Foreword xxvii
Supachai Panitchpakdi

Introduction xxix
The Editors

VOLUME I

I. BACKGROUND

1. **An Interpretative History of the Uruguay Round Negotiation** 3
   Gilbert R. Winham
2. **The Politics of Trade Policy Development—the New Complexity** 27
   Peter Sutherland
3. **The Democratic Roots of the World Trade Organization** 39
   Mike Moore

II. THE LEGAL FRAMEWORK OF THE WORLD TRADE ORGANIZATION

A: Institutional Issues

4. **Institutional Framework** 51
   William J. Davey

B: The Multilateral Agreements

5. **GATT 1994** 89
   Kevin Kennedy
6. **The Agreement on Agriculture** 187
   Joseph A. McMahon
7. **The Agreement on the Application of Sanitary and Phytosanitary Measures** 231
   Denise Prévost and Peter Van den Bossche
8. **The Agreement on Technical Barriers to Trade** 371
   Arthur E. Appleton
9. **The Agreement on Textiles and Clothing** 411
   Simon Lester
10. **The Agreement on Trade-Related Investment Measures** 437
    Martha Lara de Sterlini

11. The Anti-Dumping Agreement 485
Patrick F.J. Macrory

12. The Agreement on Customs Valuation 531
Ian Forrester, Q.C., and Omar E. Odarda

13. The Agreement on Preshipment Inspection 573
Rolf M. Jeker and Nigel Balchin

14. The Agreement on Import Licensing Procedures 591
Patrick F.J. Macrory

15. The Agreement on Rules of Origin 601
Hiroshi Imagawa and Edwin Vermulst

16. The Agreement on Subsidies and Countervailing Measures 679
Peggy A. Clarke and Gary N. Horlick

17. Injury Determinations in Antidumping and Countervailing Duty Investigations 735
Peggy A. Clarke and Gary N. Horlick

18. The Agreement on Safeguards 749
Yong-Shik Lee

19. The General Agreement on Trade in Services 799
Mary E. Footer and Carol George

20. Financial Services 955
Sydney J. Key

21. Telecommunications Services 989
Marco Bronckers and Pierre Larouche

22. The Agreement on Trade-Related Aspects of Intellectual Property Rights 1041
Thomas Cottier

C: The Plurilateral Agreements

23. The Agreement on Government Procurement 1123
Peter Trepte

24. The Agreement on Trade in Civil Aircraft and Other Issues Relating to Civil Aircraft in the GATT/WTO System 1165
Richard O. Cunningham and Peter Lichtenbaum

D: Dispute Settlement

25. Consultations 1197
Christiane Schuchhardt

26. The Panel Process 1233
Werner Zdouc

27. The Appellate Body: Institutional and Procedural Aspects 1277
Victoria Donaldson

28. Implementation and Enforcement of Dispute Settlement Decisions 1341
Andrew W. Shoyer, Eric M. Solovy and Alexander W. Koff

29. A Re-Appraisal of Non-Violation Complaints Under the WTO Dispute Settlement Procedures 1371
Frieder Roessler and Petina Gappah

30. Some Thoughts on the Appellate Body 1389
Mitsuo Matsushita

31. The Application of Non-WTO Rules of International Law in WTO Dispute Settlement 1405
Joost Pauwelyn

32. The Intervention of Private Entities and States as "Friends of the Court" in WTO Dispute Settlement Proceedings 1427
Brigitte Stern

Maurice W. Schiff and L. Alan Winters

C: Developing Country Perspectives

52. LDCs in the Multilateral Trading System 341
Ratnakar Adhikari

53. Textiles and Developing Countries 383
Magda Shahin

54. The Trips Agreement and Developing Countries 419
Carlos M. Correa

55. Trade-Related Technical Cooperation and Capacity Building 457
Esperanza Durán

D: New Issues

56. Trade and Electronic Commerce 469
Stewart Baker and Maury Shenk

57. Trade and Competition Policy 487
Merit E. Janow

58. Trade and the Environment 511
Matthew Stilwell and Jan Bohanes

59. Trade and Labor I 571
Friedl Weiss

60. Trade and Labor II 597
Janelle M. Diller

61. Trade and Human Rights I 623
Ernst-Ulrich Petersmann

62. Trade and Human Rights II 663
Sheldon Leader

63. Trade and Gender 697
Eugenia McGill

64. Trade and Culture 747
Ivan Bernier

Author Biographies 795

Index 807

VOLUME III

IV. COUNTRY REPORTS

65. Argentina 01
Julio J. Nogués

66. Canada 29
Michael Hart

67. China 47
Yaotian Wang and Guiquo Wang

68. Colombia 73
Felipe Jaramillo

69. Egypt 91
Adel M. Khalil

70. The European Union 111
Hugo Paemen

71. Indonesia 137
H.S. Kartadjoemena

72. Japan 171
Minoru Endo

73. Korea 183
Chulsu Kim

74. Mexico 215
Antonio Ortiz Mena L.N.

75. Mongolia 249
Damdin Tsogtbaatar

76. New Zealand 269
David J Walker

77. Russia 287
Julia Selivanova

78. Singapore 335
Barry Desker

TABLE OF CASES

WTO Decisions

Argentina—Definitive Anti-Dumping Duties on Poultry from Brazil:
Report of the Panel, WT/DS241/R (2003): I:507, I:511, I:512, I:513, I:517, I:523

Argentina—Definitive Anti-Dumping Measures on Imports of Ceramic Floor Tiles from Italy:
Report of the WTO Panel (not appealed), WT/DS189/R (2001): I:506, I:513, I:514, I:515, I:516, I:517, I:1351

Argentina—Definitive Safeguard Measure on Imports of Preserved Peaches:
Report of the WTO Panel (not appealed), WT/DS238/R (2003): I:755, I:766, I:768, I:772, I:786

Argentina—Measures Affecting Imports of Footwear, Textiles, Apparel and Other Items:
Report of the WTO Panel, WT/DS56/R (1997): I:143, I:1224
Report of the Appellate Body, WT/DS56/AB/R (1998): I:109, I:111, I:1259, I:1260, I:1273, I:1336, I:1416

Argentina—Measures Affecting the Export of Bovine Hides and the Import of Finished Leather:
Arbitration Under Article 21.3(c), WT/DS155/10 (2001): I:1352, I:1356

Argentina—Safeguard Measure on the Imports of Footwear:
Report of the WTO Panel, WT/DS121/R (1999): I:737, I:739, I:740, I:744, I:745, I:755, I:766, I:772, I:773, I:786, I:789, I:795, II:238, II:239, II:240
Report of the Appellate Body, WT/DS121/AB/R (1999): I:147, I:153, I:740, I:745, I:755, I:765, I:768, I:772, I:773, I:786, I:795, I:796, I:1303, I:1307, I:1332, I:1336, II:235, II:238, II:240, II:429

Australia—Measures Affecting the Importation of Salmon:
Report of the WTO Panel, WT/DS18/R (1998): I:246, I:253, I:263, I:266, I:271, I:281, I:284, I:287, I:288, I:289, I:290, I:296, I:307, I:309, I:313, I:314, I:316, I:317, I:320, I:321, I:323, I:324, I:354, I:1273
Report of the Appellate Body, WT/DS18/AB/R (1998): I:264, I:266, I:280, I:281, I:282, I:283, I:284, I:289, I:290, I:309, I:311, I:312, I:314, I:316, I:317, I:318, I:320, I:321, I:322, I:324, I:328, I:353, I:354, I:1216, I:1254, I:1265, I:1270, I:1273, I:1303, I:1336, I:1597, II:523, II:525, II:526, II:545
Arbitration Under Article 21.3(c), WT/DS18/9 (1999): I:1351, I:1356, I:1357, I:1358
Recourse to Article 21.5 by Canada, WT/DS18/RW (2000) I:248, I:265, I:282, I:285, I:297, I:321, I:323, I:324, I:1442, I:1443

Australia—Subsidies Provided to Producers and Exporters of Automotive Leather:
Report of the WTO Panel (not appealed), WT/DS126/R (1999): I:697, I:698, I:699, I:700, I:1175
Recourse to Article 21.5 of the DSU by the United States, WT/DS126/RW (2000): I:1345

Brazil—Export Financing Programme for Aircraft:
Report of the WTO Panel, WT/DS46/R (1999): I:1167, I:1187, I:1205, I:1218, I:1220
Report of the Appellate Body, WT/DS46/AB/R (1999): I:699, I:1184, I:1188, I:1205, I:1218, I:1243, I:1256, I:1273, I:1309, I:1310, I:1311, I:1317, I:1325, I:1336
Arbitration under Article 22.6 of DSU, WT/DS46/ARB (2000): I:1354, I:1363
Recourse by Canada to Article 21.5 of the DSU, WT/DS46/RW (2000), I:1189
Recourse by Canada to Article 21.5 of the DSU, Report of the Appellate Body, WT/DS46/AB/RW (2000): I:1336, I:1350, I:1354
Second Recourse to Article 21.5 by Canada, WT/DS46/RW/2 (2001): I:698, I:1187, I:1189, I:1190, III:201
Recourse to Article 22.2 of the DSU, WT/DS46/16 (2000): I:1363

Brazil—Measures Affecting Desiccated Coconut:
Report of the WTO Panel, WT/DS22/R (1996): I:1206, I:1207
Report of the Appellate Body, WT/DS22/AB/R (1997): I:686, I:1066, I:1216, I:1244, I:1273, I:1336, II:548

Canada—Certain Measures Affecting the Automotive Industry:
Report of the WTO Panel, WT/DS139/R, WT/DS142/R (2000): I:458, I:462, I:463, I:467, I:468, I:469, I:483, I:886, I:888, I:890, II:234, II:237, II:238, II:657
Report of the Appellate Body, WT/DS/139/AB/R, WT/DS/142/AB/R (2000): I:463, I:483, I:690, I:697, I:699, I:875, I:884, I:885, I:886, I:888, I:889, I:1270, I:1273, I:1336, III:33, III:201
Arbitration Under Article 21.3(c), WT/DS139/12, WT/DS142/12 (2000): I:1352, I:1357, I:1358, I:1359

Canada—Certain Measures Concerning Periodicals:
Report of the WTO Panel, WT/DS/31/R (1997): I:103, I:875, I:876, I:879, I:881, I:1391, II:538, II:756, II:757, II:759, II:760, II:782
Report of the Appellate Body, WT/DS31/AB/R (1997): I:103, I:119, I:121, I:122, I:875, I:877, I:878, I:879, I:881, I:887, I:1066, I:1301, I:1332, I:1336, I:1391, II:474, II:475, II:539, II:756, II:757, II:758, II:759, II:763, II:764, II:766

Canada—Export Credits and Loan Guarantees for Regional Aircraft:
Report of the WTO Panel (not appealed), WT/DS222/R (2002): I:698, I:701, I:1187, I:1193

Canada—Measures Affecting the Export of Civilian Aircraft:
Report of the WTO Panel, WT/DS70/R (1999): I:1167, I:1175, I:1176, I:1186, I:1218, I:1219, I:1220, I:1397
Report of the Appellate Body, WT/DS70/AB/R (1999): I:689, I:692, I:697, I:699, I:717, I:1184, I:1185, I:1186, I:1256, I:1258, I:1261, I:1262, I:1263, I:1273, I:1301, I:1309, I:1310, I:1311, I:1317, I:1329, I:1336, I:1397
Recourse to Article 21.5 of the DSU, WT/DS70/RW (2000): I:1186, I:1193
Recourse to Article 21.5 of the DSU, Report of the Appellate Body, WT/DS70/AB/RW (2000): I:1186, I:1336, I:1354, II:548

Canada—Measures Affecting the Importation of Milk and the Exportation of Dairy Products:
Report of the WTO Panel, WT/DS103/R, WT/DS113/R (1999): I:212, I:595, I:1356, III:274

Report of the Appellate Body, WT/DS103/AB/R, WT/DS113/AB/R (1999): I:212, I:699, I:1317, I:1336, I:1351, I:1360, III:274
Recourse to Article 21.5 of the DSU, Report of the Panel, WT/DS103/RW, WT/DS113/RW (2001): I:212, I:213
Recourse to Article 21.5 of the DSU, Report of the Appellate Body, WT/DS103/AB/RW, WT/DS113/AB/RW (2001): I:1336
Second Recourse to Article 21.5, Report of the Appellate Body, WT/DS103/AB/RW2, WT/DS113/AB/RW2 (2003): I:1258, I:1273, I:1336

Canada—Measures Relating to Exports of Wheat and Treatment of Imported Grain:
Report of the WTO Panel, WT/DS276/R (2004): I:149, I:150, I:458, I:459

Canada—Patent Protection for Pharmaceutical Products:
Report of the WTO Panel, (not appealed) WT/DS114/R (2000): I:1065, I:1066, I:1079, I:1094, I:1095, II:424, II:425, II:428, II:430, II:431, II:432, II:435, II:436, II:442, II:445, II:446, II:648
Arbitration Under Article 21.3(c), WT/DS114/13 (2000): I:1066, I:1351, I:1356, I:1357, I:1358, I:1359

Canada—Term of Patent Protection:
Report of the WTO Panel, WT/DS170/R (2000): I:1066, I:1097
Report of the Appellate Body, WT/DS170/AB/R (2000): I:1097, I:1320, I:1336, II:424, II:425
Arbitration Under Article 21.3(c), WT/DS170/10 (2001): I:1352, I:1359

Chile—Price Band System and Safeguard Measures Relating to Certain Agricultural Products:
Report of the WTO Panel, WT/DS207/R (2002): I:203, I:206, I:755, I:766, I:775
Report of the Appellate Body, WT/DS207/AB/R (2002): I:1247, I:1257, I:1264, I:1273, I:1298, I:1307, I:1337

Chile—Taxes on Alcoholic Beverages:
Report of the WTO Panel, WT/DS87/R, WT/DS110/R (2000): I:103, I:1012
Report of the Appellate Body, WT/DS87/AB/R, WT/DS110/AB/R (2000): I:104, I:121, I:612, I:1269, I:1271, I:1273, I:1303, I:1336,
Arbitration Under Article 21.3(c), WT/DS87/15, WT/DS110/14 (2000): I:1351, I:1356, I:1357, I:1359, I:1360

Egypt—Definitive Anti-Dumping Measures on Steel Rebar From Turkey:
Report of the WTO Panel (not appealed), WT/DS211/R (2002): I:513, I:514, I:516, III:100

European Communities—Anti-Dumping Duties on Imports of Cotton-Type Bed Linen from India:
Report of the WTO Panel, WT/DS141/R (2000): I:505, I:511, I:525, I:709, I:743, I:1220, I:1227, I:1239, I:1274, I:1444, I:1551, II:415, III:100
Report of the Appellate Body, WT/DS141/AB/R (2001): I:434, I:505, I:523, I:1260, I:1274, I:1294, I:1313, I:1337, I:1351, II:413, II:415, III:100
Recourse to Article 21.5, WT/DS/141/RW (2002): III:201
Recourse to Article 21.5, Report of the Appellate Body, WT/DS141/AB/RW (2003): I:1274, I:1303, I:1331, I:1337
Agreement under Art. 21.3 (b) of the DSU, WT/DS141/10 (2001): I:1358

European Communities—Anti-Dumping Duties on Malleable Cast Iron Tube or Pipe Fittings From Brazil:
Report of the Appellate Body, WT/DS219/AB/R (1998): I:504, I:1300, I:1337

European Communities—Conditions for the Granting of Tariff Preferences to developing Countries:
Report of the Appellate Body, WT/DS246/AB/R (2004): I:1544

European Communities—Customs Classification of Certain Computer Equipment:
Report of the WTO Panel, WT/DS62, WT/DS67, WT/DS68 (1998): I:1224, I:1375, I:1479, I:1480, I:1584, I:1595
Report of the Appellate Body, WT/DS62/AB/R, WT/DS67/AB/R, WT/DS68/AB/R (1998): I:112, I:1245, I:1246, I:1274, I:300, I:301, I:1302, I:1337, I:1411, I:1412, I:1480, I:1584, I:1585, I:1586, I:1589, I:1591, I:1592, I:1594, I:1595, I:1596, I:1597, II:478, III:130, III:201

European Communities—Measures Affecting Asbestos and Asbestos-Containing Products:
Report of the WTO Panel, WT/DS135/R (2000): I:406, I:844, I:1224, , I:1239, I:1375, I:1377, I:1379, I:1380, I:1394, II:653
Communication from the Appellate Body (Additional Procedures), WT/DS135/9 (November 8, 2000): I:1400, I:1444, II:564, II:644, II:645
Report of the Appellate Body, WT/DS135/AB/R (2001): I:83, I:119, I:120, I:171, I:245, I:256, I:377, I:378, I:383, I:389, I:390, I:393, I:395, I:405, I:406, I:409, I:844, I:845, I:1066, I:1237, I:1273, I:1301, I:1302, I:1307, I:1320, I:1323, I:1324, I:1326, I:1328, I:1332, I:1337, I:1380, I:1381, I:1382, I:1394, I:1400, I:1401, I:1437, I:1438, I:1445, I:1450, I:1452, I:1458, I:1586, I:1588, II:440, II:527, II:528, II:539, II:589, II:613, II:614, II:615, II:631, II:644, II:652, II:654, II:687, II:688, III:130

European Communities—Measures Affecting the Importation of Certain Poultry Products:
Report of the WTO Panel, WT/DS69/R (1998): I:134, I:206, I:207, I:592, I:595, I:596, I:597, I:598
Report of the Appellate Body, WT/DS69/AB/R (1998): I:136, I:206, I:207, I:592, I:596, I:598, I:1265, I:1270, I:1274, I:1302, I:1303, I:1320, I:1337, I:1351

European Communities—Measures Concerning Meat and Meat Products:
Report of the WTO Panel, WT/DS26/R, WT/DS48/R (1998): I:244, I:245, I:246, I:248, I:249, I:250, I:252, I:253, I:256, I:263, I:270, I:271, I:272, I:273, I:274, I:278, I:280, I:281, I:286, I:291, I:292, I:293, I:294, I:295, I:296, I:310, I:311, I:312, I:313, I:314, I:318, I:348, I:354, I:1066, I:1256, I:1274, I:1392, I:1402, I:1492, II:150, II:151, II:163, II:655, II:733, III:130
Report of the Appellate Body, WT/DS26/AB/R, WT/DS48/AB/R (1998): I:160, I:250, I:256, I:257, I:260, I:261, I:262, I:264, I:265, I:266, I:267, I:268, I:272, I:273, I:274, I:276, I:277, I:278, I:280, I:281, I:282, I:283, I:284, I:286, I:287, I:288, I:290, I:291, I:292, I:293, I:294, I:295, I:296, I:298, I:299, I:301, I:304, I:305, I:307, I:308, I:309, I:310, I:311, I:314, I:315, I:316, I:318, I:319, I:346, I:349, I:351, I:352, I:353, I:354, I:384, I:394, I:399, I:788, I:1066, I:1248, I:1253, I:1254, I:1256, I:1258, I:1261, I:1262, I:1264, I:1265, I:1266, I:1274, I:1300, I:1302, I:1303, I:1317, I:1318, I:1328, I:1337, I:1343, I:1353, I:1392, I:1402, I:1412, I:1492, I:1495, II:142, II:150, II:151, II:163, II:439, II:440, II:523, II:524, II:525, II:529, II:544, II:545, II:546, II:648, II:649, II:655, II:733, III:129, III:130

Arbitration Under Article 21.3(c), WT/DS26/15, WT/DS48/13 (1998): I:1351, I:1356, I:1357, I:1358, I:1361, I:1366
Arbitration Under Article 22.6, WT/DS26/ARB, WT/DS48/ARB (1999): III:130

European Communities—Regime for the Importation, Sale and Distribution of Bananas:
Report of the WTO Panel, WT/DS27/R (1997): I:68, I:69, I:105, I:133, I:204, I:406, I:458, I:460, I:466, I:467, I:468, I:469, I:482, I:875, I:878, I:879, I:880, I:881, I:885, I:886, I:1230, I:1237, I:1239, I:1248, I:1256, I:1273, I:1274, I:1420, I:1486, I:1492, I:1493, I:1494, II:657, III:129, III:132
Report of the Appellate Body, WT/DS27/AB/R (1997): I:133, I:136, I:204, I:460, I:467, I:482, I:592, I:595, I:596, I:875, I:878, I:879, I:880, I:881, I:882, I:883, I:884, I:885, I:886, I:887, I:888, I:1066, I:1213, I:1214, I:1216, I:1230, I:1237, I:1239, I:1241, I:1245, I:1246, I:1248, I:1273, I:1274, I:1298, I:1300, I:1311, I:1313, I:1315, I:1316, I:1317, I:1318, I:1319, I:1320, I:1332, I:1337, I:1343, I:1350, I:1410, I:1492, I:1493, II:424, II:475, II:782, III:65, III:129, III:132
Arbitration Under Article 21.3(c) of the DSU, WT/DS27/15 (1998) I:1351, I:1356
Arbitration under Article 22.6 of the DSU, WT/DS27/ARB (2000): I:134, I:1111, I:1353, I:1354, I:1362, I:1363, I:1376, II:51 (has listed as 1999), II:424, III:129
Recourse to Article 21.5, Report of the Panel, WT/DS27/RW/ECU (2001), I:133, I:1353, I:1354, I:1497, I:1501

European Communities—Trade Description of Sardines:
Report of the Panel, WT/DS231/R (2002): I:377, I:398, I:399, I:406, I:407
Report of the Appellate Body, WT/DS231/AB/R (2002): I:377, I:378, I:384, I:385, I:396, I:397, I:398, I:399, I:400, I:405, I:1240, I:1260, I:1266, I:1268, I:1274, I:1299, I:1300, I:1307, I:1312, I:1320, I:1321, I:1322, I:1323, I:1325, I:1326, I:1327, I:1328, I:1332, I:1333, I:1337, I:1438, I:1439, I:1440, I:1447, I:1453

Guatemala—Anti-Dumping Investigation Regarding Portland Cement from Mexico:
Report of the WTO Panel, WT/DS60/R (1998): I:512
Report of the Appellate Body, WT/DS60/AB/R (1998): I:300, I:430, I:512, I526, I:1236, I:1245, I:1246, I:1274, I:1282, I:1313, I:1337, I:1420

Guatemala—Definitive Anti-Dumping Measures on Grey Portland Cement from Mexico:
Report of the WTO Panel (not appealed), WT/DS156/R (2000): I:511, I:513, I:514, I:515, I:516, I:523, I:524, I:709, I:710, I:712, I:713, I:724, I:1207

India—Measures Affecting the Automotive Sector:
Report of the WTO Panel, WT/DS146/R, WT/DS175/R (2002): I:123, I:128 I:458, I:464, I:465, I:468, I:469, I:483, II:657
Report of the Appellate Body, WT/DS146/AB/R, WT/DS175/AB/R (2002): I:123, I:128, I466, I:483, I:1307, I:1327, I:1328, I:1337, III:201

India—Patent Protection for Pharmaceutical and Agricultural Chemical Products:
Report of the WTO Panel, WT/DS50/R (1997): I:1064, I:1216, I:1224, II:424, II:428, II:429, II:430, II:433, II:434, II:441
Report of the Appellate Body, WT/DS50/AB/R (1997): I:1064, I:1065, I:1205, I:1216, I:1217, I:1218, I:1225, I:1242, I:1245, I:1255, I:1264, I:1274, I:1302, I:1332, I:1337, I:1356, I:1422, II:424, II:433, II:434, II:441

India—Quantitative Restrictions on Imports of Agricultural, Textile and Industrial Products:
Report of the WTO Panel, WT/DS90/R (1999): I:65, I:84, I:595, I:1178
Report of the Appellate Body, WT/DS90/AB/R (1999): I:65, I:1236, I:1259, I:1262, I:1275, I:1303, I:1337, I:1351, I:1534

Indonesia—Certain Measures Affecting the Automobile Industry:
Report of the WTO Panel (not appealed), WT/DS54/R, WT/DS55/R, WT/DS59/R, WT/DS64/R (1998): I:103, I:126, I:300, I:440, I:458, I:459, I:461, I:462, I:466, I:467, I:469, I:470, I:471, I:472, I:482, I:702, I:703, I:734, I:1066, I:1178, I:1239, II:424, II:539, II:657, II:763, II:782, III:201
Arbitration Under Article 21.3(c), WT/DS54/15, WT/DS55/14, WT/DS59/13, WT/DS64/12 (1998): I:1351, I:1356, I:1357, I:1360

Japan—Measures Affecting Agricultural Products:
Report of the WTO Panel, WT/DS76/R (1998): I:246, I:302, I:306, I:321, I:323, I:324, I:346, I:350, I:351, I:354, I:1219
Report of the Appellate Body, WT/DS76/AB/R (1999): I:257, I:258, I:260, I:261, I:262, I:263, I:264, I:278, I:280, I:282, I:302, I:304, I:305, I:306, I:307, I:308, I:320, I:337, I:339, I:340, I:346, I:347, I:350, I:353, I:354, I:1263, I:1265, I:1275, I:1303, I:1337, I:1351, I:1453, I:1454, II:523, II:526, II:527, II:545, II:546

Japan—Measures Affecting Consumer Photographic Film and Paper:
Report of the WTO Panel (not appealed), W/DS44/R (1998), I:123, I:136, I:171, I:172, I:781, I:875, I:890, I:891, I:1237, I:1238, I:1241, I:1275, I:1375, I:1377, I:1382, I:1510, II:99, II:492, II:495, II:496, II:563

Japan—Measures Affecting the Importation of Apples:
Report of the WTO Panel, WT/DS245/AB/R (2003): I:246, I:257, I:258, I:259, I:285, I:286, I:287, I:289, I:290, I:302, I:303, I:338, I:347
Report of the Appellate Body, WT/DS245/AB/R (2003): I:262, I:280, I:285, I:287, I:303, I:304, I:348, I:351, I:353, I:354, I:1298, I:1303, I:1338,

Japan—Taxes on Alcoholic Beverages:
Report of the WTO Panel, WT/DS8R, WT/DS10/R, WT/DS11/R (1996): I:103, I:121, I:736, I:1588, II:758, II:763
Report of the Appellate Body, WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R (1996): I:80, I:103, I:105, I:116, I:117, I:118, I:120, I:121, I:122, I:300, I:301, I:315, I:389, I:390, I:877, I:878, I:883, I:1066, I:1178, I:1302, I:1319, I:1329, I:1338, I:1376, I:1422, I:1588, II:240, II:429, II:484, II:757, II:758, II:763
Arbitration Under Article 21.3(c), WT/DS8/15, WT/DS10/15, WT/DS11/13 (1997): I:1351, I:1356, I:1365, I:1366

Korea—Definitive Safeguard Measure on the Imports of Certain Dairy Products:
Report of the WTO Panel, WT/DS98/R (1999): I:755, I:767, I:769, I:770, I:771, I:772, I:774, I:775, I:776, I:781, I:782, I:783, I:784, I:785, I:788, I:789, I:790, I:791, I:795
Report of the Appellate Body, WT/DS98/AB/R (1999): I:153, I:206, I:542, I:755, I:758, I:768, I:774, I:782, I:786, I:787, I:790, I:1245, I:1246, I:1259, I:1265, I:1275, I:1303, I:1318, I:1338, I:1351, II:766, III:203

Korea—Measures Affecting Government Procurement:
Report of the WTO Panel (not appealed), WT/DS163/R (2000): I:1123, I:1130, I:1138, I:1139, I:1157, I:1224, I:1375, I:1377, I:1378, I:1407, I:1408, III:203

Korea—Measures Affecting Imported of Fresh, Chilled and Frozen Beef:
Report of the WTO Panel, WT/DS161/R, WT/DS169/R (2000): I:206, I:209, I:595, I:1275
Report of the Appellate Body, WT/DS161/AB/R, WT/DS169/AB/R (2000): I:124, I:206, I:209, I:210, I:256, I:393, I:845, I:1275, I:1338, I:1351, II:528, II:638, II:652, III:203
Agreement under Art. 21.3(b), WT/DS161/12, WT/DS169/12 (2001): I:1358

Korea—Taxes on Alcoholic Beverages:
Report of the WTO Panel, W/DS75/R, W/DS84/R (1998): I:103, I:1012, I:1205, I:1223, I:1224, I:1227, I:1228, II:500
Report of the Appellate Body, W/DS75/AB/R, W/DS84/AB/R (1999): I:103, I:121, I:1265, I:1269, I:1275, I:1300, I:1301, I:1303, I:1338, III:203, II:500
Arbitration Under Article 21.3(c), WT/DS75/16, WT/DS84/14 (1999): I:1351, I:1356, I:1357, I:1358

Mexico—Antidumping Investigation of High Fructose Corn Syrup (HFCS) from the United States:
Report of the WTO Panel (not appealed), WT/DS132/R (2000): I:511, I:521, I524, I:709, I:711, I:719, I:724, I:746, I:747, I:1351,
Recourse to Article 21.5, Report of the Appellate Body, WT/DS132/AB/RW (2001): I:1204, I:1221, I:1222, I:1241, I:1243, I:1245, I:1253, I:1269, I:1270, I:1271, I:1275, I:1303, I:1318, I:1331, I:1338,

Mexico—Measures Affecting Telecommunications Services:
Report of the Panel (not appealed), WT/DS204/R (2004): I:874, I:891, I:892, I:893, I:997, I:999, I:1001, I:1002, I:1003, I:1004, I:1005, I:1006, I:1007, I:1013, I:1020, I:1032, I:1033, I:1036, I:1218

Thailand—Antidumping Duties on Angles, Shapes, and Sections of Iron or Non-Alloy Steel and H-Beams from Poland:
Report of the WTO Panel, WT/DS122/R (2001): I:504, I:505, I:511, I:526, I:527, I:709, I:738, I:739, I:743
Report of the Appellate Body, WT/DS122/AB/R (2001): I:737, I:740, I:743, I:1246, I:1259, I:1262, I:1275, I:1309, I:1310, I:1311, I:1312, I:1320, I:1322, I:1328, I:1338, I:1351, I:1446, I:1447, I:1452

Turkey—Restrictions on Imports of Textile and Clothing Products:
Report of the WTO Panel, WT/DS34/R (1999): I:419, I:429, I:430, I:1224, I:1248, I:1275, II:227, II:235
Report of the Appellate Body, WT/DS34/AB/R (1999): I:1275, I:1338, I:1351, II:227, II:235, II:236, II:240

United States—Anti-Dumping Act of 1916:
Report of the Appellate Body, WT/DS136/AB/R, WT/DS162/AB/R (2000): I:141, I:500, I:510, I:512, I:1242, I:1256, I:1275, I:1317, I:1318, I:1338, I:1410
Arbitration Under Article 21.3(c), WT/DS136/11, WT/DS162/14 (2001): I:1351, I:1356, I:1357, I:1359

United States—Anti-Dumping and Countervailing Duty Measures on Steel Plate from India:
Report of the WTO Panel (not appealed), WT/DS206 (2002): I:516, I:525

United States—Antidumping Duty on Dynamic Random Access Memory Semiconductors (DRAMS) of One Megabit or Above From Korea:
Report of the WTO Panel (not appealed), WT/DS99/R (1999): I:512, I:522, I:723, I:742, III:202

United States—Antidumping Measures on Certain Hot-Rolled Steel Products from Japan:
Report of the WTO Panel, WT/DS184/R (2001): I:521, I:526, I:714, I:715, I:745
Report of the Appellate Body, WT/DS184/AB/R (2001), I:501, I:513, I:516, I:520, I:527, I:714, I:737, I:738, I:739, I:745, I:746, I:1265, I:1276, I:1302, I:1325, I:1339, I:1412, III:201
Arbitration under Article 21.3(c) of the DSU, WT/DS184/9 (2001): I:1352

United States—Anti-Dumping Measures on Stainless Steel Plate in Coils and Stainless Steel and Strip from Korea:
Report of the WTO Panel (not appealed), WT/DS/179/R (2001): I:506, I:507, I:508, I:1351, III:202
Agreement under Art. 21.3 (b) of the DSU, WT/DS179/5 (2001): I:1358

United States—Continued Dumping and Subsidy Offset Act of 2000:
Report of the WTO Panel, WT/DS/ 217/R, WT/DS/234/R (2003): I:510, I:712, I:732, I:1230, III:202
Report of the Appellate Body, WT/DS217/AB/R, WT/DS/234/AB/R (2003): I:510, I:527, I:528, I:712, I:732, I:1247, I:1248, I:1276, I:1299, I:1300, I:1302, I:1304, I:1310, I:1311, I:1312, I:1317, I:1318, I:1320, I:1339, II:63, III:201, III:202

United States—Countervailing Duties on Certain Corrosion Resistant Carbon Steel Flat Products From Germany:
Report of the WTO Panel, WT/DS213/R (2002): I:742
Report of the Appellate Body, WT/DS213/AB/R (2002): I:512, I:742, I:1260, I:1266, I:1275, I:1298, I:1302, I:1303, I:1329, I:1338

United States—Countervailing Measures Concerning Certain Products from the European Communities:
Report of the WTO Panel, WT/DS212/R (2002): I:693, I:694
AB report: I:693, I:694, I:722, I:723, I:1297, I:1298, I:1299, I:1320, I:1323, I:1329, I:1338

United States—Definitive Safeguard Measures on Imports of Certain Steel Products:
Report of the WTO Panel, WT/DS248∼DS259/R (2003): I:755, I:766, I:767, I:768, I:769, I:770, I:773, I:786, I:787, I:791, I:794, III:202, III:274
Report of the Appellate Body, WT/DS248∼DS259/AB/R (2003): I:153, I:755, I:766, I:769, I:791, I:792, I:794, I:1303, I:1317, I:1318, I:1323, I:1325, I:1339, III:202

United States—Definitive Safeguard Measures on Imports of Circular Welded Carbon Quality Line Pipe from Korea:
Report of the WTO Panel, WT/DS/202/R (2001): I:755, I:766, I:768, III:202
Report of the Appellate Body, WT/DS/202/AB/R (2002): I:736, I:755, I:774, I:775, I:783, I:789, I:795, I:1224, I:1327, I:1328, I:1339, II:234, II:235, II:238, III:202

United States—Definitive Safeguard Measures on Imports of Wheat Gluten from the European Communities:

Report of the WTO Panel, WT/DS166/R (2000): I:737, I:744, I:745, I:755, I:766, I:768, I:769, I:770, I:772, I:773, I:774, I:781, I:783, I:789, I:791, I:794

Report of the Appellate Body, WT/DS166/AB/R (2000): I:206, I:755, I:772, I:774, I:783, I:791, I:794, I:1263, I:1264, I:1265, I:1276, I:1303, I:1339, I:1351, II:234, II:235, II:238

United States—Final Countervailing Duty Determination with Respect to Certain Softwood Lumber from Canada*:*

Report of the Appellate Body, WT/DS257/AB/R (2004): I:690, I:694, I:716, I:1301, I:1304, I:1314, I:1323, I:1327, I:1328, I:1339

United States—Final Dumping Determination on Softwood Lumber from Canada:

Report of the Appellate Body, WT/DS264/AB/R (2004): I:504 I:507

United States—Import Measures on Certain Products from the European Communities:

Report of the WTO Panel, WT/DS165/R (2000): I:565, I:1354, I:1355, I:1361, I:1362

Report of the Appellate Body, WT/DS165/AB/R (2000): I:1271, I:1275, I:1338, I:1355 I:1361, I:1362

United States—Import Prohibition of Certain Shrimp and Shrimp Products:

Report of the WTO Panel, WT/DS58/R (1998): I:844, I:1239, I:1393, I:1399, I:1431, II:147, II:149, II:150, II:151, II:163, II:165, II:166, II:637

Report of the Appellate Body, WT/DS58/AB/R (1998): I:80, I:83, I:154, I:163, I:164, I:165, I:300, I:374, I:383, I:844, I:886, I:1069, I:1075, I:1226, I:1238, I:1239, I:1240, I:1261, I:1276, I:1297, I:1298, I:1307, I:1316, I:1317, I:1320, I:1321, I:1322, I:1332, I:1339, I:1356, I:1379, I:1386, I:1393, I:1399, I:1412, I:1429, I:1430, I:1431, I:1432, I:1433, I:1434, I:1435, I:1436, I:1441, I:1442, I:1443, I:1447, I:1457, II:147, II:149, II:150, II:151, II:163, II:165, II:166, II:414, II:436, II:514, II:521, II:522, II:537, II:540, II:560, II:564, II:587, II:588, II:589, II:610, II:611, II:613, II:614, II:616, II:637, II:643, II:652, II:653, II:678, II:691

Recourse to Article 21.5, WT/DS58/RW (2001): I:165, I:1225, I:1226, I:1330, I:1331, I:1416, I:1421, II:560

Recourse to Article 21.5 of the DSU, Appellate Body Report, WT/DS58/AB/RW (2001): I:165, I:383, I:392, I:1226, I:1307, I:1322, I:1330, I:1331, I:1339, II:523, II:540, II:587, II:615, II:637, II:653, II:678, II:680, II:691

United States—Imposition of Countervailing Duties on Certain Hot-Rolled Lead and Bismuth Carbon Steel Products Originating in the United Kingdom:

Report of the WTO Panel, WT/DS138/R (2000): I:693, I:1276, I:1395, I:1443

Report of the Appellate Body, WT/DS138/AB/R (2001): I:83, I:352, I:692, I:693, I:717, I:722, I:723, I:731, I:737, I:738, I:1276, I:1299, I:1300, I:1304, I:1321, I:1328, I:1332, I:1339, I:1395, I:1399, I:1436, I:1437, I:1439, I1440, I:1441, I:1449, I:1451, I:1452, I:1455, I:1457, II:101, II:564, II:644

United States—Investigation of the International Trade Commission in Softwood Lumber from Canada:

Report of the WTO Panel, WT/DS277/R (2004): I:741, I:746, I:747, I:748

United States—Measures Affecting the Cross-Border Supply of Gambling and Betting Services

Report of the WTO Panel, WT/DS285/R (2004): I:874

United States—Measures Affecting Imports of Woven Wool Shirts and Blouses from India:
Report of the WTO Panel, WT/DS33/R (1997): I:422, I:424, I:425, I:427, I:428, I:429, II:408, II:413, II:414
Report of the Appellate Body, WT/DS33/AB/R (1997): I:346, I:348, I:422, I:428, I:467, I:864, I:1258, I:1259, I:1270, I:1271, I:1276, I:1302, I:1313, I:1339, I:1410, I:1413, II:408, II:413, II:414

United States—Measures Treating Export Restraints as Subsidies:
Report of the WTO Panel (not appealed), WT/DS194/R (2001): I:688, I:691, I:1190

United States—Preliminary Determinations with Respect to Certain Softwood Lumber from Canada:
Report of the WTO Panel (not appealed), WT/DS236/R (2002): I:690, I:694, I:719, I:721, I:722

United States—Restrictions on Imports of Cotton and Man-Made Fibre Underwear:
Report of the WTO Panel, WT/DS24/R (1996): I:422, I:424, I:425, I:426, I:427, I:428, I:429, I:1224, I:1228, II:408, II:413, II:415
Report of the Appellate Body, WT/DS24/AB/R (1997): I:135, I:422, I:423, I:1319, I:1339, I:1361, II:408, II:413, II:415

United States—Rules of Origin for Textiles and Apparel Products:
Report of the WTO Panel (not appealed), WT/DS243/R (2003): I:433, I:603, I:612, I:613, I:614

United States—Safeguard Measures on Imports of Fresh, Chilled or Frozen Lamb Meat from New Zealand and Australia:
Report of the WTO Panel, WT/DS177/R, WT/DS178/R (2000): I:755, I:767, I:768, I:771, I:772, I:774, I:786, I:789, III:274
Report of the Appellate Body, WT/DS177/AB/R, WT/DS178/AB/R (2001): I:153, I:206, I:428, I:738, I:740, I:743, I:745, I:746, I:755, I:771, I:772, I:774, I:789, I:790, I:791, I:1267, I:1276, I:1307, I:1317, I:1325, I:1339, I:1351, III:274

United States—Section 110(5) of U.S. Copyright Act:
Report of the WTO Panel (not appealed), WT/DS160/R (2000): I:1079, I:1083, I:1084, I:1085, I:1239, I:1276, I:1351, I:1441, I:1443, I:1444, II:425, II:426, II:428, II:430, II:431, II:436, II:442, II:656
Recourse to Arbitration under Article 25 of the DSU,WT/DS160/ARB25/1 (2001): I:1112, I:1342, I:1366, II:214, II:656
Arbitration Under Article 21.3(c), WT/DS160/12 (2001): I:1352, I:1357, I:1358

United States—Section 211 Omnibus Appropriations Act of 1998:
Report of the WTO Panel, WT/DS176/R (2001): I:1063, I:1226, II:430
Report of the Appellate Body, WT/DS176/AB/R (2002): I:1057, I:1063, I:1111, I:1265, I:1276, I:1301, I:1320, I:1339, II:425, II:426, II:431

United States—Section 301–310 of the Trade Act of 1974:
Report of the WTO Panel (not appealed), WT/DS152/R (1999): I:81, I:1224, I:1430, II:422, II:437, II:626, III:201

United States—Standards for Reformulated and Conventional Gasoline:
Report of the WTO Panel, WT/DS2/R (1996): I:103, I:118, I:256, I:394, I:409, I:844, I:1391, II:438, II:587, II:588
Report of the Appellate Body, WT/DS2/AB/R (1996): I:103, I:154, I:155, I:156, I:157, I:162, I:163, I:300, I:315, I:844, I:877, I:886, I:1258, I:1276, I:1302, I:1305, I:1319, I:1330, I:1339, I:1361, I:1393, I:1406, I:1422, II:438, II:439, II:514, II:519, II:520, II:538, II:540, II:563, II:588, II:589, II:613, II:652

United States—Sunset Review of Anti-Dumping Duties on Corrosion-Resistant Carbon Steel Flat Products from Japan
Report of the Appellate Body, WT/DA244/AB/R (2004): I:522, I:1301, I:1338

United States—Sunset Reviews of Anti-Dumping Measures on Oil Country Tubular Goods from Argentina:
Report of the WTO Panel, WT/DS268/R (2004): I:523

United States—Transitional Safeguard Measure on Combed Cotton Yarn from Pakistan:
Report of the WTO Panel, WT/DS192/R (2001): I:422, I:424, I:425, I:426, I:429
Report of the Appellate Body, WT/DS192/AB/R (2001): I:422, I:426, I:429, I:1259, I:1266, I:1275, I:1302, I:1338, I:1408, I:1412, II:413, II:416

United States—Tax Treatment for Foreign Sales Corporations:
Report of the Appellate Body, WT/DS108/AB/R (2000): I:213, I:689, I:690, I:698, I:699, I:1225, I:1253, I:1275, I:1301, I:1318, I:1325, I:1326, I:1327, I:1328, I:1338, I:1385, I:1412, II:95, III:129, III:130
Arbitration under Article 22.6, WT/DS108/ARB (2002): I:1366, III:129, III:131
Recourse to Article 21.5, Report of the Panel, WT/DS108/RW (2001): III:131
Recourse to Article 21.5, Report of the Appellate Body, WT/DS108/AB/RW (2002): I:698, I:1257, I:1276, I:1279, I:1313, I:1314, I:1320, I:1325, I:1338, III:131

GATT Panel and Working Party Reports

Australian Subsidy on Ammonium Sulphate, BISD, 2nd Supp. 188 (Adopted April 3, 1950): I:103, I:104, I:171, I:1374, I:1375, I:1376

Border Tax Adjustments, Report of the Working Party, BISD, 18th Supp. 97 (Adopted December 2, 1970): I:103, I:104, I:118

Brazil—Imposition of Provisional and Definitive Countervailing Duties on Milk Powder and Certain Types of Milk from the European Economic Community, BISD, 41st Supp. 467 (Adopted by the SCM Committee, April 28, 1994): I:739

Brazilian Internal Taxes, Report of the Working Party, BISD, 2nd Supp. 181 (1949): I:103

Canada—Administration of the Foreign Investment Review Act, BISD, 30th Supp. 140 (Adopted February 7, 1984): I:123, I:154, I:444, I:445, I:464, I:482, II:657

Canada—Import, Distribution and Sale of Alcoholic Drinks by Provincial Marketing Agencies, BISD, 35th Supp. 37 (Adopted March 22, 1988): I:112, I:150

Canada—Import, Distribution and Sale of Certain Alcoholic Drinks by Provincial Marketing Agencies, BISD, 39th Supp. 27 (Adopted February 18, 1992): I:117, I:135, I:149

Canada—Import Restrictions on Ice Cream and Yoghurt, BISD, 36th Supp. 68 (Adopted December 5, 1989): I:129, I:130

Canada—Import Quotas on Eggs, BISD 23rd Supp. 91 (Adopted February 17, 1976): I:197

Canada—Measures Affecting Exports of Unprocessed Herring and Salmon, BISD, 35th Supp. 98 (Adopted March 22, 1988): I:129, I:155, I:162, I:163, I:375, II:586

Canada—Measures Affecting the Sale of Gold Coins, L/5863 (September 17, 1985) (unadopted): I:103, I:126

Canada—Withdrawal of Tariff Concessions, BISD, 25th Supp. 42 (Adopted May 17, 1978): I:109, I:110

Canada/Japan: Tariff on Imports of Spruce, Pine, Fir (SPF) Dimension Lumber, 36th Supp. BISD 167 (Adopted July 19,1989): I:103, I:105, I:1584, I:1587, I:1588, I:1592, I:1593, I:1594, I:1598, I:1599

Canadian Countervailing Duties on Grain Corn from the United States, SCM/140 (Adopted by the SCM Committee, March 26, 1992): I:739, I:740, I:744, I:745

Ceylon—Article XVIII Applications, BISD, 6th Supp. 112 (1957): I:1532

Ceylon—Notifications Under Article XVIII:C, BISD, 6th Supp. 75 (1958): I:1535

DISC—United States Tax Legislation, Report of the Working Party, BISD 23rd Supp. 98 (presented to the Council of Representatives on November 12, 1976): II:95

European Communities—Refunds on Exports of Sugar, complaint by Australia, BISD 26th Supp. 290 (Adopted November 6, 1979): I:198

European Communities—Refunds on Exports of Sugar, complaint by Brazil, BISD 27th Supp. 69 (Adopted November 10, 1980): I:198, I:1536

European Community—Anti-Dumping Duties on Audio Tapes in Cassettes Originating from Japan ADP/136(April 28, 1995) (unadopted): I:498, I:507

European Community—Imposition of Anti-Dumping Duties on Imports of Cotton Yarn from Brazil, BISD 42nd Supp. 17 (Adopted by the ADP Committee, October 30, 1995): I:498, I:525

European Community—Tariff Treatment on Imports of Citrus Products from Certain Countries in the Mediterranean Region, L/5776 (February 7, 1985) (unadopted): I:171, I:1374, I:1375

European Economic Community—Follow-Up on the Panel Report "Payments and Subsidies Paid to Processors and Producers of Oilseeds and Related Animal-Feed Proteins", BISD 39th Supp. 91 (March 31, 1992) (unadopted): I:202, I:1375, I:1376, III:416

European Economic Community—Measures On Animal Feed Proteins, L/4599—25S/49 (Adopted March 14, 1978): I:103, I:104, I:122, I:1588

European Economic Community—Member States' Import Regimes for Bananas (Bananas I), DS/32/R (June 3, 1993) (unadopted): III:129

European Economic Community—Member States' Import Regimes for Bananas (Bananas II), DS38/R (February 11,1994) (unadopted): I:460, III:129

European Economic Community—Payments and Subsidies Paid to Processors and Producers of Oilseeds and Related Animal-Feed Proteins, BISD, 37th Supp. 86 (Adopted January 25, 1990): I:126, I:128, I:171, I:201, I:206, I:686, I:1237, I:1273, I:1374, I:1377, II:95

European Economic Community—Production Aids Granted on Canned Peaches, Canned Pears, Canned Fruit Cocktail and Dried Grapes, L/5778 (February 20, 1985) (unadopted): I:171, I:1374, I:1375

European Economic Community—Programme on Minimum Import Prices, Licences and Surety Deposits for Certain Processed Fruits and Vegetables, BISD, 25th Supp. 68 (Adopted October 18, 1978): I:128, I:197, I:593

European Economic Community—Quantitative Restrictions Against Imports of Certain Products from Hong Kong, BISD, 30th Supp. 129, (Adopted July 12, 1983): II:585

European Economic Community—Regulation on Imports of Parts and Components, BISD, 37th Supp. 132, (Adopted May 16, 1990): I:116, I:497, I:499

European Economic Community—Restrictions on Apples from Chile, BISD, 27th Supp. 98 (adopted November 10, 1980): I:197

European Economic Community—Restrictions on Imports of Dessert Apples, complaints by Chile, BISD 36th Supp. 93 (Adopted June 22, 1989): I:130, I:134, I:136, I:197, I:593, I:1536, I:1537, I:1591

European Economic Community—Restrictions on Imports of Apples, complaints by the United States, BISD, 36th Supp. 135 (Adopted June 22, 1989): I:133, I:593

European Economic Community—Subsidies on Exports of Pasta Products, SCM/43 (May 19, 1983) (unadopted): I:199

European Economic Community, Subsidies on Export of Wheat Flour, SCM/42 (March, 21, 1983) (unadopted): I:198, I:199

Exports of Potatoes to Canada, BISD, 11th Supp., at 88 (Adopted November 16, 1962): I:540

France—Assistance to Exports of Wheat and Wheat Flour, Complaint by Australia, BISD, 7th Supp. 46 (Adopted November 21, 1958): I:197

Greece—Special Import Taxes, BISD, 1st Supp. 48 (Adopted November 3, 1952): I:117

Italian Discrimination Against Imported Agricultural Machinery, BISD, 7th Supp. 60 (Adopted October 23, 1958): I:123, I:126, I:880, II:500, II:585

Italian Restrictions Affecting Imports from Israel, BISD, 10 Supp. 130 (Adopted December 9, 1961): II:584

Japan—Customs Duties, Taxes and Labelling Practices on Imported Wines and Alcoholic Beverages, BISD, 34th Supp. 83 (Adopted November 10/11, 1987): I:103, I:117, I:118, I:120, I:145

Japan—Measures on Imports of Leather, BISD, 31st Supp. 94 (Adopted May 15/16, 1984): I:170, I:593, II:585

Japan—Restrictions on Imports of Certain Agricultural Products, BISD, 35th Supp. 163 (Adopted February 2, 1988): I:130, I:135, I:161, I:196, I:197

Japan-Trade in Semi-conductors, BISD, 35th Supp. 116 (Adopted May 4, 1988): I:128, I:171, I:761, I:1374, I:1375, I:1386, II:495

Korea—Antidumping Duties on Imports of Polyacetal Resins from the United States, BISD, 40th Supp. 205 (Adopted by the ADP Committee, April 27, 1993): I:497, I:736, I:746, III:201

New Zealand—Imports of Electrical Transformers from Finland, BISD, 32nd Supp. 55 (Adopted July 18, 1985): I:497

Norway—Restrictions on Imports of Certain Textile Products, BISD, 27th Supp. 119 (Adopted June 18, 1980): I:132, I:758

Norway—Restrictions on Imports of Apples and Pears, BISD, 36th Supp. 306 (Adopted June 21/22, 1989): I:54

Republic of Korea—Restrictions on Imports of Beef, BISD, 36th Supp. 268 (Adopted November 7, 1989): I:150, I:162, I:1534, III:191, III:201

Spain—Measures Concerning Domestic Sale of Soyabean Oil, L/5142 (June 17, 1981) (unadopted): I:103

Spain—Tariff Treatment of Unroasted Coffee, L/5135—28S/102 (Adopted June 11, 1981): I:103, I:103, I:105, I:1589, I:1592, I:1593, I:1594

Swedish Antidumping Duties, BISD, 3rd Supp. 81 (Adopted February 26, 1955): I:141, I:497

Thailand—Restrictions on Importation of and National Taxes on Cigarettes, BISD, 37th Supp. 200 (Adopted November 7, 1990): I:149, I:155, I:158, I:159, I:256, I:391, I:393, I:595, II:439, II:528, II:540, II:615, II:652, II:687, II:688

Treatment by Germany of Imports of Sardines, BISD, 1st Supp. 53 (Adopted October 31, 1952): I:103, I:171, I:1374, I:1375, I:1376, I:1592, I:1597, I:1598

United States—Anti-Dumping Duties on Gray Portland Cement and Cement Clinker from Mexico, ADP/82, (September 7, 1992) (unadopted): I:497, I:509, I:510, I:711, I:718, III:233

United States—Countervailing Duties on Fresh, Chilled and Frozen Pork from Canada, BISD, 38th Supp. 45 (Adopted July 11, 1991): I:142, I:686, II:95

United States—Customs User Fee, BISD, 35th Supp. 245 (Adopted February 2, 1988): I:102, I:111, I:143

United States—Definition of Industry Concerning Wine and Grape Products, BISD, 39th Supp. 436 (Adopted by the SCM Committee, 28 April 1992): I:103

United States—Denial of Most-favoured-nation Treatment as to Non-Rubber Footwear from Brazil, BISD, 39th Supp. 128 (Adopted June 19, 1992): I:95, I:102, I:103, I:103, I:124, I:683, I:1542

United States—Imports of Certain Automotive Spring Assemblies, BISD, 30th Supp. 107 (Adopted May 26, 1983): I:156

United States—Imports of Sugar from Nicaragua, BISD, 31st Supp. 67 (Adopted March 13, 1984): I:133, I:1575, I:1576

United States—Imposition of Anti-Dumping Duties on Imports of Fresh and Chilled Atlantic Salmon from Norway, BISD 41st Supp. 229 (Adopted by the ADP Committee, April 28, 1994): I:498, I:507, I:510

United States—Imposition of Anti-dumping Duties on Imports of Seamless Stainless Steel Hollow Products from Sweden, ADP/47 (August 20, 1990) (unadopted): I:497, I:510, I:710, I:711

United States—Imposition of Countervailing Duty on Imports of Fresh and Chilled Atlantic Salmon from Norway, BISD, 41st Supp. 2 (Adopted by the SCM Committee, April 27, 1994): I:497, I:711, I:739

United States—Manufacturing Clause, BISD, 31st Supp. 75 (Adopted May 15/16, 1984): I:54

United States—Measures Affecting Alcoholic and Malt Beverages, BISD, 39th Supp. 206 (Adopted June 19, 1992): I:103, I:117, I:121, I:126, II:538, II:759

United States—Measures Affecting Imports of Softwood Lumber From Canada, BISD, 40th Supp. 358 (Adopted October 27, 1993): I:214, I:709, I:710

United States—Measures Affecting the Importation, Internal Sale and Use of Tobacco, DS44/R, 41S/131 (Adopted October 4, 1994): I:117, I:125

United States—Prohibition of Imports of Tuna and Tuna Products from Canada, BISD, 29th Supp. 91 (Adopted February 22, 1982): I:130, I:155, I:156, I:157, I:162, I:163, I:196,

United States—Restrictions on Imports of Tuna, BISD, 39th Supp. 155 ((September 3, 1991) (unadopted): I:144, 1:155, I:162, I:391, II:139, II:147, II:149, II:150, II:151, II:162, II:163, II:166, II:533, II:538, II:585, II:586, II:652, II:653, III:233, III:419

United States—Restrictions on Imports of Tuna, DS 29/R, (June 10, 1994) (unadopted): II:615

United States—Restrictions on the Importation of Sugar and Sugar-containing Products Applied under the 1955 Waiver and Under the Headnote to the Schedule of Tariff Concessions, BISD, 37th Supp. 228 (adopted on November 7, 1990): I:171, I:1374, I:1375

United States—Section 337 of the Tariff Act of 1930, BISD, 36th Supp. 345 (Adopted November 7, 1989): I:117, I:124, I:154, I:155, I:156, I:158, I:160, I:161, I:1067, II:439, II:445

United States—Taxes on Automobiles, DS31/R (October 11, 1994) (unadopted): I:103, I:391, I:1390, II:538

United States—Taxes on Petroleum and Certain Imported Substances, BISD, 34th Supp.136 (Adopted June 17, 1987): I:103, I:117, I:170, I:868, I:1516, III:233

United States—Trade Measures Affecting Nicaragua, Report of the Panel (unadopted), L/6053, (October 13, 1986): I:1576, I:1577

Uruguayan Recourse to Article XXIII, BISD, 11th Supp. 95 (Adopted November 16, 1962): I:171, I:1374, I:1375

FOREWORD

Supachai Panitchpakdi

In the relatively short time since the World Trade Organization (WTO) was founded, both the institution itself and the vast and complex set of rules it administers have generated enormous debate and controversy, both in the meeting rooms of Geneva and in legislatures, in the press, and on the streets of countries around the world. Interestingly, discussions in and about the WTO have tended to mirror not only the trade-related concerns of the world today but also concerns about a wide variety of other issues whose relationship to the WTO is still being defined.

From one perspective, the WTO is a system of trading rules; from another, it is a forum to implement those rules and to negotiate new ones. As an intergovernmental institution with a broad membership and a wide mandate, the WTO's ultimate success or failure will depend heavily on the effectiveness of those who guide it, rather than those who make demands upon it. But to appreciate fully the importance of, and the potential for, the WTO to make a positive contribution to the well-being of the world requires more than a casual understanding of what the WTO is and is not, its experiences to date, and its possibilities for the future.

At a time when the WTO has embarked on a major new effort through the Doha Development Agenda to further refine itself in some areas and to extend itself in others, this book is a major contribution to helping people around the world understand what the WTO is, where it has been, and where it is headed. Authored by a highly qualified group of individuals, it reviews the experience to date with WTO rules, discusses a wide array of political and economic issues related to these rules, and provides a series of commentaries on the WTO from the perspective of particular WTO Members—large and small, original and new, and developed and developing.

What has been achieved in the WTO since 1995 has been nothing short of remarkable, which fosters expectations of greater success in the years ahead. While most of what has occurred to date has focused on the implementation of the results of the Uruguay Round, including the successful establishment and operation of an efficient system for the settlement of trade disputes, the case for the WTO's core business of continued trade liberalization remains as valid today as it ever was. Such course of action will continue to help raise material standards of living around the world, and will also help to ensure that developing countries, especially the least-developed countries, secure a greater share in the growth of international trade in the future.

I congratulate all those who have worked so hard to produce this impressive new publication. It is an outstanding contribution to our collective understanding of today's world trading system as embodied in the WTO.

INTRODUCTION

The international trading system came of age on January 1, 1995, with the establishment of the World Trade Organization ("WTO"). The vast majority of international trade is now subject to this rule-based trading system. Almost all of the major trading nations can be counted among its 148 Members,[1] and with just a very few exceptions, those that are not members are seeking to accede.[2]

Many of the WTO Agreements are technical and complex. This obscures the fact that the WTO is built on many of the time-tested principles of the 1947 General Agreement on Tariffs and Trade ("GATT"). The GATT-based trading system provided a strong economic, philosophical and political underpinning for the WTO, and the 1947 General Agreement forms a part of the WTO Agreements.

The GATT was however organizationally flawed. Indeed, it was never intended to be an organization, and only took on this role by default when the International Trade Organization was still-born. The GATT dispute settlement system was weak. While the successive rounds of multilateral trade negotiations held under the auspices of the GATT did produce massive tariff reductions, particularly on imports of manufactured goods by developed countries, the GATT was less successful in reducing non-tariff barriers, which became greater obstacles to trade as tariffs came down. For example, in the 1980s administrative actions restricting trade grew in significance and "voluntary" export restraints ("VERs") became more commonplace, even as tariffs on manufactures were reduced to post-war lows. There were significant exceptions to the rules governing trade in agricultural goods, and trade in textiles fell outside the GATT system altogether. Trade in services, insignificant in 1947 when the GATT came into being, was not covered by the Agreement, yet was becoming an increasingly important component of international trade. These omissions and shortcomings, many of which operated to the detriment of developing countries, provided the negotiators of the WTO Agreements with the inspiration to strengthen and broaden the system.

Unlike its GATT predecessor, the WTO is a full-fledged international organization. In addition to trade in goods, the only form of trade that was covered by the GATT, the WTO covers trade in services and trade-related aspects of intellectual property. The separate trade regime long applicable to textiles trade has been phased out. The Agreement also seeks, albeit with less success, to impose "GATT discipline" on trade in agricultural goods. The flawed GATT approach to dispute settlement, which allowed the losing party to block adoption of a panel report, has been replaced by a highly developed and frequently used dispute settlement system. It would thus be wrong to regard the WTO as the mere offspring of the GATT; in many ways it is an evolutionary step forward, albeit imperfect, and riddled with loopholes waiting to be plugged when sufficient political will again arises.

The WTO has been in place long enough to justify an in-depth analysis. Ideally, like John Jackson's magisterial 1969 analysis of the GATT,[3] the book should be written by one person. However, the WTO covers so much more than the GATT, and has become so complex, that no one person could produce a work of the detail we had in mind. This

[3] JOHN H. JACKSON, WORLD TRADE AND THE LAW OF GATT.

work, finalized as the Doha Development Agenda negotiations make fitful progress, is perhaps the first to offer such an in-depth analysis of each of the covered agreements and to integrate panel and Appellate Body decisions into this analysis. It is also the first to offer in the same text economic and political points of view, commentaries on new trade issues, and the perspective of diplomats who participated in the Uruguay Round of trade negotiations.

Our first goal was to produce a legal work that would be easy to use, practical in nature, and which would appeal to practitioners, government officials, professors, scholars and students alike. For each of the covered agreements we sought to find a practitioner, scholar, diplomat or WTO official who had special knowledge and experience with the particular agreement. We chose top names in the field—or individuals whom we were convinced would become top names. With only a couple of exceptions, almost everyone that we approached accepted our invitation to contribute. Occasionally we were too good in our selection process. In three cases authors had to withdraw when they accepted senior positions in the WTO or government service. We are pleased to offer a foreword by the Director-General of the WTO, and chapters by two of his predecessors. We also have contributions from a past Deputy Director-General, two Appellate Body Members, and past and present Members of the WTO Secretariat and the diplomatic corps. We are also fortunate to count among our contributors top legal practitioners and well-known professors of law and economics.

Our second goal was to provoke debate but to avoid rhetoric. This being said, we did not shy away from controversial new issues, nor have we avoided development-related concerns. Controversial chapters were presented to the Editorial Board and outside experts for review. Balance was further achieved by presenting more than one point of view, and by seeking geographical, economic and political diversity among contributors.

Our third goal was to produce a readable and lively work. This necessitated an enormous amount of patience and time on the part of our contributors—many of whom have revised and updated their chapter several times. It has also necessitated the patience of several members of the Editorial Board to whom we have turned for advice. The result, we hope, is a challenging and often lively treatment of the WTO Agreements, made only somewhat uniform by templates provided to each author in an attempt to avoid a "cacophony of styles".

We had originally planned to limit the book to the legal aspects of the WTO. However, the publisher urged us to expand its scope to include economic and political aspects of the international trading system, as well as a series of chapters examining the WTO from the viewpoint of a number of individual members. We hope that readers find these additional topics useful and informative.

The book is divided into five principal parts. The first part is introductory in nature. One chapter discusses the history of the Uruguay Round. Other chapters deal with the politics of trade policy development and organizational aspects of the WTO.

Part II analyses the Legal Framework governing the international trade system. It is divided into two sections, Institutional Issues and the Uruguay Round Agreements, with the latter including an examination of both the multilateral and the plurilateral agreements. This part is divided into three subsections: (1) a detailed legal analysis of each of the substantive "Covered Agreements", (2) ten chapters on the Dispute Settlement system, merited because it is one of the most significant achievements of the Round, and (3) an examination of other important legal issues, more specifically Special and Differential Treatment of developing countries, national security, transparency and customs classification. Customs classification, while falling under the purview of the World

Customs Organization rather than that of the WTO, is included in this subsection because of its importance in international trade and because classification issues have arisen in the context of the WTO.

Part III of the book deals with what we have called "Economic and Political Issues". This part begins with an analysis of the basic economic principles applicable to international trade, then turns to economic questions associated first with some of the more important WTO Agreements, and second to economic questions associated with key trade policy issues such as environmental and labor-related issues. Part III then examines important and timely political issues as regionalism, developing country concerns, and new and controversial issues that are not now covered by the WTO system but are, at least in some cases, candidates for inclusion in the system in the future. These include E-commerce, investment, competition, labor rights, environmental issues, human rights, and gender issues.

Part IV consists of a series of what we have called "country reports"—an analysis of the WTO system from the viewpoint of particular countries, ranging from the Quad countries (the United States, Canada, the EU, and Japan) to one of the smallest members, Mongolia. We hope that these chapters, most of whose authors are present or former senior trade officials, will provide a useful and slightly different perspective.

Part V, while not a Conclusion as such, looks toward the future, touching briefly on important issues such as the Doha Work Program and globalization.

We are grateful to many people for their assistance in the creation of this book. Alex Schwartz, formerly of Kluwer Academic, had the idea for the book. We particularly wish to thank Marilea Fried and Jill Strathdee of Springer for their unfailing support and enthusiasm. Members of the Editorial Board have been extremely helpful, as have Kevin Kennedy and Simon Lester, both of whom have given very freely of their time. Lastly, we gratefully acknowledge the contributions of Ali Oromchian and Boris Figeli.

Finally, we wish to dedicate this book to the memory of Anna Morner of Queen Mary's and Westfield College, University of London, one of the original editors, who died in a tragic accident in the fall of 2000.

I. Introduction

The Uruguay Round negotiation was the eighth postwar multilateral trade negotiation conducted under the General Agreement on Tariffs and Trade ("GATT"). As with other GATT negotiations, its purpose was to liberalize trade. One might have expected the Uruguay Round, as with other GATT negotiations, to continue the steady movement toward a more open and predictable international trade regime. It did not do this. Instead, the Uruguay Round produced a profound alteration of the trade regime in response to an equally profound transformation of international economic relations. It amounted to system change in the world economy.

The task for this chapter is to examine what factors precipitated the Uruguay Round, and what pressures led to its successful conclusion. This examination is less straightforward than would be the case regarding other negotiations held under the GATT. Since the formation of the European Economic Community ("EEC", or "Common Market") in the late 1950s, there have been three multilateral trade negotiations under GATT auspices. The first was the Kennedy Round of 1963–67. The Round was initiated by the Kennedy Administration in response to the creation of the EEC and the fear that American products would be shut out of an integrated European market.[1] The second negotiation was the Tokyo Round of 1973–79. It was established in the wake of the U.S. decision in 1971 to abandon the Bretton Woods link between the dollar and gold, which created a crisis in the postwar system of fixed exchange rates.[2] As part of this decision, the United States applied a surcharge on imports and demanded international action to address its first trade deficit in the 20th century.

Both the Kennedy and Tokyo Rounds were induced by large-scale policy change in leading countries. By comparison, there was no comparable challenge to the multilateral trade system by a leading actor in the run-up to the Uruguay Round. Instead, the early 1980s in which the Uruguay Round was conceived was a recessionary period that affected all countries, and it contributed to widespread uncertainty about the performance of the world economy. In these circumstances, the factors that led to the Uruguay Round negotiation were less evident than were those that precipitated the Kennedy or Tokyo Rounds. The reasons that led to its eventual successful conclusion were also opaque.

This chapter will therefore explore the reasons that the Uruguay Round was initiated, and why it was concluded some eight to twelve years later. It will focus on systemic factors that affected the trade policies of all countries, and not those factors that were specific to individual countries. The chapter will make the argument that the world economic system underwent profound changes in the 1980s and early 1990s, and that the Uruguay Round can be seen as a collective adaptation to those changes.

II. Resume of the Uruguay Round

A. Overview

How significant was the Uruguay Round? One way to assess the Uruguay Round is to compare it to the Tokyo Round of 1973–1979, which in its time was regarded as the most significant multilateral negotiation undertaken within the GATT. The significance

[2] GATT, International Trade 1985–86 (1986) at 26. *See also* Gilbert R. Winham, International Trade and the Tokyo Round Negotiation (1986).

of any negotiation is a function of the parties, issues, and results of the negotiation. The active *parties* in the Tokyo Round were mainly developed countries, and the developing countries were less involved. By the conclusion of the Round, few developing countries had signed even one of the nine agreements produced in the negotiation.[3] By contrast, the Final Act of the Uruguay Round (which committed countries to accept the Uruguay Round Agreements subject to ratification) was signed by 111 countries, the majority being developing countries.[4] Developing countries were active in all phases of the Uruguay Round, and their involvement broadened the potential for tradeoffs and the package deal that ultimately was agreed upon. The strong support of developing countries was instrumental in encouraging the major parties—the United States and European Union—to settle. It is true that the diplomatic behaviour of the Uruguay Round still reflected the bipolar structure that had characterized the Tokyo Round, but the former was nevertheless impacted by new actors that had the capacity to force changes in the process and outcome of the negotiations.

The *issues* negotiated seriously in the Tokyo Round included tariffs—which had been the exclusive subject of most previous GATT negotiations—and a number of non-tariff measures, including government procurement which had not previously been addressed in GATT negotiations. In the Uruguay Round, participating countries took up all of the issues that had been on the Tokyo Round agenda, plus the "new" issues (services, intellectual property and investment), institutional issues (dispute settlement and the creation of the WTO), and textiles, which had been excluded from GATT multilateral disciplines. Finally, agriculture and safeguards, which failed in the Tokyo Round, were again dealt with on the Uruguay Round agenda. The conclusion is that negotiators attempted a much broader and more significant agenda in the Uruguay Round than they did in the Tokyo Round.

The main *results* of the Tokyo Round were multilateral tariff concessions plus six codes on non-tariff measures that were binding only on those Contracting Parties which chose to accept them. With the exception of government procurement, most of these codes simply extended existing GATT articles. By contrast, the results of the Uruguay Round were remarkable on several dimensions. Not a person for overstatement, the late Professor Raymond Vernon observed shortly after the conclusion of the Uruguay Round that "the agreements, if taken at their face value, show promise of reshaping trade relationships throughout the world."[5] Vernon's statement, if taken at face value, reflects the stunning accomplishment of the negotiation.

One dimension of the Uruguay Round results was the creation of a new international organization, the World Trade Organization ("WTO"), that completed in form the work begun with the aborted International Trade Organization ("ITO") of 1948. Prominent in the new organization was the dispute settlement system that operationalized the concept of compulsory arbitration in trade disputes between Members. Second, liberalizing agreements were established in agriculture and textiles, two areas that are critical to developing countries and other primary products exporters, and which had been carved out of GATT disciplines for most of the post-war period. In agriculture particularly, the agreements placed limitations on internal support programs and export subsidies, and provided for improved market access. Third, the Uruguay Round produced agreements in new areas

[3] By March 31, 1994, only 29 developing and transitional countries had signed one or more of the Tokyo Round Agreements, GATT, GUIDE TO GATT LAW AND PRACTICE 1056–59 (1994).

[4] *Results of the Uruguay Round Signing Ceremony of April 15th, 1994 in Marrabesh, Morocco.* GATT, NUR086, 18 April 1994.

such as services and intellectual property, thereby sharply expanding the scope of the old General Agreement and keeping it abreast of new developments in the international economy. Overall, the Uruguay Round substantially deepened the obligation of countries to practice more liberal trade policies.

In sum, the accomplishments of the Uruguay Round dwarfed those of the Tokyo Round. The Tokyo Round was an important achievement, but it should be understood mainly as a methodological breakthrough in that it developed in the GATT the capacity to define and negotiate non-tariff measures.[6] By contrast, the Uruguay Round was a substantive breakthrough; it successfully applied the Tokyo Round methodology of non-tariff negotiation to the broad range of trade issues that arose in the 1980s. The Uruguay Round represented a major deepening of the international trade regime, and was perhaps as significant as the creation of the GATT itself.

B. Chronology[7]

The chronology of the Uruguay Round unfolded in stages, which is typical of the negotiation process. Stages are usually delineated by important events, or stopping points, in a negotiation, but their main analytical value is that they signal a change in the behaviour of the parties, and hence a change in process. In the Uruguay Round, there were five such stages. This is not counting the pre-negotiation (1981–86), which was a process with a different objective, namely, to set an agenda for the subsequent negotiation.

The Uruguay Round commenced formally on September 20, 1986 with the adoption of the Uruguay Declaration at a Ministerial Meeting of the GATT Contracting Parties held in Punta del Este, Uruguay. However, the impetus for this action had begun in the United States after 1979, when a domestic campaign got underway to promote the inclusion of services in a new GATT negotiation. This campaign was carried by US diplomats to the OECD and the GATT, where European Community officials who were initially sceptical gradually became proponents of a new negotiation that would include trade in services. In 1982, after sustained pressure by the United States and its supporters, a GATT Ministerial Meeting was held ostensibly to examine the multilateral trading system, but also to consider initiating a new negotiation. The Meeting failed to find consensus on the latter point, but it did produce a Work Program that permitted analysis of negotiable issues to continue.

The main cause of division at the 1982 Ministerial Meeting was the opposition by developing countries to a new negotiation that would include services and other new issues before adequate progress had been made on traditional issues such as textiles and agriculture. This opposition led to one of the severest tests of the trading system in GATT history, and was only partially reconciled by the time the Uruguay Round got underway. In the Uruguay Declaration of 1986, following a difficult week-long Ministerial Meeting that produced a tenuous consensus between developed and developing countries, a formula was accepted that called for services to be negotiated separately from goods. This formula permitted the Uruguay Round to begin, but it became progressively ignored as the negotiation took shape after 1986.

[6] WINHAM, *supra* note 2, Chapter 2, "Background: Creating the Capacity to Negotiate."

[7] The reader is encouraged to consult two excellent histories and two excellent memoirs: JOHN CROOME , RESHAPING THE WORLD TRADING SYSTEM: A HISTORY OF THE URUGUAY ROUND (1995); PREEG, *supra* note 1; ALAN OXLEY, THE CHALLENGE OF FREE TRADE (1990); and HUGO PAEMEN AND ALEXANDRA BENSCH, FROM THE GATT TO THE WTO: THE EUROPEAN COMMUNITY IN THE URUGUAY ROUND (1995).

The *first* stage of the Uruguay Round negotiation, from September 1986 to December 1988, encompassed the initiation of the negotiation through to the Mid-Term Review of December 1988, an event negotiators intended as a stocktaking session to prepare for the final movement toward an agreement. The main effort of negotiation at this stage was the exploration of country positions, and the development of policy mechanisms (such as the concept of the "aggregate measure of support" in the negotiations on agriculture) to discipline national trade practices. The Mid-Term Review established solid progress in many areas (e.g., dispute settlement), but it failed to produce an acceptable interim position on agriculture, with the result that four extra months were needed to regain forward momentum in the negotiation.

The *second* stage, from December 1988 to December 1990, was a drive toward final agreement, and was marked by an effort to produce definitive wordings in legal drafts, and to settle a myriad of bilateral and multilateral issues between parties. The negotiations were largely technical and were intended to conclude at the Brussels Ministerial Meeting in December 1990; however, failure began to become evident by the summer of 1990 as countries were unable to establish the convergence necessary for negotiations to reach closure. The momentum of the negotiations required that the Brussels Meeting take place, but it was clear before it began that the absence of convergence in the draft agreements insured that the meeting would be a failure. Again the Uruguay Round recorded a failure, with the result the negotiators were forced to realize the full enormity of the task before them.

The *third* stage, from December 1990 to December 1991, began with a sustained political effort by Director General Arthur Dunkel to restart the negotiation, which produced an agreement on a revised formula for the agricultural negotiation. Following this, the third stage picked up where the second stage left off, and was mainly a continuation of technical negotiation. Draft texts were under construction in most areas, and bracketed text, indicating disagreement, was removed in a step-by-step process. A deadline was set for December 1991, but again it became apparent by autumn that the needed political decisions were unlikely to be forthcoming to allow completion of the negotiation. In December, 1991, the negotiations were halted, but in a remarkable move, the GATT Director-General—in the absence of general political agreement between governments—asked the chairmen of negotiating groups to table a document that represented their own view of a consensus text in their area of responsibility. These documents, which were partially but not completely negotiated texts, were compiled in the "Draft Final Act Embodying the Results of the Uruguay Round of Multilateral Trade Negotiations", ("DFA") known also as the Dunkel Draft. *Faute de mieux*, the DFA was the point of departure for much of the remaining negotiation in the Round. The DFA symbolized the power, but also the limitations, of the technical side of negotiation to shape the political decisions that lie behind negotiated agreements.

The *fourth* stage, from December 1991 to June 1993, was wholly different from the preceding stages. In complex negotiation there has to be a balance between progress on technical and political decision-making. By January,1992, it was clear that the former had occurred, but the latter was seriously in arrears, with the result that the Round essentially stalled in Geneva. The cause was the agricultural negotiation. Protectionism in agricultural trade has been a longstanding problem for many countries in the GATT system, but in the Uruguay Round the inherent difficulties of the agriculture portfolio became compounded by the fact that this issue pitted the interests of the major players—the United States and the European Union—against one another. These differences stemmed mainly from the fact that since the 1960s Europe established a protectionist policy under

the Common Agricultural Policy, while the United States was moving toward a comparative advantage in agricultural exports. The negotiation thus turned into a politicized contest between superpowers, and for eighteen months the main activity of the Uruguay Round was a series of bilateral encounters between U.S. and EU officials. This blockage halted progress in areas other than agriculture, and even between other countries. Before the end of this period, the European Union and the United States reached a partial resolution of their difficulties in the "Blair House" accord on agriculture, but agriculture continued to be the major stumbling block to a general agreement until very late in the negotiation.

The *fifth* stage, from June to December 1993, was relatively brief. It started with a preliminary agreement on market access reached between the United States, European Union, Japan and Canada at the Tokyo Economic Summit in July 1993, and continued with an accelerated negotiation process in Geneva under the leadership of newly-appointed GATT Director-General Peter Sutherland. Tariff reductions and service access commitments received disproportionate attention as the negotiation moved toward a conclusion: these issues represented calculable monetary concessions offered to trade partners, and were therefore among the last issues to be negotiated. Encouraged by the Director-General, the negotiation was conducted at a higher political level than had been the case previously. The U.S.-EU dispute over agriculture continued to be problematic, and was only resolved in a second "Blair House agreement" on December 5, 1993. This agreement paved the way for a frantic final round of multilateral tariff and service concessions, and for final agreements in troublesome areas such as anti-dumping and audio visual services. The negotiation concluded on December 15, 1993, the deadline that had been announced by Director-General Sutherland the previous September.

In reflecting on the events of the Uruguay Round, one is struck by two features of this negotiation: first, it was extraordinarily difficult to get the negotiation started; and second, the main lines of the agreements were effectively settled about eighteen months before the negotiation could be concluded politically. Both these features suggest that even though the Uruguay Round was a hard-fought bargain between parties, it was even more a deliberate decision by all parties, especially the major parties, to move toward a substantially changed regime in their trade and economic relations. These features direct the main explanation of the Uruguay Round to factors that lie outside the immediate exchange of proposals by the parties. The factors that most influenced the outcome of the negotiation lay in the world economy itself, especially the changes that were occurring in that economy before and during the negotiation of the Uruguay Round.[8]

III. The Launch of the Uruguay Round Negotiation

Nations enter negotiations with certain national objectives, and these were summarized in the early period by the delegates to the Uruguay Round. For example, consider the statement of the U.S. delegate to a GATT preparatory session in 1985. As recorded in the minutes: "The representative of the *United States* . . . accepted certainly what the representative of India had said that the real objective [of a new negotiation] was to

[8] Odell has examined market conditions as an explanation for international economic negotiations, which is analogous to the argument presented here. *See* John Odell, *Understanding International Trade Policies: An Emerging Synthesis*, 43 WORLD POLITICS 139 (October 1990).

re-establish confidence in the multilateral system."[9] But what had caused countries to lose confidence in the system in the first place? In short, what events propelled countries to commence an undertaking as far-reaching as the Uruguay Round eventually became? The most plausible explanation is that the Uruguay Round was initiated because countries recognized that the early 1980s were a turning point for the world economy, and that fundamental changes were occurring that would call into question the traditional GATT structure. This recognition led the United States to take the lead in calling for a new negotiation, but other countries, especially Japan, the small developed countries and some developing countries, also supported the early U.S. initiative.[10] These countries were motivated by diverse concerns, as noted below, but they shared a common goal to preserve the multilateral trading system and to make it more responsive to the economic problems they faced in their domestic economies.

A. Declining Performance of the World Economy

In the discussions leading up to the Punta del Este Declaration, GATT parties had been concerned about the slowing of the world economy which became evident in the 1970s. From the early 1950s onward, the international economy enjoyed a period of prosperity that was hitherto unknown in the Twentieth Century. For example, in a study of 32 countries (including 15 developing countries), Angus Maddison found that the average annual compound growth rate for the period 1950–73 was 5.1 per cent, approximately double the rates of two earlier periods in the century.[11] For developing countries, the rate was even higher at 5.3 per cent for the period. Growth rates of trade were also exceptionally high in the 1950–73 period, and arguably contributed strongly to general economic growth. Underlying both trade and economic growth were annual increases in productivity (GDP/person-hour), which in OECD countries rose to 4.5 per cent for 1950–73 period, from an average of 1.9 per cent in the first half of the century.[12]

The economic strength of the period from 1950 onward resulted from the stability of the post-war international economic system, coupled with the domestic and international policies pursued by the major countries. The international system explicitly promoted development, as evidenced by steady flows of capital, including foreign aid, to developing countries. Domestic policies in developed countries were directed toward an expansion of demand and employment. Capital investment was everywhere emphasized, and where it occurred overseas in the form of foreign investment, it promoted technology transfer and accelerated economic development.[13]

After 1970 the situation changed, as indicated by the changes in total world production and total exports. The growth in world production and exports slowed to 3.4 and

[9] Senior Officials Group, *Record of Discussions: Note by the Secretariat* (GATT Doc., SR.SOG/2 of November 22, 1985) at 17. This observation was supported by the Chief Negotiator of the European Union: "Its [the Uruguay Round] aim was quite simply to carry out a complete overhaul of the multilateral trading system, whilst at the same time broadening and deepening its scope." Paemen and Bensch, *supra* note 7, at 89.

[10] A former Australian Head of Delegation to the Uruguay Round has observed: "When the United States started advocating a new trade round, its first supporters were Japan, the smaller industrialized countries and some of the Latin Americans, mainly the agricultural exporters. The European Community was ambivalent." Oxley, *supra* note 7, at 97.

4.5 per cent respectively in the period 1973–87, down from a high of 5.1 and 7.7 per cent in the 1950–73 period.[14] Data compiled by the GATT itself confirm Maddison's generalizations, and present an even starker picture of declining economic performance as the 1960s gave way to the 1970s. For example, GATT figures show that world production and world exports grew yearly at 6 per cent and 8.5 per cent over the period 1963–73, but fell to 2.5 per cent and 3.5 per cent over 1974–85, the period immediately preceding the Uruguay Round negotiation.[15] These figures reflect especially the serious impact of the recession of the early 1980s on international trade. The conclusion to be drawn is that by the mid-1980s the world economy was going from bad to worse.

Inflation was contained in the 1960s, but it began to increase after the break-up of the Bretton Woods monetary system in 1971, and then accelerated rapidly with the shock of increasing oil prices after 1973. The oil shock had an immediate effect on production and trade in OECD countries, but other less dramatic factors had even greater impact. Productivity growth which had been at historically high levels began to slip, and the average annual productivity growth rate of 4.5 per cent for the period 1950–73 fell to 2.2 per cent for the period 1973–86.[16] A further factor was domestic economic policy, which gradually shifted from maintaining high demand to fighting inflation. The focus on inflation—with attendant high interest rates—forced countries to accept a slowdown of growth and an associated rise in the level of unemployment.[17]

World production recovered sharply in 1976, but then trended downward for the next six years to conclude in the recession of 1982. Trade performance was equally dismal. The combination of high interest rates, a further oil price escalation, and reduced trade and investment flows, brought many developing countries to the brink of fiscal collapse and focused attention on emergency programs for debt restructuring and relief. In sum, by the early 1980s, it appeared to many that the world economy was performing poorly for developed countries, and contributing to crisis and dislocation in developing countries. This situation created an incentive for governments to re-examine international trade policy.

B. The Decline of Agriculture

Agriculture was an historic and politically important component of trade, and its decline was a central concern for those countries that sought a new trade negotiation. By the 1980s, agriculture had long since fallen to a small proportion of industrialized country economies, but it continued to be a major component of the economies of developing countries. However, its share of the domestic economy in both developing and industrial countries had been dropping in recent decades. As for international trade, agriculture represented almost half of world merchandise trade in 1950, but its share had declined to about fourteen per cent by the mid-1980s.[18] This decline was relative and not absolute, and is related to the secular trend toward manufactures (and later toward services) in modern industrial economics in the postwar period. The natural decline of agricultural trade was compounded by an increase of protectionism by major importers, particularly the European Community, as exporters brought increasing pressure on domestic producers in a slow-growing market.

[14] MADDISON, *supra* note 11 at 67.
[15] Data compiled from GATT, INTERNATIONAL TRADE, Vols 1981/82, 1983/84, 1985/86, and 1986/87.

[18] GATT, INTERNATIONAL TRADE, Vol. 1987/88, 29.

The effect of slow growth in agricultural trade was especially felt in countries that were agricultural exporters. For example, Argentina's exports grew only from 8.4 percent of GDP in 1950 to 8.7 percent in 1986, while in Australia the equivalent ratio actually fell from 22.0 to 13.5.[19] As a result, both countries failed to benefit from a major source of growth enjoyed by many countries in the post-war period. Thus, the continuing decline of agricultural trade motivated agricultural exporters from Argentina to the United States to try again to liberalize agricultural trade in the Uruguay Round.

Attempts had been made to liberalize trade in agriculture in the Kennedy and Tokyo Rounds, but they failed mainly because of the unwillingness of the European Union to modify the protection afforded by its Common Agricultural Policy. By the 1980s, liberalization of agriculture had become a litmus test for many countries of the possibility of achieving any reform of the multilateral trade system. As the representative of New Zealand stated: "The longer a gross imbalance against agriculture in the international trading system remained the greater was the threat to the credibility of an international trading system committed to non-discriminatory treatment and maximizing opportunities for trade. Agriculture was a sector of key importance for developed and developing countries alike. It had assumed the touchstone of commitment to the new round proposal."[20] The statement of New Zealand, which was echoed by many other countries, made it clear that the demand for the liberalization of agricultural trade created pressure for a new multilateral negotiation.

C. Trade in Services

In the run-up to the Punta del Este Declaration, the discussions focussed very much on services. The role of services in the international economy is by now well known, but in the early 1980s the situation was much more opaque. Services such as transport costs or insurance were generally categorized as "invisibles", and were treated inconsistently in the current account statistics of different nations. GATT statistics focused on merchandise trade, and not services. However, governments were well aware of the increasing importance of services at the domestic level, and by the mid-1980s this information was being published by the GATT.[21]

As noted earlier, the issue of services divided the developed and developing countries during the pre-negotiation to the Uruguay Round. Data from the GATT indicate that in the thirty years from 1950 to 1980, all countries showed a decline in the work force in agriculture, and a corresponding increase of labour in industry and services.[22] However, the decline of agriculture and the movement into services was much greater in developed as opposed to developing countries. It was recognized that unless trade in services was expanded, there would be little prospect that trade would continue to promote the growth of developed countries in the future, as it had done in the past.[23] A further issue was that some services (e.g., insurance or financial services) were linked to merchandise trade,

[19] MADDISON, *supra* note 11, at Table D-6, 143.

[22] *Id*. at 25.

[23] *See* William E. Brock, *A Simple Plan for Negotiating on Trade in Services* 5:3 THE WORLD ECONOMY 229 (November 1982). *See also* PAEMEN AND BENSCH, *supra* note 7, at 17: "For societies keen to retain the privileges of wealth, the limits to the development of the North-North trade in goods provide justification enough for launching a new initiative to conquer new markets. When it comes to expanding markets, the services sector appears to be promising."

and failure to liberalize the former would restrict growth of the latter. Finally, although trade data show that trade in services is only about one-fifth of total world exports, statistics from the 1980s showed trade in services growing at 7.5 per cent on average against an average of 5.5 per cent for merchandise for the decade.[24] The unavoidable conclusion from these data was that liberalization of trade in services was necessary to maintain the GATT as a relevant instrument of international trade policy for developed countries.

The United States took the lead in pushing for the inclusion of trade in services in a new GATT negotiation. "In today's world," stated a U.S. representative at a preliminary meeting, "the services sectors were the engine of growth of the world economy and were a major contribution to technological improvement and competitiveness for goods and services."[25] This policy reflected the economic interests of the United States, which had a higher share of services in the domestic economy than other OECD countries.[26] However, the U.S. lead was quickly followed by the smaller industrialized countries, as indicated in a statement from a Swedish representative: ". . . the Nordic countries . . . considered that one of the important objectives of a new trade round should be the creation of a system that was capable of handling not only the trade policy problems of today but also those of tomorrow."[27] Thus the attraction of adding services to the GATT agenda was that it promised to keep the trade policy agenda consistent with the changes that were already occurring—or about to occur—in actual trade relations between countries.

The United States attempted to convince the European Union in the early 1980s to support a new negotiation centring on trade in services, but it made little headway until the GATT Ministerial Meeting at Punta del Este in 1986. The EU delegation was sensitive to the opposition to the inclusion of services among some influential developing countries, and attempted to find a middle ground. However, what convinced the Europeans was the recognition that Western Europe accounted for over half of the world trade in services by the mid-1980s.[28] Moreover, services were likely to be as much a growth area for Europe as for the United States in the future. The economic interests of the EU clearly supported a GATT negotiation on services.

D. Developing Countries

Developing countries were instrumental in building momentum toward a new trade negotiation. This was overshadowed by the fact that a group of developing countries led by India and Brazil conducted a campaign of pitched opposition to the inclusion of some issues like services on the negotiating agenda.[29] The reality, however, was that a changing world economy both made developing countries important to the international trade system, and in turn reform of the system important to developing countries.

Developing countries were important in two respects. On the one hand, some developing countries were assuming a much larger role in the international trade system by the

1980s than had been the case previously. By 1985, China, Hong Kong, Korea and Saudi Arabia were included among the world's top twenty exporters and importers, while Brazil and Taiwan joined the list as exporters and Singapore joined as an importer.[30] Developing country trade was becoming increasingly industrialized, and by 1987, manufactures accounted for nearly half of developing country exports, up by twenty per cent from 1980.[31] Developing countries were also becoming an increasingly important market for developed countries, and by 1987 they took approximately one-third of merchandise exports from Japan, one-fourth of exports from North America, and one-eighth of exports from West Europe.[32] These circumstances motivated developed countries to seek a new negotiation to incorporate developing countries more firmly into GATT rules.

On the other hand, developing countries had their own reasons to seek a new negotiation. The recession and debt crisis of the early 1980s devastated many developing country economies, and resulted in sharply increased debt repayments with a consequent decline in imports, which constituted the real cost of the debt crisis.[33] The experience of the 1980s led developing country governments to recognize the stake they had in expanded exports and in an open trade system more generally. For example, consider the following extract from the GATT discussions in 1985: "The representative of *Brazil* said that. . . . his country was interested in promoting economic growth on the basis of an economy open to foreign trade, and needed to generate trade surpluses in a very large magnitude for the servicing of the external debt which consumed only in interest payments around 40 per cent of export earnings."[34] The position of Brazil was echoed by numerous other developing countries in the preparatory meetings for the Uruguay Round.

E. The Growth of Trade Dependence

Apart from specific concerns over their performance in the world economy, some countries had general concerns over the increasing interdependence between national economies in the world economy. For countries like Switzerland or Austria, this phenomenon had been a factor in economic policy throughout the postwar period, and it led those countries to pursue liberal trade policies.[35] Other effects of increasing interdependence can be seen in Canada's decision to initiate free trade with the United States. Following the recession of the early 1980s, the government assessed Canada's future economic prospects and concluded that Canada's market was too small to stimulate efficient production by itself, and that an increase in productivity—on which the standard of living was based—could only be achieved through freer trade. This assessment led the Canadian Government to support freer trade bilaterally with the United States, and multilaterally in the Uruguay Round.

Increasing interdependence and rising trade to GDP ratios also influenced large as well as smaller industrialized countries. In Europe, the importance of exports grew rapidly. Even in economies where trade volumes were historically low relative to the domestic market, trade dependence increased rapidly after 1950. For example, the export/GDP ratio of Japan more than doubled (4.7 to 10.8 per cent) from 1950 to 1986, while that of

the United States went from 3.6 to 5.2 per cent.[36] In the latter country, exports constituted over 20 per cent of industrial output.[37] These figures led many Americans to conclude by the 1980s that: "The United States has become heavily dependent on the world economy."[38]

The evidence of increasing trade dependence encouraged officials in the United States as well as in other countries to pursue the option of a new trade negotiation. Rising trade dependence meant that national economies were becoming increasingly externalized, and therefore were more vulnerable to the actions of other governments. Negotiating new international trade rules was a means to promote market access and economic security in the external economy, which is similar to the role governments have often performed in domestic economies.

F. The Choice of Reforming or Losing a World Trade Regime

There was widespread agreement at the start of the Uruguay Round that the objective of the negotiation was to restore confidence in the GATT multilateral trade system. The reason governments felt a need to revitalize the system was the mismatch between the GATT system and the direction the world economy was taking by the early 1980s. The GATT contract was established to expand trade. However, it was questionable whether this purpose was being served, given the slowdown of the international economy in the 1970s and early 1980s; the inability of the GATT to tackle protectionism in agriculture or textiles; and the development of the service economy.

There were incentives other than developments in the world economy that encouraged countries to negotiate the Uruguay Round. One was the threat to multilateralism posed by regional trade agreements, especially the expansion of the European Union, and the start of a bilateral trade negotiation between Canada and the United States. Another was the widespread use of voluntary restraint agreements, or other similar mechanisms, designed to circumvent the fundamental MFN requirements of the GATT. Yet a third incentive was the use of unilateral trade sanctions by the United States, inspired partly by the struggle of the U.S. Congress to take control of trade policy from the Executive.[39] All these actions were indicative of a world trade system that was not working well, and they likely did encourage countries to enter a negotiation to improve that system. However, the principal incentive to negotiate was that the world economy was becoming a different entity from the one which the GATT was created for, and trading countries faced a choice either of revitalizing multilateral trade rules or risking their loss altogether.

International negotiations proceed more on the basis of fear than opportunity, and often a sense of apprehension or threat is the catalyst that initiates the process. In the Kennedy and Tokyo Rounds, that catalyst was provided by the actions of large trading countries, which created an incentive to negotiate in their trading partners. In the Uruguay Round, the threat was more diffuse, and it originated with systemic changes in the world economy that were not under the control of any one or several countries. The threat took time to comprehend, and as a result it took some six years for GATT members to complete the pre-negotiation stage and to initiate formally a new negotiation. It was clear by the mid-1980s that the direction the world economy was taking, and the concern this

[39] *See* PATRICK LOW, TRADING FREE: THE GATT AND US TRADE POLICY (1993). Low suggests that unilateral actions alarmed U.S. trading partners including the EU and may have created an incentive to negotiate.

created for the relevance of the trade system, were the reasons why governments felt a new negotiation was needed.

IV. The Conclusion of the Uruguay Round Negotiation

There are differences between the beginning and the conclusion of a negotiation. At the start, the parties' relationship to the negotiating environment is a distinctive feature. That environment, and parties' evaluation of it, largely determine whether parties will find benefit in collaboration, or instead will pursue their own solutions to policy problems. At the beginning of a negotiation, there are less likely to be trade-offs, or deals, or possible bargained solutions yet on the table that might distract the parties from an analysis of the general circumstances in which they find themselves.

The conclusion of a negotiation is different: the situation is much more complicated. There are of course the issues on the table, and the behaviour of negotiating partners in relation to those issues. But then there may be further pressure from the external environment. Events do not stand still while negotiators deliberate, even less when these deliberations involve the international economy. As much as the world economy had appeared to change by 1986 when the Uruguay Round was started, there was even greater perception of change between 1986 and 1993 while the Uruguay Round was underway. These changes were *policy reform* and *globalization.* Both these changes generated renewed pressure to settle outstanding issues and conclude the GATT multilateral negotiation.

A. Policy Reform

The Uruguay Round was negotiated in a period which saw a startling shift in economic ideology toward the free market. The most prominent event of that shift was the breakup in 1989 of the Soviet bloc and Communist governments, which was a defining moment in the long contest between alternative systems.[40] The immediate effect of this event was felt in the easing of security arrangements that had been prominent during the previous forty-plus years of the Cold War. However, the more enduring impacts were political and economic. The fall of communism ensured the ascendancy of democracy as a preferred governing institution throughout the world. With democracy came greater communication with parts of the world that were theretofore isolated, especially communication based on greater concern for individual rights and representative government. The prospect for world cooperation was expanded, and the danger of division and international conflict was reduced.[41] This was a positive influence on a negotiation striving to reshape trade relations in the world.

In economic terms, the fall of communism also ensured the ascendancy of market principles in the world economy, which are the principles on which the GATT had been founded. Western countries were quick to recognize the value of this turn of events. For example, the Economic Declaration of the Houston G-7 Economic Summit of July 11, 1990 proclaimed unreserved support for ". . . the increasing recognition of the principles of the open and competitive economy," and it asserted that ". . . freedom and economic

[40] Lipsey has noted: "Rarely in human history has such a decisive verdict been delivered on two competing systems." Richard G. Lipsey, *Global Change and Economic Policy*, in THE CULTURE AND POWER OF KNOWLEDGE (Nico Stehr and Richard V. Ericson eds. 1992) 279–283.

[41] *See generally,* FRANCIS FUKUYAMA, THE END OF HISTORY AND THE LAST MAN (1992).

prosperity are closely linked and and mutually reinforcing." The Summit Communique further noted that: "The advance of democracy accompanied by market-oriented reforms is not just a European phenomenon," in reference to reform then taking place in various countries in the developing world. Indeed, the greatest impact of the fall of communism on the Uruguay Round was the disappearance of the model of the command economy, and the further discrediting of government intervention as a means to manage international trade relations. Add to this the loss of the Soviet Union and Eastern Europe as a hegemonic trading bloc, and the resulting pressure for economic change in many countries was intensified.

The enormity of the fall of communism obscured the fact that market-based reform had been occurring in various countries throughout the decade. Following the Second World War and up until the 1980s, developing countries largely pursued economic policies of import substitution industrialization ("ISI"). These policies called for import protection to stimulate the rapid development of industry, and led to government interventionism and bureaucratic control of the domestic economy. Most important, ISI policies led developing countries to resist integration into the world economy by maintaining restrictions on trade, investment and financial flows. Resistance to trade liberalization carried out in GATT multilateral negotiations was also part of this overall economic strategy.

Economic reform began in the early 1980s, although it took on different guises depending on the circumstances of individual countries. It commenced with the move toward deregulation in the domestic economies of the United States and the United Kingdom.[42] Deregulation only touched selected areas of the economy such as transport (e.g., trucking, air carriers, telecommunications), but it created a strong demonstration effect throughout the economy. Although such reform mainly constituted internal change, the size of the U.S. and U.K. economies insured that it would have a wider impact in the international economy.

The recession of 1981/82 produced a crisis in many countries that further hastened economic reform. The Mexican government came perilously close to default on its international payments, and then commenced a rejection of the policy of economic nationalism that it had pursued since the Revolution of 1910. In Canada a similar pattern unfolded. Stung by the recession, the Canadian government established a body—the Macdonald Royal Commission—to examine economic policy for the future. The main thrust of the Commission's report was that "we Canadians must significantly increase our reliance on market forces", and this conclusion formed the rationale for the recommendation to negotiate free trade with the United States.[43] The subsequent establishment of a bilateral free trade agreement marked the end of a century of trade protection under Canada's National Policy of 1879.

The need for a larger market to support domestic economic growth was the principal motivation for Canada's initiative for free trade with its largest trading partner. A similar motivation had previously led small European democracies to undertake liberal economic policies,[44] and it also inspired the export promotion strategies adopted in the 1970s by

[42] Cerny has defined deregulation as meaning "... the lifting or abolishing of government regulations on a range of economic activities in order to allow markets to work more freely ...." Philip G. Cerny, *The Limits of Deregulation: Transnational Interpenetration and Policy Change*, 19 European Journal of Political Research 173 (1991).

[43] Report of the Royal Commission on the Economic Union and Development Prospects for Canada, I, at 66 (1985) ("Report").

[44] Peter Katzenstein, Small States in World Markets: Industrial Policy in Europe (1985).

Taiwan and Korea.[45] By the mid-1980s, the movement toward reform was evident in many countries in the developing world, especially in Latin American countries such as Chile and Argentina, and in the ASEAN countries of Malaysia, Thailand and Indonesia. Reform continued into the 1990s, and in 1991 the largest GATT signatory, India, responded to a crisis in its external payments by liberalizing its domestic and foreign economic policies.

A similar move toward market reform was launched in the second superpower engaged in the Uruguay Round: the European Union. Concerned particularly about Japanese growth and the prospect that Europe might become a third ranking economic power behind Japan, the European Commission initiated "Europe 1992" as a plan to restructure intra-EU relations to be more consistent with market principles, and thereby to increase the internal coherence and external impact of the EU itself. The motivation for this action was consistent with reforms undertaken in other countries, for as noted by Sandholtz and Zysman: "In an era when deregulation—the freeing of the market—became the fad, it made intuitive sense to extend the European internal market as a response to all ailments."[46] With the EU thus engaged in market reform, it ensured that the movement toward deregulation was a worldwide phenomenon affecting both developed and developing countries in the world economy. Deregulation was part and parcel of a profound shift in economic values,[47] and in the aggregate could be fairly claimed to have created a revolution in national trade policies.

The move toward deregulation revealed some interesting policy differences between large and smaller countries in the international economy. The larger actors, particularly the United States and the European Union, were able to achieve reform through their own actions; consequently they directed their efforts toward their internal markets. For smaller countries, with typically a larger ratio of trade to GDP, it was convenient and perhaps necessary to use trade policy to promote change throughout the domestic economy. For example, in Canada the Macdonald Commission clearly underlined the link between trade policy and economic policy with the statement that: "Free trade is the main instrument in this Commission's approach to industrial policy."[48] In the developing world, trade policy served a similar purpose as observed by Alan Oxley, former Australian ambassador to the GATT:

> Trade liberalization will not address all developmental problems. But of all the options available to the industralizing world to address developmental problems over the next decade, it is the one within reach which can have the most dramatic effect.[49]

The conclusion is that for many countries trade policy served as a surrogate for deregulation as they struggled to liberalize their economies and to meet the challenges thrown up by the world economy of the 1980s.

Economic reform was pursued differently from one country to another, but its cumulative effect improved the prospects for a negotiated settlement at the Uruguay Round. What all countries wanted at the Uruguay Round was increased market access from their

trading partners, which would be accomplished through the liberalization of trade. The presence of economic reform insured that the demands for change that arose from the Uruguay Round negotiation were consistent with the changes already underway in various countries. Compliance with the actions requested by trading partners was made less onerous by the fact that those actions were already consistent with domestic policy. The Uruguay Round was an international step in a direction that many countries were already moving in their domestic economies.

B. Globalization

Globalization as a concept became commonplace in the early 1990s, but the term was neither consistent nor clear. Generally it expressed the sense of change and transformation that many perceived were occurring in the world economy. For example, two analysts expressed this perception as follows: "The world economy is changing in fundamental ways. The changes add up to a basic transition . . . ."[50]; while another claimed: "We are living through a transformation that will rearrange the politics and economics of the coming century . . . . There will no longer be national economies, at least as we have come to understand that concept . . . ."[51] The importance of globalization is that it was seen as a threat to national economies and the nation state itself, and it put pressure on national leaders to demonstrate that they were still in control of the economic forces that impacted their countries.

There were many factors that created the impression of a globalizing world. Some included "the simple extension of economic activities across national boundaries"[52], such as increasing communication or transportation, or rising proportions of foreign trade in national economies. Other factors involved "the functional integration of . . . internationally dispersed activities"[53], which could include the changes brought by the combination of foreign investment and modern information technology.

Of the various factors involved in globalization, two stand out as being particularly salient to the economic decision makers of the 1990s: *global financial transactions* and *foreign direct investment* ("FDI"). In both these areas, changes accumulated in the 1980s in a way that made decision-makers recognize the need to control change and to subsume it in the context of multilateral rules and governance. It is useful to review these factors to appreciate how changing circumstances increased the incentives for national governments to conclude the Uruguay Round negotiation.

1. Global Financial Transactions

The international economy underwent great change during the postwar period, but none was more striking than the scale of global finance.[54] From a low point following the Depression and World War II, international financial transactions were re-established by the late 1950s and then began to accelerate in the 1970s. By the 1990s, the daily turnover

[53] *Id*.

[54] Cohen has defined global finance as encompassing "... all types of cross-border portfolio-type transactions—borrowing and lending, trading of currencies or other financial claims, and the provision of commercial banking or other financial services. It also includes capital flows associated with foreign direct investment . . . ." Benjamin J. Cohen, *Phoenix Risen: The Resurrection of Global Finance*, 48 WORLD POLITICS 268, 269 (January 1996).

on foreign exchange markets simply dwarfed figures on global output, trade and overseas production, which were the indicators usually relied upon to measure the extent of the global economy.[55]

The expansion of foreign exchange trading was rapid. For example, in March 1973 during a currency crisis, a high of $3 billion was exchanged into European currencies in one day; but by the late 1970s, daily turnover on foreign exchange markets was estimated at $100 billion, and by the late 1980s the estimate was $650 billion.[56] Goldstein *et al*. compiled data on the expansion of foreign exchange trading in ten developed countries over the approximate period of the Uruguay Round negotiation, and show that daily foreign exchange turnover increased by 37 per cent from 1989 to 1992; the estimate for worldwide net turnover was $1 trillion, which was nearly double the total non-gold reserves of all industrial countries (i.e., $555.6 billion) in April 1992.[57]

The reasons for the growth in global finance are complicated and subject to academic disagreement.[58] The explanation likely begins with the movement toward a fluctuating exchange rate system in the early 1970s, which reduced the need for central banks to retain capital controls to defend national currencies at fixed values. Advances in information technology which facilitated the movement of capital between countries also played a role. Whatever the exact stimulus, governments in the 1980s proceeded to liberalize international capital movements, which in turn promoted competition between national financial institutions and greatly expanded the menu of financial instruments available in international commerce.[59] The lending activities of international banks accelerated quickly and were particularly instrumental in promoting the expansion of global financial markets. The gross size of the international banking market became larger than the total amount of world trade during the period of the initiation of the Uruguay Round, and was more than double (215.6 per cent) world trade by 1991.[60]

Global finance grew steadily from the early 1970s, but the impact of this phenomenon was not fully appreciated until the late 1980s when the enormity of the foreign exchange market led to popular speculation about the capacity of the global economy to overwhelm national economies and government policy making.[61] Given the hyperbole associated with global financial markets, it is important to assess what was new and not new about the circumstances of the early 1990s. First, the move toward globalization since mid-century was not a new phenomenon, but largely a reopening of an international economy closed down by depression and two world wars. The period

[55] Goldblatt *et al* have stated: "The ratio of foreign-exchange turnover to world trade has climbed from 10:1 in the early 1980s to more than 60:1 today." [60] WORLD INVESTMENT REPOPRT: TRANSNATIONAL CORPORATIONS, EMPLOYMENT AND THE WORKPLACE 120 (UNCTAD, 1994).

[61] *See, e.g.,* HOWARD M. WACHTEL THE MONEY MANDARINS: THE MAKING OF A NEW SUPRANATIONAL ECONOMIC ORDER (1990); and RICHARD MCKENZIE AND DWIGHT LEE QUICKSILVER CAPITALISM: HOW THE RAPID MOVEMENT OF WEALTH HAS CHANGED THE WORLD (1991).

1870–1913 represented a high point of international integration, during which restrictions on capital movements were minimal, cross-national ownership of securities was high, and capital outflows from investing countries reached very high portions of GDP.[62] Second, however rapid the rise of international financial flows, this did not create a single global market for capital which would be characterized by converging national interest rates. Most investment is financed domestically, and even though capital mobility rose continuously since the 1970s, it still did not reach the relative levels achieved in the 1920s.[63] Finally, the globalization of finance did not mean an end of the power of the state to direct and even control the national economies. Against the constraints introduced by capital mobility and fluctuating exchange rates, the state still retained the fundamental powers to tax, spend, and to direct transfers. In most countries, government spending as a proportion of GDP increased steadily since the 1960s.[64]

What was new about the world economy of the 1990s is that the global financial market included many more players than were present in earlier periods of high globalization, ranging from private actors such as pension funds, to bond-issuing subnational governments, to national governments that did not exist prior to mid-century. The sheer size of the foreign exchange market in comparison to world trade and output was unique in historical terms. The foreign exchange market is a largely open market, brought about in part by the liberalizing policies of nation states themselves. The result was that market morality became an inescapable condition and point of departure for actors in the world economy of the 1990s, with which the liberalizing thrust of the Uruguay Round was consistent.

2. Foreign Direct Investment

Foreign investment has caused a profound change in the international economy over the past three decades. The change is less a matter of the simple extension of economic activities across national boundaries, but, increasingly, a matter of the formal integration of geographically dispersed activities. More than any other economic variable, FDI is responsible for the passage from shallow integration to deep integration in the international economy.[65]

Foreign investment takes place when ". . . an investor based in one country (the home country) acquires an asset in another country (the host country) *with the intent to manage that asset*."[66] The reference to management is important, and distinguishes FDI from portfolio investment, which consists mainly of ownership of foreign stocks, bonds and other financial instruments. Historians generally agree that there were significant flows of FDI before World War I, particularly from Britain to its current or former colonies. However, war in 1914, then depression, and then again war in 1939 brought a retrenchment

in foreign investment as it did in financial flows more generally. After 1945, foreign investment resumed in what can be seen from the perspective of the 1990s as a series of three stages.

First, beginning in the 1950s, U.S. companies expanded manufacturing in Canada and Europe, and made heavy investments in oil and mineral production throughout the world. At this time FDI was viewed largely as an American phenomenon, and it stimulated concerns over sovereignty and the takeover of domestic industry by foreign interests.[67]

Second, by the early 1970s, FDI flows began to diversify as European companies invested abroad in sectors like textiles, clothing and footwear in order to take advantage of lower labour costs outside Europe. Concurrently, nationalistic objections to foreign investment began to attenuate, in part because European investors helped to diversify concerns away from investment as an American phenomenon, and as well because FDI was becoming increasingly valued as a tool for economic development.

Third, in the mid-1980s a sharp increase occurred in FDI flows, mainly from Japan and Europe, as multinational firms sought to contest global markets by accessing foreign technology and improving economies of scale. The boom in FDI flows started in 1985 following the recession of the early 1980s, continued to 1990, and then resumed after a brief downturn in 1990–91. The impact of surging flows during the 1985–90 boom was to more than double the accumulated world stock of FDI over the decade, from $517 billion in 1980 to $1.6 trillion in 1990.[68]

The 1985–90 FDI boom changed the structure of the international economy. Although FDI is a small proportion of domestic investment in all countries, from 1985 onward the growth of FDI was considerably more rapid than the growth of domestic investment. This indicates an increasing orientation toward the international economy by investors in many countries. Furthermore, the pattern of foreign investment changed. Many countries emerged as sources of foreign investment, including countries like Canada that had traditionally been host states for FDI. As well, developed countries that had mainly been the source of investment became major destinations for FDI; for example, by the late 1980s the U.S. share of outward stocks of international direct investment had fallen, and its share of inward stocks had risen to a nearly equal level.[69] Indeed, the 1985–90 FDI boom was largely a developed country phenomenon, and it was not until the early 1990s that developing countries began to increase their share of FDI inflows.

Finally, the FDI boom changed the relationship of global foreign production to trade. For the whole decade of the 1980s, foreign investment flows averaged an annual increase of thirty per cent, which was about three times faster than the growth of world exports and four times faster than growth in the world gross national product. The result was that the global foreign production of companies where ownership and financing lay outside the host country exceeded the total of world trade; for example, in 1992, some 207,000 foreign affiliates generated sales of US$5.8 trillion, while the value of global exports of goods and services was US$4.7 trillion.[70] It is clear that FDI and foreign production

[69] *Id*, at 8. In 1989, the U.S. share of world outward stocks of IDI was 27.9 per cent, and its share of inward stocks was 26.85. per cent.

[70] Recent Developments in International Investment and Transnational Corporations: Trends in Foreign Direct Investment 5 (1995).

had become an equal if not more important route to foreign markets as international trade.

An economic definition of globalization can have many aspects,[71] but the basic mechanism of change is foreign investment. As defined by the OECD, the globalization of industry is "... the transborder operations of firms undertaken to organise their development, production, sourcing marketing and financing activities."[72] The essence of globalization is the integration of production across national boundaries, or as Richard Lipsey has observed, a globalized economy is one which "... increasingly integrates both the financial and the production sectors of the economies of many individual countries."[73]

Globalization is important because it affects trade and trade policy. Again as noted by the OECD, "... international trade is being increasingly restructured by international investment and international collaboration between firms, as they expand and organize operations more broadly ..."[74] One effect of this in the 1980s was to reorganize trade on a regional basis, but in the 1990s this changed more toward a reorganization across regions. For example, OECD data indicated that although foreign affiliates generally produced for the markets in which they are located, the sales of U.S. and Japanese affiliates became less regionally concentrated over the 1980s, and increasingly directed toward inter-regional or global markets.[75] This was consistent with statements made about globalization in the auto industry, that: "In a global industry ... optimization on only a national or regional basis is not sufficient. Significant competitive advantage accrues to companies which can deploy their core capabilities with facility on a broad geographical scale."[76]

As for the impact of globalization on trade policy, it is undeniable that globalization exerted pressure on governments for more liberal trade policies.[77] This has led some to suggest the State is in decline, but as previously noted the evidence on this matter goes in the opposite direction.[78] What does occur, however, is that states will come under pressure from their business sectors to liberalize trade policy, and an example of this pressure has been the demands by business for faster tariff cuts than those established in the WTO (and NAFTA) accords. Beyond liberalization, there were demands for global trade policies that corresponded to the global markets that firms were increasingly engaged with. As

[71] For example, Ostry defines it as follows: "The ever tightening and more complex linkages among nation-states, first by trade, then by financial flows, and more recently by a surge of foreign direct investment have greatly enhanced the power and ubiquitousness of the multilateral enterprise in the international arena. This deepening integration of the world economy, fed or even led by the continuing revolution in information and communication technology has reinforced the shift to trade policy inside the border and the latent push to system harmonization." Ostry, *supra* note 13, at xvi–xvii.

noted in a Report of the OECD's Group of Thirty, "... the reality is that global companies competing in global markets ultimately require global rules ..."[79] The need for global rules was a powerful incentive to complete the Uruguay Round.

V. Impact of Globalization on the Uruguay Round

The lesson of the past decade was that it had become necessary to think differently about international trade. It was necessary to recognize that trade, which historically had always been the main economic link between national societies, was now being integrated into a broader set of relationships that included foreign investment, corporate alliances and other forms of collaboration. Trade in goods and services has been, and probably always will be, the mainstay of economic relations in the international economy, but it had become an element in a broader picture that had a different dynamic.

Was this lesson understood by the government leaders who directed and negotiated the Uruguay Round? The answer is not clear. It was of course understood by high-level observers, as demonstrated in the aforementioned paper published for the Washington-based Group Of Thirty describing the new policy agenda facing international trade.[80] But for those responsible for the conduct of trade negotiations, the specific (and competitive) issues of the negotiation likely commanded more attention than any broad generalities about change in the world trading system. In the communications between negotiators (especially from the United States and European Union), the focus was on defending the requests and offers previously put on the table, and there was less comment on reasons for concluding the negotiation than there had been previously for starting it. In the context of the heated debates that occur in the endgame of a negotiation, any indication that one regards an agreement as important or necessary can unfortunately be interpreted as a sign of weakness.

On the other hand, in GATT negotiation generally, there is one individual whose task is to get an agreement and who is therefore constitutionally empowered to speak for the importance of reaching an agreement. That individual is the mediator, who in GATT negotiations has traditionally been the Director-General of the GATT. In the Uruguay Round, Peter Sutherland served as Director-General for the last six months of the negotiation. He presented a series of speeches over that period, and then spoke out even more vigorously in the year following the Uruguay Round's conclusion as various countries undertook the critical ratification phase of the agreement. These speeches were designed to win support for a proposed new international trade regime, much as two centuries before the *Federalist Papers* were written to win support of the American people for a proposed new federal constitution for the United States. Just as the *Federalist Papers* provide clues as to why Americans accepted constitutional government, the Director-General's speeches provide some evidence as to the arguments he felt would convince governments to support the Uruguay Round Agreements.

One theme enunciated by the Director-General was the theme of change. "It was undeniable," said Sutherland, "that the GATT and the Uruguay Round are about change ... the changes that have, in any event, taken place in the world economy over the past two

[79] Geza Feketekuty, The New Trade Agenda at 29, Occasional Paper 40 (Washington, D.C.: Group of Thirty, 1992).

[80] The paper commenced with the statement: "As the Uruguay Round draws to a close ... a whole new set of challenges [vi3, globalization of production and markets] has emerged since the Uruguay Round was launched." The report concluded: "The multilateral trading system must inevitably adapt to the process of internationalization and globalization." *Id*. at 1, 31.

decades and . . . the change which will take place in the years to come."[81] That change was external and autonomous, and not something created and forced on governments by the GATT itself. As the Director-General said: "The GATT is an effect [and] not a cause of developments taking place at the most fundamental levels of national life."[82]

What were these changes? In the global economy, argued Sutherland, ". . . policies relating to money, finance and trade have become inextricably linked."[83] Stability in finance was necessary for expansion in trade, and a credible trade system was necessary for monetary stability. The system was more integrated, which resulted from the liberalization of exchange and capital restrictions, technological change, and innovations in the organization of international business operations.[84] Finally, led by FDI, the system was globalizing, and "liberalisation of international capital flows was in the vanguard of the current process of globalization of markets."[85]

The challenge presented by global economic change was one of structure and organization. Speaking at Davos, the Director-General said that ". . . change has certainly outstripped the existing structures for economic cooperation."[86] The result was ". . . a structural deficit in the world economy, in terms of both the making of policies and their execution."[87] Trade policy needed to be put on "a sounder institutional footing", in order to address the "increasing mismatch between GATT coverage and the realities of world trade [e.g., the growth of trade in services]."[88]

Finally, the solution was one of rulemaking and governance. Invoking Hayek's language that "where there is no law there is no freedom"[89], the Director-General argued that the multilateral rules represented by the Uruguay Round Agreements ". . . ensure freedom for economic agents to operate in their commercial interests across national frontiers . . . [and] also *enhance* the freedom of governments in their trade policy interventions, by defining the scope of actions permissible within the confines of international law."[90] The purpose of rulemaking was to govern change. "Multilateral trade negotiations are crucial," said Sutherland, ". . . because change needs to be harnessed and encouraged against the background of reasonable multilateral rules and disciplines. Without the GATT, the change will take place anyway but the law of the jungle will prevail."[91]

To sum up, the Director-General of the GATT presented a coherent line of argument in support of the Uruguay Round Agreements, based on the developments that had occurred

and were occurring in the world economy. In the absence of evidence to the contrary, and given that the Uruguay Round succeeded, one can assume that the Director-General's arguments were not only influential, but likely represented what national delegations may have felt but were constrained by the circumstances of the negotiation from voicing. The arguments were profound, and went to the heart of the problem of governance of the world economy. As observed in the *Wall Street Journal* on the eve of the successful conclusion of the negotiation, "... the [Uruguay Round] is not just a matter of pettifogging trade rules, it represents a fundamental decision about the direction of politics in the 21st century."[92]

VI. Conclusion

The Uruguay Round began with one set of concerns and ended with another. It started with the fear that the world economy was slowing while at the same time trade was becoming more important, and that trade problems such as agriculture, services and textiles—as well as relations between developed and developing countries—were long past the point where they needed urgent attention. It concluded with the recognition that the world economy was becoming globalized, and that the GATT trade regime needed a fundamental overhaul for it to be relevant to a changed international environment. In this negotiation, national decision makers appeared to appreciate the importance of the international economy for national economies. Presumably there was a link between problems in the international economy and the policies designed to address them.

On the other hand, there is an argument that in analyzing government actions, one often assumes that more order exists in policy-making than was the case when the decisions were made. Thus Paul Krugman has observed that: "Policy is rarely a coherent response to perceived problems; more often it represents the outcome of bargains and struggles between groups. . . ."[93] The Uruguay Round could well have been an example of Krugman's observation. It was a hard fought multilateral negotiation with an enormous agenda: surely it would be plausible to expect the outcome would be simply a vast collection of expedient exchanges, with little if any reference to the broader forces at work in the world economy. And as for being a coherent response to policy problems, no one associated with negotiations in GATT would claim that coherence was the strong suit of the process.

And yet the Uruguay Round did produce a result that was relevant to the perceived problems of the day. Decision makers appeared to make the right choices at the Uruguay Round, which have been confirmed in the passage of time since the completion of the Uruguay Round. Despite the problems the WTO has had in its brief history, including the aborted Seattle Ministerial Meeting and the continuing difficulties of the Doha Round, there has been no serious movement to renounce the rules-based multilateral trading system created by the Uruguay Round Agreements. The WTO owes its success to the fact that it was a largely appropriate response to the problems thrown up by the world economy at the end of the Twentieth Century.

* Peter Sutherland was the last Director-General of the GATT and the first Director-General of the WTO. He is currently chairman of BP plc and of Goldman Sachs International.

I. Introduction

The politics of trade have never been straightforward. They have always been a complicated balance between commercial, economic, political and consumer interests. In recent years, the scene seems to have become even more encumbered with multiple interests and lobbies, requiring governments to add endlessly to their juggling skills. Where once, if consultations were required at all, they were probably restricted to trade associations and sometimes trade unions, now an extensive and growing collection of interested parties seek involvement and a say. Indeed, they are often entitled to a say by law or regulation.

Perhaps this is a natural development; trade policy itself is now more complex. It is no longer simply a matter of protection at the border, technical barriers, subsidies, or government procurement regulations. The policies with which officials and ministers have to deal are increasingly sensitive in themselves and, as a consequence, increasingly impacted by other policy areas—development, environment, labor, food safety, competition policy, investment rules, even security issues, human rights and foreign policy.

This complexity was in part recognized as the World Trade Organization and the broad range of trade rules that it encompasses were being negotiated in the Uruguay Round. Indeed, the sheer scope of the Marrakesh agreement was seen as both a major step forward in multilateralism and a challenge, in some minds at least, for national sovereignty. It may be, of course, that the WTO is required to do too much and is overextended into fields in which it has no business. For the moment, at least, a winding back of the Organization's powers and reach is not on the table and nor, in my view, should it be. On the contrary, the current Doha Round of multilateral trade negotiations could well further extend the purview of the WTO in a significant manner—into general investment rules and competition policy, in particular. So the real question is how to deal with the complexity and ensure that business is done as effectively and efficiently as possible.

For one thing is sure, if it was ever true that the world trade body—in the form of the GATT or the WTO—operated as an ivory tower, it cannot do so now and never will again. This paper looks at the kind of influences and inputs with which, first, governments must deal in formulating trade policies and, second, the WTO must cope at the multilateral level if it is to continue moving forward coherently and positively. It also considers the various interfaces of the WTO with other international and regional bodies, including the United Nations family, which have also become an integral part of the picture.

II. The Politics of Trade Policy Development

A. Finding a Balance in Capitals—a Proliferation of Lobbies

The need for policy makers and ministers in capitals to interact and consult with a profusion of interest groups has never been greater. Not only in advanced industrial democracies but in many parts of the developing world too, there is a constant scramble to be heard as WTO and other positions are developed and as decisions in the context of strictly domestic trade regulation are formulated. Arguably, as the numbers of interest groups to be heard have grown, their indvidual capacities to influence may have diminished. Certainly, the balance has changed with traditional lobbies having to work that much harder and new voices sometimes having a disproportionate impact.

B. Business Sector Maintains a Strong but Often Divided Voice

Naturally it is the business sector which has traditionally been most associated with driving trade policy development in capitals. After all, trade policies are essentially about how companies do business across borders and how foreign firms are treated within borders. Trade officials need to heed the business view—indeed, in the United States they are required to do so by statute; hence the web of industry advisory committees that feed into the USTR and Department of Commerce. Elsewhere the relationships are sometimes more arm's-length, sometimes less transparent, but always telling. A specific requirement to listen to, and take account of, other views is rare even if, whether for reasons of genuine national interest or political necessity, it is usually the case in practice that they are heard.

Yet as greater and greater proportions of national economies become dependent on trade, the job of finding a single national "industry view" becomes ever more difficult. Certainly, the sectors which have traditionally been those most forcibly demanding protection are still noisy—textiles, clothing, footwear, agriculture, white goods, steel and so on, depending on country and level competitiveness. But now governments must increasingly listen to the services sector—certainly in the advanced countries where services industries are expanding rapidly and are increasingly active in overseas markets. Driven in part by the WTO's successful General Agreement on Trade in Services ("GATS"), banks, insurance firms, telecommunications companies and professional services, among others, have been pushed into the front line of trade policy formulation. Further, trade officials must keep in mind increasingly the interest of the high-tech and Internet-based sectors for which keeping governments out of their businesses—and away from the temptation to regulate trade—is often the prime motivation.

Clearly there are major conflicts of interest among and within these broad areas of industry—and it is no less the case for developing countries. Larger groupings like the Conference Board in the United States, the Keidanren in Japan, or the Union of Industrial Employer's Confederations of Europe and the European Round Table of Industrialists struggle endlessly to devise coherent and comprehensive positions for WTO and other trade negotiations. In fact, the multiplicity and even confusion of industry voices—and their differing interests—has probably made it easier for other, more focused, interest groups to be heard.

C. Local Political Interests can be Conflicting

The growing complexity of economies must also make local political judgements more difficult. It is not so many years since the voices of local textiles, steel and motor vehicle firms dominated all others simply because they were the *only* major sources of employment in their areas. Local political representatives had little choice but to back calls for trade protection—their constituency seats often depended on it. It was much the same in agriculture. Inevitably ministers had to take account of the political interests in play for their own political survival and that of the governments they represented.

Judgements were relatively straightforward. In many instances, admittedly, it remains the case that simple political calculations are still made when, because of import competition, local industries get into trouble. More often, however, the political judgements are becoming troublesome. An area previously wholly dependent on, for instance, textile mills may now have a balance of employers which includes high-tech companies, accountancy firms or the administrative headquarters of a manufacturing company. A region

which may have seen the virtual disappearance of steel production may now have a car production implant from the Far East or a pharmaceuticals research center as far bigger employers. Local politicians who chose to back calls for protection from fading industrial sectors must now understand—or they will be told, forcibly—that such action could damage the prospects of more promising sources of employment. There are still plenty of populist causes—backing agricultural subsidies and market access barriers, for instance—but the costs are less and less easy to ignore.

D. Legislative Oversight is Getting Tougher

However, if local political interests are getting too complicated for easy judgements to be made, national legislatures are beginning to take a more active interest in trade issues as a whole. Whether it is the U.S. Congress, the European Parliament, the Japanese Diet or the Indian Lok Sabha, all have seen intense interest and animated debate about WTO issues as well as domestic trade concerns. Whether political parties have a properly considered position on trade or simply respond to the winds of public and media opinion, the result is the same: more complication for policy makers and, particularly, ministers. The examples where GATT and WTO negotiations have had to be put on hold while France, the United States, Germany and others hold presidential or legislative elections are many. Indeed, the entire course of a trade round can be constructed around the timing of such events.

Interest at the legislative level has raised the issue of whether legislators should be more directly involved in WTO affairs. One view would be that keeping them in the loop might ensure they are not over-influenced by interest groups in domestic debate. Another would argue that well-informed and involved legislators can provide a useful counterbalance to governments themselves. Of course, it is open to governments to include legislators in their delegations to WTO meetings: some do so regularly at ministerial conferences. Going further would seem to me both impractical and undesirable.

E. The Media is a Double-Edged Sword for Policy Makers

The media is also an element not to be forgotten in the formulation of trade policies at the national level. It can be a positive influence, reminding political leaders, for instance, that policies that may be attractive electorally at home can be highly damaging to national standing and, often, negotiating credibility overseas—particularly in the WTO context. On the other hand, media pressure can be negative and damaging. This is particularly the case where governments feel themselves driven to use trade weapons for fear of being portrayed as timid and unconcerned with domestic interests. We have seen this frequently in transatlantic trade relations.

Furthermore, balanced press coverage of trade policies has been further undermined by highly committed, but narrowly focused, activist groups, especially non-governmental organizations ("NGOs"), that are adept at getting across challenging new ideas. The challenge of communicating conviction and good sense in pursuing open trade policies is hardly new. The plight of unemployed steel workers put out of work, allegedly by import competition, always provides a more dramatic and telling image than an assertion, however true, that more jobs are created by the more efficient allocation of resources. But now there are new and emotive images that appear to discredit open trade: environmental degradation, child labor, cultural invasion, food safety scandals, access to medicines, poverty in the developing countries and so on. The links between these issues and trade

policy are seldom explained and often barely exist. Nevertheless, because of media pressure many politicians now feel the need to respond as if the links were self-evident.

F. NGOs have Become a Telling New Force in Trade Policies

Now that the NGOs have learnt how to link trade and other causes in the public mind, they are having an increasing impact at the national level in trade policy making. Environmental and development lobbies are, quite reasonably, seeking to ensure either that trade policies do not cut across their own interests or that those interests are reinforced by using trade policy tools, notably the WTO rules. Moreover, NGO involvement does not stop with political opinion forming; increasingly governments are involving the more responsible NGOs in policy formation. Interestingly, it is to NGOs that many governments in the poorest countries, particularly in Africa, turn in establishing negotiating positions for the WTO. After all, it is such groups that have often invested most locally, in terms of people, expertise and commitment, to poverty reduction, rural development and so on. Understandably they have local credibility. Whether the advice they offer is appropriate to the countries concerned is another matter.

However, once again these are interests that cannot be ignored. Some NGOs have many thousands of members in the countries where they exercise influence at policy-making levels. It is not appropriate to see them, in the manner they often promote themselves, as representing the views of "civil society". In democracies, governments have the obligation to adequately reflect the needs of society as a whole. Yet NGOs do represent strands of coherent public opinion that need to be heard. The recent efforts of the European Commission to establish a workable dialogue with NGOs is an admirable example of what can be done. The United States is also broadening its consultative processes. These are far from the only examples.

G. What Happened to the Voice of Labor?

The success of the environmental and development lobbies appears to have been partly at the cost of two longer standing interest groups, labor and consumers. Labor unions still have influence, of course. In rich nations as well as poor, the highly unionized areas of the economy tend often to be precisely in the sectors which are struggling with international competition. Among them, steel, automobiles and farming stand out. In recent years, public service unions have also become active in the trade field, largely because of misplaced and exaggerated concerns that the GATS agreement was designed to force the privatization and deregulation of health, education, water and other public services. The campaign, however misdirected, has generated a further battalion of anti-WTO, anti-globalization critics in the ranks of organized labor.

However, the labor movement has continued to juggle its domestic interests, in regularly seeking protection for industries in competitive difficulties, with its wider concern for the conditions and rights of workers around the world. These are contradictory interests, of course, and lead to the appearance, at least, of a degree of hypocrisy. They have also led to a twenty-year long campaign—which straddled the entire Uruguay Round and the early years of the WTO—to find an acceptable means of tying trade concessions to the observance of internationally recognized labor standards. Governments in the industrialized countries have shown varying degrees of sympathy. It was the United States that pushed hardest for work to be undertaken directly in the WTO, others contenting themselves with proposals for some sort of parallel process largely

focused on the International Labor Organization, the body responsible for the development of labor standards. Developing countries have held out successfully, and rightly, against the WTO route. They have seen the attempts to establish a formal trade-labor link as essentially motivated by protectionist ambitions no matter how hard its supporters have worked to suggest otherwise. Since the 2001 Doha ministerial meeting of the WTO, which failed to agree anything of substance on labor rights, the issue appears, for the moment, to be dead. Nevertheless, the labor lobby—particularly allied to other elements of the anti-globalization movement—will continue to be one that governments must keep in mind if a public consensus broadly in favor of open-markets is to be maintained.

H. Consumer Interests in Trade Appear to have Changed

The same ought to be true of the consumer interest lobby. After all, open markets and competition have long been correctly viewed as benefiting consumers of products and services—and particularly poor people. It is a simple concept, almost a matter of common sense: protecting under-performing industries may be politically seductive, but it is taxpayers and consumers who pay the price.

As "influencers" of political policy, consumer groups are a relatively new phenomenon. For many years they were a vocal lobby for free trade. The last decade or so, however, has seen a marked change. Now the tendency is to suggest that consumers have an interest in being protected from the rigors of market economics. Whether they like it or not, consumers have found their voices integrated into anti-WTO campaigns related to the environment, food safety, labor rights and development. Oddly, even in the poorest countries consumer groups appear to have forgotten that the most disadvantaged communities are precisely those which have most to gain from their governments encouraging competition among producers and suppliers. Such groups are pushing governments in the opposite direction. The countervailing force to producer interests that used to be, and ought to be, provided by consumer organizations is less and less evident.

I. How to Ensure the Interests of all Trade Stakeholders are Heard

Given all these conflicting sources of pressure on policy-makers, it is tempting to conclude that trade officials and ministers ought to feel safe in making decisions on an objective basis, in the national interest. For, surely, in the arena of public, media and political opinion the disparate interests must largely cancel each other out. Sadly, national politics in most countries are not like that. Votes hang on the very particular and immediate interests of narrow constituencies, not on generalized sentiment about the theory or value of free trade. Many trade experts have long argued that the best way out is for governments to conduct—or have conducted by independent authorities—trade policy audits which provide a clear account of the gains and losses from particular options. Some countries—Australia—for instance have introduced such systems. Others do it on an *ad hoc* and largely opportunistic basis; for instance, to calm activist lobbies like the environmental groups. Certainly, the complexity of reaching coherent trade policy decisions and formulating negotiating positions, especially given the higher profile of trade in the public consciousness, will argue increasingly in favor of credible, transparent and inclusive examination.

J. There are Now Still Wider Political Calculations to be Made

Yet trade policy in many capitals is something more than a question of juggling a collection of special interests, in one hand, an overall calculation of the national interest, in the other, and measuring the conclusion against WTO and other obligations. The era of raised public consciousness of the process we refer to as globalization has added a further dimension, at least for ministers if not necessarily for trade officials. This is not the place to discuss the nature of globalization or the validity of the concerns it raises. The question is merely whether the phenomenon is creating new complications in policy-making and in the work of the WTO.

In many capitals the answer has to be, yes. Even if much of the debate has been manipulated by interest groups, the media and, indeed, by political leaders, the issue needs to be taken seriously. The first problem is that too much is placed on the doorstep of globalization. Food safety crises, factory closures, climate change, poverty, child-labor, even international terrorism, are supposedly all a reflection of what is too frequently seen as an essentially malign phenomenon. The second problem is that it is trade policy—and especially the WTO—which is seen as the driving force behind globalization. That is the widely held perception; it matters little if it measures up to reality or where the real cause-effect relationships exist. Few political leaders have shown any willingness to wind down the globalization phobia.

Indeed, even faced with the most outrageous and violent outbursts by anti-globalization activists at major international meetings, few politicians have spoken out firmly on the underlying issues, only on the behavior of demonstrators. The impression—and indeed it has been said explicitly—is that despite their excesses, the activists must have a point and the point ought to be taken into account in international negotiations or domestic policy-making. I would not imply that this is an entirely wrong-headed stance to adopt—it may make sense both politically and substantively—but it certainly adds a major new layer of complication in policymaking. Let me take just a few examples.

One response to activist pressure is the concept of "sharing the benefits" of globalization. It is a notion that has appeared in various communiqués from major international gatherings, and it is a politically attractive one. Most political leaders understand that globalization is here to stay and is the underpinning of much of the world's evolving wealth. But surely the advantages it brings could be better managed; it ought to be the answer to poverty, disease and even military conflict. So the reaction must be to put the international institutions to work to correct the imbalance, starting with the World Trade Organization. The intention is, of course, faultless (if genuine); but the problem is that neither the WTO nor any other of the current global institutions is designed for such a task. The danger—and it is actual rather than potential—is that trade negotiations which traditionally operate on a rather self-interested basis are being sidetracked away from their core business. Instead of creating conditions in which global trade will grow and, as has generally been the case in the past, benefit all those who wish to participate as open economies in the global system, it is chasing the hare of equality—not of opportunity but of actual results. The result will be disappointment, more disillusionment with the system and more political discontent. Another headache for trade policy makers and negotiators. For the most part, the responses to poverty, and the imbalances in the impact of globalization, lie in a multitude of policy areas; some of which are the appropriate responsibility of international organizations, some of which must stay with governments.

Another facet of the globalization debate concerns citizens at the other end of the wealth scale. Somehow, goes the argument, we may be getting richer but the quality

of life is falling. As market barriers are lowered and the regulatory opportunities open to governments fall away, we are inundated with the entertainment values of foreign cultures, foreign food, unsafe food produced through genetic engineering or under poor hygienic conditions, a private sector culture we do not want and so on. The WTO has been accused of being an agent of forcibly reduced health and safety standards. It is sometimes blamed for peasant farmers leaving their alpine meadows. Little if any of this is even remotely true, yet it is widely believed and, again, undermines the policy-making environment and the opportunities of using the WTO for positive and worthwhile ends. At the very least, politicians judge that there is a malaise among ordinary citizens faced with the demands and pressures of globalization; there is a degree of discomfort that needs to be recognized. That is probably a reasonable assumption; it is the policy responses that can be worrisome.

By the same token, political leaders, in the years since the WTO was founded, have also had to factor in lingering concerns about sovereignty. One of the biggest problems they face in poorer countries—and in some smaller advanced countries also—is that globalization removes some of the tools of government. In other words, they face a harsh choice. They can open up to the world and accept that they are no longer fully masters of their own future: many policies will be dictated by global economic realities, some by the WTO and other rule-based systems. Alternatively, they can remain wholly in protected command—but face a very gloomy future, locked out of the big game. It is certainly the case that the global economy brings benefits at the cost of a narrowing of policy choices. But it is precisely the WTO that returns a degree of self-determination to governments that have no negotiating leverage outside. Multilateralism is a tool of empowerment in an era of globalization; it prevents a return to the rule of the jungle where might is always right. Sadly, we still see political speeches arguing exactly the opposite: the WTO is to be feared; it robs countries of their sovereign rights.

All these are examples of the new politics of the global economy. They are all distortions and all make trade policy making that much more troublesome. Yet somehow the system must learn how to correct them or to live with them without losing direction and energy.

K. Geneva and the WTO—are they Equipped to Cope?

Given the complexity of the external policy-making environment, how does the WTO, as a negotiating and decision-making vehicle, measure up to the challenge? In purely structural terms, not much has really changed since the days when technocrats and customs experts ruled the roost in Geneva and nobody took too much notice of an institution whose impact appeared distant and sometimes irrelevant to citizens and even to business. In reality the work of the GATT was crucially important and the underpinning of three decades of impressive economic and trade growth. But the activities of the institution in Geneva were followed only intermittently in capitals and the manner of doing business attracted still less attention.

Yet the essential balance was much as it is now, even if a much wider range of constituencies observes more closely and seeks to influence the WTO's operations. The interactions that effectively dominate the activities of the organization are those between governments in capitals, their delegations and ambassadors in Geneva, and the WTO Secretariat. Since the launch of the WTO in 1995 there has probably been less attention paid to these interactions and relationships—and their intersection with other

constituencies—than was warranted. Are they, in fact, appropriate for the job of managing global trade policies?

L. WTO Delegations have Widely Differing Relationships to their Capitals

Up to now we have focused largely on the policy-making processes in capitals. How are these translated into action in Geneva by the delegations of WTO Members? Naturally there is a wide variation. At one end of the spectrum, the Geneva delegations of the European Union—the Commission, Council and Member States—are tightly bound to the machinery of Brussels and to well-informed trade departments and closely involved ministers in capitals. Co-ordination of EU positions takes place regularly in the Commission headquarters in Geneva and it is Commission officials, almost uniquely, who speak for the European Union as a whole in the WTO bodies.

The United States has less of a challenge of co-ordination in Geneva but its representatives there are required to follow, very closely, briefs developed in Washington. Naturally, the Geneva office of the U.S. Trade Representative—which also houses officials from the Departments of Agriculture and Commerce—feeds its assessments of local sentiment and the negotiating positions of other players into the Washington mix. Nevertheless, the room for maneuver for U.S. delegates in Geneva is limited.

The capitals of other industrial countries and the more advanced developing nations have the necessary capacity and expertise to guide, if not always dictate, the positions taken by their delegates to the WTO nations. Yet, few of the very large number of poorer WTO members—developing and transition economies—have that ability. Some such countries do not even have permanent missions in Geneva. Others may have an office of one or two people to service the vast number of processes in the WTO. More importantly they may have no one back in their capitals capable of providing solid guidance or even monitoring some of the crucially important issues in the WTO court. In turn, there may be nobody to maintain the interest or ensure the engagement of ministers in the long periods between WTO ministerial conferences. Indeed, it has not been unheard of for governments to be pursuing significant programs of economic liberalization domestically while their representatives pursue quite different—and sometimes apparently contradictory—positions in Geneva. This lack of capacity has been extremely concerning; it is the reason that much attention is now directed at technical assistance activities, notably in the context of the Doha Round.

Of course, few delegations operate in isolation in Geneva. Certain regional groups, like those covering Africa, ASEAN and South and Central America, meet regularly to co-ordinate positions. Other active alliances include the group of 49 least-developed countries and the Cairns Group of agricultural exporters. The "Quad"—the United States, European Union, Canada and Japan—used to be very active but has diminished in importance, with the two main transatlantic powers tending to do most of the running together. So long as these and other groups do not dig themselves too deeply into unsustainable positions their capacity to co-ordinate can and does help expedite efficient business in the WTO.

M. A Changing Role for the WTO Secretariat

So where does the WTO Secretariat fit in? The 500-strong Secretariat includes, apart from its heavy contingent of translators, document printers, interpreters and other services, a series of expert divisions designed to support the work of specific delegate bodies. It is the

"institutional memory" of the organization, equipped to provide the analytical and legal backup to negotiations, the settlement of disputes and other activities. But its role does seem to have changed. In recent years, delegations have emphasized that the WTO is a "member-driven" organization. That is clearly the case: all substantive decision-making powers are in the hands of governments, as Members. At the same time, governments—certainly throughout the history of the GATT and I see no reason why it should be less the case now—have tended to need an "honest broker" or a facilitator of consensus. They also appreciated the value of what was sometimes referred to as a "brotherhood" of people whose allegiance was to the principles and rules of the multilateral trading system rather than to any passing policy fad or special interest. These were the roles of the Secretariat and, especially, its Director-General. That the Secretariat is now seen only in a support position—with little or no scope for taking initiatives—is unfortunate, but in part reflects the far greater political sensitivities of trade policymaking in the era of anti-globalization sentiment.

It may also be the case that governments see the assertion of their own roles—and the downplaying of the Secretariat's influence—as an element in the public perception of the institution's accountability and legitimacy. In other words, as we have already seen, the issues with which the WTO now deals are complex and sensitive; too sensitive for there to be even the appearance of an unelected, secretive bureaucracy in control. The price to pay may be a meandering, inefficient process, often lacking direction. However, it may be a necessary price if governments are to generate, or hang on, to sufficient public support for gradually edging the system forward rather than seeing it collapse in disrepute.

If such a view were correct then it would be logical to examine the working methods of the institution to see if there are opportunities for improving efficiency while not diminishing legitimacy. Much attention has focused on the processes of consultation that inevitably precedes formal decisions in delegate bodies. It is sometimes suggested that consultations in the old GATT were less than inclusive, especially for many developing countries. While it was certainly the case that limited consultations often were confined to countries with direct trade interests in the issues under discussion, it was always understood that all other delegations needed to be kept informed either directly or through their regional groups. Certainly, nothing was ever agreed without an opportunity for further consideration in the formal delegate bodies concerned.

N. New Mechanisms to Broaden Debate and Increase Efficiency

At the same time it is easy to understand that times have changed. Certainly there are now many more WTO delegations able and willing to play active roles in the organization. As important, it is evident that given the high profile of the institution and the potential impact of much of its work, few trade diplomats can run the risk that they are excluded from any meaningful process or negotiation in Geneva. Hence the challenge of marrying efficiency with inclusiveness and legitimacy. That challenge may require organizational change. One proposal is to put in place a management board to deal with routine matters. Just as necessary, however, is some means of introducing the broader aspects of national debates on trade policy, to which I have already referred, to the Geneva process. Debate as of now tends to be blinkered and fixated on the precise demands and disciplines of the WTO agreements. There is little opportunity—save, perhaps, the useful open symposia which have been introduced over several years—for WTO delegates to understand the wider contexts in which positions are formulated. In the GATT, there was a vehicle for

such a debate. The Consultative Group of 18 (ultimately there were about 24 participants) was perhaps too exclusive in its representation. But it served an important purpose, which is missing today. It also served to bring senior policy-makers from capitals to Geneva on a regular basis—something that is sorely lacking now.

There are other aspects of the Geneva process which will continue to attract attention, among them the issues of transparency and the involvement of non-governmental constituencies. The opening up of the WTO's work—and especially the release of its documents—has already gone a long way further than would have been imaginable even a decade ago. It is to be hoped however that rash decisions are not taken on the widening of active involvement from solely government representatives. This would be a slippery slope and would be neither in the interests of the fundamentals of the multilateral system nor of most of its participants. On that score, governments must safeguard the system however much they are bludgeoned by activists. A degree of opaqueness is bound to be associated with a negotiating machine. If governments want merely a talking machine, they will open it up fully to unrelenting and unmodulated public scrutiny.

O. Wider Intersections at the Multilateral Level

One final dimension remains in this patchwork of policy intersections and conflicts against which trade policy-making and WTO activities now take place: the regional and multilateral perspective.

Regional trade agreements are here to stay and we can expect them to continue their proliferation in the years to come. Countries like Japan, Singapore, Korea and India, that previously had shown no interest in anything but the multilateral trading system, are now active in seeking new bilateral and wider regional relationships. The EU will certainly continue to make its own bilateral links as will, for political purposes, the United States. A Free Trade Area of the Americas may come to pass someday, while regionalism in Africa will probably deepen as an alternative to complete integration into the global economy. I do not intend here to rehearse the arguments for and against this clear trend.

However, if regionalism is to grow it is even more important that the multilateral system is seen to work effectively both in its own right—and its capacity to deliver real trade benefits—and in its ability to oversee regional agreements as it is required to do under Article XXIV of GATT 1994. This latter obligation of the WTO is on the agenda of the current round of trade negotiations and it is to be hoped that a solid result will emerge. Until now, it cannot be pretended that the WTO has delivered effective oversight and discipline to any of the agreements it has been required to review. In almost every case, delegations have had to agree to disagree on Article XXIV consistency. That situation cannot be permitted to continue. All the more so since dubious and inconsistent regional agreements not only undermine the multilateral system, they impose a further level of complexity for policy makers. One day, perhaps, all free-trade agreements will be rolled into the WTO as a single zero-tariff commitment. That day is a long way off. Until then, the WTO and regional groups must co-exist productively.

A further multilateral complexity is the drive to push together the trade rules with a variety of global concerns overseen by other multilateral agencies. The environment, labor rights, human rights and poverty elimination are the best examples, each the territory of distinct United Nations bodies. We have already looked at these policy intersections at the national level. The tendency to associate the WTO closely with other agencies is understandable—indeed, it is an easy way to dampen the anti-trade instincts of the

activists—but potentially dangerous. The WTO is a very different kind of organization to those within the UN system—essentially because it is founded on a system of rights and obligations which are enforceable in its unique dispute-settlement system. Unfortunately there is a temptation to use the toughness of the trading system in fighting other causes—rather than seeing the efficiency and success of the trading system, in its own right, as one tool that ultimately will help provide the environment of economic growth in which such causes will succeed.

That is not to say that the WTO must live in a world apart from other global institutions. Crucially, the best way to deliver effective trade-related technical assistance to the developing and transition economies is through a joint effort among the economic and development organizations. Certainly the WTO does not have the capacity itself. Indeed, admirable efforts to co-ordinate such capacity building aid have been made in recent years. More needs to be done. Most immediately, work needs to be focused on generating the necessary numbers of skilled negotiators and policy-makers in the trade area. Other forms of capacity building—for instance, in customs service reform—are almost as urgent and should proceed hand-in-hand. However, without a solid base at the trade policy level, too many countries will continue to be ineffective in Geneva, and that is not an asset for the system, quite the contrary.

III. Conclusions

This chapter is not intended to be a rigorous analysis of trade policy making in the era of the World Trade Organization and globalization. I hope it does, however, demonstrate the extraordinary complexity in a policy field where most of the world's citizens rely on good sense prevailing. The WTO is an attempt to ensure that good sense does, generally, win out over conflicting political pressures and short-term narrow interests. Yet it is far from easy to make the system work with so many counter-currents.

At some point soon governments will need to consider far more carefully how they are to order and come to terms with the complexity. At present we are getting by, often more by luck than judgement. It would not be so difficult for something as dynamic as the anti-globalization campaign to overturn the apple cart. Structures within which a more balanced trade policy debate can take place will need to be put into place at the national level in many countries. At the same time the WTO will have to become a more worldly institution, able to provide its members with mechanisms in which wider policy concerns can be aired alongside the practical, detailed business of the day.

CHAPTER 3

THE DEMOCRATIC ROOTS OF THE WORLD TRADE ORGANIZATION

Mike Moore*

TABLE OF CONTENTS

I. Introduction 40
II. The Value of Consensus 43
III. Democracy and the WTO 45
IV. Conclusion 47

* Mike Moore was Director-General of the World Trade Organization from 1999 to 2002. He has served as New Zealand Minister of Overseas Trade and Marketing (1984–1990), Minister of Foreign Affairs (1990), Deputy Minister of Finance (1988–1990) and Prime Minister (1990).

I. Introduction

The claim that the World Trade Organization is "undemocratic" starts from a basic fallacy. The WTO is not imposed on countries. Countries choose to belong to the WTO. No one is told to join. No one is forced to sign our agreements. Each and every one of the WTO's rules is negotiated by Member governments, agreed by consensus, and ratified by parliaments. Countries choose to participate in an open, rules-based multilateral trading system for the simple reason that it is overwhelmingly in their interest to do so. The alternative is a less open, less prosperous, more uncertain world economy—an option few countries would willingly choose. It is difficult to conceive of a system that could be more democratic.

This explains the multilateral trading system's remarkable expansion, and why so many countries are queuing up to join. It began with just 23 Members in 1947. The WTO now has nearly 150 Members—including, recently, China and Chinese Taipei—and this number could easily reach 170 or more within a decade. This also explains why Members have repeatedly agreed to widen and deepen the system's body of rules. The multilateral trading system was initially concerned mainly with trade in goods, and it was based not on a permanent organization but on a provisional treaty, the General Agreement on Tariffs and Trade ("GATT"). By the end of the Uruguay Round in 1994, the system contained sweeping new rules for services, intellectual property, subsidies, textiles, and agriculture. It was also established on a firm institutional foundation, the new WTO, with a strengthened mechanism for settling disputes. Nor is there any sign that the system has stopped moving forward. In the most recent Round, launched in Doha in November 2001, governments agreed to expand the scope of existing agreements in key areas such as industrial goods, agriculture, and services and to try to build a framework of rules on issues of investment, competition policy, government procurement, and trade facilitation, although the first three of these were dropped from the agenda at a General Council meeting held in Geneva in July 2004 (*see* WT/L/579, August 1, 2004). No other international body oversees rules that extend so widely around the world, or so deeply into the fabric of economies. Yet at the same time, no other body is as directly run by Member governments, or as firmly rooted in consensus decision-making and collective rule. The multilateral trading system works precisely because it is based on persuasion, not coercion—rules, not force.

Two fundamental principles underpin the equal rights of WTO members. One is the principle of non-discrimination. The WTO treats all Members alike, be they rich or poor, big or small, strong or weak. The same rules apply to everyone, even the world's largest and most powerful economies. Central among these rules is the "most-favored-nation" obligation—which prevents WTO Members from discriminating between foreign goods, or treating products from one WTO Member better than those from another[1]—and the "national treatment" rule—which obliges governments to treat foreign- and

[1] The most-favored-nation ("MFN") obligation is embodied in Article I of the GATT, Article II of the General Agreement on Trade in Services ("GATS"), and Article 4 of the TRIPs Agreement. Some exceptions are allowed to MFN. For example, under GATT Article XXII countries within a region can set up a free trade agreement that does not apply to goods from outside the group. Or a country can raise barriers against products from specific countries that are considered to be traded unfairly. And in services, countries are allowed, in limited circumstances to discriminate. But the agreement only permits these exceptions under strict conditions. In general, MFN means that every time a country lowers a trade barrier or opens up a market, it has to do so for the same goods or services from all its trading partners—whether rich or poor, strong or weak.

domestically-produced products equally.[2] Non-discrimination has been key to the multilateral trading system's success. Preferential trade blocs and alliances, by definition, exclude and marginalize non-member countries. This not only hurts the countries themselves, but can be harmful for the system as a whole. It is widely accepted that competition and conflict amongst trade blocs in the inter-war years was a major cause of global instability—paving the way for a descending spiral of tit-for-tat protectionism, economic depression and ultimately world war. The multilateral trading system—based on a uniform set of international rules under which all countries are treated equally—was designed precisely to avoid a world of inward-looking trade blocs and self-destructive factionalism. From a national perspective, the principle of non-discrimination has also allowed countries to liberalize their economies and integrate into the world trading system at their own pace. MFN and National Treatment do not demand "harmonization" towards universal norms or rules. On the contrary, these rules were designed precisely to allow countries to maintain their own policy "space", to set their own standards and priorities, so long as all economic actors—foreign and domestic—were treated equally. Non-discrimination has provided the essential underpinning for the huge expansion of global trade over the past half century, and for the broad political consensus to move the system forward into new sectors and wider responsibilities. Non-discrimination has also enshrined universality as a central objective of the trading system. It is certainly one major reason why the GATT/WTO system has emerged, especially after the Cold War, as a major force for integrating developing and transition countries into the world economy.

Equally central to the multilateral trading system is the principle of consensus decision-making. Unlike other international agencies, the WTO has no executive body with delegated authority to take decisions on behalf of member governments. With a few limited exceptions, there are no provisions for majority or "weighted" voting.[3] And the small WTO Secretariat has only limited independent authority and initiative-taking rights, but no grants or loans to hand out, no licenses to issue, and no influence over individual countries' policies (although technical advice is offered, and some analytical comments are provided in regular trade policy reviews). In short, the WTO does not tell governments what to do. Governments tell the WTO. All decisions—from the creation of the GATT to last year's launch of the Doha Development Agenda—have been taken collectively by the member governments themselves.[4] Each WTO member has equal rights and an equal

[2] The national treatment obligation does not prevent countries from imposing tariffs (on an MFN basis, and not higher than maximum levels bound in tariff schedules) and applies long after goods have been cleared from customs. However, it is applied slightly differently in different WTO agreements. For example, under the GATS the obligation is not unconditional and exceptions to the national treatment principle can be written into country schedules. Special and differential treatment for developing countries in the form of tariff preferences is also allowed, as are preferences extended to countries which are part of regional trade agreements.

[3] Where consensus is not possible, the WTO agreement allows for voting (a vote being on the basis of "one country one vote") in the following four limited situations: (1) An interpretation of any of the multilateral trade agreements can be adopted by a majority of three-quarters of WTO Members; (2) The Ministerial Conference can waive an obligation imposed on a particular member by a multilateral agreement, also through a three-quarters majority; (3) Decisions to amend provisions of the multilateral agreements can be adopted through approval either by all members or by a two-thirds majority depending on the nature of the provision concerned, but the amendments only take effect for those WTO members which accept them; (4) A decision to admit a new member is taken by a two-thirds majority in the Ministerial Conference, or the General Council in between conferences.

[4] Members make decisions through numerous councils and committees, whose membership consists of all WTO members. Topmost is the ministerial conference, which has to meet at least once every two years.

vote under the agreements. Because no decision is taken unless all member governments agree, effectively every country—from the largest to the smallest—has the power of veto. Even the enforcement of rules is undertaken by the members themselves under agreed procedures that they negotiated. Sometimes enforcement includes the threat of sanctions. But those sanctions are imposed by Members not by the organization.

This is not to say that the day-to-day workings of the WTO are perfect. Far from it. One problem is that the system continues to rely on major new negotiating rounds—and "package" deals—to create new rules or to clarify existing ones.[5] This means that reforms to the system occur episodically and infrequently. Seven years elapsed between the end of the Tokyo Round and the beginning of the Uruguay Round; eight years between the Uruguay Round's completion and the launch of the Doha Development Agenda in November 2001. And the Uruguay Round itself spanned eight years from beginning to end. One reason for the successful launch of the Doha Development Round was a series of important reforms to WTO decision-making processes since the failed launch of negotiations at the Seattle Ministerial in 1999. In Geneva, thousand of hours were spent in plenary discussions and in meetings of heads of delegations. Every issue and every national position had been fully aired and explored before Doha. At the Conference itself, every effort was made to keep ministers and delegations fully involved in the negotiations. When more limited—or "Green Room"—meetings were held they typically involved more and a wider representation of countries than the whole of the original GATT. The transparency and inclusiveness—which is to say the "legitimacy"—of the process helps to explain why member governments were more prepared and more willing to reach agreement.

Another challenge is that not all governments are equipped to participate in WTO processes as effectively as they would like—certain least-developed countries cannot even afford to maintain offices in Geneva. The scope, complexity and value of the WTO's legal system continues to expand. Much of the controversy about implementation of Uruguay Round commitments stemmed from the human and resource constraints faced by developing countries in adapting legislation to new obligations and building the infrastructure needed to implement them. These constraints should concern every member, not just the countries subject to them. As the WTO embarks on new negotiations and rule-making as a result of Doha—and as its membership continues to widen—the system's future success will hinge directly on the ability of all Members to participate more fully in the process and to feel ownership of the outcome. That is why an increasingly important function of the WTO is technical assistance and capacity building—helping transitional, developing and least-developed countries to integrate into the multilateral trading system and to participate fully in negotiations. The WTO Secretariat has embarked on a range of new programs to explain how the system works and how Members can meet their obligations and maximize benefits under the system, and also to help train government officials and negotiators. One key objective, as a result of Doha, is to empower officials to better identify their negotiating objectives and to analyze the many proposals that will be forthcoming from other partners.[6] Many of these activities are organized jointly with

Since 1994, ministers have met in Singapore (1996), Switzerland (1998), the United States (1999), Qatar (2001) and Mexico (2003).

[5] One rationale for the creation of the WTO was to put an end to rounds by creating a permanent forum for negotiations, but so far this promise has not been realized.

[6] Members have approved an increased WTO Secretariat budget to assist in this work. They have also established the Doha Development Agenda Global Trust Fund to provide secure and predictable resources to build capacity.

other international organizations, as a way of achieving a more "coherent" approach to global economy policy-making and development.

Another goal is to help member-governments make better use of dispute settlement. The WTO has expanded the rules of international trade manifold compared to the GATT, and has created a new dispute settlement system—a "world trade court"—with a possibility of appeal. Legal advice in trade matters is expensive, thus creating potential problems of access to justice for developing countries. To help redress this imbalance the Advisory Center for WTO Law was opened in October, 2001. It marks the start of a true legal aid center on an international scale. Individuals appearing as defendants before War Crimes Tribunals have always been able to call upon *pro bono* legal aid. The International Court of Justice has a small fund out of which costs of legal assistance can be paid for countries who need such help. But the Advisory Center for WTO Law marks the first time that a true legal aid center has been established within the international legal system, with a view to combating the unequal possibilities of access to international justice as between states.

The fact remains that the multilateral trading system—for all its imperfections—gives even the smallest and poorest countries far greater leverage and security than they would ever have outside the system. Multilateral negotiations allow weaker countries to pool their collective influence and interests—as opposed to bilateral or even regional negotiations in which they have virtually no negotiating clout. In the same way, a system which replaces the role of "power" in international trade relations with the rule of "law" is invariably to the advantage to the smallest and weakest countries. The alternative is no rules and no impartial dispute settlement—a world where commercial relations are based on economic and political power alone, where small countries are at the mercy of the largest.

The fact that there has been a "flood" of cases brought by both developed and developing countries to the WTO's dispute settlement system—more than 300 cases in less than ten years—clearly demonstrates the faith that members place in the system.[7] The majority of disputes notified to the WTO have been resolved "out of court", without recourse to the full adjudication process. And almost all those countries that have been the subject of an adverse decision have voluntarily implemented the recommendations without the need for enforcement measures. Threats of unilateral measures by the major industrialized countries that undermined confidence in the trading system in the 1980s have virtually disappeared. The WTO system has successfully resolved disputes between the largest economies, involving billions of dollars of trade, without bilateral conflict and without drawn-out processes that could prolong uncertainty for the commercial interests affected. All of this, in turn, has facilitated the huge expansion of world trade in the 1990s—by an average of five per cent a year for industrialized countries, and a remarkable ten per cent a year for developing countries.

II. The Value of Consensus

It is an article of faith among opponents of the WTO that the system is "undemocratic". The irony is that many of the things they do not like about the WTO stem from too much democracy, not too little. They want the WTO to force open markets, preserve union

[7] As of October, 2003, developing countries, as a group, had initiated 109 of the 302 disputes (70 against developed countries; 45 against developing countries). Brazil, India, Mexico and Thailand were the most active.

jobs, strengthen labor standards, protect animal rights, preserve the environment, watch over indigenous people, save the developing world from capitalism, and a lengthening list of other goals—even when these goals are resisted by sovereign countries. They grasp that the dispute settlement system, and its threat of trade sanctions, gives the WTO unique power to impose policies on recalcitrant governments—if only the WTO could be made to exercise those powers. In a muddled way, the argument is that the WTO is too "democratic". Many who say the WTO is too powerful, in fact want it to take on wider powers.

Some argue that consensus rule-making should be reconsidered because reaching agreement among nearly 150 governments is simply too slow, cumbersome, "bureaucratic". Since every Member effectively has a veto, it is claimed that the WTO can only move at the speed of its slowest or most obstinate member—which is too slow for a fast-globalizing world. Still others suggest that the issues now facing the WTO are too complex to be effectively debated and decided upon by all of its member governments acting as a "committee of the whole". As one trade expert puts it, "mass membership simply does not lend itself to operational efficiency or serious policy discussion".[8] This is why proposals for the creation of a smaller executive body—like the World Bank's Development Committee or even the UN's Security Council—are heard from time to time. But the more fundamental argument is political. The fact is that on certain issues international consensus simply *does not exist.* The rationale for circumventing consensus—through executive powers, weighted voting, trade sanctions—is basically that objectives which cannot be reached through persuasion should be reached through coercion. Of course, the consensus principle can sometimes be taken to unproductive extremes. When a national interest is involved that is fine. However, it does not always work so well in micro or practical "housekeeping issues" which are not of national interest, such as who is to speak at a seminar, but which are used as leverage by some representatives to get attention elsewhere.

The notion that consensus can—and should—be overruled on basic policy questions is easily the most dangerous idea confronting the WTO. Leave aside for a moment the obvious fact that the WTO has no policy expertise or competence in these areas.[9] The WTO has an ambitious enough mandate without making it a substitute for the whole of the international system. The more fundamental objection is that imposing policies on unwilling Members is "undemocratic". Who determines "correct" standards? What gives the WTO the right to act as judge, jury, and police over sovereign governments? Only governments can decide that. And what makes us think that coercion and threats can produce lasting solutions? Not only are we asking the multilateral trading system to perform a role which runs contrary to its basic principles, but worse, coercion is the surest way of poisoning the spirit of international cooperation that is so desperately needed to begin building a consensus around broader global solutions. Unilateralism will not convince any country of the rationale or validity of the objectives which another asserts. Nor will trade sanctions serve as a wake up call to bring public opinion on board. Coercion is a sign of weakness not strength. It reflects a basic lack of confidence that one's ideas or values can be freely shared and embraced by others.

[8] Jeffrey J. Schott, Institute for International Economics, Washington, quoted in WTO, *Trading into the Future* (April, 1999), at 63.

[9] As UN Secretary General Kofi Annan has argued, "attempting to use the multilateral trading system to solve problems in these and other areas would place it under great strain, and would be much less effective than adopting policy solutions in the sectors themselves". Opening Statement by Kofi Annan, Secretary General of the United Nations, to the 1998 ECOSOC meeting.

The WTO system is the result—not the cause—of a broadening consensus about the value of open trade, painstakingly built up over fifty years. If its success proves anything, it is that persuasion, not coercion, is the key to international cooperation and peace. What is most striking about the multilateral trading system is not how often agreement has eluded countries, but how often difficult and seemingly intractable agreements have been struck. The "death of the GATT" has been announced too many times to count, yet eight major rounds of negotiations have been successfully completed, and a ninth, arguably the most ambitious, is now underway. Meanwhile international institutions with "powerful" executives and more "efficient" systems of voting have often proven less successful than the WTO in advancing global cooperation.

There are several reasons for this. The most important is that consensus decision-making gives all Members—rich and poor, big and small, developed and developing—"ownership" of the system: its decisions, its rules, its rights and its obligations. The effectiveness of the WTO depends fundamentally on its legitimacy, on the willingness of its member governments to abide by its rules and rulings. A precondition for this willingness to be "bound" by the WTO is participation in the negotiation of the rules—as well as the right, in the end, to withhold agreement. What the consensus rule embodies is the fundamental notion that countries should have a say in the making of treaties that will bind them. It is about the right to sovereignty, free choice, self-government—in other words "democracy" in its most basic sense.

III. Democracy and the WTO

There is no meaningful "democratic deficit" in the WTO unless one takes the position that governments do not legitimately represent their citizens and their interests. Some argue just that. Many NGOs claim a right of direct participation, alongside governments, in the decisions of the WTO and other international bodies. Some even propose a new "democratic" international order in which NGOs would offer an alternative form of representation in competition with governments.[10] Others go further still. They would have us treat the world as if it were a nation state writ large. There would be world elections to a world parliament and even a world government—exercising the kind of sovereign powers now reserved for nations states. Every citizen—not just every nation—could have a vote. This is not a new idea. Generations of idealists have dreamed of Alfred Lord Tennyson's "Parliament of Man".

Dream on. The international community is manifestly not ready for world government. Hopefully it never will be. Anyway, it is not going to happen. Who are "we the people" in a world where pride in culture and nation is so strong, and where shared global identity is so weak? Who represents a world electorate? Does anyone really believe that a body politic exists at the global level with a strong enough sense of community that it could legitimize decisions and the exercise of power based on world majority option? It does not exist. The philosopher Leo Strauss predicted that the "universal and homogenous state" would be a tyranny. Too many countries, cultures, and peoples would see world government as just that—a thinly veiled disguise for imperialism, neo-colonialism, more a tyranny than a democracy.

Nation-states remain the only viable foundations for democracy in a globalizing world. Political scientists Robert Keohane and Joseph S. Nye make the point that:

[10] CLAUDE E. BARFIELD, FREE TRADE, SOVEREIGNTY, DEMOCRACY 4 (2001).

> International institutions lack the key features that make democracy possible, and that, in democracies, facilitates accountability: an acknowledged public, operating within a political community in which there is a general consensus on what makes public decisions legitimate . . . . Most meaningful voting and associated democratic political activities occur within the boundaries of national states that have democratic constitutions and processes. Minorities are willing to acquiesce to a majority in which the may not participate directly because they feel they participate in some larger community. This is absent at the global level . . . .[11]

Martin Wolf goes further. He argues that globalization and the growing need to manage interdependence through bodies like the WTO, far from weakening nation-states, actually make them more important: "The ability of society to take advantage of the opportunities offered by international economic integration depends on the quality of public goods, such as property rights, an honest civil service, personal security, and basic education".[12] The success of international governance rests on the ability of individual states to provide stability and to articulate shared goals.

It may be convenient to blame the WTO for a lack of democracy. But democratic accountability rests with governments and governments alone. If WTO negotiations are shrouded in too much secrecy, or if citizens are left in the dark, or if certain Ministers only listen to "big business" and national elites, then it is a failure of governments—and their obligation to represent all their citizens' interests—not a failure of the WTO.[13] Democracy, like charity, begins at home. There are many ways that governments could improve their accountability in the WTO—so people can judge whether their government is carrying out its mandate in Geneva, and to improve the connection between votes and issues that are of growing concern to them. For a start, they could do much more to educate people about the WTO and its activities. They could also develop better procedures for informing parliaments and voters about their ongoing work at the WTO—including through mandated parliamentary reviews and periodic testimonials. More might be done to involve members of parliament, congressmen, and legislators in the WTO's work, by including more elected officials in delegations. Parliamentarians could, if given the opportunity, assist governments to bridge the gap between the WTO and voters by holding public hearings and better engaging the public at home in the creation and implementation of policy. Indeed, parliamentarians already play a very important part in the WTO as they are charged with the responsibility of ratifying our agreements. In this regard, we have advanced new ways of involving Parliamentarians, in seminars, through publications, etc.

Finally, governments could work with each other to negotiate new rules and guidelines to make the WTO's processes more "transparent". Much could be done to derestrict WTO documents (and perhaps the arguments and reasoning that shape their formation) when the information does not compromise business or government confidentiality. There is also growing pressure to open up the Trade Policy Review process and even the dispute settlement panels and appeals body. After all, few national courts can afford to operate behind closed doors—it is neither lawful nor useful in terms of preserving legitimacy and public support.

However, these issues—like all issues before the WTO—are for member governments to decide. The WTO's External Relations Division can promote dialogue and

information sharing with civil society. Organizing conferences and symposia, where NGOs are invited to discuss and debate a range of trade-related issues, is also a growing feature of the Secretariat's work. And hundreds of NGOs are accredited to the WTO ministerial conferences, based on guidelines set out by the General Council. Meanwhile many governments already conduct open and wide ranging national-level consultations on trade policy, including reflecting NGO views in their policy positions and involving NGOs in their delegations. But all of this is undertaken by individual governments because they choose to do so, and because their voters demand it. Nothing in the WTO agreements tells governments how to undertake relations with their citizens, consult on trade policy, or prepare for negotiations. Member governments have repeatedly re-affirmed that they, and they alone, are responsible for dialogue with their citizens, and for determining how best to represent the interests of their countries. This is of course exactly as it should be in a rules-based, member-driven organization such as the WTO. As Martin Wolf has argued:

> A civilized society is one in which the state alone has a monopoly power of coercive power, exercised under law, by a government responsible to the electorate as a whole. To grant *any* private interests a direct voice in negotiations over how coercion is to be applied is fundamentally subversive to constitutional democracy . . . . Only elected governments can be properly responsible for the making of law, domestically and internationally.[14]

IV. Conclusion

The WTO is at the center of the debate about democracy because of its successes, not its failings. More and more countries want to participate. More and more people recognize that the WTO matters. More actors—businesses, unions, church groups, environmentalists, development NGOs—want the multilateral system to reflect their causes and their concerns. The WTO is not a "global government"; but it *is* a key forum where governments cooperate globally. It is not a "world democracy"—in the sense of being a government of the world's people—but it *is* the most democratic international body in existence today. It provides an answer to perhaps the central political question of our time—how to manage a globalizing world when democracy remains rooted in the nation-state? In a way, the WTO—together with an expanding web of other global treaties and agreements—is more interesting than a new layer of government. From trade to the environment, human rights to war crimes, the world is moving towards rules, not power, persuasion, not coercion—a world of mutual respect, rights, and freedoms.

This looks like a brave new world, but its root can be traced back over half a century. The generation that emerged from the devastation of the Second World War pledged "never again". They dreamed of creating a new kind of global order based on common and universal values—of law, cooperation, shared prosperity and individual rights. They launched the Marshall Plan, where for the first time in modern history the victors rebuilt their former enemies—the opposite of what had happened under the ill-fated Treaty of Versailles. They created a constellation of international institutions that, a half century later, are the bedrock of our global order today: the UN, the IMF, the World Bank, and the GATT, and now the WTO.[15] This system was the embodiment of a revolutionary

[14] Martin Wolf, *Uncivil Society: The Ill-Fated Multilateral Agreement on Investment Shows the Need to Confront the Claims of Pressure Groups Hostile to Globalisation*, FINANCIAL TIMES, September 1, 1999, at 14.

[15] This new international architecture was initially intended to comprise an International Trade Organization ("ITO") as well as the UN and the Bretton Woods institutions. The first discussion on the proposed ITO took place at the 1946 United Nations Conference on Trade and Employment, and a year and a half later, in Havana, a draft charter finally emerged. In the end neither the Havana Charter for the ITO even came

idea: That freedom—free democracies, free markets, the free co-existence of nations and peoples—was the surest guarantee of peace. And that a free world could, in turn, only be built on the foundations of the international rule of law.

It is sometimes easy to forget—when even the Cold War is a fading memory—how spectacularly successful that idea has been. UNDP reminds us that poverty has been reduced more in the past fifty years than in the previous five hundred.[16] Life expectancy in the developing world has risen by over twenty years, and living standards by 190 per cent. Literacy is up 34 percent in China, 33 percent in India, 39 percent in Sub-Saharan Africa, and 41 percent in North Africa. In the first half of the twentieth century, there were but a handful of democracies, and the future seemed a contest between the twin totalitarianisms of fascism and communism. By the century's end, 120 of the 192 governments in the world were electoral democracies.[17] Never before in human history have so many people enjoyed the freedom of the market-place and the ballot box. As Pope John Paul II eloquently observed in his 50th anniversary address to the UN:

> On the threshold of a new millennium we are witnessing an extraordinary global acceleration of that quest for freedom which is one of the great dynamics of human history. This phenomenon is not limited to any one part of the world; nor is it the expression of any single culture. Men and women throughout the world, even when threatened with violence, have taken the risk of freedom, asking to be given a place in social, political, and economic life which is commensurate with their dignity as free human beings. This universal longing for freedom is truly one of the distinguishing marks of our time.[18]

The existing system of international rules is not alone responsible for this world-wide march of freedom. But the promise of a "free world" would be inconceivable without it.

The debate about democracy and the international system is to be welcomed. Encouraged. This is particularly true at a time when government cannot ensure clean air, and a clean environment, run an airline, organize a tax system, attack organized crime, solve the plagues of our age—AIDS, poverty, genocide—without the cooperation of other governments and international institutions. The threat to democracy is not debate, but silence, complacency, the indifference and ennui that comes with familiarity. The Russian novelists had a word for it, "ostranonie"—defamilialization. The value of the protests in Seattle, Prague, Washington, and Genoa is that they have wakened us from our complacency and ignited a much needed debate. They have forced the world to look anew at fifty year-old institutions, not only to examine what might be wrong, but to remind what is right—and what is enduring. A measure of civilized society is how it manages its differences. Is it by the rule of law or by force? By that measure the WTO has a lot to be proud of. With all its imperfections, the world would be a more dangerous, less democratic place without the WTO. It is worth defending.

into being, largely because the U.S. Congress did not approve the agreement. In the meantime, as part of the preparatory work for the ITO, a handful of governments had been negotiating a General Agreement on Tariffs and Trade, the GATT, in order to operationalize the results of tariff negotiations before the ITO came into being. With the failure of the ITO, the GATT lived on, with less than fully developed legal status, to provide the basis for the conduct of international trade relations until the creation of the WTO in 1994. It is an irony of post-war history that the institution that began on the weakest footing has emerged as arguably the strongest pillar of a rules-based global system.

2. External Transparency 86

This Chapter outlines the institutional arrangements of the World Trade Organization. It begins with a bit of history, in which the institutional inadequacies of GATT are considered, since those were in large part the impetus for the creation of a new organization in the Uruguay Round. After a brief description of the negotiations on institutional arrangements in that Round, the bulk of the Chapter examines the resulting institution in detail. In doing so, it largely follows the structure of the WTO Agreement.[1] The Chapter concludes with an overall assessment of the WTO's institutional arrangements, including an analysis of a number of weaknesses that could ultimately undermine the effectiveness of the WTO if its Members do not correct them.

I. GATT and Its Institutional Inadequacies

A. GATT and the ITO

The General Agreement on Tariffs and Trade ("GATT") was signed in 1947 during the course of broader negotiations aimed at the establishment of the International Trade Organization ("ITO").[2] The ITO was to be the third leg of an international economic triad consisting of the International Bank for Reconstruction and Development (generally known as "the World Bank") and the International Monetary Fund ("IMF"). These organizations were intended to promote economic development, the reconstruction of Europe and the expansion of world trade. In particular, the IMF was to provide liquidity to countries running trade deficits so as to enable the ITO to work for the reduction of tariffs and other trade barriers.

The GATT contained a series of rules that were intended to implement and protect the results of tariff reductions that had been agreed upon during the ITO negotiations.[3] It was expected that the GATT would promptly be subsumed under the mantle of the ITO once the ITO came into existence.[4] Unfortunately, it never did. An ITO charter, known as the Havana Charter,[5] was agreed upon, but the U.S. Congress failed to ratify it, even though the United States had been a prime mover in the negotiations. Consequently, GATT was orphaned at the very beginning. However, because it was intended to protect the integrity of tariff reduction commitments, it included most of the trade-related provisions of the Havana Charter.[6] Although no organization or secretariat was provided for in the GATT, there were some general governance provisions that enabled the GATT contracting parties to cobble together a workable, even if shaky, governance structure. Thus, GATT was able

[5] The Havana Charter of the International Trade Organization is formally known as the Final Act of the United Nations Conference on Trade and Employment, March 24, 1948, UN Doc. E/Conf.2/78. It was published by the U.S. Dept. of State as HAVANA CHARTER FOR AN INTERNATIONAL TRADE ORGANIZATION, COMMERCIAL POLICY SERIES 114 (PUB. NO. 3206, 1948).

[6] In some cases the provisions were not in the exact form contained in the Havana Charter. The principal differences between the GATT and the Havana Charter were that only the Havana Charter contained provisions (i) regulating restrictive business practices, (ii) regulating the use of export subsidies, (iii) regulating intergovernmental commodity agreements, (iv) calling for the promotion of full employment and economic development and reconstruction and (v) establishing detailed institutional provisions. Some of the Havana Charter's provisions on export subsidies were later added to GATT Article XVI.

to play the role that was thrust upon it as the only significant multilateral trade agreement, even though it had these constitutional infirmities.

This initial tentative aspect of GATT was also evidenced by the fact that the GATT contracting parties brought the GATT into effect only on a provisional basis through the Protocol of Provisional Application.[7] Significantly, this Protocol provided that the parties could maintain in force indefinitely existing legislation inconsistent with their obligations under Part II of the GATT, which includes most of GATT's substantive obligations, other than the most-favored-nation obligation (Article I) and the tariff concessions (Article II). This "loophole" was interpreted narrowly in GATT dispute settlement proceedings,[8] but it remained available until it was abolished in the Uruguay Round (with one exception).[9]

B. ICITO as the Legal Entity

During the Havana Conference, an Interim Commission for the International Trade Organization ("ICITO") was established.[10] It was intended to prepare for the expected coming into existence of the ITO. It met only once, at Havana, and delegated its powers to an Executive Committee. An Executive Secretary was also appointed. The GATT contracting parties early on decided to avail themselves as necessary of the services of ICITO for secretariat functions.[11] After a short period of time, ICITO's only function was to perform such services for GATT. As a practical matter, the head of GATT (initially called the Executive Secretary and later the Director-General of GATT) was also the Executive Secretary of ICITO; the employment contracts of those working for the GATT Secretariat were technically with ICITO; and the bank accounts and other "GATT property" were held in ICITO's name. Since ICITO was an organization under the UN umbrella, the employees of the GATT Secretariat participated in the UN pension plan. After 1950, the Executive Committee of ICITO rarely met—only to elect each new head of GATT as ICITO Executive Secretary and in connection with the transfer of the property and employees to the WTO Secretariat.

C. Pragmatic Adaptation and Its Limitations

Both because GATT was expected to be subsumed under the ITO and because U.S. officials believed that President Truman had the authority to commit the United States to a trade agreement (like GATT) but not to an organization, the GATT contained no formal organizational structure,[12] beyond providing for meetings of the parties at which they

[7] *Protocol of Provisional Application*, IV GATT, BISD 76–77 (1969).

[8] To qualify as "existing legislation," measures were required to be legislation in the formal sense, predate the Protocol and be mandatory in character. Report of the GATT Panel (adopted), *Norway—Restrictions on Imports of Apples and Pears*, BISD 36th Supp. 306 (1990); Report of the GATT Panel (adopted), *United States—Manufacturing Clause*, BISD 31st Supp. 75 (1985).

[9] The WTO Agreement carries over the existing legislation exemption only in respect of certain cabotage measures that may be inconsistent with the GATT. In practical terms, the exception applies only to the United States. *WTO Agreement, Annex 1A, General Agreement on Tariffs and Trade 1994*, Note 3(e). As of 2002, the continuing need for the exemption is currently under review by the WTO's General Council. WTO General Council, *Annual Report* (2000), WT/GC/44, p. 28 (February 12, 2001). The review was not mentioned in the Council's 2001 Annual Report, but the matter appeared on the Council's agenda in 2002.

[10] This history is recounted in GATT, Analytical Index: Guide to GATT Law and Practice 1119–1125 (Updated 6th Edition 1995) ("GATT Analytical Index").

[11] John H. Jackson, GATT and the Law of World Trade 145 (1969).

[12] *Id.* at 119–121.

might take certain decisions collectively.[13] As a practical matter, however, GATT was able to function as an organization. The power of the parties to act collectively and the *de facto* existence of a secretariat worked. Nonetheless, this jerrybuilt, informal structure was viewed as a shortcoming. In particular, the annual meetings of the contracting parties were not sufficient to deal with the business of the organization. That specific problem was addressed by the creation in 1960 of the GATT Council to handle GATT's business in between meetings of the contracting parties.[14] It remained the case, however, that the GATT's organizational structure was generally viewed as deficient.

The structural inadequacies were plain to see in the results of the Tokyo Round of trade negotiations (1973–1979). That round resulted in a number of agreements on specific topics (e.g., customs valuation, dumping, subsidies, civil aircraft, standards, government procurement, import licensing, and dairy and beef products), but only some, mainly industrialized, contracting parties accepted those agreements, a sort of GATT *a la carte.* That limited membership was a problem, but so was the lack of a formal GATT structure where these agreements could be placed. As a result, each had its own governing body and dispute settlement system and its relationship to the GATT was not always clear.

A third problem could be seen in the inadequacies of the decision-making process. The practice of consensus slowed progress on resolving issues and undermined the effectiveness of the dispute settlement system by giving a single country—usually the losing party—the power to veto adoption of a panel report. The rules for amendment were such that it was thought difficult, if not impossible, to amend the agreement.[15]

These various problems, while not fatal, helped create a favorable climate for the discussions described below in the Uruguay Round.

II. Uruguay Round Negotiations on Institutional Issues

A. The "FOGS" Group

At the time the Uruguay Round negotiations were launched, it was agreed that there would be negotiations on the functioning of the GATT system ("FOGS"). The Uruguay Round Ministerial Declaration provided that the negotiations would be aimed at (i) improving regular monitoring of trade policies of contracting parties; (ii) improving the overall effectiveness and decision-making of GATT as an institution, *inter alia*, by increasing ministerial level involvement; and (iii) improving coherence in global economic policy-making.[16]

The FOGS negotiations progressed relatively rapidly on the first point,[17] and in April 1989, the GATT contracting parties adopted a decision to establish a trade policy review mechanism,[18] which was carried over into the WTO Agreement, as described below.[19] There was not much progress in the FOGS group on other issues, although

[19] *See* text accompanying notes 40–45 *infra.*

eventually a declaration on coherence in global economic policy-making and a decision relating to improving notification procedures were adopted at the end of the Uruguay Round.[20]

B. Proposals for a New Institution

At the outset of the Uruguay Round in 1986, there were no plans to create a new organization. In the course of the negotiations, occasional reference was made to the need to improve GATT's organization framework, but it was not until 1989 that consideration of a new organization began to receive serious attention. Such an idea was promoted by Professor John H. Jackson,[21] and in the course of 1990 proposals were put forward by Canada and the EC.[22] The EC supported its proposal by noting, *inter alia*, (i) the need for a proper legal basis for GATT; (ii) the desirability of a common institutional framework for the existing side agreements, as well as the agreements on new subjects such as services; and (iii) the advantages of a single dispute settlement system.[23]

There was no agreement on creating a new institution at the time of the 1990 Brussels ministerial, but as part of the effort to reach consensus on the text of agreements at the end of 1991, negotiators succeeded in hammering out a short agreement on establishing a new organization. Indeed, the text included in the so-called Dunkel Draft Final Act,[24] bears considerable similarity to what was eventually agreed upon. As of 1991, the United States was of the view that a new organization was unnecessary, but it finally accepted the creation of such an organization at the very end of the Uruguay Round negotiations.[25]

III. The Marrakech Agreement Establishing the World Trade Organization

A. Establishment and Scope of the World Trade Organization

Article I of the WTO Agreement provides for the establishment of the World Trade Organization ("WTO"). In accordance with the Final Act of the Uruguay Round, the heads of delegations to GATT in Geneva met in December 1994 and decided that the WTO Agreement would enter into force on January 1, 1995.[26] At the same time, a special session of the GATT Contracting Parties decided that the General Agreement on Tariffs and Trade of 1947 would terminate on December 31, 1995. The provisions of the GATT 1947 continue in force, of course, through their inclusion in GATT 1994, one of the agreements

[25] For an excellent, complete description of the negotiation of the WTO Agreement, see Debra Steger, *The World Trade Organization: A New Constitution for the Trading System*, in NEW DIRECTIONS IN INTERNATIONAL ECONOMIC LAW: ESSAYS IN HONOR OF JOHN H. JACKSON 135, 143–146 (Marco Bronckers and Reinhard Quick eds. 2000).

[26] The Final Act of the Uruguay Round provided for a ministerial decision (¶ 3), but ministers agreed at Marrakech that the implementation conference would be held at the level of heads of delegations. MTN.TNC/45(MIN). For more details on the transition arrangements from GATT 1947 to the WTO, see GATT ANALYTICAL INDEX, *supra* note 10, at 1087–1093.

annexed to the WTO Agreement.[27] Pursuant to Article XVI:6 of the WTO Agreement, it is registered with the United Nations in accordance with Article 102 of the U.N. Charter.[28]

The WTO is intended to provide the "common institutional framework for the conduct of trade relations among its Members in matters related to the [WTO] agreements."[29] The term "WTO agreements" includes the so-called Multilateral Trade Agreements, which are defined as the agreements in Annexes I, II and III of the WTO Agreement. Those three annexes contain GATT 1994 and the related trade-in-goods agreements (i.e., the agreements on agriculture, sanitary and phytosanitary measures, textiles and clothing, technical barriers to trade, trade-related investment measures, anti-dumping, customs valuation, preshipment inspection, rules of origin, import licensing procedures, subsidies and countervailing measures, and safeguards, all in Annex 1A); the General Agreement on Trade in Services (Annex 1B); the Agreement on Trade-Related Aspects of Intellectual Property Rights (Annex 1C); the Dispute Settlement Understanding (Annex 2); and the Trade Policy Review Mechanism (Annex 3). Pursuant to Article II:2 of the WTO Agreement, all of the Multilateral Trade Agreements are binding on all WTO Members.

The requirement that all WTO Members accept this package of agreements is known as the "single undertaking". As noted earlier, one of the problems associated with the GATT system was that many GATT Contracting Parties were not parties to the various Tokyo Round codes on dumping, valuation, subsidies and so on.[30] The WTO Agreement ends this "GATT *a la carte*" approach, with the exceptions described in the next paragraph.

In addition to the Multilateral Trade Agreements, there were also four so-called plurilateral agreements contained in Annex 4 to the WTO Agreement. These agreements were on trade in civil aircraft (the Tokyo Round agreement, as negotiations to update it in the Uruguay Round were not successful); government procurement (a new agreement negotiated in the Uruguay Round, which came into force on January 1, 1996, and effectively replaced the Tokyo Round agreement); dairy products (terminated as of December 31, 1996); and bovine meat (terminated as of December 31, 1996). Membership in the plurilateral agreements is optional, and most Members are not members of the agreements on civil aircraft and government procurement.

B. The Functions of the WTO

The functions of the WTO are specified in Article III of the WTO Agreement, which lists five specific functions. Most generally, the WTO is mandated to facilitate the implementation, administration and operation of the WTO agreements and to further their objectives.[31] The other four functions areas follows:

1. Negotiations

The WTO Agreement explicitly provides that the WTO shall provide a forum for negotiations among its Members as to matters dealt with in the WTO agreements. In fact, the

[27] The definition of GATT 1994 includes a number of understandings that effectively modify or supplement the provisions of GATT 1947. Article II:4 of the WTO Agreement specifies the foregoing distinction between GATT 1947 and GATT 1994.

[28] GATT 1947 was also so registered and the United Nations published it and the various additions to it over the years in the United Nations Treaty Series. In the case of the WTO, it appears that the U.N. will not publish the schedules to the various WTO agreements.

[29] *WTO Agreement*, Art. II:1.

[30] *See* text accompanying notes 14–15 *supra*.

[31] *WTO Agreement*, Art. III:1. It is also to provide such a framework for the Plurilateral Trade Agreements. *Id*.

WTO is the locus of negotiations all of the time. In many cases, such negotiations have been provided for in WTO agreements or the ministerial decisions taken in establishing the WTO. For example, in the case of GATS, there have been negotiations in respect of financial services, telecommunications and movement of natural persons, and protocols were added to GATS on each subject.[32] There have also been negotiations, provided for by GATS, on so-called GATS rules (e.g., relating to subsidies, safeguards and government procurement), which have not yet led to new agreements.[33] Further negotiations started in 2000 on services trade generally, as provided for in GATS Article XIX:1. Since the end of the Uruguay Round, negotiations on rules of origin have been ongoing, as required by the Agreement on Rules of Origin.[34] Many other examples could be cited as well. In addition to negotiations provided for in the WTO agreements, the Ministerial Conference or General Council may authorize additional negotiations, as recently happened at Doha.[35]

The WTO is also the locus of other negotiations. Although not specifically authorized by the Ministerial Conference, negotiations at the Singapore Ministerial among a number of WTO Members and accession candidates resulted in an agreement on trade in information technology products, which required adherents to bind their tariffs on such products at zero, following a transition period.[36] While the commitment is not a WTO agreement, it has led to changes in tariff bindings that constitute enforceable WTO commitments.

Finally, it should be noted that the WTO is also the locus of bilateral (or other limited) negotiations between Members. For example, such negotiations may occur under the tariff renegotiation provisions of GATT Article XXVIII or under the consultation requirements found in many WTO provisions.[37]

2. Dispute Settlement

The third function of the WTO is to administer the Dispute Settlement Understanding ("DSU").[38] The operation of the DSU is discussed in Chapters 25 *et seq* of this book. In this chapter, we consider below the relationship of the dispute settlement function of the WTO and its "legislative" function, focusing in particular on the tensions that may arise when one of the functions operates much more effectively than the other.[39]

3. Trade Policy Review

The fourth function of the WTO is to administer the Trade Policy Review Mechanism ("TPRM").[40] The TPRM is intended "to contribute to improved adherence by all [WTO]

[32] WTO, *Second GATS Protocol: Revised Schedules of Commitments on Financial Services*; WTO, *Third GATS Protocol: Schedules of Specific Commitments relating to Movement of Natural Persons;* WTO, *Fourth GATS Protocol: Schedules of Specific Commitments concerning Basic Telecommunications*; WTO, *Fifth GATS Protocol*: *Schedules of Specific Commitments and Lists of Exemptions from Article II concerning Financial Services.* There was no First Protocol.

[40] *WTO Agreement*, Art. III:4.

Members to rules, disciplines and commitments made under the Multilateral Trade Agreements."[41] As such, the TPRM provides a mechanism that allows WTO Members, collectively and on a regular basis, to examine and comment on the trade policies and practices of individual WTO Members and the effect that those policies and practices have on the functioning of the multilateral trading system.[42]

Under the TPRM procedures, each Member to be reviewed is required to submit a detailed report on its trade policies and practices in light of the coverage of the Multilateral Trade Agreements. The Secretariat also prepares a report, based on information gathered in a visit to the Member and on other information available to it. The Trade Policy Review Body ("TPRB"), which is the General Council performing the trade policy review function under a separate chair, then holds a meeting at which the reports are discussed. The practice is to have two Members lead the discussion and for the TPRB chair to summarize it. In addition to the minutes of the meeting, there are press releases issued based on the Secretariat's report and the chair's summary. Since September 2001, the reports and press releases are available on the WTO website.

Generally speaking, Annex 3 to the WTO Agreement requires the four largest trading entities (at the moment, the United States, the European Community, Japan and Canada) to be reviewed by the TPRB every two years; with the next sixteen largest trading entities being reviewed every four years; and with the rest of the membership being reviewed every six years (less often for least-developed countries). This is an ambitious commitment, but the TPRM is quite active. Through the end of 2000, 74 WTO Members had been reviewed and 135 reviews had been conducted.[43] In 2001, 21 Members were scheduled to be reviewed.[44]

The TPR process is an important part of the WTO's efforts at promoting transparency in the multilateral trading system. Indeed, the reports are probably in most cases the only comprehensive description of a country's trade policies. Since WTO obligations cut across a wide range of subjects, they are normally dealt with by many different government departments and agencies, none of which is likely to be in a position to produce such an overview on its own.

In addition, Annex 3 requires the TPRB to undertake annually an overview of developments in the multilateral trading system. In connection with that review, the WTO Director-General prepares a detailed annual report on such developments.[45]

4. Coherence in Global Economic Policymaking

The fifth specific function of the WTO is to cooperate with the IMF and the World Bank so as to achieve greater coherence in global economic policymaking. To this end, the WTO entered into agreements with both of those institutions.[46] The agreements provide for various levels of cooperation, for example, through provision of information, invitations to observe meetings of governing and other bodies, and consultations on certain issues. The most controversial aspect of the agreements related to the extent that either the IMF

[41] *WTO Agreement*, Annex 3, para. A(i).

[42] Annex 3 specifically provides that the TPRM "is not . . . intended to serve as a basis for the enforcement of specific obligations under the [WTO agreements] or for dispute settlement procedures, or to impose new policy commitments on Members." *WTO Agreement*, Annex 3, para. A(i).

[43] WTO, ANNUAL REPORT 2001, at 105. Each trade policy review is published as a separate volume. The reports of the Secretariat and individual members are also available on the WTO website.

[44] WT/TPR/89/Rev.3 (February 19, 2001).

[45] WT/TPR/OV/—. The 2001 report is found in WT/TPR/OV/7 (December 10, 2001) and is over 100 pages long.

[46] The agreements with the IMF and the World Bank are found in WT/L/195 (November 18, 1996). The General Council decision approving the agreements is found in WT/L/194 (November 18, 1996).

or the World Bank would have a role in WTO dispute settlement proceedings. As finally agreed, and as elaborated upon in the General Council decision approving the agreements, such a role is quite limited. The decision specifies how the IMF may indirectly submit information to a panel and the circumstances and procedures under which the IMF or the World Bank may be invited to a meeting of the Dispute Settlement Body.[47]

The aim of the WTO-IMF-World Bank cooperation is to ensure that the three institutions are following mutually supportive policies. This cooperation has led to the establishment of the Integrated Framework for Trade-Related Assistance to the Least-Developed Countries ("IF"). The IF was established in 1997 by six international agencies: the WTO, IMF, World Bank, UNCTAD, UNDP and ITC; it was revamped in 2000. The aim of the IF is to assist the least-developed countries to incorporate trade priorities into their national plans for economic development and poverty reduction strategies. Currently, the IF is being implemented on a pilot basis in three countries.[48] The WTO-IMF-World Bank cooperation is also manifested in the involvement of the WTO in poverty reduction strategies of the World Bank and the IMF.[49]

C. The Governance Structure of the WTO

1. Ministerial Conference

The WTO Agreement provides that all decision-making powers shall reside in a Ministerial Conference, which is to be held at least every two years.[50] Such a conference is attended by ministers from all WTO Members. This implements the desire expressed at the outset of the Uruguay Round to have greater ministerial involvement in the operation of the organization, in hopes that the it would function more effectively.[51] To date, there have been four ministerial conferences. The first was held in Singapore at the end of 1996. The second was held in Geneva in May 1998 in conjunction with the 50th anniversary celebration of the multilateral trading system. In November 1999, the third ministerial was held in Seattle, with the fourth being held two years later in Doha, Qatar. The fifth ministerial was held in Cancun, Mexico, in September 2003; the sixth is to be held in Hong Kong in 2005.

(a) Singapore—December 1996. At the Singapore Ministerial, two declarations were issued. The general Ministerial Declaration was noteworthy for its statement on core labor standards and for the decisions to establish working groups to examine (i) the relationship between trade and investment; (ii) issues raised by Members relating to the interaction between trade and competition policy, including anti-competitive practices; and (iii) transparency in government procurement practices, in each case with a view to identifying topics that might merit further consideration in the WTO framework. It also directed the Council for Trade in Goods to undertake exploratory and analytical work on the simplification of trade procedures in order to assess the scope for WTO rules in this area.[52]

[47] WT/L/194, para. 4(a)–(b) (November 18, 1996). Although the IMF and the World Bank are generally observers to WTO meetings, no non-governmental observers are normally allowed at DSB meetings.

[48] Additional information on the IF is available at the WTO website.

[49] WTO, ANNUAL REPORT 2001, at 112.

[50] *WTO Agreement*, Art. IV.

[51] CROOME, *supra* note 17, at 130–131.

[52] *Singapore Ministerial Declaration*, WT/MIN(96)DEC (December 18, 1996), ¶¶ 4, 20 and 21 (reproduced in the Appendix to this book).

In respect of core labor standards, the declaration stated that ministers renewed their commitment to the observance of internationally recognized core labor standards[53] and that the International Labor Organization ("ILO") was the competent body to set and deal with such standards. The ministers also rejected the use of labor standards for protectionist purposes.

As noted earlier,[54] negotiations at the Singapore Ministerial among a number of WTO Members and accession candidates resulted in an agreement on trade in information technology products, which required adherents to bind their tariffs on such products at zero, following a transition period.[55]

(b) Geneva—May 1998. The 1998 Geneva Ministerial was held only one and one-half years after the Singapore Ministerial in order to celebrate the Fiftieth Anniversary of the multilateral trading system (GATT came into effect on January 1, 1948). One of the three meeting days was set aside for celebrating that anniversary. Little of substance was accomplished at the ministerial. The main new element in the declaration was the setting of a work program for the General Council to prepare for the next ministerial.[56] There was also a declaration on global electronic commerce, which established a work program to examine all trade-related issues relating to that subject, and in which it was "declare[d] that Members will continue their current practice of not imposing customs duties on electronic transmissions."[57] The Geneva Ministerial was noteworthy for raising the profile of the WTO. As part of the Fiftieth Anniversary celebrations, there were speeches by a number of world leaders, including U.S. President Clinton, U.K. Prime Minister Blair (the United Kingdom was then President of the European Council), South African President Mandela, Brazilian President Cardoso, Cuban President Castro and President Santer of the EC Commission.[58]

(c) Seattle—November 1999[59]. The hope going into the Seattle Ministerial was to launch a new round of multilateral trade negotiations and to give some direction to those negotiations that were already scheduled to commence in 2000 under the so-called "Built-in Agenda" of the Uruguay Round, particularly in respect of agriculture. The meeting was accompanied by extensive and violent street protests. The meeting ended in failure; no declaration was issued. The causes for the failure were multiple. Generally speaking, there seemed to have been inadequate preparation, due in large part to the fact that the first Director-General, Renato Ruggiero and all three of the Deputy Directors-General

[53] Those standards include the right to organize and bargain collectively and prohibitions on forced labor, child labor and discrimination. See Chapters 59 and 60 of this book.

[54] *See* text accompanying note 36 *supra*.

[55] *Ministerial Declaration on Trade in Information Technology Products*, WT/MIN(96)/16 (December 13, 1996) (issued by the ministers of fourteen Members and accession candidates, accounting for over eighty per cent of trade in such products) reproduced in the Appendix to this book.

[56] *Ministerial Declaration of May 20, 1998*, WT/MIN(98)/DEC/1 (May 25, 1998), reproduced in the Appendix to this book.

[57] *Ministerial Declaration on Global Electronic Commerce*, WT/MIN(98)/DEC/2 (May 25, 1998), reproduced in the Appendix to this book: An interesting question is the enforceability of the commitment on customs duties. Since the declaration is not one of the so-called "covered agreements" under the DSU, could its violation give rise to a claim in WTO dispute settlement? Or in some other forum?

[58] Foreshadowing problems to come, Geneva also witnessed extensive and violent demonstrations against the WTO during the ministerial.

[59] For a flavor of the commentary on the Seattle Ministerial, *see* THE WTO AFTER SEATTLE (Jeffrey A. Schott ed. 2000); *Quick Reactions to Seattle*, 3 JOURNAL OF INTERNATIONAL ECONOMIC LAW 167 (2000)(five brief articles).

left office at the end of April. Ruggiero's successor was not appointed until late July (and then only after a particularly divisive selection process) and his deputies were not selected until shortly before the Seattle meeting. That meant that there was no senior Secretariat leadership in place when the bulk of the preparatory work should have been done and that the atmosphere among delegates in Geneva was not conducive to compromise. Thus, the meeting probably started with too many open issues to expect agreement. Progress at the meeting itself was significantly hindered by developing country concerns about a U.S. proposal to have the WTO analyze trade-related labor issues, particularly after President Clinton suggested in an interview that eventually he hoped that the WTO would incorporate core labor standards and that "ultimately I would favor a system in which sanctions would come for violating any provision of a trade agreement".[60] The effect of the street protests was probably not all that great, except to the extent that they may have convinced the United States, which chaired the meeting, that there was insufficient political advantage in making any significant compromises to try to launch a new round of negotiations. The protests did, however, create a significant public relations problem for the WTO, one that has not yet been overcome.[61] The problems in trying to reach agreement also revealed significant internal decision-making problems in the WTO, which are discussed later.[62]

(d) Doha—November 2001. Following the failure of the Seattle ministerial, it was felt by many knowledgeable observers that the WTO badly needed a successful ministerial at Doha, so as to avoid trade policy negotiating activity becoming more and more the preserve of regional arrangements. From that standpoint, the Doha ministerial was a success. The Doha Ministerial Declaration established a broad work program for the WTO to be completed as a single undertaking by January 1, 2005.[63] Among the topics for negotiations are a continuation of the services market access negotiations started in 2000; negotiations on agriculture to reduce (with a view to ultimately phasing out) export subsidies; the reduction of industrial tariffs (including tariff peaks, high tariffs and tariff escalation); WTO rules on dumping, subsidies and regional trade agreements; various trade and environment issues; and the continuation of the work program on electronic commerce. In respect of what are known as the Singapore issues (competition, investment and transparency in government procurement), the declaration provided that negotiations would take place after the next ministerial on the basis of a decision to be taken at that meeting on modalities of negotiation. In respect of labor rights, the declaration simply reaffirmed the Singapore declaration and noted the work of the International Labor Organization on the social dimension of globalization.

One of the more controversial issues in the preparations for the Doha conference was what, if anything, should the ministers say about the relationship of the TRIPS Agreement to public health. This has become a major issue in the developing world, where there are concerns that pharmaceutical companies are exercising their patent rights on drugs in a way that effectively makes those drugs unavailable to any significant degree in developing countries. More specifically, there has been concern about the availability of drugs to fight AIDS, particularly in Africa. The declaration adopted by ministers provides, *inter*

[63] WT/MIN(01)/DEC/1 (November 20, 2001).

alia, that "the TRIPS Agreement does not and should not prevent Members from taking measures to protect public health. Accordingly, while reiterating our commitment to the TRIPS Agreement, we affirm that the Agreement can and should be interpreted and implemented in a manner supportive of WTO Members' right to protect public health and, in particular, to promote access to medicines for all." The declaration also notes that the TRIPS Agreement contains various "flexibilities" that can be invoked to achieve these public health goals.[64] The exact legal status of the declaration is not clear. While it is not a formal interpretation of the TRIPS Agreement, it is likely that a dispute settlement panel or the Appellate Body would take its emphasis on flexibilities into account in the event that a developing country's action in this area were challenged. In any event, the consensus adoption of the declaration will probably make such a challenge unlikely. At the insistence of developing countries, a furthur clarification of Members' rights to protect public health was adopted immediately prior to the Cancun ministerial (*see* Chapter 22 of this book).

(e) Cancun, September 2003. The Cancun ministerial meeting was originally intended to occur more or less at the midpoint of the Doha Development Agenda negotiations, which were originally planned to be completed in 2005. Because little progress had occurred in the negotiations prior to the Cancun meeting, it was hoped that there would be agreements reached on more detailed negotiating frameworks for the subjects under negotiation, particularly for agriculture. In addition, the meeting was intended, as agreed at Doha, to consider modalities for negotiations on the four so-called Singapore issues—investment, competition, trade facilitation and transparency in government procurement. The meeting ended in failure when no agreement on how to deal with the Singapore issues could be reached. At the time the meeting ended, it was uncertain whether agreements on other difficult issues such as agriculture could have been reached.

An attempt to resuscitate the Doha Development Agenda succeeded in July 2004 at a WTO General Council meeting in Geneva. Although not a ministerial conference, it was attended by ministers from key players and a decision on the Doha Work Programme was adopted on 1 August 2004 (WT/L/579, reproduced in the Appendix to this book). It contains a framework for establishing modalities in agriculture and in market access for non-agricultural products, as well as recording an explicit consensus to commence negotiations on trade facilitation. The framework agreements are not as detailed as an agreement on modalities would have been, but it appears that they will serve to give a badly needed impetus to the Doha negotiations. The framework in agriculture calls for cutting domestic support by twenty percent and ending export subsidies and certain longer term export credits, as well as giving special attention to the cotton sector. In the words of the framework agreement, it "offer[s] the additional precision required at this stage of negotiations and thus the basis for the negotiation of full modalities in the next phase." In contrast to trade facilitation, the other three so-called Singapore issues—competition, investment and transparency in government procurement—will not be included in the Doha negotiations.

2. General Council

In between meetings of the Ministerial Conference, its powers may be exercised by the General Council, which is composed of representatives of all WTO Members and

[64] *Declaration on the TRIPS Agreement and Public Health*, WT/MIN(01)/DEC/2 (November 20, 2001), especially ¶¶ 4 and 5, reproduced in the Appendix to this book.

meets from time to time as appropriate in Geneva, where most WTO Members have permanent representatives. Indeed, it is becoming increasingly common for Members to have separate missions in Geneva dealing with WTO matters exclusively (as opposed to UN and other matters). The General Council is charged with supervising the WTO's dispute settlement system and in so doing convenes as the Dispute Settlement Body ("DSB").[65] It is also responsible for the operation of the trade policy review mechanism and in that connection convenes as the Trade Policy Review Body ("TPRB").[66] To date, the General Council, DSB and TPRB have had separate chairpersons, as the Agreement permits. The General Council, as such, meets on a regular basis every other month, with special meetings as necessary. It met in special sessions (outside of its regular meetings) to prepare for the Seattle and Doha ministerials.

As its position in the WTO governance structure implies, the General Council deals with a broad range of issues, as can be seen in its annual reports.[67] It deals with budget and administrative matters and general personnel issues, including the appointment of the Director-General; approves actions proposed by other bodies, such as waivers, accessions, etc; oversees relations with other organizations; and so forth. The other WTO bodies report, directly or indirectly, to the General Council on an annual basis.[68] These reports give the most detailed available overview of WTO activities, mentioning many issues that do not receive coverage in the WTO's annual report.

3. Sectoral Councils and Subsidiary Bodies

There are three specialized councils under the General Council: The Council for Trade in Goods; the Council for Trade in Services and the Council for Trade-Related Aspects of Intellectual Property Rights.[69] The three councils may also have subsidiary bodies (committees, working parties, etc.) and there are many such bodies in the case of the Goods and Services Councils. For example, there are separate committees supervising each of the multilateral agreements on trade in goods and committees for various service sectors under GATS. The Councils and committees are charged with carrying out the responsibilities assigned to them in the various agreements. Membership in all WTO bodies is open to all WTO Members wishing to participate.

4. WTO Committees

There are five WTO committees that deal with matters of general concern and report to the General Council directly. These include Committees on Trade and Development; Balance-of-Payments Restrictions; Budget, Finance and Administration; Trade and the Environment; and Regional Trade Agreements. The first three mentioned committees are provided for in the WTO Agreement.[70] The Committee on Trade and Environment was established at Marrakech in April 1994. In 1996, the General Council created a Committee on Regional Trade Agreements. The basic activities of these committees are as follows.

[65] *WTO Agreement* Art. IV:3

[66] *Id*., Art. IV:4.

[67] WT/GC/5 (February 7, 1996); WT/GC/7 (November 20, 1996); WT/GC/10 (January 7, 1998); WT/GC/10/Add.1 (May 8, 1998) (a partial year report prepared for the Geneva ministerial); WT/GC/15 (January 26, 1999); WT/GC/28 (November 12, 1999); WT/GC/44 (February 12, 2001); WT/GC/53 (November 5, 2001). The reports are quite summary and reference to the minutes of the meetings referred to is necessary to understand the issues involved and the action taken. The minutes are found in document series WT/GC/M/—.

[68] WT/L/105 (November 24, 1995).

[69] *WTO Agreement*, Art. IV:5.

[70] *WTO Agreement*, Art. IV:7.

(a) Committee on Trade and Development. The terms of reference of the WTO Committee on Trade and Development are, *inter alia*, (i) to serve as a focal point for consideration and coordination of work on development in the WTO and its relationship to development-related activities in other multilateral agencies, (ii) to keep under review developing country participation in the multilateral trading system and to consider measures and initiatives to assist them in the expansion of their trade and investment opportunities, (iii) to review periodically, and consider any questions arising from, the application of special provisions in the Multilateral Trade Agreements and related Ministerial Decisions in favor of developing country Members and report to the General Council for appropriate action; and (iv) to provide guidelines for, and to review periodically, the technical cooperation activities of the WTO as they relate to developing country Members.[71] Under the Committee on Trade and Development, there is a Sub-Committee on Least-Developed Countries, which has a similar mandate, but with respect to the problems of least-developed countries.[72]

It should be noted that the WTO has an extensive technical cooperation operation, designed to assist developing countries to implement their WTO obligations. In this regard, WTO Members have contributed substantial funds, beyond the regular budget, to fund such activities, and the WTO cooperates with other multilateral agencies (particularly the World Bank and the International Monetary Fund) in providing such assistance. The general issue of technical cooperation has become more pressing over time, as developing countries argue that they cannot be expected to take on additional obligations in new rounds of negotiations until they have the capacity to implement the obligations that they have already undertaken.[73]

(b) Committee on Balance-of-Payments Restrictions. The Committee on Balance-of-Payments Restrictions carries out regular consultations with WTO Members that have imposed restrictive import measures for balance-of-payments ("BOP") purposes under GATT Article XII or XVIII:B. There are both full and simplified consultation procedures, which are elaborated upon in the Uruguay Round Understanding on the Balance-of-Payments Provisions of GATT 1994 and related decisions. The committee reports on the consultations to the General Council, which typically approves the report. The Understanding provides that the General Council, in approving a report in which there is a planned phase-out of BOP measures, may recommend that the Member be deemed in compliance with the BOP provisions as long as it adheres to the phase-out.[74] Under the WTO, the committee has not been very active. For example, in 2001, it reported to the General Council on consultations with only two Members—Pakistan and Bangladesh.[75]

The relative roles of the General Council and BOP Committee *vis à vis* panels and the Appellate Body in assessing compliance with GATT Articles XII and XVIII:B was the subject of a dispute between the United States and India. The panel and the Appellate Body concluded that the dispute settlement system could appropriately decide the issue of whether import restrictions imposed for BOP purposes were in compliance with those articles.[76] That conclusion was controversial, in part because of its implications for the

respective competences of the WTO's "judicial" and "legislative" branches, an issue to which we revert at the end of this Chapter.

(c) The Committee on Budget, Finance and Administration. The WTO Committee on Budget, Finance and Administration deals with budgetary and financial issues. For the most part, the documents considered and produced by this committee remain restricted. The committee also deals with personnel matters. It was, for example, the focus of the negotiations that resulted in the establishment of new staff regulations for the WTO secretariat and the creation of a WTO Pension Plan. According to its 2001 annual report, the Committee's major areas of activities in 2000–2001 were the introduction of a performance award program as part of the professional compensation scheme and the drafting of guidelines on the acceptance by the WTO of contributions from non-governmental donors.[77]

The budget of the WTO is relatively small, given the importance of the organization. That probably reflects the fact that Members, as the GATT Contracting Parties before them, have desired to keep the Secretariat small and under Member control. The budget for 2001 was CHF 134,000,000 (US$ 81,000,000 at December 2001 rates), with extra-budgetary pledges of CHF 5,330,000 for technical cooperation and training.[78] This amount is about fifteen percent over the Swiss franc budget amounts for the first three years of the WTO's existence, although in U.S. dollar terms the budget has declined almost fifteen percent over the years because of the increased relative value of the U.S. dollar. By way of comparison, the budget of the Organization for Economic Cooperation and Development ("OECD") is about $200,000,000, even after having been reduced significantly since 1996.[79] The budget of the United Nations Conference on Trade and Development ("UNCTAD") is $45,000,000, with another $24,000,000 in extra-budgetary resources.[80] These are all dwarfed by the budgets of the IMF ($622 million in 2000)[81] and the World Bank ($1.4 billion).[82]

Member contributions to the WTO budget are based on each Member's share of international trade. For 2001, they ranged from CHF 20.8 million ($12.6 million) for the United States to CHF 19,935 ($12,051, the minimum contribution assessed of the least active Members).[83]

(d) Committee on Trade and Environment. The Committee on Trade and Environment was established pursuant to a ministerial decision taken at Marrakech. Its work is discussed in Chapter 58 of this book.[84]

(e) Committee on Regional Trade Agreements. The Committee on Regional Trade Agreements was established in 1996 and was charged with carrying out the examination

[77] WT/BFA/55 (October 10, 2001). This was the only committee document publicly available on the WTO website in late 2001.

of such agreements in accordance with the procedures and terms of reference adopted by the Goods Council, the Services Council or the Committee on Trade and Development (which has jurisdiction over certain such agreements entered into pursuant to the Enabling Clause)[85], and thereafter presenting its report to the relevant body for appropriate action. It was hoped that the Committee would be able to standardize and consolidate the process of reviewing regional trade agreements.[86] This was viewed as a considerable problem because the GATT practice of establishing an *ad hoc* working party for each agreement had not been very successful in that almost no agreement had been found either to meet or not to meet the requirements of Article XXIV, nor had recommendations been adopted under Article XXIV:7.[87] Unfortunately, the Committee has faced the same problems that the working parties faced, and, as of the end of 2001, it had not completed the examination of any agreement. The issue of regional trade agreements in the WTO/GATT system is treated extensively in Chapter 46 of this book.

5. Meetings

The large number of WTO councils and committees has resulted in a plethora of WTO meetings. Indeed, developing countries have complained that Members with small delegations in Geneva find it impossible to attend every meeting, and even some major Members at times seem unable to cover all meetings. While attempts are made to avoid scheduling more than two major meetings at the same time, complaints continue to be heard.

6. Organization of Negotiations

The organization of negotiations, such as those ongoing as a result of the Doha ministerial, is done on an ad hoc basis. In the case of the Doha negotiations, the overall conduct of the negotiations is under the supervision of a Trade Negotiations Committee, acting under the authority of the General Council.[88] The specific subjects under negotiation in the Doha negotiations are sometimes treated in special sessions of regular WTO bodies, under separate chairs (e.g., the Committees on Agriculture, Services, DSB), and sometimes assigned to new bodies (e.g., separate negotiating groups on market access (covering non-agricultural market access issues in the goods area) and rules (covering dumping, subsidies and regional agreements)).[89]

D. Decision-Making in the WTO

1. General Rules and Practice (Consensus and Voting)

The WTO Agreement provides that the WTO shall continue the practice of decision-making by consensus used by the GATT in the past.[90] However, if a decision "cannot be arrived at by consensus", the agreement provides for voting. It specifies that at meetings

[85] Decision of the CONTRACTING PARTIES of November 28, 1979, on *Differential and More Favorable Treatment, Reciprocity and Fuller Participation of Developing Countries*, BISD, 26th Supp. 203 (1980) (known as the Enabling Clause).

[86] WT/L/127 (February 7, 1996). The Committee is also charged with considering the systemic implications of regional agreements and initiatives for the multilateral trading system and the relationship between them, and making appropriate recommendations to the General Council.

[88] *Doha Ministerial Declaration*, ¶ 46.

[89] TN/C/1, 4 February 2002.

[90] *WTO Agreement*, Art. IX:1.

of the Ministerial Conference and General Council each Member shall have one vote,[91] with decisions being taken on the basis of the majority of votes cast, unless otherwise provided. As of December 2001, consensus decision-making remained the rule. Although requests for a vote are occasionally made, they have not been pressed.[92] It should be noted that voting in subsidiary bodies on substantive issues is not provided for. The rules of procedures of those bodies typically provide that matters on which there is no consensus may be referred to a higher body in the hierarchy (ultimately the General Council or Ministerial Conference) for decision.[93]

The process of building consensus is complex and has been occasionally criticized. Essentially, the proponent(s) of a proposal, either directly or through the relevant committee chair, consults with an ever-widening group of Members so as to build support for the proposal and to modify it where necessary to avoid opposition. The necessity of achieving consensus means that an attempt is normally made to ensure that all major Members and any other Members with particular interests are involved in the consultations early on. However, those Members that are not consulted early on may, of course, feel slighted. This was a particular problem at the Seattle Ministerial. While most Members do not stand alone so as to block an emerging consensus, the General Council (and other WTO) decision-making processes can easily be slowed and even blocked by any determined Member.[94] The problems of consensus decision-making are explored further in the last section of this Chapter.

2. Interpretations

The Ministerial Conference and General Council have the right to adopt interpretations of the WTO Agreement and the various Multilateral Trade Agreements by a vote of three-quarters of the membership.[95] This right is exclusive, which is another way of saying that results of the dispute settlement process do not in themselves constitute formal interpretations of the agreements (although they may in practice do so to the extent that their reasoning is followed in subsequent dispute settlement proceedings).[96] The agreement specifically states that the right of interpretation is not to be used so as to undermine the amendment provisions, discussed in subsection 4 below. Under

[91] The number of votes cast by the European Community and its member states may not exceed the number of member states. *WTO Agreement*, Art. IX, footnote.

[92] For example, at one point in 1999 Egypt suggested that given the absence of a consensus on any one individual, the Director-General should be chosen by voting, as provided for in Article IX, but the chair chose to continue to seek a consensus, which was eventually achieved. WT/GC/M/40/Add.4, at 10 (July 5, 1999). Earlier in 1999, the EC had requested a vote on whether to overturn a ruling of the chair of the DSB in connection with the *EC Bananas* dispute, but the chair declined to take a vote. WT/DSB/M/54, at 26–30 (April 20, 1999).

[93] *See, e.g.*, S/L/15 (October 19, 1995) (Rule 33 of the rules of procedure of the Services Council provides: "Where a decision cannot be arrived at by consensus, the matter shall be referred to the General Council for decision.").

[94] The rules of procedure of WTO bodies generally require that the first item of business of a meeting is to adopt the proposed agenda of the meeting, which like everything else is normally done by consensus. Threatening to block consensus on the adoption of the agenda has occasionally been used in the DSB and elsewhere informally to force items to be removed from the agenda. In dealing with a lack of consensus on adoption of the agenda in a DSB meeting relating to the *EC Bananas* dispute, the chair of the DSB ruled that the meeting at issue would go forward on the basis of the proposed agenda, even in the absence of consensus. WT/DSB/M/54, at 1–10 (April 20, 1999). Any other result could defeat the automatic nature of the dispute settlement system. It is unclear whether the DSB chair's decision would apply in other contexts.

[95] *WTO Agreement*, Art. IX:2.

[96] DSU, Art. 3.2, 3.9.

GATT, there were no specific provisions on adoption of interpretations, although GATT Article XXV:1, under which decisions could be taken by majority vote, could be read to encompass such power.

As of the end of 2001, there had been no interpretations adopted in the WTO, although one had been requested in connection with the *EC Bananas* dispute.[97]

3. Waivers

The Ministerial Conference and the General Council have the power to waive obligations under the WTO Agreement and the Multilateral Trade Agreements, by a vote of three-quarters[98] of the membership.[99] (Under GATT, only a two-thirds vote was required.) The Ministerial Conference or General Council considers requests for waivers concerning the WTO Agreement. Waivers concerning other agreements are first submitted to the relevant sectoral council for consideration. That council is to report on the request to the Ministerial Conference or General Council within ninety days.

Waivers are to be granted only in "exceptional circumstances" and the decision granting the waiver is to state what those circumstances are, specify the terms and conditions of the waiver and the date on which it terminates.[100] If the waiver extends for more than one year, it must be reviewed annually to see if the exceptional circumstances still exist and whether the terms and conditions are being met. The increase in the approval requirement (from two-thirds to three-quarters), the requirement of an expiration date and the annual review process, were all intended to add more rigor to the waiver-granting process, compared to the GATT system. To date, however, the annual reviews have been pro forma.[101]

Most waivers to date have involved conversions of tariff schedules (e.g., to conform to the latest version of the Harmonized System) and preferences for developing countries,

[97] WT/GC/W/133 (January 25, 1999). The General Council took no action on the request, which concerned the so-called sequencing problem and which has been the subject of further negotiations and proposals to amend the DSU. *See* Chapter 28 of this book.

[98] Consensus is required to waive obligations with respect to transition periods or a period of staged implementation. WTO Agreement, Art. IX:3, footnote.

[99] *WTO Agreement*, Art. IX:3. In actual practice, waivers are granted by the General Council if there is a consensus to do so at a meeting of the General Council, even if fewer than three-quarters of the Members are present. This is done pursuant to a General Council decision. WT/L/93, November 24, 1995. The decision, which also applies to accessions, notes, "if any Member has a particular problem with a proposed decision regarding a request for a waiver or an accession to the WTO, it should ensure its presence at the meeting in which this matter will be considered. The absence of a Member will be assumed to imply that it has no comments on or objections to the proposed decision on the matter." In the absence of such a pragmatic practice, a postal ballot would sometimes be needed (because attendance at General Council meetings is sometimes less than three-quarters of the Members), and it would likely be difficult to obtain the return of sufficient ballots within the prescribed thirty-day period for voting, particularly in the case of routine waivers. The Ministerial Conference has not adopted an analogous decision, but reference was made at Doha to the General Council's practice when the various accessions and waivers considered at Doha were adopted by consensus without a formal vote.

[100] *WTO Agreement*, Art. IX:4.

[101] GATT 1994 includes an *Understanding in Respect of Waivers of Obligations Under GATT 1994*. The relationship of the Understanding to the rules of the WTO Agreement is not completely clear, although it appears to be intended to add additional rules, but for GATT waivers only. The Understanding requires that a request of a waiver from a GATT obligation include a description of the policy objectives the Member seeks to pursue and the reasons GATT-consistent measures cannot achieve those policy objectives. It also provides that existing GATT waivers would expire two years after the entry into force of the WTO Agreement unless extended and that claims of nullification and impairment of benefits as a result of (i) a waiver or (ii) a failure to meet the terms and conditions of a waiver, can be brought in dispute settlement

although specific obligations under the agreements on agriculture, customs valuation and trade-related investment measures have also been waived with respect to individual countries.[102]

4. Amendments

The WTO agreements may be amended under certain circumstances.[103] The process is complicated, but in most cases is as follows. The Ministerial Conference or the General Council considers a proposal for an amendment, which may be made by any WTO Member or sectoral council. If consensus cannot be reached (normally within a ninety-day time limit), the amendment may be proposed by a two-thirds vote of the Members.

Amendments of certain WTO rules,[104] however, do not become effective unless all Members formally accept them by depositing an instrument of acceptance.[105] Otherwise, in the case of an amendment that does not alter rights and obligations, it becomes effective for all WTO Members on formal acceptance by two-thirds of WTO Members.[106] In the case of an amendment that does alter rights or obligations, the amendment becomes effective only when two-thirds of the Members have formally accepted it and then only in respect of those Members that formally accept it.[107] The Ministerial Conference or General Council may decide, however, by a three-quarters vote, that an amendment "is of such a nature that any Member which has not accepted it within a period specified . . . shall be free to withdraw from the WTO or remain a Member with the consent of the Ministerial Conference."[108] While not clearly worded, the aim of this provision, which derives from GATT 1947 Article XXX:2, is apparently to provide a mechanism for forcing Members either to accept an amendment that is widely supported or withdraw from the WTO. Finally, the addition of a plurilateral agreement to Annex IV of the WTO Agreement requires a consensus decision; deletion of such an agreement from Annex IV is authorized when requested by the parties thereto.[109]

5. Accessions

Approval of accessions requires a two-thirds vote of WTO Members.[110] The accession process is discussed below under Membership.

[102] The annual reports of the General Council catalog the new waivers granted each year and the multi-year waivers reviewed. *See, e.g.*, WT/GC/53, at 6–9 (November 5, 2001).

[103] *WTO Agreement*, Art. X.

[104] These include the amendment and decision-making rules of the WTO Agreement (Articles IX and X); the MFN provisions of GATT (Article I), GATS (Article I:1) and TRIPS (Article 4); and GATT Article II (tariff schedules). WTO Agreement, Art. X:2. Consensus is also needed to amend the Dispute Settlement Understanding, which is contained in Annex 2 to the WTO Agreement. *WTO Agreement*, Art. X:8. A DSU amendment takes effect immediately upon adoption by the Ministerial Conference or General Council, without the need for formal acceptance by Members through deposits of instruments of acceptance.

[105] *WTO Agreement*, Art. X:7.

[106] *WTO Agreement*, Art. X:4. In the case of GATS, this rule applies to amendments to Parts IV, V and VI of GATS (and annexes thereto). *WTO Agreement*, Art. X:5. Formal acceptance is not necessary in respect of certain amendments to the TRIPS Agreement proposed pursuant to TRIPS Article 71.2; nor in respect of amendments to the DSU and TPRM. *WTO Agreement*, Art. X:6, X:8.

[107] *WTO Agreement*, Art. X:3, X:5.

[108] *WTO Agreement*, Art. X:3, X:5.

[109] *WTO Agreement*, Art. X:9. The procedures for amendments to plurilateral agreements are governed by the agreement in question. *WTO Agreement*, Art. X:10.

[110] *WTO Agreement*, Art. XII:2. The General Council, under the same practice as applies to waivers, normally takes accession decisions on a consensus basis. WT/L/93 (November 24, 1995). *See* note 99 *supra.*

E. Organizational Issues

1. WTO Secretariat

The WTO Agreement provides for the appointment by Members of a Director-General, who is the head of the WTO Secretariat and appoints the staff thereof.[111] Following its establishment as of January 1, 1995, the WTO took over the headquarters of the GATT in Geneva in the Centre William Rappard, the former International Labor Organization building overlooking Lake Geneva. Although the WTO later took over the one-half of the Rappard building that had not been occupied by the GATT, in the year 2000 its expanded functions required it to lease additional office space in Geneva.

After long discussions over terms and conditions of employment, the personnel of the GATT Secretariat became the WTO Secretariat on January 1, 1999.[112] The staff of the secretariat is relatively small as international organizations go, consisting of only about 550 employees. Its main function is to provide support services for the activities of the WTO: negotiations on trade issues, oversight committees, dispute settlement proceedings, technical cooperation, and trade policy courses for officials from developing countries. The WTO Agreement provides that the staff shall be "exclusively international in character". Staff members are not to seek or accept instructions from any governments or other external authority, and WTO Members are under an obligation not to seek to influence staff members in the discharge of their duties.[113]

There were only four Directors-General of the GATT: Eric Wyndham-White (1947–1968), Olivier Long (1968–1980), Arthur Dunkel (1980–1993) and Peter Sutherland (1993–1995). The first Director-General of the WTO was Renato Ruggiero (1995–1999). The Members had considerable difficulties in choosing his successor and finally agreed that the two leading candidates would have successive three-year terms: Mike Moore (1999–2002) and Dr. Panitchpakdi Supachai (2002–2005). The Directors-General have often played important roles in helping WTO Member conclude trade negotiations. In particular, Directors-General Dunkel and Sutherland played an important role in pushing the Uruguay Round to a successful conclusion, in particular, through the submission by Dunkel of a draft final act at the end of 1991. Although the negotiations continued for two more years, the draft final act served to sharply focus the negotiations.

2. Status of the WTO

The WTO Agreement provides that the WTO shall have legal personality and shall be accorded by its Members with such privileges and immunities as are necessary for the exercise of its functions.[114] Similarly, Members are required to accord WTO officials and Member representatives such privileges and immunities as are necessary for the

[111] *WTO Agreement*, Art. VI:1–3. General regulations setting out the powers, duties, conditions of service and term of office of the Director-General have not yet been adopted, although they are provided for in Article VI:2.

[112] In the 1995–1999 period, they served the WTO but remained technically employees of the Interim Commission of the International Trade Organization (ICITO), which was the formal employer of the GATT Secretariat. *See* text accompanying notes 10–11 *supra.* ICITO had previously transferred all of the assets it held for GATT to the WTO and on transfer of the personnel, this relic of the Havana Charter negotiations ceased to exist.

[113] *WTO Agreement*, Art. VI:4.

[114] *WTO Agreement*, Art. VIII:1–2. The privileges and immunities are to be similar to those stipulated in the 1947 UN Convention on Privileges and Immunities of the Specialized Agencies. WTO Agreement, Art. VIII:4.

independent exercise of their functions in connection with the WTO.[115] In this regard, the WTO has a Headquarters Agreement with Switzerland that deals with a number of these issues.[116]

3. WTO Relations with Intergovernmental and Nongovernmental Organizations

(a) Intergovernmental Organizations. The WTO Agreement provides that the General Council shall make appropriate arrangements for effective cooperation between the WTO and other intergovernmental organizations ("IGOs") that have responsibilities related to those of the WTO.[117] In light of the global economic coherence mandate, the two most closely related IGOs to the WTO are the IMF and the World Bank, and the WTO's relations with them is discussed in connection with the coherence mandate.[118] The WTO has entered into agreements with various other international intergovernmental organizations with related mandates, as well, such as the World Intellectual Property Organization ("WIPO") and the International Telecommunications Union.[119]

The WTO is not formally a part of the United Nations system, although it has close contacts with that system, particularly in respect of administrative matters in Geneva. It has, however, no general agreement with the UN. The two organizations have merely exchanged letters in which they agree to continue the relationship that existed between the UN and GATT.[120] Of course, the relationship has changed in that the Secretariat staffers are no longer employees of a UN-connected entity nor do they participate in the UN Pension Plan.

As of December 2001, the General Council had not been able to agree on general rules for dealing with requests from IGOs to be observers at General Council meetings. Consequently, since the advent of the WTO only the United Nations, UNCTAD, IMF, World Bank, FAO, WIPO and OECD have been observers at General Council meetings, as they were at GATT Council meetings. Other WTO bodies have permitted different IGO observers depending on the work of the body. There are no IGO observers at DSB meetings, except occasionally the IMF when a dispute has involved it or its rules. Many more IGOs have observer status at Ministerial Conferences.

(b) Nongovernmental Organizations. The WTO Agreement provides that the General Council may make appropriate arrangements for consultation and cooperation with nongovernmental organizations ("NGOs") concerned with matters related to those of the WTO.[121] In this regard, the General Council adopted guidelines for arrangements with NGOs.[122] The goal of the guidelines is "to improve transparency and develop communication with NGOs." In the guidelines, the Secretariat is instructed to play a more active role in direct contacts with NGOs. While NGOs are recognized as being capable of making valuable inputs to the WTO, the guidelines state "there is currently a broadly held

[122] WT/L/162 (July 23, 1996).

view that it would not be possible for NGOs to be directly involved in the work of the WTO or its meetings."[123]

In implementation of the guidelines, the WTO has, *inter alia*, sponsored a number of symposia involving NGOs, briefed them on WTO activities, set up a system for informing WTO Members of materials received by the Secretariat from NGOs and granted many of them observer status for ministerial meetings.[124] An important issue, discussed in detail below, in the WTO's relations with NGOs and other "outsiders" is the degree of transparency in respect of the WTO's documentation and meetings.

F. Membership in the WTO

As of August 1, 2004, there were 147 WTO Members, and another twenty-eight countries with observer status.[125] The latter are either in or expected soon to start the accession process.[126] The two principal non-Members, in terms of international trade volume, were Russia and Saudi Arabia, both of whom were in the accession process.

Article XII provides that any country or "separate customs territory possessing full autonomy in the conduct of its external commercial relations and of the other matters provided for in this Agreement and the Multilateral Trade Agreements" may accede to the WTO.[127] Thus, separate customs territories of a country may become WTO Members, even though they are not independent national states. This was also true under the General Agreement. Hong Kong and Macao, for example, were GATT parties and are now WTO Members, and Chinese Taipei became a WTO Member on January 1, 2002. The European Community is also a Member, as well as its member countries.

1. Original Members

Article XI of the WTO Agreement provides that any Contracting Party to GATT 1947 or the European Communities could become an original member of the WTO by accepting the WTO Agreement (including the annexed Multilateral Trade Agreements), so long as it had schedules annexed to GATT 1994 and GATS. In fact, almost all GATT Contracting Parties became original Members of the WTO.[128] There does not seem to be any difference in status within the WTO or under any of the WTO agreements between "original Members", as defined by Article XI:1 and WTO Members who have acceded under Article XII.

Article XI:2 specifies that least developed countries, as defined by the United Nations, are "only . . . required to undertake commitments and concessions to the extent consistent

[123] For a further discussion of the relationship between the WTO and NGOs, *see* Chapter 82 of this book.

[124] WTO, ANNUAL REPORT (2001), at 113.

[125] The observer governments were Algeria, Andorra, Azerbaijan, the Bahamas, Belarus, Bhutan, Bosnia & Herzegovina, Cape Verde, Equatorial Guinea, Ethiopia, Kazakhstan, Laos, Lebanon, Russia, Samoa, Sao Tome & Principe, Saudi Arabia, Serbia & Montenegro, Seychelles, Sudan, Tajikistan, Tonga, Ukraine, Uzbekistan, Vanuatu, Vietnam and Yemen. All except Equatorial Guinea and Sao Tome & Principe have commenced the accession process. Requests for accession had also been received from Iran, Libya and Syria, but no action had been taken on their requests. Nepal's accession had been granted subject to ratification by the Government of that country.

[126] The Holy See (Vatican) is also an observer, but is not expected to accede.

[127] *WTO Agreement*, Art. XII:1.

[128] The exceptions were Yugoslavia, which did not participate in the Uruguay Round, and five GATT parties whose schedules were not completed in time to be annexed to the WTO Agreement. Those five acceded to the WTO under expedited procedures. *See* note 132, *infra.*

with their individual development, financial and trade needs or administrative and institutional capabilities."

2. Accession of New Members

Article XII of the WTO Agreement establishes the procedures for accession to the WTO. It does not provide much detail on the accession process; it simply provides that accession is to be "on terms agreed between [the acceding country or territory] and the WTO".[129] Once those terms are agreed, the accession (and the terms) must be approved by a two-thirds majority of the WTO.[130] In practice, accession decisions are made on a consensus basis in the General Council or Ministerial Conference.[131] As of November 1, 2003, the WTO had approved the accession of twenty countries and territories: Albania, Armenia, Bulgaria, Cambodia, China, Chinese Taipei, Croatia, Ecuador, Estonia, Georgia, Jordan, the Kyrgyz Republic, Latvia, Lithuania, Macedonia, Moldova, Mongolia, Nepal, Oman, and Panama.[132] As noted above, many other countries are in the accession process.

To become a WTO Member, a country seeking accession first becomes an observer to the WTO. When it formally requests accession (which could be at the same time as its request for observer status), the General Council establishes a working party to consider the accession. The membership of the working party is open to all interested WTO Members. There are essentially four steps to the accession process.[133]

(a) Foreign Trade Regime Memorandum. The first step in the working-party process is the submission by the applicant of a detailed memorandum describing its foreign trade regime. The required format for this memorandum is designed to elicit information on all aspects of a country's trade regime that will be affected by WTO rules.[134] For example, the memorandum is expected (i) to discuss the applicant's economy in general and describe its economic policy, (ii) to explain its framework for making and enforcing

[129] *WTO Agreement*, Art. XII:1.

[130] There was an easier path to GATT membership for some countries that was not carried over into the WTO Agreement. Under GATT Article XXVI:5(c), a country that gained its independence from a GATT contracting party could become a GATT contracting party automatically if its parent country applied GATT to the territory in question and sponsored the admission. This method was easier than the normal accession procedure because no terms of accession had to be negotiated and it was usually the case that few of the sponsored territory's tariffs were subject to GATT bindings. Consequently, former colonies could gain the benefits of GATT membership without undertaking significant obligations under the GATT, and many did so. The requirements of Article XI on original membership, and particularly the requirement that all original Members have schedules, was designed to ensure that all WTO Members have made tariff and other commitments, even if they had not done so in GATT.

[131] WT/L/93 (November 23, 1995).

[132] Technically, there were five GATT parties that did not become original members of the WTO because negotiations on their schedules were not completed in time. They were permitted to accede under expedited procedures, without involvement of a working party, when their schedules were completed. *See* WTO/L/30 (February 7, 1995). The five countries were Grenada, Qatar, Papua New Guinea, St. Kitts & Nevis, and the United Arabs Emirates. *See* World Trade Organization, *WTO Analytical Index* 95–96 (1st ed. 2003). The WTO website does not mention these parties as having acceded to the WTO.

[133] For a detailed explanation of the accession process, *see* WT/ACC/7/Rev.2 (November 1, 2000), which is a technical note by the WTO Secretariat on the accession process.

[134] The outline of the memorandum is specified in WT/ACC/1 (March 24, 1995), entitled "Accession to the World Trade Organization: Procedures for Negotiations Under Article XII: Note by the Secretariat)". There are also four technical notes by the Secretariat dealing with information to be provided in respect of agriculture (WT/ACC/4), services (WT/ACC/5), SPS and TBT matters (WT/ACC/8) and intellectual property protection (WT/ACC/9).

foreign trade policies, (iii) to describe in detail its regulation of imports and exports and its internal policies affecting trade in foreign goods, (iv) to describe in detail its trade-related intellectual property and services regimes, and (v) to describe the institutional basis for its trade and economic relations with third countries. In addition, the applicant is expected to supply extensive statistical data and copies of all relevant legislation. The applicant then must respond to the many written questions that members of the working party typically ask in order to clarify issues raised by the memorandum. Needless to say, the preparation of a memorandum such as this takes considerable time and expertise. Applicants typically receive technical assistance from the WTO Secretariat, as well as from private consultants, whose expenses may be defrayed by governmental or intergovernmental foreign assistance programs.[135] Some countries present their memorandum at the time the working party is established; others take years to prepare it.[136]

(b) Bilateral Negotiations. In the second stage of the accession process, the applicant engages in bilateral negotiations with all interested WTO Members. Those Members have been liberalizing trade with each other for over fifty years, and, in order to gain the benefits that those many years of trade negotiations have produced, a prospective member may have to take significant market-opening measures in respect of imports from WTO Members. These negotiations are bilateral. Each WTO Member will have a different list of trade concessions that it seeks from a prospective Member. However, because of the most-favored-nation requirement, all WTO Members benefit from the market-opening concessions obtained by other Members. The negotiation process for the acceding member can be rather difficult, as each WTO Member will have its own negotiating goals for specific products and services and may not want to compromise them simply because some other Members have obtained their goals for other products and services. Since consensus is required in the end, there is a lot of pressure on acceding countries, especially those with significant economies, to make broad market access commitments.

It is difficult to give an indication of a "typical" result of these bilateral negotiations. For example, the average bound tariff rates on non-agricultural goods of the first sixteen acceding countries ranged from 4.8 per cent (Chinese Taipei) and 5.7 per cent (Moldova) to 20 per cent (Mongolia) and 20.1 per cent (Ecuador). Over time, the average bound rates accepted by acceding countries seem to have declined a bit, but meaningful generalizations are impossible to draw. However, the WTO Secretariat has published general summaries of the market access commitments that acceding countries have made in goods and services,[137] and these do give useful background information.

(c) The Accession Protocol and Working Party Report. The third stage of the accession process is the negotiation of the accession protocol. In fact, this takes place while the bilateral negotiations are ongoing. In the course of the protocol negotiations, existing Members give careful consideration to the extent that the foreign trade regime of the acceding country complies with WTO rules. To the extent that it does not, changes

[135] A description of technical assistance provided by the WTO Secretariat, along with some information on other sources of assistance, can be found in WTO/ACC/10 (Dec. 21, 2001), at pp. 32–35.

[136] For a timetable setting out the time taken by the various stages of the accession process for the first sixteen accessions, *see* WTO/ACC/10 (December 21, 2001), pp. 10–11.

[137] For tariff bindings, *see* WTO/ACC/10 (December 21, 2001), Table 2, at pp. 23–26; for services commitments, *see id.*, Table 3, at pp. 30–31.

will be required. Any applicable transitional provisions and reporting requirements are specified in the protocol (or in the report of the working party that sets the terms of the protocol, to the extent that the report is incorporated into the protocol).

Protocols of accession are typically brief.[138] The standard protocol provides that the applicant becomes a WTO Member when the protocol comes into force, which is thirty days after its formal acceptance by the applicant. The goods and services schedules of the applicant are, of course, annexed to the protocol. Probably the only other significant provision in the protocol is that which specifies that the protocol includes specified commitments made by the applicant that are included in the working party report and that the protocol shall be an integral part of the WTO Agreement. This practice is unfortunate, since it means that it is necessary to page through the relevant working party report to determine the complete contents of the protocol. A more transparent practice would be desirable.

The one exception to the use of the standard protocol involved China.[139] China's accession protocol,[140] the initial drafting of which pre-dated the WTO, contains many provisions—some of which simply restate its WTO obligations, but others of which impose on China obligations that go beyond those found in the WTO Agreement. Among those provisions are those on transparency of laws and regulations, judicial review of administrative actions and the right to trade.[141] China also accepts that it may be subject to certain special product-specific safeguards actions by other WTO Members during a transitional period.[142]

Although most protocols are quite short, as mentioned above, they typically incorporate commitments found in the working party reports. The WTO Secretariat summarizes the kind of commitments found in working party reports and incorporated into protocols as follows:[143]

- statements of fact that do not actually impose any commitment
- commitments to abide by existing WTO rules (sometimes these commitments specify national measures that need to be amended or elaborate on the WTO obligations)
- obligations not to have recourse to WTO provisions (typically transition provisions regarding TRIPS and customs valuation)
- identification of specific transition provisions that are applicable for the acceding country (e.g., customs valuation, TRIMs)
- authorization of temporary departures from WTO rules or commitments (e.g., internal taxes, import licensing, technical barriers and agriculture support)
- additional obligations (i.e., obligations not found in WTO agreements) with respect to, for example, privatization, sub-central governments, government procurement, trade in civil aircraft, transparency

As the foregoing list makes clear, these additional commitments cover a wide range of topics. The WTO Secretariat has compiled all of these commitments into one document

[138] The standard accession protocol is set out in WTO/ACC/10 (December 21, 2001), at pp. 39–40.
[139] Most protocols have deviated from the standard protocol in minor respects. *See* WT/ACC/10 (December 21, 2001), at pp. 40–41 for the provisions in question.
[140] WT/L/432 (November 23, 2001). The position of China in the WTO is discussed in more detail in Chapter 67.
[141] WT/L/432 (November 23, 2001), Secs. I(2)(C)–(D), I(5).

[143] WTO/ACC/10 (December 21, 2001), at p. 43.

for reference, and it takes more than one hundred pages to list them all.[144] The most interesting categories are those dealing with transition periods and additional obligations.

Pressure is put on acceding countries to implement their WTO obligations immediately, without the benefit of transition periods.[145] Indeed, the standard accession protocol provides that transition periods in WTO agreements are normally to be measured for acceding countries as of the entry into force of the WTO Agreement, i.e. January 1, 1995.[146] At this point, most of those transition periods have expired. The theory seems to be that acceding countries know that they will have to implement all WTO obligations when they start the accession process. Thus, it is argued, the accession process is essentially their transition period and, when that process is completed, they should be in compliance with their obligations.

The inclusion of additional obligations in protocols seems to stem from two separate concerns. First, in a number of instances, the additional obligations have simply been to accede or negotiate accession to the two plurilateral agreements—the Government Procurement Agreement and the Agreement on Civil Aircraft.

Second, some of the additional obligations seem to arise from concerns that the applicant's status as a country in transition from a non-market economy requires additional obligations in order to ensure that it fits into the WTO. Similar concerns existed in GATT, which had some difficulties in respect of accession of non-market economies.[147] Indeed, some of the commitments in the Chinese accession protocol—for example, the creation of a right to trade and the right of other WTO Members to use selective safeguards—address concerns that are similar to those that motivated analogous provisions in the GATT accession protocols for non-market economies. The issue of how to deal with countries in transition in the WTO has been a particularly significant one since roughly one-half of the countries that are in or have completed the WTO accession process are former Communist states. Since the easiest way to avoid problems associated with non-market economies is to encourage them to become market economies, the accession process puts pressure on countries to speed the transformation of their economies, although there are generally no specific requirements imposed beyond transparency and notification requirements in respect of privatization and pricing polices.[148]

To date, there have been no cases in dispute settlement arising out of commitments made in or incorporated into accession protocols. Given the extensive commitments

[144] *Id.*, at pp. 43–157.

[145] For the case of LDCs, *see* Part III.F.2d *infra*.

[146] WTO/ACC/10 (December 21, 2001), at p. 39 (Part I(3)).

[147] Three non-market economies in Eastern Europe – Hungary, Poland and Romania—acceded to GATT. The first was Poland, and in order to allay concerns that imports into Poland could be kept artificially low by the policies of state-trading enterprises charged with importing, the Polish accession protocol contained a commitment by Poland to increase its imports each year by a specified amount. Because of balance of payments problems, Poland was not able to comply with this obligation. The second of these countries to accede to GATT was Romania. In its accession protocol, Romania committed to increase its imports from other GATT parties in line with its increase of imports generally. That provision also failed to work effectively. In the case of Hungary, no such import commitment was required, as the Hungarians successfully argued that they had a working tariff system and that a commitment to bind tariffs was sufficient. Because of concerns over whether exports to these countries would increase, the other GATT parties reserved the right in the protocols of accession to use selective safeguards against imports from the three countries. All in all, the experience of trying to admit non-market economies into GATT seemed generally negative. *See generally* M.M. Kostecki, East-West Trade and the GATT System (1978); Jackson, Davey & Sykes, *supra* note 15, at 1150–1152.

[148] WT/ACC/10 (December 21, 2001), at pp.46–53 (compiling commitments on state ownership and privatization, and pricing policies).

made by China and the importance of China in the trading system, the first such cases may well arise out of its commitments, although that remains to be seen.

(d) Approval of Accession. Once the bilateral and protocol negotiations are completed, the bilateral commitments are consolidated into annexes to the protocol and the accession working party adopts its report recommending accession and sends it to the General Council (or Ministerial Conference), where both the report and the approval of the accession are adopted by consensus.

Overall, the process of accession can be arduous. The Chinese accession negotiations lasted over fifteen years. Indeed, the median time for completing accession for the first sixteen countries to accede to the WTO was over six years.[149] While efforts are made from time to time to speed up the process, for the most part, it remains a long and difficult one. At the end of 2002, however, the General Council adopted special rules for the accession of least-developed countries (LDCs).[150] These rules provide, inter alia, that Members shall exercise restraint in seeking market access commitments from LDCs; that special and differential treatment in WTO agreements shall apply to LDCs; that transitional periods and arrangements will be granted to LDCs (taking into account their needs, and accompanied by action plans for future compliance with WTO rules); and that LDCs will not be required to accede to any plurilateral agreements. The decision notes that no LDC has yet to accede to the WTO under the current accession procedures, although nine are in the accession process.[151]

3. Non-application among Members

Article XIII:1 of the WTO Agreement allows a WTO Member to decide in certain circumstances that the WTO Agreement (and the Multilateral Trade Agreements in Annexes 1 and 2 (which includes the DSU)) shall not apply between it and another WTO Member.

In respect of original Members of the WTO, such a decision on non-application was permitted only if the non-application provision of GATT (GATT Article XXXV) had been invoked and was in effect between the two Members at the time the WTO Agreement came into force for them.[152] This was the situation in the case of the United States and Romania, and the United States invoked Article XIII.[153] It subsequently withdrew that invocation in 1997.[154]

In the case of new Members, the non-application provision must be invoked prior to the time that the terms of accession for a new Member are approved.[155] Under the WTO Agreement, the non-application clause has been invoked seven times. The United States has invoked the clause five times, in respect of Mongolia, the Kyrgyz Republic,

[149] WT/ACC/10 (December 21, 2001), at pp. 10–11.
[150] *Accession of Least-Developed Countries*, WT/L/508 (January 20, 2003).
[151] The nine are Bhutan, Cambodia, Cape Verde, Laos, Nepal, Samoa, Sudan, Vanuatu and Yemen. Since the decision, a working party on the accession of Ethiopia has been established. The two observer countries to the WTO that are not now in the accession process—Equatorial Guinea and Sao Tome & Principe—are LDCs. For general information on the accession of LDCs, including a description of technical assistance provided to them in respect of accession, *see Summary State of Play in Working Parties on the Accession of Least-Developed Countries*, WT/ACC/12 (July 4, 2002).
[152] *WTO Agreement*, Art. XIII:2.
[153] WT/L/11 (January 27, 1995).
[154] WT/L/203 (February 20, 1997).
[155] *WTO Agreement*, Art. XIII:3.

Georgia, Moldova and Armenia.[156] It has maintained the non-application status until the U.S. Congress has acted to remove the country in question from the application of the so-called Jackson-Vanik provisions of the U.S. Trade Act of 1974, which impose certain conditions on granting MFN treatment to certain former Communist countries.[157] As of May 2003, the United States had revoked its invocation of Article XIII in respect of Mongolia, the Kyrgyz Republic and Georgia, which means that only its invocations in respect of Moldova and Armenia remain in effect.[158] The only other invocations of Article XIII through May 2003 were by El Salvador in respect of China[159] and Turkey in respect of Armenia.[160]

The Ministerial Conference may review the operation of Article XIII in a particular case on request. There have been no such reviews.[161] In the case of plurilateral agreements, non-application is governed by the agreement in question.[162]

As noted above, a similar provision existed in the GATT (GATT Article XXXV). The negotiating history of the provision and its use through 1995 is detailed in the *GATT Analytical Index*.[163]

4. Withdrawal

Article XV of the WTO Agreement provides that any member may withdraw from the agreement on six months' notice. The withdrawal automatically applies to all of the Multilateral Trade Agreements as well.[164] Withdrawal from a plurilateral agreement is governed by that agreement.[165]

G. Miscellaneous

In its preamble and in Article XVI, the WTO Agreement contains a number of provisions that have been important for other than institutional purposes and we will refer to them only briefly here.

1. Preamble to the WTO Agreement

Compared to the preamble to GATT 1947, the preamble to the WTO Agreement is noteworthy for adding wording in respect of protecting and preserving the environment, the

[156] Mongolia-WT/L/159 (July 17, 1996); Kyrgyz Republic-WT/L/275 (October 12, 1998); Georgia-WT/L/318 (October 1, 2000); Moldova-WT/L/395 (May 4, 2001); Armenia-WT/L/505 (December 10, 2002).

[157] On the Jackson-Vanik rules, see JACKSON, DAVEY AND SYKES, *supra* note 15, at 445–446. The Jackson-Vanik rules required Communist countries to meet certain criteria with respect to freedom of emigration before they were eligible to receive MFN treatment from the United States. At the time of their adoption, they effectively prevented the entry into force of a trade agreement between the United States and the Soviet Union that had been negotiated by President Nixon. However, under certain circumstances the President could waive the rules from time to time, subject to being overruled by Congress. In recent years, the annual Presidential decisions to extend MFN treatment to China were often controversial, although they were never reversed by Congress, which removed China from the coverage of the Jackson-Vanik rules effective on its accession to the WTO.

[158] Mongolia-WT/L/306 (July 8, 1999); Kyrgyz Republic-WT/L/363 (September 20, 2000); Georgia-WT/L/385 (January 10, 2001).

[164] *WTO Agreement*, Art. XV:1.

[165] *WTO Agreement*, Art. XV:2.

objective of sustainable development, and the development of developing countries.[166] Since the basic treaty interpretation rules of the Vienna Convention refer to a treaty's preamble as part of the context in which treaty terms are interpreted,[167] the preamble could potentially play an important role in dispute settlement cases presenting environmental or development issues. To date, the most noteworthy example has been the Appellate Body's citation of the preamble in its decision in the so-called *Shrimp-Turtle* case.[168]

2. Continuation of GATT Practices

Article XVI:1 of the WTO Agreement explicitly states that, except as otherwise provided, the WTO shall be guided by past GATT decisions, procedures and customary practices.[169] In practice, this has meant that past GATT decisions (e.g., on procedures for selection of Deputy Directors-General) have been viewed as having been carried forward into the WTO context. Such decisions, however, are not generally regarded as treaty text subject to amendment rules. Rather, they are viewed in the same way as normal WTO decisions, subject to change by the appropriate WTO body.

As to the specific situation of GATT panel reports, the Appellate Body has cited this provision as grounds for stating that adopted GATT panel reports "create legitimate expectations among WTO Members, and should be taken into account where they are relevant to any dispute", even though they are not technically binding in subsequent disputes.[170]

3. Resolution of Conflicts Between WTO Agreements

The WTO Agreement provides that it prevails in the event of a conflict between it and any of the annexed Multilateral Trade Agreements.[171] The situation of conflicts between other WTO agreements is dealt with in other provisions, throughout the agreements. For example, a general interpretative note to Annex 1A (the annex containing the WTO agreements relating to trade in goods) provides that in the event of a conflict between GATT 1994 and another Annex 1A agreement, the Annex 1A agreement prevails. There are also conflict resolution provisions in some specific agreements. For example, the Agreement on Agriculture provides that the other goods agreements are subject to its provisions.[172] There are no explicit provisions for conflicts between GATT 1994 and GATS or the TRIPS Agreement, or between GATS and the TRIPS Agreement.

4. Requirement to Conform National Laws to WTO Rules

Article XVI:4 of the WTO Agreement provides that WTO Members shall ensure that their laws, regulations and administrative procedures conform to their obligations under the Multilateral Trade Agreements and the plurilateral agreements.[173] While this could be viewed as a simple statement that WTO Members are required to respect

their obligations under the WTO agreements, it has been cited in dispute settlement proceedings as supporting the possibility of challenging legislation "as such" in dispute settlement proceedings, even if the legislation has not been applied in a specific case.[174]

5. Reservations

Unlike many treaties, the WTO Agreement explicitly provides that no reservations may be made to it, and reservations may be made to other agreements only insofar as explicitly permitted therein.[175] Generally speaking, those other agreements do not permit reservations.

IV. Appraisal of the WTO's Institutional Arrangements

The WTO Agreement solves a number of the institutional problems that were perceived to exist in the GATT system.[176] It establishes a clear legal basis for the organization and its activities. It provides a unified governance framework for the various multilateral trade agreements that have been negotiated, as well as a unified dispute settlement system in which to resolve all disputes. Moreover, it is conceived as a single undertaking, so that all WTO agreements apply to all WTO Members (the two plurilateral agreements excepted). These innovations have all worked quite well, with the exception perhaps of the overly complex governance structure in the trade in goods area. However, while the resultant abundance of meetings taxes the delegates in Geneva, and is a perennial concern of smaller developing countries, it is not a problem of a fundamental nature.

There are, however, problems with the WTO's institutional arrangements. They stem mainly from the continuation of GATT decision-making practices, and, in particular, of the consensus requirement. A second problem that arises from the increased visibility of the WTO relates to the "transparency" of the WTO's work and, in particular, to its relations with NGOs.

A. Decision-Making Difficulties

The WTO's decision-making problems manifest themselves in three specific ways: difficulties in making routine decisions in a timely manner; the relative impotence of the General Council in relation to the dispute settlement system; and the uncertain viability of the amendment procedures. Each of these problems is addressed below.

1. Routine Decisions

There are many decisions that the WTO needs to take on a routine basis, particularly in respect of budget and personnel matters and general "house-keeping" issues, but also in respect of waiver requests and other regularly occurring issues. In practice, the consensus requirement has too often greatly delayed decisions on these matters. For example, the annual approval of the budget has been delayed (albeit for only a relatively short period) because of the objections of only one or two Members. The adoption of staff rules and

[174] *See, e.g.*, Report of the WTO Panel, *United States—Sections 301–310 of the Trade Act of 1974*, WT/DS152/R, ¶¶ 7.41–7.42 (1999).

[175] *WTO Agreement*, Art. XVI:5. Reservations to a plurilateral agreement may be made pursuant to the terms of the agreement.

[176] *See* text accompanying notes 1–15 *supra.*

the transfer of the staff from ICITO to the WTO Secretariat did not occur until four years after the WTO came into existence, because a number of important (and wealthy) Members kept raising budgetary issues. While rules on the de-restriction of documents were adopted in 1996, the review of those rules to be completed by July 1998 was not completed until mid-2002; and the adoption of rules on admission of intergovernmental observers to General Council meetings has been under discussion for seven years. The four-year review of the DSU, to be completed by the end of 1998, dragged on throughout much of 1999 and ended without reaching any conclusions.

The foregoing matters could be viewed as relatively inconsequential. In fact, while it would have been desirable to have prompt decisions on these matters, decisions were eventually implemented in those cases where they were really needed. In cases described above where matters remain pending, one can argue that no decision is critically needed. For example, the major IGOs have *de facto* observer status in the General Council, so no decision on observership is crucial. Since Members expressed general satisfaction with the DSU in the DSU review and since what is perhaps the only critical need for amendment—to clarify the so-called "sequencing" issue[177]—has been solved pragmatically on a case-by-case basis, it is arguable that the DSU review accomplished all that was necessary.

Nonetheless, the continued pendency of these longstanding, unresolved issues has a corrosive impact on the day-to-day operation of the organization. More importantly, the failure to take some routine decisions can damage the organization. Indeed, the inability of the General Council to agree on a successor to Director-General Ruggiero until three months after he left office put the organization in a state of near paralysis at a time when progress in preparations for the Seattle Ministerial was urgently needed. In 2000–2001, there was considerable difficulty in promptly handling waiver requests—from a number of developing countries in respect of the TRIMs Agreement and from the EC in respect of its partnership agreement with the so-called ACP countries. The lack of progress on these issues was not conducive to maintaining a healthy climate in Geneva for constructive interaction.

It could be argued that certain types of issues—here called routine—should be handled other than on a consensus basis. Such a shift would require defining which issues are routine. While the definition process would be difficult, it would seem that such matters as budget and personnel issues and basic organizational issues (e.g., de-restriction of documents and observership) clearly fall within the "routine decisions" classification. I would consider placing waivers here as well, or at least the review and extension of waivers, although that would be a more controversial step.[178]

For such routine decisions, consensus would remain the preferred decision-making mechanism, but if consensus could not be achieved within a specified time—such as

[177] *See* Chapter 28 of this book.

[178] In this regard, it should be noted that the standard practice with respect to waivers is to provide that a Member adversely affected by the waiver may bring a non-violation nullification or impairment complaint. *See, e.g.*, *Understanding in Respect of Waivers of Obligations Under GATT 1994*, ¶ 3. Thus, although a waiver does alter the balance of rights and obligations (even though it does not impose new obligations), affected parties are not left without the possibility of recourse to obtain a rebalancing of rights and obligations. While most Members would presumably not avail themselves of the possibility of initiating such an action, it would be a safety valve for Members who feel that their interests have not been properly or adequately considered in the negotiations over the terms and conditions of the waiver. Since voting on waivers was the practice in GATT and since the possibility of asking for a vote is specifically mentioned in the General Council decision on procedures for adoption waivers (WT/L/93, November 24, 1995), what is proposed would not be a complete innovation, although it would obviously change current practice.

by the end of November for the budget; within ninety days of a scheduled completion date for a review of organizational matters or of a request for a waiver—then voting would be in order, if requested. Such a practice would improve the functioning of the organization and still maintain the right of Members not to have substantive obligations imposed upon them without their consent. Needless to say, negotiations on substantive rules would remain subject to the consensus rule.

2. Relationship of the "Legislative" Institutions to the DSB

The Uruguay Round resulted in a much strengthened dispute settlement system for the WTO, one in which the decisions of panels and the Appellate Body are automatically adopted, absent consensus to the contrary.[179] A fundamental aspect of dispute settlement in a rule-based system is that decision-makers in dispute settlement must interpret the text of the agreements setting out the rules. In some cases, the meaning of those texts will be quite clear; but often there will be some gaps or a degree of ambiguity in the texts, or the application of a clearly specified standard in the text will involve the exercise of judgment in situations where reasonable minds could reach different results. All of this would seem to be unexceptional; indeed, it is fundamental to dispute settlement. However, many WTO Members have felt a considerable degree of frustration when they believe that the dispute settlement system has interpreted a text in a way that they claim they did not foresee when they negotiated the text. Usually, this view is expressed mainly by the loser in a particular dispute settlement proceeding and does not appear to be shared by the winner or by other neutral Members to any significant degree. Occasionally, however, a decision is made that attracts a great deal of criticism by a large number of Members. To date, the prime example of that has been a series of Appellate Body decisions related to its right and the right of panels to accept in dispute settlement proceedings *amicus curia* submissions from non-Members (i.e., NGOs or individuals).[180]

The problem faced by Members who disagree with such a decision is that they cannot prevent its adoption by the DSB or adopt a contrary formal interpretation under Article IX or amend the WTO agreements to negate the decision without consensus support, which is difficult to obtain.[181] For example, in respect of *amicus* submissions, the decision by the Appellate Body in *EC Asbestos* to establish procedures in that case by which non-Members could apply for leave to file such submissions led to a torrent of criticism at a special meeting of the General Council held to discuss those procedures. At the meeting, views were expressed directly or indirectly (through a group representative) by more than 50 Members.[182] Although only the United States offered unqualified support for the Appellate Body's ruling, the General Council was not in a position to change the ruling.

[179] *See* Chapter 26 of this book.

[180] Report of the Appellate Body, *United States—Import Prohibition of Certain Shrimp and Shrimp Products*, AB-1998-4, WT/DS58/AB/R, ¶¶ 99–110 (1998) (Panels have the authority to accept and consider unsolicited submissions from non-Members); Report of the Appellate Body, *United States—Imposition of Countervailing Duties on Certain Hot-Rolled Lead and Bismuth Carbon Steel Products Originating in the United Kingdom*, AB-2000-1, WT/DS138/AB/R, ¶¶ 36–42 (2000) (Appellate Body has the authority to accept and consider submissions from non-Members); Report of the Appellate Body, *European Communities—Measures Affecting Asbestos and Asbestos-Containing Products*, AB-2000-11, WT/DS135/AB/R, ¶¶ 50–57 (2001) (Appellate Body issued procedures for applying to it for permission to submit *amicus* briefs in the case, but then rejected all applications).

[181] Technically, of course, interpretations and amendments may be proposed in absence of a consensus and adopted by a vote, *see* text accompanying notes 95–97 and 103–109 *supra*, but in practice consensus decision-making is followed.

[182] WT/GC/M/60 (January 23, 2001).

It is arguable, however, that the intense reaction against and criticism of the procedures in fact resulted in a retreat by the Appellate Body, as it ultimately rejected all of the applications to submit *amicus* briefs in the *EC Asbestos* case.

Another example was presented by the *India Quantitative Restrictions* case.[183] That case arose out of India's application of quotas and other import restrictions for balance-of-payments purposes, as is permitted by GATT Article XVIII:B. The question presented was whether India's underlying balance-of-payments situation satisfied the criteria for imposing such restrictions. The consultations that occurred in the Balance-of-Payments Committee were inconclusive as no agreement could be reached on a phase-out plan. In the course of those negotiations, six developed-country Members requested consultations with India under the DSU. India was later able to settle on a six-year phase-out with five of them, but the United States insisted on a shorter period and requested the DSB to establish a panel to consider the matter, which occurs automatically. In the dispute settlement proceeding, India argued that only the Balance-of-Payments Committee had jurisdiction to decide if the India measures were justified by balance-of-payments difficulties. The United States argued that such an issue was justiciable in dispute settlement and the panel and the Appellate Body agreed. While the relevant agreement text and GATT practice would seem to support the US position,[184] the case highlights the fact that the lack of consensus in a WTO body results in no action, while the dispute settlement system produces results quickly and automatically.

For those for whom these examples demonstrate a problem, two types of solutions have been proposed. One type focuses on rebalancing the judicial-legislative balance in the WTO system through reducing the power of the dispute settlement system, either by removing certain kinds of cases altogether (such as claims related to justification of balance-of-payments measures)[185] or by limiting access to dispute settlement for inappropriate cases and by allowing a minority of Members to block adoption of panel reports.[186] The other type of solution focuses on improving the ability of the General Council to modify dispute settlement decisions and thereby provide a more effective counterweight to the dispute settlement system.[187]

A discussion of these issues is beyond the scope of this Chapter. In general, the proposals focus on changing dispute settlement practices and not the general institutional arrangements of the WTO. Two points should be made, however. First, despite the special pleading of those who have lost cases, it is not at all clear that the dispute settlement system is imposing new obligations on Members.[188] Second, as to proposals to limit

[183] *India—Quantitative Restrictions on Imports of Agricultural, Textile and Industrial Products*, WT/DS90.

[185] *See* Frieder Roessler, *Are the Judicial Organs of the World Trade Organization Overburdened*, in EFFICIENCY, EQUITY, AND LEGITIMACY: THE MULTILATERAL TRADING SYSTEM AT THE MILLENNIUM, *supra* note 184, at 308.

[186] *See, e.g.*, CLAUDE BARFIELD, FREE TRADE, SOVEREIGNTY, DEMOCRACY: THE FUTURE OF THE WORLD TRADE ORGANIZATION 111–129 (2001).

[187] *See, e.g.*, John H. Jackson, *Dispute Settlement and the WTO: Emerging Problems*, 1 JOURNAL OF INTERNATIONAL ECONOMIC LAW 329 (1998).

[188] The prime complaint of WTO Members in this regard concerns the Appellate Body's decisions regarding *amicus* briefs, see text accompanying notes 180–182 *supra*, which do not impose new substantive obligations. Indeed, despite its position that it could, the Appellate Body has not yet relied on such briefs. On the issue of the extent to which the WTO dispute settlement system has resulted in decisions that go beyond what reasonable interpretation of the agreements would predict, *see generally* William J. Davey, *Has the WTO Dispute Settlement System Exceeded Its Authority?*, 4 JOURNAL OF INTERNATIONAL ECONOMIC LAW 79 (2001) (concluding that the system has not done so).

access to dispute settlement or to remove the automaticity of adoption of panel reports, it would seem perverse to undermine a functioning dispute settlement system because of problems in the "legislative" decision-making process. Rather, the legislative process should be strengthened, if necessary.[189]

3. Amendment Procedures

A third troublesome aspect of the WTO's decision-making process arises because of the difficulty of amending the WTO agreements. By the early 1960s, it was thought that amending GATT 1947 was probably impossible,[190] yet the GATT amendment provisions were carried over into the WTO Agreement.[191] The negotiations launched by the Doha ministerial are supposed to result in a single undertaking accepted by all WTO Members. To the extent that the texts of agreements need to be changed, the amendment process will have to be used and that will mean that Members will only be bound when they formally accept the amendments and no one will be bound until two-thirds of the Members accept the amendments. To the extent that Members undertake specific commitments in their tariff, agricultural or service schedules, they will be bound only when they formally accept the protocol adding those schedules to the relevant agreement. Thus, it is quite possible that for some time following the conclusion of the negotiations, many Members will not be bound by the results. In fact, this situation has already arisen in respect of the post-Uruguay Round services protocols, where some Members signed protocols, but have not formally accepted them even after four years. Of course, to the extent that the "major players" all accept the agreements, the problem is less significant, but it would be unfortunate if some agreements applied in amended form to most of the membership, while they applied in original form to others.

The difficulty of the amendment process has caused some to suggest, with tongue in cheek, that it will be necessary to repeat what was done in 1994 each time significant amendments to the WTO agreements are needed, i.e., create a new organization (WTO II, WTO III, etc.) to replace the WTO, with the ratifying Members withdrawing from the original WTO. This would, of course, give a considerable impetus for non-ratifying Members to ratify. Time will tell whether such a procedure is the only practicable one.

B. Transparency

There are two transparency issues frequently discussed in WTO circles. The first is known as internal transparency and is related to the WTO's decision-making process. The second is external transparency and arises in the context of the WTO's relations with NGOs.

1. Internal Transparency

The consensus-building process typically used in WTO decision-making requires consultations and discussions with an increasing number of Members. By its nature, that process brings Members into discussions at different stages, which may annoy those Members who are brought in at the later stages, particularly if the proposal is presented to them as a *fait accompli* that cannot be changed. While this has always been a problem, it has become more serious as more and more developing countries have become more

[189] *See* Davey, *supra* note 184, at 331–332.

[190] JACKSON, DAVEY & SYKES, *supra* note 15, at 214. GATT was amended in the 1950s, but some amendments proposed at that time never came into force because of Uruguay's refusal to accept them. JOHN H. JACKSON & WILLIAM J. DAVEY, LEGAL PROBLEMS OF INTERNATIONAL ECONOMIC RELATIONS 310 (1986).

[191] The WTO amendment procedures are described in the text accompanying notes 103–109 *supra.*

active in the WTO. The issue came to a head at the Seattle Ministerial when a number of African and Caribbean countries stated that because of a lack of internal transparency, they would not support any declaration.[192] Since there was no declaration, their resolve was never tested, but their concerns became the subject of further discussions in the WTO.

In summarizing the result of those discussions in July 2000, the chair of the General Council noted that (i) Members did not see any need for any major institutional reform that would alter the basic character of the WTO as a Member-driven organization and its consensus decision-making process and (ii) that informal open-ended consultations (i.e. consultations open to all) played an important role in facilitating consensus, as did consultations within smaller groups. As to the latter, he noted that it was important that (i) those Members with a specific interest in the issue under consideration should be given the opportunity to make their views known; (ii) that no assumptions should be made that one Member "represents" other Members absent a clear agreement to such an arrangement; and (iii) the outcome of such consultations should be reported back to the full membership expeditiously.[193] There were no further discussions in 2001,[194] and the Doha Ministerial did succeed where the Seattle Ministerial had not, probably because of better pre-conference preparation, which was possible in part because there was an additional two years to discuss the basic issues. There have been extensive discussions in 2002, though no decisions had been taken at the time of writing (December 2002).[195]

2. External Transparency

The problem of external transparency concerns how the WTO deals with the outside world. There are a number of sub-issues: (i) the role of the Secretariat in promoting the WTO; (ii) the role of NGOs in the WTO and the relationship of the Secretariat to them; and (iii) the openness of the WTO in terms of meetings and documentation.[196]

Many WTO Members take the view that it is for the Members themselves, and not the Secretariat, to promote the organization.[197] Of course, the Director-General and other Secretariat staff make many speeches and the Secretariat prepares reports and studies on various topics, which generally tend to cast the WTO in a favorable light. Nonetheless, the Secretariat does less of this than might be expected, in part because of Member attitudes, which seem unlikely to change.

The role of the NGOS in the WTO can be usefully divided into two sub-issues. The first concerns whether NGOs should have any participatory role in WTO meetings and negotiations, as they do in some other international organizations. Notwithstanding their role in UN organizations, I think that the arguments against such a role for NGOs in the WTO are quite strong. Despite their claims to represent various constituencies, they do not represent those constituencies in the usual democratic sense of the word. Rather they

[193] WT/GC/M/57, at 24–25 (September 14, 2000). *See also* WTO, ANNUAL REPORT 2001, at 47.

[194] The 2001 Annual Report of the General Council does not mention the internal transparency issue. WT/GC/53 (November 5, 2001).

[195] *See* WT/GC/M/74 (Meeting of May 13–14,2002) at 17–32; WT/GC/M/75 (Meeting of July 8 and 31, 2002) at 7–27.

[196] There are also transparency issues that arise in dispute settlement, which are discussed in Chapter 30 of this book.

[197] *See 1999 Annual Report of the General Council*, WT/GC/28, at 14–15 (November 12, 1999) and materials cited therein.

represent those who control the NGOs.[198] As such, there is simply no justification for them to have a substantive voice in the WTO.[199]

The WTO, of course, has to deal with NGOs and the General Council has adopted some limited guidelines for doing so.[200] Under the guidelines, the Secretariat distributes documents received from NGOs to its Members (and others), briefs NGOs on WTO developments and sponsors symposia on topics of NGO interest to which NGOs and trade officials are invited. Beyond that, NGOs have informal contacts with some Secretariat officials on a regular basis, and, of course, have contacts with Members in Geneva and at home.

Finally there is the issue of the openness of meetings and the availability of WTO documentation. Meetings of WTO bodies are generally closed to the public and NGOs, with the notable exception of ministerial conferences at which NGOs are observers. While it would not be possible or desirable to have informal or negotiating sessions open to the public, it would seem that over time, the WTO should open more meetings to the public, especially those of the major decision-making bodies, such as the General Council.

As for documentation, most WTO documents are issued as unrestricted documents, including all documents related to specific disputes, but some WTO documents are still issued as restricted documents, including minutes of meetings.[201] In the case of minutes, it may be several months after the meeting before they are available. While they are derestricted 45 days after they are circulated to Members, they may not be so circulated until three (or more) weeks after the meeting occurs. Generally, the 2002 changes to the derestriction policy move in the direction of greater openness, although more openness is still possible and desirable.

[198] Permitting NGOs participatory rights would probably require giving virtually all NGOs such rights. This would include business groups as well as various activist groups, despite the fact that the latter often view themselves as morally superior to business groups, as it would be difficult to divide NGOs into "legitimate" NGOs and other NGOs. Creating rules for establishing such legitimacy would be difficult, as many NGOs would probably find it difficult to accept having to disclose funding sources and governance practices and the other sort of similar transparency issues that are relevant to legitimacy (at least where the NGOs claim is that it "represents" some group).

[199] For a detailed elaboration of this position, *see* BARFIELD, *supra* note 206, at 97–110, 135–143. For development of the argument that the WTO needs to be more inclusive in order to be "legitimate", *see* Robert O. Keohane and Joseph S. Nye, Jr., *The Club Model of Multilateral Cooperation and Problems of Democratic Legitimacy* and comments thereon by Robert E. Hudec and Daniel C. Esty; and Robert Howse and Kalypso Nicolaïdis, *Legitimacy and Global Governance: Why Constitutionalizing the WTO Is a Step Too Far* and comments thereon by Steve Charnowitz and Gary N. Horlick in EFFICIENCY, EQUITY, AND LEGITIMACY: THE MULTILATERAL TRADING SYSTEM AT THE MILLENNIUM, *supra* note 184, at 227–307.

I. Introduction

Contemporary international trade law had its genesis in 1947 with the signing of the General Agreement on Tariffs and Trade ("GATT").[1] For 47 years GATT performed the dual roles of being the world's only multilateral trade agreement and multilateral trade organization. The World Trade Organization assumed GATT's legal and institutional functions on January 1, 1995.

The negotiators who drafted GATT worked with the experience of the Great Depression, the trade protectionist measures of the 1930s, and, of course, World War II, deeply etched in their minds. Among the more notorious of the trade protectionist measures was the infamous Smoot-Hawley Tariff Act of 1930, which was a major contributor to deepening the Depression globally. Such trade protectionist measures played no small role in creating an opportunity for political radicals in Europe and Japan to seize power, which in turn precipitated World War II.[2]

Against this backdrop, a comprehensive plan for post-World War II reconstruction and economic development was proposed by the United States and the United Kingdom at Bretton Woods, New Hampshire, in 1944. The creation of three international economic and financial institutions was contemplated at the Bretton Woods Conference. Two of these institutions, the International Bank for Reconstruction and Development (the World Bank) and the International Monetary Fund, were in fact established for the purpose of responding to investment and international balance-of-payment issues, respectively. The institutional triad was to include the International Trade Organization ("ITO").

The United States introduced a draft Charter in September 1946 that served as the basis for discussions at the First Session of the Preparatory Committee on the Havana Charter.[3] Pending approval of the Havana Charter by national legislatures, international negotiations on tariff reductions and their implementation were concluded and the results codified in the GATT, which was approved provisionally by national representatives, effective January 1, 1948. Thus, GATT's *raison d'être* was to serve as an interim agreement until the ITO and its organic document, the Havana Charter, could be definitively approved by national legislatures. To underscore the provisional status of GATT, GATT Article XXIX plainly states that once the Havana Charter entered into force, and with it the ITO, Part II of GATT that contains the bulk of the international legal commitments (other than the MFN obligation and tariff commitments) would be

[1] General Agreement on Tariffs and Trade, *opened for signature* Oct. 30, 1947, 61 Stat. pts. 5, 6, T.I.A.S. No. 1700, 55 U.N.T.S. 187.

[2] *See* Richard N. Cooper, *Trade Policy and Foreign Policy, in* U.S. Trade Policies in a Changing World Economy 291–92 (Robert M. Stern ed. 1987).

[3] The members of the Preparatory Committee were Australia, Belgium, Luxembourg, Brazil, Canada, Chile, China, Cuba, Czechoslovakia, France, India, Lebanon, the Netherlands, New Zealand, Norway, South Africa, the USSR, the UK, and the United States. With the exception of the former Soviet Union, all of these countries became GATT contracting parties under Protocols of Provisional Application.

For a history of the preparatory work on GATT, *see* World Trade Organization, Analytical Index: Guide to GATT Law and Practice, vol. 1, at 1–9 (1995); John H. Jackson, World Trade and the Law of GATT 35–57 (1969); Kenneth W. Dam, The GATT: Law and International Economic Organization 10–16 (1970); Olivier Long, Law and Its Limitations in the GATT Multilateral Trade System 4–6 (1985); Robert E. Hudec, The GATT Legal System and World Trade Diplomacy (1990); Armin von Bogdandy, *International Trade Law*, *in* U.S. Trade Barriers: A Legal Analysis 74–76 (E. Grabitz and A. von Bogdandy eds. 1991).

suspended.[4] In the end, of course, the Havana Charter never entered into force. Even though the Charter was far more comprehensive than GATT both substantively and institutionally, with articles covering employment, economic development, restrictive business practices, and dispute resolution, no acceptances of the Charter were ever received by the United Nations, the depositary for Charter accessions. Once it became clear that the Havana Charter had no chance of being approved by the neo-isolationist U.S. Senate, the State Department issued a statement in 1950 that the Charter would not be submitted again to Congress.As a consequence, GATT was pressed into service by default to fill the institutional and legal vacuum, with all of its warts and pimples. Defying the odds, GATT became the fountainhead of international trade law, doubling as the premier multilateral trade agreement and international trade forum for its contracting parties—which by 1994 numbered 114—for nearly five decades.

GATT was applied provisionally by the contracting parties (as the signatories to GATT 1947 were called) under Protocols of Provisional Application or Protocols of Accession to the General Agreement.[5] All Protocols of Provisional Application and of Accession grandfathered preexisting national legislation that discriminated against imports vis-à-vis the like domestic product, and preexisting national laws authorizing import quotas.

The total absence of institutional provisions in GATT underscores the point that GATT was never intended by its drafters to be an international organization. In fact, during its 47-year term, GATT's secretariat services were provided by the Interim Commission for the International Trade Organization, which was established by the United Nations Conference on Trade and Development in 1948 to perform certain interim functions pending approval of the ITO.[6] Nevertheless, considering these organic flaws, GATT was able to execute its role as the premier international trade organization remarkably well.

A. The MTN Rounds

Eight multilateral trade negotiation sessions or Rounds have been completed under GATT auspices. A ninth round, informally named the Doha 'Development' Round, was launched in December 2001 at the conclusion of the fourth WTO Ministerial Conference. It was scheduled to be completed by the end of 2004, but this deadline has been moved to at least the end of 2005. Each multilateral trade negotiation ("MTN") round has had the broad goal of liberalizing trade by reducing tariffs on trade. In the last three MTN rounds—the Kennedy, Tokyo, and Uruguay Rounds—the additional goals of clarifying existing trade rules, broadening GATT's scope of coverage, and eliminating nontariff barriers to trade among the world's trading countries have figured prominently in the negotiations.[7] GATT has sponsored the following eight MTN rounds and the WTO is sponsoring the ninth round:

[4] GATT Article XXIX provides in pertinent part:

> 2. Part II of this Agreement shall be suspended on the day on which the Havana Charter enters into force.
> 3. If by September 30, 1949, the Havana Charter has not entered into force, the contracting parties shall meet before December 31, 1949, to agree whether this Agreement shall be amended, supplemented or maintained.

Round	Location	Dates	Countries Participating
First Round	Geneva	1947	23
Second Round	Annecy	1949	33
Third Round	Torquay	1950–51	34
Fourth Round	Geneva	1955–1956	22
Dillon Round	Geneva	1961–1962	45
Kennedy Round	Geneva	1964–1967	48
Tokyo Round	Geneva	1974–1979	102
Uruguay Round	Geneva	1986–1994	118
Doha Development Round	Geneva	2001–	147

The primary focus of the first five GATT MTN rounds was the progressive reduction of tariffs and the elimination of quantitative restrictions. For example, the first round of negotiations yielded 45,000 tariff concessions affecting $10 billion worth of world trade. By the time of the third MTN round, 8,700 concessions were negotiated, resulting in tariff reductions of twenty-five percent compared to 1948 levels. In the sixth MTN Round, the Kennedy Round, existing customs duties were lowered an average of thirty-five percent affecting $40 billion worth of global trade.[8]

Average tariffs were forty percent *ad valorem* at the end of World War II. Over the course of the eight MTN Rounds average tariffs of developed countries on all goods have been reduced to less than three percent *ad valorem*. The progressive reduction and elimination of tariffs helped increase world trade by an average of eight percent annually during the decades of the 1950s and 1960s. World merchandise exports increased an average of 5.5 percent annually in the 1990s.[9] As the level of customs duties was reduced and resort to quotas eased, new obstacles to trade emerged, referred to collectively as nontariff barriers to trade ("NTBs"). Many of these NTBs had been in place for years as a form of contingent protection, but they had minimal adverse effects on trade flows because tariff levels were so high that many foreign goods could not clear the high tariff wall in any event. Other NTBs were put in place as a quick fix for dealing with the deteriorating economic climate of the 1970s. Once tariff rates began to decline, NTBs became the weeds of international trade, blocking and choking the growth of trade. NTBs replaced tariffs to protect weak domestic industries in many developed countries. Thus, while in the sixth, seventh, and eighth MTN rounds (the Kennedy, Tokyo, and Uruguay Rounds, respectively) GATT contracting parties continued to negotiate tariff reductions, they devoted more of their attention to negotiating legal disciplines on the use of NTBs.

With the experience of the first five MTN rounds behind them, GATT contracting parties were familiar with the process of multilateral negotiations on the reduction of tariffs and the elimination of quantitative restrictions. However, negotiating the elimination of NTBs presented them with thorny negotiation problems. First, NTBs are far more varied than tariffs, making trade-offs in negotiations difficult. Second, NTBs are less transparent than tariffs, making it difficult at times to pinpoint government policies that are *de facto* or *de jure* protectionist. Third, because most developed-country tariffs rates are bound, they cannot be increased quickly or discreetly without violating GATT commitments. NTBs, on the other hand, are comparatively more easy to impose. Fourth,

[8] *See* John B. Rehm, *Developments in the Law and Institutions of International Economic Relations—The Kennedy Round of Trade Negotiations,* 62 Am. J. Int'l L. 403 (1968).
[9] *See* WTO, Annual Report 2000 (2000).

unlike tariffs, it is difficult at times to quantify the protective effect of NTBs. Fifth, NTBs may be politically difficult to remove for the governments imposing them because their *raison d'être* may not have been to shield a domestic industry from import competition, even though that is the indirect consequence of their implementation.

It is a tribute to the flexibility of the GATT system and the persistence of the GATT contracting parties that the problem of NTBs and the threat they pose to liberal trade was tackled head-on by extending the scope of the last three MTN rounds to include negotiations on a broad range of NTBs.

B. The Tokyo Round

The Tokyo Round was distinguished from earlier MTN rounds by its focus on and successful conclusion of nine agreements refining, and in some cases extending, existing GATT obligations. The nine NTB agreements concluded in the Tokyo Round were an improved Anti-Dumping Agreement (first negotiated in the 1965 Kennedy Round), the Subsidies Code, the Agreement on Import Licensing, the Agreement on Civil Aircraft, the Agreement on Technical Barriers to Trade (the Standards Code), the Agreement on Customs Valuation, the Government Procurement Code, the Bovine Meat Agreement, and the Dairy Products Agreement. The Tokyo Round agreements or Codes were open to all GATT contracting parties, but a GATT contracting party was not required to become a signatory to any of these agreements as a condition of continued GATT membership.[10] Thus, the Tokyo Round Codes were not core GATT obligations applicable to all GATT contracting parties under the most-favored-nation commitment, but rather separate legal instruments negotiated under GATT auspices and existing parallel to, but not fully integrated into, GATT.

What explains this departure from GATT multilateralism and shift to plurilateralism? A number of factors have been identified that explain why the Tokyo Round Codes were not made integral parts of GATT: the press of time (the President's fast-track negotiating authority[11] was to expire on January 3, 1980), the practical difficulty of amending GATT, the problem of free riders expected to enjoy the benefits of concessions made by other countries without themselves making reciprocal concessions, and the broad sweep of subjects covered in the Tokyo Round Codes. The Tokyo Round Codes became side agreements to GATT, not an integral part of it. Benefits under the Codes were available to signatories only. Each Code had its own dispute resolution mechanism.

[10] As of December 31, 1993, the Anti-Dumping Code had been signed by 25 countries; the Subsidies Code by 26, the Agreement on Import Licensing by 29, the Agreement on Civil Aircraft by 22, the Standards Code by 46, the Agreement on Customs Valuation by 34, the Government Procurement Code by 12, the Bovine Meat Agreement by 26, and the Dairy Products Agreement by 16. For a table of the signatories to the respective Tokyo Round codes, *see* U.S. Intl Trade Comm'n, The Year in Trade 1993: Operation of the Trade Agreements Program 43–44 (USITC Pub. 2769, 1994).

[11] Under fast-track negotiating authority (now called "trade promotion authority"), Congress authorizes the President to negotiate and conclude regional (e.g., NAFTA) and multilateral (e.g., WTO) trade agreements subject to a straight up-or-down vote by Congress within a specified time without amendment. Fast-track negotiating authority became necessary following Congress's refusal to approve the Kennedy Round Antidumping Agreement. That experience left U.S. trading partners reluctant to enter into future trade negotiations with the United States unless they had some assurance that agreements negotiated by the U.S. Trade Representative had a high probability of receiving congressional approval. Fast-track negotiating authority provided that assurance. The President was first given fast-track authority in the Trade Act of 1974. It expired in 1993, and was not renewed until 2002. *See* Section 2103 of the Trade Act of 2002, P.L. 107–210, 116 Stat. 933. *See generally* Harold Hongju Koh, *The Fast Track and United States Trade Policy*, 18 Brook. J. Int'l L. 143 (1992).

Most-favored-nation unconditionality had been replaced with reciprocity and conditionality. Pragmatism triumphed over multilateralism.

As the GATT agenda became more ambitious and as GATT began to evolve into a more comprehensive set of rules governing most aspects of international trade in goods, the more serious of its congenital defects began to emerge. One of its most serious flaws was its lack of an adequate dispute settlement mechanism, as discussed in Part V of this Chapter. In addition, GATT's lack of coverage of trade in services and intellectual property protection was of growing concern to developed countries that had shifted from a goods-oriented to a services-oriented economy. Moreover, serious questions of the compatibility of the Tokyo Round Codes with the Article I MFN commitment were raised by commentators and GATT contracting parties alike, thus sparking an interest in fully integrating those Codes into GATT.[12]

The eighth and most ambitious MTN round, the Uruguay Round, resolved these issues by establishing a comprehensive and binding dispute settlement mechanism and by integrating most of the Tokyo Round Codes into the GATT-WTO system.[13]

C. The Uruguay Round

After eight years of negotiations that began in 1986, the most far-reaching and comprehensive development in world trade since 1947 took place in 1994 with the successful completion of the Uruguay MTN Round.[14] Peter Sutherland, the first Director-General of the World Trade Organization, described the conclusion of the Uruguay Round as a defining moment in modern history.[15]

As part of the Final Act Embodying the Results of the Uruguay Round of Multilateral Trade Negotiations signed in Marrakesh on April 15, 1994 (the Final Act),[16] several

[12] For example, Brazil complained that the U.S. countervailing duty law violated the MFN obligation because countries like Brazil, that were not Subsidies Code signatories, did not receive the benefit of the injury determination before such duties were levied on their imports. The panel agreed with Brazil that the United States had violated the MFN obligation of GATT Article I. *See* Report of the GATT Panel (adopted), *United States—Denial of Most-favoured-nation Treatment as to Non-Rubber Footwear from Brazil*, BISD, 39th Supp. 128, 150–51 (1992). *See also* GUIDE TO GATT LAW AND PRACTICE, *supra* note 3, vol. 1, at 32; Gary Clyde HUFBAUER AND JEFFREY J. SCHOTT, TRADING FOR GROWTH: THE NEXT ROUND OF TRADE NEGOTIATIONS 20–22 (1985).

[16] *Final Act Embodying the Results of the Uruguay Round of Multilateral Trade Negotiations*, done at Marrakesh, April 15, 1994, *reprinted in* 33 INT'L LEGAL MATERIALS 1130 (1994). The Final Act, as well as all of the Agreements, Understandings, Decisions, and Declarations adopted at the conclusion of the

Understandings and Multilateral Trade Agreements were concluded that are made an integral part of the Marrakesh Agreement Establishing the World Trade Organization (the WTO Agreement). A series of Ministerial Decisions was also taken to further clarify certain provisions of the Multilateral Trade Agreements. These Understandings, Agreements, and Decisions have a profound impact on GATT 1994.

1. The Transition from GATT 1947 to GATT 1994

One of the first items of business that the Uruguay Round participants had to address was the application of GATT 1947 between countries that were still GATT contracting parties and those that had acceded to the WTO Agreement. Because countries could become Members of the WTO within two years after entry into force of the WTO Agreement,[17] a seamless transition only was possible if all WTO Members continued as GATT 1947 contracting parties until all GATT contracting parties became WTO Members.[18] Accordingly, the parties to GATT 1947 concluded an arrangement defining the scope of legal obligations of countries that remained GATT 1947 contracting parties during a transitional period after they joined the WTO.

On January 1, 1995, when the WTO Agreement entered into force, GATT 1947 and the World Trade Organization co-existed under the *Decision on the Transitional Co-existence of the GATT 1947 and the WTO Agreement*.[19] The Decision provided for the termination of GATT 1947 on January 1, 1996, on which date GATT 1947 would be absorbed into the GATT-WTO system as GATT 1994. Paragraph 1 of the GATT 1947-WTO Agreement Co-Existence Decision provides:

> 1. The contracting parties that are Members of the WTO may, notwithstanding the provisions of the GATT 1947,
>
> (a) Accord to products originating in or destined for a Member of the WTO the benefits to be accorded to such products solely as a result of concessions, commitments or other obligations assumed under the WTO Agreement without according such benefits to products originating in or destined for a contracting party that has not yet become a Member of the WTO; and
> (b) Maintain or adopt any measure consistent with the provisions of the WTO Agreement.

Paragraph 1(a) clearly was aimed at restricting the reach of the most-favored-nation commitment by relieving a WTO Member which remained a GATT 1947 contracting

Uruguay Round, may be found in THE LEGAL TEXTS—THE RESULTS OF THE URUGUAY ROUND OF MULTILATERAL TRADE NEGOTIATIONS (1999).

[17] *See WTO Agreement*, Art. XIV:1.

[18] *See generally* Patrick M. Moore, *The Decisions Bridging the GATT 1947 and the WTO Agreement*, 90 AM. J. INT'L LAW 317 (1996).

[19] *Decision on Transitional Co-Existence of the GATT 1947 and the WTO Agreement*, adopted Dec. 8, 1994, GATT Doc. PC/12-L/7583. Similar co-existence decisions were concluded to resolve the issue of whether a country that withdrew from GATT 1947 would be obligated to complete dispute settlement proceedings initiated before its withdrawal under the Tokyo Round Anti-Dumping and Subsidies Codes. A dispute initiated under either Code could not be refiled under the WTO Agreement. *See Decision on Transitional Co-Existence of the Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade and the Marrakesh Agreement Establishing the World Trade Organization*, adopted Dec. 8, 1994, GATT Doc. PC/13-L/7584; *Decision on the Transitional Co-Existence of the Agreement on Interpretation and Application of Articles VI, XVI, and XXIII of the General Agreement on Tariffs and Trade and the Marrakesh Agreement Establishing the World Trade Organization*, adopted Dec. 8, 1994, GATT Doc. PC/16-L/7587. *See* Moore, *supra* note 18, at 324–26.

party during the transitional period from any obligation to extend to other GATT 1947 contracting parties that were not yet WTO Members any of the WTO benefits that were more favorable than those under GATT 1947. Consequently, GATT contracting parties were prevented from invoking the MFN clause of GATT 1947 to claim WTO benefits and were thus given an incentive to join the WTO quickly in order to receive the benefits under the WTO Agreement that were unavailable under GATT 1947. One of the most important of these WTO benefits was the lower tariff rates negotiated during the Uruguay Round.

Paragraph 1(b) addressed the converse problem of applying to GATT 1947 contracting parties those provisions of Uruguay Round Multilateral Trade Agreements that are more protectionist than their GATT 1947 counterparts (*e.g.*, the rules on trade in textiles and agriculture).[20] For example, certain bound tariff rates on agricultural products are higher under the Uruguay Round Agreement on Agriculture than under GATT 1947.[21] Also, the test for imposing quantitative restrictions on textile imports in order to protect a domestic industry from serious injury is more lax under the Uruguay Round Agreement on Textiles and Clothing than the test under Article XIX of GATT 1947, but still an improvement over the test used under the protectionist Multifiber Arrangement which the Agreement on Textiles and Clothing replaces. In short, Paragraph 1(b) prevented GATT 1947 contracting parties that had not become WTO Members from challenging actions taken by a WTO Member under an Uruguay Round Agreement that were inconsistent with GATT 1947.

Another important provision of the Co-Existence Decision is paragraph 3. It provides:

> 3. The legal instruments through which the contracting parties apply the GATT 1947 are herewith terminated one year after the date of entry into force of the WTO Agreement. In the light of unforeseen circumstances, the CONTRACTING PARTIES may decide to postpone the date of termination by no more than one year.

This paragraph not only established a deadline for co-existence, but it also provided a termination date for the Protocols of Provisional Application or Accession to GATT 1947. It was designed to prod signatories to the Agreement Establishing the WTO (the WTO Agreement) to expedite domestic procedures for WTO accession. Although Article XIV:1 of the WTO Agreement gave original signatories two years within which to join the WTO, it was not inconsistent with paragraph 3. The latter dealt solely with termination of the GATT 1947 Protocols; the purpose of the former being to set the terms of WTO accession. If a country joined the WTO within the two-year grace period, then it did so on the basis of the concessions it had negotiated during the Uruguay Round. However, if an original signatory failed to join within two years, then it would have the same status as a country that was not an original signatory. In that event, it faced the prospect

[20] *See* Chapters 6 and 9 of this book.

[21] These higher tariffs are the product of the "tariffication" process that all WTO Members undertook under the Agreement on Agriculture, discussed in Chapter 6 of this book. The process of tariffication—converting non-tariff measures into ordinary customs duties—yields a tariff that is equivalent to the level of protection afforded by the non-tariff measures that the new tariff replaces. It requires Members to convert existing measures into ordinary customs duties and to bind them, subject to special safeguard provisions applicable in cases of rapidly increasing agricultural imports. The tariffication process is far from an exact science. It can result in a duty rate that is prohibitive, as illustrated by the phenomenon known as "dirty tariffication." WTO Members have allegedly manipulated the tariffication methodology in many instances, resulting in declared tariffs higher than the estimated tariff equivalents. *See* Jeffrey J. Steinle, *The Problem Child of World Trade: Reform School for Agriculture,* 4 Minn. J. Global Trade 333, 348–49 (1995).

of having to renegotiate the trade deal it had previously concluded during the Uruguay Round.[22]

Finally, the WTO Agreement provides that GATT 1994 and GATT 1947 are legally distinct.[23] Thus, when a contracting party withdrew from GATT 1947 and joined the WTO, it had no GATT obligations to contracting parties that had not joined the WTO. However, while GATT 1994 and GATT 1947 are legally distinct, the WTO Agreement maintains continuity with the past by providing that the WTO shall be guided by the decisions, procedures, and customary practices followed by the CONTRACTING PARTIES to GATT 1947 and the bodies established in the framework of GATT 1947.[24]

2. The Uruguay Round MTAs, Decisions, and Understandings

The Final Act embraces all agreements negotiated in the Uruguay Round, with tariff reductions, agreements on disciplines governing nontariff barriers to trade in goods, and the specific market access commitments on trade in services being recorded in national Schedules of Concessions (for tariffs) and Commitments (for services trade). The most important of the Uruguay Round agreements is the Agreement Establishing the World Trade Organization,[25] under which the institutional functions of GATT 1947 are replaced by the World Trade Organization. The WTO Agreement establishes a single institutional framework that encompasses (1) GATT 1994, (2) six Understandings that amend GATT 1947, and (3) fourteen multilateral trade agreements covering trade in goods, services, and intellectual property rights. Of equal importance is the vastly improved dispute settlement mechanism codified in the Understanding on Rules and Procedures Governing the Settlement of Disputes. The following Annexes are appended to the WTO Agreement and are an integral part of it:

- GATT 1994, as amended (Annex 1A)
- General Agreement on Trade in Services (Annex 1B)
- Agreement on Trade Related Aspects of Intellectual Property Rights (Annex 1C)
- Understanding on Rules and Procedures Governing the Settlement of Disputes (Annex 2)
- Trade Policy Review Mechanism (Annex 3)
- Plurilateral Trade Agreements (Annex 4).

The agreements listed in Annexes 1A-C, 2, and 3 comprise the Multilateral Trade Agreements (MTAs). The MTAs are integral parts of the WTO Agreement and are binding on all WTO Members.[26] Annex 1A includes the following Understandings that amend and clarify GATT 1947:

- Understanding on the Interpretation of Article II:1(b)
- Understanding on the Interpretation of Article XVII
- Understanding on Balance-of-Payments Provisions
- Understanding on the Interpretation of Article XXIV

[22] *See* Moore, *supra* note 18, at 323–24.

[23] *WTO Agreement*, Art. II:4.

[24] *WTO Agreement*, Art. XVI:1. Countries acting jointly under GATT 1947 were referred to as the "CONTRACTING PARTIES." The Ministerial Conference replaces the CONTRACTING PARTIES in this role.

[25] *Marrakesh Agreement Establishing the World Trade Organization, reprinted in* 33 INT'L LEGAL MATERIALS 1125 (1994). *See* Amelia Porges, *The Marrakesh Agreement Establishing the World Trade Organization, in* THE WORLD TRADE ORGANIZATION, *supra* note 14, at 63.

[26] *See WTO Agreement*, Art. II:1–2.

- Understanding in Respect of Waivers of Obligations
- Understanding on the Interpretation of Article XXVIII

These six Uruguay Round Understandings; GATT 1947, as amended and modified; waivers granted under GATT 1947 and still in force on the date of entry into force of the WTO Agreement; and the Marrakesh Protocol, to which the WTO Members' schedules of market access commitments are appended, are referred to collectively as "GATT 1994."

The following twelve subject-specific multilateral agreements on trade in goods (the MTAs) also are listed in Annex 1A:

- Agreement on Agriculture
- Agreement on the Application of Sanitary and Phytosanitary Measures
- Agreement on Textiles and Clothing
- Agreement on Technical Barriers to Trade
- Agreement on Trade-Related Investment Measures
- Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994 [Antidumping]
- Agreement on Implementation of Article VII of the General Agreement on Tariffs and Trade 1994 [Customs Valuation]
- Agreement on Preshipment Inspection
- Agreement on Rules of Origin
- Agreeent on Import Licensing Procedures
- Agreement on Subsidies and Countervailing Measures
- Agreement on Safeguards

In the event of a conflict between the WTO Agreement and any of the MTAs, the WTO Agreement prevails.[27] In the event of a conflict between the MTAs and GATT 1994, the MTAs prevail.[28]

II. The Five Pillars of GATT 1994

The structure of GATT 1994 is built around five legal principles or pillars that form the core of the legal obligations undertaken by WTO Members. These five pillars are (1) the unconditional most-favored-nation obligation, (2) tariff bindings, (3) the national treatment obligation, (4) the elimination of quantitative restrictions, and (5) transparency of government regulations affecting trade.

The unconditional most-favored-nation ("MFN") obligation requires that a WTO Member treat imports from all other Members on an equal, nondiscriminatory basis vis-à-vis all other Members' imports. The MFN obligation is unconditional in the sense that MFN treatment must be accorded all imports from WTO Members, regardless of country of origin, and regardless of whether the exporting Member negotiated reciprocal trade concessions with the importing Member. The MFN obligation is not absolute, however. Two of the most important exceptions are the GATT Article XXIV exception for free trade areas and customs unions discussed in Part VI of this Chapter and Chapter 46 of this book, and the exception for special and differential treatment of developing countries, discussed in Chapter 34 of this book.

[27] *See WTO Agreement*, Art. XVI:3.
[28] *See WTO Agreement, General Interpretative Note to Annex 1A of the Agreement.*

The economic rationale for the MFN commitment is that discrimination can lead to wasteful trade diversion. Without the benefit of the MFN principle, the most efficient producers may not have access to a foreign market because of discriminatory trade preferences in favor of less efficient producers from other countries. The unconditional MFN principle gives assurance to the most efficient producers that they will not be denied market access because of the country of origin of the goods, thereby promoting the most efficient allocation of resources. This in turn lowers the costs of production, increases consumer choices, and promotes world economic growth. Unconditional MFN also facilitates trade negotiations by giving a country that has negotiated a trade concession the peace of mind of knowing that whatever trade deal it has struck with another country, it will not be denied the benefit of its bargain if the latter country later strikes a more favorable deal with a third country concerning the same goods. The unconditional MFN commitment multilateralizes the benefit of all bargains that are struck during an MTN round.

The second pillar of the GATT-WTO system is tariff bindings. Tariffs, or customs duties, are the one form of trade protection that GATT authorizes. However, if, in GATT parlance, negotiated tariff concessions are "bound," they cannot be increased above the bound duty rate unless compensation is paid to other adversely affected WTO Members in the form of lowered tariffs on other items of interest to those Members. Failing compensation those members will be entitled to retaliate by raising duties on goods of export interest to the Member raising its tariff. Tariff bindings thus enable foreign producers to better plan their entry into an export market by locking in one variable in the price structure—the duty rate imposed on their product at the time of importation. Working hand-in-glove with tariff bindings is the MFN clause. Through the operation of the unconditional MFN commitment, negotiated tariff concessions are generalized and multilateralized.

The third GATT-WTO pillar is the national treatment obligation. The principle of nondiscrimination embodied in the MFN commitment is carried over to the national level, so that Members are required, first, to treat imports no less favorably than the domestic like product respecting internal measures, and second, not to tax imports in excess of the amount of indirect taxes imposed on the like domestic product.

The fourth of the GATT-WTO pillars is the obligation to eliminate quantitative restrictions on imports and exports. This obligation includes a prohibition on border measures that have the effect of restricting the quantity of goods imported from or exported to a WTO Member. It thus allows the law of supply and demand to determine the price of goods, rather than allowing prices to be set by an artificial short supply created by a government restriction on the quantity of a product that may be imported or exported.

The fifth and final GATT pillar, the transparency obligation, requires that all national laws and regulations of general application affecting trade be published and readily available. It is in essence a due process guarantee and a partial shield against arbitrary government action.

A. Article I, The Unconditional Most-Favored-Nation Obligation

The unconditional MFN obligation of GATT Article has been described as "the foundation of the GATT system," "the cornerstone of GATT," and "the touchstone of the GATT." What is the unconditional MFN commitment? What explains its prominence in the GATT

architecture in the face of criticism from international trade lawyers, economists, and politicians alike?[29]

1. The Antecedents of MFN

The MFN obligation can be traced back to the Middle Ages and has been commonplace since the seventeenth century.[30] Today, the unconditional MFN principle lies at the very heart of international trade law.[31] In its 1978 annual report, the International Law Commission prepared draft articles on most-favored-nation clauses.[32] The Commission defined "most-favored-nation treatment" as

> treatment accorded by the granting State to the beneficiary State, or to persons or things in a determined relationship with that State, not less favorable than treatment extended by the granting State to a third State or to persons or things in the same relationship with that third State.[33]

More tersely, the *Restatement (Third) Foreign Relations Law of the United States* defines MFN treatment as "an obligation to treat that state, its nationals or goods, no less favorably than any other state, its nationals or goods."[34] Under the unconditional MFN commitment, all tariffs and nontariff barriers to trade are applied equally to all imports regardless of origin.[35]

2. Conditional vs. Unconditional MFN Treatment

What distinguishes the conditional from the unconditional MFN obligation? The hallmark of the conditional MFN commitment is reciprocity; that of unconditional MFN, nondiscrimination. Under a conditional MFN commitment, Country A will extend to Country B the trade concessions that Country A has granted to Country C, provided that Country B reciprocates by granting to Country A concessions that Country A deems satisfactory. In other words, Country B does not automatically receive the benefit of the trade concessions that Country A accords to the trade of Country C. At first blush there is something instinctively "fair" about a conditional MFN obligation. Why should Country B be the windfall beneficiary of the trade deal that Country C negotiated with Country A, i.e., why should Country B be allowed to "free ride"? Although several arguments have been advanced in support of an unconditional MFN trade policy, the various arguments can be distilled to a single word: nondiscrimination. The nondiscrimination argument has two dimensions, one political, the other economic.

[29] The unconditional MFN principle has not received universal acclaim. In the words of one commentator, "The unconditional MFN principle has always enjoyed more affection in the textbooks than in the daily life of commercial policy." Gary C. Hufbauer, *Should Unconditional MFN Be Revived, Retired or Recast?, in* Issues in World Trade Policy 33 (R.H. Snape ed. 1986). *See also* Warren F. Schwartz and Alan O. Sykes, *Toward a Positive Theory of the Most Favored Nation Obligation and Its Exceptions in the WTO/GATT System*, 16 Int'l Rev. L. & Econ. 27 (1996).

[33] *Id*. Art. 5.

[34] Restatement (Third) Foreign Relations Law of the United States § 801(1) (1987).

[35] A note of caution is in order here. This general prohibition on preferential trade arrangements has several broad exceptions, most notably customs unions (e.g., the European Union), free trade areas (e.g., the North American Free Trade Agreement), and trade preferences for developing countries (e.g., the Generalized System of Preferences).

The political argument in support of nondiscrimination is that by pursuing international trade on a nondiscriminatory basis, the unconditional MFN principle helps suppress aggression in international relations. Trade conducted on an unconditional MFN basis promotes the development of multilateralism, which in turn acts as a prophylactic against discriminatory trade barriers, which further reduces trade frictions among trading nations. As noted in a U.S. State Department statement at the end of World War II issued in support of creating the ITO:

> The fundamental choice is whether countries will struggle against each other for wealth and power, or work together for security and mutual advantage. . . . The experience of cooperation in the task of earning a living promotes both the habit and the techniques of common effort and helps make permanent the mutual confidence on which the peace depends.[36]

The attack on Pearl Harbor was triggered at least in part by the U.S. trade embargo against Japan on oil and rubber. The three wars fought between France and Germany within the span of seventy years during the Nineteenth and Twentieth Centuries were the inspiration for the European Coal and Steel Community that "internationalized" two industries essential to war-making.

The economic argument for unconditionality has two prongs. The first prong focuses on locking in the benefit of the bargain obtained in the course of MTN rounds. The unconditional MFN principle ensures that the value of bilateral trade concessions will not be eliminated by a later and more favorable trade concession to a third country competing for the same export market in the same goods. The second prong of the economic argument takes its cue from efficiency. By preventing discriminatory trade patterns from developing, unconditional MFN trade concessions ensure that the most efficient producers will have equal access to export markets regardless of country of origin.

3. Overview of the GATT Article I MFN Clause

GATT Article I:1 contains the core MFN obligation. Within its scope are four areas of government activity, three that take place at the border and a fourth that treats goods once they have entered the customs territory of a WTO Member.

Article I:1 provides that with respect to (1) customs duties and charges of any kind imposed on importation or exportation,[37] (2) the method of levying those duties and charges, (3) all rules and formalities in connection with importation and exportation,[38] and (4) all matters referred to in paragraphs 2 and 4 of Article III concerning national treatment in internal taxation and regulation

> any advantage, favour, privilege or immunity granted by any contracting party to any product originating in or destined for any other contracting party shall be accorded immediately and unconditionally to the like product originating in or destined for the territories of all other contracting parties.

The text of Article I:1 is plain that the rule of nondiscrimination among WTO Members applies unconditionally. The MFN obligation also applies equally to imported goods

[36] *United States Proposals*, Dep't of State Pub. No. 2411, at 1–2 (1946).

[37] The term "charges of any kind" has been given a broad interpretation consistent with its plain language to include the customs user fee imposed by the United States. *See* Report of the GATT Panel (adopted), *United States—Customs User Fee*, BISD, 35th Supp. 245, 289–90, ¶ 122–23 (1988).

[38] This phrase has also received an interpretation consistent with the breadth of its plain language. For example, in Report of the GATT Panel (adopted), *United States—Non-Rubber Footwear from Brazil*, BISD, 39th Supp. 128, 150, ¶ 6.8 (1992), the panel concluded that the rules and formalities applicable to countervailing duties, including those applicable to the revocation of countervailing duty orders, are rules and formalities imposed in connection with importation.

regardless of whether they are subject to bound or unbound tariffs.[39] In addition, a Member cannot cite more favorable treatment in one instance to offset less favorable treatment in another instance and, thereby, claim observance of the MFN obligation on balance.[40]

4. The Meaning of the Term "Like Product"

Although a number of GATT panels, WTO panels, and the Appellate Body have construed the various parts of the MFN obligation, most dispute settlement proceedings brought under Article I:1 have focused on the interpretation of the term "like product." If imports from two WTO Members are "like products," then those imports are entitled to identical treatment regardless of their country of origin.[41]

[39] Report of the GATT Panel (adopted), *Spain—Tariff Treatment of Unroasted Coffee*, BISD, 28th Supp. 102, 111, ¶ 4.3 (1981). A WTO Member is not relieved of its MFN obligation because it did not enter into a tariff binding on the imported item.

[40] Report of the GATT Panel (adopted), *United States—Denial of Most-favoured-nation Treatment as to Non-Rubber Footwear from Brazil*, BISD, 39th Supp. 128, 151, ¶ 6.10 (1992).

[41] In addition to being found in Article I, the term "like product" is used in Articles II:2(a), III:2, III:4, VI:1(a), VI:1(b), IX:1, XI:2(c), XIII:1, XVI:4, and XIX:1 of GATT 1994. In addition, the term "like commodity" appears in Article VI:7, and the term "like merchandise" is used in Article VII:2 of GATT 1994. The term is also used in the SCM Agreement, the Antidumping Agreement, and the Safeguards Agreement.

The meaning of the term "like product" has been addressed in a number of GATT and WTO reports. *See, e.g.*, Report of the Working Party (adopted), *Brazilian Internal Taxes*, BISD, II/181 (1949) (Article III:2 of GATT 1947); Report of the Working Party (adopted), *The Australian Subsidy on Ammonium Sulphate*, BISD, II/188 (1950)(Articles I and III:4 of GATT 1947); Report of the GATT Panel (adopted), *Treatment by Germany of Imports of Sardines*, BISD, 1st Supp. 53 (1952)(Articles I and XIII of GATT 1947); Report of the Working Party (adopted), *Border Tax Adjustments*, BISD, 18th Supp. 97 (1970)(Articles II, III and XVI of GATT 1947); Report of the GATT Panel (adopted), *EEC—Measures on Animal Feed Proteins*, BISD, 25th Supp. 49 (1978)(Articles I, III:2 and III:4 of GATT 1947); Report of the GATT Panel (adopted), *Spain—Tariff Treatment of Unroasted Coffee*, BISD, 28th Supp.102 (1981)(Article I:1 of GATT 1947); Report of the GATT Panel (unadopted), *Spain—Measures Concerning Domestic Sale of Soyabean Oil*, L/5142 (1981) (Article III:4 of GATT 1947); Report of the GATT Panel (unadopted), *Canada—Measures Affecting the Sale of Gold Coins*, L/5863 (1985)(Article III:2 of GATT 1947); Report of the GATT Panel (adopted), *United States—Taxes on Petroleum and Certain Imported Substances*, BISD, 34th Supp.136 (1987)(Article III:2 of GATT 1947); Report of the GATT Panel (adopted), *Japan—Customs Duties, Taxes and Labelling Practices on Imported Wines and Alcoholic*, BISD, 34th Supp. 83 (1987)(Article III:2 of GATT 1947); Report of the GATT Panel (adopted), *Canada/Japan—Tariff on Imports of Spruce, Pine, Fir (SPF) Dimension Lumber*, BISD, 36th Supp.167 (1989)(Article I:1 of GATT 1947); Report of the GATT Panel (adopted, SCM committee) *United States—Definition of Industry Concerning Wine and Grape Products*, BISD, 39th Supp. 436 (1992)(Article VI of GATT 1947); Report of the GATT Panel (adopted), *United States—Denial of Most-favoured-nation Treatment as to Non-rubber Footwear from Brazil*, BISD, 39th Supp. 128 (1992)(Article I:1 of GATT 1947); Report of the GATT Panel (adopted), *United States—Measures Affecting Alcoholic and Malt Beverages*, BISD, 39th Supp. 206 (1992)(Articles III:2 and III:4 of GATT 1947); Report of the GATT Panel (unadopted), *United States—Taxes on Automobiles*, DS31/R (1994)(Articles III:2 and III:4 of GATT 1947); Report of the WTO Panel, *United States—Standards for Reformulated and Conventional Gasoline*, WT/DS2/R, as modified by the Appellate Body Report, WT/DS2/AB/R (1996)(Article III:4 of GATT 1994); Report of the WTO Panel, *Japan—Taxes on Alcoholic Beverages*, WT/DS8/R, WT/DS10/R, WT/DS11/R, as modified by the Appellate Body Report, WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R (1996)(Article III:2 of GATT 1994); Report of the Appellate Body, *Japan—Alcoholic Beverages*, WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R (1996)(Article III:2 of GATT 1994); Report of the WTO Panel, *Canada—Periodicals*, WT/DS31/R, as modified by the Appellate Body Report, WT/DS31/AB/R (1997)(Articles III:2 and III:4 of GATT 1994); Report of the WTO Panel, *Indonesia—Certain Measures Affecting the Automobile Industry*, WT/DS54/R, WT/DS55/R, WT/DS59/R, WTDS64/R (1998)(Articles I:1 and III:2 of GATT 1994); Report of the WTO Panel, *Korea—Taxes on Alcoholic Beverages*, WT/DS75/R, WT/DS84/R, as modified by the Appellate Body Report, WT/DS75/AB/R, WT/DS84/AB/R (1999)(Article III:2 of GATT 1994); Report of the Appellate Body Report, *Korea—Taxes on Alcoholic Beverages*, WT/DS75/AB/R, WT/DS84/AB/R, (1999)(Article III:2 of GATT 1994); Report of the WTO Panel, *Chile—Taxes on Alcoholic Beverages*,

When a complaint is brought alleging discriminatory treatment in violation of Article I:1, resolution of the complaint usually turns on whether an item imported into Member C from Member A is a product "like" that imported from Member B, and therefore entitled to the same treatment by Member C.

Because no definition of the term "like product" is included in GATT, decisions on this question are made on a case-by-case basis after applying a variety of criteria that GATT panels have found to be relevant, including the product's end-uses in a particular market, consumer tastes and habits, and the product's characteristics.[42] In the Article I "like product" context, an early suggestion was made to accept national tariff classification and tariff structures as presumptively conclusive in answering the question whether two products are like each other for MFN purposes.[43] In favor of this approach is the fact that tariff classifications are generally drafted on the basis of the physical characteristics of the goods themselves. Considerations of the processes or methods by which goods are produced are irrelevant. Although the other criteria mentioned above also are considered, the use of tariff classifications and nomenclature are often dispositive in an Article I "like product" analysis.

Illustrative of the "like product" analysis in the Article I context is the 1950 GATT Working Party report that adopted the tariff-classification methodology for "like product" determinations in a case dealing with two types of fertilizers, ammonium sulphate and sodium nitrate. The Working Party concluded that the two items were not like products because the importing country, Australia, as well as other countries, classified them as separate items in their tariff schedules, notwithstanding the fact that in the national schedules of some of those countries the tariff rates were the same for both products.[44]

In a 1978 GATT panel report, the panel rejected the argument that the term "like product" is synonymous with "directly competitive or substitutable product" that is employed in *Ad* Article III:2 dealing with national treatment in the taxation of fungible goods.[45] The panel feared that if this view were adopted it would lead to a broad "like product" definition encompassing far more items than would be the case using tariff classifications.

Although the trend of GATT panels has been to employ a tariff classification methodology in Article I MFN "like product" determinations, GATT panels have not adhered slavishly to this approach when the importing country's tariff schedules are aberrational in comparison with other countries' schedules, deviate from a scheme that focuses on the physical characteristics of the goods, or are based on distinctions that are not commercial in nature. In such cases, the presumption that tariff schedules are a legitimate basis for

WT/DS87/R, WT/DS110/R, as modified by the Appellate Body Report, WT/DS87/AB/R, WT/DS110/AB/R (2000)(Article III:2 of GATT 1994). *See also* Rex J. Zedalis, *A Theory of the GATT "Like Product" Common Language Cases*, 27 VAND. J. TRANSNAT'L L. 33 (1994).

[42] *See, e.g.*, Report of the GATT Working Party (adopted), *Border Tax Adjustments*, BISD, 18th Supp. 97, 102, ¶ 18 (1970).

[43] First Session of the Preparatory Committee of the United Nations Conference on Trade and Employment, E/PC/T/C.II/PV/12, at 7–8 (1946).

[44] *See* Report of the Working Party (adopted), *Australian Subsidy on Ammonium Sulphate*, BISD, II/188, 191, ¶ 8 (1950). Unlike a GATT or WTO panel proceeding which is adversarial, a Working Party is an *ad hoc* inquisitorial body open to all interested WTO Members and established to study and report on the issues submitted to it for its consideration. A Working Party submits a report of its investigation to the General Council. Working Parties were used to resolve disputes in the early years of the GATT, before the practice developed of establishing panels consisting of individuals who were not nationals of the disputing countries.

[45] *See* Report of the GATT Panel (adopted), *EEC—Measures on Animal Feed Proteins*, BISD, 25th Supp. 49, 63, ¶ 4.1–4.2 (1978). The panel found significant the different duty rates, tariff classifications, and physical characteristics of the imported products under review.

distinguishing among imported products is rebutted by evidence that they are instead a disguised form of discrimination. For example, in a 1981 panel report involving Spain's five-part tariff classification scheme for unroasted coffee, a GATT panel concluded that all types of unroasted coffee are a like product, notwithstanding admitted differences among the types of coffee involved, based largely on the fact that no other country applied different duty rates to different types of coffee and that all coffee had the same end-use.[46]

Similarly, an exporting country challenging an importing country's tariff classification scheme must make a "like product" argument that is based on a classification scheme that has some measure of international acceptance. Thus, consistent with the "like product" methodology that deems an importing Member's tariff classification scheme as presumptively valid, the burden falls on the exporting Member to show that the importing Member's tariff differentiations are a disguised form of protectionism. In that connection, a 1989 GATT panel report on softwood lumber from Canada noted that tariff differentiation is a legitimate means of trade protection, and that countries have wide latitude in structuring their national tariff and classification schemes. The panel concluded that Japan's tariff classification scheme that gave duty-free treatment to certain softwood lumber imports but imposed an eight percent duty on the Canadian imports was not an MFN violation because the two imported products were not "like products."[47] The panel observed that Canada's proffered tariff classification scheme did not have international acceptance.[48]

WTO panels and the Appellate Body have adopted the factors laid down in GATT panel reports when undertaking a like product analysis.[49] For example, the Appellate Body in *Japan—Alcoholic Beverages* noted that a uniform tariff classification can be relevant, but cautioned that there is a major difference between tariff classification nomenclature and tariff bindings or concessions made by WTO Members under GATT Article II, the latter often having a broader scope than the former.[50] The Appellate Body observed "that there is a major difference between tariff classification nomenclature and tariff bindings or concessions . . . . [Many WTO Members] have bindings in their tariff schedules which include broad ranges of products that cut across several different HS [Harmonized Tariff Classification and Nomenclature System] tariff headings."[51] The Appellate Body issued a word of caution that like product determinations will not invariably be the same wherever that term is used in GATT 1994: "The accordion of 'likeness' stretches and squeezes in different places as different provisions of the WTO Agreement are applied."[52]

Besides the GATT Article I context, the MFN commitment can be found in several other articles of GATT 1994 and in many of the WTO MTAs.

5. Additional MFN Commitments in GATT 1994

GATT 1994 contains nine other subject-specific MFN commitments, in addition to the one of general application contained in Article I:1:

[46] *See Spain—Unroasted Coffee*, *supra* note 41, ¶ 4.11.

[47] *See* Report of the GATT Panel (adopted), *Japan—Tariff on Imports of Spruce, Pine, Fir (SPF) Dimension Lumber*, BISD, 36th Supp. 167, 197–98, ¶¶ 5.7–5.10 (1989).

[48] *See id*. at 199, ¶ 5.15.

[49] *See, e.g.,* Report of the WTO Panel, *European Communities—Regime for the Importation, Sale and Distribution of Bananas*, WT/DS27/R, ¶¶ 7.62–63 (1997).

[50] Report of the Appellate Body, *Japan—Taxes on Alcoholic Beverages*, WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R, at 22 (1996).

[51] *Id.*

[52] *Id*. at 18.

- Article III:7 provides that "[n]o internal quantitative regulation relating to the mixture, processing or use of products in specified amounts or proportions shall be applied in such a manner as to allocate any such amount or proportion among external sources of supply."
- Article IV(b) relates to movies and provides that "screen time . . . shall not be allocated formally or in effect among sources of supply."
- Articles V:5 and V:6 extend MFN treatment to traffic and products in transit through the territory of a WTO Member.
- Article IX:1, concerning marks of origin, provides for MFN treatment in connection with all marking requirements.
- Article XIII:1 provides for the nondiscriminatory administration of quantitative restrictions. The equal allocation of a quota among all WTO Members—in literal compliance with the MFN commitment—could operate unfairly against those Members that are major suppliers of the product under quota vis-à-vis Members that neither produce nor export the product. For example, giving each of the 147 WTO Members a 1/147 share of an import quota would be perfectly nondiscriminatory on its face, but it would discriminate in effect against those Members which are major suppliers by reducing disproportionately their exports of that product relative to the exports of other Members. Accordingly, Article XIII:2 tempers the strict MFN commitment with a rule that permits the *pro rata* allocation of quotas among supplier Members.
- Article XVII:1 commits state trading enterprises—government purchasing monopsonies and sales monopolies—to act on an MFN basis in all their purchases and sales. This obligation has a particular bearing for Members whose economies are in transition from a planned to a market economy.
- Article XVIII, Section C, permits developing countries to provide otherwise impermissible subsidies to infant industries. However, Article XVIII:20 qualifies this exception by providing that whenever a developing country does provide assistance to promote the establishment of a particular industry, such assistance cannot authorize deviations from the MFN principle. For example, a developing country cannot assess tariffs on imports from Member A that are higher than those assessed on like imports from Member B as a way of protecting an infant industry from international competition.
- The eighth and ninth instances of MFN commitments outside of Article I are found in Article XX, the general exceptions provision. The preamble or chapeau to Article XX provides that when measures are taken, they not be applied "in a manner which would constitute a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail." Paragraph (j) of Article XX provides that if a Member imposes export restrictions on products that are in local short supply, those restrictions "shall be consistent with the principle that all contracting parties are entitled to an equitable share of the international supply of such products."

6. Additional MFN Commitments in the MTAs

In addition to the nine supplementary MFN provisions within GATT 1994 proper, several of the WTO MTAs covering trade in goods contain their own MFN or MFN-like clauses. For example, Article 2.3 of the Agreement on the Application of Sanitary and Phytosanitary Measures provides that "Members shall ensure that their sanitary and phytosanitary measures do not arbitrarily or unjustifiably discriminate between Members where

identical or similar conditions prevail . . . .” Article 2.1 of the Agreement on Technical Barriers to Trade (the TBT Agreement) provides that “Members shall ensure that in respect of technical regulations, products imported from the territory of any Member shall be accorded treatment no less favourable than that accorded . . . to like products originating in any other country.” Articles 5.1.1 and 5.2.1 of the TBT Agreement further provide for MFN treatment in conformity assessment procedures.

Article 2.1 of the Agreement on Preshipment Inspection provides that “[u]ser Members shall ensure that preshipment inspection activities are carried out in a non-discriminatory manner, and that the procedures and criteria employed in the conduct of these activities are objective and are applied on an equal basis to all exporters affected by such activities.” Finally, Article 1.3 of the Agreement on Import Licensing Procedures provides that “[t]he rules for import licensing shall be neutral in application and administered in a fair and equitable manner.”

The two MTAs outside the goods sector, the General Agreement on Trade in Services (the GATS) and the Agreement on Trade-Related Aspects of Intellectual Property Rights (the TRIPS Agreement), also contain their own MFN clauses. Article II:1 of the GATS provides that “[w]ith respect to any measure covered by this Agreement, each Member shall accord immediately and unconditionally to services and service suppliers of any other Member treatment no less favourable than that it accords to like services and service suppliers of any other country.”

Article 4 of the TRIPS Agreement provides that “[w]ith regard to the protection of intellectual property, any advantage, favour, privilege or immunity granted by a Member to the nationals of any other country shall be accorded immediately and unconditionally to the nationals of all other Members.” These two MFN clauses obviously mirror, *mutatis mutandis,* the core Article I:1 MFN commitment.[53] However, in a significant departure from the unconditional MFN principle, GATS Article II:2 permits Members to exempt measures from the GATS Article II MFN commitment if the conditions of the GATS Annex on Article II Exemptions are met. Eighty-three WTO members have entered 424 MFN exemptions.[54]

B. GATT Article II, Tariff Bindings

Tariffs (customs duties) on imported goods are the one form of trade protection that the GATT does not specifically prohibit. On the contrary, the imposition of tariffs is permitted with very few qualifications, the most important being that they be imposed on an MFN basis. GATT Article II:1(a) sets out this basic obligation:

> Each contracting party shall accord to the commerce of the other contracting parties treatment no less favourable than that provided for in the appropriate Part of the appropriate Schedule annexed to this Agreement.

The GATT preamble and Article XXVIII *bis* provide for multilateral tariff negotiations to reduce tariff rates and to bind tariff concessions. When tariff concessions are “bound,” the duties assessed on the “bound” items may not be greater than the bound rate. Bindings give legal assurance that tariffs will not be increased above that maximum tariff level. Members are free to set a tariff at any level they wish below the bound rate without prejudice to their right to increase the tariff to the bound rate at a later date. With bound tariff rates exporters can price goods destined for a foreign market knowing exactly what

[53] Article III of the plurilateral Agreement on Government Procurement is an MFN clause.

[54] See OECD, *Trade in Services: A Roadmap to GATS MFN Exemptions*, TD/TC/WP(2001)24 (2001).

the duty rate on the goods will be when they arrive at the foreign destination, thus keeping an important element of a good's total price fixed.

If an importing Member increases a duty rate above the bound tariff rate, adversely affected trading partners are entitled to compensation. Compensation can include tariff reductions by the importing Member on goods of export interest to the adversely affected exporting Members. Failing agreement on adequate compensatory adjustments, adversely affected Members may retaliate by increasing their tariffs on items of special interest to exporters in the Member making the tariff withdrawal.

Besides encouraging the reduction of tariff levels, the GATT recognizes tariffs as the only form of permissible financial charge that may be imposed on imported goods. It undergirds this policy through other GATT Articles, such as Article III, prohibiting discriminatory internal taxes, and Article VII, prohibiting excessive charges associated with customs procedures.

Once tariff concessions are negotiated, insuring their integrity and preventing their circumvention is one of GATT's main objectives. In this connection, GATT Articles I, II and III play mutually supportive roles. The unconditional MFN obligation ensures that if Member A has negotiated specific tariff reductions on goods it exports to Member B in exchange for tariff cuts on goods that Member B exports to Member A, Member A can rest assured that it will not lose the benefit of its bargain if Member B thereafter negotiates an even lower tariff rate on those same goods with Member C. Unconditional MFN ensures that goods originating from Member A will receive the same tariff treatment from Member B that Member B accords to goods originating from Member C.

In order to prevent circumvention of tariff bindings through devices that either improperly inflate the price of imported goods or lower the price of the like domestic product, GATT employs a number of devices, including (1) rules on valuation that prevent an importing country from overvaluing imported goods and thereby eliminating the benefit of any tariff concession,[55] and (2) rules on national treatment that require imported goods and the like domestic product to be treated equally for purposes of internal taxes and regulations.[56]

1. Tariff Negotiations

Article XXVIII *bis* establishes the framework for negotiating tariff concessions. It calls for negotiations

> on a reciprocal and mutually advantageous basis, directed to the substantial reduction of the general level of tariffs and other charges on imports and exports and in particular to the reduction of such high tariffs as discourage the importation of even minimum quantities. . . .[57]

Although the term "reciprocal" is used, GATT does not deal formally with the "free-rider" problem where a Member enjoys the benefit of other Members' tariff concessions under the unconditional MFN clause, but makes few, if any, concessions in return. Developing countries, for example, argue that non-reciprocity is their right because their shaky economies do not permit the negotiation of reciprocal trade concessions.[58]

[55] GATT Art. VII; *Agreement on Implementation of Article VII of the General Agreement on Tariffs and Trade 1994*, discussed in Chapter 12 of this book.

[56] GATT Art. III.

[57] GATT Art. XXVIII:1 *bis*.

[58] *See* Samuel Laird and Alexander Yeats, *Tariff-Cutting Formulas—and Complications, in* THE URUGUAY ROUND: A HANDBOOK ON THE MULTILATERAL TRADE NEGOTIATIONS 89 (J. Michael Finger and Andrzej Olechowski eds. 1987).

In order to facilitate tariff negotiations between countries which have previously made deep cuts in their tariffs and those that have not, Article XXVIII:2(a) *bis* provides that "[t]he binding against increase of low duties or of duty-free treatment shall, in principle, be recognized as a concession equivalent in value to the reduction of high duties." Although there is no GATT rule on the subject, the accepted practice for measuring the value of concessions is to multiply the volume of trade in the goods under negotiation by the percentage points of the proposed tariff reduction. Paragraph 2(a) of Article XXVIII *bis* states no preference for the conduct of negotiations, suggesting that they be carried out on a product-by-product basis or "by the application of such multilateral procedures as may be accepted by the contracting parties concerned." The growing complexity of tariff negotiations led to the abandonment of the product-by-product negotiating approach in the Kennedy and Tokyo Rounds in favor of a formula applied to a large number of products in linear (across-the-board) fashion. The Kennedy Round used a 50-percent linear cut as a starting point, with certain products being exempted from the linear cut.[59] After the linear cut was made, parties negotiated exceptions to further tariff reductions on a sector-by-sector, product-by-product basis. Although the overall level of tariffs was reduced in the Kennedy Round, in the Tokyo Round negotiators were confronted with tariff "spikes" or duty rates on many products greatly in excess of the average duty rate. In order to chop down the spikes and to align them more closely with the average duty rate, Switzerland proposed a formula that would accomplish this goal.[60] With the exception of negotiations on specific non-agricultural sectors where the Quad members (Canada, the EU, Japan, and the United States) negotiated "zero-for-zero" reductions and negotiations on agricultural products, the Uruguay Round returned to the traditional bilateral "request-and-offer" format between principal supplier countries.

In ranking the many achievements of the GATT-WTO system, among the most significant is the deep reduction in developed-country tariffs from high double-digit figures in 1947 to low single-digit numbers today.[61]

2. Tariff Modification and Withdrawal

GATT Article XXVIII governs the modification and withdrawal of tariff concessions. It is supplemented by the Uruguay Round Understanding on the Interpretation of Article XXVIII of GATT 1994. Members adversely affected by a proposed tariff modification or withdrawal have rights of tariff renegotiation and compensation.[62] GATT divides adversely affected Members that have negotiating or consultation rights into three

[59] *See* CONGRESSIONAL BUDGET OFFICE, THE GATT NEGOTIATIONS AND U.S. TRADE POLICY 29 (1987).

[60] The Swiss formula was $T_1 = aT_0/(a + T_0)$, where T_0 is the existing tariff, a is a co-efficient, and T_1 is the resulting tariff. Thus, if $a = 16$, and $T_0 = 10\%$, then $T_1 = 6.15\%$, or a 38% tariff cut. In the case of a tariff spike, again if $a = 16$, and $T_0 = 40\%$, then $T_1 = 11.42\%$, or a 68% cut. For a study of the various modalities used in tariff negotiations, *see* Negotiating Group on Market Access, *Formula Approaches to Tariff Negotiations*, Note by the Secretariat, TN/MA/S/3 (Sept. 9, 2002).

[61] The Secretariat has prepared a profile of all WTO Members' = tariffs that shows the percentage of tariff bindings for each Member, the simple average tariff rate, the standard deviation, the maximum duty rate, the last year of implementation, and other duties and charges. *See* Negotiating Group on Market Access, *WTO Members' Tariff Profiles*, Note by the Secretariat, TN/MA/S/4 (Sept. 11, 2002).

[62] If a Member wishes to convert specific duties to *ad valorem* duties, the conversion is also the subject of mandatory negotiations under Article XXVIII. *See* Report of the GATT Panel, *Canada—Withdrawal of Tariff Concessions*, BISD, 25th Supp. 42, 47, ¶ 14 (1979). Similarly, the imposition of specific duties when only *ad valorem* duties are bound is sufficient to establish a violation of Article II when it results in ordinary customs duties being levied in excess of those provided for in that Member's Schedule of Concessions. *See* Report of the Appellate Body, *Argentina—Measures Affecting Imports of Footwear, Textiles, Apparel and Other Items*, WT/DS56/AB/R, ¶ 55 (1998).

categories: (1) Members with which the concession was initially negotiated, (2) a Member determined to have a "principal supplying interest," and (3) Members determined to have a "substantial interest." Members in the first two categories have the right to negotiate a compensation agreement with the importing Members. Members in the third category have a right to be consulted only.

With respect to the first category of adversely affected Member, more than one country may fall within this category for any single product. For example, if Member A agreed to a tariff concession on steel wire rod with Member B during the Kennedy Round, and thereafter made a concession on steel wire rod with Member C during the Tokyo Round, then Members B and C would both have initial negotiating rights. Members with initial negotiating rights are identified by name in Members' Schedules of Concessions.

With respect to the second category of adversely affected Member, a country with a principal supplying interest is normally limited to the one country with the greatest market share in the subject product that is also greater than the country or countries with which the concession was initially negotiated. *Ad* Article XXVIII:4 states that "[i]t would . . . not be appropriate for the CONTRACTING PARTIES to determine that more than one contracting party . . . had a principal supplying interest," although in exceptional circumstances a second country may be designated a principal supplier if its trade that is affected by the tariff withdrawal or modification "constitutes a major part of the total exports of such contracting party."[63] The 1994 Understanding on the Interpretation of Article XXVIII of the General Agreement on Tariffs and Trade 1994 expands the category of Members qualifying as having a "principal supplying interest" to include a Member "which has the highest ratio of exports affected by the concession . . . to its total exports."[64] This modification is intended to give developing countries a chair at the renegotiation and compensation table.

The third category of adversely affected Member includes countries that have at least a ten-percent share of the import market of the particular good based on the prior three years' trade statistics.[65]

A Member wishing to modify or withdraw a concession must first attempt to secure the agreement of the Members in the first two categories, although Members in the third category have a right to consultation.[66] If no agreement is reached, the concession may nevertheless be withdrawn, but Members in the three categories are free to withdraw substantially equivalent concessions.[67] What constitutes "substantially equivalent concessions" is not defined in GATT, but a GATT panel has suggested using a methodology that estimates the value of the exports that would have occurred but for the withdrawal of the tariff binding.[68]

In situations where a tariff binding is replaced with a tariff-rate quota, the 1994 Understanding provides a ten-percent formula that results in compensation equal to the amount by which future trade prospects exceed the level of the quota.[69] Future trade prospects are based on the greater of (1) average trade over a recent three-year period, increased by the average annual growth rate of imports in that same period or ten percent, whichever is greater, or (2) the trade in the most recent year increased by ten percent.[70]

[69] *See Understanding on Article XXVIII*, *supra* note 64, ¶ 6

[70] *See id.*

Article XXVIII:1 entitles WTO Members to renegotiate their tariff bindings on a three-year cycle (the current benchmark is January 1, 1994, although the WTO Ministerial Conference can change this cycle[71]). Guidelines were adopted in 1981 on procedures for conducting Article XXVIII negotiations.[72] But as noted by McGovern, "This procedure is now very rarely used. It was invoked by Korea in 1986, and by the EC in 1992 regarding oilseeds following the panel finding that the EC had nullified or impaired its zero tariff binding."[73]

3. "Other Duties or Charges"

Beyond the basic Article II obligation to respect tariff bindings when duties are assessed on imported goods, Article II:1(b) exempts bound items "from all other duties or charges of any kind imposed on or in connection with importation." Although Article II does not define "other duties or charges," the term is recognized to include import surcharges, revenue duties, special import taxes, economic development taxes, and import or security deposits.[74]

Article II:2 excepts from the term "other duties or charges" internal taxes that are also imposed on domestic like products; antidumping and countervailing duties; and "fees or other charges commensurate with the cost of services rendered," such as charges for health and safety inspections.[75]

A contracting party was not required under GATT 1947 to record with GATT its "other duties or charges" under Article II. The Uruguay Round Understanding on the Interpretation of Article II:1(b) corrects this lack of transparency by requiring Members to record in their schedule of concessions all such "other duties or charges" levied on bound tariff items. All such recorded charges and duties are bound, and the assessment of any new or omitted "other duties or charges" on bound tariff items is prohibited.[76] The 1994 Understanding further requires Members to record in their schedule of concessions the nature and level of all other duties or charges, regardless of whether those duties and charges are imposed on goods that are subject to a tariff binding. Such recordation is without prejudice to the right of other WTO Members to challenge at any time the GATT-consistency of such "other duties or charges."

4. Valuation of Imports

To prevent the erosion of the benefit of tariff concessions, Article II:3 provides that "[n]o contracting party shall alter its method of determining dutiable value or of converting currencies so as to impair the value of any of the concessions provided for in the appropriate Schedule annexed to this Agreement." Without this restriction a WTO Member that had made a ten-percent concession on tariffs, for example, could wipe out the benefit of the concession by altering its valuation or currency conversion methodologies with a ten-percent upward adjustment. Building on Article II:3, Article VII, as amended and clarified by the Agreement on the Implementation of Article VII of the General Agreement on Tariffs and Trade 1994 (the Customs Valuation Agreement), lays down

[75] A GATT panel report invalidated the U.S. customs user fee to the extent it was not limited in amount to the approximate cost of services rendered. *See United States—Customs User Fee*, *supra* note 37, at 276–79, ¶¶ 78–82, 84–86. *See also* Guide to GATT Law and Practice, *supra* note 3, vol. 1, at 271–76.

[76] *Understanding on the Interpretation of Article II:1(b) of the General Agreement on Tariffs and Trade 1994*, ¶¶ 1, 2, and 7.

methodologies that WTO Members are to adhere to when making valuation determinations. The basic valuation methodology is to accept the transaction value, or invoice value, of the imported goods as the basis for valuing the imports and assessing *ad valorem* duties. The Customs Valuation Agreement is analyzed in a separate chapter of this book.[77]

5. Import Monopolies

Article II:4 restricts import monopolies from providing protection in excess of the amount of protection provided in the appropriate Schedules. Policing this rule requires a comparison of the purchase and resale prices of the import monopoly, with allowances being made for reasonable transportation costs and related overhead costs, and a reasonable margin of profit.[78]

6. Tariff Classification

In the event an exporting Member considers that a product it has exported to another Member is not receiving the treatment from the importing Member that the exporting Member believes to have been contemplated by a concession provided for in the importing Member's Schedule of Concessions, the exporting Member may bring the matter to the attention of the importing Member. If the importing Member's response is that it agrees with the position of the exporting Member, but that it cannot adjust the situation because a court or other national authority has ruled that the product cannot be classified under the importing Member's customs laws so as to permit the treatment sought by the exporting Member, the two Members are to enter into negotiations with a view to a compensatory adjustment. In *European Communities—Computer Equipment*, the Appellate Body ruled that reliance on the subjective views of the exporting Member's expectations as to how a product would be classified upon importation into another Member would undermine the security and predictability of the reciprocal arrangements directed to the substantial reduction of tariffs and other barriers to trade.[79] The Appellate Body pointed out that the text of Article II:5 does not support the view that the legitimate expectations of the exporting Member are a vital element in the interpretation of Article II:1, given that the second sentence of that paragraph refers to the treatment contemplated by both the exporting and importing Members.[80]

7. The Marrakesh Protocol

The Marrakesh Protocol to GATT 1994 is the vehicle by which national schedules of tariff concessions are made legally binding following the Uruguay Round. All tariff concessions and market access commitments are set forth in schedules annexed to the Marrakesh Protocol and are an integral part of GATT 1994.[81] Each Member's schedule

[77] *See* Chapter 12.

[78] *See* Interpretative Note *ad* Article II:4. In Report of the GATT Panel (adopted), *Canada—Import, Distribution and Sale of Alcoholic Drinks by Provincial Marketing Agencies,* BISD, 35th Supp. 37, ¶¶ 4.10, 4.15, 4.16 (1989), the panel concluded that any margin of profit would on the average have to be the same for both domestic and imported products in order to prevent undermining the value of tariff concessions. For extensive discussions of this panel report and of Interpretative Note *ad* Article II:4, *see* GUIDE TO GATT LAW AND PRACTICE, *supra* note 3, vol. 1, at 88–96; MCGOVERN, *supra* note 14, at §§ 5.11-9, 5.11-10.

lists concessions under the following four general categories:[82]

Part I Most-Favored-Nation Tariffs
Section I
A. Agricultural Products (tariffs)
B. Agricultural Products (tariff quotas)
Section II Other Products (tariffs)
Part II Preferential Tariffs (this pertains only to the preferential schemes registered under Article I:2 of GATT 1947 when it was first signed)
Part III Non-Tariff Concessions
Part IV Commitments Limiting Subsidization of Agricultural Products
Section I Domestic Support
Section II Export Subsidies (budgetary and quantity commitments)
Section III Export Subsidies (commitments limiting scope of export subsidies)

Addressing the free-rider problem, countries that are not original WTO Members (i.e., were not contracting parties to the GATT at the time the WTO Agreement entered into force), but instead accede to the WTO after its entry into force, must submit a schedule of concessions that includes substantial tariff reductions in line with those made by WTO Members.[83] If an original Member accedes to the WTO Agreement after its entry into force, that Member must implement all of the tariff reductions that have already been required of other WTO Members and the reduction required of them by January 1 of the year following accession, in the absence of an accession agreement to the contrary.[84]

The Marrakesh Protocol provides that as a general rule WTO Members will implement their tariff reductions in five equal stages, with the first reduction taking place on the date the WTO Agreement entered into force (January 1, 1995), and with each successive reduction being implemented on January 1 of each of the following years. The staging does not apply to tariff reductions for agricultural products. Members are free to implement reductions sooner, but the final cut must have been implemented no later than January 1, 1999.

As noted above, over the course of the eight MTN rounds, average tariffs in developed countries have been significantly reduced. Following the Uruguay Round average tariffs rates in developed countries on all goods on manufactured goods stand at an average of three percent on imports from other developed countries, down from the 5.5-percent pre-Uruguay Round average, a 45-percent reduction. While average tariff levels in developed countries have fallen dramatically over the past 55 years, tariff structures have not changed as dramatically, with tariffs remaining persistently high on certain finished manufactured goods, including textiles and footwear.[85] Developed countries' average tariff rates on

[82] *See* THE YEAR IN TRADE 1993, *supra* note 10, at 4.
[83] *See Marrakesh Agreement Establishing the World Trade Organization*, Article XII. *See also* Chapter 4 of this book.
[84] *Id.* Art. XIV:2.
[85] At the start of the Uruguay Round, average tariff rates in the Quad on finished manufactures were 6.9 percent in the United States, 8.1 percent in Canada, 7 percent in the EU, and 6.4 percent in Japan. Average tariff rates on raw materials at the same time were 1.8 percent in the United States, 2.6 percent in Canada, 1.6 percent in the EU, and 1.4 percent in Japan. *See* HUFBAUER AND SCHOTT, *supra* note 12, at 14. The post-Uruguay Round average tariff rates in developed countries on raw materials is 1 percent; on semi-manufactured goods, under 3 percent; and on finished products, under 5 percent. *See* EVANS AND WALSH, *supra* note 7, at 74.

imported goods from developing countries stand at 4.8 percent post-Uruguay Round, 1.8 percent higher than the average duty rate on imported goods from developed countries.[86] Developed countries' average tariffs on textiles and footwear—goods of obvious export interest to developing countries—remain high even after the Uruguay Round, at 12.4 percent and 7.1 percent, respectively.[87]

Developed countries reached agreement in the Uruguay Round on tariff concessions that result in bound tariff rates on 99 percent of the value of imported manufactured goods and on 98 percent of the value of all imports to developed countries from all sources.[88] Although this figure is impressive, it represents only a marginal improvement on the Tokyo Round results, which bound 94 percent of all developed countries' tariffs.[89] What is impressive about the Uruguay Round results on this score, however, is that as part of the market access package of agreements, the Quad Members agreed to eliminate most tariffs in several sectors, including pharmaceuticals, construction equipment, medical equipment, steel, beer, spirits, furniture, toys, paper, and farm equipment; to reduce tariffs for other products by an average of one-third; and to chop tariff "spikes" of fifteen percent or greater.[90] Given the multilateralizing effect of the unconditional MFN obligation, all WTO Members benefit from these tariff cuts.

Many developing countries bound a large percentage of their tariffs as well. After the Uruguay Round, 61 percent of the tariffs on manufactured goods imported by developing countries will have a bound duty rate, compared with a figure of thirteen percent pre-Uruguay Round.[91] Several developing countries, mainly in Latin America, agreed to bind one hundred percent of their tariffs on manufactured goods, while the average in Asia was seventy percent on manufactured goods. India, Korea, Malaysia, the Philippines, Singapore, and Thailand bound between 60 and 89 percent of their tariffs on manufactured goods.[92]

With the conclusion of the Uruguay Round Agreement on Agriculture, a wide range of nontariff barriers on agricultural products, including quotas, voluntary restraint agreements, and variable import levies, were eliminated and "tarrified," *i.e.*, converted into tariff equivalents that provide approximately the same level of trade protection as the previous nontariff barriers.[93] Developed countries made a commitment to reduce agricultural tariffs by 36 percent over six years. Developing countries committed to a 24 percent reduction over ten years.[94] Tariffs on agricultural products will be high for the foreseeable future and are the subject of on-going tariff-reduction negotiations.

C. GATT Article III, The National Treatment Obligation

The third pillar in the GATT structure is the Article III national treatment obligation. GATT Article III's general theme is to prohibit Members from circumventing tariff concessions through the use of discriminatory internal taxes or other measures that might

[94] *See id.* Arts. 4, 15.

undermine the benefit of a tariff reduction. However, the national treatment obligation applies to all imported goods regardless of whether they are subject to a tariff binding or not. Like its MFN counterpart, national treatment is a nondiscrimination obligation, but imposed at the national level. Once imports have entered a Member's territory, (1) internal taxes must not be applied to imports compared to the like domestic product and similar domestically-produced goods in such a way as to afford protection, and (2) national regulations other than taxes must not treat imports "less favorably" than the like domestic product. By way of backdrop, national treatment clauses are standard in bilateral treaties of friendship, commerce, and navigation concluded between the United States and many of its trading partners, and are thus not unique to GATT Article III.[95]

The broad purpose of Article III, as stated in Article III:1, is to ensure that internal tax and regulatory measures are not applied to imported or domestic products in a way that affords protection to domestic products. To that end, WTO Members are obligated to provide equality of competitive conditions—what is metaphorically referred to as a "level playing field"—for imported goods vis-à-vis like domestic products once they have entered the country of importation and any applicable tariffs have been paid.[96]

In order for national regulations to be valid under Article III, they must be based on the characteristics of the imported products themselves, not on the process or method by which those products were produced or manufactured, and must apply equally to imported and domestic goods. Article III:1 sets forth the general national treatment obligation:

> The contracting parties recognize that internal taxes and other internal charges, and laws, regulations, and requirements affecting the internal sale, offering for sale, purchase, transportation, distribution or use of products, and internal quantitative regulations requiring the mixture, processing or use of products in specified amounts or proportion, should not be applied to imported or domestic products so as to afford protection to domestic production.

[95] *See, e.g., Treaty of Commerce and Navigation, Feb. 21, 1911, United States-Japan*, Art. VI, 37 Stat. 1504, T.S. No. 558; *Treaty of Friendship, Commerce, and Consular Rights, Dec. 8, 1923, United States-Germany*, Art. VIII, 44 Stat. 2132, T.S. No. 725 ("The nationals and merchandise of each High Contracting Party within the territories of the other shall receive the same treatment as nationals and merchandise of the country with regard to internal taxes, transit duties, charges in respect to warehousing and other facilities and the amount of drawbacks and bounties"); *Treaty of Friendship, Commerce, and Consular Rights, United States-Hungary, June 24, 1925*, Art. VIII, 44 Stat. 2441, T.S. No. 748 (same); *Treaty of Friendship, Commerce, and Consular Rights, June 19, 1928, United States-Austria*, Art. VIII, 47 Stat. 1876, T.S. No. 838 (same).

[96] The difficulties introduced by the Protocol of Provisional Application—which accorded grandfather rights to existing domestic legislation that was inconsistent with the GATT—have essentially been eliminated under the WTO Agreement. No broad exemptions for existing national laws that are inconsistent with GATT 1994 are permitted. However, one narrow exception exists in paragraph 3(a) of the General Agreement on Tariffs and Trade 1994, appended to the WTO Agreement as Annex 1A. Paragraph 3(a) provides in pertinent part:

> The provisions of Part II of GATT 1994 shall not apply to measures taken by a Member under specific mandatory legislation, enacted by that Member before it became a contracting party to GATT 1947, that prohibits the use, sale or lease of foreign-built or foreign-reconstructed vessels in commercial applications between points in national waters or the waters of an exclusive economic zone.

This is the only national law grandfathered under GATT 1994. It refers to provisions of the U.S. Jones Act concerning foreign-vessel cabotage in U.S. coastal waters and was demanded by the United States in order to preserve certain preferences for the U.S. coastal shipping industry. The Ministerial Conference was to have reviewed this exemption by 2000 and every two years thereafter as long as the exemption is in force. *Id.* ¶ 3(b). The General Council initiated the five-year review of the Jones Act exemption in July 1999, and continued to consider this matter at its meetings in October and November 1999; in February, May and July 2000; and in July 2002. No conclusions could be agreed during these discussions. *See* General Council, *Minutes of Meeting Held 7, 8, 11 and 15 December 2000*, WT/GC/M/61 (Feb. 7, 2001); General Council, *Minutes of Meeting Held 8 and 31 July 2002*, WT/GC/M/75 (Sept. 27, 2002).

Although Article III:1 sounds precatory (certain measures "*should* not be applied"), while the specific national treatment commitments regarding internal taxes, charges, and the other obligations in paragraphs 2, 4, 5, and 7 of Article III use the compulsory term "*shall*," the general principle of Article III:1 informs the rest of Article III. According to the Appellate Body in *Japan—Alcoholic Beverages*:

> The purpose of Article III:1 is to establish this general principle as a guide to understanding and interpreting the specific obligations in Article III:2 and in the other paragraphs of Article III, while respecting, and not diminishing in any way, the meaning of the words actually used in the texts of those other paragraphs. In short, Article III:1 constitutes part of the context of Article III:2, in the same way that it constitutes part of the context of each of the other paragraphs in Article III. Any other reading of Article III would have the effect of rendering the words of Article III:1 meaningless, thereby violating the fundamental principle of effectiveness in treaty interpretation.[97]

In addressing the question whether a Japanese tax on imported alcoholic drinks that were directly competitive with or substitutable for the domestic product (shochu) afforded protection to the domestic product, the Appellate Body noted that dissimilar taxation does not necessarily result in affording protection to the domestic product. In reviewing a tax on imported goods that are directly competitive with or substitutable for the domestic product, the proper inquiry is whether if in the application of the tax, protection of the similar domestic product is provided. This is not a matter of discriminatory intent, the Appellate Body noted, but of application.[98] The magnitude of the tax differential is often determinative.

1. Internal Taxes and Other Charges

Article III:2 is the source of the specific national treatment commitment with respect to the discriminatory application of internal taxes and charges. It provides:

> The products of the territory of any contracting party imported into the territory of any other contracting party shall not be subject, directly or indirectly, to internal taxes or other internal charges of any kind in excess of those applied, directly or indirectly, to like domestic products. Moreover, no contracting party shall otherwise apply internal taxes or other internal charges to imported or domestic products in a manner contrary to the principles set forth in paragraph 1.

The function of Article III:2 is in part to defend the integrity of Article II tariff bindings. However, a WTO Member is held to the national treatment obligation even if the imported product is not subject to a tariff binding.[99] With regard to the collection of internal taxes and other charges, and the enforcement of internal regulations that apply equally to imports and domestic products, Interpretative Note *Ad* Article III states:

> Any internal tax or other internal charge, or any law, regulation or requirement . . . collected or enforced in the case of the imported product at the time or point of importation, is nevertheless to be regarded as an internal tax or other internal charge, or a law, regulation or requirement of the kind referred to in paragraph 1, and is accordingly subject to the provisions of Article III.

The GATT-legality of a financial charge on imports thus will initially turn in part on whether it is a border tax measure or an internal tax measure. If it is the former, it

[97] *Japan—Taxes on Alcoholic Beverages*, *supra* note 50, at 18.

[98] *See id.*

[99] *See id.* § F, at 17 and n. 39 ("This obligation clearly extends also to products not bound under Article II."); Report of the GATT Panel (adopted), *European Economic Community—Regulation on Imports of Parts and Components*, BISD, 37th Supp. 132, 191–92, ¶ 5.4 (1990).

is subject to scrutiny under Article II; if it is the latter, then it must be examined for consistency with Article III.

2. Article III:2, First Sentence

The rule stated in the first sentence of paragraph 2 is applied strictly in order to prevent discrimination between like domestic products and imports.[100] If the imported product and the competing domestic product are "like products," then any indirect tax (e.g., sales or excises taxes but not income taxes) that is imposed on the imported product that is "in excess of" the tax imposed on the like domestic product violates Article III:2, first sentence. The policy reasons for which the tax is imposed is irrelevant if it has a protectionist effect.[101]

The trade effects of a Member's internal taxes or regulations are equally irrelevant. Even if there is no trade in the particular product that is the subject of the tax or regulation, if the internal tax or regulation nevertheless discriminates between imports and domestic like products, it violates the national treatment commitment. As several GATT panels and the Appellate Body have noted, the purpose of Article III is to protect the expectation that a competitive relationship will exist between imports and the domestic like product, subject to any tariffs that might be assessed on the imported product.[102] Article III is designed to protect not only current trade but also to create the predictability needed to plan future trade. Consequently, the prohibition in the first sentence of Article III:2 on discriminatory taxes and regulations is not conditioned on a "trade effects test,"[103] is not qualified by a *de minimis* exception,[104] and is not subject to an offsets rule where less favorable treatment on some imported products can be balanced against more favorable treatment for other imported products.[105] Moreover, even if a given regulation does not currently discriminate against imports in its application, it violates the national treatment obligation if it poses the risk of discrimination in the future.[106]

No discrimination is permitted in the computation of the base figure on which the tax is assessed, although customs duties may be included in the valuation of imported goods.[107] Similarly, it is impermissible to assess taxes on products made with local inputs at a rate lower than the rate charged to imports.[108]

3. The "Like Product" Determination

The question of whether an imported product is like, directly competitive with, or substitutable for a domestic product has been the focus of several reports by GATT Working Parties, GATT panels, WTO panels, and the Appellate Body. For example, in the 1970 *Working Party Report on Border Tax Adjustments*,[109] the results of a survey of panel reports dealing with this question were summarized:

> With regard to the interpretation of the term "like or similar products," which occurs some sixteen times throughout the General Agreement, it was recalled that considerable discussion has taken place . . . but that no further improvement of the term has been achieved. The Working Party concluded that problems arising from the interpretation of the terms should be examined on a case-by-case basis. This would allow a fair assessment in each case of the different elements that constitute a "similar" product. Some criteria were suggested for determining, on a case-by-case basis, whether a product is "similar": the product's end-uses in a given market; consumers' tastes and habits, which change from country to country; the product's properties, nature and quality.[110]

In short, as is the case with the Article I "like product" determination, the criteria generally used in analyzing "likeness" are (1) the properties, nature, and quality of the products; (2) the end-uses of the products; and (3) consumers' tastes and habits.

GATT panels dealing with the like product question in the Article III context have focused on product characteristics, end-uses, and tariff classifications. The panel report in *Japan—Customs Duties, Taxes and Labeling Practices on Imported Wines and Alcoholic Beverages*,[111] observed generally that a definition of like product as "more or less the same product" is too narrow a definition.[112] The WTO panel in *United States—Reformulated Gasoline* made a like product determination in the course of resolving a complaint brought by Venezuela and Brazil charging that U.S. Clean Air Act regulations on gasoline violated Article III:4.[113] In light of the Working Party's conclusions in its *Border Tax Adjustments* report, the panel found that since imported and domestic gasoline are chemically-identical, have the same end-uses and tariff classification, and are perfectly substitutable, that they were like products for purposes of Article III:4.[114]

The Appellate Body in *Japan—Alcoholic Beverages*, summarized the Article III "like product" methodology in the following terms:

> No one approach to exercising judgement will be appropriate for all cases. The criteria on *Border Tax Adjustments* should be examined, but there can be no one precise and absolute definition of what is "like". The concept of "likeness" is a relative one that evokes the image of an accordion. The accordion of "likeness" stretches and squeezes in different places as different provisions of the *WTO Agreement* are applied. The width of the accordion in any one of those places must be determined by the particular provision in which the term "like" is encountered as well as by the context and the circumstances that prevail in any given case to which that provision may apply. We believe that, in Article III:2, first sentence of the GATT 1994, the accordion of "likeness" is meant to be narrowly squeezed.[115]

The Appellate Body added that the use of the Harmonized Tariff Classification and Nomenclature System is a recognized, and often useful, practice in judging the likeness

of products.[116] The Appellate Body has thus concluded that like product determinations must be made on a case-by-case basis with discretion in considering various product characteristics.[117]

In one of the most intriguing reports to address the meaning of the term "like product," the Appellate Body in *European Communities—Asbestos* was asked to determine whether products are "like" for purposes of Article III:4 based on their associated health risks.[118] Specifically, the Appellate Body was called upon to decide whether Canadian products containing chrysotile asbestos fibers are "like" certain other domestically produced fibers, namely polyvinyl alcohol, cellulose, and glass fibers (collectively referred to as "PCG fibers"). At the panel level it was concluded that chrysotile asbestos and PCG fibers are all "like products" under Article III:4 based on the products' physical characteristics, end uses, and consumer tastes and habits. The panel next examined whether cement-based products containing chrysotile asbestos fibers are "like" cement-based products containing one of the PCG fibers. The panel also concluded that all these cement-based products are "like" as well.[119]

In focusing on the carcinogenicity of chrysotile asbestos fibers, the Appellate Body rejected the panel's conclusion that the imported and domestic products were like products, stating:

> This carcinogenicity, or toxicity, constitutes, as we see it, a defining aspect of the physical properties of chrysotile asbestos fibres. The evidence indicates that PCG fibres, in contrast, do not share these properties, at least to the same extent. We do not see how this highly significant physical difference cannot be a consideration in examining the physical properties of a product as part of a determination of "likeness" under Article III:4 of the GATT 1994.
>
> ****
>
> In sum, in our view, the Panel reached the conclusion that chrysotile asbestos and PCG fibres are "like products" under Article III:4 of the GATT 1994 on the following basis: the Panel disregarded the quite different "properties, nature and quality" of chrysotile asbestos and PCG fibres, as well as the different tariff classification of these fibres; it considered no evidence on consumers' tastes and habits; and it found that, for a "small number" of the many applications of these fibres, they are substitutable, but it did not consider the many other end-uses for the fibres that are different. Thus, the only evidence supporting the Panel's finding of "likeness" is the "small number" of shared end-uses of the fibres.
>
> For the reasons we have given, we find this insufficient to justify the conclusion that the chrysotile asbestos and PCG fibres are "like products" and we, therefore, reverse the Panel's conclusion, . . .[120]

Turning to the question of whether the cement-based products containing the different fibers were like products, the Appellate Body reiterated that "[i]n examining the physical

[116] *See id.* at 25.

[117] In *Canada—Periodicals*, for example, the Appellate Body stated that the proper test for making a like product determination is to construe Article III:2, first sentence, narrowly on a case-by-case basis, examining factors that include the product's end-uses in a given market; consumer tastes and habits; and the product's properties, nature, and quality. *See* Report of the Appellate Body, *Canada—Certain Measures Concerning Periodicals*, WT/DS31/AB/R, Part V.A, at 21 (1997)(reversing the panel's "like product" determination based on a faulty comparison).

[119] *See id.* ¶ 84.

[120] *Id.* ¶¶ 114, 125, 126.

properties of the two sets of cement-based products, it cannot be ignored that one set of products contains a fibre known to be highly carcinogenic, while the other does not. . . . We, therefore, reverse the Panel's finding . . . that these health risks are not relevant in examining the 'likeness' of the cement-based products."[121]

4. Article III:2, Second Sentence

In contrast to the relatively bright-line obligation established in the first sentence of paragraph 2, the precise contours of the obligation set forth in the second sentence of paragraph 2 are somewhat blurred. How could internal taxes be imposed on imports in a manner inconsistent with paragraph 1 that is not already proscribed by the first sentence of paragraph 2? Interpretative Note *ad* Article III:2 sheds light on the cryptic reference back to Article III:1. It provides:

> A tax conforming to the requirements of the first sentence of paragraph 2 would be considered to be inconsistent with the provisions of the second sentence only in cases where competition was involved between, on the one hand, the taxed product and, on the other hand, a directly competitive or substitutable product which was not similarly taxed.

The scope of product coverage in the second sentence is broader than that of the first sentence, given that the set of products that are "directly competitive or substitutable" includes "like" products. At the same time, the second sentence of paragraph 2 is intended to reach taxes that violate the general principle of Article III:1 because they "afford protection to domestic production." Under Article III:2, first sentence, discriminatory internal taxes are deemed *per se* to cause adverse trade effects, while under Article III:2, second sentence, discriminatory internal taxes must be shown to "afford protection" to the domestic product.[122] As noted above, the prohibition of discriminatory taxes in Article III:2, first sentence, is not conditional on a trade effects test, nor is it qualified by a *de minimis* standard.

Where no substantial domestic production of a product like an imported product exists, but the imported product is directly competitive with or substitutable for an existing domestic product, such as imported natural rubber and domestic synthetic rubber, then one is presented with a situation involving a "directly competitive or substitutable" product. While a discriminatory internal tax on imported natural rubber would not violate the first sentence of Article III:2 *per se* (natural rubber not being a product "like" synthetic rubber), dissimilar taxation of imported natural rubber compared to domestic synthetic rubber that afforded protection to domestic production would violate the second sentence of Article III:2.[123]

The following three questions must be addressed to determine whether an internal tax is inconsistent with Article III:2, second sentence:

1. Are the imported product and the domestic product in competition with each other?
2. Are the directly competitive or substitutable imported product and the domestic product dissimilarly taxed?
3. Is the dissimilar taxation applied so as to afford protection to domestic production?[124]

[121] *Id.* ¶ 128 (emphasis in original).
[122] *See Japan—Customs Duties on Alcoholic Beverages*, *supra* note 111, ¶ 5.5.
[123] *See* GUIDE TO GATT LAW AND PRACTICE, *supra* note 3, vol. 1, at 159–60.
[124] *See Japan—Taxes on Alcoholic Beverages*, *supra* note 50, § H.2, at 24.

First, are the imported product and the domestic product in competition with each other? The determination of whether an import is directly competitive with or substitutable for a domestic product is made on a case-by-case basis. Panels have looked at physical characteristics, common end-uses, tariff classifications, and the marketplace. An important but not decisive criterion is whether two products have common end-uses as shown by the cross-price elasticities of demand of the two products.[125] This is the inquiry: for every sale of product A at price X, how many sales of product B at price Y are lost? If for every sale of the import there is one lost sale of the domestic product, then the two products are perfect substitutes and in direct competition. In a case of perfect substitutability, the imported and domestic products are like products and are covered under Article III:2, first sentence.[126] Instances of less-than-perfect substitutability are addressed under Article III:2, second sentence.

For example, in *Japan—Alcoholic Beverages,* the WTO panel concluded that although several imported and domestic alcoholic beverages were not like products, they were nevertheless directly competitive or substitutable.[127] The Appellate Body concurred with the panel's conclusion that based on cross-price elasticities of demand, imported whisky, brandy, rum, and gin are directly competitive with or substitutable for Japanese shochu.[128] In *Canada—Periodicals*, the Appellate Body found that periodicals with a mainly current news content are directly competitive or substitutable with other news magazines, even though advertising might be targeted at different markets.[129]

The second question is whether the directly competitive or substitutable imported product and the domestic product are dissimilarly taxed. Consistent with the fundamental legal principle of treaty interpretation that all words in the text of a treaty are to be given meaning and effect, the phrase "in excess of" in the first sentence of Article III:2 must mean something different from the phrase "not similarly taxed" in Interpretative Note *ad* Article III:2, second sentence. If the former phrase means any amount of tax on imported products greater than the tax on domestic like products, then the latter phrase must mean something else.[130] Accordingly, there may be an instance of excess taxation of imported products that is not enough to warrant the conclusion that the products are not similarly taxed. The Appellate Body in *Chile—Alcoholic Beverages* concluded that the tax burden on the imported products must be heavier than that on directly competitive or substitutable domestic products, and the amount of the differential must be more than *de minimis.*[131] What a *de minimis* amount is must be determined on a case-by-case basis.[132]

The third and final inquiry under the second sentence of Article III:2 is to determine whether directly competitive or substitutable products are not similarly taxed so as to afford protection to domestic production. The Appellate Body made clear in *Japan—Alcoholic Beverages* that this is not an issue of legislative or regulatory intent.[133] The

[133] *See Japan—Taxes on Alcoholic Beverages*, *supra* note 50, at 27.

inquiry is whether the dissimilar taxation has trade-distorting effects, as evidenced by the application and structure of the tax measure in question for domestic as compared to imported products. In some cases the magnitude of the dissimilar taxation may be sufficient to show a violation.[134] In *Japan—Alcoholic Beverages*, for example, the Appellate Body had no difficulty in concluding that the dissimilar taxation afforded protection to domestic production where taxes on imported products were four to six times greater than those on domestically-produced shochu. This disparity contributed to Japanese shochu producers' success in capturing 75 percent of Japan's distilled spirits market, while limiting imports to eight percent of the domestic market.[135]

Other than a gross disparity in the applicable taxes as proof of a trade-distorting effect, evidence may show that a measure by its very design and structure affords protection to domestic production.[136] However, evidence of protective intent is not totally irrelevant, as demonstrated in the Appellate Body's report in *Canada—Periodicals.*[137] There, the Appellate Body concluded that the prohibitive magnitude of the difference in taxation, coupled with the statement of policy objectives by Canadian government officials, provided sufficient evidence that the design and structure of the Canadian excise tax scheme on foreign periodicals were clearly to afford protection to the production of Canadian periodicals.[138] Again, a tax measure is inconsistent with Article III:2, first sentence, if the imported product is taxed in excess of the domestic like product. Evidence of protectionist intent need not be shown because such a discriminatory tax *per se* affords protection to domestic production.[139]

5. Internal Regulations Affecting Imports

While Article III:2 is the source of specific national treatment commitments on internal taxes and charges, Article III:4 is the source of specific national treatment commitments with respect to internal laws, regulations, and requirements other than taxes that affect imports. Article III:4 provides:

> The products of the territory of any contracting party imported into the territory of any other contracting party shall be accorded treatment no less favorable than that accorded to like products of national origin in respect of all laws, regulations and requirements affecting their internal sale, offering for sale, purchase, transportation, distribution or use. The provisions of this paragraph shall not prevent the application of differential internal transportation charges which are based exclusively on the economic operation of the means of transport and not on the nationality of the product.

By its express terms, Article III:4 is limited to laws, regulations, and requirements affecting like products, not directly competitive or substitutable products.[140] Unlike Article III:2 and Article III:5, Article III:4 makes no express reference to Article III:1. Nevertheless, the Appellate Body in *Japan—Alcoholic Beverages* noted that Article III:1 "constitutes part of the context of each of the other paragraphs in Article III."[141]

[141] *Japan—Taxes on Alcoholic Beverages*, *supra* note 50, at 18.

The operative word in paragraph 4 is "affecting"—a broad term that includes internal laws and regulations that not only govern the sale, purchase, or distribution of imported products, but also those which have a negative effect on the competitive opportunities enjoyed by imports vis-à-vis the like domestic product in the importing Member's home market.[142] Thus, for example, a 1984 GATT panel report condemned as violative of the national treatment obligation a requirement in the Canadian Foreign Investment Review Act ("FIRA") that as a condition on government approval of a foreign investment, inputs had to be purchased locally if they were "competitively available". Unless the foreign investor agreed to purchase goods of Canadian origin in preference to imports, provided the former were "competitively available," its investment ran the risk of not being approved by the Canadian government.[143] Even though the obligation was imposed on investors and not importers and even though the obligation was contained in an undertaking between the investor and the Canadian government making it contractual in nature, the undertaking was nevertheless deemed to be a "requirement" that was violative of Article III:4. The holding in the *Canada-FIRA* dispute was codified in the Agreement on Trade-Related Investment Measures (the TRIMs Agreement).[144]

Can internal laws and regulations that treat imported goods and the like domestic product identically still violate Article III:4? The answer is "yes." Internal regulations that are *de jure* neutral may still violate Article III:4 if they adversely affect the equality of competitive opportunities of imports in the domestic market. In the GATT panel report, *Canada—Import, Distribution and Sale of Certain Alcoholic Drinks by Provincial*

[142] *See, e.g.*, Report of the WTO Panel, *Japan—Measures Affecting Consumer Photographic Film and Paper*, WT/DS44/R, ¶¶ 10.379–10.380 (1998)(the standard of effective equality of competitive conditions on the internal market is the standard of national treatment required under Article III:4); Report of the GATT Panel (adopted), *Italian Discrimination Against Imported Agricultural Machinery*, BISD, 7th Supp. 60, 64, at ¶¶ 11–13 (1959); *United States—Section 337*, *supra* note 105, at ¶ 5.11; *Canada—Import, Distribution and Sale of Certain Alcoholic Drinks by Provincial Marketing Agencies*, *supra* note 107, ¶ 5.6.

[144] *See also* Report of the WTO Panel, *India—Measures Affecting the Automotive Sector,* WT/DS146/R and WT/DS175/R, (1999)(an obligation to use a certain portion of local parts and components in the manufacture of cars violates Article III:4), *appeal withdrawn by India*, Report of the Appellate Body, *India—Measures Affecting the Automotive Sector*, WT/DS146/AB/R (2002).

The TRIMs Agreement, discussed in detail in Chapter 10 of this book, represents a modest attempt to reinforce GATT rules respecting national treatment and the prohibition on import quotas, but falls short of being a comprehensive set of rules regulating either international investment or restrictive business practices, topics much discussed in trade circles. The TRIMs Agreement builds on Article III, which requires Members to provide national treatment to imported products, and Article XI, which prohibits Members from imposing quantitative restrictions on the importation or exportation of goods. Although Article III:4, 5, and 7 do apply to certain aspects of investment laws, the GATT panel dispute involving the Canadian Foreign Investment Review Act spotlighted the need for Article III repair through the adoption of specific and unambiguous rules on certain trade-distorting investment measures, in particular local content requirements.

Article 2.1 of the TRIMs Agreement stipulates that "no Member shall apply any TRIM that is inconsistent with the provisions of Article III or Article XI of GATT 1994." Article 2.2 refers to the illustrative list of TRIMs that are inconsistent with Articles III:4 and XI:1 of GATT 1994. The TRIMs Annex provides that measures must be enforceable under domestic law or under administrative rulings, or compliance with which is necessary to obtain an advantage. Next, these measures are prohibited if they require the purchase or use of domestic products (*i.e.*, local content requirements), limit the purchase or use of imported products to an amount related to the volume or value of local products that are exported (*i.e.*, trade-balancing requirements), or tie access to foreign exchange to an investor's foreign exchange earnings (*i.e.*, foreign exchange balancing restrictions). The prohibited measures listed in the illustrative Annex to the TRIMs Agreement underscore the close link between foreign investment and international trade. The prohibitions of the TRIMs Agreement apply equally to measures imposed on domestic firms, not just on foreign investments, and cover both new and existing investments.

Marketing Agencies,[145] the panel concluded that Canadian minimum price regulations for beer undermined one of the fundamental purposes of Article III:4, which is to ensure that internal regulations do not dilute or eliminate the benefit of Article II tariff concessions. Even though the two products are treated identically (*e.g.*, as in the case of minimum price regulations), a national treatment violation nevertheless exists if the imported product could have undersold the domestic like product but for the minimum price control.

At the same time, a formal difference in treatment between imported and like domestic products is neither necessary nor sufficient to show a violation of Article III:4. As the Appellate Body observed in *Korea—Beef*, "Whether or not products are treated 'less favourably' than like domestic products should be assessed instead by examining whether a measure modifies the conditions of competition in the relevant market to the detriment of imported products."[146]

Regulations that in some instances favor imports but in others discriminate against them also violate Article III:4. In this connection, in *Section 337 of the Tariff Act of 1930*, the GATT panel rejected the contention that a balancing test should be used under which administrative proceedings in the United States that were less favorable to some imported products could be offset by ones that treated other imported products more favorably.[147] The panel noted:

> If this notion were accepted, it would entitle a contracting party to derogate from the no less favourable treatment obligation in one case, or indeed in respect of one contracting party, on the ground that it accords more favourable treatment in some other case, or to another contracting party. Such an interpretation would lead to great uncertainty about the conditions of competition between imported and domestic products and thus defeat the purposes of Article III.[148]

In short, just as tariff bindings afford exporters a minimum level of certainty regarding pricing, the national treatment obligation prevents importing Members from using internal regulations in a way that frustrates exporters' ability to reasonably assess the legal and regulatory climate in a target export market.

6. Additional Article III Commitments

Paragraphs 5, 6, and 7 of Article III lay down rules on internal quantitative regulations. Paragraph 5 elaborates on the rules stated in Article III:4. Paragraph 7 in turn is an MFN obligation. Paragraphs 5 and 7 provide:[149]

> 5. No contracting party shall establish or maintain any internal quantitative regulation relating to the mixture, processing or use of products in specified amounts or proportions which requires, directly or indirectly, that any specified amount or proportion of any product which is the subject of the regulation must be supplied from domestic sources. Moreover, no contracting party shall otherwise apply internal quantitative regulations in a manner contrary to the principles set forth in paragraph 1.

[148] *United States—Section 337*, *supra* note 105, at 387, ¶ 5.14.

[149] Article III:6 is a grandfather clause that permitted otherwise GATT-inconsistent internal quantitative regulations to remain in place on the dates specified in that paragraph. It has been superceded by the Agreement Establishing the WTO.

* * * * * *

> 7. No internal quantitative regulation relating to the mixture, processing or use of products in specified amounts or proportions shall be applied in such a manner as to allocate any such amount or proportion among external sources of supply.

The prohibited activities mentioned in paragraph 5 are a more specific subset of those listed in paragraph 4. In *United States—Measures Affecting the Importation, Internal Sale and Use of Tobacco*,[150] a GATT panel examined the U.S. Domestic Marketing Assessment (DMA) that required domestic manufacturers of cigarettes to use at least 75 percent domestic tobacco or be subject to penalties in the form of a nonrefundable marketing assessment. The panel noted that "both Article III:5 and Article III:4 deal with internal regulations, but Article III:5 is the more specific of the two provisions."[151] The panel concluded that the DMA was an internal quantitative regulation relating to the use of tobacco in specified amounts or proportions which required, directly or indirectly, that a minimum specified proportion of tobacco be supplied from domestic sources, inconsistently with Article III:5, first sentence.[152]

Paragraph 7 expands on paragraph 5 by prohibiting any allocation among foreign suppliers with respect to products subject to internal mixing regulations. The objective of paragraph 7 is to secure non-discrimination as between foreign suppliers with respect to products subject to internal mixing regulations. Accordingly, paragraph 7 was added to Article III as the best method of securing MFN treatment.[153]

As broad as the rules are in paragraphs 4 and 5 to prevent trade protection through the use of discriminatory internal regulations, negotiators at the Uruguay Round concluded two agreements that elaborate upon these two Article III provisions. The first agreement is the Agreement on Technical Barriers to Trade (the TBT Agreement), the successor agreement to the Tokyo Round Standards Code. The second is the TRIMs Agreement. They are fully discussed in other chapters of this book.[154]

7. National Treatment Exceptions

Four express exceptions to the national treatment obligation are (1) government procurement of goods and services, (2) the payment of subsidies exclusively to domestic producers, (3) state and local laws that derogate from GATT-WTO commitments, and (4) the exhibition of films.

First, GATT Article III:8(a) excepts government purchases of goods from the national treatment obligation so long as the purchases are for governmental purposes and not made with a view to resale. (In a parallel provision, GATS Article XIII excepts government purchases of services for a government's own use.) Governments are thus permitted to discriminate in favor of local suppliers of goods and services free of any constraints that would otherwise be imposed by the national treatment obligation. The plurilateral Agreement on Government Procurement imposes a national treatment obligation for WTO Members that are signatories to it. The Government Procurement Agreement is analyzed in a separate chapter of this book.[155]

[151] *Id.* ¶ 72.

[152] *Id*. ¶ 68. Interpretative Note *Ad* Article III:5 provides that a regulation is not consistent with the second sentence of paragraph 5 even when the allocations among imported and domestic products are equitable.

[153] *See* GUIDE TO GATT LAW AND PRACTICE, *supra* note 3, at 189.

[154] The TBT Agreement is discussed in Chapter 8 of this book, the TRIMs Agreement in Chapter 10.

[155] *See* Chapter 23.

Second, Article III:8(b) provides that nothing in Article III prevents

> the payment of subsidies exclusively to domestic producers, including payments to domestic producers derived from the proceeds of internal taxes or charges applied consistently with the provisions of this Article and subsidies effected through governmental purchases of domestic products.

Panel and Appellate Body reports are consistent in holding that the phrase "payment of subsidies" is a term of art, so that a reduction in taxes exclusively for the benefit of domestic producers is not the payment of a subsidy and does not pass muster under the Article III:8(b) exception.[156] A reduction in tax rates, postal rates, or transportation rates for domestic producers does not qualify for the Article III:8(b) exception.[157] The Article III:8(b) exemption also does not include a financial advantage that benefits domestic producers indirectly. The subsidies must have been provided directly to the producers.[158] If the subsidy benefit to producers derives from indirect taxes, then there must be a prior collection of such taxes on a non-discriminatory basis.[159]

Even though Article III:8(b) permits discriminatory domestic subsidy programs, a WTO Member may nevertheless raise a claim of non-violation nullification or impairment of GATT benefits pursuant to GATT Article XXIII:1(b) if it loses export sales as a result of underpricing by the subsidized domestic product.[160]

Third, Article XXIV:12 provides that "[e]ach contracting party shall take such reasonable measures as may be available to it to ensure observance of the provisions of this Agreement by regional and local governments and authorities within its territory." This so-called "federal clause" qualified the basic obligation of every GATT contracting party to ensure the observance of GATT obligations by regional and local governments in countries with a federal constitutional structure, *e.g.*, Australia, Canada, Germany, Mexico, and the United States. The drafting history of Article XXIV:12 indicates that it applies only to those regional and local measures that the federal government cannot control because the measures fall outside the central government's jurisdiction under the constitutional distribution of powers.[161] In the unadopted GATT panel report, *Canada—Measures Affecting the Sale of Gold Coins*, the panel concluded that in cases where a national treatment violation by a sub-central governmental body is alleged, the benefit of the doubt must go to the responding contracting party where the exact distribution of powers between the federal and sub-federal units of governments remains to be determined by the competent national judicial or political bodies.[162]

The Uruguay Round Understanding on the Interpretation of Article XXIV of the GATT 1994 makes a significant change to Article XXIV:12 that corrects an imbalance that had existed between Members with federal constitutions and those Members with unitary

forms of government. With regard to the legal responsibility of federal governments for laws and regulations of their sub-federal levels of government that violate WTO agreements, the Understanding confirms the view held by some experts that federal governments are "fully responsible under GATT 1994 for the observance of all provisions of GATT 1994 . . . . "[163] GATT-inconsistent measures taken by their sub-federal units of government, such as states, provinces, or municipalities may be the subject of a GATT Article XXIII:1(a) violation nullification or impairment complaint.[164] If a state law or regulation is found to be in conflict with GATT 1994, the responsible Member must take such measures as are available to it to ensure the observance of GATT-WTO obligations by its sub-federal governmental bodies.[165] In the event that the offending local measure is not removed or amended, the Understanding makes plain that the prevailing Member is entitled to compensation: "The provisions relating to compensation and suspension of concessions or other obligations apply in cases where it has not been possible to secure such observance."[166]

The fourth GATT exception to the national treatment obligation is contained in Article III:10 and Article IV. Article III:10 provides that nothing in Article III prevents any contracting party from establishing or maintaining internal quantitative regulations relating to exposed cinematographic films and meeting the requirements of Article IV. Article IV permits Members to establish quotas for the exhibition of cinematographic films (movies) that favor films of national origin.[167] Such screen quotas may require the exhibition of films of national origin during a specified proportion of total screen time over a period of not less than one year in the commercial exhibition of all films of whatever origin. Screen time may not be allocated formally or in effect among sources of supply. This Article was the subject of consultations requested by the United States in 1991 concerning EU member-country measures restricting the showing of non-European films on television. The EU's response was that the question of broadcasting belonged to the area of services.[168] This subject is now largely subsumed under the GATS.

D. GATT Article XI, The Elimination of Quotas

The fourth pillar of the GATT-WTO system, and the most important of the original GATT 1947 commitments respecting nontariff barriers to trade, is the Article XI commitment to eliminate quantitative restrictions (quotas) on imports and exports. Article XI prohibits quantitative restrictions for two reasons. First, quotas lack the transparency of customs duties. Second, by creating an artificial short supply, quotas prevent the law of supply and demand from determining the price at which domestic and imported goods should be sold.

[163] *Understanding on the Interpretation of Article XXIV of the GATT 1994*, ¶ 13.
[164] *See id.* ¶ 14.
[165] *See id*. Alternatively, the DSU provisions relating to compensation to the complaining Member apply in cases where the offending law or regulation is not amended or withdrawn. *See id.* ¶ 13. Failing that, the complaining Member may retaliate by suspending concessions pursuant to DSU procedures. *See id.* ¶ 13.
[166] *Id*. ¶ 14.
[167] At the 1965 Review Session, it was agreed to incorporate Article IV into Article III:10. However, the Protocol to effect this amendment never entered into force and was abandoned in 1967. *See* GUIDE TO GATT LAW AND PRACTICE, *supra* note 3, vol. 1, at 211.
[168] *See* GUIDE TO GATT LAW AND PRACTICE, *supra* note 3, vol. 1, at 210.

GATT Article XI, *General Elimination of Quantitative Restrictions*, plainly states the rule respecting quotas:

> No prohibitions or restrictions other than duties, taxes or other charges, whether made effective through quotas, import or export licences or other measures, shall be instituted or maintained by any contracting party on the importation of any product of the territory of any other contracting party or on the exportation or sale for export of any product destined for the territory of any other contracting party.

Article XI's prohibitions on quantitative restrictions are broad. First, both import and export quotas are prohibited. Second, government measures that may lead to the implementation of an export or import quota are prohibited. In this connection, the GATT panel in *Japan–Semi-Conductors*[169] rejected Japan's argument that "administrative guidance" by the government to Japanese semi-conductor producers did not come within the Article XI prohibition because it was not legally binding or mandatory. The panel noted that Article XI:1, unlike other GATT provisions, does not refer solely to laws, regulations, or requirements (as does Article III:4), but rather more broadly to "measures." Therefore, initiatives taken by a WTO Member that effectively restricts the flow of exports or imports is prohibited under Article XI:1, even though the legally binding nature of the government initiative as a formal matter may be in doubt. The panel added, however, that not all types of government action—such as "jawboning" by government officials—necessarily fall within the ambit of Article XI:1. In order to come within the Article XI:1 proscription, a government measure must satisfy two criteria: (1) there must be reasonable grounds to believe that sufficient incentives or disincentives exist for observing non-mandatory measures; and (2) government action or intervention is required to restrict exports or imports once certain triggering events take place.[170]

As is the case with national treatment violations, whether a quantitative restriction has actual trade effects is irrelevant. The existence of a quantitative restriction, regardless of whether it actually impedes imports or exports, violates Article XI:1 because it adversely affects the equality of competitive conditions.[171]

In addition to prohibitions on imports or exports, other measures have been found to violate Article XI:1 as well. For example, a measure imposing minimum export prices for goods was held to be inconsistent with Article XI:1,[172] and a minimum import price for vegetables that was enforced through security deposits was also found to violate that Article.[173]

There are four important GATT-authorized exceptions to the general prohibition on quantitative restrictions. The first exception deals with quotas imposed on agricultural products as part of a government market stabilization program. The second is an exception under Article XII for quotas imposed to correct a balance-of-payments problem. The third

is an exception for quotas imposed as a remedy under an Article XIX safeguards action. (This third exception is discussed briefly below in connection with Article XIX.) The fourth exception is export and import quotas on textiles and clothing under the provisions of the Agreement on Textiles and Clothing.[174]

1. The Exception for Agricultural Products

Article XI:2 sets forth a set of three exceptions that generally permit quantitative restrictions on agricultural and fisheries products to the extent necessary to enforce government measures designed to stabilize national markets for these products. Paragraph 2(a) of Article XI permits "[e]xport prohibitions or restrictions temporarily applied to prevent or relieve critical shortages of foodstuffs or other products essential to the exporting contracting party." Paragraph 2(b) permits "[i]mport and export prohibitions or restrictions necessary to the application of standards or regulations for the classification, grading or marketing of commodities in international trade."

In the 1988 GATT panel report, *Canada—Measures Affecting Exports of Unprocessed Herring and Salmon*, the panel examined Canada's claim that its regulations prohibiting the exportation of unprocessed herring and salmon were permitted under Article XI:2(b), inasmuch as the fish were "commodities" and the regulations were "standards" dealing with "marketing," all of which were deemed necessary to maintain Canada's quality standards for these fish.[175] The panel rejected Canada's interpretation as overly broad. Accepting Canada's interpretation would mean in effect that import or export restrictions that protected a domestic industry and facilitated its ability to sell abroad would be exempted from the general prohibition on export and import restrictions.[176] Such a sweeping interpretation would swallow the Article XI:1 prohibition.

Paragraph 2(c) of Article XI permits import restrictions on any agricultural or fisheries product necessary to the enforcement of governmental measures that operate in one of the following three ways: (i) to restrict the quantities marketed or produced of a like or directly substitutable domestic product, (ii) to remove a temporary surplus of the like or directly substitutable domestic product by making it available to domestic consumers either free or at below market price, or (iii) to restrict the quantities of any animal product the production of which is directly dependent on the imported commodity, if the domestic production of that commodity is relatively negligible. Arguments made to extend the paragraph 2(c) exception to industrial products were rejected out of hand by the GATT 1947 drafters. They were quick to point out that agricultural products, unlike industrial products, are subject to the caprice of the weather and the whims of the market. These uncontrollable variables will in some seasons give a country's farmers and fishermen a bumper crop or a huge catch of fish that will in turn drive down the price for their products, preventing a fair return to farmers and fishermen.[177]

In the 1989 GATT panel report on *Import Restrictions on Ice Cream and Yoghurt*,[178] the panel summarized the elements and burden of proof regarding claims under paragraph 2(c)(i):

[174] The Agreement on Textiles and Clothing is analyzed in Chapter 9 of this book.

[175] *See* Report of the GATT Panel (adopted), *Canada—Measures Affecting Exports of Unprocessed Herring and Salmon*, BISD, 35th Supp. 98, 112, ¶ 4.2 (1988).

[176] *See id.* at 112, ¶ 4.3.

[177] *See* GUIDE TO GATT LAW AND PRACTICE, *supra* note 3, vol. 1, at 328.

[178] Report of the GATT Panel (adopted), *Canada—Import Restrictions on Ice Cream and Yoghurt*, BISD, 36th Supp. 68, 85–86, ¶ 62 (1989).

> As the party invoking an exception, it was incumbent upon Canada to demonstrate that the measures applied to imports of ice cream and yoghurt met each of the conditions under Article XI:2(c)(i) and XI:2(c) last sub-paragraph, in order to qualify in terms of these provisions for exemption from Article XI:1. These conditions are:
>
> — the measure on importation must constitute an import restriction (and not a prohibition);[179]
> — the import restriction must be on an agricultural or fisheries product;
> — the import restriction and the domestic marketing or production restriction must apply to "like" products in any form (or directly substitutable products if there is no substantial production of the like product);
> — there must be governmental measures which operate to restrict the quantities of the domestic product permitted to be marketed or produced;
> — the import restriction must be necessary to the enforcement of the domestic supply restriction;
> — the contracting party applying restrictions on importations must give public notice of the total quantity or value of the product permitted to be imported during a specified future period; and
> — the restrictions applied must not reduce the proportion of total imports relative to total domestic production, as compared with the proportion which might reasonably be expected to rule between the two in the absence of restrictions.[180]

Substantial similarity of the imported and domestic product is the key to fulfilling the requirements of paragraph 2(c).[181] Processed forms of the fresh product can be products "like" the fresh product, provided they meet the two criteria of Interpretative Note *ad* Article XI:2(c): (1) they are in an early stage of processing and still perishable; and (2) they compete directly with the fresh product and if freely imported would tend to make the restriction on the fresh product ineffective.

The burden of proof is on the Member invoking the Article XI:2(c) exception,[182] a heavy one for responding Members.[183] In fact, no contracting party or WTO Member has ever successfully defended a challenge to quantitative restrictions on agricultural products in a GATT panel proceeding using an Article XI:2(c) defense.[184]

While paragraph 2(c) is not meant to protect domestic producers against foreign competition, its lack of flexibility means that it is often honored in the breach. Disputes brought under Article XI in which the Article XI:2(c) exception has been invoked were played out against the backdrop of one of the most serious failures of GATT 1947: the nearly total lack of GATT discipline in the area of agricultural trade. The WTO Agreement on

[179] Several GATT panels have specifically noted that import prohibitions, whether *de facto* or *de jure*, are *per se* disqualified from the paragraph 2(c) exception. *See, e.g.,* Report of the GATT Panel (adopted), *United States—Prohibition of Imports of Tuna and Tuna Products from Canada*, BISD, 29th Supp. 91, 107, ¶ 4.6 (1982); Report of the GATT Panel (adopted), *Japan—Restrictions on Imports of Certain Agricultural Products*, BISD, 35th Supp. 163, 244, ¶ 6.4 (1988).

[180] *See Canada—Ice Cream and Yoghurt*, *supra* note 178, at 85–86, ¶ 62. *Accord* Report of the GATT Panel (adopted), *EEC—Restrictions on Imports of Dessert Apples*, BISD 36th Supp. 93, 124–25, ¶ 12.3 (1989).

[181] *See, e.g., Canada—Ice Cream and Yoghurt*, *supra* note 178, at 87, ¶¶ 66–67 (raw milk not like ice cream or yoghurt); *Japan—Restrictions on Certain Agricultural Products*, *supra* note 179, at 232, ¶ 5.3.1.4 (fresh milk not like products prepared from it); at 239, ¶ 5.3.11 (prepared pineapple not like fresh pineapple).

[182] *See Japan—Restrictions on Certain Agricultural Products*, *supra* note 179, at 227, ¶ 5.1.3.7.

[183] *See Canada—Ice Cream and Yoghurt*, *supra* note 178, at 84–85, ¶ 59.

[184] *See* GUIDE TO GATT LAW AND PRACTICE, *supra* note 3, vol. 1, at 326–48; MCGOVERN, *supra* note 14, § 14.31.

Agriculture, discussed in a separate chapter,[185] is designed to restore GATT disciplines to the agricultural sector, although it does so in a very modest fashion. By requiring Members to replace all nontariff barriers to agricultural trade with tariffs that are equivalent in effect to those preexisting nontariff barriers, the Agreement on Agriculture prohibits Members from applying nontariff barriers to agricultural imports. This prohibition substantially diminishes the importance of Article XI:2(c)(i) in the overall GATT scheme.[186] Whether the Agreement on Agriculture renders Article XI:2(c)(i) a dead letter remains to be seen.

2. The Balance-of-Payments Exception

The second Article XI exception is Article XII, which permits the imposition of import quotas for balance-of-payment purposes. Article XVIII:B is a corresponding provision applicable to developing countries. These two Articles permit the use of quantitative restrictions to safeguard a country's balance-of-payments ("BOP") position under certain narrowly circumscribed circumstances. Under Article XII, a Member may restrict the quantity or value of imports to the extent necessary to prevent or forestall a serious decline in foreign exchange reserves or, when reserves are low, to achieve a reasonable increase in such reserves. Under the special BOP provision reserved for developing-country Members, Article XVIII:B, import restrictions may be imposed "to ensure a level of reserves adequate for the implementation of its programme of development."[187]

Although by their express terms the only border measure permitted under both Articles is quantitative restrictions, an alternative practice developed of using price-based measures in lieu of quotas. The 1979 Declaration on Trade Measures Taken for Balance-of-Payments Purposes[188] (supplemented and clarified by the 1994 Understanding on the Balance-of-Payments Provisions of the General Agreement on Tariffs and Trade 1994) formally approves the use of price-based measures, such as import surcharges and import deposit schemes, in preference to quotas taken to safeguard a country's BOP position.[189] The 1994 Understanding excepts such measures from Article II tariff bindings, provided they are less disruptive to trade flows than comparable quantitative restrictions would be.[190] Paragraph 4 of the 1994 Understanding further provides that "restrictive import measures taken for balance-of-payments purposes may only be applied to control the general level of imports and may not exceed what is necessary to address the balance-of-payments situation." New quantitative restrictions are to be avoided unless the Member imposing the quota can establish that price-based actions are not adequate to address the BOP problem.

[185] *See* Chapter 6 of this book.

[186] Article 4.2 of the Agreement on Agriculture provides that "Members shall not maintain, resort to, or revert to any measures of the kind which have been required to be converted into ordinary customs duties. . . . " A footnote to this paragraph list the measures affected, including "quantitative import restrictions, variable import levies, minimum import prices, . . . voluntary export restraints, . . . but not measures maintained under balance-of-payments provisions or under other general, non-agricultural-specific provisions of GATT 1994 or of the other Multilateral Trade Agreements in Annex 1A to the WTO Agreement."

[187] GATT Article XVIII:B, ¶ 9.

[188] *Declaration on Trade Measures Taken for Balance-of-Payments Purposes*, BISD, 26th Supp. 205 (1979).

[189] For a discussion of GATT Working Party and panel reports dealing with import surcharges and import deposit schemes prior to the 1979 Tokyo Round Declaration, *see* GUIDE TO GATT LAW AND PRACTICE, *supra* note 3, vol. 1, at 363–65.

[190] GATT Article XII:3(c); GATT Article XVIII:10; *1979 Tokyo Round Declaration*, ¶ 1(a); *Understanding on the Balance-of-Payments Provisions of the General Agreement on Tariffs and Trade 1994*, ¶ 2.

Any Member invoking Article XII must publish a schedule for the removal of the restriction (only one type of restriction is permitted per product), and must enter into consultations with the Committee on Balance of Payments Restrictions to review such restrictions.[191] A simplified, documentary review procedure is established for developing and least-developed country Members.[192] If a Member refuses to provide a timetable for removing restrictive import measures taken for BOP purposes, then it must justify its refusal. In addition, the Understanding requires a government whose BOP measures are the subject of consultations to provide detailed, written information on those measures, including (1) an overview of its BOP situation, (2) a full description of its BOP restrictions, (3) the measures it has taken since the last consultation to liberalize import restrictions, and (4) a plan for the reduction and elimination of remaining restrictions. These transparency requirements are major improvements on the 1979 Tokyo Round Declaration.

3. The Allocation of Quotas

If quotas are used for any of the permissible grounds described above, then quota allocations must be made without discrimination among the other WTO Members.[193] Paragraph 1 of Article XIII provides:

> No prohibition or restriction shall be applied by any contracting party on the importation of any product of the territory of any other contracting party or on the exportation of any product destined in the territory of any other contracting party, unless the importation of the like product of all third countries or the exportation of the like product to all third countries is similarly prohibited or restricted.

It is obviously not possible to attain perfection in the allocation of quotas. It is inevitable that some supplying Member will be slightly more or slightly less favored than another supplying Member. Article XIII instructs Members to use quantitative restrictions in the least trade-distorting manner possible. Accordingly, Article XIII:2 requires Members to allocate quotas on the basis of the shares that exporting Members might be expected to enjoy in the absence of quotas. This general principle is explained in subsequent sub-paragraphs.

First, wherever practicable quotas representing the total amount of permitted imports must be fixed.[194] Second, in cases where quotas are not practicable, the import restrictions may be imposed through import licenses without a quota.[195] Third, except for purposes of operating a quota under sub-paragraph (d), Members shall not require that import licenses or permits be utilized for the importation of the product concerned from a particular country or source.[196] Fourth, Article XIII:2(d) provides that in cases in which a quota is allocated among supplying countries, the Member applying the restrictions should seek agreement on the allocation of shares in the quota with all other Members having a substantial interest in supplying the product concerned. Where this method is

[191] *See Understanding on the Balance-of-Payments Provisions of the General Agreement on Tariffs and Trade 1994*, ¶¶ 1–3, 5–6.

[192] *See id.* ¶ 8. For an overview of the Article XII and Article XVIII:B consultation procedures, *see* GUIDE TO GATT LAW AND PRACTICE, *supra* note 3, vol. 1, at 378–92.

[193] *See, e.g.*, Report of the GATT Panel (adopted), *Norway—Restrictions on Imports of Certain Textile Products*, BISD, 27th Supp. 119, 125–26, ¶¶ 15–16 (1980). The panel noted that when Norway concluded six bilateral agreements limiting imports of textiles, it violated Article XIX when it failed to allocate a quota for Hong Kong.

[194] GATT Art. XIII:2(a).

[195] GATT Art. XIII:2(b).

[196] GATT Art. XIII:2(c).

not practicable, a Member must allot quota shares to Members with a substantial interest in supplying the product based on proportions supplied by Members during a previous representative period.[197]

Regarding which Members are considered to have a "substantial interest in supplying the product," no precise import share has ever been established for determining whether a Member has a substantial interest in supplying a product in the Article XIII context. Interestingly, in the context of Article XXVIII's rules on negotiation rights in the event of a proposed tariff modification or withdrawal, a ten-percent market-share rule has been applied to determine whether a Member has a "substantial interest."[198] While refusing to adopt a bright-line test, the WTO panel in *European Communities—Bananas* concluded that for purposes of Article XIII:2(d), Costa Rica and Colombia had a substantial supplying interest in supplying bananas to the EU, with 19.7-percent and 15.7-percent market shares, respectively. The panel rejected out of hand the EU's contention that Nicaragua, with a 1.7-percent share, and Venezuela, with less than a 0.1-percent share, had "substantial supplying interest" status.[199]

In *European Communities—Bananas,*[200] the Appellate Body found that the EU's allocation of a tariff-rate quota through agreement with some supplying Members not having a substantial interest in supplying the EU banana market, while at the same time not reaching agreement with other Members having a substantial interest in supplying the EU banana market, was inconsistent with Article XIII. According to the Appellate Body, the terms of Article XIII:2(d) are clear: the combined use of agreements and unilateral allocations to Members with a substantial supplying interest is not permitted.[201] If a Member wishes to allocate shares to other Members not having a substantial supplying interest, as the EU had done, then such shares must be allocated to all such suppliers.[202]

[197] GATT Art. XIII:2(d).

[198] *See* GUIDE TO GATT LAW AND PRACTICE, *supra* note 3, vol. 1, at 941. The inequity of this approach has been pointed out by at least one developing country. *See* Committee on Market Access, *Implementation-Related Issues and Concerns: Meaning to Be Given to the Phrase "Substantial Interest" in Paragragh 2(D) of Article XIII of GATT 1994*, Communication from Saint Lucia, G/MA/W/30/Add.1, ¶ 7 (Oct. 31, 2002)("It seems somewhat surreal that a Member with even 70% of its exports [in a single product] entering a particular market could be deemed by the WTO not to have a substantial interest in supplying the product to that market" in the context of Article XIII:2(d)). The Market Access Committee agreed that the Secretariat should undertake additional case studies based on Saint Lucia's concerns. *See* Committee on Market Access, *Report (2002) of the Committee on Market Access*, G/L/582, ¶ 13 (Oct. 30, 2002).

[199] *See* Report of the WTO Panel, *European Communities—Regime for the Importation, Sale and Distribution of Bananas*, WT/DS27/R/USA, ¶¶ 7.84, 7.85 (1997). The panel also found that as to countries without a substantial supplying interest, the EC could not discriminate among them with regard to the importation of bananas. This finding was affirmed by the Appellate Body. *See* Report of the Appellate Body, *European Communities—Regime for the Importation, Sale and Distribution of Bananas*, WT/DS27/AB/R, at 74, ¶¶ 161, 162 (1997). The Article XIII complaints brought under GATT 1947 typically were based on blatant discrimination against certain contracting parties. *See, e.g.,* Report of the GATT Panel (adopted), *EEC—Restrictions on Imports of Apples*, BISD, 36th Supp. 135 (1989)(retroactive application of quota allocation violates GATT 1947). For example, Nicaragua brought a complaint against the United States when the latter cut Nicaragua's sugar quota by ninety percent in 1983 in an attempt to deny Nicaragua foreign currency with which to finance military operations in Central America. *See* Report of the GATT Panel (adopted), *United States—Imports of Sugar from Nicaragua*, BISD, 31st Supp. 67, 73, at ¶ 4.3 (1984). The GATT panel agreed that the greatly reduced U.S. sugar quota allocated to Nicaragua was inconsistent with Article XIII:2.

[200] Report of the Appellate Body, *European Communities—Regime for the Importation, Sale and Distribution of Bananas*, WT/DS27/AB/R (1997).

[201] *See id.* at 74–75, ¶¶ 161–163. *Accord* Report of the WTO Panel, *European Communities—Regime for the Importation, Sale and Distribution of Bananas, Recourse to Article 21.5 by Ecuador*, WT/DS27/RW/ECU, ¶ 6.41 (1999).

[202] *See European Communities—Bananas*, *supra* note 200, at 74–75, ¶¶ 161–163.

Therefore, when an importing Member is faced with making an allocation among Members with and Members without a substantial supplying interest, the importing Member will have to use a general "others" category for all suppliers other than suppliers with a substantial supplying interest. Under such an allocation, new market entrants will have some market access and, theoretically, an opportunity to achieve "substantial supplying interest" status.

Members are entitled to allow non-Members to participate in the allocation of the quota, but are not required to do so.[203] As for the determination of a "previous representative period," the prior three-year period is normally considered to be the appropriate period. However, under GATT practice it is necessary that the representative period be the most recent period not distorted by import restrictions.[204] If no representative period can be determined, a Member has the alternative of using a global quota or a country-specific allocation by agreement.[205] Article XIII:4 permits the Member imposing the quantitative restriction to select the representative period initially, subject to consultation with Members with a substantial supplying interest.

Article XIII:3 sets forth rules on the administration of quotas, including licensing procedures. The subject of licensing procedures is comprehensively addressed in the Agreement on Import Licensing Procedures which is discussed in another chapter.

E. GATT Article X, Publication and Administration of Trade Regulations

Together with the MFN and national treatment obligations, tariff bindings, and the prohibition on quantitative restrictions, transparency commitments could be considered the fifth pillar of the GATT-WTO system. The smooth functioning of a multilateral trade system requires transparency of the trade laws, regulations, decisions, and other measures adopted by its Members affecting international trade. With that goal in mind, GATT Article X, *Publication and Administration of Trade Regulations*, sets forth guidelines governing the publication of national rules and regulations affecting import and export trade.

The chief publication requirement is found in Paragraph 1 which provides:

> 1. Laws, regulations, judicial decisions and administrative rulings of general application, made effective by any contracting party, pertaining to the classification or the valuation of products for customs purposes, or to rates of duty, taxes or other charges, or to requirements, restrictions or prohibitions on imports or exports or on the transfer of payments therefor, or affecting their sale, distribution, transportation, insurance, warehousing, inspection, exhibition, processing, mixing or other use, shall be published promptly in such a manner as to enable governments and traders to become acquainted with them. Agreements affecting international trade policy which are in force between the government or a governmental agency of any contracting party and the government or governmental agency of any other contracting party shall also be published. [The balance of paragraph 1 provides that business confidential and law enforcement information need not be disclosed.]

The panel reports addressing issues of compliance with Article X are a mixed bag. For example, in a 1989 panel report, *EEC–Restrictions on Imports of Dessert Apples*,[206]

[203] *See* Report of the WTO Panel, *European Communities—Measures Affecting the Importation of Certain Poultry Products*, WT/DS69/R, ¶ 229 (1998).

[204] *See* Decision of the Arbitrators, *European Communities—Regime for the Importation, Sale and Distribution of Bananas—Recourse to Article 22.6 by the EC*, WT/DS27/ARB, ¶¶ 5.25–5.26 (1999).

[205] *See id.* ¶ 5.28.

[206] *EEC—Dessert Apples*, *supra* note 199, at 166–67, ¶¶ 5.20–5.23.

the panel examined the GATT-consistency of quotas imposed by the EEC on imports of apples, both in terms of the allocation of the quotas among supplying countries and the manner in which the quota allocations were notified retroactively. The quota allocation was announced in April 1988, but covered a period which began in February 1988 and ended in August 1988. The panel found that since the EEC had given public notice of the quota allocation two months after the quota period had begun, the EEC was in breach of Article X which, the panel concluded, prohibits backdated quotas. The panel offered no views on the meaning of the term "promptly" or what that obligation might entail, other than to observe that no period of time need lapse between the publication of a regulation and its entry into force.[207]

A similar result was reached in the 1992 panel report in *Canada–Import, Distribution and Sale of Certain Alcoholic Drinks by Provincial Marketing Agencies*.[208] In that case the United States complained that the liquor board of British Colombia had shared information with domestic brewers relating to pricing policy before that same information was made available to U.S. brewers. The United States also claimed that Article X had been violated when the Ontario legislative assembly announced a new pricing policy for beer only five days before its entry into force. The panel disagreed with the United States, concluding that Article X's requirement to promptly publish trade regulations did not require contracting parties to make information affecting trade available to domestic and foreign suppliers precisely at the same time, and did not require contracting parties to publish trade regulations in advance of their entry into force.[209]

Although GATT panels have concluded that no specific time interval need lapse between the publication of a law or regulation and its entry into force, the soundness of those panel reports is suspect in light of Article X:2. Article X:2 does require that measures of general application be published on or before the date they take effect. Article X:2 provides:

> 2. No measure of general application taken by any contracting party effecting an advance in a rate of duty or other charge on imports under an established and uniform practice, or imposing a new or more burdensome requirement, restriction or prohibition on imports, or on the transfer of payments therefor, shall be enforced before such measure has been officially published.

As noted by the Appellate Body in *United States—Restrictions on Imports of Cotton and Man-Made Fibre Underwear*, "Members and other persons affected . . . by governmental measures imposing restraints, requirements and other burdens, should have a reasonable opportunity to acquire authentic information about such measures and accordingly to protect and adjust their activities or alternatively to seek modification of such measures."[210] A measure is "of general application" even though addressed to a specific country. However, measures addressed to individual firms or shipments do not generally meet the "of general application" criterion.[211] Nevertheless, administrative

[207] *See id.* ¶ 12.29.

[208] *See Canada—Imports of Certain Alcoholic Drinks*, *supra* note 107, at 85–86, ¶ 5.34.

[209] In a GATT panel proceeding involving a challenge to a Japanese quantitative restriction on the ground of inconsistency with Article XI, the panel declined to address the subsidiary claim that the laws or regulations bringing such quantitative restriction into effect also violated Article X, stating simply that Article X deals with "the administration of quotas that may be applied consistently with the General Agreement." *Japan—Restrictions on Certain Agricultural Products*, *supra* note 179, at 242, ¶ 5.4.2 (emphasis added). *See also* GUIDE TO GATT LAW AND PRACTICE, *supra* note 3, vol. 1, at 298–300.

[210] *See* Report of the Appellate Body*, United States—Restrictions on Imports of Cotton and Man-Made Fibre Underwear*, WT/DS24/AB/R, Part VI (1997).

[211] *See id.*

rulings issued in cases involving specific companies may be of general application if such rulings establish or amend principles applicable in future cases.[212]

Not only must national rules and regulations affecting international trade be transparent, but as Article X:3(a) makes clear, so too must the manner in which they are administered:

> 3. (a) Each contracting party shall administer in a uniform, impartial and reasonable manner all its laws, regulations, decisions and rulings of the kind described in paragraph 1 of this Article.

As the Appellate Body observed in *EC-Poultry Products*,[213] "the requirements of 'uniformity, impartiality and reasonableness' do not apply to the laws . . . . *themselves*, but rather to the *administration* of those laws . . . ."[214] Thus, challenges to the substantive content of laws and rules, rather than to their publication or administration, must be made under the provisions of one of the WTO MTAs. *De minimis* differences in the manner in which laws and regulations are administered do not constitute a breach of paragraph 3(a).[215]

Finally, Article X:3(b) obligates Members to "maintain, or institute as soon as practicable, judicial, arbitral or administrative tribunals or procedures for the purpose, *inter alia*, of the prompt review and correction of administrative action relating to customs matters." These tribunals and procedures must be independent of the agencies entrusted with administrative enforcement. The tribunal's decisions must also be binding on the administrative agency whose action is under review. However, paragraph 3(c) grandfathers procedures already in force at the time of accession although not fully or formally independent, provided they provide for an objective and impartial review.

1. The Trade Policy Review Mechanism

While Article X of GATT is designed as a prophylactic to forestall resort to byzantine and obscure internal and border measures affecting trade, its shortcomings have been the topic of discussions within the GATT-WTO system.[216] In 1964, the GATT CONTRACTING PARTIES adopted two Reports and a Recommendation on notification of internal trade regulations, urging contracting parties to promptly forward to the GATT Secretariat copies of all laws, regulations, and decisions of the kind described in Article X:1. Contracting parties continued to use internal rules and regulations to curb import competition, but failed to notify other contracting parties of those measures, in blatant disregard of Article X:1. It was clear to most observers that the time for tightening up the transparency commitment was long overdue.

In preparation for the Tokyo Round, major exporting countries compiled a list of eight hundred measures that had not been notified to GATT that were being used by importing countries to block or suppress trade.[217] As one commentator candidly noted, "If the

[217] *See* LONG, *supra* note 3, at 74.

notifications had been submitted by the countries imposing them, it is certain that the inventory would have been very much shorter."[218] Recognizing the need to improve the exchange of notifications, the Tokyo Round negotiators concluded an Understanding Regarding Notification, Consultation, Dispute Settlement and Surveillance.[219] Paragraphs 2 and 3 of this Understanding provide the following in connection with notification:

> Contracting parties reaffirm their commitment to existing obligations under the General Agreement regarding publication and notification.
>
> Contracting parties moreover undertake, to the maximum extent possible, to notify the CONTRACTING PARTIES of their adoption of trade measures affecting the operation of the General Agreement, it being understood that such notification would be without prejudice to views on the consistency of measures with or their relevance to obligations under the General Agreement. Contracting parties should endeavor to notify such measures in advance of implementation. In other cases, where prior notification has not been possible, such measures should be notified promptly *ex post facto*. Contracting parties which have reason to believe that such trade measures have been adopted by another contracting party may seek information on such measures bilaterally, from the contracting party concerned.

Perhaps better indicia of the seriousness with which the WTO Members take the transparency issue, and of the general level of dissatisfaction with Members compliance with the GATT-WTO notification and publication requirements, are the two Uruguay Round agreements dealing with transparency. The first is the Trade Policy Review Mechanism ("TPRM"), the successor to the Trade Policy Review Mechanism first created in 1989.[220] The second is the Decision on Notification Procedures, a partial successor arrangement to the 1979 Tokyo Round Understanding Regarding Notification, Consultation, Dispute Settlement and Surveillance.[221]

The purpose of the TPRM is to improve WTO Members' adherence to GATT-WTO commitments through the periodic review of Members' trade policies and practices by the Trade Policy Review Body.[222] The Quad Members are subject to TPRM review every two years. The next sixteen Members in terms of shares of world trade are subject to review every four years. The remaining Members are subject to review every six years, with a longer period for least-developed country Members.

The Decision on Notification Procedures advances the transparency goal as well. In that Decision the Members reaffirm their commitment to notify and publish measures affecting the operation of GATT 1994 and create a central registry for filing notifications. The Council for Trade in Goods is responsible for reviewing notification obligations and procedures under the MTAs. The Decision contains an Annex, *Indicative List of Notifiable Measures*, that lists the types of measures subject to notification: tariffs; tariffs quotas and surcharges; quantitative restrictions, including voluntary export restraints and orderly marketing arrangements affecting imports; other nontariff measures, such as licensing, mixing requirements, and variable levies; customs valuation; rules of origin; government procurement; technical barriers; safeguard actions; antidumping actions; countervailing actions; export taxes; export subsidies, tax exemptions and concessionary export financing; free-trade zones, including in-bond manufacturing; export restrictions,

including voluntary export restraints and orderly marketing arrangements; other governmental assistance, including subsidies and tax exemptions; the role of state-trading enterprises; foreign exchange controls related to imports and exports; government-mandated countertrade; and any other measure covered by the MTAs.

2. Additional Transparency Commitment in the MTAs

In addition to the commitments in Article X, the TPRM, and the Uruguay Round Decision to notify and publish all rules, regulations, and measures affecting international trade, several of the MTAs contain their own transparency provisions.

First, Article 18.2–.3 of the Agreement on Agriculture requires Members to submit notifications on the implementation of commitments made under the Agreement generally, and specifically to notify promptly any new domestic support measure.

Second, Article 7 of the Agreement on the Application of Sanitary and Phytosanitary Measures obligates Members to "notify changes in their sanitary and phytosanitary measures and . . . provide information on [such] measures in accordance with the provisions of Annex B." Annex B, *Transparency of Sanitary and Phytosanitary Regulations*, requires Members to publish promptly all such regulations in a manner that enables interested Members to become acquainted with them, and to allow a reasonable passage of time between promulgation and entry into force of such regulations "in order to allow time for producers in exporting Members, and particularly in developing country Members, to adapt their products and methods of production to the requirements of the importing Member."[223]

Third, Article 2.9 of the TBT Agreement requires Members to publish advance notice of any proposed product standard in order to give other Members a reasonable opportunity to comment on the proposal before it takes effect. Annex 3 of the TBT Agreement, *Code of Good Practice for the Preparation, Adoption and Application of Standards*, provides guidelines that governmental and non-governmental standardizing bodies are to follow when preparing standards, including notice and an opportunity to comment by interested persons.[224]

Fourth, the Agreement on Textiles and Clothing is sprinkled with express notification requirements.[225]

Fifth, in Article 6.1 of the TRIMs Agreement, Members "reaffirm, with respect to TRIMs, their commitment to obligations on transparency and notification in Article X of GATT 1994, in the undertaking on Notification contained in the Understanding Regarding Notification, Consultation, Dispute Settlement and Surveillance adopted on 28 November 1979 and in the Ministerial Decision on Notification Procedures adopted on 15 April 1994."

Sixth, Article 2.5 of the Agreement on Preshipment Inspection provides that "User Members shall ensure that preshipment inspection activities are conducted in a transparent manner." Article 2.6 of the Preshipment Inspection Agreement further requires that exporters be provided with a list of all the information that is necessary for exporters to comply with inspection requirements.

Seventh, the Agreement on Rules of Origin, whose long-range goal is the eventual harmonization of Members' non-preferential rules of origin, commits Members during

[223] *See Agreement on the Application of Sanitary and Phytosanitary Measures*, Annex B:2.

[224] *TBT Agreement*, Annex 3, *Code of Good Practice for the Preparation, Adoption and Application of Standards*.

[225] *See, e.g.*, *Agreement on Textiles and Clothing*, Arts. 2.3, 2.4, 2.7, 2.17, 2.18, 3.3, 3.4, 3.5.

and after the transition period to publish their laws, regulations, judicial decisions, and administrative rulings relating to rules of origin as if they were subject to, and in accordance with, the provisions of Article X:1 of GATT 1994.[226] As part of the long-range harmonization program, Members are further obligated to provide the WTO Secretariat with their rules of origin, and judicial decisions and administrative rulings relating to rules of origin.[227]

Eighth, Article 1.3 of the Agreement on Import Licensing Procedures echoes the spirit of Article X:3(a) by requiring that "the rules for import licensing procedures shall be neutral in application and administered in a fair and equitable manner." Article 5 of the Agreement requires Members instituting licensing procedures to notify the Committee on Import Licensing.

Ninth, Article 22 of the Agreement on Subsidies and Countervailing Measures requires that a notice of the initiation of an investigation, preliminary and final determinations, the imposition of provisional measures, and suspension or termination of an investigation be published. Article 23 mandates that all administrative determinations must be subject to judicial or arbitral review by an independent body. Article 25 of the SCM Agreement directs Members to submit notifications of subsidies annually in sufficient detail to enable other Members to evaluate the trade effects and to understand the operation of notified subsidy programs.

Tenth, the Antidumping Agreement contains transparency provisions that parallel those contained in the SCM Agreement.[228]

Eleventh, Article 3 of the Agreement on Safeguards requires public notice of all investigations and an opportunity for interested parties to present evidence. Article 12 of the Agreement obligates Members to notify the Committee on Safeguards when initiating any safeguards proceeding or granting any escape clause relief. Article 13, *Surveillance*, charges the Committee on Safeguards with monitoring Members' compliance with the Agreement.

Twelfth, in order to enhance the transparency of state trading enterprises, the Uruguay Round Understanding on the Interpretation of Article XVII of the General Agreement on Tariffs and Trade 1994 obligates Members to notify the Council for Trade in Goods of all state trading enterprises.

Finally, the GATS and the TRIPS Agreement have their own transparency provisions. GATS Article III, *Transparency*, requires Members to publish promptly all relevant measures of general application that affect the operation of GATS, and to notify annually any new laws or amendments to existing laws that significantly affect trade in services. Similarly, Article 63 of the TRIPS Agreement, *Transparency*, requires Members to publish all laws, regulations, and decisions dealing with the subject matter of the Agreement, and to notify the Council for TRIPS of all such laws, regulations, and decisions.

Much has been said about the critical importance of the MFN obligation, tariff commitments, the national treatment obligation, and the prohibition on quantitative restrictions to the overall functioning of the GATT-WTO system. Nevertheless, based on the extent to which GATT 1994 and the MTAs are peppered with transparency obligations, a strong case can be made for including transparency as one of the GATT pillars. Transparency is clearly important not only as a formal matter, but also as a practical matter in the overall functioning of the international trade system. Transparency introduces the rule of law

[226] *See Agreement on Rules of Origin*, Arts. 2(g), 3(e).
[227] *See id.* Art. 5.1.
[228] *See Agreement on Antidumping*, Arts. 12, 13, and 16.

into national legal systems that might not be accustomed to such principles. Scrutinizing WTO Members' trade policies and practices is an important check against a slide into noncompliance with GATT disciplines.

III. Other Non-Tariff Barriers to Trade

The balance of commitments in the GATT-WTO system serve mainly to buttress the five pillars by prohibiting Members from erecting nontariff barriers to trade as a substitute for tariffs and quotas. These commitments concern freedom of transit, antidumping and countervailing duties, valuation, fees and formalities connected with importation, marks of origin, state trading enterprises, safeguards relief, and national standards and technical regulations on imported goods.

A. Article V, Freedom of Transit

Article V ensures that goods shipped from Country A to Country C may pass through Country B on their way to Country C. This guarantee is particularly important for land-locked countries. Article V:2 provides:

> There shall be freedom of transit through the territory of each contracting party, via the routes most convenient for international transit, for traffic in transit to or from the territory of other contracting parties. No distinction shall be made which is based on the flag of the vessels, the place of origin, departure, entry, exit or destination, or any circumstances relating to the ownership of goods, of vessels or of other means of transport.[229]

Members may require that traffic in transit be entered at the proper customs house.[230] However, such traffic may not be subject to unnecessary delays or restrictions, and are exempt from customs duties and all transit duties or other charges imposed in respect of transit.[231] Article V:5 further provides that with respect to charges, regulations, and formalities in connection with transit, "each contracting party shall accord to traffic in transit to or from the territory of any other contracting party treatment no less favourable than the treatment accorded to traffic in transit to and from any third country." Thus, a WTO Member must not only accord MFN treatment with regard to all charges and regulations imposed on traffic in transit to or from the territories of other Members, but discrimination on the ground that goods have passed through any particular country is prohibited as well.

B. Article VI, Antidumping and Countervailing Duties

Although GATT Article VI recognizes that private-firm pricing of exports below normal value—usually the home-market price or the cost of production—is to be "condemned" if it causes or threatens material injury to an established industry,[232] it does not seek to prevent the practice, since the GATT only regulates the conduct of governments. Instead, Article VI acknowledges the unilateral right of countries to impose duties to counteract

[229] These rules also apply to air transit of goods. *See* GATT Art. V:7. For additional legal analysis of Article V, *see* Council for Trade in Goods, *Article V of the GATT 1994—Scope and Application*, Note by the Secretariat, G/C/W/408 (Sept. 10, 2002).

[230] GATT Art. V:3.

[231] *Id.* A Member may impose a charge for transportation or for administrative expenses entailed by transit. *Id*.

[232] GATT Art. VI:1.

the effect of dumping in their domestic markets, and imposes rules designed to ensure that this right is not abused in a protectionist fashion.

The 1955 GATT panel report, *Swedish Antidumping Duties*, considered whether a reference price system is consistent with Article VI.[233] The Swedish government imposed fixed minimum prices on imported nylon stockings. When it established these basic prices, the Swedish government did not consider the differential costs of production in the home market (Italy) or Sweden, nor did it ensure that these prices were related to the actual price of nylons in the home market. Sweden imposed an antidumping duty on imported nylons whenever the importer's invoice price was below the basic price. The GATT panel found Sweden's system of fixed minimum prices consistent with Article VI as long as these prices were equal to or below the actual price of nylons in the market of the lowest cost producer.

Article VI imposes no affirmative obligation on the country of exportation to prevent or punish alleged dumping by firms within its territory. It is thus left to the country of importation to respond to injurious dumping if it chooses to do so by imposing a duty "not greater in amount than the margin of dumping,"[234] which is designed to offset the effect of the dumping. Article VI:3 also places a cap on the amount of any countervailing duty that may not exceed the amount of the subsidy granted on the imported product.

In *United States—Anti-Dumping Act of 1916*, the Appellate Body held that the Article VI remedy for injurious dumping is exclusive of any other domestic remedy.[235] In connection with the claim that the 1916 Act does not target dumping, the Appellate Body found that the express language of the Act provides for the recovery of damages and the imposition of criminal penalties when persons import products for sale at a price less than the price for which the products are sold in the country of export or, in certain cases, a third-country market. "In other words," the Appellate Body concluded, "the civil and criminal proceedings and penalties contemplated by the 1916 Act require the presence of the constituent elements of 'dumping,"' thus making GATT Article VI:1 applicable to the 1916 Act.[236] The Appellate Body also rejected the contention that the 1916 Act's *scienter* requirement—an antitrust-type intent—somehow transforms the Act and takes it outside the scope of Article VI. Even though the 1916 Act contains an intent element not found in Article VI:1, the 1916 Act is nevertheless "a specific action against dumping" within the meaning of Article 18.1 of the WTO Antidumping Agreement.[237]

Having concluded that the 1916 Act is within the scope of Article VI, the Appellate Body agreed with the panel that by providing for the imposition of fines, imprisonment, and an award of treble damages—remedies not available under Article VI:2—the 1916 Act violates Article VI:2.[238]

With regard to subsidies and countervailing duties, Article VI:3 permits Members to impose a countervailing duty in an amount equal to the estimated bounty or subsidy that has been granted on the manufacture, production, or export of the imported product. The countervailing duty is designed to remedy the injury to domestic producers caused by imported goods that have been subsidized by the country of exportation. (The terms of Article VI:3 need to be read in conjunction with Article XVI on subsidies which is

[238] *See id.* ¶ 138.

discussed below.) As a GATT panel observed in *United States—Countervailing Duties on Fresh, Chilled and Frozen Pork from Canada*, "the decision as to the existence of a subsidy must result from an examination of all relevant facts. . . . [T]he issue was . . . whether the facts which the United States did take into account were all the facts relevant for the determination to be made."[239]

The terms of Article VI with regard to both antidumping and countervailing duties have been largely overshadowed by three Uruguay Round MTAs: the Antidumping Agreement (formally known as the Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994), the Agreement on Subsidies and Countervailing Measures, and the Agreement on Agriculture. These three MTAs, which are analyzed in separate chapters of this book,[240] add significant substantive rules and procedural provisions to the antidumping and countervailing duty administrative process to be observed by national authorities.

C. Article VII, Valuation for Customs Purposes

Once tariff concessions are negotiated, ensuring their integrity and preventing their circumvention is one of the main objectives of GATT 1994. In order to prevent circumvention of tariff bindings through devices that improperly inflate the price of imported goods, GATT 1994 employs rules on valuation that prevent an importing country from overvaluing imported items and thereby wiping out the benefit of any tariff concession.[241] Valuation rules are important because customs duties usually are assessed on an *ad valorem* basis, i.e., on the basis of the value of the imported merchandise.

Besides the rules on valuation found in Article II:3 on tariff bindings,[242] Article VII, as amended and clarified by the Agreement on Customs Valuation, lays down methodologies that WTO Members are to adhere to when making valuation determinations. Article VII:2(a) states a preference for the use of a valuation methodology that is based on the actual value of imported merchandise, or of like merchandise. That same paragraph admonishes Members to avoid using methodologies that are based on the value of merchandise of national origin or on arbitrary or fictitious values. Article VII:2(b) defines "actual value" as the price at which such or like merchandise is sold or offered for sale "in the ordinary course of trade under fully competitive conditions." Quantity discounts may be accounted for in determining actual value. The Interpretative Notes to Article VII:2(b) state that "actual value" may be represented by the invoice price, but that transactions may be excluded where the buyer and seller are not independent of each other and the price is not the sole consideration.[243]

The Agreement on Customs Valuation (formally known as the Agreement on Implementation of Article VII of the General Agreement on Tariffs and Trade 1994) is essentially the same as its predecessor agreement, the Tokyo Round Valuation Code. Given the Valuation Agreement's breadth and detail, it effectively supplants Article VII. The Agreement identifies the acceptable valuation methodologies that importing countries

[239] Report of the GATT Panel (adopted), *United States—Countervailing Duties on Fresh, Chilled and Frozen Pork from Canada*, BISD, 38th Supp. 45 (1991).

[240] *See* Chapters 6, 11, and 16.

[241] GATT Art. VII; Agreement on Implementation of Article VII of the General Agreement on Tariffs and Trade 1994.

[242] Article II:3 provides that "[n]o contracting party shall alter its method of determining dutiable value or of converting currencies so as to impair the value of any of the concessions provided for in the appropriate Schedule annexed to this Agreement."

[243] Interpretative Notes 1 and 2 ad Article VII.

may use, stating a strong preference for the transaction value (i.e., invoice price) of the goods as the proper basis for assessing customs duties. It eliminates the use of arbitrary or fictitious methodologies, thereby providing a good measure of uniformity, transparency, and certainty in the customs valuation process. The subject of customs valuation and the Valuation Agreement are analyzed in a separate chapter of this book.[244]

D. Article VIII, Fees and Formalities Connected with Importation

Article VIII on fees and formalities works hand-in-glove with Article II:2(c) which permits the imposition of customs fees or other charges commensurate with the cost of services rendered.[245] Article VIII:1(a) underscores that all fees and charges (other than duties and taxes within the purview of Article III) are to be limited in amount to the approximate cost of services rendered and "shall not represent an indirect protection to domestic products or a taxation of imports or exports for fiscal purposes." In 1988, the GATT Council adopted a GATT panel report that held that a flat *ad valorem* fee charged by the U.S. Customs Service on all entries of merchandise was inconsistent with Article VIII because it was not limited in amount to the approximate cost of services rendered.[246] The GATT panel found that "the ordinary meaning of the term 'cost of services rendered' would be the cost of those services rendered to the individual importer in question. That meaning was also in keeping with the general practice when 'services' are charged for, which is to charge the same fee for the same service received."[247]

Article VIII:3 prohibits the imposition of substantial penalties for minor breaches of customs regulations or procedural requirements. Specifically, no penalty imposed for an omission or mistake in customs documentation that is easily rectifiable and obviously made without fraudulent intent or gross negligence may be greater than necessary to serve merely as a warning.

The provisions of Article VIII extend to all fees, charges, and formalities imposed by governmental authorities in connection with importation and exportation, including charges relating to consular invoices and certificates (e.g., certificates of origin), quantitative restrictions, licensing, exchange control, statistical services, documentation, inspection, and quarantine.

Finally, Article VIII:1(c) recognizes the need to reduce the number and complexity of import and export formalities and documentation requirements. With this admonition in mind, the Members negotiated the Agreement on Import Licensing Procedures as part of the package of MTAs. A number of countries use a system of "automatic" and "non-automatic" licensing systems to monitor and regulate imports. An "automatic" licensing system is used to monitor, but not to regulate, the importation of goods. Governments use "non-automatic" systems to administer quotas and tariff-rate quotas. Under a non-automatic license regime, only a limited number of licenses are issued.

The Agreement on Importing Licensing Procedures builds on the Tokyo Round Licensing Code and strengthens the rules governing import licensing by improving the transparency and predictability of such procedures. The Agreement establishes firm

[244] *See* Chapter 12.

[245] For additional legal analysis of Article VIII, *see* Council for Trade in Goods, *Article VIII of the GATT 1994-Scope and Application*, Note by the Secretariat, G/C/W/391 (July 9, 2002).

[247] *United States—Customs User Fee*, *supra* note 37, at 276–77.

deadlines for the publication of new or revised import license requirements and imposes time limits on processing import license applications. The Agreement also establishes a limit on the number of government agencies an importer must contact in order to obtain a license (three, with a stated preference for one).

Article 2 of the Licensing Agreement governs "automatic" license systems. In order to qualify as an "automatic"system, completed applications must be approved immediately and in no case more than ten days after submission.

Article 3 governs "non-automatic" license systems. Governments using them must publish licensing criteria in a manner that is understandable. Denials of applications must be accompanied by reasons. An aggrieved applicant must be afforded an opportunity to appeal. Licensing systems that administer quotas must publish the amount of the quota, the quota allocations among supplying countries, and the opening and closing dates of quotas. Applications must be processed within thirty days on a first-come, first-served basis. If applications are considered simultaneously, then they must be processed within sixty days.

The Agreement on Import Licensing Procedures is analyzed in a separate chapter of this book.[248]

E. Article IX, Marks of Origin

Article IX of GATT sets forth rules on country-of-origin marking requirements. Underlying this Article is a basic tension between two policy concerns. On the one hand, marking requirements are recognized as protecting legitimate consumer and producer interests. On the other hand, marking requirements ought not to be an unreasonable burden on international trade. To address the second concern, Article IX:1 applies the MFN principle to marking requirements. A WTO Member is precluded from using these requirements to discriminate against imported articles from one particular Member or group of Members. There is, however, apparently no requirement of national treatment in Article IX. The 1991 GATT panel report in *United States—Tuna* rejected Mexico's argument that a United States law restricting the use on tuna products of the label "Dolphin Safe" violated Article IX:1, noting that Article IX:1 was intended to regulate marks of origin of imported products but not the marking of products generally.[249]

A 1958 Recommendation on Marks of Origin adopted by the GATT Contracting Parties[250] states that "[t]he national provisions concerning marks of origin should not contain any other obligation than the obligation to indicate the origin of the imported product."[251] This Recommendation in effect restates the Article IX:2 admonition that laws pertaining to country of origin markings "should be reduced to a minimum" to avoid "difficulties and inconveniences" caused to commerce and industry.

GATT Articles IX:3 and 4 also promote the policy of minimizing burdens on trade. Article IX:3 urges flexibility in country-of-origin marking laws, suggesting that WTO Members permit marks of origin to be affixed at the time of importation, if it is administratively practicable to do so. Article IX:4 provides that compliance with marking

[248] *See* Chapter 14.

[249] *See* Report of the GATT Panel (unadopted), *United States—Restrictions on Imports of Tuna*, BISD, 39th Supp. 155, 193–94, ¶¶ 5.9, 5.11, 5.12 (1991).

[250] *Recommendation on Marks of Origin*, BISD, 7th Supp. 30 (1958). The Recommendation was drawn from the Report of the Working Party, *Certificates of Origin, Marks of Origin and Consular Formalities,* BISD, 7th Supp. 117 (1958). *See* Guide to GATT Law and Practice, *supra* note 3, vol. 1, at 288.

[251] *Recommendation on Marks of Origin*, *supra* note 250, ¶ 4.

requirements should not result in serious damage to, or material reduction in value or unreasonable increase in cost of, the imported article. Article IX:5 urges restraint in imposing penalties for failure to comply with marking requirements. Unless corrective marking is "unreasonably delayed," "deceptive marks have been affixed," or the requisite mark has been "intentionally omitted," a penalty ought not to be imposed.

The balance of the other provisions of Article IX are designed to promote consumer and certain producer interests. Article IX:2 acknowledges the necessary role that marking laws play in "protecting consumers against fraudulent or misleading indications." Regarding the protection of producer interests, Article IX:6 obligates WTO Members to cooperate with each other, and "accord full and sympathetic cooperation" to each other, in order to prevent the use of trade names in a manner that would misrepresent the true origin of a product. Such use, of course, would adversely affect the distinctive regional or geographical names of products of a particular Member that are protected by its legislation. (An example might be champagne from the French province of Champagne.) In practice, whether use of a trade name misrepresents the true origin of a product is likely to depend in part upon how prominently the product label displays the name of the producing country. For example, in *Japan—Customs Duties, Taxes and Labeling Practices on Imported Wines and Alcoholic Beverages*, a GATT panel noted that labels on Japanese liquor products were written partly in English or French with European styles and symbols, employed foreign terms to describe the Japanese products (*e.g.*, "whisky," "brandy," "chateau," and "reserve"), and used the names of grape varieties.[252] However, because the Japanese manufacturers provided sufficient information on their labels to indicate the Japanese origin of the product, the panel could not find any detriment to a distinctive regional or geographical product name with respect to European liquor products.[253] Moreover, the panel noted that Article IX:6 lacks a definition of "trade name."[254] In short, while Article IX:6 is supposed to help consumers make informed product choices, the extent of its obligations is limited.

The protection of geographical names is addressed in the Agreement on Trade-Related Aspects of Intellectual Property Rights (the TRIPS Agreement).[255] Articles 22 through 24 of the Agreement govern the protection and use of geographical indications. These three Articles are especially important in view of the lack of significant progress in other international fora to regulate the subject.[256]

TRIPS Article 22 defines "geographical indications" as indications that identify a good as originating in the territory, region, or locality of a Member, where a particular quality, reputation, or other characteristic of the good is essentially attributable to its geographic origin (*e.g.*, a Swiss watch or Colombian coffee). Article 22.2 requires Members to provide interested parties the legal means by which to prevent the use of product descriptions that mislead the public regarding the geographic origin of a good or that constitute an act of unfair competition within the meaning of Article 10*bis* of the Paris Convention. Article 22.3 further requires Members to refuse registration or invalidate trademark registrations for goods that use product descriptions that mislead

[252] *See Japan—Customs Duties on Alcoholic Beverages*, *supra* note 111, at 118, ¶ 5.15.

[253] *See id.* at 125, ¶ 5.14.

[254] *See id.* at 126, ¶ 5.15.

[255] The TRIPS Agreement is discussed in detail in Chapter 22 of this book.

[256] Other international agreements that address the subject of geographical indications include the 1958 Madrid Arrangement for the Repression of False or Deceptive Indications of Source of Goods; the 1967 Additional Act on the Madrid Arrangement; the 1967 Lisbon Arrangement for the Protection of Appellations of Origin and Their International Registration; and Articles 10 and 10*bis* of the Paris Convention. The texts of these agreements are available from the WIPO website at <http://www.wipo.org/eng/iplex/index.htm>.

the public regarding the geographic origin of a good. Also prohibited are geographic indications that, although literally true as to the territory, region, or locality in which the goods originate, falsely represent to the public that the goods originate in another territory (*e.g.*, a geographical indication that perfume is from Paris, but fails to mention that the place is Paris, Michigan, not Paris, France).[257]

Nothing is to prevent a person from using that person's own name or the name of that person's predecessor in business, even though it happens to be a place name, provided such use is not misleading to the public.[258] Geographical indications that have fallen into disuse in the country of origin or have become the common name for goods or services in the territory of that Member need not be protected by other Members.[259]

Special protection for wines and spirits is provided under Article 23. Articles 23.1 and 23.2 provide that (1) geographical indications for wines or spirits that do not originate in the location indicated may be challenged by an interested party, and (2) such indications may not be used or registered, even though the true geographical origin is indicated on the product or is accompanied by expressions such as "kind," "type," "style," "limitation," or the like. An exception is made for homonymous geographical indications for wines (*e.g.*, "Bordeaux" when used as a noun describes the region in France where a type of wine is produced; when used as an adjective it describes the variety of grape from which Bordeaux wine is made). This exception is subject to the qualification that such homonymous indications not mislead consumers, and to the restriction previously mentioned on literally true indications that falsely represent the origin of goods.

F. Articles XIV and XV, Exchange Controls and Exchange Arrangements

At the conclusion of World War II, the participants at the Bretton Woods Conference called for the establishment of three international organizations that would put the nations of the world back on their economic feet: the International Trade Organization, the World Bank, and the International Monetary Fund.[260] As noted earlier in this chapter, although the ITO was stillborn, GATT was pressed into service in order to fill the institutional vacuum. The International Monetary Fund (IMF) was designed to repair the international monetary system that had been destroyed by the War. The World Bank was created for the purpose of stimulating international investment. The IMF and GATT were to collaborate on exchange and trade policies.

The jurisdiction of both the WTO and the IMF can be triggered when a country that is experiencing balance-of-payments difficulties imposes exchange controls on international payments in connection with international trade in goods. For example, a country faced with a balance-of-payments deficit might repair the situation by imposing quotas on imports of foreign goods.

In the Uruguay Round Ministerial Declaration on the Relationship of the World Trade Organization with the International Monetary Fund, trade ministers reaffirmed as follows:

> [T]he relationship of the WTO with the International Monetary Fund, with regard to the areas covered by the Multilateral Trade Agreements in Annex 1A of the WTO Agreement, will be based on the provisions that have governed the relationship of the CONTRACTING PARTIES to the GATT 1947 with the International Monetary Fund.

[257] *See TRIPS Agreement*, Art. 22.4.
[258] *See id*. Art. 24.8.
[259] *See id*. Arts. 24.6, 24.8.
[260] *See generally,* Gerald M. Meier, *The Bretton Woods Agreement—25 Years After*, 39 STAN. L. REV. 235 (1971).

Two closely related GATT 1994 provisions, Articles XIV and XV, address the questions of exchange controls and coordination between the International Monetary Fund and the WTO.[261]

First, under Article XIV, a WTO Member invoking the Article XII balance-of-payments exception may also deviate from the provisions of Article XIII on the allocation of quotas pursuant to amendments to the General Agreement that entered into force in 1957 and 1961. Article XIV:1 permits such a deviation "in a manner having equivalent effect to restrictions on payments and transfers for current international transactions which that contracting party may at that time apply" under provisions of the Agreement of the International Monetary Fund. This paragraph incorporates relevant provisions of the IMF Agreement on protecting a country's balance-of-payments position in an attempt to coordinate the IMF Agreement with GATT 1994. Under Article XIV:2, a Member may, with the consent of all WTO Members, temporarily deviate from Article XIII "in respect of a small part of its external trade where the benefits to the contracting party . . . substantially outweigh any injury which may result to the trade of other contracting parties." Since 1961, no contracting party or WTO Member has invoked Article XIV.[262]

Second, Article XV:4 lays down a general principle that Members must not "frustrate" the intent of GATT 1994 through exchange action, nor may they frustrate the intent the IMF's Articles of Agreement by trade action. The Interpretative Note to Article XV states that the term "frustrate" is intended to indicate that violations of the letter of GATT 1994 by exchange action is not to be regarded as a violation of Article XV "if, in practice, there is no appreciable departure from the intent of the Article." The Note gives as an example that a requirement that payment for a Member's exports may be made in its own currency or in the currency of other IMF members will not be deemed to contravene Articles XI or XIII. Another example is if a Member specifies on an import license the country from which the goods may be imported, "for the purpose not of introducing any additional element of discrimination in its import licensing system but of enforcing permissible exchange controls." Article XV:5 directs the Ministerial Conference to notify the IMF if it considers that exchange controls in connection with imports are being applied inconsistently with the GATT exceptions for quantitative restrictions.[263]

Article XV was designed to establish more effective machinery for consultation and coordination between the IMF and GATT.[264] Among the WTO's responsibilities, Article III of the WTO Agreement lists cooperation with the IMF and the World Bank to achieve greater coherence in global economic policymaking.[265] The WTO concluded cooperation agreements with the IMF in December 1996, and with the World Bank in April 1997. The agreements provide for the exchange and sharing of information, and accord each other observer status at meetings of the other's decision-making bodies.

[261] GATT Article II:6 provides that if the par value of a Member's currency is reduced by more than twenty percent in accordance with the IMF's Articles of Agreement, then specific duties may be adjusted to take account of such a reduction. With the replacement of floating exchange rates for par value in the early 1970s, this paragraph is of historical interest only.

[262] *See* GUIDE TO GATT LAW AND PRACTICE, *supra* note 3, vol. 1, at 419.

[263] Paragraphs 6 and 7 of Article XV are intended to prevent a Member which does not belong to the IMF from frustrating GATT's objectives through exchange controls. Such Members are obligated to conclude a special exchange arrangement with the WTO on terms generally consistent with those of the IMF. Few such agreements were ever concluded, and no such arrangement has been in force for several years. *See* MCGOVERN, *supra* note 14, at § 7.13.

[264] *See* GUIDE TO GATT LAW AND PRACTICE, *supra* note 3, vol. 1, at 429.

[265] As noted by the Appellate Body in *Argentina—Footwear*, the agreement between the IMF and the WTO does not modify, add to, or diminish the rights and obligations of Members. *See Argentina –Footwear*, *supra* note 42, ¶ 72.

G. Article XVI, Subsidies

Article XVI:1 requires a WTO Member to notify the other Members if it maintains a "subsidy" that operates directly or indirectly to increase exports or reduce imports of any product. If "subsidization" causes or threatens to cause "serious prejudice" to the interests of any other Member, then the subsidizing Member is obligated to discuss the possibility of limiting the "subsidization." Article XVI:3 encourages Members to avoid the use of "subsidies" on the export of primary products (*i.e.*, products of farm, forest, or fisheries). If a Member maintains this type of "subsidy," then it should not apply it in such a manner that gives the Member more than an equitable share of world export trade in the product during a previous representative period.

Nowhere in XVI does a definition of "subsidy" or "subsidization" appear.[266] Article XVI is generally broad and mainly hortatory. Thus, it imposes no meaningful disciplines on the use of subsidies. These lacunae have been filled by two Uruguay Round MTAs. The Agreement on Subsidies and Countervailing Measures (the SCM Agreement) establishes a comprehensive legal regime regarding the use of domestic and export subsidies, as well as disciplines over the use of countervailing duties to offset the effect of subsidies. The SCM Agreement's provisions on export subsidies differ dramatically from the export subsidy disciplines in GATT Article XVI. Given the detail of the SCM Agreement, it has largely eclipsed Article XVI, relegating that Article to playing an extremely minor role in the overall regulation of government subsidies to industry. An analysis of the SCM Agreement is left to a separate chapter in this work.[267] On the specific subject of subsidies on agricultural products, the grant of such subsidies is now governed by the Agreement on Agriculture, which is also analyzed in another chapter of this book.[268]

H. Article XVII, State Trading Enterprises

To generalize, state trading enterprises ("STE") have a relationship with government, through the grant of a right or privilege, and conduct an activity that influences the level and direction of imports and exports. An STE engages in the following kinds of activities: (1) controls or conducts imports or exports; (2) administers multilaterally or bilaterally agreed quotas, tariff quotas or other restraint arrangements, or other import or export regulations; (3) issues licenses/permits for importation or exportation; (4) determines domestic sales prices of imports; and (5) enforces the statutory requirements of an agricultural marketing scheme and/or stabilization arrangement.

The potential anti-competitive and trade-distortive effects of state-run monopolies are widely recognized. Article XVII does not prohibit a Member from establishing import or export monopolies, but it does regulate their operation and effect on trade when they make purchases or sales. Article XVII commits state trading enterprises—government-owned or government-controlled purchasing monopsonies and sales monopolies—to act on an MFN basis in all their purchases and sales.[269] Article XVII also covers any enterprise that

[266] Nor are the terms defined in Article VI, which authorizes the use of countervailing duties to counteract the injurious effect of subsidies.

[267] *See* Chapter 16.

[268] *See* Chapter 6.

[269] Article XVII:1(a) provides:

> Each contracting party undertakes that if it establishes or maintains a State enterprise, wherever located, or grants to any enterprise, formally or in effect, exclusive or special privileges, such enterprise shall, in all its purchases or sales involving either imports or exports, act in a manner consistent with the general principles of non-discriminatory treatment prescribed in this Agreement for governmental measures affecting imports or exports by private traders.

has been given exclusive or special buying or selling privileges, "formally or in effect." An Interpretative Note to Article XVII:1(a) adds that governmental measures imposed to insure quality standards, or privileges for the exploitation of natural resources that do not also authorize the government to exercise control over the trading activities of the enterprise in question, do not constitute "exclusive or special privileges."

Article XVII:1(b) requires that state trading enterprises make their purchases and sales

> solely in accordance with commercial considerations, including price, quality, availability, marketability, transportation and other conditions of purchase or sale, and shall afford the enterprises of other contracting parties adequate opportunity, in accordance with customary business practice, to compete for participation in such purchases or sales.

An Interpretative Note to Article XVII:1(b) provides that a country receiving a tied loan may take such loans into account as a "commercial consideration" when making foreign purchases. Article XVII:1(b) further provides that state trading enterprises must "afford enterprises of the other contracting parties adequate opportunity, in accordance with customary business practice, to compete for participation in [the monopoly's] purchases or sales." Thus, a WTO member which has authorized a private import or export monopoly could be found to be in violation of GATT if it allowed such a monopoly to, in effect, abuse its dominant position by acting in a manner inconsistent with the Article III national treatment obligation.[270] The competition policy message of Article XVII is clear: If countries create or authorize state trading enterprises, they must not allow those enterprises to abuse their monopoly buying and purchasing power. Article XVII:1(c) adds that no Member shall prevent any enterprise under its jurisdiction from acting in accordance with the principles of paragraph 1(a) and (b).

The Uruguay Round Understanding on the Interpretation of Article XVII of the General Agreement on Tariffs and Trade 1994 provides the following working definition of a state trading enterprise:

> Governmental and non-governmental enterprises, including marketing boards, which have been granted exclusive or special rights or privileges, including statutory or constitutional powers, in the exercise of which they influence through their purchases or sales the level or direction of imports or exports.

In order to enhance the transparency of state trading enterprises, the Understanding obligates Members to notify the Council for Trade in Goods of all state trading enterprises. The Working Party on State Trading Enterprises was established by the Council for Trade in Goods in 1995, pursuant to paragraph 5 of the Understanding. The mandate

Most WTO Members—developed countries, developing countries, as well as economies in transition—still maintain state trading enterprises. Marketing boards are not all that uncommon in developed countries.

[270] *See, e.g.*,*Canada—Import, Distribution and Sale of Alcoholic Drinks by Canadian Provincial Marketing Agencies*, *supra* note 107, at 85, ¶ 5.31; Report of the GATT Panel, *Thailand—Restrictions on Importation of and National Taxes on Cigarettes*, BISD, 37th Supp. 200, 223–26, ¶¶ 76–81 (1990)("[t]he Thai government may use this monopoly to regulate the overall supply of cigarettes, their prices and their retail availability provided it thereby does not accord imported cigarettes less favourable treatment than domestic cigarettes"); Report of the WTO Panel, *Canada—Measures Relating to Exports of Wheat and Treatment of Imported Grain*, WT/DS276/R, ¶ 6.150 (2004), (no showing that Canadian Wheat Board does not afford enterprises of other Members adequate opportunity to compete for participation in its sales). The panel's decision was upheld in its entirety by the Appellate Body. *See* Report of the Appellate Body, *Canada–Measures Relating to Exports of Wheat and Treatment of Imported Grain*, WT/DS276/AB/R (Aug. 30, 2004) (upholding panel's findings that the United States failed to establish that Canada acted inconsistently with its obligations under GATT Article XVII:1). The panel's findings that certain provisions of Canadian legislation do violate GATT Article III were not appealed.

of the Working Party, as set out in paragraph 5 of the Understanding, is (1) to review notifications and counter-notifications on state trading; (2) to review, in the light of the notifications received, the adequacy of the questionnaire on state trading and the coverage of state trading enterprises notified under paragraph 1 of the Understanding; and (3) to develop an illustrative list showing the kinds of relationships between governments and enterprises, and the kinds of activities engaged in by these enterprises, which may be applicable to Article XVII of GATT 1994.[271]

Under Article XVII of GATT 1994 and paragraph 1 of the Understanding, all Members are required to submit annual notifications of their state trading activities. New and full notifications were first required in 1995 and, subsequently, every third year thereafter, while updating notifications are to be made in the intervening years, indicating any changes since the new and full notification. New and full notifications for 1995 were received from 59 Members and for 1998 from 39 Members. Updating notifications were received from 32 Members in 1996, from 33 Members in 1997, from 31 Members in 1999, and from 20 Members in 2000.[272] In light of the poor compliance record since 1995, it was decided at the July 2000 meeting of the Working Party that the Chairman would write to those Members who had made no state trading notification thus far in order to urge them to do so. In November 2000, such a letter was sent by the Chairman to those Members who had not yet made—a state trading notification.[273] In 2001, the Working Party received 25 new and full notifications from Members.[274]

Government procurement of goods is excepted from the substantive obligations of Article XVII, as well as from the notification requirements of the Uruguay Round Understanding, provided such purchases are for ultimate consumption in governmental use and not otherwise for resale or use in the production of goods for resale.[275] Not surprisingly, the Interpretative Note to Article XVII:2 states that the term "goods" does not include the purchase or sale of services. Interestingly, the General Agreement on Trade in Services has no article that parallels Article XVII.

Although no GATT or WTO panel has ever found a measure to be in violation of Article XVII *per se*, GATT panels have found that Article XVII state trading enterprises have violated the Article XI prohibition on import or export quotas and Article III national treatment.[276]

[271] That illustrative list was completed in July 1999. *See* Working Party on State Trading Enterprises, *Illustrative List of Relationships between Governments and State Trading Enterprises and the Kinds of Activities Engaged in by These Enterprises*, G/STR/4 (1999).

[272] *See Report (2000) of the Working Party on State Trading Enterprises*, G/L/418, ¶ 7 (2000).

[273] Those Members were Angola; Antigua and Barbuda; Bangladesh; Belize; Benin; Brunei Darussalam; Burkina Faso; Burundi; Cameroon; Central African Republic; Democratic Republic of Congo; Republic of Congo; Cuba; Djibouti; Dominica; Dominican Republic; Ecuador; El Salvador; Estonia; Gabon; Georgia; Ghana; Grenada; Guinea Bissau; Guyana; Jordan; Kenya; Kuwait; Kyrgyz Republic; Lesotho; Madagascar; Malawi; Mali; Maldives; Mauritania; Mozambique; Myanmar; Nicaragua; Niger; Panama; Papua New Guinea; Rwanda; Saint Kitts and Nevis; Saint Lucia; Saint Vincent and the Grenadines; Sierra Leone; Solomon Islands; Sri Lanka; Suriname; Swaziland; Tanzania; Togo; and Zimbabwe. *See Report (2000) of the Working Party on State Trading Enterprises*, G/L/418, ¶ 9 (2000).

[274] *See Report (2001) of the Working Party on State Trading Enterprises*, G/L/491, ¶ 7 (2001).

[275] *See* GATT Art. XVII:2; *Understanding on the Interpretation of Article XVII of the General Agreement on Tariffs and Trade 1994*, ¶ 1.

[276] *See, e.g.,* Report of the GATT Panel (adopted), *Canada—Import, Distribution and Sale of Alcoholic Drinks by Canadian Provincial Marketing Agencies*, BISD, 35th Supp. 37, 90, ¶ 4.27 (1988)(Article XI violated); Report of the GATT Panel (adopted), *Republic of Korea—Restrictions on Imports of Beef*, BISD, 36th Supp. 268, 301–02, ¶¶ 114–15 (1989)(Article XI violated); *Canada—Measures Relating to Exports of Wheat and Treatment of Imported Grain, supra* note 270, ¶¶ 6.341–350 (discriminatory railway revenue cap violates Article III:4 because it makes imported grain more costly to transport by rail).

I. Article XIX, Emergency Action on Imports of Particular Products

As noted above in the discussion of exceptions to the prohibition on quantitative restrictions (Section II.D), a third GATT exception to this prohibition is Article XIX safeguards relief. Safeguards relief is available to domestic industries that are injured by fairly-traded imports. Article XIX permits Members to escape from their GATT obligations and raise trade barriers to safeguard a domestic industry seriously injured or threatened with serious injury by import competition. When the conditions for imposing escape clause relief are satisfied, a Member may suspend a GATT obligation in whole or in part, or withdraw or modify a tariff concession, on a temporary basis usually not to exceed four years.[277] This temporary relief is designed to give a domestic industry a breathing space within which to adjust to import competition.

Why should any domestic industry be shielded from fairly-traded imports? The rationale for safeguards relief has been explained on at least four grounds. One explanation is that it gives a domestic industry injured by fairly traded import competition a breathing space to adjust to the new competition, thereby restoring competitiveness. A second explanation is that it allows an orderly contraction of sunset industries within a country. A third explanation is that safeguards relief acts as a political safety valve when protectionist pressures build within a society. A fourth explanation for safeguards relief is based on public choice theory. Public choice theory posits that such relief encourages WTO Members to agree to trade concessions knowing that there is a "snapback" device to fall back on if domestic industries are seriously injured by the new import competition.[278]

Article XIX, *Emergency Action on Imports of Particular Products*, provides in part:

> If, as a result of unforeseen developments and of the effect of the obligations incurred by a contracting party under this Agreement, including tariff concessions, any product is being imported into the territory of that contracting party in such increased quantities and under such conditions as to cause or threaten serious injury to domestic producers in that territory of like or directly competitive products, the contracting party shall be free, in respect of such product, and to the extent and for such time as may be necessary to prevent or remedy such injury, to suspend the obligation in whole or in part or to withdraw or modify the concession.

Thus, the elements of an Article XIX safeguards action are (1) "as a result of unforeseen developments", (2) imports are increasing in such quantities, (3) as to cause serious injury to domestic producers, (4) of like or directly competitive products. If these four elements are satisfied, then relief from imports may be imposed "to the extent and for such time as may be necessary." Before adoption of the Agreements on Safeguards, if safeguards relief was granted to an injured domestic industry, exporting countries were entitled to compensation if the import relief took the form of increased tariffs on products for which a tariff binding existed. This compensation factor made safeguards relief unattractive to importing countries. In addition, establishing the causal connection between increasing imports and serious injury to the domestic industry was often problematic. Consequently, because the "compensation bill" could be quite high in cases where safeguards relief was granted and bound tariffs were raised, and because proving the elements of a safeguards action was not always easy, many importing countries bypassed Article XIX altogether and instead entered into "voluntary restraint agreements" with exporting countries.

Thus, an important *de facto* exception to both the Article XI proscription on quantitative restrictions and the Article XIII requirement of nondiscrimination in the allocation of quotas was the voluntary restraint agreement (VRA), sometimes referred to as a voluntary

[277] *See Agreement on Safeguards, Art*. 7.1.

[278] *See* Raj Bhala, International Trade Law: Theory and Practice 1118–23 (2001).

export restraint (VER). Under the terms of a VRA, exporting countries of a product agreed to limit the volume of their exports to an importing country. These so-called "gray area" measures were neither GATT legal nor GATT illegal, but they certainly violated the spirit if not the letter of GATT by stemming the free flow of goods across national borders on the basis of quality and price.[279] The proliferation of these "grey-area" measures[280] (a neologism for GATT-inconsistent) represented a serious threat to the continued relevance of GATT both as an institution and as a legal instrument for regulating international trade. The remedy of choice for most domestic industries that were being injured by fairly-traded imports was to ask their governments to enter into VRAs with exporting countries to restrict the flow of fairly-traded exports. Resort to these grey-area measures was attributable in large part to certain defects in GATT Article XIX on safeguards relief. The Uruguay Round Agreement on Safeguards repaired the more glaring defects in Article XIX and directly addressed the subject of VRAs, requiring Members to phase them out over a five-year period and thereafter making them illegal.[281] In short, another GATT-authorized exception to Article XI's prohibition on quantitative restrictions is Article XIX, as supplemented by the 1994 Agreement on Safeguards.

In an effort to breathe new life into the virtually moribund and sketchy GATT Article XIX on safeguards, and to state definitively that voluntary restraint agreements are WTO-illegal, the Uruguay Round negotiators concluded the Agreement on Safeguards. Articles 2 to 7 of the Safeguards Agreement resolve the ambiguities of GATT Article XIX. In order to impose a safeguards measure, imports must be increasing absolutely or relatively compared to the share of the domestic market owned by the domestic product. Those increasing imports must be the cause of serious injury to the domestic industry. The safeguards remedy may take the form of increased tariffs, quotas, or a blend of the two, but imports from all sources must be subject to the safeguards remedy (that is, the remedy must be applied on an MFN basis). The period of relief may last for an initial period of four years, subject to renewal for an additional four years. The import restrictions must be progressively relaxed over the period of relief.[282]

One of the leading explanations for why GATT Article XIX was bypassed is its requirement that compensation be paid to the countries whose exports were the subject of a safeguard action. (Of course, if a tariff is not bound or if the applied rate of duty is currently set below the bound rate, then it may be raised unilaterally without invoking Article XIX and the Agreement on Safeguards.[283]) This Article XIX price tag was usually too dear to pay, which explains in part the resort to voluntary restraint agreements that did not carry the compensation price tag. In a major amendment to Article XIX, Article 8.3 of the Agreement provides that exporting countries may not seek compensation or retaliation during the first three years that a safeguard measure is in effect, provided the measure was taken in response to an absolute increase in imports and otherwise complies with the Agreement.

[279] *See* Kevin C. Kennedy, *Voluntary Restraint Agreements: A Threat to Representative Democracy,* 11 HASTINGS INT'L & COMP. L. REV. 1 (1987).

[280] At the time the Uruguay Round was launched, 96 VRAs were in force affecting products ranging from steel, machine tools, transportation equipment, electronic products, footwear, textiles, agricultural products, and automobiles. Of these 96 arrangements, 53 protected EEC markets and 32 protected the U.S. market. *See* Gary Samson, *Safeguards, in* THE URUGUAY ROUND HANDBOOK, *supra* note 58, at 143, 144–45.

[281] *See Agreement on Safeguards*, Art. 11.2.

[282] Special rules apply to developing countries that permit them to impose safeguard relief for up to ten years, and exempts them from any safeguards action if the combined imports from all developing countries is less than nine percent of the total volume of imports.

[283] *See* MCGOVERN, *supra* note 14, § 10.213.

Practice has favored the imposition of increased customs duties over quantitative restrictions in a ratio of about two to one. In allocating import quotas among supplying countries, a Member may either seek agreement with Members having a substantial interest in supplying the product, or allocate quotas based on the proportion of the product supplied by other Members during a previous representative period.[284] A Member imposing safeguard measures must not discriminate among sources of the imported product.[285]

Article 2.1 of the Agreement states that Members may apply safeguards measures to a product that is being imported in increased quantities and is causing or threatening to cause serious injury to a domestic injury, without specifying the additional GATT Article XIX requirements that the increase in imports be the result of "unforeseen developments" and "the effect of obligations" under the GATT. It appeared, therefore, that these two requirements had been made obsolete by the Agreement. However, at least three Appellate Body reports have held that the Agreement on Safeguards does not replace Article XIX and that the two requirements must still be met. For example, in *United States—Safeguard Measures on Imports of Lamb Meat*,[286] the Appellate Body addressed this very issue in the following terms:

> In our Reports in *Argentina—Footwear Safeguard* and *Korea—Dairy Safeguard*, we examined the relationship between Article XIX of the GATT 1994 and the *Agreement on Safeguards* and, in particular, whether, with the entry into force of the *Agreement on Safeguards*, Article XIX continues to impose obligations on WTO Members when they apply safeguard measures. We observed in those two appeals that "the provisions of Article XIX of the GATT 1994 and the provisions of the Agreement on Safeguards are all provisions of one treaty, the WTO Agreement", and we said that these two texts must be read "harmoniously" and as "an inseparable package of rights and disciplines".[287]

Thus, in any domestic proceeding involving the grant or denial of safeguards relief, the national administering authorities are required to take into account the "unforeseen developments" criterion when making their determinations. However, the Appellate Body has not explained what "unforeseen developments" means. In the *United States—Lamb Meat* report, the Appellate Body stated:

> In conducting such an examination now, we note that the text of Article XIX provides no express guidance on this issue. However, as the existence of unforeseen developments is a prerequisite that must be demonstrated, as we have stated, "in order for a safeguard measure to be applied". . . .
>
> . . . . As Article XIX:1(a) of the GATT 1994 requires that "unforeseen developments" must be demonstrated, as a matter of fact, for a safeguard measure to be applied, the existence of "unforeseen developments" is, in our view, a "pertinent issue[ ] of fact and law", under Article 3.1, for the application of a safeguard measure, and it follows that the published report of the competent authorities, under that Article, must contain a "finding" or "reasoned conclusion" on "unforeseen developments".[288]

Safeguards actions are analyzed more fully in a separate chapter of this book.[289]

[284] *See Agreement on Safeguards*, Art. 5.2(a).

IV. General and Security Exceptions

A. Article XX, General Exceptions

Article XX permits Members to derogate from GATT obligations in limited circumstances. A WTO Member that is initially unsuccessful in defending a measure against the charge that it is inconsistent with a GATT obligation will thus often argue in the alternative that one or more of the Article XX exceptions applies. However, any Member invoking Article XX in defense of a challenged measure carries the burden of proving that the measure meets the criteria for an Article XX exception.[290]

Article XX consists of a chapeau or preamble, followed by ten specific exceptions. Subject to the qualifications set forth in the chapeau, nothing in GATT 1994 is to be construed to prevent adoption or enforcement of measures:

(a) necessary to protect public morals;
(b) necessary to protect human, animal or plant life or health;
(c) relating to the exportation of gold or silver;
(d) necessary to secure compliance with laws or regulations . . . relating to customs enforcement, . . . the protection of [intellectual property rights], and the prevention of deceptive practices;
(e) relating to the products of prison labor;
(f) imposed for the protection of national treasures of artistic, historic or archaeological value;
(g) relating to the conservation of exhaustible natural resources if such measures are made effective in conjunction with restrictions on domestic production or consumption;
(h) undertaken in pursuance of obligations under any intergovernmental commodity agreement . . . ;
(i) involving restrictions on exports of domestic materials necessary to ensure essential quantities of such materials to a domestic processing industry during periods when the domestic price of such materials is held below the world price as part of a government stabilization plan . . . ; or
(j) essential to the acquisition or distribution of products in general or local short supply. . . .

As explained more fully below, the term "necessary" used in Article XX(b) and (d) is shorthand for the minimum derogation principle, *i.e.*, there must not be available any less trade restrictive alternative measure that would be equally effective. The term "relating to" the conservation of exhaustible natural resources that is used in Article XX(g) has been interpreted to mean that a measure must be "primarily aimed at" such conservation.

The Appellate Body has made it abundantly clear that an Article XX analysis is two-tiered. First, the challenged measure must meet the criteria of one of the specific Article XX exceptions; second, the measure must pass muster under the Article XX chapeau.[291]

GATT practice in resolving Article XX disputes has been to construe the exceptions so as not to defeat the legal obligations of GATT; to place the burden on the Member invoking

[290] *See, e.g.*, *United States—Section 337*, *supra* note 105, at 393, ¶ 5.27; *Canada –Foreign Investment Review Act*, *supra* note 143, at 164, ¶ 5.20.

[291] *See* Report of the Appellate Body, *United States—Standards for Reformulated and Conventional Gasoline*, WT/DS2/9, Part IV, at 22 (1996); Report of the Appellate Body, *United States—Import Prohibition of Certain Shrimp and Shrimp Products*, WT/DS58/AB/R, ¶¶ 117–119 (1998).

the Article XX exception to justify its invocation; and to examine Article XX exceptions only if they are invoked. As a corollary, a two-pronged test has emerged against which measures taken under Article XX are evaluated: (1) the measure must pass a means-end, rational relationship test, that is, the measure must be reasonably calculated to achieve the objective stated in the Article XX exception; and (2) no other measure that is less trade restrictive must be reasonably available that would be as effective.[292] GATT panels and the Appellate Body have adopted a "less trade restrictive" principle—usually referred to as the minimum derogation principle—when assessing measures for consistency with Article XX. The minimum derogation principle asks whether there are alternative measures reasonably available that would be as effective as the one adopted that are less trade restrictive than the measure adopted.[293] If such alternative measures do exist, then the measure fails to meet the Article XX exception.

One commentator has suggested a third prong, that of proportionality.[294] Under this proportionality prong, a measure must not be disproportionate to the objective being sought. For example, a ban on exports of all artistic works in order to protect national treasures would be a disproportionate response to the objective being sought. While it is possible for a measure to be sufficiently means-end related, and the only effective method for achieving the objective stated in Article XX, it could nevertheless be disproportionate to that objective. No GATT or WTO panel has cited disproportionality as a reason for invalidating a measure taken pursuant to one of the Article XX exceptions.

1. The Article XX Chapeau

The chapeau or preamble to Article XX provides as follows:

> Subject to the requirement that such measures are not applied in a manner which would constitute a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail, or a disguised restriction on international trade, nothing in this Agreement shall be construed to prevent the adoption or enforcement by any contracting party of [the following] measures: . . .

Any Member invoking an Article XX exception must satisfy the two preconditions set out in the chapeau. First, the Member must show that its measure is not applied in a manner that constitutes a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail. Second, any such measure must not amount to a disguised restriction on trade. Two GATT panel reports and an Appellate Body report that have analyzed the "arbitrary or unjustifiable discrimination" precondition are instructive.

First, in a 1982 panel report, *Prohibition of Imports of Tuna and Tuna Products from Canada,*[295] the GATT panel examined a U.S. import ban on tuna and tuna products from Canada that was imposed in retaliation for Canada's seizure of U.S. fishing vessels in disputed waters. The panel concluded that although the import ban was directed solely at Canada, and thus discriminatory on its face, similar actions had been taken against tuna

[292] *See, e.g.,* Report of the GATT Panel (adopted), *Thailand –Restrictions on Importations of and Internal Taxes on Cigarettes*, BISD, 37th Supp. 200 (1990).

[293] *See, e.g.*, *United States—Gasoline*, *supra* note 41, at 27; Report of the GATT Panel (unadopted), *United States—Restrictions on Imports of Tuna*, *reprinted in* 33 Intl Legal Materials 839 (1994); *Canada—Unprocessed Herring and Salmon*, *supra* note 175, at 113–15, ¶¶ 4.4–4.7. *See also United States—Section 337*, *supra* note 105, at 392–393, ¶¶ 5.25–5.27.

[294] *See* McGovern, *supra* note 14, § 13.111.

[295] Report of the GATT Panel (adopted), *United States—Prohibition of Imports of Tuna and Tuna Products from Canada*, BISD, 29th Supp. 91 (1982).

imports from Costa Rica, Ecuador, Mexico, and Peru for similar reasons. Consequently, in the panel's view, the discrimination against Canada "might not necessarily have been arbitrary or unjustifiable."[296]

Second, one year later in *Imports of Certain Automotive Spring Assemblies*, [297] another GATT panel considered a U.S. International Trade Commission exclusion order banning imports of automotive spring assemblies on the ground that they infringed U.S. patents. The panel concluded that because the exclusion order banned imports of the infringing products from all sources, not only Canada, the order was not applied in a manner constituting an arbitrary or unjustifiable discrimination in violation of Article XX's preamble.[298]

These same two panels also considered whether the preamble's "disguised restriction on international trade" prohibition had been violated. In neither case did the panels find that the U.S. measures were applied in a manner that constituted a disguised restriction on international trade. In what may have been an overly facile conclusion in the *Tuna* case, however, the panel concluded that because the U.S. prohibition on imports of tuna from Canada had been taken as a trade measure and publicly announced as such, it could not be a "disguised" restriction on international trade,[299] a conclusion with which Canada took sharp exception.[300] In an intellectually more satisfying analysis in the *Automotive Spring Assemblies* report, the panel found that because the International Trade Commission had concluded that patent infringement was taking place only after evidence was produced that clearly established both the validity of the patent and its infringement, and that the exclusion order was applied to all infringing imports regardless of country of origin, the exclusion order was not a disguised restriction on international trade.[301]

Finally, in the Appellate Body's inaugural report, *Standards for Reformulated and Conventional Gasoline,*[302] the Appellate Body offered the following views on the breadth of the Article XX chapeau:

> [T]he chapeau says that "*nothing in this Agreement* shall be construed to prevent the adoption or enforcement by any contracting party of measures . . . " The exceptions listed in Article XX thus relate to all of the obligations under the *General Agreement:* the national treatment obligation and the most-favored-nation obligation, of course, but others as well. . . .
>
> * * * * * *
>
> "Arbitrary discrimination", "unjustifiable discrimination" and "disguised restriction" on international trade may, accordingly, be read side-by-side; they impart meaning to one another. It is clear to us that "disguised restriction" includes disguised discrimination in international trade. It is equally clear that concealed or unannounced restriction or discrimination in international trade does not exhaust the meaning of "disguised restriction." We consider that "disguised restriction", whatever else it covers, may properly be read as embracing restrictions amounting to arbitrary or unjustifiable discrimination in international

[296] *See id.* at 108, ¶ 4.8.

[297] Report of the GATT Panel (adopted), *United States—Imports of Certain Automotive Spring Assemblies*, BISD, 30th Supp. 107 (1983).

[298] *See id.* at 125, ¶ 55. The panel report was adopted with the understanding that it was without prejudice to future complaints challenging Section 337 of the Tariff Act of 1930, pursuant to which the exclusion order was issued. That challenge was considered and parts of Section 337 invalidated in the 1989 GATT panel report, *United States—Section 337*, *supra* note 105.

[299] *See United States—Prohibition of Imports of Tuna*, *supra* note 295, at 108, ¶ 4.8.

[300] *See* GUIDE TO GATT LAW AND PRACTICE, *supra* note 3, vol. 1, at 565.

[301] *See United States—Automotive Spring Assemblies*, *supra* note 297, at 125, ¶ 56.

[302] *See United States—Gasoline*, *supra* note 41.

> trade taken under the guise of a measure formally within the terms of an exception listed in Article XX. . . . The fundamental theme is to be found in the purpose and object of avoiding abuse or illegitimate use of the exceptions to substantive rules available in Article XX.[303]

The Appellate Body thus clearly disagrees with the views expressed in the GATT panel report in *Prohibition of Imports on Tuna* that a publicly-declared measure cannot be a "disguised" measure in violation of Article XX.

2. The Public Morals Exception

The first of Article XX's exceptions permits WTO Members to adopt measures "necessary to protect public morals." Although there is no GATT practice that sheds light on the scope of this exception, it evidently deals in part with border measures to prohibit the importation of obscene materials and possibly drugs, although there is no GATT or WTO practice on either of these points. Under U.S. law, the U.S. Customs Service is authorized to seize not only obscene materials imported into the United States, but also materials advocating treason or insurrection against the United States.[304] Given the value-laden nature of the term "morals," and the open-ended quality of the term "public morals," the potentially broad sweep of the public morals exception could easily swallow many GATT obligations.[305]

A public morals exception is also contained in Article XIV of the GATS. Unlike its Article XX(a) counterpart, GATS Article XIV(a) adds the words "necessary to protect public morals *or to maintain public order* [emphasis added]."[306] A footnote to this exception states that "[t]he public order exception may be invoked only where a genuine and sufficiently serious threat is posed to one of the fundamental interests of society." What constitutes a "fundamental interest of society" is anyone's guess. It is unimaginable that WTO Members, with their diverse social, cultural, political, and economic conditions, could ever reach a consensus on this question.

3. Protection of Human, Animal, or Plant Life or Health

In the arsenal of weapons at a country's disposal to block the free flow of goods across national borders, one of the most insidious and potentially effective is product standards. What makes product standards insidious is that the same standard can be a legitimate health and safety regulation and at the same time act as a disguised restriction on trade.

[303] *Id.* at 24–25 (emphasis in original).

[304] 19 U.S.C. § 1305(a) provides in part:

> All persons are prohibited from importing into the United States from any foreign country any book, pamphlet, paper, writing, advertisement, circular, print, picture, or drawing containing any matter advocating or urging treason or insurrection against the United States, or forcible resistance to any law of the United States, or containing any threat to take the life of or inflict bodily harm upon any person in the United States, or any obscene book, pamphlet, paper, writing, advertisement, circular, print, picture, drawing, or other representation, figure, or image on or of paper or other material. . . .

For cases applying § 1305, *see, e.g.*, *United States v. 1903 Obscene Magazines*, 907 F.2d 1338 (2d Cir.), *cert. denied*, 498 U.S. 984 (1990); *United States v. Various Articles of Obscene Merchandise*, 705 F.2d 41 (2d Cir. 1983).

[305] *See,* e.g., Daniel S. Ehrenberg, *The Labor Link: Applying the International Trading System to Enforce Violations of Forced and Child Labor,* 20 YALE J. INT'L L. 361 (1995).

[306] *Compare* Article 8.1 of the TRIPS Agreement, which provides:

> Members may, in formulating or amending their laws and regulations, adopt measures necessary to protect public health and nutrition, and to promote the public interest in sectors vital to their socio-economic and technological development, provided that such measures are consistent with the provisions of this Agreement.

For example, a country could decide to set comparatively high environmental, health, and safety regulations out of a legitimate concern for the health and welfare of consumers within its borders. Those same regulations could also protect local manufacturers and retailers from import competition.

Even when national product standards are not designed to block imports, standards often differ from one country to another, impeding the free flow of goods. Because of such differences, minor but costly modifications must often be made to a product destined for foreign markets.

Once tariff reductions were progressively implemented and market access began to significantly improve with trade flows substantially increasing, differences in national product standards and certification systems began to present a significant barrier to trade. As imports were tested to determine whether they conformed to domestic standards, the suspicion grew that national standards and certification procedures were being used as a gossamer-thin disguise to restrict trade. From an economic perspective, this suspicion, if true, was unwelcome. From a legal perspective, if any technical regulation or conformity assessment procedure expressly discriminates against imports, such regulation or procedure in all likelihood violates the Article III national treatment commitment (in the case of an internal measure) or the Article XI prohibition of quantitative restrictions (in the case of a border measure). However, any alleged inconsistency of product standards with Articles III and XI must be further tested against the general exception in Article XX(b) for measures to protect human, animal, or plant life or health. Nevertheless, even if a health or safety regulation passes muster under the specific Article XX exception, that regulation still must not, in the words of the chapeau to Article XX, "be applied in a manner which would constitute a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail, or a disguised restriction to international trade . . . ."

Article XX(b) authorizes measures "necessary to protect human, animal or plant life or health." This provision allows Members to give priority to health over trade liberalization, provided a measure is "necessary." GATT panels have on several occasions interpreted the term "necessary" in the context of Article XX(b) and (d), the latter dealing with measures relating to customs enforcement, the prevention of restrictive business practices, and intellectual property protection. One highly instructive report, *Thai Cigarettes,*[307] concluded that the term "necessary" has the same meaning under both Article XX(b) and (d). Having concluded that the Thai ban on imported cigarettes violated Article XI's prohibition on quantitative restrictions, the panel then proceeded to assess the Thai import ban against the yardstick laid down in the *Section 337* panel report of whether the measure was "necessary:"

> [A] contracting party cannot justify a measure inconsistent with other GATT provisions as "necessary" . . . if an alternative measure which it could reasonably be expected to employ and which is not inconsistent with other GATT provisions is available to it. By the same token, in cases where a measure consistent with other GATT provisions is not reasonably available, a contracting party is bound to use, among the measures reasonably available to it, that which entails the least degree of inconsistency with other GATT provisions.[308]

The panel's interpretation of "necessary" restates the minimum derogation principle, *i.e.*, any measure taken pursuant to one of the Article XX exceptions must be the least trade restrictive measure available. In response to Thailand's claim that the ban on imported

[307] *Thailand—Cigarettes*, *supra* note 292.

[308] *See United States—Section 337*, *supra* note 105, ¶ 5.26.

cigarettes was necessary in order to implement the government's program to control smoking, the panel accepted that smoking constitutes a serious risk to human health and that measures designed to reduce the consumption of cigarettes fell within the scope of Article XX(b). Nevertheless, Thailand's import restrictions could be considered "necessary" only if there was no alternative measure less inconsistent with GATT that Thailand could reasonably be expected to employ in order to achieve its health policy objectives. The panel in fact identified two alternative GATT-consistent measures.

In response to Thailand's concern about ensuring the quality of imported cigarettes, the panel suggested that non-discriminatory, mandatory labeling requirements requiring complete disclosure of ingredients, in conjunction with a ban on unhealthy substances, would be an alternative consistent with GATT. Second, in response to Thailand's concern about the quantity of cigarettes consumed, the panel pointed to the World Health Organization's recommendation to ban cigarette advertising and promotions, especially those that target the youth market. Increasing the price of tobacco through nondiscriminatory, government-mandated price controls could also be an effective tobacco control strategy.[309] The panel concluded, therefore, that Thailand's ban on the importation of foreign cigarettes, while at the same allowing the sale of domestic-produced cigarettes, was not "necessary" within the meaning of Article XX(b).

A recurring issue under Article XX(b) has been one of transparency, *i.e.*, the lack of adequate publication, notification, and consultations concerning measures taken under paragraph (b). For example, in 1989 Chile complained that sales of fruit exports to the United States were lost because of a U.S. ban on Chilean fruit following the discovery of toxic chemicals in Chilean grapes. Chile urged the establishment of a system for the expeditious notification and review of such measures to ensure that the measures adopted were proportionate to the threat. Later that year the Director-General offered a recommendation to the GATT Council, *Streamlined Mechanism for Reconciling the Interests of Contracting Parties in the Event of Trade-Damaging Acts*. Its three recommendations are (1) a measure taken should not be any more severe, and should not remain in force any longer, than necessary to protect the human, animal, or plant life or health involved; (2) the importing country should notify the Director-General as quickly as possible by telephone followed by a written communication to all contracting parties; and (3) the importing country should submit to expeditious informal consultations with the principally concerned contracting party as soon as a trade-damaging act has occurred with a view to reaching a mutually satisfactory resolution of the dispute.[310]

Two Uruguay Round agreements substantially supplement the Article XX(b) exception. These agreements are the Agreement on the Application of Sanitary and Phytosanitary Measures ("the SPS Agreement"), and the Agreement on Technical Barriers to Trade ("the TBT Agreement"). Before the SPS Agreement and the TBT Agreement (and the TBT Agreement's predecessor, the Tokyo Round Standards Code) were added to the GATT-WTO legal regime, Article XX(b) was the only GATT provision dealing expressly with the subject of sanitary and phytosanitary measures and product standards.

Briefly, the SPS Agreement is the first multilateral trade agreement with a fully articulated set of rules governing a country's use of SPS measures in connection with imported goods. The SPS Agreement circumscribes the use by WTO Members of such measures as a nontariff barrier to trade. The SPS Agreement applies to all sanitary and phytosanitary

[309] *See Thailand—Cigarettes*, *supra* note 292, at 222–226, ¶¶ 73–81.
[310] C/M/236, BISD, 36th Supp. 67 (1989), *reprinted in* GUIDE TO GATT LAW AND PRACTICE, *supra* note 3, vol. 1, at 571–72.

measures that may, directly or indirectly, affect international trade.[311] The SPS Agreement does not create any substantive sanitary or phytosanitary measures *per se*. Instead, the Agreement sets forth a number of general procedural requirements to ensure that a sanitary or phytosanitary measure is in fact a scientifically-based protection against the risk asserted by the Member imposing the measure, and not a disguised barrier to trade.[312] The Agreement expressly recognizes that Members have a legitimate right to protect human, animal, and plant life and health, and to establish a level of protection for life and health that they deem appropriate. The provisions of the SPS Agreement are designed to preserve the ability of Members to act while guarding against the use of SPS measures that are designed to protect a domestic industry from foreign competition. The Agreement establishes criteria and procedures to distinguish the former from the latter.[313]

The TBT Agreement builds on the 15-year experience of the Tokyo Round Standards Code. The TBT Agreement restates, clarifies, and modestly expands the Code. The TBT Agreement balances the ability of governments and the private sector to implement legitimate standards and the procedures for assessing product conformity with those standards against their unjustified use to protect a domestic industry. The TBT Agreement establishes rules on distinguishing legitimate standards and product conformity assessment procedures from protectionist measures and procedures in three areas: (1) the preparation and adoption of technical regulations and standards, (2) conformity assessment procedures and mutual recognition of other countries assessments, and (3) information and assistance about technical regulations, standards, and conformity assessment procedures. Like its predecessor, the TBT Agreement does not establish or prescribe standards, technical regulations, or conformity assessment procedures. Rather, it establishes general procedural requirements to be observed when adopting or using such measures so that they do not create unnecessary obstacles to trade.

The SPS and TBT Agreements are discussed in later chapters of this book.[314]

4. Measures Against Deceptive Practices and to Protect Intellectual Property

Article XX(d) permits Members to take measures necessary to secure compliance with laws relating to customs enforcement, the protection of intellectual property rights, and the prevention of deceptive practices. One of the leading panel reports analyzing Article XX(d) is the 1989 GATT panel report, *Section 337 of the Tariff Act of 1930*.[315] Section 337 of the Tariff Act of 1930, a special U.S. law for enforcing intellectual property rights at the border, was examined against the charge that it violates the national treatment clause of Article III:4 because it treats imported products less favorably than the like

[311] *See generally* Marsha A. Echols, *Sanitary and Phytosanitary Measures, in* THE WORLD TRADE ORGANIZATION: THE MULTILATERAL TRADE FRAMEWORK FOR THE 21ST CENTURY AND U.S. IMPLEMENTING LEGISLATION 191 (Terence P. Stewart ed. 1996); John J. Barcelo III, *Product Standards to Protect the Local Environment—the GATT and the Uruguay Round Sanitary and Phytosanitary Agreement*, 27 CORNELL INT'L L.J. 755 (1994); Robert M. Millimet, *The Impact of the Uruguay Round and the New Agreement on Sanitary and Phytosanitary Measures: An Analysis of the U.S. Ban on DDT*, 5 TRANSNAT'L L. & CONTEMP. PROBS. 443 (1995). The WTO Secretariat has published a booklet, UNDERSTANDING THE WORLD TRADE ORGANIZATION AGREEMENT ON SANITARY AND PHYTOSANITARY MEASURES (1996).

[312] *See* David A. Wirth, *The Role of Science in the Uruguay Round and NAFTA Trade Disciplines,* 27 CORNELL INT'L L.J. 817 (1994).

[313] This is not always an easy task, as illustrated by the interminable dispute between the United States and the EU over the 1987 EU ban on U.S. beef from cattle fed with growth-inducing hormones. *See* Report of the Appellate Body, *European Communities—EC Measures Concerning Meat and Meat Products (Hormones),* WT/DS26/AB/R (1998).

[314] *See* Chapters 7 and 8.

[315] *See United States—Section 337*, *supra* note 105.

domestic product. The United States responded in part that even if Section 337 does violate Article III:4, that Section 337 is "necessary" to enforce U.S. patent laws against infringing imports, as that term is used in Article XX(d).

After concluding that Section 337 is inconsistent with Article III:4,[316] the panel identified three conditions that must be met before GATT-inconsistent measures can be sustained under Article XX(d):

1. The laws or regulations with which compliance is being secured are themselves "not inconsistent" with GATT.
2. The measures must be "necessary to secure compliance" with those laws or regulations.
3. The measures must not be applied "in a manner which would constitute a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail, or a disguised restriction on international trade," which are the criteria stated in the Article XX chapeau.

The panel agreed that Section 337 is not otherwise inconsistent with GATT, that is, GATT contracting parties are permitted to enact laws that protect intellectual property rights at the border.[317]

With regard to the second prong of the three-prong test, the panel concluded that the Section 337 procedures for resolving allegations of violations of U.S. patent laws could not be justified as necessary within the meaning of Article XX(d) so as to permit an exception to the basic national treatment obligation contained in Article III:4. The panel observed that if a contracting party could reasonably secure a desired level of enforcement in a manner that is not inconsistent with other GATT provisions, it is required to do so.[318]

[316] The panel found that Section 337 discriminates against imported articles vis-à-vis the domestic like product in six respects. First, a Section 337 complainant has a choice of two fora—the ITC or federal district court—in which to challenge imported articles, whereas articles manufactured domestically in the United States may only be challenged in federal court. Second, foreign producers and importers of challenged products are at a potential disadvantage vis-à-vis their U.S. domestic counterparts, given the strict time limits applicable in Section 337 proceedings (described below), with no corresponding time limits applicable in federal court actions. Third, a Section 337 respondent cannot bring a counterclaim (*e.g.*, a counterclaim alleging an antitrust violation by the complainant for abusing its exclusive rights under a patent, trademark, or copyright), whereas a federal court defendant has that option. Fourth, relief in the form of a general exclusion order against infringing imports is available in a Section 337 proceeding. In contrast, no corresponding remedy is available against infringing articles of U.S. origin in a federal court proceeding. Fifth, exclusion orders are automatically enforced by the U.S. Customs Service, whereas any injunctive relief ordered by a federal court in a private civil action requires for its enforcement separate contempt proceedings brought by the successful plaintiff. Sixth, foreign producers and importers of challenged imports face the prospect of defending parallel or successive administrative and judicial proceedings. In contrast, products of U.S. origin are not exposed to the same gauntlet. In addition, the panel concluded that Section 337 does not meet the criteria of the Article XX(d) exception because it is not a measure "necessary" to protect IPRs at the border. *See id.* at 392–93, ¶¶ 5.25–5.27.

[317] The first condition also was examined in the 1988 panel report in *Japan Restrictions on Imports of Certain Agricultural Products*, *supra* note 179. In response to Japan's invocation of the Article XX(d) exception in justification of import restrictions administered by an import monopoly, the panel found that "Article XX(d) only exempts from the obligations under the General Agreement measures necessary to secure compliance with those laws and regulations which are not inconsistent with the provisions of [the General] Agreement. Article XX(d) therefore does not permit contracting parties to operate monopolies inconsistently with the other provisions of the General Agreement." *Id*. at 230, ¶ 5.2.2.3. The panel concluded that the enforcement of laws and regulations providing for an import restriction made effective through an import monopoly that was inconsistent with Article XI:1 could not be justified under Article XX(d).

[318] *See United States—Section 337*, *supra* note 105, at 396, ¶ 5.35.

The term "necessary to secure compliance" in the Article XX(d) context was also examined in the Appellate Body's report in *Korea—Beef*. where the Appellate Body offered the following views as to the meaning of the term "necessary":

> We believe that, as used in the context of Article XX(d), the reach of the word "necessary" is not limited to that which is "indispensable" or "of absolute necessity" or "inevitable". Measures which are indispensable or of absolute necessity or inevitable to secure compliance certainly fulfil the requirements of Article XX(d). But other measures, too, may fall within the ambit of this exception. As used in Article XX(d), the term "necessary" refers, in our view, to a range of degrees of necessity. At one end of this continuum lies "necessary" understood as "indispensable"; at the other end, is "necessary" taken to mean as "making a contribution to." We consider that a "necessary" measure is, in this continuum, located significantly closer to the pole of "indispensable" than to the opposite pole of simply "making a contribution to".[319]

The Appellate Body rejected Korea's claim that its dual retail system for domestic and imported beef was necessary to protect against fraud in the sale of beef, finding that Korea could achieve its desired level of enforcement through conventional GATT-consistent enforcement measures.[320]

The third prong of the *Section 337* panel's three-prong test is analyzed above in connection with the discussion of the Article XX chapeau and the Appellate Body's report in *Standards for Reformulated and Conventional Gasoline*.

5. Measures to Conserve Exhaustible Natural Resources

Several panels and the Appellate Body have considered the Article XX(g) exception for measures taken to conserve natural resources. For example, in the 1988 *Herring and Salmon* panel report, the GATT panel rejected Canada's reliance on paragraph (g) in justification of regulations that required that all unprocessed herring and salmon caught in Canadian waters be landed first in Canada before leaving Canadian waters. The panel concluded that Canada's regulations were not "primarily" aimed at the conservation of an exhaustible natural resource and were thus not justified under Article XX(g).[321]

In the 1982 panel report on *Prohibition of Imports of Tuna and Tuna Products from Canada*, the panel rejected the U.S. invocation of Article XX(g) in justification of its ban on imports of tuna from Canada because the United States had not restricted the domestic consumption of tuna as required by paragraph (g).[322]

In the unadopted panel report, *Restrictions on Imports of Tuna*,[323] the panel concluded that Article XX(g) could not justify measures to conserve exhaustible natural resources that are beyond the territorial jurisdiction of the importing Member.[324]

In *Standards for Reformulated and Conventional Gasoline*, the Appellate Body rejected the panel's conclusion that the U.S. regulations did not qualify under Article XX(g) as a measure for the conservation of an exhaustible natural resource—in this case, clean air—made effective in conjunction with domestic conservation measures. Although the U.S. clean air regulations passed muster under Article XX(g), the Appellate Body

[319] *Korea—Beef*, *supra* note 276, ¶ 161 (footnote omitted).
[320] *See id.* ¶ 180.
[321] *See Canada—Unprocessed Herring and Salmon*, *supra* note 175, at 113–15, ¶¶ 4.4–4.7.
[322] *See United States—Tuna and Tuna Products from Canada*, *supra* note 295, at 107–09, ¶¶ 4.5–4.6, 4.9–4.12.
[323] *See United States—Restrictions on Imports of Tuna, supra* note 293.
[324] *See id.* ¶ 5.31.

nevertheless concluded that the United States had failed to satisfy the preconditions in the chapeau to Article XX, namely, that the measures adopted not unduly discriminate against foreign gasoline.[325] In particular, the United States was faulted by the Appellate Body for not pursuing cooperative agreements with exporting countries.[326]

In *United States—Shrimp*, the Appellate Body agreed with the United States that the phrase "exhaustible natural resources" is not limited to non-living natural resources, but includes living resources as well.[327] As noted, Article XX(g) exempts from the MFN and national treatment commitments trade measures "relating to the conservation of exhaustible natural resources if such measures are made effective in conjunction with restrictions on domestic production or consumption." Rejecting Malaysia's "original intent" argument that Article XX(g) was intended to cover non-living resources only, the Appellate Body stated:

> The words of Article XX(g), "exhaustible natural resources,"were actually crafted more than 50 years ago. They must be read by a treaty interpreter in the light of contemporary concerns of the community of nations about the protection and conservation of the environment. . . .
>
> From the perspective embodied in the preamble of the WTO Agreement [explicitly acknowledging the objective of sustainable development], we note that the generic term "natural resources" in Article XX(g) is not "static" in its content or reference but is rather "by definition, evolutionary."[328]

Moreover, the Appellate Body added, two adopted GATT 1947 panel reports, *United States—Prohibition of Imports of Tuna and Tuna Products from Canada,*[329] and *Canada—Measures Affecting Exports of Unprocessed Herring and Salmon,*[330] found fish to be an "exhaustible natural resource" within the meaning of Article XX(g). Accordingly, the Appellate Body held that measures to conserve exhaustible resources, whether living or non-living, may fall within Article XX(g).[331] The Appellate Body further found that sea turtles are an exhaustible natural resource.

Turning next to the issue of whether the U.S. measure was one "relating to the conservation of" exhaustible natural resources, the Appellate Body found a substantial relationship between Section 609 of the Endangered Species Act[332] and its implementing regulations, on the one hand, and the conservation of sea turtles, on the other. "The means [i.e., turtle excluder devices or "TEDs"] are, in principle, reasonably related to the ends [i.e., the conservation of sea turtles]."[333]

Addressing the last Article XX(g) criterion—that the measure is made effective in conjunction with restrictions on domestic production or consumption—the Appellate Body found that this requirement was easily satisfied. U.S. shrimpers who failed to use TEDs faced serious civil and criminal penalties, including forfeiture of their trawlers.

"We believe," the Appellate Body concluded, "that, in principle, Section 609 is an even-handed measure."[334]

Having concluded that Section 609 is provisionally justified under the Article XX(g) exception, the Appellate Body next tackled the thorny issue of whether Section 609 violates the Article XX chapeau. Reflecting on the language of the preamble to the Agreement Establishing the WTO that calls for "the optimal use of the world's resources in accordance with the objective of sustainable development," and the creation of the Committee on Trade and Environment and its terms of reference, the Appellate Body noted that these developments "must add colour, texture and shading to our interpretation of the agreements annexed to the WTO Agreement, in this case, the GATT 1994."[335] Nevertheless, the Appellate Body found it unacceptable

> for one WTO Member to use an economic embargo to require other Members to adopt essentially the same comprehensive regulatory program, to achieve a certain policy goal, as that in force within that Member's territory, without taking into consideration different conditions which may occur in the territories of those other Members.[336]

The Appellate Body added that the protection and conservation of highly migratory species of sea turtles demands concerted and cooperative efforts on the part of the many countries whose waters are traversed by sea turtles. With the exception of the Inter-American Convention for the Protection and Conservation of Sea Turtles, the United States had failed to exhaust multilateral efforts, in the Appellate Body's view.[337] Rather than attempt to exhaust international mechanisms, the United States instead pursued the unilateral application of Section 609. In a footnote, the Appellate Body underscored this point with the observation that the United States, a party to CITES,[338] made no attempt to raise the issue of sea turtle mortality due to shrimp trawling in the CITES Standing Committee.[339] The Appellate Body also faulted the United States for acting in a discriminatory manner vis-à-vis shrimp exporting members (Central and South American shrimp exporters were given preferential treatment under Section 609 vis-à-vis shrimpers from the four complaining Asian members), as well as for the lack of adequate transparency in the administration of the Section 609 certification procedures.

Anticipating the backlash of criticism that its decision would generate within the environmental community, the Appellate Body closed with the following observations:

> In reaching these conclusions, we wish to underscore what we have *not* decided in this appeal. We have *not* decided that the protection and preservation of the environment is of no significance to the Members of the WTO. Clearly, it is. We have *not* decided that the sovereign nations that are Members of the WTO cannot adopt effective measures to protect endangered species, such as sea turtles. Clearly, they can and they should. And we have *not* decided that sovereign states should not act together bilaterally, plurilaterally or

> multilaterally, either within the WTO or in other international fora, to protect endangered species or to otherwise protect the environment. Clearly, they should and they do.[340]

In sum, the Appellate Body found Section 609 flawed chiefly in the manner in which the United States administered it, not with the substance of the law *per se* or its objectives. It recognized a country's right to protect sea turtles, provided that country did so by negotiating bilateral or multilateral species protection agreements rather than by imposing its preferences unilaterally.

In subsequent panel proceedings involving a challenge by Malaysia to an alleged lack of compliance by the United States with the Appellate Body's report, the reviewing panel concluded that the United States has an obligation to make serious good faith efforts to reach a multilateral agreement before resorting to unilateral measures.[341] In assessing whether such good faith efforts had been made, the panel concluded that the Inter-American Convention could reasonably be considered as a benchmark of what can be achieved through multilateral negotiations in the field of protection and conservation of sea turtles. The panel concluded:

> [O]ur understanding of the Appellate Body findings is that the United States would be entitled to maintain the implementing measure if it were demonstrated that it was making serious good faith efforts to conclude an international agreement on the protection and conservation of sea turtles. The Panel is of the view that the US efforts since 1998 meet the standard established by the Appellate Body Report. In this respect, the Panel notes the sustained pace of the negotiations and the prospect of their conclusion in 2001, as well as the effective contribution of the United States in the context of these negotiations. . . . Finally, the Panel notes that Malaysia did not submit convincing evidence that the United States had not made serious good faith efforts in relation to the negotiation of an international agreement on the protection and conservation of sea turtles since the adoption of the reports of the Original Panel and the Appellate Body.[342]

The panel added that a multilateral agreement is clearly to be preferred and that unilateral measures such as those taken by the United States may only be accepted under Article XX(g)(1) if they are allowed under an international agreement, or (2) if they are taken to further the completion of serious good faith efforts to reach a multilateral agreement. The Appellate Body affirmed the panel's conclusion.[343]

6. Other Article XX Exceptions

Rounding out the other Article XX exceptions are (1) the importation or exportation of gold and silver;[344] (2) the products of prison labor;[345] (3) the protection of national treasures,[346] which is enforced at the international level through the Convention on the

Means of Prohibiting and Preventing the Illicit Import, Export and Transfer of Ownership of Cultural Property;[347] (4) export restrictions on products subject to price controls;[348] and (5) products in short supply.[349]

B. Article XXI, Security Exceptions

Article XXI lists government measures that are exempt from regular GATT obligations when taken on national security grounds. They are (1) furnishing information the disclosure of which the Member considers contrary to its essential security interests; (2) taking action for the protection of the Member's essential security interests relating to fissionable materials or arms traffic, or taken in time of war or other international emergency; and (3) taking action in pursuance of a Member's obligations under the UN Charter for the maintenance of international peace and security.

The practice under Article XXI has centered around Article XXI(b)(iii): action which a Member considers necessary for the protection of its essential security interests taken in time of war or other emergency in international relations. For example, in 1975, Sweden imposed a global import ban on certain footwear on the ground that "the decrease in domestic production has become a critical threat to the emergency planning of Sweden's economic defence as an integral part of the country's security policy."[350] Many contracting parties raised doubts about Sweden's justification of its import ban.[351] It terminated the ban in 1977.

During the Falklands war in 1982 the EC, Canada, and Australia imposed a two-month import ban on goods from Argentina. Argentina complained that this action violated, *inter alia*, Articles I, II, and XI. The countries taking the measure stated that Article XXI did not require notification. The upshot was a Decision Concerning Article XXI of the General Agreement adopted by GATT on November 30, 1982, which stated cryptically that contracting parties affected by action taken under Article XXI retain their full rights under the General Agreement.[352]

In 1985, the United States imposed a trade embargo on Nicaragua, invoking the Article XXI(b)(iii) exception. Following a complaint from Nicaragua, a panel was established to examine the U.S. measures, but its terms of reference precluded the panel from judging

[347] Nov. 14, 1979, entered into force, Dec. 2, 1983, 823 U.N.T.S. 231, *reprinted in* 10 Intl Legal Materials 289 (1983). The Convention Prohibiting the Illicit Import, Export and Transfer of Cultural Property is intended to protect the world's cultural property by obligating parties, *inter alia*, to require that exports of cultural property be accompanied by a certificate of authorization, and to impose penalties on any person responsible for violating the prohibitions of the Convention. *Id.* Art. 5. The Convention is one of a handful of bilateral and multilateral agreements intended to protect cultural property. *See generally* Jeanette Greenfield, The Return of Cultural Treasures (1995). Two other important agreements in this field are the *Treaty of Cooperation Between the United States and Mexico Providing for the Recovery and Return of Stolen Archaeological, Historical and Cultural Properties*, July 17, 1970, entered into force, March 24, 1971, 22 U.S.T. 494, T.I.A.S. 7088, 791 U.N.T.S. 313; and the *Convention for the Protection of the World Cultural and Natural Heritage*, Nov. 23, 1973, entered into force, Dec. 17, 1975, 27 U.S.T. 37, T.I.A.S. 8226. *See also Convention on the Return of Stolen Cultural Property, reprinted in* 34 Intl Legal Materials 1322 (1995). In the United States, the implementation of import restrictions to prevent the illicit trade of cultural property is contained in 19 U.S.C. §§ 2601 *et seq.*

the validity or motivation for the invocation of Article XXI(b)(iii).[353] In 1991, the EC, Canada, the United States, Japan, and several other countries imposed trade sanctions on the former Yugoslavia. Because of the uncertainty over the status of the successor government, a GATT complaint was not acted upon.

Before 1996, the GATT security exceptions had not been a source of serious disruption of the GATT-WTO system. However, with the enactment in 1996 of a controversial U.S. law designed to tighten trade sanctions against Cuba, an area of international trade that had been relatively calm began to stir.

On March 12, 1996, President Clinton signed the Cuban Liberty and Democratic Solidarity (LIBERTAD) Act of 1996, popularly known as the Helms-Burton Act,[354] which was designed to tighten the U.S. trade embargo on Cuba that was formalized under the Cuban Democracy Act of 1992.[355] The Act broadens the U.S. embargo against Cuba by barring U.S. foreign aid to countries that provide assistance to Cuba; authorizing U.S. nationals who had property confiscated by the Cuban government since 1959 to sue foreign companies if they are "trafficking" in the property that was expropriated by the Cuban government after the Cuban revolution; and barring the issuance of visas to aliens, including officers of trafficking companies and members of their family, who, after the effective date of the Act, confiscate, convert, or traffic in property expropriated from a U.S. citizen.

The Helms-Burton Act has triggered diplomatic protests and threats of retaliation from several U.S. trading partners, including Canada, Mexico, and the EU.[356] The EU approved blocking legislation in 1996 to prevent enforcement in EU-member state courts of U.S. judgments entered pursuant to Title III of Helms-Burton.[357] In 1996 the EU filed a complaint with the WTO Dispute Settlement Body against the United States, alleging that the Helms-Burton Act violated GATT Articles I (MFN), III (national treatment), V (freedom of transit), XI (the prohibition on quotas), and XIII (the allocation of quotas); and GATS Articles I (scope), III (transparency), VI (impartial administration of domestic regulations), XVI (market access), and XVII (national treatment). It was anticipated that the United States would defend the Helms-Burton Act on Article XXI national security grounds. It also was feared that the United States would reject any standard terms of reference for a panel and judge for itself whether its national security interests were

genuinely implicated. Following negotiations with the United States in April 1997, the EU requested a suspension of the WTO panel proceedings, pursuant to Article 12.12 of the Dispute Settlement Understanding,[358] following an agreement with the United States that an effort would be made to secure from Congress waiver authority under Title IV, which denies U.S. entry to any foreigner trafficking in U.S. property confiscated in Cuba.[359] Pursuant to Presidential authority granted by Congress, President Clinton waived the right to sue persons trafficking in confiscated property for six-month periods, as has President Bush.

Finally, Article XXI(c) authorizes action taken in pursuance of a Member's obligations under the United Nations Charter for the maintenance of international peace and security.

Considering the disruption to the stability of the GATT-WTO system that the phrase "essential security interests" could cause if interpreted broadly or unilaterally by the Member invoking it, it is fortunate that Article XXI has not evolved into the exception that swallowed GATT. If every WTO Member arrogates for itself the right to be the final arbiter on questions relating to trade and national security, such action could deliver a mortal blow to the GATT-WTO system.

V. Dispute Settlement

Criticisms of the GATT 1947 dispute settlement process are legion.[360] The most frequently recurring complaints about dispute settlement under GATT 1947 included the following:

- GATT lacked a single dispute settlement procedure, with the Tokyo Round Codes containing separate dispute settlement mechanisms.
- GATT disputes were sometimes resolved through the grant of waivers.
- The adoption of panel reports could be blocked by a single member, often the losing party.
- The *ad hoc* composition of the panels, and the lack of a reviewing body, often led to inconsistent decisions.
- Small countries were handicapped in achieving effective results against large countries.
- The GATT panel process was lengthy and subject to delaying tactics.
- GATT contained no provision for the automatic establishment of a panel.

The Uruguay Round Understanding on Rules and Procedures Governing the Settlement of Disputes (the Dispute Settlement Understanding or DSU) addresses almost all of these criticisms. As noted in DSU Article 3.2, "The dispute settlement system of the WTO is a central element in providing security and predictability to the multilateral

[359] *See EU Said Not Planning to Revive Challenge to Helms-Burton Challenge,* 14 Int'l Trade Rep. (BNA) 1040 (1997); *EU Warns It Will Reinstate Complaint On Helms-Burton if Congress Tightens Law*, 14 Int'l Trade Rep. (BNA) 1069 (1997); *For and Against Punishing US Allies on Cuba,* Christian Sci. Monitor, June 3, 1997.

[360] For an analysis of dispute settlement under GATT 1947 and criticisms of that process, *see* Robert E. Hudec, Enforcing International Trade Law: The Evolution of the Modern GATT Legal System (1993); John H. Jackson, Restructuring the GATT System (1990); U.S. Int'l Trade Comm'n, Review of the Effectiveness of Trade Dispute Settlement Under the GATT and the Tokyo Round Agreements (USITC Pub. 1793 1985); Pierre Pescatore, Handbook of GATT Dispute Settlement (1992).

trading system." To that end, the DSU establishes an integrated, comprehensive, rules-based dispute settlement process which includes a right of appellate review. The DSU virtually assures that all panel or Appellate Body reports will be adopted expeditiously and without modification. The dispute settlement clauses in the MTAs state for the most part that consultations and dispute settlement are governed by GATT Articles XXII and XXIII as elaborated and applied by the DSU. The only exceptions are the Valuation Agreement, the Antidumping Agreement, and the GATS. Thus, GATT Articles XXII and XXIII, the key dispute settlement provisions of GATT and at best skeletal ones, have been substantially fleshed out by the DSU. Nevertheless, DSU Article 3.1 recognizes the continuing influence of GATT: "Members affirm their adherence to the principles and management of disputes heretofore applied under Articles XXII and XXIII of GATT 1947, and the rules and procedures as further elaborated and modified herein."

WTO dispute settlement is exhaustively analyzed in separate chapters of this book.[361] Here, the GATT predecessor provisions covering dispute settlement are briefly discussed.

A. Article XXII, Consultation

Article XXII obligates Members to "accord sympathetic consideration to, and . . . to afford adequate opportunity for consultation regarding," request of other Members with respect to any matter affecting the operation of GATT. Building on this commitment, the DSU lays down timetables for consultations and adds mechanisms for resolving disputes short of a panel proceeding.[362]

The Director-General, acting in an *ex officio* capacity, may offer good offices, conciliation, and mediation with a view to assisting disputing Members to settle their dispute.[363] Good offices, conciliation, and mediation are voluntary procedures that the disputing Members may request and undertake at any time, are confidential, and are without prejudice to their rights. They may be terminated at any time and may continue while the panel process proceeds.[364]

B. Article XXIII, Nullification or Impairment

The key concept in WTO dispute settlement is that of "nullification or impairment." Article XXIII:1 provides:

> If any contracting party should consider that any benefit accruing to it directly or indirectly under this Agreement is being nullified or impaired or that the attainment of any objective of the Agreement is being impeded as the result of
>
> (a) the failure of another contracting party to carry out its obligations under this Agreement, or
> (b) the application by another contracting party of any measure, whether or not it conflicts with the provisions of this Agreement, or
> (c) the existence of any other situation,
>
> the contracting party may, with a view to the satisfactory adjustment of the matter, make written representations or proposals to the other contracting party or parties which it considers to

[361] *See* Chapters 25, *et seq.*
[362] The process is discussed in detail in Chapter 25 of this book.
[363] *See* DSU Art. 5.6.
[364] *See id*. Arts. 5.1–5.5.

be concerned. Any contracting party thus approached shall give sympathetic consideration to the representations or proposals made to it.

Thus, a complaint may be made either on the basis that a benefit has been nullified or impaired, or on the basis that the attainment of an objective is being impeded. In GATT practice, the latter has never been the basis for a complaint.

Article XXIII:2 lays out a rough procedure for further review by the CONTRACTING PARTIES of disputes that are not satisfactorily resolved by the disputing parties themselves. Article XXIII is silent on the question of dispute settlement panels. Supplementing Article XXIII are three pre-Uruguay Round documents that elaborate and codify the GATT 1947 dispute settlement process, including the procedures for the establishment of panels under GATT 1947.[365]

Complaints brought under Article XXIII:1(a) are referred to as violation nullification or impairment complaints. Complaints brought under Article XXIII:1(b) are known as non-violation nullification or impairment complaints. Complaints brought under Article XXIII:1(c) are referred to as "situation" complaints.

1. GATT Article XXIII:1(a) Violation Complaints

Complaints alleging a violation of a GATT obligation are brought pursuant to Article XXIII:1(a). In cases where there is an infringement of the obligations assumed under GATT, the action is considered *prima facie* to constitute a case of nullification or impairment.[366] Actual adverse trade effects need not be shown; they are presumed.[367] Once a *prima facie* case has been established, according to established GATT practice, it is up to the responding Member to rebut the presumption that nullification or impairment has actually occurred.[368] While the presumption is in theory rebuttable, in GATT practice it is *de facto* irrebuttable for the simple reason that the presumption may not be rebutted by showing that the violation has had no or insignificant trade effects. The GATT panel in *United States—Taxes on Petroleum and Certain Imported Substances*, rejected the U.S. argument that the challenged tax had either no trade effects or at most *de minimis* effects, adding that "while the CONTRACTING PARTIES had not explicitly decided whether the presumption that illegal measures cause nullification or impairment could be rebutted, the presumption had in practice operated as an irrefutable presumption."[369]

2. Non-violation Complaints Under GATT Article XXIII:1(b)

While the term "non-violation nullification or impairment" does not appear in the negotiating history or early GATT practice, it appears to have been added to the GATT vocabulary by international trade scholars.[370] The gravamen of a non-violation nullification or impairment complaint is that benefits accruing to the complaining Member under a WTO agreement have been nullified or impaired by a measure of another Member

[365] *See Understanding on Notification, Consultation, Dispute Settlement and Surveillance of 28 November 1979*, BISD, 26th Supp. 210 (1979); Ministerial Declaration of 29 November 1982, *Decision on Dispute Settlement*, BISD, 29th Supp. 13 (1982); *Decision on Dispute Settlement of 30 November 1984*, BISD, 31st Supp. 9 (1984).

[366] *See* Annex to Understanding on Notification, Consultation, Dispute Settlement and Surveillance of 28 November 1979, *Agreed Description of the Customary Practice of the GATT in the Field of Dispute Settlement*, BISD, 26th Supp. 210, 216, ¶ 5 (1979).

[367] *See* Report of the GATT Panel (adopted), *Japan—Measures on Imports of Leather*, BISD, 31st Supp. 94, 112–13, ¶ 55 (1984). This presumption is now codified in DSU Article 3.8.

[368] *See id.*

[369] *United States—Taxes on Petroleum*, *supra* note 100, at 158, ¶ 5.1.7.

[370] *See* GUIDE TO GATT LAW AND PRACTICE, *supra* note 3, vol. 2, at 657 n. 67.

that does not violate GATT 1994 or other WTO MTA. GATT and WTO panels have approached the non-violation nullification or impairment remedy with caution because such claims challenge otherwise GATT-legal measures of the responding Member.[371]

In order for an Article XXIII:1(b) complaint to succeed, the challenged government action must be of a kind that could not have been reasonably anticipated by the complaining Member at the time the tariff concession was negotiated.[372] Few non-violation nullification or impairment complaints have been brought, and even fewer have succeeded.[373] The panel reports in the *EEC—Oilseeds* case and the *Kodak-Fuji Film* dispute confirm that the non-violation nullification or impairment remedy should be approached with caution and treated as an exceptional concept.[374] The reason for this caution is straightforward: Members negotiate the rules that they agree to follow and only in the rarest of cases would expect to be challenged for actions not in contravention of those rules.

A claim of Article XXIII:1(b) non-violation nullification or impairment has three elements. A complaint must allege that (1) benefits accruing to the complaining member under GATT or a WTO agreement have been (2) nullified or impaired (3) "by the application of another contracting party of any measure," although that measure is not prohibited under GATT or any WTO agreement.

The complaining party must submit a detailed justification in support of its complaint.[375] In GATT practice, non-violation nullification or impairment claims have arisen where a country that made a tariff concession thereafter acted in a way that frustrated the reasonable expectations of market access created by the concession.[376] The reasonable expectations element is a temporal element: a comparison must be made of the competitive relationship between the domestic and imported products at the time when a relevant

[371] *See, e.g., Japan—Film*, *supra* note 142, ¶ 10.36.

[372] *See id.* ¶ 10.76.

[373] There have been ten cases in which panels or working parties have substantively considered Article XXIII:1(b) claims. *See* Report of the Working Party (adopted), *Australian Subsidy on Ammonium Sulphate*, BISD, II/188 (1950); Report of the GATT Panel (adopted), *Treatment by Germany of Imports of Sardines*, BISD, 1st Supp.53 (1952); Report of the GATT Panel (adopted), *Uruguayan Recourse to Article XXIII*, BISD, 11th Supp. 95 (1962); Report of the GATT Panel (unadopted), *EC—Tariff Treatment on Imports of Citrus Products from Certain Countries in the Mediterranean Region*, GATT Doc. L/5576 (1985); Report of the GATT Panel (unadopted), *EEC—Production Aids Granted on Canned Peaches, Canned Pears, Canned Fruit Cocktail and Dried Grapes*, GATT Doc. L/5778 (1985); Report of the GATT Panel (adopted), *Japan—Trade in Semi-Conductors*, BISD, 35th Supp.116 (1988); Report of the GATT Panel (adopted), *EEC—Oilseeds*, BISD, 37th Supp. 86 (1990); Report of the GATT Panel (adopted), *United States—Agricultural Waiver*, BISD, 37th Supp. 228 (1990); Report of the WTO Panel, *Japan—Measures Affecting Consumer Photographic Film and Paper*, WT/DS44/R (1998); Report of the Appellate Body, *European Communities—Measures Affecting Asbestos and Asbestos-Containing Products*, WT/DS/135/AB/R (2001). *See also* Ernst-Ulrich Petersmann, *Violation Complains and Non-Violation Complaints in Public International Trade Law*, 34 GERMAN Y.B. INT'L L. 175, 192 (1991). Complainants were successful in *EEC—Oilseeds, Australian Subsidy on Ammonium Sulphate, Treatment of Germany of Imports of Sardines,* and in *Canned Peaches, Canned Pears*.

[374] In *EEC—Oilseeds*, the United States stated that it "concurred in the proposition that non-violation nullification or impairment should remain an exceptional concept. Although this concept had been in the text of Article XXIII of the General Agreement from the outset, a cautious approach should continue to be taken in applying the concept." *EEC—Oilseeds*, BISD, 37th Supp. 86, 118, ¶ 114. The EEC in that case stated that "recourse to the 'non-violation' concept under Article XXIII:1(b) should remain exceptional, since otherwise the trading world would be plunged into a state of precariousness and uncertainty". Id. ¶ 113. *See Japan—Film*, *supra* note 142, ¶ 10.36. *See also* MCGOVERN, *supra* note 14, at § 2.27, at 2.27-1 ("If these provisions were taken literally their potential scope would be enormous.").

[375] *See* DSU Art. 26.1(a).

[376] *See, e.g., EEC—Oilseeds*, *supra* note 160, ¶ 148. *See generally* GUIDE TO GATT LAW AND PRACTICE, *supra* note 3, vol. 2, at 657–58.

tariff concession was made and at the current time. In order for a non-violation claim to succeed, the action taken by the responding member could not have been reasonably anticipated by the complaining member at the time the concession was first negotiated.[377]

DSU Article 26.1 codifies GATT practice by requiring that complaints concerning a non-violation measure be supported by a detailed justification. Under DSU Article 26.1, there is no obligation to withdraw such a measure even where it is found to have caused nullification and impairment (in contrast to the situation where a violation of an Agreement is found to have occurred), and the panel or Appellate Body is to recommend that the parties reach a mutually satisfactory adjustment of their dispute. Compensation may be part of a mutually satisfactory adjustment as a final settlement of the dispute.

3. GATT Article XXIII:1(c) Situation Complaints

The other non-violation complaint provision, Article XXIII:1(c), permits a complaint to be brought if benefits accruing to a member under GATT or a WTO agreement are being nullified or impaired "as the result of the existence of any other situation." As rare as Article XXIII:1(b) complaints are, Article XXIII:1(c) complaints are even rarer. Article XXIII:1(c) has never been applied by a GATT or WTO panel. DSU Article 26.2 sets out special procedures applicable to GATT Article XXIII:1(c) complaints that will do nothing to encourage its use. Under those DSU rules, if benefits accruing to a Member under an Uruguay Round agreement are being nullified or impaired "as the result of the existence of any other situation," the DSU procedures apply only up to the point where the panel report is circulated to the Members.[378] Beyond that point, the dispute settlement rules and procedures contained in the Decision of 12 April 1989 on Improvements to the GATT Dispute Settlement Rules and Procedures apply to issues of adoption, surveillance, and implementation of recommendations.[379] This means that in GATT Article XXIII:1(c) cases, there is no Appellate Body review, and the GATT 1947 practice of adopting panel reports by consensus, as opposed to the DSU rule of rejection by consensus, applies.[380] In other words, a single member can block adoption of the report.

VI. Customs Unions and Free-Trade Areas

A. GATT Article XXIV Criteria for Establishing An RTA

What are free trade areas and customs unions? Article XXIV:8 provides the following definitions:

> (a) A customs union shall be understood to mean the substitution of a single customs territory for two or more customs territories so that
>
> (i) duties and other restrictive regulations of commerce (except, where necessary, those permitted under Articles XI, XII, XIII, XIV, XV and XX) are eliminated with respect

[377] *See, e.g., Japan—Film*, *supra* note 142, at ¶ 10.76.

[378] An example of a GATT Article XXIII:1(c) situation is a 1983 complaint by the EC against Japan that the benefits of successive negotiations with Japan had not been realized due to factors peculiar to the Japanese economy which have resulted in a lower level of imports. *See* GUIDE TO GATT LAW AND PRACTICE, *supra* note 3, vol. 2, at 670–71. The United States has expressed similar concerns about the structural impediments to market access caused by the Japanese *keiretsu* system of vertical integration and interlocking directorships. The *keiretsu* system purportedly prevents parts suppliers outside Japan from competing with Japanese parts suppliers in the sale of their parts to Japanese assemblers when the suppliers and assemblers belong to a *keiretsu*.

[379] *Decision of 12 April 1989 on Improvements to the GATT Dispute Settlement Rules and Procedures*, BISD, 36th Supp. 61 (1989).

[380] *See Decision of 12 April 1989*, *supra* note 379, at G.3.

to substantially all the trade between the constituent territories of the union or at least with respect to substantially all the trade in products originating in such territories, and

(ii) subject to the provisions of paragraph 9 [dealing with trade preferences between colonial powers and their former colonies in existence at the time of GATT's creation], substantially the same duties and other regulations of commerce are applied by each of the members of the union to the trade of territories not included in the union.

(b) A free-trade area shall be understood to mean a group of two or more customs territories in which the duties and other restrictive regulations of commerce (except, where necessary, those permitted under Articles XI, XII, XIII, XIV, XV and XX) are eliminated on substantially all the trade between the constituent territories in products originating in such territories.

The constituent members of a free trade area agree to eliminate barriers to "substantially all the trade" between the members, but the constituent members retain their respective tariff schedules for trade from countries outside the free trade area. Customs unions are identical to free trade areas in the first respect, but take the additional step of adopting a common external tariff for trade from countries outside the union.

In establishing a customs union, Article XXIV lays down three requirements that must be met: (1) substantially all the trade between the constituent territories must be covered;[381] (2) duties and regulations on non-member country goods after the formation of the union must not on the whole be higher or more restrictive than the general incidence of the duties and regulations that existed before the union was formed;[382] and (3) the agreement must include a plan for the formation of the union "within a reasonable length of time."[383] The same requirements exist for free trade areas, with the qualification in the second requirement that duties and regulations on non-member country goods in place after the formation of the free trade area shall not be higher or more restrictive than the corresponding duties and regulations existing before the formation of the free trade area.[384]

Since the conclusion of the Uruguay Round, there has been an explosion in the number of regional trade arrangements (RTAs).[385] At the conclusion of the Uruguay Round, the number of preferential trade agreements notified under GATT Article XXIV was 106, with 36 of these notifications coming since 1990.[386] For all its successes—and they are many—the Uruguay Round did little to check the proliferation of RTAs. As of December 2003, no fewer than 273 RTAs had been notified to the GATT and the WTO.[387]

In its 1985 publication, *Trade Policies for a Better Future: Proposals for Action,* the GATT Secretariat reported that many of the RTAs concluded under Article XXIV had fallen short of complying with that Article's criteria. As a consequence, ambiguities and exceptions were introduced that threatened to weaken the rules governing the multilateral

[381] GATT Art. XXIV:8(b).

[382] GATT Art. XXIV:5(a). The term "on the whole" has been interpreted to mean the average level of tariffs on all goods for the entire customs union before and after formation, not the average tariff on each individual product. *See* GUIDE TO GATT LAW AND PRACTICE, *supra* note 3, vol. 2, at 803.

[383] GATT Art. XXIV:5(c). The 1994 Understanding on the Interpretation of Article XXIV states that the "reasonable length of time" should exceed ten years only in exceptional cases.

[384] GATT Art. XXIV:5(b).

[385] RTAs are discussed in more detail in Chapters 46–51 of this book.

[386] *See* GUIDE TO GATT LAW AND PRACTICE, *supra* note 3, vol. 2, at 858–70.

[387] *See* Report (2003) of the Committee on Regional Trade Agreements to the General Council, WT/REG/13, ¶ 4 (2003). Of these 273 RTAs, 227 agreements were notified under GATT Article XXIV, of which 143 are still in force today; 19 agreements were notified under the Enabling Clause; and 27 were notified under GATS Article V.

trade system.[388] These observations were reiterated in 1995 in the WTO's report, *Regionalism and the World Trading System,* where it was noted that of the 69 GATT Working Parties established to assess the conformity of proposed free trade areas and customs unions with Article XXIV, only six Working Parties had reached a consensus that the proposed arrangement under review complied with Article XXIV.[389]

The ambivalence of the WTO toward RTAs is evidenced by the Singapore Ministerial Declaration where the Ministers issued the following statement regarding regional arrangements:

> We note that trade relations of WTO Members are being increasingly influenced by regional trade agreements, which have expanded vastly in number, scope and coverage. Such initiatives can promote further liberalization and may assist least-developed, developing and transition economies in integrating into the international trading system. In this context, we note the importance of existing regional arrangements involving developing and least-developed countries. The expansion and extent of regional trade agreements make it important to analyze whether the system of WTO rights and obligations as it related to regional trade agreements needs to be further defined. We reaffirm the primacy of the multilateral trading system, which includes a framework for the development of regional trade agreements; and we renew our commitment to ensure that regional trade agreements are complementary to it and consistent with its rules. In this regard, we welcome the establishment and endorse the work of the new Committee on Regional Trade Agreements. We shall continue to work through progressive liberalization in the WTO Agreement and Decisions adopted at Marrakesh, and in so doing facilitate mutually supportive processes of global and regional trade liberalization.[390]

Despite the judgment that RTAs threaten the GATT-WTO system because they pose a risk of trade and investment diversion,[391] economists, lawyers, and the WTO Secretariat itself counter that RTAs have had broadly positive effects on multilateral economic integration.[392] The picture is less clear, however, on whether RTAs have been economic building blocks and catalysts for a more integrated GATT-WTO system.

[388] *See* GATT, Trade Policies for a Better Future: Proposals for Action 41 (1985).

[389] *See* World Trade Organization, Regionalism and the World Trading System 16 (1995). The six agreements are the Southern Rhodesia-South Africa Customs Union Agreement; the El Salvador-Nicaragua Free Trade Agreement and the Agreement on the Participation of Nicaragua in the Central American Free Trade Area; the Caribbean Free Trade Agreement and the subsequent Caribbean Community and Common Market Agreement; and the Czech Republic-Slovak Republic Customs Union Agreement. For a table listing the Working Parties and decisions under Article XXIV, *see id.* at 77–87; Guide to GATT Law and Practice, *supra* note 3, vol. 2, at 849–57.

Steinberg, *Antidotes to Regionalism: Responses to Trade Diversion Effects of the North American Free Trade Agreement*, 29 Stan. J. Int'l L. 315 (1993).

B. Types of RTAs

RTAs are categorized by the extent of economic integration undertaken by the participating countries.[393] On a continuum that runs from the least economically integrated to the most economically integrated, RTAs include free trade areas, customs unions, common markets, and economic unions. In their most basic form, a free trade area eliminates barriers to trade in goods between or among its members, but the members retain all of their preexisting tariffs and other trade barriers in their trade relations with third countries. The North American Free Trade Agreement is an example of a free trade area.

A customs union, which also eliminates barriers to trade in goods between or among its members, adopts a common external tariff that all members of the customs union apply to trade from countries outside the union. The Andean Group or Pact, comprised of Bolivia, Colombia, Ecuador, Peru, and Venezuela, is an example of a customs union.[394]

A common market not only eliminates all barriers to trade in goods among the members and adopts a common external tariff, but it also permits the free movement of goods, services, people, and capital within the market. The Southern Common Market (MERCOSUR) and the European Communities are examples of common markets.

Lastly, an economic union includes all of the features of a common market, plus a common monetary and fiscal policy and a common currency for its members. The European Union ("EU") is an example of an economic union, at least for certain members.

By way of comparison, NAFTA, as a free trade area, is far less economically and socially integrated than the EU in at least four respects. First, workers cannot move freely between NAFTA Parties, unlike their EU counterparts. Second, the NAFTA Parties, unlike EU-Member States, take antidumping actions against one another. Third, the NAFTA Parties have retained their own separate tariff rates on trade from third countries, while the EU has a common external tariff. Fourth, the NAFTA countries do not have a common monetary or fiscal policy or a common currency.

The WTO includes within its definition of RTAs preferential trading arrangements between or among developed and developing countries, and between or among developing countries *inter se*. The ASEAN Free Trade Area is an example of a preferential trade arrangement among developing countries *inter se*.

From the standpoint of the volume of trade affected, by far the most important departures from the unconditional MFN obligation are GATT Article XXIV and GATS Article V. These two parallel provisions authorize RTAs that liberalize trade in goods and services, respectively. Historically, Article XXIV may be the one provision in the GATT-WTO system most honored in the breach. By one account, only six of eighty RTAs surveyed comply with GATT rules.[395]

Without an exception to unconditional MFN commitment, every free trade area and customs union would violate the MFN obligation to the extent that more favorable treatment is accorded to imports from member countries than to imports from non-member countries. Why does GATT permit this departure from the MFN principle? The economic rationale for this MFN exception—reiterated in the Uruguay Round Understanding on the Interpretation of Article XXIV—is that RTAs can be trade creating. As long as they

[393] For a discussion of the economic distinctions between free trade areas and customs unions, *see* FREDERICK M. ABBOTT, LAW AND POLICY OF REGIONAL INTEGRATION: THE NAFTA AND WESTERN HEMISPHERIC INTEGRATION IN THE WORLD TRADE ORGANIZATION SYSTEM 172–73 (1995).

[394] *Agreement on Andean Subregional Integration, May 26, 1969, Bolivia-Colombia-Chile-Ecuador-Peru*, *reprinted in* 8 INT'L LEGAL MATERIALS 910 (1969).

[395] *See Regional Trade Blocs Are In; Global Group Draws Yawns,* CHRISTIAN SCI. MONITOR, May 1, 1996, at 7.

are trade creating, then they are considered desirable. If they lead to trade diversion, however, then they are cause for concern.

Article XXIV:4 memorializes the aspiration that RTAs be instruments of trade creation, not trade diversion:

> The contracting parties recognize the desirability of increasing freedom of trade by the development, through voluntary agreements, of closer integration between the economies of the countries party to such agreements. They also recognize that the purpose of a customs union or of a free-trade area should be to facilitate trade between the constituent territories and not to raise barriers to the trade of other contracting parties with such territories.[396]

In other words, the GATT rules on the formation of customs unions and free trade areas cannot be used to justify the imposition of unnecessary trade restrictions on other countries in violation of other GATT rules.[397] Professor Kenneth Dam explains:

> [C]ustoms unions and free-trade areas are excepted from the most-favored-nation clause . . . [because], although they are technically incompatible with the [MFN] principle and are undeniably discriminatory, such arrangements are, or at least once were, thought to constitute a movement toward the GATT goal of freer trade.[398]

Professor Dam identifies economic considerations as a partial explanation for Article XXIV's existence. Political considerations also explain why countries have tolerated the lax observance of Article XXIV's rules on the formation of free trade areas and customs unions.

C. The Uruguay Round Understanding on Article XXIV

In an effort to reinvigorate the legal disciplines of Article XXIV, the 1994 Understanding on the Interpretation of Article XXIV in the Uruguay Round provides in its preamble that WTO Members are

> *Convinced* also of the need to reinforce the effectiveness of the role of the Council for Trade in Goods in reviewing agreements notified under Article XXIV, by clarifying the criteria and procedures for the assessment of new or enlarged agreements, and improving the transparency of all Article XXIV agreements[.][399]

The Understanding answers a number of unresolved issues concerning the legal requirements for the formation of customs unions and free trade areas. Most importantly, the Understanding clarifies Article XXIV's more nagging ambiguities. However, it does not by any means set a new course for increased multilateralism and away from regionalism.

First, the Understanding provides generally that in order to comply with Article XXIV, RTAs must comply with paragraphs 5, 6, 7, and 8 of Article XXIV.[400]

Second, the Understanding interprets the requirement that "substantially all the trade" between the members be covered. Earlier proposals that coverage of "substantially all the trade" is deemed to be achieved when the volume of liberalized trade reaches eighty or ninety percent of total trade had been rejected by the GATT CONTRACTING PARTIES for two reasons.[401] The first reason was that the term "substantially all the trade" has a qualitative meaning. Qualitatively, if any sector, such as agriculture, was excluded from the free trade

[396] *See also* GUIDE TO GATT LAW AND PRACTICE, *supra* note 3, vol. 2, at 796–97.
[397] *See* MCGOVERN, *supra* note 14, § 8.41 (1996).
[398] Dam, *supra* note 3, at 19.
[399] *Understanding on the Interpretation of Article XXIV of the General Agreement on Tariffs and Trade 1994*, Preamble.
[400] *See Understanding on the Interpretation of Article XXIV*, ¶ 1.
[401] *See* GUIDE TO GATT LAW AND PRACTICE, *supra* note 3, vol. 2, at 824–25.

agreement, then it could not satisfy the "substantially all the trade" requirement. The second reason is that, quantitatively, trade barriers left intact after formation of a customs union or free trade area could be so high that one hundred percent of all observable trade could in fact be liberalized trade, but no account would be taken of the trade that did not occur because of prohibitively high trade barriers that were not dismantled.[402] The preamble to Understanding states that "the contribution [to the expansion of world trade] is increased if the elimination between the constituent territories of duties and other restrictive regulations of commerce extends to all trade, and diminished if any major sector or trade is excluded."

Third, the 1994 Understanding interprets the Article XXIV requirement that the general incidence of duties after formation should not on the whole be higher than before formation. The Understanding states that this assessment is to be based on weighted average tariff rates and duties collected during a representative period on a tariff-line basis for each country of origin.[403] The methodology used by the WTO Secretariat in computing the weighted average tariff rates and duties collected is the same as that used in assessing duty-rate offers in the Uruguay Round.[404] The duties taken into consideration are the *applied* rates of duty, *i.e.*, all duty rates, not just bound duty rates.[405]

In the case of regulations that are arguably more restrictive than those in effect prior to the formation of the customs union, the Understanding recognizes the difficulty of quantifying the impact of such regulations and provides that such regulations may have to be assessed on a case-by-case basis.[406]

Fourth, the Understanding addresses the issue of customs unions and the common external tariff. If the resulting common external tariff on non-member country goods after the formation of the union is increased from the preexisting bound duty rate on an item, adversely affected countries are entitled to compensation, "due account [being] taken of the compensation already afforded by the reductions brought about in the corresponding duty of the other constituents of the union."[407] The Understanding in this respect is thus a reiteration of the Article XXIV:6 requirement that in determining the compensation non-member countries are entitled to when a WTO Member joins a customs union and adopts the common external tariff, the Members take into account the fact that when that WTO Member joins the customs union, it may also lower its tariffs on specific products, thereby offsetting the adverse trade effects of tariff increases on other products under the customs union's common external tariff. For example, if before joining a customs union Country A's duty rate on steel wire rod is 5 percent *ad valorem*, but after joining the customs union its duty rate increases to 7.5 percent *ad valorem* when it adopts the common external tariff, non-member countries are entitled to compensatory adjustments on the 2.5 percent duty rate increase, all other things being equal. However, all other things seldom are equal, that is, Country A will certainly have high duties on other products of export interest to non-member countries that will be lowered when Country A adopts the common external tariff. The Understanding contemplates that credit will be given if Country A's duty rates on other items decrease by a corresponding amount after joining the union.

[406] *See id.*
[407] *See id.*, ¶ 6.

Examples of Article XXIV:6 compensation negotiations include the enlargement of the EC with the accessions of Spain and Portugal in 1986, and of Austria, Finland, and Sweden in 1995. The United States sought compensation for anticipated decreases in exports of certain agricultural products after Spain and Portugal adopted the common external tariff on agricultural products. The EC responded that any such losses would be more than offset by increased sales of U.S. computer products to those two countries, whose pre-accession duty rates on such goods were higher than the common external tariff. In the end, the United States and the EC compromised with the EC promising to import a minimum dollar volume of U.S. agricultural products. In the case of the accessions of Austria, Finland, and Sweden to the EU in 1995, the EU cut tariffs on a number of products exported by the United States to the EU, including semiconductors, agricultural products, and chemicals, estimated to be worth more than $4 billion in savings to U.S. exporters over ten years.[408] The EU-15 became the EU-25 in May 2004, and compensation negotiations between the United States and the EU were Scheduled to begin in Fall 2004.

The Understanding notes that if agreement on acceptable compensation cannot be reached in a reasonable period of time, the customs union may go forward with the modification of its tariffs. In that event, countries adversely affected by those changes are free to withdraw substantially equivalent concessions in accordance with Article XXVIII.

Finally, the 1994 Uruguay Round Understanding calls for a biennial report by all RTAs on their operation.[409] To monitor this process, the Understanding directs the establishment of a Committee on Regional Trade Agreements to review RTAs to ensure their compliance with both the letter and spirit of Article XXIV.[410]

At the Doha Ministerial Conference, the Members agreed to "negotiations aimed at clarifying and improving disciplines and procedures under the existing WTO provisions applying to regional trade agreements."[411]

VII. Institutional Provisions

The subject of institutional provisions is fully addressed in Chapter 4. A few of the more important provisions will be briefly highlighted here.

Decision-making within the WTO is governed by provisions contained in the Agreement Establishing the WTO. The WTO Agreement carries forward the GATT rules and adds a few new voting rules of its own. Article IX of the WTO Agreement continues the GATT practice of decision-making by consensus.[412] Where consensus cannot be reached, a matter is decided by voting. It is noteworthy, however, that under GATT 1947 there

[408] *See USTR Announces Signing of Accords With EU on Enlargement Compensation, WTO Grain Dispute*, 13 Int'l Trade Rep. (BNA) 1242 (1996).

[409] *See id.* ¶ 11.

[410] *See id*. ¶¶ 7–11.

[411] WTO Ministerial Conference, Fourth Session, 9–14 November 2001, *Ministerial Declaration adopted on 14 November 2001*, WR/MIN/(01)/DEC/W/1, ¶ 29(2001).

[412] Footnote 1 of Article IX:1 explains:

> The body concerned shall be deemed to have decided by consensus on a matter submitted for its consideration, if no Member, present at the meeting when the decision is taken, formally objects to the proposed decision.

Article XVI of the WTO Agreement further provides that "the WTO shall be guided by the decisions, procedures and customary practices followed by the contracting parties to GATT 1947 and the bodies established in the framework of GATT 1947."*See* Mary E. Footer, *The Role of Consensus in GATT/WTO Decision-Making,* 17 Nw. J. Int'l L. & Bus. 653 (1996–97).

had not been a vote on a policy matter (other than waivers and terms of accession) since 1959.[413] Voting in the WTO follows the UN formula of one-member, one-vote (the EU holds a block of twenty-five votes, one for each of its member states). If decisions are voted upon, then they generally are taken by a majority of votes cast in the Ministerial Conference and the General Council. Exceptions to the simple majority rule exist for interpretations, waivers, amendments, and the adoption of panel reports by the Dispute Settlement Body. These matters essentially concern issues of substance as opposed to procedure.

Requests for waivers from the obligations of an MTA must be directed first to the Council responsible for the MTA in issue. Waivers of an obligation under an MTA may be granted only in exceptional circumstances, only by the Ministerial Conference, and only by a three-fourths majority vote of the Members.[414] Unless otherwise extended, all waivers granted under GATT 1947 expired on their termination date or at the end of 1996, whichever was earlier.[415] All waivers granted for more than one year are reviewed annually by the General Council to determine whether the requisite "exceptional circumstances" continue to exist. There were 115 waivers granted under GATT 1947.[416] Only two requests for a waiver were ever denied.[417] Among the waivers that have been granted under GATT 1947 and GATT 1994 are the waiver for the U.S. Caribbean Basin Economic Recovery Act of 1983,[418] the waiver granted to the European Communities in 1994 for the Fourth Lomé Convention,[419] the waiver granted to developing countries in 1971 for the Generalized System of Preferences,[420] and the so-called "conflict diamonds" waiver granted to eleven WTO members in May 2003.[421] Through May 2003, a total of 139 decisions granting waivers or extensions of waivers have been reached under Annex 1 of the WTO Agreement.[422]

GATT Article XXXV, Non-Application of the Agreement Between Particular Contracting Parties, has been superceded by Article XIII of the Agreement Establishing the WTO. Pursuant to Article XIII:1 of the WTO Agreement, if a WTO Member does not consent to application of GATT 1994 between itself and another Member at the time either joins the WTO, then the WTO Agreement and the MTAs will not apply as between those Members. This opt-out provision is qualified for original WTO Members, however,

by the requirement that (1) original Members must have invoked the non-application provision of Article XXXV of GATT 1947, and (2) the non-application still is effective at the time the WTO Agreement entered into force for that Member.[423]

Countries that do not qualify as original WTO Members, i.e., countries that were not GATT 1947 contracting parties at the time GATT 1994 entered into force, must notify the Ministerial Conference of such non-application before the terms of accession have been approved by the Conference.[424]

The provisions of the WTO Agreement relating to non-application differ from the GATT predecessor rules in one important respect. The latter prohibited a contracting party from engaging in tariff negotiations with an applicant if it intended to invoke non-application at the time the new applicant acceded to GATT. Under Article XIII of the WTO Agreement, a WTO Member may enter into such negotiations, thereby ensuring that the acceding country will apply the negotiated tariff rates to the Member's imports if at some point in the future the Member decides to apply GATT 1994 to the acceding country.

As one commentator has observed, GATT 1994 continues the paradox in international law that two countries can simultaneously be Members of the same international convention and yet not have that convention apply to them in their relations *inter se*.[425]

VIII. Special Provisions for Developing Countries

A. Article XVIII, Governmental Assistance to Economic Development

The GATT Contracting Parties took steps in 1955 to more fully integrate developing countries into the GATT system by substantially redrafting Article XVIII, Governmental Assistance to Economic Development. The current text of Article XVIII, which took effect in 1957, is derived from two 1955 GATT Working Party reports, the Report of the Review Working Party on Quantitative Restrictions,[426] and the Report of the Review Working Party on Schedules and Customs Administration.[427]

The Report of the Review Working Party on Quantitative Restrictions summarized the new direction of the redrafted Article XVIII in the following terms:

> The general concept of the new Article is that economic development is consistent with the objectives of the General Agreement and that the raising of the general standard of living of the underdeveloped countries which should be the result of economic development will facilitate the attainment of the objectives of the Agreement. In that sense, the new text represents a new and more positive approach to the problem of economic development with the obligations undertaken under the General Agreement regarding the conduct of commercial policy.[428]

This general concept is given expression in Article XVIII's preamble and four sections.[429] Section A authorizes developing countries whose economies only can support a low

[429] *See generally* Guide to GATT Law and Practice, *supra* note 3, vol. 1, at 488–511.

standard of living and are in the early stages of development to modify or withdraw tariff concessions in order to promote the establishment of an industry. Section B authorizes the imposition of import quotas for balance-of-payment purposes. Section C authorizes resort to certain GATT-inconsistent measures as necessary to promote the establishment of a particular industry. Section D permits developing countries that do not qualify as countries with a "low standard of living" to nevertheless derogate from GATT for the purpose of establishing a particular industry with the permission of other GATT contracting parties. GATT Article XVIII is explored more fully in the chapter on developing countries.[430]

B. Articles XXXVI–XXXVIII, Trade and Development

In 1957, the GATT Contracting Parties appointed a panel of experts to report on trends in international trade, "in particular the failure of the trade of less developed countries to develop as rapidly as that of industrialized countries, excessive short-term fluctuations in prices of primary products, and widespread resort to agricultural protection."[431] The report, *Trends in International Trade*, also known as the "Haberler Report" after Gottfried Haberler, the panel's chairman, galvanized the Contracting Parties to examine ways in which developing countries could achieve greater access for their exports in world markets.[432] Part IV of GATT, entitled Trade and Development, was added to GATT by the Protocol Amending the General Agreement on Tariffs and Trade to Introduce a Part IV on Trade and Development,[433] and became effective in 1966. It is in no small measure the end product of the 1958 Haberler Report, as well as a response to the restiveness of developing countries that were turning to alternative trade policy fora, such as UNCTAD, in the 1960s.[434]

Part IV consists of three Articles, Articles XXXVI–XXXVIII. Although Part IV makes these three new Articles an integral component of a binding legal instrument, i.e., GATT, they are drafted in language that is mainly precatory, not compulsory, in tenor. In other words, developed countries made few legal commitments to developing countries in Part IV.

In brief, Article XXXVI is a statement of principles and objectives. Their thrust is greater market access for the products of developing countries. Article XXXVII states the commitments the Contracting Parties agree to make to ensure developing countries do in fact attain increased access to world markets. Article XXXVIII provides for joint action by the Contracting Parties. GATT Part IV is discussed fully in the chapter on developing countries.

Further expanding on special and differential treatment for developing was the 1971 waiver granted under the Generalized System of Preferences (GSP). Under this waiver, developed countries permitted, but not required, to give imports from developing countries preferential tariff treatment without regard to the MFN obligation. The waiver was replaced by the Tokyo Round Enabling Clause adopted in 1979. The GSP is discussed in the chapter on developing countries.[435]

IX. Summary and Appraisal

The underlying economic premise of the entire GATT-WTO system is open or liberal trade. One commentator has explained open trade (sometimes referred to as liberal trade) in the following terms:

> In a liberal economic system, government does not thwart private parties in their attempts to enter voluntary transactions, and taxes are stable, predictable, and non-prohibitive. The General Agreement on Tariffs and Trade (GATT) is liberal in this sense . . . . Interventions [by governments] in liberal exchange across frontiers to make trade fair may be the political price of liberalism, but such interventions are themselves its antithesis.[436]

Why open trade? Simply stated, liberal trade policies that observe the law of comparative advantage permit the unrestricted flow of goods and services across national borders, thereby increasing total world wealth. How does GATT achieve its goal of promoting liberal trade? It does so primarily through five core legal commitments or five pillars of GATT: (1) the unconditional most-favored-nation obligation that prohibits discrimination between and among WTO Members in their trade laws and tariffs, (2) the national treatment obligation that requires that imports have equality of competitive opportunity vis-à-vis the like domestic product insofar as internal taxes and other domestic regulations are concerned, (3) binding commitments to reduce tariffs on imports, (4) the elimination of quotas on imports and exports, and (5) transparency of all national laws and regulations governing international trade.

While not solely responsible for the liberalization of international trade, the rules-based GATT-WTO system deserves much of the credit for the increased integration of national economies into a world economy. GATT 1994 and the liberal trade philosophy it embodies weathered a series of protectionist storms reasonably well over its fifty-year legacy. Even though GATT from its inception never was intended to be a permanent agreement or an international trade organization, against extraordinary odds it acquitted itself reasonably well in both roles. The success of GATT in promoting trade liberalization is indisputable.

X. The Future

At the conclusion of the fourth Ministerial Conference in Doha, Qatar in December 2001, the WTO Members launched what has been informally called the "Development Round" of multilateral trade negotiations. The primary focus of this Round is on developing countries and their capacity to implement the commitments that they made in the Uruguay Round. Other agenda items included the issues of whether agreements on competition policy and foreign investment should be negotiated under WTO auspices. At the third Ministerial Conference held in Seattle in in December 1999, several WTO members (including the EU, Japan, and Korea), academics, and other commentators urged that the WTO include on its agenda negotiations leading to multilateral rules on investment and antitrust.[437] As GATT 1994 has progressively removed or lowered

SCHERER, COMPETITION

government barriers to trade, the focus of policymakers has shifted to private barriers to market access that could undermine the progress of the GATT-WTO system. To what extent do private anti-competitive practices, as opposed to government barriers, block access to foreign markets? If they do inhibit market access to a significant extent, what should policymakers' response be? The best method for removing these private barriers to market access, some argue, is through vigorous application of national competition laws.[438] National competition legislation directed at private anti-competitive conduct, the argument runs, is a natural complement to a set of international rules regulating government barriers to market access. Others counter that a more appropriate response is to negotiate a multilateral agreement on binding rules and principles on competition policy. The proponents of a global response look to the World Trade Organization as the forum for negotiating, administering, and enforcing these multilateral rules and principles. The question pending before the WTO is whether the mutually-reinforcing roles that international trade and competition policy play in opening markets to foreign goods, services, and capital should be integrated into a WTO multilateral agreement on competition policy. In June 1999, the OECD sponsored a conference attended by 200 trade and competition officials, academics, and business and labor groups from the 29 OECD countries and 30 non-member countries. No consensus on the inclusion of competition policy in the next round of WTO multilateral trade negotiations emerged;[439] on the contrary, in August 2004 the issues of trade and investment and trade and competition policy were dropped from the Doha Round negotiations.[440] In short, building a consensus for a multilateral agreement on competition policy continues to be a work in progress.[441]

The World Trade Organization has been buffeted by a storm of criticism from almost every conceivable front. The 1999 street demonstrations in Seattle during the WTO's third ministerial conference showed the disdain of many groups and organizations of every stripe and persuasion, from environmental, human rights, labor, to consumer, for the WTO and their disaffection in general with globalization. The demonstrations also proved that the WTO and GATT 1994 are poorly understood, if they are understood at all. Broadly, non-governmental organizations have criticized the WTO for being undemocratic, closed, and secretive. Specifically, environmental and labor rights groups have condemned the WTO as being callous to environmental and labor rights issues, respectively. Consumer groups have blasted the WTO for being insensitive to food safety issues.

POLICIES FOR AN INTEGRATED WORLD ECONOMY (1994); Diane P. Wood, *The Internationalization of Antitrust Law: Options for the Future,* 44 DEPAUL L. REV. 1289 (1995); Mitsui Matsushita, *Competition Law and Policy in the Context of the WTO System*, 44 DEPAUL L. REV. 1097 (1995); Eleanor M. Fox, *Competition Law and the Agenda for the WTO: Forging the Links of Competition and Trade*, 4 PAC. RIM L. & POL'Y J. 1 (1995).

[438] The term "competition laws" refers to that body of national legislation dealing with anti-competitive conduct in four broad areas: (1) horizontal restraints, e.g., agreements among competing firms to fix prices; (2) vertical restraints, e.g., agreements between a manufacturer and distributor on resale price maintenance; (3) abuse of a dominant position or, as described under U.S. antitrust law, unlawful monopolization; and (4) mergers and acquisitions. The term "competition policy" refers to the goals that competition law is to designed to achieve, that is, competition law is the means to accomplishing the ends of competition policy. Competition policy thus informs the drafting, implementation, and enforcement of competition law.

[441] For an analysis of this question, *see* KEVIN KENNEDY, COMPETITION LAW AND THE WORLD TRADE ORGANIZATION: THE LIMITS OF MULTILATERALISM (2001). The issue is discussed further in Chapter 57 of this book.

The debacle at the WTO's Seattle ministerial meeting in December 1999 was in part fueled by myths and misinformation about the WTO, free trade, and globalization. It is true that accelerated trade liberalization worldwide has led to the increased globalization of business and the interdependence of national economies. Environmental fear-mongers proclaim that we are on the brink of a global environmental collapse, thanks in large part to free trade. Labor unions condemn the labor rights record of developing countries. But many environmental and labor rights groups view the world as a zero-sum game: to the extent the WTO succeeds at promoting globalization, then in equal measure do the environment and labor rights suffer. One can only pause and wonder whether they silently fear global economic interdependence and wish *sub rosa* for autarchy. In the words of former presidential economic adviser Murray Weidenbaum:

> If the full policy agenda of the anti-global activists were adopted, the long-run effect would be for the United States and other industrialized nations to lose the benefits of the specialization of labor, and suffer severe declines in standards of living. Ironically, the economic costs would soon be translated into environmental costs. Wealthier countries can afford to devote more resources to achieving a cleaner environment, and they do so. Poorer countries do far less to clean up the environment.[442]

Unilateralists/isolationists within national legislatures (here, read "some members of the U.S. Congress") view the WTO as a threat because to them it represents a loss of national sovereignty. "Dismantle the WTO" is the rallying cry for many of its critics. I have found most of the criticisms of the WTO to be the product of misinformation, distortion, and a lack of understanding of what the various WTO agreements actually provide. On the other side are the WTO's supporters who sometimes fall into the trap of viewing the WTO as a panacea that should have its portfolio enlarged to include multilateral agreements on everything tangentially related to trade, including labor, the environment, foreign direct investment, and competition policy.

What the critics fail to fully appreciate is that the WTO is not a top-down, supranational organization that directs nations what to do. Rather, it is a bottom-up forum where member governments meet and, occasionally, reach agreement on the conduct of world trade. The main attraction of the WTO for many non-trade groups is the WTO's binding dispute settlement mechanism. When environmentalists criticize the WTO, they speak with the voice of the green-eyed monster of envy. The WTO's dispute settlement mechanism is coveted by environmental and labor rights groups that have been unsuccessful in creating their own parallel international dispute settlement body. Because they have been unsuccessful in co-opting the WTO, they now want to trash it.

A December 1999 article in The Economist asked rhetorically, "Who needs the WTO?"[443] The article makes the following bold but highly defensible claim that "[f]or five decades the world's multilateral trade-liberalising machinery—known first as the General Agreement on Tariffs and Trade (GATT) and more recently as the World Trade Organisation (WTO)—has, in all likelihood, done more to attack global poverty and advance living standards right across the planet than has any other man-made device."[444] In answer to the question, "Who needs the WTO?" the answer is, of course, everyone. By increasing people's economic freedom, the WTO has enhanced people's political freedom and made most of them economically better off than they would have been in the absence of such an organization.

I. Introduction

Governments intervene in the agricultural sector for a number of reasons, including the desire to provide adequate food for the population, to achieve self-sufficiency and to promote rural welfare. Concerns of this sort are not present in any other trade sector. Although at least in theory the GATT covered trade in agricultural products, the Contracting Parties were unwilling to subject their domestic agricultural policies to the same disciplines as industrial products. As a result, distortions, in the form of high tariff and non-tariff barriers, characterized the international market for agricultural goods. In addition, many developed countries, in particular the United States and the European Community ("EC"),[1] have given huge amounts of support to their farmers, and surplus production generated by this support has been disposed of on the international market with the help of subsidies.

Despite efforts in the various GATT trade rounds to reduce these distortions, success was not achieved until the Uruguay Round. However, although most of the commitments on market access, domestic support and export subsidies in the Uruguay Round Agreement on Agriculture had been implemented at the time of writing (August, 2004), agricultural trade is still highly restricted. The principal achievement of the Agreement was to create a framework for the further systematic liberalization of trade in agricultural products. Such liberalization may result from the recently-launched Doha Round, which is discussed at the end of this chapter. Before that, the Part II of this chapter examines the regulation of agricultural trade under the GATT, to provide a historical context for the Uruguay Agreement. Part III analyses the Uruguay Round Agreement in detail, and discusses the dispute resolution cases that have arisen under the Agreement.

II. Agriculture under the GATT

A. Introduction

The failure of the U.S. Congress to ratify the Havana Charter for World Trade, which would have established an International Trade Organization ("ITO"), had a profound effect on the post-war regulation of international trade in agricultural products.[2] What was salvaged from the Havana Charter was a series of rules on commercial policy that would become the General Agreement on Tariffs and Trade ("GATT"). The Charter chapters dealing with employment and economic activity, economic development and reconstruction, and international commodity agreements did not come into force. Whereas the Charter aimed to establish a comprehensive framework for the regulation of international trade, the primary focus of the GATT was the reduction of tariffs and other barriers to trade.

Only one of the provisions of the GATT, Article XI:2, would specifically refer to agriculture, while Article XVI referred to primary commodities, which include agricultural products. Differences between Article 25 of the Havana Charter and GATT Article XVI on the use of subsidies would not be reconciled until the 1955 GATT Review Session.[3] By that time, serious damage had been done to the credibility of the GATT. The bifurcation of treatment in international trade between industrial and agricultural products, occasioned

[1] Although the reference to the European Community is only legally correct since the Treaty of Maastricht (1993), it is used throughout this chapter for the sake of convenience.

[2] For a discussion of the Havana Charter, *see* Claire Wilcox, A Charter for World Trade (1949), and Richard Gardner, Sterling Dollar Diplomacy in the Current Perspective (1980).

[3] *See* Robert Hudec, The GATT Legal System and World Trade Diplomacy 15(1975).

by the failure of the ITO and events in the early history of the GATT, has only recently begun to be eliminated.

Attempts at the 1955 Review Session to reactivate Chapter VI of the Havana Charter on commodity agreements through the proposed Special Agreement on Commodity Arrangements ("SACA") were unsuccessful. The SACA would have operated alongside, rather than within, the GATT, but the exact nature of the legal relationship that would have existed between the two bodies was unclear. The SACA would have provided an opportunity for Contracting Parties to submit problems arising out of trade in primary commodities, and, if such problems could be alleviated by joint international action, a mechanism to negotiate such action. Although some Contracting Parties began negotiations on the SACA, the lack of support from the United States, which considered that existing mechanisms were sufficient to deal with commodity issues, was the crucial factor in its demise. In the end, those Contracting Parties who had supported the SACA had to be content with a resolution that promised to review the trends and developments of commodity trade within a specially established GATT committee.[4] Resolution of the problems of international commodity trade would eventually be addressed by the United Nations Conference on Trade and Development.[5]

This part of the chapter seeks to outline the impact of the establishment of the GATT on the international regulation of agricultural trade. It examines the attitudes of the Contracting Parties towards such regulation and the influence of agricultural trade on the implementation of domestic policy. It also discusses multilateral attempts to promote trade liberalization and examines agricultural trade disputes between the Contracting Parties. The discussion illustrates the extensive problems that the Uruguay Round Agreement on Agriculture has had, and continues to have, to contend with.

B. The Attitude of the Contracting Parties

1. The United States

The position of the United States illustrates the extent of the difficulties facing the GATT in its early days. Although the United States negotiators generally espoused the principles of free trade during the drafting of the GATT, they insisted that despite the general ban on quantitative restrictions contained in Article XI, a provision be included that permitted the retention of quantitative import restrictions when necessary to enforce domestic agricultural programs.[6] This provision, Article XI:2(c), legalized the retention of Section 22 of the U.S. Agricultural Adjustment Act of 1933, which allowed quotas to be imposed whenever imports threatened to impair domestic support programs. This Act was amended in 1951 to provide that no international agreement entered into by the United States was to be applied in a manner inconsistent with the requirements of Section 22. The United States requested a waiver under Article XXV:5 to eliminate any possible inconsistency between its obligations under the GATT and those under the amended Section 22.[7]

[4] BISD 5th Supp. 26 and 87 (1957). The reports of this Committee appear at BISD 7th Supp. 42 (1959), 8th Supp. 76 (1960) and 10th Supp. 83 (1962).

[5] For discussion of UNCTAD efforts to promote international commodity trade, *see for example*, KABIR KHAN, THE LAW AND ORGANIZATION OF INTERNATIONAL COMMODITY AGREEMENTS (1982).

[6] For example, import restrictions could be seen as necessary to enforce a price support system in order to prevent large quantities of imports from undermining the system.

[7] BISD 3rd Supp. 32 and 141(1955). Prior to the waiver, the GATT had authorised the Netherlands to retaliate against the United States with respect to Section 22 restrictions on dairy products. *See* Decision of the Contracting Parties, *United States—Import Restrictions on Dairy Products, Complaints by the Netherlands and Denmark*, BISD 1st Supp. 32, 62–64 (1953) and BISD 2nd Supp. 16 (1954).

The amended Section 22 sought to assert the primacy of the U.S. domestic agricultural program over the GATT, especially when that program required the imposition of import restrictions.

In the Working Party established to consider the waiver request, the U.S. representative argued that the nature of U.S. domestic agricultural support programs meant that unless restricted, imports would be attracted in such large quantities as to adversely affect these programs. The U.S. representative successfully argued against the imposition of various restrictions on the waiver, for example, that it should be defined in scope and limited to those products that were actually under restriction at the time or that the restrictions applied under the waiver should be eliminated after a specified date.[8] By rejecting such restrictions and by granting the U.S. request for an open-ended waiver, the Contracting Parties dealt a serious blow to the potential application of the GATT to the agricultural policies of other Contracting Parties. As one commentator noted:

> At a time when other exporters were highly agitated about agricultural trade restrictions, the architect of the trading system and the custodian of liberalism was itself giving primacy to national interests and demanding sanction for the use of a barrier which the agreement had set out to control and eliminate, namely quotas.[9]

The only obligation imposed on the United States was that it should submit periodic reports on the application of the waiver, and these simply served to underline the extent of the damage that had been inflicted on the GATT.[10] Besides creating a situation where the rights and obligations of the Contracting Parties in this area had become unbalanced, one review of the waiver also noted that it was frustrating the process of liberalizing international agricultural trade.[11]

The example afforded by the U.S. waiver would not be lost on other Contracting Parties, including the EC as it established its Common Agricultural Policy ("CAP") in the 1960s.

2. The European Community and the Common Agricultural Policy

The GATT Working Party established in 1956 to examine the compatibility of the Treaty of Rome establishing the EC with Article XXIV of the GATT (covering regional arrangements) expressed concern over the provisions of the Treaty dealing with agriculture. Several factors contributed to the concern, notably, the absence of a precise plan showing how these provisions would be applied, as well as the wide area of discretion left to the EC institutions in this area. The major concern was that the proposed policy would lead to restrictions on the level of agricultural exports to the EC from other Contracting Parties. The Working Party considered that ". . . the particular measures envisaged by the Treaty

[8] BISD 3rd Supp. 141. A document attached to the deliberations of the Working Party noted the dates on which initial controls were to be imposed on the import of manufactured dairy products (July 1, 1953), oats (December 23, 1953), rye (April 1, 1954) and barley (October 1, 1954).

[9] Thorald K. Warley, *Western Trade in Agricultural Products,* in INTERNATIONAL ECONOMIC RELATIONS OF THE WESTERN WORLD 1959–71, VOLUME 1, POLITICS AND TRADE 287, 347 (Andrew Shonfield ed. 1976).

[10] As part of the decision it was recognised that: "The United States will remove or relax each restriction permitted under this waiver as soon as it finds that the circumstances requiring such restriction no longer exist or have changed so as no longer to require its imposition in its existing form." *Supra* note 7, p. 34 (¶ 5 of the decision). Section 22 restrictions were still in place at the end of the Uruguay Round. For further discussion of the waiver *see* George Welch, *United States Agricultural Import Quotas and the General Agreement on Tariffs and Trade,* 1 FLORIDA INT'L L.J. 209 (1986).

[11] BISD 8th Supp. 173, 177 (1960): "Governments of other countries were under constant pressure from their producers to follow protectionist policies and even small progress towards the removal by the United States of restrictions would be an encouragement to other countries to take similar action."

carried a strong presumption of increased external barriers and a substitution of new internal barriers in place of existing tariffs and other measures."[12] However, the Working Party Report reached no firm conclusions. It merely recommended that the GATT should set up suitable machinery "to follow and consider together with the Six" the measures to be taken in the implementation of the CAP and the relationship between these measures and the relevant provisions of the GATT. The Working Party Report failed to influence the development of the CAP.

The CAP involved the introduction of common organizations of the market for various products that were based on three core principles, common prices, common financing, and Community preference. Not surprisingly, the establishment within the CAP of a common cereals price that was closer to the existing German price level rather than the more efficient French level led to over-production and excessive consumer prices.[13] Given the importance of the common cereals price to other common organizations of the market, problems soon began to emerge in the CAP. By ignoring the recommendations of the Haberler Report (discussed in the next section) and basing its policy on interventionism and external protection, the CAP became a major source of conflict between the EC and other Contracting Parties.[14] The operation of the EC's variable levy system, which sought to insulate domestic producers from the impact of price changes on the international market but which was also a cause of instability in that market, was of particular concern.[15] Attempts within the GATT to challenge the consistency of the system with the GATT were to be unsuccessful.[16] Coupled with the U.S. waiver, the outlook for international trade in agricultural products was not promising.

C. The Haberler Report

A wider attempt to influence the agricultural policies of all Contracting Parties was made in the agricultural section of the 1958 report of a Panel of Experts established to consider trends in international trade, including agricultural trade. The report, best known after its Chairman as the Haberler Report, recognized that the domestic agricultural policies of the Contracting Parties were major factors in restraining the growth of international

[12] BISD 6th Supp. 71, 88 (1958).

[13] This had been predicted by GATT Committee II, which had been set up in 1958 to consider the agricultural aspects of the Haberler Report, discussed in the next section.

[14] For example, the United States filed complaints against import restrictions maintained by France. *French Import Restrictions*, BISD 11th Supp. 55 (1963). The complaint resulted in a partial liberalization in 1962, which was completed in 1972. A Panel was also requested by both the United States and the EC to establish the level of compensation for the United States arising out of the withdrawal of tariff concessions by the EC on poultry. *US/EEC Negotiation on Poultry*, BISD 12th Supp. 65 (1964). On the latter *see* Herman Walker, *Dispute Settlement: The Chicken War*, 58 American Journal of International Law 671 (1964).

[15] In the case of the common organisation of the market in cereals, for example, a threshold price was established so that the price of an imported product would be equal to that of the target price, which was the price it was hoped that producers would be able to obtain on the internal market. In essence the variable levy covers the difference between the world price and the internal Community price, ensuring that imports could never undercut domestic products. For further discussion see Thomas Grennes, *Economic Interdependence and the Variability of Tariffs,* 14 J. World Trade Law 242 (1980); Gary Sampson and Richard Snape, *Effects of the EEC's Variable Import Levies,* 88 J. Pol. Econ. 1026 (1980).

[16] See for example, Uruguay's complaint against fifteen developed countries, which was later amended to include a request for a ruling on the GATT compatibility of the variable levy system and the CAP, BISD 11th Supp. 95 (1963) and follow-up reports, BISD 13th Supp. 35 and 45 (1965). The Panel concluded that the issue of the legality of the CAP has not been properly raised and that it was "not appropriate" to rule on the legality of the variable levy system.

agricultural trade.[17] Summarizing the current state of international trade in agricultural products, the report noted:

> . . . whether or not agricultural protectionism has increased in the highly developed countries, there are two incontrovertible facts. First, agricultural protectionism exists at a high level in the most industrialised countries; and second, the development of production and consumption of agricultural production in such countries has been such as to make net agricultural imports into these countries more and more marginal in relation to their total domestic production and consumption of such products.[18]

Having identified the aim of these domestic policies as being stabilization and/or protection, the Report went on to urge Contracting Parties to give preference to policies based on a system of deficiency payments rather than intervention.[19] The advantages of such an approach would be the emphasis given to income support under the deficiency payments scheme rather than price support under the intervention approach. This would encourage greater responsiveness by producers to market signals and reduce the risk of over-production. External protection was identified as a factor leading to instability in international trade.[20]

Although the recommendations of the Report were not adopted, its publication led to the establishment of various committees within the GATT. A dispute arose as to the terms of reference of Committee II, which was established to consider the agricultural aspects of the report.[21] Some members of the Committee considered the GATT to be a code of rules of commercial policy, while others considered it a mechanism to safeguard the effectiveness of mutually-agreed tariff concessions. This dispute reflected differences of opinion as to the extent of the possible impact of the GATT on domestic agricultural policies but it did not prevent the Committee from reaching a series of conclusions. Whilst reaffirming the need to moderate agricultural protection, the Committee did not recommend, as the Haberler report had, a move to income support. It argued instead for a change in the nature of price support under which prices would be set at a level that would be remunerative to efficient producers rather than providing a price guarantee to all producers.[22] As noted above, the EC did not follow this approach, and protectionism continued. However, an opportunity for change would soon emerge as a result of a change in U.S. trade policy.

D. Multilateral Trade Negotiations

1. The Kennedy Round

After the conclusion in 1962 of the Dillon Round, which was directed primarily at the negotiation of compensatory adjustments under GATT Article XXIV:6 with respect to the creation of the EC, the Contracting Parties planned to launch another round of multilateral

[17] GATT, Secretariat Trends in International Trade (1958).
[18] *Id*. at 87.
[19] *Id.* at 102.
[20] *Id*. at 67–68.
[21] The mandate of Committee II was to assemble data on the use of non-tariff barriers by the Contracting Parties to support domestic agricultural incomes; to examine the effects of these measures on international trade in agricultural products; to consider the adequacy of the GATT rules on non-tariff barriers to trade; and to suggest procedures for further consultation between all Contracting Parties on agricultural policy. BISD 8th Supp. 121 (1960). The mandate of Committee I was to examine tariff reductions and that of Committee III to look at other barriers to trade. BISD 7th Supp. 27 (1959).
[22] BISD 10th Supp. 135 (1962).

trade negotiations. One of the prime motivations for this round was a change of emphasis in American agricultural policy that sought to reduce the levels of domestic price support for major products towards prices prevailing on the international market. In contrast with its attitude during the 1950s, the United States now sought to use the GATT to promote agricultural trade liberalization. In 1961, the United States had started the process of reducing domestic support prices towards the prices prevailing on the world markets, as part of its efforts to alleviate balance-of-payments problems. This change of policy was reflected in the Declaration that launched the Kennedy Round, which listed as one of the negotiating objectives the need to provide for "acceptable conditions of access to world markets for agricultural products."[23] Agriculture would therefore be an integral part of multilateral trade negotiations for the first time.

At the heart of the Kennedy Round agricultural negotiations was the EC proposal, referred to as either Mansholt II or the *montant de soutien* (margin of support), which reflected the EC's belief that the impact of domestic agricultural policies on the world market resulted in distortion of competition.[24] The first of the two elements of the proposal was the establishment of a mechanism through which the level of support provided by each Contacting Party to its agricultural producers would be measured by comparing the guaranteed domestic support price with the price of the product on the international market. The second element of the proposal involved the binding of these levels of support, which would then form the basis for future negotiations on agriculture. In effect these bindings would prevent countries from increasing the protection afforded to their producers, and this consolidation of the levels of support would have led to restrictions on the domestic agricultural policies of the Contracting Parties. For example, the competitive use of export subsidies would have been curtailed as a consequence of the obligation to respect the established negotiated reference price. In essence what the EC was proposing was the internationalization of the existing mechanisms of the CAP.

However, the proposal also suffered from a number of defects, most notably the failure to consider the amount of protection afforded by tariffs and non-tariff barriers, and the assumption that world prices represented the true cost of production, thereby ignoring the impact of domestic agricultural programs on the international market price. Moreover, the fact that the plan provided for limited trade expansion, as a result of its maintenance of the present levels of support, was one of the reasons that led to its rejection by other Contracting Parties.[25] In particular the plan did not meet the negotiating objectives of the United States, which sought arrangements for the expansion of international agricultural trade over the short and longer terms. The significance of the EC's proposal was that it represented an attempt to reach international agreement on agricultural policies. The poor reception of the plan by other Contracting Parties was due in part to the belief that what was being proposed was a mechanism to ensure international acceptance at least of the EC's variable levy system, and perhaps of the entire CAP, as a means of protecting its domestic producers. The result was that:

[23] BISD 12th Supp. 36 (1964).

[24] *See* for further discussion, Warley, *supra* note 9, and GIAN CARLO CASADIO, TRANSATLANTIC TRADE: USA-EEC CONFRONTATION IN THE GATT NEGOTIATIONS (1973), Chapter 6. Both authors also discuss the previous (1961) EC proposal.

[25] One commentator has observed that ". . . what ensured that Mansholt II would meet with violent opposition from the exporters was that the Community proposed that the *montant de soutien* be used not as a basis for further negotiations but as a substitute for them." JOHN EVANS, THE KENNEDY ROUND IN AMERICAN TRADE POLICY 210 (1972).

> . . . on the central issues nothing substantial had been accomplished. Apart from an enhanced understanding of the issues involved, the principal legacies were heightened friction between the two major protagonists (the United States and the EC) and a polarisation of views as to the basic conditions under which agricultural trade should be conducted in the future.[26]

The 1967 Future Work Program of the Contracting Parties attempted to reconcile these views by establishing an Agriculture Committee to examine the problems in the agricultural sector and to explore opportunities for mutually acceptable solutions to these problems that would help realize GATT objectives.[27] Nothing positive would emerge from this Committee.[28] In retrospect the failure of the Kennedy Round marked a major turning point for the GATT's treatment of agriculture, as in the years that followed the EC completed the implementation of the CAP through the introduction of more common organizations of the market. Although the Kennedy Round failed with respect to agriculture, it was reasonably successful in other respects; for example, the Round brought the GATT close to its goal of eliminating tariff barriers as an obstacle to trade in manufactured goods. The focus of GATT negotiations would now shift to non-tariff barriers.

2. The Tokyo Round

The Tokyo Round Declaration recognized the need to reduce or eliminate non-tariff measures, and where this was not appropriate, to reduce or eliminate the negative trade effects of such measures.[29] In addition to the usual tariff reductions, the Round produced a series of codes seeking to reduce or eliminate non-tariff barriers.[30] Little progress was made with respect to agriculture. One reason for this was the limited mandate given to the EC Commission by the Member States, which stressed that the principles and mechanisms of the CAP should not be called into question and that they should not constitute a matter for negotiation.[31] The approach dictated by the EC mandate emphasized the need to expand trade through market stabilization. Such stability would be achieved through international agreements, either commodity agreements or orderly marketing arrangements, for what were referred to as "main products".[32]

Others did not share the EC's view that stabilization of international agricultural trade should be the principal goal. The United States, for example, believed that the aim should be to establish rules promoting greater efficiency. The resulting conflict between

[26] Warley, *supra* note 9, at 377.

[27] BISD 15th Supp. 67 (1968). The terms of reference of the Committee were: "to examine the problems in the agricultural sector and to explore the opportunities for making progress in the attainment of the objectives of the General Agreement in the agricultural field. The examination would cover all agricultural products important in international trade. This examination should prepare the way for subsequent consideration of positive solutions which could be mutually accepted by all Contracting Parties concerned."

[28] *See, e.g., Report of the Agriculture Committee*, BISD 17th Supp. 110 (1970).

[29] BISD 20th Supp. 19, para. 3(b) (1974).

[30] Agreements were concluded, for example, on Subsidies and Countervailing Measures, Anti-Dumping, Government Procurement, Technical Barriers to Trade, Customs Valuation and Import Licensing, *see* BISD 26th Supp. (1980). The agreements were plurilateral rather than multilateral, i.e., they were only binding on those Contracting Parties who chose to sign them.

[31] For a discussion of the mandate and its impact on the negotiation *see, e.g.,* STUART HARRIS, EEC TRADE RELATIONS WITH THE USA IN AGRICULTURAL PRODUCTS (1977).

[32] These were products that were essential for human consumption and which were determining factors in the maintenance of a balance in the agricultural sector; they included cereals, rice, sugar and homogenous milk products.

the "main protagonists" was one of the reasons for the limited success of the Tokyo Round with respect to agriculture. In addition to the usual tariff concessions in the agricultural sector, estimated to cover thirty percent of trade and yielding an unweighted average tariff reduction of forty percent, the Tokyo Round ended with two international agreements on agriculture, limited to bovine meat and dairy products respectively.[33] Two other agreements concluded during the Round had some application to agricultural trade. The Agreement on Technical Barriers to Trade sought to ensure that unnecessary barriers to trade were not created by regulations adopted by the Contracting Parties, while the Code on Subsidies and Countervailing Duties aimed to improve the limited discipline provided by Article XVI:3 GATT.[34] The Subsidies Code recognized the legitimacy of subsidies as instruments of social and economic policy whilst trying to ensure to control the impact of such subsidies on other Contracting Parties. Disputes in the early 1980s would show the limited impact of the Code on agriculture.

E. Trade Disputes Under the GATT

1. Article XI(2)—Import Restrictions

As previously noted, the only agriculture-specific GATT provision incorporated from the ITO Charter was Article XI:2(c).[35] This provides that the general prohibition on import restrictions contained in Article XI:1 would not extend to:

> Import restrictions on any agricultural or fisheries product, imported in any form, necessary to the enforcement of governmental measures which operate:
>
> (i) to restrict the quantities of the like domestic product permitted to be marketed or produced, or, if there is no substantial domestic production of the like product, of a domestic product for which the imported product can be directly substituted; or
>
> (ii) to remove a temporary surplus of the like domestic product, or, if there is no substantial domestic production of the like product, of a domestic product for which the imported product can be directly substituted, by making the surplus available to certain groups of domestic consumers free of charge or at prices below the current market level; or
>
> (iii) to restrict the quantities permitted to be produced of any animal product the production of which is directly dependent, wholly or mainly, on the imported commodity, if the domestic production of that commodity is relatively negligible.

This provision was subject to extensive (and exhaustive) legal analysis in the Panel Report on the U.S. complaint against quantitative import restrictions on twelve product categories maintained by Japan.[36] The Panel concluded that:

- to qualify for the exemption there must be a governmental measure which operates to restrict (rather than prohibit) the quantities of a product permitted to be marketed or produced.[37]

[33] BISD 26th Supp. 84 (Arrangement on Bovine Meat) and 91 (International Dairy Agreement) (1980).
[34] *Id,* at 8 (Agreement on Technical Barriers to Trade) and 69 (Subsidies).
[35] For a more extensive discussion of this provision see MELAKU DESTA, THE LAW OF INTERNATIONAL TRADE IN AGRICULTURAL PRODUCTS (2002), Chapter 2.
[36] Report of the GATT Panel (adopted), *Japan—Restrictions on Imports of Certain Agricultural Products,* BISD 35th Supp. 163 (1987).
[37] *Id.*, ¶¶ 5.1.3.1, 5.1.3.3. *See also,* Report of the GATT Panel (adopted), *US—Prohibition of Imports of Tuna from Canada,* BISD 29th Supp. 91 (1983).

- a product and a product processed from that product could not be considered "like" products with the meaning of Article XI:2(c).[38]
- the import restriction must not exceed what is necessary to the enforcement of the domestic supply restriction.[39]
- paragraph (c) quotas could only be applied if they defined the quantity or value for each product subject to quota, and the quotas must reflect the proportion between domestic production and imports during a previous representative period and any "special factors" that affected or might affect trade in the relevant concerned product.
- the contracting party invoking paragraph 2(c)(i) must show that all the conditions were met.

Applying these rules to the case before it, the Panel concluded that none of the restrictions imposed by Japan was justified. This was the first time that Article XI:2 had been the subject of such an extensive legal analysis.[40] The guidance provided by the Panel would be used in subsequent disputes, notably one concerning EC restrictions on the imports of apples.[41] The strict interpretation of Article XI:2 is in stark contrast to the approach of the GATT panels to Article XVI, as now discussed.

2. Article XVI—Export Subsidies

Added at the 1955 Review Session, Article XVI:3 of the GATT provides that no Contracting Party should acquire "more than an equitable share of world export trade" in primary products through the use of export subsidies. This provision gave rise to a number of problems, particularly in relation to the definition of the term "more than an equitable share."[42] Moreover, to be successful any complainant would have to show the existence of a causal connection between the grant of the subsidy and the acquisition of more than an equitable share of world trade. An effort was made during the Tokyo Round to deal with these problems. Article 10(2) of the Code on Subsidies and Countervailing Duties defined "more than an equitable share of world export trade" as including "any case in which the effect of an export subsidy . . . is to displace the exports of another signatory bearing in mind developments on world markets."[43]

The inconclusive Panel reports on the complaints made by Australia and Brazil concerning EC export refunds on sugar demonstrated that the new definition of "equitable

[38] *Japan—Agricultural Products, supra* note 36, ¶ 5.1.3.4. However, the Interpretative note to Article XI permits restrictions on "the same products when in an early stage of processing and still perishable, which compete directly with the fresh product and if freely imported would tend to make the restriction on the fresh product ineffective."

[39] *Id.*, para. 5.1.3.5. See also the *Working Party Report on Quantitative Restrictions*, BISD 3rd Supp. 190.

[40] Previous panel reports dealing with Article XI:2 include Report of the GATT Panel (adopted), *Canada—Import Quotas on Eggs*, BISD 23rd Supp. 91 (1977); Report of the GATT Panel (adopted), *EC—Programme on Minimum Import Prices, Licences and Surety Deposits for Certain Processed Fruits and Vegetables*, BISD 25th Supp. 68 (1979); and Report of the GATT Panel (adopted), *EC—Restrictions on Imports of Apples from Chile*, BISD 27th Supp. 98 (1981).

[41] See Report of the GATT Panels (adopted), *European Economic Communities—Restrictions on Imports of Dessert Apples*, complaints by Chile, BISD 36th Supp. 93 (1990) and the United States, BISD 36th Supp. 135 (1990). It is noteworthy that a previous complaint about the EC regime on the import of apples had found it to be consistent with Article XI:2(c). *See* Report of the GATT Panel*, EEC Restrictions on Imports of Apples From Chile*, *supra* note 40 at ¶ 4.10.

[42] See Report of the GATT Panel (adopted), *France—Assistance to Exports of Wheat and Wheat Flour, Complaint by Australia*, BISD 7th Supp. 46 (1959), for a discussion of this issue.

[43] BISD 26th Supp. 69 (1980). For discussion *see* Patrick Low, *Definition of Export Subsidies in GATT*, 16 JWTL 375 (1982), and Belayneh Seyoum, *Export Subsidies under the MTN,* 18 JWTL 512 (1984).

share" did not remedy the problems.[44] The Panels were unable to conclude that the EC had acquired more than an equitable share of world trade or that there was a causal connection between the increase in exports by the EC and the decline in exports of the complainants.[45] All that the Panels did find was that the EC system had depressed world sugar prices, indirectly causing prejudice to Australian and Brazilian interests.[46] Given the significance of the export subsidy system to the CAP, this conclusion may have been politically acceptable to the EC as it maintained the integrity of the system whilst forcing the EC to engage in consultations on possible ways of limiting the adverse effects of the system. Such consultations were mandated by Article XVI:1, under which the contracting party granting a subsidy could be asked to enter into consultations with other contracting parties to discuss the possibility of limiting the subsidization in cases "in which it is determined that serious prejudice to the interests of any other contracting party is caused or threatened by any such subsidisation."

Subsequent attempts by Australia and Brazil to resolve the issue within the GATT failed to eliminate the prejudice (or threat of prejudice) caused by the EC export subsidy system.[47] In the Working Party established under Article XVI:1 to discuss possible limits on EC sugar export subsidies, the EC argued that it had met the notification obligations imposed on it by Article XVI. However, a majority of the Working Party considered that the EC had not advanced any meaningful possibility of limiting the subsidization and, therefore, the prejudice (or threat of prejudice) found by the GATT Panels would continue.[48] Although the EC amended its common organization of the market in sugar by introducing an element of producer responsibility, further complaints were made about the EC sugar regime by the United States and Argentina. These did not proceed beyond consultations.[49]

A number of high profile cases in the early 1980s further highlighted the problems of Article XVI in particular and the GATT dispute settlement mechanism in general. In the first of these cases the United States alleged that the EC export subsidy system for wheat flour violated the Tokyo Round Subsidies Code.[50] The EC world market share for

[44] Reports of the GATT panels (adopted), *European Communities—Refunds on Exports of Sugar,* complaint by Australia, BISD 26th Supp. 290 (1980); complaint by Brazil, BISD 27th Supp. 69 (1981). As the findings of both Panels are identical, further references relate only to the Australian complaint. For further discussion, see Ian Smith, *GATT: EEC Export Refunds Dispute,* 15 JWTL 95 (1981); Colin Phegan, *GATT Article XVI:3: Export Subsidies and 'Equitable Shares'*, 16 JWTL 251 (1982).

[45] BISD 26th Supp. at 318. The EC's market share had increased by seventy-five percent during the period 1976–78. Such an increase, it was argued, could not have happened without the use of export subsidies given that the support price of sugar within the EC was well above that of the world market. Despite this the Panel could not find a causal connection between the increased EC exports and the reduced exports of the complainants.

Kodwo Bentil, *Attempts to Liberalize International Trade in Agriculture and the Problem of the External Aspects of the Common Agricultural Policy of the European Economic Community*, 17 CASE WESTERN RESERVE J. INT'L. L. 335 (1985).

[50] Report of the GATT Panel (unadopted), *European Economic Community, Subsidies on Export of Wheat Flour,* SCM/42 (1983), The filing of the case constituted a "breach" of the implied understanding between the United States and the EC reached during the Tokyo Round that the former would not use the Subsidies Code to attack the CAP. *see* Robert Hudec, '*Transcending the Ostensible': Some Reflections on the Nature of Litigation between Governments,* 72 MINN. L REV. 101 (1987), for discussion of this understanding.

wheat flour had risen from 18 percent to 62 percent since the introduction of the CAP, suggesting that it had acquired more than an equitable share of world trade. The Panel was unable to reach a decision, given the problems arising from the concept of "more than an equitable share". The United States resisted adoption of the report, naturally advocated by the EC, and it remained unadopted.[51]

The United States also attacked the EC export subsidy system for pasta.[52] This dispute raised even greater problems than the wheat flour case and in the initial period the EC refused to consult with the United States. Arguing that the dispute involved a misinterpretation of Article 9 of the Subsidies Code, the EC insisted that the matter be referred to the Committee established under the Code before the dispute could proceed. Eventually, a Panel was established and it concluded, by a majority, that there was a breach of the Subsidies Code. However, given the history of the dispute, in particular the involvement of the Committee on Subsidies, and the fact that other contracting parties had adopted a subsidy system similar to that at issue in this dispute, it was obvious that the Panel report would not be adopted.[53] The case was settled through a bilateral agreement between the parties, as was a further U.S. complaint against the EC's system of production aids for canned fruit.[54]

The results in these cases, especially in the *Wheat Flour* and *Pasta* cases, highlighted the problems inherent in the concept of "more than an equitable share of world export trade" and the need for reform in this area. The 1985 GATT-sponsored Leutwiler Report concluded:

> We believe this concept is economically misconceived, since it impliedly endorses market-sharing. It is also too vague and subjective to permit clear judgment on whether a subsidy is acceptable or not—as was shown by the result of a U.S. complaint to the GATT about European exports of subsidised flour. A better test of legitimacy than that of equitable share is needed for subsidies on primary products.[55]

This series of disputes and the Leutwiler report highlighted the need to "bring all measures affecting import access and export competition under strengthened and more operationally effective GATT rules and disciplines", in the words of the Uruguay Round Declaration. Such rules and disciplines would only be effective, however, if they were accompanied by agreement on, and solutions to, the problems posed by the domestic agricultural policies of the Contracting Parties. A start on this latter problem had been made with the establishment in 1982 of a GATT committee to find lasting solutions to the problems of trade in agricultural products.[56]

[51] The response of the United States was to sell at less than half the market price, thus eliminating the EC from the world's largest market for wheat flour, Egypt. *See* Marsha Echols, *Just Friends: The US-EEC Agricultural Export Subsidies Stand-off,* PROCEEDINGS OF THE 77TH ANNUAL MEETING OF THE AMERICAN SOCIETY OF INTERNATIONAL LAW 119 (1983).

F. Conclusion

Reflecting on the history of dispute settlement under the GATT, Hudec concluded:[57]

> In sum, dispute settlement data provides no support at all for the widely held view that GATT law is much weaker in the agricultural sector than elsewhere. As stated before, however, we know that dispute settlement data does not give us an accurate picture. What the data really shows is that the GATT legal system has not yet been able to engage agricultural trade policy in a significant way.

The reason why the data did not give an accurate picture was that "the main problems in agriculture are not yet within the reach of the legal system at all."[58] The preceding brief analysis of the dispute settlement cases confirms Hudec's conclusion. The Contracting Parties were unwilling to let the GATT influence the development and/or implementation of their agricultural policies. Although the increasingly legalistic nature of GATT dispute settlement led to an improved understanding of Article XI, the same cannot be said of Article XVI as attempts to solve the problems inherent in that article met with limited success. There was clearly a need for a new start, but this would require the Contracting Parties to submit their domestic agricultural policies to multilateral disciplines. The lessons from GATT history were not encouraging.

III. The Agreement on Agriculture

A. The Negotiations

The Punta del Este Declaration that launched the Uruguay Round stated that:

> The Contracting Parties agree that there is an urgent need to bring more discipline and predictability to world agricultural trade by correcting and preventing restrictions and distortions . . . so as to reduce the uncertainty, imbalances and instability in world agricultural markets.
>
> Negotiations shall aim to achieve greater liberalisation of trade in agriculture and bring all measures affecting import access and export competition under strengthened and more operationally effective GATT rules and disciplines, taking into account the general principles governing the negotiations, by:
>
> (i) improving market access through, *inter alia*, the reduction of import barriers;
> (ii) improving the competitive environment by increasing discipline on the use of all direct and indirect subsidies and other measures affecting directly or indirectly agricultural trade, including the phased reduction of their negative effects and dealing with their causes;
> (iii) minimising the adverse effects that sanitary and phytosanitary regulations and barriers can have on trade in agriculture, taking into account the relevant international agreements.[59]

Despite the preparatory work undertaken by the GATT Committee on Trade in Agriculture since its establishment in 1982, the progress of the negotiations was slow, which was

[58] *Id*, p. 332.
[59] BISD 33rd Supp. 19, 24 (1987)

hardly surprising given the contrasting negotiating positions of the various Contracting Parties.[60]

As in the Tokyo Round, the initial negotiating position of the EC, in addition to defending the CAP, sought to reduce the level of internal support and external protection offered by domestic agricultural policies. The EC position envisaged that once the level of support that could be granted to agricultural producers had been agreed, each country would be able to decide what method to use to support its domestic producers. In contrast, the United States, supported by the Cairns Group,[61] wished to see greater competition, which would benefit the more efficient producers.[62] Export subsidies provide an excellent example of the contrast between the EC and the United States. The United States proposed that such subsidies should be phased out over a five-year period, while the EC supported reduction (and rebalancing) of subsidies but did not consider abolition as an option.

This major philosophical difference ensured that the negotiations would be protracted. In addition, a number of difficult trade disputes between the Contracting Parties involving agriculture emerged. The most significant of these was between the EC and the United States in the oilseeds sector.[63] Despite the lack of progress the mid-term review reaffirmed the commitment of the Contracting Parties to the objectives set forth in the Punta del Este Declaration. The review document set the end of 1990 as the date for agreement on the long-term reform program and the implementation period as part of the overall package that would lead to the conclusion of the round.[64] The Contracting Parties continued the negotiations, and in June 1990 the Chairman of the Agriculture Negotiating Group proposed a final negotiating text which was endorsed by the Group of Seven meeting in Houston in July that year.[65] Although there was a good deal of optimism that agreement could be reached by December, the Ministerial meeting in Brussels resulted in stalemate.

Disagreements between the EC Member States and the on-going oilseeds dispute undoubtedly contributed to the lack of agreement at the Ministerial Meeting. It was 1992 before each of these issues would be resolved. Discussions within the EC began in 1991 on a far-reaching reform of the CAP, and decisions were reached in 1992 that involved a reduction in the level of support prices within the EC, coupled with increased compensatory payments to farmers. With respect to the oilseeds dispute, although the EC had introduced a new subsidy regime, a GATT Panel concluded that impairment of the

[60] The one area where there was little difference between the Contracting Parties was recognition of the need for special and differential treatment for developing countries, in the form of longer implementation periods and other concessions. The April 1989 mid-term review document stated that special and differential treatment should be "an integral element" of the negotiations. It agreed that government assistance measures aimed at agricultural and rural development were an integral part of the development programs of developing countries and that a method should be found to alleviate the possible negative effects of the reform process on net food-importing developing countries. *GATT Focus* No. 61 (May 1989).

[61] At that time the group included Argentina, Brazil, Chile, Colombia, Indonesia, Malaysia, the Philippines, Thailand and Uruguay.

[62] For a discussion of the progress of negotiations see John Breen, *Agriculture*, in THE GATT URUGUAY ROUND: A NEGOTIATING HISTORY (1986–94) (Terence Stewart, ed., 1993 and 1999) Vol. I at 125–254 and Vol. IV at 1–179. *See also* Bernard Hoekman, *Agriculture and the Uruguay Round*, 23 JWTL 83 (1989), for discussion of the original negotiating positions of the various parties.

[63] Report of the GATT Panel (adopted), *EEC—Payments and Subsidies Paid to Processors and Producers of Oilseeds and Related Animal-feed Proteins*, BISD 37th Supp. 86 (1991). The Panel concluded that the subsidy payments to EC processors for processing EC-produced oilseeds violated Article III:4 and that they nullified or impaired earlier tariff concessions on oilseeds.

[65] GATT *Newsletter Focus* No. 72 (July 1990), p. 12.

1962 tariff binding continued.[66] Consultations following the EC request for renegotiation of the tariff binding foundered on the issue of compensation. The EC blocked the U.S. request for authority to retaliate, so the United States announced that it would impose a two hundred percent tariff on $300 million of EC imports in December 1992.[67] Before the tariff was actually imposed, consultations between the EC and the United States eventually led to a resolution of the dispute and to agreement on a number of issues relating to the negotiations on domestic and export subsidies. Despite this agreement, usually referred to as the Blair House agreement, the negotiations continued into 1993 and it was only after a slight revision to that agreement that further progress was made in the negotiations.

The Uruguay Round was formally concluded by the Marrakesh Declaration of April 15 1994, adopted by the 124 governments (and the EC) that had participated in the negotiations. The Uruguay Round was a historic achievement with respect to agriculture, as it was in so many other areas. The Agreement on Agriculture, which considerably strengthened the GATT rules on agriculture, was designed to shape the future agricultural policies of the Members of the newly created World Trade Organization. This was to be achieved through the adoption of specific commitments to increase market access and to reduce domestic support and export subsidies, which would, in the words of the Preamble, lead to "substantial reductions in agricultural support and protection sustained over an agreed period of time."[68] The agreed implementation period, according to Article 1(f) of the Agreement, was six years, save in the case of Article 13, the "Peace Clause", which limited the possibility of disputes and which would remain in effect for nine years.

B. The Major Provisions of the Agreement

As noted previously, the three major ways in which the Agreement seeks to reduce restrictions on trade in agricultural products are by increasing market access and reducing domestic support measures and export subsidies. Commitments made by the WTO Members in each of these areas were to be implemented within six years in the case of developed countries and ten years in the case of developing countries (least-developed countries were not required to make any commitments). This section discusses the provisions of the Agreement with respect to each of the three areas, and describes the important dispute settlement cases that have arisen under them. It will then discuss the so-called "Peace Clause", and will conclude with a discussion of the Net Food-Importing Developing Countries Decision, which was designed to alleviate the impact of the reforms in agricultural trade on certain developing countries.

1. Market Access

The two major components of the market access provisions of the Agreement were the requirement that almost all non-tariff measures be converted to tariffs, and the commitment

[66] *See* Report of the GATT Panel, *Follow up on the Panel Report "European Economic Community—Payments and Subsidies Paid to Processors and Producers of Oilseeds and Related Animal-Feed Proteins,"* BISD 39th Supp.91 (1993).

[67] *See* documents from Council meetings of 19 June (C/M/257), 29 September (C/M/259) and 4–5 November 1992 (C/M/260).

[68] Unlike the GATT, which provided no definition of agricultural product, Annex 1 of the Agreement on Agriculture specifies that the Agreement covers all products listed in Chapters 1 through 24 of the Harmonised System except fish and fish products, as well as certain other specified items.

to reduce tariffs over the implementation period. The Agreement also provides a special safeguard mechanism that can be invoked with respect to products that were subject to non-tariff barriers but which have now undergone tariffication.

(a) Tariffication. A major aspect of the market access provisions was the elimination of nearly all types of non-tariff barriers, which were to be converted into tariff equivalents, under a process known as "tariffication".[69] Under Article 4.2 of the Agreement, in the future "members shall not maintain, resort to, or revert to any measures of the kind which have been required to be converted into ordinary customs duties."[70] This is perhaps the most significant aspect of the entire Agreement, since it means that virtually all agricultural protection is now in the form of tariffs, which are more transparent and easier to negotiate than non-tariff measures.

Details of how the process of tariffication is to be undertaken are contained not in the Agreement itself but in a document usually referred to as the Modalities Agreement.[71] According to paragraph 2 of Annex 3 of the Modalities Agreement, tariff equivalents are to be fixed "using the actual difference between the internal and external prices in a transparent manner using data, data sources and definitions as specified in Annex 2." Annex 2 provides that countries are to submit lists of commitments and supporting material for each of the reduction commitments in the Agreement on Agriculture. Annex 3 defines internal price as generally being a representative wholesale price on the domestic market of the country and the external price as generally the actual average c.i.f. unit values for the importing country. The result of the calculation, for which the base period was 1986 to 1988, could be expressed as either specific or *ad valorem* rates.

Once the base period for the data had been agreed the actual conversion of non-tariff barriers was left to each Member, who not surprisingly chose data that would allow the highest possible tariffs. This exaggeration of the difference between the internal and external prices during the reference period is often referred to as "dirty tariffication".[72] The resulting tariff ceilings were not always applied in practice; however, they reduced the impact of the reform process since reduction of the tariff from the nominal amount counted towards the tariff reductions required by the Agreement without actually increasing market access. As a result, a number of WTO members—notably the United States and the EC—have not significantly increased access to their markets.[73] The Agenda 2000 reforms of the CAP adopted by the EC did not lower import tariffs, thus increasing the amount of "dirt" in its tariff.[74]

[69] According to Article 4.2 the process of tariffication does not apply to "measures maintained under balance-of-payments provisions or under other general, non-agriculture-specific provisions of the GATT 1994 or of other Multilateral Trade Agreements in Annex 1A of the WTO."

[70] Footnote 1 to Article 4.2 states that these measures include "quantitative import restrictions, variable import levies, minimum import prices, discretionary import licensing, non-tariff measures maintained through state-trading enterprises, voluntary export restraints, and similar border measures other than ordinary customs duties. . . ." As for the scope of this provision, *see* Report of the GATT Panel, *Chile—Price Band System and Safeguard Measures Relating to Certain Agricultural Products,* WT/DS207/R, ¶¶ 7.17-7.102 (2002).

[74] *See* Alan Swinbank, *CAP Reform and the WTO: Compatibility and Developments*, 26 EUROPEAN REVIEW OF AGRICULTURAL ECONOMICS 389, 396–99 (1999).

The process of converting quotas (and other non-tariff barriers) into tariffs could of course reduce market access where the quota had been small and tariffication produced a high tariff. To avoid this effect each Member is required to include minimum and current access requirements for all tariffied products in its Schedules.

- *Minimum access opportunities* were to be established in those situations where the historic level of imports was below five per cent of domestic consumption. In the first year of the implementation period such opportunities were to represent three per cent of domestic consumption in the base period and they were to rise to at least five per cent by the end of the six-year implementation period.
- *Current access commitments* apply where imports of a product represented at least five per cent of domestic consumption in the 1986 to 1988 base period. According to Paragraph 6 of the Modalities Agreement such imports are to be maintained and increased over the implementation period.[75] The mechanism to achieve this is, according to Annex 3B of the Modalities Agreement, the creation of terms and conditions for imports at least equivalent to those in the 1986 to 1988 base period.

Both commitments were implemented through tariff-rate quotas, the lower rate applying to the current or minimum access requirement. The Modalities Agreement provides that the expansion of access opportunities is to be provided on a most-favored-nation basis.[76] This implies that country-specific access opportunities should reflect the historic share of imports, in accordance with GATT Article XIII:2.[77]

Annex 5 to the Agreement contains two exceptions to the tariffication requirement. These exceptions are designed to deal with concerns raised during the negotiations relating to the tariffication of non-tariff barriers on particularly sensitive products. Annex 5A covers products that have been designated as subject to special treatment based on non-trade concerns such as food security and environmental protection. A number of conditions must be met, suggesting that there will be few exemptions under this provision.[78] This particular exception was introduced at the request of Japan and Korea and will only apply if a reservation is made in the Member's Schedule of Concessions.[79] Annex 5B exempts from the tariffication requirement primary agricultural products that are the predominant staple in the traditional diet of a developing country. Both exemptions are conditional upon the provision of minimum access commitments.[80]

[75] Paragraph 6 does not set a figure for the increase but notes that in "the expansion of current access, due account is to be taken of reduction commitments in the export competition area." No figure for the increase is set in paragraph 11 of Annex 3B of the Modalities Agreement.

[76] *Supra* note 71, ¶ 14.

[77] This provision requires that the allocation of quotas should seek to achieve a distribution of trade in the product "approaching as closely as possible" the shares that Members would have in the absence of restrictions. On the interpretation of this provision *see* Report of the Appellate Body and Report of the Panel, *European Communities—Regime for the Importation, Sale and Distribution of Bananas*, WT/DS27/AB/R and WT/DS27/R (1997).

[78] Imports of the designated product must have comprised less than three percent of domestic consumption during the base period (1986–88), no export subsidies must have been provided with respect to the product since 1986, and effective production-restricting measures must be applied to the primary agricultural product. In addition, minimum access opportunities must be provided equal to four percent of base period domestic consumption during the first year of the implementation period, increasing by 0.8 percent per year throughout the period.

[79] Reservations were made by four countries—Japan, Korea and the Philippines for rice and Israel for cheese and sheepmeat.

[80] The commitment is equal to one percent of base period domestic consumption in the first year of the implementation period, increasing by equal annual instalments to four percent after ten years.

(b) Tariff Reductions. The tariff reduction commitments, which under Article 4.1 of the Agreement were recorded for each Member in their national schedule of concessions annexed to the Uruguay Round Protocol that forms an integral part of the Final Act, apply to both traditional tariffs [81] and new tariffs, that is the tariffs resulting from the process of tariffication. For developed Members the average reduction was to be 36 percent over six years, whereas for developing Members the average reduction was to be 24 percent to be implemented over a ten-year period. Least-developed Members were not required to undertake any reduction commitments, although they were required to tariffy and bind their tariffs. To reflect the comprehensive nature of the market-access negotiations, all participating Members were required to make minimum reductions on each tariff line, fifteen per cent per tariff line for developed countries and ten percent for developing countries.

(c) Special Safeguard Measures. While the exceptions to the tariffication requirement provided in Annex 5 were tailored to specific concerns raised during the Uruguay Round, Article 5 of the Agreement provides a more general exception. Under this provision special safeguard measures may be taken with respect to tariffied products where the volume of imports exceeds a specified trigger level or the price of imports falls below a specified trigger price.[82] A Member may invoke the safeguard measures on the basis of either import volumes or import prices but not both.

Volume-Based Safeguard. A volume-based safeguard may only remain in effect until the end of the year in which it was imposed, and it may not exceed one third of the regular tariff. The trigger level is defined in Article 5.4 on the basis of market access opportunities, *i.e.*, imports as a percentage of domestic consumption for the last three years of available data. Base trigger levels of 125 percent, 110 percent, and 105 percent are set where the market access opportunities for a product are respectively less than or equal to ten percent, between ten and thirty percent, and greater than thirty percent. The special safeguard duty may be imposed whenever imports of the product in question exceed the sum of (a) the base trigger level multiplied by the average quantity of imports in the three preceding years and (b) the absolute volume change in domestic consumption of the product in the most recent year for which data is available compared with the preceding year.[83] The trigger level must be at least 105 percent of the average quantity of imports in the preceding three years.[84]

Price-Based Sqfeguard. The additional duty that may be imposed if a Member uses the import price approach is established according to a sliding scale schedule set out in Article 5.5. It is based on the difference between the import price, defined as the c.i.f. import price, and the trigger price, which is defined as the average reference price during the period 1986–88. If the difference is less than ten percent no special safeguard duty may be imposed. As the difference increases so too does the amount of the additional duty permitted. Members

[81] In the case of bound tariffs, the reduction was to be from the bound rate, in the case of unbound tariffs, from the rate in effect on September 1986. *Modalities Agreement*, *supra* note 71, ¶ 3.

[82] In order to have recourse to the special safeguard provision, a Member must also have designated the product in question in its Schedule using the symbol SSG. *See* Article 5:1 of the Agreement. For details of the designations, *see* Committee on Agriculture, *Special Agricultural Safeguard*, Background Paper by the Secretariat, G/AG/NG/S/9 (Tables 2 and 3).

[83] Suppose, for example, that imports of wheat during the previous three years averaged 100,000 tons, reflecting 25 percent of total domestic consumption, and that domestic consumption had increased by 25,000 tons in the most recent year. The trigger level would be (100,000 × 110%) + 25,000 = 135,000 tons. The question of whether this safeguard can be imposed when the volume of domestic consumption is actually falling is an interesting one. In such an event, it would seem be more logical to apply the price-based safeguard rather than the volume-based safeguard.

[84] *See* TIMOTHY JOSLING, STEFAN TANGERMANN AND THORALD WARLEY, AGRICULTURE IN THE GATT 192(1996), for criticisms of the EC approach to trigger prices.

are encouraged not to use the import price method to impose special safeguards whenever import volumes are declining.

In the case of perishable and seasonable products, Article 5:6 allows for shorter time periods to be used in the case of a volume-based safeguard and for different reference prices for different periods in the case of a price-based safeguard. Other Members must be given the opportunity to consult with the Member introducing the measures on the conditions giving rise to the measure. Article 5.8 prohibits the use of general safeguards with respect to products that are subject to special safeguards under Article 5. Article 5 will remain in force for the duration of the reform process, for which Article 20 does not set an end-date.

(d) General Exceptions. In addition to the exceptions to the tariffication commitments provided in the Agreement on Agriculture itself, there are also the general, non-agriculture specific exceptions found in other trade agreements and in the GATT itself. Because of the prohibition on non-tariff measures in Article 4.2 of the Agreement on Agriculture, the scope of the existing agriculture-specific exception, GATT Article XI:2(c), appears now to be limited to fish and fish products and those agricultural products not referred to in Annex 1 of the Agreement on Agriculture.[85] The exception with the most continuing relevance within the GATT is Article XX, which was raised in cases filed by the United States and Australia concerning Korean measures affecting imports of fresh, chilled and frozen beef. The Appellate Body Report upheld the Panel's findings that a dual retail system requiring imported beef to be sold only in specialized beef stores or in separate sales areas in department stores under signs indicating that the beef was imported was contrary to Article III:4 and not justified under Article XX(d).[86]

(e) Dispute Settlement. The proper interpretation of Article 5 was central in the complaint by Brazil against certain measures adopted by the EC affecting the import of certain poultry products.[87] At issue was the following phrase in Article 5.1(b), which determined

[85] It has been pointed out that a breach of Article XI:1 necessarily constitutes a breach of Article 4.2 of the Agreement on Agriculture, Report of Panel, *Korea—Measures Affecting Imported of Fresh, Chilled and Frozen Beef*, WT/DS161/R and WT/DS169/R (2000), ¶ 7.62.

[86] *Korea—Measures Affecting Imports of Fresh, Chilled and Frozen Beef*, Report of the Appellate Body, WT/DS161/AB/R and WT/DS169/AB/R (2000). While not directly relevant to the Agreement on Agriculture, a series of Appellate Body and panel decisions involving agricultural products has produced a greater understanding of the scope of the Agreement on Safeguards and GATT Article XIX. For further discussion, see Chapter 18 of this book. The decisions are: Report of the Appellate Body, *Korea—Definitive Safeguard Measures on Imports of Certain Dairy Products*, WT/DS98/AB/R (1999); Report of the Appellate Body, *United States—Quotas on the Import of Wheat Gluten from the EC*, WT/DS166/AB/R (2000); Report of the Appellate Body, *United States—Safeguard Measures on Imports of Fresh, Chilled or Frozen Lamb Meat from New Zealand and Australia*, WT/DS177/AB/R and WT/DS178/AB/R (2001); and Report of the WTO Panel, *Chile—Price Band System and Safeguard Measures Relating to Certain Agricultural Products,* WT/DS207/R (2002).

[87] *EC—Measures Affecting Importation of Certain Poultry Products*, Report of the Appellate Body, WT/DS69/AB/R and Report of the Panel, WT/DS69/R (1998). A bilateral agreement between the EC and Brazil concluded during the Uruguay Round established a duty-free global annual tariff-rate quota for frozen poultry meat. The agreement was one of the results of a GATT Panel report in *EC—Oilseeds, supra* note 63, and it was implemented by EEC Regulation 774/94 (OJ 1994 L 91/1) and Regulation 1431/94 (OJ 1994 L 156/9). In the resulting Uruguay Round Schedule the EC reserved the right to introduce an additional duty on out-of-quota imports of poultry if the conditions of Article 5 were satisfied, *see* Regulation 3290/94 (OJ 1994 L 349/105) amending the regulation establishing the common organisation of the market in poultry (Regulation 2775/75 (OJ 1975 L 282/77) and Regulation 1484/95 (OJ 1994 L 145/47) on the detailed rules for the application of the safeguard mechanism.

when the special safeguard mechanism is triggered: " the price at which imports of that product may enter the customs territory of the Member . . . , as determined on the basis of the c.i.f. import price of the shipment concerned." The Appellate Body disagreed with the majority view of the Panel that this referred to the duty-paid price of the imports by pointing to the use of the words "customs territory" rather than "domestic market" in Article 5.1(b). It therefore interpreted the phrase to mean the c.i.f. price without customs duties and taxes, a conclusion supported by the rest of Article 5.1 and Article 5.5.[88]

2. Domestic Support

(a) The Provisions of the Agreement

Aggregate Measure of Support. The centerpiece of the commitments in the area of domestic support is the concept of the Aggregate Measurement of Support ("AMS"), which is defined in Article 1(a) as "the annual level of support, expressed in monetary terms, provided for an agricultural product in favor of the producers of the basic agricultural product or non-product-specific support provided in favor of agricultural producers in general . . . ."[89] Annex 3 to the Agreement gives detailed guidance on the calculation of the AMS. According to the provisions of this Annex, the AMS is to be calculated on a product-specific basis for each product receiving any type of non-exempt support. The purpose is to calculate the value of all of the financial factors that influence the decision of a farmer to produce a particular product.

Annex 3 identifies three kinds of support that are to be included in the calculation of the AMS:

- *Market price support*, which is based on the difference between a fixed external reference price and the applied administrative price; this is then multiplied by the quantity of production that is eligible to receive the applied administrative price. The applied administrative price is the price that the government determines producers should receive. The external reference price is based on the period from 1986 to 1988, and is country-specific. For a net exporting country, it is generally the average f.o.b. value for the product and for a net importing country it is generally the average c.i.f. value for the product, adjusted if necessary for quality differences.[90]
- *Non-exempt direct payments*, which consist of payments that are dependent on a "price gap" calculated on the difference between a fixed external reference price

[88] *EC—Poultry Products, supra* note 87, ¶ 146. According to the Appellate Body "to read the inclusion of customs duties into the definition of the c.i.f. import price in Article 5.1(b) would require us to read words into the text of that provision that simply are not there." Having reversed the Panel's interpretation of Article 5.1, the Appellate Body went on to make a finding on the consistency of the implementing EC Regulation with Article 5.5. The relevant issue was whether this provision allowed an importing Member to offer a choice to the importer between the use of the c.i.f. price, as provided in Article 5.5, and another method of calculation. It concluded that there is no language that permits any method other than that set out in the schedule in Article 5.5 as a basis for the calculation of additional duties. (¶ 165). Although Article 3.1 of Regulation 1484/95 used this method, the fact that it was only available at the request of the importer and if the price so established was higher than the applicable representative price meant that the EC had acted inconsistently with Article 5.5. The Appellate Body also concluded (¶ 170) that the alternative method of calculation, the representative price, was inconsistent with Article 5.5.

[89] "Basic agricultural product" is defined in as "the product as close as practicable to the point of first sale".

[90] In those situations where a fixed external reference price cannot be calculated, Annex 4 of the Agreement provides for the calculation of an Equivalent Measurement of Support, to be based on the applied administrative price and the quantity of the product benefiting from this price or, if this is not possible, on budgetary outlays. According to Article 1(c) of the Agreement, budgetary outlays include revenue foregone.

and the applied administrative price multiplied by the quantity of production that is eligible to receive the applied administrative price. If the direct payments are not dependent on a price gap, the AMS calculation will be based on budgetary outlays.

- *Other non-exempt measures,* such as input subsidies and marketing-cost reduction measures, which are to be valued based on budgetary outlays.[91]

Total AMS. Having calculated the AMS by product,[92] the next step is to calculate the Total AMS. This is defined in Article 1(h) as being the sum of all non-exempt domestic support provided to agricultural producers. It includes all aggregate measurements of supports for basic agricultural products, all non-product-specific aggregate measurements of support, and all equivalent measurements of support for agricultural products. In Part IV of each Member's schedules, a table can be found which consists of several columns. The first column specifies a Base Total AMS, that is a figure for the support provided during the base period. The final column in the table is the Final Bound Commitments, which represents the effect of the implementation of the reduction commitment on the Base Total AMS. Between these two figures are the Annual Bound Commitments, which represent the AMS commitments for each year of the implementation period.

Reduction of Total AMS. Under the Modalities Agreement, each developed country Member is committed to reduce its Total AMS by twenty percent during the six-year implementation period.[93] Developing countries are committed to a 13.3 percent reduction over ten years, while no reduction is required in the case of the least developed countries. In order to comply with the reduction commitments, the Current Total AMS in any given year must not exceed the corresponding Annual or Final Bound Commitments specified in Part IV of the Member's Schedule.

Exemptions. Article 6 of the Agreement exempts a number of domestic support measures from the reduction commitment:

- *Developing Country Exemptions.* Article 6.2 exempts three types of measure from the calculation of the Current Total AMS (i.e. the Total AMS provided during any year of the implementation period and thereafter) of developing countries: generally available agricultural investment subsidies; agricultural input subsidies generally available to low-income and resource-poor producers; and domestic support to encourage diversification from growing illicit narcotic crops.
- *De Minimis Exemptions.* Under Article 6.4 of the Agreement, Members are not required to include either product-specific or non-product specific domestic support that falls below a certain percentage of the total value of production of a basic agricultural product during the relevant year. The level of *de minimis* support is set at five percent for developed countries and ten percent for developing countries. By virtue of Article 7.2(b), where a Member's schedule does not include a Total AMS commitment, the level of support must not exceed the relevant *de minimis* level.
- *Blue Box Exemptions.* Article 6.5 of the Agreement exempts from the reduction commitment direct payments under production-limiting programs provided that they are based on fixed areas and yields, or on 85 percent or less of the base

[91] Where budgetary outlays do not reflect the full extent of the subsidy, provision is made for calculating the difference between the price of the product benefiting from the measure and a representative market price for a similar product, which is then multiplied by the quantity of the product benefiting from the measure.

[92] Non product-specific support is to be aggregated into one number, which is included in the Total AMS. See Annex 3, ¶ 1, of the Agreement.

[93] *Modalities Agreement*, *supra* note 71, ¶ 8.

level of production or, in the case of livestock payments, on a fixed number of head. Payments under such programs need not be decoupled from production. This is the notorious "Blue Box," which was considered necessary to secure an overall agreement on agriculture, especially from the point of view of the EC. The "Blue Box" represents the continuation of the special treatment afforded to agriculture in the history of the GATT, as the measures included within the box have some trade distortion effects or effects on production, despite the fact that they are described as "production-limiting".[94] However, the countries using these measures, notably the EC, claim that their effects are not as severe as those measures covered by the AMS reduction commitment.

- *The Green Box Exemptions.* The final group of measures that need not be included within the commitment to reduce the Total AMS is defined in Annex 2 of the Agreement on Agriculture. Annex 2(1) states:

> Domestic support policies for which exemption from the reduction commitments is claimed shall meet the fundamental requirement that they have no, or at most minimal, trade distortion effects or effects on production. Accordingly, all policies for which exemption is claimed shall conform to the following basic criteria:
> (i) the support in question shall be provided through a publicly-funded government program (including government revenue foregone) not involving transfers from consumers; and,
> (ii) the support in question shall not have the effect of providing price support to producers.

Section 2 to 13 of the Annex goes on to list twelve specific types of policies, the so-called "Green Box" policies that will be excluded from the reduction commitment. Such policies are divided into two categories, (a) general services, such as public stockholding for food security purposes and domestic food aid, and (b) direct payments to producers, such as payments for relief from natural disasters and payments under environmental or regional assistance programs. If excluded, it is up to the Member to ensure that such policies remain consistent with the requirements of Annex 2. Article 7.2(a) makes it clear that in the event that they do not, they will be included in future calculations of the Total AMS.

The types of action that may be brought with respect to a domestic subsidy that fully conforms with a Member's commitments are limited by Article 13 of the Agreement, the "Peace Clause", which is discussed in Section 4 below.

(b) Dispute Settlement. Only one opportunity has arisen to date for an interpretation of the provisions of the Agreement on domestic support. This involved a claim by the United States that Korea had exceeded its Current Total AMS commitment levels for 1997 and 1998.[95] The first issue was what Korea's commitment level was, which was confused by the fact that Korea had provided two sets of figures, one in parentheses, in its

[94] On this point, at a meeting of the Agriculture Committee on June 28–29, 2001, Argentina requested the EC to supply data on its direct payment supports in 1992 for specific cereals under its "blue box" programs. The EC response was that a breakdown for individual cereals was not available because the payments were made on fixed areas and yields. Argentina reserved the right to raise this issue again in the Agriculture Committee, and is considering possible further steps. (G/AG/R/27, ¶¶ 2–16). *See* Swinbank, *supra* note 74, at 410; Joseph McMahon, *The Common Agricultural Policy: From Quantity to Quality* 53 NORTHERN IRELAND LEGAL QUARTERLY, 9, 22 (2002).

[95] *Korean Beef, supra* note 86.

schedule. The Appellate Body held that the Panel had selected the wrong set of figures, because it had failed to refer to an explanatory footnote in the schedule.[96]

The next issue was whether the Current AMS for beef should have been included in Korea's Current Total AMS. The Panel rejected Korea's claim that the figure for beef was below the ten percent *de minimis* level and therefore did not have to be included in Current Total AMS. The Appellate Body agreed with the Panel that the Current AMS had to be calculated based on the production that was *eligible* to receive the applied administered price, rather than the amount of production actually purchased.[97] However, in finding that Korea had exceeded the *de minimis* threshold for beef, the Panel had used an external reference price based on 1989–91 data, apparently on the assumption that this would be more favorable to Korea than data for the period specified in Annex 3 to the Agreement, 1986–88. The Appellate Body reversed this finding, saying that the Panel should have used 1986–88 data.[98] Since no such data was in the record, the Appellate Body was forced to reverse the Panel's overall finding that Korea had exceeded its Current Total AMS.

3. Export Subsidies

(a) The Provisions of the Agreement.

(i) Reduction Commitments. Article 8 of the Agreement prohibits Members from granting export subsidies that do not conform with the Agreement and the commitments in their Schedules. Article 9.1 lists the six types of export subsidy that are subject to the reduction commitments. [99] These are:

- Direct export subsidies
- Government exports of non-commercial stocks at a price lower than the domestic market price
- Export payments financed by government action (whether or not a charge on the public account is involved), including payments financed by a levy on the product
- Subsidies to reduce the cost of marketing exports, including handling, upgrading and other processing costs, and costs of international transport and freight
- Internal transport and freight charges on terms more favorable than for domestic shipments, if provided or mandated by governments
- Subsidies on agricultural products contingent on their incorporation in exported products

Under Article 3.3 a Member may not provide subsidies in these categories in excess of the commitments specified in Section II of Part IV of its Schedule. In contrast to the AMS Schedule, this part of the Schedule is disaggregated and maximum annual expenditure and volume levels are established for twenty-two different product categories.[100] Article 3.3 also prohibits Members from providing export subsidies for products not specified in the Schedule.

[96] *Korean Beef,* Report of the Appellate Body, *supra* note 87, at ¶ 105.

[97] *Id.,* at ¶ 122. The Appellate Body agreed with the Panel that Korea had also made errors with respect to the calculation of the market price support, the total value of production and the classification of certain support as "non-product specific support" when it was in fact product-specific. (¶¶ 118–121).

[98] *Id.,* at ¶ 126.

[99] Export subsidies are defined in Article 1(e) as "subsidies contingent upon export performance, including the export subsidies listed in Article 9 of this Agreement."

[100] These 22 categories are: wheat and wheat flour, coarse grains, rice, oilseeds, vegetable oils, oilcakes, sugar, butter and butter oil, skimmed milk powder, cheese, other milk products, bovine meat, pig meat, poultry meat, sheepmeat, live animals, eggs, wine, fruit, vegetables, tobacco and cotton.

The export subsidy commitments relate to both the amount of money spent and the quantity exported. Under the Modalities Agreement, over the six-year implementation period, developed country Members are required to reduce their expenditure on export subsidies to a level 36 percent below the levels existing in the 1986–1990 base period, and to reduce the quantities benefiting from export subsidies by 21 percent.[101] The equivalent figures for developing countries are 24 percent and 14 percent, and Article 15.2 of the Agreement provides them with a ten-year period over which to make these reductions.[102] Least developed country Members are not required to undertake any reduction commitments.

Members are given a certain degree of flexibility with regard to their export commitments. Article 9.2(b) allows a Member to exceed its commitments in any given year by up to three percent of expenditure and 1.75 percent of the exported quantities, provided that it does not exceed the overall commitments over the entire implementation period. As in the case of domestic subsidies, export subsidies are subject to Article 13 of the Agreement, the Peace Clause, which limits the types of action that can be taken against subsidies and which is discussed in Section 4 below.

(ii) Anti-Circumvention Provisions. Article 10 contains various provisions designed to prevent circumvention of the export subsidy commitments. Under Article 10.1 Members may not apply subsidies of a type not listed in Article 9.1 (e.g. export credits or export insurance) in ways that circumvent their export subsidy commitments. This prohibition appears to apply to both scheduled and unscheduled products. Under Article 10.2 Members undertake to work toward developing disciplines governing the provision of export credit, export credit guarantees, and insurance programs.[103] Article 10.4, covering food aid, specifies that Members must ensure that:[104]

- the provision of international food aid is not tied directly or indirectly to commercial exports of agricultural products to recipient countries
- international food aid transactions are carried out in accordance with the FAO "Principles of Surplus Disposal and Consultative Obligations"
- the aid is provided to the extent possible in fully grant forms or on terms no less concessional than those provided for in Article IV of the Food Aid Convention 1986.

As a further means of avoiding circumvention of the export subsidy commitments, Article 11 restricts the export subsidy on a processed product to the amount that would be payable on the basic product.

(b) Dispute Settlement. One of the more important disputes in this area involved claims by the United States and New Zealand that Canada had provided export subsidies for dairy products in excess of its quantity commitments through the provision by producers of

[101] *Supra* note 71, Annex 8.

[102] Under Article 9.4, during the six-year implementation period, developing countries do not have to reduce two categories of subsidy: those designed to reduce the cost of export marketing and preferential internal transport and freight charges; provided that they are not applied in a manner that circumvents the reduction commitment.

[103] These efforts have been unsuccessful to date. *See* G/AG/NG/S/13, the WTO Secretariat background paper on export credits for details of these efforts and the nature of the problem posed by these measures. *See also* G/AG/NG/S/12 and Add.1.

low-cost milk for export under a program administered by provincial marketing boards.[105] The issue was whether the provision of the milk constituted an export subsidy. The Appellate Body first reversed the Panel's finding that the provision of the milk constituted the "provision by governments or their agencies of direct subsidies, including payments-in-kind", within the meaning of Article 9.1(a). The Appellate Body agreed with the Panel that the marketing boards were government agencies, even though their officers included dairy producers.[106] The marketing boards derived their powers from government, and they exercised government functions. However, the Appellate Body held that the Panel had wrongly assumed that a payment-in-kind was a direct subsidy, without considering whether it constituted a benefit.[107] On the other hand, the Appellate Body agreed with the Panel that the provision of milk did fall within the definition of Article 9.1(c), "payments on the export of an agricultural product that are financed by virtue of governmental action, whether or not a charge on the public account is involved . . . ." It held that the term "payment" included payments-in-kind, and that although the cost of selling milk at a reduced price for exports was borne by the producers rather than the government, governmental action was indispensable to enable the supply of milk for export.[108]

In an attempt to comply with the ruling by the Appellate Body, Canada changed its program to allow the producers to freely negotiate the price of the milk with the exporters. The United States and New Zealand challenged the new program under Article 21.5 of the Dispute Settlement Understanding.[109] The Panel found that the new program still involved payments on the export of milk "that are financed by virtue of government action" within the meaning of Article 9.1(c), but the Appellate Body reversed. In order to determine whether the sale of the milk by the producers to the exporters involved "payments", the Panel had compared the prices of the sales with the domestic market price. The Appellate Body said that this was incorrect, as that price was an administered price fixed by the Canadian government and was no doubt favorable to the producers. Thus, the fact the milk was sold for export at a lower price did not necessarily mean that the producer had "foregone a portion of the proper value of the milk to it."[110] The Appellate Body found that the alternative benchmark used by the panel, world market prices, was equally invalid, but for the opposite reason—it was possible that the export milk could be sold at world market prices *because* it was receiving a subsidy.[111] The Appellate Body held that the appropriate standard for determining whether the sale of milk to exporters involved a "payment" within the meaning of Article 9.1(c) was the average total cost of production. Since the Panel had made no factual findings on this issue, the Appellate Body felt itself unable to complete the analysis.[112] Because of this

[105] *Canada—Measures Affecting the Importation of Milk and the Exportation of Dairy Products*, Report of the Appellate Body, WT/DS103/AB/R and WT/DS113/AB/R; Report of the Panel, WT/DS103/R and WT/DS113/R (1999). The case also involved a challenge with respect to Canadian tariff-rate quotas on imports of milk and cream. This aspect of the case did not involve an interpretation of the Agreement on Agriculture, but rather Article II:1(b) of the GATT 1994. The Appellate Body held that Canada's restriction of access to its tariff-rate quota on fluid milk to consumer packaged milk was consistent with its obligations under Article II:1(b), but that its limiting such access to entries valued at less than C$20 was inconsistent.

[112] *Id.,* at ¶ 103.

conclusion, the Appellate Body did not rule on the Panel's finding that the sales were "financed by virtue of government action", although it did say that it disagreed with the Panel's finding that the program "oblig[ed] producers, at least *de facto,* to sell outside-quota milk for export."[113]

After the Appellate Body ruling, the United States and New Zealand filed a second request for an Article 21.5 Panel. Applying the cost of production standard enunciated by the Appellate Body, the Panel found that the sale of milk for export did constitute "payments" within the meaning of Article 9.1(c), since the price was little more than half of the cost of production.[114] The Panel also found that the payments "were financed by virtue of government action", since the overall milk program encouraged production of more milk than needed to fill quotas for the domestic market and producers had no choice but to sell the over-quota milk for export or, at much lower prices, for animal feed.[115] It accordingly concluded that the sale of milk to exporters did constitute a subsidy within the meaning of Article 9.1(c).[116]

The dispute concerning U.S. tax treatment of Foreign Sales Corporations involved claims under the Agreement on Agriculture, although the case was not limited to trade in agricultural products.[117] The Appellate Body reversed the Panel's finding that the FSC measure, a tax exemption for a portion of export-related foreign source income, was a subsidy "to reduce the cost of marketing exports" under Article 9.1(d) of the Agreement and therefore violated Article 3.3.[118] As a consequence, the Appellate Body had to consider the alternative claim that there was a breach of Articles 8 and 10.1. It first found that the FSC measures were export subsidies within the definition in Article 1(e) of the Agreement, since they constituted "revenue foregone" and were "contingent on export performance". It observed that under the Agreement Members were obliged not to provide export subsidies of the type listed in Article 9.1 for scheduled products in excess of the scheduled commitments and not to provide any Article 9.1 subsidies with respect to unscheduled products. Although the FSC measures did not fall within the Article 9.1 definitions, which did not include revenue foregone, they nevertheless provided a way to circumvent the commitment not to provide export subsidies on unscheduled products in violation of Article 10.1,[119] since

> Members would certainly have 'found a way round', a way to 'evade', this prohibition if they could transfer, through tax exemptions, the very same economic resources that they are prohibited from providing in other forms under Article 3.3 and 9.1.[120]

With respect to scheduled agricultural products, the Appellate Body concluded that the unlimited nature of the FSC subsidies meant that there was a threat of circumvention

[115] *Id.* at ¶ 5.134.
[116] The Panel also found in the alternative (¶ 5.174), in case the Appellate Body reversed the Article 9.1(c) finding, that the program constituted an export subsidy "not listed in paragraph 1 of Article 9 . . . applied in a manner which results in, or which threatens to lead to, circumvention of export subsidy commitments", in violation of Article 10.1 of the Agreement.
[117] Report of the Appellate Body, *United States—Tax Treatment of "Foreign Sales Corporations"*, WT/DS108/AB/R (2000).
[118] *Id*, ¶¶ 131–132.
[119] Article 10.1 provides that "[e]xport subsidies not listed in paragraph 1 of Article 9 shall not be applied in a manner which results in, or which threatens to leads to, circumvention of export subsidy commitments. . . ."
[120] *Supra,* n. 117, ¶ 150.

of the scheduled commitments, and therefore a violation of Article 10.1. The decision of the Appellate Body confirms the intimate links between Part V of the Agreement on Agriculture and the Agreement on Subsidies and Countervailing Measures.

4. The "Peace Clause"

The Blair House agreement between the United States and the EC included a "peace clause" under which the parties agreed to exercise "due restraint" in the initiation of countervailing duty investigations or other GATT challenges to various categories of subsidies. The scope of this particular undertaking was expanded when the agreement was "renegotiated" in 1993, for example, the duration of the peace clause was extended from six to nine years and the scope of the agreement was broadened. This bilateral commitment between the United States and the EC was extended to all other Members through Article 13 of the Agreement on Agriculture. Article 13 limited in the following manner the type of actions that could be brought against domestic and export subsidies on agricultural products.

- Green Box subsidies as defined in Annex 2 of the Agreement were completely exempt from challenge.
- Domestic and export subsidies that conform to a Member's commitments under the Agreement could only be subjected to countervailing duties if "a determination of injury or threat thereof" was made in accordance with GATT Article VI and Part V of the SCM Agreement. As those provisions do not ever permit the imposition of countervailing duties in the absence of the finding of an injury or threat of injury, the Peace Clause limitation appears meaningless.[121] Presumably, it was included as a rhetorical "face-saver", to enable one of the negotiating parties to claim to its domestic constituency that it had gained an important concession. In addition, under Article 13, "due restraint shall be shown in initiating any countervailing duty investigations." It is not clear what this language means, and again it may have been included as a "face-saver".[122]
- Domestic subsidies that complied with a Member's commitments could not be challenged either (a) as a violation of GATT Article XVI or of the SCM Agreement, or (b) as a "non-violation" nullification or impairment of benefits,[123] provided that they did not grant support to a specific commodity in excess of that decided during the 1992 marketing year.

[121] *See* GATT Article VI:6(a).

[122] Under United States law, for example, a countervailing duty investigation must be initiated upon the filing of a petition in proper form, and the government has no discretion to exercise "due restraint". The due restraint provision may simply mean that Members agree not to self-initiate investigations as opposed to initiating upon a petition filed on behalf of a domestic industry. If so, it is a fairly meaningless concession because it is extremely rare for governments to self-initiate countervailing duty investigations. The United States has only self-initiated one countervailing duty investigation, *Certain Softwood Lumber From Canada,* 57 Fed. Reg. 22570 (1992). A GATT Panel held that the initiation was not inconsistent with Article 2 of the Tokyo Round Agreement on Interpretation and Application of Articles VI, XVI, and XXIII of the General Agreement on Tariffs and Trade. Report of the GATT panel (adopted) *United States—Measures Affecting Imports of Softwood Lumber From Canada,* BISD 40th Supp. 358 (1994).

[123] Most actions brought in the WTO Dispute Settlement system are based on alleged violations of the WTO Agreements. However, an action can be brought even in the absence of a violation where the Member claims that benefits accruing to it under the GATT (e.g. tariff concessions) have been "nullified or impaired" by the action of another member, even though that action did not violate a WTO Agreement. Such "non-violation" actions are rare. *See* Chapter 29 of this book.

- Export subsidies that complied with a Member's commitments could not be challenged as a violation of GATT Article XVI or Part III of the SCM Agreement. This appears to have left open the possibility of a non-violation action.

The Peace Clause did not prevent disputes from emerging, as evidenced by the discussion above.[124] However, the nature of the commitment of the Members to exercise "due restraint" remains ambiguous and no Member has yet initiated a non-violation action with respect to export subsidies.[125]

5. Developing Countries

Like most of the WTO Agreements, the Agreement on Agriculture contains a number of provisions granting special and differential treatment to developing and least-developed countries. Special attention has also been paid to the impact of the changes required by the Decision on net food-importing countries.

(a) Special and Differential Treatment. Examples of special and differential treatment for developing countries, such as the lower reduction commitments and a longer implementation period, have already been described. To summarize the most important Special and Differential Treatment provisions:

> *Market Access.* Annex 5B exempts primary agricultural products that are the predominant staple in the diet of a developing country from the requirement to tarrify non-tariff barriers.
>
> *Domestic Support Measures.* The commitments for domestic support reduction are lower for developing countries and may be implemented over a longer period. Developing countries are entitled to a greater *de minimis* percentage than developed countries and certain programs are exempted from the reduction commitments. Least developed countries are not required to make any commitments.
>
> *Export Subsidies*. As in the case of domestic subsidies, developing companies have lower commitment requirements and a longer period of time over which to implement them. Developing countries were not required to reduce certain types of subsidy until 2000. Again, least developed countries are not required to make any commitments.
>
> *Export Restrictions.* Article 12 of the Agreement requires Members introducing export prohibitions or restrictions on foodstuffs to relieve critical domestic shortages, in accordance with GATT Article XI.2(a), to notify the Committee on Agriculture and to consult with any importing country upon request. Under Article 12.2 of the Agreement, however, these requirements do not apply to developing country Members unless they are net food exporters of the foodstuff in question.

(b) The Net Food-Importing Developing Countries Decision. The special treatment accorded to the least-developed countries is further enhanced by the Decision on

[124] *See also* WT/DS167/1, *United States—Countervailing Duty Investigation with Respect to Live Cattle From Canada*, a Canadian request for consultations concerning the initiation of a countervailing duty investigation by the United States, made on 22 December 1998, with respect to live cattle from Canada. Canada contended that initiation of the investigation was inconsistent with U.S. obligations under Article 13 of the Agreement on Agriculture, as well as obligations under the Agreement on Subsidies and Countervailing Measures. The matter was dropped after the investigation resulted in a negative determination.

[125] For further discussion, *see* Didier Chambovey, *How the Expiry of the Peace Clause (Article 13 of the WTO Agreement on Agriculture) Might Alter Disciplines on Agricultural Subsidies in the WTO Framework,* 36 J. WORLD TRADE 305 (2002).

Measures Concerning the Possible Negative Effects of the Reform Program on Least-Developed and Net Food-Importing Developing Countries ("NFIDC"),[126] which was reached at the conclusion of the Uruguay Round. The Decision recognizes that implementation of the reform package in agriculture may have negative effects on these countries in relation to the supply of food imports on reasonable terms and conditions.

To ameliorate these negative effects, it was agreed that the level of food aid would be reviewed periodically and that guidelines would be adopted to ensure that an increasing proportion of such aid is in grant form and/or supplied under appropriate concessional terms. In addition, greater consideration would be given to providing technical and financial assistance for agricultural development and infrastructure projects in these countries. Under paragraph 4 of the Decision any future agreement on agricultural export credits would make appropriate provisions for the differential treatment of the least developed and net food-importing countries. Finally, under paragraph 5 those developing countries experiencing short-term difficulties in financing their normal level of commercial imports could draw on the resources available from international financial institutions, the IMF and World Bank, either existing or specially created to deal with this problem. Subsequent Ministerial Conferences and the Committee on Agriculture were to review and monitor the provisions of this decision.[127]

The limited impact of the Decision led the Committee on Agriculture to make a number of recommendations on the NFIDC to the Doha meeting of the General Council of the WTO in September 2001.[128] With respect to food aid, the Committee recommended that early action be taken by food aid donors to review their contributions with a view to improving the identification and meeting of the food aid needs of least-developed and net food-importing developing countries. Donors of food aid were also encouraged to ensure that the levels of food aid to developing countries are maintained during periods of rising world prices. The Committee recommended that food aid for the least developed countries be fully in grant form and that food aid for the remaining net-food importing countries be in grant form to the maximum extent possible.

The Committee also recommended that developed country Members should continue to give full and favorable consideration to technical and financial assistance to improve agricultural productivity and infrastructure in the context of their aid programs. In addition, the General Council was urged to encourage the relevant international development organizations to enhance their provision of, and access to, technical and financial assistance for this priority area. Finally, the Committee recommended the establishment of an inter-agency panel to report on the question of finance to the General Council not later than 30 June 2002.[129] The mandate of the Panel would be to explore mechanisms to improve access by the least-developed and net food-importing developing countries to multilateral programs and facilities to assist with short-term difficulties in financing normal levels of commercial imports of basic foodstuffs. This would include the concept and feasibility of a proposal submitted to the Committee for a Food Financing

[126] The decision is reproduced in THE LEGAL TEXTS: THE RESULTS OF THE URUGUAY ROUND OF MULTILATERAL TRADE NEGOTIATIONS (1999) at 392.

[127] For details of action taken within the framework of the Decision as notified by the Members, *see* GA/AG/NG/S/4.

[128] *See* G/AG/11 for further details.

[129] The Panel would be constituted by financial and commodity experts and would involve the participation of the World Bank, the IMF, the FAO, the International Grains Council and the UNCTAD.

Facility.[130] The Doha Ministerial Conference Decision on Implementation-related Issues and Concerns duly noted the report of the Committee on Agriculture.[131]

The Inter-Agency Panel Report was published in June 2002 and it notes that there has been no clear upward trend in the aggregate food import bills of the least developed and net-food importing developing countries since the Agreement on Agriculture entered into force.[132] The Report offers several points to be considered in the impending review of the IMF's Compensatory Financing Facility.[133] With respect to the proposed Food Financing Facility, it concluded that an *ex-post* revolving fund to support food imports in times of need would be of limited usefulness, but the feasibility of an *ex-ante* financing mechanism aimed at food importers should be explored.[134] The report was to be considered at the General Council meeting of 31 July but it was postponed to its next meeting, at which the Chairman of the Committee on Agriculture was to report on the consultations held with interested Members on how to advance the proposed *ex-ante* financing mechanism. However, as of the time of writing (August 2004), consultations were still continuing. It remains to be seen whether any substantial action will be taken to assist the least-developed and net food-importing developing countries. Indeed the Agreement on Agriculture has produced very limited results for developing countries and it is no surprise that they are seeking a more equitable outcome in the negotiations for a renewed Agreement on Agriculture.[135]

IV. Towards a New Agreement?

A. Introduction

Article 20 of the Agreement on Agriculture recognized that the process of reform is ongoing, and it was agreed that negotiations for continuing that process would begin one year before the end of the implementation period. The objective of such negotiations was to continue fundamental reforms leading to "substantial progressive reductions in support and protection." After the failure of the Ministerial Conference in Seattle, a new round of agricultural negotiations was launched on March 23, 2000, in Geneva. Phase One of the negotiations ended in early 2001 after proposals had been submitted on behalf of one hundred and twenty-one members, and Phase Two concentrated on in-depth work on the options for reform set forth in the proposals.

The Doha Declaration not only reconfirmed the commitment of the Members to the Article 20 program of long-term reform but also committed the Members to "comprehensive negotiations aimed at substantial improvements in market access; reductions of, with a view to phasing out all forms of export subsidies; and substantial reductions in trade-distorting domestic support."[136] Special and differential treatment of developing countries would, according to the Declaration, be an integral part of all elements of the

[130] The proposal for the Facility, which would have resources of around $1.4 billion, was made by Cuba, Dominican Republic, Egypt, Honduras, Ivory Coast, Jamaica, Kenya, Mauritius, Morocco, Pakistan, Peru, Senegal, Sri Lanka, St. Lucia, Trinidad and Tobago, Tunisia, and Venezuela. *See* G/AG/W/49 and Add. 1 and Corr.1.

negotiations. The Declaration also takes note of "the non-trade concerns" reflected in the negotiating proposals submitted by Members, and confirms that they will be taken into account as reflected in Article 20 of the Agreement on Agriculture. The modalities for the negotiation of new commitments were to be established by 31 March 2003, and all the negotiations initiated under the Doha Declaration were to be concluded, as a single package, by 1 January 2005. The members failed to meet the March 2003 deadline for establishing the modalities, and the deadline for completion of the negotiations has been delayed as a result of the General Council meeting held in Geneva in July 2004. See subpart C below.

B. The Negotiating Proposals

The proposals for the next stage of the reform process reveal a range of approaches. Some Members, notably the United States and the Cairns Group, view the negotiations as a major step, or perhaps the final step, in the full integration of agriculture into the disciplines of the WTO. The EC and Japan are part of another group of Members that seek to limit the extent of the changes to the Agreement or to promote changes that would allow them to maintain their existing agricultural policies. A final group, which includes most developing countries, wishes to ensure a more reasonable balance of the benefits and obligations under the Agreement that would promote the process of sustainable development. Each of these approaches is discussed below based on the framework provided by the Agreement. The discussion ends by addressing the issue of non-trade concerns, which includes the relatively new concept of multifunctionality, which is seen by many countries as a pretext on the part of the EC for justifying continued protection.

1. Market Access

The U.S. objective for the market access negotiations is "to maximize market access opportunities for all countries and to make more uniform the level and structure of tariff bindings for all countries in all products."[137] The U.S. proposal calls for a substantial reduction or elimination of disparities in tariff levels and for a reduction of tariff escalation. The Special Safeguard provision in Article 5 of the Agreement would be abolished and existing tariff rate quotas would be subject to substantial increases over an implementation period.[138] The U.S. proposal is supported by the Cairns Group, whose goal is to achieve market access for agricultural goods on similar terms to those applying to other goods.[139]

Other Members have opposed such a dramatic change in market access opportunities. Japan, for example, argues for the retention of the special safeguard provision of the

[137] G/AG/NG/W/15, *U.S. Proposal for Comprehensive Long-Term Agricultural Trade Reform*. *See also,* G/AG/NG/W/32, *Statement by the United States to the Second Special Session of the Committee on Agriculture*.

[138] *See* G/AG/NG/W/58, *U.S. Proposal for Tariff Rate Quota Reform*. The proposal refers to various background papers prepared by the Secretariat. On tariff rate quotas, see various background papers of the WTO Secretariat, G/AG/NG/S/7, 8, 8/Rev.1, and 20.

[139] The Cairns group now includes Argentina, Australia, Bolivia, Chile, Colombia, Costa Rica, Guatemala, Indonesia, Malaysia, New Zealand, Paraguay, the Philippines, South Africa, Thailand and Uruguay. *See* G/AG/NG/W/54, *Cairns Group Negotiating Proposal—Market Access,* and statement by Australia on the proposal, G/AG/NG/W/60, in which it is noted that the average tariff on agricultural products is more than eight times higher than the average tariff on industrial products. *See also, e.g., G*/AG/NG/W/12, *WTO Negotiations on Agriculture Market Access—A Negotiating Proposal by Canada,* and a statement by Canada in support of the Cairns Group proposal, G/AG/NG/W/23.

Agreement, although it has suggested that the mechanism become more transparent.[140] Japan also clams that the existing system has a fundamental problem of imbalance in rights and obligations between importing and exporting countries, and therefore should be improved.[141] In essence, Japan claims that the Agreement endorses a particular model of agriculture that it cannot support, as the Agreement, in its opinion, does not recognize the multifunctionality of agriculture. Whilst supporting improvements in market access, the EC proposes establishment of a close link between market access and fair competition.[142] This would be accomplished through more effective protection against usurpation of names for agricultural products, greater protection of the right to use geographical indications, and improved regulation of labeling.[143] Such an approach seeks recognition of the multifunctionality of agriculture, and in particular the consumer aspects of this concept.

The developing countries that are not members of the Cairns Group have expressed their concerns about the limited results achieved by the Agreement on Agriculture.[144] One developing country submission lists the particular market access problems facing developing countries, including dirty tariffication and tariff peaks, tariff escalation, unweighted tariff reductions, complex and non-transparent tariffs, and various problems with tariff quotas.[145] The developing countries naturally seek to resolve these particular problems to ensure that the renegotiated Agreement on Agriculture results in greater market access and increased exports to developed countries.[146]

None of the negotiating proposals has seriously questioned the continuing expansion of the market access commitments undertaken in the Agreement on Agriculture. The only questions relate to the pace of expansion and the need to ensure equitable distribution of its benefit. The Doha Declaration calls for substantial improvements in market access; however, it is unlikely that such improvements will achieve the goal of the Cairns Group, i.e., similar market access conditions to those applying to non-agricultural products. The principal challenge will be to ensure that all developing countries derive real benefits from the new commitments, in contrast to their limited gains from the Uruguay Round Agreement.

2. Domestic Support

The Cairns Group proposal notes that assuming that the EC, Japan and the United States have met their domestic support reduction commitments by the end of the Uruguay Round Agreement implementation period, they will still be providing over US $110 billion annually in domestic support payments, in addition to the unlimited amounts permitted under the Green and Blue Boxes.[147] Since the members of the Cairns Group are highly competitive agricultural producers, they advocate a major reduction (fifty per cent in the first year of the implementation period) in trade- and production-distorting domestic support.[148] They also propose the disaggregation of the reduction commitments to ensure that support for all agricultural products is reduced. There would be no Blue Box, and the criteria governing the Green Box policies would also be revisited to ensure that these policies have no or at least minimal effects on trade and production.

The United States is also concerned about the Green Box criteria, and it has proposed simplifying the disciplines on domestic support.[149] Existing support, irrespective of which Box it is currently in, would be classified into two categories: exempt support, defined as having, at most, minimal distorting effects on production and trade, and non-exempt support, which would be subject to reduction commitments. In contrast to the Cairns Group proposal, the reduction commitments would be achieved in equal installments over the implementation period.

The EC approach to the issue of domestic support asserts that the arrangements in the Agreement "constitutes the right framework for addressing domestic support issues."[150] Although it agrees that the criteria for the Green Box should be revisited to ensure that while meeting important societal objectives these policies continue to have minimal impact on trade, it advocates retention of the Blue Box. Retention of the Blue Box is supported by Japan who, like Korea, has proposed an adjustment to the scope and criteria of the Green Box so as to reflect the multifunctionality of agriculture.[151]

A number of developing countries have made similar proposals on domestic support issues.[152] It has been proposed that the *de minimis* threshold for developed countries should be reduced or eliminated, while at the same time developing countries should be given more flexibility in its use. It is also proposed that support reductions should be on a disaggregated basis. The Green Box would be re-examined and current Green Box measures would be quantified and disciplined. The Blue Box would either be eliminated over a period of time, or at least there would have to be substantial reductions in the level of subsidies allowed within it. A special box, the Development Box, would be created for developing countries to allow these countries to deviate from their commitments to meet

[151] Japan, *supra* note 140, ¶¶ 17–22 and Korea, *supra* note 141, ¶¶ 20–23. This approach is supported by a number of European countries, *see* for example, G/AG/NG/W/103, *Proposal by Poland*, which suggests that every Member should have the right to introduce and maintain Blue Box payments.

[152] *See* the proposals listed *supra* note 146 and the proposal by Cuba and other countries, *supra* note 145. *See also,* G/AG/NG/W/106, Proposal by Turkey, and the accompanying statement in G/AG/NG/W/172.

their development and food security needs. If a special Development Box is not created, the Green Box would have to be expanded to cover the trade, financial and development needs of developing countries.

The area of domestic support represents a great challenge for the WTO Members in the forthcoming negotiations, as the actual discipline imposed in this area is weak, largely because of the introduction of the Blue Box. The most significant change for the developing countries would be the inclusion of a Development Box as part of a wider movement to make the WTO more responsive to the development needs of these countries.

3. Export Subsidies

It is interesting to note that whereas the Doha Declaration calls for substantial improvements in market access and substantial reductions in trade-distorting domestic support but without their elimination, it calls for the reduction "with a view to phasing out" of all forms of export subsidies.[153] This position on export subsidies is consistent with the Cairns Group proposal, which is that the elimination be achieved following a substantial reduction, of at least fifty per cent, in budgetary outlays and export quantities benefiting from export subsidies in the first year of the implementation period.[154] The U.S. proposal mirrors that of the Cairns Group and also calls for the elimination of variable export taxes and the introduction of disciplines governing export-state trading enterprises.[155] The objective here is to ensure that Members do not circumvent their obligations to eliminate subsidies by resorting to other measures that would distort export competition.

The EC proposal recognizes that additional reductions in the budgetary outlays and export quantities are inevitable, although it does not envisage the complete elimination of export subsidies.[156] However, it would require the additional reductions to apply to all forms of support provided to exports of agricultural and food products, particularly export credits, which are not currently covered.[157] The EC also calls for greater discipline in the areas of food aid and the activities of State Trading Enterprises.[158] Japan supports a similar approach as part of its wider goal of ensuring that the renegotiated Agreement establishes an appropriate balance between the rights and obligations of importing and exporting countries, especially in the area of food security.[159]

[153] However, it should be noted that this commitment was made "without prejudging the outcome of the negotiations," thus allowing an argument to be made that elimination is not an agreed objective. This qualification was inserted in the last hours of the Doha meeting at the insistence of the EC.

[154] G/AG/NG/W/11. *See also, Statement by Australia on Behalf of the Cairns Group to the Second Special Session of the Committee on Agriculture*, G/AG/NG/W/21, and the statement by New Zealand, G/AG/NG/W/29.

[155] *Supra* note 139. The Cairns Group later submitted a negotiating proposal on Export Restrictions and Taxes, G/AG/NG/W/93.

[156] *Supra* note 142, ¶¶ 5–9.

[157] *See* G/AG//NG/W/34, *EC Proposal on Export Competition* and G/AG/NG/W/45, Statement by the EC to the Third Special Session of the Committee on Agriculture. The EC position was supported at this meeting by the Czech Republic, G/AG/NG/W/44 and later by a proposal by the members of MERCOSUR, Bolivia, Chile, Costa Rica, Guatemala, India and Malaysia, G/AG/NG/W/139. However, see G/AG/NG/W/39 for criticism of the contingent nature of the EC proposal by Argentina.

[158] *See also* the proposal by Argentina, Brazil, Paraguay, Uruguay, Chile and Colombia on State-Trading Enterprises, G/AG/NG/W/104.

[159] *Supra* note 140, ¶ 23. The proposal goes on to note that "negotiations on these future rules and disciplines on exports should be conducted, by making sure that an appropriate balance can be achieved with the outcome on negotiations on imports, in order to reach a fair and equitable agreement that can be accepted by both exporting and importing countries alike." (¶ 24)

The concern of food security is especially significant for the developing countries. A discussion paper from a group of developing countries notes that "the perpetuation of export subsidies constitutes, in fact, a special and differential treatment in favor of some rich developed countries."[160] The vast majority of developing country proposals recommend the elimination of export subsidies because of their trade-distorting effect.[161] During the phase-out period existing levels of preferential treatment for developing countries should be continued or even extended. The development of disciplines in other areas, particularly export credits, is proposed, with adequate flexibility for developing countries and especially those countries benefiting from the NFIDC Decision.

The negotiations on export subsidies will present a significant challenge to the WTO Members. This challenge arises in part from the goal set in the Doha Declaration, since not all Members are convinced that export subsidies should be completely phased out. The fact that the Agreement applies only to certain types of export subsidy will be another challenge. There are still no internationally agreed disciplines on the use of export credits, despite the fact that Article 10.2 encouraged the development of such disciplines, and export credits can be used to circumvent a Member's reduction commitments.[162] Discussions within the OECD failed to reach agreement. One advantage of using the WTO to reach agreement on this issue is that it will be more inclusive. The activities of State-Trading Enterprises can also circumvent the export subsidy obligations assumed by Members under Part V of the Agreement, so greater discipline on the activities of these enterprises, which would lead to greater transparency, is necessary to ensure the effective implementation of the Agreement on Agriculture

4. Special and Differential Treatment

As previously noted, the Doha Declaration confirmed that special and differential treatment of developing countries would be an integral part of all the elements of the agriculture negotiations. The Declaration also recognizes that trade can play a "major" role in the promotion of economic development and the alleviation of poverty."[163] In an effort to place the needs and interests of these countries at the heart of the WTO's activities over the next few years, the Declaration notes the important roles to be played by "enhanced market access, balanced rules, and well targeted, sustainably financed technical assistance and capacity-building programs."[164] One question that arises in this context is the meaning to be attributed to special and differential treatment. It appears from the proposals made to the Committee on Agriculture, including that from the influential Cairns Group, that the bulk of such treatment will take the form of lower percentage reductions to be effected over a longer implementation period rather than substantive differences in commitments, except of course in the case of least developed countries.

[160] G/AG/NG/W/38, *Export Subsidies—Food Security or Food Dependency?*, presented by Argentina, Brazil, Paraguay and Uruguay (MERCOSUR), Chile, Bolivia and Costa Rica.

[161] The following discussion uses the proposals referred to *supra* note 146. See also G/AG/NG/W/55 Submission by ASEAN on Special and Differential Treatment for Developing Countries in World Agricultural Trade.

[162] *See* G/AG/11 in which the Committee on Agriculture discusses the implementation of Article 10.2. See also OECD AGRICULTURAL POLICIES IN OECD COUNTRIES (2001) in which the OECD reports that U.S. export credits in 1998 totalled $3.93 billion at the end of 1998. The equivalent figure for the EC was $1.25 billion.

[163] *Supra* note 136, ¶ 2. Paragraph 3 promises particular attention to the need of the least-developed countries.

[164] *See also* in this respect the *Decision of the Ministerial Conference on Implementation-Related Issues and Concerns*, WT/MIN(01)/DEC/W/1, part 2 of which deals with the Agreement on Agriculture.

5. Non-Trade Concerns

The Doha Declaration noted that the non-trade concerns identified in various negotiating proposals would be taken into account "as provided for in the Agreement on Agriculture." Article 20(c) of the Agreement states that non-trade concerns will be taken into account in the reform process but does not define these concerns. Only two non-trade concerns are specifically identified in the Preamble to the Agreement, namely food security and the need to protect the environment. Proposals have been made which would address the issue of food security ranging from the U.S. proposals to renew the commitment to food aid in the NFIDC Decision and to continue with the anti-circumvention disciplines of Article 10.4, to India's proposal that there should be a Food Security Box.[165]

A more contentious non-trade concern that has been raised by a number of WTO Members relates to what they refer to as the "multifunctionality of agriculture."[166] One starting point is the EC claim that in order to promote future liberalization and expansion of international agricultural trade:[167]

> . . . it is vital to muster strong public support, which can only be achieved if other concerns are met, in particular the multifunctional role of agriculture, which covers the protection of the environment and the sustained vitality of rural communities, food safety and other consumer concerns including animal welfare.

As noted above, protection of the environment is already identified as a legitimate non-trade concern. The reference to the sustained vitality of rural communities and various consumer concerns raises particular problems. On food safety, the EC proposes that the WTO address food safety issues through greater use of the precautionary principle, however, it is recognized that this will require clarification of the scope of the principle.[168] On animal welfare, the EC proposal recognizes that consumer pressure places limits on the ways in which it should produce its food.[169] The EC approach to multifunctionality stresses the non-commercial, societal and cultural aspects of agriculture, and asserts that the net contribution made by agriculture to a series of societal goals is greater and more valued by society than the net contribution of equivalent sectors.[170] Other European countries have endorsed this concept.[171]

[165] *U.S. Proposal*, *supra* note 137 and *Indian Proposal*, *supra* note 145. The issue of food security is also addressed in a number of the proposals submitted by developing countries, *supra* note 146.

[166] *See* G/AG/NG/W/36, *Note on Non-Trade Concerns* submitted by Barbados, Burundi, Cyprus, Czech Republic, Estonia, the EC, Fiji, Iceland, Israel, Japan, Korea, Latvia, Liechtenstein, Malta, Mauritius, Mongolia, Norway, Poland, Romania, Saint Lucia, Slovak Republic, Slovenia, Switzerland and Trinidad and Tobago. See various statements on this note, G/AG/NG/W/59, 61, 62 ,64–67, 69–71, 73–77, 81, 82.

[167] *EC Comprehensive Negotiating Proposal*, *supra* note 142, ¶ 1.

[168] *Id*, ¶ 18. For a very critical comment on this proposal by Australia, *see* G/AG/NG/W/41.

[169] G/AG/NG/W/19, *Animal Welfare and Trade in Agriculture*. In recognition of the likely competitive impact of increased costs associated with high animal welfare standards, the EC questions whether or not it would be legitimate to provide compensation to producers. Animal welfare would therefore become a Green Box policy.

[170] The concerns evident in the European approach to multifunctionality may be contrasted with the Japanese approach, which concentrates on the issues of food safety and food security, and informs their proposals in all of the core areas of the negotiations. *Supra* note 140, ¶¶ 42–49 and Annex.

[171] *See*, *e.g.*, *Statement by Switzerland* to the Seventh Special Session of the Committee on Agriculture, G/AG/NG/W/155, and the discussion paper by *Switzerland, Specific Characteristics of Agriculture and the Need to Treat Agriculture Separately Within WTO*, G/AG/NG/W/36/paper one. The Annex reproduces the constitutional provision on agriculture. *See also Statement by Hungary* on behalf of 13 East European Countries to the Fifth Special Session of the Committee on Agriculture, G/AG/NG/W/131, and the statement by Norway to Sixth Special Session of the Committee on Agriculture, G/AG/NG/W/182.

Other WTO Members question the use of the concept of multifunctionality. One comment by Cuba, Honduras and the Dominican Republic noted:[172]

> Concepts have been introduced which, as far as we are concerned, are nothing more than a pretext for continuing with the distortions in the agricultural sector, such as the multifunctionality of agriculture, the non-trade concerns of the developed countries, like environmental protection, animal welfare, and so on.

Australia has noted that the discussion of non-trade concerns seems to be a non-issue.[173] It recognizes that all countries have non-trade concerns and that they must be accommodated by policies that do not distort production or trade. It is the belief that the concept of multifunctionality is being used as a pretext by some developed countries to slow, or even reverse, the process of liberalization initiated by the Agreement on Agriculture, that gives rise to objections.

Although Article 20(c) of the Agreement on Agriculture indicates that non-trade concerns will be taken into account in the negotiations, it also makes specific reference to the long-term objective, as agreed at the mid-term review of the Uruguay Round negotiations, of establishing a fair and market-oriented agricultural trading system. This objective is also recognized in the Preamble to the Agreement, as is the objective of securing "substantial progressive reduction in agricultural support and protection sustained over an agreed period of time, resulting in correcting and preventing restrictions and distortions in world agricultural markets." These objectives form the twin pillars of the reform process and, as Argentina has asserted, "non-trade concerns should be pursued consistently with the objectives of these negotiations, not at the expense of other trading partners."[174] If the Agreement on Agriculture is to incorporate the concept of multifunctionality, it must be shown that the public goods produced by agriculture are greater or more valued by society than the public goods produced by other sectors. When this can be shown, the next step will be to establish the parameters of legitimate measures under the Agreement on Agriculture that will protect the multifunctional nature of agriculture in all WTO Members. This will be a considerable challenge, particularly given the hostility toward the concept on the part of a number of members.

C. The July 2004 Framework

The failure of the WTO Members to meet the agreed deadline of March 31, 2003, for agreement on the modalities for further commitments, despite the publication of two sets of modalities by the Chair of the special (negotiating) session of the Committee on Agriculture, only served to emphasis the divergent negotiating positions of the Members.[175] It was agreed in July 2003 that proposals for a "modalities framework" could be attached to the draft Ministerial text for the Cancun Ministerial Conference. The first attempt to provide such a framework was made by the EC and the United States on August 13, 2003, when they issued a "Joint Text" at an informal Heads of Delegation consultation.[176] This

[176] JOB(03)/157.

produced a number of counter-proposals.[177] The structure of the Joint Text became the basis for the draft Ministerial text, although it was amended to reflect the content of some of the counter proposals that had emerged.[178] The Cancun Ministerial Conference concluded on September 14, 2003, without agreement, although the Chair had issued a revised draft text on Agriculture.[179]

The brief Ministerial Statement that ended the Fifth Ministerial (Cancun) Conference stated that "more work needs to be done in some key areas to enable us to proceed towards the conclusion of the negotiations in fulfillment of the commitments we took at Doha." To this end officials were instructed to continue working on outstanding issues and a General Council meeting in December would decide the best way to move the process forward. Although there was no major breakthrough at the December General Council Meeting, Members did agree to restart negotiations and it was recognized that the negotiations on agriculture would be central to the overall success of the mandate given at Doha.[180] Negotiations on agriculture did not resume until the special (negotiating) session of the Committee on Agriculture, held in March 2004, which set the end of July as the date for agreement on a framework text on modalities for future agriculture negotiations. The re-launched negotiations have been conducted in a series of special negotiating sessions (agriculture weeks) and informal mini-ministerials, which have been discussed new proposals for reform.[181] As a result of the progress made in these negotiations the Chairman of the General Council and the Director-General submitted a Draft General Council Decision that included a draft framework for establishing modalities in Agriculture, which after slight amendment was agreed on July 31, 2004.[182]

Not unexpectedly, the Framework takes as its starting point paragraph 13 of the Doha Ministerial Declaration. The modalities that will be eventually agreed will incorporate provisions for the special and differential treatment of developing countries and will build on the long-term objective of the Agreement on Agriculture to establish a fair and market-oriented trading system. Fundamental reforms will occur in each of the three pillars of the Agreement and the Framework recognizes that "the reforms in all three pillars form an interconnected whole and must be approached in a balanced and equitable manner."[183]

In the Market Access pillar, the tiered formula found in the Harbinson drafts is retained, although the number of bands, their thresholds and the level of tariff reduction within each tier remain to be established.[184] It is therefore unclear whether the Doha Declaration mandate for "substantial improvements in market access" will be achieved, although the text does promise this for all products and for each product. All Members will be allowed to designate an "appropriate" number of tariff lines as sensitive, with substantial

[177] *See for example* the proposal of G-20, a coalition of developing countries including China, India and Brazil amongst others, JOB(03)/162 (re-circulated as WT/MIN(03)/W/6) and the proposal from the G-90, a coalition of least developed countries, member of the African Union and the African, Caribbean and Pacific Group, WT/MIN(03)/17.

[184] *Id*, ¶¶ 27–44.

improvements in access being made through "combinations of tariff quota commitments and tariff reductions." The issue of tariff escalation will be addressed through a formula to be agreed, and the issue of tariff simplification and the special agricultural safeguard remain under negotiation. Among the measures that reflect the need for special and differential treatment for developing Members to be an integral part of the negotiations are the usual methods of lower tariff reduction formulas and longer implementation periods. In addition, a Special Safeguard Mechanism will be established and using the criteria of food security, livelihood security and rural development, developing country Members will be able to designate an "appropriate" number of products as Special Products.

In relation to Domestic Support, Annex A paragraph 6 of the Framework provides that "there will be a strong element of harmonisation in the reductions made by developed Members. Specifically, higher levels of permitted trade-distorting domestic support will be subject to deeper cuts."[185] This will require the negotiation of a tiered formula. In the first year of implementation of the new Agreement there will be a twenty percent reduction in the Final Bound Total AMS plus permitted *de minimis* plus the Blue Box payments. To prevent the circumvention of this objective through transfers of unchanged domestic support between different support categories a methodology will be agreed for the capping of product-specific AMSs. The existing criteria for use of the Blue Box will be reviewed and additional criteria may be negotiated subject to conditions, for example that they would "not have the perverse effect of undoing ongoing reforms." It was agreed that the criteria for use of the Blue Box payments would ensure that they are "less trade-distorting than AMS measures" and that Blue Box payments would not exceed five percent of a Member's average total value of agricultural production during an historical period. This period would be established in the negotiations. Criteria for the use of Green Box measures would also be reviewed and clarified, for example to take account of non-trade concerns, to ensure that payments meet the criteria of having no, or at most minimal, trade-distorting effects or effects on production. Provision is made for the special and differential treatment of developing countries in the form of longer implementation periods and lower reductions as well as an exemption to the negotiated reductions in *de minimis* for those developing countries that allocate almost all *de minimis* support for subsistence and resource-poor farmers.

In the area of export competition, the Framework provides for the elimination of export subsidies, export credit guarantees or insurance programmes with repayment periods beyond 180 days, and the trade distorting practices of exporting State Trading Enterprises.[186] The date for the elimination of these measures is to be agreed. Disciplines are to be negotiated for export credits, export credit guarantees or insurance programmes with repayment periods of 180 days or less, and existing disciplines on export prohibitions and restrictions in Article 12.1 of the Agreement on Agriculture will also be strengthened. As an element of special and differential treatment in this area, State Trading Enterprises in developing country Members that enjoy special privileges to preserve domestic consumer price stability and to ensure food security will receive special consideration for maintaining monopoly status. On the issue of food aid, disciplines will be negotiated to eliminate aid that results in commercial displacement. These disciplines which will address the role of international organizations with respect to the food aid provided by Members will also address the issue of providing food aid exclusively in fully grant

[185] *Id*, ¶¶ 6–16.
[186] *Id*, ¶¶ 17–26.

form. Developing country Members will once again benefit from longer implementation periods and will continue to benefit from the provisions of Article 9.4 of the Agreement on Agriculture for a reasonable period; again this period is to be negotiated. Differential treatment is also provided for those developing countries benefiting from the Decision on Measures Concerning the Possible Negative Effects of the Reform Programme on Least-Developed and Net Food-Importing Developing Countries.

The Framework agreed on July 31, 2004, adds another issue to the negotiations—cotton.[187] This is a product that has come to the fore recently. Part of the reason for this was the Brazilian complaint against U.S. subsidies provided to producers, users and exporters of upland cotton.[188] Brazil alleged that the subsidies were contrary to the Agreement on Subsidies and Countervailing Measures and the Agreement on Agriculture. The United States had countered this allegation by claiming that the disputed subsides were covered by the peace clause. Although the report of the Panel had not been published at the time of writing, it has been reported that the Panel found that some of the U.S. subsides which it claimed were allowed under the Green Box were in fact prohibited subsidies and had exceeded the limits agreed to by the United States.[189] Given the importance of the dispute, not only to the parties but also the negotiations on agriculture, it seems likely that the decision of the Panel will be appealed.

The reference to cotton in the Framework also relates to another complaint about the impact of cotton subsidies granted by developed countries; this time by four African producers of cotton. Rather than pursue a complaint through the dispute settlement Understanding, four African producers of cotton (Benin, Burkino Faso, Chad and Mali) raised the issue in both the General Council and the agriculture negotiations. Having outlined the damage that subsidies in developed countries cause them, the four called for them to be eliminated and for compensation to be paid for the damage suffered by such subsidies.[190] The proposal called for a decision at the Cancun Ministerial Conference but no decision was reached. Discussions of the proposal reveal a difference of opinion between the WTO members as to how this should be dealt with, either separately or as part of the agriculture negotiations, and on the issue of compensation. The Framework provides that the issue should be addressed "ambitiously, expeditiously, and specifically, within the agriculture negotiations." Whilst recognising that the Sectoral Initiative offers one approach to the resolution of the problems, the Framework is also seen as the basis for addressing the problem. So the special session of the Committee on Agriculture, will establish a subcommittee on cotton which will examine all trade-distorting polices affecting the sector in the three pillars of the Agreement. The subcommittee will meet periodically and report to special session of the Committee on Agriculture to allow it to review progress. As for the development aspects of the Sectoral Initiative, the Director-General of the WTO is instructed by paragraph 1.b of the General Council decision to consult and work with multilateral institutions, including the Bretton Woods Institutions and the Food and Agriculture Organisation.

The level of ambition set by the Doha Declaration will continue to be the basis for the negotiations on agriculture. However, a significant amount of the detail needs to be filled in. Under the original Doha agenda, the Members were to have agreed the modalities

[190] *See* TN/AG/GEN/4, *Poverty Reduction: Sectoral Initiative in Favour of Cotton*, for details of the proposal.

for reform by March 2003. Instead, agreement was finally reached on a Framework for Establishing Modalities in July 2004. One consequence of this is that the deadline set by the Doha Declaration for concluding the talks, 1 January 2005, will be missed and the latest General Council Decision does not set a new deadline. It merely calls for reports to be made to the Sixth Ministerial Conference, which will be held in Hong Kong in December 2005.

However, there is cause to be optimistic about the future of the Agreement on Agriculture. Much remains to be agreed in the area of market access, although the reference to sensitive products should please the EC, Japan and Switzerland, just as the negotiations on Special Products and the Special Safeguard Mechanism should please developing countries. The United States will be pleased with the Framework provisions on the Blue Box as it should allow the counter-cyclical payments to be notified as Blue Box payments, and therefore not included in the Total AMS. Developing countries, especially India, will also be pleased with the proposed changes to the *de minimis* provisions in domestic support and the agreement by the developed countries to eliminate export subsidies. The lack of a definite time frame and the skeletal provisions in some areas are however causes of concern.

D. Conclusion

The Agreement on Agriculture has established a framework for negotiations on the core issues; substantial improvements in market access, reductions in trade-distorting domestic support and the phasing out of all forms of export subsidies. As the negotiating proposals outlined above indicate each area of the negotiations presents potential difficulties. These may include tariff quotas or tariff escalation in the area of market access, continuation of the Blue Box or the negotiation of a development box in the area of domestic support, and export credits and state trading enterprises in the case of export subsidies. Even if the negotiations succeed, implementation of the results may give rise to difficulties as the Uruguay Round was only the start of the process and did not have a significant impact on agricultural policy. This will not be the case in this round, which has more ambitious goals. Further difficulties will arise from the negotiations with respect to non-trade concerns. These could have a negative influence on the core agenda unless the negotiators maintain their focus on the twin goals of the Agreement on Agriculture—the establishment of a fair and market-oriented agricultural trading system, and substantial progressive reduction in agricultural support and protection in order to reduce distortion of world agricultural markets.

The U.S. Farm Bill[191] of 2002 has been heavily criticized by other Members as running contrary to the core objectives of the negotiations.[192] Although the Bill included various export measures, it is the increase in support for domestic producers that has attracted the most criticism. In particular new payments, referred to as counter-cyclical payments, are introduced for producers of different products whenever income falls below a certain target price. One effect of these changes is that it may reduce the ability of the United States to agree further reduction commitments on domestic support, as it is estimated that payments under the Bill will come close to reaching the annual AMS commitment

[191] *The Farm Security and Rural Investment Act 2002*, signed on 13 May, 2002.

[192] See http://www.ictsd.org/weekly/02-05–15/story2.htm for a summary of these criticisms, including a possible legal challenge by Mercosur.

level.[193] However, the Secretary for Agriculture has authority under the Bill to ensure that the WTO commitments of the United States are not exceeded.

The negative impact that passage of the Bill had on the negotiations has been alleviated by the latest U.S. proposal, which employs a two-phase process for further reform. In the first phase, which would last five years, export subsidies would be eliminated and tariffs and trade-distorting domestic support would be reduced. In the second phase all tariffs and trade-distorting domestic support would be eliminated.[194] It should also be noted that, at present, U.S. tariffs and domestic support expenditure still fall below those of the EC. The mid-term review of the CAP would not change this fact, it is a redistribution of, rather than a reduction in, expenditure.[195] It seems that the factors motivating governmental intervention in the agricultural sector are as prevalent today as they were at the birth of the GATT. The question for the future is: will these factors frustrate the process of agricultural trade reform initiated by the Agreement on Agriculture and affect the overall credibility of the WTO?

I. Introduction

A. International Trade and SPS Measures

1. An Uneasy Relationship

The protection of human, plant and animal life and health is clearly a duty of all governments within their sovereign sphere. For this purpose, governments have in place regulatory measures aimed at the protection of health[1] in their territories against risks contained in food and agricultural products. These health measures can focus on human or animal life or health (sanitary measures) or on plant life or health (phytosanitary measures). Together, they are termed sanitary and phytosanitary ("SPS") measures and can take many forms. One can think of examples such as regulations setting maximum residue levels for toxins or contaminants,[2] approval procedures for additives, quarantine requirements to minimize the spread of pests and diseases, labeling requirements to notify consumers of potentially-harmful foodstuffs (such as allergen-containing products), regulations governing the process or production method whereby the product is made, inspection or certification requirements or outright bans on potentially hazardous products.[3] These are all SPS measures.

In recent years we have witnessed a proliferation of SPS measures. This can be attributed to three main factors. First, there is an increase in the number and variety of potential risks contained in food and agricultural products due to both increasing use of new technologies in agriculture and food processing (such as pesticides, additives and genetic modification) and the growth in imports from developing countries whose domestic food-safety infrastructures are often inadequate. Second, regulators have to respond to rising consumer expectations and demands with regard to food safety in developed countries, resulting from increased affluence and consumer awareness of food-related risks. Third, regulators are confronted with pressure from the agriculture and food industry lobbies in the face of increased competition due to agricultural trade liberalization. As a result, more and more SPS regulations are adopted and market access for food and agricultural products is greatly reduced.[4]

[1] For purposes of this chapter, unless otherwise specified, a reference to "health" or "public health" should be taken to mean human, animal or plant life or health. Similarly, "health measures" refer to measures for the protection of human, animal or plant life or health.

[2] The EC's maximum residue levels for aflotoxins are an example of such an SPS measure.

[3] For example, many countries banned beef imports from the EC in response to the outbreak of foot-and-mouth disease in 2001.

[4] Several studies have been conducted into the trade impact of SPS measures and technical barriers to trade more generally. Some have focused on the impact on developing country exports. Although quantification of the effect of these measures has proved difficult due to the complexity of the impact of standards on supply and demand, it is widely acknowledged that SPS measures can have significant negative effects on trade flows. *See* for example Tsunehiro Otsuki *et al.*, *Measuring the Effect of Food Safety Standards on African Exports to Europe*, in THE ECONOMICS OF QUARANTINE AND THE SPS AGREEMENT (Kim Anderson, *et al.,* eds. 2001); Tsunehiro Otsuki *et al., Saving Two in a Billion: A Case Study to Quantify the Trade Effect of European Food Safety Standards on African Exports,* Working Paper, Development Research Group, World Bank (2001); Spencer Henson and Rupert Loader, *Barriers to Agricultural Exports from Developing Countries: The Role of Sanitary and Phytosanitary Requirements,* 29 WORLD DEVELOPMENT 85 (2001); T. Ademola Oyejide *et al.*, *Quantifying the Trade Impact of Sanitary and Phytosanitary Standards: What Is Known and Issues of Importance for Sub-Saharan Africa*, Paper presented at the WORKSHOP ON QUANTIFYING THE TRADE EFFECT OF STANDARDS AND REGULATORY BARRIERS: IS IT POSSIBLE?, April 27, 2000; John S. Wilson *et al.*, AGRICULTURE IN THE WTO—THE ROLE OF PRODUCT ATTRIBUTES IN THE AGRICULTURAL NEGOTIATIONS Commissioned Paper number 17, April, The International Agricultural Trade Research Consortium (2001).

SPS measures can have an important impact on international trade. Currently there is a large volume of trade in food and agricultural products.[5] Not only are consumer tastes, especially in developed countries, increasingly international so that demand for foreign food products is growing, but there has also been a growth in the number of countries, especially developing countries, that participate in food and agricultural trade.[6] When one bears in mind the vast array of differing SPS standards that exist in different countries, reflecting their national priorities, stage of economic development and consumer preferences, it becomes clear that the possibilities exporters have of exploiting economies of scale on the international market are significantly reduced. The high cost of meeting the plethora of health standards means that exporters are forced to charge higher prices for their products on the export market or are even completely excluded from this market.

Many SPS measures are based on legitimate health concerns but others are based on more questionable motives. Clearly governments, under the influence of domestic industry pressure groups, may misuse SPS measures as disguised trade barriers for protectionist purposes. It is for this reason that all free trade regimes, including the WTO, contain rules to mediate the conflict between the competing goals of trade liberalization (and thus economic growth) and the protection of human, animal and plant health from risks contained in food and agricultural products.

2. The Importance of Rules

(a) For Developed Countries. Traditionally, developed countries have primarily been food importers. Increasing affluence gives rise to increased consumer demand, not only in terms of quantity of food but also with regard to variety. Developed country consumers also expect their governments to ensure high food quality and safety standards. For this reason, developed country regulators impose a large number of SPS measures. It is important for these regulators that international trade agreements recognize their right to impose SPS measures and lay down clear rules regarding any limitations to this right. This avoids the situation under the relevant GATT rules where it was left to dispute-settlement panels to flesh out the rather rudimentary provisions of the Article XX(b) exception for health measures, reading into it increasingly complex requirements that GATT contracting parties had to comply with in order to defend a measure from challenge.

Developed countries are also exporters of food and agricultural products. For this reason, producers in developed countries benefit from disciplines on the ability of importing countries to impose SPS measures in a way that restricts market access for their products. Clear rules provide security for producers and encourage them to invest in producing goods for export. There is an increased use of sophisticated technologies in the agricultural and food industries of some developed countries, which entail huge investment. Some of these technologies have been the subject of much controversy and have led to consumer health concerns. Examples such as the use of hormones in cattle feed to enhance growth, the administration of the hormone bovine somatropin ("BST") to increase

[5] The share of trade in agricultural products in world trade in goods amounted to 10.5 percent in 1998 (larger than sectors such as iron and steel, automobiles, textiles and clothing, chemicals). In that year, food products made up eighty percent of total agricultural trade. WTO Secretariat, THE AGREEMENT ON AGRICULTURE, July 1999.

[6] W.C.K. Hammer, *Food Trade and Implementation of the SPS and TBT Agreements: Current Status of Food Trade, Including Food Quality and Safety Problems*, Paper presented at the CONFERENCE ON INTERNATIONAL FOOD TRADE BEYOND 2000: SCIENCE-BASED DECISIONS, HARMONIZATION, EQUIVALENCE AND MUTUAL RECOGNITION, Melbourne, Australia, October 11–15, 1999, at 1.

milk production in dairy cows, and the genetic modification of crops to make them resistant to pests and herbicides come to mind. Regulations restricting market access have proliferated as a result of consumer concerns and public opinion regarding such new technologies. Developed countries employing such new technologies have an interest in ensuring that rules exist prohibiting the rejection of their products on the import market on the basis of ungrounded public fears and ensuring that scientific evidence of risk underlies regulatory decisions.

In many cases, agricultural producers in developed countries have become accustomed to generous government support.[7] Attempts to liberalize the agricultural sector at the national level, even though they make economic sense for the country concerned, are made difficult by the strength of the agricultural lobby.[8] Now, with increasing reduction of traditional market barriers in the agricultural sector due to WTO disciplines, as achieved by the Agreement on Agriculture and ongoing negotiations for the further liberalization of trade in agricultural products,[9] regulators in developed countries are subject to increasing pressure from the agricultural lobby to restrict market access by other means. Typically, technical standards and health regulations are measures open to abuse for protectionist purposes. The creation of international rules imposing disciplines on non-tariff barriers to trade enables governments to reject calls for protectionism with the convenient excuse that their hands are tied by the rules they have negotiated at the international level. Open markets in the agricultural sector are often to the economic advantage of developed countries as this provides them with access to cheaper agricultural imports, which are beneficial to expanding processed-food industries in these countries.

(b) For Developing Countries. Agriculture is a sector of primary importance for trade in most developing countries. It comprises a much larger share of economic output in developing countries than in developed countries,[10] and accounts for a large part of developing countries' exports and foreign exchange earnings.[11] In addition, several developing countries rely on exports of only a few agricultural products. These countries are thus extremely vulnerable to trade barriers in this sector. A reduction in market access for agricultural products from developing countries has far-reaching effects not only on

[7] Total support for agriculture in OECD countries was estimated to be U.S.$327 billion in 2000. Organization for Economic Cooperation and Development, AGRICULTURAL POLICIES IN OECD COUNTRIES—MONITORING AND EVALUATION (2001), *quoted in* World Trade Organization, ANNUAL REPORT 2002, 36 (2002).

[8] The difficulty of liberalization of the agricultural sector has been ascribed to the distribution of the costs and benefits of agricultural subsidies. The costs are borne by a diffuse group of consumers and taxpayers who are unlikely to organize to lobby for policy reform. On the other hand, the benefits go to an identifiable, already highly organized group of farming interests, who are experienced in exerting political pressure to secure protection and support from their governments. Furthermore, concerns regarding excessive dependency on food imports to meet domestic food requirements as well as concerns over the impact of reduced agricultural activity on the environment and the survival of rural communities, have strengthened the opposition to liberalization of the agricultural sector.

[9] Now taking place in the context of the Doha Development Round, launched in Doha on November 14, 2001.

[10] In 1997, agriculture accounted for three percent of the GDP of developed countries, but 26 percent of GDP for developing countries and fifty percent of the GDP of least-developed countries. Food and Agriculture Organization, *Issues at Stake Relating to Agricultural Development, Trade and Food Security*, FAO Symposium on AGRICULTURE, TRADE AND FOOD SECURITY: ISSUES AND OPTIONS IN THE FORTHCOMING WTO NEGOTIATIONS FROM THE PERSPECTIVE OF DEVELOPING COUNTRIES, September 23–24, 1999, at 12–15.

[11] In developing countries, agricultural exports account for on average 27 percent of total merchandise exports whereas in developed countries this share is only four percent. Thomas C. Beierle, FROM URUGUAY TO DOHA: AGRICULTURAL TRADE NEGOTIATIONS AT THE WORLD TRADE ORGANIZATION 4, Resources for the Future (2002).

export revenues, which are crucial for the development needs of these countries, but also on income and rural employment in these countries.[12]

With the increasing liberalization of the agricultural sector by means of disciplines on traditional trade barriers (such as quotas) under WTO rules, the focus has started to shift to non-tariff barriers, such as SPS regulations and standards, as obstacles to market access. As is to be expected, there is a large difference in consumer expectations in developed and developing countries regarding food safety and vast differences in the standard of the food-safety and animal and plant health systems in place to ensure that food and agricultural products meet the standards set in a particular country. As a result, developing countries increasingly face the rejection of their food and agricultural exports, causing great financial losses. It is therefore crucial for developing countries to ensure that effective disciplines are in place to deal with non-tariff barriers in the form of SPS measures, in order to prevent their misuse for protectionist purposes in lieu of traditional market barriers. In addition, it is important for developing countries that the rules in place take account of their financial and human resource constraints in meeting those SPS standards that are legitimate.

With the creation of a rules-based system for international trade, the WTO has strengthened the position of developing countries in the international arena *vis-à-vis* their trading partners. Now developing countries can challenge the trade-restrictive measures of other Members in accordance with WTO rules, by means of the WTO dispute settlement system.[13] The creation of clear and enforceable disciplines, in an international agreement, that enhance trade opportunities in an area of crucial interest to developing countries, namely the food and agricultural sector, provides tools for developing countries to use in securing market access for their export products.

B. Rules on SPS Measures before the SPS Agreement

1. GATT 1947, Articles III, XI and XX(b), and the Tokyo Round Standards Code

The trade disciplines in GATT 1947 covered the use of non-tariff measures, including SPS regulations, as trade barriers, and tried to limit the possibilities for their misuse for protectionist purposes. The disciplines of GATT 1947, now incorporated by reference into GATT 1994, contained provisions that were (and still are) applicable to health regulations and standards, to the extent that they discriminate against imports. The most important provisions in this regard are Articles III, XI and XX(b) of the GATT.

Article III contains what is commonly known as the National Treatment provision, which prohibits discriminatory tax and regulatory treatment of imported products from WTO Members once they have crossed the border. Under Article III:4, Members agree to provide imported products treatment "no less favorable" than that granted to "like" domestic products by means of all laws, regulations and requirements affecting their

[12] While in developed countries only nine percent of the population is employed in the agricultural sector, in developing countries this is more than fifty percent. *Id.*

[13] The WTO dispute settlement system is discussed in Chapters 25 *et seq* of this book, so it will not be described here. It should, however, be remembered that the dispute settlement system includes a consultation phase during which a mutually acceptable solution to a trade dispute (in accordance with WTO rules) can be agreed upon without recourse to the panel procedure. Thus, even if developing countries lack the resources to make use of the full dispute settlement procedure of the WTO, they still benefit from the rules of the SPS Agreement according to which they can raise challenges to trade-restrictive SPS measures in consultations with their trading partners. In Part III D, below, we briefly discuss a few specific issues of WTO dispute settlement that have arisen in the context of disputes on SPS measures.

sale, purchase, distribution, transportation or use. Thus any health regulation, such as a maximum residue level for pesticides, must be applied equally to imports and "like" domestic products. Article XI, on the other hand, focuses on border measures and prohibits quantitative restrictions, such as bans or other restrictions, on imports from Members, except in very limited cases. Import bans that are imposed on products for health reasons would be prohibited by this provision unless covered by an exception to the general rules.

It is clear that in some cases regulations that discriminate against imports or set quantitative restrictions on imported products are a justifiable exercise of the sovereign duty of a government to protect certain societal values in its territory. For this reason, the GATT provides, in Article XX, for certain qualified exceptions to its rules for measures aimed at particular policy objectives. One of these exceptions, contained in Article XX(b), is that for measures *necessary* to protect the life or health of humans, animals and plants. Such measures are allowed, provided that they are not applied in a manner constituting arbitrary or unjustified discrimination between countries where the same conditions prevail, or a disguised restriction on international trade, in terms of the *chapeau* of Article XX.

The early negotiating rounds under the auspices of the GATT focused on tariff negotiations, and were quite successful in reducing tariff levels. As a result, the relative importance of standards and regulations as trade barriers increased. At the same time, growing consumer awareness of health and environmental issues was leading to a proliferation of regulations and standards in these areas, particularly in developed countries. Thus, in the Tokyo Round of trade negotiations,[14] there was a shift in focus towards tackling this form of trade barrier and four codes on non-tariff barriers were adopted. One of these was the Agreement on Technical Barriers to Trade, commonly known as the "Standards Code". The Standards Code did not focus specifically on regulations for the protection of human, plant or animal life or health, but was aimed broadly at all technical regulations and standards, as is the Uruguay Round Agreement on Technical Barriers to Trade ("TBT Agreement"). The Standards Code was not binding on all GATT Contracting Parties but only on those 32 Contracting Parties that were signatories to it.[15]

The Standards Code reiterated the GATT obligation of "national treatment" for like imported products. However, unlike the GATT, it applied also to non-discriminatory measures, laying down disciplines for the setting and application of standards and regulations even where they applied to domestic and imported products alike. Under the Standards Code, signatories agreed to adopt only standards and regulations that were necessary to achieve a legitimate aim, such as the protection of public health, and not to apply these measures in a manner that would constitute a disguised restriction on trade or create unnecessary obstacles to trade. More importantly, the Code required signatories to apply relevant international standards where they existed, unless these were deemed inadequate to meet the intended goal, thus introducing the first reference to harmonized standards into the international trade regime. In addition (and perhaps the main achievement of the Code) it introduced transparency requirements for the adoption of regulations and standards that were not "substantially the same" as international standards.

[14] These negotiations lasted from 1973–1979.

[15] Under the GATT regime it was possible for GATT contracting parties to choose whether or not to become signatories to the agreements which were negotiated to supplement the basic GATT disciplines. In the Uruguay Round, in contrast, all WTO Members undertook to be bound to all the multilateral agreements as part of a "single undertaking".

The Standards Code included a dispute-settlement mechanism that established the possibility for review by a panel or a technical group of experts of regulations or standards that could have "the effect of creating unnecessary obstacles to international trade". Thus, a Member could challenge the regulations or standards of another Member on the grounds that they violated a provision of the Standards Code. Despite the fact that no dispute-settlement proceeding was ever conducted under the Code, it did assist in the resolution of a few trade disputes involving industrial standards.[16]

2. Insufficiency of the GATT 1947 Rules and the Standards Code

The rules of GATT 1947 were insufficient in several respects to address the problem of the increasing use of SPS measures to restrict trade in agricultural and food products. First, GATT disciplines on national regulations focus on prohibiting discrimination against imported products. Thus, the rules do not catch non-discriminatory SPS measures that have trade restrictive effects. Most SPS measures apply not only to imports but also to domestic products. For this reason, they often escaped GATT disciplines. Second, the exception provided in Article XX(b) to the usual GATT rules for measures necessary to protect human, animal or plant life or health does not contain detailed rules disciplining the use of such measures. For example, no risk assessment is required as a basis for a health measure, nor are Members required to publish their proposed health measures in advance. Lastly, there is no recognition in the GATT of the *right* of governments to enact regulations for the protection of human, animal and plant life or health in their territories. Instead, health measures are seen as an *exception* to the usual GATT disciplines and thus the government imposing the measure bears the burden of proving that it falls within the scope of the exception provided in Article XX(b).

The Standards Code also had certain inherent shortcomings that limited its effectiveness in disciplining the use of regulations for the protection of human, animal and plant life and health as barriers to trade. First, it was only binding on its 32 signatories, thus excluding the majority of GATT Contracting Parties from its rules. Second, it did not directly apply to non-product-related processes and production methods ("NPR-PPMs").[17] Thus, regulations on how a specific product was produced fell outside its scope and were dealt with in terms of the usual GATT disciplines. Third, the dispute settlement mechanism created in the Standards Code, like that in GATT 1947, required consensus among WTO Members for the establishment of a panel or technical expert group to review a complaint. It was thus possible for a Member whose regulation was being challenged to block the establishment of a panel or review group. Further, even if review of the measure were not blocked, the findings of the relevant panel or review group had to be adopted by consensus of the signatories to the Standards Code in the Committee on

[16] Vogel discusses a few cases where agreement was reached in bilateral consultations following a challenge on the basis of the Standards Code. David Vogel, *Ships Passing in the Night: GMOs and the Politics of Risk Regulation in Europe and the United States*, Paper prepared for the CONFERENCE ON REGULATORY ISSUES OF GENETICALLY MODIFIED ORGANISMS, Maastricht, June 24–25, 2002, at 152–153.

[17] The definition in the Standards Code of a measure that would fall under its disciplines was "(a) specification contained in a document which lays down the characteristics of a product such as levels of quality, performance, safety or dimensions". This implicitly excludes process and production standards to the extent that they are not reflected in the product characteristics themselves. However, under Article 14 of the Standards Code, a signatory could challenge a PPM measure under the Code where it considered that the requirements had been drafted in the form of regulations on PPMs in order to avoid the Standards Code disciplines.

Technical Barriers to Trade in order to become binding. This created a second possibility for a signatory to block the dispute settlement process. Finally, no enforcement mechanism existed to ensure compliance with adopted dispute settlement reports, and thus compliance depended on the good faith of the Members and the shaming effect of the ruling.

In the 1980s, a dispute arose between the United States and the European Communities ("EC"), concerning an EC ban on the use of hormones for growth-promotion purposes in livestock farming, and an import prohibition on hormone-treated meat.[18] Despite attempts to address this dispute in informal discussions and later in dispute settlement proceedings under the Tokyo Round Standards Code, the conflict remained unresolved.[19] This ongoing dispute served to highlight the insufficiency of the existing rules with respect to the use of measures for the protection of human, animal or plant life or health in ways that restrict international trade. This resulted in an increased awareness of the need for new rules.[20]

C. Uruguay Round Negotiations on the SPS Agreement

1. Negotiating History

One important aim of the Uruguay Round negotiations was the liberalization of the agricultural sector. This sector had remained subject to much protection, despite the existing GATT rules. Thus, agricultural liberalization was one of the main driving forces behind the launching of the Uruguay Round of trade negotiations in September 1986. The agenda for these negotiations was set out in the Punta Del Este Declaration.[21] The Declaration called for the liberalization of trade in agricultural products and for bringing "... all measures affecting import access ... under strengthened and more operationally active GATT rules and disciplines" by, *inter alia*, "minimizing the adverse effects that sanitary and phytosanitary regulations and barriers can have on trade in agriculture, taking into account the relevant international agreements."[22]

During the Uruguay Round negotiations on agricultural trade liberalization and on what would eventually become the Agreement on Agriculture, negotiators were very aware of the possibility that progress towards lowering trade barriers in the agricultural sector could be made ineffective by the increased use of SPS measures for protectionist purposes. Thus special disciplines for SPS measures were seen as crucial and inherently linked to the attempts to liberalize the agricultural sector.

[18] Council Directive of December 31, 1985, *Prohibiting the Use in Livestock Farming of Certain Substances having a Hormonal Action*, 1985 O.J. (L.382) 228. For details of the various EC Directives and proposals on this issue as well as this history of this dispute, *see* Dale E. McNiel, *The First Case under the WTO's Sanitary and Phytosanitary Agreement: The European Union's Hormone Ban,* 39 VIRGINIA JOURNAL OF INTERNATIONAL LAW 89, 99–107 (1998).

[19] In 1987, after unsuccessful consultations on this dispute between the United States and the EC, the United States requested that the matter be referred to a technical expert group. The EC blocked the establishment of this expert group.

[20] Patterson discusses possible reasons why, before the Uruguay Round, disciplines for SPS measures were not negotiated despite the fact that the abuse of SPS measures for protectionist purposes was not new. Briefly, these are the importance attached to national sovereignty in health matters and the fact that agreement on uniform rules is made difficult by the fact that national health priorities differ widely. *See* Eliza Patterson, *International Efforts to Minimize the Adverse Trade Effects of National Sanitary and Phytosanitary Regulations*, 24 JOURNAL OF WORLD TRADE 91, 95–96 (1990).

[21] *Ministerial Declaration on the Uruguay Round: Declaration of September 20, 1986,* ("*Punta Del Este Declaration*") GATT B.I.S.D. 33S/19 (1987).

[22] *Punta Del Este Declaration, supra* note 21, at 20.

Originally, the idea was to strengthen the rules in the Standards Code with respect to SPS measures. However, as negotiations progressed, the issue of SPS measures was seen as meriting special attention, apart from the larger genus of technical standards.[23] This led to the creation of a separate Working Group on Sanitary and Phytosanitary Regulations and Barriers in 1989, under the Negotiating Group on Agriculture. As a result, two separate agreements on technical barriers to trade emerged from in the Uruguay Round: first, the Agreement on Technical Barriers to Trade ("TBT Agreement")[24] applicable to technical regulations, standards and conformity assessment procedures other than sanitary or phytosanitary measures; and second, the Agreement on the Application of Sanitary and Phytosanitary Measures ("SPS Agreement").[25]

2. Position of the Major Trading Nations

In the negotiations that led to the conclusion of the SPS Agreement, the leading role was taken primarily by those countries that account for the largest share of agricultural trade, namely the Cairns Group[26] of agriculture exporting countries, the United States and the EC.[27]

By the mid-term review of the Uruguay Round negotiations in December 1988, five priorities had been agreed upon for SPS disciplines, namely (1) international harmonization of SPS measures around standards set by international organizations; (2) the establishment of an effective notification procedure for SPS measures; (3) improvements to the multilateral dispute settlement system; (4) the possibility of obtaining scientific input and expertise, relying on the international organizations; and (5) an effective mechanism for bilateral settlement of disputes.[28] After the creation of the Working Group on Sanitary and Phytosanitary Regulations and Barriers in 1989, negotiations proceeded on this basis.

Written proposals were submitted to the Working Group. In these proposals, the United States, the EC and the Cairns Group all supported harmonization of SPS measures around the standards set by the Codex Alimentarius Commission, the International Plant

[23] Reasons that have been suggested for this view are the close link between agriculture and SPS standards, the importance of the beef hormone dispute, and the fact that SPS measures were thought to raise problems different from those linked to other technical standards, for example the greater importance of scientific risk assessment, the greater divergence in national approaches to standard setting and the crucial role of national regulatory authorities in deciding on the need for regulation and the measures to be taken. *See* David A. Wirth, *The Role of Science in the Uruguay Round and NAFTA Trade Disciplines,* 27 CORNELL INTERNATIONAL LAW JOURNAL 817, 824 (1994).

[24] Agreement on Technical Barriers to Trade, Annex 1A to the Marrakesh Agreement, reprinted in GATT SECRETARIAT, THE RESULTS OF THE URUGUAY ROUND OF MULTILATERAL TRADE NEGOTIATIONS: THE LEGAL TEXTS 6–18 (1994). This Agreement elaborates on and replaces the Tokyo Round Standards Code of 1980. The TBT Agreement goes further than the Standards Code in that it applies to both mandatory technical regulations and optional standards, and extends not only to products but also to related processes and production methods. The TBT Agreement is discussed in Chapter 8 of this book.

[25] Agreement on the Application of Sanitary and Phytosanitary Measures, Annex 1A to the Marrakesh Agreement, reprinted in THE RESULTS OF THE URUGUAY ROUND, *supra* note 24, at 69–84. The scope of the SPS Agreement and its relationship to the TBT Agreement are discussed *infra* Part II(A).

[26] At the time of the Uruguay Round negotiations the Cairns Group was composed of: Argentina, Australia, Brazil, Canada, Chile, Colombia, Hungary, Indonesia, Malaysia, New Zealand, the Philippines, Thailand and Uruguay.

[27] Significant input was also provided by Japan and the Nordic group of countries. Israel, Korea, Austria, Morocco, Brazil and Colombia made proposals on SPS issues within their proposals for the agriculture negotiations in general.

[28] Simonetta Zarrilli and Irene Musselli, THE SPS AGREEMENT AND THE DEVELOPING COUNTRIES, World Bank (2002).

Protection Convention and the International Office of Epizootics or, for matters not covered by these organizations, around standards set by other relevant international organizations open for full participation by WTO Members. However, the proposals initially differed with respect to the strength of the harmonization provision. The United States and the Cairns Group envisaged a presumption of consistency with either the requirement of sound scientific evidence[29] or with the disciplines of Article XX(b)[30] of the GATT for SPS measures based on international standards, requiring Members that impose more stringent standards to prove that their measure was consistent with sound scientific evidence or the relevant GATT provisions. By contrast, the EC saw the international standards as constituting only a "principal source of scientific or technical advice when considering the sanitary and phytosanitary aspects of international trade" and emphasized the need "to provide for countries that have reached a high health status to be able to continue to apply standards more stringent than the international standards, where appropriate".[31] A convergence in positions resulted when, during the negotiations, the EC was faced with restrictions on its wine exports to the United States due to the presence of the pesticide procymidone, while Codex was in the process of adopting a maximum residue level for this pesticide. The EC then realized the potential benefits of harmonized standards and strengthened its support for a stricter harmonization provision.

There was general consensus on the inclusion of a non-discrimination principle and a requirement that the measure not constitute a disguised restriction on trade. In addition, the importance of ensuring transparency by means of notification procedures was agreed upon. The EC and the Cairns Group also indicated the need for technical assistance and special and differential treatment with regard to developing countries, with the Cairns proposal going further in calling for phased introduction of new SPS measures, longer time frames for compliance by developing countries, assistance for dispute settlement, and compensation where SPS measures more stringent than necessary are applied to developing country products.

The Working Group drew up a draft text of the SPS Agreement in October 1990. In the last months of 1990, however, the Uruguay Round negotiations faltered and the Brussels Meeting at which the Round should have been completed ended in deadlock. The deadlock was largely due to disagreement on issues relating to the liberalization of agricultural trade. To break the deadlock, in December 1991 the then Director-General of the GATT tabled what is now known as the "Dunkel Draft", embodying an overall compromise position. With respect to the SPS Agreement the Dunkel Draft closely followed the text of the 1990 draft prepared by the Working Group on Sanitary and

Phytosanitary Regulations and Barriers and this formed the basis for the final text of the SPS Agreement.[32]

3. Role of Developing Countries

Apart from those developing countries that were members of the Cairns group at the time of the Uruguay Round negotiations,[33] developing country participation in the negotiation of the SPS Agreement was very limited. Some developing country Cairns Group members, such as Argentina and Chile, made statements and actively participated in the discussions in the meetings of the Working Group. However, only Brazil and Colombia, acting jointly, and Morocco (not a Cairns Group member) submitted written negotiating proposals in this area, as part of their broader submissions for the agriculture negotiations. These developing countries emphasized the importance of harmonization of SPS measures on the basis of standards set by the international standard-setting organizations, as well as technical assistance and special and differential treatment for developing countries. In addition, it was proposed by Brazil and Colombia that when, without sound scientific evidence, Members apply stricter SPS measures to developing country products than to products from other countries, resulting in a reduction of the market share of developing countries or their exclusion from the relevant market, it should be possible to claim equitable compensation in dispute settlement.[34]

The lack of broader participation from developing countries in the negotiations leading to the drafting of the SPS Agreement can be attributed to their limited resources and the resulting wish to focus on those aspects of the negotiations that they perceived as being of most direct relevance to them (such as the agriculture and textiles negotiations). The technical nature of negotiations regarding disciplines on sanitary and phytosanitary measures may have further discouraged their participation, due to their lack of technical expertise in this area.

D. Overview of the Main Features of the 1994 SPS Agreement

The SPS Agreement tries to balance the right of Member governments to enact measures for the protection of human, animal and plant life or health in their territories against risks contained in imported products, with the goal of liberalizing trade in agricultural and food products. It thus aims to reconcile free trade with the legitimate concerns of governments for the life and health of humans, animals and plants. It does this by recognizing the right

[32] Some significant differences between the Dunkel Draft and the final version of the SPS Agreement were: (1) the addition of a footnote clarifying what the "scientific justification" required when an SPS measure deviates from an international standard is composed of; (2) the change in the initial requirement of Article 5.6 that SPS measures be least restrictive to trade, to indicate that they must be no more trade restrictive that required to achieve their appropriate level of sanitary or phytosanitary protection; (3) the indication in Article 5.3 that the requirement that economic factors be taken into account in a risk assessment does not apply to human health risks; and (4) the extension of the transitional period for implementation of the SPS Agreement from two years to five years, for least-developed country Members. THE GATT URUGUAY ROUND: A NEGOTIATING HISTORY (1986–1994), VOL. IV: THE END GAME 44–45 (Terence P. Stewart ed. 1999).

of Members to enact SPS measures[35] and to determine the level of health protection they want to ensure in their territories,[36] while setting certain limits for the exercise of these rights.

The SPS Agreement lays down specific rules and disciplines applicable to SPS measures. Going further than a mere elaboration and clarification of Article XX(b) of GATT 1994,[37] the SPS Agreement establishes a new, comprehensive set of norms for the adoption, maintenance and enforcement of SPS measures. Unlike the new TBT Agreement, the SPS Agreement emphasizes the role of scientific justification for the validity of national health measures.

The SPS Agreement introduces scientific disciplines for SPS measures. It requires that Members base their SPS measures on science, in the form of a risk assessment.[38] Certain requirements are set for risk assessments. Further, it encourages, without obliging, Members to harmonize their SPS measures around international standards, where these exist.[39] The SPS Agreement makes specific reference to three international standard-setting organizations in the area of SPS standards. Members are obliged to participate fully, within the limits of their resources, in international standard setting in these organizations. If Members wish to adopt SPS measures that are not based on international standards, they must provide scientific justification for these deviating measures. Where scientific evidence is insufficient, Members are allowed to take provisional measures, subject to certain requirements.[40]

In addition to the scientific disciplines on SPS measures, the SPS Agreement incorporates and elaborates GATT disciplines relevant to measures for the protection of human, animal or plant life or health. For example, SPS measures must be necessary to protect human, animal or plant life or health.[41] Members may not adopt measures that are more trade restrictive than required to achieve their chosen level of protection and must take into account the aim of minimizing negative trade effects when choosing their appropriate level of protection.[42] The SPS Agreement prohibits SPS measures that discriminate between Members or between a Member's own territory and that of other Members or are applied so as to constitute a disguised restriction on trade.[43] Members may not make arbitrary or unjustifiable distinctions in the levels of protection they deem appropriate in different but comparable situations.[44]

[35] Contained in Article 2.1of the SPS Agreement and discussed *infra* Part II(B)(1).

[36] *See infra* Part II(F)(1).

[37] Previously Article XX(b) of GATT 1947.

[38] The scientific disciplines are contained in Articles 2.2 and 5 of the SPS Agreement and are discussed *infra* Parts II(B)(2)(b) and II(D) respectively.

[39] The rules in respect of harmonization are contained in Article 3 of the SPS Agreement and are discussed *infra* Part II(C).

[40] Rules on provisional measures are contained in Article 5.7 of the SPS Agreement and discussed *infra* Part II(E).

[41] The "necessary" test is found in Article 2.2 of the SPS Agreement and discussed *infra* Part II(B)(2)(a). It reflects the "necessary" requirement of Article XX(b) of the GATT.

[42] The least-trade-restrictive requirement is found in Article 5.6 and (in non-mandatory form) in Article 5.4 of the SPS Agreement, discussed *infra* Parts II(F)(3) and II(F)(2) respectively, and reflects one element of the "necessary" test in Article XX(b) of the GATT.

[43] This non-discrimination provision is found in Article 2.3 of the SPS Agreement, discussed *infra* Part II(B)(2)(c). It encompasses the national treatment obligation of Article III of the GATT as well as the most favored nation treatment obligation of Article I of the GATT. It also reflects the requirements of the *chapeau* of Article XX of the GATT but is broader in scope.

[44] The goal of consistency in levels of protection is contained in Article 5.5 of the SPS Agreement, discussed *infra* Part II.(F)(2). It is a concrete application of the prohibition on arbitrary or unjustifiable discrimination or disguised restrictions on trade embodied in the *chapeau* to Article XX of the GATT.

The SPS Agreement also creates novel disciplines, specifically designed to minimize the trade-restrictive effect of legitimate SPS measures. It obliges Members to accept different SPS measures as equivalent to their own where they have been shown to achieve the same level of protection,[45] and to adapt their measures to take account of differences such as pest- and disease free status (and low pest and disease prevalence) in different countries and regions.[46]

Further, the SPS Agreement sets out procedural rules to ensure that the adoption and application of legitimate SPS measures do not unnecessarily limit trade. It requires that new or amended SPS measures be notified in advance to other Members and that a reasonable period of time be provided for Members to adapt to the new measures.[47] It also obliges Members to restrict administrative procedures for control, inspection and approval to ensure that they are no more burdensome, lengthy or costly than is reasonable and necessary.[48] An SPS Committee is established to oversee the operation and implementation of the SPS Agreement[49] and special rules are established to deal with scientific expertise in dispute settlement.[50]

Finally, particular rules are in place to address the special position of developing countries. These rules are aimed at the provision of technical assistance to developing country Members[51] as well as special and differential treatment of developing countries.[52]

II. Substantive Provisions of the SPS Agreement as Applied and Interpreted in Case Law

A. Scope of Application of the SPS Agreement (Article 1.1 and Annex A, paragraph 1)

Before examining the substantive disciplines of the SPS Agreement, it is necessary to determine what falls within its scope. Article 1.1 sets out the scope of application of this Agreement. It provides that the SPS Agreement applies to "all sanitary and phytosanitary measures which may, directly or indirectly, affect international trade."

Thus, as set out by the Panel in *EC—Hormones*, there are two requirements for the SPS Agreement to apply:

> According to Article 1.1 of the SPS Agreement, two requirements need to be fulfilled for the SPS Agreement to apply: (i) the measure in dispute is a sanitary or phytosanitary measure; and (ii) the measure in dispute may, directly or indirectly, affect international trade.[53]

[45] The disciplines on recognition of equivalence are found in Article 4 of the SPS Agreement, discussed *infra* Part II(G)1.

[46] Rules on adaptation to regional conditions are found in Article 6 of the SPS Agreement, discussed *infra* Part II(G)2.

[47] The transparency obligations are contained in Article 7 and Annex B of the SPS Agreement, discussed *infra* Part III(A).

[48] The rules on control, inspection and approval procedures are found in Article 8 and Annex C of the SPS Agreement, discussed *infra* Part III(B).

[49] The provisions relating to the SPS Committee are found in Article 12 of the SPS Agreement, discussed *infra* Part III(C).

[50] Special rules with regard to dispute settlement under the SPS Agreement are found in Article 11 of the SPS Agreement, discussed *infra* Part III(D).

[51] Rules regarding technical assistance for developing countries are found in Article 9 of the SPS Agreement, discussed *infra* Part IV(A).

[52] Provisions relating to special and differential treatment are found in Article 10 of the SPS Agreement, discussed *infra* Part IV(B)(1).

[53] Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by Canada, WT/DS48/R/CAN (1997), ¶ 8.39 (footnotes omitted); Report of the WTO Panel, *EC—Measures*

The first step is therefore to determine whether the measure is an SPS measure, after which the effect on international trade needs to be examined.

1. Definition of an SPS Measure (Annex A, paragraph 1)

Not all measures imposed for the protection of health are SPS measures for purposes of the SPS Agreement. The term SPS measure is defined in Annex A of the SPS Agreement, which provides in relevant part that an SPS measure is:

> . . . any measure applied: (a) to protect animal or plant life or health within the territory of the Member from risks arising from the entry, establishment or spread of pests, diseases, disease-carrying organisms or disease causing organisms; (b) to protect human or animal life or health within the territory of the Member from risks arising from additives, contaminants, toxins or disease-causing organisms in foods, beverages or feedstuffs; (c) to protect human life or health within the territory of the Member from risks arising from diseases carried by animals, plants or products thereof, or from the entry, establishment or spread of pests; or (d) to prevent or limit other damage within the territory of the Member from the entry, establishment or spread of pests.
>
> Sanitary or phytosanitary measures include all relevant laws, decrees, regulations, requirements and procedures including, *inter alia*, end product criteria; processes and production methods; testing, inspection, certification and approval procedures; quarantine treatments including relevant requirements associated with the transport of animals or plants, or with the materials necessary for their survival during transport; provisions on relevant statistical methods, sampling procedures and methods of risk assessment; and packaging and labelling requirements directly related to food safety.

It is clear from this definition that whether a measure falls under the SPS Agreement depends on its purpose or goal. Broadly speaking, the definition covers measures aimed at protecting humans and animals from food-borne health risks and protecting humans, animals and plants from risks from pests or diseases. Measures addressing other health risks relevant for international trade (such as a ban on toys made from toxic plastics or on products containing asbestos) and measures not directly aimed at health protection, but rather at consumer information or ethical concerns (such as requirements for labeling of biologically-grown vegetables or free-range eggs) do not fall under this definition. Such measures would thus not be subject to the disciplines of the SPS Agreement and would have to be analyzed under the relevant provisions of GATT 1994 and the TBT Agreement.[54]

While the characterization of a measure as an SPS measure depends on the purpose or goal of this measure, we are of the opinion that it is not the purpose or goal that a Member ascribes to the measure that is the determining factor.[55] If that were the case, a Member could avoid the application of the Agreement by denying that the purpose of its measure is one of those falling within the Annex A definition. We believe that to establish whether

Concerning Meat and Meat Products (Hormones), Complaint by the United States, WT/DS26/R/USA (1997), ¶ 8.36. It should be noted that in this dispute, the complaints by the United States and Canada regarding the EC ban on hormone-treated beef were dealt with separately by two Panels. However, since the two Panels had the same composition and heard and decided the two complaints together, we will refer to the Panels as "the Panel" (singular). The Panel did, however, circulate two separate reports, which were largely identical. Thus, where reference is made to this dispute, the relevant paragraphs of each of the two reports will be mentioned.

[54] In a recent case the Appellate Body found that a French ban on asbestos products from Canada could be challenged under the TBT Agreement and GATT 1994. *See* Report of the Appellate Body, *European Communities—Measures Affecting Asbestos and Asbestos-Containing Products*, WT/DS135/AB/R (2001), ¶ 75.

[55] *See also* McNiel, *supra* note 18, at 112.

a measure is an SPS measure one has to determine objectively the regulatory goal of the measure (for example by examining the formulation of the measure, its structure or design, and its effect), rather than trying to determine the subjective intent of the Member imposing the measure.

Health protection may be only *one of several* goals or objectives pursued by a measure. How does this affect the characterization of a measure as an SPS measure?[56] Could the Member imposing a measure argue that the other goals or objectives predominate and that the measure is thus not an SPS measure? Would the mere existence of one of the health objectives listed in paragraph 1 of Annex A be sufficient to characterize the measure as an SPS measure? This question has not received any attention in the case law so far. In all four cases to date, the Member defending its measure actually claimed that its purpose was the protection of health.[57]

Once it is established that a measure falls within one of the definitions in Annex A, paragraph 1, it is also important to determine precisely which definition applies since this affects the kind of risk assessment required to support the measure.[58] The risk assessment required differs depending on whether the measure is classified as a measure against food-borne risks (definition in paragraph 1(b)) or as a measure against risks from pests or diseases (definitions in paragraphs 1(a), 1(c) and 1(d)).

In *Australia—Salmon*, the Panel examined whether an Australian ban on imports of fresh, chilled or frozen salmon to prevent the importation of exotic diseases was a "sanitary measure" within the meaning of Annex A, paragraph 1(a) or (b), and stated as follows:

> In the circumstances at hand, we consider that the definition of a "sanitary measure" in paragraph 1(a) encompasses the coverage sought by Australia under the definition in paragraph 1(b). The definition in paragraph 1(a) deals with risks arising from "the entry, establishment or spread of pests, diseases ... or disease-causing organisms" in general. In the context of disease-causing organisms, the definition in paragraph 1(b) is limited in the sense that it only addresses risks arising from "disease-causing organisms in foods, beverages or feedstuffs" (hereafter also referred to as food-borne risks). We are of the view that, even though both definitions of a "sanitary measure" invoked by Australia might be applicable to the measure in dispute, the *objectives for which that measure is being applied* are more appropriately covered by the definition in paragraph 1(a). These objectives have been clearly expressed by Australia on several occasions.[59] (Emphasis added)

It appears in this case that the Panel first objectively determined which of the provisions of Annex A applies, before affirming its conclusion by reference to the fact that Australia had expressed this objective.

Significantly, the definition in Annex A specifies that the measures must aim to protect human, animal or plant life or health "within the territory of the Member." Thus measures

[56] *See also* Joost Pauwelyn, *The WTO Agreement on Sanitary and Phytosanitary (SPS) Measures as Applied in the First Three SPS Disputes: EC—Hormones, Australia—Salmon and Japan-Varietals,* 2 JOURNAL OF INTERNATIONAL ECONOMIC LAW 641, 643 (1999).

The Appellate Body finding in the cases are discussed extensively in this chapter.

[58] This issue will be discussed *infra* Part II(D)(1).

[59] Report of the WTO Panel, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 57, ¶ 8.34.

aiming at the extra-territorial application of domestic health standards are excluded from the application of the SPS Agreement. This issue relates to the treatment of measures with respect to processes and production methods ("PPMs") under the SPS Agreement. Although the definition of SPS measures in Annex A of the SPS Agreement expressly includes PPMs, this is qualified by the requirement that SPS measures aim to protect health "within the territory of the Member". Thus, while, for example, rules relating to hygiene in foreign packaging or processing plants or abattoirs would fall within the definition of SPS measures as they aim to prevent health risks in the importing Member, rules on, for example, foreign forestry practices aimed at protecting plant health in the exporting Member would not be considered SPS measures for purposes of the SPS Agreement. Such extra-territorial PPMs would fall under the rules of the GATT[60] or possibly the TBT Agreement.[61]

The definition in Annex A, paragraph 1, goes on to state that SPS measures "include all relevant laws, decrees, regulations, requirements and procedures . . ." and gives a broad, illustrative, non-exhaustive list of such measures ranging from end-product criteria and quarantine requirements to certification and sampling procedures. The SPS Agreement therefore provides broad coverage of legal measures and is clearly intended to cover all measures aimed at one of the above-mentioned purposes, whether by means of legislation, administrative regulation or procedural rules. Thus, if the measure at issue is aimed at one of the goals mentioned in points (a) to (d) of the definition, it is an SPS measure for the purposes of the SPS Agreement, regardless of the specific form it takes.

The scope of application of the SPS Agreement is not limited to discriminatory measures. WTO Members negotiating the SPS Agreement realized that a test based on discrimination does not adequately distinguish between legitimate SPS measures and those used for protectionist purposes.[62] It is possible for a measure which neither discriminates de facto nor de jure between domestic products and imports to have a negative impact on international trade, and thereby serve to protect domestic industry from foreign competition. For example, a low maximum residue level for the presence of a specific chemical used in pesticides, applicable to both domestic and imported fruit, may have the effect of excluding fruit exports from many countries from the domestic market. The SPS Agreement is thus also applicable to non-discriminatory SPS measures that affect international trade. The application of the Agreement therefore extends beyond the scope of GATT 1994, which is limited to discriminatory measures. An SPS measure is subject to the disciplines of the SPS Agreement even if it is neither directly nor indirectly discriminatory and is thus GATT-consistent.

2. Direct or Indirect Effect on International Trade (Article 1.1)

The second requirement set forth in Article 1.1 for the application of the SPS Agreement is that it must be shown that the relevant measure may directly or indirectly affect international trade. It would appear that this is not an empirical standard, necessitating proof

[60] There has been extensive discussion in the literature regarding whether, under GATT law, Members are allowed to distinguish between products in their regulations on the basis of PPMs. The debate focuses on whether products made using different PPMs are to be considered "like products" for purposes of the non-discrimination rules of the GATT. If so, the question remains open whether the exceptions in Article XX of the GATT could in limited cases justify extra-territorial measures dealing with PPM issues.

[61] There is some debate regarding whether PPMs that do not affect the characteristics of the product fall under the definition of a "technical regulation" for purposes of the TBT Agreement. Since the TBT Agreement is dealt with in Chapter 8 of this book, this issue will not be addressed here.

[62] David R. Hurst, *Hormones: European Communities—Measures Affecting Meat and Meat Products,* 9 European Journal of International Law 182, 182 (1998).

that the measure has led to a reduction in trade flows, but rather a theoretical standard, met by showing that the measure applies to imports and can therefore be presumed to have a negative impact on trade.[63] In *EC -Hormones* the Panel agreed with both parties that this requirement had been met and stated that "it cannot be contested that an import ban affects international trade."[64] This requirement should be easy to fulfill, and has yet to be discussed in any SPS case.

3. Other Issues relating to the Scope of Application

(a) Applicability to Bodies Other than Central Government Bodies (Article 13). The applicability of the disciplines in the SPS Agreement to bodies other than the central government is addressed in Article 13 of the SPS Agreement. This provision states:

> Members are fully responsible under this Agreement for the observance of all obligations set forth herein. Members shall formulate and implement positive measures and mechanisms in support of the observance of the provisions of this Agreement by other than central government bodies. Members shall take such reasonable measures as may be available to them to ensure that non-governmental entities within their territories, as well as regional bodies in which relevant entities within their territories are members, comply with the relevant provisions of this Agreement. In addition, Members shall not take measures which have the effect of, directly or indirectly, requiring or encouraging such regional or non-governmental entities, or local governmental bodies, to act in a manner inconsistent with the provisions of this Agreement. Members shall ensure that they rely on the services of non-governmental entities for implementing sanitary or phytosanitary measures only if these entities comply with the provisions of this Agreement.

The compliance Panel in *Australia—Salmon* in this regard found, with respect to the applicability of the SPS Agreement to a measure taken by a state government (Tasmania), as follows:

> Article 13 of the SPS Agreement provides unambiguously that: (1) "Members are fully responsible under [the SPS] Agreement for the observance of all obligations set forth herein"; and (2) "Members shall formulate and implement positive measures and mechanisms in support of the observance of the provisions of this Agreement by other than central government bodies". Reading these two obligations together, in light of Article 1.1 of the SPS Agreement referred to earlier, we consider that sanitary measures taken by the Government of Tasmania, being an "other than central government" body as recognized by Australia, are subject to the SPS Agreement and fall under the responsibility of Australia as WTO Member when it comes to their observance of SPS obligations.[65]

Thus the rules contained in the SPS Agreement will not only have an impact on the central government bodies of a Member, but indirectly also on other bodies under its responsibility charged with duties in the area of sanitary and phytosanitary protection. It is the task of the Member to ensure that these bodies comply with the disciplines of the SPS Agreement.

(b) No Requirement of Prior Proof of GATT Violation. Before the coming into force of the SPS Agreement, Members were only required to justify their health measures under

[63] McNiel, *supra* note 18, at 113.

[64] Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by the United States, *supra* note 53, ¶ 8.23; and Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones)*, Complaint by Canada, *supra* note 53, ¶ 8.26.

[65] Report of the WTO Compliance Panel, *Australia—Measures Affecting the Importation of Salmon, Recourse to Article 21.5 by Canada*, WT/DS18/RW (2000), ¶ 7.13.

Article XX(b) of the GATT once a violation of GATT disciplines had been shown. This is a logical consequence of the rule/exception relationship between Articles III and XI on the one hand and Article XX on the other. The Panel in *EC—Hormones* was faced with the question whether a prior violation of the GATT 1994 must be shown before the SPS Agreement is applicable to a dispute. The EC argued that since the Preamble of the SPS Agreement explicitly states as one of its aims the elaboration of rules for the application of the provisions of the GATT 1994 relating to SPS measures, particularly Article XX(b), the SPS Agreement is not an independent agreement but only an interpretation of Article XX(b). It would thus only apply in cases where Articles I, III or XI of the GATT 1994 had been violated and recourse could be had to the Article XX(b) exception.[66] The Panel rejected this argument, finding that the SPS Agreement is an independent agreement, imposing substantive obligations that go beyond those of the GATT.[67] After referring to the two requirements of Article 1.1, it held:

> . . . There are no additional requirements. The SPS Agreement contains, in particular, no explicit requirement of a prior violation of a provision of GATT which would govern the applicability of the SPS Agreement, as asserted by the European Communities.[68]

Thus, prior proof of a violation of the GATT is not a precondition for the applicability of the SPS Agreement.[69] This finding is clearly correct, since the scope of the SPS Agreement is broader than that of the GATT. As noted above, an SPS measure that is non-discriminatory and thus in compliance with GATT rules could still fall foul of the disciplines of the SPS Agreement, for example by not being based on a risk assessment. While, as has been stated above, the negotiations on the SPS Agreement started out, *inter alia,* as an attempt to clarify Article XX(b) of the GATT, it is clear that the result went far beyond this. The SPS Agreement now lays down a comprehensive set of rights and obligations, independent of those contained in GATT 1994 and covers all SPS measures that could have an impact on international trade, not only those that are discriminatory in nature or effect. Therefore it is clear that a violation of the GATT cannot be a prerequisite for the applicability of the SPS Agreement.

(c) Temporal Scope of Application. The temporal scope of application of the SPS Agreement also deserves attention here. In EC— *Hormones* the EC argued that, as its measure

[66] Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by the United States, *supra* note 53, ¶ 4.4; and Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones)*, Complaint by Canada, *supra* note 53, ¶ 4.3.

[67] The Panel based its finding on the following grounds: (1) under the plain language of Article1.1 which governs the applicability of the SPS Agreement, the only requirements are that the relevant measure be an SPS measure as defined in Annex A and that it affect international trade. No prior violation of GATT is required. (2) The SPS Agreement does not only elaborate on GATT provisions but establishes its own substantive obligations in order to further, *inter alia*, the harmonization of SPS measures. (3) Under Article 2.4 of the SPS Agreement, measures that conform to the SPS Agreement are deemed to comply with GATT provisions, in particular Article XX(b). (4) Article 3.2 of the SPS Agreement states that measures conforming to international standards are presumed consistent with GATT 1994. These presumptions imply that the SPS Agreement contains at least as many and probably more obligations than Article XX(b) of the GATT 1994.

[68] Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by Canada, *supra* note 53, ¶ 8.39 (footnotes omitted); Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by the United States, *supra* note 53, ¶ 8.36.

predated the entry into force of the SPS Agreement on January 1, 1995, the SPS Agreement was not applicable to it. The Appellate Body agreed with the Panel's finding that the SPS Agreement nevertheless governed the dispute. The Appellate Body held as follows:

> If the negotiators had wanted to exempt the very large group of SPS measures in existence on 1 January 1995 from the disciplines of provisions as important as Articles 5.1 and 5.5, it appears reasonable to us to expect that they would have said so explicitly. Articles 5.1 and 5.5 do not distinguish between SPS measures adopted before 1 January 1995 and measures adopted since; the relevant implication is that they are intended to be applicable to both.[70]

The Panel had based its conclusion on Article 28 of the Vienna Convention on the Law of Treaties[71] which provides that—as a rule—a treaty cannot apply to acts, facts or situations ceasing to exist before the treaty came into force. As the EC measure continued to exist after the entry into force of the SPS Agreement and since there were no provisions in the SPS Agreement itself limiting its temporal application, the Agreement was held to apply to the measure in question.[72] The Appellate Body also pointed to Article XVI:4 of the Marrakesh Agreement which obliges Members to ensure the conformity of their laws, regulations and procedures with their obligations under the annexed Agreements.[73] It is thus apparent that Members have to review their existing SPS measures in the light of the new disciplines of the SPS Agreement, in particular those relating to the scientific basis for SPS measures.

Recognizing the difficulties that this could cause for Members, particularly in the light of the requirement contained in the SPS Agreement that measures be based on risk assessments, the Appellate Body pointed to the qualification to this obligation in Article 5.1, which provides for a degree of flexibility by requiring only a risk assessment "as appropriate to the circumstances."[74]

From the above discussion it is apparent that the SPS Agreement has a very broad scope of application. The disciplines it establishes will have a far-reaching impact on national measures for the protection of health falling within the definition of SPS measures.

4. Relationship with other WTO Agreements

Where a measure for the protection of health is at issue, it could fall under any of the following three WTO agreements, namely the SPS Agreement, the TBT Agreement or GATT 1994, depending on the nature and content or objective of the measure. While both the SPS Agreement and the TBT Agreement circumscribe the measures to which they apply,[75] GATT 1994 rules[76] generally apply to discriminatory measures applicable

[70] Report of the Appellate Body, *EC—Measures Concerning Meat* and *Meat Products (Hormones)*, WT/DS26/AB/R, WT/DS48/AB/R, ¶ 128.

[71] Concluded in Vienna on May 23, 1969, 8 I.L.M. 679 (1969).

[72] Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by the United States, *supra* note 53, ¶ 8.25; and Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones)*, Complaint by Canada, *supra* note 53, ¶ 8.25.

[73] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 128.

[74] *Id.* ¶ 129.

[75] The SPS Agreement applies to SPS measures as defined in Annex A thereto and the TBT Agreement applies to technical regulations, standards and conformity assessment procedures, as defined in Annex 1 thereto, except where these are covered by the SPS Agreement.

[76] Most relevant for our purposes are Articles III:4, XI and XX(b) of GATT 1994, the provisions of which are described briefly *supra* Part I(B)(1).

to trade in goods.[77] Thus, the treatment of measures for the protection of health under WTO law is determined by the relevant provisions of these three agreements within their respective spheres of application. The relationship between these agreements will therefore be addressed. In addition, the relationship between the SPS Agreement and the Agreement on Agriculture also deserves attention here due to the close link between the aims of these agreements.

(a) The TBT Agreement. As discussed above, during the Uruguay Round negotiations it was agreed that separate disciplines were necessary for SPS measures aside from those applicable to technical standards generally.[78] This led to the drafting of two separate agreements on technical barriers: the SPS Agreement and the TBT Agreement.

The importance of establishing which of these two agreements applies when dealing with a technical regulation or standard for the protection of health comes from the fact that the two agreements apply different disciplines to measures falling within their respective ambits. The rules in the TBT Agreement are less strict; they are primarily aimed at ensuring that technical regulations, standards and conformity assessment procedures do not constitute unnecessary barriers to trade, while recognizing the right of governments to pursue legitimate objectives by means of such measures. In brief, the TBT Agreement prohibits discrimination in the preparation, adoption and application of technical regulations, standards and conformity assessment procedures, establishes a Code of Good Practice for standardizing bodies, mandates the use of the least-trade-restrictive measure available, obliges transparency in the regulatory process and encourages the adoption of international standards. However, unlike the SPS Agreement, it sets no scientific requirements for the adoption of measures and it allows deviation from international standards where necessary to fulfill a legitimate objective, without requiring scientific justification for the deviation.

It is clear, therefore, that it would be to the advantage of a complaining Member to challenge a measure under the SPS Agreement rather than the TBT Agreement. However, this choice is not left to the complaining Member. Instead, the TBT Agreement provides in Article 1.5:

> The provisions of this Agreement do not apply to sanitary and phytosanitary measures as defined in Annex A of the Agreement on the Application of Sanitary and Phytosanitary Measures.

Thus, once a measure falls within the definition of an SPS measure in Annex A of the SPS Agreement, it falls under the disciplines of the SPS Agreement to the exclusion of the TBT Agreement.

(b) GATT 1994 (Article 2.4). The insufficiency of Article XX(b) of GATT 1947 to deal with the complexities of SPS regulations was one of the factors that led Members to negotiate the SPS Agreement in the Uruguay Round, as set out above. Members sought to flesh out Article XX(b), thereby establishing limits on the use of health measures in ways that could adversely affect international trade. However, the resultant SPS Agreement goes further than a mere elaboration of Article XX(b). Instead, it establishes a new, comprehensive set of norms for the adoption and maintenance of SPS measures.

[77] The scope of application of GATT 1994 is thus at once narrower (including only discriminatory measures) and broader (including all such measures, not only SPS measures) than that of the SPS Agreement.

[78] For a more detailed discussion of the negotiating history, *see supra* Part I(C).

The Panel in *EC—Hormones* held the following on the relationship between the SPS Agreement and Article XX(b) of GATT 1994:

> . . . we find the EC claim that the SPS Agreement does not impose "substantive" obligations additional to those already contained in Article XX(b) of GATT not to be persuasive. It is clear that some provisions of the SPS Agreement elaborate on provisions already contained in GATT, in particular Article XX(b). The final preambular paragraph of the SPS Agreement provides, indeed, that the Members desired "to elaborate rules for the application of the provisions of GATT 1994 which relate to the use of sanitary or phytosanitary measures, in particular the provisions of Article XX(b)". Examples of such rules are, arguably, some of the obligations contained in Article 2 of the SPS Agreement. However, on this basis alone we cannot conclude that the SPS Agreement only applies, as Article XX(b) of GATT does, if, and only if, a prior violation of a GATT provision has been established. Many provisions of the SPS Agreement impose "substantive" obligations which go significantly beyond and are additional to the requirements for invocation of Article XX(b). These obligations are, *inter alia,* imposed to "further the use of harmonized sanitary and phytosanitary measures between Members"[79] and to "improve the human health, animal health and phytosanitary situation in all Members".[80] They are not imposed, as is the case of the obligations imposed by Article XX(b) of GATT, to justify a violation of another GATT obligation (such as a violation of the non-discrimination obligations of Articles I or III).[81]

The SPS Agreement, however, does not expressly supplant the relevant provisions of GATT 1947 (now incorporated by reference in GATT 1994) applicable to health measures. Nor is it subordinate to the GATT. Instead, the two agreements now operate as complements to each other and to the TBT Agreement.[82]

Where the measure at issue is an SPS measure as defined in Annex A of the SPS Agreement, it may fall within the scope of application of the SPS Agreement and, to the extent that it is also discriminatory, within that of GATT 1994. Therefore, both these agreements would, in principle, apply to such a measure. The relationship between GATT 1994 and the other multilateral agreements on trade in goods, including the SPS Agreement, in case of conflict is defined in the General Interpretative Note to Annex 1A of the WTO Agreement, which provides:

> In the event of conflict between a provision of the GATT 1994 and a provision of another agreement in Annex 1A to the Agreement Establishing the WTO (referred to in the Agreements in Annex 1A as the "WTO Agreement"), the provision of the other agreement shall prevail to the extent of the conflict.

Therefore, in the case of a conflict between the applicable GATT rules and the SPS Agreement, the latter prevails. The SPS Agreement could be seen as a kind of *lex specialis* specifying rules applicable to SPS measures, aside from the more generally applicable rules of the GATT 1994.

However, the possibility for conflict between GATT rules and the disciplines of the SPS Agreement is slim, as the SPS Agreement incorporates the relevant GATT disciplines. This fact is reflected in Article 2.4 of the SPS Agreement, which, unlike the case with

[79] Preambular ¶ 6 of the SPS Agreement [Footnote in original].

[80] Preambular ¶ 2 of the SPS Agreement [Footnote in original].

[81] Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by the United States, *supra* note 53, ¶ 8.38, and Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones)*, Complaint by Canada, *supra* note 53, ¶ 8.41.

[82] A detailed discussion on the relationship between the GATT, the SPS Agreement and the TBT Agreement can be found in Gabrielle Marceau and Joel P.Trachtman, *The Technical Barriers to Trade Agreement, the Sanitary and Phytosanitary Measures Agreement, and the General Agreement on Tariffs and Trade: A Map of the World Trade Organization Law of Domestic Regulation* 36 JOURNAL OF WORLD TRADE 811 (2002).

the other Annex 1A agreements, contains a presumption of consistency with GATT 1994 for measures conforming to its provisions. Article 2.4 of the SPS Agreement provides:

> Sanitary or phytosanitary measures which conform to the relevant provisions of this Agreement shall be presumed to be in accordance with the obligations of the Members under the provisions of GATT 1994 which relate to the use of sanitary or phytosanitary measures, in particular the provisions of Article XX(b).

We consider that one can infer from the presumption of consistency in Article 2.4 that the provisions of Article XX(b) of the GATT 1994 and all other relevant provisions of that Agreement could be regarded as being subsumed into the SPS Agreement, to the extent that they would apply to discriminatory SPS measures.

When an SPS measure is at issue, it is therefore logical to examine this measure under the SPS Agreement first.[83] This argument is borne out by the finding of the Panel in *EC—Hormones* which, when it addressed the question of which of the two agreements to examine first, held:

> The SPS Agreement specifically addresses the type of measure in dispute. If we were to examine GATT first, we would in any event need to revert to the SPS Agreement: if a violation of GATT were found, we would need to consider whether Article XX(b) could be invoked and would then necessarily need to examine the SPS Agreement; if, on the other hand, no GATT violation were found, we would still need to examine the consistency of the measure with the SPS Agreement since nowhere is consistency with GATT presumed to be consistency with the SPS Agreement. For these reasons, and in order to conduct our consideration of this dispute in the most efficient manner, we shall first examine the claims raised under the SPS Agreement.[84]

Also, in *Australia—Salmon*, the Panel first examined the SPS Agreement, holding:

> Canada recognizes that the SPS Agreement provides for obligations additional to those contained in GATT 1994, but, nevertheless, first addresses its claim under Article XI of GATT 1994. Australia invokes Article 2.4 of the SPS Agreement, which presumes GATT consistency for measures found to be in conformity with the SPS Agreement, to first address the SPS Agreement. We note, moreover, that (1) the SPS Agreement specifically addresses the type of measure in dispute, and (2) we will in any case need to examine the SPS Agreement, whether or not we find a GATT violation (since GATT consistency is nowhere presumed to constitute consistency with the SPS Agreement). In order to conduct our consideration of this dispute in the most efficient manner, we shall, therefore, first address the claims made by Canada under the SPS Agreement before addressing those put forward under GATT 1994.[85]

While the presumption of GATT-consistency of measures found to be in compliance with the SPS Agreement could in theory perhaps be rebutted, in which case the provisions of

[83] In favor of this position, *see* Reinhard Quick and Andreas Blüthner, *Has the Appellate Body Erred? An Appraisal and Criticism of the Ruling in the WTO Hormones Case,* 2 JOURNAL OF INTERNATIONAL ECONOMIC LAW 603 (1999). *See also contra,* Pierre Pescatore, *The Reconciliation of Interests and the Revision of Dispute Resolution Procedures in the Framework of the WTO*, paper presented at the expert meeting FREE WORLD TRADE AND THE EUROPEAN UNION Academy of European Law, Trier, June 11–12, 1998, at 23 (summarized in Quick and Blüthner, at 627), where it is argued that the SPS Agreement is subordinate to GATT principles and therefore the first question in a dispute should always be whether there is a violation of GATT rules which can give rise to the application of Article XX(b) and consequently to SPS rules.

[84] Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by the United States, *supra* note 53, ¶ 8.42; and Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones)*, Complaint by Canada, *supra* note 53, ¶ 8.45.

[85] Report of the WTO Panel, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 57, ¶ 8.39.

the GATT 1994 would subsequently need to be examined,[86] it is difficult to think of any examples where this would be the case.[87] In our opinion, the relevant GATT rules are best seen as having been subsumed into the disciplines of SPS Agreement, and this leads us to the conclusion that the presumption of GATT-consistency contained in Article 2.4 should be regarded as irrebuttable.

(c) The Agreement on Agriculture. It was clear to the negotiators of the Agreement on Agriculture that special disciplines for SPS measures were crucial and inherently linked to the attempts to liberalize trade in agricultural products. This link is made explicit in Article 14 of the Agreement on Agriculture, which states that "Members agree to give effect to the Agreement on the Application of Sanitary and Phytosanitary Measures."

This provision is, legally speaking, redundant, since all WTO Members are bound to give effect to *all* multilateral WTO agreements including the SPS Agreement. However, this provision does serve to emphasize the negotiators' acknowledgement of the importance of the disciplines in the SPS Agreement in securing the gains for agricultural trade liberalization achieved in the Agreement on Agriculture.

The SPS Agreement and the Agreement on Agriculture are complementary in nature. Both have the common aim of enhancing market access in the agricultural sector by creating disciplines on trade-restrictive measures. However, the SPS Agreement covers measures affecting not only agricultural but also food products. In addition, while the Agreement on Agriculture addresses the traditional trade barriers in the agricultural sector, the SPS Agreement was negotiated to deal with trade barriers that were not covered by the disciplines of the Agreement on Agriculture, namely sanitary and phytosanitary measures. Thus, together these two agreements represent an important step forward in securing market access for food and agricultural products.

B. Basic Rights and Obligations (Article 2)

1. Right to Take SPS Measures (Article 2.1)

Article 2 of the SPS Agreement sets out the basic rights and obligations under the Agreement. They are further elaborated in subsequent articles. This article reflects the underlying aim of the SPS Agreement of balancing the legitimate right of sovereign governments to take health protection measures, with the goal of promoting free trade and preventing protectionism. Article 2, under the heading *Basic Rights and Obligations* provides in relevant part as follows:

[86] *See* Quick and Blüthner, *supra* note 83, at 628.

[87] Quick and Blüthner argue that an interpretation of those SPS rules which are similar to GATT disciplines (such as those in Articles 2.3 and 5.5 of the SPS Agreement), in a way that diverges from that given to the relevant GATT provision (Article XX), would make it possible for a challenging Member who loses the case under the SPS Agreement, to "easily" rebut the presumption of compatibility and pursue its challenge under the GATT. This result would go against the aim of the SPS Agreement to clarify and give further meaning to the relevant GATT provisions (while going further than GATT). Thus they argue that the panels and Appellate Body should interpret these SPS rules in the light of existing GATT jurisprudence to avoid this possibility. *Id.* At 630–632. On the other hand, Goh and Ziegler claim that where an SPS measure is at issue, the SPS Agreement should apply exclusively, making recourse to the GATT impossible. Gavin Goh and Andreas R. Ziegler, *A Real World Where People Live and Work and Die: Australian SPS Measures after the WTO Appellate Body's Decision in the Hormones Case,* 35 JOURNAL OF WORLD TRADE 271 (1998). This would imply that the presumption of compatibility with the relevant GATT provisions is irrebuttable.

1. Members have the right to take sanitary and phytosanitary measures necessary for the protection of human, animal or plant life or health, provided that such measures are not inconsistent with the provisions of this Agreement.
2. Members shall ensure that any sanitary or phytosanitary measure is applied only to the extent necessary to protect human, animal or plant life or health, is based on scientific principles and is not maintained without sufficient scientific evidence, except as provided for in paragraph 7 of Article 5.
3. Members shall ensure that their sanitary and phytosanitary measures do not arbitrarily or unjustifiably discriminate between Members where identical or similar conditions prevail, including between their own territory and that of other Members. Sanitary and phytosanitary measures shall not be applied in a manner which would constitute a disguised restriction on international trade.

Significantly, paragraph 1 of Article 2 explicitly recognizes the *right* of Members to take SPS measures necessary for the protection of human, plant or animal life or health provided that they conform to the provisions of the SPS Agreement. This is an important provision as it represents a movement away from the situation under GATT 1994 where discriminatory health measures are, in principle, prohibited unless they can be justified under the exception provided in Article XX(b). Thus, under the GATT rules, the burden of proof rests on the Member imposing the SPS measure to prove that it meets the requirements of Article XX(b) and the *chapeau* of Article XX. On the contrary, Article 2.1 of the SPS Agreement makes clear that SPS measures are, in principle, allowed and it is therefore for the complaining Member to prove that the measure is not consistent with the provisions of the SPS Agreement.

However, the right of Members to impose SPS measures is not unlimited but subject to the disciplines set out in the rest of the SPS Agreement. These disciplines can usefully be divided into two categories: first, the new scientific disciplines on the use of SPS measures, introduced by the SPS Agreement, and, second, the familiar GATT trade disciplines, which are reiterated in the SPS Agreement.[88] These disciplines are first reflected in paragraphs 2 and 3 of Article 2 and are further elaborated in later provisions.

2. Limits to the Right to Apply SPS Measures (Articles 2.2 and 2.3)

Article 2.2 lays down three requirements for SPS measures: they must be (a) applied only to the extent necessary to protect human, animal or plant life or health; (b) based on scientific principles; and (c) not maintained without sufficient scientific evidence, except as provided for in Article 5.7. Article 2.3 contains the familiar GATT prohibitions on arbitrary or unjustifiable discrimination and disguised restrictions on trade.

(a) Applied Only To the Extent Necessary to Protect Human, Animal or Plant Life or Health (Article 2.2). The obligation on Members, contained in the first part of Article 2.2, to ensure that SPS measures are applied "only to the extent necessary to protect human, animal or plant life or health" reflects the well-known discipline contained in Article XX(b) of GATT 1994 justifying measures with health-policy objectives. This requirement of Article 2.2 has not yet been subject to dispute settlement. However, cases decided under Article XX(b) of GATT 1994 can usefully be examined to determine how this discipline is likely to be interpreted by panels and the Appellate Body in future cases

[88] The prohibition on arbitrary or unjustifiable discrimination and disguised restrictions on trade is contained in the *chapeau* of Article XX of GATT 1994 and the necessary test in paragraph (b) of that article.

under the SPS Agreement.[89] In particular, those aspects of the "necessary" test under Article XX(b) of the GATT that are not already reflected in later provisions of the SPS Agreement,[90] would probably be addressed under Article 2.2. It should, however, be borne in mind that while GATT Article XX(b) represents an exception to the normal disciplines, and thus the burden of proof to show that its requirements are met rests on the Member imposing the health measure, under the SPS Agreement this rule-exception relationship is not present and it is for the complaining Member to prove that this obligation has not been fulfilled.

(b) Based on Scientific Principles and Not Maintained Without Sufficient Scientific Evidence (Article 2.2). Article 2.2 of the SPS Agreement also requires that SPS measures be based on scientific principles and not be maintained without sufficient scientific evidence. The importance of these basic scientific disciplines, which are further elaborated in Article 5.1 and which mediate between the goals of national health protection and the liberalization of trade, was made explicit in *EC—Hormones*, where the Appellate Body stated:

> The requirements of a risk assessment under Article 5.1, as well as of "sufficient scientific evidence" under Article 2.2, are essential for the maintenance of the delicate and carefully negotiated balance in the *SPS Agreement* between the shared, but sometimes competing, interests of promoting international trade and of protecting the life and health of human beings.[91]

Article 2.2 raises the question of the meaning of "scientific principles" and "scientific evidence", as well as what will be regarded as "sufficient", both in terms of the quantity of evidence required and its quality or scientific validity.[92]

Although this issue was raised in *EC—Hormones*, the Panel found violations of Articles 3 and 5 and thus did not consider it necessary to decide whether Article 2 was also violated (*see* note 53, *supra*). The Appellate Body agreed with this application of judicial economy, but stated that it would have been more logical for the Panel to start

[89] The likelihood that a similar interpretation will be followed can be inferred from the presumption in Article 2.4 SPS that measures conforming to the SPS Agreement are in accordance with GATT obligations, in particular Article XX(b), discussed *supra* Part II(A)(4)(b). See in this regard the argument of Quick and Blüthner, set out *supra* note 87.

[90] The Panel in *U.S.—Gasoline* identified two requirements for the test of Article XX(b) of the GATT to be met, namely that the policy aimed at by the measure falls within the ambit of policies designed to protect human, animal or plant life or health, and that the measure imposed be necessary to achieve this objective. Report of the WTO Panel, *United States—Standards for Reformulated and Conventional Gasoline*, WT/DS2/R (1996) ¶ 6.20. The first part of this test is already covered by the definition of SPS measures in the SPS Agreement. Measures not falling within the policy objective of this definition will not be covered by the SPS Agreement. It is the second element of the test that is more interesting here, namely the "necessity" test. To the extent that it has been interpreted in Article XX case law to require the least-trade restrictive measure reasonably available that achieves a Member's appropriate level of protection, it is already embodied in Article 5.6 of the SPS Agreement. Report of the GATT Panel, *Restrictions on Importation of and Internal Taxes on Cigarettes*, BISD, 37th Supp. 200 (1991), ¶ 75. However, the Article XX(b) case law also establishes an element of weighing and balancing of factors, including the contribution made by the measure to the aim it pursues, the importance of the common interests of values protected by the measure and the trade restrictive effect of the measure. Report of the Appellate Body, *Korea—Measures Affecting Imports of Fresh, Chilled and Frozen Beef*, WT/DS161/AB/R, WT/DS169/AB/R (2000), ¶¶ 162–164; Report of the Appellate Body, *European Communities—Measures Affecting Asbestos and Asbestos-Containing Products,* supra note 54, ¶ 172. We argue that this element will be of importance in the interpretation of the first requirement of Article 2.2 of the SPS Agreement.

[91] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 177.

[92] McNiel, *supra* note 18, at 117.

by focusing on Article 2, which sets out the basic rights and duties, before considering Article 5 (*see* note 70, *supra*).

In *Japan—Apples*,[93] the Panel, for the first time, examined the meaning of the words "scientific evidence" in Article 2.2. It held that in order to be "scientific" the evidence must be gathered through scientific methods.[94] It also established that both direct and indirect evidence can be scientific, although the probative value ascribed to each would differ.[95] According to the Panel, "evidence" excludes insufficiently substantiated information and non-demonstrated hypotheses.[96]

In *Japan—Agricultural Products,* the Panel and the Appellate Body were once again faced with the issue of the meaning of "sufficient scientific evidence" in Article 2.2, and they established a very vague test for sufficiency. The Appellate Body stated:

> The ordinary meaning of "sufficient" is "of a quantity, extent, or scope adequate to a certain purpose or object". From this, we can conclude that "sufficiency" is a relational concept. "Sufficiency" requires the existence of a sufficient or adequate relationship between two elements, *in casu,* between the SPS measure and the scientific evidence.
>
> The context of the word "sufficient" or, more generally, the phrase "maintained without sufficient scientific evidence" in Article 2.2, includes Article 5.1 as well as Articles 3.3 and 5.7 of the SPS Agreement.[97]

In examining this context of the term "sufficient", the Appellate Body first agreed with the Panel that the Appellate Body's finding in *EC—Hormones* regarding Article 5.1 provides guidance for the interpretation of Article 2.2.[98] In *EC—Hormones* it had held that the requirement in Article 5.1 that a measure be "based on" a risk assessment, read together with Article 2.2, means that there must be a rational relationship between the measure and the risk assessment. Second, the Appellate Body looked at Article 3.3 which allows Members to introduce or maintain measures resulting in a higher level of protection than those based on the relevant international standard, *inter alia* if there is sufficient scientific justification. The Appellate Body held that there is sufficient scientific justification if there is a rational relationship between the measure and the available scientific information.[99] Third, the Appellate Body turned to Article 5.7, which allows Members to adopt provisional measures in case of insufficient scientific evidence. It held that this is a qualified exemption from Article 2.2 and that a too-broad interpretation of Article 2.2 would render it meaningless.[100]

The Appellate Body then concluded:

> . . . we agree with the Panel that the obligation in Article 2.2 that an SPS measure not be maintained without sufficient scientific evidence requires that there be a rational or objective relationship between the SPS measure and the scientific evidence. Whether there is a rational relationship between an SPS measure and the scientific evidence is to be determined on a case-by-case basis and will depend upon the particular circumstances of the case, including the characteristics of the measure at issue and the quality and quantity of the scientific evidence.[101]

[100] *Id.* ¶ 80.
[101] *Id.* ¶ 84.

The Appellate Body then proceeded to agree with the Panel that Japan's SPS measure, the varietal testing requirement,[102] was maintained without sufficient scientific evidence for four of the eight products at issue.[103]

In *Japan—Apples*, the meaning of the word "sufficient" in Article 2.2 was again at issue. The Panel followed the interpretation of the Appellate Body in *Japan—Agricultural Products,* namely that sufficiency is a relational concept and thus that there must be a sufficient or adequate relationship between the SPS measure and the scientific evidence. The Panel took this to mean an objective or rational relationship.[104] It then stated that although the term "sufficient" is clearly to be considered in relation to the phytosanitary measure itself, "scientific evidence relates to a risk and is supposed to confirm the existence of a given risk."[105] It thus linked the concept of sufficiency in Article 2.2 to the extent to which the scientific evidence indicates the existence of a risk.

After examining the evidence submitted to it, the Panel held that a *negligible*[106] risk of transmission of fire blight through apple fruit was shown and there was no sufficient scientific evidence that apple fruit was likely to serve as a pathway for the entry, establishment or spread of fire blight in Japan.[107] In order to come to this conclusion, the Panel disassembled the sequence of events on the transmission pathway for fire blight, in order to identify the risk, and then compared the risk so identified with the measure at issue.[108] As a result, the Panel held that Japan's measure, which consisted of a range of cumulative requirements that had to be met for importation to be allowed,[109] was

[102] The varietal testing requirement refers to Japan's requirement that different varieties of eight agricultural products, which are potential hosts of codling moth, be tested before importation to ensure the efficacy of the quarantine treatment.

[103] The Panel's decision was based on a factual finding of an absence of a causal link between varietal differences and test differences with respect to the relationship between the fumigant concentration and the time period of fumigation (CxT value) and the dose required to kill 50 percent of codling moths (LD50 value). The experts advising the panel were of the view that the differences in CxT and LD50 values could have been caused by a number of factors not related to varietal differences (*e.g.*, leakage in the fumigation chamber, sorption by the packaging material and experimental errors). The Appellate Body understood this finding to indicate the absence of a rational relationship between the varietal testing requirement and the scientific evidence.

[104] Report of the WTO Panel, *Japan—Measures Affecting the Importation of Apples, supra* note 57, ¶¶ 8.101–8.103.

[105] *Id.*, ¶ 8.104.

[106] One of the experts consulted by the Panel, Dr Hayward, indicated that the standard scientific definition of "negligible" was a likelihood of between zero and one in one million.

[107] Report of the WTO Panel, *Japan—Measures Affecting the Importation of Apples, supra* note 57, ¶¶ 8.169 and 8.176.

[108] The Panel based this finding on its conclusions on the basis of the evidence available to it with regard to mature symptomless apples and other apples. With regard to mature, symptomless apples, it found that infection with fire blight had not been established; that populations of endophytic bacteria have not been found and epiphytic bacteria are very rare; and that the risk of completion of the transmission pathway is negligible. With regard to apples other than mature, symptomless fruit, it held that infected apples are capable of harbouring populations of bacteria which could survive through the various stages of commercial handling, storage and transportation; that risks of errors of handling or illegal actions could legitimately be taken into account, although the experts considered these risks small or debatable; but that completion of the last stage of the transmission pathway (the transmission of the bacteria to the host plant) was not shown to be likely. This was because only a reduced number of bacteria would survive commercial storage, handling and transportation and the existence of a vector (such as rain splash or bees), which could transmit the bacteria from the imported apples to the host apple plant in Japan, had not been established. Report of the WTO Panel, *Japan—Measures Affecting the Importation of Apples, supra* note 57, ¶¶ 8.136, 8.139, 8.153, 8.157, 8.161, 8.168.

[109] These conditions are: that the apples are produced in designated fire blight-free orchards; that the orchard is free of fire blight-infected plants and other host plants of fire blight; that the orchard is surrounded by

"clearly disproportionate" to the negligible risk identified.[110] The Panel thus introduced a *proportionality test* into the "rational relationship" requirement in Article 2.2.[111]

On appeal, the Appellate Body accepted as appropriate the methodology of the Panel of disassembling the sequence of events and comparing the risk to the measure, in its Article 2.2 analysis, but noted that this does not exhaust the range of possible methodologies and that the circumstances of each case will determine the appropriateness of a given methodology.[112] The Appellate Body also did not take issue with the Panel's view that "clear disproportion" between the risk and the measure implies that a "rational or objective" relationship does not exist.[113] It rejected Japan's contention that the Panel should have accorded Japan a "certain degree of discretion" in the way in which it chose, weighed and evaluated the scientific evidence, finding that deference by panels to the findings of national authorities would not be compatible with the standard of review[114] applicable to panels.[115]

The "rational relationship-test" developed in the case law does not lay down clear guidelines on what will be regarded as "sufficient scientific evidence", beyond establishing a proportionality requirement. By leaving wide discretion to panels to make *ad hoc* decisions based on their evaluation of the circumstances of the case, it explicitly gives panels the mandate to evaluate the quality or weight of the scientific evidence presented. Are panels, which are primarily composed of trade experts, qualified for this task?[116] It has been argued that a panel should limit its enquiry to the question whether there is scientific consensus or scientific uncertainty regarding the issue at hand. Scientific uncertainty is most often the case and is evinced by the presence of a good faith difference of opinion among scientists. In such cases, a panel should determine which of the alternative accounts are found plausible by scientists and which are not. If there is any reputable scientific support for the Member's measure, it should be held to be based on "sufficient scientific evidence".[117]

Article 2.2 embodies the core SPS obligation establishing the role of science as a crucial part of the disciplines in respect of SPS measures. This provision sets science as

a 500-meter buffer zone; that the orchard and buffer zone are inspected at least three times per year; that the harvested apples, harvesting containers and interior of the packing facility be disinfected; that apples destined for Japan be kept separate from other apples after harvesting; that US officials certify that the apples are not infested or infected with fire blight and were disinfected; and that Japanese officials confirm the certification and carry out inspections themselves.

[110] Report of the WTO Panel, *Japan—Measures Affecting the Importation of Apples, supra* note 57, ¶¶ 8.181 and 8.198.

[111] The Panel proceeded to examine two elements of Japan's measure, namely the buffer-zone requirement and the requirement of inspections three times yearly, as instances of elements most obviously maintained without sufficient scientific evidence either as such or when applied cumulatively with other elements. *Id.*, ¶¶ 8.182–8.197.

[112] Report of the Appellate Body, *Japan—Measures Affecting the Importation of Apples*, WT/DS245/AB/R (2003), ¶ 164.

[113] *Id.*, ¶ 163.

[114] It is well-established case law that the standard of review to be applied by panels is that of an "objective assessment" of the matter, which implies neither total deference by panels to national authorities' determinations, nor *de novo* review. The issue of the appropriate standard of review is discussed *infra* Part III(D)(1)(c).

[115] Report of the Appellate Body, *Japan—Measures Affecting the Importation of Apples, supra* note 112, ¶ 165.

[116] The issue of the composition of the Panels is discussed further *infra* Part III(D)(1).

[117] Vern R. Walker, *Keeping the WTO from Becoming the "World Trans-science Organization": Scientific Uncertainty, Science Policy, and Factfinding in the Growth Hormones Dispute,* 31 Cornell International Law Journal 251, 280 (1998).

the touchstone against which SPS measures are judged for validity. However, today the notion of "universal science" as neutral, objective and valid for all is widely rejected. The same factual situation can lead to different, equally valid, scientific conclusions.[118] This situation is commonly referred to as the problem of "dueling science." Regulation thus involves a choice between various scientifically plausible alternatives. It therefore becomes necessary to ask: *whose* science must measures be tested against? In judging the validity of an SPS measure against the scientific criteria of Article 2.2, must a panel defer to the scientific approach of the government imposing the measure, or can it substitute its own judgment for that of the government?

The U.S. Administration's Statement of Administrative Action that accompanied the bill to implement the Uruguay Round Agreements into U.S. law claimed that the requirement of "sufficient scientific evidence" does not authorize a panel to substitute its judgment for that of the government imposing the measure. It stated that by requiring only "sufficient scientific evidence," rather than a weighing of the preponderance of the evidence, this provision recognizes the existence of scientific uncertainty and the fact that decisions are based on choices between differing scientific views.[119] This approach would leave the evaluation and choice between the different scientific views in the hands of the government imposing the measure, and would require panels and the Appellate Body to defer to these decisions. This interpretation of Article 2.2 by the U.S. Administration is, of course, not an authoritative statement of the way in which this provision must be understood and applied. In fact, as will be seen in the following discussion, the positions taken by panels and the Appellate Body to date regarding scientific evidence do not indicate such complete deference. While the Appellate Body has shown greater deference to national choices than panels, recognizing the right of regulatory health authorities to rely on minority opinions and to act with caution in life-threatening situations, it reserves for panels the ability to rule on the quality and weight of the scientific evidence. Members imposing SPS measures must be able to offer evidence that would be acceptable to prominent scientists and that indicates a risk proportional to the measure imposed.[120]

In *EC—Hormones*, the issue of competing scientific opinions did not arise as there was unusually broad consensus among scientists that the use of hormones for growth-promotion purposes, in accordance with good veterinary practice, is safe. A single scientist, Dr. Lucier, was of the opinion that using oestrogen for growth promotion could raise the risk of breast cancer by up to one in one million. His opinion was deemed, by the Panel and Appellate Body, to be of insufficient weight to overturn the contrary results of the other studies referred to by the EC (which confirmed the safety of the hormones at issue, when used in accordance with good agricultural practice), in

[118] *See* Wirth, *supra* note 23 at 842. Wirth notes that "there is unlikely to be a single, unique way to analyze even the purely scientific significance of much empirical data. . . And even if we could somehow get a group of scientists to endorse a consensus position, it would be, in the first place, only tentative and subject to revision with the arrival of new discoveries; and in the second place, it may be entirely wrong. In science, the majority does not rule, as the history of science amply demonstrates".

[119] Statement of Administrative Action ("SAA"), H.R. Doc. 103–316, at 746, *quoted in* McNiel, *supra* note 18, at 118.

[120] McNiel, *supra* note 18, at 118. *See* Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 194, where the Appellate Body held (for purposes of Article 5.1) that a risk assessment may embody a minority opinion, provided it comes from a "qualified and respected source". As Article 5.1 is a specific application of Article 2.2, this finding is also relevant to the interpretation of "sufficient scientific evidence" in the latter article (held in the Report of the Appellate Body, *Japan—Measures Affecting Agricultural Products, supra* note 97, ¶ 77).

particular because this opinion was not based on studies, carried out by him or under his supervision, specifically focused on hormone residues in meat from cattle on which such hormones were used for growth-promotion purposes. This does not necessarily imply, however, that if his opinion had been so based, it could have overturned the majority opinion. Whether there is "sufficient scientific evidence" will be determined on a case-by-case basis, depending on the circumstances of the case, including not only the specificity of the studies conducted but also the quantity and quality of scientific evidence.[121] In addition, the seriousness, i.e. the life-threatening nature, of the risks involved may affect the determination whether there is "sufficient scientific evidence" within the meaning of Article 2.2. It may be expected that the more serious the risks, the easier it will be to have "sufficient scientific evidence".[122]

(i) Relevance of the Precautionary Principle for Article 2.2

Another important issue raised in *Japan—Agricultural Products* was that of the applicability of what is known as the precautionary principle, to the interpretation of Article 2.2.[123]

The precautionary principle has gained wide acceptance on the international level,[124] particularly in the field of environmental protection, in response to the increasing realization of scientific uncertainty. According to the precautionary principle, in cases where there are threats of serious or irreversible harm, lack of full scientific certainty should not be used as a reason for postponing measures to prevent such harm.[125] In *Japan—Agricultural Products*, Japan contended that since it had established that certain products were potential hosts of codling moth (a pest of great significance for Japan), it was entitled to adopt a precautionary attitude and require testing of each variety of imported product, rather than accept the results for one variety. Thus, it argued that Article 2.2's requirement of "sufficient scientific evidence" must be interpreted in the light of the precautionary principle.

This claim was rejected by the Appellate Body,[126] which referred back to its decision on the use of the precautionary principle to soften the application of SPS disciplines in *EC—Hormones*.[127] In the latter case, the Appellate Body considered (in the context of its review

[121] *See* Report of the Appellate Body, *Japan—Measures Affecting Agricultural Products, supra* note 97, ¶ 84.

[122] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 124.

[123] For further discussion of the role of the precautionary principle in the SPS Agreement, *see* Wirth, *supra* note 23, at 838–840.

[124] The precautionary principle is recognized in the following international instruments amongst others: the Treaty establishing the European Community, as amended by the Treaty on the European Union, in Article 174 (with regard to environmental protection), 31 I.L.M. 247 (1992); the United Nations Framework Convention on Climate Change, in Article 3.3, 31 I.L.M. 849 (1992); Agenda 21 of the United Nations Conference on the Environment and Development U.N. Doc.A/CONF.151/26, (1992); the Rio Declaration on Environment and Development, United Nations Conference on the Environment and Development, in Principle 15, U.N. Doc. A/CONF.151/5/Rev.1 31 I.L.M. 876 (1992); and the Cartagena Protocol on Biosafety to the Convention on Biological Diversity, in Articles 10.6 and 11.8, 39 I.L.M. 1027 (2000). For an interesting discussion on whether the precautionary principle has emerged as a norm of customary international law, *see* Owen McIntyre and Thomas Mosedale, *The Precautionary Principle as a Norm of Customary International Law* 9 JOURNAL OF ENVIRONMENTAL LAW 221 (1997).

[125] This definition was adapted from the one appearing in Principle 15 of the Rio Declaration, *supra* note 124.

[126] Report of the Appellate Body, *Japan—Measures Affecting Agricultural Products, supra* note 97, ¶ 81.

[127] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones), supra* note 70, ¶ 125.

of the Panel's findings on Articles 5.1 and 5.2) that it would be "unnecessary and probably imprudent" for it to decide whether the precautionary principle now forms part of general customary international law (as opposed to customary international environmental law, where it has gained wide acceptance).[128] However, it held that even if this were the case, the specific rule for cases of scientific uncertainty in Article 5.7 of the SPS Agreement overrides any such general principle.[129] Thus, according to the Appellate Body, the precautionary principle cannot be used to justify an otherwise inconsistent measure except to the extent provided for in Article 5.7.[130] The Appellate Body did, however, recognize that:

> . . . a panel charged with determining, for instance, whether "sufficient scientific evidence" exists to warrant the maintenance by a Member of a particular SPS measure may, of course, and should, bear in mind that responsible, representative governments commonly act from perspectives of prudence and precaution where risks of irreversible, e.g. life-terminating, damage to human health are concerned.[131]

It is as yet unclear what effect this directive to panels will have in practice on the interpretation of Article 2.2.[132] In our opinion, however, this directive will, for extreme cases of risks to human life or health, lower the threshold for finding "sufficient scientific evidence" within the meaning of Article 2.2. The Appellate Body's finding on the precautionary principle in *EC—Hormones* applies not only to the interpretation of Article 5.1,[133] but also to all science-based rules in the SPS Agreement (as evidenced by the reference thereto in *Japan—Agricultural Products* with respect to Article 2.2). Thus, under the current case law, the precautionary principle cannot be used as an interpretative principle with regard to the scientific disciplines of the SPS Agreement. Instead, all situations of insufficient scientific evidence must be dealt with by means of provisional measures under Article 5.7.[134]

[128] *Id.*, ¶ 123. Pauwelyn has criticized this ruling on the grounds that the Appellate Body was obliged to make a finding regarding whether the precautionary principle is part of customary international law or not, since if it is and if it were shown to have emerged later in time than the SPS Agreement and be in conflict with it, it would prevail over the treaty rule, in the absence of an intention to continue applying the SPS Agreement as *lex specialis. See* JOOST PAUWELYN, CONFLICT OF NORMS IN PUBLIC INTERNATIONAL LAW—THE EXAMPLE OF THE WORLD TRADE ORGANIZATION: INTERNAL HIERARCHY AND HOW WTO LAW RELATES TO OTHER RULES OF INTERNATIONAL LAW 312, Doctoral Thesis, Faculty of Law, University of Neuchâtel (2001).

[129] This ruling presupposes a hierarchy or norms in international law where treaty rules have priority over custom. This idea has been criticized. *See* PAUWELYN, *supra* note 128, at 60–61, where the wide support for the idea that there is no inherent hierarchy or norms is discussed.

[130] The question whether Article 5.7 SPS deals adequately with the issue of lack of certainty in science will be discussed *infra* Part II(E).

[131] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones), supra* note 70, ¶ 124.

[132] The Appellate Body in *Japan—Agricultural Products, supra* note 57, and in *Japan—Apples, supra* note 112, did not address the effect of this directive for the interpretation of Article 2.2, probably because what was at stake in those cases was a threat to plant health rather than human health whereas the directive is limited to cases of irreversible risks to human health.

[133] *See* discussion of Article 5.1 *infra* Part II(D).

[134] Article 5.7 of the SPS Agreement will be discussed *infra* Part II(E), where the question whether it sufficiently incorporates the precautionary principle with respect to the different aspects of risk analysis will be raised. It should be noted that under the points for negotiation raised in the failed Seattle Ministerial Conference was the need to strengthen the precautionary principle in the SPS Agreement, as Article 5.7 is not perceived as going far enough in recognizing it.

This conclusion is supported by the Appellate Body's finding with regard to the relationship between Article 2.2 and Article 5.7, where it stated:

> . . . it is clear that Article 5.7 of the *SPS Agreement,* to which Article 2.2 explicitly refers, is part of the context of the latter provision and should be considered in the interpretation of the obligation not to maintain an SPS measure without sufficient scientific evidence. Article 5.7 allows Members to adopt provisional SPS measures "[i]n cases where relevant scientific evidence is insufficient" and certain other requirements are fulfilled.[135] Article 5.7 operates as a *qualified* exemption from the obligation under Article 2.2 not to maintain SPS measures without sufficient scientific evidence. An overly broad and flexible interpretation of that obligation would render Article 5.7 meaningless.[136]

Thus it would appear that the Appellate Body would prefer to limit the scope for deviation from the scientific disciplines of Article 2.2 to the "qualified exemption" provided for by Article 5.7. Increased flexibility in the interpretation of Article 2.2 by application of the precautionary principle is thus rejected by the Appellate Body on the grounds that it would make Article 5.7 "meaningless".

(ii) Relationship between Article 2.2 and Articles 5.1 and 5.2

The question of the relationship between Article 2.2 and other, more specific, provisions needs to be addressed. Does Article 2.2 impose independent obligations on Members, or are its general disciplines subsumed by the specific rules contained in the later provisions of Articles 5.1 and 5.2? This question arose in *EC—Hormones,* where the Panel, after finding violations of Articles 3.1, 5.1 and 5.5, applied, as already discussed above, the principle of judicial economy to refrain from ruling on the Article 2.2 challenge. The Appellate Body confirmed the Panel's application of judicial economy. It agreed that Article 5.1 can be seen as "a specific application of the basic obligations contained in Article 2.2",[137] and thus once a violation of Article 5.1 is established, it is unnecessary to determine whether Article 2.2 has also been violated. However, the Appellate Body expressed its surprise that the Panel had not followed the more "logically attractive" route of starting with an analysis of the basic obligations contained in Article 2.[138] The Appellate Body did not elaborate further on the relationship between Articles 2 and 5, aside from expressing the view that Articles 2.2 and 2.3 inform Articles 5.1 and 5.5 respectively and these articles must thus be read together.[139]

In *Australia—Salmon* the Appellate Body again had the opportunity to address this relationship, and it clarified that Article 2.2 is more general than Articles 3 or 5.1–2. It thus agreed with the Panel that, while a violation of the specific rules regarding risk assessment contained in Articles 5.1 and 5.2 necessarily implies a violation of the more general requirements of "sufficient scientific evidence" and a basis in "scientific principles" embodied in Article 2.2,[140] due to the more general nature of Article 2.2

[135] The Appellate Body here cited ¶ 89 of the same report, where it set out the four requirements of Article 5.7.

[136] Report of the Appellate Body, *Japan—Measures Affecting Agricultural Products*, *supra* note 97, ¶ 80.

[138] *Id.* ¶ 250.

[139] *Id.* ¶¶ 180, 212 and 250. The Appellate Body held that further analysis of the relationship between these articles "should await another case."

[140] Report of the WTO Panel, *Australia—Measures Affecting the Importation of Salmon, supra* note 57, ¶ 8.52.

not all violations of Article 2.2 are subsumed into Articles 5.1 and 5.2.[141] In *Japan—Agricultural Products*[142] the Appellate Body rejected as textually unfounded Japan's proposition that Article 2.2 should only be directly applied in cases where scientific evidence is patently insufficient and that the case at issue should be dealt with under Article 5.1 instead. The Appellate Body emphasized that the finding in *EC—Hormones* that Article 5.1 is a specific application of the basic obligation contained in Article 2.2, does not justify limiting the scope of Article 2.2 in favor of Article 5.1. It thus appears that the Appellate Body is at pains to make clear that Article 2.2 sets disciplines which are broader than those contained in the more specific provisions of Article 5 and lays down independent obligations against which measures can be directly challenged, without recourse to Article 5.

(c) No Arbitrary or Unjustifiable Discrimination or Disguised Restriction on International Trade (Article 2.3). Article 2.3 imposes a general prohibition on SPS measures which arbitrarily or unjustifiably discriminate between Members where identical or similar conditions prevail, including between their own territory and that of other Members, and on the application thereof so as to constitute a disguised restriction on international trade. Article 2.3 thus clearly embodies certain familiar GATT trade disciplines. In this regard, the Appellate Body in *Australia—Salmon* held:

> This provision takes up obligations similar to those arising under Article I:1 and Article III:4 of the GATT 1994 and incorporates part of the "chapeau" to Article XX, of the GATT 1994. Its fundamental importance in the context of the *SPS Agreement* is reflected in the first paragraph of the preamble of the *SPS Agreement*.[143]

It is necessary to examine how a violation of Article 2.3 can be established. This issue was raised before the *Australia—Salmon* compliance Panel. In that case, Canada claimed that Article 2.3, first sentence, was violated since Australia imposed import requirements for salmonids from Canada but had no control measures in place regarding the internal movement of dead Australian fish. It alleged that this constituted discrimination between Canada and Australia. The compliance Panel identified the requirements for proof of a violation of Article 2.3 as follows:

> . . . three elements, cumulative in nature, are required for a violation of this provision:
>
> (1) the measure discriminates between the territories of Members other than the Member imposing the measure, or between the territory of the Member imposing the measure and that of another Member;
> (2) the discrimination is arbitrary or unjustifiable; and
> (3) identical or similar conditions prevail in the territory of the Members compared.
>
> In respect of the first element we only note the following. Given: (1) the Panel and Appellate Body finding[144] in the original dispute that discrimination contrary to Article 5.5 by implication entails discrimination contrary to Article 2.3, first sentence; and (2) that under Article 5.5 different situations including *different* products can be

[141] Report of the Appellate Body, *Australia—Measures Affecting the Importation of Salmon,* WT/DS18/AB/R, ¶ 137.
[142] Report of the Appellate Body, *Japan—Measures Affecting Agricultural Products*, *supra* note 97, ¶ 82.
[143] Report of the Appellate Body, *Australia—Measures Affecting Importation of Salmon*, *supra* note 141, ¶ 251.
[144] Panel report, *op. cit.*, ¶¶ 8.109 and 8.160 and Appellate Body report, *op. cit.*, ¶¶ 178 and 252. [Footnote in original.]

> compared,[145] we are of the view that—contrary to what Australia argues—discrimination in the sense of Article 2.3, first sentence, may also include discrimination between *different* products, e.g. not only discrimination between Canadian salmon and New Zealand salmon, or Canadian salmon and Australian salmon; but also discrimination between Canadian salmon and Australian fish including non-salmonids, as referred to by Canada in this case.[146]

Therefore, Article 2.3 prohibits not only discrimination between similar products but also between different products (in this case salmonids from Canada and other dead fish from Australia). This represents a significant deviation from the position under GATT 1994, which only prohibits discrimination between "like"[147] or "directly competitive or substitutable"[148] products. The aim of this broader prohibition on discrimination is to take into account the fact that different products can pose the same or similar health risks (one could think here of the possibility that different fruits may be vectors for the same pest, or that various animals can be carriers of foot and mouth disease). The breadth of the prohibition is tempered by the second and third requirements of Article 2.3, namely that the discrimination must be arbitrary or unjustifiable and identical or similar conditions must prevail in the territories of the Members subject to different treatment. With regard to the third requirement, the compliance Panel held:

> . . . we also harbor doubts as to whether "identical or similar conditions" in the sense of the third element of Article 2.3, first sentence, prevail in the territories of both Canada and Australia in respect of the situations compared. We note, for example, the substantial difference in disease status between Canada and Australia.
>
> We thus find that Australia has not acted inconsistently with Article 2.3, first sentence.[149]

As has been stated above, Article 2 lays down core disciplines, which are further specified in later articles. In this way, the prohibition contained in Article 2.3 is reflected again in Article 5.5, which proscribes arbitrary or unjustifiable distinctions in the levels of protection that a Member deems appropriate. The relationship between these two articles therefore deserves attention here. In *EC—Hormones,* when dealing with Article 5.5, the Appellate Body stated the following regarding Article 2.3:

> It is well to bear in mind that, after all, the difference in levels of protection that is characterizable as arbitrary or unjustifiable is only an element of (indirect) proof that a Member may actually be applying an SPS measure in a manner that discriminates between Members or constitutes a disguised restriction on international trade, prohibited by the basic obligations set out in Article 2.3 of the *SPS Agreement*.[150]

In *Australia—Salmon*, the issue of the relationship between Articles 2.3 and 5.5 was raised before the Appellate Body by Canada, which argued that the Panel had erred in only applying Article 2.3 through Article 5.5 and not independently. The Appellate Body found

[145] As long as they have a risk of entry, establishment or spread of the same or a similar disease, *or* a risk of the same or similar associated potential biological and economic in common, *different* products can be compared under Article 5.5. *See supra* ¶ 7.89. [Footnote in original]

[146] Report of the WTO Compliance Panel, *Australia—Measures Affecting Importation of Salmon, Recourse to Article 21.5 by Canada*, *supra* note 65, ¶¶ 7.111–7.112.

[147] Article I:1 (most favored nation treatment) and Article III:2 and 4 (national treatment).

[148] Add Note to Article III:2 (in respect of taxes).

[149] Report of the WTO Compliance Panel, *Australia—Measures Affecting Importation of Salmon, Recourse to Article 21.5 by Canada*, *supra* note 65, ¶¶ 7.113–7.114 (in relevant part).

[150] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 240.

that the Panel had not intended to deny that Article 2.3 contains an obligation independent of Article 5.5[151] but had merely refrained from addressing Article 2.3 separately on grounds of judicial economy. Further discussing the relationship between Articles 2.3 and 5.5, the Appellate Body in *Australia—Salmon* held:

> We recall that the third—and decisive—element of Article 5.5, discussed above, requires a finding that the SPS measure which embodies arbitrary or unjustifiable distinctions in levels of protection results in "discrimination or a disguised restriction on international trade". Therefore, a finding of violation of Article 5.5 will necessarily imply a violation of Article 2.3, first sentence, or Article 2.3, second sentence. Discrimination "between Members, including their own territory and that of others Members" within the meaning of Article 2.3, first sentence, can be established by following the complex and indirect route worked out and elaborated by Article 5.5.[152] However, it is clear that this route is not the only route leading to a finding that an SPS measure constitutes arbitrary or unjustifiable discrimination according to Article 2.3, first sentence. Arbitrary or unjustifiable discrimination in the sense of Article 2.3, first sentence, can be found to exist without any examination under Article 5.5.[153]

It is therefore clear that Article 2.3 contains disciplines broader than those embodied in Article 5.5 and thus a violation thereof may be found independently of a violation of Article 5.5.

C. Harmonization (Article 3)

Pursuant to the preamble of the SPS Agreement, one of the primary objectives of the SPS Agreement is:

> . . . to further the use of harmonized sanitary and phytosanitary measures between Members, on the basis of international standards, guidelines and recommendations developed by the relevant international organizations, . . . without requiring Members to change their appropriate level of protection of human, animal or plant life or health. . . .[154]

The use of internationally harmonized SPS measures would obviously promote trade and eliminate trade restrictions. Yet the SPS Agreement does not oblige Members to use harmonized SPS measures. It rather encourages the use of such harmonized measures and, at the same time, acknowledges the sovereign right of each Member to determine its own appropriate level of protection of human, animal and plant life and health.

[151] Report of the Appellate Body, *Australia—Measures Affecting Importation of Salmon*, *supra* note 141, ¶ 248. The Appellate Body here quoted the Panel's finding that "given the more general character of Article 2.3, not all violations of Article 2.3 are covered by Article 5.5." Report of the WTO Panel, *Australia—Measures Affecting Importation of Salmon*, *supra* note 57, ¶ 8.109.

[152] (Footnote in original) In *European Communities—Hormones* we characterized Article 5.5 as "marking out and elaborating a *particular* route leading to the same destination set out in Article 2.3" (emphasis added). Adopted February 13, 1998, WT/DS26/AB/R, WT/DS48/AB/R, ¶ 212.

[153] Report of the Appellate Body, *Australia—Measures Affecting the Importation of Salmon, supra* note 141, ¶ 252.

[154] This aim is expressed in the sixth paragraph in the Preamble. It is notable that the preamble makes no mention of scientific disciplines on remaining (not harmonized) SPS measures. *See* David G. Victor, *The Sanitary and Phytosanitary Agreement of the World Trade Organization: An Assessment After Five Years,* 32 JOURNAL OF INTERNATIONAL LAW AND POLITICS 868, 884 (2000), where the author claims that harmonization is the principal objective of the SPS Agreement. However, after analyzing the interpretation of Article 3 by panels and the Appellate Body, Victor comes to the conclusion that the SPS Agreement will not lead to harmonization of SPS measures and appropriate levels of protection set by Members, but will rather lead to harmonization of national SPS procedures, such as requiring risk assessments. *Id*. at 936.

In *EC—Hormones*, the Appellate Body elucidated the aim of Article 3 as follows:

> In generalized terms, the object and purpose of Article 3 is to promote the harmonization of the SPS measures of Members on as wide a basis as possible, while recognizing and safeguarding, at the same time, the right and duty of Members to protect the life and health of their people. The ultimate goal of the harmonization of SPS measures is to prevent the use of such measures for arbitrary or unjustifiable discrimination between Members or as a disguised restriction on international trade, without preventing Members from adopting or enforcing measures which are both "necessary to protect" human life or health and "based on scientific principles", and without requiring them to change their appropriate level of protection.[155]

Article 3 of the SPS Agreement, entitled "Harmonization", sets out how this aim is to be achieved. Article 3 provides:

1. To harmonize sanitary and phytosanitary measures on as wide a basis as possible, Members shall base their sanitary or phytosanitary measures on international standards, guidelines or recommendations, where they exist, except as otherwise provided for in this Agreement, and in particular in paragraph 3.
2. Sanitary or phytosanitary measures which conform to international standards, guidelines or recommendations shall be deemed to be necessary to protect human, animal or plant life or health, and presumed to be consistent with the relevant provisions of this Agreement and of GATT 1994.
3. Members may introduce or maintain sanitary or phytosanitary measures which result in a higher level of sanitary or phytosanitary protection than would be achieved by measures based on the relevant international standards, guidelines or recommendations, if there is a scientific justification, or as a consequence of the level of sanitary or phytosanitary protection a Member determines to be appropriate in accordance with the relevant provisions of paragraphs 1 through 8 of Article 5.[156] Notwithstanding the above, all measures which result in a level of sanitary or phytosanitary protection different from that which would be achieved by measures based on international standards, guidelines or recommendations shall not be inconsistent with any other provision of this Agreement.
4. Members shall play a full part, within the limits of their resources, in the relevant international organizations and their subsidiary bodies, in particular the Codex Alimentarius Commission, the International Office of Epizootics, and the international and regional organizations operating within the framework of the International Plant Protection Convention, to promote within these organizations the development and periodic review of standards, guidelines and recommendations with respect to all aspects of sanitary and phytosanitary measures.
5. The Committee on Sanitary and Phytosanitary Measures provided for in paragraphs 1 and 4 of Article 12 (referred to in this Agreement as the "Committee") shall develop a procedure to monitor the process of international harmonization and coordinate efforts in this regard with the relevant international organizations.

[155] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 177.

[156] For the purposes of paragraph 3 of Article 3, there is a scientific justification if, on the basis of an examination and evaluation of available scientific information in conformity with the relevant provisions of this Agreement, a Member determines that the relevant international standards, guidelines or recommendations are not sufficient to achieve its appropriate level of sanitary or phytosanitary protection. [Footnote in original].

The rules contained in Article 3 and their interpretation by the Appellate Body deserve particular attention here, as they provide a good illustration of the use of science in conjunction with the promotion of harmonization in the policing of national health regulations in the SPS Agreement. Briefly, Article 3.1 expresses the aim of harmonizing SPS measures on as wide a basis as possible, and states the obligation of Members to "base" their SPS measures on international standards, guidelines or recommendations, where they exist, except as provided for in Article 3.3. Article 3.2 creates a presumption of consistency with GATT 1994 and the SPS Agreement for measures that "conform to" international standards. Article 3.3 recognizes the right of Members to use SPS measures which result in a higher level of protection than would be achieved by measures "based on" the relevant international standards and sets certain requirements for this.

The Appellate Body in *EC—Hormones* identified the various options open for Members under these provisions. It rejected the Panel's approach of seeing Articles 3.1 and 3.2 as the general rule and Article 3.3 as the exception.[157] Instead, it identified *three autonomous options* available to Members under these provisions. The Appellate Body first noted:

> It appears to us that the Panel has misconceived the relationship between Articles 3.1, 3.2 and 3.3, a relationship discussed below,[158] which is qualitatively different from the relationship between, for instance, Articles I or III and Article XX, of the GATT 1994. Article 3.1 of the *SPS Agreement* simply excludes from its scope of application the kinds of situations covered by Article 3.3 of that Agreement, that is, where a Member has projected for itself a higher level of sanitary protection than would be achieved by a measure based on an international standard. . . . [159]

It subsequently held:

> Under Article 3.2 of the *SPS Agreement*, a Member may decide to promulgate an SPS measure that conforms to an international standard. Such a measure would embody the international standard completely and, for practical purposes, converts it into a municipal standard. Such a measure enjoys the benefit of a presumption (albeit a rebuttable one) that it is consistent with the relevant provisions of the *SPS Agreement* and of the GATT 1994.
>
> Under Article 3.1 of the *SPS Agreement*, a Member may choose to establish an SPS measure that is based on the existing relevant international standard, guideline or recommendation. Such a measure may adopt some, not necessarily all, of the elements of the international standard. The Member imposing this measure does not benefit from the presumption of consistency set up in Article 3.2; . . .
>
> Under Article 3.3 of the *SPS Agreement*, a Member may decide to set for itself a level of protection different from that implicit in the international standard, and to implement or embody that level of protection in a measure not "based on" the international standard. The Member's appropriate level of protection may be higher than that implied in the international standard. The right of a Member to determine its own appropriate level of sanitary protection is an important right.[160]

Each of the three options identified by the Appellate Body will now be examined in detail.

[160] *Id.* ¶¶ 170–172.

1. SPS Measures Based on International Standards (Article 3.1)

(a) International Standards (Annex A, paragraph 3). It is necessary to begin with an examination of what the term "international standards, guidelines or recommendations" specifically refers to in Article 3. The WTO is not a regulatory body with norm-setting capacity. Thus, it does not establish the harmonized international standards itself, but relies on those set by the international organizations listed in Annex A, paragraph 3. Members are obliged under Article 3.4 to participate in the work of these organizations, to the extent that their resources permit, and to promote development and periodic review of SPS standards. Article 3.5 mandates the SPS Committee to establish a procedure to monitor the process of international harmonization in co-ordination with the relevant international organizations.[161]

Paragraph 3 of Annex A of the SPS Agreement defines the term "standards, guidelines or recommendations" broadly, with reference to the three main international standard setting organizations in the area of health. The definition indicates that international standards, guidelines and recommendations for purposes of the SPS Agreement refer to those set by: (1) the Codex Alimentarius Commission ("CAC") in the area of food safety; (2) the International Office of Epizootics ("OIE") in the area of animal health; (3) the International Plant Protection Convention ("IPPC") in the area of plant health; and (4) certain other relevant international organizations for matters not covered by the three mentioned organizations. The CAC, OIE and IPPC are often referred to as "the three sisters" in WTO jargon. Each of these standard-setting organizations has its own structure and standard-setting procedure. These are dictated by its own statutes and not by the WTO. In general, the activities of these organizations may be characterized as taking risk management decisions (such as laying down guidelines or setting standards, which embody a certain level of protection) on the basis of scientific information from risk assessments. However, the way in which they do this varies considerably.

There are no requirements in the definition of "standards, guidelines or recommendations" in the SPS Agreement relating to the procedure by which the relevant norm was created, such as requirements regarding the degree of support the norm should have (*e.g.*, a qualified majority or a consensus in favor), the role of civil society interest groups in standard setting or the extent of participation by developing countries in the setting of the norm. It is only provided that the relevant organizations should be "open for Membership to all Members." The latter requirement, however, says nothing about the actual participation by all Members in norm setting, or about the effectiveness of the participation that does occur.[162]

Further, no distinction is made in the SPS Agreement between standards, guidelines and recommendations although they are clearly quite different international norms and are not intended to have the same status by the international organizations creating them.

[161] Article 12 of the SPS Agreement reiterates this obligation, stating that the SPS Committee must develop a procedure to monitor the process of international harmonization. *See infra* Part III(C)(2)(b). A provisional procedure was adopted on October 22, 1997(*see* G/SPS/11) and thereafter extended. Six Annual Reports have been prepared by the SPS Committee on the basis of this procedure. *See* G/SPS/13, G/SPS/16, G/SPS/18, G/SPS/21, G/SPS/28 and G/SPS/31.

[162] The problematic nature of developing country participation in international standard setting is discussed *infra* Part IV(B)(1). In addition, concerns have been raised with regard to the weak role of civil society NGOs as opposed to industry interest groups in the standard-setting process, both as observers and as members of national delegations, in certain standard-setting bodies. See, for example, Natalie Avery *et al*, CRACKING THE CODEX. AN ANALYSIS OF WHO SETS WORLD FOOD STANDARDS, National Food Alliance, (1993). These participatory problems call into question the legitimacy of the use of the standards adopted by these standard-setting organisations as benchmarks by the SPS Agreement.

This issue has been raised in the context of the Codex Alimentarius Commission. On September 29, 1997, a question was sent by the CAC to the SPS Committee regarding whether the obligations in Article 3 of the SPS Agreement applied equally and without distinction to standards, guidelines and recommendations set by the CAC. This was important to CAC Members in order to know what effect the norms they set would have on their obligations under the SPS Agreement.[163] This issue was discussed in the SPS Committee meetings[164] and a response was drafted and later revised.[165] In this response, the SPS Committee[166] stated that the SPS Agreement makes no distinction between the three types of norms, namely standards, guidelines and recommendations, in the Annex A definition or later provisions and that they would thus be equally applicable to the disciplines set by Article 3 of the SPS Agreement. However, the Committee noted that the substantive content of a Codex text might have an impact on how a Member could show that its measure was based thereon—for example a standard such as a "maximum residue level"[167] provides a high degree of numerical precision whereas a guideline or recommendation may allow greater discretion as to the choice of measures which can be regarded as based thereon.[168] It is thus the content rather than the category of the Codex text that affects its application. The SPS Committee also emphasized the fact that there is no legal obligation on Members under the SPS Agreement to apply any Codex texts.

The Codex Executive Committee noted this response[169] and agreed that it should be brought to the attention of all Codex Committees. It further agreed that the Codex Committee on General Principles should examine the possibility of developing a set of appropriate preambular statements explaining the intent of different types of Codex texts. However, the Committee on General Principles decided that, in view of the response of the SPS Committee, there was no need to develop such a set of preambular statements.[170]

In *EC—Hormones* the issue arose whether either the type of international measure at issue, the date of its adoption or the standard-setting procedure used were relevant to the application of the disciplines in Article 3 of the SPS Agreement. In this context, with respect to the international standards referred to in Article 3.1, the Panel noted that:

> Article 3.1 unambiguously prescribes that "... Members shall base their sanitary ... measures on international standards ... *where they exist* ..." (emphasis added). Paragraph 3 of Annex A of the SPS Agreement states equally clearly that the international standards

[163] Victor notes that Codex codes of conduct and guidelines are intended to augment the application of core Codex standards rather than to act as main standards themselves and are often adopted by the CAC where agreement cannot be reached on a commodity or residue standard. *See* Victor, *supra* note 154, at 886. It would thus be inappropriate to give these looser norms the same status as applies to commodity and residue standards under the SPS Agreement although this seems to be the intention of the Annex A definition. It should be pointed out that, contrary to the view of Victor, this does not give guidelines "potentially binding application" since no international norms are made binding by the disciplines of the SPS Agreement. This point is discussed *infra* Part II(C)(1).

[164] SPS Committee meetings of October 1997 and March 1998.

[165] *See* G/SPS/W/86 and G/SPS/W/86/Rev.1.

[166] The SPS Committee began by noting that it is not competent to formally interpret the provisions of the SPS Agreement. Thus, this opinion is not binding.

[167] A maximum residue level sets a numerical limit for the amount of residue of a potentially harmful substance (for example of a pesticide) that is permissible.

[168] This draft response was formally adopted by the SPS Committee in its meeting of March 12–13, 1998 (G/SPS/R/10, ¶ 50).

[169] Codex Executive Committee, *Report of the Forty-Fifth Session of the Executive Committee of the Codex Alimentarius Commission*, ALINORM 99/3, June 3-5, 1998, ¶ 44.

[170] Codex Committee on General Principles, *Report of the Thirteenth Session of the Codex Committee on General Principles*, ALINORM 99/33. September 7–11, 1998, ¶ 54.

> mentioned in Article 3:1 are "for food safety, the standards . . . *established by the Codex Alimentarius Commission* relating to . . . *veterinary drug* . . . *residues* . . . " (emphasis added). No other conditions are imposed in the SPS Agreement on the relevance of international standards for the purposes of Article 3. Therefore, as a panel making a finding on whether or not a Member has an obligation to base its sanitary measure on international standards in accordance with Article 3.1, we only need to determine whether such international standards exist. For these purposes, we need not consider (i) whether the standards reflect *levels* of protection or sanitary *measures* or the *type* of sanitary measure they recommend, or (ii) whether these standards have been adopted by consensus or by a wide or narrow majority, or (iii) whether the period during which they have been discussed or the date of their adoption was before or after the entry into force of the SPS Agreement.[171]

This issue was not raised on appeal.

In *Australia—Salmon*, the question of the existence of relevant international standards was once again at issue, as the guideline that had been drafted by the OIE did not cover all 24 of the diseases at which the Australian measure was aimed. The Panel found that:

> . . . Paragraph 3(b) of Annex A to the SPS Agreement indicates that the international standards, guidelines or recommendations referred to in Article 3 *for animal health* (the concern at issue in this dispute) are those developed under the auspices of the International Office of Epizooties ("OIE"). Both parties agree that the International Aquatic Animal Health Code adopted by the OIE in 1995 ("OIE Code") provides international guidelines on a disease-by-disease basis. However, they also agree that as of today no relevant OIE guideline exists which deals with salmon on a product specific basis. Moreover, both parties also agree that OIE guidelines do not exist for all of the 24 diseases of concern to Australia. Therefore, even if we were to examine first, if and how many relevant international guidelines exist and second address the question of whether Australia deviates from these guidelines, we would thereafter still need to examine either (1) in the event Australia does deviate from any such guidelines contrary to Article 3, whether the measure in dispute could not be based on Australia's concern for any of the other diseases for which no international guideline exists (*in casu*, under Articles 2 and 5); or (2) in the event Australia's measure is based on and/or conforms to any such guidelines, whether that part of the measure for which no guidelines exist, is consistent with the provisions of the SPS Agreement other than Article 3 (*in casu*, Articles 2 and 5). In this respect, we are of the view, however, that the fact that in this case no international guidelines exist for *all* 24 diseases of concern does not mean that an international guideline which applies to only *one* of these diseases cannot be relevant (or, according to the language of Article 3.1, does not 'exist') for the measure at issue.[172]

Further, the Panel found that "the SPS Agreement (paragraph 3(b) of Annex A) explicitly directs us to the OIE and the standards, guidelines and recommendations it develops. . . The fact that the OIE Code is subject to revision or the way it has been adopted in our view does not change its validity for our purposes".[173] There was no appeal on this point in this dispute. From these findings it appears that a broad and unqualified acceptance of all norms adopted by the "three sisters" for purposes of the Article 3 disciplines is currently the approach followed by panels.

It should be noted, however, that the term "standards, guidelines or recommendations" is qualified by the adjective "international". This would therefore exclude standards set on the regional level, intended to address specifically regional health concerns. An example

[171] Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones)*, Complaint by Canada, *supra* note 53, ¶ 8.72, Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones)*, Complaint by the United States, *supra* note 53, ¶ 8.69.

[172] Report of the WTO Panel, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 57, ¶ 8.46.

[173] *Id.* ¶ 7.11.

would be the standards set by the regional offices of the International Plant Protection Convention, or those adopted by the Codex Alimentarius Commission on a proposal by one of the regional committees for purposes of that region only (such as the Codex guidelines for street vending of foods, explicitly intended to apply to African countries only). The omission of the requirement of an international nature would have led to the anomalous situation that Members outside the relevant region for which the standard was set would have to scientifically justify their deviation from a standard or guideline neither intended nor appropriate for their adoption. This was confirmed by the SPS Committee.[174] The Committee further stated that even if based on scientific evidence, regional standards are intended to apply only within a specific geographic region. However, it recognized that scientifically sound regional standards could form a foundation for the creation and adoption of international standards.[175]

(b) The "Based On" Requirement. Article 3.1 embodies the obligation to "base" national SPS measures on international standards, guidelines and recommendations. The meaning of "based on" in Article 3.1 was addressed in *EC—Hormones.* The Panel had held that Article 3.1 does not define "based on" but that Article 3.2 equates measures "based on" international standards with those which "conform to" these standards.[176] They had also held that to be "based on" an international standard, the measure must achieve the same level of sanitary protection as that standard, a conclusion implied by Article 3.3.[177] The Appellate Body rejected this reasoning, finding that the plain meaning of the terms "based on" and "conform to" differ.[178] It held:

> In the first place, the ordinary meaning of "based on" is quite different from the plain or natural import of "conform to". A thing is commonly said to be "based on" another thing when the former "stands" or is "founded" or "built" upon or "is supported by" the latter. In contrast, much more is required before one thing may be regarded as "conform[ing] to" another: the former must "comply with", "yield or show compliance" with the latter. The reference of "conform to" is to "correspondence in form or manner", to "compliance with" or "acquiescence", to "follow[ing] in form or nature". A measure that "conforms to" and incorporates a Codex standard is, of course, "based on" that standard. A measure, however, based on the same standard might not conform to that standard, as where only some, not all, of the elements of the standard are incorporated into the measure.
>
> In the second place, "based on" and "conform to" are used in different articles, as well as in differing paragraphs of the same article. Thus, Article 2.2 uses "based on", while Article 2.4 employs "conform to". Article 3.1 requires the Members to "base" their SPS measures

[174] This was in its response to a question of the CAC, regarding the status of Codex regional standards and related texts. *See supra* note 165.

[175] Committee on Sanitary and Phytosanitary Measures, *Clarification of References to Codex Texts: Draft Response to the Codex Alimentarius Commission, Note by the Chairman. Revision,* G/SPS/W/86/Rev.1, March 13, 1998, adopted in the decision contained in the report of the SPS Committee meeting of March 12–13, 1998. Committee on Sanitary and Phytosanitary Measures, *Summary of the Meeting Held on 12–13 March, 1998,* G/SPS/R/10, April 30, 1998, ¶ 50. It should be noted, however, that the CAC is moving away from the adoption of regional standards as much as possible.

[177] Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by the United States, *supra* note 53, ¶ 8.73 and *EC—Measures Concerning Meat and Meat Products (Hormones)*, Complaint by Canada, *supra* note 53, ¶ 8.76.

[178] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones*, *supra* note 70, ¶ 163–166.

> on international standards; however, Article 3.2 speaks of measures which "conform to" international standards. Article 3.3 once again refers to measures "based on" international standards. The implication arises that the choice and use of different words in different places in the *SPS Agreement* are deliberate, and that the different words are designed to convey different meanings. A treaty interpreter is not entitled to assume that such usage was merely inadvertent on the part of the Members who negotiated and wrote that Agreement. Canada has suggested the use of different terms was "accidental" in this case, but has offered no convincing argument to support its suggestion. We do not believe this suggestion has overturned the inference of deliberate choice.[179]

The Appellate Body also pointed out that the Panel's interpretation was contrary to the object of Article 3, which sets the harmonization around international standards as a goal to be achieved in the future, not as a current obligation on Members.[180] In this regard, it stated:

> . . . the object and purpose of Article 3 run counter to the Panel's interpretation. That purpose, Article 3.1 states, is "[t]o harmonize [SPS] measures on as wide a basis as possible . . . ". The preamble of the *SPS Agreement* also records that the Members "[d]esir[e] to *further the use of harmonized [SPS] measures between Members* on the basis of international standards, guidelines and recommendations developed by the relevant international organizations . . . ". (emphasis added) Article 12.1 created a Committee on Sanitary and Phytosanitary Measures and gave it the task, *inter alia*, of "furtherance of its objectives, in particular with respect to harmonization" and (in Article 12.2) to "encourage the use of international standards, guidelines and recommendations by all Members". It is clear to us that harmonization of SPS measures of Members on the basis of international standards is projected in the Agreement, as a *goal*, yet to be realized *in the future*. To read Article 3.1 as requiring Members to harmonize their SPS measures *by conforming those measures with international standards*, guidelines and recommendations, *in the here and now*, is, in effect, to vest such international standards, guidelines and recommendations (which are by the terms of the Codex *recommendatory* in form and nature) with *obligatory* force and effect. The Panel's interpretation of Article 3.1 would, in other words, transform those standards, guidelines and recommendations into binding *norms*. But, as already noted, the *SPS Agreement* itself sets out no indication of any intent on the part of the Members to do so. We cannot lightly assume that sovereign states intended to impose upon themselves the more onerous, rather than the less burdensome, obligation by mandating *conformity* or *compliance with* such standards, guidelines and recommendations. To sustain such an assumption and to warrant such a far-reaching interpretation, treaty language far more specific and compelling than that found in Article 3 of the *SPS Agreement* would be necessary.[181]

The Appellate Body thus made it clear that "based on" in Article 3.1 could not be understood to mean "conform to". The Appellate Body also emphasized that the voluntary standards set by the relevant international organizations did not become mandatory through the operation of the SPS Agreement.[182]

The Appellate Body proceeded to explain the consequences for a Member of choosing the option under Article 3.1. Noting that although a Member that merely bases its

[179] *Id*. ¶¶ 163–164.
[180] *Id*. ¶ 165.
[181] *Id*.
[182] Before the panels, the EC had argued that CAC members were used to adopting voluntary standards and were not aware that the standards for hormones in beef would in effect become mandatory through the operation of the SPS Agreement. Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by the United States, *supra* note 53, ¶ 8.68; and Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by Canada, *supra* note 53, ¶ 8.71.

measure on an international standard does not benefit from the presumption of consistency contained in Article 3.2, it stated that a Member is also "not penalized by exemption of a complaining Member from the normal burden of showing a *prima facie* case of inconsistency with Article 3.1 or any other relevant article of the *SPS Agreement* or of the GATT 1994."[183]

The question which then arises is what the benefits of choosing the option under Article 3.1 are. As noted by the Appellate Body, a Member that merely bases its SPS measures on international standards, without conforming to them, does not enjoy a presumption of compliance of its measures with the SPS Agreement and GATT 1994. Still, it seems logical that there should be an advantage over the situation set forth in Article 3.3. It seems that as a measure based on an international standard is automatically based on a risk assessment (namely the risk assessment used by the relevant international organization in drafting its standard), the measure may be assumed to comply with Article 5.1–5.3. Thus, an evaluation of whether the strict requirements for a risk assessment are met is rendered unnecessary. This is of particular importance to developing countries, which often lack the resources and infrastructure to conduct their own risk assessments.

Despite the more lenient interpretation of the requirements of Article 3.1 given by the Appellate Body in *EC—Hormones*, the EC ban was obviously not "based on" the existing Codex standards and did not adopt any elements thereof. The Appellate Body thus continued by analyzing the measure under the requirements of Article 3.3 for measures that are not based on international standards.[184]

The Appellate Body also refrained from deciding on the correctness of the rest of the Panel's analysis on the meaning of "based on", including the finding that "for a sanitary measure to be *based on* an international standard . . . , that *measure* needs to reflect the same level of sanitary protection as the *standard*."[185] The Appellate Body stated:

> It appears to us that the Panel reads much more into Article 3.3 than can be reasonably supported by the actual text of Article 3.3. Moreover, the Panel's entire analysis rests on its flawed premise that 'based on', as used in Articles 3.1 and 3.3, means the same thing as "conform to" as used in Article 3.2. As already noted, we are compelled to reject this premise as an error in law. The correctness of the rest of the Panel's intricate interpretation and examination of the consequences of the Panel's litmus test, however, have to be left for another day and another case.[186]

Although the question was thus left open by the Appellate Body, it would appear that the Panel was correct in informing the term "based on" in Article 3.1 with reference to the use of the same term in Article 3.3.[187] Thus, we argue that in order to be regarded as "based on" an international standard, the SPS measure must not only adopt at least some of the elements of the international standard but also result in *the same level of protection*.

[183] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 171.

[184] *Id*. ¶¶ 176–177.

[185] Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by Canada, *supra* note 53, ¶ 8.76; and Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by the United States, *supra* note 53, ¶ 8.73.

[186] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 168.

[187] It does not seem that the Appellate Body's general comment that the Panel reads more into Article 3.3 than is supported by the text would contradict this conclusion, since this reading of the meaning of "based on" is firmly grounded in the text of Article 3.1 and 3.3. In any case, the Appellate Body decided to leave the examination of the correctness of the Panel's interpretation for another day.

If it is not "based on" the international standard, it must then meet the requirements of Article 3.3.

(c) Nature of the Obligation under Article 3.1. One could ask whether Article 3.1 obliges Members to maintain at least the minimum level of health protection that is reflected in relevant international standards, while allowing higher, but not lower, levels of protection. This would seem to be the case from an examination of the words of the relevant provisions, since a Member is obliged to adopt measures that are "based on" international standards, that is, achieving the same level of protection, unless the provisions of Article 3.3 are complied with. The latter article allows SPS measures resulting in a *higher* level of protection under certain conditions. Nowhere are measures aimed at a lower level of protection mentioned.

It has been argued that a measure should not be analyzed under Article 3.3 simply because the Member imposing it claims that the measure achieves a higher level of protection than the international standard, but that it should first be determined whether the measure actually does so.[188] However, it seems unlikely that a positive obligation of a certain minimum level of health protection was intended or would be accepted by WTO Members. The international standards are used as a ceiling that Members cannot exceed without complying with the additional science disciplines of Article 3.3, rather than as a floor that all Members must reach. No provisions specifically deal with the possibility of challenging measures that fall below the relevant international standards.[189] This can be explained by the fact that the role of the WTO is regarded as limited to disciplines relating to trade barriers and thus does not extend to the promotion of health objectives. There are other international organizations that have mandates in the area of promotion of public health, such as the World Health Organization. Further, it is hard to imagine one Member challenging another within a trade forum for having too low a level of health protection for its own citizens, a situation which could have no negative trade implications for other Members.[190]

2. SPS Measures which Conform to International Standards (Article 3.2)

(a) The "Conform To" Requirement. The second option a Member has is to promulgate an SPS measure that conforms to the relevant international standard, guideline or recommendation. What is required for a measure to "conform to" an international standard

[188] McNiel, *supra* note 18, at 126.

[189] A Member could arguably base a challenge on Article 3.1, claiming that the lax measure is not "based on" an international standard and cannot be justified by Article 3.3 as the latter only refers to stricter measures. However, the obligation to base a measure on international standards cannot be read to require that a Member adopt at least the level of protection embodied in the international standard. This would go against the aim and purpose of the SPS Agreement, which is to promote free trade rather than to ensure a minimum level of health protection.

[190] *See contra* Victor, *supra* note 154, at 884, who argues that the requirements of Article 5 apply whether a Member's standards are stricter or looser than international standards. He states that for manufactured food products, lax standards could have the effect of benefiting local producers who do not have to comply with expensive stricter standards. The SPS Agreement could be used to force a higher level of health protection in these countries. He does acknowledge that such challenges would be rare due to the difficulty of proving a trade effect from weak SPS measures. The correctness of this argument can be questioned, however, since producers in countries with strict SPS standards can, and often do, export food and agricultural products of lesser quality to countries with lower standards. They are thus not bound by high local standards for their exports. Therefore it is doubtful that lax standards could constitute a trade barrier. More compelling, however, is the legal argument that the provisions of Article 3.3 refer only to a "higher level of sanitary or phytosanitary protection".

was addressed by the Appellate Body in *EC—Hormones*, where it stated:

> Under Article 3.2 of the *SPS Agreement*, a Member may decide to promulgate an SPS measure that conforms to an international standard. Such a measure would embody the international standard completely and, for practical purposes, converts it into a municipal standard.[191]

The measure must thus completely embody the international standard. This would seem to mean that they must be identical in both structure and desired level of protection.

(b) Presumption of Consistency. The SPS Agreement promotes measures conforming to international standards by granting them a presumption of consistency with the SPS Agreement and GATT 1994. This presumption was held to be rebuttable in *EC—Hormones*.[192] The Appellate Body in this case also addressed the implications of the presumption of consistency, stating as follows:

> The presumption of consistency with relevant provisions of the *SPS Agreement* that arises under Article 3.2 in respect of measures that conform to international standards may well be an *incentive* for Members so to conform their SPS measures with such standards. It is clear, however, that a decision of a Member not to conform a particular measure with an international standard does not authorize imposition of a special or generalized burden of proof upon that Member, which may, more often than not, amount to a *penalty*.[193]

It has been argued that the fact that a measure, which is in accordance with international standards, enjoys a presumption of validity, increases the importance of standard setting on international level.[194] This is because international standards have hereby become the benchmarks against which national SPS measures are judged.

3. SPS Measures Resulting in a Higher Level of Protection (Article 3.3)

(a) Higher Level of Protection. The third option open to Members is to promulgate SPS measures providing a higher level of protection than would result from measures "based on" the relevant international standards. This provision recognizes the right of Members to choose their own level of protection, an important principle in the SPS Agreement. The Appellate Body held in *EC—Hormones* that the "right of a Member to establish its own level of sanitary protection under Article 3.3 of the *SPS Agreement* is an autonomous right and *not* an 'exception' from a 'general obligation' under Article 3.1".[195]

However, as recognized by the Appellate Body, this is not an "absolute or unqualified right". Two science-related conditions are set in the alternative. Either there must be a

[191] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 170.

[192] *Id*. The implications of this presumption for the burden of proof are discussed further *infra* Part III(D)(1)(a).

[193] *Id*. ¶ 102.

[194] As pointed out by Quick and Blüthner, *supra* note 83, at 613, this does not mean that international standards become (either directly or indirectly) binding on WTO members as a result of SPS disciplines. The standards only give content to the provisions of the SPS Agreement. It is the latter provisions that have binding force. However, the effect of the SPS provisions on harmonization is to encourage the adoption of international harmonized standards and thus they do increase the status and relevance of these standards for WTO Members.

[195] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 172.

scientific justification for the measures,[196] or they must be the result of the higher level of protection chosen by the Member in accordance with Article 5.1–5.8. It is not quite clear why Article 3.3 provides for two alternative conditions or how exactly they differ. What is clear, however, is that in both cases the measures must be consistent with all other provisions of the SPS Agreement.[197]

In *EC—Hormones,* the EC argued that since there was a "scientific justification" for its measure, it need not be in accordance with the provisions of Article 5.1–5.8, which are required only for the second situation. It thus claimed that no risk assessment was required as a basis for its ban on hormone-treated beef, despite the fact that it deviated from Codex standards. The Appellate Body held that the distinction between the two situations identified in Article 3.3, is more apparent than real.[198] In fact, both situations require a risk assessment in accordance with Article 5. The Appellate Body in *EC—Hormones* stated:

> Article 3.3 is evidently not a model of clarity in drafting and communication. The use of the disjunctive "or" does indicate that two situations are intended to be covered. These are the introduction or maintenance of SPS measures that result in a higher level of protection:
>
> (a) "if there is a scientific justification"; or
> (b) "as a consequence of the level of . . . protection a Member determines to be appropriate in accordance with the relevant provisions of paragraphs 1 through 8 of Article 5".
>
> It is true that situation (a) does not speak of Articles 5.1 through 5.8. Nevertheless, two points need to be noted. First, the last sentence of Article 3.3 requires that "all measures which result in a [higher] level of . . . protection", that is to say, measures falling within situation (a) as well as those falling within situation (b), be "not inconsistent with any other provision of [the SPS] Agreement". "Any other provision of this Agreement" textually includes Article 5. Secondly, the footnote to Article 3.3, while attached to the end of the first sentence, defines "scientific justification" as an "examination and evaluation of available scientific information in conformity with relevant provisions of this Agreement . . . ". This examination and evaluation would appear to partake of the nature of the risk assessment required in Article 5.1 and defined in paragraph 4 of Annex A of the *SPS Agreement*.
>
> On balance, we agree with the Panel's finding that although the European Communities has established for itself a level of protection higher, or more exacting, than the level of protection implied in the relevant Codex standards, guidelines or recommendations, the European Communities was bound to comply with the requirements established in Article 5.1. We are not unaware that this finding tends to suggest that the distinction made in Article 3.3 between two situations may have very limited effects and may, to that extent, be more apparent than real. Its involved and layered language actually leaves us with no choice.[199]

Thus this ruling should be understood as requiring that a Member claiming scientific justification for its deviation from international standards, must base such a claim on a valid risk assessment, in the same way as a Member that justifies its deviation from the international standard on the grounds that it has chosen a different level of protection

[196] A footnote to Article 3.3 clarifies the term "scientific justification" (quoted *supra* at note 155). This footnote was not present in the Dunkel Draft but was added to the final text of the SPS Agreement due to controversy regarding the meaning of the "scientific justification" requirement for deviation from international standards. Wirth, *supra* note 23, at 827.

[197] *See* last sentence of Article 3.3.

[198] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 175.

[199] *Id.*, ¶¶ 173–175.

than that achieved by the international standard.[200] The Appellate Body went on to indicate its "... belief that compliance with Article 5.1 was intended as a countervailing factor in respect of the right of Members to set their appropriate level of protection"[201] and pointed out that the scientific requirements of Articles 2.2 and 5.1 are crucial in maintaining the delicate balance between the competing goals of trade liberalization and health protection.[202] Thus, the Appellate Body sees science as the scale on which these interests are balanced.

In *Japan—Agricultural Products*, the Appellate Body again faced the question of what a Member needs to show when it claims there is "scientific justification" for a deviating measure. It held:

> In our opinion, there is a "scientific justification" for an SPS measure, within the meaning of Article 3.3, if there is a rational relationship between the SPS measure at issue and the available scientific information.[203]

This finding seems to stop short of actually requiring a risk assessment in the case of reliance on a "scientific justification". However, in order to prove that the measure is based upon "available scientific information," it seems unavoidable that a Member will have to show a risk assessment.

It has been argued that the reason behind distinguishing between the two different situations mentioned in Article 3.3 is to emphasize the difference in the scope of review in each case.[204] The first situation deals with the Member's judgment, on the basis of scientific information, that the international standards are inadequate to meet its level of protection. This could, for example, be the case where, due to local peculiarities, the international standard is ineffective in securing the desired level of health protection.[205] The second situation deals with the choice of a different level of protection by a Member, which is a policy choice. One could thus speak of a scientific justification and a policy justification.[206] Scientific justifications could be more rigorously reviewed than policy justifications and thus harmonization of the former more vigorously promoted than the latter.[207]

What is clear from an examination of this harmonization provision in the SPS Agreement is the role of science, in the form of scientific justification or risk assessment, in providing norms or rules in the absence of harmonization. Free trade necessitates harmonized health standards in order to do away with the barriers created by disparate requirements in various countries. However, the lack of a rule-making body in the

[204] Walker, *supra* note 117, at 275–276.

[205] *See* Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by Canada, *supra* note 53, ¶ 8.84. Here the Panel stated that both Canada and the EC interpreted the first situation as existing where the relevant international standard is outdated, inadequate, faulty or obsolete from a scientific perspective, for example where it in fact does not provide the level of protection it was intended to provide.

[206] *See contra* Wirth, *supra* note 23, at 827, where he argues that the footnote explaining the term "scientific justification" might be taken to mean that there are scientific constraints on the choice of the appropriate level of protection. However, it seems that the scientific analysis mandated by that footnote is directed at the question of whether the international standards are effective in achieving the Member's chosen level of protection, rather than at the choice of an appropriate level of protection.

[207] Walker, *supra* note 117, at 276.

WTO to take on the task of providing generally applicable health standards creates an institutional gap.[208] Article 3 attempts to fill this gap by making use of another, universally accepted and thus authoritative provider of uniform standards, namely science. Where a large degree of scientific consensus appears to exist, as embodied in standards set by international organizations,[209] Members are encouraged to use these standards. International standard-setting bodies use recognized risk assessment procedures conducted by scientific committees or expert groups to draw up standards. In the alternative, where no such standards exist or where Members wish to deviate from these standards, "scientific justification will operate to generate norms and rules".[210] The reason for this approach is the fact that science is seen to be a universal body of knowledge, based on physical experience and neutral and thus valid for all. Therefore, requiring that national regulations which differ from harmonized standards follow the dictates of science as embodied in risk assessment, should result in greater uniformity of health measures by promoting gradual regulatory convergence across national borders.

While this would be the case if science were really universal and absolute, the lack of consensus that exists among scientists as to the true state of scientific knowledge makes it of limited effect in achieving greater uniformity in national health measures.

D. Risk Assessment (Article 5.1–5.3)

Members are obliged, under Article 5.1 of the SPS Agreement, to base their SPS measures on a risk assessment. Articles 5.2 and 5.3 list factors that Members must take into account in the assessment of risks. Paragraphs 1 to 3 of Article 5 state:

1. Members shall ensure that their sanitary or phytosanitary measures are based on an assessment, as appropriate to the circumstances, of the risks to human, animal or plant life or health, taking into account risk assessment techniques developed by the relevant international organizations.
2. In the assessment of risks, Members shall take into account available scientific evidence; relevant processes and production methods; relevant inspection, sampling and testing methods; prevalence of specific diseases or pests; existence of pest- or disease-free areas; relevant ecological and environmental conditions; and quarantine or other treatment.
3. In assessing the risk to animal or plant life or health and determining the measure to be applied for achieving the appropriate level of sanitary or phytosanitary protection from such risk, Members shall take into account as relevant economic factors: the potential damage in terms of loss of production or sales in the event of the entry, establishment or spread of a pest or disease; the costs of control or eradication in the territory of the importing Member; and the relative cost-effectiveness of alternative approaches to limiting risks.

[208] This is unlike the situation that exists in the EU where negative integration (lowering of trade barriers) is accompanied by positive integration (setting of general norms or rules). This is possible due to the norm-setting capacity of the EU institutions, which can operate on a supranational level, a characteristic that is absent in the WTO.

[209] The Secretariat of the Codex Alimentarius Commission released a paper on the role of science in the Codex decision-making process. *See* Codex Alimentarius Doc. CX/GP 94/4.

[210] Jeffrey Atik, Symposium -*Institutions for International Economic Integration: Science and International Regulatory Convergence,* 17 Journal Of International Law And Business 736, 739 (1997).

Before proceeding to an analysis of what the obligation to base an SPS measure on a risk assessment entails, it is first necessary to determine what is meant by a "risk assessment" for purposes of Article 5.

1. Concept of "Risk Assessment" (Annex A, paragraph 4)

Paragraph 4 of Annex A to the SPS Agreement defines two types of risk assessment. The *first* type is the "evaluation of the likelihood of entry, establishment or spread of a pest or disease within the territory of an importing Member according to the sanitary or phytosanitary measures which might be applied, and of the associated potential biological and economic consequences". The *second* type is the "evaluation of the potential for adverse effects on human or animal health arising from the presence of additives, contaminants, toxins or disease-causing organisms in food, beverages or feedstuffs."

The Appellate Body examined these definitions in four cases.[211] The interpretation of these definitions is important in assessing what will be required of Members who impose SPS measures not conforming to international standards. The cases dealing with these definitions will be addressed in the order in which they were decided, as later cases referred back to the findings in earlier cases.

In *EC—Hormones*,[212] the second type of risk assessment was at issue. The Panel had held that there were two steps to this kind of risk assessment, namely that it should:

(i) *identify* the *adverse effects* on human health (if any) arising (in that case) from the presence of the hormones at issue when used as growth promoters *in meat or meat products*, and
(ii) if any such adverse effects exist, *evaluate* the *potential* or probability of occurrence of these effects.[213]

The Appellate Body did not take issue with the two-step test, but regarded the Panel's use of "probability" as an alternative for "potential" as cause for concern as the word implies a higher degree of potentiality and seems to introduce a quantitative element.[214] The Appellate Body addressed the appeal of the EC on the point that the Panel was "in effect requiring a Member carrying out a risk assessment to quantify the potential for adverse effects on human health",[215] and found:

> It is not clear in what sense the Panel uses the term "scientifically identified risk". The Panel also frequently uses the term "identifiable risk"[216], and does not define this term either. The Panel might arguably have used the terms "scientifically identified risk" and "identifiable risk" simply to refer to an ascertainable risk: if a risk is not ascertainable, how does a Member ever know or demonstrate that it exists? In one part of its Reports, the Panel

> opposes a requirement of an "identifiable risk" to the uncertainty that theoretically always remains since science can *never* provide *absolute* certainty that a given substance will not *ever* have adverse health effects.[217] We agree with the Panel that this theoretical uncertainty is not the kind of risk which, under Article 5.1, is to be assessed. In another part of its Reports, however, the Panel appeared to be using the term "scientifically identified risk" to prescribe implicitly that a certain *magnitude* or threshold level of risk be demonstrated in a risk assessment if an SPS measure based thereon is to be regarded as consistent with Article 5.1.[218] To the extent that the Panel purported to require a risk assessment to establish a minimum magnitude of risk, we must note that imposition of such a quantitative requirement finds no basis in the *SPS Agreement*.[219]

Thus it is clear that in the view of the Appellate Body, theoretical uncertainty is not the kind of risk to be assessed under Article 5.1. Such uncertainty always exists since it is not possible for science to ever completely rule out the possibility of risk.[220] Instead, there must be proof of an actual risk, not just uncertainty about whether a risk exists or not. However, no quantitative requirement that a certain magnitude of risk be shown is contained in the second definition. A panel may only determine whether the measure is sufficiently supported or reasonably warranted by the risk assessment and not whether a threshold level of risk has been shown.[221] Further, the Appellate Body stated that the risk assessment may go beyond the controlled conditions in a scientific laboratory, and take account of the actual potential for adverse effects in the real world.[222]

In *Australia—Salmon*,[223] the first type of risk assessment was relevant as the concern did not relate to food safety but rather to fish diseases that could be introduced through the importation of adult, wild, ocean-caught Pacific salmon from Canada. Referring to the definition in Annex A, the Panel clarified the risks that must be evaluated in this type of risk assessment:

(1) the risk of entry, establishment or spread of a disease and
(2) the risk of the associated potential biological and economic consequences.[224]

The Appellate Body in this case agreed with the Panel which had set out a three-pronged test that must be met by a risk assessment of the type described in the first definition of risk assessment in Annex A.[225] In terms of this test, the risk assessment must:

(1) *identify* the diseases whose entry, establishment or spread a Member wants to prevent within its territory, as well as the potential biological and economic consequences associated with the entry, establishment or spread of these diseases;

[224] Report of the WTO Panel, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 57, ¶ 8.72.
[225] Report of the Appellate Body, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 141, ¶ 121.

(2) *evaluate the likelihood* of entry, establishment or spread of these diseases, as well as the associated potential biological and economic consequences; and
(3) evaluate the likelihood of entry, establishment or spread of these diseases *according to the SPS measures which might be applied*.[226]

Australia had contended that its 1996 Final Report constituted a risk assessment in terms of Article 5.1. The Panel examined the Australian risk assessment and found that it met the first requirement of the test as it identified up to twenty diseases whose establishment or spread Australia was trying to prevent. Second, the Panel found that Australia had evaluated *some* elements of possibility and probability regarding the likelihood of entry or spread of these diseases. Third, the Panel held that Australia had considered a range of risk reduction factors to mitigate these risks. It accordingly assumed that the three-pronged test was met by Australia's risk assessment. This finding was overturned by the Appellate Body due to Australia's failure to meet the second and third requirements. The Appellate Body addressed each of the three requirements in turn.

With regard to the first requirement, the Appellate Body in *Australia—Salmon* agreed that Australia had identified the relevant diseases and that this requirement was thus met.[227] With regard to the second and third requirements, the Appellate Body examined the meaning of the term "evaluation of the likelihood". The Appellate Body pointed to the different language used in the first and second definitions of risk assessment in Annex A.[228] While the second calls for an evaluation of the "potential" for adverse effects, the first requires the evaluation of the "likelihood" of entry, establishment or spread of pests or diseases and their associated biological or economic consequences. The Appellate Body held that, contrary to the EC's assertion, these substantial differences in the two kinds of risk assessment should not be diminished.[229] Further, it stated:

> We note that the first definition in paragraph 4 of Annex A speaks about the evaluation of "likelihood". In our report in *European Communities—Hormones,* we referred to the dictionary meaning of "probability" as "degrees of likelihood" and "a thing that is judged likely to be true", for the purpose of distinguishing the terms "potential" and "probability".[230] For the present purpose, we refer in the same manner to the ordinary meaning of "likelihood", and we consider that it has the same meaning as "probability". On this basis, as well as on the basis of the definition of "risk" and "risk assessment" developed by the Office international des épizooties ('OIE') and the OIE *Guidelines for Risk Assessment,* we maintain that for a risk assessment to fall within the meaning of Article 5.1 and the first definition in paragraph 4 of Annex A, it is not sufficient that a risk assessment conclude that there is a *possibility* of entry, establishment or spread of diseases and associated biological and economic consequences. A proper risk assessment of this type must evaluate the

[226] *Id*. It should also be noted that in *Japan—Agricultural Products* the Appellate Body once again endorsed this three-pronged test and found that a risk assessment, on which Japan argued it had based its measure, did not refer to any SPS measure which could be taken to reduce the risk, and thus did not comply with the third requirement. Report of the Appellate Body, *Japan—Measures Affecting Agricultural Products*, *supra* note 97, ¶ 113. This test was also used by the compliance Panel in *Australia—Salmon.* Report of the WTO Compliance Panel, *Australia—Measures Affecting the Importation of Salmon, Recourse to Article 21.5 by Canada*, *supra* note 65, ¶ 7.41. In *Japan—Apples* the Appellate Body again used this test to evaluate Japan's risk assessment. Report of the Appellate Body, *supra* note 112, ¶ 196.

[228] *Id.* ¶ 123.

[229] *Id.* n.69. The EC was a third party participant in this dispute.

[230] Adopted February 13, 1998, WT/DS26/AB/R, WT/DS48/AB/R, ¶ 184. [Footnote in original].

> "likelihood", i.e., the "probability", of entry, establishment or spread of diseases and associated biological and economic consequences as well as the "likelihood", i.e., "probability", of entry, establishment or spread of diseases *according to the SPS measures which might be applied*.[231]

It seems likely that the different terminology in the two definitions of risk assessment was intended to set less stringent requirements in cases where human health is more likely to be at risk, namely where food safety is at issue, than in cases where the risk relates to pests or diseases, which are more likely to affect plants or animals.[232]

The Appellate Body went on to find that the second and third requirements of this definition of risk assessment were not met by just *some* evaluation of likelihood.[233] In this regard, it held:

> We note that, although the Panel stated that the definition of a risk assessment for this type of measure requires an "evaluation of the likelihood", for the purpose of satisfying the second and third requirements,[234] it subsequently was hesitant in applying these requirements, by stating or suggesting in paragraphs 8.80, 8.83, 8.89 and 8.91, that *some* evaluation of the likelihood or probability would suffice. We consider this hesitation unfortunate. We do not agree with the Panel that a risk assessment of this type needs only *some* evaluation of the likelihood or probability. The definition of this type of risk assessment in paragraph 4 of Annex A refers to "the evaluation of the likelihood" and not to *some* evaluation of the likelihood. We agree, however, with the Panel's statements in paragraph 8.80 that the *SPS Agreement* does not require that the evaluation of the likelihood needs to be done quantitatively. The likelihood may be expressed either quantitatively or qualitatively. Furthermore, we recall, as does the Panel,[235] that we stated in *European Communities—Hormones* that there is no requirement for a risk assessment to establish a certain magnitude or threshold level of degree of risk.[236]

In coming to the conclusion that Australia's 1996 Final Report did not meet the requirement of an "evaluation of likelihood" of the entry, establishment or spread of the relevant diseases and of their associated potential biological and economic consequences, the Appellate Body relied on findings of the Panel based on statements of the experts

[231] Report of the Appellate Body, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 141, ¶ 123.

[232] Contrary to the EC's contention, it is not the case that both definitions apply equally to human life or health and plant and animal life or health. In fact the second definition omits plants. While the second definition refers to animal health as well as human, clearly the human health consideration was paramount in the setting of a more lenient criterion to satisfy the obligation to conduct a risk assessment in this definition. The first definition, referring to the entry, establishment or spread of pests or diseases is obviously most likely to affect animals and plants, and a stricter requirement was set. While not explicitly stated, it seems that risks to human health were not envisaged as likely to fall within the first definition. It would, in any case, appear unlikely that pests or diseases that can be spread by cross-border movement of goods that are not food or beverages (or they would fall under the second definition) could be transferred to humans. It should, however, be noted that the definition of SPS measures in Annex A expressly includes, in paragraph 1(c), measures to protect *human* health from risks from pests or diseases carried by animals or plants or products thereof. Thus the possibility of risks to humans falling under the first definition of risk assessment cannot be excluded. In such a case, the wisdom of interpreting the first definition to lay down a stricter requirement can be questioned.

The case cited is: Report of the Appellate Body, *Australia—Measures Affecting the Importation of Salmon*, supra note 141, ¶ 124.

advising the Panel.[237] These experts expressed the view that the 1996 Final Report lent more weight to unknown and uncertain elements of the assessment and looked at the *possibilit*y of adverse effects occurring rather than assessing the *probability* thereof.[238] The Appellate Body pointed out that the existence of unknown or uncertain elements does not justify a departure from the requirements for a risk assessment.[239]

While in *EC—Hormones* the Appellate Body had expressed concern that the Panel's use of the term "probability" might introduce a quantitative element into the second definition, in *Australia—Salmon*[240] it found that likelihood or probability in the first definition could be expressed quantitatively or qualitatively. However, Australia's evaluation of the probability as "low" or "small" was not deemed sufficient.[241] It is not clear what kind of qualitative determination of probability would satisfy this requirement.

Further, the Appellate Body in *Australia—Salmon* confirmed the finding in *EC—Hormones* that the risk assessment need not establish a certain magnitude or threshold level of risk. Thus, even a very small, demonstrated probability of risk is sufficient. The Appellate Body[242] distinguished between the evaluation of risk, which must show an ascertainable risk, not just a theoretical uncertainty, and the determination of an appropriate level of protection, which may be premised on a zero-risk level. It is thus possible for a Member (once an actual risk, however small, has been proven to have a *certain quantitative or qualitative probability*) to choose a zero-risk level of protection and institute SPS measures to achieve this level.[243] The usefulness of the determination of probability is thus doubtful, since no matter how small the probability of the risk, the state's chosen level of protection cannot be challenged on grounds of proportionality.[244] The more stringent criterion ("probability" as opposed to "potential") thus only serves to make it harder to satisfy the risk assessment requirement without serving any real purpose with regard to disciplining the resulting SPS measure.

With respect to the third element of this definition of a risk assessment, namely the evaluation of likelihood "according to the SPS measures which might be applied", the Appellate Body in *Australia—Salmon* agreed with the Panel that this term refers to those measures that reduce the risks of concern.[245] In *Australia—Salmon (21.5)*, the compliance Panel further clarified what is required under this element. It rejected the contention that, in order for the third element of the definition to be met, the SPS measure applied must

[240] *Id.* ¶ 124.

[241] It should be noted that the OIE, which is recognized in the SPS Agreement as the relevant standard-setting organization in the area of animal health, defines a qualitative risk assessment as "[a]n assessment where the conclusions on the likelihood of the outcome or the magnitude of the consequences are expressed in qualitative terms such as high, medium, low or negligible". *See* OIE, *Diagnostic Manual for Aquatic Animal Diseases*, 3rd edition (2000), Article 1.4.1.3.

[242] Report of the Appellate Body, *Australia—Measures Affecting the Importation of Salmon, supra* note 141, ¶ 125 (quoted *infra* Part II(F)(1)).

[243] This point is discussed further *infra* Part II(F)(1).

[244] This can be compared to the situation under EC law, where the exception for health measures, which requires that the measure be "necessary" to protect human life or health, has been interpreted by the ECJ to include the requirement that the measure be proportional to the aim it seeks to achieve.

[245] Report of the WTO Panel, *Australia—Measures Affecting the Importation of Salmon, supra* note 57, ¶ 132.

be shown to be linked with the risk assessment. It stated as follows:

> Canada's claim . . . raises the question of whether the definition of risk assessment *as such*, requiring Members to assess risk "according to the [sanitary] measures which might be applied", can be construed so as to include the obligation to make the link between the assessment, the measures *finally selected* and the necessity to use these measures in order to achieve the ALOP.[246] We find it difficult to read such a requirement into paragraph 4 of Annex A.
>
> In our view, the rights and obligations in respect of these linkages are set out *not* in the definition of risk assessment itself—which logically *precedes* the selection of measures—but, *inter alia*, in the obligation to *base* sanitary measures *on* a risk assessment in Article 5.1 and to ensure that sanitary measures are not more trade-restrictive than required to achieve the ALOP in the sense of Article 5.6. To examine these questions of relationship between the risk assessment, the measures selected and the ALOP under the definition of risk assessment—as Canada . . . seem[s] to do—would, in our view, run the risk of adding to or diminishing the more specific rights and obligations of Members set out in other SPS obligations, contrary to Article 19.2 of the DSU.
>
> . . . In any event, we prefer to address this question of relationship between the measures selected and the risk assessment under the obligation to *base* measures *on* a risk assessment pursuant to Article 5.1 rather than under the very definition of risk assessment referred to in the same provision.[247]

Thus, the third element of the three-pronged test, requiring the evaluation of the likelihood of entry, establishment or spread of the relevant diseases *according to the SPS measure that might be applied* does not necessitate a determination of the link between the measure applied and the risk assessment itself. Instead, it only requires that the risk be determined according to the different options available to mitigate the risk.

In *Japan—Apples*, the Panel found that Japan had not evaluated the risk according to the SPS measures which might be applied, as its risk assessment examined only the SPS measure it had imposed to address the risk of fire blight. The Panel held that "consideration should be given not just to those specific measures which are currently in application, but at least to a potential range of relevant measures."[248]

On appeal, the Appellate Body found:

> We agree with the Panel that this phrase "refers to the measures *which might* be applied, not merely to the measures which *are being* applied." The phrase "which might be applied" is used in the conditional tense. In this sense, "might" means: "were or would be or have been able to, were or would be or have been allowed to, were or would perhaps". We understand this phrase to imply that a risk assessment should not be limited to an examination of the measure already in place or favoured by the importing Member. In other words, the evaluation contemplated in paragraph 4 of Annex A to the *SPS Agreement* should not be distorted by preconceived views on the nature and the content of the measure to be taken; nor should it develop into an exercise tailored to and carried out for the purpose of justifying decisions *ex post facto*.[249]

Risk assessments must therefore evince an evaluation of a range of possible SPS measures which could be applied to address the risk at issue, and their relative effectiveness,

[246] "ALOP" is an abbreviation for Appropriate Level of Protection. [Note added by the authors].

[247] Report of the WTO Compliance Panel, *Australia—Measures Affecting the Importation of Salmon, Recourse to Article 21.5 by Canada*, *supra* note 65, ¶¶ 7.68–7.70.

[248] Report of the WTO Panel, *Japan—Measures Affecting the Importation of Apples, supra* note 57, ¶ 8.285.

[249] Report of the Appellate Body, *Japan—Measures Affecting the Importation of Apples, supra* note 112, ¶ 208 (footnotes omitted).

not merely address the measure actually applied. Otherwise they could be regarded as prejudging their own outcome[250] by showing that the measure actually applied is appropriate and effective, without regard for possible alternatives.

From the above discussion of its interpretation of the requirements for the two types of risk assessment, it is apparent that the Appellate Body takes a more realistic view of the scientific assessment of risks than do the Panels. It would appear that the Appellate Body is trying to make provision for the difficulties inherent in risk assessment by: (1) allowing the probability to be established quantitatively or qualitatively, (2) not requiring a minimum level of risk to be shown, and (3) finding that the risk to be ascertained is not only that which can be established under controlled conditions in science laboratories, but includes that occurring in the "real world".

Aside from the findings regarding the specific requirements of each of the two definitions, the decisions in these cases also address common issues relating to risk assessment in general. It is useful to identify certain common elements.

(a) Specificity. One of the issues common to both types of risk assessment is the *requirement of specificity* in the analysis of risk. On this issue, the Appellate Body in *EC—Hormones* stated:

> . . . [the studies submitted by the respondent] constitute general studies which do indeed show the existence of a general risk of cancer; but they do not focus on and do not address the particular kind of risk here at stake—the carcinogenic or genotoxic potential of the residues of those hormones found in meat derived from cattle to which the hormones had been administered for growth promotion purposes—as is required by paragraph 4 of Annex A of the *SPS Agreement*. Those general studies, are in other words, relevant but do not appear to be sufficiently specific to the case at hand.[251]

Further, the Appellate Body in *EC—Hormones* agreed with the Panel that a risk assessment must be comprehensive, i.e. it must cover each of the substances at issue. Thus, the Appellate Body upheld the Panel's finding that "there was no risk assessment with regard to MGA",[252] one of the six growth hormones at issue, stating that "[i]n other words, there was an almost complete absence of evidence on MGA in the Panel proceedings."[253] On this point, the Panel explained that, "one of the basic principles of a risk assessment appears to be that it needs to be carried out for each individual substance."[254]

When dealing with the second element of its three-pronged test, the Panel in *Australia—Salmon* emphasized the need for specificity in a risk assessment, finding:

> . . . given the definition of risk assessment applicable in this case (the "evaluation of the likelihood of entry, establishment or spread of a . . . *disease*", in the singular form), a risk assessment for the measure at issue in this dispute at least has to *identify* risk on a disease specific basis, i.e., it has to identify the risk for any given disease of concern separately, not simply address the overall risk related to the combination of all diseases of concern. . . . The experts advising the Panel on this issue confirmed this. In the *EC—Hormones* case

[250] This comment was made by one of the experts advising the Panel in *Japan—Apples*. Report of the WTO Panel, *Japan—Measures Affecting the Importation of Apples, supra* note 57, ¶ 6.177.

[251] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 200.

[252] *Id*. ¶ 201.

[253] *Id*.

[254] Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by the United States, *supra* note 53, ¶ 8.255; and Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by Canada, *supra* note 53, ¶ 8.258.

> as well, both the panels and the Appellate Body required some degree of specificity for a risk assessment—or a study or report allegedly part thereof—to be in accordance with the requirements imposed in Article 5.1.[255]

Although the Appellate Body agreed with the Panel that Australia had identified the risk on a disease-specific basis in its risk assessment, it held that Australia had not assessed or evaluated this risk and had thus not complied with the requirements of a risk assessment. On the relevance of studies on one product category for a risk assessment in respect of another product category, the Panel in *Australia—Salmon* addressed Australia's submission that to the extent that a disease agent was common to wild Pacific and other Canadian salmon products, its risk assessment (contained in the 1996 Final Report) with regard to the former product was equally valid for the latter. The Panel noted:

> (. . .) [W]e do not consider—nor has Australia claimed—that the 1996 Final Report (which is explicitly limited to adult, wild, ocean-caught Pacific salmon) constitutes a risk assessment, in the sense of Article 5.1, for the other categories of salmon products covered by the measure in dispute. We do, however, agree with Australia that some of the evidence, assessments and conclusions contained in the 1996 Final Report might be relevant for the risk assessment to be carried out (or relied upon) for the other categories of salmon products and that, therefore, a completely new risk assessment for these other categories of salmon products might not be necessary.[256]

The issue of specificity was again addressed in *Japan—Apples*, where the Panel examined Japan's risk assessment which evaluated the risk of entry, establishment and spread of fire blight through a collection of possible hosts, including apples. The Panel found that as Japan's risk assessment did not evaluate the risks in relation to apple fruit separately from those posed by other hosts, whereas scientific evidence showed that the risks vary significantly depending on the vector (host plant) involved, it did not meet the requirement of specificity.[257] On appeal, Japan argued that the methodology of a risk assessment is not regulated by the SPS Agreement and a Member may thus decide for itself whether to analyse the risk on the basis of a particular pest or disease, or on the basis of a particular commodity.[258] The Appellate Body upheld the Panel's finding, holding that it did not limit a Member's choice of risk assessment methodology. Members are free to organise their risk assessments along the lines of pests or diseases, or of the commodity imported, provided that a likelihood of entry, establishment or spread of the disease is attributed to *each agent specifically*.[259] The Appellate Body emphasised that, as held in *EC—Hormones*, the risk to be specified in a risk assessment is the harm concerned *as well as* the precise agent that may cause the harm.[260]

Therefore, a rather high degree of specificity is required in a risk assessment. It has to focus and address the particular kind of risk at stake from the product at issue, not just generally establish that the substance may be harmful. It must assess the risk for each type of disease or harmful substance at issue separately it must also specify due risk from the specific agent at issue. Although a completely new risk assessment is not

[260] *Id.*, ¶ 202.

necessary for each product category, a risk assessment for one product cannot be regarded as constituting a risk assessment for related product categories.[261]

(b) "As Appropriate to the Circumstances" (Article 5.1). The requirement of Article 5.1 that SPS measures be based on a risk assessment is qualified by the phrase "as appropriate to the circumstances." It is therefore necessary to examine what this qualification entails to determine whether circumstances such as scientific uncertainty, the fact that the measure predates the coming into force of the SPS Agreement, or the lack of economic resources or scientific capabilities of a Member might mitigate the strict requirements relating to risk assessments. When addressing the applicability of the SPS Agreement to those measures adopted before the entry into force of the WTO Agreement, the Appellate Body in *EC—Hormones* noted the following:

> We are aware that the applicability, as from 1 January 1995, of the requirement that an SPS measure be based on a risk assessment to the many SPS measures already in existence on that date, may impose burdens on Members. It is pertinent here to note that Article 5.1 stipulates that SPS measures must be based on a risk assessment, *as appropriate to the circumstances*, and this makes clear that the Members have a certain degree of flexibility in meeting the requirements of Article 5.1.[262]

However, what this flexibility would entail in practice is not clear, as the Appellate Body did not seem to relax any of the normal disciplines in its ensuing assessment of whether the EC had met the requirements for a risk assessment in this case. In respect of Australia's claim that its risk assessment for one product category was equally valid with respect to other product categories to which the same disease agent was common, the Panel in *Australia—Salmon* referred back to the above-mentioned finding of the Appellate Body in *EC—Hormones* and noted:

> As to the product coverage of Article 5.1, the reference contained in Article 5.1 to base sanitary measures on an assessment "as appropriate to the circumstances" cannot, in our view, annul or supersede the substantive obligation resting on Australia to base the sanitary measure in dispute (irrespective of the products that measure may cover) on a risk assessment. We consider that the reference "as appropriate to the circumstances" relates, rather, to the way in which such risk assessment has to be carried out.[263] Only Article 5.7 allows for an exception to the obligation to base sanitary measures on a risk assessment.[264]

Turning to an examination of Australia's 1996 Final Report, to determine if it constituted a risk assessment in respect of adult, wild, ocean-caught salmon, the Panel further stated:

> Following Article 5.1, a risk assessment needs to be "appropriate to the circumstances". Answering a Panel question in this respect, Canada is of the view that the circumstances thus referred to are the source of the risk (e.g., an animal pathogen or a chemical contaminant) and the subject of the risk (i.e., whether it is to human, animal or plant life or health). For Australia, the phrase "as appropriate to the circumstances" confers a right and obligation on WTO Members to assess the risk, on a case by case basis, in terms of product, origin and destination, including, in particular, country specific situations. We

[261] The Panel's finding of the absence of a risk assessment with regard to the other product categories ("other Canadian salmon") covered by the measure was not appealed.

[262] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 129.

[263] *See further* in ¶ 8.70. [Footnote in original].

[264] Report of the WTO Panel, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 57, ¶ 8.57.

> agree that both interpretations may be covered by the term "as appropriate to the circumstances". In our view, also the OIE risk assessment techniques as well as the scientific opinions we gathered, may shed light on what is a risk assessment "appropriate to the circumstances".[265]

The Panel, however, did not proceed to evaluate whether Australia's 1996 Final Report met the requirements of a risk assessment, but merely assumed it did so[266] and went on to determine whether the measure was "based on" the Final Report. The Appellate Body in this case did not find it appropriate to base its examination of Article 5.1 on this assumption of the Panel, and thus examined itself the question whether Australia's 1996 Final Report was a risk assessment within the meaning of Article 5.1. In its finding that the second requirement of a risk assessment (the evaluation of the likelihood of the risk) was not met, it stated as follows:

> . . . the existence of unknown and uncertain elements does not justify a departure from the requirements of Articles 5.1, 5.2 and 5.3, read together with paragraph 4 of Annex A, for a risk assessment. We recall that Article 5.2 requires that "in the assessment of risk, Members shall take into account available scientific evidence". We further recall that Article 2, entitled "Basic Rights and Obligations", requires in paragraph 2 that "Members shall ensure that any sanitary . . . measure . . . is based on scientific principles and is not maintained without sufficient scientific evidence, except as provided for in paragraph 7 of Article 5.[267]

Although the Appellate Body was not specifically addressing the question of the meaning of the phrase "as appropriate to the circumstances", it did not seem to allow the existence of scientific uncertainty to mitigate the requirements for a risk assessment in Article 5.1.

In *Japan—Apples*, the Panel examined what is meant by a risk assessment "as appropriate to the circumstances". It held that this factor, together with the consideration of the risk assessment techniques developed by the relevant international organizations,[268] pervades the entire risk assessment as defined in Annex A and is therefore relevant to the evaluation of the risk assessment as a whole. It therefore addressed this first, before looking at other requirements for a risk assessment.[269] The Panel first found, rather obviously, that as Japan's measure was a phytosanitary measure, it must focus on risks related to plant life and health.[270] It then noted that the term "as appropriate to the circumstances" has been interpreted, in *Australia—Salmon*, to provide some flexibility for risk assessments, on a case-by-case basis, including consideration of country-specific situations. It therefore found that Japan's fire blight-free status and its climatic conditions, which were favorable to the spread of fire blight, were relevant "circumstances" to be taken into account in Japan's risk assessment, and noted that they related to some of the factors required to be considered under Article 5.2.[271]

From the above discussion it appears that the qualifying phrase "as appropriate to the circumstances" has been interpreted by panels to indicate that the *manner* of conducting a risk assessment may differ, depending on the source of the risk (e.g. chemical or pathogen), subject of the risk (human, plant or animal), product involved, and country-specific situations regarding the country of origin or destination of the product. What the

appropriate manner of conducting a risk assessment is in a specific case is determined with reference to the opinions of scientific experts, and risk assessment techniques established by international standard-setting organizations in the area at issue.

(c) "Taking into Account Risk Assessment Techniques Developed by the Relevant International Organizations."(Article 5.1). Article 5.1 further requires that a risk assessment take into account the risk assessment techniques which are developed by the relevant international organizations. It can be assumed that these organizations are those referred to in the definition of "international standards, guidelines and recommendations" in Annex A, paragraph 3, namely primarily the CAC, OIE and IPPC, since these are the most relevant for SPS matters. In *Australia—Salmon*, as noted above, the Panel took account of the risk assessment techniques developed by the OIE as part of its consideration of what is covered by the term "as appropriate to the circumstances".[272] In *Japan—Apples*, however, the Panel examined this issue separately, as one of the two factors which pervade the evaluation of a risk assessment. After noting that Article 5.1 merely requires that these risk assessment techniques be "taken into account", rather than that a risk assessment be "based on" or "in conformity with" them, the Panel found that:

> . . . such techniques should be considered relevant, but that a failure to respect each and every aspect of them would not necessarily, *per se*, signal that the risk assessment on which the measure is based is not in conformity with the requirements of Article 5.1. Nonetheless, reference to these risk assessment techniques can provide very useful guidance as to whether the risk assessment at issue constitutes a proper risk assessment within the meaning of Article 5.1.[273]

It is thus clear that the risk assessment techniques developed by the relevant international organizations, while useful, are not determinative to the determination whether a risk assessment complies with Article 5.1.

(d) Borrowed Risk Assessments. On the question whether the risk assessment relied upon must be conducted by the Member itself, the Appellate Body in *EC—Hormones* pointed out that the SPS Agreement is not prescriptive as to *who* carries out the risk assessment. It stated that:

> Article 5.1 does not insist that a Member that adopts a sanitary measure shall have carried out its own risk assessment . . . The SPS measure might well find its objective justification in a risk assessment carried out by another Member, or an international organization.[274]

Thus it is sufficient if the measure is *based on* a risk assessment, whatever its origin. This is particularly significant for developing countries, which often lack the financial and technical capacity to carry out their own risk assessments. They may thus rely on those risk assessments conducted in the relevant standard-setting organizations or in other countries, to the extent that they are applicable to their own situations.

[272] Report of the WTO Panel, *Australia—Measures Affecting the Importation of Salmon, supra* note 57, ¶ 8.71.

[273] *Id*. ¶ 8.241. In this context, the Panel examined two relevant standards set by the International Plant Protection Convention, ISPM 2 on Guidelines for Pest Risk Analysis, and ISPM 11 on Pest Risk Analysis for Quarantine Pests. The parties agreed that both instruments build upon the same framework, thus the Panel focused on the key issue of whether Japan's risk assessment sufficiently identified and assessed the possible pathways for the introduction and spread of fire blight through apple fruit and the likelihood for their being realised, as required by both instruments. *Id.,* ¶ 8.244.

[274] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones), supra* note 70, ¶ 190. This finding was recalled by the Appellate Body in *Australia—Measures Affecting the Importation of Salmon*, *supra* note 141, n. 68.

(e) Risk Assessment as Distinct from Risk Management. To further elucidate what a risk assessment entails, it is useful to distinguish it from risk management. There is a commonly-drawn distinction in risk analysis methodology between *risk assessment* (the science-based process of determining the existence of a risk and the likelihood of it occurring according to the SPS measures which could be applied), and *risk management* (a policy-based choice of the level of protection deemed appropriate by a state, taking into account various societal value judgments such as the citizens' tolerance of risk, economic considerations, *etc.* and the choice of measure to achieve this level of protection).[275] While a Member's risk assessment must be founded on scientific analysis, scope is left for risk management decisions in the setting of an appropriate level of protection and the choice of a measure to achieve this level of protection. This distinction was recognized by the Panel in *EC—Hormones*.[276] However, it used this distinction to exclude from the scope of a risk assessment certain non-scientific reports as well as opinions of the European Parliament and the Economic and Social Committee, which evaluated reports submitted to them, and the question of risks associated with the problem of control of the use of hormones. It viewed these issues as having to do with social-value judgments and thus as not scientifically based and belonging under "risk management" rather than "risk assessment". The Appellate Body rejected the Panel's distinction, stating that the SPS Agreement nowhere refers to the term "risk management" but only to "risk assessment".[277] Thus the Panel's use of the distinction to limit the scope of what falls under risk assessment was held to have no basis in the text. The Appellate Body held:

> . . . The Panel observed that an assessment of risk is, at least with respect to risks to human life and health, a "scientific" examination of data and factual studies; it is not, in the view of the Panel, a "policy" exercise involving social value judgments made by political bodies.[278] The Panel describes the latter as "non-scientific" and as pertaining to "risk management" rather than to "risk assessment".[279] We must stress, in this connection, that Article 5 and Annex A of the *SPS Agreement* speak of "risk assessment" only and that the term "risk management" is not to be found either in Article 5 or in any other provision of the *SPS Agreement*. Thus, the Panel's distinction, which it apparently employs to achieve or support what appears to be a restrictive notion of risk assessment, has no textual basis. The fundamental rule of treaty interpretation requires a treaty interpreter to read and interpret the words actually used by the agreement under examination, and not words which the interpreter may feel should have been used.[280]

[275] For a more detailed analysis of this distinction, *see* Walker, *supra* note 117, at 256–277. In addition, risk communication forms part of the risk analysis process. It is defined as follows in Article 1.3.2.7 of the OIE *International Animal Health Code*: "Risk communication is the process by which information and opinions regarding hazards and risks are gathered from potentially affected and interested parties during a risk analysis, and by which the results of the risk assessment and proposed risk management measures are communicated to the decision-makers and interested parties in the *importing* and *exporting countries*. It is a multidimensional and iterative process and should ideally begin at the start of the risk analysis process and continue throughout." (Emphasis in original). This aspect of risk analysis is party covered by the rules on transparency in the SPS Agreement, dealt with in Part III(A) below.

[280] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 181.

While it is true that the term "risk management" is not explicitly mentioned in the SPS Agreement, the Agreement deals in different ways with the Members' obligation to base their SPS measures on a risk assessment and their right to establish their own level of protection and choose a measure to achieve this level of protection. The former is subject to strict scientific criteria, whereas the latter choices are not reviewable, provided they takes into account the aim of reducing negative trade effects when determining the appropriate level of protection,[281] and avoid arbitrary or unjustifiable distinctions in the levels of protection established in different situations, and ensure that the measure taken is the least restrictive.[282] The criteria against which the choice of the level of protection is evaluated do not have a scientific basis. This recognizes the sovereign right of Members to make their own policy choices in the area of public health, taking into account various non-scientific considerations. The choice is ultimately one based on societal value judgments. The latter area of decision-making is commonly known as risk management.

It would perhaps have made more sense for the Appellate Body to take issue only with the Panel's classification of the risks associated with control as non-scientific and thus belonging under risk management and not under risk assessment, rather than objecting to the Panel's distinction between risk management and risk assessment. Such an approach would be in line with the Appellate Body's view, expressed in *EC—Hormones*, that a risk assessment deals with real-world risks and not just risks ascertainable by means of laboratory experiments.[283]

2. Factors Taken into Account (Article 5.2 and 5.3)

Although the SPS Agreement does not specify a methodology to be used in making a risk assessment,[284] it does list in Article 5.2 and 5.3 the scientific (in a broad sense) and economic factors that Members must take into account.

First, Article 5.2 provides that Members must take certain objectively ascertainable factors into account when assessing risks. These are: available scientific evidence, relevant processes and production methods, relevant inspection sampling and testing methods, prevalence of specific diseases or pests, existence of pest- or disease-free areas, relevant ecological and environmental conditions, and quarantine or other treatment. As stated above, the Panel in *EC—Hormones* held that the risks relating to detection and control of failure to observe good veterinary practice should be excluded from risk assessment *a priori* because they are non-scientific and thus do not fall within the scope of Article 5.2's provision on "relevant inspection sampling and testing methods", but rather are taken into account in risk management. The Appellate Body rejected this finding, holding that the scope of Article 5.2 allowed consideration of these risks. The Appellate Body noted:

> The listing in Article 5.2 begins with "available scientific evidence"; this, however, is only the beginning. We note in this connection that the Panel states that, for purposes of the EC measures in dispute, a risk assessment required by Article 5.1 is "a *scientific* process aimed

[281] Article 5.4 SPS.

[282] Article 5.5 SPS and Article 5.6 SPS.

[283] As will be discussed below, the Appellate Body did overrule the Panel's decision that risks from failure to observe good veterinary practice and problems relating to detection and control of such failure must be rejected *a priori* because they are unscientific and thus do not belong under risk assessment. The Appellate Body found that the Panel had misinterpreted the scope of Article 5.2 and that these considerations did, in fact, belong thereunder. Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 187.

[284] However, Members are required, in Article 5.1, to take account of the risk assessment techniques developed by the relevant international organizations.

> at establishing the *scientific* basis for the sanitary measure a Member intends to take".[285] To the extent that the Panel intended to refer to a process characterized by systematic, disciplined and objective enquiry and analysis, that is, a mode of studying and sorting out facts and opinions, the Panel's statement is unexceptionable. However, to the extent that the Panel purports to exclude from the scope of a risk assessment in the sense of Article 5.1, all matters not susceptible of quantitative analysis by the empirical or experimental laboratory methods commonly associated with the physical sciences, we believe that the Panel is in error. Some of the kinds of factors listed in Article 5.2 such as "relevant processes and production methods" and "relevant inspection, sampling and testing methods" are not necessarily or wholly susceptible of investigation according to laboratory methods of, for example, biochemistry or pharmacology. Furthermore, there is nothing to indicate that the listing of factors that may be taken into account in a risk assessment of Article 5.2 was intended to be a closed list. It is essential to bear in mind that the risk that is to be evaluated in a risk assessment under Article 5.1 is not only risk ascertainable in a science laboratory operating under strictly controlled conditions, but also risk in human societies as they actually exist, in other words, the actual potential for adverse effects on human health in the real world where people live and work and die.[286]

The Appellate Body further stated:

> It should be recalled that Article 5.2 states that in the assessment of risks, Members shall take into account, in addition to "available scientific evidence", "relevant processes and production methods; [and] relevant inspection, sampling and testing methods". We note also that Article 8 requires Members to "observe the provisions of Annex C in the operation of control, inspection and approval procedures . . . ". The footnote in Annex C states that "control, inspection and approval procedures include, *inter alia*, procedures for sampling, testing and certification". We consider that this language is amply sufficient to authorize the taking into account of risks arising from failure to comply with the requirements of good veterinary practice in the administration of hormones for growth promotion purposes, as well as risks arising from difficulties of control, inspection and enforcement of the requirements of good veterinary practice.[287]

The Appellate Body qualified its finding, however, as follows:

> [T]he *SPS Agreement* requires assessment of the potential for adverse effects on human health arising from the presence of contaminants and toxins in food. We consider that the object and purpose of the *SPS Agreement* justify the examination and evaluation of all such risks for human health whatever their precise and immediate origin may be. We do not mean to suggest that risks arising from potential abuse in the administration of controlled substances and from control problems need to be, or should be, evaluated by risk assessors in each and every case. When and if risks of these types do in fact arise, risk assessors may examine and evaluate them. Clearly, the necessity or propriety of examination and evaluation of such risks would have to be addressed on a case-by-case basis. What, in our view is a fundamental legal error is to exclude, on an *a priori* basis, any such risks from the scope of application of Articles 5.1 and 5.2.[288]

Thus, the Appellate Body has clarified that the SPS Agreement requires an assessment of the potential for adverse effects on human, animal or plant life or health from contaminants or toxins in food, or pests or diseases, regardless of their origin. Whether a specific risk must be examined should be determined on a case-by-case basis but no risk should be excluded *a priori*.

[287] *Id.* ¶ 205.
[288] *Id.* ¶ 206.

Article 5.3 sets out certain economic factors to be taken into account in assessing risks to animal or plant life or health and in determining which SPS measure should be applied. These economic factors listed in Article 5.3 are "the potential damage in terms of loss of production or sales in the event of entry, establishment or spread of a pest or disease; the costs of control or eradication in the territory of the importing Member; and the relative cost-effectiveness of alternative approaches to limiting risks." This list of factors implies a recognition of the fact that risk assessments are not purely science-based but involve economic considerations as well. It is significant that in the assessment of human health risks these economic factors are not required to be taken into account.[289] Thus, governments are not required to weigh economic factors against the protection of human health.

3. The "Based on" Requirement (Article 5.1)

Article 5.1, quoted above, sets out the requirement that SPS measures be "based on" an assessment of the risks to human, animal or plant life or health, as appropriate to the circumstances and taking into account risk assessment techniques developed by the relevant international organizations.

The meaning of "based on" in Article 5.1 was discussed in *EC—Hormones*.[290] In this case, the Panel read a procedural requirement into the term, obliging Members to take a risk assessment into account when enacting or maintaining SPS measures.[291] It looked to preambles of EC Directives for evidence that this was in fact done.[292] The Appellate Body rejected this subjective requirement as having no basis in the text. It found:

> The term "based on", when applied as a "minimum procedural requirement" by the Panel, may be seen to refer to a human action, such as particular human individuals "taking into account" a document described as a risk assessment. Thus, "take into account" is apparently used by the Panel to refer to some subjectivity which, at some time, may be present in particular individuals but that, in the end, may be totally rejected by those individuals. We believe that "based on" is appropriately taken to refer to a certain *objective relationship* between two elements, that is to say, to an *objective situation* that persists and is observable between an SPS measure and a risk assessment. Such a reference is certainly embraced in the ordinary meaning of the words "based on" and, when considered in context and in the light of the object and purpose of Article 5.1 of the *SPS Agreement*, may be seen to be more appropriate than "taking into account". We do not share the Panel's interpretative construction and believe it is unnecessary and an error of law as well.[293]

[289] As mentioned previously, this exclusion of human health risks from Article 5.3 in the final text of the SPS Agreement was not present in the Dunkel Draft. *See supra* note 32.

[290] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶¶ 188-209.

[291] Thus, the panel found that the EC could not rely on new scientific evidence regarding the risks posed by hormone-treated beef, published in journals in 1995 and 1996, since it could not have been considered by the EC at the time of imposing the import ban. Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by the United States, *supra* note 53, ¶ 8.113; Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by Canada, *supra* note 53, ¶ 8.116.

[292] Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by Canada, *supra* note 53, ¶¶ 8.116–8.119; and Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by the United States, *supra* note 53, ¶ 8.114.

[293] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 189.

The Panel also found that Article 5.1 contained a substantive requirement, namely that the scientific conclusions reached in the risk assessment and those implicit in the SPS measure should *conform*.[294] The Appellate Body agreed with the relevance of the relationship between the two sets of conclusions, but emphasized that this is only one of the relevant factors. It held:

> The relationship between those two sets of conclusions is certainly relevant; they cannot, however, be assigned relevance to the exclusion of everything else. We believe that Article 5.1, when contextually read as it should be, in conjunction with and as informed by Article 2.2 of the *SPS Agreement*, requires that the results of the risk assessment must sufficiently warrant—that is to say, reasonably support—the SPS measure at stake. The requirement that an SPS measure be "based on" a risk assessment is a substantive requirement that there be a rational relationship between the measure and the risk assessment.[295]

The Appellate Body further clarified what the requirement of "based on" entails in cases of divergent scientific views as follows:

> We do not believe that a risk assessment has to come to a monolithic conclusion that coincides with the scientific conclusion or view implicit in the SPS measure. The risk assessment could set out both the prevailing view representing the "mainstream" of scientific opinion, as well as the opinions of scientists taking a divergent view. Article 5.1 does not require that the risk assessment must necessarily embody only the view of a majority of the relevant scientific community. . . . In most cases, responsible and representative governments tend to base their legislative and administrative measures on "mainstream" scientific opinion. In other cases, equally responsible and representative governments may act in good faith on the basis of what, at a given time, may be a divergent opinion coming from qualified and respected sources. By itself, this does not necessarily signal the absence of a reasonable relationship between the SPS measure and the risk assessment, especially where the risk involved is life-threatening in character and is perceived to constitute a clear and imminent threat to public health and safety. Determination of the presence or absence of that relationship can only be done on a case-to-case basis, after account is taken of all considerations rationally bearing upon the issue of potential adverse health effects.[296]

This conclusion has been criticized for leaving intact the issue of dueling science and opening the door for the use of "hired scientists" in future dispute settlement cases.[297] However, it should be recognized that this is the only realistic approach that could be taken in the light of a lack of consensus that frequently exists within the scientific community. For this reason, the Appellate Body has recognized that Members may in some cases base their SPS measures on minority scientific views, if they come from qualified and respected sources. Whether such measures will be regarded as "based on" a risk assessment will depend on the circumstances of each case.

The Appellate Body's ruling in *EC—Hormones* on the "based on" requirement leaves, considerable scope for discussion as to what kind of relationship would be considered "rational". Would a measure based on a single divergent scientific opinion be considered rationally related to the risk assessment?

[294] Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by Canada, *supra* note 53, ¶ 8.120. Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by the United States, *supra* note 53, ¶ 8.119.

[295] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 193.

[296] *Id.* ¶¶ 193–194.

[297] McNiel, *supra* note 18, at 134.

It does not necessarily follow that if the EC in the *EC—Hormones* dispute had found a single scientist willing to report that human consumption of beef treated with hormones for growth-promotion purposes poses a real risk of cancer, this would meet the requirement of Article 5.1. Such a result would seem to frustrate the SPS Agreement's goal of using science to create clear rules and disciplines.[298] It would also encourage the "purchasing" of scientific opinions by national governments. Instead, it appears the ruling of the Appellate Body, that the determination of whether a rational relationship exists between an SPS measure and a divergent scientific view will be done on a case-by-case basis taking into account all relevant considerations. Where serious and imminent threats to public safety are at issue, it will be easier for measures based on minority scientific opinions to fulfill the criterion of having a "rational relationship" to a risk assessment and thus be based thereon for purposes of Article 5.1.

It is also important to determine *when* the risk assessment needs to have been made in order for a measure to be "based" thereon. Obviously there are a multitude of SPS measures that were in existence long before the coming into force of the SPS Agreement. It is possible that many of these were not based on a risk assessment, particularly in Members whose resources are too scarce to permit them to undertake thorough risk assessments before enacting SPS measures. As discussed above, the SPS Agreement applies also to those measures predating its coming into force, provided the measures are still in existence.[299] The question arises whether Article 5.1 may be an exception to this rule.

With respect to the risk assessment requirement for SPS measures enacted *before* the entry into force of the SPS Agreement, the Panel in *EC—Hormones* noted:

> [Article 5.1] does not prevent that with respect to a sanitary measure enacted *before* the entry into force of the SPS Agreement, the risk assessment is carried out or invoked *after* the entry into force of that Agreement (and thus *after* the enactment of the sanitary measure in question). However, the fact that a sanitary measure may be enacted *before* the entry into force of the SPS Agreement does not mean that, once the SPS Agreement entered into force, there is no obligation for the Member in question to base that measure on a risk assessment.[300]

The Appellate Body in that case confirmed this finding.[301]

The same approach was followed by the Panel in *Australia—Salmon*, which stated:

> Article 5.1 does not qualify—either in terms of application in time or product coverage—the substantive obligation imposed on all WTO Members to base their sanitary measures on a risk assessment.[302]

Therefore, it is clear that the requirement in Article 5.1 that SPS measures be based on a risk assessment also applies to SPS measures in existence before the coming into force of the SPS Agreement. However, it is not necessary for the risk assessment to precede the enactment of the SPS measure in order for the latter to be regarded as "based on" a risk

[298] *Id.* at 93.

[301] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 129.

[302] Report of the WTO Panel, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 57, ¶ 8.56.

assessment. This added flexibility is only applicable to measures predating the coming into force of the SPS Agreement in order to lessen the burdensome consequences of the fact that the SPS Agreement also applies to measures already in existence.[303]

Before the compliance Panel in *Australia—Salmon*, Canada claimed that the new Australian measures could not be said to be based on a risk assessment, because the publication of the new measures, on July 19, 1999, preceded the publication in its final form of Australia's new risk assessment, contained in the 1999 Import Risk Analyses ("IRA"), on November 12, 1999. The Panel rejected this argument as follows:

> We note that the final form of the 1999 IRA, though only edited and published in book form on 12 November 1999, is still dated July 1999 and that . . . the amendments made in the final 1999 IRA "do not alter the substance or the conclusions of the report as announced on 19 July".
>
> On these grounds, we find that the fact that the 1999 IRA was only published in final form subsequent to the date the new sanitary measures were taken, does not, in this case, preclude the measures from being *based on* the 1999 IRA. All substantive elements of the risk assessment we looked at earlier were already included in the draft 1999 IRA of July 1999, i.e. *before* the new measures were taken.[304]

From these findings of the compliance Panel in *Australia—Salmon*, it appears that for measures postdating the SPS Agreement at least the substantive elements of the risk assessment must already have been in existence at the time of adoption of the measure. The fact that the risk assessment was *published* only after the measure was adopted is of no relevance to the question whether the measure can be regarded as "based on" the risk assessment.

E. Provisional Application of SPS Measures (Article 5.7)

1. Relationship between Article 5.7 and the Precautionary Principle

It is generally accepted that there are situations where governments need to take measures to prevent risks to health even when sufficient scientific evidence confirming the risk is lacking.[305] Thus, governments may act with precaution in order to protect against risks without waiting for the conclusive results of scientific analyses. This is in line with the old adage "better safe than sorry", and is particularly important where risks to health are concerned. Citizens prefer their governments to err on the side of caution when faced with decisions on the protection of health where complete information is lacking. This is commonly referred to as acting in accordance with the precautionary principle.[306]

It is necessary to examine the extent to which the precautionary principle is taken into account in the SPS Agreement. Article 5.7 of the SPS Agreement allows for provisional measures to be taken by Members when there is insufficient scientific evidence, under certain conditions, and thus could be said to reflect a particular formulation of the

[303] *See supra* Part II(A)(3)(c) regarding the temporal scope of application of the SPS Agreement.

[304] Report of the WTO Compliance Panel, *Australia—Measures Affecting the Importation of Salmon, Recourse to Article 21.5 by Canada*, *supra* note 65, ¶¶ 7.76–7.77.

[305] For an interesting discussion on the prevalence of uncertainty in SPS risk analysis and reasons for this, *see* Mark Powell, *Science in Sanitary and Phytosanitary Dispute Resolution*, Discussion Paper 97–50, RESOURCES FOR THE FUTURE, 5–11 (1997).

[306] It should be noted that some countries, such as the United States, prefer the term "precautionary approach" in order to avoid the implication that an overriding general principle of law has emerged in this respect. In addition, there is a difference of opinion among Members, particularly the EC and the U.S., regarding at which stage of risk analysis (i.e. risk assessment or risk management) precaution should play a role.

precautionary principle. Article 5.7 provides:

> In cases where relevant scientific evidence is insufficient, a Member may provisionally adopt sanitary or phytosanitary measures on the basis of available pertinent information, including that from the relevant international organizations as well as from sanitary or phytosanitary measures applied by other Members. In such circumstances, Members shall seek to obtain the additional information necessary for a more objective assessment of risk and review the sanitary or phytosanitary measure accordingly within a reasonable period of time.

However, the question arises whether this provision represents the only scope for the precautionary principle in the SPS Agreement. In *EC—Hormones*, the EC had categorized its SPS measure as final, rather than provisional and thus did not rely on Article 5.7. Nevertheless, it contended that scientific uncertainty existed regarding the health effects of growth hormones in beef. Therefore, it tried to rely on the precautionary principle outside the framework of Article 5.7, as a general customary rule of international law or at least a general principle of law, applying to the interpretation of both risk assessment and risk management disciplines in the SPS Agreement.[307]

The Appellate Body in this case expressed its doubts as to whether the precautionary principle has developed into a principle of general or customary international law, outside the field of international environmental law, but found it unnecessary to decide this issue.[308] The Appellate Body stated:

> The status of the precautionary principle in international law continues to be the subject of debate among academics, law practitioners, regulators and judges. The precautionary principle is regarded by some as having crystallized into a general principle of customary international *environmental* law. Whether it has been widely accepted by Members as a principle of *general* or *customary international law* appears less than clear. We consider, however, that it is unnecessary, and probably imprudent, for the Appellate Body in this appeal to take a position on this important, but abstract, question. We note that the Panel itself did not make any definitive finding with regard to the status of the precautionary principle in international law and that the precautionary principle, at least outside the field of international environmental law, still awaits authoritative formulation.[309]

Further, the Appellate Body stated that Article 5.7 does not exhaust the relevance of the precautionary principle, which it found to be reflected also in the sixth paragraph of the

[307] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 16. It is interesting to note that the EC Commission's recent Communication on the Precautionary Principle, adopted partly as a reaction to the Appellate Body decision in *EC—Hormones* reflects a departure from the view that the precautionary principle applies to both phases of risk analysis. The communication (at 15) states that the appropriate role for the precautionary principle is in risk management decisions, where scientific uncertainty precludes a full risk assessment. It distinguishes this situation from the prudential approach that scientists take in their assessment of data, in order to deal with the scientific uncertainties inherent in risk assessment. It identifies certain prudential techniques adopted by risk assessors to deal with uncertainties, for example the use of animal models to establish potential effects in humans, adopting a safety factor when evaluating an acceptable daily intake to take account of inter- and intra-species variability, not adopting an acceptable daily intake for recognised carcinogens, etc. *See* European Commission, *Communication from the Commission on the Precautionary Principle,* COM(2000)1, Brussels, February 2, 2000. It seems that the Commission's change in approach is a reaction to the Appellate Body's refusal in its report in *EC—Hormones* to see the precautionary principle as allowing deviation from the explicit provisions of Article 5.1 on risk assessment, except as provided for in Article 5.7. It thus cannot influence the application of the risk assessment disciplines. The Commission thus now prefers to view the principle as a risk management tool.

[308] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones), supra* note 70, ¶ 123.

[309] *Id.*

Preamble to the SPS Agreement and Article 3.3.[310] However, we wonder what the Appellate Body might have meant with this statement. The sixth paragraph of the Preamble and Article 3.3 both refer to the right of Members to set their own level of protection, even if it is higher than that embodied in international standards. However, these provisions are in our opinion not reflections of the precautionary principle. Logically, *before* a Member can decide on the level of protection it wants to achieve with regard to a particular risk, it needs to conduct a risk assessment on the basis of scientific information to determine if a risk exists. On grounds of this scientific evaluation, the Member takes the risk management decision regarding a level of protection. However, the precautionary principle is precisely at issue where a lack of scientific evidence hinders the conduct of a proper risk assessment, yet prompt action is necessary to address suspected risks. Thus, the fact that a Member may determine its own level of protection when the risk is certain does nothing to incorporate the precautionary principle into SPS disciplines.[311]

The Appellate Body then held that the precautionary principle (presumably whatever its legal status in international law) could not override the explicit requirements of Articles 5.1 and 5.2, in cases of scientific uncertainty.[312] On the relationship between the "precautionary principle" and the SPS Agreement, the Appellate Body noted the following four elements:

> First, the principle has not been written into the *SPS Agreement* as a ground for justifying SPS measures that are otherwise inconsistent with the obligations of Members set out in particular provisions of that Agreement. Secondly, the precautionary principle indeed finds reflection in Article 5.7 of the *SPS Agreement*. (. . .) Thirdly, a panel charged with determining, for instance, whether "sufficient scientific evidence" exists to warrant the maintenance by a Member of a particular SPS measure may, of course, and should, bear in mind that responsible, representative governments commonly act from perspectives of prudence and precaution where risks of irreversible, e.g. life-terminating, damage to human health are concerned. Lastly, however, the precautionary principle does not, by itself, and without a clear textual directive to that effect, relieve a panel from the duty of applying the normal (i.e. customary international law) principles of treaty interpretation in reading the provisions of the *SPS Agreement*.[313]

This statement follows the traditional view of the hierarchy of norms in international law, according to which customary international law norms (unless they have developed into mandatory rules of *ius cogens*) do not override the express terms of treaty provisions but are only useful in interpreting treaty provisions. In the *Gabcikovo—Nagymaros* case,[314] referred to by the Appellate Body,[315] the International Court of Justice ("ICJ") declined to

[310] *Id.* ¶ 124.

[311] The Appellate Body appears to be confusing the precautionary principle with the protective principle. The latter principle is a forerunner of the precautionary principle, dealing with the duty of governments to provide protection from risks that have been *established scientifically*. Thus the ability of a government to set a high level of protection once a risk has been proved falls under the protective principle. The precautionary principle represents a step forward in that it requires government action in the face of suspected risks that *cannot* be scientifically proven in the current state of scientific knowledge. It evolved precisely due to the need to address the regulatory paralysis that results from a lack of scientific certainty. *See* H. HOHMANN, PRECAUTIONARY LEGAL DUTIES AND PRINCIPLES OF MODERN INTERNATIONAL ENVIRONMENTAL LAW 10 (1994).

[312] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones), supra* note 70, ¶ 125, where it held, "We accordingly agree with the finding of the Panel that the precautionary principle does not override the provisions of the *SPS Agreement*."

[313] *Id.* ¶ 124.

[314] *Case Concerning the Gabcícovo-Nagymaros Project (Hungary/Slovakia)* I.C.J. Judgment, September 25, 1997 ¶¶ 111–114 (not yet reported in the I.C.J. Reports), 37 I.L.M. 162 (1998)

[315] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones), supra* note 70, ¶ 123 and n.93.

find that newly developed norms and standards in environmental law could override treaty obligations. Instead it emphasized the principle of *pacta sunt servanda*. In a separate, concurring opinion, Judge Korma held that the ICJ's ruling "represents a significant statement by the Court rejecting the argument that obligations assumed under a validly concluded treaty can no longer be observed (. . .) as a result of the emergence of a new wave of legal norms, *irrespective* of their legal character or quality."[316] Clearly then, in terms of this view, the question whether the precautionary principle has evolved into a customary international law norm would not affect the fact that it is subordinate to the express provisions agreed upon by Members in the SPS Agreement and thus cannot override clear provisions in the Agreement.[317]

Even if the view were taken that customary international law norms are equal in status to, and thus can override, express treaty provisions, the limited mandate of panels and the Appellate Body prevents them from relying on non-WTO norms or rules to overturn express treaty provisions. Article 3.2 of the Dispute Settlement Understanding ("DSU") expressly provides that the recommendations and rulings of the Dispute Settlement Body "cannot add to or diminish the rights and obligations provided in the covered agreements."

However, the matter does not end here. If the precautionary principle can be said to have developed into a principle of customary international law or a general principle of international law, it has the effect of guiding the interpretation of treaty articles.[318] It is a customary international law principle of interpretation that, as parties to a treaty are presumed not to have intended to violate other relevant norms of international law, including customary international law, the treaty provisions are interpreted as far as possible in conformity with these norms. This general international law principle of interpretation is known as the presumption against conflicts,[319] and finds reflection in Article 31.3(c) of the Vienna Convention on the Law of Treaties (the "Vienna Convention"), which requires that *any* relevant rule of international law applicable in the relations between the parties to a treaty be taken into account together with the context in which the treaty must be interpreted. Article 31 of the Vienna Convention has been recognized by the Appellate Body[320] as constituting part of the "customary rules of interpretation of public

[316] Emphasis added.

[317] There is wide support for the view that there is no inherent hierarchy of norms in international law, and thus that treaty provisions do not necessarily have precedence over customary international law norms or general principles of international law. However, Pauwelyn argues that genuine conflicts between treaty law and custom or general principles of law are exceptional, due to the fact that custom and general principle emerge gradually over time and therefore constitute more a "process" which interacts with other norms of international law, rather than a "rule" with which other norms of international law can conflict. *See* Pauwelyn, *supra* note 128, at 60–62.

[318] In *U.S.—Shrimp/Turtle*, the Appellate Body recognised that its task is to interpret the language of WTO agreements "seeking additional interpretative guidance, as appropriate, from the general principles of international law". Report of the Appellate Body, *United States—Import Prohibition of Certain Shrimp and Shrimp Products*, WT/DS58/AB/R (1998), ¶ 158.

[319] This general principle of treaty interpretation was recognised by the Appellate Body in *Guatemala-Cement* and by a panel in *Indonesia-Automobiles* with regard to conflicts between different WTO Agreements. Report of the Appellate Body, *Guatemala—Anti-Dumping Investigation Regarding Portland Cement from Mexico,* WT/DS60/AB/R (1998), ¶ 65; Report of the WTO Panel, *Indonesia—Certain Measures Affecting the Automobile Industry,* WT/DS54/R, WT/DS55/R, WT/DS59/R, WT/DS64/R, (1998), ¶ 14.28.

[320] In *U.S.—Gasoline*, the Appellate Body held that Article 31.1 of the *Vienna Convention* constitutes customary rules of interpretation of public international law. Report of the Appellate Body, *United States—Standards for Reformulated and Conventional Gasoline,* WT/DS2/AB/R, (1996), 17. This finding was confirmed and extended to include the whole of Article 31 and Article 32 of the Vienna Convention in *Japan—Alcoholic Beverages* and *EC—Computer Equipment.* Report of the Appellate Body *Japan—Taxes on Alcoholic Beverages*,

international law" which panels and the Appellate Body are bound to apply in clarifying the provisions of the covered agreements under Article 3.2 of the DSU. Thus the Appellate Body's statement that ". . . the precautionary principle does not, by itself, and without a clear textual directive to that effect, relieve a panel from the duty of applying the normal (i.e. customary international law) principles of treaty interpretation"[321] reveals a misunderstanding of the issue at stake. In fact, it is precisely the "normal principles of treaty interpretation"[322] referred to by the Appellate Body, that require that the precautionary principle be used to guide the interpretation of the provisions of the SPS Agreement, *if* it can be shown that this principle is now a customary international law norm or a general principle of international law.[323]

For this reason, we argue that the Appellate Body was wrong to state that it was "unnecessary" for it to take a position on this question.[324] In fact, the answer to this question is crucial to the determination of the role of the precautionary principle in the SPS Agreement. While it could not result in the non-application of treaty obligations, the precautionary principle could be important in giving meaning to vague terms in the SPS Agreement, such as the "sufficient scientific evidence" requirement[325] in Article 2.2, or the requirement that SPS measures be "based on" a risk assessment, "as appropriate to the circumstances" in Article 5.1. Most importantly, if a customary international law precautionary principle or a general principle of international law has emerged, its content would be a crucial guide to the interpretation of Article 5.7 itself.

Since, despite the absence of a precedent system in WTO dispute settlement, it is the practice of panels and the Appellate Body to follow the interpretations adopted in previous decisions, the Appellate Body's decision with respect to the role of the precautionary principle in the SPS Agreement is likely to be definitive on this issue. As the case law now stands, the Appellate Body's decision in effect limits the applicability of the precautionary principle under the SPS Agreement to the situation covered by Article 5.7.[326] It is therefore necessary to examine the provisions of Article 5.7 SPS to determine to what extent they give expression to this principle and deal with the exigencies it was developed to address.

WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R (1996), 11–12; Report of the Appellate Body, *European Communities-Customs Classification of Certain Computer Equipment*, WT/DS62/AB/R, WT/DS67/AB/R, WT/DS68/AB/R (1998), ¶ 84.

[321] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones), supra* note 70, ¶ 124.

[322] The normal principles of treaty interpretation that are part of customary international law must be used in the interpretation of the provisions of the WTO Agreements, according to Article 3.2 of the DSU.

[323] This is due to the fact, set out above, that Article 31.3(c) of the Vienna Convention on the Law of Treaties provides that "any relevant rules of international law applicable in the relations between the parties" are part of the "context" which guides the interpretation of treaty provisions. Clearly, customary international law rules are rules of international law that apply to the relations between Members of the WTO and must thus be taken into account.

[324] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones), supra* note 70, ¶ 123.

[325] It is perhaps arguable that the Appellate Body itself recognised this possibility, in a confusing *obiter* statement in *EC—Hormone*s that in interpreting Article 2.2, a panel should bear in mind that responsible governments act "from perspectives of prudence and precaution" in case of risks of irreversible damage to human health. Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones), supra* note 70, ¶ 124. (quoted *supra* in text accompanying note 122). Although the interpretation of Article 2.2 was not at issue in this case, the Appellate Body seems to have recognised the possibility of interpreting this article in the light of a rather restrictive formulation of the precautionary principle.

[326] And possibly, to a limited extent, to the interpretation of Article 2.2 SPS. *See supra* note 325.

2. Conditions for Application of Article 5.7

The requirements of Article 5.7 were set out in *Japan—Agricultural Products*. The Appellate Body held that Article 5.7 lays down four requirements for provisional measures. Under the first sentence, the measure may be imposed if it is:

(1) imposed in respect of a situation where "relevant scientific information is insufficient"; and
(2) adopted "on the basis of available pertinent information."

Under the second sentence, the measure may not be maintained unless the Member:

(3) seeks to "obtain the additional information necessary for a more objective assessment of risk"; and
(4) reviews the measure accordingly "within a reasonable period of time".

These requirements were held to be cumulative. The Appellate Body rejected Japan's claim that the words "except as provided for in Article 5.7" in Article 2.2 refer only to the first sentence of Article 5.7, holding that the text of Article 2.2 does not support this proposition as it refers to Article 5.7 as a whole.[327] Thus, all four conditions of Article 5.7 must be met in order to avoid the scientific disciplines of Articles 2.2 and 5.1 of the SPS Agreement.

When the four requirements of Article 5.7 are met, Members may take provisional measures. Provided that these requirements are interpreted in a flexible way to allow recourse to precautionary measures when science gives no clear-cut answers and a plausible case can be made for the existence of a risk on the basis of existing information, Article 5.7 would seem to provide an adequate vehicle for the incorporation of the precautionary principle into SPS disciplines, to the extent that they apply to risk management decisions.

(a) Insufficiency of Relevant Scientific Evidence. The first requirement, namely that "relevant scientific evidence is insufficient", is what triggers the application of Article 5.7. Where this requirement is not met, there is no legitimate reason for resort to provisional measures.[328] It is thus crucial to determine in what circumstances this criterion will be met. For reasons of judicial economy, the Panel in *Japan—Agricultural Products* had found it unnecessary to decide this issue. The Appellate Body upheld this decision.[329]

In *Japan—Apples,* the first requirement of Article 5.7 was addressed for the first time in the case law, making this a particularly interesting case for the understanding of the role of the precautionary principle in the SPS Agreement.

In this case, the Panel held that the fact that a measure has been found to be maintained "without sufficient scientific evidence" under Article 2.2 does not automatically mean

[327] Report of the Appellate Body, *Japan—Measures Affecting Agricultural Products*, *supra* note 97, ¶ 90.

[328] It would thus seem logical to start the analysis of the requirements of Article 5.7 in dispute settlement cases by examining whether this criterion is met. However, in *Japan—Agricultural Products* the Panel began by examining the requirements of the second sentence of Article 5.7 and the Appellate Body did not take issue with this order of analysis.

[329] Report of the Appellate Body, *Japan—Measures Affecting Agricultural Products*, *supra* note 97, ¶ 91. While it is clear that, since the requirements of the second sentence of Article 5.7 were not met, Japan could not rely on Article 5.7 to justify its measure and it was unnecessary to go on to investigate whether Japan complied with other two requirements of Article 5.7, it would seem more logical to have started the analysis by determining whether Article 5.7 is applicable to the case at all. For this purpose, it would have been useful to examine the first requirement, which triggers the application of this article when "scientific evidence is insufficient." The EC expressed the view in its third party submission before the Appellate Body in *Japan—Agricultural Products* that both the requirements of the first sentence are the triggers for the operation of Article 5.7 and should therefore be examined first. *Id.* ¶ 64.

that "relevant scientific evidence is insufficient" under Article 5.7, which is a separate question.[330] The sufficiency requirement under Article 2.2 requires that the evidence *supporting* the SPS measure applied be sufficient, whereas the evidence to be considered under Article 5.7 "includes not only evidence supporting Japan's position, but also evidence supporting other views."[331] In this case, the Panel found that a wealth of relevant, high quality, scientific evidence was available[332] on the matter at issue and that this was thus "clearly not the type of situation Article 5.7 was intended to address."[333] According to the Panel, Article 5.7 was instead "obviously designed to be invoked where little, or no, reliable evidence was available on the subject matter at issue."[334] It thus concluded that the first requirement of Article 5.7 was not met and that Japan's measure could therefore not be justified under this Article.[335]

Japan challenged the Panel's finding of non-compliance with the first requirement of Article 5.7 on appeal, arguing that the insufficiency of the evidence should be interpreted to relate to a *particular* measure or a *particular* risk, but not to the subject matter *in general*. The Appellate Body, on the contrary, held that Japan's reliance on this distinction was misplaced.[336] Instead, the Appellate Body identified a contextual link between the first requirement of Article 5.7 and the obligation to perform a risk assessment in Article 5.1.[337] Thus, relevant scientific evidence will be "insufficient" for purposes of Article 5.7 if it "does not allow, in qualitative or quantitative terms, the performance of an adequate assessment of risks as required under Article 5.1."[338] According to the Appellate Body, the factual findings of the Panel showed that the scientific evidence available *did* permit the performance of a risk assessment under Article 5.1 and the relevant scientific evidence was thus not insufficient within the meaning of Article 5.7.

Japan also appealed the Panel's finding that Article 5.7 is intended only to address situations where little, or no, reliable evidence is available on the subject matter at issue. Japan argued that this would not provide for situations of "unresolved uncertainty". According to Japan, Article 5.7 covers not only situations of "new uncertainty" (where a new risk is identified) but also "unresolved uncertainty" (where there is considerable scientific evidence but still uncertainty remains). The Appellate Body, however, upheld the Panel's finding, pointing out that Article 5.7 "is triggered not by the existence of scientific uncertainty, but rather by the insufficiency of scientific evidence".[339] Moreover, it held that the Panel's finding referred to the availability of *reliable* evidence, and thus

[330] Report of the WTO Panel, *Japan—Measures Affecting the Importation of Apples, supra* note 57, ¶ 8.215.
[331] *Id.*, ¶ 8.216. The Panel later concluded that the term "insufficient scientific evidence" in Article 5.7 refers to evidence in general on the SPS question at issue (in this case the risk of transmission of fire blight through apple fruit). *Id.*, ¶ 8.218.
[332] The Panel noted that much relevant evidence had been submitted by the parties and panel experts, and scientific studies and practical experience on the matter had accumulated for the past 200 years. *Id.*, ¶¶ 8.216 and 8.219.
[333] *Id.*, ¶ 8.219.
[334] *Id.*, ¶ 8.219.
[335] *Id.*, ¶ 8.222.
[336] Report of the Appellate Body, *Japan—Measures Affecting the Importation of Apples, supra* note 112, ¶ 179.
[337] The Appellate Body found these contextual elements in the following: first, the concepts of relevance and insufficiency in Article 5.7 imply a relationship between scientific evidence and something else; second, Article 5.1, obliging Members to base their measures on a risk assessment, contains a key discipline under Article 5 and informs the other provisions of Article 5; and third, Article 5.7 itself refers to "a more objective assessment of risks". *Id.*, ¶ 179.
[338] *Id.*, ¶ 179.
[339] *Id.,* ¶ 184.

did not exclude cases "where the available evidence is more than minimal in quantity, but has not led to reliable or conclusive results."[340]

This analysis of the first requirement of Article 5.7 is groundbreaking. It clarifies the role of Article 5.7, establishing that it is there to address situations where there is a true lack of sufficient scientific evidence regarding the risk at issue, either due to the small quantity of evidence on new risks, or due to the fact that accumulated evidence is inconclusive or unreliable. In either case, the insufficiency of the evidence must be such as to make the performance of an adequate risk assessment impossible. Thus Article 5.7 cannot be used to justify measures that are adopted in disregard of existing scientific evidence. The Panel and Appellate Body's findings establish the fact that the precautionary principle, as embodied in Article 5.7, does not create a broad loophole in the scientific disciplines of the SPS Agreement through which protectionist measures can slip. Rather, it creates a limited exception for cases where there is a true lack of relevant and reliable scientific evidence on the risk at issue.

(b) Based on Available Pertinent Information. The second criterion contained in Article 5.7 requires that the provisional measure be adopted "on the basis of available pertinent information." Judicial economy made it unnecessary to examine this requirement in *Japan—Agricultural Products*[341] and in *Japan—Apples*.

The Appellate Body's interpretation of "based on" in Article 5.1 suggests, however, that under Article 5.7, the SPS measure adopted must be reasonably supported by whatever information exists. In other words, the available information must support a reasonable concern that harm could result.[342] Obviously, the information need not amount to conclusive evidence otherwise recourse to Article 5.7 would not be necessary. However, the measure may not be contrary to what little information is available. Where contradictory information is present, it would appear that the measure need not reflect the preponderance of evidence, but could be based on a minority view that a potential for harm exists, provided this view is held by qualified and respected scientists.[343]

The word "pertinent" indicates that the information must have a bearing upon or be relevant to the suspected risk. It would appear to indicate that the risk must be at least theoretically plausible on the basis of what evidence exists. However, it is unlikely that the term "pertinent" will be interpreted to require an indication of a certain threshold level of risk, since this is also not required for SPS measures based on a proper risk assessment as required by Article 5.1.

The question whether the available pertinent information must indicate a certain level or seriousness of risk can be further elucidated by reference to the developing concept

[340] *Id.*, ¶ 185.

[341] Report of the Appellate Body, *Japan—Measures Affecting Agricultural Products*, *supra* note 97, ¶ 91, where the Appellate Body held: "We, therefore, conclude that the Panel did not err in its application of Article 5.7 by first examining whether the varietal testing requirement meets the requirements of the second sentence of Article 5.7. Having established that the requirements of the second sentence of Article 5.7 are not met, there was no need for the Panel to examine the requirements of the first sentence."

[342] This requirement is embodied in most treaties that incorporate the precautionary principle. *See* James Cameron and Juli Abouchar, *The Precautionary Principle: A Fundamental Principle of Law and Policy for the Protection of the Global Environment*, 14 BOSTON COLLEGE INTERNATIONAL AND COMPARATIVE LAW REVIEW 1 (1991), for a brief discussion of the treaties that incorporate the precautionary principle.

[343] The EC Commission supports this view (COM(2000)1, *supra* note 307, at 17), referring to the following statement by the Appellate Body: "In some cases, the very existence of divergent views presented by qualified scientists who have investigated the particular issue at hand may indicate a state of scientific uncertainty." Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones), supra* note 70, ¶ 194.

of the precautionary principle in international law.[344] In earlier environmental treaties embodying the precautionary principle, the available evidence had to indicate a threat of serious or irreversible harm before recourse to the precautionary principle was justified.[345] However, more recently there has been a tendency to lower this evidentiary threshold or leave it out altogether.[346] It would appear that the average evidentiary threshold now required is a non-negligible threat of harm, but beyond that the formulation of the principle in the relevant treaty depends on the relevant context of its negotiation.[347] As Article 5.7 in the SPS Agreement incorporates the precautionary principle with respect to human, animal and plant life and health, rather than environmental protection, it seems clear, in the absence of an explicit provision requiring a stricter standard in Article 5.7, that no more than a non-negligible threat should be required to be indicated by the available information.[348]

(c) Obtain Information Necessary. Article 5.7 further prohibits the maintenance of a provisional measure unless a Member "seeks to obtain the information necessary for a more objective assessment of the risk." The term "more objective assessment" seems to imply that there must have been an original evaluation of the risk before the provisional measure was imposed, although this need not have been altogether objective.[349] The Member is then required to try to gather the information necessary to enable it to conduct a proper risk assessment that would meet the requirements of Article 5.1–5.3.

In *Japan—Agricultural Products*, Japan argued that the requirement to seek additional information was met by gathering information through the experience of the successful importation of varieties, specifically by requiring exporting countries to submit data when

[344] The argument that the precautionary principle, to the extent that it has developed into a principle of customary international law, should guide due interpretation of the SPS Agreement, and particularly Article 5.7, was developed *supra*, Part II(E)(1).

[345] It could perhaps be argued that the Appellate Body seemed to support this high evidentiary threshold for the use of the precautionary principle outside the framework of Article 5.7, to interpret the requirement of "sufficient scientific evidence" in Article 2.2 when it stated that panels should bear in mind that governments act with precaution when *serious (irreversible) threats to human health* are at stake. Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones), supra* note 70, ¶ 124, discussed *supra* note 325.

[346] For example, while the Bergen Ministerial Declaration on Sustainable Development in the ECE Region (Bergen, May 16, 1990) required the threat of "serious or irreversible" damage for the application of the precautionary principle (in Article 7), the Convention on the Ban of Import into Africa and the Control of Transboundary Movement and Management of Hazardous Wastes within Africa (Bamako, January 29, 1991, 30 I.L.M. 773) incorporates the precautionary principle (in Article 4(3)(f)) without requiring the threat of serious or irreparable harm. Similarly, the Cartagena Protocol on Biosafety (Cartagena, January 28, 2000), not yet in force pending ratification) refers only to "potential adverse effect." Both the latter conventions specifically relate to threats to humans as well as the environment, which could explain the lower threshold. *See* further P. SANDS, PRINCIPLES OF INTERNATIONAL ENVIRONMENTAL LAW I—FRAMEWORKS, STANDARDS AND IMPLEMENTATION 210–211 (1995).

[347] James Cameron and Juli Abouchar, *The Status of the Precautionary Principle in International Law* in THE PRECAUTIONARY PRINCIPLE AND INTERNATIONAL LAW: THE CHALLENGE OF IMPLEMENTATION, 44 (Freestone and Hey eds. 1996).

[348] In its *Communication on the Precautionary Principle*, the EC Commission suggests that recourse to the precautionary principle should be allowed when it can be concluded from an evaluation of existing information that the desired level of protection could potentially be jeopardized by inaction. COM(2000)1, *supra* note 307, at ¶ 6.2.

[349] *Id*. ¶ 4. The EC Commission recommends that the evaluation of existing evidence constitute as complete a scientific evaluation as possible, encompassing both an inventory of existing evidence and an identification of the possible gaps in knowledge as well as the degree of scientific uncertainty at each stage (*Id.* ¶ 6.1).

applying for the approval of additional varieties. It claimed that Members are obliged to seek information but no actual results are required.[350] The United States submitted that the information sought by Japan was not relevant to the question whether different varieties of products have different sorption levels. It thus did not enable Japan to review its measure and therefore did not meet the third requirement.[351] The Appellate Body held in this regard:

> Neither Article 5.7 nor any other provision of the *SPS Agreement* sets out explicit prerequisites regarding the additional information to be collected or a specific collection procedure. Furthermore, Article 5.7 does not specify what actual results must be achieved; the obligation is to "seek to obtain" additional information. However, Article 5.7 states that the additional information is to be sought in order to allow the Member to conduct "a more objective assessment of risk". Therefore, the information sought must be germane to conducting such a risk assessment, i.e., the evaluation of the likelihood of entry, establishment or spread of, *in casu*, a pest, according to the SPS measures which might be applied. We note that the Panel found that the information collected by Japan does not "examine the appropriateness" of the SPS measure at issue and does not address the core issue as to whether "varietal characteristics cause a divergency in quarantine efficacy".[352] In the light of this finding, we agree with the Panel that Japan did not seek to obtain the additional information necessary for a more objective risk assessment.[353]

Thus, although this element of Article 5.7 seems to embody an obligation of endeavor rather than of result, it does require the Member maintaining a provisional measure to attempt to obtain information that would enable it to conduct a proper risk assessment. Engaging in general information collection exercises is not sufficient.

(d) Review within a Reasonable Period of Time. The last requirement contained in Article 5.7 is the obligation to review the measure within a "reasonable period of time." Article 5.7 therefore creates only a limited exemption from the normal SPS disciplines, pending review of the measure in the light of new evidence.

The Appellate Body in *Japan—Agricultural Products* had to decide on what constitutes a "reasonable period of time" within which to review the measure. It held:

> In our view, what constitutes a "reasonable period of time" has to be established on a case-by-case basis and depends on the specific circumstances of each case, including the difficulty of obtaining the additional information necessary for the review *and* the characteristics of the provisional SPS measure. In the present case, the Panel found that collecting the necessary additional information would be relatively easy. Although the obligation "to review" the varietal testing requirement has only been in existence since 1 January 1995, we agree with the Panel that Japan has not reviewed its varietal testing requirement "within a reasonable period of time".[354]

The requirement of review within a reasonable period of time is clearly linked to the provisional nature of the SPS measure allowed by this article. In *Australia—Salmon*, the Panel noted:

[350] Report of the Appellate Body, *Japan—Measures Affecting Agricultural Products*, *supra* note 97, ¶ 13.
[351] *Id.* ¶ 26.
[352] The Panel pointed out that the information provided by exporting countries was based on studies designed and carried out to *comply* with Japan's varietal testing requirement. Thus they did not examine the appropriateness of the requirement itself. Report of the WTO Panel, *Japan—Measures Affecting Agricultural Products*, *supra* note 56, ¶ 8.56. [Footnote added by authors].
[353] Report of the Appellate Body, *Japan—Measures Affecting Agricultural Products*, *supra* note 97, ¶ 92.
[354] *Id.* ¶ 93.

> Only Article 5.7 allows for an exception to the obligation to base sanitary measures on a risk assessment, namely "in cases where relevant scientific evidence is insufficient" . . . In this dispute Australia has not invoked Article 5.7. Nor do we consider that this provision applies to the measure in dispute, given the fact that it was imposed more than 20 years ago and can thus hardly be seen as a measure "provisionally" adopted.[355]

While there is no time limit expressed in Article 5.7 on the existence of a "provisional measure", it seems logical that an indirect time limit is inherent in the requirement of review within a reasonable period. Thus, it is not the length of time for which a measure has been in existence that is crucial to its "provisional" nature, but rather the review thereof, within a reasonable period, which indicates that the measure is not final. It would have made more sense, therefore, for the Panel to highlight this aspect to support its finding that the measure was not "provisional" within the meaning of Article 5.7 rather than focus on the time of its existence, *per se*.

It is interesting to note in this regard that, in its *Communication on the Precautionary Principle*,[356] the European Commission interpreted the requirement of review "within a reasonable period of time" to include the time needed for completion of the necessary scientific work as well as the time needed for performance of a risk assessment based on the conclusions drawn there from. Thus, the provisional nature of measures under Article 5.7 was argued to be dependent on the development of scientific knowledge, rather than on a specific time limit.[357] This interpretation is partially supported by the Appellate Body's finding that one of the factors to be considered in the determination of what constitutes a reasonable period of time in a given case is the difficulty of obtaining the additional information necessary for the review. Clearly, the state of scientific knowledge has a direct impact on the difficulty of obtaining the required information and would thus affect the determination whether a "reasonable period" has elapsed. This is significant in that it waters down the temporary nature of measures allowed under Article 5.7 and makes provision for circumstances where scientific uncertainty persists for extended periods or where the risks involved are only expected to materialize in the long term.

However, it is important to note that the difficulty of obtaining information is not the sole criterion. The specific circumstances of the case will be evaluated, including factors such as the characteristics of the SPS measure at stake, amongst others, in order to establish whether the requirement of review within a reasonable period has been met.[358] Nonetheless, it seems important to make sure that the determination of what constitutes a "reasonable period" in each case be made with particular regard to the reality that the state of scientific knowledge has a decisive influence on whether a "more objective assessment of risk" can be conducted. Therefore, artificially linking the requirement of review within a "reasonable period of time" to specific deadlines should be avoided. In this way, Members need not fear that reliance on Article 5.7 to justify their measures will compromise their ability to maintain the measure as long as is necessary for scientists to find clear answers.[359]

[355] Report of the WTO Panel, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 57, ¶ 8.57.

[356] COM(2000) 1, *supra* note 307, at ¶ 6.3.5.

[357] *Id*.

[358] Report of the Appellate Body, *Japan—Measures Affecting Agricultural Products*, *supra* note 97, ¶ 93.

[359] The fact that the EC supports this interpretation of a "reasonable period of time" could explain why it has changed its approach from the one it followed in *EC—Hormones* (where it did not rely on Article 5.7 and thus did not classify its ban on hormone treated meat as a "provisional measure"—fearing

3. Relationship between Article 5.7 and Article 2.2

As has been mentioned, Article 2.2 refers explicitly to Article 5.7, stating that measures may not be maintained without sufficient scientific evidence, except as provided in Article 5.7. The Appellate Body in *Japan—Agricultural Products* addressed the relationship between Article 5.7 and Article 2.2, emphasizing that Article 5.7 is only a *qualified* exemption from the scientific discipline in Article 2.2 and warning that an overly flexible interpretation of Article 2.2 would deprive Article 5.7 of meaning.[360] Thus the Appellate Body seems to regard a less-flexible interpretation of the rather vague requirement of "sufficient scientific evidence" in Article 2.2 as justifiable or even necessary due to the possibility provided in Article 5.7 for an exemption from this requirement.

While there are indications, from the interpretation given to those elements of Article 5.7 addressed in the case law so far, that Article 5.7 will be interpreted in a flexible way and will thus adequately take account of the precautionary principle in risk management decisions, this does not exhaust the relevance of this principle. In our opinion, precaution also plays a role in the scientific aspect of the regulatory process, and may determine the assumptions used and rules of thumb followed in risk assessment in dealing with the gaps and uncertainties inherent in scientific analysis. For this reason, the evolving concept of the precautionary principle in international law could usefully be drawn upon in the interpretation of the requirement of "sufficient scientific evidence" in Article 2.2 and the qualification that measures be based on risk assessments "as appropriate to the circumstances" in Article 5.1. This should not "render Article 5.7 meaningless" as suggested by the Appellate Body, since Article 5.7 deals with a different application of the precautionary principle, namely in respect of the situation where uncertainties in science make a risk assessment either impossible to conduct or too inconclusive to form the basis for an SPS measure.

F. Risk Management (Article 5.3–5.6)

1. Determination of the Appropriate Level of Protection (Annex A, paragraph 5)

A Member's "appropriate level of protection" is defined in paragraph 5 of Annex A as "[t]he level of protection *deemed appropriate by the Member* establishing a sanitary or phytosanitary measure to protect human, animal or plant life or health within its territory." (emphasis added). Thus, the SPS Agreement recognizes a Member's right to choose its own appropriate level of protection, or in other words to decide freely what standard of sanitary and phytosanitary protection it will aim at with its SPS measures.

that the temporary nature of such a measure would undermine its hormones regime). More recently, in statements claiming that it is now in compliance with the Appellate Body's ruling in *EC—Hormones,* the EC averred that its continued ban on meat treated with the relevant hormones (except 17-beta oestradiol, for which it adopted a permanent ban based on conclusions from new studies in 2000) is a provisional measure in terms of Article 5.7, pending the results of studies to determine the effects of the relevant hormones on human health. ICTSD, *Dispute Settlement, EC Move Fans the Flames under Beef Row,* 21(4) Bridges Weekly Trade News Digest (2000). An additional seventeen studies were conducted regarding the toxicological aspects, potential abuse and control problems and environmental aspects of the six relevant hormones, on the basis of which the EU Scientific Committee on Veterinary Measures relating to Public Health confirmed its previous opinions concluding that no acceptable daily intake could be established for any of the hormones evaluated. *See* European Commission, Press Releases, *Growth Promoting Hormones Pose Health Risk to Consumers, Confirms EU Scientific Committee,* IP/02/604, April 24, 2002.

[360] Report of the Appellate Body, *Japan—Measures Affecting Agricultural Products*, *supra* note 97, ¶ 80, quoted *supra* Part II(B)(2)(b).

Therefore the determination of an appropriate level of protection (risk management) must be clearly distinguished from the evaluation of risk (risk assessment), which is subject to scientific disciplines.[361] This was not done by the Panel in *Australia—Salmon* which stated:

> . . . we consider that a risk assessment, on which to base an import prohibition in accordance with Article 5.1, cannot be premised on the concept of "zero risk". Otherwise, all import prohibitions would be based on a risk assessment since there is a risk (i.e., a *possibility* of an adverse event occurring), however remote, associated with most (if not all) imports.[362]

The Appellate Body in that case, noted to the contrary:

> . . . it is important to distinguish—perhaps more carefully than the Panel did—between the evaluation of "risk" in a risk assessment and the determination of the appropriate level of protection. As stated in our Report in *European Communities—Hormones*, the "risk" evaluated in a risk assessment must be an ascertainable risk; theoretical uncertainty is "not the kind of risk which, under Article 5.1, is to be assessed." This does not mean, however, that a Member cannot determine its own appropriate level of protection to be "zero risk".[363]

Once it is established that there is scientific evidence of risk, Members are free to choose their own appropriate level of protection. The choice of a particular level of protection is what is typically called a *risk management* decision. Such decisions are taken by national administrations on grounds of societal value judgments on issues such as what level of risk is considered acceptable, what is economically or technically feasible or what consumers prefer, not purely on the basis of scientific analysis of risk. In other words, once it has scientifically been established that a health risk exists and what the likelihood or potential of that risk occurring is, by means of a risk assessment, other policy issues come into play in the actual crafting of the regulation. SPS measures seldom have the protection of health as their sole objective. Instead several other significant factors are incorporated into the decision. The decision is at core a political one, reflecting societal value choices. The SPS Agreement recognizes this by not requiring a scientific basis for the choice of the appropriate level of protection. Thus, particularized national health measures result even where the scientific basis for the measures is the same everywhere.[364]

2. Limits to the Right to Determine the Appropriate Level of Protection (Article 5.4 and 5.5)

The choice of an appropriate level of protection is, however, subject to some limitations. These limitations are set out in Articles 5.4 and 5.5. Article 5.4 provides:

> Members should, when determining the appropriate level of sanitary or phytosanitary protection, take into account the objective of minimizing negative trade effects.

The use of the word "should" rather than "shall" indicates that this is not a mandatory provision but rather a recommendation. The effect of this provision was explained by the

[361] *See contra* Victor, *supra* note 154, at 883, where he argues that the requirement that measures be based on risk assessments could be interpreted as a requirement that a Member's appropriate level of protection also be based on a risk assessment. He states, "Indeed, how can one logically assess the risks of SPS measures without assessing the risks associated with the level of protection as well? Levels and measures are two sides of the same coin."

[362] Report of the WTO Panel, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 57, ¶ 8.81.

[363] Report of the Appellate Body, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 141, ¶ 125.

[364] This point is made by Atik, *supra* note 210, at 737.

EC—Hormones Panel as follows:

> Guided by the wording of Article 5.4, in particular the words "should" (not "shall") and "objective", we consider that this provision of the SPS Agreement does not impose an obligation. However, this objective of minimizing negative trade effects has nonetheless to be taken into account in the interpretation of other provisions of the SPS Agreement.[365]

Article 5.5, in contrast, creates both a long-term goal and a binding obligation with respect to a Member's choice of an appropriate level of protection.[366] It provides:

> With the objective of achieving consistency in the application of the concept of appropriate level of sanitary or phytosanitary protection against risks to human life or health, or to animal and plant life or health, each Member shall avoid arbitrary or unjustifiable distinctions in the levels it considers to be appropriate in different situations, if such distinctions result in discrimination or a disguised restriction on international trade. Members shall cooperate in the Committee, in accordance with paragraphs 1, 2 and 3 of Article 12, to develop guidelines to further the practical implementation of this provision. In developing the guidelines, the Committee shall take into account all relevant factors, including the exceptional character of human health risks to which people voluntarily expose themselves.

What are precisely the disciplines embodied in Article 5.5? In *EC—Hormones*, the Appellate Body found:

> The objective of Article 5.5 is formulated as the "achieving [of] consistency in the application of the concept of appropriate level of sanitary or phytosanitary protection". Clearly, the desired consistency is defined as a goal to be achieved in the future. To assist in the realization of that objective, the Committee on Sanitary and Phytosanitary Measures is to develop *guidelines for the practical implementation of Article 5.5*, bearing in mind, among other things, that ordinarily, people do not voluntarily expose themselves to health risks. Thus, we agree with the Panel's view that the statement of that goal [consistency] does not establish a *legal obligation* of consistency of appropriate levels of protection. We think, too, that the goal set is not absolute or perfect consistency, since governments establish their appropriate levels of protection frequently on an *ad hoc* basis and over time, as different risks present themselves at different times. It is only arbitrary or unjustifiable inconsistencies that are to be avoided.[367]

Therefore, it is clear that there is no immediate obligation of consistency in appropriate levels of protection. This is only a long-term goal. However, Members are obliged to ensure that the distinctions in the levels of protection they choose meet the requirements

[365] Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by Canada, *supra* note 53, ¶ 8.169; Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by the United States, *supra* note 53, ¶ 8.166.

[366] After five years of deliberation, at its meeting on March 15–16, 2000, the SPS Committee drew up a final draft of guidelines for the implementation of Article 5.5. These guidelines are not legally binding but are intended as aids to assist officials in applying Article 5.5 when deciding on appropriate levels of protection or adopting and implementing SPS measures. These guidelines were provisionally adopted at the following meeting of June 21–22, and Members having objections to the final adoption were asked to make these known by July 14. Since no objections were raised by that date, the guidelines are now adopted. Committee on Sanitary and Phytosanitary Measures, *Guidelines to Further the Practical Implementation of Article 5.5*, G/SPS/15, July 18, 2000. *See* WTO *SPS Committee Completes Draft on Risk "Consistency"* 45 FOCUS NEWSLETTER Mar.–Apr. 2000 at 12; and ICTSD *WTO Meets on SPS and Risk Management*, 4(25) BRIDGES WEEKLY TRADE NEWS DIGEST, June 27, 2000.

[367] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 213.

of Article 5.5, namely that they are not arbitrary or unjustifiable and do not lead to discrimination or disguised trade restrictions.

(a) Elements of Article 5.5. The Appellate Body in *EC—Hormones*[368] set out the elements required for a violation of Article 5.5 to be shown. These are that: (1) the Member has set its own level of protection in different situations; (2) the levels of protection show arbitrary or unjustifiable differences in their treatment of different situations; and (3) these arbitrary or unjustifiable differences lead to discrimination or a disguised restriction on trade (referring to the effect of the measure used to reflect the particular level of protection).[369] These elements were found to be cumulative, thus proof of different treatment of different situations is not sufficient, though it might serve as a warning signal that the measure might be discriminatory or a disguised restriction on trade.[370]

It is obvious that not all health risks can or should be treated in the same way. Thus, with regard to the first element for proving a violation of Article 5.5, the Appellate Body in *EC—Hormones* found that to compare the different levels of protection deemed appropriate by a Member, the situations dealt with must be comparable, that is, have some common element or elements.[371] On this issue, the Appellate Body stated:

> Clearly, comparison of *several* levels of sanitary protection deemed appropriate by a Member is necessary if a panel's inquiry under Article 5.5 is to proceed at all. The situations exhibiting differing levels of protection cannot, of course, be compared unless they are comparable, that is, unless they present some common element or elements sufficient to render them comparable. If the situations proposed to be examined are *totally* different from one another, they would not be rationally comparable and the differences in levels of protection cannot be examined for arbitrariness.[372]

In this case the Panel found that two situations, namely the treatment given to natural hormones administered for growth-promotion purposes and the treatment given to hormones occurring endogenously in meat and other foods or administered for therapeutic or zootechnical purposes, were comparable as the same substance was involved (natural hormones) and the same adverse health effect was at stake in both cases (namely carcinogenicity).[373] In addition, although different substances were involved, the Panel regarded as comparable the treatment given by the EC to the synthetic hormones in dispute and the treatment given to natural hormones occurring endogenously in meat and

[368] *Id.* ¶ 214.

[369] These elements were reiterated in the Report of the Appellate Body, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 141, ¶ 140.

[370] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 215.

[371] The Panel in *EC—Hormones* noted that both parties agreed that Article 5.5 covers situations which deal with the same substance or the same averse health effect. Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by Canada, *supra* note 53, ¶ 8.179; Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by the United States, *supra* note 53, ¶ 8.176.

[372] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 217.

[373] Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by Canada, *supra* note 53, ¶¶ 8.189–8.190; Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by the United States, *supra* note 53, ¶¶ 8.186–8.187.

other foods due to their common adverse health effect (carcinogenicity).[374] Lastly, the Panel held that the treatment given to five of the six hormones[375] in dispute was comparable to that given to carbadox and olaquindox,[376] two antimicrobial growth promoters used in swine production, as they also both had carcinogenicity in common as an adverse health effect.[377]

Similarly, the Appellate Body in *Australia—Salmon* was faced with the question of the comparability of "different situations". In this case, the situations compared were the treatment applied to imports of Canadian adult, wild, ocean-caught salmon for human consumption and that applied to whole frozen herring used as bait and ornamental finfish. The Appellate Body stated:

> Situations which involve a risk of entry, establishment or spread of the same or a similar disease have some common elements sufficient to render them comparable under Article 5.5. Likewise, situations with a risk of the same or similar associated potential biological and economic consequences also have some common elements sufficient to render them comparable under Article 5.5. We, therefore, consider that for "different" situations to be comparable under Article 5.5, there is no need for both the disease *and* the biological and economic consequences to be the same or similar.[378]

The Appellate Body further stated:

> We believe that for situations to be comparable under Article 5.5, it is sufficient for these situations to have in common a risk of entry, establishment or spread of *one* disease of concern. There is no need for these situations to have in common a risk of entry, establishment or spread of *all* diseases of concern.[379]

In this case, the situations were deemed comparable as the potential consequences of the risk occurring were the same, regardless of whether the disease entered Australia via salmon or herring.

In response to Australia's argument that a "situation" cannot be compared under Article 5.5 if no risk assessment has been made in respect of it, the Panel in *Australia—Salmon* noted:

> . . . we consider that even though Australia has not yet conducted import risk analyses for the other products compared under Article 5.5, Australia does, nevertheless, have a level of protection it considers to be appropriate for these other products. Australia currently has a sanitary regime, imposing specific sanitary measures or refraining from such regulation, for these other products. This sanitary regime (whether or not specific measures are enacted) reflects a level of protection. To have a specific level of protection, there is no need to first complete a risk assessment . . . Article 5.5 directs us to compare for different situations the related levels of protection as they are currently considered to be appropriate by Australia and this whether or not the sanitary measures enacted to achieve that level are based on a risk assessment. Of course, such comparison would be easier and more accurate if for both situations

[374] Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by Canada, *supra* note 53, ¶¶ 8.211–8.212; Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by the United States, *supra* note 53, ¶¶ 8.208–8.209.

[375] The hormone MGA was dealt with separately.

[376] The U.S. complaint dealt only with carbadox, not olaquindox, whereas the Canadian complaint dealt with both.

[377] Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by Canada, *supra* note 53, ¶ 8.223–8.224; Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by the United States, *supra* note 53, ¶ 8.221.

[378] Report of the Appellate Body, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 141, ¶ 146.

[379] *Id.* ¶ 152.

> an appropriate risk assessment were available. However, according to Article 5.5 and our mandate set out in Article 11 of the DSU (to make an "objective assessment of the matter before [us], including an objective assessment of the facts of the case"), we are called upon in this case to make this comparison and to do so on the basis of the evidence before us.[380]

To establish if the first element has been met, it is furthermore necessary to determine whether the Member has imposed *different* levels of protection in different (but comparable) situations. The Panel in *EC—Hormones* found that there was a difference in the levels of protection applied by the European Communities in the comparable situations of administered hormones and naturally-occurring hormones or those administered for therapeutic or zootechnical purposes as in the former case a "no-residue level" (a ban) was applied, whereas in the latter an unlimited-residue level was permitted (complete tolerance).[381] Similarly, the Panel identified differences between a no-residue level of protection and an unlimited-residue level of protection applied respectively to synthetic hormones as opposed to natural hormones occurring endogenously in meat and other foods,[382] as well as to the hormones in dispute as opposed to the relevant antimicrobial agents used in swine production.[383]

With regard to how to determine whether Australia imposed *different* levels of protection for the situations compared, the Panel in *Australia—Salmon* stated:

> . . . the appropriate level of sanitary protection will normally be reflected in the sanitary measures imposed for a specific situation. We consider, moreover, that the level of protection achieved by a specific sanitary measure will also depend on the degree of risk against which that measure is intended to protect. In that sense, we agree with Australia that imposing the same sanitary measure for different situations does not necessarily result in the same level of protection. Indeed, in many situations (e.g., situations representing different risks) the same sanitary measure might result in different levels of protection. On the other hand, different sanitary measures for different situations might ensure the same level of protection. Indeed, one given situation might only represent a small risk for which a lenient sanitary measure will achieve a high level of protection, whereas another situation might pose very high risks requiring a very strict and different sanitary measure in order to meet that same high level of protection.
>
> To determine whether Australia makes a distinction in the levels of protection it considers to be appropriate for the situations compared, we thus need to examine the sanitary measures Australia currently imposes for these different situations . . . Since we have found that these situations are comparable as "different situations" under Article 5.5 . . . and since we will consider the potential difference in the degree of risk posed by these different situations under the second element of Article 5.5, we will for present purposes assume that if there is a difference in the sanitary *measures* imposed for the different situations we compare under Article 5.5, this difference does reflect a distinction in *levels of protection* achieved in—and considered to be appropriate by—Australia.[384]

[380] Report of the WTO Panel, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 57, ¶ 8.126.

[381] Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by Canada, *supra* note 53, ¶ 8.193–8.194; Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by the United States, *supra* note 53, ¶¶ 8.190–8.191.

[383] Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by Canada, *supra* note 53, ¶ 8.229; Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by the United States, *supra* note 53, ¶ 8.226.

[384] Report of the WTO Panel, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 57, ¶¶ 8.123–8.124.

This finding was not appealed.[385] However, in dealing with the determination of the appropriate level of protection under Article 5.6, the Appellate Body in *Australia—Salmon* noted that nothing in the SPS Agreement or the DSU permits a panel or the Appellate Body to imply the Member's appropriate level of protection from the measure it applies to attain that level of protection.[386]

Regarding the second element, namely that of arbitrary or unjustifiable differences in the levels of protection, the Appellate Body in *EC—Hormones* disagreed with the Panel's finding that both the added hormones and naturally-occurring hormones pose the same risks and practical difficulties of control,[387] and that the difference in the level of protection must therefore be arbitrary. The Appellate Body stated as follows:

> . . . we consider there is a fundamental distinction between added hormones (natural or synthetic) and naturally-occurring hormones in meat and other foods. In respect of the latter, the European Communities simply takes no regulatory action; to require it to prohibit totally the production and consumption of such foods or to limit the residues of naturally-occurring hormones in food, entails such a comprehensive and massive governmental intervention in nature and in the ordinary lives of people as to reduce the comparison itself to an absurdity.[388]

Regarding this same element, the Panel in *Australia—Salmon* found that the different levels of protection applied by Australia against risks from imports of salmon and from imports of other fish were "arbitrary or unjustifiable". It based its finding on the fact that since the level of protection in the case of salmon was higher, one could expect that a higher risk was present for salmon than for other fish. However, the evidence pointed to the opposite conclusion, namely that there was ". . . a higher risk of disease introduction associated with imports of bait fish and live ornamental fish than the risk posed by imports of salmon products for human consumption."[389] Thus, Canada had raised a presumption in this regard which had not been rebutted by Australia. The Panel therefore held that the differences in levels of protection applied by Australia were arbitrary and unjustifiable, a finding upheld by the Appellate Body. This is the only case thus far where a finding was made of a violation of Article 5.5.

The fact that the second element of Article 5.5 limits the prohibition to *arbitrary or unjustifiable* distinctions, not all distinctions,[390] is sensible in the light of the exigencies of health protection decision-making. Regulators make decisions regarding the level of protection to be secured on a case-by-case basis, as the need arises. The difficulty in evaluating the justifiability of distinctions lies in the problem of explaining why a society accepts some risks but not others or values some goals more than others. This fact

[385] Report of the Appellate Body, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 141, n. 106.

[386] *Id.*, ¶¶ 199–200. This issue is dealt with further *infra* Part II(F)(3)(b).

[387] Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by Canada, *supra* note 53, ¶ 8.190; Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by the United States, *supra* note 53, ¶ 8.187.

[388] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 221 (footnote omitted). When comparing the levels of protection for hormones used for growth promotion purposes and hormones used for therapeutic and zootechnical purposes—a comparison not further pursued by the panels—the Appellate Body, referring to the differences in frequency and scale of the two treatments and the strict mode of administration of the latter treatment, found that the distinction in levels of protection "is not, in itself, 'arbitrary or unjustifiable"'. *See* ¶¶ 222–225.

[389] Report of the WTO Panel, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 57, ¶ 8.137.

[390] As emphasised in Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 213.

was explicitly recognized by the drafters in their direction to the SPS Committee to take into account "the exceptional character of human health risks to which people voluntarily expose themselves" in the Committee's formulation of guidelines for the implementation of Article 5.5.[391]

Even if it is shown that the different levels of protection chosen by a Member in different but comparable situations are arbitrary or unjustifiable, it is necessary to show that they result in discrimination or disguised trade restrictions, under the third element of Article 5.5, before a violation of this Article can be said to exist. According to the Appellate Body in *EC—Hormones,* the third element of Article 5.5 is the "most important".[392]

On the relationship between the second and third elements of the three-pronged test, the Appellate Body in *EC—Hormones* stated:

> The second element alone would not suffice. The third element must also be demonstrably present: the implementing measure must be shown to be applied in such a manner as to result in discrimination or a disguised restriction on international trade. The presence of the second element—the arbitrary or unjustifiable character of differences in *levels of protection* considered by a Member as appropriate in differing situations — may in practical effect operate as a 'warning' signal that the implementing *measure* in its application *might* be a discriminatory measure or *might* be a restriction on international trade disguised as an SPS measure for the protection of human life or health. Nevertheless, the measure itself needs to be examined and appraised and, in the context of the differing levels of protection, shown to result in discrimination or a disguised restriction on international trade.[393]

On the third requirement of Article 5.5, the Appellate Body in *EC—Hormones* disagreed with the Panel's finding that the decisions in *U.S.—Gasoline*[394] with respect to Article XX of the GATT 1994 and that in *Japan—Alcoholic Beverages*[395] regarding Article III:2 of GATT 1994 can be used as precedents for the interpretation of Article 5.5.[396] It reversed

[391] In its guidelines on Article 5.5, the SPS Committee has noted that reasons for a significant difference in the appropriate level of protection for human health "may, in exceptional circumstances, include a risk which humans voluntarily accept. Such circumstances might arise with respect to traditional foods or some other products for which consumers knowingly accept a higher risk than that generally considered to be appropriate for food products." Committee on Sanitary and Phytosanitary Measures, *Guidelines to Further the Practical Implementation of Article 5.5*, G/SPS/15, July 18, 2000, ¶ A.8.

[392] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 240.

[393] *Id.* ¶ 215.

[394] Report of the Appellate Body, *United States-Standards for Reformulated and Conventional Gasoline, supra* note 320, ¶ 22.

[395] Report of the Appellate Body, *Japan-Taxes on Alcoholic Beverages*, *supra* note 320.

[396] In the Report of the Appellate Body, *United States-Standards for Reformulated and Conventional Gasoline, supra* note 320, ¶ 22, the Appellate Body had found that "arbitrary discrimination", "unjustifiable discrimination" and "disguised restriction on international trade" in Article XX impart meaning to each other and that the fundamental theme is the purpose and object of avoiding abuse or illegitimate use of the exceptions in Article XX. Thus the same considerations used to determine if a measure amounts to arbitrary or unjustifiable discrimination can be used to decide if the measure is a disguised restriction on international trade. The Appellate Body in *EC—Hormones* found that the structural differences between the *chapeau* of Article XX of GATT 1994 and Article 5.5 of the SPS Agreement are too great for this analogous interpretation to be made. In its argument, the EC pointed out that the three elements of the chapeau of Article XX of GATT 1994 are in the alternative, whereas those in Article 5.5 of the SPS Agreement are cumulative. *See* Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 239. In the Report of the Appellate Body, *Japan-Taxes on Alcoholic Beverages, supra* note 320, it was held that a large difference in the taxation applied to imports and that applied to domestic products could be sufficient to prove that it was applied so as to afford protection to domestic products, contrary to Article III of GATT 1994. The Appellate Body in *EC—Hormones*, ¶ 239, distinguished the reasoning in the Report of the Appellate Body, *Japan-Taxes on Alcoholic Beverages*, regarding tax differentials from the different question in this case regarding different levels of health protection. As tax is always expressed quantitatively

the Panel's finding, on the basis of the degree of difference in levels of protection in certain comparable situations, that the EC measure in question constituted discrimination or a disguised restriction on international trade, finding that:

> . . . the degree of difference, or the extent of the discrepancy, in the levels of protection, is only one kind of factor which, along with others, may cumulatively lead to the conclusion that discrimination or a disguised restriction on international trade in fact results from the application of a measure or measures embodying one or more of those different levels of protection. Thus, we do not think that the difference between a "no residues" level and "unlimited residues" level is, together with a finding of an arbitrary or unjustifiable difference, sufficient to demonstrate that the third, and most important, requirement of Article 5.5 has been met . . . Evidently, the answer to the question whether arbitrary or unjustifiable differences or distinctions in levels of protection established by a Member do in fact result in discrimination or a disguised restriction on international trade must be sought in the circumstances of each individual case.[397]

In *Australia—Salmon*, the Panel had relied on what it called three "warning signals" (i.e., elements which are "not conclusive in [their] own right"[398]) and three "other factors more substantial in nature" or "additional factors"[399] taken cumulatively, to support its finding that the third element of Article 5.5 was met.[400] The three warning signals identified by the Panel were (1) "the arbitrary character of the differences in levels of protection";[401] (2) "the rather substantial difference in levels of protection";[402] and (3) its earlier "two findings of inconsistency (with both Article 5.1 and 2.2)" which make it "seem that the measure at issue constitutes an import prohibition, i.e., a restriction on international trade, 'disguised' as a sanitary measure".[403]

The Appellate Body in this case addressed Australia's contention, on appeal, that the Panel had erroneously regarded proof of arbitrary and unjustifiable distinctions in the levels of protection, that is the second element of Article 5.5, as evidence that the third element, that of discrimination or a disguised restriction on trade, was met. The Appellate Body held:

> According to Australia, the Panel erred in according the first "warning signal", the status of evidence which demonstrates that the measure results in a disguised restriction on international trade. We note however, that it appears clearly from the Panel Report, and in particular, from the reference therein to our Report in *European Communities—Hormones*, that the Panel considered the arbitrary or unjustifiable character of differences in levels of protection as a "warning signal" for, and not as "evidence" of, a disguised restriction on international trade.[404]

and affects the competitiveness of imports, a tax differential necessarily protects domestic products. There is no such link between differences in levels of health protection and the issue of discrimination or a disguised restriction on international trade. The extent of the difference is only one factor among others to be taken into account in determining whether there is discrimination or a disguised restriction on trade. Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, at n.251. Regard must be had to the circumstances of each case.

[397] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 240.

[398] Report of the WTO Panel, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 57, ¶ 8.151.

[399] *Id.* ¶ 8.152.

[400] *Id.* ¶ 8.159.

[401] *Id.* ¶ 8.149.

[402] *Id.* ¶ 8.150.

[403] *Id.* ¶ 8.151.

[404] Report of the Appellate Body, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 141, ¶ 162.

Thus, it is clear that while the fact that the second element is established can be one indication (or a "warning signal") that the third element is also met, the former cannot be regarded as conclusive proof of the latter. This is so even if the distinction in levels of protection is great. Instead, each element must be determined separately and its existence must be determined on a case-by-case basis, taking into account all relevant circumstances.

However, the degree of difference in level of protection has been recognized to constitute a separate "warning signal" that the third element for a violation of Article 5.5 may be met. The Appellate Body in *Australia—Salmon* agreed with the Panel that the rather substantial difference in levels of protection provided by an import prohibition on ocean-caught Pacific salmon, as opposed to the tolerance of both imports of herring used as bait and imports of live ornamental fish, was a separate (second) warning signal.[405] It held that the degree of difference in the level of protection justified this factor being treated as a separate warning signal distinct from the first.

The Appellate Body also agreed with the Panel in respect of the third warning signal, stating:

> We note that a finding that an SPS measure is not based on an assessment of the risks to human, animal or plant life or health—either because there was no risk assessment at all or because there is an insufficient risk assessment—is a strong indication that this measure is not really concerned with the protection of human, animal or plant life or health but is instead a trade-restrictive measure taken in the guise of an SPS measure, i.e., a "disguised restriction on international trade".[406]

The Panel also took account of three "additional factors" in its decision on the third element of Article 5.5. It derived these "additional factors" from the architecture and structure of the measures applied to implement the different chosen levels of protection. The "additional factors" were: (1) that the two substantially different SPS measures (import prohibition versus import tolerance) applied by Australia lead to discrimination between salmon on the one hand and herring used as bait and live ornamental finfish on the other; (2) that there was a sudden, unexplained change in the conclusion of Australia's earlier Draft Report (which recommended the conditional allowing of the importation of ocean-caught Pacific salmon) and the Final Report (which recommended the import prohibition); and (3) the absence of controls on internal movement of salmon products within Australia compared to the import prohibition with respect to ocean-caught Pacific salmon.[407] On the basis of these considerations, the Panel held that Article 5.5 and, for that reason, also Article 2.3, was violated.[408]

The Appellate Body agreed with the Panel's conclusion,[409] although it reversed the Panel's finding in respect of the first additional factor, holding that it was no different from the first "warning signal" and should be excluded from consideration as a separate factor.[410]

[405] *Id.* ¶ 164.
[406] *Id.* ¶ 166.
[407] Report of the WTO Panel, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 57, ¶¶ 8.153–8.158.
[408] *Id.* ¶ 8.160.
[409] Report of the Appellate Body, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 141, ¶ 177.
[410] *Id.* ¶¶ 167–169. The Panel noted that the substantial distinctions in the *levels of protection* applied by Australia to salmon products and to herring and finfish were expressed in two different implementing *measures*, namely import prohibition and import tolerance. It found that as the two products were considered

Whether different levels of protection resulted in discrimination or a disguised restriction on trade also arose as an issue in *EC—Hormones.* In this case, the Panel in support of its finding that the difference in the level of protection for hormones and that for anti-microbial agents, Carbadox and Olaquindox, resulted in discrimination or a disguised restriction on trade, pointed to certain factors. These were: (1) the great difference in level of protection (a no-residue level for the relevant hormones as opposed to an unlimited-residue level for Carbadox and Olaquindox); (2) the absence of a plausible justification for this significant difference; and (3) the nature of the EC measure, an import prohibition, which necessarily restricts international trade.[411]

The Panel in *EC—Hormones* also looked at three "additional factors", namely: (1) the objectives, besides health protection, it believed the European Communities had in mind when enacting and maintaining the ban, which it deduced from the fact that the preambles of the relevant directives, the reports of the European Parliament, and the opinions of the EC Social and Economic Committee indicated that the measure was aimed at harmonization of laws within the European Communities, the removal of distortions of competition and barriers to intra-Community trade, the increase of beef consumption and the reduction of internal surpluses; (2) the fact that before the coming into force of the ban, fewer animals were treated with hormones for growth promotion in the European Communities than in Canada and the United States; and (3) that the hormones are used in the bovine sector, where the European Communities wants to limit supply, whereas Carbadox and Olaquindox are used in the pork sector, where the EC has no surpluses.[412]

The Appellate Body rejected the Panel's conclusion, stating that it did not attach the same importance as the Panel to the multiple objectives of the measure. It pointed to the demonstrated concerns within the EC regarding the studies showing the carcinogenicity of hormones, consumer concerns and the problems of abuse. It stated that the harmonization of regulations was a result of the EC's mandate to establish a Common Market and that the reduction of beef surpluses not only benefited the EC but also other non-hormone beef producers. It thus concluded that it did not agree with the Panel's inference that the import ban was aimed at restricting beef imports from Canada and the United States rather than protecting the EC's population from the risk of cancer.[413] The Panel's finding that there was a violation of Article 5.5 was thus reversed.[414] The Appellate Body's decision makes it clear that the mere incorporation of various non-scientific considerations in the decision to impose a certain health measure is not sufficient to invalidate the measure by rendering it a "disguised restriction on trade". This decision implies a positive recognition by the

comparable (as "different situations" under Article 5.5) and the risk arising therefrom was the same, the different implementing measures suggested that Australia was effectively discriminating between salmon products on the one hand and herring and finfish on the other. The Panel viewed "disguised restriction on international trade" under Article 5.5 as including restrictions amounting to arbitrary or unjustifiable discrimination *between products*. Australia contended that the Panel's concept of discrimination under Article 5.5 was wrong, as discrimination here refers to discrimination *between countries*.

[414] *Id.* ¶ 246.

Appellate Body of the important role of societal value judgments in the making of risk management decisions.

(b) Relationship between Article 5.5 and Article 2.3. As mentioned previously, Article 5.5 can be regarded as a specific application of the general obligation contained in Article 2.3. The Panel and Appellate Body in *EC—Hormones* found that Article 5.5 must be read together with the basic obligation of Members to avoid discrimination and disguised restrictions on trade in Article 2.3.[415] Article 2.3 reiterates the obligations set out in the *chapeau* (headnote) to Article XX of GATT 1994.[416] The Appellate Body in *EC—Hormones* held regarding the relationship between Article 5.5 and Article 2.3:

> Article 5.5 must be read in context. An important part of that context is Article 2.3 of the *SPS Agreement*, . . .
>
> When read together with Article 2.3, Article 5.5 may be seen to be marking out and elaborating a particular route leading to the same destination set out in Article 2.3.[417]

The most concrete reflection of Article 2.3 is found in the third element of Article 5.5. Regarding the relationship between the third element of Article 5.5 and Article 2.3, the Appellate Body in *EC—Hormones* noted:

> . . . We also recall our interpretation that Article 5.5 and, in particular, the terms "discrimination or a disguised restriction on international trade", have to be read in the context of the basic obligations contained in Article 2.3, which requires that "sanitary . . . *measures* shall not be *applied in a manner which would constitute a disguised restriction on international trade*". (emphasis added)[418]

There is thus a close link between these two articles and a violation of Article 5.5 will necessarily imply a violation of the broader obligation of Article 2.3.

3. Requirement of the Least-Trade Restrictive Measure (Article 5.6)

Another aspect of the risk management process is the choice of a measure to achieve the level of protection deemed appropriate by the government. Measures are typically chosen with regard not only to their technical effectiveness, but also to considerations of cost and ease of application. It is clear that the characteristics of the measure chosen can have a significant effect on trade. While a Member has the right to determine for itself the level of protection it deems appropriate, its choice of a measure can be subject to disciplines to ensure that the trade effect is limited. To this purpose, Article 5.6 of the SPS Agreement provides:

> Without prejudice to paragraph 2 of Article 3, when establishing or maintaining sanitary or phytosanitary measures to achieve the appropriate level of sanitary or phytosanitary protection, Members shall ensure that such measures are not more trade-restrictive than required to achieve their appropriate level of sanitary or phytosanitary protection, taking into account technical and economic feasibility.

This amounts to a discipline on the choice of measure rather than on the selection of an appropriate level of protection.

[415] *Id.* ¶ 212.
[416] Article 2.3 of the SPS Agreement is discussed *supra* Part II(B)(2)(c).
[417] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 70, ¶ 212.
[418] *Id.* ¶ 238.

In a footnote, the SPS Agreement defines what is meant by "a measure not more trade restrictive than required". This footnote provides:

> For purposes of paragraph 6 of Article 5, a measure is not more trade-restrictive than required unless there is another measure, reasonably available taking into account technical and economic feasibility, that achieves the appropriate level of sanitary or phytosanitary protection and is significantly less restrictive to trade.

In *Australia—Salmon*[419] the Panel set out the three elements of this definition, which it held to be cumulative, namely that a measure is more trade restrictive than required only if there is another SPS measure which: (1) is reasonably available taking into account technical and economic feasibility; (2) achieves the Member's appropriate level of sanitary protection; and (3) is significantly less trade restrictive than the contested measure. The Appellate Body agreed with this three-pronged test[420] and added:

> These three elements are cumulative in the sense that, to establish inconsistency with Article 5.6, all of them have to be met. If any of these elements is not fulfilled, the measure in dispute would be consistent with Article 5.6. Thus, if there is no alternative measure available, taking into account technical and economic feasibility, *or* if the alternative measure does not achieve the Member's appropriate level of sanitary or phytosanitary protection, *or* if it is not significantly less trade-restrictive, the measure in dispute would be consistent with Article 5.6.[421]

This finding was reiterated by the Appellate Body in *Japan—Agricultural Products*.[422] It is now useful to examine each of these requirements in turn to determine what needs to be proved if a measure is challenged under Article 5.6.

(a) No Alternative Measure that is Reasonably Available. The first element of the three-pronged test is that another SPS measure is reasonably available taking into account technical and economic feasibility. It is important to note that in determining the existence of an alternative measure within the meaning of Article 5.6 both the *technical* and *economic* feasibility of the measure must be taken into account. This reflects the recognition that an alternative less-trade-restrictive measure could have high regulatory or compliance costs or could be impractical to implement.[423] This is particularly significant for developing countries. It seems logical that the question of economic and technical feasibility will be determined on the basis of the resources and capacity of the importing Member, rather than by looking in abstract at the alternative measures. This should result in greater flexibility in the application of this discipline to developing countries.

In *Australia—Salmon*, the Panel stated as follows with regard to options considered in the relevant risk assessment as technically and economically feasible alternatives:

> . . . all four alternative options . . . were presented in the 1996 Final Report itself as options which merit consideration and this in contrast to two other options—removal of all quarantine restrictions and banning the importation of all salmon products—which were thought of as options which could not "reasonably be considered as appropriate, having regard to associated quarantine risks" and were therefore "not discussed further". In our view, this

[419] Report of the WTO Panel, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 57, ¶ 95.

[423] Goh and Ziegler, *supra* note 87, at 280.

> implies that the 1996 Final Report put forward the four alternatives we examine as technically and economically feasible policy options. Nothing in the 1996 Final Report—nor any other evidence before us—implies that any of these four alternatives would be technically or economically unfeasible.[424]

The compliance Panel in *Australia—Salmon*, when examining one of the four alternatives proposed by Canada for the challenged Australian measure, stated as follows:

> . . . [s]ince one can assume that current Australian requirements are "reasonably available taking into account technical and economic feasibility", also a regime without the consumer-ready requirements [the current Australian requirements] . . . would be so. Given that inspection and control to release from quarantine only product that meets the consumer-ready requirements would no longer be necessary, a regime without the consumer ready requirements would be even more reasonably available in the sense of Article 5.6.[425]

In *Japan—Agricultural Products*, the Panel also examined whether testing by product was a technically and economically feasible alternative to the measure at issue, namely varietal testing, and found this to be so.[426] This issue was not appealed. From the above findings it is clear that a panel will look concretely at the facts of each case, including the characteristics of the SPS measure actually applied and the alternative measures considered in the risk assessment, to determine which measures can be considered feasible alternatives.

(b) No Alternative Measure which Achieves the Appropriate Level of Protection. The Panel in *Australia—Salmon*[427] examined the second element required for proof that a measure is more trade restrictive than required, namely that an alternative measure achieves the Member's appropriate level of protection. It found that the level of protection deemed appropriate by a Member could be implied from the level reflected in the SPS measure it adopts. Thus it must be determined whether the alternative measures meet the level of protection achieved by the measure actually imposed. The Appellate Body disagreed, holding as follows:

> We do not believe that Article 11 of the DSU, or any other provision of the DSU or of the *SPS Agreement*, entitles the Panel or the Appellate Body, for the purpose of applying Article 5.6 in the present case, to substitute its own reasoning about the implied level of protection for that expressed consistently by Australia. The determination of the appropriate level of protection, a notion defined in paragraph 5 of Annex A, as "the level of protection deemed appropriate by the Member establishing a sanitary . . . measure", is a *prerogative* of the Member concerned and not of a panel or of the Appellate Body.[428]

The Appellate Body distinguished the appropriate level of protection, which is an objective, and the measure used to achieve that level, which is an instrument to attain this objective.[429] It continued:

[424] Report of the WTO Panel, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 56, ¶ 8.171. The Appellate Body noted the panel's "factual finding" in this respect and considered, therefore, that the first element was met. Report of the Appellate Body, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 141, ¶ 195.

[428] Report of the Appellate Body, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 141, ¶ 199.

[429] *Id.* ¶ 200.

> It can be deduced from the provisions of the *SPS Agreement* that the determination by a Member of the "appropriate level of protection" logically precedes the establishment or decision on maintenance of an "SPS measure".[430]

The Appellate Body noted that the correlation between the appropriate level of protection and the relevant SPS measure is most clearly illustrated by Article 5.6 and held:

> . . . The words of Article 5.6, in particular the terms "*when establishing or maintaining* sanitary . . . protection", demonstrate that the determination of the level of protection is an element in the decision-making process which logically *precedes* and is *separate* from the establishment or maintenance of the SPS measure. It is the appropriate level of protection which determines the SPS measure to be introduced or maintained, not the SPS measure introduced or maintained which determines the appropriate level of protection. To imply the appropriate level of protection from the existing SPS measure would be to assume that the measure always achieves the appropriate level of protection determined by the Member. That clearly cannot be the case.[431]

Thus the appropriate level of protection determines what SPS measure will be used, not *vice versa*.[432] Applying this finding to the case at hand, the Appellate Body stated:

> We note that, in this case, the level of protection *reflected* in the SPS measure at issue, i.e., the import prohibition, is undisputedly a "zero-risk level" of protection. However, Australia determined explicitly that its *appropriate* level of protection is:
>
> > . . . a high or "very conservative" level of sanitary protection aimed at reducing risk to "very low levels", 'while not based on a zero-risk approach.[433]
>
> It is clear, in this case, that the *appropriate* level of protection as determined by Australia is definitely *not* at least as high as the level of protection *reflected* in the SPS measure at issue".[434]

Further, the Appellate Body held that although there is no explicit obligation on Members to determine their appropriate level of protection, this obligation is implicit in paragraph 3 of Annex B, and Articles 4.1, 5.4 and 5.6. It found:

> We do not believe that there is an obligation to determine the appropriate level of protection in quantitative terms. This does not mean, however, that an importing Member is free to determine its level of protection with such vagueness or equivocation that the application of the relevant provisions of the *SPS Agreement,* such as Article 5.6, becomes impossible. It would obviously be wrong to interpret the *SPS Agreement* in a way that would render nugatory entire articles or paragraphs of articles of this Agreement and allow Members to escape from their obligations under this Agreement. While in this case Australia determined its appropriate level of protection, and did so with sufficient precision to apply Article 5.6, we believe that in cases where a Member does not determine its appropriate level of protection, or does so with insufficient precision, the appropriate level of protection may be established by panels on the basis of the level of protection reflected in the SPS measure actually applied. Otherwise, a Member's failure to comply with the implicit obligation to determine its appropriate level of protection—with sufficient precision—would allow it to escape from its obligations under this Agreement and, in particular, its obligations under Articles 5.5 and 5.6.[435]

[430] *Id.* ¶ 201.
[431] *Id.* ¶ 203.
[432] *Id*.
[433] (Footnote in original) Panel Report, ¶ 8.107.
[434] Report of the Appellate Body, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 141, ¶ 197.
[435] *Id.* ¶¶ 205–207.

Thus, if a Member does not determine its appropriate level of protection, or does so with insufficient clarity, panels may determine the appropriate level based on the level reflected in the measure actually applied.

This finding is important in that it prevents the discipline in Article 5.6 from limiting the ability of governments to adopt measures that achieve the level of protection they have chosen. It recognizes that the choice of level of protection is the sole prerogative of national decision-makers. Thus alternative measures must always be judged against the Members' own chosen level of protection and not simply compared to the measure currently in place. Only in cases where a government does not adequately determine its level of protection, may a panel infer it from the measure applied in order to prevent the avoidance of disciplines under the SPS Agreement.

This approach was followed in *Japan—Agricultural Products*, where the Panel, when dealing with the second element of Article 5.6, stated:

> Both parties agree that it is up to Japan to determine its appropriate level of phytosanitary protection with respect to codling moth. We agree since the SPS Agreement (in paragraph 5 of Annex A) defines the "appropriate level of . . . phytosanitary protection" as "[t]he level of protection *deemed appropriate by the Member* establishing a . . . phytosanitary measure to protect . . . plant life or health within its territory",[436] *in casu*, the level deemed appropriate by Japan.[437]

(c) No Alternative Measure which is Significantly Less Restrictive to Trade. With regard to the third requirement, it is notable that the alternative measure must be *significantly* less trade-restrictive before a Member's measure will be deemed "more trade-restrictive than required." Thus a small difference in the trade impacts of the two measures is not sufficient to oblige a Member to adopt the alternative measure.

This requirement was examined by both the Panel and the compliance Panel in *Australia—Salmon*, and by the Panel in *Japan—Agricultural Products.*[438] It appears from these cases that the issue relates to whether market access will be substantially improved under an alternative measure as compared to the measure currently imposed. This examination turns on the relevant facts of the case. For example, in *Japan—Agricultural Products,* Japan did not contest that two alternative measures, namely testing the efficacy of the quarantine treatment by product rather than by each variety of the product;[439] and determining the sorption levels of different varieties of products,[440] were significantly less trade-restrictive than its varietal-testing requirement. The Panel agreed, noting that market access would be obtained either automatically or significantly more easily under the alternatives.[441] In *Australia—Salmon*, the Panel found that even the most stringent

[436] (Footnote in original) Emphasis added.

[437] Report of the WTO Panel, *Japan—Measures Affecting Agricultural Products*, *supra* note 57, ¶ 8.81.

[438] Report of the WTO Panel, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 57, ¶ 8.182; Report of the WTO Compliance Panel, *Australia—Measures Affecting the Importation of Salmon*, *Recourse to Article 21.5 by Canada*, *supra* note 65, ¶¶ 7.150–7.153; Report of the WTO Panel, *Japan—Measures Affecting Agricultural Products*, *supra* note 56, ¶¶ 8.79, 8.89, 8.95–8.96 and 8.103–8.104.

[439] In other words, once the efficacy of quarantine treatment for a product has been shown and the product has been approved, no further testing would be required for any other varieties of the product. Report of the WTO Panel, *Japan—Measures Affecting Agricultural Products*, *supra* note 57, ¶ 8.73.

[440] This would require that once a particular variety of a product is approved, if it can be demonstrated that the sorption level of an additional variety is not higher than that of the initial variety, the same treatment can be applied to both varieties without further testing or approval requirements. If the sorption level of the additional variety is demonstrated to be higher, further testing could be required. *Id.* ¶ 8.96.

[441] With regard to the alternative of testing by product, the Panel noted that market access for additional varieties would be automatic as no additional testing would be required. *Id.* ¶ 8.79. Regarding the alternative

of the four alternative measures examined (requiring retail-ready filleting, evisceration, beheading and gilling of salmon before importation) would be significantly less trade-restrictive than Australia's requirement of heat treatment for salmon, as this amounted to a prohibition on the importation of fresh, chilled or frozen salmon.[442] Australia changed its requirements with respect to the importation of salmon after its measures were judged in violation of the SPS Agreement.[443] With respect to its new measure, and in particular the "consumer-ready" requirement for the importation of salmon,[444] the compliance Panel found that the alternatives proposed[445] would result in significantly more salmon products being allowed for direct release from quarantine.[446] On the basis of evidence before it, the compliance Panel found that demand existed in Australia for non-consumer ready salmon, for use in hotels, restaurants and institutions as well as large families. Therefore, increased market access would result from the alternative measures.[447]

G. Other Substantive Provisions

1. Equivalence (Article 4)

In order to ensure the protection of human, animal and plant health in its territory, a country needs to be satisfied that imported products meet its SPS standards. However, there may be marked differences in the SPS regulations applied as well as the control and inspection systems in place to ensure that the local standards are met in the country where the products are produced as compared to those in the importing country. These differences are not only due to differences in the levels of health protection deemed appropriate by the importing and exporting countries, they may also be due to differences

of determination of sorption levels, the Panel noted that if the determination showed no higher sorption level for other varieties, no additional testing would be necessary, thus resulting in market access being obtained significantly more easily. If a higher sorption level was shown, additional testing could be required, in which case market access would be obtained in circumstances no more difficult than under the current regime. *Id.* ¶ 8.96.

[442] As the Panel in this case incorrectly viewed the requirement of heat-treatment for salmon products as the measure at issue (as opposed to the ban on fresh, chilled or frozen salmon), it proceeded to discuss how heat treatment changes the nature of the product and limits its use since heat-treated salmon cannot be consumed as fresh salmon. In contrast, eviscerated, headless and filleted salmon can be consumed as fresh or cooked salmon. Thus the latter requirement is significantly less trade restrictive. Report of the WTO Panel, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 57, ¶ 8.182.

[443] The Appellate Body overturned the Panel's finding with regard to Article 5.6 since the Panel had made its finding on the wrong premise—that the SPS measure at issue was the heat-treatment requirement. There were insufficient factual findings for the Appellate Body to reach a conclusion on whether the actual SPS measure at issue (the import prohibition) was consistent with Article 5.6. Report of the Appellate Body, *Australia Measures Affecting the Importation of Salmon*, *supra* note 141, ¶¶ 213 and 241–242.

[444] This entailed that only salmon ready for household use (defined as cutlets of less than 450g, skinless fillets of any weight, skin-on fillets of less than 450g, eviscerated, headless pan-size fish of less than 450g or products processed even further) could be released from quarantine. Other salmonid products were required to be processed to a consumer-ready stage at an approved processing plant before release from quarantine. These requirements aimed to avoid the risk that imported salmon would be processed commercially in Australia, leading to substantial concentrations of waste material (skin, fins etc) that would create the risk of pests or diseases.

[445] Canada proposed as alternatives either the current Australian regime *without* the consumer-ready requirements or the current regime with *different* consumer-ready requirements (in particular, removing the weight limitations and requiring the product to be individually and commercially wrapped).

[446] In particular, skin-on salmon weighing more than 450g would be able to be imported for direct sale.

[447] Report of the WTO Compliance Panel, *Australia—Measures Affecting the Importation of Salmon*, *Recourse to Article 21.5 by Canada*, *supra* note 65, ¶¶ 7.150–7.151.

in the conditions prevalent in each country[448] which may affect the efficacy of particular SPS measures and make it possible for alternative measures to be used which result in the same level of health protection.[449] As a result, it is possible for importing countries to rely on the SPS measures and control and inspection systems in place in exporting countries, even where these may be different from their own, when such measures or systems have been demonstrated to achieve the level of protection sought by the importing Member, *i.e.*, to be equally effective in reducing risk. This is known as the recognition or acceptance of "equivalence".

Countries can accept the equivalence of different SPS measures on an *ad hoc* basis or by means of bilateral or regional equivalence agreements. The acceptance of equivalence on an *ad hoc* basis commonly occurs with regard to specific products or technical aspects of SPS measures.[450] In equivalence agreements criteria are often set out for the acceptance of different SPS measures as equivalent on either a system-wide or product-by-product basis. Further, agreements can be concluded in which countries agree that the standards and food safety systems used by each are sufficient to guarantee the level of protection each aims to secure. As a result, they mutually bind themselves to allow each other's products to enter their respective markets despite differences in the SPS measures or control systems applied. The latter type of agreement is known as a "mutual recognition agreement"[451] and may be concluded for specific food or agricultural products or all food and agricultural products and may apply to only certain food safety requirements (for example only conformity assessment procedures or only food safety standards) or to all such requirements.[452] If effectively implemented, equivalence could reduce the barriers created by onerous, but legitimate SPS measures. It is a useful method of eliminating the trade restrictive effect[453] of SPS measures in the absence of complete harmonization.[454]

[448] For example, the prevalence of particular pests or diseases may differ, as may climatic conditions that may be more or less conducive to the proliferation of pests or the spread of diseases. In addition it has been noted that developing countries may face rather different developmental and technological conditions which also result in differences in SPS measures. *See* Simonetta Zarrilli, WTO Sanitary and Phytosanitary Agreement: Issues for Developing Countries, T.R.A.D.E. Working Paper 3, 17, South Centre (1999).

[449] Digby Gascoine, *Harmonisation, Mutual Recognition and Equivalence—How and What Is Attainable?* Paper presented at the Conference on International Food Trade Beyond 2000: Science-Based Decisions, Harmonization, Equivalence and Mutual Recognition, Melbourne Australia, October 11–15, 1999, at 6.

[450] This fact was emphasized in discussions on equivalence in the SPS Committee. Such acceptance occurs on a technical level and is not reflected in formal bilateral agreements. *See* Committee on Sanitary and Phytosanitary Measures, *Equivalence—Note by the Secretariat,* G/SPS/W/111, July 4, 2001. An example of this is the determination of the United States Department of Agriculture on December 14, 1999, that 32 of the 36 countries exporting meat and poultry to the United States had an inspection system equivalent to that of the U.S. See USDA, Office of the Inspector General, Food Safety and Inspection Service, *Imported Meat and Poultry Inspection Process Phase 1*, Rep. No. 24099-3-Hy (2000).

[451] An example of a mutual recognition agreement is that signed by the EU and Argentina in June 1996, where they agreed to full mutual recognition of each other's sanitary and phytosanitary standards. *See Argentina and EU Sign SPS Agreement,* 351 Animal Pharm 14, 14 (1996).

[452] *See* Gascoine, *supra* note 449, at 5.

[453] *See* Victor, *supra* note 154, at 877–878, where the author notes, "Assuming that exporters have an interest in identifying the least trade restrictive measure, this "equivalence" requirement could automatically ensure that SPS rules are not more discriminatory than necessary (. . .)". It may perhaps be more correct to say that the result would be rules that are least trade-restrictive, since SPS measures need not be discriminatory at all to fall under the SPS Agreement.

[454] This may be the case either where no international standards exist in the specific area or where the existing international standards are inappropriate since they do not achieve the level of protection chosen by the importing Member. In these cases the principle of equivalence could nevertheless result in open markets. It should be noted that the SPS Committee has emphasized that equivalence does not replace the need for

As has been discussed above,[455] Members are not obliged to adopt harmonized standards where these do not meet their chosen levels of protection. However, by recognizing as equivalent divergent SPS measures that meet the relevant appropriate level of protection, Members can avoid creating unnecessary trade barriers while continuing to provide the level of protection they deem appropriate. This is of particular importance to developing countries since their SPS measures and food safety systems often differ from those in place in importing developed countries, due to the developmental and technological constraints faced by developing countries. If their measures nonetheless achieve the level of protection aimed at by the importing country, they should be recognized as equivalent.[456]

However, the recognition of equivalence is not to be used as an instrument for discrimination between countries nor should it result in additional barriers to trade. Neither is it intended to replace the need for the development and use of international standards.[457]

Article 4 of the SPS Agreement aims to promote the recognition of equivalence, both on an *ad hoc* basis and by means of equivalence agreements, and in this way minimize the trade barriers caused by divergent SPS measures.

(a) Acceptance of Equivalence (Article 4.1). Article 4 of the SPS Agreement makes provision for acceptance by WTO Members of the equivalence of different SPS measures provided that the measure achieves the appropriate level of protection chosen by the importing Member. In paragraph 1, it obliges Members to accept as equivalent different SPS measures that have been proven to achieve their chosen level of health protection.

(b) Conditions. In order for Members to be obliged to recognize the equivalence of other Members' SPS measures, Article 4.1 requires that the exporting Member "objectively demonstrate" to the importing Member that its SPS measures achieve the latter's appropriate level of protection. The burden of proof is on the exporting Member to adduce scientific proof that its measure is equally effective in reducing the health risk posed by its export. In addition, the exporting Member must allow reasonable access to the importing Member on request, to conduct its own inspections, tests and other procedures to verify the efficacy of the measure.

(c) Agreements on Recognition of Equivalence (Article 4.2). It is possible for the recognition of equivalence to occur not only on an *ad hoc* basis but also by means of bilateral,

the development and use of international standards. Committee on Sanitary and Phytosanitary Measures, *Equivalence—Note by the Secretariat,* G/SPS/W/111, July 4, 2001, ¶ 3. *See also* Victor, *supra* note 154, at 878, where he refers to the similar concept of "mutual recognition" in the context of the EC single market which "created a strong market-opening dynamic by allowing legal production from any European country into any other European national market." In this regard he refers to Linda Horton, *Mutual Recognition Agreements and Harmonization*, 29 SETON HALL LAW REVIEW 692, 708–729 (1998).

[455] *See supra* Part II(C).

[456] In the meetings of Members in the SPS Committee regarding equivalence, it was stressed that the purpose of equivalence is to facilitate trade and that the recognition of equivalence should enhance developing country access to export markets, including those in developed countries, by allowing them to meet the importer's chosen level of protection by means of alternative measures. *See* Committee on Sanitary and Phytosanitary Measures, *Equivalence: Consideration of Article 4 of the SPS Agreement: Summary of Informal Discussions on Equivalence. Second Report by the Chairman,* G/L/445, March 21, 2001, ¶ 7.

[457] Committee on Sanitary and Phytosanitary Measures, *Equivalence—Note by the Secretariat,* G/SPS/W/111, July 4, 2001, ¶ 3.

regional or multilateral agreements[458] in which criteria are set out for acceptance of different SPS measures as equivalent. Therefore, the SPS Agreement, in Article 4.2, encourages the conclusion of equivalence agreements between Members by obliging Members to enter into consultations to this end upon request. However, there is no obligation to actually conclude such agreements.

Some Members are reluctant to enter into negotiations for the conclusion of formal equivalence agreements due to the lengthy and costly nature of such negotiations. However, once in place, formal agreements can make the subsequent recognition of equivalence easier and less costly as the general criteria and conditions for the recognition of equivalence are already established in such agreements.[459]

(d) Procedure. Article 4 does not provide for specific procedures for the recognition of equivalence or the conclusion of equivalence agreements. It is thus left to Members to determine how they will give effect to this provision, in particular what procedures they will establish and which criteria they will apply for the recognition of equivalence.[460] Although these procedures may be laid down in formal equivalence agreements, the Chairman of the SPS Committee made clear in his 2001 Report to the General Council that equivalence does not necessarily require formal equivalence agreements but can be achieved on different levels. He noted:

> In the Committee's discussions in November 2000, Members recognized that there were several different levels of equivalence, which ranged from (i) formal agreements recognizing the equivalence of sanitary and phytosanitary systems; to (ii) agreements of equivalence for specific products; to (iii) acceptance, on an ad hoc basis, of the equivalence of specific technical aspects of certain sanitary and phytosanitary measures. In the March 2001 discussions, it was also suggested that equivalence could be considered for either: (i) inspection and control systems; (ii) processing techniques; and (iii) for product standards.[461]

The Chairperson also reported that delegations had stressed that regardless of the level at which equivalence is recognized, certain obligations exist for both the importing country and the exporting country. These obligations stem from the fact that the SPS measures of the exporting country, in order to be accepted as equivalent, must meet the appropriate level of protection of the importing country. Therefore, the importing country must clearly identify the level of protection its measure aims to achieve and the exporting country must provide appropriate, science-based technical information to

[458] Johanson and Bryant have noted that, "[i]n practice, the definition of equivalency and criteria for recognizing equivalent practices is likely to emerge from bilateral consultations, regional agreements, and the exchange of views encouraged by the Sanitary and Phytosanitary Committee. . . ". David S. Johanson and William L. Bryant, *Eliminating Phytosanitary Trade Barriers: The Effects of the Uruguay Round Agreements on California Agricultural Exports,* 6 SAN JOAQUIN AGRICULTURAL LAW REVIEW 1, 6 (1996).

[459] Argentina has suggested that all formal equivalence agreements should contain a section establishing general principles, aims and requirements for the recognition of equivalence, and deal with specific products in annexes to the agreement. *See* Committee on Sanitary and Phytosanitary Measures, *Equivalence—Article 4 of the Agreement on the Application of Sanitary and Phytosanitary Measures,* G/SPS/GEN/268, August 15, 2001. *See also* Zarrilli and Musselli, *supra* note 28, at 8.

[460] The Decision on Equivalence, discussed *infra*, provides some guidelines with regard to the procedure to be followed.

[461] Committee on Sanitary and Phytosanitary Measures, *Equivalence: Consideration of Article 4 of the SPS Agreement: Summary of Informal Discussions on Equivalence. Second Report by the Chairman,* G/L/445, March 21, 2001, ¶ 4.

demonstrate that its alternative measure meets this level of protection.[462] The Secretariat has noted that, in identifying their appropriate level of protection, Members should take into account the Guidelines to Further the Practical Implementation of Article 5.5,[463] which were adopted by the SPS Committee in June 2000.[464] The question of a Member's identification of its chosen level of protection is addressed in these Guidelines as follows:

> A Member should indicate the level of protection which it considers to be appropriate with respect to risks to human life or health, to animal life or health or to plant life or health in a sufficiently clear manner so as to permit examination of the extent to which any sanitary or phytosanitary measure achieves that level.
>
> Such an indication may be contained in a published statement or other text generally available to interested parties. The statement of the appropriate level of protection may be qualitative or quantitative, and should serve to guide its consistent implementation over time, and also to increase the transparency of the sanitary or phytosanitary regime. Examples might include government policy statements with regard to appropriate levels of protection in response to certain risks, or documents on animal health protection objectives or with respect to plant protection. The use of quantitative terms, where feasible, to describe the appropriate level of protection can facilitate the identification of arbitrary or unjustified distinctions in levels deemed appropriate in different situations.[465]

The Guidelines also indicate,[466] as decided by the Appellate Body in *Australia—Salmon*,[467] that although the SPS Agreement contains no express obligation on a Member to determine its appropriate level of protection, this obligation is implicit in several provisions including Article 4.

Once the appropriate level of protection of the importing Member is known, and the exporting Member produces evidence to support its claim that its SPS measure achieves this level of protection, the importing Member makes its determination of equivalence. The equivalence of different types of SPS measures (such as ban on a potential host of a pest and a requirement of fumigation treatment prior to importation) could be determined by examining the effectiveness of each by means of scientific evidence. In contrast, when different control and inspection systems are compared, a more subjective element is present as the quality of the system and qualifications of personnel are evaluated.[468]

(e) Notification. The notification of equivalence agreements or *ad hoc* recognition of equivalence is not mandatory under the SPS Agreement. In the informal discussions on equivalence in the SPS Committee, several Members expressed concern regarding the lack of transparency with regard to equivalence agreements.[469] A notification obligation

[462] Committee on Sanitary and Phytosanitary Measures, *Equivalence—Note by the Secretariat,* G/SPS/W/111, July 4, 2001, ¶ 6; Committee on Sanitary and Phytosanitary Measures, *Equivalence: Consideration of Article 4 of the SPS Agreement: Summary of Informal Discussions on Equivalence. Second Report by the Chairman,* G/L/445, March 21, 2001.

[463] Committee on Sanitary and Phytosanitary Measures, *Guidelines to Further the Practical Implementation of Article 5.5,* G/SPS/15, July 18, 2000. These non-binding guidelines relate to the objective of consistency in the choice of appropriate level of protection and are discussed *supra* Part II(F)(2).

[467] Report of the Appellate Body, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 141, ¶ 205.

[468] This point is made by Johanson and Bryant, *supra* note 449, at 6.

[469] Committee on Sanitary and Phytosanitary Measures, *Equivalence—Note by the Secretariat,* G/SPS/W/111, July 4, 2001, ¶ 19.

would facilitate the recognition of equivalence of SPS measures of developing countries by enabling developing countries to make a request to become party to a notified equivalence agreement by showing that they meet the conditions set out therein. A notification obligation would also facilitate the recognition of equivalence by making it easier for developing countries to conclude a similar bilateral agreement with the importing country. However, it was pointed out in the Committee meeting that all Members' national Enquiry Points[470] are obliged to respond to questions regarding, *inter alia* the *ad hoc* recognition of equivalence and equivalence agreements.[471] Nevertheless, the SPS Committee endorsed a conclusion stating that Members will inform the SPS Committee of their recognition of the equivalence of the SPS measures of other Members.[472] The Secretariat proposed a format for the notification of determinations of equivalence and equivalence agreements, where such recognition of equivalence may have a significant effect on the trade of the Member that requested the determination or on the trade of other Members.[473] The SPS Committee adopted the recommended procedures and format for the notification of equivalence agreements at its meeting of June 25–26, 2002.[474]

(f) Examples. In practice, the recognition of equivalence most often takes place informally, on a technical or administrative level for specific products. An example of such recognition of equivalence is that of Australia with regard to Switzerland's measures applicable to hard cheeses. Australia requires pasteurization or thermization of milk in the production of cheeses in order to achieve its "safe food use" level of protection for cheese consumption. Switzerland sought to demonstrate that its manufacturing process for cheeses achieved Australia's level of protection by means of a risk assessment. The risk assessment showed, according to Australia, that hard cheeses made following the Swiss process achieved the same level of pathogen destruction as hard cheese subject to pasteurization, but this was not the case with soft cheeses. Australia thus recognized Emmental, Sbrinz and Gruyere as safe due to the equivalence of the Swiss process with regard to hard cheeses.[475]

Currently, the recognition of equivalence by means of formal agreements is taking place in very limited cases, in the context of bilateral or regional agreements. In particular, it occurs between the Member States of the European Union, the Members of NAFTA, and between Australia and New Zealand.[476] In addition, in certain cases Members have

[470] The Enquiry Points will be discussed *infra* Part III(A)(4).

[471] This obligation is contained in Annex B.3(d) and was confirmed by the SPS Committee in its meeting of March 13, 2001. Committee on Sanitary and Phytosanitary Measures, *Equivalence: Consideration of Article 4 of the SPS Agreement: Summary of Informal Discussions on Equivalence. Second Report by the Chairman,* G/L/445, March 21, 2001, ¶ 11(ii).

Other examples of *ad hoc* recognition of equivalence were provided by New Zealand. *See* Committee on Sanitary and Phytosanitary Measures, *Experience in Recognizing Equivalence of Phytosanitary Measures: Submission by New Zealand,* G/SPS/GEN/232, February 28, 2001.

[476] For examples of the recognition of equivalence in the EU and NAFTA and the mutual recognition agreement between Australia and New Zealand (which has since been replaced by a joint food authority, the ANZFA), *see* Zarrilli, *supra* note 448, at 17–18. The recognition of equivalence by the United States of the new Australian meat inspection system is discussed in J.J. Kastner and R.K. Pawsey, *Harmonising*

negotiated agreements laying down the conditions and requirements for the recognition of each other's SPS measures as equivalent for specific products or sectors. An example of such an equivalence agreement is that concluded between the European Union and Canada, where they have established a mechanism, laying down procedures and criteria for the recognition of equivalence of sanitary measures relating to trade in live animals and animal products.[477]

(g) Problems with Implementation. The implementation of Article 4 of the SPS Agreement to date leaves much to be desired. Developing countries have repeatedly raised the concern that developed countries demand "sameness" rather than equivalence of standards and control and inspection systems.[478] This deprives countries of the flexibility in their choice of measures that Article 4 intends to achieve. In addition, some Members[479] are of the opinion that the negotiation of formal equivalence agreements or determinations is too time consuming and resource intensive, imposing administrative burdens on both the importing and the exporting countries, whereas the gains in trade achieved thereby are limited. They therefore hold the view that recourse to other provisions of the SPS Agreement (such as the rules on risk assessment, transparency, technical assistance and control and inspection procedures) would yield more immediate trade benefits in the form of market access.[480] However, other Members note that although importing countries may view the administrative burden of an equivalence agreement as unjustified with regard to the limited trade benefits it can bring, the improved market access through recognition of equivalence can be very important for developing countries.[481] This is because developing country exports are often limited to a small range of products and involve few enterprises. Thus the recognition of equivalence with regard to the few products of export interest to a developing country could have great benefits for its export trade, while being less costly and burdensome than if equivalence negotiations across a wide range of products were necessary.

In its first periodic review of the implementation of the SPS Agreement,[482] the SPS Committee noted that although there had been an increase in the recognition of equivalence and in the negotiations towards bilateral agreements in this respect, greater efforts in this area were necessary. The Committee pointed in this regard to the importance of the recognition of equivalence for developing countries. The Committee requested Members

to provide more information on equivalence agreements that they have concluded bilaterally. In addition, the work of Codex and other international organizations to promote the recognition of equivalence was welcomed by the SPS Committee.[483]

(h) International Guidelines on Equivalence. Since the SPS Agreement does not lay down specific procedures or criteria for the recognition of equivalence, international guidelines in this regard would be useful. They would also reduce the costs of equivalence negotiations by providing a framework against which equivalence can be judged.[484]

In order to facilitate the recognition of equivalence among trading partners,[485] the Codex Alimentarius Commission has established international guidelines on the development of equivalence agreements,[486] on the design, operation, assessment and accreditation of food import and export inspection and certification systems,[487] and for the judgment of equivalence of sanitary measures associated with food inspection and certification systems.[488] The Equivalence Decision[489] mandates the SPS Committee to formally encourage the Codex Alimentarius Committee to complete its work with regard to equivalence as expeditiously as possible, and to formally encourage the OIE and IPPC to elaborate guidelines on equivalence as appropriate.

The SPS Committee has done so, and the International Committee of the OIE has since adopted the Guidelines for Reaching a Judgment on Equivalence of Sanitary Measures.[490] The Interim Commission on Phytosanitary Measures of the IPPC took note of the request of the SPS Committee and agreed to include, as priorities in its work programme, work on the equivalence and efficacy of measures, which is considered a pre-requisite to an international standard for phytosanitary measure on equivalence.[491] Such work is currently underway.

(i) The Equivalence Decision. At its Special Session on Implementation on October 18, 2000, the General Council referred the issue of implementation of Article 4 to the SPS

[483] Gretchen Stanton, *A Review of the Operation of the SPS Agreement*, Paper presented at the Conference on Agriculture and the New Trade Agenda in the WTO 2000 Negotiations, Geneva, October 1–2, 2000, at 5.

[484] It has been noted that in the absence of guidelines on the methodology for judging equivalence, specific bilateral issues are more likely to arise and the methodological concerns of developing countries are more likely to be neglected. Zarrilli and Musselli, supra note 28, at 8.

[485] One of the recommendations resulting from an FAO conference in 1999, under the heading "Food trade and implementation of WTO Agreements," was the recognition of the urgency of the development of Codex guidelines on the judgment of equivalence, initially in a generic sense and subsequently in relation to specific topics such as equivalence of inspection and certification systems and food hygiene measures. *See* Food and Agriculture Organization, Report of the Conference on International Food Trade Beyond 2000: Science-Based Decisions, Harmonization, Equivalence and Mutual Recognition, Melbourne, Australia, October 11–15, 1999, at Appendix II A.2. In addition, in discussions on equivalence in the SPS Committee, Members noted with regard to the concern about the time and resources needed to conclude equivalence agreements, that international guidelines for systemic application of the principle would be useful. The progress made by the CAC in this regard was noted. *See* Committee on Sanitary and Phytosanitary Measures, *Equivalence: Consideration of Article 4 of the SPS Agreement: Summary of Informal Discussions on Equivalence. Second Report by the Chairman,* G/L/445, March 21, 2001, ¶ 7.

[486] CAC/GL/34-1999, adopted by the CAC in its 23rd Session in 1999.

[487] CAC/GL/26-1997, adopted by the CAC in its 22nd Session in 1997.

[488] ALINORM 03/03A, Appendix II, ¶¶ 8–16, adopted by the CAC in its 25th session in 2003.

[489] *See infra* Part II(G)(1)(i).

[490] These guidelines were adopted at the 71st General Session of the OIE, which took place in Paris, France, on May 18–23, 2003.

[491] This occurred at the 5th Session of the Interim Commission on Phytosanitary Measures, held in Rome, Italy, on April 7–11, 2003.

Committee.[492] The SPS Committee held informal and special meetings on equivalence and also addressed the issue in its regular meetings.[493] The result of these discussions[494] was the adoption in November 2001 of the Decision on the Implementation of Article 4 of the Agreement on the Application of Sanitary and Phytosanitary Measures (hereinafter the Equivalence Decision)[495] by the SPS Committee.[496]

The Equivalence Decision[497] sets out some guidelines for any Member who requests the recognition of equivalence of their SPS measures and for the importing Member who is the addressee of such a request. In particular, the importing Member should, on request, supply information regarding the aim and rationale of its SPS measure, clearly identify the risks it addresses and indicate its chosen appropriate level of protection. The explanation should be accompanied by a copy of the underlying risk assessment for the measure or a technical justification based on a relevant international standard, guideline or recommendation. The importing Member must respond in a timely manner to the request for recognition of equivalence, normally within six months. The exporting Member must provide science-based and technical information to show that its measure achieves the level of protection chosen by the importing Member, and provide reasonable access for testing and inspection. The importing Member should evaluate the scientific and technical information with a view to determining if the SPS measure of the exporting Member achieves its level of protection and must give full consideration to requests for technical assistance for the implementation of Article 4.[498] The procedure for determining equivalence must be accelerated for products historically imported from the exporting Member. The consideration of equivalence may not be a reason to disrupt or suspend

[492] The General Council requested the SPS Committee "to examine the concerns of developing countries regarding the equivalence of SPS measures and to come up with concrete options as to how to deal with them." *See* General Council, *Minutes of Meeting: Special Session on Implementation*, WT/GC/M/59, October 18, 2000, ¶ 12.

[493] The informal meetings on equivalence were held on November 7, 2000, March 13, 2001 and July 9, 2001. The formal meetings where equivalence was considered were those of November 8–9, 2000 and July 10–11, 2001. In addition, two Special Meetings on equivalence were held on September 18–19, and October 24, 2001.

[494] The discussions on equivalence are summarized in Committee on Sanitary and Phytosanitary Measures, *Equivalence: Consideration of Article 4 of the SPS Agreement: Summary of Informal Discussions on Equivalence. Second Report by the Chairman,* G/L/445, March 21, 2001, ¶ 7.

[495] Committee on Sanitary and Phytosanitary Measures, *Decision on the Implementation of Article 4 of the Agreement on the Application of Sanitary and Phytosanitary Measures,* G/SPS/19, October 24, 2001.

[496] The Ministerial Conference at Doha took note of this Decision. Ministerial Conference, *Implementation-Related Issues and Concerns, Decision of 14 November 2001,* WT/MIN(01)/17, November 20, 2001, ¶ 3.3.

[497] The legal status of the Equivalence Decision brings up interesting questions. It was adopted under the authority of the SPS Committee to carry out the functions necessary to implement and further the objectives of the SPS Agreement under Article 12.1 SPS. However, the question arises whether this decision can be enforced in dispute settlement, since it is not a "covered agreement" for purposes of the DSU, and only claims pursuant to a "covered agreement" fall within the jurisdiction of panels or the Appellate Body. *See* Articles 1.1, 3.1 and 3.2 DSU. The Equivalence Decision cannot be the legal basis for a complaint of violation before panels or the Appellate Body. However, this does not mean that the Equivalence Decision could not be considered in the interpretation of Article 4 of the SPS Agreement. Arguably, it could constitute a subsequent agreement between the parties regarding the interpretation of the SPS Agreement and should thus be considered together with the context for interpreting the agreement in terms of Article 31.3(a) of the Vienna Convention on the Law of Treaties, which reflects customary international law with regard to treaty interpretation.

[498] This technical assistance may be in the form of help in identifying and implementing equivalent measures, otherwise enhancing market access opportunities, or the development and provision of science-based information to support the recognition of equivalence requests.

on-going imports of the relevant product from the exporting Member. Members must actively participate in the work of the international standard-setting organizations on equivalence and are encouraged to notify bilateral equivalence agreements to the SPS Committee.

The Equivalence Decision also creates obligations for the SPS Committee. It must revise its notification procedures to provide for the notification of equivalence agreements[499] and must reinforce the obligation of national Enquiry Points to provide information in this regard. Further, it must formally encourage the international standard-setting organizations to develop guidelines on equivalence. It must also develop a program to further the implementation of Article 4, with particular regard for the problems encountered by developing countries.

At its meeting of March 19–21, 2002, the SPS Committee adopted a program for further work on equivalence,[500] setting out the main issues for discussion in 2002 and 2003. The work program included discussions regarding the clarification of the following paragraphs of the Equivalence Decision: paragraph 5 (regarding accelerated steps for determining equivalence for products historically imported from the exporting Member); paragraph 6 (with respect to the relationship between current imports and potential compliance problems) and paragraph 7 (regarding the examination of scientific and technical information to determine equivalence of SPS measures). These discussions have taken place in steps, culminating in the adoption of clarifying texts.[501]

The SPS Committee completed the work programme on equivalence in March 2004. However, it agreed to keep equivalence as a standing item on the agenda of its meetings. A second, revised, version of the Equivalence Decision was adopted in 2004, providing updated information on the actions that have been undertaken pursuant to the Decision.[502]

2. Adaptation to Regional Conditions (Article 6)

The prevalence of pests and diseases is not determined by national boundaries, and may differ between various regions within a country. This may be the case either due to variations in climatic, environmental or geographic conditions within a country, or due to the efforts of the regulatory authorities to eradicate a pest or disease from specific areas. In practice, however, it is common to ban products from an entire country where it has been established that a pest or disease of significance for the importing country occurs, even if its prevalence is limited to certain regions.[503] If importing countries were instead to adapt their SPS measures to the conditions prevailing in the region of origin of the product,

[499] As mentioned above, the SPS Committee has since adopted a notification procedure for equivalence agreements or determinations. Committee on Sanitary and Phytosanitary Measures, *Notification of Determination of the Recognition of Equivalence of Sanitary or Phytosanitary Measures, Decision by the Committee. Addendum,* G/SPS/7/Rev.2/Add.1, July 25, 2002.

[500] Committee on Sanitary and Phytosanitary Measures, *Equivalence—Programme for Further Work, Decision by the Committee,* G/SPS/20. March 21, 2002.

[501] Clarifications to ¶¶ 5 and 6 of the Equivalence Decision were adopted by the SPS Committee at its meeting of November 7–8, 2002. These clarifications are contained in G/SPS/19/Add.1. In June 2003, a clarification to ¶ 7 was adopted (contained in G/SPS/A/Add.2) and a further clarification to ¶ 5 was adopted in March 2004 (G/SPS/19/Add.2).

[502] Committee on Sanitary and Phytosanitary Measures, *Decision on the Implementation of Article 4 of the Agreement on the Application of Sanitary and Phytosanitary Measures, Revision,* G/SPS/19/Rev.2, July 23, 2004.

[503] For example, in 1995 Ecuador banned the importation of fruit hosts of the oriental fruit fly from the United States after a few oriental fruit flies had been detected in Southern California. This example was noted in Johanson and Bryant, *supra* note 458.

this could greatly improve market access possibilities. Article 6.1 therefore requires that Members shall ensure that their sanitary or phytosanitary measures are adapted to the sanitary or phytosanitary characteristics of the area from which the product originated and to which the product is destined. This adaptation of SPS measures to regional conditions is especially significant for large developing countries where conditions vary greatly from region to region, as the costs of eradicating a pest or disease or keeping pest- or disease-free status can be limited by focusing on specific areas.

(a) Factors to Be Taken into Account (Article 6.1). In determining what the sanitary or phytosanitary characteristics of a region are, Article 6.1 obliges Members to take into account the level of prevalence of specific pests or diseases, and the existence of eradication or control programs and guidelines developed by international organizations. This is not an exhaustive list of factors.

It is significant that international guidelines are mentioned as a factor that must be considered. The OIE has specific procedures in place pursuant to which, after an investigation and evaluation of the evidence, it officially recognizes the disease-free status of a country or region with regard to foot-and-mouth disease,[504] rinderpest and contagious bovine pleuropneumonia.[505] The Director General publishes a list of countries that meet the requirements for disease free status. With regard to these and other diseases the OIE lays down guidelines according to which a country can declare itself, or a *zone* within the country, free of a particular disease. To do so, the country must provide epidemiological information that conforms to the standards laid down in the *Animal Health Code,* to the importing country in support of its declaration. The IPPC has also laid down guidelines for the establishment of pest-free status[506] and for the determination of pest status in an area.[507] Further, the IPPC has created guidelines for the establishment of pest-free production sites and areas of production.[508] All these guidelines should facilitate the implementation of Article 6, as they clarify what is meant by a pest- or disease-free country or region and how this can be established.

However, concerns have been raised that even the official recognition of a Member as disease-free by the OIE is in practice not accepted by other Members as proof of disease-free status and the exporting Member is required to supply anew all the evidence it has in support of its claim of disease-free status to the importing country.[509] This situation seems to be contrary to the aim of Article 6.

(b) Recognition of Pest- or Disease-free Areas or Areas of Low Pest or Disease Prevalence (Article 6.2). Annex A, paragraph 6 defines a pest- or disease-free area as an area which

[504] OIE International Committee, *Establishment of a List of Foot and Mouth Disease (FMD) Free Countries Where Vaccination is not Practiced*, Resolution XI and *Procedure for the Recognition of the Foot and Mouth Disease Status of Member Countries*, Resolution XII, 63rd General Session, (1995)

[505] A specific procedure for recognition of disease-free status was created for rinderpest and contagious bovine pleuropneumonia and will soon also be created for BSE. It should be noted that with regard to rinderpest, only whole countries and not regions can be officially recognised as rinderpest-free by the OIE.

[506] International Plant Protection Convention, *Requirements for the Establishment of Pest Free Areas*, ISPM 4, FAO (1996).

[507] International Plant Protection Convention, *Determination of Pest Status in an Area*, ISPM 8, FAO (1998).

[508] International Plant Protection Convention, *Requirements for the Establishment of Pest Free Places of Production and Pest Free Production Sites*, ISPM 10, FAO (1999).

[509] Committee on Sanitary and Phytosanitary Measures, *Articles 6(2), 6(3) and Annex A(3)(B): Recognition of the Concept of Pest- or Disease-Free Areas as an International Standard, Guideline or Recommendation: Submission by South Africa,* G/SPS/GEN/139, November 2, 1999.

can be all or part of a country or of several countries, as identified by the competent authorities, in which a pest or disease does not occur. This area may adjoin an area where the pest or disease does occur, but is subject to regional control measures such as protection, surveillance or buffer zones that confine or eradicate the pest or disease. An area of low pest- or disease prevalence is defined as an area, which can be all or part of a country or of several countries, as identified by the competent authorities, in which a pest or disease occurs at low levels and is subject to effective surveillance, control or eradication measures.

Article 6.2 specifically creates the obligation on Members to recognize the concepts of pest- or disease-free areas and areas of low pest or disease prevalence. These areas shall be determined with regard to factors such as geography, ecosystems, epidemiological surveillance and the effectiveness of SPS controls.

(c) Obligations on Exporting Members (Article 6.3). In terms of Article 6.3, an exporting Member that claims that regions within its territory are pest- or disease-free or have low pest or disease prevalence must provide the necessary evidence to objectively demonstrate this fact to the importing Member. For this purpose, it must give the importing Member reasonable access for inspection, testing and other relevant procedures.

Once again, it can be argued that the official recognition of the pest-free status of a country by the OIE and the publication of this status in the official Bulletin of the OIE should be accepted as constituting the "necessary evidence" for an objective demonstration of disease-free status. Members that refuse to accept such evidence could therefore be challenged under Article 6.

(d) Ongoing Work on Regionalization. Several Members, particularly developing countries, have raised concerns that the full benefits of regionalization, as provided for in Article 6, are not being reaped due to problems with the implementation of this provision. These Members have emphasized the importance of regionalization in reducing barriers to trade. As a result, the SPS Committee is currently conducting work in this area. Informal meetings of the SPS Committee have been held, dedicated to the regionalization issue, where the submissions of Members have been discussed,[510] and representatives of the OIE and IPPC have made presentations.[511] At these meetings, Members have stressed the crucial role of the international organizations in creating specific standards in this area, in order to facilitate the recognition of pest- and disease-free areas and areas of low pest and disease prevalence. Chile has submitted a proposal, later revised, regarding the

[510] Submissions were made by Mexico, Argentina, Chile and Peru (G/SPS/GEN/388, G/SPS/GEN/440, G/SPS/GEN/417, G/SPS/GEN/418, G/SPS/GEN/445, G/SPS/W/129, G/SPS/W/140, G/SPS/GEN/381, G/SPS/GEN/433), followed later by other Members.

[511] The OIE representative indicated that in May 2004, the OIE would consider for adoption simplified definitions and procedures for regionalization, which would provide Members with recommendations on regionalization for a broad range of diseases of terrestrial animals. Similar work would be undertaken with regard to aquatic animals but was delayed due to the complexity of the issue. The concept of regionalization is part of existing OIE recommendations for how countries could achieve, maintain, and regain pest-free status for most major diseases. The IPPC representative described the ongoing efforts to develop standards related to the designation of pest-free areas and areas of low pest prevalence. The relevant existing standards are ISPM 4 (containing detailed requirements for the establishment of pest-free areas) and ISPM 10 (containing information on pest-free areas of production) and the draft standard on requirements for the establishment, maintenance and verification of areas of low pest prevalence. However, there is as yet no IPPC procedure for officially recognizing pest-free areas. *See* Committee on Sanitary and Phytosanitary Measures, *Summary of the Meeting Held on 17–18 March 2004, Note by the Secretariat*, G/SPS/R/33, May 7, 2004, ¶¶ 109–110.

adoption of procedural guidelines for the implementation of regionalization measures by the SPS Committee.[512] This proposal has been supported by several Members, who suggest that the Committee address the regionalization issue in a similar way to the work it has done on equivalence and transparency.[513] Although the SPS Committee agreed that further work on regionalization is necessary, there was no consensus on whether the Committee should develop guidelines and procedures. The Chairman thus proposed that work continue in informal mode on this issue.

III. Institutional and Procedural Provisions of the SPS Agreement

The SPS Agreement contains several provisions dealing with institutional or procedural matters. Some of these provisions impose obligations of an institutional or procedural nature on Members, for example those requiring Members to follow certain procedures and set up certain institutions with respect to notification and transparency and those disciplining Members' use of control, inspection and approval procedures, in order to minimize their trade effects. Other provisions deal, instead, with the institutions and procedures necessary for the smooth and effective implementation of the SPS Agreement. Both these categories of institutional and procedural provisions have an important impact on the effectiveness of the SPS Agreement in achieving its goals, and will be discussed in detail below.

A. Transparency (Articles 5.8 and 7, and Annex B)

An important hurdle faced by exporters of food and agricultural products is a lack of transparency regarding SPS measures with which they must comply. SPS measures are often complex and subject to change, as a result of which exporters have no certainty that their products will have access to the markets in the country of destination. Obtaining the necessary information regarding the SPS measures with which they must comply is often a costly and burdensome process for exporters. In addition, the lack of information regarding SPS measures is problematic for Members whose exporters are faced with SPS barriers to trade, as they need to obtain full information about these measures in order to identify whether they are legitimate measures or whether they could be challenged under the SPS Agreement.

For these reasons, the transparency and notification obligations in the SPS Agreement are crucial in facilitating market access for exports since the cost and difficulty of obtaining information on their trading partners' SPS measures are thereby greatly reduced. In addition, the transparency obligations make it possible for Members to become acquainted with proposed SPS measures before they come into force, enabling them to raise their concerns regarding these measures at an early enough stage to influence the final measure adopted.

1. Scope of Application of Notification Obligation

It is useful to start by identifying when the notification obligation applies. Article 7 of the SPS Agreement obliges Members to notify changes in their SPS measures and to provide

[512] Committee on Sanitary and Phytosanitary Measures, *Draft Decision on the Implementation of Article 6 of the Agreement on the Application of Sanitary and Phytosanitary Measures, Proposal by Chile, Revision,* G/SPS/W/140/Rev.1, October 30, 2003.

[513] Committee on Sanitary and Phytosanitary Measures, *Summary of the Meeting Held on 17–18 March 2004, Note by the Secretariat*, G/SPS/R/33, May 7, 2004, ¶¶ 115.

information on their SPS measures in accordance with Annex B. In terms of Annex B.1, Members must publish all adopted "SPS regulations" in a way that enables all interested Members to become acquainted with them. A footnote to this paragraph defines "SPS regulations" as SPS measures such as laws, decrees or ordinances of general application. The Appellate Body in *Japan—Agricultural Products* noted with regard to this definition:

> We consider that the list of instruments contained in the footnote to paragraph 1 of Annex B is, as is indicated by the words "such as", not exhaustive in nature. The scope of application of the publication requirement is not limited to "laws, decrees or ordinances", but also includes, in our opinion, other instruments which are applicable generally and are similar in character to the instruments explicitly referred to in the illustrative list of the footnote to paragraph 1 of Annex B.
>
> The object and purpose of paragraph 1 of Annex B is "to enable interested Members to become acquainted with" the sanitary and phytosanitary regulations adopted or maintained by other Members and thus to enhance transparency regarding these measures. In our opinion, the scope of application of the publication requirement of paragraph 1 of Annex B should be interpreted in the light of the object and purpose of this provision.[514]

Further, Annex B.5 provides that Members must notify proposed new SPS measures in cases where no international standard, guideline or recommendation exists or where the Member's SPS measure is "not substantially the same" as the international standard, and the measure may have a significant effect on trade. The question arises whether a measure that is substantially the same as an international standard for purposes of Annex B.5 and thus does not have to be notified is a measure "based on" an international standard under Article 3.1, or a measure that "conforms to" an international standard under Article 3.2. It would appear that a measure "not substantially the same" as an international standard is a measure that does not "conform to" the international standard under Article 3.2, although the reason for the difference in terminology is not clear. This view is supported by the fact that measures which do "conform to" international standards benefit from a presumption of consistency with the SPS Agreement and thus also with its Annexes, including the transparency provisions of Annex B, whereas measures that are simply "based on" international standards do not. Therefore, if a measure is merely "based on" an international standard, it seems likely that it will be regarded as "not substantially the same" as the international standard for purposes of Annex B.5 and will have to be notified.

In addition, the notification procedures of Annex B.5 apply only if the relevant SPS measure "may have a significant effect on trade of other Members". The Secretariat has established non-binding guidelines for what is meant by a "significant effect on trade".[515] According to these guidelines, this term may refer to the import-enhancing or import-reducing effect on trade in a specific product, group of products or products in general of a single SPS measure or various SPS measures in combination, between two or more Members. The guidelines further set out various factors that Members should take into account when determining if there is a significant effect on trade.[516]

[514] Report of the Appellate Body, *Japan—Measures Affecting Agricultural Products*, *supra* note 97, ¶¶ 105–106.

[515] Committee on Sanitary and Phytosanitary Measures, *Recommended Notification Procedures for Implementing the Transparency Obligations of the SPS Agreement (Article 7),* G/SPS/7/Rev.2, April 2, 2002, ¶ 6.

[516] These include the value or importance of the imports for the importing and/or exporting Members concerned, the potential development of these imports and difficulties for producers, particularly in developing countries, to comply with the proposed SPS measure.

In *Japan—Apples,* the issue arose whether certain changes in Japan's measure "may have a significant effect on trade of other Members" and should thus have been notified. The Panel referred to the guidelines on this concept adopted by the SPS Committee and held that:

> . . . the most important factor in this regard is whether the change affects the conditions for market access for the product concerned, that is, would the exported product (apple fruit from the United States in this case) still be permitted to enter Japan if they complied with the prescription contained in the previous regulations. If this is not the case, then we must consider whether the change could be considered to potentially have a *significant* effect on trade of other Members. In this regard it would be relevant to consider whether the change has resulted in any increase in production, packaging and sales costs, such as more onerous treatment requirements or more time-consuming administrative formalities.[517]

The crux of the issue is therefore whether the changes have an actual or potential effect on the conditions for market access. If so, the changes must be notified.

When all the conditions of Annex B.5 are met, Members have to comply with the notification procedure set out in the rest of the Annex.

2. Notification Procedure

Annex B.5–10 sets out the notification procedure to be followed. In terms of this procedure, the proposal for a new measure must be published early enough to allow other Members to become acquainted with the proposal. In addition, the products to be covered and the objective and rationale for the proposed measure must be notified to other Members through the WTO Secretariat,[518] allowing a reasonable time for comments from other Members. These comments must be discussed upon request and must be taken into account by the Member imposing the SPS measure. In urgent cases, Members may follow a shorter procedure under Annex B.6. Members are not obliged to disclose confidential information that could hamper the enforcement of their SPS measures or prejudice the legitimate interests of enterprises.[519]

A special meeting of the SPS Committee on the operation of the transparency provisions of the SPS Agreement was held five years after the coming into force of the SPS Agreement.[520] The Secretariat has established guidelines on transparency, contained in the handbook *How to Apply the Transparency Provisions of the SPS Agreement*.[521] These are particularly aimed at helping developing countries comply with their transparency obligations. In addition, the Secretariat has established detailed guidelines for notifications under both the normal and the urgent procedure, including a specific format to be

[517] Report of the WTO Panel, *Japan—Measures Affecting the Importation of Apples, supra* note 57, ¶ 8.314. After comparing the two existing measures (which predated the SPS Agreement) with the two new measures, the Panel did not consider that the changes in one measure could have a significant effect on the trade of other Members, and was unable to determine if the changes to the second measure were strictly editorial or introduced substantial changes. It therefore found that the US had failed to make a *prima facie* case of violation of Article 7 SPS.

[518] Notifications received by the Secretariat are circulated to Members as part of the official document series G/SPS/N/*.

[519] Annex B.11(b).

[520] Committee on Sanitary and Phytosanitary Measures, *Summary of the Special Meeting of the SPS Committee on the Transparency Provisions of the SPS Agreement, 9 November 1999, Note by the Secretariat,* G/SPS/R/16, January 20, 2000.

[521] Published in November 2000, available at: www.wto.org/english/tratop_e/sps_e/spshand_e.pdf. The guidelines are non-binding and are not intended as a legal interpretation of the relevant provisions of the SPS Agreement.

used when notifying new SPS measures.[522] These guidelines have since been revised.[523] The new guidelines state that where previously notified measures are changed so as to apply to new Members or new products they should be re-notified by means of the submission of a Revision. An additional sixty days are allowed for comments. The revision was originally proposed by New Zealand in response to an implementation proposal of Brazil,[524] which called for the re-notification of measures if they may have negative trade effects on trade opportunities of developing countries.[525]

Other proposals being considered for the amendment of the notification guidelines relate to the notification of special and differential treatment. These are, first, the proposal of Egypt to include a box on special and differential treatment in the notification formats, where Members should indicate *ex ante* what special treatment they are providing to affected developing countries.[526] Second, there is a Canadian proposal to oblige Members, *ex post*, to notify requests for special and differential treatment arising from their notified measures, indicating whether such treatment has been provided, giving reasons in case of a refusal to do so.[527] It is interesting to note that the Secretariat is obliged, under paragraph 9 of Annex B, to draw the attention of developing country Members to any notifications relating to products of particular interest to them. As it is difficult for the Secretariat to establish which notifications affect products significant to developing countries, it fulfils this obligation by circulating, to all Members, monthly lists of notifications.

3. Request for Reasons for SPS Measures (Article 5.8)

An additional provision in the SPS Agreement that contributes to transparency is Article 5.8. According to this provision, an exporting Member may request an importing Member to provide reasons for the latter's SPS measure where it is not based on international standards and it constrains or could potentially constrain exports. The importing Member is then obliged to provide such reasons.

This obligation is significant as it can assist a Member in establishing a *prima facie* case that another Member's SPS measure is not based on a risk assessment or sufficient scientific evidence. In *Japan—Agricultural Products*, the Appellate Body noted the

[522] Committee on Sanitary and Phytosanitary Measures, *Recommended Notification Procedures,* G/SPS/7/Rev.1, November 26, 1999.

[523] Committee on Sanitary and Phytosanitary Measures, *Recommended Notification Procedures for Implementing the Transparency Obligations of the SPS Agreement (Article 7),* G/SPS/7/Rev.2, April 2, 2002. This revision was adopted at the SPS Committee meeting of meeting of March 19–21, 2002.

[524] Committee on Sanitary and Phytosanitary Measures, *Agreement on the Application of Sanitary and Phytosanitary Measures. Proposal by Brazil,* G/SPS/W/108, June 22, 2001.

[525] Brazil's proposal followed a dispute with Canada in February 2001 due to a ban by Canada of Brazilian beef imports due to BSE concerns. The ban was based on a previously notified regulation and was therefore not notified to the WTO although it was applied to Brazil for the first time. ICTSD, *SPS Committee Resolves Implementation Issue, Discusses Biotech,* 6(11) BRIDGES WEEKLY TRADE DIGEST March 26, 2002.

[526] This proposal was supported by many developing countries, who believe it would encourage developed countries to build into their measures leniency for developing countries, such as longer compliance periods. Developed countries (EC, Canada, U.S.) questioned whether this would be effective in ensuring special and differential treatment.

[527] The Egyptian proposal was carried forward to the next meeting of the SPS Committee, where Canada set out its proposal (contained in G/SPS/W/127) that the special and differential treatment provided by a Member be notified later, by means of an addendum to the original notification. After amendments to this proposal following comments by Members, the revised proposal was adopted at the meeting of March 24, 2004 (G/SPS/W/132/Rev.2) provided no objections were raised. Malaysia objected to the adoption, due to the fact that it places the onus on the developing country to raise its concerns regarding the notified measure. At the SPS Committee meeting of June 22–23, 2004, Members again failed again to reach agreement on the Canadian proposal due to opposition of Malaysia.

following with respect to the establishment of a *prima facie* case under Article 2.2:

> (. . .) The United States could have requested Japan, pursuant to Article 5.8 of the *SPS Agreement*, to provide "an explanation of the reasons" for its varietal testing requirement, in particular, as it applies to apricots, pears, plums and quince. Japan would, in that case, be obliged to provide such explanation. The failure of Japan to bring forward scientific studies or reports in support of its varietal testing requirement as it applies to apricots, pears, plums and quince, would have been a strong indication that there are no such studies or reports.[528]

4. Infrastructure for Transparency

Members are further required to create the infrastructure necessary for the implementation of their notification obligations. Under Annex B.10, Members must designate a single central government authority as responsible for implementing the notification procedures in Annex B.5–8 on a national level. The Secretariat regularly updates and circulates lists of Members' National Notification Authorities.[529]

Also as part of the infrastructure necessary for transparency, the SPS Agreement obliges each Member to establish a national Enquiry Point. The Secretariat maintains an updated list of Enquiry Points, which it circulates to Members.[530] A Member's national Enquiry Point must provide answers to all reasonable questions from other Members as well as provide relevant documents regarding: any adopted or proposed SPS measures in its territory; the risk assessment basis for the measure; control and inspection procedures, production and quarantine treatment, pesticide tolerance and food additive approval procedures; and the Member's participation in international or regional SPS systems as well as bilateral or multilateral agreements within the scope of the SPS Agreement. Requested copies of documents must be supplied to other Members at the same price as to nationals.

By June 18, 2004, of the then 147 WTO Members, 127 had established National Notification Authorities and 136 had established Enquiry Points.[531]

In order to address the problems that Members experience with the operation of Enquiry Points, the SPS Committee has held a special meeting on this issue in June 2003. Prior to the meeting, a questionnaire was circulated by the Secretariat on the operation of Enquiry Points and National Notification Authorities, to which eighty responses were received. At the meeting, officials from Members' Enquiry Points and National Notification Authorities came together for in-depth discussions focusing on the problems encountered with the operation of these bodies and the identification of possible solutions.[532] The Secretariat will use the information gathered to identify best practice models to help developing countries operate their Enquiry Points effectively.

B. Control, Inspection and Approval Procedures (Article 8 and Annex C)

In addition to imposing SPS standards, countries also have mechanisms in place to check compliance with these standards and to approve new products. Where these mechanisms

[528] Report of the Appellate Body, *Japan—Measures Affecting Agricultural Products*, *supra* note 100, ¶ 137.

[529] These can be found in the G/SPS/NNA/* series of official WTO documents.

[530] These can be found in the G/SPS/ENQ/* series of official WTO documents.

[531] These numbers include the 25 Member States of the European Union, together with the European Communities, in respect of which a single Notification Authority, the European Commission Directorate General for Health and Consumer Protection, is responsible for notifications. Separate Enquiry Points have been notified for the European Communities and each of its Member States. See Committee on Sanitary and Phytosanitary Measures, *Implementation of the Transparency Obligations as of 18 June 2004, Note by the Secretariat, Revision,* G/SPS/GEN/27/Rev.13, June 21, 2004.

[532] Committee on Sanitary and Phytosanitary Measures, *Special Meeting of the SPS Committee on the Operation of Enquiry Points held on 31 October 2003,* G/SPS/R/32, February 6, 2004.

are complex and lengthy, they may effectively restrict market access. They may also be duplicative of domestic conformity assessment procedures in the exporting country, unnecessarily adding to the costs of exportation. Thus the SPS Agreement establishes rules in Article 8 and Annex C to prevent Members from using technical procedures to monitor compliance with their SPS standards as a way to restrict the importation of foreign products. According to Article 8, Members must comply with Annex C as well as the other provisions of the SPS Agreement in the operation of their control, inspection and approval procedures. This includes their national systems for approval of additives and establishment of tolerances for contaminants in food, beverages and feedstuffs.

Annex C contains the detailed rules applicable to control, inspection and approval procedures. These are mainly aimed at ensuring that the procedures are not more lengthy or burdensome than reasonable and necessary and do not discriminate between imports and like domestic products. In addition, Members may not charge fees for the control, inspection or approval procedures that are higher than the actual cost of the service. A review procedure must be in place for complaints regarding the operation of the control, inspection or approval procedure. Where Members require approval for the use of additives or have a system in place for the determination of tolerances for contaminants, they are encouraged to use the relevant international standard as the basis for allowing importation until a final determination is made.[533] In addition, exporting Members are obliged to facilitate the work of other Members' controlling authorities on their territories where the SPS measure relates to control at the level of production.

The relevance of these disciplines on control, inspection and approval procedures can be illustrated by the following example. In a meeting of the SPS Committee in November 2000, Thailand raised its concerns in respect of Australia's pre-shipment inspection requirements for durian fruit. Australia required that for shipments of less than 1000 fruits, samples of 450 fruits be randomly selected and cut open to check for the presence of seed borers and for shipments of more than 1000 fruits, samples of 600 fruits be thus cut open. The result was that, in many cases, for each fruit to be exported to Australia, a pre-shipment volume of two fruits was necessary, thus doubling the cost of durian in each shipment. Due to the existence of disciplines on control, inspection and approval procedures in the SPS Agreement, Thailand was able to raise its concerns before the SPS Committee regarding the compatibility of this measure with the provision in Annex C.1(e) which stipulates that any requirements for control, inspection and approval of individual specimens of a product must be limited to what is reasonable and necessary.[534] In its response to Thailand's statement,[535] Australia noted that its cutting requirement was in accordance with the internationally accepted approach. However, it noted that due to Thailand's concerns, the Australian authority had amended the proposed cutting

[533] This provision takes into account the fact that it is common practice among regulatory authorities to prohibit products containing new additives or contaminants until the exporter has established the safety of the additive or the tolerance level for the contaminant to the satisfaction of the authority in the country of import. Once the additive is approved or a tolerance level established for the contaminant, the product may be imported.

[534] Committee on Sanitary and Phytosanitary Measures, *Australia's Import Restrictions on Durian: Statement by Thailand at the Meeting of 8–9 November, 2000,* G/SPS/GEN/217, November 22, 2000, ¶ 3.1.

[535] Committee on Sanitary and Phytosanitary Measures, *Australia's Import Restrictions on Durian. Response from Australia to Thailand's Statement at the Meeting of 8–9 November 2000*, G/SPS/GEN/218, November 22, 2000 ¶¶ 6–7.

requirement to allow culled fruits to be included in the samples taken from the export shipment, thus reducing its economic impact.[536]

C. The SPS Committee (Article 12)

1. Composition

A Committee on Sanitary and Phytosanitary Measures (the "SPS Committee") is established under Article 12.1 of the SPS Agreement. The SPS Committee consists of representatives of all WTO Members[537] and takes its decisions by consensus. Observer status[538] is granted to governments that have observer status in higher WTO bodies as well as representatives from certain international intergovernmental organizations with a mandate in this area. Observers may be invited to speak at meetings and table papers, but do not participate in decision-making in the Committee. The SPS Committee is serviced by the Agriculture and Commodities Division of the WTO Secretariat. The SPS Committee usually holds three meetings per year, and may convene informal meetings as necessary.

2. Functions

In terms of Article 12.1, the SPS Committee has as its goal to provide a regular forum for consultations and further the implementation of the SPS Agreement and the achievement of its aims, in particular the harmonization of SPS measures.[539] The specific tasks of the SPS Committee in the fulfillment of these objectives are elaborated in the other paragraphs of Article 12.

(a) Forum for Consultations (Article 12.1). Article 12.2 mandates the SPS Committee to encourage and facilitate consultations between Members on specific SPS issues. Coupled with the transparency obligations, this provision may go a long way towards helping countries to solve SPS conflicts in a low-cost manner, without resort to dispute settlement. Discussions on notified changes in SPS legislation take place, with concerns being raised by exporting Members and clarifications given by the Member imposing the measure.[540] This could lead to the revision of the notified measure or further bilateral consultations between the Members involved. In this way, disputes can be resolved without recourse to the expensive and time-consuming process of formal dispute settlement. In a

[536] However, at a recent meeting of the SPS Committee in June 2002, Thailand reiterated its concern regarding the cutting requirement and the excessive sample size. Australia indicated that it was willing to consider alternatives to destructive sampling if their efficacy was shown. Joint trials indicated that x-ray technology was promising and Australia agreed to keep the SPS Committee informed in this regard. *See* Committee on Sanitary and Phytosanitary Measures, *Summary of the Meeting Held on 25–26 June 2002, Note by the Secretariat*, G/SPS/R/27, August 2, 2002, ¶¶ 133–134.

[537] Members may send representatives of their choice, and normally send officials from their food safety authorities or veterinary or plant health officials.

[538] Criteria used in decisions to grant observer status are: the mandate, scope and area of work of the applicant organization and reciprocity with regard to the grant of observer status to the WTO. Committee on Sanitary and Phytosanitary Measures, *Criteria for Observer Status,* G/SPS/GEN/229, February 23, 2001.

[539] In terms of this power, the SPS Committee adopted the Equivalence Decision in 2001, in order to facilitate the implementation of Article 4 of the SPS Agreement. This decision is further discussed *supra* Part II(G)(1)(i).

[540] The Secretariat provides a summary of all specific trade-related concerns raised in the SPS Committee, together with an indication of the resolution of the issue, if notified. Committee on Sanitary and Phytosanitary Measures, *Specific Trade Concerns: Note by the Secretariat. Revision,* G/SPS/GEN/204/Rev.2, February 15, 2002.

recent study[541] it was shown that approximately 120 SPS issues have been raised in the SPS Committee, almost half involving complaints by developing countries or transition economies.[542]

(b) Monitoring and Encouraging the Process of Harmonization (Article 12.2–12.6). Article 12 of the SPS Agreement allocates various tasks to the SPS Committee regarding the process of international harmonization of SPS standards. It must encourage the use of international standards, guidelines and recommendations by all Members, and sponsor technical consultation and study in this regard.[543] It must also maintain close contact with the three main international standard-setting organizations in order to obtain the best possible scientific advice for the administration of the SPS Agreement and avoid duplication of effort.[544] Further, the SPS Committee must develop a procedure to monitor the process of international harmonization and the use of international standards.[545] A provisional procedure was established[546] and extended three times.[547] In conformity with this procedure,[548] the SPS Committee draws up annual reports based on information and comments from Members and international standard-setting organizations regarding the use of existing international standards, the need for new international standards and work on the adoption of such standards. Further, to avoid duplication, Article 12.5 allows the SPS Committee to use information gathered by the international organizations. Finally, on the initiative of a Member the Committee may, in terms of Article 12.6, invite the international organizations to examine specific matters with regard to a particular standard, guideline or recommendation, including the basis for explanations of non-use of the standard.

(c) Periodic Review of the Operation and Implementation of the SPS Agreement (Article 12.7). The SPS Committee is obliged by Article 12.7 to review the operation and implementation of the SPS Agreement three years after its entry into force, and thereafter as the need arises. Where appropriate, the SPS Committee may make proposals to the Council for Trade in Goods regarding amendments to the SPS Agreement. The SPS Committee established a procedure for this review[549] and the first review was conducted in 1998, resulting in a report of the SPS Committee.[550] However, no amendments were

[541] Micheal Friis Jensen, *Reviewing The SPS Agreement: A Developing Country Perspective,* Working Paper 02.3, Centre for Development Research (2002), at 18, table 1.

[542] It is however, significant that almost all developing country complaints come from the developing countries that are part of the Cairns group of agricultural exporting Members and from India and Mexico, while African and least-developed country complaints are almost non-existent. *Id*.

proposed as a result of this review. The SPS Committee noted that the review had not been comprehensive and recognized that Members could raise any issue for the consideration of the Committee at any time.

The Ministerial Decision on Implementation adopted in Doha, instructs the SPS Committee to review the operation and implementation of the SPS Agreement at least once every four years.[551]

The WTO Secretariat has noted that, as a result, the report of the next review should be prepared for the Sixth Session of the Ministerial Conference. It has therefore proposed a procedure for the review process, in consultation with the Chairman of the SPS Committee. This procedure consists of a series of informal meetings, back-to-back with the regular SPS Committee meetings, where issues identified by Members will be discussed. Members will be invited to submit papers in advance of the meetings and the Chairman will report on the results of the meetings to the each regular SPS Committee meeting.[552]

3. Overview of Work (1995–2002)

Each year, the SPS Committee holds an average of three regular committee meetings. In addition, it holds informal meetings to discuss specific issues as the need arises. At each regular meeting, specific trade concerns raised by Members are discussed, often in response to notifications received and circulated by the SPS Committee under the transparency provisions of Article 7 and Annex B.[553] In addition, there are standing items on the agenda of SPS Committee meetings relating to technical assistance and special and differential treatment for developing countries and the use of international standards, and Members are encouraged to raise concerns they may have in these areas and report on progress made.

Since the entry into force of the SPS Agreement through October 1, 2003, the SPS Committee received and circulated over 3,600 notifications of SPS measures.[554] In addition, it adopted non-binding guidelines for the implementation of Article 5.5.[555] The Committee adopted and revised recommended procedures for notification,[556] including notification of equivalence agreements,[557] as well as a procedure for the monitoring of harmonization. It has drawn up six annual reports on the monitoring of harmonization. The SPS Committee maintains close working relationships with the CAC, OIE and IPPC and receives regular updates of their activities. The SPS Committee also conducts informal consultations with various international intergovernmental organizations on the recognition of their observer status at meetings of the SPS Committee. Regular observer status has been granted to the CAC, OIE, IPPC, Food and Agriculture Organization, World Health Organization, International Organization for Standardization, International Trade

Center, United Nations Conference on Trade And Development, World Bank, International Monetary Fund and observer status on an *ad hoc* meeting-by-meeting basis to the group of African, Caribbean and Pacific countries, European Free Trade Association, Inter-American Institute for Cooperation on Agriculture, Organization for Economic Cooperation and Development, Regional International Agricultural Health Organization, and Latin American Economic System. Existing requests for observer status from the International Organization for Vine and Wine, the Asia Pacific Coconut Community, and the Convention on Biodiversity and its Cartagena Protocol on Biosafety[558] continued to be considered.

In 2001, the Committee adopted the Equivalence Decision in terms of its powers under Article 12.1 and has adopted a future work program on the subject of equivalence. In terms of this work program, the Committee, as discussed above, has adopted clarifications to the Equivalence Decision.[559] As mentioned above, work regarding regionalization under Article 6 of the SPS Agreement is currently ongoing. The SPS Committee also circulated a questionnaire in July 1999 on the subject of technical assistance, to gather information on technical assistance that Members have asked for, received and provided in relation to the implementation of the SPS Agreement.[560] In October 2001, a second questionnaire was circulated to identify the technical assistance needs of developing countries.[561] The SPS Committee has also considered various proposals regarding special and differential treatment which the General Council referred to it in May 2003, and has established a work plan for the consideration of these proposals. It has reported to the General Council on the progress made in this regard.[562]

At its meetings of November 7–8, 2002, and October 29–30, 2003, the SPS Committee conducted a transitional review, under paragraph 18 of the Protocol of Accession of the Peoples Republic of China. Under this review, Members put questions in writing to China regarding its implementation of the SPS Agreement. China responded both to these questions and to others raised in the meeting.[563]

D. Dispute Settlement (Article 11)

In order to enforce their rights under the SPS Agreement, Article 11.1 provides that Members can have recourse to the dispute settlement system of the WTO, as embodied in Articles XXII and XXIII of GATT 1994 and elaborated in the Dispute Settlement Understanding (the "DSU"), except as otherwise specifically provided in the SPS Agreement. Thus, the DSU applies fully and unconditionally to disputes under the SPS Agreement.[564] In addition, Article 11.3 provides that nothing in the SPS Agreement impairs Members' rights under other international agreements, including the right to resort to the good offices or dispute settlement mechanisms of other international organizations

[562] These reports were circulated as G/SPS/27 and G/SPS/30.

[563] World Trade Organization, *Report (2003) on the Activities of the Committee on Sanitary and Phytosanitary Measures,* G/L/661, November 18, 2003, ¶ 10.

[564] The dispute settlement system is discussed in detail in Chapters 25 *et seq.* of this book. Here attention will only be given to specific aspects applicable to SPS disputes.

or established under any international agreement. In addition to the normal rules of the DSU, the SPS Agreement contains a special provision with regard to dispute settlement, dealing with the authority of panels to seek expert advice.[565]

Three issues regarding the settlement of disputes arising under the SPS Agreement deserve particular attention: the burden of proof; the standard of review; and the use of scientific experts and expert review groups.

1. Special Dispute Settlement Rules and Procedures

(a) Burden of Proof. Due to the complexity of the facts and scientific evidence in SPS disputes, the question of which party bears the evidentiary burden is particularly significant in cases involving health measures. In *EC—Hormones* the Appellate Body emphasized the importance of this issue, in the light of the "multiple and complex issues of fact" that may arise under the SPS Agreement.[566]

The Appellate Body first set out the burden of proof rules generally applicable in WTO disputes in *U.S.—Wool Shirts and Blouses*.[567] There it recognized that various international tribunals and most national jurisdictions apply the rule that the party that asserts a fact, whether plaintiff or respondent, must prove it. Once a party has adduced sufficient evidence to create a presumption that what is claimed is true, in other words has established a *prima facie* case, the evidentiary burden shifts to the other party who must rebut the presumption or lose the case. In *EC—Hormones* the Appellate Body held that this rule applies equally to disputes under the SPS Agreement. It rejected the Panel's finding that the SPS Agreement allocates the burden of proof to the Member imposing the SPS measure.[568]

The question of the burden of proof under the SPS Agreement arose again in *Japan—Agricultural Products*.[569] The Panel found that Japan's varietal testing requirement was maintained without "sufficient scientific evidence" contrary to Article 2.2, with regard to apples, cherries, nectarines and walnuts.[570] However, it did not consider that there was sufficient evidence before it to extend this finding to apricots, pears, plums and quince. This was due to the fact that the parties had not submitted any evidence for the latter products. The Panel had also asked the experts advising it whether their statements

[565] Article 11.2 of the SPS Agreement, discussed *infra* Part III(D)(b). Article 1.2 of the DSU provides that its rules and procedures apply subject to such additional rules and procedures on dispute settlement as are identified in Annex 2 to the DSU. Article 11.2 of the SPS Agreement is one of the provisions identified in Annex 2 of the DSU.

[566] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones), supra* note 70, ¶ 97.

[567] Report of the Appellate Body, *United States—Measures Affecting Imports of Woven Wool Shirts and Blouses from India*, WT/DS33/AB/R (1997), 14–16.

[568] In *EC—Hormones*, *supra* note 70, ¶¶ 102–105, the Appellate Body dealt with the three grounds for the Panel's finding in turn. First, it rejected the Panel's conclusion that the fact that many SPS provisions are worded "Members shall ensure that . . . " has any logical connection to the allocation of the evidentiary burden. Second, contrary to the Panel's ruling, it held that Article 5.8 (pursuant to which a Member may ask for an explanation of an SPS measure from another Member and the latter is obliged to comply with the request) does not address burden of proof issues. Instead Article 5.8 is most likely to be used in pre-dispute situations in order to enable a Member to acquire information that it could later use to meet its burden of proof. Third, the Appellate Body dismissed as a *non-sequitur* the reverse inference made by the Panel from Article 3.2, that if a measure does not conform to international standards, the Member imposing the measure bears the burden of proving its consistency with the SPS Agreement in case of a challenge.

[569] Report of the Appellate Body, *Japan—Measures Affecting Agricultural Products*, *supra* note 97, ¶¶ 132–139.

[570] Report of WTO the Panel, *Japan—Measures Affecting Agricultural Products*, *supra* note 57, ¶ 8.45.

with regard to the former group of products applied to the latter as well. The experts affirmed this but did not elaborate. Thus the Panel found that the United States had not adduced sufficient evidence to raise a presumption (i.e. make a *prima facie* case) that the measure was maintained without sufficient scientific evidence with regard to apricots, pears, plums and quince.

The United States appealed this ruling, arguing that the Panel's interpretation imposed on it an impossible burden of proof, requiring it to prove a negative (namely that there were no relevant studies or reports supporting Japan's measure). The United States contended that the Panel's finding amounted to holding that because there was insufficient evidence of the existence or relevance of varietal differences, the Panel could not find that there was insufficient evidence to support the measure.[571] The Appellate Body rejected this argument, finding that the United States was not being required to prove a negative, but merely to raise a presumption that there were no relevant studies or reports. According to the Appellate Body, this is not an impossible burden. The United States could have requested Japan, under Article 5.8, to provide an "explanation of the reasons" for its measure as it related to the products at issue. The failure of Japan to do so would have amounted to a strong indication that such studies or reports did not exist. Further, the United States could have questioned the Panel's experts or submitted an opinion of its own experts on the question whether such reports exist. Instead, the United States submitted no evidence on the point. Therefore, the Appellate Body agreed with the Panel's refusal to find a violation of Article 2.2 with regard to the products at issue.[572]

This decision is significant as it establishes that it is the challenging Member's duty to make a *prima facie* case for the absence of scientific evidence in support of an SPS measure. Only once this has occurred does the defending Member have to submit evidence to rebut this presumption. A mere contention that scientific evidence is lacking and an omission to submit any evidence are insufficient to create a duty of rebuttal. It would be too onerous to require Members to defend their SPS measures on the basis of scientific evidence without any indication that the measures violate the SPS Agreement.

The issue of burden of proof arose again in *Japan—Apples*. In that case, the US had argued that there was insufficient scientific evidence, for purposes of Article 2.2, that mature, symptomless apples could form a transmission pathway for fire blight. To counter these arguments, Japan averred that, due to failures in export control systems, infected or immature apples could be exported, and these apples could serve as a pathway for fire blight. The US limited its arguments to the issue of mature, symptomless apples. On the basis of the scientific evidence presented to it, the Panel agreed with the US that Japan's measure, as it applied to mature, symptomless apples, was maintained without sufficient scientific evidence and concluded that it had not been established with sufficient scientific evidence that infected or immature apples could serve as a pathway for the transmission of fire blight.[573] On appeal, Japan argued that the Panel had erred in shifting the burden of proof to Japan in respect of infected or immature apples before the US had made a *prima facie* case in that regard. The Appellate Body rejected Japan's contention, holding:

[571] Report of the Appellate Body, *Japan—Measures Affecting Agricultural Products*, *supra* note 97, ¶ 38.
[572] *Id.* ¶ 137.
[573] This was due to the fact that Japan did not present sufficient scientific evidence that the last stage of the transmission pathway of fire blight from the infected imported apple to the host plant, was likely to be completed. Report of the WTO Panel, *Japan—Measures Affecting the Importation of Apples, supra* note 57, ¶ 8.168.

> It is important to distinguish, on the one hand, the principle that the complainant must establish a *prima facie* case of inconsistency with a provision of a covered agreement from, on the other hand, the principle that the party that asserts a fact is responsible for providing proof thereof. In fact, the two principles are distinct. In the present case, the burden of demonstrating a *prima facie* case that Japan's measure is maintained without sufficient scientific evidence, rested on the United States. Japan sought to counter the case put forward by the United States by putting arguments in respect of apples other than mature, symptomless apples being exported to Japan as a result of errors of handling or illegal actions. It was thus for Japan to substantiate those allegations; it was not for the United States to provide proof of the facts asserted by Japan. Thus, we disagree with Japan's assertion that "the shift of the burden of proof to Japan was made prematurely *before* the demonstration of a *prima facie* case by the United States." There was no "shift of the burden of proof" with respect to allegations of fact relating to apples other than mature, symptomless apples, for Japan was solely responsible for providing proof of the facts it had asserted. Moreover, it was only after the United States had established a *prima facie* case that Japan's measure is maintained without sufficient scientific evidence, that the Panel had to turn to Japan's attempts to counter that case.[574]

This finding is useful in clarifying the issue of the burden of proof in cases where there are several hypotheses regarding the perceived risks underlying an SPS measure. It is not necessary for the complainant to address all possible hypotheses and establish that there is insufficient evidence of risk for each.[575] According to the Appellate Body in this case, the Panel had evidently found it sufficient for the US to address whether mature symptomless apples could serve as a transmission pathway for fire blight. It noted, referring to its previous finding in *US-Wool Shirts and Blouses* that "the nature and scope of evidence required to establish a *prima facie* case 'will necessarily vary from measure to measure, provision to provision, and case to case.'"[576]

Once a *prima facie* case is established, the respondent will bear the burden of proving the allegations it makes to refute the complainant's case.

Aside from the general issue of the burden of proof under the SPS Agreement, the harmonization provision contained in Article 3 presents interesting specific burden of proof issues. In *EC—Hormones* the Panel derived, from the presumption of consistency in favor of a measure that conforms to an international standard in Article 3.2 and from its finding of a rule/exception relationship between Articles 3.1 and 3.3, a burden of proof for a defending Member whose SPS measure deviates from the relevant international standard.[577] The Appellate Body rejected this finding as having no textual basis. It denied that Article 3.3 embodies an exception to the general rule contained in Article 3.1, finding that the relationship between Articles 3.1, 3.2 and 3.3 is qualitatively different from that between Articles I or III (non-discrimination obligations) and Article XX, (exceptions) of GATT 1994. Instead, it held that Article 3.1 of the SPS Agreement merely excludes from its scope situations falling under Article 3.3. Article 3.3 contains an autonomous option available to Members and it is for the challenging Member to prove the failure

[574] Report of the Appellate Body, *Japan—Measures Affecting the Importation of Apples, supra* note 112, ¶ 157 (footnotes omitted).

[575] This was argued by Japan but rejected by the Appellate Body. *Id.*, ¶ 159.

[576] Report of the Appellate Body, *Japan—Measures Affecting the Importation of Apples, supra* note 112, ¶ 160. In footnote, the Appellate Body referred to the Appellate Body Report, p. 14, DSR 1997:I, 323, at 335

[577] Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by the United States, *supra* note 53, ¶¶ 8.54 and 8.87–7; Report of the WTO Panel, *EC—Measures Concerning Meat and Meat Products (Hormones),* Complaint by Canada, *supra* note 53, ¶¶ 8.57 and 8.89–8.90.

to meet conditions laid down in Article 3.3 with respect to SPS measures not based on international standards.[578] To hold otherwise would result in penalizing a Member who chooses a higher level of protection than that aimed at by the international standard, a right expressly recognized in the Preamble of the SPS Agreement.[579] The Appellate Body's ruling on the burden of proof pursuant to Article 3 is particularly important in the light of the problematic aspects, discussed elsewhere, of standard setting by international bodies.[580]

A second question raised by Article 3 is that of the consequences of the presumption of consistency with the SPS Agreement and GATT 1994, for measures that conform to the relevant international standards contained in Article 3.2. Clearly, this provision is intended to encourage Members to adopt international standards, thus resulting in increasing harmonization of SPS measures and promoting free trade. In *EC—Hormones*, the Appellate Body held this presumption to be rebuttable.[581] However, it would seem that a higher standard of proof would be required from the challenging Member due to this presumption than would be the case if the challenging Member only had to establish a *prima facie* case of inconsistency. Bearing in mind the difficulties of meeting the requirements for a risk assessment under the SPS Agreement, particularly for developing countries that often lack the necessary scientific expertise, this constitutes a considerable advantage and thus a strong incentive to adopt international standards.

(b) Consultation with Experts (Article 11.2). Disputes between WTO Members, including those under the SPS Agreement, are heard by dispute settlement panels, which are usually composed of trade diplomats or academics with an expertise in international trade law.[582] In SPS disputes, these panelists are often faced with complex scientific issues of fact. An attempt to deal with the lack of scientific expertise of panelists is reflected generally in Article 13 of the DSU, and for SPS matters more specifically in Article 11.2 of the SPS Agreement. Article 13.1 of the DSU authorizes panels to seek information and technical advice from any individual or body. Article 13.2 allows panels to seek information from any source and to consult experts or request advisory reports.[583] Article 11.2 of the SPS Agreement states that in SPS disputes involving scientific or technical issues, a panel should consult experts chosen by it in consultation with the parties. For this purpose, the panel may set up advisory technical experts groups or consult relevant international organizations.

In *EC—Hormones*[584] the Appellate Body affirmed the panel's right to receive opinions from experts in their individual capacity rather than set up expert review groups. Articles

[578] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones), supra* note 70, ¶ 104.

[579] ¶ 6 of the Preamble to the SPS Agreement provides: "Desiring to further the use of sanitary and phytosanitary measures between Members, on the basis of international standards, guidelines and recommendations developed by international organizations. . . without requiring Members to change their appropriate level of protection of human, animal or plant life or health."

[580] Certain concerns regarding the standard setting process in international organisations have been mentioned *supra* Part II(C)(1)(a). *See* also *infra* Part IV(B)(1) regarding the problems that developing countries face in participating effectively in international standard setting.

[581] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones), supra* note 70, ¶ 170.

[582] The composition of panels is dealt with in Article 8 of the DSU.

[583] The rules and procedures applying to expert review groups are laid down in Appendix 4 of the DSU.

[584] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones), supra* note 70, ¶ 147.

11.2 and Article 13.2 of the DSU, together with Appendix 4, do not limit this right. These provisions leave it to the discretion of the panel to determine whether an expert review group should be established. Both provisions require the panel to consult the parties to the dispute in the selection of experts. Since experts were chosen in terms of procedures agreed upon by the parties in this case, the Appellate Body found that the Panel had acted consistently with the Article 13.2 and Appendix 4 of the DSU and Article 11.2 of the SPS Agreement.

To date, in all three disputes heard under the SPS Agreement, the panels have consulted individual experts rather than set up expert review groups. This was partly due to the time constraints in the dispute settlement procedure. If time had to be provided for an expert review group to reach an agreement on scientific issues, it is probable that the tight deadlines within which panels should reach a decision would be far exceeded. In addition, panelists were interested in hearing the individual opinions of the scientists consulted in each case. In this regard, it should be noted that scientists consulted individually are more likely to provide a clear picture of the state of scientific knowledge on an issue, particularly when there is a divergence in scientific opinion. The views of scientists reflect the scientific tradition of which they are a part.[585] It is therefore important for the panel to hear from a variety of scientists rather than only hear a final consensus opinion arrived at within an expert review group. An expert review group is less conducive to understanding the range of possible interpretations of scientific data.[586]

In *Japan—Agricultural Products*[587] the Appellate Body examined the interaction between the obligation of a party to prove a *prima facie* case of inconsistency and the investigative authority of a panel. The United States argued that Japan's varietal testing requirement was more trade restrictive than required to meet Japan's appropriate level of protection, contrary to Article 5.6. It claimed that testing by product was an alternative measure, meeting the Article 5.6 requirements. The Panel found that this measure would not meet Japan's appropriate level of protection. However, it went on to deduce another alternative measure, namely the determination of sorption levels, which had neither been claimed nor argued by the United States, from the opinions given by its expert advisors.[588] Although the Panel acknowledged that the United States had not argued that the determination of sorption levels met any of the three requirements of Article 5.6, it held that it could be presumed that the requirements were met and that the United States had offered views consistent with this.

This finding was appealed and the Appellate Body found that the United States was obliged to establish a *prima facie* case that an alternative measure exists meeting all three requirements of Article 5.6. Since the United States had not claimed that determination of sorption levels was such a measure, it had not complied with this obligation. The Appellate Body recognized that a panel is entitled under Article 13 of the DSU to seek

[585] According to Atik, *supra* note 201, at 757, scientists are more likely to recognize a scientific justification for a measure where the scientific assertion is accepted in the scientific community to which they belong. *See* Wirth for an interesting discussion on the problematic nature of adjudication in respect of scientific controversies. Wirth, *supra* note 23, at 841–845.

[586] *Contra see* Joost Pauwelyn, *The Use of Experts in WTO Dispute Settlement*, 51 INTERNATIONAL AND COMPARATIVE LAW QUARTERLY 325, 327–329 (2002) and Theofanis Christoforou, *Settlement of Science-Based Trade Disputes in the WTO: A Critical Review of the Developing Case Law in the Face of Scientific Uncertainty*, NEW YORK UNIVERSITY ENVIRONMENTAL LAW JOURNAL 622 (2000).

[587] Report of the Appellate Body, *Japan—Measures Affecting Agricultural Products*, *supra* note 97, ¶¶ 120–131.

[588] Report of the WTO Panel, *Japan—Measures Affecting Agricultural Products*, *supra* note 57, ¶ 8.74.

information from any relevant source and to consult experts, and that it is instructed under Article 11.2 of the SPS Agreement to seek expert advice in technical and scientific matters. However, it held that this authority cannot be used to rule in favor of a party that has not established a *prima facie* case of inconsistency. The expert advice sought by the Panel is intended to help it understand and evaluate the evidence submitted and arguments made by the parties, not to make the complainant's case for it.

In *Japan—Apples*, Japan referred to this finding by the Appellate Body to challenge on appeal the Panel's use of experts. Japan argued that the US had not made claims or submitted evidence in respect of the risk of transmission of fire blight by apples other than mature symptomless apples, yet the Panel had made findings of fact with regard to these "other" apples. Japan claimed that the Panel had thus exceeded the bounds of its investigative authority.[589] The Appellate Body rejected Japan's argument, finding that the Panel had acted within the limits of its investigative authority, as "it did nothing more than assess the relevant allegations of fact asserted by Japan, in the light of the evidence submitted by the parties and the opinions of the experts."[590] It thus clarified that a panel may use the evidence of its experts to assist it in assessing not only the claims of the complaining Member, but also the allegations of the responding Member. In doing so, it cannot be said to be exceeding its authority under Article 11.2.

These findings are important in clarifying the respective roles of the panel, the experts and the parties. They establish that a panel procedure is adversarial, with the panel acting as an impartial arbiter, rather than inquisitorial, A panel's investigative authority is meant only to help its own understanding and evaluation of the case presented by the parties. Thus the role of panel experts is limited to assisting the panel in its understanding of the complex issues before it. The evidence of these experts cannot be used to make the case for one of the parties.

(c) Standard of Review. The issue of the appropriate standard of review is important, as it raises the question of whether panels are entitled to interfere in a Member's regulatory determinations, or whether they must defer to such decisions and confine themselves to the question of whether procedural rules related to decision-making have been followed. This is crucial to establishing the limits of regulatory review and deference to national standards under the SPS Agreement.

In *EC—Hormones*[591] the question of the appropriate standard of review was first examined. The EC argued that the Panel had failed to apply the appropriate standard of review, which it asserted to be a "deferential reasonableness standard", as exists for the Anti-Dumping Agreement.[592] Under such a standard, the panel is not to substitute its judgment for that of the national investigative authority that led to the establishment of the measure. It must limit itself to determining whether the procedure set by WTO rules has been followed. Thus, if the Member has properly established the facts and conducted an objective, unbiased examination thereof, its conclusions should be deferred to by the panel, even if the panel would have reached a different conclusion based on the facts. The EC argued that the Panel had instead undertaken a *de novo* standard of review, under

[589] *Id.*, ¶ 158.

[590] *Id.*.

[591] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones), supra* note 70, ¶ 133.

[592] Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade, Annex 1A to t he Marrakesh Agreement, reprinted in THE RESULTS OF THE URUGUAY ROUND, *supra* note 24, at 168–196, ("Anti-Dumping Agreement") at Article 17.6(i).

which it exercised complete freedom to examine the factual and procedural validity of the decision and to come to a different conclusion.

The Appellate Body rejected the application of the standard of review set in the Anti-Dumping Agreement to the SPS Agreement,[593] holding that this standard is textually specific to the former agreement and there is no evidence of an intention to adopt it in the latter agreement.[594] Instead, it focused on the need for the standard of review applied to the SPS Agreement to reflect the balance created in that agreement between the jurisdictional competences transferred by Members to the WTO and those retained by them. Neither a panel nor the Appellate Body is authorized to change this balance.[595]

The Appellate Body found that although the SPS Agreement is silent on the issue of the standard of review, Article 11 of the DSU articulates this standard both for the determination of the facts and the legal characterization of these facts.[596] The standard of review established by this article is neither total deference nor *de novo* review, but rather the "objective assessment of the facts" (with respect to fact-finding) and an objective assessment of the matter, including the applicability of and conformity with the relevant covered agreements (with respect to legal issues).

The issue of whether the appropriate standard of review was used thus depends, according to the Appellate Body in *EC—Hormones*, on whether there was an objective assessment of the matter, including an objective assessment of the facts.[597] It held that failure to conduct an objective assessment requires proof that there has been deliberate disregard of or refusal to consider submitted evidence or willful distortion or misrepresentation of the evidence.[598] These do not indicate a mere error of judgment but imply an egregious error, which calls into question the good faith of the panel. It is apparent that the Appellate Body will not lightly find that this element of bad faith is present, as can be seen from its findings in *EC- Hormones* that although the Panel had misquoted and misinterpreted the evidence,[599] its actions had not been

[593] This refusal to extend the standard of review laid down in the Anti-Dumping Agreement to other WTO agreements was affirmed in the Report of the Appellate Body, *United States—Imposition of Countervailing Duties on Certain Hot-Rolled Lead and Bismuth Carbon Steel Products Originating in the United Kingdom,* WT/DS138/AB/R (2000), ¶ 51, where the Appellate Body held that Article 11 of the DSU sets the standard of review for disputes under the Agreement on Subsidies and Countervailing Measures.

[594] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones), supra* note 70,¶ 114. Further, this standard applies only to the factual assessment of the matter and not to the legal analysis applied thereto.

[595] *Id.* ¶ 115.

[596] *Id.* ¶ 116.

[597] The utility of this "objective assessment" standard has been criticized on the grounds that it does not clarify the required standard of review. *See* Axel G. Desmedt, *Hormones: "Objective Assessment" and (or as) Standard of Review,* 1 JOURNAL OF INTERNATIONAL ECONOMIC LAW 695, 698 (1998).

[598] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones), supra* note 70, ¶ 133.

[599] The Appellate Body in *EC—Hormones* agreed with the EC that the Panel had misquoted the evidence of an EC expert, Dr. Lucien. Further, in response to the EC's contention that the panel had distorted the views of Dr. André by stating that they supported those of the other panel experts when, in fact, they rather supported the views of EC scientists, the Appellate Body stated, "Whether or not the views of Dr. André support the statements made by the other Panel experts or the opinions expressed by the EC scientists may be an issue of fact; it does require some technical expertise to deal with it. However, even if the Panel has interpreted the views of Dr. André incorrectly, we see no reason, and no reason was advanced, to consider this mistake as a *deliberate disregard* or *distortion* of evidence." Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones), supra* note 70, ¶¶ 138–139. Provided the mistake is not deliberate, it would appear that the Appellate Body grants some leeway to the panel based on its lack of "technical expertise".

deliberate and there had thus been no failure to make an objective assessment of the facts.[600]

Due to the scope given by the Appellate Body to the obligation to conduct an objective assessment, it is clear that panels have broad discretion in assessing the evidence before them and that it is difficult for parties to a dispute to challenge the assessment of the evidence made by panels. This is problematic when one bears in mind the composition of panels and their lack of expertise in scientific matters. The lack of certainty that often exists in the scientific arena means that a panel's ability to consult experts does not constitute a real safeguard against the possibility of mistakes. In *EC—Hormones*[601] the Appellate Body recognized that the panel had misrepresented the statements of its own expert advisors on the potential for abuse in a regime where the use of hormones was allowed. However as the mistake was not egregious, it did not amount to a failure to make an objective assessment of the facts.

The Appellate Body's decision on the standard of review thus has two problematic aspects. Firstly, the decision that the applicable standard of review is an "objective assessment" of the factual and legal aspects of the case, without a precise definition of what this standard entails, gives cause for concern. While this was held to mean neither complete deference nor *de novo* review, what it does mean is not clear aside from the fact that a panel must act in good faith. Secondly, since only "willful distortion" or "deliberate disregard" of evidence will constitute a failure to make an "objective assessment" of the facts, the situation could arise that a case is incorrectly decided on the basis of a good faith misunderstanding of scientific evidence by a panel, without this mistake constituting a ground for overturning the panel decision.

This is problematic since the disciplines of the SPS Agreement are primarily science-based, and thus cases decided under its provisions will most likely turn on the evaluation of scientific evidence. Since the Appellate Body may not review issues of fact on appeal, an appeal will not be able to correct this situation but will instead be decided on the basis of this mistaken understanding of the facts. In order to avoid this unacceptable situation, it seems imperative that the question of the appropriate standard of review under the SPS Agreement be reassessed to allow for deference to national decisions regarding the quality and weight of scientific evidence. Provided that the scientific support for a measure is plausible and comes from respected sources, and that a Member has met all the procedural requirements relating to the conduct of a risk assessment and setting an appropriate level of protection, a panel should refrain from evaluating the scientific evidence itself, a task for which it is demonstrably poorly suited.

An additional issue which arises with regard to the standard of review to be applied, is whether the precautionary principle should guide a panel's evaluation of the evidence before it. This issue arose in *Japan—Apples*. Japan argued, on appeal, that the Panel had failed to adequately take into account the precautionary principle in its evaluation of the evidence. The panel experts in this case had recognized the need for caution with respect to the elimination of the phytosanitary measures protecting Japan from fire blight. According to Japan, this fact should have been given greater weight by the Panel

[600] This trend continued in both *Australia—Salmon* and *Japan—Agricultural Products*, where errors of the Panel in the appreciation of evidence were not characterized by the Appellate Body as failures to make an objective assessment of the facts, due to lack of an egregious nature. *See* Report of the Appellate Body, *Australia—Measures Affecting the Importation of Salmon*, *supra* note 141, ¶ 266, and Report of the Appellate Body, *Japan—Measures Affecting Agricultural Products*, *supra* note 97, ¶ 142.

[601] Report of the Appellate Body, *EC—Measures Concerning Meat and Meat Products (Hormones), supra* note 70, ¶ 144.

in considering the evidence regarding the completion of the transmission pathway for fire blight.[602] The Appellate Body noted that Japan did not argue that the precautionary principle should have been applied as distinct from the provisions of the SPS Agreement, nor did it argue that the Panel should have used the precautionary principle as part of its interpretative analysis of the Agreement. Instead, it understood Japan to argue that the principle was embodied in the cautionary opinions of the experts and *should have been given greater weight* in the Panel's conclusions on the completion of the pathway. The Appellate Body then noted that it is established case law that the credibility and weight to be properly ascribed to a particular piece of evidence is in the discretion of a panel as the trier of facts. This discretion is limited only by a panel's duty to make an "objective assessment" of the facts. Since Japan made no argument challenging the objectivity of the Panel's assessment, it failed to establish a violation of Article 11.[603]

This finding of the Panel reinforces the conclusion that the possible relevance of the precautionary principle for purposes of the SPS Agreement is limited to the particular formulation it has been given in Article 5.7. Outside this article, the precautionary principle plays no role, according to the case law, in guiding the interpretation of the SPS Agreement or the evaluation of the evidence. The standard of review to be applied by panels remains an "objective assessment" of the matter, even in cases of scientific uncertainty.

2. Overview of Dispute Settlement Relating to the SPS Agreement

To date (July 2004), there have been thirty formal complaints under the SPS Agreement regarding twenty-six separate issues, three of which only involved minor SPS issues. No African country or LDC has initiated a complaint under the SPS Agreement. Consultations are still pending in fifteen cases. A mutually agreed solution has been reported in six cases.[604] Eight disputes,[605] regarding five separate issues, have proceeded to adjudication by a panel under the SPS Agreement[606] and four panel reports have thus far been issued.[607] All of these have been appealed, resulting in four Appellate Body reports.[608]

[602] This evidence was considered for purposes of the Panel's finding under Article 2.2 SPS.

[603] Report of the Appellate Body, *Japan—Measures Affecting the Importation of Apples, supra* note 112, ¶ 283.

[604] *Korea—Measures Concerning the Shelf-Life of Products (Complaint by the United States)*, WT/DS5; *Korea—Measures Concerning Bottled Water (Complaint by Canada)*, WT/DS20; *Australia—Measures Affecting the Importation of Salmonids (Complaint by the United States)*, WT/DS21; *India—Quantitative Restrictions on Imports of Agricultural, Textile and Industrial Products (Complaint by the European Communities)*, WT/DS96; *Turkey—Certain Import Procedures for Fresh Fruit (Complaint by Ecuador)*, WT/DS237; and *Mexico—Certain Measures Preventing the Importation of Black Beans from Nicaragua (Complaint by Nicaragua)*, WT/DS284.

[605] These eight disputes are the separate complaints by the United States and Canada in *EC—Hormones* (WT/DS48, WT/DS26) that were heard by separate panels, composed of the same panelists, which issued separate but largely identical reports; the complaint by the United States in *Japan—Agricultural Products II* (WT/DS76); the complaint by Canada in *Australia—Salmon* (WT/DS18); the complaint by the United States in *Japan—Apples*, (WT/DS245), and the separate complaints by the United States, Canada and Argentina in *EC—Biotech* (WT/DS291, WT/DS292, WT/DS293) which is being heard by a single panel. This count does not include the compliance disputes under Article 21.5 DSU in *Australia—Salmon* (WT/DS18) and *Japan—Apples* (WT/DS245).

[606] The dispute *EC—Asbestos* (WT/DS135) also proceeded to adjudication by a panel and the Appellate Body, but the claims under the *SPS Agreement* were not pursued in the adjudication process.

[607] See the WTO Panel Reports in *EC—Hormones, Australia—Salmon, Japan—Agricultural Products,* and *Japan—Apples*. The findings in these cases have been discussed in previous sections where relevant.

[608] See the Appellate Body Reports in *EC—Hormones, Australia—Salmon, Japan—Agricultural Products,* and *Japan—Apples*. The findings in these cases have been discussed in previous sections where relevant.

One dispute is currently still before a panel.[609] Developing countries[610] have been involved in thirteen disputes, in nine cases as complainant[611] and in nine as defendant.[612] In only one of these disputes involving developing countries, namely *EC—Biotech Products*, has the dispute proceeded to adjudication.[613]

IV. Developing Countries and the SPS Agreement

The general disciplines of the SPS Agreement apply equally to developed and developing countries. However, the SPS Agreement does take into account the financial and technical resource constraints that developing countries face. This consideration finds its first reflection in the preamble to the SPS Agreement, which recognizes that:

> (. . .) developing country Members may encounter special difficulties in complying with sanitary and phytosanitary measures of importing Members, and as a consequence in access to markets, and also in the formulation and application of sanitary and phytosanitary measures in their own territories, and desiring to assist them in their endeavors in this regard; . . . [614]

For this reason, special provisions exist that take into account the special position of developing countries. These provisions relate to the provision of technical assistance to developing countries as well as to special and differential treatment in favor of developing countries. In addition, some of the disciplines in the SPS Agreement contain elements of flexibility that can be used to the benefit of developing countries.[615]

[609] A panel was established on to address the complaints of the US, Argentina and Canada against the EC's measure with regard to the products of biotechnology (WT/DS291, 292 and 293).

[610] Developing countries here is interpreted broadly to include economies in transition.

[611] *Croatia—Measure Affecting Imports of Live Animals and Meat Products (Complaint by Hungary),* WT/DS297; *European Communities—Measures Affecting the Approval and Marketing of Biotech Products (Complaint by Argentina)*, WT/DS293; *Mexico—Certain Measures Preventing the Importation of Black Beans from Nicaragua (Complaint by Nicaragua)*, WT/DS284; *Australia—Certain Measures Affecting the Importation of Fresh Pineapple (Complaint by the Philippines),* WT/DS271; *Australia—Certain Measures Affecting the Importation of Fresh Fruit and Vegetables (Complaint by the Philippines),* WT/DS270; *Turkey—Import Ban on Pet Food from Hungary (Complaint by Hungary),* WT/DS256; *Turkey—Certain Import Procedures for Fresh Fruit (Complaint by Ecuador),* WT/DS237; *Egypt—Import Prohibition on Canned Tuna with Soybean Oil (Complaint by Thailand),* WT/DS205; and *EC—Restrictions on Certain Import Duties on Rice (Complaint by India),* WT/DS134.

[612] *Croatia—Measures Affecting Imports of Live Animals and Meat Products (Complaint by Hungary),* WT/DS297; *Mexico—Certain Measures Preventing the Importation of Black Beans from Nicaragua (Complaint by Nicaragua)*, WT/DS284; *India—Import Restrictions Maintained Under the Export and Import Policy 2002–2007 (Complaint by the European Communities),* WT/DS279; *Turkey—Import Ban on Pet Food from Hungary (Complaint by Hungary),* WT/DS256; *Turkey—Certain Import Procedures for Fresh Fruit (Complaint by Ecuador),* WT/DS237; *Egypt—Import Prohibition on Canned Tuna with Soy Oil (Complaint by Thailand),* WT/DS205; *Mexico—Measures Affecting Trade in Live Swine (Complaint by the United States),* WT/DS203, *Slovak Republic—Measures Concerning the Importation of Dairy Products and the Transit of Cattle (Complaint by Switzerland),* WT/DS133; and *India—Quantitative Restrictions on Imports of Agricultural, Textile and Industrial Imports (Complaint by the European Communities),* WT/DS96.

[613] In *Australia—Certain Measures Affecting the Importation of Fresh Fruit and Vegetables (Complaint by the Philippines)*, WT/DS270, the Philippines requested the establishment of a panel once, on July 10, 2003. This panel request was blocked by Australia. The Philippines has not yet submitted its second panel request to the DSB (at which time the decision to establish a panel would be taken by reverse consensus in the DSB and could therefore not be blocked), and thus no panel has yet been established to hear this dispute. In *Turkey—Certain Import Procedures for Fresh Fruit (Complaint by Ecuador)*, WT/DS237, a panel request was submitted by Ecuador on June 14, 2002, but a mutually agreed solution was subsequently reached.

[614] In the 7th preambular paragraph of the SPS Agreement.

[615] For example, Article 5.1 requires a risk assessment "as appropriate to the circumstances" and Article 5.6 allows technical and economic feasibility to be taken into account in the choice of an SPS measure.

A. Technical Assistance (Article 9)

The technical assistance needs of developing countries encompass not only the improvement of their understanding of the rules applicable under the SPS Agreement, but also the acquisition of the technical and scientific capacity required to meet their obligations and enforce their rights under the SPS Agreement, and to comply with the SPS measures imposed by their trading partners. Thus technical assistance is a broad term, including: the provision of information to enhance Members' understanding of their rights and obligations under the SPS Agreement; the provision of practical and detailed training on the operation of the SPS Agreement; the provision of "soft" infrastructure (training and formation of technical and scientific personnel and the development of national regulatory frameworks); and "hard" infrastructure (laboratories, equipment, veterinary services and the establishment of disease free areas).[616]

The provision of technical assistance to developing countries involves several actors, including other WTO Members, the WTO Secretariat, as well as other international organizations such as the FAO (including Codex and the IPPC), the WHO, the OIE and the World Bank. It should be noted that the active participation and contribution of developing countries in this process is essential in order to ensure that the provision of technical assistance is effective and demand-driven.

Under Article 9.1, Members agree to facilitate the provision of technical assistance to other Members, especially developing countries, either bilaterally or through international organizations. This assistance may take various forms, including advice, credits, and grants and donations, and may be in the areas of processing technologies or research and infrastructure, including the creation of national regulatory bodies. Such assistance may also aim at helping developing countries adjust to and comply with SPS measures affecting their export markets.

Article 9.2 refers specifically to the case where the SPS measures put in place by an importing Member necessitate substantial investments in order for a developing country exporting Member to be able to comply with these measures. In such a case, the importing Member must consider providing technical assistance that will enable the developing country Member to maintain and expand its market access opportunities for that product. However, there is no obligation to actually provide such technical assistance.

Technical assistance is a standing item on the agenda of SPS Committee meetings, where Members are encouraged to identify specific technical assistance needs and report on technical assistance activities. The SPS Committee[617] has undertaken a survey of technical assistance needs and activities by means of questionnaires,[618] and drawn up a technical assistance typology.[619] In addition, informal discussions on technical assistance

[616] This typology was drawn up by the WTO Secretariat. Committee on Sanitary and Phytosanitary Measures, *Technical Assistance Typology: Note by the Secretariat,* G/SPS/GEN/206, October 18, 2000.

[617] A compilation of all documents submitted to and drafted by the SPS Committee on this issue was circulated to all Members. Committee on Sanitary and Phytosanitary Measures, *Technical Assistance and Capacity Building in the Context of the SPS Committee, Note by the Secretariat,* G/SPS/GEN/332, June 24, 2002.

[618] In July 1999, a questionnaire was circulated to Members by the Secretariat, to gather information on technical assistance requested, received or provided under the SPS Agreement but few developing countries replied. Committee on Sanitary and Phytosanitary Measures, *Questionnaire on Technical Assistance: Note by the Secretariat,* G/SPS/W/101, July 23, 1999. In October 2001 a second questionnaire was circulated regarding technical assistance needs to which 35 Members have responded to date. Committee on Sanitary and Phytosanitary Measures, *Questionnaire on Technical Assistance,* G/SPS/W/113, October 15, 2001. *See* addenda to Committee on Sanitary and Phytosanitary Measures, *Technical Assistance—Responses to the Questionnaire,* G/SPS/GEN/295, February 6, 2002.

[619] *See supra* note 552.

and co-operation have been held in the SPS Committee. In these discussions, concrete proposals were put forward to improve the effectiveness of the technical assistance provisions, including creating a coherent program for the provision of technical assistance, regardless of the source of the assistance, and placing emphasis on the development of human resources.[620] Further, high-level as well as technical meetings have been held between the WTO and other international organizations to co-ordinate the provision of technical assistance.[621] In November 2002, prior to the SPS Committee meeting, the WTO Secretariat organized a seminar on SPS-related technical assistance and capacity building. At this seminar, information was presented by international and regional organizations as well as developing country Members regarding their experiences with technical assistance in the SPS area.[622]

The Doha Development Agenda recognizes the importance of technical assistance and capacity building for developing countries in order to enable these Members to benefit fully from the multilateral trading system. For this reason, a Doha Development Agenda Trust Fund has been established, to which donor countries have pledged 30 million Swiss francs. The WTO Secretariat regularly provides technical assistance to developing countries for the implementation of the SPS Agreement, in particular through training programs organized by the WTO or through WTO participation in training programs organized by other organizations or institutions.[623] However, it should be noted that the role of the WTO Secretariat in the provision of technical assistance is necessarily limited. Other international organizations, and in particular the three standard-setting organizations (CAC, OIE and IPPC) as well as the World Bank, with which the WTO co-operates closely, are better suited to the provision of technical assistance in areas requiring scientific or technical expertise, such as building regulatory systems or strengthening infrastructure in the SPS sector.[624]

[620] The first meeting was held in July 2001. Committee on Sanitary and Phytosanitary Measures, *Discussion on Technical Assistance and Cooperation—Informal Meeting of the SPS Committee of 9 July, 2001,* G/SPS/GEN/267, July 16, 2001 and the second on March 18, 2002 (no report yet derestricted).

[621] General Council, Special Session on Implementation, *Actions to Increase the Participation of Developing Country Members in the Work of the Relevant International Standard-Setting Organizations: Report by the Director-General,* WT/GC/42, December 11, 2000; General Council, *Actions to Increase the Participation of Developing Country Members in the Work of Relevant International Standard-Setting Organizations—Information from Financial Institutions,* WT/GC/46/Rev.1, July 16, 2001; General Council, *Actions to Increase the Participation of Developing Country Members in the Work of Relevant Sanitary and Phytosanitary International Standard-Setting Organizations,* WT/GC/54, November 7, 2001; General Council, Special Session on Implementation, *Actions to Increase the Participation of Developing Country Members in the Work of Relevant Sanitary and Phytosanitary International Standard-Setting Organizations: Second Report by the Director General,* WT/GC/45, March 7, 2001.

[622] WTO Seminar on Technical Assistance and Capacity Building Related to the SPS Agreement, November 5, 2002, Geneva. The PowerPoint presentations delivered at this seminar are available at: www.wto.org/english/tratop_e/sps_e/sem_nov02_e/programme_e.htm.

[623] WTO Secretariat, annual report 2002 (2002). For a list of planned technical assistance activities in the SPS area for 2003, see Committee on Trade and Development, *2003 Technical Assistance Activities, Note by the Secretariat. Revision*, WT/COMTD/W/104/Add.1/Rev.1, November 7, 2002, at 33.

[624] In this context, it is worth mentioning that, on September 27, 2002, the World Bank and the WTO established a new fund, called the *Standards and Trade Development Facility* ("STDF"). This fund aims to provide funding to assist developing countries to meet SPS standards. The World Bank has pledged US$ 300 000 to this fund and the WTO has contributed to it from the Doha Development Trust Fund. In its list of technical assistance activities for 2003, the WTO Secretariat proposed a contribution of CHF 100 000 to the STDF (*see supra* note 567). The fund will be administered by the WTO. The FAO, WHO and OIE are part of this initiative. *See* Committee on Sanitary and Phytosanitary Measures, *The Standards and Trade Development Facility, Note by the Secretariat*, G/SPS/GEN/371, February 18, 2003. *See also* WTO Press Release 314 *World Bank Grant Kicks off Bank-WTO Assistance on Standards,* September 27, 2002.

B. Special Rules for Developing Countries (Articles 10 and 14 and Annex B)

1. Special and Differential Treatment (Article 10)

Special and differential treatment in the SPS Agreement relates to the aim of ensuring that the special constraints faced by developing countries are taken into account in the implementation certain provisions of the SPS Agreement. This may refer to the implementation of provisions of the agreement in a manner favorable to developing countries by other Members, additional flexibility in the obligations contained in the SPS Agreement for developing countries, or actions by the SPS Committee or Secretariat to assist developing countries.

Article 10.1 obliges Members to take account of the special needs of developing country Members, and in particular least-developed country Members when preparing and applying SPS measures. However, there is no obligation to adapt the SPS measure or its application to address developing country needs. This can therefore be characterized as a "best endeavor" obligation.

Article 10.2 makes provision for phased-in introduction of new SPS measures. It encourages Members, without obliging them, to allow longer time frames for compliance with new SPS measures for developing country Members, where the appropriate level of protection of the importing Member allows scope. This is aimed at allowing developing countries to maintain their export opportunities while adjusting to the new measures.

Article 10.3 allows the SPS Committee to grant developing countries, upon request, specified, time-limited exemptions from all or some of their obligations under the SPS Agreement. This is done with the aim of enabling developing countries to comply with their obligations by giving them extra time to adjust to their new obligations, and takes account of their financial, trade and development needs. However, to date no developing country has requested an exemption under Article 10.3 despite the fact that certain developing countries remain in breach of certain obligations under the SPS Agreement, such as the obligation to establish a National Notification Authority and Enquiry Point, or to publish and notify all new SPS measures.

According to Article 10.4, Members should encourage and facilitate the active participation of developing countries in relevant international organizations. This is clearly a reference to the international standard-setting organizations. The issue of developing country participation in international standard setting is very contentious. Participation in the numerous committees of the international organizations where standards are developed and proposed for adoption requires not only financial and human resources, but also technical capabilities for the formulation of positions regarding standards of interest to the country. Although in recent years the number of developing country delegates attending meetings of the standard-setting organizations has increased and their participation has been more active, there remains considerable room for improvement. This has led to assertions that the standards set by the international organizations do not cover areas of interest for developing countries and do not reflect a level of protection that is realistic or desirable for developing countries. However, Article 10.4 is purely hortatory and contains no binding obligations. It should, nevertheless, be noted that the international standard-setting organizations themselves are taking steps to address this problem.[625]

[625] For instance, in the Codex Alimentarius Commission's Strategic Framework, adopted at its 24th Session in 2001, the issue of improving developing country participation is included as an objective. Codex Alimentarius Commission, *Report of the 24*th *Session*, July 2–7, 2001 ALINORM 01/41, Appendix II, ¶ 16. The objectives of the Strategic Framework will be implemented through a Medium Term Plan for

2. Reasonable Adaptation Period (Annex B, paragraph 2)

Under paragraph 2 of Annex B, Members are obliged to allow a reasonable period between the publication of an SPS measure and its entry into force for exporting Members (especially developing countries) to adapt to the new measure, except in cases of urgency. Although this provision is not a special and differential treatment provision in that the reasonable adaptation period must be granted equally to both developed and developing country exporting Members, it does hold particular advantages for developing countries as they often face more difficulties in adapting to new SPS measures than do their developed counterparts. For this reason, the provision makes specific reference to developing countries.

3. Special Provisions on Notification (Annex B, paragraphs 8 and 9)

Compliance with the transparency obligations of the SPS Agreement can be costly and burdensome for developing countries. Under the transparency provisions of Annex B, paragraph 8, developing countries are exempted from the obligation to provide copies of the documents, or in case of lengthy documents, summaries of the documents covered by a specific notification in one of the official languages of the WTO. This exemption from translation and summarizing obligations is clearly an attempt to reduce the burden on developing countries that results from compliance with the transparency provisions.

In addition, developing countries do not always benefit from increased transparency if they do not have the skilled manpower to monitor the notifications and identify those of interest to them. For this reason, under Annex B.9, the Secretariat is obliged to draw the attention of developing countries to any notifications relating to products of interest to them. In this way, developing countries can benefit fully from the increased transparency resulting from the disciplines of the SPS Agreement despite the fact that they may lack the resources to keep track of all notifications. As it is difficult to determine which notifications may be of interest to each developing countries Member, the Secretariat implements this obligation by circulating monthly lists of notified SPS measures to all WTO Members.[626] Further, in order to address the problems Members face in translating proposed regulations of other Members into a language in which they can work, the Secretariat has recently established a mechanism to circulate information on the availability of unofficial translations of draft regulations notified by Members.[627]

4. Transitional Periods (Article 14)

Article 14 of the SPS Agreement made provision for delayed implementation of the obligations under the Agreement for developing and least-developed country Members. Least-developed Members were granted a five-year period, from the entry into force of

2003–2007. In addition, on February 14, 2003 at the Extraordinary Meeting of the Codex Alimentarius Commission, the Directors General of the FAO and WHO officially launched the *FAO/WHO Trust Fund for Participation of Developing Countries and Countries in Transition in the Work of the Codex Alimentarius Commission*, which is expected to run for 12 years on a budget of $40 million and aims to help developing countries and countries in transition increase their participation in Codex activities. *See* Codex Alimentarius Commission, *Trust Fund for the Participation of Developing Countries and Countries in Transition in the Work of the Codex Alimentarius Commission, FAO/WHO Project and Fund for Enhanced Participation in Codex. Progress Report*, ALINORM 03/25/4, February 13–15, 2003.

[627] Committee on Sanitary and Phytosanitary Measures, *Unofficial Translation, Note by the Secretariat,* G/SPS/GEN/487, April 23, 2004.

the WTO Agreement, for delayed implementation of their obligations. Other developing Members were given a two-year grace period, where lack of technical expertise, infrastructure or resources prevented immediate implementation of their obligations. However, this possibility did not extend to their transparency and information obligations. The period for delayed application expired in January 2000 for least-developed Members and in January 1997 for other developing Members.

C. Problems with Implementation

Despite the existence of these provisions on technical assistance and special and differential treatment, developing countries have often raised concerns that their needs are not taken into account by developed country Members. These concerns form part of the broader discussion on implementation of the WTO agreements, which has been going on since the Seattle Ministerial Conference and, in a more concrete fashion, during the preparations for the Doha Ministerial Conference. The SPS Committee was asked by the General Council to examine implementation concerns relating to the SPS Agreement, and the Committee held discussions on this issue.[628] During these discussions, developing countries have complained that the provisions on technical assistance and special and differential treatment are either couched in non-mandatory language or constitute at most "best-endeavor" obligations without being fully operational.[629] In particular, they have noted that additional time for compliance with new SPS measures has seldom been granted and that they do not receive technical assistance to facilitate adjustment to SPS measures that affect their trade. In addition, their continued problems with regard to effective participation in international standard setting have been pointed out.

These and other concerns of developing countries with regard to implementation of the WTO agreements have been the focus of special sessions in the General Council,[630] which have resulted in the adoption of the Decision on Implementation-Related Issues and Concerns (the "Decision on Implementation") on November 14, 2001 at the Ministerial Conference in Doha.

D. Doha Decision on Implementation

The Decision on Implementation adopted at the Ministerial Conference in Doha urges the WTO Director-General to continue co-operative efforts with the international standard-setting organizations to facilitate the provision of technical and financial assistance to ensure the effective participation of least-developed countries.[631] In addition, Members

[628] As background to these discussions, the Secretariat prepared a document summarizing implementation concerns raised at SPS Committee meetings. Committee on Sanitary and Phytosanitary Measures, *Special and Differential Treatment: Note by the Secretariat,* G/SPS/W/105, May 9, 2000.

[629] *See e.g.*, the statement by India on this point. Committee on Sanitary and Phytosanitary Measures, *Implementation of the Provisions for Special and Differential Treatment: Statement by India at the Meeting of 21–22 June, 2000,* G/SPS/GEN/197, July 21, 2000.

[630] On May 3, 2000, the General Council adopted a decision to meet in special sessions to address outstanding implementation issues. Special Sessions were held in October and December 2000 and April, July and October 2001. Specific issues were referred to the relevant WTO bodies, including the SPS Committee for further work, which resulted in reports from these bodies to the General Council.

[631] At the Doha Ministerial Conference, the Director-Generals of the WTO, FAO, and OIE and the President of the World Bank declared their commitment to promote the participation of developing countries in international standard setting. Ministerial Conference, *Participation of Developing Countries in the Development and Application of International Standards, Guidelines and Recommendations on Food Safety,*

are urged to provide technical and financial assistance to least-developed countries to enable them to respond to SPS measures that may negatively affect their trade as well as to ensure that technical assistance is provided to these countries in response to the special problems they face in implementing the SPS Agreement.[632]

The Decision on Implementation establishes a longer time frame for compliance under Article 10.2—"normally a period of not less than 6 months" where there is scope for phased introduction of the new measure. Where such phased introduction is not possible, if a Member identifies specific problems it faces with regard to the new measure, the importing Member must enter into consultations with a view to reaching a mutually satisfactory solution, while continuing to achieve the importing Member's appropriate level of protection.[633]

In addition, the Decision on Implementation sets the reasonable adaptation period under Annex B.2 at "normally a period of not less than 6 months," but notes that the particular circumstances of the measure and the actions needed for its implementation must be considered. In addition, it clarifies that the entry into force of SPS measures that liberalise trade should not be unnecessarily delayed.[634] This takes into account the fact that some new SPS measures may establish lower or easier requirements than existing ones.

The Decision on Implementation represents a step towards the strengthening of the provisions in the SPS Agreement in favor of developing countries. However, much remains to be done if these special provisions are to be fully operationalized. For this reason, work is ongoing in the Special Session of the Committee on Trade and Development with respect to the identification of ways to make the special and differential treatment provisions in WTO agreements more effective.[635] The Doha Ministerial Declaration provides that outstanding implementation issues are to be addressed as a matter of priority by the relevant WTO bodies. In May 2003, the General Council referred five proposals, containing twelve specific recommendations, on special and differential treatment to the SPS Committee. The Committee adopted a work programme with regard to these proposals on June 25, 2003.[636] The SPS Committee has held an informal meeting on special and differential treatment. The proposals on special and differential treatment are also a standing item on the agenda of SPS Committee meetings. At the meeting of March 2004, no comments were made regarding these proposals.[637]

V. Conclusion

A. An Evaluation of the SPS Agreement as a Balancing Act

An evaluation of the SPS Agreement must logically examine its effectiveness in achieving its aims. As was discussed in the introduction to this Chapter, the SPS Agreement has the objective of balancing the right of Members to impose measures for the protection of human, plant and animal life or health, with the goal of liberalization of trade in the food and agricultural sector. This is an extremely delicate balance, as on one side of the scale is a policy area of significant public concern, namely that of health. Health issues tend to be emotionally charged and politically sensitive. Members need to have sufficient flexibility to be able to respond to the legitimate demands of their citizens for effective protection in this area. On the other side of the scale is another important goal, namely that of market access for food and agricultural products, creating economic growth and prosperity. The importance of this value is often underplayed by critics of the SPS Agreement who see the protection of health as trumping all other considerations. However, when one bears in mind the crucial importance of the agricultural sector for the export trade of developing countries, and takes into account the fact that the export revenue earned in this sector is necessary to finance basic services such as education and health, it becomes clear that market access considerations should also be given sufficient weight in the balancing process. For these reasons, it is critical that this balance be finely struck.

A complicating factor in evaluating the balance struck between these competing aims is the fact that WTO Members have vastly different levels of economic development. This affects a variety of factors of relevance to the disciplines of the SPS Agreement. First, it plays a role in the level of SPS protection expected by citizens and thus the demands that they make on their regulators. Second, it affects the export interests of Members, with developing countries being much more dependent on the food and agricultural sector for their export earnings than industrialized countries. Third, the level of development of a Member is often reflected in the strength and efficacy of the sanitary and phytosanitary systems, consisting of both regulations and infrastructure, in place in that country to secure a particular level of SPS protection. The ability of a Member to guarantee the safety and pest- or disease-free status of its food and agricultural products and meet the requirements of its trading partners is dependent on the effectiveness of its SPS system. Finally, the ability of a Member to enforce its rights and meet its obligations under the SPS Agreement is conditional on the availability of financial and human resources which can be dedicated to this purpose by that Member. For these reasons, a realistic evaluation of the SPS Agreement must determine whether it takes sufficient account of the varying levels of economic development of WTO Members and has effective mechanisms in place to ensure that all Members benefit from its disciplines.

B. Evaluation of the Balance Achieved

In respect of allowing sufficient scope for Members to regulate in the area of human, animal or plant life and health, the SPS Agreement represents a significant achievement as compared to the situation under the GATT 1947. Now the imposition of SPS measures is no longer viewed as an exceptional situation requiring justification. By recognizing the right of Members to regulate in this area, the SPS Agreement has shifted the burden of proof to the Member who wishes to challenge an SPS measure. In addition, the SPS Agreement recognizes the right of Members to set the level of protection they deem fit,

even if this level of protection is higher than that embodied in international standards. Also this possibility is regarded as an autonomous right rather than an exception from the harmonization disciplines. Thus it is for the challenging Member to show that relevant measure is not scientifically justified.

It is with the disciplines on Members' right to regulate in the SPS area, that the balance struck in the SPS Agreement becomes apparent. The Agreement represents an innovation from the previous GATT approach in that it uses *science* to mediate the conflict between the competing values of health protection and free trade. Some concerns arise in connection with the scientific disciplines in the SPS Agreement. Given the strict interpretation that has been given to the requirement of a risk assessment, the lack of clarity regarding the requirement of "sufficient scientific evidence" and the limitation of the role of the precautionary principle to the provisions of Article 5.7, concerns can be raised regarding the ability of the SPS Agreement, as it has been interpreted in the case law, to deal with the uncertainties inherent in scientific analysis. By using science as if it were a neutral benchmark against which SPS measures can be tested for legitimacy, the SPS Agreement may reflect a naïve and outdated view of the nature of science. The Appellate Body has gone some way towards taking into account the realities of risks in the real world, rather than looking only at laboratory science, and has also accepted that divergent risk assessments can occur in a particular situation and that SPS measures can legitimately be based on minority opinions. However, it has stopped short of allowing the presence of unknown factors and uncertainties to influence the interpretation of the requirements for a risk assessment or sufficient scientific evidence, or the evaluation by panels of the scientific evidence before them.

It is argued here that account should be taken of the prevalence of uncertainties and differing scientific opinions in all aspects of the regulatory process, not just the risk management stage. For this reason, the emerging concept of the precautionary principle, to the extent that it develops into a general principle of international law or a customary international law principle, should be taken into account in interpreting the requirements of "sufficient scientific evidence" and of risk assessment "as appropriate to the circumstances". However, this taking into account must be carefully circumscribed to avoid introducing unpredictability into the trade regime in this area and shifting the carefully negotiated balance in the SPS Agreement too far towards the side of health protection, undermining the market access achievements of the disciplines in the Agreement.

Another area that merits attention with respect to how the balance is struck in the SPS Agreement relates to the use of international standards set by the "three sisters" as reference standards. The possibility of deviating from international standards without a shift in the burden of proof ensures that Members' right to choose their own level of protection is respected. At the same time, the harmonization of standards holds real benefits in terms of facilitating market access and is particularly useful for developing countries that lack the resources and infrastructure to set their own standards. However the standard-setting process leaves much to be desired. Until such time as these international standard-setting organizations have effectively resolved the problems of developing country participation in standard setting and the politicization of the standard-setting process, the standards they set are of doubtful legitimacy as the touchstone against which SPS measures are judged for presumptive validity with the SPS Agreement and the GATT. Reforms to the standard-setting process are necessary to ensure that these standards reflect the needs of all Members, including developing countries.

Perhaps one of the most significant achievements of the SPS Agreement is the improvement it has brought about with regard to transparency of SPS measures. This has

increased predictability in the international market for food and agricultural products, by enabling exporters to determine, in advance, what requirements their products have to meet. The requirement of a reasonable interval between publication of a measure and its entry into force[638] gives exporters time to adjust to new measures. In addition, the transparency requirement of advance notification of new non-harmonized measures to allow for comments as well as the possibility to discuss notified measures in the SPS Committee enables Members to raise their concerns regarding SPS measures that affect their exports and to try to get these measures amended before they come into force. This means that disagreements regarding SPS measures can be resolved quickly and simply without recourse to the more costly process of dispute settlement.

However, the full potential of the transparency obligations to enhance market access has not been realized due to the flexibility in the transparency provisions. Although the Doha Decision on Implementation has taken a step towards tightening these obligations, a lot remains to be done. It has been pointed out that the content and quality of the information provided in notifications varies between countries, the period allowed for comments on proposed measures is sometimes insufficient, comments are often not taken into account and documentation is sometimes not promptly provided.[639] Further work in the area of notification is thus necessary.

Other disciplines that hold significant potential for increasing market access for food and agricultural products, without bringing into question the level of protection maintained by an importing Member, are those relating to the recognition of equivalence and adaptation to regional conditions. These provisions make it possible for Members to limit the negative effects of legitimate SPS measures of their trading partners on their exports. This can be done either by requesting that the effectiveness of their own different measures in achieving the appropriate level of protection of the importing Member be recognized or by proving that regional conditions in their territories (such as pest- or disease-free status) justify an adaptation (or non-application) of the measure with regard to that region. Due to the best-endeavor nature of these provisions, they have been dogged by problems of lack of implementation. The SPS Committee's Equivalence Decision and the clarification thereto adopted through the work programme in this area, have gone some way towards clarifying and operationalizing the provision on equivalence. It now remains to be seen whether this work will bear fruit, in promoting the recognition of equivalence in practice. Similarly, it is hoped that the informal discussions initiated on the regionalization provision will lead to a similar work programme for the establishment of procedural guidelines to further the full use of this provision.

It is now necessary to evaluate whether the disciplines of the SPS Agreement sufficiently take account of the special constraints faced by developing countries. The rules of the SPS Agreement entail high costs for developing countries first of all in terms of establishment of the infrastructure required for transparency and risk assessment, but also in terms of participation in the SPS Committee, participation in international standard-setting and enforcement of SPS disciplines in dispute settlement. In order for developing countries to be able to meet these costs and thus benefit from the Agreement, it is important that the rules on technical assistance and special and differential treatment in the SPS Agreement be effectively implemented by developed Members. As most of these provisions are either non-mandatory or at best create best-endeavor obligations,

[638] As discussed *supra* Part IV(D), this period has been specified in the Doha Decision on Implementation as normally not less than six months.

[639] Zarilli, *supra* note 448, at 19.

many complaints have been raised regarding the inadequate implementation of these provisions.[640] It is clear that a tightening of these rules is necessary if developing countries are to reap the full benefits of the SPS Agreement.

C. Context for Possible Clarifications or Amendments

The SPS Agreement is *not* on the agenda for negotiations for the Doha Round. This would appear to be due to the difficulty in reaching agreement in this contentious area. Members thus prefer to work with the disciplines they have already negotiated in this area, rather than risk reopening the Agreement and not being able to reach agreement on the amendment of its provisions.[641] However, this does not mean that it will not be possible to agree on amendments to or clarifications of specific provisions of the SPS Agreement either in the context of other negotiations that form part of the Doha Development Agenda or through the SPS Committee outside the Doha Round.[642]

In the first place, SPS concerns have been raised in the context of the ongoing agriculture negotiations. Three facts could be regarded as opening the door for this possibility: first, the reference to the SPS Agreement in Article 14 of the Agreement on Agriculture;[643] second, the identification of market access (which in principle includes non-tariff barriers such as SPS measures) as one of the "three pillars"[644] of the ongoing agriculture negotiations; and third the explicit reference in Article 20 of the Agreement on Agriculture to "non-trade concerns"[645] as one of the elements to be taken into account in the mandated negotiations. Already several proposals in the area of agriculture contain

[640] That is not to say that no technical assistance relating to SPS concerns has been delivered. In fact several Members have submitted papers to the SPS Committee documenting the technical assistance they have provided to developing countries. Amongst others, *see* G/SPS/GEN/181;Committee on Sanitary and Phytosanitary Measures, *Discussion on Technical Assistance and Cooperation—Informal Meeting of the SPS Committee of July 9, 2001,* G/SPS/GEN/267, July 16, 2001; Committee on Sanitary and Phytosanitary Measures, *Summary of the Replies to the Questionnaire on Technical Assistance: Note by the Secretariat,* G/SPS/GEN/143/Rev.1/Add.1, June 16, 2000; Committee on Sanitary and Phytosanitary Measures, *Technical Assistance to Developing Countries Provided by the United States: Submission by the United States,* G/SPS/GEN/181, June 15, 2000; Committee on Sanitary and Phytosanitary Measures, *Technical Cooperation and Assistance: Submission by the United States,* G/SPS/GEN/78, June 9, 1998; Committee on Sanitary and Phytosanitary Measures, *Quarantine and Other Sanitary and Phytosanitary Capacity Building and Training Activities Undertaken by Australia: Submission by Australia,* G/SPS/GEN/124, June 15, 1999; Committee on Sanitary and Phytosanitary Measures, *Technical Assistance to Developing Countries: Statement by the European Communities at the Meeting of March 14–15, 2001,* G/SPS/GEN/244, April 27, 2001. What remains a concern is the inadequacy of the technical assistance given thus far to overcome the barriers to developing country products created by stringent SPS standards. *See* Committee on Sanitary and Phytosanitary Measures, *Special and Differential Treatment and Technical Assistance: Submission Made by India at the Meeting of June 10–11, 1998,* G/SPS/GEN/85, July 23, 1998, at 4.

[641] This does not mean that the possibility that the SPS Agreement could be reopened for negotiation in this Round is entirely excluded, as the negotiations may go beyond the initial agenda set. However, for the reasons mentioned, this would be unlikely in this case.

[642] *See* Denise Prévost and Mariëlle Matthee, *The SPS Agreement as a Bottleneck in Agricultural Trade between the European Union and Developing Countries: How to Solve the Conflict*, 29 LEGAL ISSUES OF ECONOMIC INTEGRATION 43, 44–45 (2002).

[643] Article 14 states that Members agree to give effect to the SPS Agreement. This serves to underscore the link between the SPS Agreement and the Agreement on Agriculture.

[644] The other two pillars are export competition and domestic support.

[645] Food-safety issues (including issues such as GMO labeling, the application of the precautionary principle and consumer concerns) have been identified in some proposals as one of the non-trade concerns relevant to the agriculture negotiations.

references to SPS issues and could serve to open the door for discussion of SPS matters.[646] Perhaps amendments to specific provisions of the SPS Agreement could be agreed upon and included in the results of the Doha Round without the need to reopen the whole SPS Agreement for negotiation.

Second, the SPS Committee views its mandate under Article 12.1 of the SPS Agreement to "carry out the functions necessary to implement the provisions of this Agreement and the furtherance of its objectives" as encompassing the power to make binding rules, clarifying the provisions of the SPS Agreement. It has already exercised this power in adopting the Equivalence Decision.[647] While the enforceability of such decisions in dispute settlement remains an open question, at the very least they will be taken into account by panels and the Appellate Body in interpreting the provisions of the Agreement as either "subsequent agreement between the parties regarding the interpretation of the treaty or the application of its provisions" under Article 31.3(b) of the Vienna Convention on the Law of Treaties[648] or as a "rule of international law applicable to the relations between the parties" pursuant to Article 31.3(c) thereof. It is therefore possible that certain ambiguous obligations could be given content by decisions of the SPS Committee, provided these do not go as far as to amend the rules or create new obligations.

Third, the SPS Agreement itself, in Article 12.7, provides a mechanism for review of the Agreement and the proposal of amendments to the Council for Trade in Goods. This Council would then forward the proposed amendments to the Ministerial Conference for adoption under the amendment mechanism contained in Article X of the WTO Agreement. While Article 12.7 provides that after the first review of the SPS Agreement reviews shall take place "as the need arises", the Doha Decision on Implementation now obliges the SPS Committee to undertake such reviews at least once every four years.[649] Members could usefully have recourse to this possibility to address remaining concerns with the rules of the SPS Agreement.

D. Key Issues for the Future

Equivalence and regional adaptation remain key issues. The work done by the SPS Committee in the area of equivalence will hopefully ensure that the provisions on equivalence live up to their potential in respect to increasing market access.[650] A similar exercise has been initiated with regard to regionalization. It should encompass clarifications to the procedure and requirements that Members should follow in order to have pest- or disease-free status recognized. In particular, it is important to specify that once a Member

[646] *See e.g.*, G/AG/NG/W/37, G/AG/NG/W/142, G/AG/NG/W/136, G/AG/NG/W/94, G/AG/NG/W/98, G/AG/NG/W/96, G/AG/NG/W/90, and G/AG/NG/W/97 (including Corr. 1 and 2).

[647] This Decision is discussed *supra* Part II(F)(1).

[648] Articles 31 and 32 of the *Vienna Convention* are regarded as a codification of customary rules of public international law with regard to treaty interpretation. Thus panels and the Appellate Body are bound to apply them in interpreting provisions of the WTO agreements under Article 3.2 of the Dispute Settlement Understanding.

[649] Ministerial Conference, Fourth Session, *Implementation-Related Issues and Concerns, Decision of 14 November 2001,* WT/MIN(01)/17, November 20, 2001, ¶ 3.4.

[650] Informal discussions by the SPS Committee have focused on the Work Programme on equivalence, and in particular on clarifications of paragraphs 5–7 of the Equivalence Decision. For a summary of the Chairman's report on these discussions, *see* Committee on Sanitary and Phytosanitary Measures, *Summary of the Meeting Held on 25–26 June 2002, Note by the Secretariat*, G/SPS/R/27, August 2, 2002, ¶ V(a). As mentioned *supra* Part III(C)(3), the SPS Committee agreed to clarifications to ¶¶ 5 and 6 of the Equivalence Decision at its meeting of November 7–8, 2002. *See supra* note 501.

(or a region in its territory) has officially been declared pest- or disease free by the relevant international organization, other Members should recognize such a declaration and not require that proof of pest- or disease-free status be provided from scratch.

The gaps in the notification obligations are also an important area for future work. The notification guidelines issued by the SPS Committee are a useful tool in specifying the procedures and requirements of notification but these guidelines are non-binding and failure to comply with them can thus not be challenged in dispute settlement. It is therefore suggested that binding rules in this respect should be worked out by Members in the SPS Committee as part of the next review of the SPS Agreement and submitted to the Council for Trade in Goods, under the possibility for amendment of the SPS Agreement created in Article 12.7 thereof.

With respect to special and differential treatment for developing countries, we have noted that the implementation problems encountered with regard to special and differential treatment provisions in WTO agreements were the subject of discussions in the General Council. On the basis of these discussions, the Decision on Implementation was adopted at the Doha meeting of the Ministerial Conference.[651] This Decision instructs the Committee on Trade and Development ("CTD") of the WTO to examine the possibility of making mandatory those special and differential treatment provisions that are currently non-mandatory as well as other ways of improving the effectiveness of these provisions. The CTD was asked to report to the General Council with clear recommendations for a decision by July 31, 2002.[652] For this purpose, the Special Session of the CTD was established. Discussions in the Special Session of the CTD on this issue were contentious and it was difficult to reach agreement on key issues.[653] Three proposals were received with respect to the special and differential treatment provisions of the SPS Agreement.[654] On July 24, 2002, the Members in the Special Session of the CTD reached agreement on a report[655] that was presented at the meeting of the General Council on July 31, 2002. In this report, the deadline for recommendations for a decision on special and differential treatment was postponed until December 2002.[656] In addition, the report recommended *inter alia* that the Special Session of the CTD be instructed to continue its examination of Agreement-specific proposals, utilizing, as appropriate, the expertise available in other WTO bodies.[657] Subsequently, on February 10, 2003 the CTD adopted a report requesting the General Council to clarify its mandate regarding special and differential treatment negotiations. The General Council failed to adopt this report due to opposition from

[651] This Decision is discussed *supra* Part IV(D).

[652] Ministerial Conference, Fourth Session, *Implementation-Related Issues and Concerns, Decision of 14 November 2001,* WT/MIN(01)/17, November 20, 2001, ¶ 12.1. This work program was endorsed in the Doha Ministerial Declaration. Ministerial Conference, Fourth Session, Ministerial Declaration. *Adopted on 14 November 2001*, WT/MIN(01)/DEC/1, November 20, 2001

[653] These issues deal with basic matters such as the timeline, the relationship between two tracks that have been identified for the discussions, namely agreement-specific issues and cross-cutting issues and the question whether agreement-specific issues would be more appropriately dealt with in the relevant WTO bodies responsible fort he various agreements. ICTSD, *Arduous Process Yields Agreement on S&D Report,* 6(28) Bridges Weekly Trade Digest July 24, 2002.

[654] These proposals were from India (TN/CTD/W/6), the African Group (TN/CTD/W/3/Rev.1 and 2, not yet derestricted), and the Like-Minded Group, consisting of Cuba, the Dominican Republic, Egypt, Honduras, India, Indonesia, Kenya, Mauritius, Pakistan, Sri Lanka, Tanzania, and Zimbabwe (TN/CTD/W/2).

[657] *Id.* ¶ 15.

developed countries and the negotiations were deadlocked.[658] With the failure of the Cancun Ministerial Conference in September 2003, progress in negotiations on special and differential treatment stalled. Since the adoption of the new framework text on the Doha work program by the General Council in Geneva on July 31, 2004, negotiations are restarting. Although no agreement was reached on the adoption of amendments to special and differential treatment provisions as part of the 'July package', the text includes an instruction by the General Council to the Special Session of the Committee on Trade and Development to expeditiously complete its condideration of proposals in this regard and to report to the General Council, with clear recommendations for a decision, as soon as possible and no later than July 2005. Similarly, the Council instructs all WTO bodies to which proposals have been referred, to expeditiously complete the consideration of these proposals and report to the General Council with clear recommendations by July 2005.

Since special and differential treatment is a standing agenda item for SPS Committee meetings, and certain proposals on special and differential treatment have been forwarded to the SPS committee under the Doha mandate discussions on this topic between the delegates to the SPS Committee who have specific expertise in this area could provide useful input for the Special Session of the CTD.[659] It is to be hoped that with regard to the special and differential treatment provisions in the SPS Agreement, Members will succeed in agreeing to new rules or to the tightening of existing provisions to fully operationalize these provisions.[660]

The issue of technical assistance is also of fundamental importance and is currently receiving attention not only within the SPS Committee,[661] but also in other international

[658] *See* ICSTD, *S&D Review in Limbo as General Council Fails to Adopt Report* 7(5) BRIDGES WEEKLY TRADE NEWS DIGEST, February 12, 2003.

[659] Until recently, developing countries made little use of this possibility to raise concerns or make suggestions under this agenda item, preferring to keep discussions on special and differential treatment within the CTD. However, it is interesting to note the recent Egyptian and Canadian proposals in the SPS Committee on ways to enhance transparency regarding the provision of special and differential treatment under the SPS Agreement by modifying the recommended notification format to include information on the provision of special and differential treatment, either *ex ante* (Egyptian proposal) or *ex post* by means of an Addendum to the notification after bilateral discussions on this issue between the importing and exporting Members (Canadian proposal) . Committee on Sanitary and Phytosanitary Measures, *Enhancing Transparency of Special and Differential (S&D) Treatment within the SPS Agreement, Submission by Canada,* G/SPS/W/127, October 30, 2002. *See* further *supra* note 525.

[660] At time of writing, prospects for this seem bleak, as discussions in the CTD regarding the relevant provisions in the SPS Agreement have not led to progress in reaching agreement. Developed countries have indicated that they regard developing country proposals in this regard as unrealistic or impractical, placing too many restrictions on the implementation of SPS measures, thus endangering health, or requiring unlimited funding for technical assistance. Instead, they suggest more effective use of the current provisions on special and differential treatment and further consultations in the SPS Committee when new SPS measures are likely to cause difficulties for developing countries. In addition, developed countries oppose changes to the language of special and differential treatment provisions in the agreements, as this would alter the balance of rights and obligations. Developing countries counter that their proposals do not require lowering SPS standards but rather meaningful and mandatory technical and financial assistance in order to meet new SPS measures. According to developing countries, the current under-utilisation of special and differential treatment provisions is due to the vagueness of the language used therein, which is precisely what was meant to be addressed under the CTD's mandate. *See* ICTSD, *WTO: S&D Review Struggles for Agreement* 6(39) BRIDGES WEEKLY TRADE NEWS DIGEST, November 14, 2002.

[661] The relevant discussions and documents circulated in the SPS Committee on technical assistance and capacity building are summarized in a Secretariat document. *See* Committee on Sanitary and Phytosanitary Measures, *Technical Assistance and Capacity Building in the Context of the SPS Committee, Note by the Secretariat,* G/SPS/GEN/332, June 24, 2002.

organizations and bilaterally.[662] Much is being done by the WTO Secretariat to encourage the effective implementation of technical assistance provisions.[663] Informal discussions have taken place in the SPS Committee on this issue and specific proposals were discussed.[664] Some of the suggestions put forward were the integration of all technical assistance into a single coherent framework, irrespective of the source of the assistance; placing emphasis on improving human resources, aiming technical assistance at the establishment or improvement of national regulatory systems in the area of SPS, as well as assisting developing countries to meet the SPS standards of their trading partners.[665] It would be of great consequence if these discussions were to result in a coherent framework for the provision of technical assistance.[666]

Finally, with respect to the problems of standard setting in international organizations, it should be borne in mind that this is outside the scope of action of the WTO. The standard-setting organizations are fully independent of the WTO and operate according to their own rules and statutes. Any initiatives for reform of the standard setting process must thus come from these organizations themselves or Members acting in their capacity as members of the standard-setting organizations. It is interesting to note that an evaluation of the Joint FAO/WHO Food Standards Program has recently been conducted. This involved a review of the Codex standard-setting process and the problems of participation of developing countries. The results of this review were discussed within the Codex[667] and recommendations were made to the FAO and WHO governing bodies regarding reforms to the Codex structure and decision-making process. Consequently several important changes to the CAC Rules of Procedure were considered at the twenty-seventh session of the CAC in 2004. Similarly, the IPPC established a trust fund for technical assistance in 2003, aimed at helping developing countries to participate in standard-setting activities and meetings and to implement resulting standards.[668] In addition, a Trust Fund for the

[662] At the SPS Committee meeting of June 2002, the U.S.A., EC, Codex, ITC and IICA highlighted some of their recent technical assistance activities. *See* Committee on Sanitary and Phytosanitary Measures, *Summary of the Meeting Held on 25–26 June 2002, Note by the Secretariat*, G/SPS/R/27, August 2, 2002, paras 102–106. More detailed information on some of these activities can be found in G/SPS/GEN/181/Add.2, G/SPS/GEN/335, G/SPS/GEN/344 and G/SPS/GEN/333.

[663] For example, by the gathering of information on the technical assistance needs of developing countries by means of questionnaires. *See supra* Part IV(A). In the June 2002 meeting of the SPS Committee, the Secretariat drew Members' attention to the Coordinated WTO Secretariat Annual Technical Assistance Plan for 2002 and indicated that it will do its best to include in its 2003 program the technical assistance requests that emerge from the responses to the questionnaire. However, it pointed out that due to resource constraints, most technical assistance requests would have to be addressed bilaterally or by other international organizations. *See* Committee on Sanitary and Phytosanitary Measures, *Summary of the Meeting Held on 25–26 June 2002, Note by the Secretariat*, G/SPS/R/27, August 2, 2002, ¶ 97.

[664] *See supra* Part IV(A).

[665] Committee on Sanitary and Phytosanitary Measures, *Discussion on Technical Assistance and Cooperation—Informal Meeting of the SPS Committee of 9 July, 2001,* G/SPS/GEN/267, July 16, 2001.

[666] In addition, it should be noted that the Agriculture and Commodities Division of the WTO Secretariat is participating in the creation of a technical assistance database. *See* Committee on Sanitary and Phytosanitary Measures, *Summary of the Meeting Held on 25–26 June 2002, Note by the Secretariat*, G/SPS/R/27, August 2, 2002, ¶ 97.

[667] Extraordinary sessions of the Codex Alimentarius Commission and its Executive Committee were convened in Geneva on February 10–15, 2003, to discuss the conclusions and recommendations emanating from this evaluation. A statement resulting from these discussions was adopted for submission to the governing bodies of the FAO and WHO. Further work will be undertaken by the Commission in this regard. See Codex Alimentarius Commission, *Report of the 25th (Extraordinary) Session*, February 13–15, 2003 ALINORM 03/25/5, Appendix II.

[668] Committee on Sanitary and Phytosanitary Measures, *Summary of the Meeting Held on 17–18 March 2004, Note by the Secretariat*, G/SPS/R/33, May 7, 2004, ¶ 140.

Participation of Developing Countries and Countries in Transition in the Work of the Codex Alimentarius Commission[669] was launched on February 14, 2002.[670]

In conclusion, we argue that the SPS Agreement represents a significant achievement in addressing the potential for conflict between trade liberalization and the protection of health. It is the first WTO agreement to deal specifically with the interface between free trade and a specific social policy area. As any such new initiative, it contains both promises and pitfalls. The experience gained during the nine years of existence of the SPS Agreement has served to highlight these two aspects of the Agreement, and can be usefully examined in order to address the issue of whether, and if so which, reforms to the Agreement or clarifications thereof may be necessary. It is hoped that the discussion in this Chapter may stimulate thinking and debate in this area.

[669] *See supra* note 625.

[670] At the SPS Committee meeting of March 17–18, 2004, the CAC representative reported that the contributions to the FAO/WHO Trust Fund have reached the threshold of US$500,000 needed to operationalize it. However, as this amount is insufficient to significantly increase developing country participation in the work of the CAC, he encouraged further contributions.

I. Introduction

Technical regulations and standards play an important part in everyday life. Governments apply "technical regulations" (mandatory measures) and "standards" (voluntary measures), and they rely on measures to assess the conformity of goods with standards and regulations ("conformity assessment procedures") for many widely accepted domestic policy purposes, among them to:

- protect the health and safety of citizens and workers
- preserve the environment
- increase consumer confidence
- prevent deceptive marketing practices
- protect national security
- protect animal and plant life and health
- to assure product uniformity, compatibility and interchangeability.

There is however a darker side to the use of technical regulations and standards. With the progressive reduction in tariffs since 1948, WTO Members, like GATT Contracting Parties before them, have turned to technical regulations, standards and conformity assessment procedures as a means of protecting domestic producers. Such protectionism is sometimes overt—for example a requirement that a product sold in a country incorporate an environmental technology only manufactured in that country. At other times it is less overt, as in the case of an economically small country that establishes standards for the dimensions of an appliance that differ from those of other countries, making it harder for foreign manufacturers to supply the domestic market.[1]

The Uruguay Round Agreement on Technical Barriers to Trade ("TBT Agreement") is designed to allow WTO Members to pursue what they have agreed are legitimate regulatory and standardization interests, while at the same time attempting to ensure that such regulations and standards do not become unnecessary obstacles to international trade in goods. This is a difficult balance to achieve since regulatory measures may have legitimate as well as protectionist purposes. The TBT Agreement is also intended to make the process of formulating, implementing and applying technical regulations, standards, and conformity assessment procedures transparent—so that Members are aware of regulations and standards that exist in other Members' jurisdictions and can influence their development and monitor their application.

These competing goals are reflected in the TBT Agreement's preamble or recitals which sets forth the philosophy of this Agreement.[2] These recitals set the TBT Agreement

[1] Large foreign manufacturers with substantial economies of scale might find it uneconomical to retool their factories to compete for market share in a small market.

[2] In relevant part the TBT Agreement's preamble provides:

> *Recognizing* the important contribution that international standards and conformity assessment systems can make in this regard by improving efficiency of production and facilitating the conduct of international trade;
>
> *Desiring* therefore to encourage the development of such international standards and conformity assessment systems;
>
> *Desiring* however to ensure that technical regulations and standards, including packaging, marking and labeling requirements, and procedures for assessment of conformity with technical regulations and standards do not create unnecessary obstacles to international trade;
>
> *Recognizing* that no country should be prevented from taking measures necessary to ensure the quality of its exports, or for the protection of human, animal or plant life or health, of the environment, or for

squarely in the context of the Uruguay Round Agreement and the objectives of GATT 1994. However, the recitals go further. They establish the preference, given voice in the Agreement, for the use of "international" standards and conformity assessment procedures. The recitals also establish the important policy objective, again repeated in the TBT Agreement, of assuring that regulations, standards and conformity assessment procedures do not create unnecessary obstacles to international trade.[3]

The preamble evidences that the drafters of the TBT Agreement sought to achieve a balance between assuring that technical regulations, standards and conformity assessment procedures do not become unnecessary obstacles to international trade and allowing Members the regulatory autonomy to protect legitimate interests through the use of these potential barriers.[4] If the TBT Agreement is applied too strictly, the legitimate policy interests of Members will be thwarted. If the TBT Agreement is applied too laxly, technical regulations may be used for protectionist purposes and the gains Members have achieved through progressive rounds of tariff reductions may be lost.

The result is that some sensitivity is required when dealing with TBT issues, in particular from a developing country viewpoint. Developing countries fear that technical regulations and standards imposed by developed countries purportedly for social policy goals may in reality be for protectionist purposes. Developed countries fear that the TBT Agreement will be applied too strictly and that trade measures designed to pursue legitimate social policy objectives will be struck down.

This chapter provides a detailed examination of the provisions of the TBT Agreement. As of August 2004, there have only been two WTO dispute settlement decisions interpreting the TBT Agreement. What little experience that exists is incorporated into the following analysis.

II. Brief Historical Overview

A. The GATT

The 1947 General Agreement on Tariffs and Trade ("GATT") does not treat technical regulations and standards in much detail. Although the term "regulation" appears in several places in the GATT Agreement, and the term "standards" is mentioned in Article XI, only GATT Articles III:4, XI:2, and Article XX are significant.[5] Article III:4 of

> the prevention of deceptive practices, at the levels it considers appropriate, subject to the requirement that they are not applied in a manner which would constitute a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail or a disguised restriction on international trade, and are otherwise in accordance with the provisions of this Agreement;
>
> *Recognizing* that no country should be prevented from taking measures necessary for the protection of its essential security interest;
>
> *Recognizing* the contribution which international standardization can make to the transfer of technology from developed to developing countries;
>
> *Recognizing* that developing countries may encounter special difficulties in the formulation and application of technical regulations and standards and procedures for assessment of conformity with technical regulations and standards, and desiring to assist them in their endeavors in this regard . . .

[3] Packaging, marking and labeling requirements are singled out for special attention in the preamble's fifth recital as potential obstacles to international trade.

[4] Based on the Appellate Body's decision in *U.S.—Shrimp*, it can be inferred that both the preamble to the WTO Agreement and the preamble of the TBT Agreement will play a role in the interpretation of the TBT Agreement. *United States—Import Prohibition of Certain Shrimp and Shrimp Products,* Report of the Appellate Body, WT/DS58/AB/R (1998) ("*U.S.—Shrimp")*, ¶¶ 152–155.

[5] Article XX's introductory paragraph ("chapeau") uses the term "measure" which would include a regulation. Article XX(d) specifically uses the term "regulations".

the GATT Agreement requires that the principle of "national treatment" be applied to regulations and requirements affecting the "internal sale, offering for sale, purchase, transportation, distribution or use" of "like products". It is the GATT Article with the greatest relevance to the treatment of regulations and standards, as well as procedures for assessing whether products conform with regulations and standards.[6] The basic principle is that regulations and standards should not be applied so as to discriminate between "like" foreign and domestic products, that is to say, similar foreign and domestic products, sold within a country.[7]

Article XI:2 of the GATT Agreement applies to commodities—a term of art among trade lawyers.[8] It permits import and export prohibitions necessary for the application of standards and regulations for the classification, grading or marketing of commodities in international trade. It operates as an exception to the general Article XI rule that only duties, taxes and other charges should be applied to restrict imports and exports.

Lastly, Article XX(b) and (g) of the GATT Agreement establish exceptions to GATT obligations, in practice often to Article III of the GATT Agreement, that may be applicable to technical regulations and standards. Among other goals, these exceptions are designed to offer GATT Contracting Parties, and now WTO Members, a means of protecting, when "necessary", human, animal or plant life and health, as well as enacting regulatory measures relating to the protection of exhaustible natural resources. They can be used to justify certain regulatory and standardization measures provided that, in the words of Article XX's chapeau, the measures do not constitute a means of arbitrary or unjustifiable discrimination or a disguised restriction on international trade.

The above provisions of GATT 1947 do not establish a comprehensive legal structure for the treatment of technical regulations and standards. However, the important principles contained in these GATT provisions served as a basis for the Tokyo Round Standards Code, and later the WTO TBT Agreement. In particular, the TBT Agreement contains a general obligation of non-discrimination that draws inspiration from GATT Articles I and III, and provides room for exceptions similar to those present in GATT Articles XX and XXI.

B. The Tokyo Round Standards Code

This first step toward the establishment of a more comprehensive legal structure to discipline the application of technical regulations and standards came with the growing realization that GATT Article III:4 is subject to abuse. It is not particularly difficult for

[6] GATT Article III:4 provides in part that:

> The products of the territory of any contracting party imported into the territory of any other contracting party shall be accorded treatment no less favorable than that accorded to like products of national origin in respect of all laws, regulations and requirements affecting their internal sale, offering for sale, purchase, transportation, distribution or use.

In brief, the national treatment principle requires that foreign and domestic "like products" be subjected to similar tax and regulatory treatment. The national treatment principle, together with the MFN principle (Article I), form the principle of non-discrimination that is fundamental to the WTO system. See Chapter 5 of this book.

[7] The phrase "like product" is a term of art. It is discussed *infra* Part V(A)(1).

[8] The term commodity usually refers to food or metal products. Such products are frequently traded by investors. In Report of the GATT panel, *Canada—Measures Affecting Exports of Unprocessed Herring and Salmon,* L/6268, BISD 35S/98, 112 (1988), ¶¶ 4.2–4.3, herring and salmon appear to have been accepted by the panel to be commodities for purposes of Article XI:2(b). The panel report dealt with whether a particular Canadian law was a marketing regulation for commodities (fish products).

a government to implement technical regulations that comply with Article III:4, but that nevertheless act as non-tariff barriers. Non-tariff barriers, in the form of domestic regulations, make excellent protectionist tools and were used by certain GATT Contracting Parties, including Japan,[9] to protect domestic producers. The use of non-tariff barriers to protect domestic manufacturers necessitated the establishment of a stronger regime governing the application of technical regulations and standards. Negotiations on the reduction of non-tariff barriers during the Tokyo Round eventually led to the Tokyo Round Agreement on Technical Barriers to Trade,[10] usually known as the "Standards Code", a title that remains useful because it distinguishes the Tokyo Round TBT Agreement (the Standards Code) from the Uruguay Round TBT Agreement.

The Standards Code came into effect on January 1, 1980. It was a plurilateral agreement—meaning that GATT Contracting Parties could but were not required to become members. Nevertheless, 32 Contracting Parties, primarily developed and advanced developing countries, opted to join. Despite the fact that its membership was limited and the Standards Code lacked a strong dispute settlement mechanism (which, like much of the GATT regime, was dependent on a consensus of its members), it provided a good testing ground for how best to discipline the use of technical regulations and standards. Significant portions of the WTO TBT Agreement are drawn from the Standards Code.

III. The TBT Agreement

The Uruguay Round Agreement on Technical Barriers to Trade entered into force on January 1, 1995. Much was learned from the Tokyo Round experience, and weaknesses present in the Tokyo Round Standards Code are addressed in the TBT Agreement. Two examples illustrate this point: (1) the TBT Agreement is an integral part of the single undertaking that forms the WTO Agreement—meaning that the TBT Agreement is a multilateral undertaking and as a result all WTO Members are bound by its obligations; and (2) the TBT Agreement has a much stronger enforcement mechanism, being subject to the WTO Agreement's Dispute Settlement Understanding ("DSU") which does not require consensus for adoption of panel and Appellate Body recommendations.

A. Terminology in the TBT Agreement

The TBT Agreement is applicable to "technical regulations", "standards", and "conformity assessment procedures"—procedures used to assess compliance with technical regulations and standards. Each of these terms is defined in Annex 1 of the TBT Agreement.

1. Technical Regulation

A technical regulation is defined in Annex 1 Paragraph 1 of the TBT Agreement as a:

> Document which lays down product characteristics or their related processes and production methods, including the applicable administrative provisions, with which compliance is mandatory. It may also include or deal exclusively with terminology, symbols, packaging, marking or labeling requirements as they apply to a product, process or production method.

[9] Jackson singles out the case of Japan. JOHN H. JACKSON, THE WORLD TRADING SYSTEM: LAW AND POLICY OF INTERNATIONAL ECONOMIC RELATIONS 222 (1997).

[10] The (Tokyo Round) Agreement on Technical Barriers to Trade, GATT, BISD, 26/S 8 (1980), (*entered into force* January 1, 1980), *reprinted in* 18 ILM 1079 (1979).

In *EC—Asbestos* the Appellate Body set forth a three-part test, derived from Annex 1.1 of the TBT Agreement, for a "document" to be classified as a technical regulation:

1) The document must apply to an *identifiable* product or group of products,
2) The document must lay down one or more *product characteristics*, and
3) Compliance with the product characteristics must be *mandatory*.[11]

One example of a technical regulation would be a law stating that only kitchen ovens that are one meter wide may be sold in State X. A second example would be a law stating that toys could not be sold in State X unless their packaging was recyclable. Kitchen ovens or toy packaging that do not comply with the terms of these technical regulations would not be permitted to be sold in State X, whether produced in State X or imported.

Being mandatory, technical regulations have the greatest potential to restrict international trade. This is because the sale of products with "characteristics" that do not meet applicable technical regulations will be prohibited by law.

The three criteria presented in *EC—Asbestos* were reiterated and applied in *EC—Sardines* where both the Panel and the Appellate Body examined as a threshold issue whether a particular trade measure was a technical regulation within the sense of Annex 1.1 of the TBT Agreement.[12] Since this important TBT case is referred to several times in this chapter, a brief description of the facts is provided below.

EC—Sardines concerned a complaint by Peru against the European Communities. The case involved the marking or labeling for sale of preserved and canned fish products made from two small and rather similar fish species—*Sardina pilchardus Walbaum* which is primarily found in the Eastern North Atlantic, Mediterranean and Black Seas, and *Sardinops sagax sagax*, which is found off the Peruvian and Chilean coasts. Both belong to the same family and sub-family, but to a different genus.[13]

In June 1989 the European Union adopted Council Regulation (EEC) No. 2136/89 ("EC Regulation"), which lays down common marketing standards for preserved sardines.[14] The EC Regulation reserved the use of the name "sardines" to *Sardina pilchardus*, a species found in or near European waters, thereby effectively prohibiting Peru from marketing its *Sardinops sagax sagax* as preserved "sardines" in the European Union.

The Panel found that "... the EC regulation is a technical regulation as it lays down product characteristics for preserved sardines and makes compliance with the provisions contained therein mandatory."[15] The EC appealed this decision, arguing that the measure is not a technical regulation based on the test established in *EC—Asbestos* since the regulation allegedly failed to meet the first and second criteria of the test.[16] More specifically the EC argued that the product was not identifiable since the product coverage

[11] *European Communities—Measures Affecting Asbestos and Asbestos-Containing Products,* Appellate Body Report, WT/DS135/AB/R (2001) ("*EC—Asbestos*"), ¶¶ 66–70 (emphasis added).

[12] *European Communities—Trade Description of Sardines*, Report of the Panel, WT/DS231/R, ¶¶ 7.24–7.35; and *European Communities—Trade Description of Sardines*, Report of the Appellate Body, WT/DS 231/AB/R (2002) ("*EC—Sardines*"), ¶¶ 173–195.

[13] *Sardina pilchardus Walbaum* and *Sardinops sagax sagax* both belong to the *Clupeidae* family and the *Clupeinae* sub-family. They belong to the genus *Sardina* and *Sardinops* respectively. *EC—Sardines*, Report of the Panel, *supra* note 12, ¶¶ 2.1–2.2.

[14] *Council Regulation (EEC) 2136/89 of June 21, 1989 Laying Down Common Marketing Standards for Preserved Sardines*. The EC Regulation is appended to the Panel Report, Annex 1. *See EC—Sardines*, Report of the Panel, *supra* note 12, ¶¶ 2.5–2.6.

[15] *EC—Sardines*, Report of the Panel, *supra* note 12, ¶ 7.35.

[16] *EC—Sardines*, Report of the Appellate Body, *supra* note 12, ¶¶ 173–174 (*citing EC—Asbestos*).

of its regulation is limited to preserved *Sardina pilchardus*, and the EC measure does not regulate fish made from *Sardinops sagax* or any other species.[17] Second, it argued that the requirement to state a certain name on the label does not involve just a labeling requirement but also a "substantive naming rule". It sought to draw a distinction between labeling requirements, which it accepted are covered by the TBT Agreement, and naming rules, which it argued do not reflect product characteristics and are therefore not covered by the TBT Agreement.[18]

The Appellate Body rejected both arguments. With respect to the first argument the Appellate Body found that a product does not have to be mentioned explicitly in a document for the product to be identifiable, and that identifiable does not mean expressly identified.[19] The Appellate Body upheld the Panel's finding that the EC Regulation is applicable to an identified product, "preserved sardines". More importantly it rejected the EC's contention that preserved sardines only referred to *Sardina pilchardus.* In doing so, it followed its reasoning in *EC—Asbestos*, that product identification relates to "aspects of compliance and enforcement"; since the EC Regulation had been enforced against imports of *Sardinops sagax*, *Sardinops sagax* was an identifiable product for purposes of the EC regulation.[20]

Next the Appellate Body turned to the question of whether the EC Regulation laid down product characteristics. Again turning to its findings in *EC—Asbestos* the Appellate Body reiterated that product characteristics "include not only 'features and qualities intrinsic to the product', but also those that are related to it, such as the 'means of identification'."[21] It found it unnecessary to determine whether the TBT Agreement distinguishes between "labeling" and "naming", holding instead that the requirement that "preserved sardines" be prepared exclusively from *Sardina pilchardus* establishes a product characteristic "intrinsic to" preserved sardines. Further, it agreed with the Panel's finding that "a means of identification" is a "product characteristic".[22]

The Appellate Body's decision in *EC—Sardines* is significant as it clarifies what is a technical regulation for TBT purposes—a threshold issue that will arise in other TBT cases. The EC's position was untenable, both legally and from a policy perspective. In effect the EC argued that product identification should be determined based on a strict reading of the text of its regulation and not based on the legal consequences of its regulation for imports. Had the EC's position prevailed, it would have become far easier to use product names to evade the classification of a trade measure as a technical regulation. The Appellate Body's decision thus helped preserve the effectiveness of the TBT Agreement.

The definition in the TBT Agreement of a technical regulation is broad. Nevertheless, Article 2.8 of the TBT Agreement does establish a preference for specifying technical

[17] *Id.* ¶ 173.
[18] *Id.* ¶ 174.
[19] *Id.* ¶ 180.
[20] *Id.* ¶¶ 185–186, *citing EC—Asbestos*, ¶ 70 which states:

> A "technical regulation" must, of course, be applicable to an identifiable product, or group of products. Otherwise, enforcement of the regulation will, in practical terms, be impossible [. . .] Although the TBT Agreement clearly applies to "products" generally, nothing in the text of that Agreement suggests that those products need be named or otherwise expressly identified in a "technical regulation". Moreover, there may be perfectly sound administrative reasons for formulating a "technical regulation" in a way that does not expressly identify products by name, but simply makes them identifiable—for instance, through the "characteristic" that is the subject of regulation.

[21] *EC—Sardines*, Report of the Appellate Body, *supra* note 12, ¶ 189 (*citing EC—Asbestos* ¶ 67).
[22] *EC—Sardines*, Report of the Appellate Body, *supra* note 12,¶ 190.

regulations based on product requirements rather than design or descriptive standards. By so doing, the Agreement leaves the Members with the maximum discretion to determine how to address legitimate TBT objectives. An example of a technical regulation based on a product requirement would be a provision requiring that a car bumper be able to withstand an impact at a speed of six kilometers/hour without damage. The same type of requirement based on a design or descriptive standard might require that car bumpers be made of a certain grade of steel and be mounted on specific springs designed to recoil a minimum amount upon impact.

2. Standard

The TBT Agreement is also applicable to standards. A standard is defined in Annex 1 Paragraph 2 of the TBT Agreement as a:

> Document approved by a recognized body, that provides, for common and repeated use, rules, guidelines or characteristics for products or related processes and production methods, with which compliance is not mandatory. It may also include or deal exclusively with terminology, symbols, packaging, marking or labeling requirements as they apply to a product, process or production method.[23]

The critical distinction between a technical regulation and a standard is that a technical regulation is mandatory and a standard is voluntary. A merchant can still try to sell a product that does not meet an applicable standard. Likewise an importer can import products that do not meet an established standard.

An example of a standard would be a guideline issued by a standardizing body establishing a common format for DVDs (digital video disks). Manufacturers whose DVD players use the common format would be able to advertise their conformity with the standard. Such DVD players would probably be more attractive to consumers given that consumers want to be able to rent DVDs that will work on their players. DVD players that use a different format could still be sold but the manufactures would lose any marketing benefits conferred by using the common standard. A familiar example of standards that illustrates how important standards can be, is the competition that occurred between two video standards—VHS and Betamax. The VHS standard triumphed over Betamax. Consumers who had purchased a video-recorder that used the Betamax standard eventually found that they were unable to rent movies recorded using the Betamax standard.

Another example of a standard would be rules or guidelines governing the use of a "recyclable symbol". Products conforming to the "rules, guidelines or characteristics for products" established by the standardizing authority would be able to bear the recyclable symbol.[24] Products that do not meet these criteria would not be permitted to bear the symbol, but would still be permitted to be sold.

Voluntary "standards" are used for many reasons, chief among them to assure proper performance, uniformity and interchangeability of a particular good. For example, manufacturers of products requiring batteries usually adapt their products to standardized voltages, and manufacturers of machines benefit by using standardized nuts and bolts so that repairs are more easily made. In the latter example, the manufacturers benefit by being able to buy standard nuts and bolts instead of producing them themselves; the users benefit by being able to make repairs more easily.

Neither a WTO panel nor the Appellate Body has had the opportunity to rule in a case involving a Member's standards. A dispute involving standards also never arose under the Tokyo Round Standards Code.

[23] *TBT Agreement*, Annex 1.2.

[24] *See TBT Agreement*, Annex 1 ¶ 2.

3. Conformity Assessment Procedure

Lastly, the TBT Agreement is applicable to conformity assessment procedures. A conformity assessment procedure is defined in Annex 1 Paragraph 3 of the TBT Agreement as:

> Any procedure used, directly or indirectly, to determine that relevant requirements in technical regulations or standards are fulfilled.
>
> Explanatory note:
>
> Conformity assessment procedures include, *inter alia*, procedures for sampling, testing and inspection; evaluation, verification and assurance of conformity; registration, accreditation and approval as well as their combinations.

Conformity assessment procedures are, as the term suggests, procedures for determining whether a given product conforms to an applicable technical regulation or standard. For example, if a WTO Member requires as a condition for the sale of a machine tool that a special guard be present to protect the hands of users, an inspection to determine if the guard is in place would be a conformity assessment procedure implemented to verify compliance with a technical regulation.

Likewise, if a WTO Member establishes standards whereby certain products may bear a "recyclable symbol", a test to make sure that a product meets the standards required to bear the symbol would be a conformity assessment procedure implemented to verify compliance with a standard. Regardless of whether the product conforms to the standard, it can be sold. The question is only whether or not the product will be permitted to bear the symbol.

B. Structure and Scope of the TBT Agreement

The scope of the TBT Agreement is set forth in TBT Article 1, and by reference to Annex 1 which defines the key terms, including: "technical regulations", "standards" and "conformity assessment procedures". Technical regulations, standards, and conformity assessment procedures are treated in separate portions of the TBT Agreement. Technical regulations are dealt with in Articles 2–3. Standards are governed by Article 4 and Annex 3—the Code of Good Practice for the Preparation, Adoption and Application of Standards. This Code sets forth almost all of the substantive provisions governing the treatment of standards. Conformity assessment procedures fall under Articles 5–9. The remainder of the Agreement, Articles 10–14, deals with transparency, technical assistance, special and differential treatment, institutional issues and dispute settlement.

Pursuant to the respective definitions set forth in Annex 1, technical regulations and standards are given form in "documents". Written form is thus implied. Technical regulations and standards may relate to product characteristics, terminology, symbols, packaging, marking or labeling requirements. As the principal difference between a technical regulation and a standard is that compliance with a technical regulation is mandatory while compliance with a standard is voluntary, technical regulations require a certain degree of product standardization, while standards merely encourage standardization. Conformity assessment procedures serve to verify whether this standardization has occurred through sampling, testing, inspection, evaluation, verification, registration, accreditation and approval procedures.

The TBT Agreement does not apply to all technical regulations, standards and conformity assessment procedures. Several provisions within the WTO Agreement, and more specifically the TBT Agreement, limit its scope. They are described in the first five

subsections below. One Appellate Body decision establishes the retroactive scope of the TBT Agreement. It is described in the sixth subsection.

1. Not Applicable to Trade in Services

The TBT Agreement is a portion of Annex 1A of the WTO Agreement. Annex 1A contains the Multilateral Agreements on Trade in Goods. These covered agreements, including the TBT Agreement, do not apply to trade in services. As a result, trade in services does not fall within the TBT Agreement.

2. TBT Agreement vs. Government Procurement Specifications: Procurement Carved Out

Pursuant to Article 1.4 of the TBT Agreement, the TBT Agreement is not applicable to government procurement activities—more specifically purchasing specifications prepared by governmental bodies for the production or consumption requirements of governmental bodies. Government purchasing specifications may fall instead under the WTO Agreement on Government Procurement ("AGP"). The AGP is a plurilateral agreement and the majority of developing countries, as well as a few developed countries, have not joined the AGP. Their procurement activity falls neither under the TBT Agreement nor under the AGP.

3. SPS vs. TBT Measures: SPS Carved Out

Pursuant to Article 1.5 of the TBT Agreement, the TBT Agreement is not applicable to sanitary and phytosanitary measures as defined in Annex A of the Agreement on Sanitary and Phytosanitary Measures ("SPS Agreement"). This is an explicit carve-out of SPS measures from the purview of the TBT Agreement. As a result, to understand the scope of the TBT Agreement, one must review Annex A(1) of the SPS Agreement. This provision defines an SPS measure as any measure applied:

> (a) to protect animal or plant life or health within the territory of the Member from risks arising from the entry, establishment or spread of pests, diseases, disease-carrying organisms or disease-causing organisms;
> (b) to protect human or animal life or health within the territory of the Member from risks arising from additives, contaminants, toxins or disease-causing organisms in foods, beverages or feedstuffs;
> (c) to protect human life or health within the territory of the Member from risks arising from diseases carried by animals, plants or products thereof, or from the entry, establishment or spread of pests; or
> (d) to prevent or limit other damage within the territory of the Member from the entry, establishment or spread of pests.
>
> Sanitary or phytosanitary measures include all relevant laws, decrees, regulations, requirements and procedures including, *inter alia*, end product criteria; processes and production methods; testing, inspection, certification and approval procedures; quarantine treatments including relevant requirements associated with the transport of animals or plants, or with the materials necessary for their survival during transport; provisions on relevant statistical methods, sampling procedures and methods of risk assessment; and packaging and labeling requirements directly related to food safety.

Despite the fact that Article 1.3 of the TBT Agreement provides that the TBT Agreement is applicable to agricultural products, it is the SPS Agreement and not the TBT Agreement that applies when a Member is protecting animal, plant or human health from the entry,

spread or establishment of pests, diseases, additives, contaminants, toxins or disease carrying organisms within its territory.

Cases do exist where different aspects of a product's "life-cycle" may fall under the coverage of both agreements. For example, agricultural products might be subject to an SPS inspection for pests at the border, then incorporated into a canned soup that is subject to labeling requirements requiring (1) the specification of the product's nutritional content and (2) whether the container is recyclable (both falling under the TBT Agreement).[25] However, it is virtually impossible that the two agreements would apply simultaneously to the same subject matter. A hypothetical instance where the distinction is somewhat blurred could be the case of hormone-treated meat. If an SPS measure is introduced to prevent health risks allegedly associated with the consumption of hormone-treated meat, the SPS Agreement would apply. If there are no health risks, the TBT Agreement might still be applicable, for example to a technical regulation introduced to prevent deceptive practices (arguably a labeling requirement intended to alert consumers to the fact that they are purchasing meat from an animal that was treated with hormones). Admittedly this example does raise questions related to the treatment of non-product-related production methods which are discussed in the following section.

4. Probably Inapplicable to Non-Product-Related Processes and Production Methods

The definitions of a "technical regulation" and a "standard" quoted above are ambiguous as to whether the TBT Agreement applies to technical regulations and standards regulating manufacturing "processes and production methods" ("PPMs") when the PPMs utilized are not detectable in the final product—so-called "non-product-related processes and production methods" ("NPR-PPMs"). This is a controversial issue. The view generally held in the trade community is that the TBT Agreement was not intended to apply to PPMs, unless the PPM is product-related (detectable in the final product).[26]

For example, it is highly unlikely that the TBT Agreement would apply to a law prohibiting the importation of aluminum produced using electricity derived from nuclear power. Instead, it is probable that GATT Article XI would be applied in a challenge to such a regulation on the grounds that generally only duties, taxes and other charges may be applied to restrict imports.

Nevertheless, there is one slight uncertainty. As just noted, an ambiguity exists in the definitions of "technical regulation" and "standard" in Annex 1 of the TBT Agreement—it is somewhat unclear whether NPR-PPMs were meant to be excluded from the definitions of technical regulations and standards, and thus from the TBT Agreement. As a result, and although highly improbable, room may exist to argue that the TBT Agreement could, in certain instances, also be applied to NPR-PPMs.

It bears noting that WTO Members have notified certain NPR-PPMs to the TBT Committee (for example, eco-labeling schemes based on a life-cycle analysis).[27] Such

[25] The SPS Agreement and not the TBT Agreement would apply to a labeling requirement if the intent or purpose of the labeling requirements is sanitary or phytosanitary in nature within the meaning of Annex A ¶ 1 of the SPS Agreement.

[26] *See generally* ARTHUR E. APPLETON, ENVIRONMENTAL LABELLING PROGRAMMES: INTERNATIONAL TRADE LAW IMPLICATIONS 92–94 (1997).

[27] "Notification" in the TBT sense of the term means to inform officially other WTO members of a particular action through the WTO Secretariat. Eco-labeling schemes are usually voluntary labeling programs where a label is awarded to environmentally friendlier products based on an environmental assessment of all phases of a products life-cycle—including, production, use, and disposal.

notifications do not seem to be evidence that a particular Member believes the TBT Agreement applies to NPR-PPMs. They are instead indicative of the efforts that certain WTO Members have made to ensure the transparency of their eco-labeling schemes.

Some may argue that the Appellate Body's decisions in *U.S.—Shrimp* suggests a willingness of the Appellate Body to close its eyes to the NPR-PPM debate, and from this draw the conclusion that the TBT Agreement should be applied to NPR-PPMs. In *U.S.—Shrimp*, the Appellate Body found (without discussing the PPM issue) that a U.S. regulatory measure, applicable to an NPR-PPM, and which violated GATT Article XI, satisfied an exception to GATT Article XX, but failed to meet the conditions of Article XX's chapeau.[28] In a subsequent proceeding under Article 21.5 of the DSU,[29] the Appellate Body ruled that a modified version of the U.S. measure met the conditions of Article XX's chapeau. This latter decision allowed the United States to impose an import ban based on an NPR-PPM.

The relevance of *U.S.—Shrimp* for purposes of the TBT Agreement has not been established. *U.S.—Shrimp* did not involve the TBT Agreement and the provisions at issue are not the same. It is doubtful that *U.S.—Shrimp* lends much legal support for the argument that the TBT Agreement should be applied to NPR-PPMs, although from a policy perspective *U.S.—Shrimp* does seem to take a friendlier view of trade-related environmental measures based on NPR-PPMs.[30]

5. Applicability to Import Prohibitions

The definition of "technical regulation" contained in Annex 1 to the TBT Agreement does not list import prohibitions or bans among the covered measures. However, the *EC—Asbestos* decision established that the TBT Agreement is applicable to import prohibitions and bans that are based on product characteristics, and exceptions to the prohibition or ban (based also on particular product characteristics) exist. In *EC- Asbestos* the Appellate Body found:

> Like the Panel, we consider that, through these exceptions, the measure sets out the "applicable administrative provisions, with which compliance is mandatory" for products with certain objective "characteristics". The exceptions apply to a narrowly defined group of products with particular "characteristics". Although these products are not named, the measure provides criteria which permit their identification, both by reference to the qualities the excepted products must possess and by reference to the list promulgated by the Minister.
>
> Viewing the measure as an integrated whole, we see that it lays down "characteristics" for all products that might contain asbestos, and we see also that it lays down the "applicable administrative provisions" for certain products containing chrysotile asbestos fibers which are excluded from the prohibitions in the measure. Accordingly, we find that the measure is a "document" which "lays down product characteristics . . . including the applicable administrative provisions, with which compliance is mandatory." For these reasons, we conclude that the measure constitutes a "technical regulation" under the TBT Agreement.[31]

[28] *U.S.—Shrimp*, *supra* note 4, ¶¶ 125–145.

[29] *United States—Import Prohibition of Certain Shrimp and Shrimp Products (Recourse to Article 21.5 of the DSU by Malaysia)*, WT/DS58/AB/RW (2001), ¶¶ 91–93.

[30] "Notification" in the TBT sense of the term means to inform officially other WTO members of a particular action through the WTO Secretariat. Eco-labeling schemes are usually voluntary labeling programs where a label is awarded to environmentally friendlier products based on an environmental assessment of all phases of a products life-cycle—including, production, use, and disposal.

[31] *EC—Asbestos*, *supra* note 11, ¶¶ 74–75. (footnote omitted)

6. Retroactive Application of the TBT Agreement

In *EC—Sardines* the Appellate Body dealt with whether the TBT Agreement applies to technical regulations adopted before the entry into force of the Uruguay Round Agreement on January 1, 1995. More specifically, the question posed was whether the EC had an obligation pursuant to Article 2.4[32] of the TBT Agreement to reassess its existing technical regulations in light of the adoption of new international standards.

The Appellate Body recalled that under Article 28 of the Vienna Convention treaties do not generally apply retroactively. According to the Appellate Body, this principle of interpretation was relevant to the interpretation of the covered agreements.[33] The Appellate Body then examined the EC's argument that the TBT Agreement applied only to the preparation and adoption of technical regulations, but not to their maintenance. The Appellate Body found that the text of Article 2.4 of the TBT Agreement did not support the EC's contention. The Appellate Body referred to its reasoning in *EC—Hormones*, where it addressed the temporal scope of the SPS Agreement. There, the Appellate Body stated:

> We agree with the Panel that the SPS Agreement would apply to situations or measures that did not cease to exist, such as the 1981 and 1988 Directives, unless the SPS Agreement reveals a contrary intention. We also agree with the Panel that the SPS Agreement does not reveal such an intention. The SPS Agreement does not contain any provision limiting the temporal application of the SPS Agreement, or of any provision thereof, to SPS measures adopted after 1 January 1995. In the absence of such a provision, it cannot be assumed that central provisions of the SPS Agreement, such as Articles 5.1 and 5.5, do not apply to measures which were enacted before 1995 but which continue to be in force thereafter. If the negotiators had wanted to exempt the very large group of SPS measures in existence on 1 January 1995 from the disciplines of provisions as important as Articles 5.1 and 5.5, it appears reasonable to us to expect that they would have said so explicitly.[34]

Like the trade measure in *EC—Hormones*, the EC Regulation at issue in *EC—Sardines* was an existing regulation that had not "ceased to exist." Nothing in Article 2.4 of the TBT Agreement suggested that there was a "contrary intention" to exclude the applicability of the Agreement to existing measures. Article 2.4 was a "central provision" of the TBT Agreement, and in the Appellate Body's view it could not "just be assumed that such a central provision does not apply to existing measures."[35]

[32] Article 2.4 of the TBT Agreement provides:

> Where technical regulations are required and relevant international standards exist or their completion is imminent, Members shall use them, or the relevant parts of them, as a basis of their technical regulations except when such international standards or relevant parts would be an ineffective or inappropriate means for the fulfillment of the legitimate objectives pursued, for instance because of fundamental climatic or geographical factors or fundamental technological problems.

[33] *EC—Sardines*, Report of the Appellate Body, *supra* note 12, ¶ 200.

[34] *European Communities—Measures Concerning Meat and Meat Products ("EC—Hormones")*, Report of the Appellate Body, WT/DS26/AB/R and WT/DS48/AB/R (1998), 128. (footnote omitted)

[35] *EC—Sardines*, Report of the Appellate Body, *supra* note 12, 208. The Appellate Body also rejected the EC's argument that the Appellate Body's ruling in *EC—Hormones* was not relevant to Article 2.4 of the TBT Agreement because, unlike Articles 2.2, 2.3, 3.3 and 5.6 of the SPS Agreement, Article 2.4 of the TBT Agreement did not contain the word "maintain." The Appellate Body noted that its analysis in *EC—Hormones* focused on Article 5.1 and 5.5 of the SPS Agreement, which also did not include the word "maintain." Similarly, the Appellate Body rejected the EC's argument that the context of Article 2.4 of the TBT Agreement demonstrates that it was not intended to cover the application of technical regulations because, when a provision was intended to do so, this was specifically mentioned. The Appellate Body agreed with the Panel's analysis, noting that the title of Article 2 specifically mentioned the term "application" ("Preparation, Adoption and Application of Technical Regulations by Central Government Bodies"). *Id.* ¶¶ 209–12.

The Appellate Body also noted that Article XVI:4 of the WTO Agreement required each Member to "ensure the conformity of its laws, regulations and administrative procedures with its obligations as provided in the [covered] agreements."[36] The Appellate Body stated that this provision established a clear obligation on all WTO Members to ensure the conformity of their existing laws, regulations and administrative procedures with the obligations in the covered agreements. Indeed, in the Appellate Body's view, the EC's reading of Article 2.4 of the TBT Agreement "[flew] in the face of the object and purpose of the TBT Agreement."[37] The TBT Agreement is replete with provisions recognizing the important role of international standards in the promotion of harmonization and facilitation of trade. The Appellate Body specifically noted the obligations established in Article 2.5 and 2.6 of the TBT Agreement.[38] The Appellate Body's decision in *EC—Sardines* means that Article 2.4 of the TBT Agreement applies to technical regulations that were adopted prior to January 1, 1995 and which have not ceased to exist.[39]

IV. Applicability of the TBT Agreement at Various Governmental and Non-Governmental Levels

The TBT Agreement sets forth rules and disciplines applicable to international, regional, governmental and non-governmental organizations at different levels of society. Within the limits of what is politically acceptable, the TBT Agreement has a wide field of application. This is in response to the fact that technical regulations, standards, and conformity assessment procedures are not only administered by national authorities, but also by international, regional and local authorities, as well as non-governmental organizations (all defined in Annex 1 of the Agreement). The TBT Agreement thus seeks to bring discipline to technical barriers established and applied at many different levels of society. The application of the basic TBT rules differs slightly depending on the level of application, *e.g.*, whether by a governmental versus non-governmental organization, and whether technical regulations, standards, or conformity assessment procedures are involved. These distinctions are addressed in the following sections.

A. Technical Regulations (Articles 2 and 3)

Pursuant to Article 2 of the TBT Agreement, Members have an obligation to ensure that "central government bodies" abide by the provisions of the TBT Agreement governing technical regulations. A central government body is defined in Annex 1 of the Agreement as the "Central government, its ministries and departments or any body subject to the

[36] *Id.* ¶ 213. There is a similar provision in Article 15.2 of the TBT Agreement, not noted by the Panel, imposing an obligation upon each Member, "promptly after the date on which the WTO Agreement enters into force for it, [to] inform the Committee [on Technical Barriers to Trade] of measures in existence or taken to ensure the implementation and administration of this Agreement." The provision appears to have an object only if the TBT Agreement is interpreted to require Members to bring their existing technical regulations into conformity with their obligations under the TBT Agreement.

[37] *Id.* ¶ 214.

[38] In ¶ 214 the Appellate Body noted that Article 2.5 of the TBT Agreement "establishes a rebuttable presumption that technical regulations that are in accordance with relevant international standards do not create unnecessary obstacles to trade". The Appellate Body also noted in the same paragraph that Article 2.6 "encourages Members to participate in international standardizing bodies with a view to harmonizing technical regulations on as wide a basis as possible".

[39] *Id.* ¶ 216.

control of the central government in respect of the activity in question." The definition of central government bodies is very wide with "control" being the important element.

With only very minor exceptions, pursuant to Article 3 of the TBT Agreement Members also have an obligation to take reasonable measures to ensure that "local governmental"[40] and "non-governmental bodies"[41] within their territories comply with the rules set forth in the TBT Agreement governing technical regulations. In addition, Members are not allowed to take measures that would require or encourage local government or non-governmental bodies to act inconsistently with the rules governing technical regulations.

Article 3.1 of the TBT Agreement establishes two exceptions. A Member is not responsible for taking reasonable measures to ensure that non-governmental bodies, and local governmental bodies beyond the level directly below the central government body, comply with the requirement to notify a technical regulation to other Members through the WTO Secretariat (1) when an international standard does not exist or a measure is not in conformity with an international standard, or (2) when urgent problems of safety, health, environmental protection or national security arise or threaten to arise.[42]

B. Standards (Article 4 and the Code of Good Practice)

Article 4 of the TBT Agreement references the "Code of Good Practice for the Preparation, Adoption and Application of Standards" ("Code of Good Practice"). The Code of Good Practice is found in Annex 3 of the TBT Agreement. The Code is designed to regulate the use of voluntary standards. It is open for acceptance by standardizing bodies within a WTO Member, whether at the central, local or non-governmental level. It is also open to regional standardizing bodies.

Standardizing bodies that accept the Code of Good Practice assume the well-known obligations discussed in Part V of this chapter, including most-favored-nation treatment, national treatment, harmonization, mutual recognition and transparency obligations. Pursuant to Article 4(1) of the TBT Agreement, Members must ensure that central government standardizing bodies accept and comply with the Code of Good Practice. Members must also take "such reasonable measures as may be available to them" to ensure that local governmental, non-governmental and regional standardizing bodies (of which they are a member) accept and comply with the Code. As with technical regulations, Members are not permitted to take measures that would require or encourage local government or non-governmental bodies to act inconsistently with the Code.[43] Article B of the Code requires standardization organizations accepting or withdrawing from the Code to notify the International Standardization Organization.

C. Conformity Assessment Procedures (Articles 5–9)

Articles 5–9 of the TBT Agreement set forth provisions relevant to determining the scope and applicability of the TBT Agreement to conformity assessment procedures.

[40] A local government body is defined in Annex 1 as a "Government other than a central government (e.g. states, provinces, Länder, cantons, municipalities, etc.) its ministries or departments or any body subject to the control of such a government in respect of the activity in question."

[41] A non-governmental body is defined in Annex 1 as a "Body other than a central governmental body or a local governmental body, including a non-governmental body which has legal power to enforce a technical regulation."

[42] These exceptions are provided rather clumsily in Article 3.1 which contains a cross-reference to Article 2—specifically paragraphs 9.2 and 10.1.

[43] TBT Article 4(1).

Article 5 provides for most-favored-nation treatment, national treatment, harmonization of assessment procedures, notice, transparency, equivalence, and exceptions in case of urgent problems. Article 6 provides for equivalence, accreditation, mutual recognition, and foreign participation in conformity assessment procedures. These principles are discussed in Part V of this chapter.

Articles 5 and 6 govern conformity assessment by central government bodies and are particularly important—they set out the applicable legal obligations. They also provide a reference point for Articles 7–9 which govern the application of the TBT Agreement to local government bodies, non-governmental bodies and international and regional systems.

1. Central Government Bodies (Articles 5 and 6)

Members have an obligation pursuant to Articles 5 and 6 to ensure that central government bodies abide by the provisions of the TBT Agreement governing conformity assessment. Not only does Article 5 implement many of the general principles applicable throughout the TBT Agreement to conformity assessment procedures, it also establishes very detailed procedural obligations governing transparency, notice, harmonization, procedural requirements and confidentiality.

2. Local Government Bodies (Article 7)

Members are required pursuant to Article 7 to take reasonable measures to assure that local government bodies within their territory comply with Articles 5 and 6 of the TBT Agreement. No indication is given in the TBT Agreement as to what measures would be considered reasonable.[44] Article 7.1 provides an exception with respect to the obligation to notify proposed procedures not in accordance with the relevant guidelines of international standardizing bodies, as well as an exception to notify urgent problems of safety, health, environmental protection, and national security that arise or threaten to arise.[45]

Members must also ensure that the conformity assessment procedures of local government bodies on the level directly below the central government body are notified in accordance with Articles 5.6.2 and 5.7.1, except when the technical content of the local procedures is substantially the same as that previously notified by the central government body.

Members must not take measures that encourage local government bodies within their territories to act inconsistently with Articles 5 and 6 of the TBT Agreement. This obligation mirrors the obligation established at the central government level. Furthermore, Article 7.5 of the TBT Agreement makes Members fully responsible for the observance of Articles 5 and 6 by local government bodies. Members are required to implement a legal mechanism to "support the observance" of the provisions of Articles 5 and 6 by other than central government bodies.

3. Non-Governmental Bodies (Article 8)

Pursuant to Article 8 Members must take reasonable measures to ensure that non-governmental bodies within their territories that operate conformity assessment procedures comply with the provisions of Articles 5 and 6 of the TBT Agreement. As with the treatment of local government bodies described above, no indication is given in the TBT Agreement as to what measures would be considered reasonable. Members are not

[44] Possibly relevant Appellate Body and GATT decisions do exist. They define "reasonable" but in a different context. *See infra* Part V(B)(2).

[45] TBT Articles 5.6.2 and 5.7.1 respectively.

required to ensure that non-governmental conformity assessment bodies comply with the requirement to *notify* proposed measures. However, Members are not permitted to take measures that have the effect of requiring or encouraging non-governmental conformity assessment bodies to act inconsistently with Articles 5 and 6.

Members must also ensure that central government bodies do not rely on conformity assessment procedures operated by non-governmental bodies unless these bodies comply with the legal obligations set forth in Articles 5 and 6 (except for the obligation to notify proposed conformity assessment procedures).

4. International and Regional Application (Article 9)

Article 9 encourages Members to formulate and adopt international systems for conformity assessment, become members of such systems, and participate in these systems. Members must also take reasonable measures to assure that international and regional conformity assessment bodies in which relevant bodies within their territory participate, comply with the obligations set forth in Articles 5 and 6, and that central government bodies only rely on international and regional assessment systems to the extent that these systems comply with Articles 5 and 6.

V. Major Principles Applicable (in Various Forms) Throughout the TBT Agreement

There are common principles that are applicable throughout the TBT Agreement whether technical regulations, standards or conformity assessment procedures are involved. An understanding of these principles, many of which appear in other covered agreements and in GATT 1947, is required to comprehend the TBT Agreement. The following principles are analyzed in turn:

(A) Non-discrimination
(B) The Prevention of Unnecessary Obstacles to International Trade
(C) Harmonization
(D) Equivalence and Mutual Recognition
(E) Transparency
(F) Derogations from TBT Disciplines in the Event of Urgent Circumstances

A. The Non-Discrimination Principle

As applied in the GATT, the non-discrimination obligation contains two elements: "most-favored-nation treatment" ("MFN treatment"), and "national treatment". MFN treatment is an obligation not to use customs duties, charges, rules, regulations and formalities to discriminate between "like products" imported from different WTO Members.[46] National treatment is similarly an obligation not to use taxes, charges and regulations to discriminate between domestic and imported "like products."[47]

An example will help to illustrate the non-discrimination obligation. State A manufactures televisions, and also imports televisions from States B and C. All three States are WTO Members. Assuming that all televisions in question are "like products," State A has an obligation to apply the same taxes, duties and regulatory treatment to television

[46] *See generally* GATT Article I.
[47] *See generally* GATT Article III.

imports from States B and C (MFN treatment); and an obligation not to apply taxes, charges and regulations to favor domestic televisions over television imports from States A or B (national treatment).

Turning more specifically to the TBT Agreement, the "non-discrimination" obligation is an obligation to ensure that technical regulations, standards and conformity assessment procedures are not applied to favor domestic over imported like products, or like products from one Member over those from another Member.[48] If two products are not like products, the non-discrimination principle does not apply as between those products. This raises the important question of what constitutes a like product for TBT purposes.

1. "Like Products"

Whether two products are "like products" and thus require similar or identical treatment is one of the more perplexing legal questions arising under the WTO Agreement. In part this is because the term "like product" is not defined in the WTO Agreement. As a result, product likeness is determined on a case-by-case basis. In what has become a famous but unhelpful passage, the Appellate Body noted in its interpretation of GATT Article III:2 (a taxation provision) that:

> The concept of "likeness" is a relative one that evokes the image of an accordion. The accordion of "likeness" stretches and squeezes in different places as different provisions of the WTO Agreement are applied. The width of the accordion in any one of those places must be determined by the particular provision in which the term "like" is encountered as well as by the context and the circumstances that prevail in any given case to which that provision may apply.[49]

The two most important WTO Appellate Body decisions interpreting product likeness are *Japan –Alcoholic Beverages*[50] and *EC—Asbestos*.[51] They set forth four factors that are relevant in varying degrees:

(1) physical characteristics (the properties, nature and quality of a product),
(2) HS classification,[52]
(3) consumers' tastes and habits (perception and behavior), and
(4) product end uses.[53]

At the time of writing there has not been a TBT case in which the term "like product" has been interpreted or defined. WTO cases interpreting GATT Article III have examined the phrase "like product", but their relevance to the interpretation of the TBT Agreement has not been formally established. In both *Japan—Alcoholic Beverages* and *EC—Asbestos* the Appellate Body even warned "against the automatic transposition of the interpretation of "likeness" under the first sentence of Article III:2 to other provisions where the phrase

[48] The principle of non-discrimination is found in the following provisions of the TBT Agreement: Article 2.1 (technical regulations); ¶ D of the Code of Good Practice (standards), and Article 5.1.1 (conformity assessment procedures).

[49] *Japan—Taxes on Alcoholic Beverages*, Report of the Appellate Body, WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R (1996) ("*Japan—Alcoholic Beverages")*, Part H(1)(a).

[50] *Id.* This case involved a tax scheme that was found by the Appellate Body to violate GATT Article III:2.

[51] *EC—Asbestos*, *supra* note 11. This case involved a regulatory measure that was found to violate GATT Article III:4.

[52] HS is the Harmonized System of tariff classification administered by the World Customs Organization. It is used by countries to classify products for tariff purposes. *See* Chapter 36 of this book.

[53] *EC—Asbestos*, *supra* note 11, ¶ 101.

"like products" is used".[54] Given however that the like product provisions of the TBT Agreement appear to be a logical extension of the non-discrimination obligations, and that GATT Article III:4 specifically deals with regulatory discrimination, it is probable that GATT non-discrimination disputes, in particular those dealing with GATT Article III:4, will provide guidance in the interpretation of the term "like product" which appears in various places in the TBT Agreement, in particular Article 2.1.[55] There is no reason why the same four factors should not receive consideration in a TBT dispute.

B. The Prevention of Unnecessary Obstacles to International Trade

As a general rule, technical regulations, standards and conformity assessment procedures must not be prepared, adopted or applied so as to create unnecessary obstacles to international trade. This provision lies at the heart of the TBT Agreement. The prevention of unnecessary obstacles to international trade is a principle applicable to technical regulations, standards and conformity assessment procedures,[56] but its application is not necessarily identical in all three areas. The treatment of technical regulations receives considerable attention below. The treatment of standards and conformity assessment procedures, where different from that of technical regulations, is indicated.

The prevention of unnecessary obstacles to international trade is set forth within the context of technical regulations in Article 2.2 of the TBT Agreement:

> Members shall ensure that technical regulations are not prepared, adopted or applied with a view to or with the effect of creating unnecessary obstacles to international trade. For this purpose, technical regulations shall not be more trade-restrictive than necessary to fulfill a legitimate objective, taking account of the risks non-fulfillment would create. Such legitimate objectives are, *inter alia:* national security requirements; the prevention of deceptive practices; protection of human health or safety, animal or plant life or health, or the environment. In assessing such risks, relevant elements of consideration are, *inter alia:* available scientific and technical information, related processing technology or intended end-uses of products.

As defined in Article 2.2, technical regulations must:

- not be more trade restrictive than *necessary* to achieve a policy goal (the least trade restrictive measure), and
- fulfill a *legitimate objective*, taking into account the *risks* that non-fulfillment would create.

With respect to standards, the phrase "prevention of unnecessary obstacles to international trade" is not defined in either Article 3 or in the Code of Good Practice. Nor is it defined in any WTO panel or Appellate Body decision considering the TBT Agreement. Given the similarities between technical regulations and standards (the primary regulatory difference is that one is mandatory and the other voluntary), it is probable that the same

[54] *EC—Asbestos*, *supra* note 11, ¶ 88 n.60 (*citing* the Appellate Body Report in *Japan—Alcoholic Beverages* at 113).

[55] Article 2.1 of the TBT Agreement provides:

> Members shall ensure that in respect of technical regulations, products imported from the territory of any Member shall be accorded treatment no less favorable than that accorded to like products of national origin and to like products originating in any other country.

[56] The prevention of unnecessary obstacles to international trade is set forth in Article 2.2 (technical regulations); ¶ E of the Code of Good Practice (standards); and Article 5.1.2 (conformity assessment procedures).

definition applicable to technical regulations would also apply in the case of standards, but this remains to be proven.

With respect to conformity assessment procedures, the phrase "unnecessary obstacles to international trade" is defined in Article 5.1.2:

> . . . *inter alia*, that conformity assessment procedures shall not be more strict or be applied more strictly than is necessary to give the importing Member adequate confidence that products conform with the applicable technical regulations or standards, taking account of the risks non-conformity would create.

Articles 2.2 and 5.1.2 of the TBT Agreement suggest a multi-part test wherein the following factors, analyzed below, must be considered:

(1) legitimacy of the objective, and the
(2) necessity of the measure—including:
    (a) its reasonableness, and
    (b) the risk of non-fulfillment of the legitimate objective.

1. Legitimate Objectives

Technical regulations must fulfill a legitimate objective. Examples of legitimate objectives are set forth in a *non-exclusive* list in Article 2.2. Legitimate objectives for technical regulations include:

- National security requirements
- Prevention of deceptive practices
- Protection of human health or safety
- Protection of animal life or health
- Protection of the environment

The phrase "legitimate objective" is not used in the analogous provision relating to standards.[57] However, there is no reason to believe that the objectives enumerated for technical regulations would not be considered legitimate for "standards". This point has not yet been addressed in a dispute settlement proceeding.

Many of the objectives deemed legitimate for the purpose of technical regulations will be familiar to readers as exceptions under GATT Article XX (General Exceptions) and Article XXI (National Security).[58]

Other objectives that are probably legitimate for TBT purposes but are not listed in Article 2.2 include:

(1) Product quality: regulations and standards establishing quality norms are widely applied to grade and standardize products, including agricultural products and consumer goods.
(2) Product compatibility/uniformity: Regulations and standards establishing norms regarding voltage, amperage, wattage, bandwidth, size, form, unit of

[57] ¶ E of the Code of Good Practice.

[58] Some of the panel reports interpreting Article XX of GATT 1947 may have influenced the development of the legitimate exceptions contained in Article 2.2 of the TBT Agreement. *See, e.g., Thailand—Restrictions on Importation of and Internal Taxes of Cigarettes*, Report of the Panel, BISD 39S/155 (1990); *United States—Restrictions on Imports of Tuna*, Report of the Panel, BISD 40S/155, *reprinted in* 30 ILM 1594 (1991) (unadopted); *United States—Restrictions on Imports of Tuna*, Report of the Panel, *reprinted in* 33 ILM 842 (1994) (unadopted); and *United States—Taxes on Automobiles*, Report of the Panel, *reprinted in* 33 ILM 1399 (1994) (unadopted).

> measurement, etc. are widely applied to household appliances, communications gear (radios and televisions), computer equipment, automobiles, and many other technical products. Such product standardization facilitates economies of scale, and may also serve to improve consumer confidence.

Regulations and standards furthering product quality and product compatibility/uniformity exist throughout the developed world, and increasingly in developing countries. They have not been the subject of a panel proceeding under the TBT Agreement. The drafters' failure to specifically identify these objectives in Article 2.2 of the TBT Agreement as "legitimate objectives" may have been an oversight given that their importance as objectives of the TBT Agreement is suggested in the Agreement's preamble.[59]

A much more controversial question at the "outer limits" of an analysis of the TBT Agreement is whether labor and human rights objectives should be considered among the "legitimate objectives" for purposes of Article 2.2 of the TBT Agreement. At the root of this question one finds other additional and controversial WTO issues, such as the applicability of the TBT Agreement to NPR-PPMs, and the relationship between the TBT Agreement and international labor and human rights conventions. One also finds other questions including whether human rights and labor norms are the type of standardization activity the Members intended to regulate when they negotiated the TBT Agreement, and whether the TBT Agreement is really the right legal instrument for addressing cross-border human rights and labor norms.[60]

Labor and human rights objectives are not specifically mentioned in Article 2.2 of the TBT Agreement as legitimate objectives. Nevertheless, the protection of human life and health is deemed a legitimate objective. Just conceivably this provision might be "stretched" to encompass certain labor and human rights objectives. Although from a trade-policy perspective it was once easy to argue that when NPR-PPMs are at issue the TBT Agreement does not apply, this question seems to have become more complicated in light of the Appellate Body's decision in *U.S.—Shrimp* (Article 21.5 proceeding) wherein the United States successfully invoked GATT Article XX to justify import restrictions against shrimp that were not caught in conformity with U.S. environmental laws (an NPR-PPM).[61] *U.S.—Shrimp* was, of course, not a TBT decision, and any such argument would only be by analogy.

The relationship between the WTO Agreement and human rights and labor norms is the subject of several chapters in this book.[62] It need only be pointed out here that including labor and human rights norms in the WTO framework is controversial, and opposed by many developing country Members. Developing country Members tend to view labor and human rights norms, and their application and supervision, as being within the scope of

[59] The preamble of the TBT Agreement is reproduced *supra* note 2.

[60] Many other unanswered questions exist. Are U.N. organizations, such as the International Labor Organization, international standardizing bodies within the meaning of the TBT Agreement? Annex 1 ¶ 4 of the TBT Agreement defines an "international body or system" as a "[b]ody or system whose membership is open to the relevant bodies of at least all Members." More generally, how should principles of public international law, such as the primacy of certain human rights norms, and the responsibility of States under certain international human rights treaties and labor agreements, be treated from the perspective of the TBT Agreement?

[61] *See supra* note 28 and accompanying text. The U.S. measure was only authorized after Malaysia's continued refusal to enter into an international cooperative arrangement that would have protected certain endangered sea turtles from being killed when shrimp are netted.

[62] *See* Chapters 59–62 of this book, where these subjects are addressed in detail.

other international agreements and organizations.[63] Many developing countries also fear that labor and human rights norms will be invoked by developed countries for protectionist purposes, and that the labor and human rights practices of certain developing countries may make them particularly vulnerable to cross-border trade measures, enacted for what developed countries allege to be human rights and labor motives.

2. Necessity

The concept of "necessity" is found in the provisions applicable to regulations, standards and conformity assessment procedures.[64] Article 2.2 of the TBT Agreement provides that "technical regulations shall not be more trade-restrictive than necessary to fulfill a legitimate objective, taking account of the risks non-fulfillment would create." It is probable that the negotiators were influenced by language in panel reports defining "necessary" within the context of GATT Article XX (General Exceptions). In the *Thai Cigarettes* dispute a GATT Panel concluded that a measure could be considered to be "necessary" in terms of GATT Article XX(b) only if there were no alternative measure consistent with the General Agreement, or less inconsistent with it, which a contracting party could "*reasonably*" be expected to employ to achieve its regulatory (health policy) objective.[65]

The term "reasonable" does not appear in the definition of "necessary" in the TBT Agreement, but without the requirement that a less restrictive trade measure be reasonably available, the "necessity" test would be unworkable—establishing a standard that would be extraordinarily difficult to meet. Legitimate TBT measures might be found to violate the TBT Agreement too easily, and as a result the regulatory autonomy and sovereignty of WTO Members could come under considerable challenge.[66] Therefore, it seems certain that a requirement of reasonableness will be read into TBT Article 2.2, as it was into GATT Article XX by GATT panels and the Appellate Body.

In both the *Korea—Beef* [67] and the *EC—Asbestos*[68] decisions the Appellate Body examined what constitutes a "reasonably available" measure for purposes of the exceptions set forth in GATT Article XX(b) and (d). The Appellate Body found that: (1) a determination of whether a WTO consistent alternative measure is reasonably available requires a "weighing and balancing process" in which an assessment is made as to whether the alternative measure "contributes to the realization of the end pursued";[69] (2) the more vital or important the common interests or values pursued, the easier it would be to accept as "necessary" measures designed to achieve those ends;[70] (3) a measure should be sufficient to achieve a member's chosen level of health protection;[71] and (4) a measure does not cease to be "reasonably" available simply because it involves administrative

[63] For example the International Labor Organization, the various United Nations human rights organizations, and the instruments produced by these organizations.

[64] Article 2.2, ¶ E of the Code of Good Practice, and Article 5.1.2 respectively.

[65] *Thailand—Taxes On Cigarettes*, *supra* note 57, ¶¶ 74–75. The "least restrictive trade measure test" is given voice in the Article 2.2 definition of "necessary".

[71] *Id.* ¶ 174.

difficulties for a Member.[72] It is probable that a panel or the Appellate Body would read a similar test into the TBT Agreement.

The evaluation of whether a technical regulation is more trade-restrictive than necessary to fulfill a legitimate objective requires consideration of the "risks non-fulfillment [of the legitimate objective] would create." A non-exclusive list of elements that can be considered in an examination of the risk of not fulfilling a legitimate objective is provided in Article 2.2 of the TBT Agreement:

- available scientific and technical information,
- related processing technology, and
- intended end-uses of products.

This assessment of risk is different from the formal science-based risk assessment required in the SPS Agreement,[73] as science if relevant is only one component to be taken into account. Furthermore, many of the matters for which technical regulations and standards are applied are not closely related to scientific considerations (*e.g.*, consumer and worker protection). Although it would seem that this examination of risk should be related to the reasonableness of the TBT measure and therefore its necessity, like most of the TBT Agreement, no decisions interpreting this provision exist.

No mention of an analysis of the "risks" of non-fulfillment is present in the analagous provisions of the TBT Agreement governing standards and conformity assessment proceedings, but the derogations discussed in Part V(F), which are related to urgent problems of safety, health or environment, may imply examining the risk of not fulfilling a legitimate objective.

The necessity test is further elaborated in Article 2.3 of the TBT Agreement which sets forth provisions governing changed circumstances. Article 2.3 provides that:

> Technical regulations shall not be maintained if the circumstances or objectives giving rise to their adoption no longer exist or if the changed circumstances or objectives can be addressed in a less trade-restrictive manner.

This provision implies, among other things, a continuing obligation to review technical regulations in light of new objectives, new circumstances and new technological developments.

Changed circumstances are not mentioned in the Code of Good Practice, but the concept nevertheless seems implicit in assuring that standards do not become unnecessary obstacles to international trade. This is further illustrated by Article 5.2.7 (applicable to conformity assessment procedures) which limits the conformity assessment procedures employed to verify that a standard is met when product specifications have been changed. If a product's specifications are changed after the product has been found to conform with a technical regulation or standard, pursuant to Article 5.2.7 the conformity assessment procedure for the modified product is to be limited to what is necessary to provide adequate confidence that the product still conforms with the technical regulation or standard. This provision assures that only necessary conformity assessments will be conducted and reduces the potential that conformity assessments will be applied to impede trade.[74]

[72] *Id.* ¶ 169 (*citing United States—Standards for Reformulated and Conventional Gasoline*, Report of the Panel, WT/DS2 (1995)).

[73] *See* Chapter 7 of this book.

[74] Instances may nevertheless arise when significant changes in a product's specifications necessitate a complete conformity reassessment.

To summarize this rather long discussion of necessity, the "necessity test" requires that a given trade measure be the least trade-restrictive measure that would achieve a legitimate policy goal. A requirement of reasonableness should be read into this test, thereby allowing a weighing and balancing of the measure in terms of the end pursued and the risk of non-fulfillment of the legitimate objective.[75] There is also a continuing obligation to assess changed circumstances, and to alter a TBT measure in the event of changed circumstances to assure that the trade measure remains the least trade-restrictive.

C. Harmonization—Use of Relevant International Standards

As a general rule, Members are encouraged to participate in the international harmonization of standards, and to use agreed international standards as a basis for domestic technical regulations, standards and conformity assessment procedures.[76] The use of technical regulations that are in accordance with relevant international standards to achieve one of the legitimate objectives explicitly mentioned in Article 2.2 of the TBT Agreement[77] is rebuttably presumed not to create an unnecessary obstacle to international trade.

The emphasis on harmonization in the TBT Agreement is based on the view among WTO Members that (a) trade is disrupted less if Members use internationally-agreed standards as a basis for domestic regulations and standards, (b) producers and consumers benefit from a degree of harmonization (in part because of economies of scale and technical compatibility), and that (c) conformity assessments are facilitated if Members follow international guidelines and procedures for such assessments.

With respect to technical regulations, there are three provisions that will be referred to in the following discussion. These provisions are set forth in their entirety:

> 2.4 Where technical regulations are required and relevant international standards exist or their completion is imminent, Members shall use them, or the relevant parts of them, as a basis for their technical regulations except when such international standards or relevant parts would be an ineffective or inappropriate means for the fulfillment of the legitimate objectives pursued, for instance because of fundamental climatic or geographical factors or fundamental technological problems.
>
> 2.5 A Member preparing, adopting or applying a technical regulation which may have a significant effect on trade of other Members shall, upon the request of another Member, explain the justification for that technical regulation in terms of the provisions of paragraphs 2 to 4. Whenever a technical regulation is prepared, adopted or applied for one of the legitimate objectives explicitly mentioned in paragraph 2, and is in accordance with relevant international standards, it shall be rebuttably presumed not to create an unnecessary obstacle to international trade.
>
> 2.6 With a view to harmonizing technical regulations on as wide a basis as possible, Members shall play a full part, within the limits of their resources, in the preparation by appropriate international standardizing bodies of international standards for products for which they either have adopted, or expect to adopt, technical regulations.

In general, analogous provisions exist and have already been noted for standards and conformity assessment procedures.[78]

Turning to the last and least complicated provision first, Article 2.6 requires Members, within the limits of their resources, to participate in the work of international

[75] This may be one step closer to a requirement that a trade measure be proportional and adequate.

[76] The following provisions govern harmonization: Article 2.4–2.6 (technical regulations); Paragraphs F–G of the Code of Good Practice (standards); and Articles 5.4 and 5.5 (conformity assessment procedures).

[77] *See supra* Part V(B)(1).

[78] *Id.*

standardization organizations with respect to products for which they have adopted or expect to adopt technical regulations and standards. Members also have a similar participation obligation with respect to the preparation of standards and "guides and recommendations" for conformity assessment procedures.[79]

The remaining provisions, Articles 2.4 and 2.5, were the subject of the *EC—Sardines* dispute and merit considerable attention. Pursuant to Article 2.4, the use of *relevant* international standards, or the relevant parts of an international standard, as a *basis* for domestic technical regulations, is *required* "except when such international standards or relevant parts would be an ineffective or inappropriate means for the fulfillment of the legitimate objectives pursued". Thus, even a measure that is non-discriminatory may violate the TBT Agreement if it is not based on international standards. Article 2.4 provides three examples of when it might not be appropriate to use international standards as a basis for domestic technical regulations: (1) fundamental climatic factors, (2) fundamental geographical factors, and (3) fundamental technological problems.

The Panel and the Appellate Body decisions in *EC—Sardines* addressed many points (underlined above) relevant to the interpretation of TBT Article 2.4. The decision examined whether the standard at issue was relevant; whether the international standard was used as a basis for the EC's technical regulations; and what is meant by the Article 2.4 phrase "ineffective or inappropriate means . . . ". These three points are addressed in the first three subsections below, and Article 2.5 is addressed in the fourth subsection.

1. The Characterization of Codex Standard 94 as a Relevant International Standard

Peru's complaint against the EC measure was predicated on its position that CODEX STAN 94-1981, Rev.1-1995 ("Codex Standard 94") was a relevant international standard for purposes of Article 2.4 of the TBT Agreement. A contrary finding would have meant that Article 2.4 of the TBT Agreement would not have applied. The EC argued that only standards adopted by consensus are relevant international standards. Second, it argued that even if Codex Standard 94 is a standard, it is not relevant since the EC Regulation only covers preserved sardines and Codex Standard 94 covers "sardine-type" products as well as preserved sardines.[80]

With respect to the EC's contention that only standards adopted by consensus are relevant, the Appellate Body found that the Explanatory Note to Annex 1.2 supports the conclusion that consensus is not required for the adoption of a standard.[81]

With respect to the EC's second argument, that Codex Standard 94 was not a relevant international standard, both Parties accepted that the ordinary meaning of the term "relevant" is "bearing on or relating to the matter in hand; pertinent".[82] The EC sought to convince the Appellate Body that the broader scope of Codex Standard 94 meant that it was not "relevant" to the dispute.[83] The Appellate Body reasoned instead that the Codex standard was relevant because it applies to *Sardina pilchardus.*[84] Therefore the standard can be said "to bear upon, relate to, or be pertinent to the EC Regulation because both refer to preserved *Sardina pilchardus.*"[85] It further reasoned that the standard was relevant

[79] These provisions are located in the following TBT provisions: Article 2.6 (technical regulations); ¶ 3(G) of the Code of Good Practice (standards); and Article 5.5 (conformity assessment procedures).

[80] *EC—Sardines*, Report of the Appellate Body, *supra* note 12, ¶ 218.

[81] *Id.* ¶ 222. In relevant part the Explanatory Note to Annex 1.2 of the TBT Agreement provides: "This Agreement covers also documents that are not based on consensus."

[84] *Id.* ¶ 231.

[85] *Id.*

because twenty fish species specified in the standard, in addition to *Sardina pilchardus*, were legally affected by the exclusion in the EC Regulation.[86]

2. Whether Codex Standard 94 Was Used as a Basis for the EC Regulation

The EC also appealed the Panel's finding that Codex Standard 94 was not used "as a basis" for the EC Regulation. Section 6.1.1(ii) of Codex Standard 94 provides:

> The name of the product shall be:
>
> . . .
>
> (ii) "X Sardines" *where X is the name of* a country, a geographic area, the species, or the common name of the species in accordance with the law and custom of the country in which the product is sold, and in a manner not to mislead the consumer. (emphasis added)

The EC, relying on the ambiguity of the English language version of this provision, argued that paragraph 6.1.1(ii) of Codex Standard 94 gives each country the option of designating the product at issue "X sardines" or using the common name of the species.[87] More specifically, the EC argued that the phrase: "the common name of the species in accordance with the law and custom of the country in which the product is sold", should be interpreted as a self-standing option for "naming" independent of the formula "X sardines".[88] This would have allowed the EC to restrict the use of the term "Sardines" to *Sardina pilchardus*.

The Appellate Body rejected the EC argument, favoring instead the textual interpretation put forth by the Panel.[89] The Appellate Body found that paragraph 6.1.1(ii) envisages combining the term "sardines" with one of the four alternatives (the X in "X sardines") presented in paragraph 6.1.1(ii), stating "that section 6.1.1(ii) permits the marketing of non-*Sardina pilchardus* as 'sardines' with one of four qualifiers."[90] A review of the French version of the provision, which was also authentic, further confirmed the Appellate Body's interpretation.[91]

The Appellate Body next examined whether the EC used section 6.1.1(ii) "as a basis" for its technical regulation.[92] The EC argued that interpretation of this phrase required consideration of the text as a whole, and that the criterion to be applied is not whether the standard is the "principal constituent" of the technical regulation, but instead whether there is a "rational relationship" between the standard and the technical regulation as regards the substantive aspects of the standard at issue.[93]

The Appellate Body rejected this argument. In seeking to establish the proper meaning of the phrase "as a basis for", which appears in Article 2.4 of the TBT Agreement, the Appellate Body turned first to its decision in *EC—Hormones* where a similar issue was addressed—the meaning of the phrase "based on" which appears in Article 3.1 of the SPS Agreement. This phrase was interpreted in *EC—Hormones* to mean "'stands' or is 'founded' or 'built' upon or 'is supported by' the latter."'[94] The Appellate Body went on

[86] *Id.* ¶ 232.
[87] *Id.* ¶ 236.
[88] *Id.* ¶ 236.
[89] *Id.* ¶¶ 238–239.
[90] *Id.* ¶ 239.
[91] *Id.* ¶ 239.
[92] *Id.* ¶¶ 240–258.
[93] *Id.* ¶ 241.
[94] *Id.* ¶ 242 (*citing EC—Hormones*, *supra* note 34, ¶ 166). In ¶¶ 163–166 of *EC—Hormones* the Appellate Body concluded that "based" does not mean "conform to". In *EC—Sardines* the Appellate Body refrained from deciding whether "as a basis" in Article 2.4 of the TBT Agreement has the same meaning as "based on" in Article 3.1 of the SPS Agreement. *EC—Sardines*, ¶ 244, n.169.

to uphold the Panel's finding that "basis" means "principal constituent" and "fundamental principal or theory",[95] adding that "basis" also means "the main constituent", [a] thing on which anything is constructed", and "a determining principle".[96] The Appellate Body concluded that "there must be a very strong and very close relationship between two things in order to be able to say that one is 'the basis for' the other."[97]

The Appellate Body found no support in Article 2.4 of the TBT Agreement for the EC's "rational relationship" standard,[98] and further found that an international standard cannot be considered the basis for a technical regulation if the two are contradictory.[99] The Appellate Body next identified a manifest contradiction between the international standard and the EC Regulation, noting that the effect of Article 2 of the EC Regulation was to prohibit preserved fish products prepared from twenty species from being labeled as sardines, while Codex Standard 94 permits these same fish products to be labeled as "X sardines", where X stands for one of four qualifiers.[100] Based on these determinations, the Appellate Body concluded that the Codex standard had not been used "as a basis for" the EC Regulation.[101]

3. Ineffective or Inappropriate Means

Article 2.4 of the TBT Agreement provides an exception to the obligation to use relevant international standards when "such international standards or relevant parts would be an ineffective or inappropriate means for the fulfillment of the legitimate objectives pursued. . . ." In its analysis of Article 2.4, the Appellate Body examined the meaning of "ineffective or inappropriate means" as well as the meaning of the term "legitimate objectives".[102] With respect to the first examination, the Appellate Body upheld the Panel's findings that:

> . . . the term "ineffective or inappropriate means" refers to two questions—the question of the *effectiveness* of the measure and the question of the *appropriateness* of the measure—and that these two questions, although closely related, are different in nature. The Panel pointed out that the term "ineffective" "refers to something which is not 'having the function of accomplishing', 'having a result', or 'brought to bear', whereas [the term] 'inappropriate' refers to something which is not 'specially suitable', 'proper', or 'fitting"'.[103]

The Appellate Body also reaffirmed the Panel's finding that:

> . . . in the context of Article 2.4, an ineffective means is a means which does not have the function of accomplishing the legitimate objective pursued, whereas an inappropriate means is a means which is not specially suitable for the fulfillment of the legitimate objective pursued. . . . The question of effectiveness bears upon the *results* of the means employed, whereas the question of appropriateness relates more to the *nature* of the means employed.[104]

[95] *EC—Sardines*, Report of the Appellate Body, *supra* note 12, ¶ 243.
[96] *Id*. ¶ 244.
[97] *Id.*
[98] *Id*. ¶ 247.
[99] *Id*. ¶¶ 248–249. The Appellate Body also found that the "relevant parts" of the international standard are all of those "that relate to the subject-matter of the challenged prescriptions or requirements." *Id.* ¶¶ 250–251.
[100] *Id*. ¶ 257–258.
[101] *Id*.
[102] *Id.* ¶¶ 285–291.
[103] *Id.* ¶ 285 (*citing* Report of the Panel, ¶ 7.116).
[104] *Id.* (*citing* Report of the Panel, ¶ 7.116).

In the Appellate Body's view, an international standard is effective if it has the capacity to accomplish the legitimate objectives set forth, and it is appropriate if it is suitable for the fulfillment of these objectives.[105] "Ineffective" and "inappropriate" thus have different meanings and it is conceptually possible that a measure could be effective but inappropriate, or appropriate but ineffective.[106]

With respect to the second question, the meaning of the term "legitimate objectives" as used in Article 2.4, the Appellate Body upheld the Panel's finding that the legitimate objectives referred to in Article 2.4 must be interpreted in the context of Article 2.2 which also refers to legitimate objectives.[107] The Appellate Body noted two implications of this finding: (1) the legitimate objectives within Article 2.4 covered those enumerated in Article 2.2 (national security requirements; the prevention of deceptive practices; protection of human health or safety, animal or plant life or health, or the environment), and that (2) the use of the term "*inter alia*" in Article 2.2 means that the legitimate objectives in Article 2.4 extend beyond the list of specific objectives listed in Article 2.2.[108]

Applying these findings to the facts before it in *EC—Sardines*, the Appellate Body determined that the Complainant had the burden of establishing that the international standard was an effective and appropriate means for the fulfillment of the "legitimate objectives" pursued through the EC Regulation—namely market transparency, consumer protection, and fair competition.[109] To satisfy this burden of proof the Complainant must establish a *prima facie* case.[110] If the Complainant succeeds in doing so, then a presumption arises that the Respondent must rebut in order for its defense to prevail.[111] If the Complainant establishes a *prima facie* case that the Respondent is unable to rebut, the Respondent must, consistent with its obligation under the TBT Agreement, use the international standard "as a basis for" its regulations as the international standard will have been shown to be both effective and appropriate to fulfill the "legitimate objectives" being pursued by the Respondent.[112]

The Appellate Body thus found that the burden of proof standard enunciated in *EC—Hormones*,[113] an SPS dispute, should also be applied in *EC—Sardines*. The Complainant challenging a measure as inconsistent with Article 2.4 of the TBT Agreement bears the burden of proving that: (1) the standard was not used as a basis for the challenged regulation, and (2) the international standard is not ineffective and inappropriate to fulfill the legitimate objectives at issue.[114]

4. Rebuttable Presumption Favoring the Use of Certain Harmonized Standards

Pursuant to Article 2.5 a Member that prepares, adopts or applies a technical regulation that may have a significant effect on the trade of other Members shall upon the request of another Member explain the justification of the regulation in terms of

[105] *Id.* ¶ 288.
[106] *Id.* ¶ 289 (*citing* Report of the Panel, ¶ 7.116).
[107] *Id.* ¶ 286.
[108] *Id.*
[109] *Id.* ¶ 287. Note that fair competition (in particular) is not a legitimate objective explicitly set forth in Article 2.2.
[110] *Id.*
[111] *Id.*
[112] *Id.*
[113] *EC—Hormones*, *supra* note 34.
[114] *EC—Sardines*, Report of the Appellate Body, *supra* note 12, ¶¶ 275–282.

Articles 2.2–2.4 of the TBT Agreement. In *EC—Sardines* the Appellate Body notes that the Panel was concerned the Complainant might not be in a position to spell out the legitimate objectives of the technical regulation and to assess the appropriateness of the relevant international standard.[115] The Appellate Body found that this concern was not justified since the TBT Agreement established a mechanism in Article 2.5 for Members to seek information about the objectives of technical regulations.[116] Members were bound to abide by their obligation to provide information pursuant to this provision in good faith and in accordance with the principle of *pacta sunt servanda* embodied in Article 26 of the Vienna Convention, and it could not be assumed that they would not comply with their obligation.[117] In addition, Article 10.1 of the TBT Agreement requires Members to establish an "enquiry point" for purposes of addressing queries from other Members. This serves as a further mechanism for Members to obtain information about the objectives of particular technical regulations, and the appropriateness and effectiveness of international standards to serve as a basis for these technical regulations.[118]

If a Member bases a domestic regulation (1) on an international standard, and if (2) the domestic regulation is for one of the legitimate objectives explicitly mentioned in Article 2.2, pursuant to Article 2.5 it is "rebuttably presumed" not to create an unnecessary obstacle to international trade.[119] This presumption makes it more difficult for a Member challenging the WTO-consistency of a technical regulation based on an international standard to make a *prima facie* case that the trade measure at issues creates an unnecessary obstacle to international trade. This portion of Article 2.5 has not yet been tested. In *EC—Sardines* both the Panel and the Appellate Body found that the technical regulation at issue was not based on an international standard so this presumption was inapplicable.

It is conceivable that the rebuttable presumption that a measure does not create an unnecessary obstacle to international trade will provide a mild incentive for international harmonization as well as for reliance on international standards. It would however appear that as a result of the Appellate Body's decision to graft the *EC—Hormones* interpretation of how the burden of proof should be applied into the TBT Agreement, the Complainant already shoulders a sizable burden of proof. It is unclear how Article 2.5 affects or alters the application of this burden of proof.

D. Equivalence and Mutual Recognition

The TBT Agreement incorporates provisions on both equivalence and mutual recognition.[120] Members are encouraged to accept foreign technical regulations as "equivalent" to their own technical regulations (even if they differ) provided that they fulfill the same objectives.[121] Likewise, Members are encouraged to accept foreign conformity assessment procedures as "equivalent" to their own procedures provided that they are assured of conformity with standards and technical regulations equivalent to their own.[122] The notion of equivalence is not mentioned in the Code of Good Practice (applicable to standards), nor is it defined in the TBT Agreement.

[115] *Id.* ¶ 276.
[116] *Id.* ¶ 277.
[117] *Id.* ¶ 278.
[118] *Id.* ¶ 279.
[119] These legitimate objectives are discussed *supra* Part V(B)(1).
[120] The provisions on equivalence and mutual recognition are found in the following TBT articles: equivalence for technical regulation—Article 2.7; equivalence for conformity assessment procedures Article 6.1; mutual recognition for conformity assessment procedures—Article 6.3.
[121] TBT Article 2.7.
[122] TBT Article 6.1.

Members are encouraged to enter into negotiations for the mutual recognition of the results of conformity assessment procedures.[123] By accepting the results of another Member's conformity assessment procedures, testing costs are reduced and less time is lost. Confidence in a trading partner's testing procedures would seem to be a prerequisite for the acceptance of a mutual recognition agreement.[124]

Although mutual recognition and equivalence may be worthwhile objectives, there is skepticism among some WTO Members concerning the effectiveness of international standardization efforts, and the extent to which equivalence, mutual recognition (and for that matter harmonization) can be increased between countries at different levels of development.

E. Transparency

"Transparency" is the process whereby the creation, terms, and application of technical regulations, standards and conformity assessment procedures are made public, and opportunities are provided for the public (including other Members) to comment on proposed technical regulations, standards and conformity assessment procedures. Transparency obligations are found throughout the TBT Agreement.[125] They take several different forms and are applicable at different points in the promulgation and application of a TBT measure. With respect to standards, some of these obligations are only applicable to Members when the relevant standardizing bodies have accepted the Code of Good Practice.

Transparency obligations generally include the following requirements:

1) *Pre-enactment publication*: A WTO Member is required to publish a notice prior to the enactment of a technical regulation, standard or conformity assessment procedure ("measure").[126] The publication and timing of the notice must be sufficient to allow interested parties to become acquainted with the proposed measure at an early appropriate stage.The TBT Agreement does not specify where the notice must be published.
2) *Notification*: A Member is required to notify other WTO Members through the WTO Secretariat prior to the enactment of a technical regulation or a conformity assessment procedure (when amendments to the measure can still be introduced). This notification must include the products to be covered and a brief indication of the objective and rationale for the technical regulation or procedure.[127] No such obligation is imposed with respect to standards.
3) *Provision of copies*: Upon request, a WTO Member must provide other Members with copies of draft technical regulations, standards, and conformity assessment procedures.[128]
4) *Allowance of time for comments*: Prior to the enactment of a measure, a Member must allow other Members a reasonable time for written comment, and for

[123] TBT Article 6.3.
[124] TBT Article 6.
[125] Transparency provisions are found in: Articles 2.9, 10 (technical regulations); Article 10 and Paragraphs J-Q of the Code of Good Practice (standards); and Articles 5.5 and 10 (conformity assessment procedures).
[126] Pre-implementation notice provisions are contained with respect to technical regulations in Article 2.9.1; with respect to standards in ¶ L of the Code of Good Practice; and with respect to conformity assessment procedures in Article 5.6.1.
[127] Notification is required by: Article 2.9.2 (technical regulations); and Article 5.6.2 (conformity assessment procedures).
[128] The provision of copies is required by Article 2.9.3 (technical regulations), ¶ M of the Code of Good Practice (Standards); and Article 5.6.3 (conformity assessment procedures).

discussions concerning proposed measures.[129] For draft standards, a sixty day period must be provided for comments.[130]

5) *Publication of measures*: WTO Members are obliged to publish or otherwise make available technical regulations, standards and conformity assessment procedures to other Members and to interested parties.[131]
6) *Creation of inquiry points*: Members are required to establish "inquiry points" to answer reasonable inquiries from and provide relevant documents to Members and other interested parties concerning technical regulations, standards and conformity assessment procedures.[132] Inquiry points have the responsibility to provide information concerning a WTO Member's participation in regional and international standardization and conformity assessment bodies. Inquiry points also have the responsibility of providing certain information concerning the activities of non-governmental standardization organizations.[133]

For example, a Member seeking to enact an environmental law regulating engine exhaust (a technical regulation) would be required, prior to enactment of the law, to provide drafts of the measure to other Members, allow comments from them, publish the measure, and notify Members through the WTO Secretariat of the measure. A Member's inquiry point would be responsible for providing information and relevant documents relating to the law.

F. Derogations from Transparency in the Event of Urgent Problems

Transparency measures applicable prior to the adoption of technical regulations and conformity assessment procedures may be omitted in the event of urgent problems related to safety, health, the environment or national security.[134] In such cases, *post-facto* obligations exist to notify Members of the measures enacted, make copies available upon request, and to consider comments from other Members. With respect to draft standards, the sixty day period allowed for comment may be shortened in the event of urgent problems related to safety, health, or the environment.

For example, if State A discovers that a type of packing material produces deadly emissions when burned and immediately outlaws its production and use within its territory, it must immediately notify other WTO members of the ban, make copies of the ban available upon request, and permit comments from all Members on the regulatory measure.

VI. Other Important Provisions of the TBT Agreement

A. Technical Assistance—Article 11

Technical assistance is the provision of expert assistance to developing countries by other Members, the WTO Secretariat, or third parties. TBT Article 11 sets forth a broad range

[129] Written comments must be permitted with respect to technical regulations in Article 2.9.4; standards: Paragraphs L and N of the Code of Good Practice; and conformity assessment procedures: Article 5.6.4.
[130] ¶ L of the Code of Good Practice (standards).
[131] Publication is required with respect to technical regulations in Article 2.11; standards in ¶ O of the Code of Good Practice, and in Article 5.8 for conformity assessment procedures.
[132] Article 10.
[133] Article 10.1.4 and 10.3.
[134] Provisions applicable to urgent problems appear in the following provisions: Technical Regulations: Article 2.10; Standards: Annex 3, ¶ L, Code of Good Practice; Conformity Assessment Procedures: Article 5.7.

of technical assistance provisions. WTO Members are required to:

- Advise other Members, especially developing country Members on the preparation of technical regulations.
- Provide technical assistance, in particular to developing countries, regarding the establishment of national standardizing bodies, and participation in these bodies, and encourage their national standardizing bodies to do likewise.
- Take reasonable measures to arrange for regulatory bodies within their territories to advise other Members, in particular developing country members. Provide technical assistance on agreed terms regarding the establishment of regulatory and conformity assessment bodies, and assistance on the methods by which their technical regulations can best be met.
- Take reasonable measures, in particular with respect to developing country Members, to advise on the establishment of bodies for the assessment of conformity with standards.
- Grant technical assistance, especially to developing country Members, regarding the steps that should be taken by foreign producers seeking access to conformity assessment systems operated by governmental and non-governmental bodies.
- Encourage organizations within their territory which are members of, or participants in, international or regional conformity assessment systems to advise other Members, and consider requests for technical assistance from other Members (in particular developing countries) regarding the establishment of institutions which would enable relevant organizations within their territories to fulfill the obligations of membership or participation in international and regional conformity assessment systems.
- Grant other Members, especially developing country Members, technical assistance on the institutions and legal framework of international and regional systems for conformity assessment sufficient to enable them to fulfill the obligations of membership or participation in such systems.
- Give priority to the needs of the least-developed country Members.

B. Special and Differential Treatment—Article 12

The TBT Agreement requires Members, in particular developed country Members, to provide more favorable treatment to developing countries based on the financial and trade needs of the developing country in question. Article 12 of the TBT Agreement sets forth a broad range of provisions "intended" to provide more favorable treatment to developing countries.[135] Although Article 12 does not provide developing countries

[135] More specifically, Article 12 requires that Members provide differential and more favorable treatment to developing countries by:

— Giving particular attention to the provisions of this Agreement concerning the rights of developing country Members.
— Taking into account the special development, financial and trade needs of developing country Members in the implementation of the TBT Agreement at the national level.
— Taking into account the special development, financial and trade needs of developing country Members in the implementation of the TBT Agreement*'s* institutional arrangements.
— Assuring that technical regulations, standards and conformity assessment procedures do not create unnecessary obstacles to exports from developing country Members. Members are to do this by taking into account the special development, financial and trade needs of developing country Members in the preparation and application of technical regulations, standards and conformity assessment procedures.

with permanent derogations to the substantive provisions of the TBT Agreement, the pro-developing country character of Article 12 is unambiguous although not particularly meaningful. Many of the provisions are non-binding and probably not enforceable.

The provisions set forth in Article 12 related to special and differential treatment ("SDT") take several different forms. They require Members to:

(a) *Recognize and to take into account* the special needs of developing countries in the promulgation and application of technical regulations, standards and conformity assessment procedures. Factors to be recognized include the developmental, financial and trade needs of developing country Members, and the preservation of indigenous technology and production methods.
(b) *Facilitate the participation* of developing countries in international standardization and conformity assessment bodies. One means of facilitation is to encourage developing country participation in the standardization and conformity assessment process; a second means is to take measures to ensure that international standards are prepared for products of interest to developing countries.

— Recognizing that developing country Members may adopt certain technical regulations, standards or conformity assessment procedures aimed at preserving indigenous technology and production methods and processes compatible with their development needs.
— Recognizing that developing country Members should not be expected to use international standards as a basis for their technical regulations or standards, including test methods, which are not appropriate to their development, financial and trade needs.
— Recognizing and taking fully into account that developing country Members may face special problems, including institutional and infrastructure problems, in the field of preparation and application of technical regulations, standards and conformity assessment procedures.
— Recognizing and taking fully into account that the special development and trade needs of developing country Members, as well as their stage of technological development, may hinder their ability to discharge fully their obligations under this Agreement.
— Taking reasonable measures to ensure that international standardizing bodies and international systems for conformity assessment are organized and operated in a way which facilitates active and representative participation of relevant bodies in all Members, taking into account the special problems of developing country Members.
— Taking reasonable measures to ensure that international standardizing bodies, upon request of developing country Members (if practicable) prepare international standards concerning products of special interest to developing country Members.
— Providing, in accordance with TBT Article 11, technical assistance to developing country Members to ensure that the preparation and application of technical regulations, standards and conformity assessment procedures do not create unnecessary obstacles to the expansion and diversification of exports from developing country Members. In determining the terms and conditions of the technical assistance, Members are required to take into account the stage of development of the requesting Members, in particular least-developed country Members. This requirement is found in Article 12.7.
— Bearing in mind during "consultations" the special difficulties experienced by developing country Members in formulating and implementing standards and technical regulations and conformity assessment procedures.
— Granting time-limited exceptions to obligations arising under the TBT Agreement. (This is potentially a very important form of special and differential treatment.)
— Taking into account, during consultations, the special difficulties experienced by developing countries in regard to formulating and implementing technical regulations, standards, and conformity assessment procedures; taking into account the special needs of developing countries with respect to financing, trade and development. This last requirement, which appears in TBT Article 12.9, is not well drafted. Some may seek to argue that assistance concerning financing, trade and development is only required during consultations. If so, such assistance would be too late to be of much use.

(c) *Provide technical assistance*.[136]
(d) *Grant time-limited exceptions*:[137] pursuant to Article 12.8, the TBT Committee is authorized to grant a "time-limited exception" to obligations under the TBT Agreement in order to ensure that developing countries are able to comply with the TBT Agreement. In granting such exceptions the Committee is to consider:
— The special problems experienced by developing countries in the preparation and application of technical regulations, standards and conformity assessment procedures,
— The special development and trade needs of the developing country Member, and
— The stage of technological development of the particular developing country.

C. Consultations And Dispute Settlement—Article 14

Pursuant to Article 14.1 of the TBT Agreement, alleged violations of the TBT Agreement are treated pursuant to the provisions of Articles XXII and XXIII of GATT 1994, as elaborated and applied in the WTO Agreement's Dispute Settlement Understanding ("DSU").[138] This is the normal manner in which WTO disputes are handled.

Under Article 14.2 of the Agreement parties to a TBT dispute or panels hearing a TBT dispute may establish a "technical expert group" to assist in questions requiring technical expertise. Annex 2 of the TBT Agreement sets forth a procedure governing the role of experts. In particular, it provides who may serve as an expert, establishes the authority of experts to seek information and advice, protects confidential information, and allows the Members concerned (parties and third parties to a dispute) to comment on the draft report developed by a Technical Expert Group.

Article 14.4 provides that the dispute settlement provisions can be invoked when a Member considers that another Member has not achieved satisfactory results under TBT Articles 3,[139] 4,[140] 7, 8 and 9[141] and its trade interests are "significantly affected". Each of these five provisions impose an obligation on Members to take "reasonable measures" to ensure that local government bodies, non-government bodies, and international and regional systems, comply with the terms of the TBT Agreement. In the event that Members do not take reasonable measures to ensure compliance with the applicable provisions, they are responsible for the acts of the various bodies mentioned in Articles 3, 4, 7, 8 and 9 as if the bodies were themselves Members of the WTO

As of the time of writing,[142] there have only been two disputes where the TBT Agreement received significant attention, *EC—Asbestos* and *EC—Sardines*. However only *EC—Sardines* was decided based on the TBT Agreement. These decisions have been discussed throughout this chapter. Some miscellaneous points not treated above are discussed in the two subsections that follow.

[136] *See* TBT Article 11 and Article 12.7.
[137] *See* Article 12.8 and the discussion of Article 13 *infra* Part VI(D).
[138] The DSU is contained in Annex 2 of the WTO Agreement.
[139] Article 3 governs the Preparation, Adoption and Application of Technical Regulations by Local Government Bodies and Non-Governmental Bodies.
[140] Article 4 governs the Preparation, Adoption and Application of Standards.
[141] Article 7, 8 and 9 govern respectively: Procedures for Assessment of Conformity by Local Government Bodies, Procedures for Assessment of Conformity by Non-Governmental Bodies and International and Regional Systems.
[142] August 2004.

1. EC—Asbestos (Miscellaneous Points)

The *Asbestos* decision examined the applicability of the TBT Agreement, and more particularly what constitutes a technical regulation, but did not examine substantive issues involving the TBT Agreement. What constitutes a technical regulation has already been examined in Part III(A)(1).

EC—Asbestos also dealt with the relationship between the GATT 1994 and the TBT Agreement and the order of analysis in a dispute settlement proceeding when both GATT 1994 and the TBT Agreement are applicable to a particular trade measure. The Panel in *EC—Asbestos* found:

> Both the GATT 1994 and the TBT Agreement form part of Annex 1A to the WTO Agreement and may apply to the measures in question. Consequently, although we do not in principle exclude application of the TBT Agreement and/or the GATT 1994 to the Decree, we have to determine the order in which we should consider this case. According to the Appellate Body in *European Communities—Regime for the Importation, Sale and Distribution of Bananas*, when the GATT 1994 and another Agreement in Annex 1A appear *a priori* to apply to the measure in question, the latter should be examined on the basis of the Agreement that deals "specifically, and in detail," with such measures.[143]

The Panel first examined whether the trade measure at issue was a technical regulation. If it were a technical regulation within the meaning of the TBT Agreement, the TBT Agreement would apply, since it is the agreement that deals with the measure in the "most specific and most detailed" manner.[144] The Panel however ruled that the portion of the decree containing the import ban was not a technical regulation pursuant to the TBT Agreement.[145] Although this finding was reversed by the Appellate Body,[146] the Appellate Body chose not to complete the TBT analysis based on the unavailability of undisputed facts and sufficient factual findings at the Panel level, and based on its determination that the "novel" TBT claims had not been explored in depth before the Appellate Body.[147]

2. EC—Sardines (Miscellaneous Points)

EC—Sardines was the first dispute decided entirely based on the TBT Agreement. It will almost certainly encourage further TBT disputes. Recalling the Appellate Body's decision in *EC—Bananas III* wherein the Appellate Body stated that when two agreements apply simultaneously, a Panel should consider the more specific agreement before the more general agreement,[148] the Panel acceded to Peru's request to examine its TBT claim before its GATT Article III claim.[149]

Peru's primary argument, and the one that prevailed before both the Panel and the Appellate Body, was that the EC measure was inconsistent with Article 2.4 of the TBT Agreement because the EC did not use Codex Standard 94 as a basis for its technical regulation despite the fact that the standard would be an effective and appropriate means to

[143] *European Communities—Measures Affecting Asbestos and Asbestos-containing Products*, Report of the Panel, WT/DS135/R (2001) ¶ 8.16.
[144] *Id.* ¶ 8.17.
[145] *Id.* ¶¶ 8.72–8.73.
[146] *EC—Asbestos*, Report of the Appellate Body, *supra* note 11, ¶ 76.
[147] *Id.* ¶¶ 79–83.
[148] *European Communities—Regime for the Importation, Sale and Distribution of Bananas*, WT/DS27/R (1997), ¶ 204.
[149] *EC—Sardines*, Report of the Panel, *supra* note 12, ¶ 7.15.

fulfill the legitimate objectives of the EC Regulation.[150] Neither the Panel nor the Appellate Body reached Articles 2.1 and 2.2 of the TBT Agreement or Article III of the GATT. As a result, and a point worthy of emphasis, each made a finding of a violation of Article 2.4 of the TBT Agreement without a formal finding that the EC's trade measure was discriminatory. The important TBT issues in this decision have already been examined in depth above.

D. Institutional Considerations

1. The Work of the Committee on Technical Barriers to Trade

Article 13 of the TBT Agreement creates a Committee on Technical Barriers to Trade. Representatives of each of the Members are entitled to participate. The Committee meets as necessary, but at least once a year. The TBT Committee has numerous responsibilities: (1) it provides Members with an opportunity to consult on TBT issues; (2) it carries out whatever responsibilities the Members may assign to it, and establishes working parties and other bodies to carry out these responsibilities; (3) it works to avoid duplication between its activities and the work of governments in other technical bodies; and (4) it grants "time-limited exceptions" to obligations arising under the TBT Agreement.[151]

2. Built-in Reviews of the TBT Agreement—Articles 12.10, 15.3 and 15.4.

The TBT Agreement contains many provisions that mandate its review by the Members. Article 15.3 of the TBT Agreement requires that the TBT Committee annually review the implementation and operation of the TBT Agreement taking into account the objectives of the Agreement. Article 15.4 requires that every three years the TBT Committee must conduct a review of the implementation and operation of the TBT Agreement, with a view to recommending adjustments of the rights and obligations of the Agreement where necessary. This review is designed to ensure mutual economic advantage and the balance of rights and obligations, without prejudice to the provisions concerning special and differential treatment contained in Article 12. Based on the implementation experience, the TBT Committee is entitled to submit proposals to amend the TBT Agreement to the Council. Two triennial reviews have been held, the first in 1997,[152] and the second in 2000.[153] These documents, referenced by number, are available on the WTO's web site. They offer a somewhat critical review of the successes and failures under the TBT Agreement.[154]

The TBT Committee is also required pursuant to TBT Article 12.10 to "examine periodically the special and differential treatment, as laid down in this Agreement, granted

[150] *Id*. ¶ 3.1(a).

[151] *See* TBT Articles 12.8 and 13. This point is mentioned *supra* Part V(B) in the discussion of special and differential treatment.

[152] WTO Document No. G/TBT/5 (97–5092) November 19, 1997.

[153] WTO Document No. G/TBT/9 (00–4811) November 13, 2000.

[154] The first report noted, among other findings, that the status of implementation of the TBT Agreement was not satisfactory. Transparency and developing country concerns (including the need for more technical assistance, and the need to make operational the special and differential treatment provisions) are also set forth. The second report provides a list detailing which Members have notified inquiry points and measures taken to ensure the implementation of the TBT Agreement. Activities organized by the TBT Committee are also listed. Information exchange, capacity building, technical assistance and special and differential treatment were also concerns. Again, the TBT Committee found that the status of implementation needed to be improved.

to developing country Members on national and international levels." It has done so in each of two triennial reviews conducted pursuant to Article 15.4.

3. Web Resources

The WTO maintains a comprehensive website at <www.wto.org>. One can find background information concerning the TBT Agreement, the complete text of the TBT Agreement, the results of the annual and triennial TBT Committee Reviews, Member notifications, training information, national TBT inquiry points, minutes of TBT Committee meetings, working documents of the TBT Committee, a list of standardizing bodies that have accepted the Code of Good Practice, and many other TBT-related documents.

4. Doha Work Program

The TBT Agreement was not the subject of major attention during the Doha Ministerial meeting. The "Decision on Implementation-Related Issues and Concerns"[155] does however define the "reasonable interval" between publication and entry into force of a technical regulation as a period of not less than six months (except in certain specified urgent circumstances).[156] In addition, one crosscutting issue present in the same instrument may have implications for the TBT Agreement. The Decision on Implementation-Related Issues and Concerns instructs the Committee on Trade and Development to identify mandatory and non-binding provisions governing special and differential treatment and to consider the implications of converting non-binding SDT provisions into mandatory provisions, as well as to consider how SDT provisions can be made more effective. Given that the SDT provisions in the TBT Agreement are not particularly meaningful for developing countries, and since the TBT Agreement's preamble does hold out some hope of benefits for developing countries,[157] these provisions may be ripe for review during the negotiations on the Doha Work Program.

VII. Conclusion

The TBT Agreement seeks to achieve a balance between permitting Members the regulatory autonomy to protect legitimate interests (through the use of technical regulations, standards and conformity assessment procedures), and assuring that technical regulations, standards and conformity assessment procedures do not become unnecessary obstacles to international trade. The TBT Agreement cannot be applied too strictly or the legitimate interests of Members will be thwarted. But it cannot be applied too laxly or the value achieved through progressive rounds of tariff reductions will be lost.

Further complicating this fine balance are various actors in civil society with divergent interests. For example, the environmental community is afraid that the TBT Agreement will be applied narrowly and that what they view as "legitimate" environmental measures will not meet the requirements of the TBT Agreement. Likewise, labor and human rights

[155] *Implementation-Related Issues and Concerns*, Decision of November 14, 2001, WTO/MIN(01)/17, November 20, 2001, ¶ 5.2.

[156] *See* Transparency, *supra* Part V(E).

[157] Recital seven of the TBT Agreement's preamble suggests that international standardization can facilitate the transfer of technology to developing countries, but fails to explain how or why. Recital eight expresses the desire of the Members to assist developing countries in formulating and applying technical regulations, standards and conformity assessment procedures.

organizations are concerned that these items are not specifically mentioned in the TBT Agreement—even though the protection of human life and health is deemed a legitimate interest in Article 2.2.

On the other side, developing countries are often suspicious that trade measures (technical regulations and standards) allegedly taken by developed countries for social policy goals are in reality for protectionist purposes. Likewise, many in the business community react negatively to the possibility that trade measures will be applied to further social policy objectives for fear of being economically disadvantaged by protectionist measures.

Perhaps as a result of these competing interests, and a desire not to subject the GATT and later the WTO to criticism, until recently panels avoided applying the Tokyo Round Standards Code and now the TBT Agreement, tending to resolve potential TBT cases under GATT rules.[158] With the Appellate Body's decision in the *Asbestos* case holding that the TBT Agreement was applicable to the import ban in question and that it is proper to begin the analysis of a trade measure with the most specific agreement, as well as the 2002 decision in the *Sardines* dispute, this situation is changing. We can expect to see more panels and the Appellate Body deciding regulatory disputes involving trade in goods through the application of the TBT Agreement. We can also expect to see an increase in TBT disputes, primarily because, despite the need for domestic policy autonomy to address legitimate interests, technical regulations, standards, and conformity assessment procedures are sometimes used as protectionist devices.

Since it is probable that TBT disputes will increase, it is time to address another problem during the Doha Round. Although the TBT Agreement contains provisions in favor of developing countries concerning the grant of special and differential treatment and technical assistance, there is a need to increase the level of technical assistance available, and to evaluate whether the provisions governing special and differential treatment are sufficient and effective. It is also time to ascertain whether international standardization efforts have been effective, and the extent to which harmonization, equivalence and mutual recognition can or should be increased.

[158] No case was ever decided under the Tokyo Round Standards Code. Until recently decisions were also avoided under the Uruguay Round TBT Agreement. *See, e.g., United States—Standards for Reformulated and Conventional Gasoline*, *supra* note 71, ¶ 6.43 where, having decided the case based on the provisions of the GATT 1994, the Panel chose not to address the TBT questions that were presented.

CHAPTER 9

THE AGREEMENT ON TEXTILES AND CLOTHING

I. Introduction

For most of the period after World War II, a special regime has existed for trade in textiles, outside the normal multilateral trade rules. During the Uruguay Round negotiations, however, the GATT contracting parties agreed to integrate textile products into the GATT/WTO system. The means by which this integration would occur was the Agreement on Textiles and Clothing ("ATC"), which provides for the gradual integration of these products into normal GATT/WTO rules, to be completed by January 1, 2005.

The ATC has proved to be one of the most controversial of the Uruguay Round Agreements. The existence of the ATC is due in large part to what has been described as the "Grand Bargain" struck during the negotiations, under which the developing countries agreed to the General Agreement on Trade in Services and the Agreement on Trade-Related Aspects of Intellectual Property Rights in exchange for greater access to developed country markets for the products of most interest to them—textiles and clothing, and agricultural products. In practice, though, many developing countries have expressed the view that the access that has actually been achieved so far under the ATC (and the Agreement on Agriculture) has been much less than what was promised. The alleged deficiencies in market access for textiles and clothing are said to be due primarily to delays in integrating key products and, at least in the first years of the Agreement, abuse of the special safeguard mechanism in the ATC.

This chapter will examine the regulation of trade in textiles from the GATT era up until the present. It will begin by reviewing the origins of the special regime for textiles under the GATT. It will then examine the Uruguay Round negotiations on textiles and clothing, which led to the ATC. Next, it will look at the ATC itself, discussing in detail its specific provisions and their interpretation through WTO dispute settlement. Finally, it will discuss some current issues of contention in the area of textiles and clothing trade, and provide some thoughts on the future treatment of textiles and clothing under the WTO system after integration has been completed.

II. Background: Regulation of Textiles Trade during the GATT 1947 Era

The textile industry has long been subject to a special set of rules within the multilateral trading system. This special status results in large part from trade tensions between rich and poor countries. Because textile production is relatively uncomplicated compared to other manufacturing industries, it is often an important stepping-stone in a country's industrialization process. For developed countries, textile production was part of the early stages of an industrialization process that took place many years ago. Although developed country economies have evolved substantially since this time, the textile industry remains as a mature industry, and still employs large numbers of workers,[1] although it uses production methods that rely heavily on mechanization. At the same time, the economies of developing and least-developed countries, which are in the early stages of their own industrialization process, rely heavily on textile production as a first step before moving up to more technically demanding industries. Developing and least-developed countries are able to take advantage of their low wages and access to cheap inputs to make labor-intensive, textile products that are very competitive in international markets. As a result of these different production patterns, cheap textiles and clothing products from developing countries often compete with more expensive products from developed

[1] The U.S. textile industry, for example, employs nearly half a million people. *See* note 3, below.

countries.[2] This puts enormous pressure on the industries in developed countries, which have difficulty competing with the cheaper foreign products. In response, the textile industry in developed countries often lobbies for protection from imports.[3]

In the early years of the GATT, trade in textiles did not cause much tension. At its inception, the GATT was seen as a "rich nations' club," with only a few developing countries as contracting parties. Therefore, textile trade among the contracting parties did not raise significant problems.

By the late 1950s, however, the situation had changed. Japan, which had substantial production of low-priced textiles, acceded to the GATT in 1955.[4] Then in 1958, West European currencies became externally convertible, which removed the balance-of-payments justification for certain quantitative restrictions imposed by these countries, including those on textiles. Finally, a number of important developing country exporters emerged at around this time. All of these factors combined to cause the developed countries to look for a response to "low wage imports" from developing countries. While textiles were not the only products at issue, they were a prime concern.

As a response, the Short-Term Arrangement Regarding International Trade in Cotton Textiles ("STA") was established, lasting from October 1961 to September 1962.[5] In October 1962, the Long-Term Arrangement Regarding International Trade in Cotton Textiles ("LTA") came into effect.[6] This latter instrument remained in force (with extensions) until 1973. These two Arrangements constituted derogations from GATT rules (although no formal waiver was ever obtained). They were designed to allow developed countries to impose quantitative restrictions on textile imports when these imports caused or threatened to cause "market disruption," while at the same time providing for gradual increases in the quota amounts.[7]

The LTA was limited to trade in cotton textiles. By the mid-1960s, however, synthetic fibers and yarns experienced significant production growth, and wool exports had also increased. In many instances, restrictions were being imposed on these products outside the context of the LTA. To address this development, a new agreement, the so-called

[2] Not all of these products compete, however. In recent years, a pattern has developed under which labor-intensive operations are undertaken in developing countries, and the resulting products are shipped to the developed countries for the higher value-added, mechanized operations. As a result of this internationalization of the industry, the very complex rules of origin applicable to textiles are extremely important and have given rise to a good deal of controversy. *See* Part VI.B below.

[3] For example, the key vote in the U.S. House of Representatives in late 2001 in favor of the bill granting the President Trade Promotion Authority was cast by a Congressman from South Carolina in exchange for important concessions on textiles. *See, e.g.,* Joseph Kahn, *Price of Bush's Trade Powers? Protectionism,* New York Times, December 8, 2001. The textile industry in the United States tends to be concentrated in certain regions, and consequently has a great deal of influence over politicians in these regions. According to the American Textile Manufacturers Institute, in 2001 there were over 300,000 textile employees in the states of North Carolina, South Carolina, Georgia and Alabama out of 443,000 employees in the U.S. overall. See *Quick Facts about U.S. Textiles*, available at <http://www.atmi.org/newsroom/qckfacts.htm>, visited April 12, 2002.

[4] A number of Contracting Parties refused to apply the GATT to Japan even after it had joined the GATT, based on the non-application provision, Article XXXV. JOHN H. JACKSON, WORLD TRADE AND THE LAW OF GATT 101–102 (1969). This refusal was based in large part on their concern about competition from Japanese textiles.

[5] *Arrangement Regarding International Trade in Cotton Textiles*, July 21, 1961, 12 U.S.T. 1675, T.I.A.S. No. 4884.

[6] *Long-Term Arrangement Regarding International Trade in Cotton Textiles*, February 9, 1962, 13 U.S.T. 2673, T.I.A.S. No. 5240.

[7] *See* Henry R. Zheng, *Defining Relationships and Resolving Conflicts Between Interrelated Multinational Trade Agreements: The Experience of the MFA and the GATT*, 25 Stan. J. Int'l Law 45, 55–56 (1988).

Multi-Fiber Arrangement ("MFA"),[8] was negotiated to address trade in textiles on a more comprehensive basis. The MFA entered into force in January 1974.[9]

In essence, the MFA provided a special set of rules and guidelines for trade in textiles. As described in Article 1.2 of the MFA, its objective was:

> to achieve the expansion of trade, the reduction of barriers to such trade and the progressive liberalization of world trade in textile products, while at the same time ensuring the orderly and equitable development of this trade and avoidance of disruptive effects in individual markets and on individual lines of production in both importing and exporting countries.

To achieve this end, the MFA permitted the imposition of country-specific restraints on textile imports.[10] In this regard, exporting and importing countries were encouraged to negotiate *bilateral* restraints on textile imports when the domestic market of the importing country was disrupted by imports.[11] The MFA also allowed importing countries to impose *unilateral* restraints where "market disruption" existed and bilateral restraints could not be agreed.[12] The restraints, whether bilateral or unilateral, were to be increased by a specified percentage each year, thus allowing for the "orderly" expansion of trade. In addition, the MFA established the Textiles Surveillance Body ("TSB") to oversee the operation of the MFA. The TSB could make recommendations, but not give binding rulings, with respect to unilateral restraints.

The MFA was created as a four-year agreement entering into force on January 1, 1974. However, it was later extended through several Protocols of Extension, and remained in effect until December 31, 1994.[13] Although its precise legal status is difficult to ascertain, and there was never any formal waiver under the GATT, the MFA has been described by many commentators as a "derogation" from the GATT.[14]

The original MFA provided for restraints on textiles made of cotton, wool and synthetics. Its coverage was later extended to include almost all fibers, with the exception

[8] *Arrangement Regarding International Trade in Textiles*, TEX.NG/1, BISD, 21st Supp. 3 (1975).

[9] While the STA, LTA and MFA were not technically part of the GATT, all three agreements were negotiated under the auspices of the GATT.

[10] Brenda Jacobs, *Renewal and Expansion of the Multifiber Arrangement*, 19 L. POL. INT'L BUS. 9 (1987); *see also*, THE GATT URUGUAY ROUND: A NEGOTIATING HISTORY (1986–1992) 261–277 (Terence P. Stewart ed. 1993).

[11] MFA, Articles 3.4, 4.

[12] MFA, Article 3.5. Annex A to the Agreement provides that a determination of "market disruption" was to be based on a finding of "serious damage" or "actual threat" of serious damage to the domestic industry. This damage must be caused by a "sharp and substantial" increase or imminent increases in imports which are sold at prices lower than domestic products or other imported products in the market of the importing country. Unilateral restraints differed from safeguards imposed under GATT Article XIX in several important respects. First, they were imposed against specific exporting countries rather than on an MFN basis. Second, no compensation was required. Third, the imposition of such restraints could not be challenged under the GATT dispute resolution process.

[13] *Draft Protocol Extending the Arrangement Regarding International Trade in Textiles*, GATT Doc. No. COM.TEX/W/47 (Dec. 14, 1977); *Protocol Extending the Arrangement Regarding International Trade in Textiles*, GATT Doc. No. L/5726 (Dec. 23, 1981); *Protocol Extending the Arrangement Regarding International Trade in Textiles*, GATT Doc. No. L/6030 (Aug. 7, 1986). *See* Jacobs, *supra* note 10, at 9.

[14] Presumably, the "derogations" were from GATT Article XI, which provides for the general elimination of quantitative restrictions, and GATT Article XIX, which governs the use of safeguard measures. *See* Jacobs, *supra*, note 10, at 9; Stewart, *supra* note 10, at 265; Zheng, *supra* note 7, at 69. It is important to note, however, that not all members of the MFA were GATT Contracting Parties, and not all GATT Contracting Parties had signed on to the MFA. China, for example, was a member of the MFA but was not a GATT contracting party after the 1950 withdrawal by the Nationalist Government.

of pure silk. As of 1991, approximately two-thirds of the world's trade in textiles were subject to the MFA framework.[15]

At the beginning of the Uruguay Round negotiations, nine developed countries (counting the European Community as one country) were participating in the MFA, although not all were applying restraints: Austria, Canada, the European Community, Finland, Japan, Norway, Sweden, Switzerland and the United States.[16] When the Uruguay Round ended, only Canada, the European Community, Norway and the United States were imposing restraints.[17]

III. The Uruguay Round Negotiations

It is beyond the scope of this chapter to systematically document every aspect of the Uruguay Round negotiating history. Other authors have already done so.[18] Instead, this Section will highlight certain important features of these negotiations, focusing on the views of the different actors involved and the key issues with which they dealt.

The Ministerial Declaration that initiated the Uruguay Round negotiations stated the following regarding the negotiations on textiles and clothing:

> Negotiations in the area of textiles and clothing shall aim to formulate modalities that would permit the eventual integration of this sector into GATT on the basis of strengthened GATT rules and disciplines, thereby also contributing to the objective of further liberalization of trade.[19]

Thus, the primary goal of the negotiations was the "eventual integration" of the sector into the GATT. By contrast, "liberalization" of trade in this sector appeared to be of lesser importance, a secondary goal to which "integration" would contribute.

The vagueness of the Ministerial Declaration led to some initial disagreement as to the scope of the negotiations. The countries facing restrictions under the MFA were of the view that the objective of the negotiations was simply to integrate the *products subject to MFA restraints* into the GATT system. By contrast, the restraining countries argued that *other restrictions*, outside of MFA restraints, should also be discussed.[20] These other restrictions included restrictions not consistent with the GATT (*e.g.*, restrictions claimed to be for BOP purposes, but not meeting those requirements) as well as GATT-consistent restrictions (*e.g.*, unbound tariffs). In addition, the developed countries emphasized the importance of the strengthened GATT rules and disciplines (referred to as "SGRAD") being discussed by other Uruguay Round negotiating groups. This difference of viewpoint is not surprising, since developed countries imposed most of their restrictions on textile imports under the MFA, whereas trade barriers imposed on these products by developing countries usually arose through a failure to follow general GATT disciplines.

[15] *See* Stewart, *supra* note 10, at 260.

[16] *Id.*, at 268. Japan and Switzerland were not relying on the MFA to impose restrictions. However, these two countries imposed restrictions on imports through other measures. *Id.*, at 274. In addition, textile and clothing exports have been subject to a number of restrictions, outside the context of the MFA, by developing countries. *Id.*, at 275–277.

[17] For information on the specific restraints imposed by these four at the time the WTO Agreement came into force, *see* Part IV below.

[18] *See* Marcelo Raffaelli and Tripti Jenkins, The Drafting History of the Agreement on Textiles and Clothing (1995); Stewart, *supra* note 10, at 259–380.

[19] *Ministerial Declaration on the Uruguay Round*, MIN.DEC, September 20, 1986.

[20] *See* Raffaelli and Jenkins, *supra* note 18, at 19; *see also Communication from Pakistan*, MTN.GNG/NG4/W/10 (February 15, 1988).

A series of negotiating groups was formed to conduct the Uruguay Round negotiations. Four groups were established to deal with so-called "market access" questions, covering textiles and clothing, tariffs, non-tariff measures and tropical products. The negotiating group on textiles and clothing began its work in February of 1987. The most active individual developing countries were Hong Kong, India, Indonesia and Pakistan. In addition, the International Textiles and Clothing Bureau ("ITCB"), an inter-governmental organization founded in 1984 by a number of textile exporting developing countries, also played an important role, as did the ASEAN countries acting jointly. Those developed countries that were applying restrictions under the MFA at that time—Canada, the European Community, Norway and the United States—were very active. Japan and Switzerland also played key roles.

The most contentious issues that came up in the negotiations were the following:

- the length of the time period in which textile and clothing trade was to be integrated into the GATT system
- the rate at which existing MFA quotas that would not be immediately integrated would grow
- the scope of the products to be integrated
- the nature of the special safeguard mechanism that would be available during the integration period
- the role of a monitoring body
- the application of other GATT rules to textile and clothing trade.

Each of these issues is discussed below.

A. The Speed of Integration

It was agreed early on that the final goal of the negotiations was the integration of textiles and clothing into the GATT/WTO system. However, the question of how long this integration would take was strongly contested, and was one of the last issues agreed upon. There were two aspects to this issue: the *time period* within which final integration would occur, and the *pace of integration* within that time period.

With regard to the time period for integration, proposals ranged from five to ten years, with developing countries generally favoring a shorter period, and developed countries generally preferring a longer period.[21] As discussed in Part IV.B below, the final period agreed upon was ten years.

As for the pace of integration, the debate centered around the percentage of products to be integrated at each of various stages of integration. Again, developing countries favored a faster integration schedule, with developed countries preferring a slower one.[22] The final text attempted to balance these opposing views.

B. Quota Growth Rates

For those products subject to MFA-restraints that were not immediately integrated into the GATT 1994, and therefore would remain subject to these restraints during the transition period, there was discussion as to the level at which these quota amounts would grow. Once again, this issue was marked by a split between developed and developing countries.

[21] RAFFAELI AND JENKINS, *supra* note 18, at 57.
[22] *Id.* at 62–65.

Developed countries argued for slower growth in the quota levels, whereas developing countries preferred faster growth.[23]

C. The Scope of Products to be Integrated

With regard to product coverage, countries facing MFA restraints generally argued that only those products subject to MFA restraints should be covered by the proposed Agreement and subject to gradual integration. Any textile and clothing products not currently subject to these restraints should be deemed integrated, and therefore subject to normal GATT rules immediately. By contrast, developed countries urged that a much wider range of textile and clothing products should be subject to the integration process and integrated on a gradual basis, in order to allow them to delay the integration of the import-competing products currently subject to restraints.[24] As discussed in Part IV.G below, the final agreement covers a broad range of products.

D. The Development of a Special Safeguard Mechanism

Having agreed to bring textiles and clothing into the multilateral trading system, developed countries wanted to ensure that they had a means of protecting domestic industries from the effects of increased imports. To this end, a special safeguard mechanism was proposed that could be invoked to restrict textile and clothing imports (despite the fact that some countries suggested that there was no need for any special mechanism, as the GATT Article XIX safeguards provision would provide an appropriate mechanism).[25]

A variety of different views were expressed regarding the specific aspects of any such mechanism. A key issue was the economic test to be used in order to impose restraints—proposed standards included "injury," "damage," and "market disruption." As explained in more detail in Section IV below, a "serious damage" test was used in the final text. Another important issue was whether the special safeguard mechanism would be applied "selectively," rather than on an MFN basis, and therefore would mirror the restraints imposed under MFA rules.[26] To address this concern, Canada proposed an approach called "global approach/selective application." Under this approach, the importing country would first determine whether there had been an increase in *total* imports, and examine the economic effect of those imports. After this determination, the country would identify the exporting countries to whom the damage was attributable, and the safeguard measure would be applied to those specific countries.[27] As discussed in Part IV.D below, the approach taken in the Canadian proposal was the one used in the final agreement.

E. The Role of a Monitoring Body

Under the MFA, the TSB had served as a monitoring body to oversee the rules governing textiles trade, and the actions taken by specific countries under those rules. During the Uruguay Round negotiations, there was a general consensus that any agreement in this

[23] *Id.* at 37–39, 73–74.
[24] *Id.* at 65–66.
[25] *Id.* at 57, 66–68, 108–109.
[26] *Id.* at 39.
[27] *Id.* at 67–68.

area would also need some form of monitoring body, both for the integration process itself and for the purposes of dispute settlement. The European Community envisioned a body along the lines of the TSB, but strengthened. This body would verify that measures were in conformity with the proposed agreement, and would review the process of the progressive elimination of restrictions.[28]

Key issues related to this proposed monitoring body were: whether its decisions would be binding; the relationship of this body to other GATT bodies; and the recourse open to parties if they were unable to accept recommendations of the body.[29] As finally agreed, the Textiles Monitoring Body ("TMB") issues recommendations, not binding decisions, and when these are not followed Members can resort to the WTO dispute resolution process.

F. Linkage to Other GATT Rules

There was concern among some developed countries that textiles and clothing faced a number of other restrictions, aside from those in the MFA. For example, the European Community raised issues related to high bound tariff rates and the existence of non-bound tariffs on these products; licensing, quantitative restrictions and import prohibitions; safeguards, anti-dumping measures and subsidies; intellectual property rights; and measures taken under balance of payments and "infant industry" provisions. In a 1988 communication, the European Community stated the following:

> The EC wishes to emphasize from the start that the modalities which will permit the final integration of the sector into GATT are to be found in the strengthening of GATT rules and disciplines, that is in the creation of permanent equitable conditions of trade for all parties.[30]

Thus, to address this problem, the European Community argued that integration of textiles and clothing should go hand-in-hand with strengthened GATT rules and disciplines. This goal is reflected in Article 7 of the final negotiated agreement.

IV. The Agreement on Textiles and Clothing

The ATC is one of the Annex 1A agreements on trade in goods that are part of the WTO Agreement. As anticipated in the Uruguay Round Ministerial Declaration, the ATC provides for the integration of trade in textiles and clothing into the WTO system. In this regard, the Preamble states: "*Recalling* that Ministers agreed at Punta del Este that 'negotiations in the area of textiles and clothing shall aim to formulate modalities that would permit the eventual integration of this sector into GATT on the basis of strengthened GATT rules and disciplines, thereby also contributing to the objective of further liberalization of trade.'" Along the same lines, Article 1.1 of the ATC provides that this agreement "sets out provisions to be applied by Members during a transition period for the integration of the textiles and clothing sector into GATT 1994." As this latter provision makes clear, the ATC is really just a transitional agreement, lasting for a defined period and expiring at the end of that period. Article 9 of the ATC confirms this

[28] *Communication from the European Community*, MTN.GNG/NG4/W/47 (May 14, 1990).
[29] RAFFAELI AND JENKINS, *supra* note 18, at 70.
[30] *Communication from the European Community*, MTN.GNG/NG4/W/12 (May 24, 1988); *see also Communication from the European Community*, MTN.GNG/NG4/W/24 (July 20, 1989).

by providing that the ATC will terminate on January 1, 2005, at which point the textiles and clothing sectors will be fully integrated into GATT 1994. Article 9 also states that there will be no extension of the Agreement.

This section provides a detailed review of the key provisions of the ATC and their implementation to date. The interpretation of the ATC by panels and the Appellate Body in several disputes is also discussed.[31]

A. Notification of Existing Restrictions

ATC Article 2.1 required that all quantitative restrictions imposed under the MFA, whether based on bilateral agreements or unilateral action, that were in effect on the day before the entry into force of the WTO Agreement (January 1, 1995), were to be notified to the TMB within sixty days. The notifications were to include the restraint levels, growth rates and flexibility provisions. As of the date of entry into force of the WTO Agreement, all such restrictions are to be governed by the ATC.

At the time the ATC entered into force, only four WTO Members—Canada, the EC, Norway and the United States—had MFA restrictions in effect, and their notifications were as follows:[32]

- Canada: 205 quotas plus 39 sub-limits affecting 26 WTO Members.
- EC: 199 quotas plus nineteen sub-limits involving fourteen Members.
- Norway: 54 quotas involving sixteen WTO Members plus twelve quotas maintained on imports from three non-WTO Members, as well as a non-automatic import licensing procedure on imports of four product categories from Chinese Taipei.
- United States: 650 quotas affecting 25 WTO Members plus 250 quotas with respect to twelve countries that were not then Members.[33]

Article 2.4 then states that the notified restrictions shall be deemed to constitute the "totality" of such restrictions applied by the respective Members, and that "[n]o new restrictions" shall be introduced except under the provisions of the ATC or the relevant GATT 1994 provisions.[34]

In addition, ATC Article 3.1 requires that restrictions on textiles and clothing imports other than those maintained under the MFA (*e.g.*, restrictions maintained for balance-of-payments reasons) must be notified to the TMB, whether these restrictions are consistent with the GATT 1994 or not. In the 1997 Report, 29 Members submitted notifications under Article 3.1 (ten of these Members reported that they did not maintain any restrictions of

[31] Three disputes under the ATC have been the subject of WTO panel and Appellate Body reports. These cases are discussed in detail later in this chapter. In addition, one panel report, although principally involving GATT Article XXIV, also discussed the ATC.

[32] *Comprehensive Report of the Textiles Monitoring Body to the Council for Trade in Goods on the Implementation of the Agreement on Textiles and Clothing During the First Stage of the Integration Process*, G/L/179, 31 July 1997 ("*1997 Report"*).

[33] *Id.*, ¶¶ 183–189.

[34] The meaning of Article 2.4 was elaborated by the panel in *Turkey—Textiles*. There, the panel interpreted Article 2.4 to mean that, in addition to a prohibition on restrictions that are *entirely* new, existing restrictions that have been notified may not be "increased." The panel then noted that Turkey did not have any restrictions in place at the time of the entry into force of the ATC. Accordingly, it said, any restrictions on textiles and clothing applied by Turkey would be "new," as defined in Article 2.4. Report of the WTO Panel, *Turkey—Restrictions on Imports of Textile and Clothing Products*, WT/DS34/R (1999) ("*Turkey—Textiles*") ¶¶ 9.70–9.81.

the type referred to in this Article).[35] Under Article 3.2, such restrictions must be brought into conformity with the GATT 1994 within one year or phased out "progressively."

B. Integration of Products into GATT 1994

ATC Article 2 sets out specific timetables and reduction commitments for removing products from MFA coverage and integrating them into GATT 1994. Once a product is integrated, any existing MFA restrictions on that product must be lifted, and no special safeguards under Article 6 of the ATC (see below) may be imposed. Under Article 2.6, on the date of entry into force of the WTO Agreement—January 1, 1995—each Member was required to integrate products that accounted for at least sixteen percent of the total volume of the Member's 1990 imports of the products covered by the ATC.[36] The products to be integrated had to include products from each of the following four categories: tops and yarns, fabrics, made-up textile products, and clothing. However, there was no requirement that specified quantities or percentages of each group be included.

Article 2.8 then establishes a staged reduction process for the integration of remaining textile and clothing imports not integrated in the initial stage: products accounting for an additional seventeen percent of the total volume of the Member's 1990 imports were to be integrated by January 1, 1998; and another eighteen percent were to be integrated by January 1, 2002. Finally, all remaining products must be integrated by January 1, 2005.[37]

According to the two Comprehensive Reports completed by the TMB as of the date of writing (December 2002), no Member had failed to integrate the required percentages in the first two phases (1995 and 1998), and the proposed Phase Three (2002) integration plans that had been notified to the TMB also met the necessary percentage.[38]

C. Growth Rate of Continuing MFA Restrictions

As explained above, restrictions applied under the MFA were subject to annual growth rates, which averaged between three and six percent. ATC Article 2.13 and 2.14 provide that these growth rates are to be increased at each stage of integration for all products still under MFA restraint, the so-called "growth-on-growth" requirement. Specifically, during stage one of integration (from January 1, 1995 to December 31, 1997) the MFA growth rate was to be increased by sixteen percent. For stage two (from January 1, 1998 to December 31, 2001), the "growth-on-growth" rate was 25 percent, and for stage three (from January 1, 2002 to December 31, 2004), it is 27 percent. The following example, based on a six percent growth rate in 1994, helps to illustrate the rules on quota-growth rates:

[35] *1997 Report,* ¶228.

[36] These products are listed in the Annex to the ATC. Countries that did not have existing MFA restrictions and did not retain the right to use the Article 6 special safeguard mechanism were deemed to have integrated all of their products immediately, since the only significance of non-integration is the right to maintain existing MFA restrictions and to impose special safeguards. *See* ATC Article 2.9.

[37] Article 2.10 makes clear that accelerated integration is permitted, stating that "[n]othing in this Agreement shall prevent a Member which has submitted an integration programme pursuant to paragraph 6 or 8 from integrating products into GATT 1994 earlier than provided for in such a programme."

[38] *See 1997 Report,* ¶¶ 14, 28; *Comprehensive Report of the Textiles Monitoring Body to the Council for Trade in Goods on the Implementation of the Agreement on Textiles and Clothing During the Second Stage of the Integration Process*, G/L/459, 31 July 2001 ("*2001 Report*") ¶¶ 47–56, 79–91. Not all of the Phase 3 integration plans had been notified. *Id.* at ¶ 86.

Year	Previous Years' Quota Growth Rate	Growth Rate Increase	Current Year's Quota Growth Rate
1995	6%	16%	6.96% (6% × 1.16)
1996			6.96%
1997			6.96%
1998	6.96%	25%	8.70% (6.96% × 1.25)
1999			8.70%
2000			8.70%
2001			8.70%
2002	8.70%	27%	11.05% (8.70% × 1.27)
2003			11.05%
2004			11.05%

D. Special Safeguard Mechanism

As explained in Section III above, one of the key issues during the negotiation of the ATC was the establishment of a special safeguard mechanism that would apply to textile and clothing imports that were not yet integrated into the GATT 1994. ATC Article 6 sets out rules for the application of this mechanism. Note that this mechanism is simply a "transitional" one, and does not apply to products that have been integrated into the GATT 1994. Once integration has occurred, the only safeguard remedy available with respect to textile imports is that provided by GATT 1994 Article XIX and the Agreement on Safeguards.

1. Overview

The Article 6 safeguard mechanism may be applied in the following circumstances. For Members that applied restrictions under the MFA, the transitional safeguard mechanism may be applied to any of the products listed in the Annex to the Agreement without prior notification, except those integrated into the GATT 1994 under ATC Article 2. Members that did not apply such restrictions, on the other hand, were required to notify the TMB as to whether they wished to retain the right to invoke the Article 6 safeguard mechanism.[39] Once this notification has been made, they, too, may apply the transitional safeguard mechanism to products in the Annex that have not yet been integrated. As noted above, under Article 2.9, Members that did not wish to retain this right would be deemed to have integrated their products immediately. Article 6.1 urges Members to apply the transitional safeguard "as sparingly as possible . . . ."

The United States has made a total of 28 requests for consultations pursuant to Article 6.7 (as required when Members propose a transitional safeguard action): twenty-four in 1995, one in 1996 and two in 1997, and one in 1998. Fourteen resulted in agreement

[39] The 1997 Report noted that 55 Members had notified that they wished to retain the right to use the provisions of Article 6, whereas nine Members notified that they did not wish to retain the right to use the provisions of Article 6. The 1997 Report also observed that a significant number of Members had not submitted a notification under this provision, despite the requirement in Article 6.1 to do so. Subsequent to the issuance of the 1997 Report, two additional Members notified that they did not wish to retain the right to use Article 6, and three notified that they did wish to retain this right. In January of 2002, China, which became a WTO Member in December of 2001, reserved its right to take transitional safeguard actions. *See China to Reserve 'Transitional Safeguard' Right on Textiles*, Xinhua News Service, January 22, 2002.

on the imposition of restraints, while others resulted in the imposition by the United States of unilateral restraints[40] Three of the latter were the subject of dispute resolution proceedings, and in each case the United States was found to have acted in violation of Article 6.[41]

The frequent invocation of Article 6 by the United States immediately after the entry into force of the ATC caused concern among some WTO Members. In this regard, the 1997 Report notes:

> In a communication sent in response to the request for information by the TMB (G/TMB/11), one Member stated with respect to Article 6 that "it is a fact to be noted by the TMB that a Member, which is the largest single importer of textile products, heralded the WTO era by initiating more than two dozen additional restraints on their imports. Though technically the actions for such restraints were taken under the provisions of the ATC, the fact that so many restraints were initiated during the first few months of the opening year of the ATC, indicates lack of sincerity on the part of this largest importing country for an effective phasing out of restraints. It is also noteworthy that many of these restraints did not stand the scrutiny of the TMB and the only cases which ultimately reached the DSB Panels were decided against this importing Member". That Member further stated that "it is a welcome trend that restraints have begun to be examined by DSB panels. This will ensure that the WTO rules are properly followed and implemented in the textile sector and will also help the international trade in the textile products to graduate into the WTO regime, by the time the phase out period is over. Another issue is the need for a mechanism to ensure proper compliance of the recommendations of TMB as well as the Dispute Panels. Since the new restraints under Article 6 of the ATC are permissible for a period of three years, it may be possible for the importing countries to achieve their objective just by delaying the implementation of the recommendations of the TMB or the Dispute Panel to cover such period."[42]

Other countries have invoked Article 6, though none to the extent of the United States, as shown in the following table of requests for consultations:[43]

The TMB noted the substantial decline in the use of the transitional safeguard mechanism as from the beginning of the year 2000. It stated that the sustained growth in the world economy up until the last quarter of 2000 might partially explain the decline. In addition, it said that the disciplines embodied in, and the control exercised by, the WTO system have made a significant contribution in this regard. In particular, "the dispute settlement system, through the respective panel and Appellate Body reports, has

[40] *1997 Report,* ¶ 85; *2001 Report,* ¶ 119, 123.

[41] Report of the WTO Panel, *United States—Restrictions on Imports of Cotton and Man-made Fibre Underwear*, WT/DS24/R (1996) ("*U.S.—Underwear*, *panel*") and Report of the Appellate Body, *United States—Restrictions on Imports of Cotton and Man-made Fibre Underwear*, WT/DS24/AB/R (1997) ("*U.S.—Underwear*, *Appellate Body*"); Report of the WTO Panel, *United States—Measure Affecting Imports of Woven Wool Shirts and Blouses from India*, WT/DS33/R (1997) ("*U.S.—Shirts and Blouses*, *panel*") and Report of the Appellate Body, *United States—Measure Affecting Imports of Woven Wool Shirts and Blouses from India*, WT/DS33/AB/R (1997) ("*U.S.—Shirts and Blouses*, *Appellate Body*"); Report of the WTO Panel, *United States—Transitional Safeguard Measure on Combed Cotton Yarn from Pakistan*, WT/DS192/R (2001) ("*U.S.—Cotton Yarn*, *panel*") and Report of the Appellate Body, *United States—Transitional Safeguard Measure on Combed Cotton Yarn from Pakistan*, WT/DS192/AB/R (2001) ("*U.S.—Cotton Yarn*, *Appellate Body*"). These cases are discussed in Subsections 2 and 3 below and in Part V of this chapter. In a fourth case, the United States decided to remove the restraint, and the complainant requested the termination of the panel proceedings. *United States—Measures Affecting Imports of Women's and Girl's Wool Coats*, Complaint by India, WT/DS32.

[42] *1997 Report,* ¶ 172.

[43] The figures in the table are taken from the 2001 Report, ¶¶ 234, 236

set jurisprudence, provided detailed guidelines to Members and established appropriate standards on which the TMB has been able to rely, or from which it has been able to take further inspiration."[44] Certainly, it is widely believed that an important reason for the sharp decline in use of Article 6 by the United States after the initial burst was the successful challenges brought by Costa Rica and others.

2. Procedural Steps

Before a Member imposes a transitional safeguard measure, certain steps must be taken. Paragraph 7 of Article 6 provides that a Member proposing to take safeguard action shall first seek consultations with the Member or Members that would be affected by such action. Under paragraph 8, if there is agreement among the Members involved (both the exporting and importing Members) that restraints are called for, restraints may be imposed at the agreed level—which must not be lower than the actual level of imports from the exporting Member in the twelve-month period ending two months before the request for consultations—and the TMB notified. However, pursuant to paragraph 10, if no agreement can be reached, the proposed restraints may be applied "after the expiry of the period of 60 days from the date on which the request for consultations was received," and the matter referred to the TMB at the request of any of the Members involved. Upon referral, the TMB shall conduct an examination of the matter, and make "appropriate recommendations" to the Members concerned.[45]

One of the issues in the *U.S.—Underwear* dispute was the earliest permissible date of application of safeguard restraints, pursuant to paragraph 10. There, Costa Rica argued that the United States violated Article 6.10 by retroactively applying the safeguard restraint back to the date of the U.S. request for consultations (under Article 6.7). The panel concluded that the United States was permitted to backdate the quotas to the date of *publication* of its request for consultations. However, the Appellate Body reversed this finding, concluding that no backdating was allowed. It noted that Article 6.10 establishes that a Member "may ' *after expiry of the period of 60 days*' from the date of receipt of the request for consultations without agreement having been reached, ' *apply the restraint* (measure)' 'within 30 days following the 60-day period for consultations . . . ." The Appellate Body emphasized the term "apply," which it defined as "putting such measure into operation." It concluded that, in the absence of express authorization to backdate, the plain language of Article 6.10 creates a presumption that "a measure may be applied only prospectively."[46]

[44] *2001 Report*, ¶¶ 238–239.

[45] As explained in more detail below, the TMB's recommendations are merely hortatory, and may be ignored by the restricting Member.

[46] *U.S.—Underwear*, *Appellate Body*, *supra* note 41, page 14.

3. Substantive Requirements

In addition to the procedural steps in paragraphs 7 though 10, paragraphs 2 through 4 of Article 6 establish certain substantive requirements that must be demonstrated by a domestic investigating authority before a transitional safeguard measure is imposed, similar to the requirements of GATT Article XIX and the Safeguards Agreement. While the rules are much less detailed and restrictive than those for normal safeguard procedures under GATT Article XIX and the Safeguards Agreement, they do serve to prevent abuse with regard to this type of safeguard restraint.

In general, in order to impose a safeguard measure under Article 6, increased quantities of total imports of the product in question must be causing or threatening serious damage to the domestic industry producing like or directly competitive products. In addition, the serious damage or threat thereof must be attributed to the Member against whom the restraints are to be applied. These requirements have been elaborated in WTO dispute settlement proceedings, as follows.

(a) Serious Damage. Although there is no explicit definition of "serious damage" in the Agreement, paragraph 3 provides a non-exclusive list of "relevant economic variables" that are to be considered in determining whether serious damage or threat thereof exists. The provision notes that none of these factors "either alone or combined with other factors, can necessarily give decisive guidance." The MFA contained a similar requirement.

The serious damage provision of the ATC has been interpreted by panels and the Appellate Body in several WTO disputes. In the first case dealing with this issue, *U.S.—Underwear*, the panel said that ATC Article 6.3 does not provide "sufficient and exclusive guidance in this case," and therefore the panel "refrain[ed] from making a finding on this point of law." The panel said that it was "not in a position to conclude" that the United States had failed to demonstrate "serious damage."[47] However, later panels examining this issue did not have the same reservations about reaching a conclusion. For example, the *U.S.—Shirts and Blouses* panel applied these provisions and found that the United States, as the responding party in that case, had not demonstrated that serious damage existed, in violation of the ATC.[48] The panel found that in its Market Statement (the determination that safeguard restraints were appropriate), the United States had failed to discuss eight of the eleven factors enumerated in paragraph 3 in the context of the particular industry involved and had given no reason for this failure. The information it did provide was "vague and imprecise." On the other hand, the panel in *United States—Cotton Yarn* rejected various challenges to the factual underpinning for the U.S. finding of "serious damage", although it did find that the finding was flawed because of the investigating authority's incorrect inductry definition, as well as its improper attribution of the serious damage.[49] In addition, the panel concluded that the U.S. determination of "actual threat of serious damage" was not justifiable, because the determination was based entirely on the assumption that the *existing* serious damage found by the United States would continue if imports were to continue as before. The panel considered that such an analysis *could* be reasonable, except that, as in this case, if the finding of serious damage is flawed is flawed, then by definition the dependent threat determination must be flawed as well. The panel explained that an authority *could* also make an "independent"

[47] *U.S.—Underwear*, *panel*, *supra* note 41, ¶ 7.45.
[48] *U.S.—Shirts and Blouses*, *panel*, *supra* note 41, ¶ 7.51–7.52.
[49] *U.S.—Cotton Yarn*, *panel*, *supra* note 41, ¶ 7.121.

finding of threat, through an adequate analysis of prospective events. However, the panel could find no such analysis in the 1998 Market Statement. Therefore, the Panel concluded that the U.S. determination of "actual threat of serious damage" was not "justifiable."[50]

(b) Causation. In addition to proving that serious damage or actual threat thereof exists, Members imposing ATC safeguard restraints must also show that the imported products at issue have *caused* the damage. Paragraph 2 provides that the serious damage or actual threat thereof "must demonstrably be caused by such increased quantities in total imports of that product and not by such other factors as technological changes or changes in consumer preference."[51] In the *U.S.—Underwear* case, the panel could not find any "discussion or demonstration of causality" in the relevant Market Statement, other than mere assertions that imports were responsible for the damage. Moreover, the panel noted that the Market Statement suggested other possible causes of serious damage, such as rising cotton prices, but that these were not considered in the causation analysis. On this basis, the panel found that the United States had failed to comply with the obligation to demonstrate causation.[52] Similarly, in *U.S.—Shirts and Blouses*, the panel found that the United States had failed even to mention the possibility of other causes, in violation of the causation requirement,[53] which it said required consideration of whether the state of the industry concerned was due to technological changes or changes in consumer preferences rather than increased imports.

(c) Attribution. Once it has been established that an increase in total imports has caused or is threatening to cause serious injury to the domestic industry, paragraph 4 requires that the serious damage or threat thereof be *attributed* to the Member or Members against whom the restraint is to be applied on the basis of a sharp and substantial increase in imports, actual or imminent, from such a Member or Members individually, and on the basis of the level of those imports as compared with imports from other sources, market share, and import and domestic prices at a comparable stage of commercial transaction. Thus, in contrast with the situation under the MFA, safeguard measures are not simply to be imposed selectively against one Member at the discretion of the importing Member, but rather must be *attributed* to the appropriate Members under the conditions set out in paragraph 4, including the sharp and substantial increase in imports.

As with the "causation" and "serious damage" provisions, the attribution provisions of the ATC have been interpreted by panels and the Appellate Body in several WTO disputes. In the *U.S.—Underwear* case, the panel concluded that while imports from Costa Rica had increased, the Market Statement had failed to compare imports from Costa Rica with those from other sources. Moreover, the panel stated that during the period immediately following imposition of the restraint, the United States had concluded agreements with five other exporting nations in this same matter, establishing a quota that represented an increase of 478 percent, which was incompatible with the U.S. finding that an increase of imports from Costa Rica of only 22 percent had caused serious damage. The panel also noted that the TMB had concluded that the United States had

[50] *Id.*, ¶¶ 7.137–141.

[51] Note that this standard is similar to the "market disruption" test from the MFA, which also referred to serious damage or threat thereof caused by imports. However, the "price factor" examined under the MFA was not carried over to the ATC.

[52] *U.S.—Underwear*, *panel*, *supra* note 41, ¶ 7.46.

[53] *U.S.—Shirts and Blouses*, *panel*, *supra* note 41, ¶ 7.49–7.50.

not demonstrated that imports were causing serious damage. On this basis, the panel found that the United States failed to comply with the attribution requirements of ATC Article 6.4.[54]

Similarly, in *U.S.—Cotton Yarn*, Pakistan argued that by failing to examine individually imports from Mexico, the largest exporter of the product in question to the United States, the United States did not carry out a proper attribution analysis under ATC Article 6.4.[55] The Panel agreed with Pakistan, and the Appellate Body upheld this finding. It concluded that, "[a]n assessment of the share of total serious damage, which is proportionate to the damage actually caused by imports from a particular Member, requires, therefore, a comparison according to the factors envisaged in Article 6.4 with all other Members (from whom imports have also increased sharply and substantially) taken individually."[56] Applying this principle to the facts in that case, the Appellate Body observed that it was undisputed that Pakistan was not the only Member from whom imports increased sharply and substantially and that Mexico also fell within this category. Therefore, the Appellate Body stated that "the share of the serious damage attributable to imports from Pakistan can be properly assessed only in the light of the effects of the imports from Mexico."[57]

E. The Textiles Monitoring Body

Under the MFA, the TSB played an important supervisory role. In a similar vein, Article 8.1 establishes the Textiles Monitoring Body ("TMB") to "supervise the implementation of this Agreement," to "examine all measures taken under this Agreement and their conformity therewith," and to "take the actions specifically required of it by this Agreement." ATC Article 8.1 provides that the TMB shall consist of a Chairman and ten members, and that its membership shall be "balanced and broadly representative of the Members and shall provide for rotation of its members at appropriate intervals." The TMB members are to be appointed "by Members designated by the Council for Trade in Goods to serve on the TMB," with their functions to be discharged in a personal capacity rather than as representatives of their countries.

Article 8.5 provides that in the absence of any mutually agreed solution in bilateral consultations under the ATC, "the TMB shall, at the request of either Member, and following a thorough and prompt consideration of the matter, make recommendations to the Members concerned." TMB recommendations are not binding, although under Article 8.9 "Members shall *endeavour* to accept in full the recommendations of the TMB" (emphasis added).

Finally, under Article 8.10, if a Member considers itself unable to conform with the recommendations of the TMB, it shall provide the TMB with the reasons therefor not later than one month after receipt of such recommendations. Following thorough consideration of the reasons given, the TMB is to issue any further recommendations it considers appropriate. If the matter remains unresolved after the TMB's further recommendations, either Member may invoke normal WTO dispute settlement procedures.

Issues regarding the impact and nature of TMB recommendations have arisen in two WTO disputes. In *U.S.—Underwear*, Costa Rica argued that the United States violated

[54] *U.S.—Underwear*, *panel, supra* note 41, ¶ 7.48–7.51.
[55] *U.S.—Cotton Yarn*, *panel*, *supra* note 41, ¶ . 7.123.
[56] *U.S.—Cotton Yarn*, *Appellate Body*, *supra* note 41, ¶¶ 121–124.
[57] *Id.*, ¶¶ 125–126.

ATC Article 8 by refusing to follow the TMB recommendations and failing to submit a report explaining its inability in that regard. The panel rejected this claim, noting that the only TMB recommendations given had been for the parties to engage in further consultations, something that did in fact take place. Therefore, it concluded that the United States had followed the TMB recommendations and that the United States did not violate ATC Article 8.[58] In addition, in *U.S.—Shirts and Blouses*, India claimed that the U.S. restraint was inconsistent with ATC Article 6 because prior consultations were never held on the specific measure for which the TMB gave its endorsement (*i.e.*, the United States had ultimately imposed a restraint to compensate for *actual threat* of serious damage, while the TMB endorsed a restraint to compensate for *current* serious damage). The panel rejected India's claim regarding the need for TMB endorsement, noting that ATC Article 6.10, as confirmed by Article 8.9, makes clear that TMB endorsement is *not* a necessary prerequisite to imposing restraints. It emphasized that Members are free to impose restraints, as long as they *refer* the matter to the TMB for appropriate recommendations.[59]

F. Circumvention

Circumvention of MFA restraints, through such devices as transshipment, false declarations of origin, and misclassification of merchandise, was a significant concern of the developed countries. At their insistence, therefore, ATC Article 5 requires Members to establish the necessary legal provisions and administrative provisions and to take appropriate action to counter circumvention.

G. Product Coverage

As stated in Article 1.7, the integration provisions of the ATC apply only to the products listed in the Annex. The products listed are to be integrated pursuant to the integration time-frames. The Annex lists textile and clothing products defined by Harmonized Commodity Description and Coding System (HS) codes at the six-digit level. Specifically, it lists a number of products in each of Chapters 50–63 of the HS, as well as certain other products in Chapters 30–49 and 64–96. Many of the products to be integrated had not been subject to MFA restraints. As discussed in Part VI.A below, developed countries were therefore able to structure their integration program so as to delay integration of the most import-sensitive products, by focusing initially on less sensitive products.[60]

V. ATC Jurisprudence—Development of Systemic Principles

The substantive issues in the three disputes directly involving the ATC that have gone to panels and the Appellate Body have been discussed already in Part IV. However, these and other reports also contain some useful discussion of procedural and systemic issues under the ATC, which are summarized in this section.

[58] *U.S.—Underwear*, *panel*, *supra* note 41, ¶¶ 7.73–7.74.
[59] *U.S.—Shirts and Blouses*, *panel*, *supra* note 41, ¶ 7.57.
[60] *Statement Circulated by the International Textiles and Clothing Bureau*, WT/MIN(01)/ST/27, November 10, 2001. This would not have been possible had the Agreement required immediate integration of all products not under MFA restraint. *See* Part III above.

A. Standard of Review

The *U.S.—Underwear* panel observed that the ATC does not contain a specific provision that explicitly deals with the standard of review. It considered the most relevant WTO provision to be DSU Article 11, which requires panels to make "an objective assessment of the facts of the case and the applicability of and conformity with the relevant covered agreements." Applying this provision, the panel rejected a policy of "total deference" to the findings of national authorities on transitional safeguard matters. On the other hand, the panel pointed out that its review should not be a "substitute" for the proceedings conducted by the investigating authority or the TMB. In other words, the review should not be *de novo*.[61] The panel concluded that, based on the language of DSU Article 11, "an objective assessment would entail an examination of whether the [U.S. investigating authority] had examined all relevant facts before it . . . , *whether adequate explanation had been provided of how the facts as a whole supported the determination made*, and, consequently, whether the determination made was consistent with the international obligations of the United States."[62] Soon thereafter, the *U.S.—Shirts and Blouses* panel confirmed the finding of the *U.S.—Underwear* panel that DSU Article 11 provides the standard of review for cases involving transitional safeguard measures under the ATC.[63]

B. Burden of Proof

In *U.S.—Shirts and Blouses* the panel had concluded that the party challenging the Article 6 restraint had the burden of proof, and that it was for India to "put forward factual and legal arguments in order to establish that the US restriction was inconsistent with Article 2 of the ATC and that the US determination for a safeguard action was inconsistent with the provisions of Article 6 of the ATC."[64] On appeal, India challenged the panel's findings on burden of proof, arguing that ATC Article 6 is an *exception* to WTO obligations and therefore represents an affirmative defense for which the respondent should bear the burden of proof. The Appellate Body disagreed, finding that ATC Article 6 does not constitute an affirmative defense. In particular, the Appellate Body described Article 6 as a "fundamental part of the rights and obligations of WTO Members . . . during the [ATC] transitional period." Because it is part of the rights provided under the ATC, a Member claiming that these rights have been violated must "assert and prove its claim."[65]

C. Evidentiary Scope of Review

A number of disputes have addressed aspects of the evidentiary scope of review. In *U.S.—Underwear*, the panel limited the evidentiary scope of its review to the first "Market

[61] *U.S.—Underwear*, *panel*, *supra* note 41, ¶¶ 7.9–7.12.

[62] *Id.,* ¶ 7.13 (emphasis added). This standard of review has been confirmed and elaborated in the context of the Safeguards Agreement, *e.g.*, in *U.S.—Lamb Safeguards. See* Report of the Appellate Body, *United States—Safeguard Measures on Imports of Fresh, Chilled or Frozen Lamb Meat from New Zealand and Australia*, , WT/DS177,178/AB/R (2001).

[63] *U.S.—Shirts and Blouses*, *panel*, *supra* note 41, ¶ 7.16.

[64] *U.S.—Shirts and Blouses*, *panel*, *supra* note 41, ¶ 7.12.

[65] *U.S.—Shirts and Blouses*, *Appellate Body*, *supra* note 41, pp. 15–16. This ruling rejected the reasoning of the panel in *U.S.—Underwear,* which considered Article 6 to constitute an *exception* to the broad prohibition in Article 2.4, so that the burden of proof was on the country invoking the exception (i.e., in that case, the United States). *U.S.—Underwear, panel, supra* note 41, ¶ 7.15–7.16.

Statement" issued by the United States in the context of the safeguard investigation, and refused to consider statements made subsequent to that document, except for the narrow purpose of verifying the accuracy of statements made in the Market Statement.[66]

Later, in *U.S.—Shirts and Blouses*, the panel stated: "When assessing the WTO compatibility of the decision to impose national trade remedies, DSU panels do not reinvestigate the market situation but rather limit themselves to the evidence used by the importing Member in making its determination to impose the measure." It also said that panels should make an objective assessment as to whether the Member respected the requirements of the ATC at the time of the determination, such that a panel should not consider developments subsequent to the initial determination.[67]

Finally, in *U.S.—Cotton Yarn* the parties disagreed over whether the panel should accept evidence submitted by Pakistan that was not available to, and therefore never examined by, the U.S. investigating authority at the time of the investigation. In addressing this issue, the panel agreed with the decisions in *U.S.—Underwear* and *U.S.—Shirts and Blouses* that panels should not reinvestigate the market situation, explaining that panels "are less equipped and might have less expertise in fact-finding than national authorities." Given this limitation, the panel stated that it would not examine any of the new evidence submitted by Pakistan "for the purpose of reinvestigating the market situation." However, it then explained that it *would* examine "any evidence, without regard to whether it was available or considered at the time of investigation, for the purpose of evaluating the thoroughness and sufficiency of the investigation underpinning the decision of the US authority."[68]

On appeal, the United States argued against one narrow aspect of the panel's ruling. Specifically, the United States claimed that the panel erred in considering evidence that did not *exist* at the time of the investigation. The Appellate Body agreed, and found that by admitting this evidence, the panel failed to make an "objective assessment," as required by DSU Article 11. However, the Appellate Body did not address the broader issue of the circumstances in which evidence not on the record of the underlying investigation may be considered by a WTO panel.[69]

D. Role of the Textiles Monitoring Body

The *U.S.—Shirts and Blouses* panel examined the role of the TMB in relation to dispute settlement under the DSU. In this regard, the panel noted the broad function of the TMB to supervise and examine measures taken relating to textile and clothing trade, a task that includes wide-ranging investigative tools and the need to operate by consensus. By contrast, panels established under the DSU have narrow terms of reference; they are not permitted to consider subsequent developments; and they need not operate by consensus.[70]

Similarly, the *Turkey—Textiles* panel addressed two questions related to the role of the TMB: the requirement of exhaustion of TMB procedures and the jurisdiction of the TMB versus that of dispute settlement panels. With regard to the former, Turkey claimed that India was required to exhaust the special dispute settlement procedures under the ATC before it could refer the matter to the DSB, and that, because India had

not done so, the panel had not been established properly. In a preliminary ruling, the panel rejected this claim. In doing so, the panel observed that the special and additional dispute settlement procedures for the TMB apply when measures are imposed pursuant to the ATC. However, Turkey, in its own notifications to the Committee on Regional Trade Agreements and to the TMB, stated that the import restrictions at issue were justified and had been introduced pursuant to its agreement with the European Community and in conformity with GATT 1994 Article XXIV. In the panel's view, then, India's claim under ATC Article 2.4 was simply a reflection of its claims under GATT 1994. Since the measures at issue were alleged to have been imposed pursuant to GATT 1994, the panel rejected Turkey's request that the TMB should have taken jurisdiction over the matter under ATC Article 8.[71]

The panel next addressed the issue of the relationship between the jurisdiction of the panel and that of the TMB. Citing the Appellate Body report in *Guatemala—Cement*,[72] the panel considered that the provisions of the ATC and the provisions of the DSU may both apply together. Therefore, even if the TMB has jurisdiction to determine what constitutes a "new" measure in the sense of the ATC and whether a violation of the ATC has taken place, a panel is nevertheless entitled to interpret the ATC to the extent necessary to determine whether Turkey benefits from a defense to India's claims under GATT Articles XI and XIII based on the provisions of the ATC. The panel then said that, in any case, the measures under examination are not measures applied pursuant to the ATC itself, and therefore the ATC could not provide a defense to a finding of violation of GATT Articles XI and XIII.[73]

VI. Current Issues

Although importing Members have generally complied with their integration commitments under the ATC, several contentious issues have arisen that are worth discussing in some detail.[74]

A. "Backloading" of Integration

The so-called "backloading" of integration commitments by major textile importing countries has been the most contentious issue under the ATC, giving rise to accusations

[71] *Turkey—Textiles*, *panel*, *supra* note 34, ¶¶ 9.14–9.16.

[72] Report of the Appellate Body, *Guatemala—Antidumping Investigation Regarding Portland Cement from Mexico*, WT/DS60/AB/R (1998).

[73] *Turkey—Textiles*, *panel*, *supra* note 41, ¶¶ 9.82–9.83.

[74] One additional issue appears to have been resolved. The 2001 Report refers to concerns over "the continuation of [U.S.] visa requirements for products included in [the Stage 2 integration program]." Specifically, the U.S. Committee for the Implementation of Textile Agreements had announced that the United States would continue to require visas for products integrated on and after January 1, 1998, before entry would be permitted. In the view of some Members, this requirement violated Article 2.8(a). Certain Members requested the TMB to review the matter under Articles 8.1 and 2.21 of the ATC and make appropriate recommendations, but the review was never carried out because the United States removed the requirements in the face of these objections. (*2001 Report*, ¶¶ 58–62)

This issue emerged again in 2001. In response to a question from the TMB, the United States said that a decision would be made later in the year as to whether or not a visa requirement would be retained for goods exported in 2002. (*See U.S. Notification under Articles 2.8(b) and 2.11*, G/TMB/N/360/Add.1, February 22, 2001, p. 3.) In December of 2001, the issue was resolved. The United States announced that visa requirements would not be applied to textile and clothing products integrated during stage 3 with respect to imports from WTO Members. (*Amendment of Export Visa Requirements for Textiles and Textile Products Integrated into GATT 1994 in the Third Stage*, 66 Fed. Reg. 63,225 (2001).)

by the developing countries that while the developed countries may have complied with the letter of the Agreement, they certainly have not lived up to its spirit. As explained in Part IV above, the ATC requires that trade in textiles and clothing be integrated into the GATT 1994, but allows a great deal of flexibility in the way this integration is carried out. Not surprisingly, developed countries appear to have used this flexibility in the early stages of integration so as to integrate products that will have the least impact on domestic industries and which have therefore not been subject to MFA quotas. Products that are subject to quota have been saved for later integration stages. In the first two stages of integration the United States had lifted only thirteen of its more than six hundred quotas, while the European Union had lifted only fourteen of some two hundred.[75] Furthermore, in the first two stages of integration, most integrated products came from the low value-added group (tops and yarns) and relatively few from the high value-added sector (clothing). For example, in the European Community, by 1997 only 4.18 percent by value of total restrained imports had been liberalized; in the United States, the figure was 6.12 percent. (Norway, on the other hand, chose to accelerate the process and at the end of 1998, 94 percent by volume of its restraints had been removed.)[76]

A number of developing countries have complained about this "backloading" of the integration process. As expressed in the 1997 Comprehensive Report, one Member stated that "[s]ome importing countries have technically met the ATC stipulations without any effective integration, in that almost all of the products which they have integrated during the first two stages have either been totally outside restraints or they are covered by group limits or substantially under utilized restraints."[77] In other words, since there were no effective restraints on any of the products integrated, integration has had little impact. The 2001 Report expressed similar sentiments: "the significant number of restrictions still in place and the perceived lack of integration of products having a potential significance to trade, have caused serious disappointment to exporting Members in terms of expectations towards progressive integration and *pro rata* implementation of the provisions of the ATC."[78] The ITCB made a formal statement related to these concerns at the Doha Ministerial Conference:

> We remain deeply disappointed and concerned that major developed countries have not yet delivered on their commitment to liberalize trade in textiles and clothing in any meaningful manner, for developing countries to benefit from. Seven years from the Uruguay Round Agreement on Textiles and Clothing (ATC), few quota restrictions have been phased out. The plans announced for the remainder of the ten-year period are no more encouraging. Unless major improvements are effected, the large bulk of quotas will remain until the end of the transitional period on 1 January 2005: 701 out of 758 in the United States, 167 out of 219 in the EU, 239 out of 295 in Canada.[79]

The "back-loading" phenomenon has given rise to another concern. Because the United States and the European Community have put off integration of the most import-sensitive imports until the end of the implementation period, domestic textile and clothing manufacturers in many countries will face a sudden shock after the ATC expires. After years

[75] ITCB, *Agreement on Textiles and Clothing: Evaluation of Implementation*, August 3, 1999 (available at <http://www.itcb.org>, visited February 21, 2002).

of delay, quotas will be removed on a wide range of products, causing a great deal of disruption. Some have likened the situation faced by domestic manufacturers to "walking off a cliff."[80] The reaction of these domestic producers to this import surge will have important implications for the future of textile and clothing trade. They will no doubt seek alternative forms of protection, and a surge of anti-dumping and countervailing duty cases has been predicted. Some of the smaller textile exporting countries are also extremely concerned about the prospect of unrestrained competition with the larger and more efficient exporting countries in the developed country markets.

B. U.S. Rules of Origin Requirements

Because of the quota system that continues to apply to many textile and clothing products, a product's country of origin is crucial. Each country has only a limited quota amount of products that it can export to the developed country markets. Therefore, decisions on where to source products are heavily influenced by domestic rules of origin requirements.

Determining a product's country of origin is more difficult with textiles and clothing than most industries. The textiles and clothing industry has a very "international" production pattern, in the sense that production of materials to be used in finished products often takes place in multiple countries. The various materials are then shipped to another country to complete the finished product. As a result, the specific rules of origin to be applied are very important for any determination as to the country of origin for a product. The country of origin for textile and clothing products can vary depending on the rules of origin applied.

The U.S. rules of origin for textiles and clothing imports have caused concerns for a number of WTO Members. As part of its legislation implementing the results of the Uruguay Round, the United States altered its rules for determining the origin of these imports.[81] These new rules, which took effect on July 1, 1996, and were later modified as part of the Trade and Development Act of 2000,[82] led to a number of important changes.

First, under the old rules, the origin of fabric was determined either by where the fabric was formed or, if the fabric underwent dyeing and printing, by where it was processed. Under the new rules, by contrast, the origin of fabric is determined by where it is formed, regardless of whether it may have been dyed, printed and finished in another country. The same approach is taken for products falling within HS Chapter 63.

Second, under the old rule, the origin of a garment depended upon whether it was a "finished garment" or a "simple assembly item." For finished clothes, sewing was origin conferring. For assembly items, the place of cutting to shape was the country of origin. As stated by the ITCB, this recognizes "multi-country processing," whereas the new rules confer origin with reference to a vague standard, *i.e.*, where the most important assembly operation is undertaken.[83]

According to the ITCB, these changes have "adversely affected" exports by its members to intermediary countries. In addition, they have disrupted normal trade patterns and created a "psychological impact" for importers, causing them to source their materials elsewhere, *i.e.*, from countries free of the possibility of being restrained through quotas.[84]

[80] *See* John Whalley, *Note on Textiles and Apparel in the Next Trade Round*, Conference on Developing Countries in the Next WTO Trade Round, held at Harvard University, November 5/6, 1999.

[84] *Id.*

The new U.S. rules were the subject of two complaints by the European Community. The first of these was withdrawn, and the second was settled.[85] Subsequently, in January of 2002, these rules were the subject of a challenge by India. India's Request for Consultations pointed out that prior to the new rules, textile and apparel products, like other industrial products, could be conferred the origin of a country if they had undergone "substantial transformation" in that country. Now, under Section 334 of the Uruguay Round Agreements Act:

- Fabrics are deemed to originate in the country where they were formed in the greige state by weaving or knitting. Dying, printing and other finishing operations that are ordinarily performed to turn greige fabric into a useful article of commerce no longer confer origin.
- A wide range of made-up non-apparel products, such as silk scarves, blankets as well as bed, table and kitchen linen, are deemed to originate in the country where their constituent fabrics are formed into the greige state.
- For apparel products, the origin is deemed to be the country where the assembly takes place, which means that the country where the component parts were cut into shape can no longer be the country of origin.[86]

According to India, "[t]he main objective of the above changes appears to have been to protect the United States' textiles and clothing industry against import competition."[87] Furthermore, India explained that the changes introduced by the United States in 1996 and 2000 resulted in "extraordinarily complex rules under which the criteria that confer origin vary between similar products and processing operations." In addition, the structure of the changes, the circumstances under which they were adopted and their effect on the conditions of competition for textiles and apparel products "suggest that they serve trade policy purposes." On this basis, India argued that these changes are inconsistent with paragraphs (b), (c), (d) and (e) of Article 2 of the Agreement on Rules of Origin, according to which rules of origin shall not be used as instruments to pursue trade objectives; shall not pose unduly strict requirements; shall not themselves create restrictive, distorting or disruptive effects on international trade; shall not be discriminatory; and shall be administered in a consistent, uniform, impartial and reasonable manner.[88]

The Panel rejected all of India's claims.[89] On many issues it found that India had failed to produce evidence in support of its claims. India did not appeal the Panel decision.

C. Accelerated Implementation

Partly in response to the problem of "backloading" described above, a number of developing countries began to demand that implementation of commitments under the ATC

[85] *See* Request for Consultations, *United States—Measures Affecting Textiles and Apparel Products*, WT/DS85/1, G/RO/D/1, G/TBT/D/13 (June 3, 1997); Request for Consultations, *United States—Measures Affecting Textiles and Apparel Products (II)*, WT/DS151, G/TMB/N/341, G/RO/D/3, G/TBT/D/19, G/L/279 (November 25, 1998); *see also* Franklin Dehousse, Katelyne Ghemar, Philippe Vincent, *The EU–US Dispute Concerning the New American Rules of Origin for Textile Products*, 36 J. be accelerated. During the Doha Ministerial Conference, this issue was very prominent. However, although several drafts of the Ministerial Decision called for expansion of the quota levels on non-integrated products, the issue remained contentious up until the last minute of the negotiations,[90] and in the end the developed countries were able to force a deferral of any formal agreement on this matter. Rather than reach agreement on this issue, the text resulting from the Doha negotiations instead "[r]equests the Council for Trade in Goods to examine [these] proposals" and "make recommendations to the General Council by 31 July 2002 for appropriate action."[91] As of this writing, this issue has not been resolved.[92]

VII. The Future: Trade in Textiles and Clothing under the WTO System

As of January 1, 2005, the ATC will expire, and the products that it covered will be subject to the normal WTO rules. However, it should be kept in mind that WTO rules allow Members to restrain imports through a variety of means. As a result, even after textiles and clothing are brought within the normal rules, barriers to imports may persist.

The most common method of restraint is the same as it was fifty years ago: tariffs. While the GATT system has encouraged countries to lower tariffs, and prohibits them from charging tariffs that are higher than the bound rate, countries may choose not to bind tariff rates on certain products, or they may bind the rates at very high levels. This has been the case with regard to tariffs imposed by many developed countries on textiles and clothing products. For example, as noted in the WTO's 2001 Trade Policy Review for the United States, "[m]ost exports of textiles and clothing products to the United States are subject to quotas or to import duties, with the latter ranging to 33%."[93]

In addition to normal tariffs, after textiles and clothing are integrated into the WTO system they may face an increase in the use of trade remedy measures. In particular, anti-dumping, countervailing duty, and safeguard measures may be applied as a means to keep out cheap imports.[94] This approach has been used effectively by domestic industries in other sectors, such as steel, particularly in the United States. Thus, while all trade in textiles and clothing will formally be subject to WTO rules as of January 1, 2005, protection for these products may still be quite prevalent.

Clearly, the desire to maintain restrictions on imports of textiles and clothing will remain strong. In fact, the use of such restrictions might be considerable, given the significant import competition faced by both developed countries and smaller developing countries. In particular, the accession of China to the WTO could lead to a surge in textile and clothing imports that gives rises to a wide range of new trade barriers.[95]

[92] *See ITCB Urges Adoption of Doha Proposals on Textiles*, at http://www.itcb.org/Documents/ITCB-MI31.pdf (visited September 9, 2002).

[93] *Trade Policy Review for the United States*, Report by the Secretariat, WT/TPR/S/99, August 15, 2001, p. 87.

[94] An EC anti-dumping duty on cotton-type bed linen was successfully challenged in a WTO dispute. *See* Report of the Appellate Body, *European Communities—Anti-Dumping Duties on Imports Of Cotton-Type Bed Linen from India,* WT/DS141/AB/R (2001).

[95] Note, however, that the full effects of the impact of Chinese textile exports might not be felt until several years after the ATC expires. As part of China's WTO accession, a special system of safeguards was established for Chinese textile exports, with effect until December 31, 2008. *See Report of the Working Party on the*

Nonetheless, despite any lingering restraints in these sectors, bringing textiles and clothing into the system is an important step. The rules that will now apply to these sectors are much stricter, more transparent, and better developed. Moreover, disputes involving trade in textiles and clothing can be taken to the WTO dispute settlement process, whereas there was no effective mechanism for settling disputes under the MFA. As a result, abuse of the rules is more difficult. While the future of trade in this industry remains somewhat uncertain, the situation is clearly better than at any time since the early years of the GATT.

Accession of China, WT/ACC/CHN/49 (1 October 2001), ¶¶ 241–242. In September, 2002, the American Textile Manufacturers Institute filed a petition with the U.S. government asking for new quotas on knit fabric, bras, gloves, nightwear and textile luggage to be imposed under this special system. In response, China warned the U.S. against imposing new restrictions on textile imports when the present quotas end in 2005, saying such measures would undermine Beijing's co-operation in the new round of global trade talks. *See* Richard McGregor, *China Warns US Over Quotas on Textiles*, FINANCIAL TIMES, November 23, 2002.

Bibliography 481

I. Introduction

Over the past decades, national policies toward foreign direct investment ("FDI") have been liberalized world-wide, reflecting a change in perceptions of the role of FDI in host countries' development. At the same time, countries have often resorted to the use of performance requirements (frequently accompanied by incentives) in an attempt to channel and maximize the contribution of FDI to their development.

By the early 1980s, some capital-exporting countries, led by the United States, expressed concern at what they perceived as the trade-restricting and distorting effects of performance requirements and proposed that they be subject to disciplines in the framework of the General Agreement on Tariffs and Trade ("GATT"). Developing countries opposed the initiative, calling into question the competence of GATT to deal with investment policy. An important development in this context was the 1982 GATT dispute brought by the United States against Canada's administration of its Foreign Investment Review Act ("FIRA"), which showed that GATT rules were applicable to certain investment measures in as much as they affected trade. Efforts to bring trade-related investment measures ("TRIMs") into the GATT materialized in 1986 with the inclusion of the topic in the Uruguay Round trade negotiations.

Given the polarization of positions between developed and developing countries, the Agreement on Trade-Related Investment Measures ("TRIMs Agreement") that ensued from the negotiations constituted a modest outcome. In essence, it only clarified the application of GATT rules on national treatment and on the prohibition of quantitative restrictions to certain investment measures (local content, foreign exchange-balancing and trade-balancing requirements), and provided for transitional periods to remove inconsistent measures. The TRIMs Agreement included a provision for its own review (Article 9), which can, in principle, lead to either amendments or to an expansion of its disciplines to cover investment and competition policy. Difficulties encountered in the notification process, the lack of a mechanism to ensure compliance with obligations at the end of the transition periods, as well as the absence of specific criteria for extending these periods have given rise to some problems in the implementation of the Agreement. Questions on the adequacy of the transition periods to respond to developing countries' adjustment needs have also been raised. To date, the TRIMs Agreement has been involved in only a few dispute settlement cases that resulted in panel proceedings. A common feature among them is that the TRIMs Agreement has never been invoked on its own but rather in conjunction with other WTO provisions, notably Articles III and XI of the GATT 1994.

Nearly ten years after its entry into force, the TRIMs Agreement is still the object of debate in several WTO fora. Aside from the ongoing Article 9 review, the operation of the TRIMs Agreement is being discussed as part of the implementation review agenda of the Uruguay Round Agreements. Issues pertaining to the use of performance requirements by developing countries have also been raised in the Working Group on the Relationship between Trade and Investment in the context of the WTO Work Program launched at the Doha Ministerial Conference in November 2001.

This article provides an overview of the origins of the TRIMs Agreement, its operation and the current debate about its results and prospects. Part II deals with the economics of TRIMs and other performance requirements and the long-standing debate on their impact on development and trade. Part III highlights the main results of the *FIRA* panel case, which exposed the need for clarifying the application of GATT rules to trade-related

investment measures. Part IV addresses the negotiating history of the TRIMs Agreement. An analysis of the provisions of the Agreement is provided in Part V, while Part VI reviews its operation since its entry into force. The disputes in which the TRIMs Agreement has been invoked are dealt with in Part VII; special attention is given to the only dispute in which the panel made findings under the TRIMs Agreement (*Indonesia-Autos*). Finally, Part VIII is concerned with the current WTO debate on the review and implementation of the TRIMs Agreement and the possible outcomes from it.

II. The Economics of Trade-Related Investment Measures

A. The Economic Rationale of TRIMs and Other Performance Requirements

The TRIMs Agreement applies to investment measures related to trade in goods, which are referred to as trade-related investment measures or "TRIMs". The Agreement provides that Members shall not apply any TRIM that is inconsistent with the provisions of Article III (national treatment) and Article XI (general elimination of quantitative restrictions) of the GATT 1994. Although the Agreement does not offer a generic definition of the term "TRIM", some guidance as to its coverage is provided in an Illustrative List annexed to the Agreement, which identifies certain measures deemed to be inconsistent with the above GATT provisions. These pertain essentially to local content requirements, foreign exchange-balancing requirements, trade-balancing requirements and export restrictions. Other performance requirements not covered by the TRIMs Agreement include, *inter alia*, export performance requirements, manufacturing requirements, product mandating requirements, technology transfer requirements, joint-ventures requirements and local equity requirements.[1]

Performance requirements are frequently employed within the framework of host countries' regulatory policies on FDI, where they are specifically aimed at influencing the activities of foreign investors. Typically, these measures are applied to foreign firms as conditions for obtaining authorization to establish and operate in the host country or for receiving incentives. Performance requirements are also applied to domestic firms in the context of industrial development policies.

TRIMs and other performance requirements tend to concentrate in specific industries, in particular the automotive, chemical and petrochemical, and computer/informatics industries.[2] While local content requirements have been used more intensively in the automotive sector, export performance requirements are more common in the computer/informatics industry. A combination of both measures has been found in the chemical and petrochemical industries.[3] Empirical studies show that performance requirements have been employed over time by both developed and developing countries, but that their use has been more frequent in the latter.[4] Studies have also found

[1] *See* for example, the list of measures identified by Patrick Low and Arvind Subramanian, *TRIMs in the Uruguay Round: An Unfinished Business?*, presented at The Uruguay Round and the Developing Economies, A World Bank Conference 4 (1995). *See also* UNCTAD's Illustrative list of "host country operational measures", which includes not only performance requirements but also investment incentives and other administrative requirements that impinge on the activity of foreign investors. UNCTAD, HOST COUNTRY OPERATIONAL MEASURES, UNCTAD Series on issues in International Investment Agreements 8–9 (2001).

[2] *See* UNCTC, THE IMPACT OF TRADE-RELATED INVESTMENT MEASURES ON TRADE AND DEVELOPMENT, 3 (1991).

[3] *Id.*

[4] *Id*.

that many developed countries abandoned the use of these measures by the end of the 1980s, and that, since then, there has also been a decline in their use by developing countries.[5]

Traditionally, TRIMs and other performance requirements have been employed by host countries as an instrument to promote development objectives, such as industrialization, import-substitution and export growth. For example, developing countries have resorted to local content measures, which require producers to use or purchase domestically-produced inputs, with the aim of encouraging the expansion of domestic component industries or of shifting into higher-value added products. Export performance requirements have been used in order to induce export-oriented industrialization or to enhance production efficiency *via* the economies of scale associated with higher production volumes than those otherwise warranted by the domestic market. Trade-balancing requirements, which link access to imports to export performance, have been applied as a means of managing foreign capital flows associated with the activities of foreign subsidiaries.[6]

Through the use of TRIMs and other performance requirements, developing countries have also sought to enhance the contribution of FDI to their technological development, to the generation of employment, to the acquisition of managerial and workforce skills, to the promotion of regional development, to the improvement of their balance-of-payments situation and to address competition policy concerns.[7] Developing countries have often imposed performance requirements in an attempt to offset market failures and the monopolistic power of multinational firms operating in their territories,[8] as well as prevent foreign subsidiaries from crowding domestic enterprises out of the local market. From a political economy perspective, developing countries have justified the use of performance requirements (in particular local equity requirements) as a means of asserting national sovereignty for fear that unrestricted FDI access might threaten their economic and political independence.[9]

On the other hand, as home countries of most multinational enterprises, developed countries are concerned with the potential impact of performance requirements on the ability of firms to establish in host countries and to operate according to market conditions and corporate strategies. More generally, developed countries perceive performance requirements as protectionist devices having the effect of restricting and distorting trade and investment flows. They also question the efficiency of TRIMs and similar measures in achieving developmental or trade policy objectives and stress that host countries jeopardize their own development prospects by applying them. Ultimately, they contend, such requirements lead to global welfare losses.[10]

The divergent views described above have led to a long and controversial debate on the development and trade effects of performance requirements, which has not

been settled to date. The debate has tended to be quite politicized, rather than being based on a systematic analysis of the actual use and effects of performance requirements. But what do theory and empirical evidence tell us about the impact of these measures?

B. Are TRIMs and Other Performance Requirements Effective?

Economic theory predicts that, under standard assumptions of perfect competition, performance requirements, like other forms of intervention, produce adverse effects leading to resource misallocation and welfare deterioration.[11] For example, by increasing the price of domestic inputs, local content requirements reduce welfare because the costs incurred by the producers of final goods exceed the benefits accruing to input suppliers. On the other hand, under conditions of imperfect competition, public intervention may be warranted to compensate for market failures. In such circumstances, performance requirements may help capture a share of the rents and externalities generated by foreign subsidiaries, thus enhancing host country welfare.[12] However, even assuming that market imperfections do exist, performance requirements may not always result in welfare creation, and they are only second-best options as their objectives may be achieved through other instruments that directly address the source of distortions.[13]

Empirical studies on the effectiveness of performance requirements show mixed results, suggesting that the effects of such measures may vary significantly depending on the specific context in which they are applied. In particular, there are divergent results as regards the effectiveness of local content requirements as a policy tool. Some studies have concluded that local content requirements have been effective in offsetting information asymmetries and other market failures, thus inducing multinational firms to source locally, license the local manufacture of components, identify and develop local suppliers capabilities and provide them with technology and know how.[14] By contrast, other studies have found that local content requirements, used as an import-substitution device, have often proved to be very costly and inefficient, especially when associated with suboptimal-sized projects and excessive import protection. In this context, they have led to resource misallocation, higher prices and reduced consumption, and have failed to create strong backward linkages to the local economy and to stimulate technology transfer.[15]

There is some positive evidence that export performance requirements have been effective in inducing export-focussed investments and linking local manufacturers to regional and global supply networks. For example, an empirical study by Moran concludes that export performance requirements have proved to be a useful means for correcting market failures and compensating for investment-location distortions in the automotive,

petrochemical and electronics/computer industries.[16] He found that these measures have played a crucial role in attracting world-scale investment projects and in inducing foreign investors to establish sourcing networks in host countries.[17] The resulting export-oriented facilities, operating under parent-company supervision, have brought valuable benefits in terms of rapid technological up-grading, managerial skills, cost-efficient production and international quality standards, as well as spillovers and externalities for the local suppliers associated with those operations.[18]

Notwithstanding this positive evidence, Moran warns that the outcome of performance requirements cannot be assumed to be beneficial or welfare-enhancing in all cases. This is because designing the appropriate form of intervention is a demanding task, which involves complex cost-benefit analysis of the objectives pursued and of the overall impact of intervention on national welfare. Thus, if improperly designed (especially when they perpetuate protection from competition), such measures may have a magnified negative impact on the host-country's prospects of economic development. A further complication is that, where host countries engage in a competition to attract FDI, the use of performance requirements linked to investment incentives may lead to a "beggar-thy-neighbor" scenario, where the net effect is likely to be a loss of welfare for all countries involved.[19]

As regards the trade effects of performance requirements, economic analysis predicts that, given certain assumptions, these measures may have an impact on trade in different ways.[20] However, some of the main empirical studies carried out during the 1980s on the trade effects of performance requirements did not find these effects to be significant. As a recent survey indicates, the results of such studies suggest that the aggregate trade impact of performance requirements has been relatively small.[21] Similarly, the same studies found that performance requirements had only a marginal effect on firm behavior and on the location of investment.[22] Such results may be explained by the fact that many performance requirements, although included in statutory regulations, are indeed discretionary and negotiable, and are often not applied. Additionally, many of these measures may be redundant in that they require a course of action that foreign firms would have pursued anyway.[23]

[16] *Id.* at 35. The author identifies two kinds of market failures that would warrant intervention by developing countries. One is the "stickiness" or initial reluctance of foreign firms to establish export-oriented investments. He observes that once this reluctance is overcome through the use of export performance requirements, a quick follow-the-leader reaction will take place. Such reaction is in itself indicative of the second market failure: the inability of first movers to "appropriate" sufficient returns to compensate for assuming the burden of the initial risk. Other rationales for host country intervention to compensate for distortions generated elsewhere are: the use of locational investment incentives by developed countries, and the presence of investment-diverting trade measures, such as preferential rules of origin with high local content and protectionist antidumping measures. *See id.* at 85–114.

III. Legal Background: The FIRA Panel Case

Until the early 1980s, investment issues received only marginal attention in the context of the GATT.[24] However, in 1982 a GATT dispute settlement proceeding initiated by the United States against Canada's implementation of its Foreign Investment Review Act ("FIRA") brought the subject of trade-related investment measures to the forefront of GATT discussions.[25] At issue were certain undertakings required from foreign investors by the Canadian authorities in exchange for the approval of investment projects in Canada, which the United States claimed had trade-distorting effects and violated several GATT provisions. The undertakings were of three types: those requiring foreign investors to buy goods of Canadian origin or from Canadian sources; undertakings to manufacture goods in Canada; and undertakings requiring foreign investors to export specified quantities or proportions of their local production.

Several contracting parties expressed doubts about the competence of a GATT panel to settle the dispute, as investment legislation was not covered by the General Agreement. Eventually, the panel was allowed to hear the dispute on the understanding that its findings would be limited to trade-specific issues falling within the scope of the GATT.[26]

The Panel concluded that Canada's purchase undertakings were inconsistent with the national treatment obligation contained in GATT Article III:4 because they discriminated against imported products.[27] In its analysis, the Panel dismissed Canada's argument that the purchase undertakings did not constitute laws, regulations or requirements within the meaning of Article III:4 because they were not mandatory but private contracts entered into freely by investors. The Panel ruled that the word "requirement" in Article III:4 covered not only mandatory measures but also voluntary commitments undertaken by firms in return for an advantage (*i.e.*, the approval of their investment proposals).[28]

The Panel, however, found that the undertakings to purchase Canadian goods did not prevent the importation of goods as such and were therefore not inconsistent with Article XI:1 of the GATT,[29] which prohibits quantitative restrictions on imports (and exports).[30]

[24] Efforts to address investment issues within the multilateral trading system date back to the drafting of the 1947 Havana Charter, which envisaged the creation of the International Trade Organization ("ITO"). The ITO Charter contained provisions both on trade and on foreign investment, however, the failure to ratify it meant that only the trade rules incorporated in the GATT were adopted.

[25] Report of the GATT Panel (adopted), *Canada—Administration of the Foreign Investment Review Act*, Complaint by the United States, BISD, 30S/140 (1984).

[26] *Id.*, at 141–142 .

[27] *Id.* at 158–162. GATT Article III:4 applies to measures that discriminate against imported products once they have cleared customs. In relevant part, this provision reads as follows:

> The products of the territory of any contracting party imported into the territory of any other contracting party shall be accorded treatment no less favorable than that accorded to like products of national origin in respect of all laws, regulations and requirements affecting their internal sale, purchase, transportation, distribution or use.

[28] *Canada—Administration of the Foreign Investment Review Act*, *supra* note 25, at 158–159.

[29] GATT Article XI:1 reads as follows:

> No prohibitions or restrictions other than duties, taxes or other charges, whether made effective through quotas, import or export licenses or other measures, shall be instituted or maintained by any contracting party on the importation of any product of the territory of any other contracting party or on the exportation or sale for export of any product destined for the territory of any other contracting party.

[30] *Canada–Administration of the Foreign Investment Review Act*, *supra* note 25, at 162–163.

With this ruling, the Panel confirmed the interpretation that Article XI applies to the *importation* of goods, while Article III is concerned with the treatment of *imported* goods. As will be seen below, this distinction is reflected in the Illustrative List annexed to the TRIMs Agreement.

Similarly, the Panel rejected the U.S. claim that export performance requirements were contrary to GATT Article XVII:1(c) (which prevents governments from prohibiting an enterprise—whether or not a state-trading enterprise—from acting in a non-discriminatory manner and in accordance with commercial considerations), and considered that such requirements fell outside the GATT's competence.[31] The Panel did not rule on the GATT consistency of the manufacturing requirements as it considered that this issue was not within its terms of reference.[32]

The Panel also considered a submission by Argentina, as a third party, that the arguments invoked against Canada could not be used against developing countries by virtue of the exception allowing these countries to adopt GATT inconsistent measures in order to promote a particular industry. While the Panel recognized that developing countries enjoyed special concessions under GATT Article XVIII:C, it did not rule on the applicability to developing nations of its decision concerning purchasing requirements.[33]

The *FIRA* Panel decision was important in that it clarified that GATT rules, in particular the national treatment obligation in Article III, were applicable to performance requirements imposed in the context of investment policies, in as much as these measures resulted in trade distortion. Also significant was the Panel's decision that export performance requirements fell outside the coverage of GATT, exposing the limit of GATT disciplines with respect to this type of measure. Finally, it is worth mentioning that the Panel made it very clear that the dispute before it pertained to the consistency with GATT rules of certain trade-related investment measures applied by Canada and not to Canada's right to regulate FDI.[34]

IV. The Uruguay Round Negotiations on TRIMs

A. Launching the Negotiations

The United States was the main advocate for introducing TRIMs and other investment issues into the GATT framework. In 1981, drawing on a joint study by the World Bank and the International Monetary Fund which concluded that performance requirements could have trade-distorting effects,[35] the United States suggested that the issue be discussed in the GATT context. While the European Community and Japan expressed some support for the U.S. proposal, this met with opposition from the developing countries, who argued that performance requirements were outside the remit of the GATT.[36]

The *FIRA* decision, which underscored the need for clarifying the relationship between GATT's disciplines and investment measures, provided the proponents with an additional

[31] *Id.* at 163–164. The Panel found that there was no provision in the General Agreement which prohibited requirements to sell goods in foreign markets in preference to the domestic market.

Bryan Christy III, *Agreement on Trade-related Investment Measures (TRIMS): Limitations and Prospects for the Future*, in THE WORLD TRADE ORGANIZATION: THE MULTILATERAL TRADE FRAMEWORK FOR THE 21ST CENTURY AND U.S. IMPLEMENTING LEGISLATION 446–447 (Terence P. Stewart ed. 1996).

justification for bringing the issue to the negotiating table. However, it was not until the preparatory process of the Uruguay Round that attempts to place investment measures on the GATT's work program gathered momentum. In 1986, the United States succeeded in having the subject included in the agenda of the Uruguay Round negotiations, albeit with a limited mandate that reflected the prevailing resistance among the negotiating parties to deal with investment issues in the GATT.

The Punta del Este Ministerial Declaration, launching the multilateral trade talks, established the following mandate for the negotiations on trade-related investment measures:

> Following an examination of the operation of GATT Articles related to the trade-restrictive and trade-distorting effects of investment measures, negotiations should elaborate, as appropriate, further provisions that may be necessary to avoid such adverse effects on trade.[37]

This carefully drafted mandate limited the scope of the negotiations to an examination of the trade-restrictive and distorting effects of investment measures and the extent to which they were covered by GATT rules. Contrary to the initial proposals by the United States, the negotiations were not aimed at addressing investment policies *per se*.[38]

B. Negotiating Positions

The Negotiating Group on Trade-Related Investment Measures initiated discussions in March 1987. From the outset, fundamental differences emerged between developed and developing countries as to the need, the nature and the coverage of possible new disciplines.[39]

The developed countries, particularly the United States and Japan, sought to introduce strong disciplines on trade-related investment measures, which they felt were not adequately addressed by existing GATT rules. They proposed the prohibition of a wide range of measures in addition to the local content requirements already found to be inconsistent with GATT Article III:4 by the FIRA Panel. These included, *inter alia*, manufacturing requirements, trade balancing requirements, exchange restrictions, domestic sales requirements, export performance requirements, product mandating, technology transfer requirements and local equity requirements.[40] The United States and Japan also proposed that other investment measures, while not prohibited, should be subject to general disciplines in so far as they might also lead to trade distortions. The European Community and the Nordic countries took a somewhat more nuanced approach, by focusing only on measures that had a direct and significant restrictive impact on trade and a direct link to existing GATT disciplines.[41] More generally, at least at the outset, the proponents of the

TRIMs Agreement saw the negotiations as a first step for bringing investment issues into future GATT rounds.[42]

By contrast, the central concern of the developing nations, led by India, Egypt and some Latin American countries, was to preserve their freedom to use TRIMs as an instrument of development policy. In their view, the objective of the Punta del Este mandate was to focus on the trade-restrictive and trade-distorting effects of TRIMs, and not to limit the capacity of countries to employ investment measures *per se*. Consequently, only the adverse trade effects of TRIMs could be subject to eventual disciplines. Furthermore, since existing GATT rules already addressed such effects, they saw no need for provisions prohibiting their use. Instead, developing countries insisted on establishing an "effects test", based on empirical evidence and a case-by-case examination of investment measures in order to determine whether they had direct and significant adverse effects on trade. If this proved to be the case, means to address the adverse effects would have to be found, taking into account situations in which developmental considerations might outweigh such effects.[43] In joint submissions, developing countries listed the main development objectives which they pursued by applying investment measures. These included ensuring the fullest contribution of FDI to host economies; maximizing employment opportunities; facilitating structural adjustment under sociably acceptable conditions; promoting disadvantaged regions; alleviating pressures on foreign exchange; upgrading technological capabilities; and expanding exports.[44] In addition, India and other countries proposed that the negotiations should address the restrictive business practices of multinational enterprises,[45] since one of the reasons why developing countries resorted to TRIMs was precisely the need to offset such practices.[46] Not surprisingly, developed countries adamantly opposed discussing non-governmental measures in the GATT context.

C. The Outcome

Given the polarization of positions, the TRIMs negotiations produced a modest outcome. The compromise that eventually emerged is essentially limited to an interpretation and clarification of the application to trade-related investment measures of GATT provisions on national treatment and on quantitative restrictions on imports and exports. The TRIMs Agreement did not create new obligations that went beyond those already established under the GATT. Thus, many of the measures proposed for regulation during the negotiations, such as export performance and technology transfer requirements, were excluded from the coverage of the Agreement. Moreover, no new disciplines regarding the treatment of foreign investment *per se* were established.

The debate on the trade effects of investment measures was never really settled. It was based more on legal and theoretical arguments, rather than on a systematic analysis of

[42] Price and Christy, *supra* note 36, at 448.

[43] Mashayekhi and Gibbs, *supra* note 40, at 9.

[44] *See* Communication from Argentina, Brazil, Cameroon, Colombia, Cuba, Egypt, India, Nigeria, People's Republic of China, United Republic of Tanzania and Yugoslavia (MTN.GNG/NG12/W/25, 1990) and the Draft Declaration on Trade-Related Investment Measures submitted by Bangladesh, Brazil, Colombia, Cuba, Egypt, India, Kenya, Nigeria, Pakistan, Peru, Tanzania and Zimbabwe (MTN.GNG/NG12/W/26, 1990).

[45] These practices include the segmentation of markets to be served by specific companies of a corporate group, the designation of corporate suppliers for foreign subsidiaries, limitations on licensing or transfer of technology by subsidiaries and transfer pricing, among others.

[46] *See* Submission by India (MTN.GNG/NG12/W/18, 1989).

empirical evidence. Besides, no serious attempt was made to define an effective "trade effects test" for measures not warranting prohibition.[47]

Developing countries succeeded in limiting the scope of the TRIMs Agreement to the application of existing GATT rules with respect to a few investment measures. However, they accepted outright prohibitions on the use of such measures, regardless of their actual trade effects. From the point of view of developed countries, the Agreement failed to cover most of the investment measures which they had hoped would be prohibited, and it was, at best, a very modest inroad for bringing investment issues under the new WTO framework.

It should be noted, however, that although the TRIMs Agreement does not create any new substantive obligations, it does have value in that it introduces transition periods for the elimination of inconsistent measures and establishes notification requirements through which it has introduced some degree of transparency in the use of TRIMs.

V. The TRIMs Agreement

A. General Features

The WTO Agreement on TRIMs, which entered into force on January 1, 1995, is one of the agreements regulating trade in goods contained in Annex 1A to the Agreement Establishing the World Trade Organization. Before analyzing the scope and nature of the provisions of the TRIMs Agreement, it is useful to point out some of its particular features.

First, because the TRIMs Agreement essentially codifies and clarifies Articles III and XI of GATT 1994, its disciplines are trade-oriented. That is, they are concerned with the discriminatory treatment of imported and exported products and do not regulate the issue of entry and treatment of foreign investment as such. By the same token, the disciplines of the TRIMs Agreement apply only to *goods* and do not cover trade in services.

Second, although the measures covered by the TRIMs Agreement are normally applied in the framework of FDI policies, the disciplines of the Agreement do not differentiate as to the origin (ownership) of the investment and they apply equally to measures imposed on foreign and domestic investments. Likewise, it is irrelevant whether a given measure discriminates against foreign investors. For instance, a local content requirement imposed on domestic and foreign investors alike is inconsistent with the national treatment obligation of the TRIMs Agreement, because it involves discriminatory treatment of domestic products over imported products. Thus, what the TRIMs Agreement prohibits is discriminatory treatment of imported goods, rather than discriminatory treatment of foreign firms.

Third, the Agreement makes no distinction with regard to the phase of the investment at which a measure is imposed, *i.e.*, its disciplines cover measures applied both at the moment of entry of the investment as well as afterwards.

Finally, a further consequence of the trade orientation of the TRIMs Agreement is that its disciplines are narrower in scope than the provisions governing performance requirements of some international agreements, such as the North American Free Trade Agreement ("NAFTA") and several bilateral investment agreements. The latter deal with performance requirements as part of a set of disciplines regulating investment policy and thus tend to encompass a wider range of measures.

[47] Fennell and Tyler, *supra* note 39, at 73.

B. The Provisions of the TRIMs Agreement

Preamble

The objectives of the TRIMs Agreement, as stated in its preamble, are:

> . . . to promote the expansion and progressive liberalization of world trade and to facilitate investment across international frontiers so as to increase the economic growth of all trading partners, particularly developing country Members, while ensuring free competition.[48]

It will be noted that the reference to progressive liberalization is made only in connection with world trade, not with investment flows. The preamble also takes into account the particular trade, development and financial needs of developing countries, and recognizes that certain investment measures can cause trade-restrictive and distorting effects.

Article 1—Coverage

Article 1 defines the coverage of the TRIMs Agreement as follows: "This Agreement applies to investment measures related to trade in goods only (referred to in this Agreement as "TRIMs")."[49] As noted above, this provision confines the coverage of the Agreement to trade in goods and makes it clear that it does not apply to trade in services. It will also be observed that no attempt is made to define the term "TRIMs". However, some guidance as to the measures covered by the Agreement is provided in an Illustrative List.

Article 2 and the Illustrative List (Annex)—Basic Obligations

Article 2.1, the core obligation of the Agreement, requires Members not to apply any TRIM that is inconsistent with the provisions of Article III (national treatment) or Article XI (prohibition of quantitative restrictions on imports or exports) of GATT 1994.[50] Since the Agreement does not offer a definition of the term "trade-related investment measures", Article 2.2 refers to an Illustrative List annexed to the Agreement, which identifies a number of measures that are inconsistent with Article III: 4 or Article XI:1.

Three aspects of the Illustrative List are worth mentioning here. First, the Illustrative List covers both measures which are mandatory or enforceable under domestic law or under administrative rulings as well as measures with which compliance is necessary to obtain an advantage.[51]

Second, the term "advantage" is not defined, but its meaning would appear to be broader than the notion of subsidies under the WTO Agreement on Subsidies and Countervailing Measures, as interpreted by the Panel in the *Indonesia-Autos* dispute (see Part VII below).

Third, given its illustrative nature, the List is not intended to be an exhaustive one. Therefore, there might be other measures which, although not explicitly mentioned in the List, would still be inconsistent with Article 2 of the TRIMs Agreement.

Paragraph 1 of the Illustrative List identifies measures that are inconsistent with Article III:4 of the GATT 1994 and which pertain to the *purchase or use* of products by an

[48] *Agreement on Trade-Related Investment Measures* ("*TRIMs Agreement*"), *Preamble,* in THE RESULTS OF THE URUGUAY ROUND OF MULTILATERAL TRADE NEGOTIATIONS, THE LEGAL TEXTS 163 (1994).

[49] *Id.* Article 1.

[50] Article 2.1 of the TRIMs Agreement provides, "Without prejudice to other rights and obligations under GATT 1994, no Member shall apply any TRIM that is inconsistent with the provisions of Article III or Article XI of GATT 1994."

[51] *TRIMs Agreement*, *Annex*, ¶¶ 1 and 2 of the Illustrative List.

enterprise. Paragraph 2 identifies measures that are inconsistent with Article XI:1 and which concern the *importation or exportation* of products by an enterprise. The difference results from the above-mentioned distinction between Article III, which is concerned with *internal* measures, and Article XI, which deals with *border* measures.

Paragraph 1(a) of the Illustrative List covers measures commonly known as local content requirements, which relate to the purchase or use by an enterprise of products of domestic origin or domestic source.

Paragraph 1(b) covers trade-balancing requirements, measures that limit the purchase or use of imported products by an enterprise to an amount related to the volume or value of local products that it exports. In both instances, the inconsistency with Article III:4 stems from the fact that the measure discriminates against imported products by subjecting their purchase or use by an enterprise to less favorable conditions than the purchase or use of domestic products.

Paragraph 2(a) of the List refers to measures that limit the importation by an enterprise of products used in its local production in general terms or to an amount related to the volume or value of local production exported by the enterprise. This provision is similar to that in Paragraph 1(b) to the extent that it is also a trade-balancing requirement. The difference, however, is that while Paragraph 1(b) deals with internal measures affecting the purchase or use of products once they have been imported, Paragraph 2(a) is concerned with border measures restricting the importation of products, which are contrary to the prohibition on quantitative restrictions in Article XI:1 of GATT 1994.

Paragraph 2(b) of the List covers measures that restrict imports through the imposition of a foreign exchange balancing requirement. Under such requirement the ability of an enterprise to import products used in or related to its local production is limited indirectly by restricting the enterprise's access to foreign exchange to an amount related to the foreign exchange inflows attributable to the enterprise. Foreign exchange balancing requirements act like import quotas and are thus incompatible with Article XI:1.

Paragraph 2(c) covers measures that involve restrictions on the exportation of or sale for export of an enterprise, whether specified in terms of particular products, volume or value of products or in terms of a proportion of volume or value of the enterprise's local production. It should be noted that, as a codification of Article XI:1, Paragraph 2(c) only refers to measures that *restrict* exports. Thus, other measures relating to exports, such as export performance requirements and export incentives are not covered by the TRIMs Agreement.

Article 3—Exceptions

General exceptions to the obligations of the TRIMs Agreement are contained in Article 3. This provision states that all exceptions under GATT 1994 shall apply, as appropriate, to the TRIMs Agreement. It follows that the exceptions and conditions which under GATT 1994 apply to the obligations under Article III and XI are also applicable to the prohibition contained in Article 2 of the TRIMs Agreement. An example would be a

local content requirement applied in the context of government procurement of goods, which is excluded from the national treatment obligation, as established in Article III:8 of GATT 1994.

Article 4—Developing Countries

In addition to transition periods, the TRIMs Agreement provides some flexibility to developing countries in Article 4. This provision allows developing countries to deviate temporarily from the obligations in Article 2 by invoking the exceptions provided for in Article XVIII of GATT 1994 (Governmental Assistance to Economic Development) and other safeguard provisions for situations of balance-of-payments difficulties. These are the Understanding on the Balance-of-Payments Provisions of GATT 1994 and the Declaration on Trade Measures taken for Balance-of-Payments Purposes adopted on November 28, 1979.[52]

Article 5—Notification and Transitional Arrangements

Although the TRIMs Agreement reaffirmed pre-existing GATT obligations, it provided for a transitional period during which Members were allowed to maintain existing TRIMs that were inconsistent with GATT provisions, subject to certain conditions. Article 5 sets forth the requirements relating to the transitional mechanism.

Under Article 5.1, Members were required to notify to the Council for Trade in Goods ("CTG"), within ninety days of the entry into force of the WTO Agreement (*i.e.*, by March 31, 1995), any existing TRIM that was inconsistent with the TRIMs Agreement.[53]

Article 5.2 provides that measures notified under Article 5.1 shall be eliminated within specified time-periods. The length of the transition periods depends upon the level of economic development of the Member in question: two years after the entry into force of the WTO Agreement for developed countries; five years for developing countries, and seven years in the case of least-developed countries. It should be pointed out that the Agreement did not provide for a specific phase-out schedule or for a mechanism to monitor actions taken by individual Members to eliminate TRIMs at the expiry of the transition period.

A decision adopted by the WTO General Council in April 1995 provided that countries which were not Members of the WTO on January 1, 1995, but were entitled to become original Members within two years after that date, should be allowed to submit TRIMs notifications under Article 5.1 within ninety days from the date of their acceptance of the WTO Agreement.[54] The decision clearly stated, however, that the duration of the transition periods for the phase-out of TRIMs would continue to be governed by reference to the entry into force of the WTO Agreement. The decision also clarified that the transition period for countries negotiating their accession to the WTO would be determined in their respective protocols of accession.[55]

Under Article 5.3, the Council for Trade in Goods may authorize an extension of the transition period for the elimination of notified TRIMs, on request by a developing

[52] The Understanding on the Balance-of-Payments Provisions of GATT 1994 is contained in THE RESULTS OF THE URUGUAY ROUND OF MULTILATERAL TRADE NEGOTIATIONS, THE LEGAL TEXTS, *supra* note 48, at 27. The Declaration on Trade Measures taken for Balance-of-Payments Purposes can be found in BISD, 26S/205–209, 1980.

[53] Notifications under Article 5.1 were submitted by 26 Members. *See* Part VI below.

[54] Decision adopted by the General Council on April 3, 1995, WT/L/64.

[55] *Id*.

or a least-developing country that demonstrates that it has "particular difficulties" in implementing the provisions of the Agreement. The Council is required to take into account the "individual development, financial and trade needs" of the Member in question when considering such a request. The provision does not define what is to be understood by "particular difficulties" nor does it provide a procedure for assessing "the individual development, financial and trade needs" of developing countries that would justify the granting of an extension of the transition period. As discussed in Part VI below, several Members have availed themselves of their rights under this provision.

Pursuant to Article 5.4, the possibility of maintaining TRIMs during the transition period provided for under Article 5.2 only applies with respect to measures that were introduced no later than 180 days before the entry into force of the WTO Agreement. This provision was intended to prevent countries from introducing inconsistent TRIMs shortly before the entry into force of the WTO Agreement in order to benefit from the transition period. It also meant that the transition provisions were not to be understood as allowing Members to introduce new inconsistent measures during the transition periods. In addition, Article 5.4 prevents Members from modifying TRIMs notified under Article 5.1 in a manner that would increase their inconsistency with the Agreement. Nevertheless, after having notified a TRIM, a Member may during the transition period apply the same TRIM to a new investment if this is necessary to prevent distortions of the conditions of competition between the new investment and existing investments (Article 5.5).

Article 6—Transparency

Article 6 contains provisions aimed at ensuring transparency in the implementation of the TRIMs Agreement. Article 6.1 incorporates by reference the transparency obligations established in Article X of the GATT 1994 (Publication and Administration of Trade Regulations) and other WTO related provisions.[56] Under Article 6.2, Members are required to notify to the WTO Secretariat the publications in which TRIMs may be found. Finally, Article 6.3 requires each Member to give sympathetic consideration to requests for information by another Member and to allow opportunity for consultation on matters arising from the Agreement. The exception pertaining to confidential information, as provided in Article X of the GATT 1994, is also incorporated.

Article 7—Committee on Trade-Related Investment Measures

Article 7 establishes a Committee on Trade-Related Investment Measures, which shall meet not less than once a year or upon request by any Member. The main responsibilities of the TRIMs Committee are to monitor the operation and implementation of the Agreement and to provide a forum for consultation among Members on any matter arising from its implementation.

The Committee is required to report annually to the Council for Trade in Goods, which may assign to it other responsibilities. For example, in February 1995, the Council agreed that the TRIMs Committee would carry out the tasks pertaining to the notification of

[56] These are the undertaking on "Notification" contained in the Understanding Regarding Notification, Consultation, Dispute Settlement and Surveillance adopted on November 28, 1979 and the Ministerial Decision on Notification Procedures adopted on April 14, 1994.

TRIMs. More recently, in May 2002, the Council decided to assign the TRIMs Committee the responsibility for conducting work on a number of implementation issues related to the TRIMs Agreement.

Article 8—Consultation and Dispute Settlement

Pursuant to Article 8, consultations and the settlement of disputes under the TRIMs Agreement are subject to the integrated dispute settlement procedure of the WTO, as set forth in Articles XXII and XXIII of GATT 1994 and as elaborated by the Understanding on Rules and Procedures Governing the Settlement of Disputes ("DSU"). To date, only five disputes related to the TRIMs Agreement have resulted in panel proceedings under the DSU. These are analyzed in Part VII of this chapter.

Article 9—Review by the Council for Trade in Goods

Article 9 requires the Council for Trade in Goods to review the operation of the TRIMs Agreement no later than five years after the entry into force of the WTO Agreement. The review offers the opportunity to propose to the Ministerial Conference, as appropriate, amendments to the text of the Agreement. Furthermore, Article 9 stipulates that during this review, the Council for Trade in Goods shall consider whether the Agreement should be ". . . complemented with provisions on investment policy and competition policy."

By including this review clause, the Uruguay Round negotiators seem to have recognized the limitations of the TRIMs Agreement and the need to move forward in future negotiations. At the same time, Article 9 was considered as a sort of trade-off. On the one hand, developed countries saw in this provision a basis for bringing investment policy into the WTO system in future talks. On the other hand, the reference to competition policy was established at the insistence of developing countries, which saw TRIMs as a way of offsetting certain anti-competitive practices by multinational firms and were, therefore, concerned that their elimination would leave them without appropriate means of addressing such practices.[57]

However, Article 9 provides no specific procedure on how to undertake the review nor does it establish a date for its completion. Thus, although the review was formally initiated in the Council for Trade in Goods in October 1999, it remains inconclusive to date. The lack of progress is also explained by the fact that the review has been held "hostage" as a result of discussions taking place in other WTO bodies, including the Working Groups on Trade and Investment and Trade and Competition Policy, established at the Singapore Ministerial Conference (1996), and the implementation review of the Uruguay Round Agreements.

VI. Operation of the TRIMs Agreement

This section is concerned with the factual aspects of the operation of the TRIMs Agreement, focusing on notification and on the process leading to the extension of transition periods. Members' views on the implementation of the Agreement are presented in Part VIII.

[57] *See* Mashayekhi and Gibbs, *supra* note 40, at 10.

A. Notification Obligations

During the first years of the operation of the TRIMs Agreement, attention was focused on aspects relating to the notification requirements established in the Agreement.[58] Notifications under Article 5.1 were submitted by 26 Members, almost all developing countries, but including one least-developed country (Uganda).[59] In the vast majority of cases, the notifications referred to measures applied in the automotive sector, followed in importance by measures taken in the agricultural sector. Many of the measures notified were local content measures, within the meaning of Paragraph 1(a) of the Illustrative List. The second most frequently notified measures pertain to foreign exchange balancing.

Although the record of compliance with notification obligations was relatively good in that most Members having inconsistent measures proceeded to notify them, a number of problems were detected in the process.

Some notifications were submitted well after the expiry of the relevant deadline, which gave rise to discussions in the TRIMs Committee as to the legal implications of such late notifications. In the view of some Members, timely notification was a substantive obligation of the TRIMs Agreement and failure to comply with it would prevent a Member from availing itself of the transition period provided for under Article 5.2. Other Members argued that the main substantive obligation in the Agreement was to eliminate inconsistent TRIMs within the prescribed time-periods, regardless of the date on which they were notified. Moreover, some developing countries complained that the ninety day period to notify measures had been too short.

The relationship between the provisions of the TRIMs Agreement and those of the WTO Agreement on Subsidies and Countervailing Measures ("SCM Agreement") also raised some difficulties. Some Members argued that due to the overlap between the two agreements, it had not always been easy to determine under which agreement a particular measure should be notified. This would have prevented some Members from notifying measures under the TRIMs Agreement within the prescribed deadline, thus losing their right to benefit from the transition period.

It should also be noted that some measures were introduced by Members after the entry into force of the WTO Agreement and for which the transition mechanism of Article 5 was not applicable. Such measures pertained in particular to the automotive industry and were the subject of consultations and dispute settlement proceedings. The proceedings are described in Part VII below.

Although not an obligation, some Members have notified the Committee that they do not apply any TRIM inconsistent with the Agreement.[60] No notifications have been submitted under Article 5.5, which permits Members to apply notified TRIMs to new

[58] In carrying out the tasks assigned to it by the Council for Trade in Goods, the TRIMs Committee adopted specific formats for the different notifications required under the Agreement. These are: Notifications under Article 5.1 of the TRIMs Agreement (G/TRIMS/1, 1995), Notifications under Article 5.5 of the TRIMs Agreement (G/TRIMS/3, 1995) and Notifications under Article 6.2 of the TRIMs Agreement (G/TRIMS/5, 1996).

[59] Notifications under Article 5.1 are found in the document series G/TRIMS/N/1/(Country)/ . . . For a list of notifying Members see Annex 1 to the Annual Report (2002) of the TRIMs Committee, G/L/589. It should be noted that a number of Members that submitted notifications under Article 5.1 subsequently notified or informed the Committee that the measures they had notified were no longer in force or had been eliminated, or that they intended to eliminate them in advance of the expiry of the transition period.

[60] A list of the Members which made such notifications is contained in Annex 2 to the Annual Report (2002) of the TRIMs Committee. *See supra* note 59.

investments during the transition period under certain conditions. Lastly, a number of notifications have been submitted under Article 6.2, which requires Members to notify to the WTO Secretariat any publications in which information on TRIMs can be found.[61]

B. The Extension of the Transition Periods

For the majority of Members who submitted notifications under Article 5.1, the date by which the notified TRIMs were to be eliminated was January 1, 2000, the deadline for developing countries. Given that the TRIMs Agreement does not provide for a phase-out schedule or for a mechanism to monitor steps taken by individual Members to fulfill this commitment, no information on implementation plans was submitted by the notifying Members before this deadline. Instead, several Members did announce their intention to request an extension of the transition period under Article 5.3.

In 1999, during the preparatory process for the Third WTO Ministerial Conference (Seattle), a number of developing countries sought to obtain a horizontal decision by Ministers, which would extend the transition period for all developing country Members. However, after the collapse of the Seattle Conference in December 1999, when it became clear that a horizontal solution was not possible, a number of individual requests for an extension were submitted to the Council for Trade in Goods.

Out of the 26 Members that had notified TRIMs, ten applied for an extension of the transition period. Eight of them (Argentina, Colombia, Chile, Malaysia, Mexico, Romania, Pakistan and the Philippines) submitted their requests before the end of the transition period (December 31, 1999) or shortly thereafter. Another request was received in May 2000 (Thailand) and another one in March 2001 (Egypt). Although the TRIMs Agreement did not establish a deadline for the submission of requests for extension, some Members questioned the legal validity of such late requests.[62] More problematic, however, was the fact that the Agreement does not define any procedure or specific criteria for granting the extensions. Article 5.3 only provides that, in considering a request, the Council for Trade in Goods is to take into account the individual development, financial and trade needs of the Member in question.

In justifying their request for an extension, Members referred primarily to financial and structural adjustment problems. Some of them pointed to the adverse repercussions of financial crises they had recently experienced on their ability to undertake the reforms necessary to fulfill their TRIMs obligations.[63] Other Members justified their request on developmental and social grounds. For example, Pakistan argued that the elimination of TRIMs would run counter to its development objectives, by preventing it from optimally exploiting domestic resources, promoting employment, backward and forward linkages with domestic industries and the transfer of technology.[64] The arguments provided by

[61] For a compilation of such notifications see the document Notifications under Article 6.2 of the TRIMs Agreement of Publications in which TRIMs may be found (G/TRIMS/N/2/Rev.9 and Addenda 1–8, 2001–2002.

[62] In particular, this was the case with Egypt's request (G/C/W/249, February 2001).

[63] *See* the requests of Argentina (G/C/W/176 + Corr.1), Malaysia (G/C/W/174), the Philippines (G/L/325) and Thailand (G/C/W/203). *See also* Bijit Bora, *Trade-Related Investment Measures*, in DEVELOPMENT, TRADE AND THE WTO: A HAND BOOK 171, 173 (Bernard Hoekman, Aaditya Mattoo, and Philip English eds. 2002).

[64] Pakistan's request (Request by Pakistan for an Extension of the Transition Period under the Provisions of Article 5.3 of the Agreement on Trade-Related Investment Measures, G/C/W/173, 2000).

Colombia for maintaining domestic absorption policies for agricultural products included the need for replacing illegal crops (crop substitution), and the unfavorable effects on its agricultural sector that have resulted from the change of its economic model since 1991.[65]

The need to ensure coherence with other international agreements is another factor explaining the requests for extensions.[66] Argentina specifically referred to its engagement in negotiations to develop a Common Automotive Policy with its MERCOSUR partners. Although unmentioned in its request, in the case of Mexico the request for an extension was probably motivated by the fact that NAFTA provided for a longer phase-out period for the elimination of certain performance requirements.[67] Finally, in a couple of cases the requests for extension were based on time constraints derived from the internal legislative process (Chile) or from contractual obligations (Romania).[68] The length of the extensions requested ranged from one year (Chile) to a minimum of seven years (Pakistan). In most cases the additional period requested was over four years.

The process leading to the granting of extensions of the transitional period was long and controversial. The Council for Trade in Goods met in a number of occasions in both formal and informal sessions to consider the matter. Exchanges of questions-and-answers and bilateral consultations also took place between the requesting countries and other interested Members. One contentious issue was whether the Council should decide on each request separately, according to its merits (which was the position taken by the United States and other developed countries) or whether all requests should be treated collectively.[69] This was the position adopted by the requesting Members, presumably to ensure that no single request be left out of a "package" solution or be granted on less advantageous terms.[70]

A more controversial issue was whether the granting of extensions should be conditioned upon the submission by the Members concerned of a phase-out program within a specified time-frame. Developed countries insisted on this requirement to ensure that TRIMs would be effectively removed at the end of the additional period. However, although some requesting Members were ready to accept this condition, others firmly opposed it as they did not wish to bind themselves to a particular phase-out program nor to a definitive date for the removal of TRIMs. Furthermore, these Members argued that the Agreement did not establish a limit for the duration of the extensions granted pursuant to Article 5.3. Thus, the length of the additional period and the conditions under which it should be authorized became the central issues in the debate.

[65] Colombia's request (Request by Colombia under the provisions of Article 5.3 of the Agreement on Trade-Related Investment Measures, G/C/W/169, 1999).

[66] Bora, *supra* note 63, at 173.

[67] Mexico's request (Request by Mexico under Article 5.3 of the Agreement on Trade-Related Investment Measures, G/C/W/171, 1999).

[68] In the case of Chile, the legislation mandating the elimination of TRIMs was awaiting parliamentary approval (Request by Chile under the Provisions of Article 5.3 of the Agreement on Trade-Related Investment Measures, G/C/W/172/Add.1, 2000). As for Romania, although the required legislative changes to comply with the TRIMs Agreement had been made, the termination of a TRIM applied in the context of a governmental contract with a particular enterprise would have meant a breach of the government's contractual obligations.

[69] Attempts were made by the requesting Members and others to obtain a decision from the Ministerial Conference in Seattle granting authorization for all the requests for extension. These did not succeed.

[70] Some requesting Members complained that they had been asked to give additional concessions (*e.g.* tariff cuts) as a condition to be granted the requested extensions.

A May 2000 decision by the WTO General Council recognized the need to preserve the multilateral character of the process for granting extensions, and directed the Council for Trade in Goods to give positive consideration to individual requests presented in accordance with Article 5.3 of the TRIMs Agreement.

After more than a year of protracted talks, a package solution eventually emerged, whereby eight requesting Members[71] were granted an extension of the transition period until December 31, 2001, with the possibility of requesting an additional extension of up to two years. Members requesting an additional extension were asked to state the particular difficulties they continued to face in implementing their TRIMs obligations and to describe the steps that they had taken or would take to eliminate their remaining TRIMs. They were also required to submit a reasonable phase-out plan for the removal of TRIMs no later than December 31, 2003, and to submit periodic reports to the Council on progress made thereon.

Under the so-called "2 + 2 formula", requesting Members were allowed a maximum extension of four years from the expiry of the initial transition period, almost two of which had already elapsed by the time the Council adopted the relevant decisions (July 31, 2001).[72] Requests for an additional extension were submitted by the eight Members concerned,[73] all of which were approved in November 2001.[74] Accordingly, transition periods for these Members were extended until December 31, 2003, except for the Philippines (June 30, 2003) and Romania (May 31, 2003). Progress reports to the Council were due by December 31, 2002, with the exception of those from Romania (September 15, 2002) and the Philippines (September 30, 2002).

As noted above, the lack of specific criteria in Article 5.3 of the TRIMs Agreement contributed to the difficulties encountered in the process leading to the granting of extensions. In the view of some Members, however, the crucial problem arising from the

[71] These were Argentina, Colombia, Malaysia, Mexico, Pakistan, the Philippines, Romania and Thailand. Given that Thailand's request was submitted several months after the end of the transition period, it was addressed as a waiver request under Article IX of the WTO Agreement. It was approved by the General Council following a recommendation from the Council for Trade in Goods. Because of the lateness of Egypt's request, it was not considered as part of the package solution. In the case of Chile, the extension became irrelevant as the period for which it had been requested elapsed before the final decision on the extensions was reached.

[72] Separate decisions for each requesting Member were adopted. See documents entitled "Extension of the Transition Period for the Elimination of Trade-Related Investment Measures Notified under Article 5.3 of the Agreement on Trade-Related Investment Measures": Argentina (G/L/460, August 2001), Colombia (G/L/461, August 2001), Malaysia (G/L/462, August 2001), Mexico (G/L/463, August 2001), Philippines (G/L/464, August 2001), Romania (G/L/465, August 2001), Pakistan (G/L/466, August 2001), and Thailand: Extension of the Transition Period for the Elimination of Trade-Related Investment Measures Notified under Article 5.1 of the Agreement on Trade-Related Investment Measures (WT/L/410, August 2001).

[73] *See* documents entitled "(Country-name)—Request for Extension of the Transition Period under the Agreement on Trade-Related Investment Measures": Argentina (G/C/W/295, August 2001), Colombia (G/C/W/296 and G/C/W/296/Corr.1, September 2001), Malaysia (G/C/W/291, August 2001; G/C/W/291/Rev.1, November 2001 and G/C/W/291/Rev.2, December 2001), Mexico (G/C/W/293, August 2001), Philippines (G/C/W/289, August 2001), Romania (G/C/W/290, August 2001 and G/C/W/290/Corr.1, September 2001), Pakistan (G/C/W/294, August 2001) and Thailand (G/C/W/292, August 2001). In addition, Colombia requested a waiver under Article IX of the WTO Agreement with respect to measures applied to an agricultural product which had not been previously notified; see: Request for Waiver from the Government of Colombia concerning the Implementation of Article 5.2 of the Agreement on Trade-Related Investment Measures (G/C/W/340, November 2001) and Colombia- Extension of the Application of Article 5.2 of the Agreement on Trade-Related Investment Measures (G/C/W/343, November 2001).

[74] The decisions are found in documents G/L/497–504. The decision approving Colombia's waiver request was taken by the General Council on December 20, 2001 (WT/L/441).

process was that of the inadequacy of the length of the transition periods to allow Members to make the structural reforms required to comply with their TRIMs obligations. Some comments are worth making in this regard. First, as explained below, several of the requests for extension were motivated by factors other than lack of capacity to undertake structural reform, such as legislative or contractual time constraints, or the need to ensure coherence with other international commitments. Moreover, in one case, the request for extension was made at the very last moment, after the Member concerned had initially announced that it would not do so. This would suggest that, at least in half of the cases, structural adjustment difficulties did not constitute a major problem.

Second, with a few exceptions, the Members that requested an extension did not seem to have designed or implemented a phase-out program during the transition period. Clearly, under such circumstances, it is not possible to draw any conclusion as to the adequacy of the transition periods to undertake policy reform. In fact, it would appear that, in the absence of a specific phase-out plan, structural adjustment tends to be postponed indefinitely.

Third, while maintaining the ability to decide the appropriate pace of reform may be regarded as a legitimate reason for not committing to specific time frames, the fundamental question is whether TRIMs are indeed effective in achieving the development objectives sought with their application. As noted earlier, while there is no agreement on this subject, economic analysis and recent empirical studies indicate that measures such as local content requirements may not be an effective development tool. To what extent TRIMs "bite" in practice is another relevant question in this context. For example, where measures require a course of action that firms would pursue even in their absence, structural reform would appear to be less problematic.[75]

VII. Dispute Settlement Cases Involving The TRIMs Agreement

Recourse to dispute settlement in connection with the TRIMs Agreement has been rather limited as measures that benefited from the transition provisions obviously could not be the subject of dispute settlement during the transition period.[76]

Reference to the TRIMs Agreement has been made in only five disputes that have resulted in panel proceedings. These are: (i) *European Communities—Regime for the Importation, Sale and Distribution of Bananas* ("*EC—Bananas III*"); (ii) *Indonesia—Certain Measures Affecting the Automobile Industry* ("*Indonesia—Autos*"); (iii) *Canada—Certain Measures Affecting the Automotive Industry* ("*Canada—Auto Pact*"), (iv) *India—Measures Affecting the Automotive Sector* ("*India—Autos*"), and (v) *Canada—Measures Relating to Exports of Wheat and Treatment of Imported Grain*.

Claims under the TRIMs Agreement were also made in a dispute settlement proceeding concerning measures applied by the Philippines in the motor vehicle sector,[77] but the

[75] Bora points out that local content targets have amply been met by two of the countries that requested extensions, which in his view suggests that any structural adjustment would not have posed an immediate problem as such requirements were not affecting the production decisions of firms. *See* Bora, *supra* note 63, at 175.

[76] During the discussions for the extension of the transition periods under Article 5.3, the legal situation of the measures maintained by the requesting Members remained unclear as the initial transition period to eliminate inconsistent measures had already expired. Notwithstanding this situation, the United States requested consultations under the DSU with respect to certain measures maintained by the Philippines and for which an extension had been requested.

[77] *See Philippines—Measures Affecting Trade and Investment in the Motor Vehicle Sector*. Request for Consultations by the United States (WT/DS195/1, May 2000).

case did not proceed as the parties concerned settled their dispute before the panel was formed.[78] Recently, the TRIMs Agreement has been cited in requests for consultations in two dispute settlement proceedings concerning the U.S. Patent Code[79] and Venezuela's import licensing system for agricultural products.[80] Consultations in both cases were still pending at the time of writing.

Although in all disputes that have been completed the complainants sought a ruling on alleged violations of the TRIMs Agreement, only in the *Indonesia—Autos* case did the Panel make a finding under the Agreement. The explanation for this lies in the fact that in all the disputes involving the TRIMs Agreement so far, its provisions have never been invoked as the sole basis for contesting the legality of the measures at issue. In particular, claims under the TRIMs Agreement have been accompanied by claims under Article III of the GATT 1994, and, in one instance, also under Article XI. The provisions of the SCM Agreement and the Agreement on Trade-Related Aspects of Intellectual Property Rights ("TRIPs") have also been cited in conjunction with TRIMs provisions. Thus the panels have been confronted with the question as to whether their findings should be made under the TRIMs Agreement and/or the GATT 1994 (or another WTO Agreement). The panels have also addressed the question of the sequence of the examination of claims under different agreements.

After a brief presentation of the relevant cases[81], this section examines the different approaches taken by the panels on the question of the relationship between the TRIMs Agreement and the GATT 1994. It is followed by a thematic analysis of the findings in the *Indonesia—Autos* case, where the panel offered some clarifications on specific provisions of the TRIMs Agreement.

[78] Other cases in which the TRIMs Agreement was invoked but did not result in panel proceedings concerned certain measures in the automotive sector applied by Brazil (*Brazil—Certain Measures Affecting Trade and Investment in the Automotive Sector*, Request for Consultations by the United States, WT/DS65/1, 1997 and Request for Consultations by the European Communities, WT/DS81/1, 2001), and measures affecting pork and poultry applied by the Philippines (*Philippines—Measures Affecting Pork and Poultry*, Request for Consultations by the United States, WT/DS74/1, 1997).

[79] *United States—U.S. Patents Code*, Request for Consultations by Brazil, WT/DS224/1 (2001).

[80] *Venezuela—Import Licensing Measures on Certain Agricultural Products*, Request for Consultations by the United States, WT/DS275/1 (2002).

[81] The Reports of the Panel in *Canada—Measures Relating to Exports of Wheat and Treatment of Imported Grain* (WT/DS276/R, April 2004) were not available at the time of writing and therefore were not included in this analysis. This case involved, *inter alia*, certain measures relating to Canada's bulk grain handling system, which the United States claimed were inconsistent with Article III of the GATT 1994 and Article 2 of the TRIMs Agreement because they accorded imported grain less favourable treatment than that accorded to like domestic grain. The Panel found that two of the Canadian measures at issue were inconsistent with Article III:4 of the GATT 1994, and exercising "judicial economy" decided not to examine the claims under Article 2 of the TRIMs Agreement. The Panel also found that the United States had failed to establish that a third Canadian measure was inconsistent with Article III:4 of the GATT 1994 and with Article 2 of the TRIMs Agreement. One aspect of the Panel's findings is worth mentioning as it illustrates the difficulties that may arise form the absence of a generic definition of what a trade-related investment measure is under the TRIMs Agreement. This refers to Canada's request for a preliminary ruling that the United States' claim should be dismissed because it did not provide any indication as to the nature of the investment measure that it alleged was inconsistent with the TRIMs Agreement, thus failing to meet the requirement imposed by Article 6.2 of the Dispute Settlement Understanding (DSU) that a panel request "identify the specific measure at issue". The Panel found that Article 6.2 of the DSU did not require the Unite States to establish, in its panel request, that the measures at issue were trade-related investment measures within the meaning of the TRIMs Agreement, or that they fitted within one of the investment measures enumerated in the illustrative list annexed to the agreement. In the Panel's view, this was a matter to be established by the United States in its written and oral submissions, through evidence and argument. Therefore, the Panel rejected Canada's assertion that the United States' panel request was inconsistent with Article 6.2 of the DSU and saw no reason not to address these claims. See WT/DS276/R, ¶¶ 47–52.

A. Outline of the Cases

1. European Communities—Regime for the Importation, Sale and Distribution of Bananas[82]

The *EC—Bananas III* dispute concerned several aspects of the EC's regime for the importation, sale and distribution of bananas. The essence of the claims was that, by granting preferential treatment to EC and African, Caribbean and Pacific ("ACP") bananas at the expense of bananas from third-countries, the EC's regime violated a number of WTO provisions. Specifically, the complainants (Ecuador, Guatemala, Honduras, Mexico and the United States) alleged that the regime's allocation of import quotas and its import licensing procedures were inconsistent with a number of WTO provisions, including Article III of GATT 1994 and Article 2 of the TRIMs Agreement, as well as provisions of the General Agreement on Trade in Services ("GATS"), the Agreement on Import Licensing Procedures and the Agreement on Agriculture.

In its report, rendered on May 22, 1997, the Panel found that the EC's regime was inconsistent with several GATT and GATS provisions. Of specific relevance for the present discussion was the Panel's finding that the allocation of a certain proportion of import licenses to a particular category of operators was inconsistent with the national treatment obligation in Article III:4 of GATT 1994.[83] The Panel first dismissed the EC's argument that, being a border measure rather than an internal measure, the import licensing regime did not fall within the purview of GATT Article III:4. In contrast, the Panel found that the administration of licensing procedures and the eligibility criteria for allocating the licenses to operators formed part of the EC's internal legislation, affecting the internal sale, purchase and distribution of imported bananas within the meaning of Article III:4.[84]

As regards the complainants' claim that the license allocation system acted as a requirement or incentive to buy EC bananas in order to be eligible to import bananas from third-countries at lower tariff rates within a specific tariff quota, the Panel adopted as its own the findings of a previous GATT panel in respect of the same issue.[85] This panel had found that a requirement to buy a domestic product in order to obtain the right to import a product at lower rates under a tariff quota was a requirement affecting the purchase of a product within the meaning of Article III:4, and that the preferred allocation of part of the tariff quota to importers who purchased EEC bananas was inconsistent with this provision.[86]

Having found that the "operator category rules" violated Article III:4, the Panel in *EC—Bananas III* did not consider it necessary to rule on their consistency with Article 2 of the TRIMs Agreement (see Section B below).

The Panel report was appealed by the European Communities. In its report of September 9, 1997, the Appellate Body upheld the Panel's main findings, including the finding that the EC's import licensing regime violated Article III:4 of the GATT 1994.[87]

2. Indonesia—Certain Measures Affecting the Automobile Industry[88]

The *Indonesia—Autos* dispute concerned a number of measures applied by Indonesia in the context of its 1996 National Car Program and related programs. Specifically, the claims concerned three sets of measures: (i) import duty relief for parts and components of cars and sales tax reductions on certain categories of motor vehicles, based on compliance with local content requirements; (ii) import duty exemptions on parts and components and tax exemptions on all sales for manufacturers in Indonesia having "Pioneer" or National Car company status, also based on the satisfaction of local content requirements; and (iii) the provision of "Pioneer" benefits for cars manufactured in a foreign country by Indonesian nationals that met certain local content requirements. The complainants, the EC, Japan and the United States, alleged that these measures were inconsistent with Articles I, III and X of GATT 1994, Article 2 of the TRIMs Agreement, and several articles of the SCM Agreement and the TRIPS Agreement.[89]

In its report of July 2, 1998, the Panel found that Indonesia's measures constituted a violation of Article 2.1 of the TRIMs Agreement.[90] The Panel first rejected Indonesia's argument that there was a conflict between Article III (and consequently the TRIMs Agreement) and the SCM Agreement, and that it should be resolved by giving priority to the more specific rules on subsidies. The Panel found that Article III and the SCM Agreement do not conflict with each other because they have different coverage and do not impose the same type of obligations. The Panel then considered whether the Indonesian car programs could be covered simultaneously by the provisions of the TRIMs Agreement and those of the SCM Agreement. It found that, since these agreements cover different subject matters, they were both applicable to the dispute[91] (see also Section C below). As regards the relationship between the TRIMs Agreement and Article III of GATT 1994, the Panel noted that the former had an autonomous legal existence, independent from Article III of the GATT 1994. It therefore determined that claims under these provisions should be addressed separately, and decided to examine the claims under the TRIMs Agreement first, because this Agreement was more "specific" to the issues under consideration[92] (see Section B below).

The Panel considered whether Indonesia's measures were TRIMs. First, it examined whether they were "investment measures". In its analysis, the Panel confirmed that the TRIMs Agreement was not limited to measures taken specifically in regard to *foreign* investment.[93] In addition, since the texts of the Indonesian regulations showed that the measures were aimed at promoting the domestic car industry, the Panel concluded that they would necessarily have an impact on investment in that sector, and could thus be characterized as "investment measures". The Panel also considered that, if the measures at issue were local content requirements, they would necessarily be "trade-related", because local content requirements, by definition, favor the use of domestic over imported products, and therefore affect trade.[94]

[94] *Id.* ¶¶ 14.80 and 14.82.

The Panel then proceeded to examine whether the measures fell within the scope of item (1) of the TRIMs Illustrative List. It noted that the Indonesian measures required the "purchase" and "use" of domestic products in order to obtain the tax and custom benefits, and concluded that these benefits constituted "advantages" within the meaning of the chapeau of the Illustrative List, and that, as such, the Indonesian measures fell within the scope of Item 1 of the Illustrative List of TRIMs.[95] The Panel dismissed Indonesia's argument that the measures were not local content requirements because they were not binding (see Section C-4 below). Based on the above, the Panel ruled that the Indonesian measures violated Article 2.1 of the TRIMs Agreement.[96] It also noted that Indonesia had not invoked any of the exceptions contained in Articles 3 and 4 of the TRIMs Agreement, nor claimed that the measures enjoyed the transition period provided for in Article 5.[97]

The Panel reasoned that action to remedy the inconsistencies it had found under the TRIMs Agreement would also remedy any inconsistency that it might have found under Article III:4 of the GATT 1994. Therefore, exercising the principle of judicial economy, the Panel saw no need to address the claims under Article III:4 of the GATT 1994.[98]

The Panel also accepted the complainants' claims that the Indonesian measures violated Articles I and III:2 of the GATT and Article 5(c) of the SCM Agreement, but rejected the rest of the claims. Its report was adopted on July 23, 1998.

3. Canada—Certain Measures Affecting the Automotive Industry[99]

The *Canada—Auto Pact* dispute concerned several measures taken by Canada in the framework of its 1965 Auto Pact agreement with the United States, and implemented through the 1988 Motor Vehicle Tariff Order ("MVTO"), several Special Remission Orders ("SROs") and letters of undertaking from Canadian car manufacturers. The measures provided for custom duty exemptions for the importation of certain motor vehicles and parts by car manufacturers established in Canada. In order to qualify for the import duty exemptions, a car manufacturer had to meet three conditions: (i) it had to have had a manufacturing presence in Canada (in the base year 1963–64) with respect to motor vehicles of the class imported; (ii) it had to achieve a minimum amount of Canadian value-added, which applied to goods and services ("CVA requirements"), and (iii) it had to comply with a production-to-sales ratio requirement ("ratio requirement").

The claimants, in this case Japan and the EC, contended that Canada's measures were inconsistent with Articles I:1, III:4, and XXIV of GATT 1994; Article 2 of the TRIMs Agreement; Article 3 of the SMC Agreement, and several GATS articles.[100] In its report, circulated on February 11, 2000, the Panel accepted most of these claims, including those under Article III:4 of GATT 1994.

The Panel decided to examine the claims under GATT Article III:4, before considering those under the TRIMs Agreement (see Section B below). It first dismissed Canada's

[95] *Id.* ¶ 14.89.

[96] *Id.* ¶ 14.91.

[97] *Id.*¶ 14.92. In this regard, it should be mentioned that Indonesia had originally notified one of its car programs under Article 5 of the TRIMs Agreement, but it subsequently withdrew its notification on the grounds that the measure was not a TRIM but rather a subsidy.

[98] *Id.* 14.93.

[100] *See Canada—Certain Measures Affecting the Automotive Industry*, Request for Consultations by Japan (WT/DS139/1, 1998) and Request for Consultations by the European Communities (WT/DS142/1, 1998).

argument that the CVA requirements did not affect the internal sale or use of imported products because they did not in law or in fact require the use of domestic products, and because they could be easily met on the basis of other elements of value added (*e.g.*, labor costs). In the Panel's view, the CVA requirements, which conferred an advantage (*i.e.*, eligibility for duty exemptions) upon the use of domestic products but not upon the use of imported products, should be regarded as measures "affecting" the internal sale or use of imported products within the meaning of Article III:4, notwithstanding the fact they did not *in law* require the use of domestic products.[101]

The Panel therefore found that the CVA requirements affected the internal sale or use in Canada of imported parts, materials and non-permanent equipment for use in the production of motor vehicles. It also found that the CVA requirements accorded "less favorable treatment" to imported products than to like domestic products because, by granting an advantage for the use of domestic products but not for the use of imported products, they adversely affected the equality of competitive opportunities of imported products vis-à-vis like domestic products.[102] Moreover, the Panel noted that the fact that the advantage could also be obtained by means other than the use of domestic products did not preclude that imported products were being treated less favorably.[103]

In light of the above considerations, the Panel concluded that Canada violated Article III:4 of GATT 1994 as a result of the application of the CVA requirements under the MVTO and the SROs.[104] The Panel arrived at the same conclusion with respect to the letters of undertakings submitted by certain auto manufacturers to the Canadian authorities. After determining that the involvement of the Canadian Government in the action taken by the companies was such that the CVA commitments contained in the letters amounted to "requirements" within the meaning of GATT Article III:4, the Panel found that Canada had also violated this provision as a result of the conditions contained in the letters.[105] Having found that Canada's CVA requirements were inconsistent with Article III:4 of the GATT 1994, the Panel did not consider it necessary to make a ruling on whether such requirements were also inconsistent with Article 2.1 of the TRIMs Agreement (see Section B below).[106]

Finally, the Panel found that the effect of the ratio-requirements was not a limitation on the internal sales of vehicles, but rather a limitation on the value of vehicles that could be imported duty-free.[107] Noting that GATT Article III:4 is not concerned with limitations on the conditions for importation, the Panel found that the effect of the ratio requirements did not constitute a grounds for finding a breach of this provision and rejected this claim. It also rejected the claim that the ratio requirements were inconsistent with Article 2.1 of the TRIMs Agreement.[108] Canada appealed certain issues of law covered in the Panel report and legal interpretations developed by the Panel, however none of these include the Panel's findings with respect to Article III:4 of the GATT 1994.[109]

4. India—Measures Affecting the Automotive Sector[110]

This dispute involved certain measures applied by India that affected the automotive sector. Under India's Public Notice No. 60 ("PN 60"), adopted in December 1997, car manufacturers wishing to import car kits were required to sign a "Memorandum of Understanding" ("MOU"), whereby they were asked to fulfill a number of conditions. In particular, these included: (i) a requirement that car manufacturers achieve specified minimum local content levels ("indigenization requirement"), and (ii) a trade balancing requirement, under which car manufacturers were required to balance the value of their imports of car kits and car parts against the value of their exports of cars and car parts.

At the time the dispute was brought before the Panel, India maintained import restrictions and an import licensing system on a range of products, including cars and car parts. Manufacturers who did not sign an MOU could be denied a license to import car kits and car parts. The EC and the United States raised claims challenging the conformity of India's measures with Articles III:4 and XI:1 of the GATT 1994 and Articles 2.1 and 2.2 of the TRIMs Agreement.[111]

After dealing with some preliminary objections, the Panel considered the order in which it should examine the substantive claims, and decided to begin with the claims under GATT 1994 (see Section B below). With respect to the indigenization requirement, the Panel accepted the complainants' arguments and ruled that such requirements were inconsistent with Article III:4 of GATT 1994.[112] First, the Panel found that the automotive parts and components of domestic and foreign origin were like products within the meaning of Article III:4 of GATT 1994.[113] It then determined that the indigenization condition in both PN 60 and the MOUs was a "requirement" because it constituted a necessary condition for obtaining the right to import the restricted car kits and components.[114] The Panel's view that the MOUs constituted "requirements" within the meaning of Article III:4 of GATT 1994 was based on GATT case law[115] and on the express language of the chapeau of the Illustrative List.[116] The Panel also found that, by requiring car manufacturers to purchase Indian parts and components rather than imported products, the indigenization requirement modified the conditions of competition between the domestic and imported products in the Indian market, thus affecting the internal sale, purchase and use of imported parts and components.[117] The Panel therefore concluded that the indigenization condition, as contained in PN 60 and the MOU, was inconsistent with Article III:4 of GATT 1994.[118]

Having found that the indigenization requirement was inconsistent with Article III:4 of the GATT 1994, the Panel did not see the need to examine whether the same

[115] The Panel referred to the *Canada—FIRA* panel, which had concluded that private contractual obligations entered into by investors (*i.e.*, undertakings signed by car manufactures with the Canadian authorities) should not adversely affect the rights of GATT contracting parties under Article III:4 of the GATT. Cited in *India—Measures Affecting the Automotive Sector*, *supra* note 110, at footnote 396.

[116] *India—Measures Affecting the Automotive Sector*, *supra* note 110, ¶ 7.192.

[117] *Id.* ¶ 7.197.

[118] *Id.* ¶ 7.204.

requirement was inconsistent with Article XI:1 of GATT 1994 and exercised judicial economy.[119]

With respect to the trade balancing requirement, the Panel ruled that it was contrary to Article XI:1 of GATT 1994. It first determined that the trade balancing requirements, as contained in PN 60 and the MOUs, constituted a "measure" within the meaning of Article XI:1.[120] The Panel then examined whether the trade balancing requirement was a "restriction on importation". It noted that, although the trade balancing condition did not set an absolute numerical limitation on imports, it in fact amounted to an import restriction, because the number of car kits and components a manufacturer could import would be determined by the quantity of exports it could commit to make. The Panel concluded that the limits placed on the amount of imports, which resulted from the link with export commitments, acted as a restriction on importation contrary to Article XI:1 of GATT 1994.[121]

In response to India's invocation of the balance-of-payments exception contained in Article XVIII:B of the GATT 1994, the Panel found that India had failed to make a *prima facie* case that its measures could be justified under this provision.[122]

The Panel then examined the claim that the trade balancing requirement was inconsistent with Article III:4 of the GATT 1994, because it required car manufacturers that purchased restricted kits and components on the Indian market to count the value of these purchases against their trade balancing obligations. The Panel found that, by requiring that the purchaser of an imported kit or component take on an additional obligation to export cars or components of equal value, the trade balancing requirement acted as a disincentive to the purchase of imported products, and thus made them more difficult to dispose of on the internal market. Therefore, this element of the trade balancing obligation accorded less favorable treatment to imported products than to like domestic products. The Panel thus concluded that the trade balancing requirement violated Article III:4 of the GATT 1994.[123]

After finding that the indigenization requirement was inconsistent with Article III:4 of the GATT 1994 and that the trade balancing requirements were inconsistent with both Articles III:4 and XI:1 of the GATT 1994, by virtue of the principle of judicial economy, the Panel determined that it was unnecessary to make separate findings under the relevant provisions of the TRIMs Agreement.[124]

Finally, the Panel dismissed India's arguments that PN 60 could not be inconsistent with the GATT and the TRIMs Agreement because the import restrictions that were to be administered under PN60 had been removed by April 1, 2001. The Panel found that the outstanding obligations contained in the MOUs with respect to both the indigenization and trade balancing requirements continued to be binding and were not altered by the elimination of import restrictions. They also remained inconsistent with GATT Articles III:4 and XI:1.[125]

India appealed the Panel report, but subsequently withdrew its appeal. Consequently, the Appellate Body issued a short report outlining the procedural history of the case, but

did not address the substantive legal issues raised by India in its appeal.[126] The Appellate Body and Panel reports were adopted on April 5, 2002.

B. Relationship Between the TRIMs Agreement and Relevant Articles of GATT 1994

Confronted with concurrent claims, the Panels in the four disputes discussed above have taken different approaches to the question of whether their findings should be made both under the TRIMs Agreement and the GATT 1994. In considering this issue, they have made a number of interesting observations concerning the relationship between these two agreements which deserve closer attention.

In ***EC—Bananas III***, after finding that the allocation of import licenses to a particular category of operators was inconsistent with Article III:4 of GATT 1994, the Panel considered whether it should also make a ruling under Article 2 of the TRIMs Agreement. For that purpose, it examined the relationship between the TRIMs Agreement and the GATT provision, and noting that "the TRIMs Agreement essentially interprets and clarifies the provisions of Article III (and also Article XI) where trade-related measures are concerned", it concluded that "... the TRIMs Agreement does not add to or subtract from those GATT obligations, although it clarifies that Article III:4 may cover investment-related measures".[127]

In light of the above, the Panel in *EC—Banana III* saw no need to make a finding with respect to the claims under the TRIMs Agreement, and it explained its decision as follows:

> ... we do not consider it necessary to make a specific ruling under the TRIMs Agreement with respect to the eligibility criteria for the different categories of operators and the allocation of certain percentages of import licenses based on operator categories. On the one hand, a finding that the measure in question would not be considered a trade-related investment measure for the purposes of the TRIMs Agreement would not affect our findings in respect of Article III:4 since the scope of that provision is not limited to TRIMs and, on the other hand, steps taken to bring EC licensing procedures into conformity with Article III:4 would also eliminate the alleged non-conformity with the obligations under the TRIMs Agreement.[128]

The Panel in ***Indonesia—Autos*** took a different approach on this issue, by emphasizing the legal independence and the "specificity" of the TRIMs Agreement. It began by recognizing that the TRIMs Agreement introduced special transition provisions and notification requirements, which supported the conclusion that "... the TRIMs Agreement has an autonomous legal existence, independent from that of Article III."[129] Therefore, in contrast with the previous panel, it determined that claims under Article III:4 and the TRIMs Agreement should be dealt with separately.[130] As to the sequence of the examination of claims, the Panel in *Indonesia—Autos* settled the issue by invoking the notion of *lex specialis* (*i.e.*, the prevalence of the specific rule over the general rule):

[126] Report of the Appellate Body, *India– Measures Affecting the Automotive Sector*, WT/DS146/AB/R and WT/DS175/AB/R (2002).
[127] *European Communities—Regime for the Importation, Sale and Distribution of Bananas*, *supra* note 82, ¶ 7.185.
[128] *Id.* ¶ 7.186.
[129] *Indonesia—Certain Measures Affecting the Automobile Industry*, *supra* note 88, at ¶ 14.62.
[130] *Id*.

> As to which claims, those under Article III:4 of GATT or Article 2 of the TRIMs Agreement, to examine first, we consider that we should first examine the claims under the TRIMs Agreement since the TRIMs Agreement is more specific than Article III:4 as far as the claims under consideration are concerned.[131]

As noted earlier, having found that certain measures applied by Indonesia were inconsistent with Article 2.1 of this Agreement, the Panel determined that it was unnecessary for it to examine the consistency of the measures with GATT Article III:4 on the following grounds:

> Under the principle of judicial economy,[132] a panel only has to address the claims that must be addressed to resolve a dispute or which may help a losing party in bringing its measures into conformity with the WTO Agreement. The local content requirement aspects of the measures at issue have been addressed pursuant to the claims of the complainants under the TRIMs Agreement. We consider therefore that action to remedy the inconsistencies that we have found with Indonesia's obligations under the TRIMs Agreement would necessarily remedy any inconsistency that we might find with the provisions of Article III:4 of GATT. We recall our conclusion that non-applicability of Article III would not affect as such the application of the TRIMs Agreement. We consider therefore that we do not have to address the claims under Article III:4, nor any claim of conflict between Article III:4 of GATT and the provisions of the SCM Agreement.[133]

The Panel in ***Canada—Auto Pact***, following a similar approach to the Panel in *EC—Bananas III*, decided to examine the claims under Article III:4 before considering those under the TRIMs Agreement. Its reasoning was as follows:

> While we are aware of the statement made by the Appellate Body in *EC—Bananas III*, and referred to by the panel in *Indonesia—Autos*, that a claim should be examined first under the agreement which is the most specific with respect to that claim, we are not persuaded that the TRIMs Agreement can be properly characterized as being more specific than Article III:4 in respect of the claims raised by the complainants in the present case. Thus, we note that there is disagreement between the parties not only on whether the measures at issue can be considered to be "trade-related investment measures" but also on whether the Canadian value added requirements and ratio requirements are explicitly covered by the Illustrative List annexed to the TRIMs Agreement. It would thus appear that, assuming that the measures at issue are "trade-related investment measures", their consistency with Article III:4 of the GATT may not be able to be determined simply on the basis of the text of the Illustrative List but may require an analysis based on the wording of Article III:4. Consequently, we doubt that examining the claims first under the TRIMs Agreement will enable us to resolve the dispute before us in a more efficient manner than examining these claims under Article III:4.[134]

Having found that Canada's CVA requirements were inconsistent with Article III:4 of the GATT, the Panel decided that it was not necessary to make a specific ruling under the TRIMs Agreement:

> We believe that the Panel's reasoning in *EC—Bananas III* as to why it did not make a finding under the TRIMs Agreement after it had found that certain aspects of the EC's licensing procedures were inconsistent with Article III:4 of the GATT also applies to the present case. [footnote omitted] Thus, on the one hand, a finding in the present case that the CVA requirements are not trade-related investment measures for the purposes of the

[131] *Id.* ¶ 14.63.
[132] As defined by the Appellate Body in *Shirts and Blouses*, op. cit., pp. 17–20 [footnote in original].
[133] *Indonesia—Certain Measures Affecting the Automobile Industry*, *supra* note 88, at ¶ 14.93.
[134] *Canada—Certain Measures Affecting the Automotive Industry*, *supra* note 99, ¶ 10.63.

> TRIMs Agreement would not affect our finding in respect of the inconsistency of these requirements with Article III:4 of the GATT since the scope of that provision is not limited to trade-related investment measures. On the other hand, steps taken by Canada to bring these measures into conformity with Article III:4 would also eliminate the alleged inconsistency with obligations under the TRIMs Agreement.[135]

The Panel in ***India—Autos*** was also confronted with simultaneous claims under both GATT 1994 and the TRIMs Agreement. It considered first whether a particular order in the examination of claims was desirable. As in *EC—Bananas III* and *Canada—Auto Pact*, the Panel did not endorse the argument that the TRIMs Agreement was more specific than the relevant GATT provisions. Although it concurred that the TRIMs Agreement had an "autonomous legal existence", it noted that the substance of its obligations referred directly to Articles III and XI of the GATT. The fact that the TRIMs Agreement's provisions on notification introduced specific rights and obligations was not deemed by the Panel to be a sufficient basis for it to conclude that "... the TRIMs Agreement could inherently be characterized as more specific than Articles III:4 and XI:1 of GATT 1994."[136]

Further, the Panel in *India—Autos* considered that where a particular measure might benefit from the transition period granted to notified TRIMs, then examining a claim first under the TRIMs Agreement might be relevant. However, it noted that in the present case India had not claimed that it had notified the measures in dispute. Therefore, the Panel saw no reason for examining the claims in any particular order.[137] Eventually, the Panel decided to examine first the claims under GATT 1994.[138] It explained its decision as follows:

> It seems that an examination of the GATT provisions in this case would be likely to make it unnecessary to address the TRIMs claims, but not vice-versa. If a violation of the GATT claim was found, it would be justifiable to refrain from examining the TRIMs claims under the principle of judicial economy. Even if no violation was found under the GATT claims, that also seems an efficient starting-point since it would be difficult to imagine that if no violation has been found of Articles III or XI, a violation could be found of Article 2 of the TRIMs Agreement, which refers to the same provisions. Conversely, if no violation of the TRIMs Agreement were found, this would not necessarily preclude the existence of a violation of GATT Articles III:4 or XI:1 because the scope of the GATT provisions is arguably broader if India's argument was accepted that there is a need to prove that a measure is an investment measure and its assertion that this is not the case with the measures before this panel.[139]

After finding that India's indigenization requirements were inconsistent with Article III:4 of the GATT 1994, and that the trade balancing requirements were contrary to Articles III:4 and XI:1 of GATT 1994, the Panel in *India—Autos* invoked the principle of judicial economy and decided not to consider the claims under the TRIMs Agreement separately.[140]

******

[135] *Id.* ¶ 10.91.
[136] *Panel Report, India—Measures Affecting the Automotive Sector*, *supra* note 110, ¶ 7.157.
[137] *Id.* ¶ 7.158.
[138] *Id.*¶ 7.162.
[139] *Id.* ¶ 7.161.
[140] *Id.* ¶ 7.324.

In three out of the four disputes examined above, the panels, having found a violation of the relevant GATT provisions, declined to make a ruling under the TRIMs Agreement. Several aspects of the panels' reasoning stand out.

First, while recognizing the independent legal status of the TRIMs Agreement and its special transition and notification provisions, the panels were not persuaded that this Agreement could be characterized as more specific than the relevant GATT provisions, consequently they decided to examine first the claims under the GATT 1994.

Second, some of the panels' remarks suggest that they found the coverage of the TRIMs Agreement to be more limited than that of Article III:4 (and Article XI:1) of GATT 1994, because it applies only to investment measures related to trade. For example, after finding a violation of Article III:4 of the GATT 1994, the panels in *EC-Bananas III* and in *Canada-Auto Pact* explained their decision not to examine the claims under the TRIMs Agreement by noting that a finding that the measures at issue were not "trade-related investment measures" would not affect a previous finding on their inconsistency with Article III:4 of GATT 1994, since the scope of this provision was not limited to TRIMs. Moreover, both panels considered that steps taken to eliminate the inconsistency with GATT Article III:4 would also eliminate the alleged inconsistency with the TRIMs Agreement. The Panel in *India—Autos* elaborated further on this point. It noted that if no violation was found under GATT Articles III and XI, it was difficult to imagine that a violation could be found under Article 2 of the TRIMs Agreement, whereas the opposite was not true (*i.e.*, a finding that there was no violation of the TRIMs Agreement did not preclude a violation of GATT Articles III:4 and XI:1), because the scope of the GATT provisions was arguably broader, if India's argument that it was necessary to prove that a measure was indeed an investment measure were to be accepted.

Third, by refraining from examining the claims under the TRIMs Agreement, the three panels did not address the question whether the measures at issue were trade-related investment measures and, if so, whether they were covered by the Illustrative List in the TRIMs Agreement. By contrast, The Panel in *Indonesia—Autos* did consider these issues, including the question as to whether a separate analysis of the nature of a measure as a trade-related investment measure is required under the TRIMs Agreement.

C. Substantive Issues Addressed by the Panel in Indonesia—Autos

Indonesia—Autos is the only case in which a Panel made findings under the TRIMs Agreement. The Panel report addressed some substantive issues concerning the interpretation of the TRIMs Agreement which are worth pointing out.

1. Relationship Between the TRIMs Agreement and the SCM Agreement

As noted above, claims were raised regarding Indonesia's car programs under Article III of GATT 1994, the TRIMs Agreement and the SCM Agreement. In considering an argument advanced by Indonesia that the measures at issue were covered only by the SCM Agreement, the Panel analyzed, *inter alia*, whether a measure could be covered simultaneously by the TRIMs Agreement and the SCM Agreement and whether there was a conflict between them. In this context, the Panel made some useful clarifications concerning the types of obligations and the subject matters covered under each of these two agreements:

> With respect to the nature of obligations, we consider that, with regard to local content requirements, the SCM Agreement and the TRIMs Agreement are concerned with different types of obligations and cover different subject matters. In the case of the SCM Agreement,

> what is prohibited is the grant of a subsidy contingent on use of domestic goods, not the requirement to use domestic goods as such. In the case of the TRIMs Agreement, what is prohibited are TRIMs in the form of local content requirements, not the grant of an advantage, such as a subsidy.
>
> A finding of inconsistency with Article 3.1(b) of the SCM Agreement can be remedied by removal of the subsidy, even if the local content requirement remains applicable. By contrast, a finding of inconsistency with the TRIMs Agreement can be remedied by a removal of the TRIM that is a local content requirement even if the subsidy continues to be granted. . . . Clearly the two agreements prohibit different measures. . . .[141]

The Panel thus found that there is no conflict between the SCM and TRIMs Agreement ". . . as they cover different subject matters and do not impose mutually exclusive obligations".[142] Therefore, the Panel concluded that since Indonesia's car programs involved TRIMs as well as subsidy elements, both the TRIMs Agreement and the SCM Agreement were applicable to the dispute.[143]

The Panel also made an interesting remark concerning the term "advantage" in paragraph 1 of the Illustrative List of the TRIMs Agreement. It understood this term to be broader in scope than the notion of subsidy under the SCM Agreement. First, it explained that a local content requirement applied as a condition for the receipt of a subsidy would remain inconsistent with the TRIMs Agreement even if the subsidy were replaced by some other type of incentive. It then stated its view on the wider scope of the term "advantage" as follows: "We note also that under the TRIMs Agreement, the advantage made conditional on meeting a local content requirement may include a wide variety of incentives and advantages, other than subsidies".[144]

2. Prior Determination that a Measure is a Trade-Related Investment Measure

The Panel in *Indonesia—Autos* noted that the disputing parties had divergent views on whether the TRIMs Agreement requires a prior determination that a measure is a "trade-related investment measure" or whether it is sufficient to find that the measure is covered by the Illustrative List. The Panel adopted a pragmatic approach on this issue: it reasoned that if it were to consider that the measures at issue in the present case were in any event trade-related investment measures, it would not be necessary for it to rule on the general question of whether the TRIMs Agreement requires a separate determination that a measure is a trade-related investment measure. The Panel thus proceeded to examine whether the Indonesian measures were investment measures, then whether they were trade-related, and finally whether they were covered by the Illustrative List of TRIMs in the Agreement .[145]

3. Characterization of a Measure as an "Investment Measure"

The Panel began by examining whether the Indonesian measures were "investment measures". In this context, it made some interesting comments on the neutrality of the TRIMs Agreement as regards the origin of investments. The Panel rejected an argument put forward by India, as a third party, that the TRIMs Agreement is basically aimed at

[142] *Id.* ¶ 14.52.
[143] *Id.* ¶ 14.55.
[144] *Id.* ¶ 14.51. As noted earlier, the Panel eventually concluded that the tax and custom duty benefits contingent on local content under Indonesia's car programs were "advantages" within the meaning of paragraph 1 of the Illustrative List. *Id.* ¶ 14.91.
[145] *Id.* ¶¶ 14.71–14.72.

foreign investment and that, therefore, it does not cover measures relating to internal taxes or subsidies. The Panel made it clear that the TRIMs Agreement is not concerned only with foreign investment, and that the national origin of the investment is irrelevant for the purposes of the Agreement:

> We note that the use of the broad term "investment measures" indicates that the TRIMs Agreement is not limited to measures taken specifically in regard to *foreign* investment. . . . [N]othing in the TRIMs Agreement suggests that the nationality of the ownership of enterprises subject to particular measure is an element in deciding whether that measure is covered by the Agreement.[146]

The Panel in *Indonesia—Autos* also noted that the TRIMs Agreement is not concerned with internal tax advantages and subsidies *per se*, but rather with local content requirements, compliance with which may be encouraged through the provision of such advantages. Moreover, the Panel did not see why an internal measure would not govern the treatment of foreign investment.[147]

The Panel then examined the legislation pursuant to which the Indonesian measures were applied to determine whether they were "investment measures". It noted that the relevant legislation had investment objectives and investment features, and concluded that since the aim of the measures was to promote the development of a local manufacturing capability for finished motor vehicles and parts and components, they would necessarily have an impact on investment in these sectors and could thus be reasonably construed as "investment measures" within the meaning of the TRIMs Agreement.[148] This conclusion was not affected by the fact that the Indonesian Government did not regard the measures as investment measures or because they were not embodied in investment acts. In this regard, the Panel stated:

> . . . there is nothing in the TRIMs Agreement to suggest that a measure is not an investment measure simply on the grounds that a Member does not characterize the measures as such, or on the grounds that the measure is not explicitly adopted as an investment regulation.[149]

This seems a rather broad interpretation, since it would suffice for a measure, taken, for example, in the context of an industrial promotion program, to have a potential impact on investment in a given sector in order to be construed as an investment measure.

4. The Trade-Related Nature of Investment Measures

Having found that the Indonesian measures were "investment measures", the Panel considered whether they were "trade-related". It first made the general statement that local content requirements are necessarily trade-related, because, by definition, they favor the use of domestic products over imported products, thus affecting trade.[150]

The Panel, nevertheless, went on to examine whether the measures applied by Indonesia were covered by Item (1) of the Illustrative List of the TRIMs Agreement. It found that, under the Indonesian car programs, compliance with provisions for the purchase and use of products of domestic origin was necessary to obtain the tax and customs duty benefits.[151] The Panel also found that these benefits constituted "advantages" within the

[146] *Id.* ¶ 14.73. Italics in original.
[147] *Id.*
[148] *Id.* ¶ 14.80.
[149] *Id.* ¶ 14.81.
[150] *Id.* ¶ 14.82.
[151] *Id.* ¶ 14.88.

meaning of the chapeau of paragraph 1 of the Illustrative List. Thereupon, the Panel concluded that the Indonesian measures were covered by the List and constituted a violation of TRIMs Article 2.1.[152]

Two aspects of the Panel's reasoning are worth mentioning. First, by rejecting Indonesia's argument that the custom duty benefits were not an *internal* measure within the meaning of Article III.4 of GATT 1994, the Panel clarified that what is relevant is not the nature of the benefit, but rather the internal regulations that provide for an incentive to use domestic products:

> . . . We do not consider that the matter before us in connection with Indonesia's obligations under the TRIMs Agreement is the custom duty relief as such but rather the internal regulations, *i.e.* the provisions on purchase and use of domestic products, compliance with which is necessary to obtain an advantage, which advantage here is the customs duty relief.[153]

Second, the Panel confirmed the emphasis placed by the TRIMs Agreement on the "enforceability" of measures, whether this is achieved through mandatory regulations or through incentives. Indeed, in dismissing Indonesia's argument that the measures were not classical local content requirements because they were not mandatory, the Panel stated: "The wording of the Illustrative List makes it clear that a simple advantage conditional on the use of domestic goods is considered to be a violation of Article 2 of the TRIMs Agreement even if the local content requirement is not binding as such. . . ."[154]

VIII. The TRIMs Agreement: Current Debate and Prospects

Discussions on the operation of the TRIMs Agreement have taken place in several parallel tracks in the WTO. One is the review mandated under Article 9 of the TRIMs Agreement, which is conducted by the Council for Trade in Goods. Another is the work undertaken by the TRIMs Committee on certain implementation issues related to the TRIMs Agreement. The latter is part of a broader "implementation agenda" under the WTO Work Program launched at the Doha Ministerial Conference (November 2001), which seeks to address a number of outstanding implementation issues and concerns raised by Members in relation to the Uruguay Round Agreements. The TRIMs Committee has also considered certain proposals pertaining to the TRIMs Agreement in the context of the review of the special and differential treatment (S&D) provisions of the WTO Agreements pursuant to paragraph 44 of the Doha Ministerial Declaration. In addition, certain aspects related to performance requirements have also been raised in discussions in the Working Group on the Relationship between Trade and Investment.

A. The Article 9 Review

As noted above, Article 9 requires the Council for Trade in Goods to review the operation of the TRIMs Agreement within five years of the entry into force of the WTO Agreement (*i.e.* no later than the end of 1999). The review offers the possibility of proposing amendments to the provisions of the Agreement, as appropriate, and to consider whether it should be complemented with provisions on investment policy and competition policy.

The Council formally initiated the Article 9 review in October 1999, but no substantive progress had been made by the Summer of 2004. In early 2002, Members discussed a

[152] *Id.* ¶ 14.89 and 14.91.
[153] *Id.* ¶ 14.89.
[154] *Id.* ¶ 14.90.

study jointly prepared by the WTO and UNCTAD Secretariats on the use of TRIMs and other performance requirements and their effects on international trade, investment, economic growth and development.[155]

Members' views as to the nature and scope of the Article 9 review differ fundamentally. Some developing countries (India, Brazil, Pakistan and others) see the review as an opportunity to amend the Agreement so as to allow for TRIMs, particularly local content requirements, to be used flexibly when applied in pursuance of development policies. On the other hand, the main concern of developed countries (United States, European Communities, Japan, Canada) in connection with the review is to avoid any erosion of current TRIMs disciplines, especially to the extent they are based on key GATT provisions.

In October 2002, Brazil and India submitted a joint proposal to the Council for Trade in Goods to amend Article 4 of the TRIMs Agreement.[156] The proposal seeks to increase the range of situations in which developing countries are allowed to deviate temporarily from the prohibition to apply TRIMs. Accordingly, it is proposed that developing countries be free to use TRIMs for the achievement of developmental objectives such as the promotion of domestic manufacturing capabilities; the transfer of technology; domestic competition and correction of restrictive business practices; the development of disadvantaged regions, sustainable development through the promotion of environmental-friendly methods and products, the increase of export capacity and the development of small- and medium-sized enterprises so as to contribute to job creation.[157] The proposal was discussed in several meetings of the Council for Trade in Goods, where it met with strong opposition from the developed countries, which have objected to any attempt to lower current TRIMs disciplines (see Section B below).

A recent proposal by Brazil, India and other developing countries for an additional study on the trade, investment and development effects of the TRIMs notified under the Agreement and of their removal has also met with resistance from developed countries. The United States, the European Communities and Canada argue that the Article 9 review has already been exhausted without reaching consensus on the necessity to amend the TRIMs Agreement and see no need for further studies. While they have expressed willingness to consider on a case-by-case basis the problems that individual Members might encounter in implementing the Agreement, they do not consider that the review under Article 9 should result in fundamental changes to the TRIMs provisions.

Given the lack of a deadline for its completion, the marked differences in Members' positions and the fact that issues relating to the TRIMs Agreement are also being discussed in other WTO contexts, it seems unlikely that the Article 9 review will be concluded in the near future. However, the review under Article 9 will continue to provide an avenue for those Members seeking to revisit the disciplines of the TRIMs Agreement.

B. The Outstanding Implementation Issues

Prior to the Third WTO Ministerial Conference held in Seattle in 1999, a group of developing countries expressed dissatisfaction with the implementation of the Uruguay Round Agreements, including the TRIMs Agreement. They submitted a large number

[155] WTO/UNCTAD, *supra* note 5.

[156] *See* Communication from Brazil and India (G/C/W/428, 2002), also submitted to the TRIMs Committee in the context of the discussions on outstanding implementation issues (G/TRIMS/W/25, 2002).

[157] *Id.* ¶ 12.

of proposals to correct what they saw as imbalances and shortcomings in the current disciplines.[158] Many of the proposals entailed important changes to the agreements in the form of less onerous commitments for developing countries. The proposed changes were not endorsed by developed countries—nor by a number of developing nations—as they were perceived as fundamentally altering the existing balance of rights and obligations. No agreement was reached on the outstanding implementation issues at the Seattle Ministerial Conference, as the meeting collapsed failing to produce any results, and despite intensive discussions conducted under the supervision of the General Council little progress was made in this area during the period 2000–2001.

At the Doha Ministerial Conference (Qatar, November 2001), it was agreed that negotiations on the outstanding implementation issues shall be an integral part of the WTO Work Program launched at Doha. Ministers also agreed that those issues for which they had not provided a specific negotiating mandate, should be addressed as a matter of priority by the relevant WTO bodies, which were required to report to the Trade Negotiations Committee ("TNC") by the end of 2002 for appropriate action.[159]

Accordingly, the TRIMs Committee was assigned the responsibility for conducting work on the outstanding implementation issues related to the TRIMs Agreement (contained in "Tirets" 37–40 of a document compiling all implementation proposals), and for reporting regularly to the Council for Trade in Goods on this matter.[160] With the exception of Tiret 37, which calls for a new opportunity for developing countries to notify TRIMs and to be granted a new transition period, the main thrust of the proposals is to amend the Agreement so as to allow developing countries flexibility to use TRIMs otherwise prohibited. This is particularly the case of Tiret 40, under which the proposal by Brazil and India referred to above was submitted, and which faced strong opposition from the developed countries.

Discussions in the TRIMs Committee on the outstanding implementation issues have been quite controversial, as reflected in the report of the Committee to the Council for Trade in Goods (November 2002).[161]

Essentially, a number of developing countries argue that, by establishing uniform obligations, the TRIMs Agreement has failed to take into account the structural inequalities and disparities in the levels of development among Members. They contend that, aside from the transitional provisions, the Agreement does not contain any clauses for special and differential treatment ("S&D") that would allow developing countries to address their specific economic, financial and social concerns. Moreover, they complain that the

[158] As regards the TRIMs Agreement, *see*, for example, the submissions by India (WT/GC/W/203, 1999), Brazil (WT/GC/W/27, 1999) and Colombia (WT/GC/W/311, 1999).

[159] Doha Ministerial Declaration, paragraph 12(b), Adopted on November 14, 2001, WT/MIN(01)/DEC/1, November 20, 2001.

[160] Tirets 37 to 40 of the document which compiles the outstanding implementation issues read as follows:

— Tiret 37: Developing countries shall have another opportunity to notify existing TRIMs measures which they would be then allowed to maintain till the end of the new transition period.
— Tiret 38: The provisions of Article 5.3 must be suitably amended and made mandatory.
— Tiret 39: Developing countries shall be exempted from the disciplines on the application of domestic content requirement by providing for an enabling provision in Articles 2 and 4 to this effect.
— Tiret 40: Specific provisions shall be included in the Agreement to provide developing countries the necessary flexibility to implement development policies (intended to address, among others, social, regional, economic, and technological concerns) that may help reduce the disparities they face *vis-à-vis* developed countries.

[161] G/L/588. *See also* the Minutes of the TRIMs Committee's meetings of June 2002 (G/TRIMS/M/13), August 2002 (G/TRIMS/M/14) and October 2002 (G/TRIMS/M/15 and G/TRIMS/M/15Add.1).

transitional periods provided for in the Agreement were not long enough and did not constitute the appropriate solution for overcoming the structural problems developing countries face in implementing the Agreement. In short, the TRIMs Agreement has failed to incorporate the development dimension in an effective manner.

Developing countries also argue that the developed nations were free to use TRIMs over a long period of time to achieve industrialization, and that this flexibility is currently denied to lower-income countries. In their view, TRIMs have proved to be a useful policy tool for countries at an intermediate stage of development to address developmental objectives, to pursue industrialization and to offset the trade-distorting effects of certain forms of corporate behavior. As for the trade-effects of TRIMs, developing countries insist that there is no conclusive empirical evidence to support the theoretical assumption on which the Uruguay Round decision to prohibit the use of TRIMs was based, *i.e.*, that such measures, *a priori*, have trade-restricting and distorting effects. In light of the above, they see a need to revisit the disciplines of the Agreement so as to provide flexibility for developing countries to use TRIMs in order to achieve specific technological, regional, economic and environmental development objectives. Such flexibility, as they see it, should not be limited to transitional arrangements, but should be incorporated in the substantive disciplines of the Agreement.

It should be noted that the position described above is not endorsed by all developing countries. Indeed, several developing-country Members, particularly those which have undertaken policy reforms to comply with their TRIMs obligations are not likely to favor a fundamental change in the current balance of rights and obligations in the TRIMs Agreement.

For their part, developed countries argue that the TRIMs Agreement already provides enough flexibility to accommodate developing countries' needs. In their view, the TRIMs Agreement is in itself a form of S&D treatment, since it allowed developing countries transition periods to eliminate measures that were inconsistent with GATT Articles III and XI. The current proposals would undermine these basic principles. They also point to Article 4, which allows developing countries to use TRIMs in certain circumstances, and to the possibility of extending the transition periods provided for under Article 5.3, which has been successfully used by several developing-country Members. In addition, they argue that further flexibility can be sought through the WTO Article IX provision on waivers and through Article XVIII of the GATT 1994, under which the needs of developing countries can be addressed on a case-by-case basis. Their concern with the present proposals is that they would alter the existing balance of rights and obligations under the TRIMs Agreement, including against those developing countries which have already complied with their commitments.

In the view of developed countries, TRIMs have been proved to have distorting effects on trade and do not constitute an effective development tool. They point to recent empirical evidence showing that these measures lead to resource misallocation and welfare reduction, and can discourage investments in the countries imposing them. They consider the proposals under discussion are at odds with recent trends in investment liberalization by several developing countries, where TRIMs and other investment restrictions have been removed in order to attract FDI. They also argue that there are other more efficient instruments to achieve the objectives that are sought through the use of TRIMs, such as through the application of competition policy in the case of abusive corporate behavior.

The fundamental differences in Members' positions as regards the TRIMs implementation issues are not likely to be narrowed in the near future. On the one hand, there seems

to be no prospect of developed Members accepting a relaxation of the TRIMs disciplines. On the other hand, Brazil and India have underlined the "extreme importance" their respective governments attach to their proposal. At the time of writing, no decision on the substance of the TRIMs implementation issues had been taken by the Trade Negotiations Committee.

C. Work on S&D Proposals

In response to concerns expressed by a number of developing and least-developed countries (LDCs) regarding the operation of the special and differential treatment provisions in WTO Agreements, the Doha Ministerial Conference instructed the Committee on Trade and Development ("CTD") in Special Session to review all S&D treatment provisions with a view to strengthening them and making them more precise, effective and operational.[162] In carrying out this task, the CTD in Special Session has considered a number of Agreement-specific proposals submitted by Members, mostly by the African Group and the LDCs.

In May 2003, two proposals concerning the TRIMs Agreement were referred by the General Council to the TRIMs Committee for consideration.[163] Basically, one of the proposal seeks to make it easier for developing and least-developed country Members to resort to the temporary exemption in TRIMs Article 4, which allows these countries to use otherwise prohibited TRIMs for balance-of-payments purposes by invoking Article XVIII of the GATT 1994. The other proposal calls for further extensions or new transition periods to eliminate TRIMs for least-developed country Members and low-income developing countries.

The S&D proposals were discussed in detail in the TRIMs Committee during the first half of 2003, but given the divergent positions taken by Members[164] the Committee was unable to adopt them or to recommend alternative compromise solutions.[165] Currently, the CTD in Special Session is considering possible ways on how to take forward the S&D review, including the outstanding Agreement-specific proposals.

D. The Working Group on the Relationship Between Trade and Investment

At the First WTO Ministerial Conference held in Singapore in 1996, Members agreed to begin analytical work on the relationship between trade and investment. A Working Group was established to examine this subject "having regard to the existing WTO provisions on matters related to investment and competition policy and the built-in agenda in these areas, including under the TRIMs Agreement."[166] The Working Group on the Relationship between Trade and Investment ("WGTI") initiated its discussions in 1997. It

[162] *See* Paragraph 44 of the Doha Ministerial Declaration, *supra* note 159, and paragraph 12 of the Decision on Implementation-Related Issues and Concerns, Adopted on November 14, 2001, WT/MIN(01)/17, November 20, 2001.

[163] *See* proposals by the African Group, TN/CTD/W/3/Rev.2.

[164] While some developed country Members might have been prepared to agree to certain flexibility for African countries and LDCs to use TRIMs, they did not seem prepared to extend such flexibility to all other developing countries.

[165] *See* Report by the Chairman of the Committee on Trade-Related Investment Measures to the General Council, G/L/638, July 21, 2003.

[166] Singapore Ministerial Declaration, paragraph 20, WT/MIN(96)/DEC, December 18, 1996. A Working Group on the Interaction between Trade and Competition Policy was also established under this mandate.

examined the links between trade and investment from several points of view, including the contribution of foreign investment to economic development and the potential advantages and disadvantages for WTO Members of bilateral, regional and multilateral rules on investment.

At Doha, WTO Ministers recognized "the case for a multilateral framework to secure transparent, stable and predictable conditions for long-term cross-border investment, particularly foreign direct investment".[167] They agreed that negotiations in the WTO on this subject would take place after the Fifth Ministerial Conference "on the basis of a decision to be taken, by explicit consensus, at that Session on modalities of negotiations".[168] They instructed the WGTI, in the period up to the Fifth Ministerial Conference (Cancun, September 2003), to focus on the clarification of a number of core elements pertaining to a possible multilateral framework of WTO disciplines on investment.[169]

Among the elements that the Working Group was instructed to clarify in the run-up to Cancun were the "development provisions" of an eventual multilateral framework on investment. Ministers also determined that any such framework should take due account of the development policies and objectives of host governments and of the "special development, trade and financial needs of developing countries and least-developed countries".[170]

Accordingly, in discussions in the Working Group on this topic, several Members stressed the need for developing countries to preserve their ability to apply investment policies in accordance with their development objectives. For some, this means allowing these countries to retain flexibility in regulating the entry and operations of foreign investment and in applying certain policies aimed at enhancing the contribution of FDI to their national development. Because TRIMs and other performance requirements are perceived by some developing nations as useful development tools, demands for flexibility in this area, including the possibility of revisiting current disciplines, were also raised in the context of the Working Group, although the topic of performance requirements is not among those listed in paragraph 22 of the Doha Ministerial Declaration.[171]

Launching negotiations on a multilateral framework on investment, however, has proved quite controversial. Since 1999, the proponents of negotiations on investment, notably the European Communities, Japan, Canada and Korea, met with opposition from a number of developing countries, led by India and other Asian countries, who strongly resisted the idea of an investment agreement in the WTO for reasons that ranged from fears that it would limit their domestic "policy space" to concerns that the remit of the WTO was already overextended. The United States, while supporting the launch of negotiations, took a low profile in the discussions.[172] Most Latin American countries were, in principle, prepared to join the talks, provided that enough progress was made in

[167] Doha Ministerial Declaration, paragraph 20, *supra* note 159.

[168] *Id*.

[169] Ministers identified seven core elements, namely: scope and definition; transparency, non-discrimination; modalities for pre-establishment commitments based on a GATS-type, positive list approach; development provisions; exceptions and balance-of-payment safeguards; consultation and the settlement of disputes between Members. *Id.* ¶ 22.

[170] Doha Ministerial Declaration, *supra* note 159, ¶ 22.

[171] *See* Communication from India on Development Provisions, WT/WGTI/148, ¶¶ 7 and 9 (2002).

[172] The United States has been skeptical about the possibility of negotiating a high-standard investment agreement in the WTO, preferring to pursue its investment protection and liberalization objectives through bilateral and regional agreements.

other areas of the Doha Round, namely in agriculture. For their part, the least-developed countries (LDCs), and African countries in particular, raised concerns about their lack of institutional capacity to adequately participate in investment negotiations in the WTO.

At the Fifth Ministerial Conference, held in Cancun, Mexico on 10–14 September 2003, Members' positions on the investment issue became further polarized, partly as a result of the lack of progress in other areas of the Doha Round of major interest to the developing nations (i.e. the elimination of farm subsidies in general and in the cotton sector in particular). Thus, a large group of developing countries, mainly LDCs and African countries, firmly rejected the launch of negotiations on investment and other so-called "Singapore issues".[173] Eventually, given the deep divide among WTO Members regarding these issues as well as other areas of the negotiations, notably the modalities for agricultural trade liberalization, the Cancun Ministerial Conference concluded without consensus on any of the areas under discussion.

E. The TRIMs Agreement: What Prospects?

The review of the TRIMs Agreement could, in principle, lead to two alternative outcomes: keeping the Agreement unchanged or introducing amendments to its provisions. Given the stalemate in the discussions, it seems unlikely that a consensus could emerge on the desirability of amending the Agreement, at least in the near future. While maintaining the *status quo* would suit those Members that have firmly opposed the relaxation of TRIMs disciplines and probably also those countries that have adjusted their policies to comply with the Agreement, such a result would not satisfy the demands of those Members seeking to introduce flexibility in the use of TRIMs.

Even if Members agreed to reopen the Agreement, the options for amendment appear rather limited. One way would be to modify its scope. However, reducing the coverage of the measures subject to the prohibition in Article 2 does not seem to be a viable option because attempts to change the scope of this provision would have legal implications for Article III and Article XI of the GATT 1994. On the other hand, while no proposal to expand the coverage of prohibited measures has been made, if a fundamental review of the TRIMs Agreement were to take place, calls by some Members for relaxing its current provisions might be countered by pressure from other Members to prohibit additional categories of performance requirements.[174]

The transitional provisions of the Agreement could also be revisited. For example, one of the implementation proposals called for allowing Members to submit new notifications

[173] The "Singapore issues" are: trade and investment; trade and competition policy; transparency in government procurement and trade facilitation. They are so named because the Singapore Ministerial Conference (1996) established the working groups responsible for studying these issues. On the last day of the Cancun Conference, a proposal emerged to launch negotiations on trade facilitation and transparency in government procurement, while discontinuing work on the other two Singapore issues. However, this proposal was not accepted by the group of LDCs and African countries (the "G–90") who opposed negotiations on all four Singapore issues, at which point the Chairman of the Conference decided to conclude the meeting.

[174] For example, during the preparatory process for the Seattle Ministerial Conference, the United States argued in favor of expanding the prohibition to use TRIMs to export performance, technology transfer and product mandating requirements. *See* Communication from the United States, WT/GC/W/115, November 19, 1998. European business groups have also called for the progressive elimination of export, joint-ventures and technology transfer requirements, UNICE, "Position on WTO Investment Negotiations", Brussels, May 6, 1999.

of existing TRIMs and for a new transition period.[175] In addition, specific criteria could be established for phasing-out the inconsistent measures in order to avoid the difficulties encountered at the expiry of the first transition period.[176] This outcome, however, is not likely to satisfy those Members that have questioned the adequacy of transition arrangements for addressing structural adjustment problems. On the other hand, it is doubtful whether developed countries would be in a position to accept such a general approach as they have repeatedly stressed their preference for addressing implementation problems on a case-by-case basis. In this context, it should be mentioned that from the eight developing-country Members that obtained an extension of the transition period up until end-2003, only one found it necessary to request for a further extension, beyond that date, in order to phase-out its remaining TRIMs.[177]

As proposed by some Members, another option for amending the TRIMs Agreement could be to provide for new exceptions under which developing countries would be entitled to use TRIMs in order to pursue certain developmental objectives. This option might respond to developing countries' demands for flexibility and policy space but, as noted before, it faces strong opposition from developed countries. Even if Members agreed to explore such an approach, in practice reaching agreement on what development policies or objectives might justify the use of TRIMs and under which circumstances could prove very difficult.[178] This would raise questions as to the effectiveness of specific measures in achieving the proposed objectives, an issue on which no consensus exists. In any event, the introduction of new flexibility would have to be reconciled with the need to maintain the relevance and integrity of TRIMs disciplines as well as the legal obligations contained in Articles III and XI of the GATT 1994. Moreover, whatever approach were to be adopted to make the TRIMs Agreement more flexible, due account would need to be taken of the effects of TRIMs on the trade and investment interests of third countries, and of the situation of those developing countries which have already taken steps to comply with their TRIMs obligations.

In principle, the review of the TRIMs Agreement could also entail complementing it with provisions on investment and competition policy as foreseen in Article 9. To date, however, the discussions have not focused on these aspects and, so long as they remain the subject matter of other WTO bodies, it does not seem likely that they will be addressed within the context of the review of the TRIMs Agreement.

[175] This corresponds to the proposal under tiret 37 of the outstanding implementation issues, though it should be noted that this proposal was originally submitted in the pre-Seattle process, that is before the original transition period had expired.

[176] An academic expert proposes that a compromise solution would be to allow for a new phase-out period in order to accommodate developing countries' adjustment concerns, while at the same time establishing a specific schedule for the removal of TRIMs, which would help insure that adjustment is made in an orderly fashion. *See* Theodore Moran, *The Relationship Between Trade, Foreign Direct Investment and Development: New Evidence, Strategy, And Tactics Under The Doha Development Agenda Negotiations*, Paper prepared for the Asian Development Bank's Study on Regional Integration and Trade: Emerging Policy Issues for Selected Developing Members Countries, mimeo, September 2002, at 21.

[177] *See Pakistan's Request for Extension of the Transition Period under the Agreement on Trade-Related Investment Measures*, G/C/W/478, December 22, 2003. The request is currently being considered by the Council for Trade in Goods.

[178] In this connection, it has been suggested that exceptions for developing countries to deviate from the provisions of the TRIMs Agreement could be linked to a per capita manufacturing value-added threshold, so that all countries falling below such threshold would qualify for the exceptions. *See* Kumar, *supra* note 14, at 73.

Aside from the Article 9 review, the WTO Work Programme on Trade and Investment provided an additional venue for Members wishing to pursue the debate on TRIMs and other related measures. In fact, issues pertaining to TRIMs disciplines were raised during the course of discussions on the developmental dimension of a possible multilateral framework of rules on investment.

Discussing investment policies from a broader perspective could offer an opportunity to consider other investment measures that have potential distorting effects on international trade and investment patterns, but which have not so far been subject to multilateral disciplines. Although not mentioned in the Doha mandate, a case in point are the so-called locational incentives (e.g., up-front grants and tax breaks) which are frequently used by host countries to attract high-value investments.[179] Studies have shown that transnational corporations often stimulate competition between potential locations in order to obtain the most attractive incentive packages.[180] Such competition may put developing countries that lack the resources to match the incentives offered by richer countries at a disadvantage. Furthermore, incentive-based competition often leads to a "beggar thy neighbour" situation where all participants end up worse than they would have been had they refrained from engaging in such wasteful competition. This suggests that exploring ways to achieve some kind of multilateral co-operation in this area would make sense.[181]

Nevertheless, the outcome of the Cancun Ministerial Conference has raised uncertainties as to the prospects of future work on investment in the WTO. A number of the developing countries that opposed launching negotiations on investment at Cancun have since insisted that, with the exception of trade facilitation, the other Singapore issues be dropped from the Doha Work Program or even from the WTO altogether. It is therefore unclear how, if at all, WTO work on trade and investment might be pursued in the future.[182]

IX. Conclusion

While the proponents of the Uruguay Round TRIMs negotiations sought strong disciplines on a wide range of performance requirements and other investment aspects, fundamental differences of view among participants as to the trade effects of these measures and the treatment that they should be given led to an agreement which is limited in scope and coverage. Nevertheless, the TRIMs Agreement has the merits of having clarified the application of key GATT articles to certain investment measures, and having reaffirmed WTO Members' commitment to better observance of trade rules by requiring

[179] It has been suggested that in order to level the playing field in the competition for FDI, efforts should also be made to prevent the use of protectionist antidumping legislation, preferential rules of origin with high domestic content and other strategic trade policies often employed by developed countries, which may also have the effect of distorting investment flows. *See* Moran (1998), *supra* note 176, at 34.

[180] *Id.*, at 35.

[181] Interestingly, before the Cancun Ministerial Conference, a group of developing countries proposed that investment incentives and performance requirements, among other issues, be addressed by the Working Group on the Relationship between Trade and Investment. Their proposal called for the Working Group to continue the process of clarification initiated at Doha, as opposed to launching negotiations on investment. *See* Communication from Bangladesh, Botswana, China, Cuba, Egypt, India, Indonesia, Kenya, Malaysia, Nigeria, Philippines, Tanzania, Uganda, Venezuela, Zambia and Zimbabwe, WT/GC/W/154, August 28, 2003.

[182] A Decision adopted by the WTO General Council in August 2004 made it clear that the issue of the Relationship between Trade and Investment would not form part of the Work Program set out in the Doha Ministerial Declaration and that no work towards negotiations on this issue would take place within the WTO during the Doha Round. The same treatment will apply to the issues of Trade and Competition and Transparency in Government Procurement. Doha Work Program. Decision Adopted by the General Council on August 1st, 2004 (WT/L/579.)

the elimination of GATT inconsistent measures (without this Agreement many TRIMs might have remained in place). Through its notification requirements, the Agreement also introduced some degree of transparency on the use of TRIMs.

The implementation of the TRIMs Agreement has not been without problems. A short notification deadline and difficulties in identifying which measures were to be notified prevented some developing countries from complying with this obligation in a timely manner, thus precluding them from the benefit of the transition period. Moreover, certain new TRIMs were introduced after the entry into force of the Agreement. Some Members have questioned the adequacy of the length of the transition periods and of the mechanism itself to overcome structural problems in implementing the Agreement. Another view is that the lack of a monitoring mechanism to ensure compliance with commitments at the expiry of the transition periods and of precise criteria for extending such periods complicated the implementation of the Agreement.

As of now, little jurisprudence is available with respect to the interpretation of key provisions of the TRIMs Agreement, since it has been invoked in a few dispute settlement cases, and in only one of them did the panel make rulings under the Agreement. However, the expiry of the extended transition period at the end of 2003 means that the possibility of new disputes involving TRIMs cannot be discounted.

Today, the debate on the effects of TRIMs on trade and economic development has returned to the forefront of discussions concerning the operation of the Agreement. In the context of the Article 9 review, the implementation agenda, and in the Working Group on the Relationship between Trade and Investment, some developing countries have maintained that the current disciplines impose undue restraints on their ability to pursue developmental policies and have called for a relaxation of the TRIMs Agreement. For their part, developed countries have so far focused their efforts on avoiding any erosion of existing TRIMs disciplines. Nevertheless, in the event of a major review of the Agreement, they might seek to extend the coverage of TRIMs disciplines to a larger number of performance requirements.

There seem to be few policy options to reconcile demands for greater flexibility based on developmental grounds, on the one hand, and preserving the effectiveness of current TRIMs disciplines on the other. While it is essential for developing countries to apply the policies that are best suited to their particular circumstances, consideration should also be given to empirical evidence suggesting that certain measures such as local content requirements have more often than not proved to be ineffective and may even lead to national and global resource misallocation and welfare deterioration. At the same time, other investment measures may also give raise to trade and investment distortions. This would seem to suggest that maintaining TRIMs disciplines and addressing other distorting measures would be in the interest of the multilateral trading system.

* Director of the International Trade Law Center at the International Law Institute, Washington, D.C., and Editor-in-Chief of this book. I am extremely grateful to Spencer Griffith, Gary Horlick, John Miller, and Edwin Vermulst for helpful suggestions on this chapter, and to Ali Oromchian for his invaluable editorial assistance.

[1] The full name of the Agreement is the Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994. In this chapter, it is referred to as "the Anti-dumping Agreement," "the Agreement" or "the ADA." The term "anti-dumping" is often written as one word without the hyphen. However, GATT Article VI and the ADA include the hyphen, and I have therefore followed this spelling throughout this chapter.

V. The Doha Development Agenda 528

"Through their want of intelligent direction the great 'Trust' of American ironmasters, a gang of energetic, narrow-minded furnace owners, had smelted far more iron than the whole world had any demand for. . . . It is manifestly just that people who do headlong stupid things of this sort should suffer, but in the old days it was quite possible, it was customary for the real blunderers in such disasters, to shift nearly all the consequences of their incapacity. [There was nothing] to prevent the sudden frantic underselling of some trade rival in order to surprise and destroy his trade, secure his customers for one's own distended needs, and shift a portion of one's punishment on him. This operation of spasmodic underselling was known as 'dumping'. The American ironmasters were now dumping on the British market"
H.G. Wells, *In the Days of the Comet* (1906).

I. Introduction

Anti-dumping is one of the most controversial subjects in international trade.[2] The use of anti-dumping laws, designed to offset the effect of imports that are deemed to be sold below "normal" value, has proliferated in the last few decades. In 1958, contracting parties of the General Agreement on Tariffs and Trade ("GATT") had only thirty-seven anti-dumping measures in force, South Africa alone accounting for twenty-two.[3] By contrast, more than sixteen hundred investigations were launched in the 1980s,[4] and between 1995 and 2003, members of the World Trade Organization ("WTO") initiated almost two thousand five hundred investigations and imposed more than fifteen hundred anti-dumping measures.[5] As of July 2004, eighteen cases—almost a quarter of all decided cases—involving anti-dumping issues had been the subject of panel and/or Appellate Body reports in the WTO dispute settlement system (ten of these cases were brought against the United States, two against the EC, and six against developing countries).

There has also been a dramatic increase in the number of countries using anti-dumping laws. Once the preserve of the developed world, anti-dumping laws are now being used by an increasing number of developing countries. Thus, between 1980 and 1989, around 95 percent of all anti-dumping measures were imposed by Australia, Canada, the EC, and the United States, and only about two percent by developing countries.[6] Between 1995 and 2003, by contrast, developing countries imposed more than half of the total number of measures.[7] As of October, 2003, 75 WTO members had reported that they had anti-dumping legislation on their books, and 41 had reported that they had imposed anti-dumping measures.[8]

Table 1 lists the most frequent users of anti-dumping laws. As can be seen, although the traditional users of anti-dumping laws are still very active, a number of the more advanced developing countries are beginning to rival them. And, of course, on a trade-weighted basis the newer users have far outstripped the United States and the EC. A recent

[2] One indication of this is the enormous literature on the subject, much of it written by economists. *See, e.g.,* the bibliography attached to Bruce A. Blonigen and Thomas J. Prusa, *Antidumping* 37–42 (National Bureau of Econ. Research Working Paper No. 8398, 2001) (available at www.nber.org), which lists over one hundred books and articles on the subject, most of which were written in the last thirteen years. Another useful source of recent papers on the subject is http://www.uoregon.edu/~bruceb/adpage.html.

[3] J. Michael Finger, *The Origins and Evolution of Antidumping Regulation*, in ANTIDUMPING: HOW IT WORKS AND WHO GETS HURT at 26 (J. Michael Finger ed. 1993). This number did not include anti-dumping duties imposed by Canada and New Zealand, which were applied by customs officials without a formal decree.

study showed that Argentina had imposed more than thirty times as many measures as the United States compared with its level of imports, India and South Africa more than twenty times, and Brazil more than five times.[9]

Table 2 shows the principal target countries of anti-dumping actions brought by WTO members between 1995 and 2003, and Table 3 indicates the industrial sectors most often subject to anti-dumping cases. The predominance of Base Metal reflects the fact that steel producers have been by far the most frequent users of anti-dumping laws.

In part at least, the increased activity on the part of developing countries is undoubtedly the result of their lowering of tariffs, which has created pressure from domestic industries for other forms of protection from imports.[10] In addition, developing countries recognized

that developed countries would be unlikely to challenge their use of anti-dumping laws since they were such frequent users of these laws themselves.

As discussed in Part II of this chapter, anti-dumping laws were first enacted in the early Twentieth Century as a defense against predatory dumping. The concern was that oligopolistic industries with protected home markets would use the high prices they were able to charge in those markets to subsidize low-priced exports with the aim of eliminating competitors in the importing countries. Once competition was eliminated, the exporters would be able to charge high prices there as well. There is however a flaw in this reasoning, at least in today's conditions. A strategy of this sort would only be successful if the dumping companies could keep competitors out of the foreign market even after they had raised prices, and this would rarely if ever be possible given the generally low tariffs now in effect in the industrialized countries. In the words of an OECD Report:

> Predatory pricing . . . is a complex form of anticompetitive conduct. It requires the perpetrator to incur substantial losses or at least to forego present profits in the hope that these losses can be more than recouped in the future through the exercise of market power. Thus, market conditions play a key role in determining whether price predation is a feasible tactic for a form to employ. The predator must have a very substantial share of the market or at least the capacity to acquire such a share.[11]

The OECD Report concluded that "cases of predation may arise but at most only very rarely."[12] Other studies have reached the same conclusion.[13] A review by the OECD of anti-dumping cases in Australia, Canada, the EC and the United States concluded that in at least ninety percent of the cases the sales practices would not have been found anti-competitive under competition law.[14]

Today's proponents of strong anti-dumping laws no longer claim that dumping is carried out with the intent of *destroying* competition, but is rather aimed at weakening it.

[11] OECD, PREDATORY PRICING 75 (1989), *quoted in* RAJ KRISHNA, ANTIDUMPING IN LAW AND PRACTICE 1 (1997) (World Bank Paper, available at <http://www.worldbank.org/html/dec/Publications/Workpapers/WPS1800series/gps1823/wps1823.pdf>).

[12] *Id.* In a 1986 case involving allegations of predatory dumping the U.S. Supreme Court observed: "The success of any predatory scheme depends on *maintaining* monopoly power for long enough both to recoup the predator's losses and to harvest some additional gain. . . . [T]here is a consensus among commentators that predatory pricing schemes are rarely tried and even more rarely successful". *Matsushita Electric Industrial Co. v. Zenith Radio Corp.,* 475 U.S. 574, 589 (1986) (emphasis in original).

[13] *See*, *e.g.*, Alan F. Deardorff, *Economic Perspectives on Anti-dumping Law*, in ANTI-DUMPING LAW AND PRACTICE 35 (John Jackson and Edwin Vermulst eds. 1990).

[14] Finger, *supra,* note 6 at 4.

> A secure closed home market or sanctuary market encourages companies to make aggressive production and expansion decisions because they can be certain of selling a percentage of their production at home at good prices. . . . From a sanctuary market, it is also possible to dump in the markets of foreign competitors to depress the profit margins of those competitors and reduce their funds available for investment in R&D and marketing. Companies from countries with open markets do not enjoy this luxury. . . . Over time, this puts companies in open-market countries, such as the United States, at a serious disadvantage in competition with companies with sanctuary home markets.[15]

Many commentators have expressed concern about the use (or abuse) of anti-dumping laws as a protectionist device. In 1988, the *Economist* observed that "[a]nti-dumping suits are emerging as the chemical weapons of the world's trade wars."[16] Judge Richard Posner has commented that:

> Of course, the concerns that actually animate anti-dumping, countervailing duty, and other measures directed against allegedly 'unfair' trade practices of foreign producers go far beyond a concern with predatory pricing. The dominant concern is to protect U.S. industry from foreign producers that have genuinely lower costs, whether because they pay lower wages, incur fewer pollution-control and other regulatory costs, are better managed, have better workers, or have more modern plants and equipment.[17]

It appears that the cost of anti-dumping duties to consumers in terms of higher prices often outweighs any gain to the domestic industry receiving protection. An analysis by the U.S. International Trade Commission in 1995 estimated that removal of all outstanding anti-dumping and countervailing duty orders in 1991 would have produced a welfare gain to the U.S. economy of $1.9 billion, and that the gain would have been far greater had the more than one hundred orders entered since 1991 been factored in.[18]

Despite the widespread agreement that active enforcement of anti-dumping laws imposes significant welfare losses on a country's economy, attempts in the WTO to curb what is seen as over-exuberant enforcement of anti-dumping laws have met with great hostility in the U.S. Congress, which sees the U.S. anti-dumping law as a vital bulwark against "unfair" imports.[19] While many economists believe that there is little or no economic rationale for anti-dumping laws,[20] they are sometimes defended by proponents of liberal trade on the basis that they provide a political safety valve that alleviates pressure for more protectionist action.[21]

Anti-dumping measures have become the remedy of choice for domestic industries seeking relief from import competition, as compared with countervailing duty or safeguard measures. Since 1995 the number of anti-dumping investigations initiated by WTO members has been eight times as high as the number of countervailing duty and

[15] GREG MASTEL, ANTIDUMPING LAWS AND THE U.S. ECONOMY 42–43 (1998). In his former position as Chief Trade Counsel to the U.S. Senate Committee on Finance, which has jurisdiction over U.S. trade laws, Dr. Mastel was closely involved with the development of U.S. anti-dumping policy.

[19] As discussed in Part V of this Chapter, Congress was strongly opposed to inclusion of anti-dumping and countervailing duties in the Doha Development Agenda negotiations.

[20] *See* Chapter 40 of this book.

[21] *See, e.g.,* JAGDISH N. BHAGWHATI, PROTECTIONISM 35 (1988); Finger, *supra* note 3 at 26–27; Richard Boltuck and Robert E. Litan, *America's Unfair Trade Law,* in DOWN IN THE DUMPS 1, 13 (Richard Boltuck and Robert E. Litan eds. 1991).

safeguard investigations combined, and the ratio is almost the same in terms of measures imposed.[22] There are several reasons for this. *First*, the injury standard imposed by the GATT/WTO rules—"material" injury—appears on its face to be a good deal easier to satisfy than the "serious injury" test applied in safeguard cases. *Second*, since dumping is considered to be an unfair trade practice, no compensation or retaliation is required when anti-dumping measures are imposed, unlike the case of safeguards.[23] *Third,* given the intricacies of the margin calculations, particularly where cost is involved, it is easy for an authority to find dumping margins if it wishes to do so.[24] In addition, the fact that in many circumstances export sales below fully allocated cost will be treated as dumped[25] makes it virtually impossible for capital-intensive industries, such as steel, to avoid dumping during downturns in the business cycle.[26] *Fourth*, the anti-dumping laws of some of the major users of anti-dumping laws, such as the United States, give little or no discretion to the authorities to choose not to apply an anti-dumping measure, so that when the necessary findings of dumping and injury have been made, imposition of anti-dumping duties is more-or-less automatic. In the case of safeguards, on the other hand, the authorities usually have quite wide discretion to weigh the domestic industry's need for protection against broader concerns such as consumer interests and international economic policy considerations. *Finally,* countervailing duty actions have never been as popular as anti-dumping cases, perhaps because they rarely result in significant duty levels. And in recent years governments have been less inclined to provide subsidies, at least to the industrial sector.

Part II of this chapter discusses the history of anti-dumping, beginning with the first anti-dumping laws passed in the early part of the last century, and then describes the various efforts within the GATT to control use of such laws. Part III describes the Uruguay Round negotiations that led to the Anti-Dumping Agreement. Part IV analyses the Agreement article-by-article, and discusses the Panel and Appellate Body reports relating to the Agreement. Finally, Part V describes the issues that are being discussed with respect to anti-dumping in the Doha Round.

[22] Between 1995 and 2003 a total of 2416 anti-dumping investigations were initiated by WTO members, and 1511 measures imposed. *Statistics on Anti-Dumping,* available at www.wto.org. By contrast, over the same period Members notified the WTO of only 168 countervailing duty initiations and the imposition of 100 countervailing duty measures. *Statistics on Subsidies and Countervailing Measures,* available at www.wto.org. Between 1995 and October 2003, the WTO Committee on Safeguards had received notification of 137 investigations and 105 measures. Committee on Safeguards, *Annual Reports,* available at www.wto.org.

[23] Moreover, safeguard measures must be applied on a most-favored-nation basis, increasing the cost of compensation or retaliation, whereas anti-dumping measures are targeted against individual countries.

[24] Between 1995 and 2003, the United States initiated 329 anti-dumping investigations and imposed 205 measures, a petitioner success rate of 62 percent. *See* Table 1, *supra.* Almost all of the negative outcomes resulted from negative injury findings rather than findings of no dumping. *See* Congressional Budget Office, *Antidumping Action in the United States and Around the World: an Update* (June 2001), Chapter One, p. 2. According to Blonigen and Prusa, *supra* note 2 at 22, between 1990 and 2000 the U.S. Department of Commerce issued only four negative dumping determinations out of a total of nearly four hundred decisions. Between 1921 and 1967, by contrast, only 75 out of 706 U.S. investigations resulted in the imposition of anti-dumping measures. J. Michael Finger, *The Origins and Evolution of Antidumping Regulation,* in Finger, *supra* note 3 at 26.

[25] *See* text accompanying notes 77–84 *infra.*

[26] Similarly, it is virtually impossible for agricultural producers to avoid selling below cost at certain points in the crop cycle, since they generally have little control over market prices and, particularly in the case of perishable produce, cannot withhold their products from the markets when it is ripe. However, as noted below (*see* discussion of ADA Article 2, Subpart B, in Part IV below), the ADA does take account of this factor, whereas it does not in the case of capital-intensive producers.

First, however, it may be helpful to provide a brief outline of the way in which anti-dumping proceedings are typically conducted. This will help to familiarize the reader with some of the terms used in this rather technical agreement.

Anti-dumping investigations are carried out by government agencies, referred to in the Agreement as *authorities*. An investigation is normally initiated by means of an *application* filed by or on behalf of a domestic industry, which must include evidence of dumping, injury and a causal connection between the two. In a few countries, such as Canada, the United States, and Argentina, the dumping and injury investigations are conducted by separate agencies. In most countries, however, a single agency makes both assessments. The investigation determines whether or not there has been dumping, which exists where the *export price* is below *normal value*, which is normally the price of the *like product* in the home market, so long as that price is at or above cost of production. Where home market sales cannot be used, normal value may be based on prices of sales to *third countries*, or *constructed value,* which is cost of production plus profit. Elaborate adjustments are made to home market (or third country) prices and export prices to ensure that the comparison is fair. The investigation also determines whether the dumped imports have caused or threaten to cause *material injury* to a domestic industry producing the like product.

If the dumping and injury determinations are both affirmative, a *definitive anti-dumping duty* is imposed on future imports. In some countries, notably the United States, the duty is assessed on a *retrospective* basis. Imports must be accompanied by estimated duties in the form of cash deposits, and each year the authorities conduct a review upon request to determine the actual margin based on the difference between the export price of the imported goods and the contemporaneous normal value. This approach has the advantage of assessing duties on a current basis, so that exporters can avoid duties by raising their prices. On the other hand, importers do not know their ultimate liability for anti-dumping duties until as much as two years after importation. Other countries, such as the EC, assess duties on a *prospective* basis, i.e., anti-dumping duties are collected at the time of importation at the margin rate determined during the investigation. Importers thus know their liability at the time of importation, but will be assessed duties even if the dumping has ceased. They can apply for refunds in this situation. In a variant of the prospective system, the Canadian authorities announce the normal value applicable to imports, so that exporters can avoid duties by setting their price at or above normal value.

Provisional measures may be imposed during the course of an investigation, after preliminary dumping and injury determinations have been made. These take the form of bonds or cash deposits required to accompany all future imports, and those imports will be subject to definitive anti-dumping duties in the event that an anti-dumping measure is issued. Dumping investigations may be suspended or terminated if the exporter gives a *price undertaking*, i.e., an undertaking to revise its prices to eliminate the injurious effects of the dumping.

Anti-dumping measures must be *terminated* after five years unless the authorities determine that this would lead to renewed or continued injurious dumping. They must also be terminated at any time that they are no longer necessary to counteract dumping or to prevent injury.

II. A History of Anti-Dumping

A. The Origins of Anti-Dumping Enforcement.

Dumping was traditionally defined as selling for export at prices below those prevailing in the home market.[27] In many cases, this may simply benefit consumers in the importing countries. As explained above, there was, however, concern that industries enjoying protected home markets could use the excess profits they were able to earn in those markets to export at low prices with the aim of driving industries in the importing countries out of business, at which point they would be able to charge high prices to customers in those countries as well.

The first anti-dumping statute was passed by Canada in 1904, in response to concern that U.S. steel producers were dumping steel rails into Canada.[28] This was followed by a number of British Commonwealth countries, New Zealand (1905), Australia (1906) and South Africa (1914).[29] Each of these laws authorized Customs officials to determine whether dumping of particular imports was occurring, and if so, to levy additional duties designed to bring the price of the imported product up to a "fair" or "normal" value.

The first attempt by the United States to deal with dumping took a different approach. The Revenue Act of 1916 (often referred to as the "Anti-Dumping Act of 1916") was an amendment to the Clayton Act, an antitrust law, which declared dumping with the intent of "destroying or injuring" a U.S. industry to be a criminal offense and also to be answerable in treble damages in civil actions.[30] The difficulty of proving the necessary degree of intent on the part of a foreign producer made it difficult for plaintiffs to win cases.[31] Accordingly, five years later the U.S. Congress passed the Anti-dumping Act of 1921, which authorized the U.S. Treasury Department to impose anti-dumping duties after it had been found that dumping had occurred and had injured or threatened to injure a U.S. industry. Passage of the statute was pushed particularly hard by the U.S. chemical industry, which feared intense competition after World War I from German chemical manufacturers, which were highly cartelized and were protected against import competition in the German market by high tariffs.[32]

[27] However, as discussed below (*see* Part IV below, discussion of Article 2 of the ADA, Subpart B), in recent years sales below cost of production have also in effect been treated as dumped under certain circumstances.

[28] *See* Finger, *supra* note 3 at 14–16. It is ironic, to say the least, that the industry that was the target of the first anti-dumping law is now one of the major users of anti-dumping law.

[29] *See* Krishna, *supra* note 11 at 14.

[30] Act of September 8, 1916, Ch. 403, § 801, 39 Stat. 798. As discussed below (*see* text accompanying Note 70), the Act was held by the WTO Appellate Body to be inconsistent with Article VI of the GATT and several provisions of the ADA.

[31] Only a handful of civil cases have been brought under the statute, and few if any resulted in an award of damages, although some confidential settlements have occurred. In one case that did come to final judgment, the plaintiff failed to prove intent. *Matsushita Electric Industrial Co. v. Zenith Radio Corp., supra,* note 12. So far as is known, there have been no criminal prosecutions under the 1916 Act.

[32] Greyson Bryan, Taxing Unfair International Trade Practices: a Study of U.S. Antidumping and Countervailing Duty Laws 608 (1980). Jacob Viner, the economist who has been described as the intellectual architect of anti-dumping law, mentions "the accusation, so common during the war, that Germany was accumulating vast stocks of goods in order to dump them on the markets of the world, with the object of crushing the new industries fostered by the wartime conditions, re-establishing her foreign commerce, and regaining in the field of economic warfare what she was losing on the military battlefield." Jacob Viner, Dumping: A Problem in International Trade 65 (1923) Viner points out that in reality Germany found herself at the end of the war without the goods, the financial resources, or the trade connections to be able to mount a large-scale dumping campaign. *Id.*

B. Article VI of the GATT

The drafters of the Havana Charter and the GATT made no attempt to regulate dumping, since it is the action of a private entity rather than a government and therefore not subject to GATT rules.[33] Their concern instead was to prevent overzealous enforcement of anti-dumping laws that would restrict fairly priced as well as dumped imports.[34] Accordingly, Article VI of the GATT authorizes the use of anti-dumping duties to counteract the effect of dumping but sets forth certain basic rules regulating such use.[35] The two most important of these are that anti-dumping duties may not be levied unless "the effect of the dumping . . . is such as to cause or threaten material injury to an established domestic industry, or is such as to retard materially the establishment of a domestic industry",[36] and that the anti-dumping duties may not exceed the margin of dumping.[37] The margin of dumping is defined as the difference between the export price and "normal" value, which in turn is defined as:

(a) The comparable price, in the ordinary course of trade, for the like product when destined for consumption in the exporting country, or;
(b) In the absence of such price, either
    (i) the highest comparable price for the like product for export to any third country in the ordinary course of trade, or
    (ii) the cost of production of the product in the country of origin plus a reasonable addition for selling cost and profit[38]

Article VI:1 also provides that in making the price comparison, "[d]ue allowance shall be made in each case for differences in conditions and terms of sale, for differences in taxation, and for other differences affecting price comparability."

C. The Kennedy Round International Anti-Dumping Code

Like its predecessors, the sixth round of multilateral negotiations organized under the auspices of the GATT—the Kennedy Round (1964–67)—focused largely on tariff cutting. However, the round also resulted in one of the first GATT agreements to deal with non-tariff barriers, the Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade, generally known as the International Agreement on Anti-dumping ("IAA"),[39] which was designed to introduce various substantive and procedural disciplines into the use of national anti-dumping laws, which some believed were being used in trade-restrictive ways. For example, the U.S. anti-dumping law allowed imposition of provisional measures, which can have a significant impact on trade, without a preliminary

[33] In 1955 New Zealand proposed a GATT discipline on dumping, but it was blocked by the United States, which was concerned about its agricultural exports. JOHN H. JACKSON, WORLD TRADE AND THE LAW OF GATT 412 (1969). GATT Art. VI:1 declares that dumping "is to be condemned" if it causes or threatens material injury to an industry in the importing country. However, nothing in Article VI or in the Anti-Dumping Agreement requires Members to have anti-dumping legislation on their books. As noted above, only a minority of WTO Members are active enforcers of anti-dumping laws.

[34] The United Kingdom argued that dumping was not harmful and that the GATT should instead ban the imposition of anti-dumping duties. Blonigen and Prusa, *supra* note 2 at 4, n. 1.

[35] GATT Art. VI also provides rules regulating countervailing duty actions. See, Chapter 16 of this book.

[36] Art. VI:6(a)

[37] GATT Art. VI:2.

[38] GATT Art. VI:1.

[39] *International Agreement on Anti-dumping,* BISD, 15S/24 (1968).

finding of injury.[40] In the United Kingdom, anti-dumping duties could be imposed without notice or opportunity for the interested parties to be heard.[41] The IAA was also designed to require contracting parties to comply with the requirements of Article VI. Canada, for example, did not require a finding of injury before applying anti-dumping measures; a practice that it claimed was protected by the Protocol of Provisional Application ("PPA") by which the GATT was applied.[42] By signing the IAA, it committed itself to applying the injury test.

The IAA was optional, binding only on those contracting parties who signed it. It imposed a number of substantive and procedural requirements designed to limit the abuse of anti-dumping laws, many of which have been carried forward with few or no changes into the ADA. For example:

- The IAA introduced the concept of a "fair" comparison, requiring the export and domestic price to be compared "at the same level of trade, normally at the ex factory level, and in respect of sales made at as nearly as possible the same time." (Art. 2(f)).
- The causation standard was raised, requiring dumping to be "demonstrably the principal cause" of material injury.[43] (Art. 3). Authorities were required to weigh the effect of dumping against all other factors that might be affecting the domestic industry, examples of such factors being the volumes and prices of non-dumped imports, competition between the domestic producers themselves, and contraction in demand due to substitution of other products or changes in consumer tastes.
- The IAA defined the term "domestic industry." (Art. 4).
- The IAA introduced the concept of regional injury. (*Id.*).
- In response to criticisms by the EC and the UK that investigations in the United States were taking too long, dumping and injury investigations were to be conducted simultaneously. (Art. 5(b)).
- A number of due process-type protections were imposed, including the right of all interested parties to present evidence and to see all relevant information that was not confidential. (Art. 6).
- On-site verifications were authorized. (*Id.*).
- Price undertakings were authorized. (Art. 7).
- Provisional measures could only be imposed after preliminary findings of dumping and injury, and could not be in place for more than three months (six months at the request of the exporter and importer). (Art. 10).
- In certain situations anti-dumping duties could be imposed on imports entering up to ninety days prior to the imposition of provisional measures ("Critical Circumstances"). (Art. 11).
- A permanent Committee on Anti-Dumping Practices was established to oversee the operation of the Agreement. (Art. 12).

The IAA ran into difficulty in the U.S. Congress, which took the position that the U.S. negotiators in the Kennedy Round had only had authority to negotiate tariff reductions,

[40] KENNETH W. DAM, THE GATT: LAW AND ECONOMIC ORGANIZATION 177 (1970).

[41] *Id.*

[42] Id. at 174. The PPA is discussed in Part I of Chapter 5 of this book.

[43] GATT Article VI merely required that the effect of the dumping "cause or threaten" material injury. The 1979 Anti-dumping Code and the Uruguay Round Agreement reverted to the Article VI standard.

and not agreements on non-tariff barriers. The Administration claimed that existing U.S. law was consistent with the IAA, so that U.S. law did not have to be changed to comply with the Agreement, but Congress disagreed. It was particularly concerned that the higher causation standard as well as the requirement of a finding of "material" injury (or threat of material injury) before dumping duties could be imposed, would make it harder for U.S. industry to obtain relief than the simple "injury" test required by U.S. law.[44] It accordingly enacted legislation declaring that U.S. law took precedence over any obligations created by the Agreement.[45]

D. The Tokyo Round Anti-Dumping Code

The Tokyo Bound resulted in a number of plurilateral agreements, or "Codes," binding only on those GATT contracting parties that signed them. One of these was the Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade, usually referred to as the "Anti-dumping Code" ("Code"), which replaced the 1967 Agreement.[46] In fact, it made few changes to the 1967 Agreement. Most importantly, perhaps, it instituted time limits for investigations, which were normally to be completed within one year. (Art. 5.5). It elaborated the rules relating to price undertakings. (Art. 7). It added a provision requiring that "special regard" be given by developed countries to the special situation of developing countries when considering the application of anti-dumping measures, and it required that "constructive remedies" be explored before applying anti-dumping duties where they would affect the essential interests of developing countries. (Art. 13). The Code also established a dispute settlement procedure, under which the Committee on Anti-Dumping Practices, established by the Code, was to attempt conciliation, and if that failed, to appoint a panel to examine the matter. (Art. 15).

In one significant respect, the Code weakened the Kennedy Round Agreement. Instead of requiring the dumped imports to be a "'principal cause" of material injury, dumped imports merely had to be "causing" injury. The authorities were no longer required to weigh the effect of dumping against other factors, although they were required not to attribute to the dumped imports injury caused by other factors (Code Art. 3.4).[47]

Twenty-five GATT contracting parties signed the Code. The ADA has incorporated most of the Code provisions.

[44] Article VI of the GATT itself imposes a "material injury" standard, but the United States took the position that its plain "injury" test was protected by the "grandfather" rights conferred by the Protocol of Provisional Application. *See* note 42, *supra.*

[45] Pub. L. No. 90-634, Title II, § 201, 82 Stat. 1347 (codified as amended in 19 U.S.C. 160 (note)). The "Fast-Track" procedure adopted by Congress in 1994 in connection with the legislation giving the President negotiating authority for the Tokyo Round was in part designed to overcome the threat to the credibility of U.S. trade negotiators caused by what was perceived as a failure by the United States to implement the IAA. *See, e.g.,* JOHN H. JACKSON, THE WORLD TRADING SYSTEM 93–95 (1997)

[46] BISD 26S/171 (1980).

[47] As in the case of the Kennedy Round Agreement, the U.S. Congress was very reluctant to change the existing "injury" test under U.S. law to "material injury" to comply with the Code, fearing that this would make it more difficult for U.S. industries to obtain relief. However, the EC insisted on the change being made. JOHN H. JACKSON, JEAN-VICTOR LOUIS, AND MITSUO MATSUSHITA, IMPLEMENTING THE TOKYO ROUND: NATIONAL CONSTITUTIONS AND INTERNATIONAL ECONOMIC RULES 1145 (1994). Congress made the change, but defined "material injury" as any injury that is not "inconsequential, immaterial, or unimportant", and made clear in the legislative history that the U.S. International Trade Commission, the agency charged with conducting injury investigations, was to apply the same standard that it had been using under the old "injury" standard. BRYAN, *supra* note 32, at 63–64. *See also,* JACKSON, *supra* note 45 at 268.

E. Litigation in the GATT

Ten matters involving anti-dumping were taken to GATT panels, and eight of these were decided between 1990 and 1995. Indeed, only one anti-dumping case, *Swedish Anti-Dumping Duties*, was decided in the first 38 years of the GATT system, presumably reflecting the fact that anti-dumping laws were little used until the last thirty years or so. A brief summary of the cases follows:

- *Swedish Anti-Dumping Duties.*[48] The Panel found that the Swedish anti-dumping system, which was based on minimum prices, was not a violation of Article VI of the GATT *per se,* although it cautioned that in practice the system could lead to a violation.
- *New Zealand—Imports of Electrical Transformers from Finland.*[49] The Panel upheld the finding of dumping but found that the injury determination was inconsistent with Article VI of the GATT. It rejected New Zealand's argument that an injury determination could not be challenged in the GATT.
- *EEC—Regulation on Imports of Parts and Components.*[50] The panel found that the EEC's "screwdriver" regulations, which imposed anti-dumping duties on parts and components imported into the EEC for assembly into finished products which were themselves already subject to an anti-dumping duty order, violated the national treatment obligations imposed by Article III of the GATT and could not be justified under the Article XX (d) exception for measures "necessary to secure compliance with laws and regulations which are not inconsistent with the provisions of this Agreement." The Panel did not rule on the question whether the regulations violated GATT Article VI.
- *United States—Imposition of Anti-Dumping Duties on Imports of Seamless Stainless Steel Hollow Products from Sweden,*[51] The Panel held that the anti-dumping investigation had been improperly initiated because the United States authorities had not determined that the application was filed by or on behalf of a domestic industry. The United States blocked adoption of the Report.
- *United States—Anti-Dumping Duties on Gray Portland Cement and Cement Clinker from Mexico.*[52] The Panel found that the United States had improperly initiated the anti-dumping investigation because it had failed to determine whether "all or almost all" of the producers in the regional market at issue supported the petition, as required by the Code. The United States blocked adoption of the Report.
- *Korea—Anti-Dumping Duties on Imports of Polyacetal Resins From the United States.*[53] The Panel found that various aspects of the injury determination were inconsistent with Article 3 of the 1979 Anti-dumping Code. In particular, the Panel criticized the failure of the Korean authorities to indicate whether the determination was based on threat of material injury, actual material injury, or material retardation of an industry. *Id.* at ¶¶ 223–224.
- *United States—Anti-Dumping Duties on Imports of Stainless Steel Plate From Sweden.*[54] The Panel held that the rejection by the U.S. International Trade

[48] BISD 3S/81 (adopted February 26, 1955).
[49] BISD 32S/55 (adopted July 18, 1985).
[50] BISD 37S/132 (adopted May 16, 1990).
[51] ADP/47 (August 20, 1990) (unadopted).
[52] ADP/(2 (September 7, 1992) (unadopted).
[53] BISD 40S/205 (adopted April 27, 1993).
[54] ADP/117 and Corr.1 (February 24, 1994) (unadopted).

Commission of a request by the exporter to conduct a "changed circumstances" review was in violation of Article 9.2 of the 1979 Anti-Dumping Code. The United States blocked adoption of the Report.

- *United States—Imposition of Anti-Dumping Duties on Imports of Fresh and Chilled Atlantic Salmon from Norway.*[55] The Panel held that the failure by the United States Department of Commerce to show that the sample of salmon farms it had selected was representative, its use of "facts available" with respect to one farm, and its failure to take proper account of different weight categories in calculating cost of production violated the 1979 Code. However, the Panel rejected various other claims made by Norway with respect to the dumping finding, and all of its claims with respect to the injury determination.
- *EC—Anti-Dumping Duties on Audio Tapes in Cassettes Originating from Japan.*[56] The Panel found that the EC had acted inconsistently with Article 2.6 of the 1979 Anti-Dumping Code by failing to make adjustments for differences in indirect selling expenses incurred in the home and export markets. However, it held that the EC's method of comparing a weighted-average home market price and failing to give credit for negative dumping margins ("zeroing out") was not necessarily a failure to conduct a "fair comparison," which Japan had argued was required under Articles 2.1 and 2.6 of the 1979 Code. It also rejected Japan's claims with respect to the calculations of profit and selling, general and administrative expences ("SG&A"), as well as its claims with respect to the injury determination. The EC blocked adoption of the Report.
- *EC—Imposition of Anti-Dumping Duties on Imports of Cotton Yarn from Brazil*.[57] The Panel rejected a series of challenges by Brazil to an anti-dumping measure, which included an attack on the EC's failure to take account in its price comparison of an exchange rate freeze taken in response to high inflation, to various aspects of the injury determination, and to the EC's alleged failure to taken account of Brazil's status as a developing country, as required by Article 13 of the 1979 Anti-Dumping Code.

III. The Uruguay Round Negotiations

At the beginning of the Uruguay Round, there were no plans to amend the Tokyo Round Anti-Dumping Code. The Committee on Anti-Dumping Practices had reported in 1982 and 1985 that the Code "was basically sound," and that the "problems of implementation that arose could effectively be addressed within the Committee."[58] The Ministerial Declaration that initiated the Round made no mention of anti-dumping.[59] However, as the negotiations continued, issues relating to anti-dumping began to emerge. There were two camps. A number of countries raised concerns about various practices engaged in by certain countries—notably the United States and the EC—which, although not necessarily illegal under GATT Article VI or the Anti-dumping Code, seemed to be unfair. These included:

[55] BISD 41S/229 (adopted April 27, 1994).
[56] ADP/136 (April 28, 1995) (unadopted).
[57] BISD 42 S/17 (adopted October 30, 1995).
[58] THE GATT URUGUAY ROUND: A NEGOTIATING HISTORY (1986–1992) 1464 (Terence P. Stewart ed. 1993).
[59] GATT *Ministerial Declaration,* Punta Del Este, Uruguay (September 20, 1986). By contrast, safeguards and subsidies and countervailing measures were mentioned as subjects for negotiation.

- The U.S. and EC practice of comparing individual home market prices with a weighted average of home or third country prices, which, coupled with the "zeroing out" of negative margins, was more-or-less guaranteed to produce a dumping margin whenever prices fluctuated during the period of investigation.[60]
- The U.S. statutory requirement that the allowance for selling expenses and profit included in the calculation of constructed value be a minimum of ten and eight percent of costs respectively. Many countries believed that these minima, particularly with respect to profit, were much higher than was normal for many industries and therefore generated artificially high dumping margins.
- The arbitrary use of "facts available" to determine margins when a party failed or refused to supply necessary information.
- The low *de minimis* standard (0.5 percent) applied by the United States to comply with the requirement under the 1979 Code that investigations be immediately terminated where the dumping margin was determined to be negligible.
- The failure of the United States to use the "sunset" procedure applied by many other countries, under which anti-dumping (and countervailing duty) orders were automatically reviewed from time to time to determine whether they were still necessary to prevent injurious dumping.

As discussed below, the ADA addressed each of these concerns.

On the other hand, the United States and the EC wanted the new agreement to endorse practices designed to close what they perceived to be significant enforcement loopholes. For example, they wanted the rules that they were currently applying to deal with "circumvention" of anti-dumping orders to be embodied in the international agreement.[61] However, the negotiators were unable to reach agreement on this issue, and instead referred the matter to the Committee on Anti-Dumping[62], which to date has made no progress. The United States and the EC were also unsuccessful in obtaining inclusion of rules concerning input dumping and "recidivist" dumping. The United States did however succeed in including a provision authorizing authorities to disregard under certain circumstances below-cost sales in determining normal value, thus endorsing the practice that many countries, including the United States, had been applying since the

[60] To use a simple example, suppose that the only sales made by the exporter were a home market sale and an export sale on Day 1 of the investigation at a price of 10, and another home market sale and export sale on Day 365 at a price of 12. Clearly there is no price discrimination. Yet, under the U.S. and EC practice normal value would be 11 (assuming that each sale was of the same quantity), and the export sale on Day 1 would be treated as dumped. The exporter would receive no credit for the fact that the sale on Day 365 was sold above normal value; the sale would be treated as one at a zero margin rather than one at a margin of minus 1.

[61] As noted in Part II.E *supra,* a GATT panel had held that the "screwdriver" regulations promulgated by the EC to prevent circumvention of anti-dumping measures through assembly operations in the EC using imported parts violated Article III:2 and III:4 of the GATT (national treatment) and could not be justified under Article XX(d). The EEC did not attempt to justify the measures under Article VI, so the Panel did not rule on this issue. *EEC—Regulation on Imports of Parts and Components, supra* note 50. The United States applies similar rules, but to date they have not been challenged. It has been argued that the imposition of anti-dumping duties on parts and components that have not been the subject of findings of dumping or injury violates Article VI of the GATT. *See*, *e.g.*, David Palmeter, *A Commentary on the WTO Anti-Dumping Code,* 30(4) J. WORLD TRADE 43, 66 (1996). Incorporation of the rules into the ADA would of course have insulated them from challenge, since any conflict between the GATT and any other agreement in Annex 1A to the WTO Agreement is to be resolved in favor of the latter. *See*, *WTO Agreement*, *General Interpretative Note to Annex 1A*.

[62] *See Uruguay Round Ministerial, Decision on Anti-Circumvention*, reproduced in THE LEGAL TEXTS: THE RESULTS OF THE URUGUAY ROUND OF MULTILATERAL TRADE NEGOTIATIONS 397 (1999) ("THE LEGAL TEXTS").

mid-1970s.[63] In addition, the ADA now authorizes the technique of "cumulation", under which the injurious effect of dumped imports from different countries can be considered together.[64] This practice had also been in effect in a number of countries, including the EC and the United States, for a number of years.

The United States also sought to impose an extremely narrow standard of review on panels reviewing disputes involving anti-dumping, in an effort to prevent panels from second-guessing the decisions of national authorities. Although the language proposed by the United States was not adopted, the ADA is the only one of the Uruguay Agreements to contain its own standard of review, which was designed to be narrower than the general standard contained in Article 11 of the Dispute Resolution Understanding that is applicable to all other disputes in the WTO system.[65]

The ADA negotiations were extremely contentious and threatened the success of the entire Round. They have been described as having "aroused passions like no other."[66] Anti-dumping was one of the four areas where it was not possible to provide a proposed text for the GATT Ministerial Meeting held in Brussels in 1990, which was intended to be the last Uruguay Round meeting.[67] In an attempt to break the impasse, the Director-General of the GATT produced the so-called "Dunkel Draft" in 1991, which with some modifications became the text of the ADA, although final agreement was not reached until the closing stages of the Round.

IV. The Anti-Dumping Agreement

The ADA, which builds on the 1979 Code, lays out in considerable detail the principles that Members must follow when they conduct anti-dumping investigations and apply anti-dumping measures. It provides elaborate rules on how the dumping margins are to be calculated, as well as specifying the factors that must be considered in injury determinations. It also contains detailed procedural rules designed to provide the parties in anti-dumping proceedings with a measure of due process. These procedural rules are very similar, though not identical, to those contained in Part V of the Agreement on Subsidies and Countervailing Measures, dealing with countervailing duty proceedings.[68]

ARTICLE 1: PRINCIPLES

Article 1 of the ADA requires that anti-dumping investigations and measures comply with the provisions of GATT Article VI and the Agreement. In *United States—1916 Act,* the Appellate Body held that this provision, as well as Article 18.1, limits anti-dumping measures to those expressly authorized by GATT Article VI and the ADA, i.e., definitive anti-dumping duties, provisional measures and price undertakings.[69] It upheld a panel ruling that by providing criminal penalties and treble damage remedies in the case of

[69] Report of the Appellate Body, *United States—Anti-Dumping Act of 1916,* WT/DS136/AB/R, WT/DS162/AB/R (2000) ("*United States—1916 Act*").

intentional dumping, the U.S. Anti-Dumping Act of 1916 (see Part II A, *supra*) was inconsistent with Article 1, as well as with Article VI:1 and VI:2 of the GATT and various other provisions of the ADA.

ARTICLE 2: DETERMINATION OF DUMPING

Article 2 of the ADA sets forth detailed rules relating to the determination of dumping. As mentioned above, many of these rules were contained in the 1979 Anti-Dumping Code but others were introduced to meet concerns that were raised during the Uruguay Round negotiations.

A. The Basic Comparison

Articles 2.1 and 2.2 amplify Article 1 of GATT Article VI in stating that (i) dumping occurs when the export price of a product is "less than the comparable price, in the ordinary course of trade, for the like product when destined for consumption in the exporting country," and that (ii) when home market sales are non-existent or do not permit a proper comparison because of their low volume or "the particular market situation", normal value may be based on exports to an appropriate third country[70] or the cost of production in the county of origin plus a reasonable amount for selling, general and administrative costs ("SG&A")[71] and for profits. A footnote indicates that home market sales will normally be considered sufficient where they are equal to at least five percent of the volume of exports to the investigating country and that a lower ratio may be acceptable where the sales are of "sufficient magnitude".

In *United States—Hot-Rolled Steel From Japan*, the Appellate Body reviewed the U.S. practice of automatically excluding from the determination of normal value all sales by the producer to affiliates at prices more than 0.5 percent below the average price to unaffiliated parties, on the ground that they were outside the "ordinary course of trade," without giving the producer an opportunity to show that the sales were in fact in the ordinary course of trade.[72] Affiliated party sales that were above the average price to unaffiliated parties, on the other hand, were included unless the exporter demonstrated that they were "aberrationally high", and the U.S. Department of Commerce had provided no guidelines as to what this term meant. The Appellate Body stated that while Members had discretion in selecting the proper methodology for determining when sales were in the ordinary course of trade, this discretion was limited and must be exercised "in an even-handed way that is fair to all parties affected by an anti-dumping investigation."[73] By systematically raising normal value and thereby raising dumping margins, the U.S. methodology was inconsistent with Article 2.1.[74]

In the same case the Appellate Body ruled that Article 2.1 does not preclude the use of "downstream" sales by affiliates of the producer in the determination of normal value where the sales to those affiliates are excluded as being outside the ordinary course of trade.[75]

[70] This differs from GATT Art. VI:1(b)(i), which refers to the "highest comparable price" for export to "any" third country.

[71] GATT Art. VI:1(b)(ii) refers only to selling costs.

[75] *Id.* ¶ 172.

B. Sales Below Cost

Article 2.2.1 specifies that sales in the home or third country markets below unit cost of production (fixed and variable) plus administrative, selling and general costs may under certain conditions be treated as not being in the ordinary course of trade and disregarded in determining normal value. This provision, which had not been included in the 1979 Anti-dumping Code,[76] reflects one of the most important developments in anti-dumping enforcement since passage of the original laws. In 1974, the U.S. Congress enacted an amendment to the U.S. anti-dumping law—reportedly in response to a powerful Senator's concern about a particular case[77]—that was designed to impose anti-dumping duties on imports that were sold below cost, even they were not sold below home market value. This had to be accomplished in a roundabout fashion, since simply to declare imports priced below cost as below normal value would have violated GATT Article VI:1, which only permits normal value to be based on constructed value (cost plus profit) where there are no or insufficient home market sales in the ordinary course of business. Congress achieved essentially the same result by declaring home market sales below cost to be outside the ordinary course of business and therefore not to be used in the calculation of normal value.[78]

Most countries that were actively enforcing anti-dumping laws followed suit quite quickly. The sales-below-cost concept revolutionized anti-dumping enforcement. Cost became the key factor in the majority of cases.[79] Exporting companies were more likely be found to be dumping since they were now effectively required to meet two benchmarks on their export sales, home market (or third country price) *and* cost of production. It is particularly difficult for capital-intensive industries, with high fixed costs, to sell at or above full cost during downturns in the business cycle. It is generally considered that in the short-term at least, it makes economic and business sense for a company to sell below full cost, so long as the selling price covers variable cost and contributes towards fixed costs.[80] It has also been observed that under most anti-monopoly laws, selling below full cost is not considered anti-competitive, and that only sales below marginal or variable cost are penalized.[81]

[76] However, in 1978, Australia, Canada, the EC, and the United States reached an understanding that it would be appropriate to disregard below-cost sales as outside the ordinary course of business. Finger, *supra* note 3, at 29.

[77] *Id.*

[78] That this approach amounts to treating below-cost exports as dumped can be illustrated by a simple example. Assume that cost of production is 100, and export price is 90. If the home market price is at or above 100, then the export sale is below normal value and dumped in the traditional sense. If home market sales are at prices below 100, they will be disregarded and normal value may be based on constructed value, i.e. cost of production plus profit (100 + profit), in which case the export sale will again be treated as dumped. Thus, even it the home market price is at or below 90, so that there is no dumping in the traditional sense, the export sale will still be treated as dumped.

[79] One hundred out of 141 anti-dumping findings by the U.S. Department of Commerce between 1995 and 1998 relied wholly or partially on cost analysis. Brink Lindsey, *The U.S. Antidumping Law—Rhetoric versus Reality,* 34(1) J. WORLD TRADE 1, 14 (2000).

[80] *See*, *e.g.*, Deardorff, *supra* note 13 at 30. Assume that a manufacturer has fixed costs of 1000 per month and produces 100 units per month at a variable cost of five per unit. Fully-allocated costs per unit are (1000/100 + 5) = 15. If the market price is 12 and the manufacturer continues to produce and sell, it will make a loss of three per unit, for a total loss of 300. If on the other hand it ceases production, it will lose its entire fixed costs of 1000. Clearly, then, it makes economic sense for the manufacturer to continue producing and selling so long as it can recover more than its variable costs.

[81] *See,* Deardorff, *supra* note 13 at 31; JACKSON, *supra* note 45 at 264–65; Alan Sykes, *Antidumping and Antitrust: What Problems Does Each Address?, in* BROOKINGS TRADE FORUM 1998 at 1, 14 (Robert Z.

It should be noted that disregarding sales below cost in determining home market or third country value is permissive, not mandatory, so that a country may choose to include below-cost sales in its calculation of normal value. In addition, Article 2.2 imposes a number of conditions that must be met before below-cost sales may be disregarded:

- They must be made *"within an extended period of time,"* which is defined in Note 4 to the Agreement as "normally one year but shall in no case be less than six months".
- They must be *"in substantial quantities."* This is defined as occurring where (i) at least twenty percent of the sales under consideration are below cost, or (ii) the weighted average selling price of the transactions under consideration is below the weighted average per unit cost. The latter provision appears to be designed for cases involving highly perishable products, where it is common for a high proportion of sales to be made below cost because of the impossibility of storing the product during periods of low prices.[82]
- Sales at prices which *recover all costs over a "reasonable period of time"* may not be disregarded.[83] Sales that are *below unit cost at the time of sale but above weighted average unit costs for the period of investigation* are to be considered to provide for recovery of costs within a reasonable period.

C. Cost Determinations

The authorities must determine production costs in two situations. *First*, where they are investigating whether sales in the home market or third countries are below production cost and therefore should be disregarded in the determination of normal value under Article 2.1 of the Agreement. *Second*, where they are basing normal value on constructed value in the absence of a viable home or third country market (either because there are no insufficient sales to such markets or because all such sales are below cost). Determining the cost of a particular item produced by a multi-product company can be quite subjective and many manufacturers do not attempt in the ordinary course of their business to cost

Lawrence ed., 1998). It has been suggested that the sales-below-cost provision was inconsistent with the national treatment requirement of GATT Article III, because it subjected imported goods to more rigorous pricing standards than competing domestic products. *See, e.g.,* Gary Horlick, *The United States Anti-dumping System*, *in* Jackson and Vermulst, *supra,* note 13 at 134; Ronald A. Cass and Stephen J. Narkin, *Antidumping and Countervailing Duty Law: The United States and GATT,* in Boltuck and Litan*, supra,* note 21 at 200, 212. Of course, now that the sales below cost provision is embodied in the Anti-Dumping Agreement, no such argument could be made, since General Interpretative Note to Annex 1A of the Uruguay Round Agreements provides that in the event of a conflict between GATT 1994 and one of the other Annex 1A agreements, the other agreement prevails.

[82] *See* the Statement of Administrative Action in MESSAGE FROM THE PRESIDENT OF THE UNITED STATES TRANSMITTING THE URUGUAY ROUND TRADE AGREEMENTS, TEXTS OF AGREEMENTS IMPLEMENTING BILL, STATEMENT OF ADMINISTRATIVE ACTION AND REQUIRED SUPPORTING STATEMENTS, H.R. Doc.NO. 316, 103rd Cong., 2ND Sess. (1994) at B.3. The U.S. Department of Commerce had developed a rule that sales below cost of highly perishable products would only be disregarded if they exceeded fifty percent of total sales. The rule in the Agreement is a modification of that approach.

[83] Nothing in the Agreement limits the "reasonable period of time". To be consistent with economic principles and normal business practices, the period of measurement should be the full business cycle. Jackson, *supra,* note 45 at 265. In the 1970s, when the U.S. Treasury Department was administering the U.S. anti-dumping law, it measured cost recovery over the full business cycle. J. Miranda, R. Torres, and M. Ruiz, *The International Use of Antidumping:1987–1997*, 32(5) J. WORLD TRADE 5, 62, n. 41 (1998). But the United States, and, so far as is known, other countries that apply the sales-below-cost provision now define "reasonable period of time" as the period of investigation.

each product.[84] The authorities must make judgments on how to allocate costs that benefit more than one product, such as research and development, depreciation of machinery used to produce more than one product, and overhead. Articles 2.2.1.1 and 2.2.2, which are both new to the ADA, are designed to limit the discretion of investigating authorities in this respect, since the cost area, more than any other in the anti-dumping field, lends itself to arbitrary decision-making. Article 2.2.1.1 specifies that costs are normally to be based on the producer's records provided that they are in accordance with generally accepted accounting principles of the exporting country and that they reasonably reflect the costs associated with the production and sale of the product. All available evidence must be considered with respect to the proper allocation of costs, including the method historically used by the exporter or producer, especially in relation to establishing appropriate amortization and depreciation periods and allowances for capital expenditures and other development costs. In *United States—Final Dumping Determination on Softwood Lumber from Canada*, WT/DS264/AB/R (2004), the Appellate Body reversed the Panel finding that Article 2.2.1.1 never requires investigating authorities to compare different allocation methodologies to assess their advantages and disadvantages, and said that they may have to make such comparisons depending on the circumstances of the case (¶¶ 135–139).

Article 2.2.1 also requires that non-recurring cost items, including start-up costs, that benefit future and/or present production be taken into account.[85] Note Six to the ADA specifies that the adjustment made for start-up operations is to reflect costs at the end of the start-up period, or, if that period extends beyond the period of investigation, the most recent costs that can reasonably be taken into account.

Article 2.2.2, which was proposed by the EC, was aimed at preventing the fairly arbitrary determination of selling, general and administrative expenses ("SG&A") and profit engaged in by some countries, in particular the United States where by statute SG&A were required to be a minimum of ten percent of direct costs, while profit was required to be at least eight percent of direct costs plus SG&A.[86] This of course created artificially high dumping margins wherever actual costs and profits were below these figures. Article 2.2.2 specifies that where possible SG&A and profit are to be based on actual data relating to production and sales in the ordinary course of business of the like product by the exporter or producer under investigation.[87] Where this is not possible, they can be based on any of the following:

- The producer's SG&A and profit on sales of the same general category of products in the domestic market[88]

[84] Some of the difficulties in determining production costs are described in JACKSON, *supra* note 45 at 264–65.

[85] The prior practice of countries such as the United States with respect to recognizing start-up costs had been quite uneven.

[86] The minimum profit requirement was clearly in violation of Article 2.4 of the 1979 Code, which specified that generally "the addition for profit shall not exceed the profit normally realized on sales of products of the same general category in the domestic market of the country of origin."

[87] By specifying that SG&A and profit be based on sales "in the ordinary course of business", Article 2.2.2 permits exclusion of below-cost sales in the calculation. It has been pointed out that this practice leads to systematic overstatement of profit in a way that would not be permitted by securities regulators. Horlick and Shea, *supra* note 66 at 18–20. In *European Communities—Anti-Dumping Duties on Malleable Cast-Iron Tube or Pipe Fittings From Brazil,* WT/DS219/AB/R (2003), the Appellate Body ruled that it was permissible to include low-volume sales in the calculation of SG&A and profit, even though Article 2.2 of the ADA explicitly authorizes exclusion of such sales in the determination of normal value.

[88] In *Thailand—Anti-Dumping Duties on Angles, Shapes and Sections of Iron or Non-Alloy Steel and H-Beams from Poland,* WT/DS122/R (2001) *("Thailand—Steel")*, a WTO panel held that it was

- The weighted average of the amounts incurred and realized by other exporters and producers subject to investigation with respect to the production and sale of the like product in the domestic market[89]
- Any other reasonable method, provided that the profit does not exceed that normally realized by other exporters and producers of the same general category in the domestic market

A WTO panel has ruled that the first two approaches, unlike the last, do not require a test of reasonableness.[90] The panel also ruled that there is no hierarchy among the three methods, and that the investigating authorities are free to choose between them.[91]

D. Constructed Export Price

Article 2.3 provides that where there is no export price, or where the export price is unreliable because of association or a compensatory arrangement between the exporter and the importer or a third party, export price may be constructed based on the price at which the imported product is first resold to an independent buyer, or, if not resold to an independent buyer or not resold in the condition in which imported, on any reasonable basis. This provision comes into play most frequently when the importer is related to the exporter through stock ownership.[92] Various adjustments are made, essentially to strip out any costs incurred in the importing country prior to resale, together with any associated profit, as specified by Article 2.4.

E. Fair Comparison

Article 2.4 specifies that the comparison between export price and normal value must be "fair." It also provides a number of detailed rules relating to the comparison:

- The comparison is to be made at the same *level of trade*, normally at the *ex-factory level*, and of sales made at *as nearly as possible the same time*. The ex-factory requirement means that all costs incurred in transporting the product from the factory to the point of sale (e.g. inland freight, ocean freight, insurance) must be deducted from both the export price and the prices used to determine normal value.
- Allowance is to be made for differences affecting price comparability, including differences in *conditions and terms of sale*, *taxation, levels of trade, quantities, physical characteristics*, and any other differences, which affect price

appropriate to use the narrowest category of products for which separate profit data were available. *Id.* at ¶ 7.117.

[89] The Appellate Body has held that the term "weighted average" implies more than one other producer, so that if there is only one besides the producer under investigation, this method cannot be used. *See* Report of the Appellate Body, *European Communities—Anti-Dumping Duties on Imports of Cotton-Type Bed Linen from India,* WT/DS141/AB/R (2001) ("*EC—Bed Linen AB*") ¶¶ 72–77. In the same case it held that sales outside the ordinary course of trade may not be excluded when using this method. *Id.* at ¶¶ 80–84.

[90] Report of the WTO Panel, *European Communities—Anti-Dumping Duties on Imports of Cotton-Type Bed Linen from India,* WT/DS141/R (2001) ("*EC—Bed Linen Panel")*, ¶ 6.97; *See also*, *Thailand—Steel, supra* note 88 at ¶ 7.128.

[91] *EC—Bed Linen Panel*, *supra* note 90 at ¶ 6.62. Neither of these last two issues was appealed.

[92] U.S. law specifies a wide range of relationships that will disqualify the price between exporter and importer and require use of a price constructed from the first unrelated sale. *See,* Tariff Act of 1930, as amended, Section 771(33), 19 U.S.C. § 1677(33).

comparability.[93] In *United States—Korean Stainless Steel,* a WTO panel held that an adjustment for bad debt incurred on sales to an unrelated importer could not be justified under this provision.

> [W]e fail to see how the fact that a customer who has purchased on credit subsequently went bankrupt and failed to pay for his purchases could be deemed 'a circumstance under which sales are made', at least in a case such as this one where the seller had no knowledge of the precarious financial situation of the purchaser.[94]

- Where export price is based on the first resale to an independent buyer, allowance should be made for *costs, including duties and taxes, incurred between importation and resale*, together with profit. The panel in *United States—Korean Stainless Steel* held that no adjustment could be made under this provision with respect to bad debt incurred by a related importer, since it is not a cost occurring between importation and resale.

> To deduct costs which not only were incurred after the date of resale but which were entirely unforeseen at that time would not result in a "reliable" export price in the sense of the price that would have been paid by the related exporter had the sale been made on a commercial basis.[95]

The same panel observed that the term "should" is not mandatory, so that authorities are not required to make adjustments under this provision.[96]

- Where price comparability is affected, normal value is to be established at a level of trade equivalent to the level of trade of the constructed export price, or an allowance is to be made for the difference.
- The authorities are to indicate to the parties what information is necessary to ensure a fair comparison, and are not to impose an unreasonable burden of proof in this respect.

F. Currency Conversion

Article 2.4.1 specifies that currency conversions are to be made using the rate of exchange on the date of sale, although when a forward sale of currency is directly linked to the export sale, that rate is to be used. Exchange rate fluctuations are to be ignored, and in an investigation (but not, apparently, in a review) exporters are to be allowed at least sixty days to adjust their export prices to reflect sustained movements in exchange rates during the period of investigations. The requirement that the exchange rate on the date of sale be used reflected concern that the previous U.S. practice of using quarterly exchange rates could create artificial dumping margins. In *United States—Korean Stainless Steel* the WTO panel held that where home market sales are denominated in the same

[93] A WTO panel has held that an investigating authority must make adjustments for all physical differences significantly affecting price comparability, not just the most important ones, even if making the adjustment for the others would be complex. Report of the WTO Panel (not appealed), *Argentina—Definitive Anti-Dumping Measures on Imports of Ceramic Floor Tiles from Italy,* WT/DS189/R (2001) (*"Argentina—Floor Tiles"*), ¶ 6.117.

[94] Report of the WTO Panel (not appealed), *United States—Anti-Dumping Measures on Stainless Steel Plate in Coils and Stainless Steel Sheet and Strip from Korea,* WT/DS179/R (2001) *("United States—Korean Stainless Steel"),* ¶ 6.76

[95] *Id.* ¶ 6.100.

[96] *Id,* ¶ 6.93. The Panel reasoned that failure to make such adjustments would raise constructed export price and therefore lower the dumping margin.

currency as the export sales, it is inconsistent with this provision to perform a double currency conversion, from the export currency to the home market currency and back again.[97]

G. Price Averaging

Under Article 2.4.2, the comparison in the investigation phase must normally be on a weighted average to weighted average or transaction-to-transaction basis.[98] This provision was included because of concern over the practice of some countries—notably the United States and the EC—of comparing the price of each individual export sale with a normal value that was based on all home market or third country sales during the period of investigation.[99] It is easy to see how this practice could generate artificial dumping margins where prices fluctuated during the period of investigation, even though the export and home market prices were the same on any given date.[100] However, because of U.S. concern that use of average prices might mask dumping targeted at particular regions of the country or particular customers, Article 2.4.2 also provides that individual export prices may be compared with a weighted average normal value if there is "a pattern of export sales which differ significantly among different purchasers, regions or time periods," and the authorities explain why these differences cannot be taken into account using average-to-average or transaction-to-transaction comparisons.

In *EC—Bed Linen,*[101] the Appellate Body struck down the EC's practice of "zeroing" negative dumping margins calculated on a model-by-model basis. The EC had calculated a separate margin for each "model" or "type" within the broad 'product category under investigation. It had then calculated a weighted average of the individual margins, but ascribed zero to those models that had negative margins (i.e., the export price was higher than normal value). The Appellate Body concluded that this practice was improper. It reasoned that Article 2.1 of the ADA declared that a "product" was deemed dumped when its export price was lower than the home market price. Having defined the product as "bed linen" for purposes of the investigation, the authority could not then determine separate margins for subcategories of that product.[102]

The panel in *United States—Korean Stainless Steel* ruled that the use of multiple averaging periods based simply on the fact that the normal value (expressed in the export currency) had changed significantly in relation to the export value because of a devaluation was inconsistent with this provision. Only a change in prices *and* differences

[97] *Id.* ¶ 6.41.

[98] One panel has held that weighted average normal value must be based on all domestic transactions, and not on a statistical sample. Report of the Panel (not appealed), *Argentina—Definitive Anti-Dumping Duties on Poultry from Brazil,* WT/DS241/R (2003) ("*Argentina—Poultry*").

[99] During the Uruguay Round negotiations two GATT panels had concluded that this methodology was not *per se* inconsistent with the requirement in Article 2.6 of the Anti-dumping Code that the comparison between normal and export value be "fair", but that fairness would have to be judged in the light of the facts of each case. *United States—Imposition of Anti-Dumping Duties on Imports of Fresh and Chilled Atlantic Salmon From Norway*, *supra* note 55, at ¶ 481; *EC—Audio Cassette Tapes*, *supra* note 56 at ¶ 355.

[100] *See* note 60 *supra.*

[101] *Supra,* note 89.

[102] A GATT panel had ruled that zeroing was not necessarily a violation of the general obligation under Articles 2.1 and 2.6 of the 1979 Anti-dumping Code to make a "fair" comparison. *EC—Audio Cassette Tapes*, *supra* note 56 ¶ 358. In *United States—Final Dumping Determination on Softwood Lumber From Canada,* WT/DS264/AB/R (2004), the Appellate Body upheld the panel's finding that the "zeroing" methodology used by the United States in that case was impermissible.

in the relative weights by volume during the POI of sales in the home market as compared with the export market would justify use of multiple averaging periods.[103]

By its terms, the averaging rule applies only to the "investigation phase," and not to duty assessment.[104]

H. Transshipment

Article 2.5 provides that where goods are imported not directly from the country of origin but from a third country, the export price from the third country is normally to be compared with the comparable price in that country, though the price comparison may be made with the price in the country of origin if the goods are merely transshipped through the third country, such products are not produced in the third country, or there is no comparable price for them in the country of export.

I. Like Product

Article 2.6 defines "like product" as "a product which is identical, i.e. alike in all respects to the product under consideration, or in the absence of such a product, another product which, although not alike in all respects, has characteristics closely resembling those of the product under consideration." The like product definition is relevant to the definition of the domestic industry for standing and injury purposes (ADA Articles 3 and 4), as well as to identification of the home market or third country sales to be used as the basis for normal value.

J. Non-Market Economies

By reference to a supplementary provision to Article VI of the GATT 1994, Article 2.7 authorizes members to deviate from the Article 2 rules in investigations involving imports from" a country which has a complete or substantially complete monopoly of its trade and where all domestic prices are fixed by the State".[105] Since prices and costs in such countries are not based on market forces, the practice has developed of using "surrogate" prices and costs from market economy countries. The United States, for example, determines the quantity of each factor of production (e.g., hours of labor and quantity of materials and energy) that go into production of the exported article, and then values those factors based on prices in a market economy at a similar level of economic development.[106]

ARTICLE 3—DETERMINATION OF MATERIAL INJURY

This Article, together with the corresponding Article in the Agreement on Subsidies and Countervailing Measures ("ASCM"), is discussed in Chapter 17 of this book.

ARTICLE 4—DEFINITION OF DOMESTIC INDUSTRY

The definition of the term "domestic industry" is relevant both to the question of standing, since an application to initiate an investigation must be filed on behalf of a domestic

[103] *United States—Korean Stainless Steel*, *supra* note 94 ¶ 6.123.

[104] The United States, for example, normally uses the average-to-average method in investigations but the average-to-transaction method in investigations. 19 C.F.R. 351.414(c)(1) and (2).

[105] GATT Ad Article VI, Paragraph 1.2.

[106] *See* Section 773(c) of the Tariff Act of 1930, as amended, 19 U.S.C. § 1677b(c).

industry (see commentary on Article 5, below) and to the issue of injury, as discussed in Chapter 17 of this book. Article 4.1 defines the term as "the domestic producers as a whole of the like products or . . . those of them whose collective output of the products constitutes a major proportion of the total domestic production of those products." There are two exceptions. *First*, producers that are related to the exporters or importers or producers that import themselves may be excluded from the domestic industry.[107] *Second*, the producers in a regional market may be treated as a separate industry where (a) they sell "all or almost all" of their production in that market; (b) demand in the market is not supplied to any substantial degree from domestic producers outside the market; and (c) dumped imports are concentrated in that market. In such a situation, an injury determination may be made if the dumped imports are causing injury to the producers of "all or almost all" the production in the regional market, without regard to conditions in the rest of the country.[108] This issue is discussed in more detail in Chapter 17 of this book.

A regional industry finding raises the question of whether anti-dumping duties may be levied on imports from the country in question that do not enter the regional market. Article 4.2 specifies that normally duties may be imposed only on imports destined for the region, but recognizes that some Members may face constitutional difficulties in limiting the application of anti-dumping measures in this way. In such a case, duties may be levied on all imports into the country if (a) the exporters have been given an opportunity to cease exporting at dumped prices to the region or otherwise to give assurances under Article 8 (see below) and such assurances have not been promptly given, and (b) duties cannot be levied on a regional basis.

ARTICLE 5—INITIATION AND SUBSEQUENT INVESTIGATION

Article 5 lays out stringent conditions relating to the initiation of an investigation. It specifies the degree of support for an application that is required before an investigation may be initiated (except where the national authority self-initiates under Article 5.6). It sets out the evidence that must be included in an application, and it defines the level of evidence that an authority must have before initiating an investigation (a separate issue). Finally, it sets time limits for an investigation.

A. Support for Application

Normally, initiation can only take place upon application filed by or on behalf of the affected domestic industry,[109] which as explained above is defined by Article 4.1 of the Agreement as "the domestic producers as a whole of the like products" or those "whose collective output of the products constitutes a major proportion of those products. . . ." This language, which originated in the Kennedy Round Agreement, gave rise to several

[107] Footnote 11 to the ADA defines the term "related" quite broadly. Producers are deemed to be related to exporters or importers if (a) one directly or indirectly controls the other; (b) both are directly or indirectly controlled by a third person; or (c) they together directly or indirectly control a third person, provided that the relationship causes the producer to behave differently from other producers. Control is deemed to exist where one party is legally or operationally in a position to exercise restraint or direction over the other.

[108] As noted earlier, a GATT panel held that producers of all or almost all the production in the regional market must support an application for a regional investigation. *United States—Mexican Cement, supra* note 53.

[109] *See* ADA, Art. 5.1. Article 5.6 does permit authorities to initiate an investigation without an application in special circumstances, provided that they have sufficient evidence of dumping, injury, and a causal link between them, to justify initiation. Self-initiation of anti-dumping investigations is rare.

GATT challenges to the U.S. practice of assuming that a petition was filed on behalf of a domestic industry unless one or members of the industry affirmatively objected.[110] The ADA therefore requires the authorities to examine whether the petition has sufficient support from the industry and mandates that the petition be supported by domestic producers that account for (a) at least 25 percent of total domestic production, and (b) more than fifty percent of production by producers who either support or oppose the application.[111] The purpose of the second part of the test is to ensure that an application cannot be accepted where there is more opposition to than support for the petition, even if the 25 percent minimum is met.[112] It recognizes that in some situations certain domestic producers may prefer to remain neutral with regard to an application.

The Appellate Body reversed a ruling by a WTO panel that the so-called Byrd Amendment to the U.S. anti-dumping law, which requires anti-dumping and countervailing duties to be paid to the petitioning companies, was inconsistent with Article 5.4 since it created a financial incentive for domestic producers to initiate and support petitions. The Appellate Body held that Article 5.4 simply required a formal assessment of the support for a petition, without an examination of the motives for the support. In particular, it rejected the Panel's conclusion that in enacting the Byrd Amendment the United States had not "acted in good faith."[113]

B. Evidence Required for Initiation

Article 5.2 specifies that the application must include evidence of dumping, injury and a causal link between them, and that it must contain more than "[a] simple assertion, unsubstantiated by relevant evidence." It provides that the following information must be included in the petition to the extent that it is reasonably available to the applicant:

- Identity of the applicant, volume and value of its production of the like product. Where the application is on behalf of a domestic industry, the application must list all known producers (or associations) and to the extent possible the volume and value of domestic production of the like product that each accounts for.

[110] In *United States—Imposition of Anti-Dumping Duties on Imports of Seamless Stainless Steel Hollow Products From Sweden, supra* note 51, a GATT panel noted that absence of opposition "could result from ignorance, indifference, disapproval but failure to express it, or tacit approval," and held that failure of the U.S. Department of Commerce to satisfy itself that the petition did have adequate support was inconsistent with the requirements of the 1979 Anti-dumping Code. *Id.* at ¶ 5.17. The panel report was blocked by the United States, as was the panel report in *United States—Mexican Cement, supra* note 52, which reached a similar conclusion. In *United States—Salmon From Norway, supra* note 55, on the other hand, a GATT Panel held that the Department had been justified in relying on statements in the petition certifying that the firms supporting the petition represented a substantial majority of production. *Id.* at ¶ 362–63.

[111] ADA, Art. 5.4. Under U.S. law the 50 percent and 25 percent tests apply to workers as well as to producers, so that unions could file a petition alone. *See* § 732(b)(4)(A) of the Tariff Act of 1930, as amended, 19 U.S.C. § 1773a(b)(4)(A). Although this seems inconsistent with ADA Article 5.4, which speaks only of "producers", Footnote 14 to the Agreement acknowledges the U.S. practice: "Members are aware that in the territory of certain Members employees of domestic producers of the like product or representatives of those employees may make or support an application for an investigation . . . ."

[112] The U.S. Revenue Act of 1916 was found to be inconsistent with this provision as well as numerous other provisions of the ADA because it permitted a single company to file suit, without the specified minimum representation of a U.S industry. *United States—1916 Act*, *supra* note 69, ¶¶ 134–135.

[113] Report of the Appellate Body, *United States—Continued Dumping and Subsidy Offset Act of 2000*, WD/DS217/AB/R,WT/DS234/AB/R (2003) ("*U.S.—Byrd Amendment*") ¶ 291. However, as discussed below, the Appellate Body upheld the Panel's findings that the Byrd Amendment violated Article 18.1 of the ADA and Article 32.1 of the SCM Agreement.

- Complete description of the allegedly dumped product, the country or countries of origin, and the names of the producers, exporters and importers.
- Home market prices (or, where appropriate, third country prices or constructed value) and export prices.
- Volume of allegedly dumped imports, the effect of the imports on prices of the like product, and consequent effects on the domestic industry, as demonstrated by relevant factors and indices having a bearing on the domestic industry, such as those listed in Articles 3.2 and 3.4.

In *Mexico-HCFS,* the Panel held that an application is not required to include information with respect to *all* of the factors and indices listed in Articles 3.2 and 3.4, but merely enough to be illustrative of the state of the industry.[114] Raw numerical data without analysis has been held by a WTO panel to constitute "relevant evidence" under this provision.[115]

Article 5.3 requires the investigating authority to satisfy itself that there is sufficient evidence to justify initiation, based on an examination of the adequacy and accuracy of the evidence in the application. WTO panels have held that national authorities have a good deal of discretion in this regard. In *EC—Bed Linen*, the panel stated that Article 5.3 "says nothing regarding the nature of the examination to be carried out. Nor does it say anything requiring an explanation of how that examination was carried out."[116] In *Guatemala—Cement II* the panel held that the investigating authority is not limited to the information in the petition in making this determination, but may gather data from other sources.[117] In *Mexico-HFCS*, the panel stated that the quantity and quality of evidence required at this stage is less than that required for a preliminary or final determination of dumping or injury, and the authority does not have to resolve all underlying issues of fact.[118]

Despite this latitude, an initiation will be held invalid if it rests on inadequate evidence. In *Guatemala-Cement II,* the only evidence relating to normal value consisted of two invoices for single bags of cement, and it was clear that these sales were at a different level of trade from the sales on which the export value allegations were based, each of which was for several thousand bags. In the view of the panel, this "should have triggered at a minimum some reflection on the part of the investigating authorities as to the possible non-comparability of the sales in question".[119] On the injury side, there was no evidence that imports had increased relative to domestic consumption and no evidence concerning the effect of the relevant imports on cement prices in the domestic market.[120] The panel held that the initiation had failed to meet the Article 5.3 standard.[121]

C. Publicizing of Petition

Article 5.5 provides that the filing of the application may not be publicized until a decision to initiate has been made. The purpose of this requirement is presumably to avoid the

[114] Report of the WTO Panel (not appealed), *Mexico—Anti-Dumping Investigation of High Fructose Corn Syrup (HFCS) from the United States,* WT/DS132/R (2000) (*"Mexico—HFCS"*), ¶ 7.73.

industry uncertainty and disruption that would be likely to occur if word got out that an application for an investigation had been filed. However, the government of the exporting country is to be notified after receipt of a properly documented application and before initiation.[122]

D. Time Limits for Investigation and Immediate Termination

Article 5.10 of the ADA provides that investigations are normally to be concluded within one year and that in no circumstances may they take more than eighteen months.[123] In addition, under Article 5.8 an application must be rejected and an investigation terminated promptly as soon as the authorities are satisfied that there is insufficient evidence of dumping or injury to justify proceeding with the case.[124] An investigation is also to be terminated immediately if the authority determines that the margin of dumping is *de minimis* or the volume of imports is negligible. A margin is deemed to be *de minimis* if it is less than two percent *ad valorem*, and imports from a particular country are to be considered negligible if they account for less than three percent of total imports, unless countries individually accounting for less than three percent account collectively for more than seven percent.[125] A WTO panel has held that since Article 5.10 speaks of "investigations," the *de minimis* provision does not apply in duty assessment proceedings.[126] And the Appellate Body, reversing a panel decision, held that under a similar provision in the ASCM the *de minimis* standard set out in the Agreement does not apply to sunset reviews. (See commentary on Article 11 below.)[127]

ARTICLE 6—EVIDENCE

Article 6 establishes rules designed to ensure that all parties to an investigation have an adequate opportunity to present evidence, to see all of the information (other than confidential information) relevant to the case, and generally to defend their interests. It

[122] The failure of the U.S. 1916 Anti-Dumping Act to require such notification was one of the many grounds on which it was found to be inconsistent with the ADA. *United States—1916 Act* (Panel), *supra* note 69, ¶ 6.216. A WTO panel held that Guatemala's failure to notify Mexico of the formal initiation of an anti-dumping investigation violated Article 5.5. even though no action was taken in the investigation until after Mexico had been notified, some months later. Report of the WTO Panel, *Guatemala—Anti-Dumping Investigation Regarding Portland Cement from Mexico,* WT/DS60/R (1998) *("Guatemala—Cement I"), reversed on procedural grounds,* WT/DS60/AB/R (1998).

[123] As explained above (Part IID), the 1979 Anti-dumping Code introduced the notion of a time limit for anti-dumping investigations, providing that they are "generally" to be concluded within one year, thus leaving room for longer investigations in exceptional circumstances.

[124] In *Argentina—Poultry, supra* note 98, the panel held that Article 5.8 had been violated when the investigating authority failed to terminate the investigation immediately upon receiving a negative injury assessment from the separate body in charge of injury investigations, but instead held the file open and later decided to initiate the investigation based on the submission of supplemental information by the applicant. *Id.* at ¶ 7.107.

[125] *Id.* It is interesting to note that unlike the ASCM, the *de minimis* level is the same for developed and developing countries. *See* ASCM Arts. 11.9 and 27.10. Also, the "negligible" imports provision in the ASCM only applies to developing countries, whereas the ADA provision applies to all countries. *Id.*

[126] Report of the WTO Panel (not appealed), *United States—Anti-Dumping Duty on Dynamic Random Access Memory Semiconductors (DRAMS) of One Megabit or Above from Korea,* WT/DS99/R (1999) *("United States—DRAMS"),* ¶ 6.89.

[127] Report of the Appellate Body, *United States—Countervailing Duties on Certain Corrosion-Resistant Carbon Steel Flat Products from Germany*, WT/DS213/AB/R (2002) *("United States—German Steel"),* ¶ 92.

also sets limits on the use by investigating authorities of "facts available" when parties fail to provide relevant information.

A. Submission of Evidence and Time Limits

Article 6.1.2 provides that once an investigation has been initiated, the application must be made available to the known exporters, to the authorities of the exporting member, and to other parties on request. All interested parties[128] in an investigation must be given notice of the information required by the authorities, as well as ample opportunity to present in writing all evidence that they believe relevant.[129] According to the Panel in *Argentina—Floor Tiles,* this requirement means that a party cannot be faulted for not providing information it was not clearly asked to submit.[130]

Under Article 6.1.1, exporters and foreign producers are to be given at least thirty days to reply to questionnaires, and extensions are to be given for good cause wherever practicable.[131] As discussed below (subpart D), the Appellate Body has ruled that while the investigating authority may impose time limits for the submission of evidence (which must be extended in appropriate circumstances), failure to comply with these limits does not by itself entitle an authority to reject evidence submitted and instead use facts available.[132]

Article 6.1.2 requires that evidence submitted by one party be made available promptly to other parties, subject to the need for confidentiality.[133] In addition, Article 6.2 provides that all interested parties are to have a full opportunity to defend their interests. They are to be given the opportunity to meet those parties with adverse interests so that opposing views and rebuttal arguments can be presented.

Article 6.1.3 requires the authorities, once an investigation has been initiated, to provide the full text of the application to the known exporters and to the authorities of the exporting Member. According to one panel, this requires the authorities to actively provide the information to the designated parties, and not merely to make it available.[134]

[128] The term "interested parties" is defined as including:

- An exporter, foreign producer, or imporder of the product under investigation or a trade or business association a majority of whose members are exporters, foreign producers, or members;
- The government of the exporting Member;
- A producer of the like product in the importing Member or a trade or business association a majority of whose members produce the like product in the territory of the importing Member.

ADA, Art. 6.11.

[129] The failure to set time limits for the submission of arguments and evidence during the final stage of the investigation is not in and of itself a violation of this requirement. *Guatemala—Cement II, supra* note 117, ¶ 8.119.

[130] *Argentina—Floor Tiles*, *supra* note 93, ¶ 6.54.

[131] The time limit is to be counted from the date of receipt of the questionnaire, which is deemed to have been received one week after it was sent to the respondent or transmitted to a diplomatic representative of the exporting Member. ADA, Note 15. The thirty-day requirement has been held to apply only to the original questionnaire, and not to supplemental requests for information. Report of the WTO Panel (not appealed), *Egypt—Definitive Anti-Dumping Measures on Steel Rebars From Turkey,* WT/DS211/R (2002) ("*Egypt-Rebar*"), ¶¶ 7.278–279.

[132] *United States—Hot-Rolled Steel from Japan AB*, *supra* note 72, ¶¶ 73–75.

[133] If each party is required to serve its submissions on the other parties, or the investigating authority undertakes such service itself, there may be no need to provide access to the official files. But where service does not take place, regular and routine access to the files may be necessary to comply with this provision. *Guatemala—Cement II, supra* note 117, ¶¶ 8.133–135.

[134] *Argentina—Poultry, supra* note 98, ¶ 7.172.

B. Confidential Information

Much of the information used in anti-dumping investigations, such as price and cost data, names of customers, and profitability, is regarded by the parties providing it as highly confidential. They may be reluctant to submit such information to the authorities unless they have some assurance that it will not fall into the hands of their competitors. Article 6.5 of the ADA tries to draw a balance between the need to protect confidential information and the need to give other parties the right to comment on that information. It provides that information which by its nature is confidential is to be treated as confidential and not disclosed without specific permission of the party submitting it.[135] However, to give other parties some opportunity to comment, the supplier must be required to supply a non-confidential summary, "in sufficient detail to permit a reasonable understanding of the substance" of the confidential information, unless it is not susceptible of summary in which case reasons why it cannot be summarized must be supplied.[136] A WTO panel has held that an authority is not justified in rejecting a response simply because the information in the non-confidential summary is not sufficient to allow calculation of normal value, export price, and the margin of dumping.[137] If the authorities find that a request for confidentiality is not justified, and the submitter is unwilling to make the information public or authorize its disclosure in generalized or summary form, they may disregard it unless they are satisfied from appropriate sources that it is correct.

C. Verification

Article 6.6 requires the authorities to satisfy themselves as to the accuracy of the information supplied by interested parties upon which the findings are based (except where a determination is made on the basis of "facts available"). This is often accomplished through on-site verification, an audit-type process carried out at the producer's premises designed to determine whether the information supplied to the Department matches the regular books and records of the company. Article 6.7 permits (but does not require) authorities to carry out on-site investigations, provided that the firms involved agree and the country of export does not object. A panel has held that since on-site, or "on-the-spot" verifications are not required, verifications may be carried out by "mail-order."[138]

Annex 1 to the ADA sets out detailed procedures to be followed in on-site, or "on-the-spot" investigations. These include the following:

- The firms involved must be given sufficient advance notice, and they should be advised in advance of the general nature of the information to be verified and of any further information to be provided, although additional details may be requested on the spot.
- The firms involved and the exporting Member's authorities are to be informed if the investigating team includes any non-government experts, who must be subject to effective sanctions for breach of confidentiality requirements.[139]

[135] Some countries, notably the United States, allow representatives of the parties access to confidential information submitted by other parties, subject to strict conditions designed to preserve its confidentiality. *See, e.g.,* Section 777(c) of the Tariff Act of 1930, as amended, 19 U.S.C. § 1677f(c). However, this is not required by the ADA.

[136] The U.S. Department of Commerce requires non-confidential summaries of numerical data to include the numbers ranged to within ten percent of the actual numbers. *See* 19 C.F.R. § 351.304(c).

[137] *Argentina—Floor Tiles*, *supra* note 93, ¶ 6.38–39.

[138] *Egypt—Rebar, supra* note 131, ¶¶ 7.322–328.

[139] The Panel in *Guatemala—Cement II* held that nothing in the ADA prohibits inclusion of non-governmental experts with a conflict of interest in the verification team. *Guatemala—Cement II*, *supra*

D. Facts Available

Investigating authorities of course have no legal power to compel foreign producers and exporters to provide information. Their only sanction against foreign parties that fail to provide relevant information is to base their decision on whatever other information is available to them, which may be unfavorable to the foreign party if the failure was deliberate. Article 6.8 provides that where an interested party "refuses access to, or otherwise does not provide, necessary information within a reasonable period or significantly impedes the investigation," preliminary and final determinations may be made based on "the facts available." The 1979 Anti-dumping Code contained identical language, but concern was expressed in the Uruguay Round negotiations that some countries had been applying "facts available" in too cavalier a fashion. Annex II to the ADA therefore spells out rules for the use of facts available in considerable detail. The most important rules are the following:

- Parties must be warned that if they do not provide information requested within a reasonable time, the authorities may make determinations based on the facts available, including those in the application for the investigation.
- The authorities may not request the party to use a computer system other than that used by the party. They may not request a computerized response if the party does not maintain computerized accounts and if computerization of the response would impose an unreasonable extra burden.
- All verifiable information that is appropriately submitted so that it can be used in the investigation "without undue difficulties" is to be taken into account in making determinations. Even though the information "may not be ideal in all respects," this does not justify the authorities from disregarding it, "provided the interested party has acted to the best of its ability."
- If information is not accepted, the supplying party must be provided with the reasons and given an opportunity to provide further explanations within a reasonable period.[140]
- If the authorities have to base their findings on secondary source information, including information in the application for the investigation, they must do so "with special circumspection." Where practicable they should check the information against other independent sources, such as published price lists, official import statistics, and customs returns, as well as information supplied by other parties during the investigation. However, if a party does not cooperate, "this situation could lead to a result which is less favorable to the party than if the party did cooperate."[141]

The Appellate Body has held that use of the term "reasonable period" in Article 6.8 means that an authority may not reject information and apply facts available solely on the ground that it was submitted after the deadline for questionnaire responses.[142] Instead, the authority must consider such factors as: the nature and quantity of information submitted;

note 117, ¶ 8.189. However, the Panel also held that the responding company was justified in objecting to verification under these circumstances, and that Guatemala's application of "facts available" in this situation was unreasonable. *Id.* ¶ 8.250.

[140] In *Argentina—Floor Tiles, supra* note 93, ¶ 6.50, a WTO panel held that the Argentinean authority had failed to comply with this provision.

[141] In this situation, the authorities are said to apply "adverse" facts available.

[142] As noted above, under Article 6.1.1 investigating authorities must provide respondents at least thirty days to reply to the original questionnaire.

the difficulties encountered by the exporter in obtaining the information; the verifiability of the information and the ease with which it can be used by the authority; whether other parties would be prejudiced if the information is used; whether acceptance of the information would compromise the authority's ability to conduct the investigation in a timely fashion; and the amount of time by which the exporter missed the deadline.[143] In that case, the Appellate Body upheld the Panel's finding that the rejection by the U.S. Department of Commerce of weight-conversion factors submitted by two producers after the deadline for questionnaire responses but before verification, and its consequent use of facts available, was inconsistent with Article 6.8.

In the same case the Panel and the Appellate Body considered the application by the Department of Commerce of adverse facts available to a third producer. The producer had made a number of sales to a fifty percent-owned U.S. affiliate, and had several times requested the affiliate to supply information on its resales of the product to enable an export price to be constructed. The affiliate, which was a member of the petitioning group, refused. The Appellate Body noted that although the producer had reported its difficulties to the Department, the Department had provided no guidance or assistance to the producer, and did not ask the affiliate directly for the information. It had even refused to allow the producer to attend a meeting with petitioners' counsel to discuss the issue. The Panel found, and the Appellate Body agreed, that there was no basis for the Department's finding that the producer had failed to cooperate, and no basis, therefore, for applying adverse facts available.[144]

A WTO panel rejected the argument of the United States that under Article 6.8 an authority may base its entire determination on facts available if *any* necessary information is not provided.[145] Instead, it must use all verifiable information (in this case U.S. price information) unless the problems with the other information (in this case home market sales data and cost information) undermine the usability of the valid information.

E. Informing Parties of Essential Facts

Article 6.9 provides that before a final determination is made, the authorities are to inform all interested parties of the essential facts that form the basis for the decision in sufficient time for them to defend their interests.[146] The Panel in *Argentina—Floor Tiles* held that merely referring the exporters to the complete file on the investigation did not comply with this requirement, since the exporters could not have been aware of essential facts that led to the determination and therefore could not defend their interests.[147]

F. Individual Margins

Under Article 6.10, individual margins are as a rule to be calculated for each known exporter or producer, except where this is impracticable because of the large number of exporters, producers, importers or types of products. In this case, the authorities may

[143] *United States—Hot-Rolled Steel from Japan*, *supra* note 72, ¶ 85–89.
[144] *Id.,* ¶¶ 99–110. *See Egypt—Rebar, supra* note 131, for an extremely detailed discussion of the use of facts available.
[145] Report of the WTO Panel (not appealed), *United States—Anti-Dumping and Countervailing Duty Measures on Steel Plate from India,* GT/DS206 (2002) *("United States—Steel Plate from India"),* ¶¶ 7.57–59.
[146] *See Guatemala-Cement II*, in which the Panel ruled that disclosure of the essential facts that were the basis for the preliminary determination of *threat* of material injury was inadequate for disclosure of the final determination, which was based on *actual* material injury. *Guatemala—Cement II*, *supra* note 117 ¶ 8.228.
[147] *Argentina—Floor Tiles*, *supra* note 93, ¶¶ 6.125–129.

limit the investigation to a reasonable number of interested parties or products by using statistically valid samples, or they may investigate the largest percentage of the volume of exports that can reasonably be investigated. Even in this situation, an individual margin must normally be calculated for each exporter or producer that is investigated.[148] The fact that an exporter did not supply all of the information needed to calculate the dumping margin has been held not to relieve the investigating authority of this obligation, since they are allowed to complete the analysis using facts available.[149]

Where the investigation is limited:

- The selection of exporters, producers, importers or types of products is if possible to be made in consultation with and the consent of the exporters, producers or importers concerned.
- Wherever practicable, an individual margin of dumping is to be determined for any exporter or producer not initially selected who submits the necessary information in time for it to be considered.

G. Consumers and Industrial Users

In some cases the harm caused by the imposition of anti-dumping duties to purchasers of the imported product, as a result of increased prices and/or reduced availability, may outweigh the benefit to the petitioning industry. The anti-dumping laws of some jurisdictions—for example the EC—include a public interest test, which allows them to decline to apply anti-dumping duties where they find that this would be against the public interest. A number of countries, including Hong Kong, Singapore, and Korea, proposed during the Uruguay Round negotiations that the ADA require such a test, but this was opposed by the United States[150] The U.S. Congress believes strongly in the "automaticity" of the anti-dumping and countervailing duty laws, and would not allow their enforcement to be subject to Executive Branch discretion. To acknowledge the concern, however, Article 6.12 of the ADA provides that the authorities are to provide opportunities to industrial users and consumer organizations to provide information relating to dumping, injury and causation. It should be noted that industrial users and consumer organizations are not included in the definition of "interested parties," and therefore do not have the right to full participation in investigations.[151]

H. Small Companies

Article 6.13 directs the authorities to take account of any difficulties experienced by interested parties, especially small companies, in supplying information requested, and to provide any assistance practicable.

ARTICLE 7—PROVISIONAL MEASURES

As discussed below, Article 10 of the ADA provides the domestic industry with a measure of protection while the investigation is in progress by permitting the retroactive

[148] *Id*., ¶ 6.90.
[149] *Argentina—Poultry, supra* note 98, ¶ 7.216.
[150] *See* Kofi Oreng Kefeor, *The Developing Countries and the Shaping of GATT/WTO Antidumping Law*, 32(6) J. WORLD TRADE 167, 178–179 (1998).
[151] *See* ADA, Art. 6.2.

assessment of anti-dumping duties on imports made after a certain point during the investigation, in the event that a final anti-dumping measure is subsequently imposed. The assumption is that since they are at risk, importers may be a little more circumspect in their selling practices even before the investigation is concluded. Article 7 provides for the application of provisional measures to ensure payment of any retroactively imposed anti-dumping duties that are ultimately imposed. Provisional measures generally take the form of withholding of final duty appraisement and the payment of estimated duties in the form of bonds or cash deposits.

Article 7.1 provides that provisional measures may only be applied if (i) an investigation has been initiated, public notice given of the investigation, and interested parties given adequate opportunity to submit information and make comments; (ii) a preliminary affirmative determination has been made of dumping and consequent injury to a domestic industry; and (iii) the authorities judge that such measures are necessary to prevent injury during the investigation. Under Article 7.3 provisional measures may not be applied sooner than sixty days after the date of initiation, and Article 7.4 provides that they must be limited to as short a period as possible, not to exceed four months, or, upon request by exporters representing a significant portion of the trade involved, six months.[152]

ARTICLE 8—PRICE UNDERTAKINGS

This Article, which had its origins in the Kennedy Round IAA, specifies that an investigation may be suspended or terminated based on undertakings from the exporters to revise their prices or to cease exports to the area in question at dumped prices so as to eliminate the injurious effect of the dumping. The advantage of a price undertaking from the exporters' point of view is that the importers do not have to pay anti-dumping duties. Nevertheless, the domestic industry will receive the same relief—higher prices—as it would have if anti-dumping duties had been imposed.

Article 8.2 provides that price undertakings may not be sought or accepted unless there have been preliminary findings of dumping and injury. The 1979 Code merely required that an investigation have been initiated before undertakings are accepted, and there was concern that authorities were coercing exporters to provide undertakings at too early a stage in the investigation, before there was any evidence of dumping or injury other than that in the petition.

Price undertakings are optional on both sides. Under Article 8.3 the authorities need not accept undertakings where this would be impracticable, if for example the number of exporters is too great, although where possible they must provide reasons for rejecting an undertaking. Similarly, Article 8.5 provides that exporters may not be forced to accept an undertaking. The fact that an exporter does not offer or accept a price undertaking is not to prejudice the outcome of the case, though the authorities may determine that threat of injury is more likely to occur if the dumped imports continue.

Article 8.4 provides that if an undertaking is accepted, the investigation is to be completed at the exporter's request or if the authorities so decide. In this situation the undertaking is to lapse if there is a negative determination of dumping or injury (unless the negative determination is due in large part to the undertaking); otherwise it is to continue.

[152] Some national laws allow the exporting interests to request an extension of time between the preliminary and final dumping determinations on condition that they also request extension of the period for provisional measures. The periods are extended to six and nine months respectively where the authorities examine whether a duty lower than the dumping margin would be sufficient to remove injury. ADA, Art. 7.4.

Article 8.6 authorizes the authorities, once an undertaking has been accepted, to require the exporters to provide relevant information and to submit to verification, to ensure that the undertaking is being fulfilled. When an undertaking is violated, the authorities may impose provisional measures, based on the best information available, immediately. They may also levy definitive anti-dumping duties on imports entering within the previous ninety days, but only after the violation has occurred.

ARTICLE 9—IMPOSITION AND COLLECTION OF ANTI-DUMPING DUTIES

As explained above, the actual collection of anti-dumping duties may be carried out on a prospective or retrospective basis. In a prospective system, exemplified by the EC, the duty rate is established at the time the anti-dumping measure is imposed, and the duties collected on the imports are viewed as final duties, although the importer can apply for a refund by showing that the rate was too high.[153] In a retroactive system, such as that of the United States, estimated duties in the form of cash deposits are levied at the time the imports enter, and the authorities subsequently conduct a review to determine the rate of duty to be assessed based on the price of the imports and the current normal value. The advantage of a prospective system is that importers know what their duty liability is at the time of importation, whereas with a retroactive system they may have to wait for as much as two years (or more if the determination is appealed) before knowing their ultimate liability. On the other hand, under a retroactive system duties are assessed on the basis of contempotaneous prices and costs, so that an exporter can avoid anti-dumping duties by raising its prices, whereas in a prospective system it does not have that opportunity.

Article 9.1 of the Agreement encourages, but does not require, Members to impose duties less than the dumping margin "if such lesser duty would be adequate to remove the injury to the domestic industry." If, for example, the dumping margin was fifteen percent, but imports were only underselling their domestic counterparts by ten percent, under the "lesser duty" approach a duty of ten percent would be applied.[154] The EC and Australia apply the lesser duty rule; the United States and Canada do not.[155]

Under Article 9.2, anti-dumping duties are to be assessed on a non-discriminatory basis on imports from all sources found to be dumped and causing injury. Thus, the authorities may not choose to assess duties on imports from one country subject to an anti-dumping measure but not on imports from another.

Article 9.3 establishes time limits for the assessment of anti-dumping. In a retroactive system, final liability for anti-dumping duties must normally be assessed within twelve months of a request for a final assessment and in no case more than eighteen months. Any refund of the difference between the cash deposit and the finally assessed duty must normally be made within ninety days of the assessment. In a prospective system, refunds

[153] For a variety of reasons, refund applications in the EC are rare. *See,* Jean-Francois Bellis, *The EEC Anti-Dumping System,* in Jackson and Vermulst, *supra* n. 13, at 433. In the past refund proceedings took up to three years to complete, Krishna, *supra* note 11, at 27, n.115, although under Article 9.3 of the ADA they are supposed to take a maximum of eighteen months.

[154] In the EC system, if actual prices are depressed by the dumped imports the authorities establish a "target" price based on cost of production plus a reasonable profit, and use this to compute the margin. Krishna, *supra* note 11, at 56–57.

[155] Edwin A. Vermulst, *The Anti-dumping Systems of Australia, Canada, the EEC and the USA: Have Anti-dumping Laws Become a Problem in International Trade?,* in Jackson and Vermulst, *supra,* n. 13, at 433.

are normally to take place within twelve months, in exceptional cases eighteen months, after the date a refund request "duly supported by evidence," is made.

Under Article 9.33, in determining the amount of reimbursement where constructed export price is used,[156] the authorities are to take account of any change in normal value, any change in costs incurred between importation and sale, and any movement in the resale price. This rather obscurely-worded provision was designed to allow the EC to continue its practice of deducting any anti-dumping duties paid in calculating export price unless the importer proves that it has passed on the duties to its customers.[157] The export price is to be calculated with no deduction for anti-dumping duties paid when evidence that the duties have been passed on is provided.

Article 9.4 establishes rules with respect to the so-called "all others" rate, the rate of duty applied to producers and exporters that have not been individually investigated.[158] This rate may not exceed either (i) the weighted average dumping margin for the investigated exporters or producers, or (ii) where duties are assessed based on a prospective normal value, the difference between the normal value for the investigated exporters and producers and the export prices of the non-investigated producers or exporters. However, in neither case may any zero or *de minimis* margins be included or margins based on facts available. In *United States—Hot-Rolled Steel from Japan,* the Appellate Body rejected the U.S. argument that this provision only requires exclusion of margins based entirely on facts available, and held that no margin that is based even in part on facts available can be used in the determination of the "all others" rate.

> Article 9.4 seeks to prevent the exporters, who were *not* asked to cooperate in the investigation, from being prejudiced by gaps or shortcomings in the information supplied by the investigated exporters. This objective would be compromised if the ceiling for the rate applied to "all others" were, as the U.S. suggests, calculated—due to the failure of investigated parties to supply certain information—using margins "established" even in part based on facts available.[159]

The Appellate Body recognized that under this interpretation there could be situations in which there were no margins on which to calculate an "all others" rate, but stated that it did not need to decide in the case at hand how to overcome this lacuna in the ADA.

Under Article 9.5, new shippers, i.e., exporters and producers that did not export the product in question during the period of investigation and are not related to any exporters or producers in the exporting country that are subject to anti-dumping duties, are entitled to accelerated reviews to determine their individual dumping margins.[160] Anti-dumping duties are not to be levied against the new shipper while the review is pending, though appraisement may be withheld and bonds required so that anti-dumping duties can be levied retroactively to the date of initiation of the review.

ARTICLE 10—RETROACTIVITY

Article 10 lays out the conditions under which anti-dumping duties may be applied retroactively after an anti-dumping measure has been imposed. *First*, where there is a
