[81] *See* CHRISTIANE FREYTAG, *supra* note 79.

[82] The compatibility of this approach with the GATT is examined below, *see* text accompanying note 89.

[83] SECOND REPORT (PRELIMINARY) TO THE COMMITTEE ON INTERNATIONAL TRADE LAW OF THE INTERNATIONAL LAW ASSOCIATION ON THE SUBJECT OF THE EXHAUSTION OF INTELLECTUAL PROPERTY RIGHTS AND PARALLEL IMPORTATION, June 25, 1999, ILA Reports, *see also supra* note 74.

The notion of importing in (a)—but not in (b)—is qualified by a footnote: "This right, like any other rights conferred under this Agreement in respect of use, sale, importation or other distribution of goods, is subject to the provisions of Article 6". As Article 6 precludes the use of dispute settlement regarding exhaustion and thereby leaves the concept of exhaustion open to individual Members, the right to prevent imports and sales of parallel trade in patented goods—unlike trademarked goods—is not subject to a uniform minimum standard under the TRIPs Agreement. Clearly, there is no obligation to apply national treatment in patent law as a WTO minimum standard.[84] Members may adopt and entertain different concepts of exhaustion under this provision in patent law.[85] The question therefore arises, as to whether these concepts are subject to potential additional disciplines contained in the GATT and GATS Agreement, the two other main pillars of the WTO legal framework.

(e) The Application of GATT 1994 and GATS. It is still controversial whether or not the TRIPs Agreement *exclusively* addresses parallel trade, and to what extent the provisions of GATT and GATS may and should also be applied to this situation. For reasons stated above and in the light of case law defining the relationship of GATT and GATS,[86] the TRIPs Agreement cannot be read in isolation. The incorporation of intellectual property rights into the multilateral trading system and its goal of insuring fair conditions of competition and enhanced market access cannot be ignored. A number of arguments have been made in support of the exclusive application of the TRIPs Agreement in determining the law of parallel trade.[87] The argument that TRIPs rights are private rights, however, is not compelling. Like all other WTO agreements, the TRIPs Agreement primarily creates rights for Members. First, the fact that those rights are based on obligations to provide certain private rights to the nationals of other WTO Members in defined circumstances, and to make enforcement measures available to them, is irrelevant. As discussed above, the distinction is of relatively minor importance.[88] Second, it is recalled again that the law on parallel trade is based more upon the origin of a product than the nationality of the right holder. The issue should therefore be considered to fall under all pertinent rules of the WTO, including GATT 1994 and GATS.[89] This is true both for the application of current rules and with a view to future negotiations.

[84] *But see* Joseph Straus, *Implications of the TRIPs Agreement in the Field of Patent Law, in From GATT to TRIPs—The Agreement on Trade Related Aspects of Intellectual Property Rights* in 18 STUDIES IN INDUSTRIAL PROPERTY AND COPYRIGHT LAW, FROM GATT TO TRIPS—THE AGREEMENT ON TRADE-RELATED ASPECTS OF INTELLECTUAL PROPERTY RIGHTS, 191–195 (Friedrich-Karl Beier and Gerhard Schricker eds., 1996). The author argues that a Member not recognizing international exhaustion would be entitled to take retaliatory measures upon violation of the right to control imports. The view is difficult to reconcile for product patents with footnote 6 of Article 28. *See also* Harvey Bale, *The Conflicts between Parallel Trade and Product Access and Innovation: The Case of Pharmaceuticals*, 4 JOURNAL OF INTERNATIONAL ECONOMIC LAW 638 (1998).

[85] *See, e.g.,* the Swiss Supreme Court in its recent decision: *Kodak SA v. Jumbo-Markt AG*, Swiss Federal Reporter (BGE) 126 III 129 (Judgment of December 7, 1999), where national exhaustion was applied in the context of patents. Interestingly, the Supreme Court had previously ruled in favor of international exhaustion in the field of trademarks (*Chanel v. EPA, supra* note 80) and copyright (*Nintendo Co. Ltd. v. Wahl Eximpo AG*, BGE 124 III 321). *Per contra*: Joseph Straus, *supra* note 84.

Addressing parallel trade under GATT 1994 raises interesting implications for compensation when a Member joins a customs union. Finally, dealing with parallel trade under GATT and GATS offers the possibility of a new approach to parallel trade which allows for sectoral and more specific regulations on the following grounds.

From the perspective of GATT 1994, the regulation of parallel imports falls under the prohibition of quantitative restrictions and other measures in Article XI.[90] A ban on parallel importation clearly amounts to a restriction of imports in the form of a measure other than tariffs or quotas, to the extent that it is administrated as a border measure, in violation of GATT Article XI. If the goods are seized domestically, and not at the border, the problem would rather be dealt with under the principles of national treatment under Article III GATT, in particular paragraphs 1 and 4.[91] Removal of parallel imports from the shelves of retail outlets, often based upon preliminary injunctions, establishes treatment less favorable to goods of foreign origin, as such remedies are not available for goods which were placed upon the market by or with the consent of the right holder in the country and which are subsequently sold outside the realm of exclusive marketing agreements by parallel traders. Under both Articles III and XI therefore, a ban of parallel imports can only be justified if one of the exceptions to the basic principles of the GATT applies. Article XX:d of GATT 1994 provides a general exception to GATT obligations where a measure is necessary to secure compliance with laws related to the protection of patents, copyrights and trademarks and that are not GATT-inconsistent.[92] First, this clearly encompasses restrictions necessary to combat trademark counterfeiting. Border measures and domestic measures aimed at the prevention of importation, distribution

[90] GATT Article XI:1 states:

> No prohibitions or restrictions other than duties, taxes or other charges, weather made effective through quotas, import or export licenses or other measures, shall be instituted or maintained by any contracting party or on the exportation or sale for export of any product destined for the territory of any other contracting party.

[91] GATT Article III:1 and III:4 state:

> 1. The contracting parties recognize that internal taxes and other internal charges, and laws, regulations and requirements affecting the internal sale, offering for sale, purchase, transportation, distribution or use of products, and internal quantitative regulations requiring the mixture, processing or use of products in specified amounts or proportions, should not be applied to imported or domestic products so as to afford protection to domestic production.
> . . .
> 4. The products of the territory of any contracting party imported into the territory of any other contracting party shall be accorded treatment no less favourable than that accorded to like products of national origin in respect of all laws, regulations and requirements affecting their internal sale, offering for sale, purchase, transportation, distribution or use. The provisions of this paragraph shall not prevent the application of differential internal transportation charges which are based exclusively on the economic operation of the means of transport and not on the nationality of the product.

[92] The chapeau to Article XX and paragraph (d) provide:

> Subject to the requirement that such measures are not applied in a manner which would constitute a means of arbitrary of unjustifiable discrimination between countries where the same conditions prevail, or a disguised restriction on international trade, nothing in this Agreement shall be construed to prevent the adoption or enforcement by any contracting party of measures:
> . . .
> d) necessary to *secure compliance with laws or regulations which are not inconsistent with the provisions of this Agreement*, including those relating to customs enforcement, the enforcement of monopolies operated under paragraph 4 of Article II and Article XVII, the protection of *patents, trademarks and copyrights*, and the prevention of deceptive practices. (emphasis added).

and sale of such products come under this provision.[93] Second, Member States operating under the doctrine of national or regional exhaustion may bar the importation of products, as the conditions of Article XX:d are met. For countries operating under international exhaustion, however, this would not be the case and a ban cannot be justified under Article XX:d, as intellectual property rights are exhausted in this case and can no longer be invoked.

Whether an argument against a ban based upon national or regional exhaustion could be developed under the chapeau of GATT Article XX strongly depends on the particular factual aspects of the case. The chapeau addresses arbitrary and unjustifiable discrimination between countries where the same conditions prevail. The chapeau essentially bars Members from abusing regulatory exceptions to market access of foreign products.[94] Regional exhaustion *per se* does not amount to abuse; differential treatment of imports from countries having comparable rights under bilateral trade agreements, however, could amount to unjustifiable discrimination under GATT law if products from countries where the same conditions exist are treated differently.

Tension may equally emerge under GATT Article XXIV and GATS Article V dealing with customs unions and regional integration, respectively. These provisions allow for deviations from MFN in the case of regional trade arrangements, subject to certain conditions. Tariffs and quantitative measures must be abolished with respect to substantiality all trade, and barriers to trade with third countries must "on the whole" not be increased.[95] Such increases occur if a Member operating under the doctrine of international exhaustion joins a customs union which requires its Members to operate under regional exhaustion. This is the case in European integration.

While a number of Member States of the European Communities applied the doctrine of international exhaustion in the field of trademarks (Germany, Austria, and the Nordic countries) under former national law, community legislation provides for exclusive and mandatory regional exhaustion in all fields of intellectual property rights. In the Silhouette case, the European Court of Justice ruled that the doctrine of regional exhaustion is a mandatory standard implemented in different regulations and directives and that member countries are not allowed to apply international exhaustion in third country relations.[96] (The EFTA Court decided the opposite. In light of the fact that the European Economic Area Agreement ("EEA") does not form a Customs Union, the Court stated that jurisdiction over commercial policy towards third countries remains with the parties to the EEA Agreement, and so, therefore, does the choice of international or regional exhaustion.[97])

[93] *Cf. also* Verma, *Exhaustion of Intellectual Property Rights and Free Trade—Article 6 of the TRIPs Agreement*, 29 International Journal of Law and Information Technology 534, 554 (1998).

[94] "The chapeau of Article XX [GATT 1994] is, in fact, but one expression of the principle of good faith. This principle, at once a general principle of law and a general principle of international law, controls the exercise of rights by states". *See United States—Import Prohibition of Certain Shrimp and Shrimp Products, supra* note 71, ¶ 158.

[95] Article XXIV:5(a) provides:

> With respect to a customs union, . . . the . . . other regulations of commerce imposed at the institution of any such union . . . in respect of trade with contracting parties not parties such union shall not on the whole be higher or more restrictive than the general incidence of the . . . regulations of commerce applicable in the constituent territories prior to the formation of such union . . .

[96] *See* ECJ, *Silhouette International Schmied GmbH & Co. KG v. Hartlauer Handelsgesellschaft mbH*, Case C-355/96, [1998] ECR I-4799.

[97] *See* EFTA-Court, *Mag Instrument Inc. v. California Trading Company Norway*, Case E-2/97 (Judgment of December 3, 1997).

In effect, genuine goods protected by intellectual property rights and put on the market outside the European Union no longer can be imported without the consent of the right holder. Under GATT Article XXIV:5(a), these restrictions call for rebalancing and may give rise to compensation to third countries for market access losses incurred. So far, the cost of regional exhaustion has not been addressed in negotiations and no compensation has been claimed or offered upon accession to a customs union.

(f) A New Approach. From a trade policy perspective, IPRs were introduced into the WTO system mainly for the purpose of improving conditions of foreign direct investment and market access abroad. As stated above, the absence of adequate protection amounts to a non-tariff barrier, as much as the excessive protection of exclusive rights. As discussed at the outset, it is important to find an appropriate balance between the two. This is particularly true for the issue of exhaustion of rights and of parallel imports. The problem no longer can be looked at exclusively from the perspective of maximizing intellectual property rights. It has to be dealt with from the perspective of creating level playing fields and avoiding market access distortions, while at the same time providing adequate investment protection. This is an important consequence of placing IPR protection within the WTO.

A combined regulation of exhaustion of rights in the TRIPs Agreement and of parallel trade in GATT, and possibly GATS, would allow the balance to be improved in future negotiations. Existing specific problems caused by parallel importation should be addressed in specific terms, as is already the case with trademarks. In other areas, in particular patents, the issue should be approached as a problem of quantitative restrictions, with the possibility of specific and well-reasoned limitations in specific market areas, depending on market structures and regulation.

GATT Article XX:d allows for trade restrictions, provided they also comply with the requirements of the chapeau, to the extent that they are necessary *to secure compliance with law or regulations which themselves are not inconsistent with GATT* 1994. To the extent that it can be demonstrated that the free flow of imports impairs a particular market regulation designed to serve the public interest (for example accessible health care) and which is not inconsistent with GATT 1994, import restrictions on parallel traded goods could be justified under this provision in order to accompany the domestic regulation and to prevent it from being undermined by imports. Therefore, it is a matter of looking at the domestic and external effects of market regulations, and of seeking optimal coordination of the two. Pharmaceuticals are a likely candidate for such a regime. Given the diverging levels of government intervention in health care and in the procurement of medication, and given the very different systems of financing health care in different countries, it would seem natural that importation be addressed by legislators when internal market regulations are designed.

Market access restrictions based upon Article XX:d GATT are specific to particular products in regulated markets. They are tailor-made and do not stem from the doctrine of national or regional exhaustion which must be applied uniformly for all products, irrespective of whether such restrictions conflict with the public interest, for example to foster price competition. From the perspective of GATT, all doctrines of exhaustion, other than international exhaustion, are too broad. Considering the possibilities of tailor-made and sector-specific restrictions under Article XX:d GATT, WTO law could allow a general doctrine of international exhaustion to operate in a future revision of the TRIPs Agreement. It is important to address the issue by considering the combined impact of both Agreements.

The same is likely true for GATS. The relationship of progressive liberalization of services and parallel trade of services protected by intellectual property rights has not been explored and deserves research. Neither the general provisions of GATS, nor the concept of market access and national treatment in Members' schedules of commitment, address the issue of licensing IP-protected services. Article XVI GATS—unlike Article XX:d GATT—does not contain special exceptions for the protection of intellectual property rights. What are the implications of different doctrines of exhaustion on commitments made? Ways should be developed to combine the goals of GATS and TRIPs, as was suggested for the GATT, both with respect to general rules, and with respect to limitations and conditions set forth in the schedules of Members.

4. Development and Social Policy Goals in the TRIPs Agreement

(a) The Goals and Principles. The TRIPs Agreement reflects the importance of effective protection of intellectual property rights for social and economic development. This is an important ingredient of the rule of law and good governance.[98] At the same time, the Agreement emphasizes that the goals of social and economic development need to be considered in shaping intellectual property regimes. The preamble of the Agreement explicitly recognizes "the underlying public policy objectives of national systems for the protection of intellectual property, including developmental and technological objectives". It equally recognizes "the special needs of the least-developed country Members in respect of maximum flexibility in the domestic implementation of laws and regulations in order to enable them to create a sound and viable technological base".

In addition to the right to exceed the mandatory standards discussed above, the TRIPs Agreement allows Members to limit protection for certain specific reasons which are enumerated in Articles 7 and 8.[99] Each provision of the TRIPs Agreement is to be read in light of the object and purpose of the Agreement as expressed in the preamble and, in particular vested in these two provisions.

Article 7, addressing the "objectives" of the TRIPs Agreement, states that:

> The protection and enforcement of intellectual property rights should contribute to the promotion of technological innovation and to the transfer and dissemination of technology, to the mutual advantage of producers and users of technological knowledge and in a manner conducive to social and economic welfare, and to a balance of rights and obligations.

Article 8:1, addressing "principles", states that:

> Members may, in formulating or amending their laws and regulations, adopt measures necessary to protect public health and nutrition, and to promote the public interest in sectors of vital importance to their socio-economic and technological development, provided that such measures are consistent with the provisions of this Agreement.

[98] *See supra* note 3.

[99] *See, e.g.,* C.M. Correa, Intellectual Property and International Trade: The TRIPs Agreement 11 (1998); C. M. Correa, *TRIPs Rulings and the Developing Countries*, 4 Journal of World Intellectual Property 252 (2001); D. Williams, *The First Six Years and Beyond*, 4 Journal of World Intellectual Property 177, 190 (2001); T. Kongolo, *The WTO Dispute Settlement Mechanism: TRIPs Rulings and the Developing Countries*, 4 Journal of World Intellectual Property 257 (2001); R. P. Rozek, The WTO Dispute Settlement Mechanism: TRIPs Rulings and the Developing Countries—Prospects after Seattle, 4 Journal of World Intellectual Property 271 (2001); N.A. Odman, *Using TRIPs to Make the Innovation Process Work*, 3 Journal of World Intellectual Property 343 (2000).

Article 8 acknowledges in paragraph 2 that:

> Appropriate measures, provided that they are consistent with the provisions of this Agreement, may be needed to prevent the abuse of intellectual property rights by right holders or the resort to practices which unreasonably restrain trade or adversely affect the international transfer of technology.

The wording of these provisions seeks to strike a careful balance between these objectives and principles and the rights protected in the Agreement. Recourse to the requirement that measures need to be consistent with the provisions of the Agreement, however, appears tautological and circular to some extent as this stipulates a predominance of the other provisions of the Agreement. It may support the view that the provisions of Article 7 and 8 merely express that necessary public policy measures do not amount to non-violation nullification and impairment of benefits to the extent that such policies may affect market access and protection of investment. However, subsequent developments in state practice relating to access to essential drugs suggest that that the objectives and principles of Articles 7 and 8 are given a preferred position as they define important public policy goals which must not be prevented by over-extensive protection of intellectual property rights:

In the Doha Ministerial Declaration the Members stressed that the TRIPs Agreement must be implemented and interpreted in a manner supportive of public health, by promoting both access to existing medicines and research and development into new medicines.[100] In a separate Doha Ministerial Declaration on TRIPs and Public Health, the Members agreed that the TRIPs Agreement does not and should not prevent Members from taking measures to protect public health.[101] This document is of considerable importance in defining the balance between exclusive rights and the needs associated with public health care. It recognizes the importance of protecting intellectual property rights for research-based industries while making it clear that these rights are subject to public health policies. While not officially an "interpretation" in accordance with Article IX:2 of the WTO Agreement, the Declaration will nevertheless influence the interpretation of the TRIPs Agreement beyond the waiver adopted in 2003 in the field of compulsory licenses for essential drugs.[102]

The objectives and principles set forth in Articles 7 and 8 of the Agreement not only apply with respect to the protection of technological subject matter but extend to all intellectual property elements that are related to the socio-economic development of the Members. They are not limited to developing countries. States therefore are entitled to shape domestic intellectual property standards by taking into account, for example, the need to protect and preserve cultural diversity.[103] The long-term impact of these provisions remains to be explored more deeply. So far, the provisions have not yet been fully

explored in jurisprudence. In *United States—Section 110(5) of the U.S. Copyright Act*[104] the Panel had to deal with two U.S. copyright provisions exempting certain transmissions from copyright infringement. The Panel focused mainly on Article 13 of the TRIPs Agreement in order to decide whether these exemptions were permissible. In interpreting Article 13 of the Agreement it failed to make any explicit reference to the objectives and purposes of the Agreement as embodied in Articles 7 and 8.[105] In *Canada—Patent Protection of Pharmaceutical Products*,[106] despite a general reference to Articles 7 and 8, the Panel did not specifically address these provisions in the process of interpreting Article 30. Commentators have identified in these two cases a trend in TRIPs interpretation that does not sufficiently take into account the balance of rights and obligations embodied in Articles 7 and 8.[107] The argument was made that the Panel mainly interprets Article 30 from the perspective of IPR holders, thereby "largely dismissing competing social interests, and reducing considerably the range of regulatory diversity permitted under TRIPs".[108] This concern for appropriate balance is valid. It also applies to industrialized countries and reflects the wording of Article 7 that the protection of intellectual property rights should contribute, *inter alia*, to the transfer of technology for the *mutual* advantage of producers and users. Both need to be taken into account in shaping and fine-tuning WTO obligations in the process of treaty interpretation.

(b) Technical Cooperation and Transfer of Technology. Article 67 requires industrial countries to provide, upon request, technical and financial cooperation in building the IP system. The task not only implies preparation of legislation, but also training and institution building. It does not extend to the transfer of knowledge and technology on the part of the private sector. Substantial efforts to build and reinforce IPR systems in developing countries have been made by Members, and in cooperation with WIPO, over the last decade based on these provisions.

The goals of transfer of technology set forth in Article 7 are understood to be achieved over time as developing countries implement IPR legislation and improve conditions for foreign direct investment. Explicit provisions only exist in relation to least developed countries.

Under Article 66:2 developed countries are obliged to provide incentives to enterprises and institutions at home for the purpose of promoting and encouraging technology transfer to least developed countries. The provision has remained largely without effect. No significant efforts have been made to discuss and introduce governmental measures supporting transfer of technology, such as tax breaks for investing firms, or any other benefits. It remains one of the problems of the TRIPs Agreement that this obligation has not yet been taken seriously, which to some extent undermines the legitimacy of the TRIPs Agreement. Bringing about a more effective transfer of knowledge, information and technology may require more proactive policies. Leaving the matter to the private sector and the market may not be sufficient to achieve the goals of Article 7 of the TRIPs Agreement. Appropriate incentives in the domestic law of industrialized Members should

be created to this effect. It is hoped that upon the entry into force of all the provisions of the TRIPs Agreement upon the expiry of transitional periods these efforts will be increased.

5. Transparency and Good Governance

Transparency is one of the core principles of WTO law. Building upon the tradition of Article X GATT, Article 63 of the TRIPs Agreement contains important obligations in this regard. Members are obliged to publish not only laws and regulations, but also final judicial decisions and administrative rulings of general application, subject to the protection of undisclosed information affecting trade and commercial secrets of companies involved. Moreover, WTO notification requirements assist in ensuring that new legislation complies with TRIPs obligations. Members are obliged to notify the Council for TRIPs of their laws and regulations for the purpose of facilitating the Council's review of the operation of the TRIPs Agreement. In practice, some of these tasks are already fulfilled through WIPO's Collection of Laws for Electronic Access,[109] a database on the intellectual property-related legislation of most countries in English translation. In addition, under Article 63:3, each Member must be prepared to supply information on its relevant national rules and case law in response to a request from another Member. Article 63 aims at implementing transparency as a prerequisite for dispute prevention and settlement, and as a tool to assess the effectiveness of the TRIPs agreement.

A major portion of the work of the TRIPs Council in its first years consisted in exercising its review function and asserting a certain amount of peer pressure with a view to bringing about compliance. Further support for this effort is provided by regular trade policy reviews of Members under the Trade Policy Review Mechanism ("TPRM").[110] The TPRM reports reflect complaints of Members and responses to those complaints. They contain additional information on the state of play and problems relating to intellectual property protection in the concerned Members.

Perhaps more than any other agreement, the TRIPs Agreement promotes the doctrine of good governance through its rules on procedural standards in Part III of the Agreement.[111] These standards are discussed in Part III(E) of this Chapter. It is important to note that the many provisions in the Agreement on civil, administrative and penal procedures applicable to intellectual property protection not only benefit foreign right holders, but also domestic right holders as the benefit of these rules would normally be made available to them as well. Finally, we note that improvements in these procedures will not be limited to intellectual property, but will carry over to other areas of civil and administrative law enforcement. *De facto*, the TRIPs Agreement makes a general contribution to good governance in the field of judicial administration.

6. Security Exceptions

The TRIPs Agreement does not contain certain of the general exceptions contained in Article XX of the GATT 1994 or Article XVI of the GATS, because the various forms of intellectual property provide significantly different rights, making these general exceptions inappropriate. Instead, exceptions to the obligations are contained in the sections

[109] *See supra* note 9.

[110] *See* Chapter 4 of this book.

[111] *See* Thomas Cottier, *Emerging Doctrines of Good Governance: The Impact of the WTO and China's Accession*, in CHINA IN THE WORLD TRADING SYSTEM—DEFINING THE PRINCIPLES OF ENGAGEMENT 119 (Frederick M. Abbott ed., 1998).

dealing with each form of intellectual property. The Agreement does however provide a general security exception, as do Article XXI of the GATT and Article XIVbis of the GATS. Article 73 imports the criteria already contained in Article XXI of the GATT, essentially allowing Members to exclude fissionable materials, traffic in arms, ammunition and implements of war and related products from protection. In addition, the Agreement allows Members to withhold information the disclosure of which it considers contrary to its security interests. For example, Members may withhold patent information relating to inventions vital to national security. Significantly, protection of intellectual property may be withdrawn through measures taken in case of war or other emergencies in international relations and measures adopted under Chapter VII of the United Nations Charter. The exemption is broadly written, and Members and the international community traditionally have enjoyed substantial discretion in applying these exceptions under GATT 1947.[112] The same standard applies to the TRIPs Agreement. In particular, economic sanctions adopted by the Security Council of the United Nations may substantially impair the operation of existing intellectual property rights, albeit the need to include IPRs in sanctions is less apparent than restrictions applicable to trade in goods and services as detrimental effects of such measures may last beyond the implementation of the sanction and are difficult to remedy in due course.

D. Standards Concerning the Availability, Scope and Use of Intellectual Property Rights (Part II)

The TRIPs Agreement is one of the most complex and detailed of the WTO Agreements. It is not possible to analyze all its provisions and those of the related conventions in great detail in this Chapter. The following discussion seeks to provide the genesis and a survey of the most important characteristics and features of the TRIPs Agreements with respect to particular forms of intellectual property rights.

1. Copyright and Related Rights

The provisions on copyright relating to creators of literary and artistic works are based upon the Berne Convention, the substantive provisions of which are incorporated into the TRIPs Agreement.[113] The Agreement supplements these provisions, in particular by introducing disciplines relating to the protection of records, software and electronic data, and of related or neighboring rights for performers and broadcasters. The Agreement clearly reflects the overall expansion of copyright law into the field of the industrial activities of the information age.[114]

(a) The Negotiating Process. The task of reconciling common law concepts of copyright, in particular U.S. law and practice, with the continental system which includes neighboring rights, i.e., the rights of performers and broadcasters, was extremely difficult to achieve.[115] Even though there was general consensus on the application of the provisions

Mathur, *Trade-Related Aspects of Intellectual Property Rights and Copyright Provisions—Some Issues with Special Reference to Developing Countries*, 6 Journal of World Intellectual Property 65 (2003).

[115] *See* Thomas Cottier, *The Prospect For Intellectual Property in GATT*, 28 Common Market Law Review 383 (1991), also published in Abbott, Cottier, Gurry, *supra* note 7, at 985.

of the Berne Convention (1971), the United States took the position that entitlement based on moral rights protecting the artistic integrity of works should not be included, because these were considered not to be trade-related economic rights. Subjecting moral rights to the GATT, it argued, could upset the existing balance of negotiating power within the entertainment industry and stir up domestic debate on this contentious subject between authors, film directors and producers.[116] Article 9 thus explicitly excludes the application of Article 6bis of the Berne Convention. Referring to Berne, but making such exclusions, hardly seemed consistent, quite apart from the fact that moral rights indeed raise trade issues as they also affect market access abroad. Paradoxically, the exclusion may particularly affect U.S. films as it leaves possibly extensive bans on altered films (cutting or re-coloring) based upon domestic moral rights without a remedy under WTO law. On the other hand, it also appears doubtful whether inclusion or exclusion would make a strong practical difference, since jurisdiction to challenge the use of moral rights for protectionist purposes already exists under Article XX:d of the GATT, which is not limited to the rights protected under the TRIPs Agreement.

The Agreement completed the development of the protection of computer programs and electronic data compilation by means of copyright. The question of duration of protection, however, was for a long time pending in the drafts, depending on whether or not compilations and programs would be defined as literary works. Some developing countries favored the inclusion of alternative systems of protection and shorter periods of protection. Progress was made with respect to rental rights in the field of computer programs, cinematographic works, as well as phonograms. A compromise established an obligation to introduce rental rights only to the extent that exclusive rights are substantially impaired and nullified. This case-by-case approach eventually produced the "impairment test" which was introduced in the context of the rental of cinematographic works in Article 11, and is a typical product of reconciling the nullification and impairment doctrine of GATT Article XXIII with IPRs. It also borrows from the concept of material injury applied in GATT antidumping, subsidy and safeguard regulations. It is an interesting and perhaps unique example of using graduation and economic thresholds in IPR protection.[117] In the field of neighboring rights, little progress was achieved beyond the protection of phonogram producers who enjoy not only potential rental rights but also a fifty-year term of protection. The lack of progress concerning other neighboring rights was due to conceptual differences between the United States and Europe as well as Japan. While the rights of performers and broadcasters were specifically addressed in former drafts, their current rights do not go beyond those allocated to phonogram producers. They are limited to what is necessary to keep the rights of performers and broadcasters in line with the strongly improved position of phonogram producers thus maintaining a balance in contractual relations.

(b) The Agreement. The provisions related to copyright are set out in Articles 9 to 14 of the TRIPs Agreement. Besides obligating all WTO Members (including prior non-signatories) to comply with the substantive provisions of the Berne Convention, the TRIPs Agreement adds new provisions and clarifies those guaranteed by the Berne Convention. The rights of authors of literary and artistic works are addressed in Articles 9 to 12, the rights of performers, phonogram producers, and broadcasting organizations mainly

[116] Moral rights essentially are personal rights which allow authors and directors to prevent acts such as editing, coloring films and interrupting the performance with extensive commercial spots.

[117] *See also* the Conclusions in Part IV of this chapter.

in Article 14. The protection of performers' rights, which was traditionally limited to European civil law countries, is for the first time dealt with in a multilateral treaty of wider geographical coverage. The TRIPs copyright provisions against counterfeiting and piracy are of particular significance to producers of computer programs and phonograms.

Article 9:1 establishes the relationship between the TRIPs Agreement and the Berne Convention. It obliges the Member States to comply with Articles 1 through 21 of the Convention. As discussed above, moral rights, however, are explicitly exempted from protection in Article 9, referring to Article 6bis of the Berne Convention. In *United States—Section 110(5) of the US Copyright Act*, brought by the EC, the Panel addressed, *inter alia*, the relationship between the TRIPs Agreement and the Berne Convention.[118] In the course of its opinion the Panel clarified the status of the relationship between the TRIPs and Berne provisions. It not only stated that the rules of the Berne Convention "have to be read as applying to WTO Members", but also that the Berne acquis[119] has been incorporated into TRIPs. It held that "the Berne Convention and the TRIPs Agreement form part of the overall framework for multilateral protection"[120] and that, if the incorporation was not intended to cover the Berne *acquis*, the TRIPs Agreement would have explicitly so provided".[121] Generally, "one should avoid interpreting the TRIPs Agreement to mean something different than the Berne Convention except where this is explicitly provided for".[122]

Article 9:2 awards copyright protection only to expressions and not to ideas, procedures, methods of operation, or mathematical concepts as such. The excluded elements are not defined by TRIPs, thus leaving it, subject to treaty interpretation, to Member states and domestic courts to decide what exactly constitutes, for example, a non-protected "procedure" or "method of operation" in software as opposed to protected expression.[123]

Article 10 expands the traditional subject matter of copyright to include computer programs and compilations of data by creating an obligation to protect them as literary works. Like Article 2:5 of the Berne Convention, *Article 10:2* of the TRIPs Agreement requires originality in the selection and arrangement of the contents of a compilation. Merely creating a list of works or extracts without engaging in any creative activity is

[118] *See United States—Section 110(5) of the U.S. Copyright Act, supra* note 104. For a more detailed analysis, *see, e.g.* D. Williams, *The First Six Years and Beyond*, 4 JOURNAL OF WORLD INTELLECTUAL PROPERTY 177, 192 ff (2001); L. R. Helfer, *World Music on a U.S. Stage: A Berne/TRIPs and Economic Analysis of the Fairnes in Music Licensing Act*, 80 BOSTON UNIVERSITY LAW REVIEW 93 (2000); J. C. GINSBURG, TOWARD SUPRANATIONAL COPYRIGHT LAW? DINWOODIE, *A New Copyright Order: Why National Courts Should Create Global Norms*, 149 UNIVERSITY OF PENNSYLVANIA LAW REVIEW 469 (2000); D. Gervais, *The TRIPs Agreement after Seattle: Implementation and Dispute Settlement Issues*, 3 JOURNAL OF WORLD INTELLECTUAL PROPERTY 509 (2000).

[119] In this specific context, the Panel analyzed the "minor exceptions" doctrine developed in the context of Articles 11bis and 11 Berne Convention (for further details, *see* ¶ 6.42–6.59 of the Panel report, *supra* note 104). As another noteworthy aspect of this decision, the Panel uses "state practice as reflected in the national copyright laws of Berne Union Members" as an additional source of treaty interpretation in order to confirm its conclusion. *Id.* ¶ 6.55.

[120] *United States—Section 110(5) of the US Copyright Act, supra* note 104, ¶ 6.66.

[121] *Id*. ¶ 6.62. To support this reasoning, the Panel mentions, *inter alia*, the treatment of moral rights, which have been explicitly excluded by TRIPs Article 9.1.

[122] *Id*. ¶ 6.66

[123] Whether or not the use of a menu command hierarchy (i.e. the means by which user control and operate) a computer program is expression or "method of operation" was extensively discussed and denied for the United States in *Lotus Development Corp. v. Borland International*, 49 F.3d 807 (1st Cir., 1995), *affirmed* 116 U.S. 804 (1996).

not sufficient to merit copyright protection. If the database is protectable, the copyright protection only extends to the creative elements (e.g., the selection and arrangement of the data) and does not "extend to the material or data itself".[124]

Article 11 provides the exclusive right to authors and their successors to authorize or prohibit the commercial rental of their computer programs and, subject to a so-called impairment test,[125] to their cinematographic works.

Following Article 7:1 of the Berne Convention, *Article 12* of the TRIPs Agreement sets the term of protection of most works that are calculated on a basis other than the life of the author to a minimum duration of fifty years from the end of the calendar year of authorized publication, making, or phonogram fixation/performance.[126] Under *Article 14:5* a term of twenty years is to apply to the rights of broadcasters, respectively, supplementing the twenty-five year term of protection for photographic works which is provided for in Article 7:4 of the Berne Convention.

Article 13 requires Members to confine limitations or exceptions to exclusive rights to (i) "certain special cases" which (ii) do not conflict with normal exploitation of the work, and (iii) do not unreasonably prejudice the legitimate interests of the right holder. The Panel first applied this test in the *U.S. Copyright* case.[127] Since the wording of Article 13 has its roots in Article 9:2 of the Berne Convention, the Panel emphasized that the "preparatory works of Article 9(2) . . . and its application in practice may be of contextual relevance in interpreting Article 13 of the TRIPs Agreement".[128] By applying the above three-prong test to the provisions of the U.S. statute at issue, it held that the exemption in U.S. copyright law from copyright liability for business establishments not exceeding a specified size to transmit or retransmit television or radio broadcasts of non-dramatic musical works failed the first criterion, since too many retail establishments were covered by the exemption to constitute only "certain special cases".[129] However, the Panel found that the home-style exemption, which provided a similar exemption for certain small restaurants and retail outlets using "a single receiving apparatus of a kind commonly used

[124] STAEHELIN, *supra* note 37, at 68. The difficult task of striking a balance between the conflicting interests of right holders (which try to impose maximum control on their databases in order to protect investment) and the interest of the public in free access to information becomes increasingly important in the light of recent revolutionary advances like digital technology and the Internet. Database producers would like to extend the protection to the non-creative elements of the database, the *data* itself (which, as a matter of fact, usually is the most valuable part of the compilation). Many databases (*e.g.*, phone books) are arranged and structured in a way that does not fulfill the "originality" requirement, as held in *Feist Publications, Inc. v. Rural Telephone Service Co., Inc.*, 499 U.S. 340 (1991). The U.S. Supreme Court ruled that the extraction of mere data does not infringe the owner's copyright. In the light of these developments, and in order to boost the domestic database market, the European Union introduced a "*sui generis*" law in Directive 96/9/EC of the European Parliament and of the Council of the EU of March 11, 1996 on the Legal Protection of Databases, O.J. L 077, March 27, 1996, at 0020-0028, granting exclusive rights irrespective of the database's eligibility for copyright protection if there had been a "substantial investment" in creating such a database. Similar legislation has been prevented, due to heavy opposition, in the United States up to now. Recently introduced draft bills in Congress rely more heavily on an unfair competition approach. For more detailed information on this issue, *see* Studer, *supra* note 44, at 653.

[125] This is the case when the rental of the copies has led to such widespread copying that the exclusive rights of reproduction are materially impaired. However, this formulation leaves many ambiguities, and many commentators consider it difficult to assess when such a case occurs, *see, e.g.*, Alberto Bercovitz, *Copyright and Related Rights*, in INTELLECTUAL PROPERTY AND INTERNATIONAL TRADE: THE TRIPS AGREEMENT 153 (Carlos M. Correa and Abdulqawi A. Yusuf eds., 1998).

[126] For unpublished works, the period of fifty years is counted from the end of the year of making.

[127] *United States—Section 110(5) of the US Copyright Act, supra* note 104, ¶ 6.97 et seq.

[128] *Id*. ¶ 6.72

[129] *Id*. ¶ 6.133.

in private homes," satisfied all three conditions of Article 13. The Panel stressed that, in addition to the actual effect on the market, the potential effect of an exemption should be taken into consideration as well when assessing the permissibility of the exemptions. In doing so, the Panel referred to similar concepts and interpretation standards developed in past GATT/WTO dispute settlement practice. It deemed it appropriate to develop an interpretation of the legal protection of IP right holders that is compatible with the treatment of products under GATT and services/service suppliers under GATS.[130]

In the field of neighboring rights, *Article 14* grants improved protection of rights of performers, phonogram producers, and broadcasting organizations. With respect to performers, *Article 14:1* sets out the protection to be granted (i.e., preventing unauthorized phonogram fixation, reproduction of such fixations, broadcasting by wireless means and communication to the public). Phonogram producers enjoy exclusive rights over the reproduction of their phonograms in *Article 14:2* and exclusive rental rights under *Article 14:4*. Finally, *Article 14:3* requires that broadcasting organizations be given the right to prohibit the fixation, reproduction of fixations, wireless re-broadcasting, and communication to the public of television broadcasts. According to *Article 14:6*, Members may provide for conditions, limitations, exceptions and reservations to the extent permitted by the Rome Convention,[131] principally those provided for by Articles 12, 15 and 16 of the Convention.

(c) The Relationship Between TRIPs and the New WIPO Treaty on Copyright. In the *U.S. Copyright* case, discussed above, the Panel also addressed the question of the role of the WIPO Copyright Treaty ("WCT")[132] in the interpretation of the TRIPs Agreement.[133] The Panel held that the subsequent WCT was designed to be compatible with the TRIPs and the Berne Convention framework and should seen as a part of the overall framework of multilateral copyright protection. Therefore, "it is relevant to seek contextual guidance also in the WCT when developing interpretations that avoid conflicts within this overall framework, except where these treaties explicitly contain different obligations".[134] This approach could become of major importance for future disputes involving treaties adopted subsequent to the adoption of the TRIPs Agreement.[135]

(d) Inter-Temporal Application. In relation to copyright obligations with respect to existing works and obligations with respect to the rights of producers and performers in existing phonograms, the principles of transitional application discussed above are governed by special rules. TRIPs Article 70:2 states that such existing rights shall be solely determined under Article 18 of the Berne Convention. TRIPs Article 14:6 extends these rules *mutatis mutandis* to neighboring rights. Since this reference is clear and specific, there is no doubt that the TRIPs Agreement does not directly answer the question of application for existing copyrights and for neighboring rights, but leaves the answer to the special provisions of the Berne Convention (1971).

[135] *See, e.g., Dara Williams, The First Six Years and Beyond*, 4 JOURNAL OF WORLD INTELLECTUAL PROPERTY 177, 203 (2001).

The first two paragraphs of Article 18 of the Berne Convention provide the substantive legal principle and its exceptions:

> (1) This Convention shall apply to all works which, at the moment of its coming into force, have not yet fallen into the public domain in the country of origin through the expiry of the term of protection.
> (2) If, however, through the expiry of the term of protection which was previously granted, a work has fallen into the public domain of the country where protection is claimed, that work shall not be protected anew.

The third paragraph contains important procedural provisions governing implementation of the substantive rules. It follows from this language that the rules set out above are not self-executing, but depend on implementation either by international agreement and/or by national legislation:

> (3) The application of this principle shall be subject to any provisions contained in special conventions to that effect existing or to be concluded between countries of the Union. In the absence of such provisions, the respective countries shall determine, each in so far as it is concerned, the conditions of applications of this principle.

The provisions relating to the protection of existing works have been, for a long time of limited practical interest to Members of the Berne Convention, since the minimum term of protection for copyright was harmonized in 1948. They again became of interest when the Berne Convention entered into force for the United States and other countries, in particular in Central and Eastern Europe. With the extension of these rules to neighboring rights under Article 70:2 *in fine* of the TRIPs Agreement, they are now of general practical interest for phonograms and videograms.

In a legal opinion dated October 10, 1995, the Director-General of WIPO expressed his views on the interpretation of Article 18 of the Berne Convention (the "WIPO Opinion").[136] According to the WIPO Opinion, Article 18 is to be construed to protect all work for which the term of protection has not yet expired in the country of origin when the Convention enters into force.[137] The opinion correctly clarifies that this:

> . . . means "retroactivity" only in the sense that the Convention does not only apply to works that are created or published after the entry into force of the Convention, but also to works already existing, and not in the sense that acts carried out in respect of such works before the entry into force would be relevant".[138]

With the incorporation of the provisions of the Berne Convention into the TRIPs Agreement, the relevant date of entry into force of the Convention is generally January 1, 1996 (and successive dates for new Members). With an agreed duration of protection of fifty years for phonograms (twenty years for broadcasting) in TRIPs Article 14:5, the relevant duration of protection in WTO Member States is fifty and twenty years respectively, provided that the respective provisions have been implemented by the date of entry into force and provided that a Member did not adopt longer terms than those prescribed by the WTO. Therefore, all phonograms protected on January 1, 1996 for fifty years are entitled to protection under the TRIPs Agreement. This basically includes all sound recordings dating from January 1, 1946. The application of this principle, however, is left to Members in accordance with Article 18:3 of the Berne

[136] On file with the author.
[137] *WIPO Opinion, supra* note 136, at 4.
[138] *Id*.

Convention. They remain free to take into account legitimate interests and acquired rights. They also remain free to adopt transitional arrangements in their national legislation that take into account the legitimate interests of those who were formerly in a position to lawfully use sound recordings and had made investments accordingly. A dispute between the United States and Japan concerning this matter was settled to this effect by consultation.[139]

Finally, Article 70:5 stipulates that the provisions on rentals of computer programs, cinematographic works and phonograms do not apply to originals and copies purchased before the entry into force of the Agreement.

2. Trademarks

(a) Negotiating History. Trademark negotiations in the Uruguay Round and its substantial achievements were not really controversial, with the exception of those relating to the "use" requirement. The United States and Canada are the only two countries whose domestic laws require actual use, or the intention to use, for the registration of a trademark. The EC and Japan were opposed to this requirement.[140] As a result of obligations under Article 6 *quinquies* of the Paris Convention, the United States and Canada did not require use in the United States for foreign marks. The United States and Canada only sought recognition of their requirement for use under domestic law for domestic marks, so that parties could not use the TRIPs Agreement to claim that a requirement of use was generally inconsistent with international law.

(b) The Agreement. The Agreement significantly improves trademark protection of goods and services in countries other than Western Europe and North America.[141] For the first time in an international agreement, *Article 15* offers a uniform minimum definition of trademarks (for goods and services), including protection of combinations of colors, but leaving aside other features such as sound or scent marks which are protected by domestic law in some countries, such as the United States. Article 15:3 allows the Members to make registration depend on intended use, but an application may not be refused solely on the ground that intended use has not taken place within three years of the application. *Article 16* specifies the owner's exclusive rights to prevent third parties from using similar marks for goods or services when such use would produce a "likelihood of confusion"—a provision discussed above in the context of parallel trade.[142] The protection of well-known trademarks is extended to services in Article 16:2 and internationally well-known (or famous) trademarks are subject to the minimum standard of protection. According to *Article 16:3,* it is no longer possible to use famous marks in relation to products other than the famous product (e.g., Nike for a sports drink) if such use suggests a linkage with the right holder that is likely to damage his or her reputation. The term of protection under *Article 18* is a minimum term of no less than seven years with an indefinite possibility of renewal. According to *Article 19*, the registration of a trademark can be cancelled only after a period of non-use of three years. *Article 20* and *Article 21* prohibit encumbering the use of trademarks with special requirements (e.g.,

[139] *Japan—Measures Concerning Sound Recordings*, WT/DS28. Consultation were requested on February 9, 1996 and a settlement was announced on January 24, 1997.

[142] *See supra* note 78 and accompanying text on the role of Article 16(1) in the context of parallel trade.

requirement for use only in combination with another trademark). Importantly, Article 21 excludes all compulsory licensing in the field of trademarks. The practice of combining, under a compulsory license, a local trademark with a foreign mark in order to launch and promote a product is no longer possible under the TRIPs Agreement.

3. Geographical Indications ("GIs")

(a) Negotiating History. Special trademark protection for goods, the quality and reputation of which is attributable to their particular geographic origin, was one of the most contentious areas of negotiations, and unfinished business was left behind.[143] The protection of sources of origin and appellations of origin has been a long-standing interest and concern mainly to Europeans. A number of international agreements address this issue, but have failed to achieve global reach.[144] The EC and Switzerland insisted that the TRIPs agreement contain protection for "appellations of origin". The differences in the EC and the U.S. approaches were reflected in the different draft proposals addressing the grounds for disallowing an appellation of origin. The EC sought high standards of protection based on "unfair competition" considerations, whereas the United States tried to limit protection to non-generic appellations of origin for wine in cases where the use "would mislead the public".[145] To a large extent the EC position eventually prevailed, taking into account the concerns of the New World and other users of geographical names not consistent with the locus of production. The groundwork for further work on wines and spirits following the Uruguay Round, and possibly more specific protection in future trade rounds, was laid.

(b) The Agreement. Article 22 of the TRIPs Agreement provides a succinct definition of geographical indications "which identify a good as originating in the territory of a Member, or a region or locality in that territory, where a given quality, reputation or other characteristic of the good is essentially attributable to its geographical origin." This definition renders eligibility narrower than for trademarks or collective marks but is still broader than the concept of appellation of origin as defined in the 1958 Lisbon Agreement for the Protection of Appellations of Origin. This agreement requires, in addition to GIs, that specific qualities or characteristics need to be expressed in the product itself and that the names directly relate to a particular geographical name of a country, region or locality.[146] The use of symbols, permissible under GIs, are not sufficient to met the requirements of an appellation of origin.

Despite the concise definition, no significant substantive improvement for geographical indications concerning foodstuffs and industrial products was achieved, since the level of protection provided by the TRIPs Agreement remains limited in Article 22:2(b) to

[143] STAEHELIN, *supra* note 37, at 108, GERVAIS, *supra* note 27, at 119–138, BLAKENEY, *supra* note 37, at 68–74; Otten and Wager, *supra* note 37, at 400.

[144] *See* Bernard O'Connor, *Geographical Indications in National and International Law*, 6 MONOGRAPHS IN TRADE LAW 41 (O'Connor Company ed., 2003). Felix Addor and Alexandra Grazioli, *Geographical Indications beyond Wines and Spirits: A Roadmap for a Better Protection for Geographical Indications in the WTO TRIPs Agreement*, 5 JOURNAL OF WORLD INTELLECTUAL Property 886 (2002).

[145] Julie Chasen Ross and Jessica A. Wasserman, SUPRA note 27, at 2303 ff.

[146] Art. 2:1 Lisbon Agreement, *supra* note 9, states:

> In this Agreement, "appellations of origin" means the geographical name of a country, region or locality, which serves to designate a product originating therein, the quality and characteristics of which are due exclusively or essentially to geographical environment, including natural and human factors.

unfair competition as defined in Article 10*bis*:3 of the Paris Convention. Thus, the use of an indication referring to the true origin of the product is not deemed to be an act of unfair competition and does not imply consumer deception even though the denomination of the product refers to a different geographical area. The proper labeling of products as to their true geographical origin (for example: Parma ham made in the United States) therefore allows for extensive use of geographical attributes in the denomination of a product.

The burden of proof to demonstrate consumer deception rests with the claimant and thus renders protection rather difficult. A higher, absolute level of protection of goodwill and reputation is introduced in *Article 23:1* for wines and spirits, with respect to which even where there is no doubt about the true origin of a product, no linkage may be made directly or indirectly to other geographical names. Protection thus is much stronger. The Agreement, however, balances these rights with existing usages of geographical indications and contains a number of exceptions, as do the sections on other forms of intellectual property. *Article 23:4* protects homonymous indications (i.e., use of identical names simultaneously used in different regions of the world, such as Rioja in Spain and Argentina). *Article 24:4* and *24:7* exclude rollback, i.e., retroactive protection of geographical indication at the expense of established trade marks where they were used in good faith or for a duration of at least ten years, and claims in relation to a trademark must be made within five years after adverse use of the indication has become generally known. *Article 24:5* protects existing trademarks registered in good faith, or for which an application for registration has been filed in good faith prior to the entry into force of the Agreement or to the protection of geographical indications in its country of origin. *Articles 24:6, 24:8, and 24:9* exempt generic use of indications, person's names, and indications that are no longer in use or are no longer protected in their country of origin.

(c) Additional Negotiations. *Article 23:4* of the Agreement obliges Members to negotiate the establishment of a multilateral system of notification and registration of geographical indications for wines and spirits. *Article 24:1* obliges Members to enter into negotiations aimed at increasing the protection of individual geographical indications. Efforts undertaken to this effect within the TRIPs Council between 1995 and 2000 did not materialize. The obligation in Article 23:4 was affirmed (as extended to spirits by the Singapore Ministerial Declaration) in paragraph 18 of the Doha Ministerial Declaration:

> With a view to completing the work started in the Council for Trade-Related Aspects of Intellectual Property Rights (Council for TRIPs) on the implementation of Article 23:4, we agree to negotiate the establishment of a multilateral system of notification and registration of geographical indications for wines and spirits by the Fifth Session of the Ministerial Conference. We note that issues related to the extension of the protection of geographical indications provided for in Article 23 to products other than wines and spirits will be addressed in the Council for TRIPs pursuant to paragraph 12 of this Declaration.[147]

Since the Uruguay Round, geographical indications have also become of increasing interest for developing countries. While trade liberalization mainly benefits large producers, benefits may accrue to smaller producers by promoting and protecting niche markets for special products that have a given quality, reputation, or other characteristic that is essentially attributable to their geographic origin. The protection of geographical indications is a potentially useful tool in this regard.[148] It is one of the areas in intellectual

[147] *Ministerial Declaration* adopted on November 14, 2001, *supra* note 26.

[148] *See* P. Vandoren, *The TRIPs Agreement: A Rising Star*? 4 JOURNAL OF WORLD INTELLECTUAL PROPERTY 307, 316 (2001).

property protection where benefits may directly accrue to developing countries, many of which still strongly rely upon agriculture. The following statement underscores the point:

> The subject of geographical indications is of particular interest to developing countries because of the importance to those countries of the remunerative marketing of their agricultural production. The expansion of the full scope of the TRIPs geographical indications regime to those products is an effective demonstration of the relevance of the Agreement to their economic circumstances. Resistance to this extension may communicate an unfortunate message to those countries about the political realpolitik of the international intellectual property regime.[149]

The Doha Declaration also requires the TRIPs Council "to examine, *inter alia*, the relationship between the TRIPs Agreement and the Convention on Biological Diversity, the protection of traditional knowledge and folklore, and other relevant new developments . . .".[150] In the context of this mandate, geographical indications may be one of the forms of protection suitable to enhance development in accordance with these objectives, and proposals to extend GIs to all products were tabled by Switzerland on behalf of 20 developed, developing and transitional countries.[151] The protection and promotion of niche products based upon traditional knowledge and a broad range of genetic resources may assist both in bringing about additional income to farming communities in developing countries and may support the ecological goal of preserving biodiversity through commercial use of these resources.[152]

Efforts to extend protection of geographical indications continue to be met with skepticism for a number of reasons. First, it is feared that extension will enhance protectionism, perhaps replacing tariffs and subsidies as barriers to trade. Moreover, it is feared that the system will be expensive. It is submitted that both arguments can be addressed. First, geographical indications do not exclude similar or like products on the market. They are limited in their effect to products that free-ride on reputation, much like trademarks. If there are problems of exclusion of competing products, they primarily arise domestically when eligibility of producers to use a geographical indication is defined. Provided that adequate transitional arrangements are reached, that there is no rollback, and the protection of homonymous products is assured, restrictions on international trade remain limited. Enhanced protection is likely to stimulate new and innovative products. It may not be a coincidence that new wines originating in countries like Chile and Australia have successfully conquered traditional markets after the Uruguay Round. Second, the international system of registration will be financed internationally and does not particularly burden national budgets. To the extent that a new regulation does not contain rollbacks (which is unlikely) there will be particular marketing costs due to re-branding of products. As Article 23:1 and the Doha Declaration do not specify the legal nature of the future system, it remains open at this stage whether registration will be legally constitutive of rights (the European view) or merely an instrument of information

(the U.S. view).[153] The matter will need to be addressed by taking into account the possible extension to products other than wines and spirits, and a uniform approach should be designed. From the perspective of legal security and efficiency, constitutive effects may be combined with limitations on excessive protection (and thus maximum standards) with a view to finding an appropriate balance between the protection of niche products and market access and efficiency.[154]

4. Industrial Designs

(a) Negotiating History. Negotiations on industrial designs were difficult. There was controversy as to whether the standards of protection to be granted for industrial design should be based on the protection available in Europe or in the United States.[155] The EC wanted the United States to expand coverage of its domestic design patent law. The initial U.S. proposal excluded "functional" designs from protection and was limited to designs that are "new, original, ornamental and non-obvious." One of the main practical interests at stake was trade in automobile spare parts. The automotive industry sought to obtain protection from cheaper parts produced by foreign competitors. Extension of protection was, therefore, opposed by developing countries and the car insurance industry. The interests of the textile industry, which sought enhanced protection for fashion designs, were another driving force in the negotiations and resulted in modest improvements. Overall, the minimum standard of protection that was agreed maintains a reasonable level of creativity, but allows Members to grant more extensive protection if they so wish.

(b) The Agreement. Members are obliged by *Article 25* to provide for the protection of independently created industrial designs that are new or original. Protection can be withheld from "designs dictated essentially by technical or functional considerations". Members must ensure that the requirements for obtaining protection for textile designs do not unreasonably impair the opportunity to obtain such protection. *Article 25:2* was included in recognition of the short lifecycle of such design creations due to changes in fashion and amounts to a novel instrument in design protection. Together with Article 62, discussed in Part III(F) below, *Article 25:2* creates an obligation to, and pressures for, facilitating filing procedures in countries notoriously slow in registering designs which depend on fashion cycles. Moreover, in many countries copyright protection can also be used as a possible way for protecting designs without any registration requirements.

5. Patents

(a) Negotiating History. From the beginning, patents were among the most contentious subjects of the Round, and the differences were not limited to North-South issues, as Members may have thought when the subject was placed on the negotiating agenda of

[153] In the context of a Multilateral Register of Geographical Indications for Wines and Spirits, *see* proposal of the US (IP/C/W/133/Rev. 1 (July 26, 1999)) and proposal of the EU (IP/C/W/107/Rev.1 (June 22, 2000)).

[154] Current standards of protection in European Community Law should be rebalanced. Two recent judgments of the European Court of Justice to require Parma ham to be sliced and packaged, as well as Grana Padano cheese to be grated and packaged, in the respective region of production in Italy, are difficult to understand from a trade policy point of view and efficient servicing of international of markets—see ECJ, *Consorzio del Prosciutto di Parma and Salumificio S. Rita v. Asda Stores Ltd*., Case C-108/01, [2003], and ECJ, RAVIL SARL V. BELLON IMPORT SARL, Case C-469/00 [2003].

[155] *See* STAEHELIN, *supra* note 37, at 125; GERVAIS, *supra* note 27, at 138-143; BLAKENEY, *supra* note 37, at 75–80; Otten and Wager, *supra* note 37, at 391, 400.

the Uruguay Round.[156] The negotiations addressed a number of key political issues: patentability, exclusions, non-discrimination, patent term, burden of proof, rights conferred, compulsory licenses, and the problem of government use.[157]

Negotiations on patent protection were key to the success or failure of the Uruguay Round. It was clear that without major commitments in this area, no package deal would be possible. Negotiations were strongly supported and monitored by industry, in particular the research-based pharmaceutical industry, and took place under considerable industry pressure. Although at the outset, the developing countries strongly opposed the introduction of product patents for certain fields of technology as well as a minimum patent duration, the negotiations succeeded in establishing a comprehensive set of rules, for reasons already discussed above.[158] Once the principle of equal protection for all sectors of technology was agreed upon, negotiations focused on possible exemptions from patentability, which remained contentious until the conclusion of the negotiations. Except for India, at the end of the day most parties were increasingly prepared to accept the inclusion of foodstuffs, pharmaceuticals and agricultural chemical products, the latter two subject to extensive transitional provisions. The debate shifted instead to complex issues involving biotechnological and genetically engineered products, as patenting of pharmaceuticals and agrochemical products increasingly depend on patenting of biotechnology and genetic engineering. Extensive patentability of such inventions in Australia, the United States, and Japan created comparative advantages, which partly explain the increasing exodus of research and know-how from Europe where legal foundations of patenting life forms and related regulations are more restrictive. The provisions on patentability reflect the compromise achieved, but also indicate that this will not be the final word on the matter.

The second issue of fundamental controversy related to compulsory licensing of patents, the conditions of which are of great importance. While compulsory licenses are granted only rarely, the rules and conditions on compulsory licensing set the stage for voluntary, contractual licensing and influence the playing field for the negotiation of commercial contracts. Developing countries and Canada argued in favor of an obligation to work the patent domestically (i.e., excluding importation even on normal commercial terms). Exporting countries argued that importation should fully satisfy the requirement of exploitation or working as economies of scale would not permit local "working" in the territory of every WTO Member. Negotiations resulted in Article 31 of the Agreement. This provision, for the first time in international law, contains a detailed list of substantive and procedural conditions for compulsory licensing, yet leaves the motives for compulsory licensing to Members. A balance was sought between the legitimate use of compulsory licensing and the conditions to be met. Again, post-Uruguay Round discussions show that the issue has remained highly controversial. Patent law will remain a key issue for years to come.

(b) The Agreement. According to *Article 27:1*, patents shall "be available for any inventions, whether products or processes, in all fields of technology", as long as these

[156] For a historical account, *see also* THOMAS COTTIER, *The Prospect For Intellectual Property in GATT*, 28 COMMON MARKET LAW REVIEW 383 (1991), also published in ABBOTT, COTTIER, GURRY, *supra* note 7, at 985.
[157] *See* STAEHELIN, *supra* note 37, at 142; GERVAIS, *supra* note 27, at 144–172; BLAKENEY, *supra* note 37, at 81–95; ABBOTT, COTTIER, AND GURRY, *supra* note 7, at 685 ff.; Otten and Wager, *supra* note 37, at 391, 400 *et seq*.
[158] *See supra* Part III(C)(4).

inventions are new, involve an inventive step and are capable of industrial application. Even though these requirements can be found in many national patent laws, the negotiating parties considered it necessary to place these provisions in the TRIPs Agreement. The main normative content of the provision consists in the all-encompassing coverage of both process and product patents in all fields of technology, thus the coverage of pharmaceuticals and agro-chemical products, subject to exceptions in *Article 27:2* and *3. Article 27:1,* also deals with the principle of non-discrimination as to the place of invention, the fields of technology and the country of production. In this context, the underlying difference between the U.S. "first-to-file" system and the more usual "first-to-invent" system is not addressed directly, but member countries are required not to discriminate in the availability of patent protection according to the place of invention. The conceptual issue leading to this affirmation of non-discrimination was that, except in very limited circumstances, the United States did not allow evidence of inventive activity that took place outside the United States, with the result that if two inventors applied for a patent on the same invention, the inventor who made his or her invention in the United States would be favored by the law.

Important exceptions from patentability are embodied in *Article 27:2 and 27:3*. Article 27:2 contains the basic general exceptions. It allows the exclusion from patentability of inventions "the commercial exploitation of which is necessary to protect *ordre publique* or morality, including to protect human, animal, or plant life or health or to avoid serious prejudice to the environment". Unlike the European Patent Convention, this provision accepts that the mere publication of inventions can infringe public order.[159] *Article 27:3(a)* permits Members to exclude from patentability diagnostic, therapeutic, and surgical methods for treatment of humans and animal, but not products associated with those methods. *Article 27:3(b)*—embodying a transitional compromise—permits Members to exclude plants and animals from patentability and essentially biological processes for the production of plants and animals. Micro-organisms and non-biological and microbiological process must however be protected. The provision also obliges Members to provide for the protection of plant varieties either by patents or by an effective sui generis system or by any combination thereof. While plant varieties are patentable at present in only a few countries (e.g., the United States, where such patents have a twenty-year term measured from the date on which the patent application was filed), the UPOV Convention (Union Pour la Protection des Obtentions Végétales) is the prime example of "sui generis" protection. The provision, however, allows equally for alternative *sui generis* systems. A number of countries have combined such protection with rights under the Convention on Biodiversity for access and benefit sharing.[160]

On January 1, 1999, *Article 27:3(b)* became subject to review. Beyond stocktaking, substantive negotiations did not take place and the matter will need to be addressed under the Doha Development Agenda. Success will depend on the integration of the newly emerging topic of protecting traditional knowledge in order to rebalance the system in the age of biotechnology. Efforts to introduce obligations for prior informed consent as a requirement to grant a patent, and thus to allow for objections on the basis of prior

[159] STAEHELIN, *supra* note 37, at 147.

[160] *See* P. Cullet, *Revision of the TRIPs Agreement Concerning Protection of Plant Varieties: Lessons from India concerning the Development of a Sui Generis System*, 2 JOURNAL OF WORLD INTELLECTUAL PROPERTY 617 (1999); *see also* the Conclusions in Part IV.

art, are being made in order to improve the potential for benefit sharing and adjust and prepare international patent law for the era of biotechnology.[161]

Article 28:1(a) confers on the owner of a product patent the exclusive right to prevent third parties that do not have their consent from making, using, offering for sale, selling, or importing that product. With respect to process patents, under *Article 28:1(b),* the patent owner must have the exclusive right to prevent third parties from using the process and from using, offering for sale, selling, or importing for these purposes the product obtained directly by that process. As discussed above, this provision also touches the issue of parallel imports. Footnote 6 clarifies that the right to prevent third parties from importing patented products is subject to TRIPs Article 6, which allows Member to apply the principle of national, international or regional exhaustion in their domestic IP regimes.[162] At any rate, the patent owner must have the possibility of preventing imports if the product infringes the patent or was manufactured in a third country based on compulsory licenses.

Article 29 clarifies the conditions for the grant of a patent, requiring disclosure of the invention in the patent application in a manner that enables a person skilled in the art to carry out the invention. Members are permitted to require, in addition, disclosure of the best mode known to the inventor at the filing or priority date.

Article 30 allows Members to grant limited exceptions to the rights conferred with a view to balancing the need for protection against the advantages of leaving the matter partly in the public domain. Such exemptions may be motivated by practical reasons, excluding rights in constellations of minor economic importance and difficult to enforce, or by public interest policies to render the subject matter of the patent more readily available to competitors and the public at large. The exception must be limited, not unreasonably conflict with normal exploitation of the patent, and, finally, not "unreasonably prejudice the legitimate interests of the patent owner, taking account of the legitimate interests of third parties".

These tests of reasonableness and legitimate expectations were the main focus of a case brought by the EC, *Canada—Patent Protection of Pharmaceutical Products*.[163]

At issue was the TRIPs consistency of Sections 55:2(1) and 55:2(2) of Canada's Patent Act, which create exceptions to the exclusive rights of patent owners. Canada's regulatory review exception (Section 55:2(1)) allows potential competitors of the owner of a patented product to use the patent during its term of protection in order to obtain government marketing approval where necessary to sell the product after expiry of the patent. This provision was of particular relevance to the pharmaceutical industry.[164] The stockpiling exception (Section 55:2(2)) allows competitors to manufacture and stockpile patented goods for a period of time before the patent expires in order to be in a position to begin marketing as soon as the patent expires.[165]

[161] *See* COMMISSION ON INTELLECTUAL PROPERTY RIGHTS, *supra* note 3, at 111–122. A submission to amend the TRIPs Agreement ensuring prior informed consent and fair and equitable sharing of benefits in the field of bioprospecting was tabled by a group of developing countries including Brazil, China, Cuba, the Dominican Republic, Ecuador, India, Pakistan, Thailand, Venezuela, Zambia and Zimbabwe (*see* TRIPs Council—*The Relationship between the TRIPS Agreement and the CBD and the Protection of Traditional Knowledge,* IP/C/W/356 (June 26, 2002); *see* also the Conclusions in Part IV of this chapter.

[162] *See supra* note 80.

[164] *Id*. ¶ 7.2.

[165] *Id*. ¶ 7.7.

The EC argued that Canada had violated Article 28:1 of the TRIPs Agreement by allowing manufacturing and stockpiling before the patent term expires. Additionally, Canada allegedly treated patent holders in the field of pharmaceutical inventions differently than all other patent holders by allowing activities such as the Section 55:2(1) marketing approval process. In order to justify its measures, Canada claimed that the regulatory review and stockpiling provisions fell under Article 30. It also argued that none of the provisions reduced *de facto* the term of protection to less than twenty years. In its report, the Panel applied the three criteria test of Article 30. Like TRIPs Article 13,[166] the language of this provision was inspired by Article 9:2 of the Berne Convention:[167] The Panel found the regulatory review exception to be consistent with Article 30 of the TRIPs Agreement and not inconsistent with Article 28:1.[168] The stockpiling exception, however, was considered to be a substantial curtailment of the exclusionary rights required to be granted to patent owners under Article 28:1 of the TRIPs Agreement and therefore inconsistent with this provision.[169]

Article 31 deals with three major issues: government use, compulsory licensing and dependent patents. Government non-commercial use of a protected invention (or such use by a private contractor on behalf of the government), as stated in *Article 31:b,* obliges government officials to promptly inform the right holder, thereby allowing the patentee to claim remuneration and the other rights granted under *Article 31.*

Article 31 allows compulsory licensing for patents. In doing so, it does not address legitimate motives and leaves their determination to Members. They are free to invoke compulsory licensing for whatever purpose they choose. However, the Agreement strictly regulates the conditions to be met for compliance, i.e., consideration of each case on its individual merits, prior effort and failure to achieve authorization from the right holder on commercial terms (except in cases of national emergency, extreme urgency and public, non-commercial use), limitation of the compulsory license to the purpose for which it was initially authorized, proper compensation to the patent holder, and judicial or other independent review. Additionally, the license must be non-exclusive, non-assignable, authorized predominantly for the supply of the domestic market under *Article 31:f,* and only be allowed while the circumstances giving rise to the license still prevail. Countries may bypass some of the above conditions in the case of anti-competitive conduct by right holders as determined on the basis of national law by courts or administrative bodies under *Article 31:h*. The provisions need to be read in conjunction with additional criteria for compulsory licensing of Article 5:2 of the Paris Convention. Potential tensions were already addressed above.[170]

The provisions on compulsory licensing have, so far, remained untested in WTO dispute settlement. However, they were at the heart of the political discussions and negotiations relating to the issue of access to essential drugs, mainly AIDS/HIV drugs, but also drugs for other epidemics (malaria, tuberculosis, etc.). The invocation of the TRIPs Agreement by governments, at the urging of the pharmaceutical industry, to prevent the

[166] *See supra* note 127 and accompanying text.

[167] *Canada—Patent Protection of Pharmaceutical Products, supra* note 61, ¶ 7.29.

[168] *Id*. ¶ 7.39.

[169] *Id*. ¶ 7.36. The panel first considered whether this specific exception to the patent owners right (to exclude "making" and "using") could be considered as being "limited". It observed that nothing in Section 55.2(2) limited the quantity of production, so that the stockpiling exception would therefore entirely remove the protection during the last six month. *Id*. ¶ 7.34.

[170] *See supra* Part II(B)(3).

use of compulsory licensing and parallel importation of less expensive drugs gave raise to political initiatives, which greatly put at risk the reputation of intellectual property, the TRIPs Agreement and the WTO. The declaration produced by the Doha Ministerial Conference on the TRIPs Agreement and Public Health was born out of the necessity to respond to the political challenge.[171] It recognized that many least developed countries do not have the capacity to produce pharmaceuticals and depend on cost efficient imports. Of concern was the availability of low priced imported products after 2005, when all developing countries must have in place product patent protection for pharmaceutical products and could no longer freely export generic products still under patent protection, since Article 31:f does not allow to grant compulsory licensing predominantly for the purpose of exportation. The Declaration mandated Members to negotiate a solution to this problem.

Efforts were made to bring about an instrument by which obligations to exclude the granting of compulsory licensing for exportation would be waived. By the end of the year 2002 all Members seemed to have agreed upon a solution except the United States which for the time being, echoing the concerns of research-based industries, refused to agree to inclusion of all medicines beyond those relating to epidemics.[172] The argument for inclusion of all medicines is that HIV/AIDS triggers the need for inexpensive access to a great number of drugs as the deficiencies of the immune system cause different diseases.[173] The argument against broad coverage is that it would essentially undermine the general obligation to introduce effective patent protection for pharmaceuticals by the end of 2005. Prior to the Ministerial Meeting at Cancun, a solution could be found. A waiver was adopted which is based upon broad product coverage, but emphasizes additional criteria in support of good faith recourse to exemptions granted for compulsory licensing for the purpose of exports.[174] These criteria will allow to avoid and counter the abuse of compulsory licensing.

In the long run, questions concerning compulsory licensing could be addressed based on existing rights and obligations under the TRIPs Agreement. A company's refusal to grant a reasonably priced compulsory license for the export of an essential drug to a country in need that is unable to produce the drug itself is arguably an abuse of rights and could be considered under the national law of the exporting country as anti-competitive conduct.[175] The problem remains, however, that most countries do not have the necessary funding to buy the drugs or to compensate companies for the imposition of compulsory licenses. Nor do they have effective competition laws. What is primarily needed are

[171] *See supra* note 26. The problem stirred an intensive debate, *see, e.g.*, D. Nash, *South Africa's Medicines and Related Substances Control Amendment Act of 1997*, 15 Berkeley Tech. Law Journal 485 (2000); S.M. Ford, *Compulsory Licensing Provision Under the TRIPs Agreement*: Balancing Pills and Patents, 15 American University International Law Review 941 (2000); A. Subramanian, *The Aids Crisis, Differential Pricing of Drugs and the TRIPs Agreement: Two Proposals*, 4 Journal of World Intellectual Property 322 (2001).

solutions outside the TRIPs Agreement, such as the creation of a fully functioning global fund. The case of access to medicines is a classical example of blaming WTO and the TRIPs Agreement for problems which are mainly caused by factors outside the trading system and therefore primarily need to be addressed by the appropriate institutions.

The issue of dependent patents is addressed in *Article 31:l* of the TRIPs Agreement. In some cases, a patent is based on some prior, protected invention. It is therefore dependent since it cannot be exploited without recourse to the older patent, and thus requires a license to work. *Article 31:1* requires compulsory licensing in case use of the patent cannot be agreed. Three additional conditions need to be met: (i) the second patent involves an "important technical advance of considerable economic significance," (ii) the owner of the first patent is allowed to receive a cross-license on reasonable terms on the second patent, and (iii) the first patent may not be assigned except with the assignment of the second patent.

The minimum term of protection under *Article 33* is twenty years from the filing of the patent application. Transitional issues arose upon entry into force of the Agreement. In *Canada—Term of Patent Protection*, provisions of the Canadian Patent Act giving patents filed before October 1, 1989 a protection term of seventeen years from the day the patent was issued were challenged by the United States.[176] *Article 33* of the Agreement requires a patent protection term of at least twenty years from the filing date for all patents in existence as of January 1, 1996. Canada considered its law to be in compliance arguing, *inter alia*, that the Agreement does not have retroactive application and that a term of seventeen years from grant provides, *de facto*, a longer protection period than twenty years from application. The Panel concluded that Canada's Patent Act failed to comply with Article 33, since some patents[177] did not enjoy the minimum patent term. Additionally, the Panel found that the wording of Article 70:2 of the TRIPs Agreement (dealing with protection of existing subject matter—see Part III(A)(2) and III(D)(1)(d) of this chapter) includes inventions protected by patents that were in effect on January 1, 1996.[178] The Appellate Body upheld the findings of the Panel.[179]

Article 34 includes a reversal of the burden of proof in the case of process patents. It generally is very difficult for the patent owner to demonstrate that another product has been produced using the same patented process, as it has no lawful access to the premises and undisclosed information of the competitor. *Article 34* therefore requires the defendant to demonstrate that a different process has been used to obtain an identical product if the product obtained by the patented process is new or if there is a substantial likelihood that the process was used and the patent owner, through reasonable efforts, has been unable to determine the process actually used.

(c) Inter-Temporal Application. As transitional periods up to ten years were granted to developing countries for the introduction of extended product patent protection under Article 65 (see Part III(H) of this chapter), it became necessary to design special

[176] *Canada—Term of Patent Protection, supra* note 63. For further details, *see, e.g.*, S. A. Mota, *TRIPs: Five Years of Disputes at the WTO*, 17 Arizona Journal of International & Comparative Law 533, 546 (2000).

[177] *Canada—Term of Patent Protection, supra* note 63, ¶ 6.6. The Panel observed that this dispute only involves "patents for which applications were filed before October 1989, which were granted less than three years after filing, which were in effect on January 1, 1996 and are still in effect". *See* Mota, *supra* note 176, at 533, 547.

[178] *Canada—Term of Patent Protection, supra* note 63, ¶ 7.1.

[179] *Canada—Term of Patent Protection*, Report of the Appellate Body, WT/DS170/AB/R (2000), ¶¶ 61–66.

intertemporal rules. Short of such rules, patent applications would only be possible as of January 1, 2006, and effective protection would result only after the additional period required for the examination and the grant of the patent. The issue is addressed in *Article 70:8 and 9* of the TRIPs Agreement which lay the foundations for the so-called "pipe line protection" and "mail-box" provisions. These provisions serve the purpose of making patent protection available from the entry into force of the product patent requirement, and of protecting a Member's priority rights in an invention.

Under these provisions, developing countries are obligated to make available, from the entry into force of the Agreement, "a means by which applications for patents can be filed" in the field of pharmaceuticals and agricultural chemical products before regular patent applications will be made available (January 1, 2006). However, the criteria for patentability under this Agreement and of priority rights shall apply as from the date of the application of the Agreement (generally January 1, 1995). Effective patent protection is to be granted only upon the expiry of the ten year transititional period, but will be counted from the date of filing through the remainder of the period. For example, if a patent is filed under the mail-box provision on April 1, 1998 in a country entitled to the ten-year implementation period, patent protection takes effect on January 1, 2006 for the period up to April 1, 2018. In addition, *Article 70:9* requires a Member to grant exclusive marketing rights for products for which an application has been filed under Article 70:8 and, in addition, a patent has already been granted abroad and marketing approval was obtained. This obligation extends to five years or until the patent is granted, which ever period is shorter.

The implementation of this provision triggered a number of disputes. Some were settled by consultation, others led to panel and Appellate Body recommendations. *India—Patent Protection for Pharmaceutical and Agricultural Chemical Products*, discussed above, was the first case ever to address the TRIPs Agreement.[180] Separate complaints by the United States and the European Communities took issue with the legal quality of administrative measures put in place by India and the lack of regulations granting exclusive marketing rights. Both resulted in findings that the measures did not meet the requirements of the Agreement since (i) they failed to assure effective priority rights, and thus the future validity of patents applied for, and (ii) failed to provide for exclusive marketing rights.

6. Layout-Designs (Topographies) of Integrated Circuits

(a) Negotiating History. The creation of special rights for the lay-out designs of integrated circuits responded to the needs of an industry that was rapidly growing in the 1980s. Instead of protecting these products by means of existing forms, such as patent, copyright or industrial designs, the view prevailed that a separate instrument be created. On the level of international law, this strategy was consolidated by the Treaty on Intellectual Property in Respect of Integrated Circuits ("IPIC" or the "Washington Treaty", adopted May 26, 1989. Although the Treaty never entered into force, it was eventually incorporated into the TRIPs Agreement. This strategy allowed contentious issues which could not be resolved in IPIC negotiations to be addressed in the Uruguay Round: the duration of protection and the protection of the *bona fide* acquisition of products containing counterfeit circuits.

(b) The Agreement. The provisions of Articles 35 to 38 implement and reinforce the "Washington Treaty". They are of particular importance not only to the protection of

[180] *supra* notes 54 and 55.

topographies as such, but also for all products that include topographies.[181] The provisions significantly strengthen the legal position of the right holders as they are linked with the enforcement provisions. In order to avoid distortions caused by potential abuse of border enforcement procedures, it is necessary to equally protect the interest of importers and bring about an appropriate balance of interests.

Article 35 requires Member countries to protect the layout-designs of integrated circuits in accordance with the provisions of the Washington Treaty. In addition, the the TRIPs Agreements clarifies several points. In *Article 38* the term of protection is extended from eight to ten years from the date of filing or from the first commercial exploitation wherever it occurs. *Article 36* defines the rights and their broad applicability to products containing infringing integrated circuits. The provision bans the import, sale, or distribution of unlawfully produced designs or circuits, and applies to the many products incorporating such designs or circuits. The breadth of product coverage made it imperative to limit the application to willful and negligent infringement. *Article 37* excludes the *bona fide* buyer of counterfeited goods. Acts of incorporating a counterfeited layout design into an integrated circuit, or incorporating the latter into any product, are not deemed unlawful if the person performing the act did not know or had no reasonable ground to know when acquiring the product that it contained an unlawfully produced layout-design. Given the number of integrated circuits contained in many products, this provision essentially limits the reach of the article to producers and traders, to the exclusion of consumers, since consumers are usually not in a position to know, and cannot be expected to know, the origin of layout-designs incorporated in a product which they buy on the market.

7. Protection of Undisclosed Information

(a) Negotiating History. The legal regimes for the protection of undisclosed data vary greatly among countries. There were many definitions of trade secrets, sometimes substantially different, on the national level, and many jurisdictions did not even provide a legal definition of trade secrets.[182] The protection of undisclosed data also varied considerably within national jurisdictions, such as the United States, where protection is provided on the federal and state levels, but mainly through the federal Uniform Trade Secrets Act.[183] In the United States protection resulted mainly from the development of case law in the fields of contract, unfair competition, and criminal law. In contrast to countries having a long tradition of such case law, those jurisdictions that more recently provided for the protection of undisclosed data did so by codification, often as a result of pressure from industry.[184] In many countries, no adequate protection was available.

The disparities in approaches and standards of protection, and the occasional lack of protection, required a more harmonized way of addressing this issue. The question of trade secrets was raised in an early phase of the Uruguay Round negotiations as one of the pressing issues. There were essentially two needs. First, the extension of liability to companies receiving unlawfully disclosed information. Second, improved protection of information submitted to authorities for purposes of product approval, so as to prevent its

[181] *See* STAEHELIN, *supra* note 37, at 163, 173–180; BLAKENEY, *supra* note 37, at 96–101; Otten and Wager, *supra* note 37, at 391, 401.

[182] MEITINGER, *supra* note 21, at 42.

[183] *Uniform Trade Secrets Act* (14 U.L.A. 433–67 (Supp. 1998)).

[184] For an extensive review of EC regulations pertaining to protection of undisclosed information *see* COTTIER AND MEITINGER, *supra* note 47.

leak or impermissible disclosure to competitors. Many delegations, however, argued that trade secrets and test data protection are not part of the traditional body of intellectual property rights and, therefore, should not be dealt with in the TRIPs Agreement.[185] It was only by tying the protection of trade secrets to Article 10*bis* of the Paris Convention, which was to be incorporated by reference into the TRIPs Agreement, that the concept was finally accepted. Likewise, Article 1:2 of the TRIPs Agreement, by reference to Section 7 of Part II of the Agreement, formally includes the protection of undisclosed information into the rights protected under the TRIPs Agreement. This is an interesting example of transmutation from unfair competition to intellectual property protection, building upon unfair competition principles and the standards of honest business practices. This treatment still leaves the legal nature of the protection of undisclosed information somewhat unsettled in WTO law. While international law now considers trade secrets as a novel category of IP rights,[186] national regulations still tend to limit the protection of trade secrets to the prevention of unfair competition, and thus to weaker protection.

(b) The Agreement. Article 39 of the TRIPs Agreement essentially consists of two parts.[187] The first part deals with the concept and definition of undisclosed information. The second part, contained in Article 39:3, addresses specific problems in handling research-based data that must be submitted to governments to obtain marketing approval for pharmaceutical and agricultural chemical products.

Article 39:2 addresses the first concern and defines undisclosed information as information that is secret, has commercial value because it is secret, and has been subject to reasonable steps by the person lawfully in control of the information to keep it secret. Secrecy is defined in terms of the absence of knowledge and of accessibility to "persons within the circles that normally deal with the kind of information in question"; the standard therefore is relatively demanding. It builds upon the professional environment of a business sector and not on accessibility of the information to the public at large. By providing harmonization and a detailed definition, the TRIPs Agreement contributes to greater legal certainty. The provision builds upon Article 10*bis* of the Paris Convention which obligates Members to assure protection against unfair competition. Paragraph 2 of this provision defines an act of unfair competition more concretely as "any act of competition contrary to honest practices in industrial or commercial matters", and paragraph 3 provides an illustrative list of practices that must be prohibited (creating confusion, discrediting a competitor and misleading the public), but does not address the issue of undisclosed information. Moreover, this general obligation does not determine the way in which the protection must be implemented and, therefore, leaves broad leeway to national legislators. *Article 39:2* of the TRIPs Agreement significantly improves protection and in effect creates a specific intellectual property right by providing that "natural and legal persons shall have the possibility of preventing undisclosed information (meeting the above requirements) lawfully within their control from being disclosed to, acquired by, or used by others without their consent in a manner contrary to honest commercial practices". Footnote 10 may be the most important and innovative provision in this section of the Agreement. It defines " a manner contrary to honest commercial practices" in

[185] COTTIER AND MEITINGER, *supra* note 47, at 26–29, 52.

[186] The various drafts of *Article 39* of the TRIPs Agreement also inspired Chapter 17 of the NAFTA Agreement and Decision 486 of the Andean Pact. COTTIER AND MEITINGER, *supra* note 47, at 51.

[187] *Id*. at 32–33, STAEHELIN, *supra* note 47, at 181–187; BLAKENEY, *supra* note 37, at 102–107; Otten and Wager, *supra* note 37, at 391, 402.

terms of a minimal standard. Besides conduct relating to contract law (breach, inducement to breach, breach of confidence), it provides that the owner of a trade secret has a claim against a recipient of the data who knew, or was grossly negligent in failing to know, that the acquisition of the data was unlawful. Often, the person who breached a contractual duty of secrecy is a natural person and, compared to the acquirer of the secret (often a company), not wealthy. This provision gives the owner of a trade secret a claim against the recipient company. Members are therefore obliged to create the tort liability of companies with respect to such acts.

Article 39:3 of the TRIPs Agreement addresses the second concern, the protection of information required by Members to be submitted to governmental authorities to obtain marketing approval for pharmaceutical and agricultural chemical products.[188] This provision obligates Members to secure fair competition among competitors, by providing for the protection of test data so as to prevent unfair commercial use by third parties. Therefore, the government institutions in question are not obliged as a matter of law to keep the information secret under all circumstances, provided that the data is protected against unfair commercial use. The solution was criticized as it does not provide full protection for trade secrets.[189] It reflects the hybrid nature of current levels of protection and its origins in unfair competition rules. Additional rules on protecting undisclosed information can be found in Article 40:3 and relate to anti-trust procedures.

8. Control of Anti-Competitive Practices in Contractual Licenses

(a) Negotiating History. Intellectual property rights are an important basis of contractual arrangements. This is perhaps the most important function of IP rights as it allows cooperation with business partners domestically and internationally. Since such contracts may infringe national competition rules, and no such disciplines were available in the GATT, the Members decided to include a carve-out provision in the Agreement and to assure minimum levels of cooperation in addressing anti-competitive practices.[190] This was a particular concern of developing countries, and the provision is closely linked to the principles and goals set forth in Articles 7 and 8 of the TRIPs Agreement. The difficulty consisted of striking an appropriate balance between the protection of exclusive rights and the potential of them being abused in contractual relations, while avoiding at the same time that domestic competition law would erode what was achieved under the TRIPs Agreement. In respect of cooperation, negotiations on Article 40 were able to build upon existing comity in the field as developed by the OECD.

(b) The Agreement. Article 40 of the Agreement recognizes that some licensing practices or conditions pertaining to intellectual property which restrain competition may have adverse effects on trade and can impede the transfer and dissemination of technology. The two portions of this provision should be read separately, as licensing agreements may adversely affect the importation of final products or investment and the transfer of technology. Member countries may, in accordance with *Article 40:2,* adopt appropriate

[188] For a detailed analysis of this provision *see* Thomas Cottier and Ingo Meitinger, *The Protection of Test Data Submitted to Governmental Authorities: The Impact of the TRIPs Agreement on EC Law*, in: MARKETING AUTHORIZATION FOR PHARMACEUTICAL PRODUCTS AND THE PROTECTION OF SUBMITTED DATA, Schriften des Europa-Instituts der Universität Saarland 27, 53–72 (W. Meng and Torsten Stein eds., 2000).

[189] RICHARD E. NEFF AND FRAN SMALLSON, NAFTA: PROTECTING AND ENFORCING INTELLECTUAL PROPERTY RIGHTS IN NORTH AMERICA 100 (1994).

[190] *Cf. also* STAEHELIN, *supra* note 37, at 171–177; GERVAIS, *supra* note 27, at 188–192; BLAKENEY, *supra* note 37, at 108–118; Otten and Wager, *supra* note 37, at 391, 402.

measures to prevent or control licensing practices or conditions "that may in particular cases constitute an abuse of intellectual property rights having an adverse affect on competition in the relevant market". This provision requires such measures to be consistent with other provisions of the Agreement. The existence of intellectual property rights per se therefore cannot be considered anti-competitive; while the exercise of licensing practices governing IP rights may be anti-competitive if it amounts to an abuse of the IP right. The provision gives a number of examples, such as exclusive grant-back conditions, coercive package licensing or restrictions against challenges to the validity of a contract, but leaves further determinations to national law. Limitations on such restrictions are difficult to define in the abstract. The provision is based upon the doctrine of abuse of rights, and extensive restrictions of the ordinary exercise and use of intellectual property rights amounts to a violation of the TRIPs Agreement. Future negotiations on trade and competition may assist in clarifying the relationship between competition and intellectual property rights with a view to enhancing legal security in this field.

Article 40:3 provides a mechanism whereby a Member can enter into consultations with other Members and exchange publicly-available information in order to facilitate action against anti-competitive practices. Members are obliged to enter into consultations with the requesting Member. There is however no obligation to impose restrictions. Since export cartels are generally excluded from the jurisdiction of competition authorities, the potential for effective cooperation to combat abusive practices having effects abroad are limited. Moreover, Members are obliged to protect undisclosed information pertaining to private parties affected. Overall, the obligation remains a procedural one. Future negotiations on trade and competition will need to address the problem with a view to bringing about more effective procedures, and obligations of mutual assistance in anti-trust procedures.[191]

Article 40:4 provides similar consultation rights for a Member whose companies are involved in competition proceedings in the jurisdiction of another Member. This is a form of diplomatic protection. For the reasons discussed with respect to Article 40:3, the instrument is weak and requires further development.

E. Enforcement of Intellectual Property Rights (Part III)

Effective legal protection depends both on substantive norms and the efficient and fair administration of justice. This is equally true for intellectual property rights protection. In many countries, implementation of and respect for rights fails due to lack of adequate and effective legal protection before administrative and judicial authorities. This is particularly true for intellectual property since it is a complex area of law often unfamiliar to regular courts and often alien to the legal tradition of developing countries. Efforts in the GATT prior to the Uruguay Round focused on combating counterfeiting and piracy which essentially entailed efforts to improve domestic and border enforcement. It was clear from the outset that comprehensive negotiations on trade-related aspects of intellectual property protection in the GATT, and subsequently the WTO, could not be limited to the definition of minimum substantive standards, but would need to extend to standards on judicial, administrative and even penal protection of IPRs. These efforts amounted to one of the most interesting and challenging tasks of the negotiation. None of the conventions

[191] *See* Benoit Merkt, Harmonisation internationale et entraide administrative internationale en droit de la concurrence (2000); Thomas Cottier and Ingo Meitinger, *supra* note 47.

administrated by WIPO addresses the issue of effective enforcement. A common and new ground between different legal traditions and systems had to be found. Developing countries resisted these efforts for a long time on the ground that the issue of enforcement goes far beyond aspects of international trade. Moreover, improving enforcement would not come without additional financial burdens which were not considered a priority in the process of development.[192] Negotiations were based upon comprehensive drafts submitted by the United States, the European Communities and Switzerland. They can be characterized as a process of mutual approximation or *approchement* between common law traditions which entail party-driven instruments such as pretrial discovery, and the European-based approach leaving procedures and investigation much more in the hand of the courts. The result amounts to a first and quite substantial harmonization of civil and administrative law procedures in international law, while leaving room for alternative solutions reflecting different legal traditions. Many of the provisions are expressed in non-mandatory terms, allowing Members, but not obliging them, to authorize judicial and administrative authorities to take certain measures. These formulations demonstrate, on the one hand, the remaining divergences between judicial systems. On the other hand, they also prescribe and confirm that such measures as authorized, but not mandated, by the Agreement do not amount to excessive procedural requirements and, consequently, cannot give rise to violation and non-violation complaints.

As the implementation of these rules in national legislation inherently reaches beyond the realm of intellectual property protection, the provisions of Part III of the TRIPs Agreement may be described as a body of common procedural standards in international law. The norms resulting from the negotiations reflect a considerable level of detail. They are particularly apt to be referred to in the process of interpretation and application of domestic law under the doctrine of consistent interpretation. They are equally suitable for direct effect where such effect is constitutionally permitted.[193] These points are of particular importance for the European Community. By means of the provisions on enforcement, a common regional standard in EC law was achieved for which no internal jurisdiction or competence existed in internal, domestic EC law. It is no coincidence that the provisions on enforcement resulted in a considerable expansion of the jurisdiction of the European Court of Justice in matters relating to civil procedure, and the doctrines of consistent interpretation and direct effect were first probed by the court in the field of WTO law.[194]

While compliance with Part III only required few, but sometimes important changes in the legislation of industrialized countries, major implementing legislation was often required in developing and transitional countries, assisting the process of reinforcing the rule of law and good governance. The Agreement, however, does not oblige Members to provide additional and special resources for the protection of intellectual property rights distinct from the resources provided for the enforcement of laws in general. Article 41:5 provides a significant limitation, stating that "[n]othing in this Part creates any obligation with respect to the distribution of resources as between enforcement of intellectual property rights and the enforcement of law in general." Developing country efforts to reinforce the judicial system for the purposes of intellectual property right protection, however,

[193] *See* Part III(B)4 of this chapter.

[194] With respect to the interpretation of Article 50 of the TRIPs Agreement in the context of European law, see ECJ Case C-53/96 *Hermès International v. FHT Marketing Choice BV* (1998) ECR I-3603; Case C-300/98 *Parfums Christian Dior SA v. Tuk Consultancy BV* and Case C-392/98 *Assco Gerüste GmbH and Rob van Dijk v. Wilhelm Layher GmbH & Co. KG and Layher BV* (2000) ECR I-11307.

have to be supported by developed country Members through technical cooperation under Article 67 of the Agreement.

1. General Obligations

Article 41 of the Agreement stipulates a number of fundamental principles which apply in general and to all the subsequent, more specialized provisions of Part III. It requires Members to ensure that enforcement procedures are available under their law that permit effective action against any act of infringement of intellectual property rights covered by the TRIPs Agreement, including expeditious remedies to prevent infringements and remedies which constitute a deterrent to further infringements. The relevant test in assessing enforcement procedures is trade-related, examining whether they create barriers to legitimate trade and whether they provide safeguards against their abuse. *Article 41:2* requires the procedures to be fair and equitable. Standards of fairness and equity are incorporated in the provisions throughout this Part. In addition, they need to be defined by reference to general principles of law. Procedures must not be unnecessarily complicated or costly, and must not entail unreasonable time-limits or unwarranted delays. *Article 41:3* entails the fundamental principle that a decision on the merits of a case is to be reasoned, preferably in writing. Oral decisions therefore are not prohibited, and may be applied primarily in the field of rapid, provisional measures. Decisions on the merits must be based solely upon evidence in respect of which the parties were offered an opportunity to be heard.

These important provisions apply to all judicial systems alike and embody the fundamental right to be heard and the right to reasoned decision-making. They also apply, in accordance with Article 62:4, to administrative revocation and inter-partes procedures, such as opposition, revocation and cancellation of rights. *Article 41:4* builds upon the tradition of Article X:3(b) of the GATT and prescribes the obligation to provide for appeal mechanisms. Members are required to provide for review of final administrative decisions by independent judicial authorities. As to judicial decisions in civil matters, the agreement is limited to a minimal standard. Members are free to define the jurisdictional threshold for appeal commensurate with the importance of the case (e.g., in terms of monetary thresholds). Within this range, they need to provide at least for review of legal issues on the merits. There is no obligation to provide for a second level of appeal. As to penal cases, judicial review is required for convictions, but not for acquittals.

Implementation of Part III is supported by obligations of Members to cooperate in international law enforcement in accordance with Article 69 of the Agreement. Members are obliged to establish and notify contacts point in their administrations and be ready to exchange information on infringing goods. Particular emphasis is laid on cooperation and exchange of information between customs authorities "with regard to trade in counterfeit trademark goods and pirated copyright goods".

2. Civil and Administrative Procedures and Remedies

The provisions of Section 2 of Part III of the TRIPs Agreement further specify the concept of fair and equitable procedural principles commensurate with well-established general rules of civil procedure. According to *Article 49*, they also apply to administrative procedures to the extent that "any civil remedy can be ordered as a result of administrative procedures on the merits of the case." The following requirements deserve particular emphasis:

Footnote 11 to *Article 42* defines right holders entitled to civil procedures to include federations and associations having legal standing in accordance with domestic law.

Parties shall be entitled to substantiate their claims. To this effect, the provision requires Members to allow representation by legal counsel. The requirement of personal appearance of right holders and defendants shall not be "overly burdensome"; an item of particular importance in transnational litigation. Defendants need to be served with sufficiently detailed and timely written notice. Subject to the constitutional law of Members, the confidential information of parties to the dispute needs to be protected, for example by making available a summary of factual evidence to the other party.

Article 43 contains important rules on evidence. *Article 43:1* obliges Members to require parties to a dispute, based upon sufficiently substantiated claims, to produce evidence in administrative and judicial proceedings, subject to the protection of undisclosed information. If a party fails to produce such evidence, *Article 43:2* empowers administrative and judicial authorities to make determinations based on the available evidence.

Article 44 addresses injunctions which are of particular importance in intellectual property litigation, especially in cases relating to counterfeiting or unlawful parallel trade. It requires domestic laws to grant power to local judicial authorities to prevent imminent infringements of intellectual property rights. This provision, applicable to proceedings on the merits and to be distinguished from independent provisional measures addressed in Article 50, sets forth minimum standards for injunctions requiring a party not to commit an infringement or to cease infringement. In particular, local judicial authorities should be empowered, immediately after customs clearance of such goods, to prevent the entry into the channels of commerce of imported goods that infringe an intellectual property right and to seize the respective goods. Members are not required to extend such mechanisms to situations where the importer did not know, or did not have reasonable grounds to know that dealing in such subject matter would entail the infringement of an intellectual property right. In such cases, the right holder would need to await the judgment on the merits.

Article 45 requires that the damages awarded must constitute adequate compensation for the injury, including payment of the expenses of the right holder which, depending on the judicial system, may also (but need not) include appropriate attorney's fees. This minimum obligation is limited to willful or careless infringement. In addition, authorities may have the power to recover profits and/or the payment of pre-established damages. This possibility is available also in cases where the infringers did not knowingly, or with reasonable grounds to know, engage in infringing activity.

In addition, local authorities shall have the mandatory authority under *Article 46* to seize infringing goods and to prevent the further delivery of infringing services (e.g., film screenings). Instruments ("implements") that predominantly serve to create infringing goods ("*instrumenta sceleris*"), such as production facilities and machinery, computers, etc., are also to be subject to seizure. For many countries, this amounts to an important additional obligation, reinforcing the fight against counterfeiting at its source. Judicial authorities shall have the authority to remove infringing goods and implements from the channels of commerce without compensation. Subject to the constitutional requirements of Members and the principle of proportionality, this may also involve destruction. Counterfeit goods or unlawfully imported goods in parallel trade may be used and consumed outside the channel of commerce, for example by making them available to food and support programs. Authorities are obliged to engage in a process of balancing the interests involved with a view to preventing further violations. As a result, goods may stay in the channel of commerce, even though the treaty specifies that mere removal of trademarks is generally not sufficient to comply with the TRIPs Agreement.

Article 47 provides an arguably very effective tool for detecting the sources of infringements. Provided that the measure appears to be proportionate to the infringement, the judicial authorities shall have the authority to require the infringing person to disclose (i) the identity of third persons involved in the production and distribution of the infringing goods or services, and (ii) their channels of distribution. While these obligations strongly reinforce the position of right holders, *Article 48* protects defendants against abusive claims and measures. The provision is designed to deal with cases of so-called procedural harassment where measures imposing unjustified restrictions were granted. Appropriate remedies to compensate for damage must be made available. Accordingly, the judicial authorities must have authority to order the applicants to pay the defendant's expenses, which may include appropriate attorneys' fees. Members may exempt both public authorities and officials from appropriate remedial measures where unjustified actions are taken in good faith in the course of enforcing intellectual property laws.

3. Provisional Measures

Provisional measures applied for and granted beyond the ordinary civil or administrative remedies discussed above, amount to one of the most effective and important tools in enforcing intellectual property rights. Most cases against infringement or, as the case may be, unlawful importation and distribution by way of parallel trade, are settled by means of such procedures and do not reach the stage of ordinary and costly proceedings on the merits. The powers granted in *Article 50* are of particular importance for trademark and copyright enforcement in the field of software protection as evidence of infringement can be easily destroyed upon notice of impending measures. A number of countries were obliged, following consultations under the DSU, to alter their legislation accordingly.[195]

Article 50 is therefore a core provision of the TRIPs Agreement.[196] Applying both to civil and administrative proceedings (*Article 50:8*), *Article 50:1* obliges Members to make available prompt and effective provisional measures in order to (i) prevent an infringement from occurring, "in particular to prevent the entry into the channels of commerce in their jurisdiction or goods, including imported goods immediately after customs clearance", and (ii) "to preserve relevant evidence in regard of the alleged infringement". The Agreement sets detailed mandatory standards to this effect. In particular, according to *Article 50:2* the judicial authorities shall have the authority to adopt such measures without having heard the defendant prior to taking action ("*inaudita altera parte*"). Such measures are subject to certain conditions set forth in Article 50:3 and 50:5: (i) the rights of the claimant must be reasonably established, (ii) any delay is likely to cause irreparable harm or where there is a risk of evidence being destroyed, and (iii) the goods concerned must be clearly identified and the applicant may therefore may be required to supply additional information necessary for the identification of the goods. Upon taking measures *inaudita altera parte, Article 50:4* requires that the defendant must be notified without delay of the measure and granted access to judicial review within a reasonable period to decide upon maintenance, revocation or modification of the measures. *Article 50:6* of the Agreement requires that the provisional measures are revoked or otherwise cease to

[195] *See* consultations held between the US and the EU: *Portugal—Patent Protection under the Industrial Property Act*, WT/DS37/2/Corr.1; *Sweden—Measures Affecting the Enforcement of Intellectual Property Rights*, WT/DS86/2; *Denmark—Measures Affecting the Enforcement of Intellectual Property Rights*, WT/DS83/1.

[196] *See generally*, Hannes Schloemann, *Rechtschutz nach Massgabe des Article 50 TRIPs*, in RECHTSFRAGEN DES INTERNATIONALEN SCHUTZES GEISTIGEN EIGENTUMS 189 (Dirk Ehlers, Hans-Michael Wolffgang and Hermann Pünder eds., 2002).

have effect upon request of the defendant, if the claimant does not initiate proceedings on the merit within a reasonable period of time. Such period is to be determined by the judicial authority ordering the provisional measure. Failing such determination, it shall not exceed 20 working days or 31 calendar days, whichever is shorter. This requirement and safeguard of linking provisional measures to proceedings on the merit amounts to a defining element of provisional measures compatible with WTO law. Article 50 gave rise to interpretation by the European Court of Justice and was applied in accordance with the doctrine of consistent interpretation with respect to both national law and the European trademark regulation.[197] Furthermore, Article 50 is particularly suitable for direct effect when its safeguard provisions do not exist in domestic law. Under *Article 50:7*, courts may order the applicant to pay appropriate damages to the defendant, if the measure turns out to be unjustified.

4. Special Requirements Related to Border Measures

Border measures operated by customs authorities provide the second central mainstay for enforcing intellectual property rights.[198] Counterfeit goods are best intercepted at the point of importation. Once they have reached the channels of distribution, law enforcement is more difficult and burdensome as complaints may need to be filed in different jurisdictions.

The provisions of Section 4 of Part III of the TRIPs Agreement deal, with measures ordered by custom administrations with respect to the importation of counterfeit trademarked or pirated copyrighted goods. "Counterfeit trademark goods" (not including geographical indications) and "pirated copyright goods" (including goods protected by neighboring rights) are defined in a footnote to *Article 51*.[199] There is no obligation to apply this Section to patented products, industrial designs, layout-designs, or geographical indications. However, if border measures are extended to other forms, there must be compliance with the procedures set forth in the Agreement. Furthermore, Members can also provide the same measures against infringing goods destined for export from their territories.

Article 52 requires the applicant to provide *prima facie* evidence of an impending infringement, and conditions are defined to this effect. Upon acceptance of the application, the authority informs the applicant as to the duration of the measure taken and, in accordance with *Article 54*, both the applicant and the importer are promptly notified of the suspension of the release of the goods at stake.

[197] See *supra* note 40

[198] STAEHELIN, *supra* note 37, at 185; Hannes Schloemann, *supra* note 196; Reginhard Henke, *Produktpiraterie und Zoll*, in RECHTSFRAGEN DES INTERNATIONALEN SCHUTZES GEISTIGEN EIGENTUMS 211 (Dirk Ehlers, Hans-Michael Wolffgang and Hermann Pünder eds., 2002).

[199] Footnote 14 reads:

> For the purposes of this Agreement:
>
> (a) "counterfeit trademark goods" shall mean any goods, including packaging, bearing without authorization a trademark which is identical to the trademark validly registered in respect of such goods, or which cannot be distinguished in its essential aspects from such a trademark, and which thereby infringes the rights of the owner of the trademark in question under the law of the country of importation;
>
> (b) "pirated copyright goods" shall mean any goods which are copies made without the consent of the right holder or person duly authorized by the right holder in the country of production and which are made directly or indirectly from an article where the making of that copy would have constituted an infringement of a copyright or a related right under the law of the country of importation.

Article 53 allows authorities to require a reasonable, non-deterrent security or an equivalent assurance sufficient to protect the interests of the defendant and the authority in case wrongful actions is taken and compensation is due in accordance with *Article 56*. In cases other than trademark counterfeiting and copyright piracy as defined above (industrial designs, patents, layout designs and undisclosed information) the importer or consignee of such goods is entitled to their release on the posting of a sufficient security. This reflects the fact that assessing violations of IPRs in these areas is more difficult than in the field of trademarks and copyright protection.

Article 55 defines the duration of suspension of release and the relationship to proceedings on the merits. Given the powerful impact of this instrument, customs authorities are obliged to release the goods if they are not informed within ten working days that proceedings on the merits have been initiated by the applicant or that the competent judicial authority has taken provisional measures prolonging the suspension of the goods in accordance with Article 50. If proceedings on the merits have been initiated, the defendant is entitled to initiate review of the measure and to be heard. Measures may be subsequently modified, revoked or confirmed within a reasonable period of time.

Article 56 addresses the indemnification of the importer and owner of the goods for injury due to wrongful detention of goods or through detention of goods released pursuant to Article 55. The provision obligates Members to grant authorities the authority to require the applicant to pay the owner of the goods or the consignee appropriate compensation for injury caused. The Agreement does not set forth any standards and criteria to this effect and Members may base such compensation on their tort law. Also, the provision is silent on the responsibility of customs authorities. Article 53 implies that the responsibility remains exclusively with the applicant vis-à-vis the defendant. Additional remedies for *ex officio* action are required by Article 58.

Under *Article 57* Members are obliged to grant the local authorities power to allow the right holder to inspect the goods in order to substantiate its claim, and the importer must also be granted the right of inspection. The Members are to authorize their authorities to inform the right holder of the names and addresses of the consignor, the importer and the consignee, and of the quantity of the goods in question if a positive determination has been made on the merits of a case.

Customs authorities are not limited to acting upon motion by the applicant. According to *Article 58*, Members may, but are not obligated, to empower competent authorities to order *ex officio* enforcement measures relating to the protection of intellectual property on the basis of *prima facie* evidence. Where such powers exist, a number of safeguards must be respected: (i) authorities are entitled to request additional information from the right holder at any time, (ii) the importer and right holder need to be promptly informed about the suspension of customs clearance (*Article 58(b)* implies that appeal procedures shaped *mutatis mutandis* in accordance with Article 55 must be available to the importer); (iii) liability of public authorities and officials for unlawful suspension must be made available and can only be excluded for acts taken or intended in good faith. The standard provides minimum protection against willful or negligent infringement.

Article 59 renders the principles and rules of Article 46 on disposal or destruction of infringing goods applicable to ex *officio* measures. Other than in exceptional circumstances, counterfeit trademark goods may not be released into a third country in an unaltered state, thus somewhat limiting the flexibility available under Article 46. Under *Article 60* Members may exclude *de minimis* imports from the application of the provisions in Section 4.

5. Criminal Procedures

The TRIPs Agreement contains in *Article 61* the first generation of penal provisions in the WTO system. It nevertheless leaves Members considerable flexibility in implementing the provision. Members are obligated to prosecute, at a minimum, willful trademark counterfeiting and copyright piracy (as defined in Article 51) on a commercial scale.[200] Penalties must include imprisonment and/or monetary fines. Members are obliged to set standards of punishment consistently with penalties provided for crimes of comparable gravity. In other words, they need to show consistency in their criminal policies. Penalties for other infringements, including negligent trademark or copyright violations, are permitted, but not required. Penal law must allow for the seizure, forfeiture and destruction of infringing goods and implements (defined in Article 46) in appropriate cases. The provision does allow Members to adopt extensive criminal sanctions without running the risk of facing challenges under violation or non-violation complaints, even though the threat of such sanctions may have considerable trade-restricting effects, for example in the field of internet communication.

F. Acquisition and Maintenance of Intellectual Property Rights and Related Inter Partes Procedures (Part IV)

Experience in a number of countries has shown that registration procedures for the acquisition and maintenance of IPRs may lead to disguised forms of willful or negligent denial of protection and even encouragement of use of information contained in pending applications, for example in the field of patents or industrial designs (fashion).[201] The time required to examine and grant protection is often excessive and cannot be justified in procedural terms. Other forms of disguised restrictions of protection include excessively high fees for registration or maintenance. As a result, the TRIPs Agreement contains requirements applicable to IP registration and maintenance procedures. Negotiations on the subject were difficult as Members were not prepared to specifically address the administrative and cost structure of domestic intellectual property offices. For example, no provision addresses the problem of excessive registration or maintenance fees, except for a general reference in Article 41:3, also applicable to registrations, and for the registration of textile designs in Article 25:2. The general reluctance is expressed in the first sentence of Article 61:1, which merely stipulates that Members may require compliance with reasonable procedures and formalities. This formulation, which should be mandatory, is somewhat at odds with the mandatory formulations in Articles 61:2–5.

According to the second sentence of *Article 62:1,,* formalities must be consistent with the TRIPs provisions. For example, a country cannot require a registration procedure for the acquisition of copyright because Article 5:2 of the Berne Convention, incorporated into the TRIPs Agreement, precludes formalities with respect to the enjoyment and exercise of copyright. As noted above, Article 25:2 stipulates procedural requirements as to cost, examination and publication of textile designs—much of this provision would have been better placed in this Part of the Agreement. *Article 62:2* requires Members to grant titles within a reasonable period of time, yet without specifying particular ranges.

[200] Even through Article 61 is framed as an alternative (by stating that criminal procedures and penalties be applied at least to trademark counterfeiting *or* copyright piracy), measures clearly need to be put in place for both trademarks *and* copyright.

[201] See *also* STAEHELIN, *supra* note 37, at 190-193; GERVAIS, *supra* note 27, at 237-240; BLAKENEY, *supra* note 37, at 140-148; Otten and Wager, *supra* note 37, at 391, 403.

Article 62:3 requires priority rights in Article 4 of the Paris Convention to be extended to service marks, newly protected under this Agreement.

Article 62:4 is a key provision as it applies the basic principles of procedural fairness, specified in Article 41:2 and 41:3, to all procedures of acquisition, maintenance, administrative revocation and *inter partes* agreement, such as opposition, revocation and cancellation of rights. *Article 62:5* subjects such procedures to judicial or quasi-judicial review, to the extent that the matter is not open to invalidation procedures before courts of law. Review of determinations by an independent administrative commission therefore meets the requirement of this provision.

As discussed above, registration procedures are partly determined by other international agreements, such as the Patent Cooperation Treaty or the Madrid and Lisbon Agreements for trademarks and designs, respectively.[202] These agreements primarily address international registrations, but also bear upon national registration procedures. They may contain important benchmarks which should be referred to in interpreting the requirements of reasonable procedures under the TRIPs Agreement. Panels and the Appellate Body are likely to take such benchmarks into account.

G. Dispute Prevention and Settlement (Part V)

With the advent of the TRIPs Agreement, the international intellectual property system has, for the first time, been provided with tools and instruments to interpret and enforce the international standards of protection for intellectual property between States. Up to this point, the existing channel to the International Court of Justice[203] has never been invoked, and efforts to bring dispute settlement into the ambit of the WIPO have failed even for matters limited to registration of patent, trademark and design rights under the respective international cooperation agreements.

The title of this section indicates that the idea of dispute prevention was equally important to negotiators. Basic principles and obligations as to transparency, good governance and reporting, discussed above, are thought to contribute effectively to the prevention of disputes.[204]

1. Recourse to Dispute Settlement

In accordance with *Article 64:1*, the WTO Dispute Settlement Understanding[205] fully applies to the TRIPs Agreement, subject to initial restrictions on non-violation complaints, set out in Article 64:2 and discussed below. A substantial body of case law has been produced in the first years after the entry into force of the Agreement. As of August 2003, out of 299 complaints, twenty-four (16.5 percent) were related to the TRIPs Agreement. Eight cases were decided, nine cases had settled and seven were pending. Most of the cases involved North-North issues as the substantive obligations of developing countries applied only after January 1, 2000, and litigation with developing countries prior to that time had to do with transitional obligations such as that under Article 70:8 and 70:9. The United States was the principal complainant (sixteen cases), followed by the EC (six), Brazil (one) and Canada (one). Six of the seven cases that resulted in panel or Appellate

[205] See Chapters 25 *et seq.* of this work.

Body decisions on the merits were initiated by the EC. The EC was also the principal defendant (nine cases), followed by the United States (four), Canada (two) and Japan (two). In addition, seven developing countries were respondents.

Compared to other new agreements, in particular the GATS, adjudication has contributed significantly to the clarification of rights and obligations created by the Agreement. As to implementation, consultations often led to domestic legislative reform based on the relatively clear spelling out of rights and obligations in the TRIPs Agreement.[206] Another factor contributing to the successful recourse to dispute settlement is that intellectual property protection has long been the subject of domestic litigation and international agreements, while the GATS Agreement addresses an area relatively new to international trade regulation and most commitments inscribed have not gone beyond the current state of domestic legislation.

As to enforcement and implementation, intellectual property can be the subject of cross-retaliation under Article 22:3 of the DSU. In *EC-Bananas*, Ecuador was authorized to suspend its obligations regarding intellectual property rights in order to compensate for nullification and impairment determined to amount to US 201.6 million per year.[207] The arbitrators authorized Ecuador to request authorization by the DSB to suspend concessions or other obligations, not only under GATT 1994 and under GATS, but also, to the extent that the suspension requested under GATT 1994 and GATS was insufficient, under the TRIPs Agreement in the sectors of copyright and related rights, protection of performers, producers of phonograms and broadcasting organizations, geographical indications and industrial designs. The arbitrators also noted that, pursuant to Article 22:3 of the DSU, Ecuador should first seek to suspend concessions or other obligations in the field of GATT and GATS, i.e., the sectors in which its rights had been impaired. On May 18, 2000, the DSB authorized Ecuador to suspend concessions to the European Communities as requested.[208]

Effective use of suspension of intellectual property rights largely depends, as for goods and services, on the size of the market. Small and middle-sized economies have a built-in disadvantage in using dispute settlement enforcement as long as the system does not make available the multilateralization of retaliatory measures. The effectiveness further depends on carefully choosing the targets of suspension of rights. General suspension of patent or trademark protection for goods and services originating in a particular Member affects imported and locally produced products alike and is likely to harm domestic producers and distributors operating under licensing agreements. Suspension, if at all, therefore needs to target specific products exclusively imported from the Member infringing its WTO obligation.[209] Even if contained and limited in time, long-lasting detrimental effects may be incurred as the measure may impair and destroy distribution systems which may not recover upon lifting of the measure. Suspension of protection or enforcement of intellectual property rights are likely to have potentially negative effects

The measure effectively targeted a single product. *See* the Appellate Body report *United States—Section 211 Omnibus Appropriation Act of 1998, supra* note 34

beyond the period of suspension and should therefore be referred to only as a measure of last resort.

Finally, we note that intellectual property gave rise to the first case of financial compensation within the WTO system. In an arbitration conducted between the EC and the United States relating to remuneration for copyright violation, the Arbitrators determined that the level of EC benefits were being nullified or impaired as a result of the operation of Section 110(5)(B) amounted to $\in$ 1, 219, 900 per year.[210]

2. Non-Violation Complaints

Under *Article 64.2* of the TRIPs Agreement, complaints may be field not only with rspect to violations of the Agreement but also, after a period of five years from the entry into force of the Agreement, with respect to measures that do not violate specific rights or obligations of the Agreement, but which frustrate legitimate expectations under the so-called non-violation rule of Article XXIII:1(b) and (c) GATT.[211] Law and Policy in International Business 1055 (2000). Application of non-violation to the TRIPs Agreement was conceptually controversial at the end of the Uruguay Round. This author argued in favour of its application.[212] The criterion of non-foreseeability of a measure, in particular, prevents invocation of non-violation in most cases, and limits cases essentially to violations of the general principles of good faith and, in my view, of legitimate expectations. Such cases may also arise in relation to intellectual property protection, and there is no justification why intellectual property should be excluded from such supplementary protection available in WTO law. Others felt that non-violation complaints are inherently linked to tariff concessions and could not apply to the field of intellectual property cases.[213] Politically, developing countries opposed this cause of action because they feared that they would be confronted with claims going beyond the negotiated text of the TRIPs Agreement. As a compromise, a moratorium was agreed in Article 64:2 which would elapse after five years. Under *Article 64:3*, the five-year period of non-availability of non-violation complaints could only be extended by a consensus of the Ministerial Conference. Since no explicit decision was taken extending the suspension, non-violation complaints appeared to be available as of the year 2001. However, this view has been strongly contested as fears of too broad a reading of the doctrine of non-violation, of extensive claims and political pressures based upon non-violation, persist among developing countries. In the Decision on Implementation-related Issues and Concerns, adopted at the Doha Ministerial Conference in 2002, Members agreed

not to initiate non-violation complaints for a further period of two years, while instructing the TRIPs Council to continue its examination of the scope and modalities of such complaints.[214] The future status of such cases therefore remains controversial.

From a legal point of view, objections to the application of non-violation complaints do not appear to be justified. First, Article 8 of the Agreement provides an important shield in defense of goals of social and economic development and counters extensive claims in law. Second, the comprehensive nature of the TRIPs Agreement renders application of the non-violation doctrine exceptional[215] and the conditions and criteria for non-violation complaints, as developed in the case law, are sufficiently stringent to counter such pressures.[216]

H. Transitional Arrangements (Part VI)

Members were granted a one year general period to implement the Agreement in *Article 65:1.* Developing countries and, under certain conditions economies in transition, were given five years from the date of entry into force of the WTO Agreement before being required to meet the obligations of the TRIPs Agreement, i.e., until January 1, 2000.[217] Developing countries could delay for a further five years application of the obligation to make product patents available for those areas of technology not protectable by product patents in its territory on the date of general application of the TRIPs Agreement.[218] Countries exercising this right were required to install "mail-box" and pipe-line protection under Article 70:8 and 9, discussed above[219] This provision is of particular importance with respect to pharmaceuticals and chemical products.

For least developed countries, *Article 66* only renders the basic principles of non-discrimination applicable in these countries as of the entry into force of the Agreement. The general deadline for implementation of the TRIPs Agreement originally was scheduled for January 1, 2006. However, it was extended for pharmaceuticals by the Doha Ministerial Declaration for the group of least developed countries until the year 2016[220] and implementation may be further delayed.

I. Institutional Arrangements and Final Provisions (Part VII)

Part VII addresses miscellaneous issues.[221] Protection of existing subject-matter (Article 70) and international cooperation in enforcement (Article 69) are addressed above.[222]

[214] International Centre for Trade and Sustainable Development ("ICTSD") and International Institute for Sustainable Development ("IISD"), Doha Round Briefing Series—Developments Since the Fourth WTO Ministerial Conference, Vol. 1 No. 5 of 13 February 2003, at 3.

[215] This is even true for challenging excessive procedural requirements, such as extensive registration or maintenance fees which may amount to nullification and impairment of benefits. While not extensively addressed in the Agreement, Articles 25:2, 41.2, and 62.4 clearly render such matters suitable for violation complaints.

1. The TRIPs Council

Article 68 of the TRIPs Agreement establishes the Council for Trade-Related Aspects of Intellectual Property Rights—in parallel to the Councils on Goods and Services. It consists of delegates of Members, generally on the level of diplomatic counselors and specialists from capital, and is chaired by one of the ambassadors accredited to the WTO. The Council monitors the operation of the Agreement. According to *Article 71*, the Council is mandated to review the implementation of this Agreement at regular two years' intervals after January 1, 2001, upon the elapse of the transitional periods of Article 65. This mandate defines much of the standard work of the Council. The Council has produced a series of reports based upon Member questions concerning the implementation of the Agreement by other Members.[223] In addition, *Article 27:3(b)* requires review of the provision on patenting life forms after January 1st 1999. This task did not include a mandate to negotiate. It was limited to an extensive review of national legislation on the subject-matter and generated extensive debate on this controversial issue.[224] The Council was also directed to provide any assistance requested by Members in the context of dispute settlement—a role which has not materialized, and is not likely to materialize given the increasing separation of powers between the legislative and judicial branches of the WTO. The Council as a political organ is not suitable for this task. Pursuant to Article 68, "In carrying out its functions, the Council may consult and seek information from any source it deems appropriate". The main partner of the Council in this respect is WIPO. In accordance with Article 68, a cooperation Agreement with WIPO was concluded on December 22, 1995[225] WIPO also participates in meetings of the Council as an observer.

2. Amendments

Beyond its administrative tasks, the Council plays an important role in negotiations taking place in the WTO on intellectual property. A number of provisions of the TRIPs Agreement mandate that the Council explicitly address what may be called the leftovers and unfinished business of the Uruguay Round. *Article 23:4*, discussed above, mandates the Council to undertake negotiations on the establishment of a multilateral system of notification and registration of geographical indications for wines; a mandate eventually extended to spirits. *Article 24* requires negotiations aimed at increasing the protection of GIs and sets forth a number of parameters for such negotiations. *Article 71:1* implies powers to negotiate in the light of new developments "which might warrant modification or amendment of this Agreement." To the extent that such modifications consist of merely adjusting to the higher levels of protection achieved in other multilateral agreements in force and accepted by all Members, *Article 71:2* of the TRIPs Agreement allows for facilitated adoption in accordance with Article X:6 of the WTO Agreement based upon a consensus proposal by the TRIPs Council.

None of the powers to amend the agreement have been utilized so far. Experience shows that it is virtually impossible to bring about consensus on single and specific issues without being able to offer mutual tradeoffs. The situation will only change if

[223] *See* reports on http://www.wto.org/english/tratop_e/trips_e/intel6_e.htm and http://www.wto.org/english/tratop_e/trips_e/intel8_e.htm (visited November 25, 2003).

[225] *See* F. M. Abbott, *Distributed Governance at the WTO-WIPO: An Evolving Model for Open-Architecture Integrated Governance*, 3 JOURNAL OF INTERNATIONAL ECONOMIC LAW 63 (2000).

WTO Members replace consensus requirements with weighted voting on issues arising between multilateral trade rounds.[226]

During multilateral trade rounds, the negotiating mandate in the field of intellectual property rights is defined by the respective Ministerial Declarations. The Doha Agenda mandates the TRIPs Council to supervise negotiations rather than to create a special negotiating group. Neither the WTO Agreement nor the TRIPs Agreement provide guidance as to the adoption of future amendments resulting from a multilateral trade round. These are likely to form part of a Final Act, comprising mandatory changes to the various agreements and possibly containing new instruments. It is possible, but not likely, that additional provisions on intellectual property protection will be framed in the form of a plurilateral agreement and thus not become part of a mandatory package binding all Members.

3. Reservations

Finally, *Article 72* provides that the TRIPs Agreement cannot be accompanied by unilateral reservations unless agreed to by the other Members. No such reservations have been granted as of the time of writing (August 2004). This is probably because the TRIPs Agreement forms an integral part of the WTO in accordance to Article II:2 of the WTO Agreement and cannot be dealt with in isolation.

IV. Conclusions and Further Developments

During the first ten years after the adoption of the Agreement, intellectual property protection has emerged as one of the mainstays of the multilateral trading system. It proved to be an important interface between industrialized countries, and has strongly reinforced the potential for protection and enforcement of defined rights. It has worked well and reinforced the global system of intellectual property protection Issues relating to cultural products, and the problem of potentially excessive copyright protection in the age of the internet are likely to dominate the agenda between industrialized countries.

The TRIPs Agreement remains a major stumbling block for many developing countries. Despite the fact that most developing countries had fairly well-developed copyright and trademark laws and clear patent laws prior to the adoption of the TRIPs Agreement and are supported by means of technical cooperation; implementation and enforcement of intellectual property rights remains a major problem for such countries. It is an arduous and a long-term process. It implies the reception and internalization of legal concepts with which many societies around the world are neither sufficiently familiar nor convinced that they serve their long-term interests. Most of the rights, in particular patent rights, are primarily of interest to industrialized countries. The invocation of the Agreement as a means of preventing parallel trade in generic pharmaceuticals by industry and a number of governments has seriously, but wrongly, furthered the view in international public opinion that the Agreement is essentially imbalanced and does not offer much to developing countries. A proper application of all its provisions, including those relating to social and developmental goals, could serve the long-term interest of developing countries in fostering intellectual property protection. Future negotiations should seek to identify those areas that are of particular interest for developing countries, commensurate

[226] For proposals to this effect *see* Thomas Cottier and Satoko Takenoshita, *The Balance of Power in WTO Decision-Making: Towards Weighted Voting in Legislative Response*, in 58 HEFT II AUSSENWIRTSCHAFT 171 (2003).

with a level of development which, in many countries, strongly depends on agriculture. To the extent that the TRIPs Agreement, in combination with other trading rules, also adequately responds to the needs and expectations of rural populations predominant in the developing world, the Agreement will develop enhanced legitimacy and acceptance. The quest for enhanced protection of geographical indications for the promotion of niche products as much as the quest for enhanced protection of traditional knowledge in an era of biotechnology should therefore be supported. The use of traditional knowledge related to plant genetic resources in developing countries for the purposes of modern biotechnology should be compensated for through contractual arrangements under the Convention on Biodiversity. Ways need to be sought on the international level to bring about adequate control by, and remuneration of, rural communities based on a new generation of intellectual property rights that protect traditional knowledge relating to geographically assignable plant genetic resources and folklore. Such rights, together with appropriate policy instruments, can make an important contribution to the validation of traditional ways of production, enhance the use and conservation of biodiverse plant genetic resources, and further distributive justice and intergenerational equity.[227] In recent years there has been an increased interest in these new subjects and the challenges they pose for the intellectual property system. Moreover, linkages with competition policy are necessary and fair conditions in developing countries should be supported by the creation of disciplines on export cartels in order to combat potential abuses of IPRs in markets largely unprotected against cartels and the abuse of dominant positions. A new generation of the TRIPs Agreement should not be limited to minimal standards, but should also reflect the need to limit protection in line with competition policies and therefore as well adopt maximum substantive standards. Such ceilings should also limit unilateral, bilateral and multilateral policies of imposing TRIPs-plus standards on Members and acceding countries. Efforts to improve the international regime of intellectual property should be undertaken within the multilateral system. Discussions on parallel importation, taking into account the implication of GATT and GATS, need to continue. New approaches, leaving overly broad concepts of national and regional exhaustion behind, are available within the multilateral system and can be further developed.

Quite apart from its internal balance, the long-term legitimacy of the TRIPs Agreement will depend on improved market access in agriculture and textiles for developing countries. It will equally depend on visible improvements in transfer of technology and investment—arguments strongly relied upon by industrialized countries and the private sector and which, so far, have not borne fruit, since many developing countries were not obligated to implement the Agreement until 2000 and developed countries are not under strict obligations to foster transfer of technology by their industries through governmental policies. But it is principally the private sector which has to assume the responsibility of handling and using intellectual property rights in a manner supportive of the needs of developing countries. Long-term legitimacy depends on that, more than on measures of governmental support. The TRIPs Agreements, the expectations it raises, and its potential, can be used as an asset in promoting global stability and peace.

[227] *See* Bernard O'Connor, *Protecting Traditional Knowledge—An Overview of a Developing Area of Intellectual Property Law*, 5 JOURNAL OF WORLD INTELLECTUAL PROPERTY 677 (2003); Thomas Cottier, *The Protection of Genetic Resources and Traditional Knowledge: Towards More Specific Rights and Obligations in World Trade Law*, 1 JOURNAL OF INTERNATIONAL ECONOMIC LAW 555 (1998); for further references *see supra* notes 160 and 161 and text accompanying note 152.

Finally, a new philosophy needs to be developed in future negotiations on implementation and graduation of rights and obligations. While in its first and initial form and content, the TRIPs Agreement was inspired by the traditions of international intellectual property protection, a new generation of rules will need to build upon the traditions of *progressive* liberalization in GATT and the multilateral trading system. In light of the economic analysis of short-term disadvantages and long-term benefits of IPRs for developing and transitional countries, rules should be framed in a way that the current level of development in a Member and particular industrial sectors can be taken into account based on economic factors to be defined. As these countries progress, as sectors of the domestic industry develop competitiveness, intellectual property rules should gradually apply to these sectors, based upon economic factors and variables. Members and industries would therefore be able to assess when they will be subject to full application of specific obligations. Both traditional perceptions of special and differential treatment and temporal exceptions and phase-ins do not sufficiently reflect the short-term and long-term needs of developing countries. The international intellectual property community may learn from other areas of the WTO system and adopt a philosophy of progressive regulation, based upon the basic concept of nullification and impairment. The incorporation of intellectual property in the system of the World Trade Organization will not leave the future evolution of intellectual property protection untouched. Linking it to progressive trade liberalization, effective dispute settlement and tools of enforcement, has brought about new dynamics, challenges and responsibilities. They need to be met with legal innovation and creativity which is at the very heart of the idea of intellectual property and the TRIPs Agreement.

* Peter Trepte is a barrister practicing at Littleton Chambers in London. He was a member of the WTO panel in the *Korean Government Procurement* case, *infra*, note 74.

The stated objective of the 1994 Agreement on Government Procurement ("GPA" or "GPA 1994") is to provide an effective and transparent multilateral framework of rights and obligations with respect to laws, regulations, procedures and practices regarding government procurement with a view to achieving greater liberalization and expansion of world trade and improving the international framework for the conduct of world trade.[1] After years of debate and disagreement, the negotiations conducted within various *fora*, including the ITO negotiations, the OECD and the GATT, have resulted in the most comprehensive multilateral set of enforceable provisions applying to government purchases, opening up potentially hundreds of billions of dollars worth of public procurement to foreign competition.[2] The GPA does so by extending the GATT principles of non-discrimination (MFN and national treatment) and transparency to the tendering procedures adopted by government bodies at both central and regional levels as well as to those of other specified entities.

This extension of the GATT principles is not absolute, however. In the first place, the GPA signed in Marrakesh on April 15, 1994 is one of the so-called plurilateral agreements under the WTO umbrella, signifying that only those States which have signed up to the agreement are bound by it. Currently, the signatories to the GPA include Canada, the fifteen European Union Member States, Hong Kong China, Iceland, Israel, Japan, Liechtenstein, Netherlands with respect to Aruba, Norway, Korea, Singapore, Switzerland and the United States. A number of countries are currently negotiating accession[3] and, in addition to those, a number of countries have observer status.[4]

Second, the non-discrimination obligations do not apply to all government procurement of the signatories. Rather, they apply in a qualified manner to specified entities, goods and services which have been the subject of extensive bilateral negotiations between the signatories. The results of these negotiations are contained in a series of Annexes to the GPA which are critical to an understanding of the scope of application of the GPA.

The GPA entered into force on January 1, 1996, one year after the multilateral Uruguay Round Agreements went into effect, and replaced the previous GPA of 1979, amended in 1987.[5]

[1] For an analysis of the economic motivation for liberalising government procurement at the international level, *see* Aaditya Mattoo, *Economic Theory and the Procurement Agreement,* in LAW AND POLICY IN PUBLIC PURCHASING: THE WTO AGREEMENT ON GOVERNMENT PROCUREMENT (Bernard Hoekman and Petros Mavroidis eds. 1997).

[2] It has been estimated that the GPA 1994 covers trade worth $350 billion per year. BHALA AND KENNEDY, WORLD TRADE LAW 1315 (1998), citing INTERNATIONAL CHAMBER OF COMMERCE, THE GATT NEGOTIATIONS: A BUSINESS GUIDE TO THE RESULTS OF THE URUGUAY ROUND 71 (1994). Statistics available after the signing of the original 1979 GPA estimated that it covered around $35 billion per year: Annet Blank and Gabrielle Marceau, *The History of the Government Procurement Negotiations Since 1945,* 5 PUBLIC PROCUREMENT LAW REVIEW 77, 102 (1996), although the actual figures appear to have been even less: ARIE REICH, INTERNATIONAL PUBLIC PROCUREMENT LAW: THE EVOLUTION OF INTERNATIONAL REGIMES ON PUBLIC PURCHASING 133 (1998). The huge expansion of coverage of the 1994 Agreement resulted from the inclusion of services as well as goods, and the extension of the Agreement to subcentral government entities.

[3] These are Albania, Bulgaria, Estonia, Georgia, Jordan, Kyrgyz Republic, Latvia, Lithuania , Moldova, Oman, Panama, Slovenia and Chinese Taipei.

[4] These are Argentina, Australia, Cameroon, China, Czech Republic, Chile, Colombia, Croatia, Hungary, Malta, Mongolia, Poland, Slovak Republic, Turkey. Three intergovernmental organisations also have observer status: the International Monetary Fund, the United Nations Conference on Trade and Development ("UNCTAD"). The International Trade Centre, a joint agency of the WTO and UNCTAD, also attends the meetings.

I. History of the GPA

A. The ITO Discussions

The idea that government procurement would be subject to international trade rules arose in the context of the ITO discussions in 1946, in which the United States proposed that government purchases and contracts should be treated as any other measures relating to trade in goods and be subject to general principles of non-discrimination.[6] Ultimately, this position was rejected, doubtless because the negotiating parties were reluctant to eliminate the numerous "buy national" provisions which many imposed and which required procuring entities to give preference to domestic products in their public purchases. These early negotiations did, however, identify a number of issues which have become key elements in all subsequent negotiations, not least of which is the issue of coverage. No consensus was reached, for example, on the meaning of the word "government" in this context, i.e. whether it referred to central government only or included regional and local governments as well. Disagreement over this issue and the inability of the negotiating parties over the years to agree on a precise definition has given the GPA its hallmark convoluted entity-coverage provisions.

There was further confusion over what was meant by the term "procurement." The discussions centred on three types of transaction: state trading, government purchases and the award of contracts. In state trading, the government is a trading partner like any other and buys, sells or resells products. In government purchasing, the government is acting as a consumer, procuring for its own consumption and not for resale. The award of government contracts was understood to apply not to the purchase of goods but to contracts for the supply of both goods and services (for example, works contracts which included both the supply of materials and the provision of construction services) and implying the use of tendering procedures. The result of this confusion was twofold. First, the fear that inclusion of works contracts would lead to coverage of services within the negotiations led to a decision to apply any provisions only to goods. This exclusion of services was a constant feature in the subsequent negotiations and, when an agreement was finally reached with the GPA (1979), services contracts were excluded from its scope of application. This exclusion was also carried over to the GATS (1995).[7] Second, the negotiators appear to have become preoccupied with the issue of state trading. Indeed, the only provision relating to government procurement to emerge from the negotiations at all was a provision in the Article dealing with state trading requiring "fair and equitable treatment" in respect of government procurement.[8]

The negotiations that led to the GATT were held in parallel to the ITO discussions and, in finalising the text of the GATT, consideration was given to those provisions of the draft ITO Charter that would be incorporated into the GATT. In the context of government

[6] Articles 8 and 9 (relating to MFN and national treatment, respectively) of the U.S. draft for an International Trade Organisation Charter.

[7] Article XIII, although the article also provides that multilateral negotiations will be held within two years of the entry into force of the WTO Agreement aimed at including government procurement in services under GATS, thereby opening up the possibility of expanding the procurement obligations to a wider membership than the current GPA signatories. *See further,* Part IV:C, below.

[8] Article XVII:2 GATT (1947 and 1994): "The provisions of paragraph 1 of this Article shall not apply to imports of products for immediate or ultimate consumption in governmental use and not otherwise for resale or use in the production of goods for sale. With respect to such imports, each contracting party shall accord to the trade of the other contracting parties fair and equitable treatment."

procurement, the final version of the GATT reflected the impasse reached in those discussions. The result was that Article I, on MFN, made no reference at all to government procurement with the largely accepted consequence that the MFN obligation does not apply to government procurement.[9] Article III, on national treatment, specifically excluded government procurement.[10] The only explicit obligation in respect of government procurement was the "soft" obligation of fair and equitable treatment in the provisions relating to state trading.

B. The Work of the OECD

The issue of government procurement next emerged in the context of the Organization for Economic Cooperation and Development ("OECD"), notably as the result of complaints by Belgium and the United Kingdom against increased preferences in U.S. defence procurement.[11] This led to a more general objective of examining the general issue of government preferences in government procurement and of compiling information on the procurement procedures of governments. Not surprisingly, it was soon appreciated that government procurement was conducted in any number of ways and using different methods. Administratively, procurement could be subject to highly detailed regulation and open to challenge by disappointed tenderers but, in many countries, was still governed by more discretionary means through the use of administrative guidelines or internal practice which gave little or no room for external challenge. In practical terms, it was clear that there were also a wide variety of tendering procedures used under different systems, some based on formal open tendering, others based on more discretionary forms of purchasing. It also emerged that most of the countries examined maintained some form of domestic preference providing protection against foreign competition. The results of this study were published in 1966[12] and formed the basis for the further discussions which took place in a working group under the auspices of the OECD Trade Committee with a view to ensuring the "fairest possible government procurement procedures, seeking to limit discrimination against foreign suppliers."

This early work of the OECD was critical in the sense that it changed the way in which government procurement was approached by the negotiators. Unlike the initial ITO/GATT discussions which started from the premise that government procurement could be approached in the same way as general trade in goods and services and could thus be made subject to the general application of the GATT non-discrimination principles, the OECD showed that it would not be possible to impose such obligations without at the same time addressing the rules for the conduct of procurement which differed widely in form throughout the potential membership. It recognised that procedural conformity or compatibility was a necessary step to the achievement of non-discriminatory access to procurement markets. This was a vital change of course and it is this imposition of detailed procedural steps and safeguards which characterised each of the subsequent agreements.

[9] *See, contra,* Arie Reich, *The New GATT Agreement on Government Procurement: The Pitfalls of Plurilateralism and Strict Reciprocity,* 31 J. WORLD TRADE 125 (1997).

[10] Article III:8(a): "The provisions of this Article shall not apply to laws, regulations or requirements governing the procurement by governmental agencies of products purchased for governmental purposes and not with a view to commercial resale or with a view to use in the production of goods for commercial use."

[11] OECD Doc. TFD/TD/499, November 15, 1968.

[12] *Government Purchasing in Europe, North America and Japan—Regulations and Procedures* (OECD 1966).

During the ITO discussions, it had become apparent that there was no consensus on what "government" meant in the context of government procurement. This was not the consequence of any linguistic difficulty but the result of the constitutional arrangements of the different States. Clearly, the constitutional powers of central government would differ between federal and unitary systems, but the degree of control over regional, local or municipal governments would also differ between similar systems. However, the central debate did not concern the level of control exercised by central government over local government[13] and the ability of central government to impose and enforce procurement procedures at the various levels. Nor was it necessarily a question of identifying the source of public funds which, at least in the domestic context, provides legitimacy for the notion that the expenditure of public money should be regulated and controlled and which also plays a part in identifying publicly funded enterprises which may be subject to procurement regulation. Rather, these discussions took place in an attempt to reach international agreement on the opening up of and access to procurement markets. What was of concern to the negotiators, therefore, was to ensure that any agreement would bring trade advantages to all the signatories and that these advantages would be of equivalent value. The key was the achievement of reciprocal trade advantages.[14]

In this context, it was feared that the likely trade advantages to be offered by federal states, who could offer access to the purchases of government only at the federal level, would be disproportionately lower than the advantages that could be offered by unitary states who would be in a position to offer access to different levels of government purchasing.[15] This issue was brought to a head particularly in the context of discussions over the extent to which public utilities could be covered by any agreement. The United States had proposed that the work should focus on heavy electrical equipment[16] because of "its considerable trade importance, its susceptibility to statistical study . . . and its relevance to OECD members as producers or consumers." Notwithstanding the ease by which trade advantages could be quantified (or maybe precisely because those advantages were readily shown to be disproportionate), it proved impossible to reach a conclusion on this sector because of the different degrees of government ownership in the sector in the different countries. This was and remains an issue in respect of public utilities (in the energy, transport and telecommunications sectors, for example) where the operators are, in some countries, entirely government-owned and, in others, privately owned to a greater or lesser degree.

[13] Although this was an issue in the context of the GPA, for example, in relation to the ability of the U.S. federal government to impose the procurement rules required by the GPA on the individual States. Indeed, a WTO dispute panel was established in 1997 to consider a law enacted by the State of Massachusetts which essentially sought to prohibit State public authorities, covered by the GPA, from procuring goods or services from any companies, whether from the United States or elsewhere, that engaged in business with Burma (Myanmar) and that were listed in the law (*United States—Massachusetts State Law Prohibiting Contracts with Firms Doing Business with or in Myanmar*, WT/DS88/1-5, WT/DS95/1-5 and WT/DSB/M/49). The Law also imposed a ten percent price penalty on bids submitted by listed companies. The work of the Panel was suspended following a U.S. court ruling preventing the implementation of the law.

[14] This bargaining for equivalent trade advantages became particularly marked during the Uruguay Round negotiations, notably between the EC and the United States which together employed an independent accounting firm to assess the value of the parties' offers. *See* Gerard de Graaf and Mathew King, *Towards a More Global Government Procurement Market: the Expansion of the GATT Government Procurement Agreement in the Context of the Uruguay Round,* 29 INTERNATIONAL LAW 552 (1995).

[15] *See* Pomeranz, *supra* note 5, at 1273.

[16] OECD Archives, *Government Purchasing—Note from the United States Delegation*, September 9, 1968, cited in Blank and Marceau, *supra* note *2*, at 89.

It was clear that it would not be possible simply to identify a sector and await the expected trade advantages by imposing reciprocal access to the "government" procurement markets of the putative signatories without, at the same time, finding a way of ensuring that those advantages could flow both ways, ie. that they were indeed reciprocal. This led to the conclusion that the approach could not be based on a limited number of sectors and that, in order to assess and ensure reciprocal advantages, some type of list of entities would need to be prepared based on the size and nature of the market in question. The idea was to devise a system under which, whatever the entity or market concerned, each member could offer the other members equivalent access to its government procurement in proportion to its size and the size of the economy as a whole.[17] The solution was to turn to the system of offers and requests used widely in the multilateral negotiations of the GATT whereby coverage would be limited to an agreed list of (governmental) entities that each party would offer, subject to the approval of the other parties. They, in turn, could reject the offer and request those entities in the offering country that they would like to see included in the list. This is the system that was eventually adopted in the Tokyo Round and Uruguay Round GPAs.

It should be added that, at the same time that the OECD discussions were taking place, the EEC had also started work on liberalising government procurement among its member states and there is little doubt that there was extensive cross-fertilisation between the two *fora*.[18] Two of the basic principles of the EEC Treaty, the freedom of establishment and the freedom to provide services, were to be achieved through the implementation of two General Programmes[19] which were adopted in 1961.[20] Both programmes recognised the importance of public procurement markets for both supplies and works but it was clear that the economic importance and sensitive nature of these markets meant that any abrupt and comprehensive liberalisation was out of the question.[21]

The approach taken was to work towards the adoption of two types of directives: "liberalising" directives to remove the most flagrant discriminatory measures applied in the member states, and "co-ordinating" directives aimed at harmonizing the laws of the member states in respect of public procurement. In the meantime and until the end of the transitional period, safeguards were put in place in the form of a quota system under which a certain percentage of relevant contracts could be reserved for nationals. As in the case of the OECD discussions, the value of contracts concluded by nationals of the different member states was also taken into account under this quota system, thereby establishing a certain degree of reciprocity.[22] Once the quota was exhausted, a member state was able to suspend allocation of the contracts to nationals of other member states. A series of liberalising directives were adopted during the 1960s[23] although it was not until the 1970s that the first co-ordinating directives emerged.[24] These have since been significantly amended.

[17] *See* Reich, *supra* note *2*, at 107.

[18] Blank and Marceau, *supra* note *2*, at 77.

[19] Articles 54(1) and 63(1) of the EEC Treaty, respectively.

[20] Official Journal 32 and 36 of 1962, respectively.

[21] Friedl Weiss, Public Procurement in European Community Law 30 (1993).

[22] *Id*. at 30, n. 86.

[23] Commission Directive of December 17, 1960, which applied the non-discrimination principles to goods including their supply for building works irrespective of whether these works were "public" works; Directive 62/427, OJ 1863/64; Directive 64/429, OJ 1880/64; Commission Directive of November 7, 1966; Directive 70/32, OJ 1970 L13/1; Directive 71/304, OJ 1971 L185/1.

[24] Directive 71/305, 1971 OJ L185/5 and Directive 77/62, OJ 1977 L13/1 on works and supplies, respectively.

These co-ordinating directives took essentially the same approach as that discussed in the context of the OECD. They regulated coverage of the directives by reference to broad descriptions[25] of the entities covered, together with (non-exhaustive) lists of the entities, and imposed a common set of procedures to be applied to procurement in the member states. These two key elements were pursued in the OECD discussions and, by the time these discussions were transferred in 1976 from Paris, home of the OECD, to Geneva where the Tokyo Round of GATT negotiations was underway, had become firmly established as the basis of any future agreement on government procurement.

C. The GATT Negotiations and the Tokyo Round

1. The Original Code

Under the Tokyo Round negotiations, begun in 1973, a special negotiating group had been established in the GATT to consider non-tariff barriers, quantitative restrictions and technical barriers to trade. A sub-group on government procurement was set up in 1976, to which the OECD sent a report setting out the current state of play of the OECD negotiations on government procurement and, soon thereafter, its "Draft Instrument on Government Purchasing Policies, Procedures and Practices." Work progressed rapidly within this sub-group and, by the end of 1977, the sub-group circulated a "Draft Integrated Text for Negotiations on Government Procurement."[26] Extensive bilateral and plurilateral negotiations and consultations between the parties followed. Given the difficulties of obtaining the required majorities for amending the GATT itself, the approach adopted was to establish a supplementary Code on procurement applicable only to those contracting parties that originally signed the Code, and open to signature to others wishing to participate. The first Government Procurement Agreement was signed on April 12, 1979 and entered into force on January 1, 1981.

The GPA 1979 ("the Code") was clearly based on the work of the OECD and many of the solutions worked out in the OECD discussions were evident in the final text. The two broad elements of entity coverage by entity list and the introduction of detailed procedural requirements were maintained and formed the basis of the Code and, later, of the GPA 1994. On the basis of the system of offers and requests, the lists of entities included in Annex I were those whose inclusion in the list had been negotiated between the parties. For the most part, these entities were agencies of the central or federal government and entities under the direct and substantial control of the government. Local, provincial and municipal entities were not covered nor were state-owned enterprises or corporations of a commercial character which excluded many of the state utility companies, notably in the fields of energy and telecommunications. Defence entities were also largely excluded, with only non-military products purchased by them being covered. Entity coverage was, therefore, limited, with only a token gesture aimed at possible enlargement in future: governments were required to inform regional and local governments and authorities of

[25] They referred to the state, its territorial sub-divisions (such as provinces, Länder, communes etc.) as well as to a more broadly defined category of bodies governed by public law (see, for example, Article 1(1) and (2) of the Commission Directive of December 17, 1960). Until the 1990s, the directives excluded entities in the utility sectors of water, energy, transport and telecommunications, mainly because the degree of State ownership over these entities varied so widely between the member states.

[26] GATT Doc. MTN/NTM/W/133 of December 15, 1977, amended by Doc. MTN/NTM/W/133/rev. 1 of March 30, 1978.

the objectives, principles and rules of the Agreement and to draw their attention to the overall benefits of liberalisation in government procurement.[27]

2. Continuing Issues Arising from the Code

The lack of a general definition of those entities which are covered by the term government procurement, though apparently resolved by adopting a system of lists, has given rise to a number of isolated disputes and the continuing elusiveness of a workable definition plagued the ongoing negotiations.[28] In particular, use of the phrase, entities "under the direct or substantial control"[29] of the government in Article I:1(c) of the Code, gave rise to the possibility that entities other than those listed in the appropriate Annex could be covered.[30] The issue was considered by a dispute panel in 1992,[31] in the context of a U.S. Sonar Mapping System.[32] There, the United States had agreed with a private company that the company would procure a sonar mapping system but that the system would be for the benefit of the government, would be paid for by government money and that the final decision over the award of the contract would also be made by the government. In the event, the panel held that those characteristics (payment by government, government ownership and possession by the government and government control over the award process) were sufficient to bring the procurement within the terms of Article I:1(a) of the Code.[33]

Linked to the issue of entity coverage was the question of thresholds, i.e. the minimum value of a contract above which the Code would apply. This issue had been discussed in the OECD but became a serious point of disagreement under the Tokyo Round negotiations. This was partly due to the question of the value of procurement offered by the different parties. The lower the threshold, the more contracts and entities would be covered. The higher the threshold, the fewer there would be,[34] and this could well affect the net value of the "contribution" of the different parties. At a more practical level, however, it was also recognised that a low threshold would cause a significant administrative burden on governments as a result of the large number of small value contracts undertaken by them on a daily basis. On the other hand, too high a threshold would limit, if not frustrate, the objectives of the Agreement since fewer contracts would be covered. Developing countries also favoured lower thresholds since this would enhance their prospects of gaining access to the procurement markets of developed countries by enabling them to compete for the lower value and less sophisticated contracts. In the end, a threshold value

[27] GPA 1979, Article I:2.

[28] For a detailed analysis of the issue and the unreported disputes, see Pablo Olivera, *Defining the Scope of Covered Entities under the WTO Agreement,* 6 PUBLIC PROCUREMENT LAW REVIEW 1, 8 (1997).

[29] This phrase has been omitted from the GPA 1994, although that has not removed the residual doubts, particularly since many of the Annexes rely on broader categories of entities than would be expected in Annexes supposedly limited to naming specific entities. See Pablo Olivera, *ibid*., at p. 16.

[30] As mentioned above, under the EEC directives, the Community's procurement rules would apply to any "body governed by public law" whether or not they were also explicitly included in the lists appended to the directives.

[31] *See* Part C.4, below in respect of the 1979 GPA dispute resolution system.

[32] Document GPR.DS1/R, April 23, 1992, and reported in *Re Procurement of a Sonar Mapping System: European Community v. United States of America* [1992] 3 CMLR 573. For a commentary, *see* Mary Footer, *GATT: Developments in Public Procurement Procedures and Practices,* 2 PUBLIC PROCUREMENT LAW REVIEW 193 (1993). *See also*, a more recent case under the GPA 1994, *Korea—Measures Affecting Government Procurement,* discussed below at Part III:A(1).

[33] Adoption of the Panel report was blocked by the United States.

[34] The United States, for example, had recognised that foreign procurement contracts tended to be much lower in value than those in the United States. *See* Reich, *op. cit*. (*footnote 2*), at p.109.

of SDR 150,000[35] was agreed. The Code also provides that contracts may not be divided with a view to removing them from the scope of the Code obligations.[36]

In line with the earlier negotiations, the scope of the Code extended only to contracts for the procurement of products. The procurement of general services was largely excluded, although services incidental to the supply of products were included under the agreement if the value of those incidental services did not exceed that of the products themselves.[37] Together with the provision, in the same article, excluding "services contracts *per se*," this suggests that, in the context of a mixed contract, one which includes the supply of both goods and services, the contract would be categorised as one or the other depending on the value of the respective components. This was not, however, the interpretation given by the panel in the *Sonar Mapping System* case, referred to above, which did not consider that the fact that the supply of products took place within the framework of a services contract of higher value was sufficient to exclude the procurement of those products from the Code. The panel concluded, therefore, that the U.S. procurement of the sonar mapping system was subject to the provisions of the Code even though it was procured in the context of a much larger contract for the supply of services.

3. Procedural Rules

The second main element of the Code was the imposition of transparent and common tendering procedures to govern the parties' procurement under the Code. The core provision is contained in Article II which incorporated into the Code the GATT obligations of MFN and national treatment. This required the parties immediately and unconditionally to provide to the products and suppliers of other parties treatment no less favorable than (a) that accorded to domestic products and suppliers and (b) that accorded to products and suppliers from any other Party. As is evident from the wording, this provision was limited to suppliers from Parties offering products originating from those countries. It was, therefore, important to determine the origin of those products which are entitled to the benefits of the Code. No agreement was reached to regulate origin questions in a single international standard,[38] and it was finally agreed that each Party would apply the same origin rules that it otherwise applies "in the normal course of trade" with specific reference to those applied to imported products.[39]

The negotiating parties had, as mentioned above, concluded that the non-discrimination obligations were not sufficient alone to open up procurement markets, and that the solution lay in the adoption of detailed and specific rules for the conduct of the procurement process. This was to be done by setting out specific tendering procedures inspired by the results of the OECD findings in relation to the parties' existing procedures.[40] Although there were many forms of tendering procedure, it was possible to identify three broad categories: "public" or "open" tenders under which the invitation to tender was given the widest possible publicity and where an unlimited number of suppliers were given the opportunity to bid; "selective" or "restricted" tenders under which participation is limited to a certain number of selected suppliers, the invitation to tender normally taking the form of invitations sent directly to those suppliers; and

[35] This refers to the full cost of the product to the entity, including any VAT or customs duties payable: *Report of the Panel on Value Added Tax and Threshold*, BISD 32nd Supp., 247.

[39] Article II:4.

[40] *See* the OECD Report of 1966, *supra* note 12.

"private contract" or "single tender" procedures under which the contracting entity contacts suppliers directly or contacts a single supplier directly, though generally only in the case of specific circumstances justifying a lack of competition (such as urgency). Article V of the Code reflects these findings and requires the use of open or selective tendering procedures unless the conditions specified for the use of single tender are met.[41]

An important principle applied to these tendering procedures was transparency. Little would be gained from the Code unless the participating countries' procedures were transparent and available to all potential and eligible bidders. Thus, the Code contained publicity requirements for announcing tenders and for notifying the award of contracts; minimum time limits providing sufficient opportunity for all eligible bidders to respond and submit bids; transparent and objective bidder selection and contract award criteria to be made known to all bidders in advance; and requirements regarding the use and development of objective technical specifications. These provisions remain largely unaltered in the GPA 1994 and will be discussed in detail below.

4. Dispute Resolution

Few agreements, let alone international agreements, are likely to be applied effectively unless there is a means of enforcing their provisions. Given the political nature of the GATT negotiations, political solutions to disputes, based on conciliation and negotiation, are to be expected and any form of adjudication is likely to be a measure of last resort. That is, indeed, the solution adopted by the Code. Nevertheless, unlike the GATT which concerns essentially public economic measures of governments affecting general trade between countries, the Code provided for specific tendering procedures, the breach of which was apt to lead to discrimination against specific foreign tenderers in the context of specific contracts and contract award procedures. Tenderers are, therefore, best placed to discover breaches of the provisions and are likely to have the keenest interest in seeking remedial action, thus avoiding costly and bureaucratic centralised supervision of the procurement process.[42] The introduction of private bid challenge rights had to await the GPA 1994, although Article VI:6 of the Code did require parties to maintain "procedures for the hearing and reviewing of complaints arising in connexion with any phase of the procurement process, so as to ensure that, to the greatest extent possible, disputes under this Agreement will be equitably and expeditiously resolved between the suppliers and the entities covered." This, however, was understood (by the parties) to mean that complaints would be heard by the procuring entity itself without, at the same time, requiring reliance on or the establishment of independent judicial or quasi-judicial bodies.[43]

The dispute resolution procedures of Article VII of the Code were threefold. First, a solution had to be sought through the use of bilateral consultations between the "government" parties under which each party was required to afford sympathetic consideration to any request for such consultations with a view to reaching a mutually satisfactory resolution of the matter. Second, in the absence of a mutually satisfactory resolution, the matter was to be referred to the Committee on Government Procurement, established

[41] These procedures, which remain largely unaltered in the GPA 1994, will be discussed at more length below.

[42] *See further*, on this issue and on the theory of procurement regulation, PETER TREPTE, REGULATING PROCUREMENT: UNDERSTANDING THE ENDS AND MEANS OF PUBLIC PROCUREMENT REGULATION (2003).

[43] Arie Reich, *supra* note 2, at 128.

during the Tokyo Round to oversee the procedures for consultation and dispute resolution, which was to investigate the matter with a view to facilitating, again, a mutually satisfactory solution. Third, if these attempts failed, the Committee was to establish a Dispute Panel to examine the matter and make such findings as would assist the Committee in making recommendations or giving rulings on the matter.[44] The findings and recommendations were not binding on the parties and parties could block their adoption by the Committee.[45]

The weakness of political compromise and of inter-governmental procedures as a means of resolving disputes, particularly where specific breaches of the Code as well as measurable damage to individual tenderers could be identified, is amply demonstrated by the Trondheim Panel.[46] In that case, although a contract had been awarded to a Norwegian supplier in clear violation of the Code,[47] the panel did not consider it necessary or appropriate to order remedial action by way of contract annulment or the recommencement of the tender procedures, since that had not been the customary practice under GATT.[48] It did not either deem it appropriate to order any form of compensation for the benefit of the U.S. supplier which was discriminated against or to order the withdrawal of the benefits of the Code from Norway. Despite breaching the Code, therefore, no action was taken against Norway or the Norwegian government entity responsible for the breach of the Code. As one commentator notes,[49] given the fact that this was apparently Norway's second violation of the Code with regard to the same type of product (the first having been with respect to Oslo) and given the well-known lack of effective remedies under the Code, it is tempting to accept the U.S. view (set forth at paragraph 3.34 of the Report) that the Norwegian Government had known that its actions would violate the Code and had made a calculated decision that this was an acceptable cost of supporting domestic industry. Whether this was the true motivation or not, the lack of adequate remedies at the disposal of aggrieved tenderers was clearly a serious weakness of the Code and one that has now been remedied in the GPA 1994.

D. Improvements Following the Tokyo Round Code

The Code contained in Article IX:6 an undertaking by the parties to begin negotiations within three years with a view to broadening and improving the Agreement and expanding its coverage to include services. These negotiations were commenced in 1982 and culminated in a Protocol of Amendments in 1986. Despite the ambitious intentions

[44] This procedure is similar to but not identical to the GATT procedure. See D.V. Anthony and C.K. Hegarty, *Cautious Optimism as a Guide to Foreign Government Procurement* 11 LAW & POL. IN INT'L. BUS. 1301, 1330 (1979).

[45] This was a weakness of the GATT system generally, and was rectified by the WTO Dispute Settlement understanding adopted at the end of the Uruguay Round. Appellate Body reports and unappealed panel reports are now adopted unless a consensus opposes adoption which as a practical matter is never likely to happen. *See* Chapters 26 and 27 of this book.

[46] GATT Doc. GPR.DS2/R of April 28, 1992 ("*Trondheim Panel Report*") and reported in *Norwegian—Procurement of Toll Collection Equipment for the City of Trondheim,* BISD 39th Supp. 400 (adopted). For a commentary, see Mary Footer, *supra* note 32, at CS200.

[47] The Norwegian government had adopted a single tendering procedure ostensibly because the contract was one for research and development, although the Panel found that it was, in fact, a contract for the supply of equipment since the result of the procurement was the purchase of operational toll equipment for a fully functioning toll ring system.

[48] *Trondheim Panel Report*, ¶ 4.17

[49] Reich, *supra* note 2 at 132.

of broadening the Code to include greater entity coverage and expanding its scope to include services contracts, very little was achieved in this respect during the negotiations following its entry into force.[50] Work concentrated on improving the text of the Code and seeking to strengthen its provisions in order to ensure proper and reciprocal implementation of the Code. In the event, the majority of the amendments concerned improvements to the text of the Code and to the tendering procedures themselves.[51] These consisted essentially in amending the publicity requirements and the minimum time limits for submitting tenders; amending the qualification criteria; introducing provisions relating to urgency; imposing restrictions on the use of offsets and improving publication of post-award information. In addition, a new and important paragraph[52] was added to the provisions relating to technical specifications in order to prevent the seeking or acceptance of advice on technical specifications which might have the effect of precluding competition.

A few more modest amendments were also made. First, the term "purchase of products" was replaced by the term "procurement of products" and was enlarged to cover not only purchase but also the lease, rental or hire-purchase of products, with or without an option to buy. Second, the threshold value was reduced from SDR 150,000 to SDR 130,000 and provisions included for the valuation of recurring contracts, lease, rental or hire purchase contracts as well as option clauses. Third, in order to prevent further discrimination, a clause was introduced[53] to ensure that parties would not discriminate against locally-established suppliers on the basis of degree of foreign affiliation or ownership. Further, parties would not discriminate against locally-established suppliers on the basis of the country of production of the good being supplied, provided that the country of production was a party to the Code.

II. The Uruguay Round and the GPA 1994

While one of the stated aims of the Uruguay Round was to "improve, clarify or expand, as appropriate, agreements and arrangements negotiated in the Tokyo Round of Multilateral Trade Negotiations," little of substance in relation to the Code was negotiated by the MTN Agreements and Arrangements group established to discuss a number of the Tokyo Round Codes, including the GPA. Negotiations on the Code continued, therefore, under the Committee on Government Procurement, established under Article IX:6 of the Code. This choice of negotiating forum is significant. Negotiations with respect to the remaining Tokyo Round MTN Agreements[54] were open to all GATT members. These agreements, as revised in the Uruguay Round, eventually ceased to be "voluntary" agreements and became part of the WTO single undertaking and, therefore, applicable to all WTO members. The GPA negotiations, by contrast, were conducted by the existing members of the Committee. The result was the plurilateral, as opposed to multilateral, GPA, signifying that it is limited to a number of WTO Members rather than all Members. While it remains part of the GATT/WTO family by virtue of its inclusion in the WTO

[50] It is perhaps no coincidence that 1986 was the year in which the Uruguay Round of multilateral trade negotiations was launched and it is possible that some of the negotiating parties were prepared to wait for those negotiations to push forward with greater expansion of the Code.

[51] These will be discussed in detail below.

[52] Article IV:4.

[53] Article II:2.

[54] The Subsidies Code, the Anti-Dumping Code, the Customs Valuation Code, the Standards Code and the Import Licensing Code.

annexes and is served by the WTO Secretariat and the Dispute Settlement Body, the GPA, together with one other plurilateral sectoral agreement,[55] remains binding on and confers benefits only to those Members who have signed up to it.

The "terms of accession" to the members-only club of the GPA reflect the long negotiating history.[56] The bargaining for entity coverage which had been the hallmark of previous negotiations reached a fever pitch during the Uruguay Round, most notably between the EU and the United States which disputed the real value of each other's offers.[57] The dispute led to the threat of retaliation by the United States against the EU's perceived discrimination[58] against foreign suppliers in the hotly contested utilities sectors of water, energy, transport and telecommunications. The dispute was only resolved after both countries agreed to sign an interim agreement (the Memorandum of Understanding ("MOU")) in which they made certain reciprocal commitments to open their respective procurement markets as a "down payment" towards an expanded Code in the areas of central government entities and electrical utilities.[59] No agreement was reached, however, on another contentious sector, telecommunications. The MOU[60] also contained a side letter calling for the appointment of an independent consultant to seek to quantify the value of the respective offers. This solution prompted other parties to improve their offers in an attempt not to be left outside an exclusive transatlantic procurement agreement.[61] These negotiations were largely bilateral with each party negotiating with the others resulting in a kaleidoscope of reciprocal arrangements between the parties. The annexes to the GPA contain not only lists of entities and contracts covered; they also contain a variety of derogations and reciprocity clauses which apply differently between the various parties.[62]

Notwithstanding the complications in implementation introduced by these various derogations, the parties succeeded in broadening entity coverage significantly. The GPA now includes not only (i) an expanded list of central government entities (Group A) already covered by the Tokyo Round Code but also, not covered by the Code, (ii) subcentral government entities (Group B) such as provinces and state authorities in federal systems and local and regional governments in centralised systems, and (iii) "other" entities (Group C) whose procurement policies are substantially controlled by, dependent

[55] The Agreement on Trade in Civil Aircraft. Two other plurilateral agreements concluded during the Uruguay Round, the International Dairy Agreement and the International Bovine Meat Agreement, are no longer in effect.

[56] During the negotiations, the parties adopted a Ministerial Decision on Accession to the GPA, partly in order to allay fears of developing countries as to the closed nature of the negotiations and the GPA. Under this Decision, coverage offers of countries seeking accession will be examined by a working party established by the Committee which will consider the coverage offer of the applicant, taking into account the export opportunities for existing parties in the procurement markets of the applicant country and the potential export capabilities of the applicant member to the procurement markets of the existing parties. *See The Results of the Uruguay Round of Multilateral Trade Negotiations: The Legal Texts,* 407(WTO 1999).

[62] The prevalence of these derogations led to Hong Kong, an active participant in the negotiations, declining to join the GPA. *See* Blank and Marceau, *supra* note 2, at 119.

on, or influenced by[63] central, regional or local government such as public utilities. No agreement[64] was reached on a fourth category of entities (Group D), which consisted of entities not substantially controlled by, dependent on, or influenced by central, regional or local government such as the private utilities operating on the basis of special or exclusive rights. Such entities are, by contrast, covered by the EU's procurement directives.[65]

The second significant advance made during the Uruguay Round was the expansion of coverage of the GPA to services. As we saw above, the Tokyo Round Code was restricted to the procurement of goods. The GPA, by contrast, covers the procurement of both goods and services. The provisions of the GPA are framed in a way which does not distinguish between the procurement of goods and services, although there is a significant distinction in practice which is evidenced in the annexes. As with entity coverage, the approach taken was to provide a list of contracts covered. In the case of goods, this is a *negative* list, signifying that all goods are covered save for those specifically excluded. In the case of services, the lists are *positive*.[66] This means that the only services covered by the GPA are those which have been explicitly included in the lists. There is a further distinction to be made. Construction services have been treated separately and are listed in Annex 5. All other services are listed in Annex 4. Whilst there was general agreement on the definition of construction services and no reservations made by any of the parties in respect of their offers for construction services, no such agreement was reached for the Annex 4 services. The offers of the parties differ considerably[67] with some (notably the United States) offering a comprehensive list of services and others, such as Japan, offering very few. Inevitably, some services are included in the lists of some parties and not in others, making it extremely difficult to identify with precision those services contracts open to bidders from other signatory countries. The issue is further complicated by the myriad restrictions included in the different parties' offers which apply reciprocity conditions, *viz.* access will not be given to service providers of parties which have not themselves included the same category of services contracts in their own offer.

Finally, perhaps the most important institutional change made by the GPA 1994 consists in the requirement for parties to provide independent bid challenge procedures. In addition to the possibility of resorting to the WTO's Dispute Settlement Body at an inter-governmental level, the parties must ensure the existence of non-discriminatory, timely, transparent and effective procedures enabling suppliers to challenge alleged breaches of the GPA arising in the context of procurements in which they have or have had an interest.[68] This gives aggrieved bidders access to judicial or otherwise impartial bodies in each of the parties' jurisdictions and opens up the possibility of quick and effective remedial action, including the award of compensation. From a procurement perspective this is a remarkable achievement, given the traditional inter-governmental approach of the GATT to dispute resolution which has proved so ineffective in the context of procurement, as was seen in the *Trondheim* case, above.

[63] The means of control or influence could include, *inter alia*, governmental ownership or part ownership, government financial assistance such as subsidies, statutory relationship between the entity and the government, special privileges such as legal monopolies, budget review by government, appointment of management personnel by government, political pressure etc. *See* Blank and Marceau, *supra* note 2, at 113.

[64] Indeed, it was decided that no negotiations should take place concerning Group D.

[65] Article 2 of Directive 93/38 (OJ 1993 L199/84). The EU's Annex 3 to the GPA ensures that, of these, only the publicly owned utilities are subject to the GPA.

[66] Except for the United States which adopted a *negative* list approach.

[67] In some instances, they also differ on threshold values.

[68] Article XX:2.

In addition to these three major improvements to the GPA (greater entity and contract coverage; introduction of bid challenge procedures), the Uruguay Round also made a number of amendments and improvements to the text of the GPA and to the tendering procedures to be applied, including the introduction of a certain degree of flexibility for the Group B and C entities, the introduction of a competitive negotiation procedure, strengthening of the prohibition on offsets and changes to the provisions on technical specifications. These will be discussed below.

III. The Government Procurement Agreement 1994

The GPA consists of the main text and four appendices. These appendices consist of lists of the agencies each government has committed to complying with the agreement, lists of services and constructions services subject to the agreement, and lists of publications the governments use to publish tender notices, qualification lists and the procurement rules and procedures they apply. Given the importance of these appendices to the understanding and implementation of the GPA, it is as well to have a clear idea of their content at the outset.

Appendix I defines the coverage of the parties' obligations under the GPA in terms of procuring entities and services, including construction services. Each party, based on the system of offers and requests discussed above, provides its own appendix[69] which comprises five annexes:

- Annex 1 contains a list of the covered central government entities;
- Annex 2 contains a list of the covered sub-central government entities;
- Annex 3 contains a list of all other covered entities that procure in accordance with the agreement;
- Annex 4 specifies those services, whether listed positively or negatively, covered by the agreement;
- Annex 5 specifies covered construction services.

In addition, there are General Notes to each party's Appendix 1 which qualify the commitments referred to in the annexes.

Appendix II sets out the publications utilised by the parties for the publication of notices of intended procurements (Article IX:1) and post-award notices (Article XVIII:1).

Appendix III sets out the publications utilised by the parties for the annual publication of information on permanent lists of qualified suppliers in the case of selective tendering procedures (Article IX:9).

Appendix IV sets out the publications utilised by the parties for the publication of laws, regulations, judicial decisions, administrative rulings of general application and any procedure regarding government procurement covered by the agreement (Article XIX:1).

A. Scope and Coverage

The GPA applies to any law, regulation, procedure or practice regarding any procurement by entities covered by the agreement. It does not seek to replace national procurement systems but sets out a requirement of consistency between the applicable national

[69] These are all available on the WTO website, www.wto.org.

systems and the GPA.[70] As a result, the national procurement systems of the parties have been modified to a greater or lesser extent in order to bring them into line with the GPA.[71] Without defining what is meant by government procurement, the GPA applies to specifically-listed government entities when they purchase goods, services and construction services, also specifically listed, where the value of the contract exceeds a specified threshold value. These elements will be considered separately.

1. Entity Coverage

Only procurement carried out by the entities listed for each party in Appendix I, Annexes 1, 2 or 3 of the GPA is covered by the Agreement. As discussed above, these now include central government entities; sub-central government entities such as states, provinces, Länder, prefectures and municipalities; and other entities which the parties have agreed to subject to the agreement, such as public undertakings and public authorities, notably in the utilities sector, or federal enterprises. These are generally undertakings operating in the sectors of the generation and supply of gas and electricity, water, operation of urban transport networks (trams, underground systems etc.), and the provision of port and airport facilities. Coverage is not equal between the parties, however. Whilst all these sectors are subject to the GPA for the member states of the EU, Korea and Japan, for example, have not provided general coverage for airports[72] and urban transport (nor electricity, in the case of Japan). Some countries have included a variety of other entities under this annex, such as, in the case of Japan, the Japan National Tourist Organization. As discussed above, Annex 3 does not cover any purely private undertakings.

The issue of the coverage of airports gave rise to the first dispute under the GPA 1994.[73] In *Korea—Measures Affecting Government Procurement,*[74] the only dispute panel finding to date under the GPA 1994, the question arose whether the Korean entities responsible for the construction of the new Inchon International Airport (the Korean Airports Authority and its successors ("KAA")) were required to comply with the provisions of the GPA.[75] The KAA was not listed in any of the relevant Annexes and it was not therefore a listed entity, although it was common ground that the Ministry of Construction and Transportation was listed. A note to Korea's annex provided that government entities included "their subordinate linear organisations, special local administrative organs and attached organs as prescribed in the [Korean] Government Organization Act." Though framed in ambiguous terms, the panel concluded that this was not sufficient to cover the

[70] *See, for example*, Articles VII:1 and XXIV:5.

[71] There are a number of commentaries on implementation in different states. See, for example: Joseph Francois, Douglas Nelson and David Palmeter, *Public Procurement in the United States: a Post-Uruguay Round Perspective*; Pierre Didier, *The Uruguay Round Covernment procurement Agreement: Implementation in the European Union*; Norio Komuro, *Implementation of the GPA in Japan*; Michael Hart and Pierre Sauvé, *Does Size Matter? Canadian Perspectives on the Development of Government Procurement Disciplines in North America*, all to be found in Hoekman and Mavroidis, *supra* note 1.

[72] Precisely the question at issue in *Korea—Measures Affecting Government Procurement,* discussed immediately below.

[73] *See also* the *Sonar Mapping* case discussed in Part IC(2) above, which raised similar, if not identical issues.

[74] WT/DS163/R ("*Korean Government Procurement*"). *See also*, for a commentary, Arwel Davies, *Korea—Measures Affecting Government Procurement: Some Critical Observations*, 10 PUBLIC PROCUREMENT LAW REVIEW 229 (2001). [75] The exclusion of certain U.S. construction companies from the bidding process had prompted a complaint from the United States.

KAA on the facts of the case. The United States had argued for the application of a control test and the panel went on to consider whether GPA coverage can result from the control relationship between two entities regardless of the Schedules and the way in which the parties seek to define them. While the panel was not prepared to read such a control test into the GPA, based as it is on the system of lists of entities, it did consider that control by one entity over another could be a relevant criterion for determining coverage,[76] especially where an entity is not specifically excluded by the Annexes.[77] It looked, in particular, at whether the government entity concerned (the Ministry of Construction and Transportation) and the KAA were, in some way, legally unified, or whether, in the alternative, it could be said that KAA was acting as the agent of the government entity such that the airport project was, in reality, the legal responsibility of the government. On the facts of the case, neither situation was found to exist. Nevertheless, the possibility that unlisted entities may be covered by the GPA in appropriate circumstances, where they are, in reality, acting for and on behalf of the government, is, as this panel finding makes clear, a real one which serves to avoid situations of circumvention. This has implications for negotiating parties in that much care needs to be taken in negotiating the Annexes. In this case, it was also evident that the United States had to some extent brought the problem on itself during the negotiations in failing to act upon qualifications Korea had made in its answers in relation to an explicit request by the United States regarding the Inchon airport construction. Other negotiating parties had understood that Korea's offer did not include the airport and had acted upon that understanding by including a derogation in their offers with respect to Korea's airport coverage.[78]

2. Scope

The provisions of the GPA apply only to the procurement[79] of goods (other than defence-related goods and a number of goods specifically excluded by the parties), construction services listed in Annex 5 and other services (defined by reference to the Central Product Classification ("CPC")) listed in Annex 4. Unlike the case for other services, the parties managed to reach a mutual agreement on the construction services to be covered and a common definition appears in each party's Annex 5. It defines a construction service contract as "a contract which has as its objective the realisation by whatever means of civil or building works, in the sense of Division 51 of the CPC." This division includes all types of services in connection with construction, from the pre-erection work at the construction site (of buildings, roads or other infrastructure) to the building and completion itself.

No such agreement was reached on the definition of other services covered by the agreement and this is where most annexes differ considerably from one another. Nevertheless, there are some services that are covered by all parties: most types of computer services, architectural services, urban planning, engineering services, sewage, refuse disposal and most other environmental services. Most parties also include, for example, accounting, auditing and bookkeeping (except for Israel and Japan); management

[76] *Korean Government Procurement,* ¶ 7.57.

[77] *Id.,* ¶ 7.72. Given the negotiated inclusion of entities in the lists, to bring within the coverage of the GPA entities which have explicitly been negotiated out, would undermine the very basis of the negotiations. *See, contra,* Davies, *supra* note 81, at 231.

[78] *Korean Government Procurement,* ¶ 7.116.

[79] By Article I:2, the agreement applies to procurement by any contractual means, including through such methods as purchase or as lease, rental or hire purchase, with or without an option to buy, including any combination of products and services.

consulting (except Japan and only partially covered by Canada); market research (except Canada); advertising (except Canada and only partially covered by Korea); printing and publishing (except Israel and Canada, the United States at sub-central level and only partially covered by Korea). Some services are covered only by a limited number of parties, for example, financial services (EU and United States) and legal services in respect of advice on foreign and international law only (Canada).

In terms of the applicable rules of origin, the GPA[80] has simply reiterated the relevant provision in the Tokyo Round Code, but adding services, to the effect that parties shall apply those rules of origin that are applied in the normal course of trade. In terms of services, there may be a problem in that most countries do not have any clear rules of origin for services which they apply in the normal course of trade.[81] Reich suggests[82] that, in this event, Article XXVIII of GATS would apply. That article distinguishes between a service supplied from or in the territory of another member and a service supplied through commercial presence or through the presence of a natural person. In the first case, the service is considered to be of the country from or in whose territory the service was supplied (regardless of the service provider's nationality). In the second case, the origin is determined in principle by reference to the nationality of the service provider.

3. Threshold Values

The GPA applies to contracts whose value exceeds the threshold values set out in Appendix 1. Though largely the same for most countries, some of these thresholds have been set at different levels. The threshold for the supply of both goods and services to Annex 1 entities is SDR 130,000, with some minor exceptions. For the sub-central government entities in Annex 2, the threshold is generally SDR 200,000. For Annex 3 entities, most parties apply a threshold of SDR 400,000. In the case of construction services procured by entities in all three annexes, most countries apply a threshold value of SDR 5 million, although, in the case of Japan and Korea, the threshold is as high as SDR 15 million.

In order to prevent manipulation of contract valuation that would take particular contracts outside the scope of the GPA, Article II:2 provides that no selection of the valuation method may be used nor any procurement requirement divided with the intention of avoiding the application of the GPA. Article II also provides for methods of contract valuation to take account of recurring contracts, contracts for the lease, rental or hire purchase of products or services or where contracts do not specify a total price and option clauses. Remuneration will include, as well as price, any premiums, fees, commission and interest receivable.

4. Exclusions

Military products are explicitly excluded by each State (either by a negative or positive list contained in each country's Annex 1). In addition, Article XXIII of the GPA contains exceptions similar to the general and security exceptions contained in Articles XX and XXI of the GATT. Thus, the GPA does not prevent any party taking action or not disclosing any information which it considers necessary for the protection of its essential security interests relating to the procurement of arms, ammunition or war materials or to procurement indispensable to national security or for national defence purposes. Provided they are not a means of arbitrary or unjustifiable discrimination or a disguised

[82] *Id.* at 291.

restriction on international trade, the GPA does not prevent a party from imposing or enforcing measures necessary to protect public morals, order or safety, human, animal or plant life or health or intellectual property;[83] or relating to the products or services of handicapped persons, of philanthropic institutions or of prison labour.

B. The Basic Principles

The central premise of the GPA is non-discrimination in government procurement between the signatories, and the two non-discrimination pillars of the GATT, national treatment and the most favoured nation (MFN) obligation, are incorporated in Article III. These principles are guaranteed by Article III:1 of the GPA which requires each party, "immediately and unconditionally," to provide to the *products*, *services* and *suppliers* (including service providers) of the other parties, treatment no less favourable than (a) that accorded to domestic products, services and suppliers (national treatment) and (b) that accorded to products, services and suppliers of any other party (MFN). It would appear that, in this context, "domestic suppliers" means locally-established suppliers, since the position of domestic firms with a degree of foreign affiliation or ownership is dealt with by another provision.[84] Article III:2(b) complements these provisions by ensuring that there will be no discrimination against locally-established suppliers on the basis of the *country of production* of the good or service (i.e. the origin of the product or service as opposed to the nationality of the supplier), provided that the country of production is a signatory to the GPA, so that a locally-established supplier will not be discriminated against when not offering domestic supplies, provided they are supplies originating in a GPA signatory State.

In addition, Article XVI provides emphatically (whereas, in the Tokyo Round Code, there was only a plea for limitation) that, in the qualification and selection of suppliers, products or services or in the evaluation of tenders and award of contracts, entities shall not impose, seek or consider offsets. Offsets in government procurement are measures used to encourage local development or improve the balance-of-payments accounts by means of domestic content, licensing of technology, investment requirements, countertrade or similar requirements. Thus, there can be no discrimination in favour of domestic suppliers through the use of offsets. Nevertheless, an exception is made (in Article XVI:2) in the case of developing countries. At the time of accession, a developing country may negotiate objective, clearly defined and non-discriminatory conditions for the use of offsets (such as requirements for the incorporation of domestic content) which will be set out in their Appendix 1. The offset conditions may only be used for purposes of qualification and not as criteria for the award of contracts, *i.e.* only tenderers meeting the offset requirement will be eligible to tender; offsets will not be used as a means of granting preferences between those tenderers meeting the offset requirement and those who do not.

C. The Contract Award Procedures

Implementation of the basic obligations of non-discrimination is ensured by setting out a number of detailed operational rules for tendering to be followed by procuring entities.

[83] Where products or services are protected by intellectual property rights *and* can be supplied by only one supplier, then a limited tendering procedure may be used.

[84] Article III:2(a). *See* Blank and Marceau, *supra* note 2, at 106.

This is done by prescribing three methods of tendering (open, selective and limited) and one additional mechanism which may be applied to each of those methods (competitive negotiation), supplemented by provisions relating to the preparation of tender documentation, the qualification of suppliers, selection procedures, receipt and opening of tenders and the award of contracts. In addition, the rules also provide transparency requirements relating both to tender notices and their publication, time limits for tendering and delivery and information on the award of contracts. The GPA also contains specific rules with regard to technical specifications.

1. Tendering Procedures

Article VII:3 sets out the three main procedures. Competitive negotiation is not a tendering procedure as such but an approach which may be relied upon by parties when using the other procedures, provided the appropriate conditions are met.

(a) The Open Procedure. Open tendering procedures are those procedures under which all interested suppliers may submit a tender. This is the most competitive of procedures and the remaining procedures involve decreasing levels of competition. The operational requirements of the GPA apply to the open procedures in full. They apply more restrictively in the case of selective and limited procedures.

(b) The Selective Procedure. Selective tendering procedures are those procedures under which only those suppliers invited to do so by the procuring entity may submit a tender. Many procurement systems incorporate a selective or restricted procedure for a number of reasons. In some systems, it is recognised that there are circumstances in which the advantages to be gained by open bidding are outweighed by the cost and time implications of conducting the procedure. Thus, where there are a limited number of suppliers (such as in the case of suppliers of power-generating equipment), little would be gained by relying on an open bidding procedure. Those invited to submit tenders are, therefore, specifically identified as individual tenderers. These systems will, therefore, also impose conditions for its use. The UNCITRAL Model Law,[85] for example, permits the use of a selective procedure when (a) the goods, construction or services, by reason of their highly complex or specialized nature, are available only from a limited number of suppliers or contractors, or (b) the time and cost required to examine and evaluate a large number of tenders would be disproportionate to the value of the goods, construction or services to be procured.[86]

Unlike UNCITRAL, however, the GPA does not set out any conditions for the use of the selective procedure and, in this, it takes a similar approach to the current equivalent EU directives on procurement.[87] The main reason for this is that the EU and GPA provide for the use of the selective procedure in cases where there are too many potential tenderers so that, if all were to be fully evaluated, the process would be excessively time-consuming and expensive. It is to be used, therefore, in a rather different situation to that envisaged in

[85] This is not a system itself but a model used to design procurement systems.

[86] Article 20 UNCITRAL Model Law. *See also* the *World Bank Guidelines on Limited International Bidding* (Official Records of the General Assembly, Forty-eighth Session, Supplement No. 17 (A/4817).

[87] One of the incarnations of the EU's Supplies Directive did, however, require a justification resulting from, *inter alia*, a need to maintain a balance between contract value and procedural costs and the specific nature of the products to be procured: *see*, Article 6 of Directive 77/62 (OJ 1977 L13/1) as amended by Directive 88/295 (OJ 1988 L127/1).

the UNCITRAL Model[88] and allows contracting entities to limit the number of tenderers. Thus, the UNCITRAL type selective procedure recognises that there is a limited number of qualified tenderers, allowing invitations to be sent directly to selected (identified) bidders, whilst the EU/GPA selective procedure allows the number to be limited by way of selection where there are too many potential tenderers. That selection is made by a form of pre-qualification, i.e. only those who are qualified based on the selection criteria are invited to submit full tenders for evaluation. As with the EU directives, a notice of an intended procurement to be conducted by way of selective procedure must also be published.

While the EU directives require that invitations be sent to a minimum of five suppliers,[89] the GPA imposes no numerical minimum. However, in order to ensure optimum effective international competition under selective tendering procedures, Article X requires entities to invite tenders from the maximum number of domestic suppliers and suppliers of other parties consistent with the efficient operation of the procurement system. They must select the suppliers to participate in the procedure in a fair and non-discriminatory manner. No method is indicated as to how a selection will be made between a large number of suppliers, although this is an issue which has plagued many procurement systems which allow the use of selective tendering without providing the means (nor the motivation) for making the selection.[90] If, as in the case of the GPA, there is no set number of tenderers to be invited, it is arguable that the selection will take place on the basis of a pass/fail test, i.e. all those tenderers who meet (pass) the minimum selection criteria will be invited to submit tenders.[91] Nevertheless, the requirement to ensure a fair representation in the selection between national suppliers and suppliers of other parties, suggests that other selection criteria are to be used. No guidance is offered in the GPA.

The GPA allows entities to maintain permanent lists of qualified suppliers[92] and, in selective procedures, they are also permitted to select suppliers to be invited to tender from among those listed, allowing equitable opportunities for suppliers on the lists.[93] Given that the selective procedure is to be advertised, this does not prevent expressions of interest from other suppliers and, under Article X:3, other suppliers requesting to participate (by telex, telegram or fax) shall also be considered where they are not yet qualified (i.e. do not appear on a permanent list of qualified suppliers), provided there is sufficient time to complete the qualification procedure. The number of additional suppliers permitted to participate shall be limited only by the efficient operation of the procurement system.

(c) The Limited Procedure. The limited procedure is the least competitive procedure and, in common with all other systems which allow it, may only be used when certain conditions are met. Under this procedure (previously called "single tendering"), a procuring entity may contact a supplier or suppliers directly and individually and negotiate the terms of a contract directly with that supplier or suppliers. Article IX:1 specifies that

[88] In some respects, this is a confusion brought about the use of non-standard terminology in international procurement.

[89] Article 19(2) of Directive 93/36 (OJ 1993 L199/1).

[90] On similar difficulties with the EU system, *see* SUE ARROWSMITH, THE LAW OF PUBLIC AND UTILITIES PROCUREMENT 217 (1996).

[91] This is the method preferred and adopted in the procurement rules of international organisations such as the World Bank, and the Asian Development Bank.

[92] *See* Part III C3 *infra*.

[93] Article X:2.

no invitation to tender need be published and Article XV:1 provides that the provisions of Articles VII to XIV governing open and selective tendering procedures do not apply. Provided that limited tendering is not used with a view to avoiding maximum possible competition or in a manner which would constitute a means of discrimination among suppliers of other parties or protection to domestic producers or suppliers, Article XV permits the use of limited tendering in the following circumstances:

- in the absence of tenders in response to an open or selective tender, or when the tenders submitted have been collusive,[94] or not in conformity with the essential requirements in the tender, or from suppliers who do not comply with the conditions for participation provided for in accordance with this Agreement, on condition, however, that the requirements of the initial tender are not substantially modified in the contract as awarded;
- when, for works of art or for reasons connected with protection of exclusive rights, such as patents or copyrights, or in the absence of competition for technical reasons, the products or services can be supplied only by a particular supplier and no reasonable alternative or substitute exists;
- in so far as is strictly necessary when, for reasons of extreme urgency brought about by events unforeseeable by the entity, the products or services could not be obtained in time by means of open or selective tendering procedures;
- for additional deliveries by the original supplier which are intended either as parts replacement for existing supplies, or installations, or as the extension of existing supplies, services, or installations where a change of supplier would compel the entity to procure equipment or services not meeting requirements of interchangeability with already existing equipment or services;[95]
- when an entity procures prototypes or a first product or service which are developed at its request in the course of, and for, a particular contract for research, experiment, study or original development. When such contracts have been fulfilled, subsequent procurements of products or services shall be subject to Articles VII through XIV;[96]
- when additional construction services which were not included in the initial contract but which were within the objectives of the original tender documentation have, through unforeseeable circumstances, become necessary to complete the construction services described therein, and the entity needs to award contracts for the additional construction services to the contractor carrying out the construction services concerned since the separation of the additional construction services

[94] Collusion among bidders is one of the constant threats to an effective procurement system. However, collusion and other anti-trust matters are generally outside the scope of procurement rules since they address supply-side actors whilst procurement rules impose obligations on buyers. Collusion is also notoriously difficult to prove and it is unclear, in this provision, what authority is to make the finding of collusion. Certainly, procuring entities are ill-equipped to undertake such a task, whatever their suspicions. On competition matters and procurement generally, *see* Diane Wood, *The WTO Agreement on Government Procurement: An Antitrust Perspective* in Hoekman and Mavroidis, *supra* note 1, at 261; Peter Trepte, *Public Procurement and the Community Competition Rules*, 2 PUBLIC PROCUREMENT LAW REVIEW 93 (1993).

[95] Footnote 5 of the GPA. It is understood that "existing equipment" includes software to the extent that the initial procurement of the software was covered by the Agreement.

[96] Footnote 6 of the GPA. Original development of a first product or service may include limited production or supply in order to incorporate the results of field testing and to demonstrate that the product or service is suitable for production or supply in quantity to acceptable quality standards. It does not extend to quantity production or supply to establish commercial viability or to recover research and development costs. *See* also the *Trondheim* panel decision, discussed above.

from the initial contract would be difficult for technical or economic reasons and cause significant inconvenience to the entity. However, the total value of contracts awarded for the additional construction services may not exceed fifty per cent of the amount of the main contract;

- for new construction services consisting of the repetition of similar construction services which conform to a basic project for which an initial contract was awarded in accordance with Articles VII through XIV and for which the entity has indicated in the notice of intended procurement concerning the initial construction service, that limited tendering procedures might be used in awarding contracts for such new construction services;
- for products purchased on a commodity market;
- for purchases made under exceptionally advantageous conditions which only arise in the very short term. This provision is intended to cover unusual disposals by firms which are not normally suppliers, or disposal of assets of businesses in liquidation or receivership. It is not intended to cover routine purchases from regular suppliers;
- in the case of contracts awarded to the winner of a design contest provided that the contest has been organized in a manner which is consistent with the principles of this Agreement, notably as regards the publication, in the sense of Article IX, of an invitation to suitably qualified suppliers, to participate in such a contest which shall be judged by an independent jury with a view to design contracts being awarded to the winners.

(d) Competitive Negotiation. Negotiations are generally not permitted in the case of tendering procedures since this would, *prima facie,* open up the possibility of unequal treatment and discrimination.[97] However, the possibility of negotiation was introduced into Article XIV of the GPA during the Uruguay Round negotiations. As mentioned above, it is not a procedure in itself, but may be used during the open or selective procedures under the stated conditions. Effectively, provided the intention to do so was indicated in the invitation to participate, negotiations may be conducted with the bidders. Even in the absence of such an indication, recourse may also be had to negotiations where it appears from the evaluation that no one tender is obviously more advantageous in terms of the specific evaluation criteria set out in the notices or tender documentation.

The purpose of the negotiations is primarily to identify the strengths and weaknesses in the tenders and the negotiations must be kept confidential so that no information shall be provided that is intended to assist particular participants to bring their tenders up to the level of other participants. The process must be non-discriminatory and the entities must, in particular, ensure that (a) any elimination of participants is carried out in accordance with the criteria set forth in the notices and tender documentation; (b) all modifications to the criteria and to the technical requirements are transmitted in writing to all remaining participants in the negotiations; (c) all remaining participants are afforded an opportunity to submit new or amended submissions on the basis of the revised requirements; and (d) when negotiations are concluded, all participants remaining in the negotiations shall be permitted to submit final tenders in accordance with a common deadline.

[97] Although a number of countries would appear to permit such negotiations. *See Procurement: Competitive Negotiations: Note by the Secretariat,* in UNCITRAL Yearbook Volume XXIII, at 243 (1992).

2. Tender Documentation

In order to provide fairness and equality of treatment, Article XII requires that the tender documentation contain all information necessary to permit tenderers to submit responsive tenders, including the information published in the notice of intended procurement. To further guarantee fairness, Article VII:2 prohibits entities from supplying to any supplier information with regard to a specific procurement which would have the effect of precluding competition. In addition, Article XII:3(c), dealing with requests for information regarding the tender documentation, prevents the entity from disclosing information that would give the supplier making the request information which would give the supplier an unfair competitive advantage over its competitors.

In addition to the above-mentioned information, as well as providing information with respect to the address to which tenders and requests for supplementary information should be sent, information regarding bid opening and the language or languages in which tenders should be submitted, the tender documentation must also contain the technical specifications, the qualification criteria (in terms of economic and technical requirements), financial guarantees and information or documents required from suppliers, terms and condition of contract, including payment terms and the criteria for awarding the contract. The award criteria will include any factors other than price that are to be considered in the evaluation of tenders and the cost elements to be included in evaluating tender prices, such as transport, insurance and inspection costs, and in the case of products or services of other Parties, customs duties and other import charges, taxes and currency of payment. This is critical since an award may only be based on the criteria set out in the tender documentation.[98]

Article XII also requires procuring entities to forward the tender documentation to any tenderer who requests them and to respond promptly to any reasonable requests for explanations.

3. Qualification

In many procurement systems, the qualification of tenderers is based on an enumeration of exhaustive selection criteria. Whilst Article VIII does refer to such criteria, the emphasis of the GPA is much more in ensuring a non-discriminatory application of the selection/qualification criteria. Thus, the main obligation is that entities shall not discriminate among suppliers of other parties or between domestic suppliers and suppliers of other parties. The qualification criteria must be published in sufficient time to allow interested suppliers the opportunity of completing the qualification procedures. The minimum time limits, discussed below, would normally be adequate to ensure this completion, although the GPA does also permit the use of permanent lists of suppliers. Where such lists exist, the suppliers appearing on them are, in a sense, pre-qualified and do not need to be qualified a second time. The concern relates to those suppliers that do not appear on these lists. They are, as is made clear in Article VIII(c), entitled to participate in the same way as suppliers appearing on the list but will only be considered provided there is sufficient time to complete the qualification procedure. On the other hand, the same Article does require entities not to use the process of and time required for qualifying suppliers as a means of keeping suppliers off the lists or from being considered for an intended procurement.

With a view to ensuring objectivity in the qualification criteria, any conditions for participation in tendering procedures must be limited to those which are essential to ensure

[98] Article XIII:4(c).

the firm's capability to fulfil the contract in question. Any conditions for participation required from suppliers, including financial guarantees, technical qualifications and information necessary for establishing the financial, commercial and technical capacity of suppliers, as well as the verification of qualifications, must be no less favourable to suppliers of other Parties than to domestic suppliers and must not discriminate among suppliers of other Parties. The financial, commercial and technical capacity of a supplier will be judged on the basis both of that supplier's global business activity as well as of its activity in the territory of the procuring entity, taking due account of the legal relationship between the supply organizations. None of these provisions preclude the exclusion of any supplier on grounds such as bankruptcy or false declarations, provided that such an action is consistent with the national treatment and non-discrimination provisions of the Agreement.

The permanent lists of suppliers are not closed lists and must be open to suppliers at all times. Applications for qualification must be dealt with promptly and decisions on qualification, as well as removal from the lists, must be communicated to the applicants. Where entities maintain permanent lists of qualified suppliers for the purpose of selective tendering, Article IX:9 requires an annual publication of an appropriate notice in one of the publications listed in Appendix III. The notice must contain the enumeration of the lists maintained, including their headings, in relation to the products or services or categories of products or services to be procured through the lists; the conditions to be fulfilled by suppliers with a view to their inscription on those lists and the methods according to which each of those conditions will be verified by the entity concerned; and the period of validity of the lists, and the formalities for their renewal. However, when the duration of the qualification system is three years or less and if the duration of the system and the fact that no further notices will be published is made clear in the notice it will be sufficient to publish the notice once only, when the system is set up.

When a notice on the existence of a qualification system is used as an invitation to participate,[99] the notice must, in addition, include the information on the nature of the products or services concerned and a statement that the notice constitutes an invitation to participate.

4. Receipt of Tenders

Notwithstanding the desire expressed in Article XXIV:8[100] to ensure that the GPA does not constitute an unnecessary obstacle to technical progress, the terms of the GPA are rather static and, for the most part, require the submission of tenders in writing. In particular, Article XIII:1(a) provides that "tenders shall normally be submitted in writing directly or by mail." This will include, where "permitted" by the purchasers, tenders submitted by telex, telegram or facsimile, although these must then be confirmed by letter or a signed copy of the original. Tenders by telephone are not permitted. It is arguable that, given the largely permissive language used in the GPA, even under the current text, electronic submission would be permitted at the behest of the purchaser.

The tenders must, of course, be submitted by the deadline, although the provisions of the GPA do not extend to requiring the return of tenders unopened if they arrive after the deadline. Article XIII:1(b) does, however, provide that a supplier shall not be penalized if a tender is received in the office designated in the tender documentation after the time

[99] *See* Part III.C.6 below.

[100] This Article simply provides for regular consultations by the Committee regarding the use of information technology with a view, where necessary, to negotiating modifications to the Agreement.

specified because of delay due solely to mishandling on the part of the procuring entity. Tenders may also be considered in other exceptional circumstances if the procedures of the entity concerned so provide. There are no specific provisions relating to public bid openings nor to the procedures of such openings. That is a procedural question for national law which must, however, guarantee the regularity of bid openings and be consistent with the non-discriminations obligations of the agreement. However, public bid openings are not excluded for those states which choose to employ them and Article XII:1(e) requires, for example, the tender documentation to identify the persons authorised to be present at the opening of tenders and the time, date and place of the opening.

The submitted tenders must include all the information necessary for the evaluation of the tender, in particular the definitive price proposed by the tenderer and a statement that the tenderer agrees to all the terms, conditions and provisions of the invitation to tender.[101] Tenderers may be given the opportunity to correct unintentional errors of form between the opening of tenders and the award of the contract but only if they do not give rise to any discriminatory practice.[102] In practical terms, this means that only errors of form will be permitted and no errors of substance. This is likely to include mathematical errors, for instance, but would not permit any reworking of the calculations in order to arrive at different prices.

5. Award of Contracts

There is always tension with regard to the most appropriate award criteria to be applied. Some countries, notably the United States, rely solely on price-based evaluation and award, although many others, notably the EU member states, rely on a combination of price and other objective criteria which could include delivery dates, commitments to spare parts and after-sales service, technical quality, and even aesthetic merit. The World Bank guidelines and the UNCITRAL Model also permit the use of various criteria in awarding contracts although, in contrast to the EU system, they (notably the World Bank) require a certain degree of quantifiability in the additional criteria imposed. Thus, the criteria are expressed, so far as possible, in monetary terms and the price offered by the tenderers are evaluated against these quantified criteria, leading to a "lowest evaluated price."[103]

Given the objective of the GPA of laying down minimum standards to be applied, it has opted for flexibility and, in addition to allowing awards on price, also allows other criteria to be taken into account, provided they have been set out in the tender documentation. Article XIII:4(b) provides that, unless in the public interest an entity decides not to issue the contract, the entity shall make the award to the tenderer who has been determined to be fully capable of undertaking the contract[104] and whose tender, whether for domestic products or services, or products or services of other Parties, is either the lowest tender

[101] Article XIII:1(a).

[102] Article XIII:1(b).

[103] It might be suggested that this is necessary in order to prevent arbitrary discrimination between tenderers. Otherwise higher weight might easily be assigned to suppliers favoured by procuring entities, whatever the reasons for that favouritism. The EU has now included such a requirement in its new directive coordinating the procedures for the award of public supplies, works and services contracts: *Directive 2004/18/EC* (OJ 2004 L134/114). Article 53(2) requires procuring entities, where additional criteria other than price are to be applied, to specify in advance the weighting given to each of those criteria.

[104] Only those tenders which, at the time of bid opening, conform to the essential requirements of the notices or tender documentation and from a supplier which complies with the conditions for participation will be considered for award.

or the tender which in terms of the specific evaluation criteria set forth in the notices or tender documentation is determined to be the most advantageous.

The difficulty with this provision is that it does not indicate what criteria may be taken into account nor what weight should be given to those criteria in the evaluation and award process. Article 34 of the UNCITRAL Model Law identifies as possible criteria, for example, the cost of operating, maintaining and repairing the goods or construction, the time for delivery of the goods, completion and construction or provision of services, the functional characteristics of the goods or construction, the terms of payment and of guarantees in respect of the goods, construction or services. World Bank guidelines suggest, in addition, inland transport and insurance costs to the site, efficiency and compatibility of equipment, availability of service and spare parts and related training, safety and environmental benefits. The EU directives would add cost effectiveness, technical merit, quality, aesthetic characteristics and security of supplies. These types of criteria are typical of the considerations buyers would take into account in the award of contracts and are likely to be permissible under the GPA; there would appear to be no limit to the possible criteria. Whilst no weighting is required, the general non-discrimination obligations of the GPA also apply and would, were it possible to prove discrimination, serve to prevent arbitrariness on the part of the procuring entity in this respect.

There is a further provision contained in Article XIII:4(a) to the effect that where a procuring entity has received a tender *abnormally lower* than other tenders submitted, it may enquire with the tenderer to ensure that it can comply with the conditions of participation and be capable of fulfilling the terms of the contract. There may be many reasons why tenderers may be able to offer abnormally low prices (currency fluctuations, stockpiles protected against inflation, assets bought on liquidations, etc) and there is no reason why a procuring entity is not also entitled to benefit from particularly competitive prices.[105] Thus, where there is such a tender, the entity may take the benefit provided it is satisfied that the low price is not due to a particular failure or likely failure of the tenderer to meet the qualification criteria or to deliver on the contract.

6. Advertising, Transparency and Information Requirements

As well as requiring entities to adopt the tender procedures outlined above and in order to make them effective, the GPA contains provisions relating to publicity of tender notices and to minimum time limits following publication which seek to ensure that all potential bidders have sufficient and equal time to prepare and submit their bids. The GPA also requires information to be published following the award of a contract. In addition, the GPA imposes certain other transparency and information requirements, both for statistical purposes and for the purpose of ensuring non-discrimination.

(a) Tender Notices. Except for procurements fulfilling the conditions of the limited procedure, the GPA requires the contract award procedures to be initiated by way of an invitation to participate in an intended procurement which will take the form of a notice. Each notice of intended procurement ("NIP") must contain specific information and must make clear that the procurement is covered by the GPA.[106] They must contain: the nature and quantity, including any options for further procurement and, if possible, an estimate

[105] There is an unfortunate tendency in transition economies to require all offers lower than an estimated price by a certain percentage to be rejected. Apart from a misconceived reliance on estimated prices, this also deprives the procuring entities of particularly favourable and competitive prices.

[106] Article IX:11.

of the timing when such options may be exercised; in the case of recurring contracts the nature and quantity and, if possible, an estimate of the timing of the subsequent tender notices for the products or services to be procured; whether the procedure is open or selective or will involve negotiation; any date for starting delivery or completion of delivery of goods or services; the address and final date for submitting an application to be invited to tender or for qualifying for the suppliers' lists, or for receiving tenders, as well as the language or languages in which they must be submitted; the address of the entity awarding the contract and providing any information necessary for obtaining specifications and other documents; any economic and technical requirements, financial guarantees and information required from suppliers; the amount and terms of payment of any sum payable for the tender documentation; and whether the entity is inviting offers for purchase, lease, rental or hire purchase, or more than one of these methods.[107]

If, after publication of an invitation to participate in any case of intended procurement, but before the time set for opening or receipt of tenders as specified in the notices or the tender documentation, it becomes necessary to amend or re-issue the notice, the amendment or the re-issued notice must be given the same circulation as the original documents upon which the amendment is based. The non-discrimination obligations are ensured by requiring that any significant information given to one supplier with respect to a particular intended procurement is given simultaneously to all other suppliers concerned in adequate time to permit the suppliers to consider such information and to respond to it.

In addition to the NIPs, Article IX provides two other options. The GPA has introduced an element of flexibility for sub-central (Annex 2) and other (Annex 3) entities, similar to the provisions contained in the EU directives.[108] In the first place, these entities may use a notice of planned procurement ("NPP") which will need to contain only so much of the information required in an NIP as is available. It must at least contain a statement that interested suppliers should express their interest in the procurement to the entity; a contact point with the entity from which further information may be obtained; the subject matter of the contract; the time-limits set for the submission of tenders or an application to be invited to tender; and the addresses from which documents relating to the contracts may be requested. There is no further requirement to publicise the planned procurement, although entities which use a notice of planned procurement as an invitation to participate must subsequently invite all suppliers who expressed an interest to confirm their interest on the basis of information which must include at least the information required in an NIP.

The second element of flexibility concerns a notice regarding qualification. The contents of this notice are described above, in Part III.C.3. As with the NPP, above, there is no requirement for further publicity after the initial notice. However, entities which use a notice regarding a qualification system as an invitation to participate must provide in a timely manner, information which allows all those who have expressed an interest to have a meaningful opportunity to assess their interest in participating in the procurement. This information will include the information required by the NIP as well as the subject matter of the contract, the time-limits set for the submission of tenders or an application to be invited to tender, and the addresses from which documents relating to the contracts may be requested, *to the extent such information is available*. Information provided to one interested supplier must also be provided in a non-discriminatory manner to the other interested suppliers.

[107] Article IX:6.

[108] Notably, the Utilities Directive 2004/17 (OJ 2004 L134/1): Articles 41 and 42.

NIPs and NPPs must be published in the appropriate publication listed in Appendix II to the GPA. Notices regarding permanent lists of qualified suppliers will be published in an Appendix III publication.

(b) Time Limits. There is little benefit in publishing tender notices, in terms of non-discrimination and equality of treatment, if tenderers are, at the same time, not given the same and sufficient time to prepare and submit their bids. Article XI:1(a), therefore, prescribes a time-limit that must be adequate to allow suppliers of other Parties as well as domestic suppliers to prepare and submit tenders before the closing of the tendering procedures. The time limits are minimum time limits and not targets since in many cases, notably large construction projects, it is necessary to give tenderers considerable time to prepare their bids. In determining any such time-limit, entities will, therefore, and consistently with their own reasonable needs, take into account such factors as the complexity of the intended procurement, the extent of subcontracting anticipated and the normal time for transmitting tenders by mail from foreign as well as domestic points.

Taking into account the likely publication delays, the general minimum time limits are the following:

- in ***open procedures***, the period for the receipt of tenders shall not be less than *40* days from the date of publication of the NIP;
- in ***selective procedures*** not involving the use of a permanent list of qualified suppliers, the period for submitting an application to be invited to tender shall not be less than *25* days from the date of publication of the NIP; the period for receipt of tenders shall in no case be less than *40* days from the date of issuance of the invitation to tender;
- in ***selective procedures*** involving the use of a permanent list of qualified suppliers, the period for receipt of tenders shall not be less than *40* days from the date of the initial issuance of invitations to tender, whether or not the date of initial issuance of invitations to tender coincides with the date of the publication of the NIP. There is again some added flexibility introduced in this procedure for Annex 2 and Annex 3 entities. This time limit may be fixed by mutual agreement between the entity and the selected suppliers. In the absence of agreement, the entity may fix periods which shall be sufficiently long to enable responsive tendering and shall in any case not be less than ten days.

The GPA permits a large degree of flexibility and all of these time limits may be further reduced in specific circumstances. Apart from the facility referred to above in respect of Annex 2 and Annex 3 entities, Article XI:3 allows the time limits to be shortened in three situations (two of which are very similar to comparable provisions in the EU directives):[109]

- in cases where a notice has already been published not less than forty days and not more than twelve months in advance (a "prior information notice" in EU parlance) provided that the original notice contains, at least:
- as much of the information required in the NIP as is available;
- the subject matter of the contract, the time-limits set for the submission of tenders or an application to be invited to tender, and the addresses from which documents relating to the contracts may be requested;

[109] *See*, for example, Article 38(4) and 38(8) of Directive 2004/18 in 2004 OJ 134/114.

- a statement that interested suppliers should express their interest in the procurement to the entity; and
- a contact point with the entity from which further information my be obtained.

Where these conditions are met, the time limit may be reduced to a period sufficiently long to enable responsive tendering which, as a general rule, should not be less than 24 days but, in no case less than 10 days.

- Where the general time periods are rendered impracticable by a state of urgency[110] which is duly substantiated by the procuring entity, when the time limit may be reduced to not less than 10 days (the "accelerated procedure" in EU parlance.)
- In the case of the second or subsequent notice in respect of a recurring contract, then the time limits for these latter notices may be reduced to not less than 24 days.

(c) Information on the Award of Contracts. Within 72 days of the award of any contract awarded under any of the procedures foreseen in the agreement, the entities must publish, in the publication listed in Appendix II, a notice containing the nature and quantity of products or services; the name and address of the awarding entity; the date of the award; the name and address of the successful tenderer; the value of the successful award *or* the highest and lowest offer taken into account in the award; where appropriate, the means of identifying the NIP or the justification for using limited tendering; and, the type of procedure used.[111]

As well as publishing the required notices, the entities are under an obligation promptly to provide information to suppliers from a party upon request.[112] This information requirement extends to an explanation of its procurement practices and procedures; pertinent information concerning the reasons why a supplier's application to qualify was rejected, why its qualification was brought to an end or why it was not selected; and, in respect of unsuccessful tenderers, pertinent information concerning the reasons why its tender was not selected and on the characteristics and relative advantages of the tender selected together with the name of the successful tenderer. Certain information may, however, be withheld where release of such information would impede law enforcement or otherwise be contrary to the public interest or would prejudice the legitimate commercial interests of particular enterprises, public or private, or might prejudice fair competition between suppliers.

There are, in addition, a number of other reporting requirements scattered about the agreement. For example, where entities have adopted the limited tendering procedure, the entities must prepare a report containing the name of the procuring entity, the value and kind of the goods or services procurement, their country of origin and a statement that the conditions applying to this procedure were fulfilled. The report is to be maintained by the entity and put at the disposal of the responsible government entity in the event of a challenge.[113] A similar report for the same purposes is to be kept regarding the opening of tenders.[114]

[110] This is not the same as the urgency condition which enables recourse to be had to the limited tendering procedure (see above), which is a far stricter conditionality.
[111] Article XVIII:1.
[112] Article XVIII:2.
[113] Article XV:2.
[114] Article XIII:3.

(d) Statistical and Other Information. Article XIX of the agreement also imposes a series of information obligations on the parties themselves, not only the procuring entities. The primary obligation is for them promptly to publish any law, regulation, judicial decision, administrative ruling of general application, and any procedure (including standard contract clauses) regarding government procurement covered by the agreement, in the appropriate publications listed in Appendix IV and in such a manner as to enable other Parties and suppliers to become acquainted with them. Each party must also be prepared, upon request, to explain to any other Party its government procurement procedures.

Available information concerning procurement by covered entities and their individual contract awards must be provided, upon request, to any other Party.[115] This becomes an even stronger obligation where the party represents an unsuccessful bidder. In those circumstances, the government of that unsuccessful bidder may seek such additional information on the contract award as may be necessary to ensure that the procurement was made fairly and impartially. To this end, the procuring government shall provide information on both the characteristics and relative advantages of the winning tender and the contract price. Normally this latter information may be disclosed by the government of the unsuccessful tenderer provided it exercises this right with discretion. In cases where release of this information would prejudice competition in future tenders, this information shall not be disclosed except after consultation with and agreement of the Party which gave the information to the government of the unsuccessful tenderer.

In terms of statistical information, Article XIX:5 requires each Party to collect and provide to the Committee on an annual basis statistics on its procurements covered by the Agreement. These reports will contain the following information with respect to contracts awarded by all procurement entities covered under this Agreement:

- for entities in Annex 1, statistics on the estimated value of contracts awarded, both above and below the threshold value, on a global basis and broken down by entities; for entities in Annexes 2 and 3, statistics on the estimated value of contracts awarded above the threshold value on a global basis and broken down by categories of entities;
- for entities in Annex 1, statistics on the number and total value of contracts awarded above the threshold value, broken down by entities and categories of products and services according to uniform classification systems; for entities in Annexes 2 and 3, statistics on the estimated value of contracts awarded above the threshold value broken down by categories of entities and categories of products and services;
- for entities in Annex 1, statistics, broken down by entity and by categories of products and services, on the number and total value of contracts awarded under limited tendering; for categories of entities in Annexes 2 and 3, statistics on the total value of contracts awarded above the threshold value under limited tendering; and
- for entities in Annex 1, statistics, broken down by entities, on the number and total value of contracts awarded under derogations to the Agreement contained in the

[115] Article XX:4, concerning the challenge procedures, discussed below, also requires the parties to ensure that documentation relating to all aspects of the process concerning procurements covered by the Agreement shall be retained for three years.

relevant Annexes; for categories of entities in Annexes 2 and 3, statistics on the total value of contracts awarded under derogations to the Agreement contained in the relevant Annexes.

To the extent that such information is available, each Party must also provide statistics on the country of origin of products and services purchased by its entities. With a view to ensuring that such statistics are comparable, the Committee will provide guidance on the methods to be used. With a view to ensuring effective monitoring of procurement covered by this Agreement, the Committee may decide unanimously to modify the requirements of the above as regards the nature and the extent of statistical information to be provided and the breakdowns and classifications to be used.

7. Technical Specifications

The objectives of the GPA could be defeated if it were possible to define technical specifications and standards in such a way that only a particular (national) supplier were able to satisfy the contract criteria based on such specifications and standards. For this reason, Article VI seeks to ensure non-discrimination in the formulation of such technical specifications. It provides that technical specifications laying down the characteristics of the products or services to be procured, such as quality, performance, safety and dimensions, symbols, terminology, packaging, marking and labelling, or the processes and methods for their production and requirements relating to conformity assessment procedures prescribed by procuring entities, shall not be prepared, adopted or applied with a view to, or with the effect of, creating unnecessary obstacles to international trade. Rather than seeking to define them in terms of their design or descriptive characteristics, they should be defined in functional or performance terms and, an innovation brought about since the Tokyo Round Code, they should be based, where possible, on international standards or, where none such exist, on national technical regulations,[116] recognized national standards[117] or building codes. In particular, there should be no reference to a particular trademark or trade name, patent, design or type, specific origin, producer or supplier, unless there is no other sufficiently precise or intelligible way of describing the procurement requirements and provided that words such as "or equivalent" are included in the tender documentation.

Finally, as mentioned above, entities shall not seek or accept, in a manner which would have the effect of precluding competition, advice which may be used in the preparation of specifications for a specific procurement from a firm that may have a commercial interest in the procurement.

D. Bid Challenge Procedures and Dispute Resolution

Perhaps the most innovative and far-reaching mechanism introduced by the GPA is the possibility of private bid challenge in the hands of aggrieved tenderers. This places the

[116] Footnote 3 to the GPA defines a technical regulation as a document which lays down characteristics of a product or a service or their related processes and production methods, including the applicable administrative provisions, with which compliance is mandatory. It may also include or deal exclusively with terminology, symbols, packaging, marking or labelling requirements as they apply to a product, service, process or production method.

[117] Footnote 4 to the GPA defines a standard as a document approved by a recognized body, that provides, for common and repeated use, rules, guidelines or characteristics for products or services or related processes and production methods, with which compliance is not mandatory. It may also include or deal exclusively with terminology, symbols, packaging, marking or labelling requirements as they apply to a product, service, process or production method.

direct supervision of compliance with the GPA in the hands of entities best placed to identify any apprehended breaches of the GPA and most likely to suffer harm as a result of those breaches. This approach is entirely consistent with most developed national procurement systems which also provide for remedial action at the suit of tenderers. In addition, the intergovernmental dispute resolution methods have also been strengthened due to the improvements made to the WTO dispute settlement mechanism.[118]

1. Private Bid Challenge

In common with other systems,[119] in the event of a complaint by a supplier that there has been a breach of the Agreement in the context of a procurement, each Party is to encourage the supplier to seek resolution of its complaint in consultation with the procuring entity. Given that the majority of perceived breaches of procurement rules are based on misunderstandings and/or easily remedied, this provision serves to prevent the pursuit of unwarranted actions. For the same reasons, before initiating the review procedure described below, the challenger must notify the procuring entity of the challenge.[120] Where such a complaint is made, the procuring entity must accord impartial and timely consideration to the complaint, in a manner that is not prejudicial to obtaining corrective measures under the challenge system.

Where that complaint is unsuccessful in resolving the perceived breach, the GPA requires that the parties must provide non-discriminatory, timely, transparent[121] and effective procedures enabling private bid challenge. To this end, it provides for a complaint to be brought before an independent review body.

(a) Independent Review Bodies. Challenges are to be heard by a court or by an impartial and independent review body with no interest in the outcome of the procurement and the members of which are secure from external influence during the term of appointment. It is not sufficient, therefore, for a party to use or establish an administrative review organ which is attached in any way to the government procuring entity. Where the chosen review body is not a court, then its decision must either be subject to judicial review or the review body must be endowed with certain procedures which give it a quasi-judicial authority. It must thus have procedures which provide that participants can be heard before an opinion is given or a decision is reached; participants can be represented and accompanied; participants shall have access to all proceedings; proceedings can take place in public; opinions or decisions are given in writing with a statement describing the basis for the opinions or decisions; witnesses can be presented; documents are disclosed to the review body. Provided these conditions are met, this would permit review to be conducted by autonomous administrative agencies within the government such as the proliferating State procurement agencies or offices established in transition economies to oversee the correct implementation of new procurement legislation.

(b) Challenge. Challenges are available against alleged breaches of the Agreement arising in the context of procurements at the suit of suppliers who have, or have had, an interest in that procurement. This would exclude, for example, actions brought by trade

[118] *See* Chapters 25 *et seq*. of this book.
[119] *See also,* the UNCITRAL Model Law.
[120] Article XX:5.
[121] Article XX:3 states that each Party shall provide its challenge procedures in writing and make them generally available.

associations and the like since the challenger must have an interest in the procurement but is likely to include all those with a direct interest such as the bidders, their joint venture partners as well as sub-contractors. Time is of the essence in the context of procurement where, following the award process, the procuring entity is keen to proceed with the successful tenderer. In order to avoid excessive delay, the GPA allows parties to require of interested suppliers that they initiate a challenge procedure and notify the procuring entity within specified time-limits from the time when the basis of the complaint is known or reasonably should have been known, but in no case within a period of less than ten days.

(c) Available Remedies. In order to avoid delay in the procurement process and to protect the commercial interests involved, the GPA requires the challenge procedure "normally" to be completed in a timely fashion. Of course, and depending on the stage of the procedure reached, even fairly short time limits for the conduct of review procedures may be insufficient to protect the interests of a challenger. Once a contract has been signed, for example, it is very difficult both legally and in practical terms to provide any meaningful remedy that will satisfy the challenger who is likely to be more interested in securing the contract than any monetary compensation. Breaches will often, though clearly not exclusively, only become apparent once the award has been made and even the most rapid review mechanism may be too brief to bridge the gap between award and signature of the contract.[122] The main mechanism to prevent such an event is to provide for the suspension of the procurement process pending a (rapid) decision on the merits of a challenge. The GPA, therefore, provides for the possibility of rapid interim measures to correct breaches of the Agreement and to preserve commercial opportunities. Such measures may result in suspension of the procurement process. At the same time, however, such procedures may also provide that overriding adverse consequences for the interests concerned, including the public interest, may be taken into account in deciding whether such measures should be applied. In those circumstances, just cause for not acting must be provided in writing.

In addition to providing for what is effectively a declaration on the merits of the case,[123] the GPA provides for correction of the breach of the Agreement or compensation for the loss or damages suffered. Corrections could, for example, take the form of amending certain documents which include breaches in the use of qualification criteria or technical specifications where such corrections could be made without adversely affecting the conduct of the procedure underway or perhaps overruling decisions incorrectly excluding tenderers and reinstating their tenders. Compensation payments present certain difficulties due largely to the nature of the claim. In most systems of law, breaches of pre-contractual procurement rules are generally categorised as delictual or tortious offences. Without seeking to refer to any specific system of law, the issue may best be described in the following way. Where a tenderer has been excluded in breach of the law, the availability of compensation will normally depend on the degree of harm suffered. If, absent the breach, that tenderer would have won the contract, then the harm suffered is the loss of the contract and, consequently, the loss of profits which would have been made. On the other hand, if the tenderer, notwithstanding the breach, would not have

[122] This is a critical issue which has recently come to the fore in the EU. *See* case C-81/98 *Alcatel Austria AG v Bundesministerium für Wissenschaft und Verkehr* [1999] ECR I-7671.

[123] The precise terms of Article XX:7(b) provide for an "assessment and a possibility for a decision on the justification of the challenge."

been the successful tenderer, it will have suffered no harm as a result of the exclusion. If there is no harm, there can, in theory, be no compensation. Where there are a number of tenders subject to evaluation on the basis of a number of award criteria, it can be extremely difficult to determine whether the complainant would have won the contract in the absence of a breach. An alternative level of compensation which seeks to avoid such a difficult assessment is to award compensation which is limited to the costs incurred by the tenderer in preparing his bid. This has the virtue at least of limiting compensation to an identifiable harm. Whether a tenderer would have won a contract or not, unfair exclusion would result in the wasted costs of bid preparation.

The GPA leaves the choice of compensation open. Whilst parties may provide for compensation for loss of profits, parties may also provide that compensation is limited to costs for tender preparation or protest. The terms are not entirely clear. For example, do they mean that parties are entitled, from the outset, to limit compensation to wasted costs or do they allow the review bodies to decide to award only compensation for wasted costs in appropriate circumstances? The latter interpretation is to be preferred and is entirely consistent with other recognised procurement systems such as that of the EU. Similarly, does the phrase "or protest" mean that compensation could be limited only to the costs of the challenge or that this is another decision to be made at the discretion of the review body? Again, it is argued that the latter solution is to be preferred since the alternative would surely be inconsistent with the obligation to provide an effective remedy.

2. Dispute Settlement

The WTO dispute settlement mechanism was significantly strengthened during the Uruguay Round[124] and, subject to specific modifications to take account of the procurement context, is also available in the case of breaches of the GPA. Thus, if any Party considers that any benefit accruing to it, directly or indirectly, under the Agreement is being nullified or impaired, or that the attainment of any objective of the Agreement is being impeded as the result of the failure of another Party or Parties to carry out its obligations under the Agreement, or the application by another Party or Parties of any measure, whether or not it conflicts with the provisions of the Agreement,[125] it may with a view to reaching a mutually satisfactory resolution of the matter, make written representations or proposals to the other Party or Parties which it considers to be concerned. Such action must be promptly notified to the Dispute Settlement Body established under the Dispute Settlement Understanding (the "DSB"). Any Party thus approached must give sympathetic consideration to the representations or proposals made to it.

The DSB has the authority to establish panels, adopt panel and Appellate Body reports, make recommendations or give rulings on the matter, maintain surveillance of implementation of rulings and recommendations, and authorize suspension of concessions and other obligations under the GPA or, and in this it differs from the general DSU provisions, consultations regarding remedies when withdrawal of measures found to be in contravention of the Agreement is not possible,[126] provided that only Members of the

[124] See Chapters 25 *et seq.* of this book.

[125] It should be noted that this phrase introduces a cause of action based on "non-violation" of the agreement, based on Article XXIII:1 of the GATT 1947. This issue was considered in the first panel decision under the new GPA: *Korea—Measures Affecting Government Procurement,* discussed above. *See further* Chapter 29 of this book.

[126] Article XXII:3. This provision would appear to avoid the *fait accompli* which could not be remedied in the *Trondheim* case, discussed above.

WTO that are party to the GPA participate in decisions or actions taken by the DSB with respect to disputes under the Agreement.

Panels established by the DSB to examine disputes under the GPA must specifically include persons qualified in the area of government procurement. Given the need for speed in the context of procurement, every effort is to be made to accelerate the proceedings to the greatest extent possible. The general DSU time limits have been reduced by two months, and the panel must attempt to provide its final report to the parties to the dispute not later than four months, and in case of delay not later than seven months, after the date on which the composition and terms of reference of the panel are agreed.

One of the most important differences between the general DSU procedure and the special rules under the GPA is the exclusion of cross-retaliation in respect of the GPA.[127] Thus, no dispute arising under any other WTO agreement may result in the suspension of concessions or other obligations under the GPA, and no dispute arising under the GPA may result in the suspension of concessions or other obligations under any other WTO agreement.

E. Special and Differential Treatment for Developing Countries

Developing countries had been active participants in the early discussions relating to government procurement (notably in the discussions leading to the Tokyo Round Code), and had made many suggestions and comments with regard to the substance of the agreement. Indeed, the discussions took place in the context of the "New International Economic Order" when pressure from the Group of 77 for effective differential and preferential treatment in favour of developing countries were high on the international agenda.[128] Certainly, as mentioned above, they were active in discussions over the threshold values, preferring lower thresholds which would bring open tendering obligations to the lower value contracts for which their companies could more easily compete. Despite the special treatment offered to developing countries seeking membership, very few did join and these were largely growing export-driven economies such as Hong Kong.[129] Those that did join[130] did so on the basis of rather limited lists of entities covered in line with the provisions on special and differential treatment for developing countries. Some developing countries which expressed their intention to join the GPA during the 1980s, failed to accede.[131]

A number of countries are currently seeking accession to the GPA but many of these are doing so in the context of and as a condition of their accession to the WTO itself.[132] This apparent lack of interest on the part of developing countries is, in part, the motivation for the work being conducted by the Committee with a view to reaching an agreement on "Transparency" (*see* Part IV B below).

The GPA maintains provisions which seek to establish special and differential treatment for developing countries. The objective of these provisions, contained in Article V, is to encourage the existing parties, in the implementation and administration of the agreement, to take into account the development, financial and trade needs of developing

[127] Article XXII:7.

[128] Blank and Marceau, *supra* note 2, at 99.

[129] Hong Kong was a party to the Tokyo Round Code but did not immediately accede to the GPA. It joined subsequently.

[130] Hong Kong, Singapore, Korea and Israel.

[131] India, Philippines, Chile.

[132] China, Croatia, Georgia, Lithuania, Moldova, Mongolia and Oman.

countries, in particular least-developed countries. These needs relate, in particular, to the necessity for these countries to safeguard their balance-of-payments position and ensure a level of reserves adequate for the implementation of programmes of economic development; to promote the establishment or development of domestic industries including the development of small-scale and cottage industries in rural or backward areas and economic development of other sectors of the economy; to support industrial units so long as they are wholly or substantially dependent on government procurement; and to encourage their economic development through regional or global arrangements among developing countries.

The first, soft, obligation is for the parties to the GPA, in the preparation and application of laws, regulations and procedures affecting government procurement, to facilitate increased imports from developing countries, bearing in mind the special problems of least-developed countries and of those countries at low stages of economic development. Taking this further, Article V:8–11 also provide for technical assistance to be given to developing countries. Each developed country Party is required, upon request, to provide all technical assistance which it may deem appropriate to developing country Parties in resolving their problems in the field of government procurement. This assistance, which is to be provided on the basis of non-discrimination among developing country Parties, will relate, *inter alia,* to the solution of particular technical problems relating to the award of a specific contract as well as to any other problem which the Party making the request and another Party agree to deal with in the context of this assistance. This technical assistance is to include translation of qualification documentation and tenders made by suppliers of developing country Parties into an official language of the WTO designated by the entity, unless developed country Parties deem translation to be burdensome, and in that case an explanation must be given to developing country Parties upon their request addressed either to the developed country Parties or to their entities.

In addition developed country Parties are required to establish, individually or jointly, information centres to respond to reasonable requests from developing country Parties for information relating to, *inter alia,* laws, regulations, procedures and practices regarding government procurement, notices about intended procurements which have been published, addresses of the entities covered by this Agreement, and the nature and volume of products or services procured or to be procured, including available information about future tenders. The Committee may also set up an information centre.

More concretely, Article V provides for the considerations enumerated above to be taken into account in the course of negotiations with respect to the procurement of developing countries to be covered by the provisions of this Agreement with a view to ensuring that developing countries are able to adhere to the GPA. Thus, developed countries, in the preparation of their coverage lists under the provisions of this Agreement, must endeavour to include entities procuring products and services of export interest to developing countries. In addition, Article V foresees a number of permitted exclusions during accession negotiations. A developing country may negotiate with other participants in negotiations mutually acceptable exclusions from the rules on national treatment with respect to certain entities, products or services that are included in its coverage lists, having regard to the particular circumstances of each case. In those negotiations, account will again be taken of the needs identified above. A developing country participating in regional or global arrangements among developing countries may also negotiate exclusions to its lists, having regard to the particular circumstances of each case, taking

into account, *inter alia,* the provisions on government procurement provided for in the regional or global arrangements concerned and, in particular, products or services which may be subject to common industrial development programmes.

After entry into force of the Agreement, a developing country Party may also modify its coverage lists in accordance with the GPA's provisions for modification of such lists,[133] having regard to its development, financial and trade needs, or may request the to grant exclusions from the rules on national treatment for certain entities, products or services that are included in its coverage lists. A developing country Party may also request the Committee to grant exclusions for certain entities, products or services that are included in its coverage lists in the light of its participation in regional or global arrangements among developing countries. Each request to the Committee by a developing country Party relating to modification of a list must be accompanied by documentation relevant to the request or by such information as may be necessary for consideration of the matter. These provisions apply *mutatis mutandis* to developing countries acceding to this Agreement after its entry into force.

Article V:12 also contains provisions which grants special treatment for the least-developed countries based on paragraph 6 of the Decision of the CONTRACTING PARTIES to GATT 1947 of November 18, 1979 on Differential and More Favourable Treatment, Reciprocity and Fuller Participation of Developing Countries.[134] Under this provision, special treatment is to be granted to least-developed country Parties and to the suppliers in those Parties with respect to products or services originating in those Parties, in the context of any general or specific measures in favour of developing country Parties. A Party may also grant the benefits of the Agreement to suppliers in least-developed countries which are not Parties, with respect to products or services originating in those countries. Each developed country Party shall also, upon request, provide assistance which it may deem appropriate to potential tenderers in least-developed countries in submitting their tenders and selecting the products or services which are likely to be of interest to its entities as well as to suppliers in least-developed countries, and likewise assist them to comply with technical regulations and standards relating to products or services which are the subject of the intended procurement.

IV. The Way Forward

Work on government procurement did not come to an end with the adoption of the GPA. Article XXIV:7(b) and (c) calls on the Parties, not later than the end of the third year from the date of its entry into force, to undertake further negotiations, with a view to improving the Agreement and achieving the greatest possible extension of its coverage among all Parties on the basis of mutual reciprocity, having regard to the provisions relating to developing countries and eliminating any remaining discriminatory measures and practices which distort open competition. Whilst this Article implied that further work would commence by the end of 1998, work actually began as early as February 1997.[135] One of the stated aims of this review was the expansion of the membership of the Agreement by making it more accessible to non-Parties. Indeed, this is one of the major themes of the post-GPA discussions, given the relative failure of the GPA to attract signatories other than from the developed world. This lack of a fully representative

[133] Article XXIV:6.

[134] BISD 26S/203-205 (1979).

[135] *See* 1996 Report to the General Council (WTO Document GPA/8) in which the Committee agreed to undertake an early review.

membership has clearly been of concern to the Parties and has driven further attempts to make the GPA more attractive to developing countries. Simultaneously with the review under Article XXIV and based on support from both the United States and the European Union for an "interim agreement" on government procurement,[136] work also began on developing a "Transparency Agreement" which would offer to developing countries a less rigorous discipline than the GPA.

Together with these two activities, work also continues on another issue which has previously been raised in the GPA negotiations, namely the relationship between the GPA and the government procurement of services within the framework of the GATS. Government procurement of services is currently excluded from the scope of the main GATS commitments but that agreement[137] foresees negotiations designed to extend the provisions of the agreement to such services. To this end, a working party has been established to provide a forum for negotiations on this issue. These three developments are discussed below.

A. Ongoing Review of the GPA

The process of review which began in 1997 has taken the form of a series of discussions and consultations between the Parties over the last six years. This review has covered a number of elements, in particular, the simplification and improvement of the GPA, including adaptation, where appropriate, to advances in the area of information technology; expansion of the coverage of the GPA, and elimination of discriminatory measures and practices which distort open procurement. The objective of simplification and improvement was thought to be a key element in attracting wider membership and thus improve the multilateral aspect of the Agreement.[138] This, however, needs to be set against the risk of weakening the Agreement by diluting its core principles. Whilst, therefore, it is likely that the review will ultimately lead to a more streamlined text, it is equally likely that it will not compromise on the essential objectives and requirements of the current GPA. Part of the simplification and improvement process has dwelt on the issue of bid challenge. Suggestions have been made, for example,[139] for the creation of independent enforcement agencies which, in comparison with the existing bid challenge mechanism, might offer the possibility of more rapid methods for the resolution of disputes by avoiding the cumbersome formality of court proceedings.

In addition to the ongoing discussions about policy improvements which might be made to the GPA, the Parties have been conducting an article by article review of the GPA and the results have been incorporated into successive versions of an informal note reflecting the discussions on the draft texts of the modifications to the Articles proposed by the various Parties, known as the "Suggested Drafting Changes to the Text of the Agreement." Modalities for further discussions (including the hitherto—avoided market access issues) were agreed in June 2004, although a final text is not expected before 2006.

B. The Working Group on Transparency

Following the suggestions of the United States and the European Union, the WTO Ministerial Conference in Singapore chose to "establish a working group to conduct a study

[136] *See* Sue Arrowsmith, "*Developing Multilateral Rules on Government Procurement,*" (1996) 6 PPLR, CS154; Martin Dischendorfer, *"The Existence and Development of Multilateral Rules on Government Procurement under the Framework of the WTO,"* (2000) 9 PPLR 1 at 29 *et seq.*

[137] Article XIII GATS.

[138] *See* Dischendorfer, *supra* note 136 at 32.

[139] WTO Document GPA/60.

on transparency in government procurement practices, taking into account national policies, and, based on this study, to develop elements for inclusion in an appropriate agreement."[140] The hope was that, by concentrating on the core principle of transparency, the Parties would be able to draft a less rigid and burdensome agreement which would encourage broader membership from developing countries. By avoiding the increased bureaucracy and financial burden which naturally flows from adherence to the provisions of the GPA, it was hoped that an agreement which requires only a limited number of basic procedural guarantees would encourage membership and, thus, an acceptance of the basic disciplines of an open and competitive public procurement system.

As is clear from the mandate given in Singapore, the working group's activities are to be considered in two phases: first, a study on transparency; second, development of an agreement on transparency. To date, efforts have concentrated mainly on the study of national and international systems as they relate to transparency and the working group has been collecting information from a number of sources, including national systems, international organisations such as the World Bank and UNCITRAL, OECD, UNDP, EBRD, and from other comparable studies such as the APEC survey and conclusions.[141] Despite the submission of draft agreements at the disrupted Seattle meeting by both the United States[142] and the European Union,[143] no agreed text of any Transparency Agreement emerged. Whilst there appeared little disagreement on the importance of transparency as a fundamental principle, there was less agreement on how transparency might be achieved.[144]

No agreement was forthcoming at the Doha Ministerial meeting either although the Ministerial Declaration of November 14, 2001 stated that negotiations on this agreement will take place after the Fifth Session of the Ministerial Conference (Cancún). The initiative appears, however, to have been abandoned following the General Council's decision on the Doha Agenda work programme of August 1, 2004 (reproduced in the Appendix to this book).

C. The GATS Negotiations

A further working party has been established to act as a forum for negotiations leading to the inclusion of the government procurement of services within the main GATS commitment. This is likely to be the most difficult of the areas subject to ongoing development within the context of the GPA and, more broadly, government procurement within the context of the WTO. The government procurement of services is currently outside the scope of the GATS and it has to be said that, even in the context of the GPA, those services which are covered vary considerably between the Parties and are, in each case, the subject of strict reciprocity provisions. Not only, therefore, will it be difficult to secure harmony between the existing Parties as to the services to be covered by the GPA, it will also be extremely difficult to persuade non-GPA Parties to open up their government procurement markets for services to foreign service providers on equal terms with their national service providers.

Despite the enormous inroads made by the GPA, its membership remains relatively limited, reflecting perhaps the reluctance of the wider WTO membership to abandon the safe haven of preferential government procurement. Whilst this reluctance is being eradicated within the ongoing review of the GPA and is likely to be the subject of much coaxing in the context of the proposed Transparency Agreement, the GATS negotiations are likely to bring these issues to a head once again and to set the free-traders against those with more protectionist inclinations.

I. Introduction

When considering how the GATT/WTO system has addressed issues relating to the civil aircraft industry, a central issue is how the system has responded to the role of governments in promoting their domestic industries. Given the enormous development costs in the aircraft industry, as well as national prestige, export potential, employment and the important overlap with defense production, governments have historically had a significant role in providing direct or indirect assistance to the civil aircraft industry. Therefore, the GATT/WTO subsidy disciplines as they relate to the civil aircraft sector necessarily have had to strike a balance between two competing considerations. On the one hand, the rules need to constrain governments from distorting trade. On the other hand, the rules inevitably reflect the view of many governments that they have an important role to play in the initial development of this capital-intensive industry, particularly given its potential significance for national security. Because of the centrality of this issue to understanding the role of the international trading system vis-a-vis civil aircraft, we devote significant attention in this chapter to the evolution of GATT/WTO subsidy disciplines in this area.

There are, of course, other ways that the GATT/WTO system may affect government involvement in or regulation of the civil aircraft sector. These include, for instance: tariff commitments; government inducements (other than subsidies) to purchasers to encourage the purchase of the domestic manufacturer's aircraft; government technical regulations that may burden trade; and the incremental effort to negotiate rules regarding aviation services. These topics are also covered in this chapter.

Part II of this chapter discusses the initial steps undertaken under the GATT—notably the Subsidies and Aircraft Codes adopted upon completion of the Tokyo Round negotiations in 1979—to discipline the provision of governments' assistance to their domestic aircraft industries. Next, Part III discusses aircraft-related disputes under the GATT dispute settlement system, primarily through a review of two disputes brought by the United States in the late 1980s and early 1990s against the European Community in an attempt to contain European subsidies to Airbus Industrie. These GATT disputes led to the negotiation and adoption of the 1992 bilateral agreement on the implementation of the GATT Aircraft Code, discussed in Part IV. Part V analyzes the impact of the 1994 WTO Agreements on the civil aircraft industry, particularly the WTO Subsidies Code and the General Agreement on Trade in Services (GATS). Part VI assesses WTO dispute settlement in this sector, specifically the *Brazil—Aircraft* and *Canada—Aircraft* disputes regarding export subsidies. Part VII describes continuing controversies relating to government assistance to domestic aircraft manufacturers. Part VIII provides a brief conclusion.

II. The Tokyo Round: the Civil Aircraft Agreement and the Subsidies Code

In the Tokyo Round of trade negotiations concluded in 1979, two agreements were concluded that had particular significance for the civil aircraft industry: (1) the Agreement on Trade in Civil Aircraft (the "Aircraft Code"), and (2) the Agreement on Subsidies and Countervailing Measures (the "Subsidies Code"). Like the other agreements negotiated in the Tokyo Round, both agreements were plurilateral, *i.e.,* were binding only on their signatories, and not on all GATT members.

A. Aircraft Code

1. Application and Institutions

In an effort to address issues peculiar to trade in civil aircraft, the United States, Europe and certain other GATT members negotiated the Aircraft Code.[1] The Aircraft Code applies to "all civil aircraft," "all civil aircraft engines and their parts and components," "all other parts, components, and sub-assemblies of civil aircraft," and "all ground flight simulators and their parts and components."[2]

A Committee on Trade in Civil Aircraft was established to meet at least once a year to consult on issues affecting the operation of the Aircraft Code.[3] In addition, if a signatory considered that its trade interests in civil aircraft had been "adversely affected" by any action by another signatory, this Committee was to review the matter and "issue such rulings or recommendations as may be appropriate."[4]

In certain situations, GATT dispute settlement was available for disputes arising under the Aircraft Code. If the dispute was "related to a matter covered by [the Aircraft Code]," and was not covered by a multilateral GATT Agreement, then the dispute could be taken to GATT dispute settlement. However, if the dispute was also covered by a multilateral GATT agreement, then the dispute arising under the Aircraft Code could not be taken to GATT dispute settlement unless both parties agreed (which was unlikely to occur).[5] Of course, the signatories to the Aircraft Code retained their pre-existing rights to bring issues to GATT dispute settlement if they arose under the GATT or other multilateral agreements negotiated under the GATT that affected trade in civil aircraft. Thus, a signatory to the Aircraft Code could bring a dispute to the Committee on Trade in Civil Aircraft, "without prejudice" to the signatory's right to initiate GATT proceedings arising out of a GATT violation.[6]

2. Government Assistance

With respect to subsidies, the Aircraft Code provided no improvement on the Subsidies Code (discussed below). In granting government support, the signatories noted that the provisions of the Subsidies Code applied, and they agreed to seek to avoid adverse

[1] The thirty current Aircraft Code members are: Bulgaria, Canada, Chinese Taipei, the European Communities, Austria, Belgium, Denmark, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal, Spain, Sweden, the United Kingdom, Egypt, Estonia, Georgia, Japan, Latvia, Lithuania, Macau, Malta, Norway, Romania, Switzerland and the United States. *See Report (2001) of the Committee on Trade in Civil Aircraft,* WT/L/34 (26 Nov. 2001), ¶ 2; *Report of Working Party on Accession of the Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu,* WT/MIN(01)/4 (11 Nov. 2001), ¶¶ 222–23. Albania and Croatia have indicated that they will become parties upon accession to the WTO and Oman within three years of accession. *See Statement of Steven J. Falken, Office of the United States Trade Representative, Before the Subcommittee on Aviation of the Committee on Transportation and Infrastructure, U.S. House of Representatives,* July 26, 2001 (hereafter "*Falken Statement"*) at 3, downloaded from www.ustr.gov/sectors/industry/aircraft.shtml. Russia confirmed bilaterally in 1996 that it will become a party when it accedes to the WTO, but its current position is that it will not do so. *See Joint Memorandum of Understanding* (30 January 1996), downloaded from http://www.ita.doc.gov/td/aerospace/aerospacedocuments.htm; *Official Position of Russia at the WTO Accession Negotiations is not to join the Agreement on Trade in Civil Aircraft,* downloaded from www.wto.ru/en/news on 27 Nov. 2002. China is not a signatory to the Aircraft Code, although it made substantial tariff and regulatory commitments in this area as part of its WTO accession. *See,* e.g., U.S. Department of Commerce, *Civil Aircraft,* downloaded from www.mac.doc.gov/China/Docs/industryfactsheets/civair.htm.

[2] *Aircraft Code,* Art. 1.1.

[3] *Id.,* Art. 8.1.

[4] *Id.,* Art. 8.7.

[5] *Id.,* Art. 8.8.

[6] *Id.,* Art. 8.7.

effects.[7] However, the European Community insisted on an additional sentence stating that participants "shall take into account the special factors which apply in the aircraft sector, in particular the widespread governmental support in this area, their international economic interests, and the desire of producers of all Signatories to participate in the expansion of the world civil aircraft market."[8] This provision was relevant only to disputes arising under the Aircraft Code, and could not be invoked, for example, in a case arising under GATT provisions (or now, in the WTO).

In response, the United States insisted on a provision that in its view means that issues concerning aircraft subsidies could be taken to dispute resolution under the Subsidies Code.[9] That is, such issues would not have to be raised under the Aircraft Code dispute procedures. This ability to rely on the Subsidies Code made the European insistence on the "special factors" provision in the aircraft sector tolerable for the United States.

3. Other Provisions

The Aircraft Code contained other provisions not relating to government assistance, the principal ones which are identified below:

- Elimination of all tariffs and of all GATT-inconsistent quantitative or import licensing restrictions.[10]
- Aircraft certification requirements to be governed by the Agreement on Technical Barriers to Trade.[11]
- No government-imposed restrictions or pressures that would prevent airlines from buying "on the basis of commercial and technological factors."[12] Governments will not require purchases from a particular source.
- Governments to avoid political or economic "inducements" to purchasers "which would create discrimination against suppliers from any Signatory."[13]
- Government procurement to "be made only on a competitive price, quality and delivery basis."[14]
- Certification requirements and specifications on operating and maintenance procedures must be non-discriminatory, as provided in the separate Agreement on Technical Barriers to Trade.[15]
- Pricing of civil aircraft "should be based on a reasonable expectation of recoupment of all costs."[16]

B. Subsidies Code

As noted above, the Tokyo Round Subsidies Code was also a plurilateral agreement, negotiated among many of the same countries who were parties to the Aircraft Code.

[7] *Id.,* Art. 6.1. This admonition was consistent with the somewhat equivocal treatment of domestic subsidies in the GATT Subsidies Code. *See* text accompanying notes 17 and 18, *infra.*

[8] *Id.,* Art. 6.1.

[9] *Id.,* Art. 6.1 (noting that the provisions of the Subsidies Code apply to trade in civil aircraft). The Subsidies Code contained formal dispute settlement procedures for panel rulings, similar to those existing under the GATT. *See Subsidies Code*, Art. 18.

[10] *Id.*, Arts. 2, 5.

[11] *Id.*, Art. 3.

[12] *Id.*, Art. 4.2.

[13] *Id.*, Art. 4.4.

[14] *Id.*, Art. 4.3.

[15] *Id.*, Art. 3.

[16] *Id.*, Art. 6.2.

The Subsidies Code also provided a less than fully effective discipline on aircraft sector subsidization. This was true for two reasons. First, the substantive discipline on subsidies was equivocal. While export subsidies on manufactured goods were prohibited, and an "illustrative list" of such subsidies was developed, the Subsidies Code was notably "soft" on domestic subsidies. There was no definition of what constituted a "subsidy." Moreover, the Code's discussion of domestic subsidies began with the assertion that such subsidies had a legitimate role in public policy.[17] The Code asked only that GATT Members "shall seek to avoid causing" adverse effects on the trade interests of other Members when using such subsidies.[18]

Second, and even more serious, were the shortcomings of the GATT dispute resolution mechanism. The GATT mechanism for resolving disputes did not guarantee a conclusive, binding final decision even in a case where a GATT panel had concluded that a subsidy violated the Subsidies Code. Any Member country—including even the country providing the illegal subsidy—could block adoption of the panel's report, thus preventing any GATT-authorized action against the subsidy.

III. GATT Dispute Settlement

Eventually, despite the frailty of the Subsidies Code's disciplines and dispute resolution mechanism, the United States turned to the GATT in an effort to achieve discipline over Airbus subsidies.

A. German Exchange Rate Case

The first case challenged a German program that insulated Deutsche Airbus ("DA"), a subsidiary of Messerschmitt-Boelkow-Blohm ("MBB"), the German member of the Airbus consortium, against adverse exchange rate fluctuations on aircraft fuselage deliveries made by DA to Airbus Industrie's assembly plant in Toulouse, France. Transfer prices between DA and Airbus Industrie were set in U.S. dollars while DA's cost structure was established in Deutsche Marks. In 1988, due to concerns about the cost of the Airbus program, the German government decided to sell MBB to Daimler-Benz. As part of the terms, the German government provided a guarantee to DA against losses on export sales of aircraft fuselages, resulting from unfavorable exchange rate fluctuations. The government agreed to compensate DA if the dollar dropped below a specified level against the Deutsche Mark, resulting in losses on the sales of DA's fuselages.[19]

The GATT panel declared the subsidy to be inconsistent with the EC's GATT obligations.[20] Specifically, the panel held that the subsidy constituted "the provision by governments . . . of exchange risk programmes, at premium rates, which are manifestly inadequate to cover the long-term operating costs and losses of the programmes,"

[17] *See* the Preamble, Articles 8.1 and 11.1 of the *Agreement on Interpretation and Application of Articles VI, XVI and XXIII of GATT* (the so-called Tokyo Round Agreement on Subsidies and Countervailing Duties), 26th Supp BISD 56 (1980). The Preamble of this agreement reads "{r}ecognizing that subsidies are used by governments to promote important objectives of national policy." Similarly, Article 8.1 reads "signatories recognize that subsidies are used by governments to promote important objectives of social and economic policy."

[18] *Id.*, Article 11.2.

[19] In other words, if the dollar dropped, the dollars that DA would receive for its fuselages would be worth less in DM.

[20] *See German Exchange Rate Scheme For Deutsche Airbus*, Report by the GATT Panel, SCM/142 (1992). *See also German Exchange Rate Scheme Found to be Export Subsidy for Airbus Parts*, INSIDE U.S. TRADE, January 24, 1992, at 1.

under item (j) of the Illustrative List of Export Subsidies annexed to the Subsidies Code.

An interesting question addressed by the panel was whether these subsidies were export subsidies, and therefore prohibited under the Subsidies Code. The panel found that the subsidies applied to payments for transfers of inputs by Deutsche Airbus only to Airbus Industrie, in France. That is, Deutsche Airbus only benefited from the German payments if it exported inputs (fuselages) to France. Thus, the panel found the German scheme was contingent on export, despite the absence of any guidance on this issue in the Subsidies Code. The panel's ruling anticipates the subsequent clarification in the WTO Subsidies Agreement that subsidies may be *de facto* export contingent even if they are not *de jure* contingent.[21] The panel noted, however, that the German program did not constitute an export subsidy relating to the ultimate sales of aircraft by Airbus, as the payments were provided without regard to the ultimate purchaser of the aircraft.[22] This interpretation did not affect that panel's recommendation, which was that Germany conform its exchange rate scheme to the Subsidies Code (in effect, that Germany terminate the subsidy).[23] However, the interpretation demonstrates that the Subsidies Code panel was unwilling to rely on the "export orientation" of the relevant industry in determining whether a subsidy was *de facto* tied to exporting. In making this finding, the panel declined to consider evidence regarding the high proportion of Airbus aircraft that were exported.

The case had been brought by the United States out of concern that the German subsidy enhanced the competitiveness of Airbus aircraft. From this commercial perspective, the GATT ruling achieved U.S. objectives, even though the export subsidy was found on the intermediate transfer rather than the ultimate sale of the plane. Although the EU blocked adoption of the GATT panel report, the EC simultaneously announced that the German Government was terminating the program with respect to claims arising after January 15, 1992.[24]

B. 1991 Case

The United States subsequently prepared a much broader Subsidies Code case, challenging the overall subsidization of Airbus Industrie's consortium. Airbus Industrie was originally registered under French law as a Groupement d'Interet Economique ("GIE").[25] The GIE is a vehicle for co-operation among several companies whose industrial activities are closely related. Its sole purpose is to facilitate or develop the economic activities of its members. The purpose of the GIE is, therefore, not to make profits for itself and, indeed, no income tax is imposed on the GIE's income. Airbus Industrie's consortium partners were Aerospatiale, Deutsche Airbus, British Aerospace and Construciones Aeronauticas.

In its new case, the United States sought to challenge the full range of subsidies to Airbus Industrie, including the financing provided for the creation of the GIE as well as launch aid for the development of the various Airbus aircraft programs. Rather than proceeding with GATT dispute resolution after the United States requested Subsidies Code consultations, the European side requested the negotiation of a bilateral arrangement,

[21] *Agreement on Subsidies and Countervailing Measures*, Art. 3.1(a).

[22] SCM/142, ¶ 5.12.

[23] *Id.*, ¶ 6.2. However, if the panel had found that subsidies provided to Airbus Industrie were contingent upon exportation due to the company's export orientation, this would have had significant implications for the full range of European government supports to Airbus Industrie.

[24] *See EC Rejects Panel on Airbus Exchange Rates, Germany Suspends Subsidy*, INSIDE U.S. TRADE, May 1, 1992, at 1.

[25] As discussed in Part VII.A.2 below, Airbus Industrie was reorganized into a single corporate entity in 2001.

discussed below. Upon negotiation of the 1992 Bilateral Agreement, the United States suspended the GATT dispute resolution proceeding without requesting a panel, but did not withdraw or terminate the proceeding. Ultimately, after adoption of the Uruguay Round Agreements and creation of the WTO, the proceeding was terminated as part of a general arrangement for the discontinuation of all unresolved GATT dispute resolution cases.

IV. U.S.-EU Bilateral Agreement (1992)

On July 17, 1992, the United States and the EU signed a bilateral "Agreement Concerning the Application of the GATT Agreement on Civil Aircraft" ("Bilateral Agreement").[26] This agreement, as its name suggests, involved an interpretation of particular provisions of the GATT Aircraft Code.

A. Background

Initially, the goal of the negotiations was to reach an agreed understanding as to what constitutes impermissible subsidization in the civil aircraft sector. Soon, however, the European side declared that it was not prepared to agree on subsidy disciplines. Instead, the Europeans proposed to negotiate limits on the amount of government funding (which they referred to as "direct supports,"[27] as opposed to "subsidies," so as to avoid the issue of which types of support would be considered "subsidies") that could be provided. The Europeans proposed to focus primarily on funding for the development of new models of large civil aircraft (referred to as "program development supports" or "launch aid").[28] The U.S. side agreed to negotiate limits on the amount of development supports (as opposed to elimination), provided that all other direct supports would be eliminated.[29] The United States also agreed to address the issue of "indirect" supports, e.g., government defense or space contracts that also benefit civil aircraft production.

B. Main Elements of Bilateral Agreement

Ultimately, agreement was reached on the conceptual basis proposed by the European side. The main elements of the Bilateral Agreement are:

- The parties stated in the Preamble that their negotiations were premised on the expectation that there would be a progressive reduction in future levels of government support.

[26] *Agreement Between the United States and the European Economic Community Concerning the Application of the GATT Agreement on Trade in Civil Aircraft*, April 12, 1979, TIAS 9620, 31 UST 619.

[27] *Id.*, Annex II ("'direct government support' means any financial support provided by a government or by a public body within the territory of a Party which is provided: 1) for specific large civil aircraft programmes or derivatives or 2) for specific companies to the extent that large civil aircraft programmes or derivatives directly benefit.")

[28] While this was the principal focus of the European side, the Bilateral Agreement is not limited to funding for new models of large civil aircraft. With the exception of engines, which are specifically excluded under Annex II, the Bilateral Agreement adopts as its scope the GATT Civil Aircraft Agreement definition of "aircraft," which includes components as well as finished aircraft. *See Bilateral Agreement,* Annex II, ¶ 1; GATT Aircraft Code, Article 1.

[29] *See* General Accounting Office, *Long-term Viability of U.S.—European Union Aircraft Agreement Uncertain,* December 1994, GAO/GGD-95-45, at 15–16. The GAO report acknowledges that EU officials and Airbus officials have portrayed the agreement as a "trade-off between constraints on direct and indirect support." *Id.* at 16.

- Development supports could be provided for a new large civil aircraft program only upon the basis of a "critical project appraisal," made on the basis of conservative assumptions as to costs and as to forecast sales revenues, that projects the full recovery of all costs (including repayment of the government support money) over a period not longer than seventeen years.[30] The "critical project appraisal" provision echoes the similar requirement in Article 6.2 of the Aircraft Code.
- Government support for a given program may not exceed 33 per cent of the forecast costs of program development.[31] Certain strictures are also placed on interest rates and repayment timetables for such aid.
- All future "direct government support . . . for the production of large civil aircraft," other than "support for the development of a new large civil aircraft programme" or "official export credit financing consistent with the [OECD] Large Aircraft Sector Understanding" ("LASU") is prohibited.[32] Since "production" is defined in Annex II as "all manufacturing, marketing and sales activities" other than new aircraft program development, this provision represents an agreement to provide no support for these activities other than that for new aircraft program development or LASU-consistent export financing.
- Equity infusions are not covered by the Bilateral Agreement, except that "Equity infusions will not, however, be provided in such a manner as to undermine the disciplines in this Agreement."[33]
- No limits are placed on the provision of supports to defense or space projects. The Bilateral Agreement merely directs each party to "take such action as is necessary to ensure that indirect government support neither confers unfair advantage upon manufacturers of large civil aircraft . . . nor leads to distortions" in aircraft trade.[34] "Identifiable benefits to the development or production" of civil aircraft arising from defense or space projects are limited, not in terms of percentages of the cost of specific aircraft programs, but rather in terms of percentages of overall annual civil aircraft turnover.[35] Those percentages are set at levels unlikely to come into play, especially since (a) the amount of indirect support is net of recoupments (*e.g.*, where government shares in revenue generated by a project) (b) "identifiable benefits" exist only "when there is an identifiable reduction in costs of large civil aircraft resulting from government-funded research and development in the aeronautical area,"[36] (c) only indirect supports for projects "performed after the entry into force of this Agreement" are relevant,[37] and (d) research and development benefits are not counted where the results of the government-funded research are made available on a non-discriminatory basis to large civil aircraft manufacturers.[38]

[30] *Bilateral Agreement*, Art. 4.1.
[31] *Id.*, Art. 4.2.
[32] *Id.* Art. 3.
[33] *Id.*, Art. 7.
[34] *Id.*, Art. 5.1. Indirect support is defined in Annex II of the Agreement to mean "financial support provided by a government or by any public body within the territory of a Party for aeronautical applications, including research and development, demonstration projects and development of military aircraft, which provide an identifiable benefit to the development or production of one or more specific large civil aircraft programmes."
[35] *Id.*, Art. 5.2.
[36] *Id.*, Art. 5.3.
[37] *Id.*
[38] *Id.*

The Bilateral Agreement is not self-enforcing, *i.e.,* it does not contain effective dispute resolution procedures. (Article 11 merely provides for consultations and bilateral efforts to resolve disputes.) The remedy of one party for the other's violation is to terminate the agreement.[39] An automatic right to terminate arises if either party commences an import relief proceeding under its domestic law.[40] However, no such right of termination arises from either party taking subsidy (or other) issues to GATT or WTO dispute resolution.

The Bilateral Agreement remains in effect as of August 2004.

V. The WTO

The WTO Subsidies and Countervailing Measures Agreement ("SCM Agreement") is the WTO agreement with greatest impact on trade in civil aircraft. However, other WTO agreements, such as the Agreement on Technical Barriers to Trade ("TBT Agreement") may also become relevant and are briefly discussed below. While there were attempts in the Uruguay Round to renegotiate the Aircraft Code on a multilateral basis, those attempts were unsuccessful. As a result, the Aircraft Code has been integrated without change in the WTO legal system as one of the four Plurilateral Agreements, i.e., agreements for which membership is optional.[41] This means that WTO dispute settlement is not available for alleged violations of the Aircraft Code.[42]

A. SCM Agreement

1. Relevance to Civil Aircraft Trade

The WTO Agreement on Subsidies and Countervailing Measures ("SCM Agreement") represented a very substantial step forward in the level of international agreement to discipline government subsidies.[43] In contrast to the Tokyo Round Subsidies Code, the SCM Agreement contains a definition of the term "subsidy": a "financial contribution" by a government that confers a "benefit." The SCM Agreement categorizes subsidies as actionable (yellow light) or prohibited (red light).[44] To be actionable under the SCM Agreement, a domestic subsidy must be "specific" to certain enterprises and must cause "adverse effects", defined as either "material injury" to the domestic industry of the importing country member, or "serious prejudice" to the interests of the complaining member, i.e., harm to its industry occurring in any market, or "nullification or impairment" of benefits accruing from the GATT 1994.[45] Regarding subsidies contingent on exportation or "red light" subsidies, the existence of adverse effects and specificity does

[39] *Id.*, Art. 9.4.

[40] *Id.*, Art. 10.3.

[41] The other three plurilateral agreements were the *Agreement on Government Procurement,* discussed in Chapter 23 of this book, the *International Dairy Agreement*, and the *International Bovine Meat Agreement.* The last two are no longer in effect.

[42] Appendix 1 to the *WTO Understanding on Rules and Procedures Governing the Settlement of Disputes* provides that plurilateral agreements such as the Aircraft Code are subject to the Understanding only if the parties to the relevant agreement adopt a decision to that effect. The signatories to the Aircraft Code had not adopted such a decision as of December 2002.

[43] The Agreement is discussed in detail in Chapter 16 of this book.

[44] Under Article 8 of the SCM Agreement, a last category of subsidies included "green light" or non-actionable subsidies. Pursuant to Article 31, Article 8 was applied provisionally for a period of five years upon entry into force of the WTO Agreements and could only be extended by agreement. No such agreement was reached, and Article 8 therefore has lapsed.

[45] *SCM Agreement,* Arts. 2 and 5.

not have to be demonstrated by the complaining country member. This reflects the SCM Agreement's hard line toward programs linked to export performance. In addition, and of critical importance, the SCM Agreement is enforceable under the WTO's Dispute Settlement Understanding ("DSU"). As a result, rulings under the SCM Agreement will be adopted by the WTO unless there is a consensus (unanimity) against the panel report. The SCM Agreement also permits members to impose countervailing duties against subsidies, if the subsidized imports are found to cause or threaten material injury to a domestic industry.[46]

Many types of government assistance provided to the civil aircraft industry are likely to come within the SCM Agreement definition of subsidies.[47] For instance, a key means of support by certain governments has been development supports furnished at below-market interest rates or on a royalty repayment basis, under which the loan is repaid with royalties on aircraft or avionics sales. Royalty-based loans may be a subsidy *per se*, if it is demonstrated that the firm could not "actually obtain" royalty-based loans on the commercial market, or where the effective interest rate based on reasonable sales forecasts is below market.[48] Debt forgiveness, exchange rate guarantees, and equity infusions are also considered as subsidies when provided on terms more favorable than those obtainable from commercial sources. *See* SCM Agreement, Articles 1 and 14.

The definition of export subsidies may apply to such government programs. Aircraft companies may benefit from programs specifically designed to promote exports, and programs contingent on meeting sales targets might be found export contingent if virtually all sales are for export.[49] Similarly, the Article 6.3 provisions relating to "serious prejudice" will likely apply, *e.g.,* where an aircraft manufacturer can demonstrate that it has lost market share in its home market or a third country market due to the effects of a subsidy provided to its competitor.[50]

[46] *SCM Agreement,* Arts. 10–23. Note that only one form of relief—either WTO action or a domestic countervailing duty action—can be pursued regarding the effects of a subsidy on the domestic market of the importing member. *Id.*, n. 35.

[47] European officials have occasionally suggested that the SCM Agreement either may not apply to assistance to civil aircraft, or may be subordinate to the terms of the 1992 Bilateral (described above). For instance, when asked whether the European governments would ensure that future assistance is on commercial terms in accordance with the SCM Agreement, EU Trade Commissioner Pascal Lamy stated his position that the SCM Agreement does not "contradict" the 1992 Agreement. While ambiguously stated, this position might be taken to suggest that compliance with the Bilateral Arrangement could be argued as a defense to a challenge under the SCM Agreement, *i.e.,* that the Bilateral Agreement is *lex specialis* regarding aircraft subsidies, such that it represents the parties' understanding of how the GATT Subsidies Code (and now the SCM Agreement) would apply to the aircraft sector. In response to such a position it could be argued that it would not have been necessary to exclude civil aircraft from the operation of certain provisions of the SCM Agreement (discussed in note 50 *infra*) if civil aircraft had not been subject to the SCM Agreement generally.

[48] *SCM Agreement,* Art. 14(b).

[49] *See SCM Agreement,* Art. 3; *see also* the discussion of the *Canada—Aircraft* case, infra note 99 and accompanying text, and the WTO panel decision in *Australia—Subsidies Provided to Producers and Exporters of Automotive Leather,* WT/DS126/R (1999) (not appealed), ¶ 9.56 (observing that it is appropriate to consider the export orientation of the recipient in assessing the issue of *de facto* export contingency).

[50] Beyond these general provisions, there are specific provisions relating to civil aircraft. However, like the "green-light" provision, these provisions were in effect for an initial five-year period and were not extended, so have now lapsed due to the operation of *SCM Agreement* Art. 31. They are unlikely to be revived in the next round, and therefore are of little current significance. Footnote 15 stated that the civil aircraft sector is not subject to the five percent *ad valorem* threshold for subsidies, over which serious prejudice is presumed under Article 6.1(a). Footnote 16 provides that "where royalty-based financing for a civil aircraft programme is not being fully repaid due to the level of actual sales falling below the level of forecast sales, this does not in itself constitute serious prejudice" for purpose of the Article 6.1(d) presumption of serious prejudice in

2. Ambiguities and Problems in the SCM Agreement

As a result of the sharp divisions existing between the negotiating governments on the proper role of subsidies in the economy, the SCM Agreement contains terms that are sometimes imprecise, or have an unclear inter-relationship. For instance, the SCM Agreement contains guidelines that apply to determinations of when various government actions confer a "benefit," but these guidelines are fairly general (*e.g.,* requiring a determination of whether a government loan is on terms better than a "comparable commercial loan which the firm could actually obtain in the market.") In the aircraft industry, this issue is particularly relevant to the question of whether and when government loans that are based on royalty repayment confer a benefit, including whether they inherently confer a benefit. Moreover, the SCM Agreement imported without change the "Illustrative List of Export Subsidies" contained in the 1979 Tokyo Round Subsidies Code, without clarifying the relationship of this Illustrative List to the SCM Agreement's definition of a "subsidy" or its prohibition of subsidies that are contingent on exportation.[51] This ambiguity has had to be resolved in the course of dispute settlement proceedings, as discussed in Part VI below.

A further problem is that in order to prevail in an SCM Agreement proceeding based upon a domestic subsidy, it is likely to be necessary to reveal confidential information about market share, pricing, etc. This is particularly true given the lapse of the Article 6.1 "dark amber" provisions under which serious prejudice could be presumed.[52] Due to insufficient procedures in WTO dispute settlement for the protection of business confidential information,[53] this concern creates a major issue for companies seeking to proceed under the SCM Agreement. The concern is magnified in the civil aircraft sector, where the number of competitors is at present very small.

B. Rectification of the Aircraft Code

As discussed at the beginning of Part V, the GATT Aircraft Code was not included in the series of multilateral agreements that are part of the "Single Undertaking" of the

cases of direct forgiveness of debt. Note that footnote 16 did not say that royalty repayment funding was not a subsidy, but rather that a shortfall in repayment did not result in a presumption of serious prejudice. Also, "serious prejudice" can be demonstrated by other evidence, under Article 6.3, and royalty-based financing for civil aircraft could cause the other two forms of "adverse effects"—injury to a domestic industry and nullification or impairment of benefits. Footnote 24 stated that the "green light" provision for research and development assistance, Article 8, does not apply to civil aircraft.

[51] *See SCM Agreement*, Annex I.

[52] Under the now-lapsed Article 6.1, four types of subsidies were presumed to cause "serious prejudice." These subsidies were known as "dark amber" in the traffic-light parlance of subsidy categories (discussed above), because they placed the burden of proof on the responding country Member to show that the subsidy program did not cause serious prejudice. Because Article 6.1 lapsed by operation of Article 31 of the SCM Agreement, a complaining Member now always has the burden of proving the existence of serious prejudice.

[53] The DSU states that: "Confidential information which is provided [by a Member] shall not be revealed without formal authorization from the individual, body, or authorities of the Member providing the information." DSU, Art. 13(1). However, from a practical standpoint, companies may desire stronger protection against the possibility of a disclosure of highly confidential information, *e.g.* a specific protective order. For instance, in the case involving aerospace subsidies brought by Brazil against Canada, the Panel adopted a protective order. This order provided for business confidential information ("BCI") to be available for review only at the WTO offices in Geneva and at the Geneva mission of the other party, although government officials were allowed to take detailed (non-verbatim) notes on the BCI. The order required that the BCI be stored in a safe in a locked room at the Geneva mission, with restrictions imposed on access to the locked room and safe, and provided for either party to visit the other party's Geneva mission and review the proposed location of the safe, and propose any changes. *See Canada—Measures Affecting the Export of Civilian Aircraft,* Report of the WTO Panel, WT/DS70/R (1999), ¶ 9.105.

Uruguay Round. Instead, it constituted one of the four plurilateral agreements, binding only on those Members of the WTO who signed it.[54] The failure to include it in the Single Undertaking resulted from a continuing dispute between the United States and the European Union over how subsidies to civil aircraft manufacturing will be treated in this agreement and in the WTO Agreement on Subsidies and Countervailing Measures. The United States has been concerned that subsidies are treated more leniently in the Aircraft Code than in the SCM Agreement, and therefore was concerned that including the Aircraft Code in the Single Undertaking would strengthen a possible European position that the Aircraft Code (and the Bilateral Agreement) should be controlling in any disputes over aircraft subsidies. (See discussion in Part V.A.2 above) As a result, there have been continuing discussions in the WTO over whether and how to "rectify" the Aircraft Code, *i.e.,* to bring the Aircraft Code into the system of WTO agreements. The benefits, and potential risks, of rectification may be summarized as follows.

One potential benefit of rectification would be that all disputes among WTO members involving civil aircraft issues covered by the Code would be handled by the WTO Dispute Settlement Body ("DSB"). The Aircraft Code Committee may review disputes among signatories related to matters covered by the Code. Indeed, when disputes arise between signatories as to issues covered by the Aircraft Code, but not covered by the WTO, the Committee is the only forum for dispute settlement.

A second potential benefit of rectification would be the imposition of the disciplines contained in the Aircraft Code on all WTO members. Thus, rectification would mean that the Aircraft Code obligations would apply with respect to the much broader group of countries who are WTO Members, but who are not currently signatories to the plurilateral agreement. If accepted by other WTO members, rectification of the Aircraft Code would obligate all members to comply with certain provisions not otherwise required by WTO commitments. These include, for instance, the elimination of tariffs on imports of products for use in the manufacture and repair of civil aircraft;[55] a requirement that purchases of civil aircraft be made only on a competitive basis;[56] the prohibition against attaching inducements to the sale or purchase of civil aircraft;[57] and the commitment that pricing of civil aircraft should be based on a reasonable expectation of recoupment of all costs.[58] However, it is unclear how significant these commitments currently are in the context of global civil aircraft trade. For instance, most countries have eliminated or reduced to low levels their tariffs affecting civil aircraft production and repair.

Rectification would not have a major immediate effect on the obligations of the countries producing large civil aircraft, since the EU and the United States are already bound by the Aircraft Code. Russia could become bound by the provisions of the Code if rectification occurs by the time it has become a member of the WTO.[59] China, in contrast, refused to accept the Aircraft Code, although it agreed to similar obligations in its WTO accession package, including reduced or zero duties on aircraft products.[60] Moreover, the broader

[54] As noted above, the only other plurilateral agreement currently in force is the *Agreement on Government Procurement. See* Chapter 23 of this book.
[55] *Aircraft Code*, Art. 2.
[56] *Id.*, Art. 4.3.
[57] *Id.*, Art. 4.4.
[58] *Id.*, Art. 6.2.
[59] In 1996, Russia bilaterally agreed with the United States to eventually become a signatory to the Aircraft Code and in the interim to allow reasonable access to its domestic market for foreign civil aircraft by waiving import duties. *Falken Testimony, supra* note 1, at 3.
[60] Id.

applicability of the Aircraft Code could still be of significant benefit to some members of the civil aircraft industry. In particular, the disciplines of the Aircraft Code would apply for the first time to WTO member countries such as Brazil, which produces regional jets.

A potential concern with rectification has been whether it would affect the ability of WTO Members to initiate and effectively pursue WTO dispute settlement proceedings based on the SCM Agreement. The Vienna Convention on the Law of Treaties, which is applied when interpreting WTO obligations,[61] could be construed to create uncertainties as to the interplay between the SCM Agreement and the Aircraft Code. First, the Vienna Convention arguably establishes that "later in time" agreements prevail in the event of conflict with earlier agreements.[62] The United States has been concerned that any rectification of the Aircraft Code would be argued to make it an agreement subsequent to the SCM Agreement and, therefore, that the provisions of the Aircraft Code should take precedence over, or should be considered in interpreting, the disciplines of the SCM Agreement as they relate to trade in civil aircraft. This U.S. concern could potentially be addressed in the drafting of the rectification documents, although several drafting efforts by both the European Commission and the Office of the U.S. Trade Representative have proved unsuccessful.

Second, the rules of interpretation of public international law establish that the more specific agreement/provision prevails over the less specific in the event of a conflict.[63] Again, it could be argued that the Aircraft Code is more specific to the civil aircraft industry and that its terms should prevail over those of the SCM Agreement in the event of inconsistency between the two agreements (*e.g.,* arising out of the Aircraft Code's recognition of the "widespread governmental support in this area."). Currently, this argument would be difficult to make successfully in an SCM Agreement dispute between signatories to the Code, because the Code is not part of the Single Undertaking and therefore would not appear to provide relevant "context" for interpreting provisions of the SCM Agreement. Alternatively, one could argue that the Aircraft Code should be considered in interpreting the disciplines of the SCM Agreement as to civil aircraft trade. Again, however, attentive drafting should serve to avoid this problem.

A March 2001 proposal from the Aircraft Committee sought to address this concern. The proposal was a limited one, which would only incorporate the tariff commitments of Article 2 of the Aircraft Code into the WTO system. The proposal would clarify that this rectification would not affect the signatories' rights and obligations under any of the WTO agreements, except with respect to the tariff commitments affected by Article 2.

C. Other Relevant WTO Agreements

1. TBT Agreement

The WTO Agreement on Technical Barriers to Trade ("TBT Agreement") contains three central substantive provisions that are relevant to the civil aircraft industry. First, it requires national treatment, *i.e.*, that technical regulations apply to imported products in a

[61] *See* DSU, Article 3.2. *See also, Japan—Taxes on Alcoholic Beverages,* Report of the Appellate Body, WT/DS8/AB/R (1996), at p.3.

[62] *Vienna Convention on the Law of Treaties,* 8 INTERNATIONAL LEGAL MATERIALS 679 (1969), Art. 30(3).

[63] For a discussion of the *'lex specialis derogat legi generali'* principle and the presumption against conflict in international law *see, e.g., Indonesia—Certain Measures Affecting the Automobile Industry,* Report of the Panel, WT/DS54/R (1998) (not appealed) at ¶ 14.28; *India—Quantitative Restrictions on Imports of Agricultural, Textile and Industrial Products,* Report of the Panel, WT/DS90/R (1999) at ¶ 4.20.

manner no less favorable than that accorded to like products of national origin.[64] Second, it requires "most favored nation" treatment, *i.e.,* that technical regulations apply to imported products in a manner no less favorable than that accorded to like products originating in any other country.[65] Third, the TBT Agreement requires Members to "ensure that technical regulations are not prepared, adopted or applied with a view to or with the effect of creating unnecessary obstacles to international trade. For this purpose, technical regulations shall not be more trade-restrictive than necessary to fulfill a legitimate objective, taking account of the risks non-fulfillment would create."[66] The TBT also requires transparency in the development and promulgation of technical regulations.[67]

There are some indications that such "technical barriers" could be of significant concern to the civil aircraft industry. As an example, in the mid-1990s, Boeing experienced a delay over the certification by the Joint Aviation Authorities ("JAA") in Europe with regard to its next generation 737 aircraft. Boeing sought to have the 737–700 certified as safe for 149 passengers, and for the 737–800 to be certified as safe for 189 passengers. These limits had been approved by the U.S. Federal Aviation Authority ("FAA"). However, the JAA ruled in early 1996 that it would certify the 737–700 only with 145 seats and the 737–800 for 180 seats.[68] Given the importance of these additional seats to airline revenues, this regulatory ruling presented a major concern for Boeing. Boeing had contracted to provide 189-seat capacity on the 737–800—nine more seats than on the rival Airbus A320.[69]

While in the end an acceptable compromise with the JAA was reached and thus it was not necessary for the United States to consider WTO action, the events show the potential for regulatory issues to become a significant commercial concern and therefore for the TBT Agreement to come into play. Indeed, as of this writing in December 2002, despite JAA approval, the French government still has not certified the Boeing plane for the limit of passenger capacity requested by Boeing.

Moreover, U.S. government officials have claimed that draft legislation proposed by the European Commission to create a European Aviation Safety Authority contains provisions that would allow the Commission to overturn a Member State's certification of U.S.-produced aircraft if the Commission were to consider that the approval would give an unfair advantage to the United States. [70] The draft legislation authorizes the Commission to require a Member State to "modify" aircraft certificates it plans to issue on the basis of approvals issued by third countries, where the third country has not concluded a mutual recognition agreement with the EU, if the Commission considers that "such certificates would give an unfair advantage to a third country."[71] While the United States has concluded agreements on certification with EU Member States, it has not yet negotiated an agreement with the EU itself.[72]

[72] *See* FAA, *Listing of Country Specific Bilateral Agreements,* downloaded from www.faa-gov/certification/aircraft/bilateral-agreements.stm.

Finally, the well-publicized "hush-kit" dispute between the United States. and the EU raised issues relating to the TBT Agreement. In 1999, the EU adopted a regulation, (EC)925/1999, to cut noise pollution around congested European airports, which was to take effect in May 2002.

The regulation would ban the use of "hush-kitted" aircraft, *i.e.,* aircrafts fitted with noise mufflers. The United States complained that the ban would discriminate against U.S. carriers, and that the ban improperly was based on a design standard rather than a performance standard. The United States did not file a WTO complaint, however, but instead filed a case asking the International Civil Aviation Organization (ICAO) to resolve the dispute.[73] Ultimately, the dispute was resolved through EU revisions to the regulatory approach.[74]

2. The General Agreement on Trade in Services

The civil aircraft industry is also affected by the GATT/WTO rules relating to civil aviation generally. National markets for civil aviation services are some of the least liberalized sectors in the WTO system. Civil aircraft manufacturers would stand to benefit from the expansion of civil aviation services that can be expected to result from any greater WTO disciplines on national measures in this area. Therefore, although a full discussion of civil aviation services in the WTO is beyond the scope of the current paper, we briefly discuss below the limited nature of the current WTO rules for aviation-related services, and the prospects for strengthening those rules in a new trade round.

Aviation-related services, like any services, are subject to WTO disciplines to the extent they are covered by the General Agreement on Trade in Services ("GATS") and national commitments thereunder. All countries who are members of the WTO have necessarily accepted GATS, which is one of the multilateral agreements that form part of the Single Undertaking. GATS commitments include Most-Favored-Nation treatment (unless an express exception is taken) and national treatment to the extent specified in a country's GATS schedule. GATS violations are subject to binding dispute settlement under the WTO's Dispute Settlement Understanding.

Aviation-related services are specifically addressed in the GATS Air Transport Services Annex, which describes the extent of GATS coverage of air transport services.[75] Air traffic rights are not covered by GATS.[76] In 1995 most countries were not prepared to

[73] *See* U.S. Department of State, *U.S.—EU Hushkit Dispute: U.S. Files Article 84* [*sic*], March 14, 2000, downloaded from http://secretary.state.gov/www/briefings/statements/2000.

[74] *See* European Commission, *EU Commission Proposes New Aircraft Noise Legislation Removing Cause for Hushkit Dispute,* November 28, 2001, downloaded from wttp://www.eurunion.org/news/press/2001/2001090.htm.

[75] A very useful review of the status of air transport services in the GATS as of November 1998 is contained in a Background Note by the WTO Secretariat, *Air Transport Services,* WTO Document S/C/W/59 (November 5, 1998). Other relevant sources include: U.S. International Trade Commission, *Air Transport Services: International Regulation and Future Prospects for Liberalization,* December 1999, USITC Publication 3271; and *Aviation Issues in GATS 2000 and Other Fora,* Office of International Aviation, U.S. Department of Transportation, July 1999 (on file with the authors).

[76] Paragraph 6(d) of the *Annex on Air Transport Services* defines air traffic rights as "the right for scheduled and non-scheduled services to operate and/or to carry passengers, cargo and mail for remuneration or hire from, to, within or over the territory of a Member, including points to be served, routes to be operated, types of traffic to be carried, capacity to be provided, tariffs to be charged and their conditions, and criteria for designation of airlines, including such criteria as number, ownership and control."

abandon the current system of bilateral reciprocity agreements and the multilateral system for air navigation, safety and security under the International Civil Aircraft Organization ("ICAO"). Essentially, WTO members believed that the existing international air transport regime would best promote liberalization of the air transport sector (e.g., because the WTO's most-favored nation requirement would dissuade members from offering concessions due to the "free-rider" problem).[77] Services "directly related to the exercise of traffic rights" services are also excluded, with specified exceptions. Excluded "related" services include activities on the ground such as check-in space and baggage handling.

Certain air transport services are, however, subject to GATS, namely: aircraft repair and maintenance services; selling and marketing of air transport services; and computer reservation system ("CRS") services. These services were generally not covered in bilateral or multilateral air transport services agreements, unlike "traffic rights," so that there was no reason to exclude them from GATS. In addition, some aviation services are not "directly related to the exercise of traffic rights" and are therefore not covered by the GATS exclusion. The category of services "directly related to the exercise of traffic rights" is not defined in the GATS Annex, and therefore it is unclear what is excluded from this category. Some WTO Members have GATS commitments on other aviation services. Such aviation services may include air catering services, refueling services, air traffic control services, etc. In assessing the scope of national commitments in any of these covered areas, one must also consider which of the GATS "modes" of delivering services are covered by the national commitments.

GATS talks on air transport services began in February 2000. The Annex committed the Council for Trade in Services (consisting of all WTO Members) to review not later than 2000 the possible application of the GATS to additional aspects of the air transport sector. As of June 2002, there is no deadline for completion of these talks. These talks involve a review of the operation of existing commitments and their sufficiency, as distinct from actual negotiations on air transport services. The Council for Trade in Services has met to review these issues and summaries of the discussions are available.[78]

What are the positions of the major players in air transport services? As one might expect, there is a diversity of views among Members. The *United States* has been skeptical of any efforts to include air traffic rights in the GATS.[79] It has stated that "no changes should be made to the status quo solely in an effort to create an impression of positive change or to resolve what is perceived as anomalous in the GATS context."[80] There is

[77] Under the MFN principle, a WTO Member are obligated to extend to all other WTO Members treatment that is no less favorable than the Member accords to services imported from any country. *See* GATS, Art. II(1). Therefore, if two Members are willing to liberalize air traffic services bilaterally, they would have to extend that liberalization to all other Members (or take a broad MFN exception under the GATS Annex on Article II Exemptions). Having received the benefit of such liberalization (*e.g.,* the right to provide air traffic services to the U.S. market), the other Members would have a reduced incentive to liberalize their own air traffic services markets: they could "free-ride" on the bilateral liberalization that had occurred.

[78] *See,* e.g., *Report of the Third Session of the Review Mandated Under Paragraph 5 of the Air Transport Annex Held on 9 October 2001*, S/C/M/57 (13 February 2002). Discussion has also occurred in a Special Session of the Council for Trade in Services in March 2002. *See Report of the Meeting Held on 19–22 March 2002,* TN/S/M/1 (5 June 2002), ¶¶ 183–206.

[79] In its *2000 Annual Report on the Trade Agreements Program*, the United States reported that "While a small number of countries have advocated changes to the current exclusion, to date the United States has taken the position that bilateral and plurilateral venues outside the WTO have proven to be effective in promoting U.S. interests in this sector." USTR, *2001 Trade Policy Agenda and 2000 Annual Report* (March 2001), at 70.

[80] Communication from the United States, *Review of the GATS Annex in Air Transport Services,* October 3, 2001, S/C/W/198 at ¶ 38.

little domestic support from U.S. carriers or labor groups for including air traffic rights in the GATS. As to GATS treatment of other air transport services, the United States in the past had indicated some interest in adding ground handling services to the list of covered services, but its October 2001 paper took a firm line that ground handling services are "directly related" to traffic rights and therefore excluded from GATS.[81] Instead of liberalization via GATS, the United States has been interested in pursuing its "beyond open skies" initiative. This could involve regional agreements such as an EU-U.S. Transatlantic Common Aviation Area (TCAA), or agreements under the Asia-Pacific Economic Cooperation (APEC) forum or within the Free Trade Area of the Americas (FTAA).[82] U.S. aviation officials have envisioned that these regional agreements could ultimately serve as the foundation for multilateral liberalization. As to air cargo services, the United States is working with the OECD to develop a prototype open-skies agreement.[83]

In September 2000, the EU supported extending GATS coverage to certain areas, including ancillary services such as airport management and ground handling,[84] as well as discussions on how GATS could promote leasing of aircraft and transit flights. The EU proposal to the GATS Council also recommended that the air transport review include greater liberalization of aircraft repair and maintenance, computer reservations, and the selling and marketing of air transport services, and whether it is possible to extend GATS coverage to air cargo services.[85] A subsequent proposal in December 2000 argued that the Council should try to ensure that the GATS covers supporting services that allow carriers to provide air traffic services, such as ground-handling services and airport management services.[86] While the EU has historically been unwilling to address the issue of traffic rights within the GATS framework, taking the position that traffic rights should be discussed in the context of regional, particularly transatlantic (EU-U.S.) negotiations, it has indicated that it would support limited discussions comparing the bilateral approach to a multilateral framework.[87] (This focus on EU-U.S. liberalization has bothered many other countries, including Australia and New Zealand.) There are some differences within the EU in the area of air transport services. The Netherlands told the "Beyond Open Skies" convention that it was exploring numerous global options for air traffic liberalization, including the WTO.[88]

Japan has called for the WTO Secretariat to review the compatibility of existing bilateral air traffic agreements with WTO equal treatment principles.[89] Japan argued that open sky agreements may not provide MFN and national treatment, which of course they do not; but they do not violate the WTO/GATS since air traffic rights are expressly excluded from the WTO/GATS.) Japan also suggested that the WTO Secretariat should

study the rise of oligopolies or monopolies in the industry and whether the competition (antitrust) policies of Members should be better coordinated. Finally, Japan suggested that the Secretariat should study possible new measures to deter "destructively low fares" for air transport.

Among other countries, *Australia, New Zealand, Chile* and *Singapore* are the strongest supporters of incorporating air traffic rights into the WTO/GATS system. These countries also support coverage of air cargo services. However, even some of these supporters of liberalization have advocated a gradual approach—for example, *Australia* has recommended that the air transport review focus on dedicated freight services and nonscheduled services, rather than more controversial issues such as passenger services and scheduled flights.[90] According to press reporting, most of the WTO's 135 member countries are not receptive to adding air traffic rights or air cargo rights to GATS. For instance, *Brazil* has stated its strong commitment to the continued exclusion of "traffic rights and all the segments directly involving traffic rights," expressing a preference for reliance on ICAO as the primary jurisdiction for aviation rights.[91]

As for industry groups, the *International Air Transport Association* ("IATA") has said that air transport should be handled primarily by ICAO, although IATA has expressed greater willingness for the GATS to address air cargo services. Several industry groups have pressed for liberalization of air cargo rules, including the *International Chamber of Commerce* and the *Trans-Atlantic Business Dialogue*. Companies such as *UPS* had lobbied for air cargo services to be discussed within GATS. The *Airports Council International* ("ACI") has said that the WTO is not the right forum to deal with liberalization of aviation services, which should proceed through ICAO. ACI also has said, however, that liberalization of air cargo services is necessary.

Based on the foregoing review, while one should not expect too much, these talks may produce some additional liberalization of some air transport services, such as ground handling or air cargo services. There is not likely to be a consensus to include air traffic rights in the GATS. However, there is significant dissatisfaction with the current system and there may be important developments beyond the current system in the coming years.

Proposals to expand the GATS/WTO coverage of air transport services are sometimes criticized as counter-productive, in that it would be much more difficult to liberalize air transport services if any opening had to be extended to all WTO Members (under the unconditional MFN principle). However, this criticism may be exaggerated. As the existence of MFN exemptions for certain air transport services shows, it is possible in the GATS for Members to include a sector on a non-MFN, reciprocal basis. In addition, there is precedent under the GATS for reaching a "plurilateral" agreement, *i.e.,* an agreement that binds only certain countries. This was done in the "Reference Paper" negotiated in connection with the Basic Telecommunications Agreement. A potential advantage of covering air transport services under the GATS/WTO is that disputes could be settled under the highly effective WTO Dispute Settlement Understanding. The DSU provides a guaranteed forum, rapid dispute proceedings (often about a year from initiation of the proceeding to issuance of a panel report), and the right to countermeasures if the other

[91] Communication from Brazil, *Review of the GATS Annex on Air Transport Services,* Oct. 4, 2001, S/C/W.201, ¶ 21. Brazil cited ICAO regulatory measures that "give special treatment to the evolution of air transport activities in developing countries." *Id.*, ¶ 24.

country does not comply. As such, the DSU system is significantly stronger than ICAO dispute procedures.

VI. WTO Dispute Settlement

In two companion cases, the WTO Appellate Body ("AB") took a first step forward in achieving clarity in the general subsidy rules that affect civil aircraft, including certain types of subsidies (royalty financing and export financing) that are common in the aircraft industry. These were: *Brazil—Export Financing Programme for Aircraft,*[92] ("*Brazil—Aircraft*") and *Canada—Measures Affecting the Export of Civilian Aircraft,*[93] ("*Canada—Aircraft*"). The *Brazil—Aircraft* case involved Canada's challenge to certain alleged export subsidies provided by the Brazilian government to its regional aircraft industry, i.e., the Brazilian manufacturer, Embraer. *Canada—Aircraft* was a companion case initiated by Brazil, challenging certain alleged export subsidies provided by the Canadian government to its own regional aircraft industry, *i.e.,* the Canadian manufacturer, Bombardier.

These decisions provided the first substantial guidance from the Appellate Body regarding the interpretation of the SCM Agreement. The decisions provide important rulings regarding the meaning of key terms in the SCM Agreement, including the meaning of a "benefit" under Article 1 of the SCM Agreement. The decisions also address issues such as when a subsidy is contingent on exports so as to be an illegal subsidy under Article 3 of the SCM Agreement, and whether a developing country has the burden of proof to show that it qualifies for the special rules in Article 27 of the SCM Agreement. The following is an analysis of the key aspects of these decisions, particularly as they may affect the global civil aircraft industry.[94]

A. Canada—Aircraft: A Blow Against Royalty-Based Financing and "Matching"

1. Royalty-Based Financing

Canada had appealed an original WTO Panel's ruling that the Technology Partnerships Canada ("TPC") program was a subsidy. The TPC program consisted primarily of royalty-based loans, *i.e.,* loans that were repayable out of royalties charged on sales of the product in question. These royalty-based loans were available to all companies helped by TPC, i.e., they were not limited to the regional aircraft industry. The Panel had held that TPC conferred a benefit and therefore was a subsidy, reasoning that Canada had not rebutted Brazil's evidence that the effective interest rate charged by the TPC program was below the comparable commercial rate, which the Panel had found to be in the 15 to 22 percent range.

Canada appealed on the ground that the existence of a "benefit" from these loans under Article 1 should be measured by reference to the government's cost of funds as well as with regard to a commercial benchmark. The European Union, as intervenor before the AB, also argued that there is no subsidy under the SCM Agreement if the measure in question did not result in a net cost to government, *i.e.,* if the costs incurred

[92] *Brazil—Export Financing Programme for Aircraft,* Report of the Appellate Body, WT/DS46/AB/R (1999).
[93] *Canada—Measures Affecting the Export of Civilian Aircraft*, Report of the Appellate Body, WT/DS70/AB/R (1999).
[94] The significant impact of these decisions on subsidy methodology issues generally is discussed separately in Chapter 16 of this book. *See also* Oliver Stehmann, *Export Subsidies in the Regional Aircraft Sector: The Impact of Two WTO Panel Rulings Against Canada and Brazil,* 33(6) JWTL 97–120 (1999) (analysis of the panel rulings in each case).

by the government in providing the support did not exceed its own cost of funds. This position would have had the effect of raising the bar for actionable subsidies, as many subsidies are likely to cover the government's cost of funds even if they do not provide a commercial rate of return to the government.

The Appellate Body affirmed the Panel's conclusion that the question of whether a company received a "benefit" from a government financial contribution is determined by reference to a *commercial* baseline, and not by reference to whether the contribution resulted in a "cost to government." The Appellate Body observed:

> there can be no 'benefit' to the recipient unless the 'financial contribution' makes the recipient 'better off' than it would otherwise have been, absent that contribution. In our view, the marketplace provides an appropriate basis for comparison in determining whether a 'benefit' has been 'conferred,' because the trade- distorting potential of a 'financial contribution' can be identified by determining whether the recipient has received a 'financial contribution' on terms more favourable than those available to the recipient in the market.[95]

The Appellate Body based its conclusion on the relevant context of SCM Article 14, which sets forth guidelines for calculating the amount of a subsidy in terms of "the benefit to the recipient." The Appellate Body rejected Canada's argument that SCM Annex IV—which refers to the "cost to government" for purposes of calculating the *ad valorem* subsidy rate in the serious prejudice context—was relevant to the interpretation of SCM Article 1. The Appellate Body found that Annex IV "has nothing to do with whether a 'benefit' has been conferred, nor with whether a measure constitutes a subsidy within the meaning of Article 1.1."[96]

This conclusion should foreclose any argument that government funding does not confer a "benefit" under the SCM Agreement because the terms are designed to recover the government's cost of funds.[97] In the particular context of civil aircraft, this ruling has significance because many governments provide financing on a royalty basis. That is, governments provide financing whose repayment is contingent on future sales, profitability, etc. An effective interest rate can be calculated based on the projections regarding the amount and timing of repayments. The *Canada—Aircraft* case makes clear that where the implicit interest rate in such schemes is below the market rate, the financing is a subsidy. However, it will not always be easy to determine the implicit interest rate in a royalty financing program, as this may require an assessment of whether the government's projected sales of the aircraft are commercially reasonable. (In the *Canada—Aircraft* case this issue did not arise, as even under the government's projected sales forecasts, the implicit interest rates were below commercial levels.)

2. "Matching"

In the original proceeding, the Panel had found that a Canadian export credit program, the "Canada Account," was an illegal export subsidy because the financing was below

[95] *Canada—Measures Affecting the Export of Civilian Aircraft*, supra note 93, at ¶ 157.

[96] *Id.* at ¶ 159.

[97] Parties may still argue, as the EU did in *Canada—Aircraft,* that government funding does not confer a "financial contribution" where the funding does not involve a cost to government. That is, parties might seek to distinguish *Canada—Aircraft* as relating solely to the interpretation of "benefit" in Article 1.1(b), thus leaving open whether "cost to government" might be relevant to the interpretation of "financial contribution" in Article 1.1(a)(1). Although a measure falling within any of the sub-categories of "financial contribution" will necessarily be a financial contribution, the issue of cost to government is likely to be raised in future disputes regarding the appropriate interpretation of these sub-categories. For instance, Members may seek to argue that a government has not foregone revenue under Article 1.1(a)(ii) if there is no cost to government.

market terms.[98] In an attempt to comply with the ruling, Canada then adopted a "Policy Guideline" to the effect that any future Canada Account financing would conform to the Organization for Economic Cooperation and Development ("OECD") Arrangement rules for export credits.

In a compliance proceeding brought under Article 21.5 of the Dispute Settlement Understanding, Brazil argued that by adopting the Policy Guideline, Canada had not revised its "Canada Account" program so as to conform to Article 3 of the SCM Agreement.[99] Brazil expressed concern that the Policy Guideline did not make clear precisely how Canada intended to interpret and apply the OECD rules. In its response, Canada argued, in part, that it was entitled to rely upon the "matching" provisions of the OECD Arrangement. These rules permit the participants in the Arrangement to "match" the export credit terms offered by other participants and by non-participants, subject to certain conditions, even where those terms themselves do not comply with credit terms approved by the OECD Arrangement.[100] Canada argued that "matching" was "in conformity with" the OECD Arrangement, and therefore was exempted from WTO challenge by item (k), paragraph 2 of Annex 1 to the SCM Agreement. This provision states that:

> Provided, however, that if a Member is a party to an international undertaking on official export credits to which at least twelve original Members to this Agreement are parties as of 1 January 1979 (or a successor undertaking which has been adopted by those original Members), or if in practice a Member applies the interest rates provisions of the relevant undertaking, an export credit practice which is in conformity with those provisions shall not be considered an export subsidy prohibited by this Agreement.

The Article 21.5 Panel decided that the matching of export credit terms which themselves did not conform with the Arrangement could not itself be considered as "in conformity with" the Arrangement.[101] The Panel considered that tolerating such "matched derogations" would undermine discipline on official financing support, as well as giving participants in the OECD Arrangement an unfair advantage over non-participants (since participants would have access to information about the terms other participants were providing).[102]

This ruling could be quite important to the export finance provided by governments to civil aircraft exports. Essentially, the ruling states that government matching of other countries' export credit terms is an illegal export subsidy, if the terms being matched are themselves inconsistent with the OECD terms (even though OECD tolerates such matching). This ruling, which was not appealed,[103] will probably eliminate the ability of countries to match other countries' offers that are inconsistent with OECD terms, without violating the SCM Agreement. While such offers could be challenged as inconsistent with the SCM Agreement, the delayed nature of the remedy means that the panel

[98] *Canada—Measures Affecting the Export of Civilian Aircraft,* Report of the Panel, WT/DS70/R, (1999), at ¶¶ 9.224 & 9.231. This finding was not challenged on appeal. Canada merely challenged the panel's interpretation of the term "benefit" by arguing that absent a cost to the government a benefit could not have been conferred on Bombardier. *See Canada—Aircraft, supra,* note 93, ¶ 7.

[103] The Article 21.5 Panel Report was appealed on other issues than "matching." *Canada—Measures Affecting the Export of Civilian Aircraft: Recourse by Brazil to Article 21.5 of the DSU*, WT/DS70/AB/RW (2000).

ruling may create significant opportunities for governments to gain market share for their national exporters through aggressive use of export credits, knowing that more responsible governments will be unable to match these terms.[104]

B. Brazil—Aircraft: Impact on Export Credit Programs

The two issues decided in the *Brazil—Aircraft* case with greatest import for the civil aircraft industry are: (1) whether government export financing assistance can be defended on the ground that it does not confer a "material advantage"; and (2) the scope of the "safe harbor" created in the Illustrative List for export financing that conforms to the terms of the plurilateral rules agreed by the OECD.

1. Material Advantage

Brazil's PROEX program bought down the interest rate available in the commercial marketplace for financing obtained by purchasers of regional aircraft manufactured by the Brazilian company, Embraer. As originally challenged by Canada, PROEX bought down the interest rate from the rate negotiated by the aircraft manufacturer and purchaser by as much as 3.8 percentage points, resulting in a reduction of the aircraft purchase price of up to $3.5 million.[105]

In the original dispute, Brazil argued that while PROEX was an export subsidy within the meaning of Article 3 of the SCM Agreement, it was exempted from challenge because it did not provide a "material advantage." As background, item (k), paragraph 1 of the Illustrative List of Export Subsidies annexed to the SCM Agreement lists as an export subsidy:

> The grant by governments (or special institutions controlled by and/or acting under the authority of governments) of export credits at rates below those which they actually have to pay for the funds so employed (or would have to pay if they borrowed on international capital markets in order to obtain funds of the same maturity and other credit terms and denominated in the same currency as the export credit), or the payment by them of all or part of the costs incurred by exporters or financial institutions in obtaining credits, *in so far as they are used to secure a material advantage in the field of export credits.*
>
> (Emphasis Supplied)

The Illustrative List of Export Subsidies also indicates, in particular provisions, that certain practices should not be considered as export subsidies.[106] Brazil made an *a*

[104] The *Canada—Aircraft* ruling on "matching" has recently been reaffirmed by the panel considering the "*PROEX III*" case brought by Canada, and discussed further below. *See Brazil—Export Financing Programme for Aircraft: Second Recourse by Canada to Article 21.5 of the DSU,* Report of the Article 21.5 Panel, WT/DS46/RW/2 (2001) ("*PROEX III Panel Report*"), ¶¶ 5.109–5.117. The panel reasoned that while this ruling may undercut the ability of parties to the OECD Arrangement to "match" terms that derogate from the OECD Arrangement, they can nonetheless achieve discipline over such terms by using the SCM Agreement to challenge those terms as illegal export subsidies. Of course, this raises the question whether the SCM Agreement can serve as a meaningful deterrent to such practices, given the length of time that elapses in WTO proceedings and their implementation.

¶ The ruling was endorsed by a third WTO panel, this one brought by Brazil against Canada. *See Canada—Export Credits and Loan Guarantees for Regional Aircraft*, Report of the Panel, WT/DS222/R (2002). At the DSB meeting to adopt this decision, the U.S. and EU delegations strongly criticized the result. *See U.S., EU Hit Out at WTO Panel Ruling on Matching Subsidies in Aircraft Dispute,* 19 (8) BNA INTERNATIONAL TRADE REPORTER 301 (February 21, 2002).

[105] *Brazil—Export Financing Programme for Aircraft,* Report of the Panel, WT/DS46/R (1999) at ¶¶ 4.41–4.43.

[106] The Illustrative List states that: "Measures referred to in Annex I as not constituting export subsidies shall not be prohibited under this or any other provision of this Agreement."

contrario argument that because PROEX fell within the ambit of item (k) but did not meet the conditions set forth therein, PROEX therefore could not be considered as an export subsidy. Brazil argued that PROEX did not confer a "material advantage in the field of export credits," because the resulting rates did not give Embraer an overall edge, in light of the alleged significant Canadian government support for its own industry. The Panel rejected this argument, finding *inter alia* that PROEX did confer a material advantage relative to terms available in the marketplace, and therefore that PROEX was not excluded from being an export subsidy.

The Appellate Body affirmed the Panel's findings but disagreed with its reasoning. The Appellate Body first noted that the term "material advantage" must be interpreted as requiring more than a mere "advantage", as in order for government assistance to be a "subsidy" it would necessarily have to confer an "advantage" (due to the requirement that a subsidy must confer a "benefit"). The Appellate Body found that the Panel had interpreted the term "material advantage" in a manner that was effectively the same as the interpretation of the term "benefit" in Article 1 of the SCM Agreement, by finding that a government action provides a material advantage if it is on terms more favorable than are available in the marketplace. The Appellate Body reasoned that this approach would make this language in item (k) devoid of meaning, since a government action found to be a subsidy would necessarily provide a material advantage.[107]

The Appellate Body then sought to determine whether PROEX had been used to convey a "material advantage". The Appellate Body relied on the second paragraph of item (k) (quoted in Part A2 above)—providing that certain export credit practices conforming with the OECD Arrangement are not export subsidies—as relevant context for interpreting the first paragraph of item (k). The Appellate Body noted that the OECD Arrangement provides "one example" of a market benchmark, by establishing a Commercial Interest Reference Rate ("CIRR"), which represents the relevant government bond rate plus one hundred basis points. The Appellate Body concluded that an appropriate comparison for purposes of "material advantage" was to compare the effective interest rate in a PROEX transaction with the relevant CIRR. If the effective net interest rate was below the relevant CIRR, this is a "positive indication" that a material advantage exists.[108] Since Brazil had not demonstrated that the PROEX effective interest rates were above the relevant CIRR, it had not shown the absence of a "material advantage."

The Appellate Body also rejected Brazil's argument that the term "in the field of export credits" should be interpreted to mean that PROEX did not provide a material advantage if it merely "matched" the subsidies provided by Canada to its own regional aircraft industry.[109] The Appellate Body made clear that it was inappropriate to compare the challenged subsidy, in this case the PROEX interest rates, with the total amount of subsidies provided by another Member.

In an Article 21.5 compliance proceeding, Canada challenged the revised "PROEX II" program adopted by Brazil in an attempt to comply with the Appellate Body ruling. The PROEX II program revised the subsidy program so that it reduced the interest rate to twenty basis points above the U.S. Treasury rate. The Article 21.5 Panel found that Brazil's program still did not qualify for exemption based on the claimed "material advantage" exception, holding that (1) Item (k), paragraph 1 could not be used as an affirmative defense (rejecting Brazil's *a contrario* argument), (2) that PROEX payments

[107] *Brazil Aircraft, supra* note 92, at 182.
[108] *Id.* at ¶¶ 180–82.
[109] *Id* at ¶ 185.

were not "the payment by [governments] of all or part of the costs incurred by exporters or financial institutions in obtaining credits," and (3) that in any event PROEX payments did convey a "material advantage."[110]

On appeal by Brazil, the Appellate Body held that Brazil had not established that PROEX II did not provide a material advantage. The Appellate Body stated that Brazil had to show either that the PROEX II interest rates were at or above CIRR, or that the rates were at or above an "alternative market benchmark."[111] The Appellate Body noted that Brazil had not argued that the PROEX II interest rates were at or above CIRR. The Appellate Body then considered whether the PROEX II floor rate of twenty basis points above the U.S. Treasury rate was an appropriate market benchmark, in light of evidence submitted by Brazil regarding other aircraft transactions that allegedly existed in the marketplace at this rate, and found that Brazil had provided insufficient evidence to support this benchmark. The Appellate Body then declined to address the other two legal issues ruled on by the Panel, stating that these findings were "moot and, thus, of no legal effect."[112]

2. OECD Safe Harbor

Brazil then amended its program again. The new "PROEX III" program authorized the provision of a buy-down payment to reduce the rates paid by purchasers of Embraer aircraft to levels "compatible with those practised in the international market." PROEX III also stated that such buy-downs should be established on a case-by-case basis, "complying with the Commercial Interest Reference Rate (CIRR), published monthly by the OECD."[113]

In the Article 21.5 compliance proceeding with respect to PROEX III, Brazil argued that its revised PROEX program was exempt from challenge because it complied with the safe harbor of item (k), paragraph 2 of the Illustrative List (quoted earlier).[114] The Article 21.5 Panel found that because of the discretionary authority provided under PROEX III to set the rate levels, PROEX III did not—as such—violate the SCM Agreement because it did not necessarily confer a benefit when compared to the market.[115] The Panel further

[110] *Brazil—Export Financing Program for Aircraft: Recourse by Canada to Article 21.5 of the DSU*, Report of the Article 21.5 Panel, WT/DS46/RW (2000) at ¶¶ 6.21–6.107.

[111] Id. at ¶ 67.

[112] *Id.* at ¶¶ 78 and 81.

[113] *See* Central Bank of Brazil, *Resolution 2799,* Article 1.

[114] Brazil made other arguments as well; we focus here on the argument with greatest relevance to the civil aircraft industry.

[115] *See PROEX III Panel Report, supra* note 104, at ¶¶ 5.30–5.51. The Panel framed the issue as whether PROEX III conferred a benefit on producers of regional aircraft, as distinct from lenders involved in the purchase of regional aircraft. A benefit conferred on the lenders rather than the producers arguably would not have violated the SCM Agreement as it would be a subsidy to the financial service provider and therefore outside the scope of the SCM Agreement, which deals with subsidies for goods.] *Id.* at ¶ 5.27. The Panel then held that PROEX III did not mandate Brazil to confer a benefit on producers of regional aircraft, within the meaning of the traditional mandatory / discretionary doctrine, because Brazil retained discretion to provide PROEX III only on terms consistent with terms otherwise available to the borrower in the international market. *Id.* at ¶¶ 5.48–5.49. The Panel's ruling on this issue may be criticized, as the Panel itself acknowledged that the "very logic" of PROEX III would not be achieved if PROEX III were administered in a way that did not confer a benefit when compared to the terms that the purchaser could obtain on the international commercial market. *See* id. at ¶ 5.51 and n. 68 (describing this as an "unlikely scenario"). As a result, the Panel's holding seems premised on a somewhat technical and unrealistic assessment of PROEX III.

¶ At a deeper level, the issue is whether the mandatory measure doctrine in GATT/WTO jurisprudence should be interpreted as precluding the finding of a violation unless a measure legally requires a violation, even if the measure makes it a virtual certainty that a violation will occur as a practical matter. Another WTO

found that, assuming PROEX III did confer a benefit, Brazil had shown that it could administer the program so as to comply with the safe harbor of item (k), paragraph 2. That is, nothing in PROEX III required Brazil to administer the program in violation of the requirements of the safe harbor.

However, the Panel interpreted the scope of the safe harbor quite narrowly. The Panel held, in particular, that compliance with the safe harbor requires a Member to comply with certain provisions of the OECD Arrangement other than the CIRR interest rate. The safe harbor requires Members not to offer credit terms longer than the applicable period (ten years for regional aircraft, twelve years for large aircraft) and requires that the credit terms not to exceed the 85 percent loan-to-value ratio.[116] These restrictions on the use of the safe harbor should prevent item (k), paragraph 2 from undermining the disciplines of the OECD Arrangement as well as the SCM Agreement.

C. France—Flight Management System Subsidy

In May 1999, the United States requested WTO consultations with regard to an alleged French subsidy provided to Sextant Avionique to develop a Flight Management System (FMS) in direct competition with the FMS manufactured by a U.S. company, Honeywell.[117] The United States contended that the French government had agreed to grant, and the European Commission had approved, a loan, on preferential and non-commercial terms, in the amount of 140 million French francs, to be disbursed over three years, for a project in which Sextant would develop a FMS adapted to Airbus aircraft.

The United States stated that it considered the aid to cause adverse effects within the meaning of Article 5 of the SCM Agreement. Specifically, the United States believed that this aid caused serious prejudice within the meaning of Articles 5(c) and 6 of the SCM Agreement because the subsidy's effect was to displace or impede imports of FMS from the United States into France, to displace or impede exports of FMS from the United States to third country markets; and to cause significant price undercutting by the subsidized product as compared with the price of a like product of a U.S. producer in the same market or significant price suppression, price depression or lost sales in the same market. However, the United States ultimately did not request a panel regarding this alleged subsidy, for unrelated commercial reasons.

VII. The Future

What will be the most important issues regarding civil aircraft in the GATT/WTO system in the next decade? Controversy will undoubtedly continue over governments' assistance to their domestic industries. In addition, there may be increased disputes over the role of government "inducements" to purchase from their domestic industries.

panel recently endorsed the restrictive view of the mandatory measure doctrine. *See United States—Measures Treating Export Restraints as Subsidies,* Report of the Panel, WT/DS194/R (2001). Such rulings, however, contribute to the inefficacy of the WTO in resolving trade disputes within a commercially reasonable period, given the inability of the WTO to issue injunctive relief. Once the violation occurs, a manufacturer may forfeit a crucial sale, particularly in the civil aircraft industry where large single competitions are common.

[116] *See OECD Arrangement on Guidelines for Officially Supported Export Credits, Annex III: Sector Understanding on Export Credits for Civil Aircraft*, Articles 3, 4, 21.

[117] *European Communities—Measures Relating to the Development of a Flight Management System*, complaint by the United States (WT/DS172/1), dated May 21, 1999.

Finally, as discussed earlier, there may be continued incremental liberalization in the air transport services area, with attendant positive implications for civil aircraft producers.

A. Tensions over Government Assistance

Despite the fact that the new SCM Agreement now sets forth improved subsidy disciplines, backed up by an almost unblockable dispute resolution mechanism, government assistance to the civil aircraft industry continues at significant levels. As is apparent from the continuing saga of the Brazil—Canada subsidy dispute, the WTO dispute settlement system sometimes does not provide timely solutions in this area. This means that complaining parties may not be able to rely solely on WTO dispute settlement to resolve highly political issues of government assistance to domestic civil aircraft industries.

1. Airbus "A380 Super Jumbo" Project

Airbus has announced the launch of an A380 "super jumbo," an aircraft substantially larger than the largest version of the Boeing 747. This massive project and to a lesser extent the recent provision of program development assistance for the A340–500 and A340–600 programs have raised questions under the Bilateral Agreement.

As discussed earlier, the Bilateral Agreement can be viewed as a *modus vivendi,* in which the United States refrains from taking Airbus subsidy issues to the WTO in return for three basic European commitments:

- no supports will be provided to Airbus other than new aircraft program development supports,
- new program development supports will not exceed 33 percent of total program development costs and there will be a progressive reduction in support levels, and
- development support will not be furnished to a new aircraft program unless a valid critical project appraisal based on conservative assumptions demonstrates a reasonable expectation that all costs (including repayment of all support money) will be recovered in not longer than seventeen years.

The critical project appraisal requirement is a central issue posed by the A380. Obviously, the question of what are the proper "conservative assumptions" for an A380 critical project appraisal is a major question to be resolved if this project is to be funded within the disciplines of the Bilateral Agreement.

The European parties have adopted the position that they will not discuss the critical project appraisal, or reveal information on that appraisal to the U.S. Government, until *after* the Airbus member governments have committed the funds for subsidizing development costs. Moreover, the European Commission's position in response to U.S. inquiries concerning the critical project appraisal on the most recent program, the A340–500 and A340–600, is to define "commitment" in such a manner that the time for disclosing details of the critical project appraisal is too late to prevent disbursement of the subsidy monies.[118]

[118] *U.S. Attempts to Take Down Subsidies for Airbus Superjumbo,* INSIDE U.S. TRADE, Oct. 20, 2000 (stating that "none of the four [Member States] have provided the Critical Project Appraisal, and are not likely to do [so] until the project is officially launched.").

In April 2001, the EU notified the U.S. government that seven Member States had made commitments to provide development support for the A380. They provided information on the terms of that support. However, the U.S. government stated in July 2001 that it believes that additional information is required in order to undertake a "meaningful analysis," and had requested supplemental information.[119]

If the United States cannot be satisfied that the European governments will refrain from subsidizing uneconomic aircraft programs, then there will be little reason for the United States to rely on the Bilateral Agreement when it now has a far stronger and non-blockable WTO remedy available. If the issues of the validity of the critical project appraisal and the amount of government funding are not resolved at an early stage, then a bilateral confrontation over the A380 could occur.

2. Restructuring of Airbus

On July 11, 2001, Airbus Industrie and its member companies converted the consortium into a "single corporate entity," the Airbus Integrated Company ("AIC"). This involved the transfer by each of the member companies of their Airbus-related production facilities and operations to a new, private company organized under French law as a simplified joint stock company (Société par Actions Simplifiée). AIC has two shareholders, the European Aeronautic Defence and Space Company ("EADS") and BAE Systems (based in the UK) holding respectively eighty percent and twenty percent of the new stock. EADS was formally created in July 2000 and combined the activities of Aerospatiale Matra (France), DaimlerChrysler Aerospace AG (Germany) and Constructiones Aeronauticas SA (Spain). About thirty percent of EADS stock is publicly held pursuant to the initial public offering (IPO) in July 2000.

In principle, the new structure could help ease bilateral U.S.—EU tensions over Airbus operations. The new AIC is indirectly held by the public (through EADS) and therefore should be subject to significantly greater transparency obligations. In its former guise as a Groupement d'Interet Economique, the Airbus consortium was not required to report its financial results to the public because it was merely operating as a vehicle for cooperation among the four European partners. In addition, given the shareholding structure of EADS (including public shareholders), the new AIC should likely be subject to greater market discipline than the old Airbus when it comes to investing in major new commercial aircraft programs.[120]

3. Indirect Supports for Boeing

It is also possible that the EU will seek to use the SCM Agreement to address perceived assistance provided by the U.S. government through "indirect supports" arising out of U.S. government contracts. Such an initiative might occur as a response if the U.S. government initiates a WTO dispute settlement proceeding involving assistance to Airbus. (Indeed, the EU's WTO challenge to the U.S. Foreign Sales Corporation (FSC) tax legislation may

[119] *Falken Testimony, supra* note 1, at 4. The EU reportedly was "reviewing" these questions, as of July 2001. *Aldonas Testimony, supra* note 70, at 3.

[120] The United States might however raise questions such as whether the member companies had received adequate payment from AIC, so that AIC's acquisition of operations and production facilities occurred at market value; whether the burden of repaying past government financial support was passed entirely to AIC; and to what extent would the indirect support provisions of the 1992 Agreement apply to European government funding of military and space R&D projects. The United States might argue that if any of these conditions were not met, the European governments could be in violation of the Bilateral Agreement's prohibition of all aid other than new program development supports.

have been motivated, in part, by a desire to reduce the level of perceived U.S. government support for Boeing.[121])

The EU has alleged that indirect support arising out of Department of Defense ("DoD"), National Aeronautics and Space Administration ("NASA"), and Federal Aviation Administration ("FAA") spending results in indirect support to U.S. large civil aircraft manufacturers that is "well above the 33% limit set by the 1992 bilateral Agreement."[122] For instance, the EU cites the NASA programme for High Speed Civil Transport as resulting in benefits for the U.S. industry's civil aircraft production. The U.S. government has rejected these European claims, arguing that virtually no identifiable benefits have accrued to current U.S. commercial aircraft programs from currently funded NASA, FAA or DOD contracts.[123] For instance, the United States argues that over ninety percent of NASA and FAA R&D results are available on a non-discriminatory basis to EU aerospace companies, and are thus exempt from the indirect support rules, under Article 5.3 of the Bilateral Agreement. The United States also claims that benefits tend to flow from the commercial side of the industry to the military side, rather than vice-versa, and that any U.S. indirect supports are exceeded by European indirect supports.[124]

4. Brazil-Canada Dispute

The Brazil—Canada dispute over subsidies shows some signs of easing. In March 2001, Brazil requested a panel ruling regarding Canada's provision of assistance in a particular competition to supply regional aircraft to Air Wisconsin.[125] Canada argued that its assistance merely served to "match" the assistance that was offered by Brazil in support of Embraer.[126] Relying on the panel ruling in *Canada—Aircraft, Article 21.5,* the panel rejected Canada's argument on the ground that matching is not consistent with the SCM Agreement.[127] According to press reports, both governments expressed interest in reaching a *modus vivendi* on government support to regional aircraft industries with a view to softening their long-standing bilateral dispute.[128]

[121] For instance, the EU's *Report on United States Barriers to Trade and Investment* (Oct. 28, 1998) stated that the FSC system "grants a considerable competitive advantage to the US aircraft manufacturers to the detriment of their competitors," and alleged that improved earnings to improved earnings due to the FSC system translated "into advantages of US$ 1 to 2 billion for Boeing's market capitalization." Boeing was the only company identified as a recipient of FSC tax benefits. *Id.*, p. 41.

[123] *See, e.g., Aerospace Daily* (Dec. 13, 1996), Vol. 180, No. 50, p. 385.

[124] Other U.S. arguments include that financial contributions to military programs are exempt from review under the broad GATT Article XXI national security exception regardless of any benefit to large civil aircraft; that the United States received fair value in return for its financial contribution (as in many military procurement situations) and did not "overpay;" and that the acquisition of R&D is more akin to a "service", than a "good," and could, therefore, be considered outside the scope of the SCM Agreement (*see* SCM Agreement Art. 1.1(a)(1)(iii)).

B. Inducements

Over the past decade, the issue of government "inducements" to purchase their domestic manufacturers' aircraft has arisen with increasing frequency, and is therefore worth a brief discussion. As discussed above, the Aircraft Code prohibits signatories from providing political or economic inducements as an incentive to the sale or lease of civil aircraft.

Both the United States and the EU have, in the past, accused one another of intervening to assist their manufacturers in competitions with foreign airlines, particularly where the airlines were state-owned. The United States focused particularly on French government activities in support of Airbus sales in India, Kuwait and South Korea.[129] In return, the EU also has expressed strong concern about U.S. government assistance with third country airlines, such as a major Boeing sale to Saudi Arabia.[130] The EU has also raised concerns about efforts by members of Congress to encourage Taiwan to buy Boeing aircraft.[131]

Quite recently, senior U.S. government officials have reiterated their concern about inducements provided by European governments for third country airlines to buy Airbus planes. The Undersecretary of Commerce for International Trade, Grant Aldonas, testified in 2001 that:

> The Airbus consortium's parent governments have intervened in sales competitions in an effort to win orders for Airbus. . . . In the past, some European governments have sought to influence these [purchasing] decisions by potentially offering increased airline landing rights for the purchasing airlines, granting preferential trading rights in unrelated sectors to benefit the country purchasing aircraft, and demonstrating willingness to advance the status of countries interested in joining the European Union.[132]

Indeed, according to press reports, European governments offered Russia the ability to use the European launching system, Arianespace, for its launch of Russian Soyuz spacecraft, if Russia would purchase Airbus planes.[133] However, Russia reportedly chose to purchase Chinese planes despite the European effort.

The continued concern about such inducements suggests that further attention will be given in the GATT/WTO context to achieving discipline on such inducements, given their particular prevalence in the civil aircraft sector.

VIII. Conclusion

In this article, we have sought to provide an overview of the practical application of the GATT/WTO to civil aircraft trade, dealing with the past, present and future. If there is a single conclusion that we can draw from this review, it is the difficulty of achieving legal discipline over governments' desire to promote a perceived national interest in a strong civil aircraft industry. Whatever the rules that are written, the ability of the GATT/WTO system to bend government decision-making depends to an extent on governments' commitment to compliance with WTO rulings, given that the system lacks enforcement jurisdiction, in the form of specific performance or damages. Ultimately, reforming the

role of governments in the civil aircraft industry will depend on national governments' evaluation of their appropriate role in relation to industry. For instance, if Airbus is one day viewed as a mature company that needs assistance relatively less than other candidates (such as small farmers), European assistance may dry up. The same may be true elsewhere as well. This does not mean that one should abandon hope of using multilateral rules to discipline governmental actions in this area, but merely that a healthy dose of realism and patience is required.

I. Introduction

From a purely legal perspective, the Dispute Settlement Understanding ("DSU") consultations process may not strike one as the most compelling phase of WTO dispute settlement. The panel and the appellate stages, discussed in Chapters 26 and 27 of this book, have naturally attracted more attention among academics and legal practitioners. There are, however, a surprising number of interesting procedural and practical issues related to consultations that have been dealt with by WTO panels and the Appellate Body, as well as by WTO Members.

A question exists concerning the justification for consultations, that is, how effective are consultations and how do the different procedural elements established by the DSU contribute to or hamper effectiveness? The first part of the question concerning the effectiveness of consultations cannot be answered fully in this chapter. To review the effectiveness of consultations would require more detailed information than is publicly available concerning settlement agreements reached during consultations and, more importantly, their implementation. Nevertheless, the statistical information concerning the rate of settlements achieved during consultations provides some measure of their effectiveness and some information is thus provided on this topic. Furthermore, this chapter discusses the usefulness of a number of procedural elements such as deadlines or objections to third party joinder in ensuring the effectiveness of the system.

A second question concerns the relationship between the consultations request and any subsequent panel proceeding. Does the consultations request limit the scope of the panel request and thereby the panel's terms of reference? And if not, to what extent do claims raised in the panel and consultation requests have to overlap? WTO panels addressing this question have given a liberal interpretation to the legal requirements for making a consultations request in Article 4.4 DSU. To date, however, the Appellate Body has not spoken definitively on the issue.

A third question relates to how WTO Members have approached the consultation process. Litigation strategies used by the large WTO Members, in particular the EU and the United States, may pose a systemic threat to the consultations process. It appears that large trading nations tend to make a serious effort to consult mainly when faced with a complaint by a WTO Member of their own size and importance. In those cases, the economic stakes are high and both sides have sufficient interest and clout to engage their opponent in meaningful consultations, and to make a serious effort to settle the dispute before it reaches a panel. By contrast, when faced with complaints involving smaller countries, large WTO Members frequently do not take the consultations process seriously, instead considering consultations as merely a required preliminary stage before litigation. From a legal and systemic perspective, such strategies are detrimental in a large number of cases because they make consultations meaningless, with the result that an entire stage of the dispute settlement process becomes useless. Equally, from a practical perspective it is important that all parties make a good faith effort to consult. Otherwise parties will forego the opportunity to reach a quick settlement and to avoid the substantial expenses involved in a panel proceeding and a possible appeal.

II. History and Development of the Consultations Process

Although this chapter includes some discussion of the evolution of the consultations process through different rounds of trade negotiations, it focuses on the consultations process and the decisions handed down under the DSU, rather than on issues arising under the GATT 1947.

A. Consultations under the GATT 1947

Consultations between GATT Contracting Parties were the first stage of dispute settlement in the GATT. The first GATT provision on the settlement of disputes through consultations was Article XXII of the GATT 1947.[1] In 1955, among other modifications to the Agreement, paragraph 2 was added to that provision, allowing a party to consultations to request the Contracting Parties ("CPs") to intervene on matters where a satisfactory solution could not be reached between the original parties to consultations.[2]

The GATT/WTO dispute settlement system as a whole has undergone a distinct evolution since its establishment in the form of the very basic provisions set forth in Articles XXII and XXIII of the GATT 1947. Two parts of the system, however, have been key elements since its inception: consultations at the beginning of the process, and the possibility of suspension of concessions or other obligations at the very end of the process. These two components mark the opposite ends of two extremes: consultations are the most conciliatory form of settling a dispute, and suspension of GATT concessions or other obligations is the ultimate means of retaliation and enforcement when a party fails to comply with its legal obligations under the Agreement. Over time the consultations process has changed less dramatically than the panel process which now contains an appellate stage. However, as with other stages of WTO dispute settlement system, consultations have become more legalized. Written rules agreed among the parties and in some instances codifying panel decisions have been introduced, and over the decades become increasingly detailed.[3] WTO panel and Appellate Body reports have added considerably to the body of decisions that provide guidance as to the legal requirements for consultations.

In 1958 procedures were introduced allowing the participation by third parties in Article XXII consultations.[4] The rules required (1) notification of the GATT Executive Secretary by the contracting party seeking consultations for the information of all contracting parties; (2) notification of the Executive Secretary by any other contracting party with a "substantial trade interest" informing the consulting parties of the desire to join consultations; (3) joinder of the third party in consultations if the party to which the request was made agrees that there is a substantial trade interest;[5] (4) referral of a

[1] The GATT 1947 was accepted and applied by most Contracting Parties based on the Protocol of Provisional Application, 55 U.N.T.S. 308 (1947). Article XXII provides:

> Each contracting party shall accord sympathetic consideration to, and shall afford adequate opportunity for consultation regarding, such representations as may be made by any other contracting party with respect to the operation of customs regulations and formalities, anti-dumping and countervailing duties, quantitative and exchange regulations, subsidies, state-trading operations, sanitary laws and regulations for the protection of human, animal or plant life or health, and generally all matters affecting the operation of this Agreement.

[2] GATT, *Protocol Amending the Preamble and Parts II and III of the General Agreement in Final Act Adopted at the Ninth Session of the CONTRACTING PARTIES,* 278 U.N.T.S. 200 (1957).

[3] For a more detailed description of the development of dispute settlement rules *see* THE GATT URUGUAY ROUND, A NEGOTIATING HISTORY (1986–1992) Volume II, 2663 (Terence P. Stewart ed. 1994).

[4] *Procedures Under Article XXII on Questions Affecting the Interests of a Number of Contracting Parties*, BISD, 7th Supp. 24 (1959) (adopted on Nov. 10, 1958) ("*1958 Procedures on Article XXII*"). The same substantive elements of the joinder into Article XXII consultations were later incorporated into Article 4.11 DSU on joint consultations.

[5] As to procedural requirements, Article 4.11 DSU stipulates that interested Members must notify the DSB of their interest to join consultations within ten days of the circulation of the request for consultations.

claim to the contracting parties by a third party whose request to join consultations was rejected; (5) informing the contracting parties of the outcome of consultations; and (6) the provision of assistance in consultations by the Executive Secretary if requested by the consulting parties.

Procedures introduced under Article XXIII in 1966 established specific provisions for the resolution of disputes between developed and less-developed country contracting parties.[6] If bilateral consultations under Article XXIII had failed, the less-developed country complainant could refer the matter to the Director-General for his good offices under the new provisions.

In 1979 the Understanding Regarding Notification, Consultation, Dispute Settlement and Surveillance was adopted as a result of the Tokyo Round of Multilateral Trade Negotiations.[7] The 1979 Understanding codified for the first time a framework of procedural rules for the GATT dispute settlement process as a whole. The principal aim was to establish rules for the panel process and to improve its functioning, but more elaborate requirements for the consultations process were also included. The requirement to respond "promptly" to requests for consultations and to attempt to conclude consultations "expeditiously" with a view to reaching mutually satisfactory conclusions was introduced. Despite these more detailed provisions intended to prevent parties from procrastinating, no specific deadlines or guidance on the length of consultations were introduced. A further new element was that the request for consultations should include grounds for the request. No specific obligations were introduced with respect to developing countries other than the requirement that during consultations special attention should be given "to the particular problems and interests of less-developed contracting parties".[8] The provisions conclude with the requirement to undertake consultations under Article XXIII:1 first before referring the matter to the contracting parties, *i.e.,* before recourse to a panel.[9]

In 1990, four years after the official launch of the Uruguay Round, the contracting Parties adopted the Improvements to the GATT Dispute Settlement Rules and Procedures.[10] These rules applied until the end of the Uruguay Round when they were replaced by the more comprehensive DSU. For the first time, the Mid-term Agreement established a specific time frame for consultations. A party had to respond within ten days to a request to consult, and consultations had to be entered into within thirty days from the date of the request. In the case of a failure to respond, the party that requested consultations could then request the establishment of a panel.[11] If consultations failed, the complaining party could request the establishment of a panel within sixty days of the request for consultations. As under the 1979 Understanding, the consultations request had to be made in writing, and had to state grounds for the request. The GATT Council had to be notified of the request.[12] In addition, for the first time a specific provision with abbreviated deadlines in cases of urgency, including cases of "perishable goods en route", was introduced. In such cases parties had to enter into consultations within ten days of the consultations

[12] *Id.*

request. In the case of failure of consultations the establishment of a panel could be requested within thirty days.[13]

As with the DSU, the Mid-term Agreement left key terms such as "urgency" undefined and open for interpretation by panels. This somewhat sketchy drafting style (applied throughout the DSU) has had positive as well as negative effects. On the one hand its flexibility allows panels to interpret legal terms in light of the applicable facts and on a case-by-case basis. On the other hand, the openness of this drafting style leaves broad gaps that may go beyond a panel's capacity, competence and even willingness to "legislate". As a result, it can create situations where the dispute settlement process is overburdened with a law-creating function that should have been assumed by the WTO Members.

B. Negotiations During the Uruguay Round: Power-Oriented versus Rule-Oriented

The GATT 1947 dispute settlement system has been viewed from the perspective of an international dispute resolution paradigm describing power-oriented diplomacy versus rule-oriented diplomacy.[14] A power-oriented system functions based on conciliation and negotiation and the outcome of a dispute is largely influenced by the relative power status of the parties. Such a system will therefore usually work to the advantage of the more influential and stronger parties. By contrast, in a rule-oriented system settlement of a dispute is achieved by reference to agreed rules.[15]

In the past some commentators considered the GATT 1947 as a "negotiating forum" designed to "preserve a balance of concessions and obligations"[16] and thus as a more power-oriented rather than rule-based system. The progressive legalization of the GATT 1947 and in particular the changes brought about by the establishment of the WTO and the DSU have tipped the balance strongly towards a rule-based system. It could, nevertheless, be argued that consultations under the DSU, being a negotiations-based phase of the dispute settlement process, are a remnant of the power-based oriented approach. Consultations are free from third party influence. Thus, there is no one to supervise or monitor the way in which parties conduct consultations under this system and a larger and more powerful country could still bring to bear its influence upon a smaller country through implicit or explicit threats of negative consequences. For example, a developed country challenged by a developing country could threaten the suspension of development aid if the developing country does not agree to a settlement during consultations, even if the settlement might not be the most advantageous and even if it would not have accepted the settlement under different circumstances.

The possibility of exerting political, economic or any other type of pressure during consultations is to some extent addressed by the fact that the party requesting consultations can proceed to the request for establishment of a panel after sixty days if it considers that consultations were unsuccessful. The right to a panel when consultations have failed brings the dispute into the ambit of the rule-based system through the application of law under third party control. It thus makes little sense to be overly critical of the consultations phase merely because it is a forum in which parties are capable of exerting political pressure against one another. Consultations are a necessary element of every dispute and will therefore occur, whether formalized as a phase of the dispute under the DSU or

[13] *Id.*

not. Even if a formal consultations phase had been omitted and parties had immediate access to the panel process, parties would still be likely to communicate and negotiate before one party requested a panel, just as parties often do in domestic litigation. Within these negotiations, there is always the possibility that parties will exert pressure upon other parties that are not in an equal negotiating position and have less leverage. It is a characteristic of the WTO that is manifest not only during consultations, but during any phases of negotiations, such as tariff negotiations.

III. The Contribution of Consultations to the Settlement of GATT/WTO Disputes

As of June 30, 2004, a total of 312 consultations had been notified to the WTO[17] out of which 124 cases have been definitively resolved. Out of those 124 cases, eighty proceedings ended in a panel or Appellate Body report and an additional sixteen cases were settled during the panel stage through mutually agreed solutions. In another 44 cases parties settled during consultations. The remaining cases were at least formally unresolved, with 109 pending consultations and 24 active panels.[18] Thus, a little under a quarter of all cases resolved have been settled without ever reaching the panel stage. This seems like a reasonable number of cases but by no means inspires enthusiasm about the performance of the consultations mechanism. Considering the DSU's explicit aim of settling disputes and the fact that consultations seem an appropriate arena for doing so early on, one would have hoped that a larger proportion of resolved cases would formally settle during consultations. It must be considered, however, that there is a relatively large gray area of inactive consultations cases among the cases currently recorded as pending consultations. Likely, quite a few of these proceedings in fact settled during consultations but settlement was never formally notified to the WTO Secretariat.[19] The number of cases that could be considerd as actually settled during consultations is therefore potentially higher. The overall performance of the consultations process must thus be considered more successful than would be indicated by the formal record. [20]

IV. Objectives and Nature of the Consultations Process

Consultations provide a relatively powerful tool for provoking a reaction from the challenged party since the party requesting consultations can fairly quickly (within ten or

[17] For a summary of the state of play of all WTO cases, *see* 30 June 2004 *Update of WTO Dispute Settlement Cases*, WT/DS/OV/21 (2004) ("*Dispute Update*"). A number of these cases are consultations requests that were consolidated at the panel stage, so that the total of the cases accounted for here will therefore not add up to 312.

[18] And in an additional 26 cases where panels are inactive, the contested measures have been terminated without formal notification of a mutually agreed solution at either the consultations or panel stage or the panel request was withdrawn.

[19] Calculated based on the information provided in WT/DS/OV/21, the average duration of the pending consultation cases has been a little over fifteen months.

[20] These figures only include cases where the settlement was reached by means of consultations and was formally notified to the DSB. Please note that other authors reach a higher number of settlements by including cases that have been resolved without resorting to the panel process, *i.e.* including cases where the panel request was withdrawn, *see* C. Christopher Parlin, *Part I: Review of the Dispute Settlement Understanding (DSU): Panel 1A: Stage I—Operation of Consultations, Deterrence and Mediation*, 31 LAW & POL'Y INT'L BUS. 565, 567 (2000). For more statistical information on WTO dispute settlement in general *see also* Young Duk Park and Barbara Eggers, *WTO Dispute Settlement 1995–99: A Statistical Analysis*, 3 JOURNAL OF INT'L ECON. LAW 193, 196 (2000).

thirty days) request a panel if the defending party does not respond to the request or refuses to consult. A request for consultations provides an opportunity to mount a relatively public threat since it will often attract the interest of other WTO Members, non-governmental organizations, companies, academics and other individuals. On the other hand, the consultations process itself is private in nature. The DSU procedures establish a process that is informal, party-controlled and settlement-oriented, rather than a formalized transition stage on the way to panel proceedings. This is demonstrated by the fact that the DSU does not provide for any involvement by the Dispute Settlement Body ("DSB") or other WTO bodies during consultations. The involvement of a third party in the form of good offices, conciliation or mediation can only occur with the agreement of the parties.[21] The fact that consultations are confidential and that no formal record exists further evidences that the drafters of the DSU did not envisage outside interference during the consultation stage of the dispute settlement process. Furthermore, panel decisions declining to consider the adequacy of consultations (discussed below) recognize that what happens during consultations is a matter of diplomacy, and is thus not subject to panel review.

A. Settlement of the Dispute by Way of Satisfactory Adjustment

With respect to the objectives of consultations, Article 4.5 demonstrates that the DSU favors settlement of a dispute by way of satisfactory adjustment and thus without reaching the panel stage. Dispute settlement in the WTO, at any stage of the process, is clearly aimed at settlement through agreement between the parties, rather than through the identification of treaty violations. This principle, among others, is also expressed in the general provisions of Article 3 of the DSU. Article 3.7 provides that "A solution mutually acceptable to the parties to a dispute and consistent with the covered agreements is clearly to be preferred." Article 4.5 specifies with respect to consultations that:

> in the course of consultations in accordance with the provisions of a covered agreement, before resorting to further action under this Understanding, Members should attempt to obtain satisfactory adjustment of the matter.

The Appellate Body thus held in *High Fructose Corn Syrup* ("*HFCS*") that:

> Through consultations, parties exchange information, assess the strengths and weaknesses of their respective cases, narrow the scope of the differences between them and, in many cases, *reach a mutually agreed solution in accordance with the explicit preference expressed in Article 3.7 of the DSU*. Moreover, even where no such agreed solution is reached, consultations provide the parties an opportunity to define and limit the scope of the dispute between them. Clearly, consultations afford many benefits to complaining and responding parties as well as to third parties and to the dispute settlement system as a whole.[22] (emphasis added).

There are numerous reasons why it may be preferable for parties to settle during consultations. The most likely reason for settlement is that the parties simply achieved the result they had been looking for when they started consultations or have come to some other kind of agreement. For financial reasons, poorer countries in particular may try to avoid going through the lengthy and costly panel process. Frequently, panel decisions are appealed, which adds to the financial burden. Two other reasons why there may be a preference for settlement during consultations are that a party may prefer to avoid the publicity involved in a panel proceeding, or may prefer to settle a case that could set a

[21] DSU, Art. 5.1.

[22] Report of the Appellate Body, *Mexico—Anti-Dumping Investigation of High Fructose Corn Syrup from the United States*, Recourse to Article 21.5 DSU, WT/DS132/AB/RW at 54 (2001) ("*HFCS*").

precedent and entail more proceedings by other WTO Members with similar complaints. Parties may also settle to avoid a panel or Appellate Body ruling on legal issues that they prefer to maintain as "uncharted territory".

B. Information Gathering, Clarification and Shaping of the Substance

Another purpose of consultations is to gather and clarify facts and to identify in a more detailed manner legal issues involved in a dispute. During consultations a party may present written questions concerning specific facts to the other side in order to obtain particular information. This may help in furthering that party's goal to reach settlement of the dispute during consultations. The panel in the *Korea Liquor Tax* case thus stated:

> Indeed, in our view, the very essence of consultations is to enable the parties gather correct and relevant information, for purposes of assisting them in arriving at a mutually agreed solution, or failing which, to assist them in presenting accurate information to the panel.[23]

As stated by that panel, in case consultations fail, information obtained will help in making a clear case before the panel. It has been noted, however, that some WTO Members treat consultations similarly to a pretrial discovery stage as it exists in U.S. procedural law.[24] In such instances, the main intent of the party requesting information is to gather a maximum of information for use in the subsequent panel proceeding. Opposing parties who, in earlier proceedings, candidly provided the information requested may have learned that such openness does not always work to their advantage.[25] As a result, there is a good chance that responding parties will not always be forthcoming and will not provide all information requested if they perceive that information is being aggressively gathered by the complaining party for use in subsequent proceedings. Allowing the information-gathering function of consultations priority over achievement of a settlement by mutually-agreed solution distorts the objectives of the DSU and leads to the use of consultations as a mere preliminary stage to the panel proceeding. When a party requested to provide detailed information refuses to do so, many facts will not be discussed during consultations and will only emerge during the panel proceedings. The Appellate Body in the *India-Patent Chemical Products* case recognized that panels need to engage in additional fact-finding when relevant information is not provided during consultations.[26]

[23] Report of the WTO Panel, *Korea—Taxes on Alcoholic Beverages*, WT/DS75/R, WT/DS84/R, ¶ 10.23 (1998) ("*Korea Alcohol Tax"*).

[24] Hyun Chong Kim, *The WTO Dispute Settlement Process: A Primer*, 2 JOURNAL OF INT'L ECON. LAW 457, 462 (1999).

[25] *Id.*

[26] The Appellate Body stated that "the claims that are made and the facts that are established during consultations do much to shape the substance and the scope of subsequent panel proceedings. If, in the aftermath of consultations, any party believes that all the pertinent facts relating to a claim are, for any reason, not before the panel, then that party should ask the panel in that case to engage in additional fact-finding." Report of the Appellate Body, *India—Patent Protection for Pharmaceutical and Agricultural Chemical Products*, WT/DS50/AB/R, ¶ 94 (1997) ("*Appellate India Chemical Products*"). The panel in the *Brazil—Aircraft* case found that "One purpose of consultations, as set forth in Article 4.3 of the SCM Agreement, is to 'clarify the facts of the situation', and it can be expected that information obtained during the course of consultations may enable the complainant to focus the scope of the matter with respect to which it seeks establishment of a panel." Report of the WTO Panel, *Brazil—Export Financing Programme for Aircraft*, WT/DS46/R, ¶ 7.9 (1999) ("*Brazil Aircraft Dispute*"). *See also* Report of the Appellate Body, *Brazil—Export Financing Programme for Aircraft*, WT/DS46/AB/R ¶ 13 (1999) (*citing* the panel's finding concerning this point) ("*Appellate Brazil Aircraft Dispute*").

Consultations can also shape the substance of a case. With respect to this function, parties may decide, after uncovering more facts during consultations, to drop claims that they consider likely to be rejected by the panel. Parties may also have only put forward certain claims tentatively in their consultations request, or because they were concerned about the completeness of the request, and may therefore decide to drop those claims. In light of the more recent panel jurisprudence parties may also decide during or after consultations to add claims in the panel request.[27]

V. The Right to Ask for Consultations and the Duty to Consult

WTO law establishes broad consultation rights in Articles XXII and XXIII of the GATT 1994 which set out the general-purpose rules for consultations. Article 4 DSU provides more detailed rules governing consultation proceedings.[28] The "causes of action" for requesting consultations are, pursuant to Article 1.1 DSU, set out in the specific consultations provisions in the Agreements covered by the DSU.[29] Consultations are the first and a mandatory step in the WTO dispute settlement process. The obligation to consult results, first of all, from Article XXII:1 and Article XXIII:1 GATT 1947, but also from Article 4.2 DSU.[30] The only exception from the obligation to consult is Article 8.10 of the Agreement on Textiles and Clothing ("ATC"), under which a matter may be taken to the DSB without prior consultations if it remains unresolved after the Textiles Monitoring Body has issued a recommendation.

The right to request consultations and the duty to consult are two sides of the same coin. The importance of the duty to appear at consultations, which is placed on the party allegedly maintaining WTO inconsistent measures, should not be underestimated. That party will have to defend or explain its measures. If it is unwilling to do so it will, at a minimum, have to communicate its unwillingness to the party requesting consultations. This procedure will often be of some embarrassment to the Member maintaining the disputed measure. In *Desiccated Coconut,* Brazil refused to consult with the Philippines on the grounds that the disputed issue was outside the scope of the DSU. In the subsequent panel proceeding the panel did not issue a direct ruling on the issue since the Philippines had failed to raise the question of Brazil's refusal to consult in its panel request and raised

[27] This subject is discussed *infra* Part VII(A).

[28] Other provisions of the GATT 1994 calling for consultations include Articles II:5; VI:7; VII:1; VIII:2; IX:6; XII:4; XIII:4; XVI:4; XVIII:7; 12, 16, 21, 22; XIX:2; XXIII; XXIV:7; XXV:1; XXVII; XXVIII:1 and 4, and XXXVII:2.

[29] The consultation provisions in the covered agreements are: *Agreement on Agriculture*, Article 19; *Agreement on the Application of Sanitary and Phytosanitary Measures*, Article 11.1; *Agreement on Textiles and Clothing*, Article 8.4; *Agreement on Technical Barriers to Trade*, Article 14.1; *Agreement on Trade-Related Investment Measures*, Article 8; *Agreement on Implementation of Article VI of GATT 1994 (Anti-dumping)*, Article 17.2; *Agreement on Implementation of Article VII of GATT 1994 (Customs Valuation)*, Article 19.2; *Agreement on Preshipment Inspection*, Article 7; *Agreement on Rules of Origin*, Article 7; *Agreement on Import Licensing Procedures* Article 6; *Agreement on Subsidies and Countervailing Measures*, Article 30; *Agreement on Safeguards*, Article 14; *Agreement on Trade-Related Aspects of Intellectual Property Rights*, Article 64.1; and any corresponding consultation provisions in Plurilateral Trade Agreements as determined by the competent bodies of each Agreement and as notified to the DSB.

[30] GATT 1947, Article XXII:1 on multilateral consultations provides that "Each contracting party shall . . . afford adequate opportunity for consultation . . . "; GATT 1947, Article XXIII:1 on bilateral consultations stipulates that "the contracting party may, with a view to the satisfactory adjustment of the matter, make written representations or proposals to the other contracting party or parties which it considers to be concerned. Any contracting party thus approached shall give sympathetic consideration to the representations or proposals made to it." DSU, Article 4.2 takes up this language and states: "Each Member undertakes to accord sympathetic consideration to and afford adequate opportunity for consultation regarding any representations made by another Member concerning measures affecting the operation of any covered agreement . . . ."

it only subsequently during the panel process. The panel nevertheless opined *in dicta*:

> The Philippine's request concerns a matter which this Panel views with the utmost seriousness. Compliance with the fundamental obligation of WTO Members to enter into consultations where a request is made under the DSU is vital to the operation of the dispute settlement system. . . . In our view, these provisions [DSU, Article 4.6 and 4.2] make clear that *Members' duty to consult is absolute*, and is not susceptible to the prior imposition of any terms and conditions by a Member.[31] (emphasis added).

Consultations are thus an absolute duty of a Member and the failure to respond or to appear at consultations violates an absolute right of the party requesting consultations. This is true despite the fact that in *Desiccated Coconut,* the Panel ultimately agreed with Brazil that the issue *was* outside the scope of the DSU.[32]

It should be noted that both parties to a dispute have the right and the duty to consult. As a consequence of the non-responding party's violation of this duty, Article 4.3 DSU provides that the party requesting consultations can move directly to the panel request within ten days (if the opposing party does not respond to the request) or thirty days (if the party responds but does not agree to hold consultations in a timely manner). A non-responding party thus foregoes its right to consult and an opportunity to settle the case during consultations.

The fundamental role that the WTO Agreements and the DSU attribute to consultations as well as the emphasis that the panel in *Desiccated Coconut* put on the importance of the duty to consult raises the question whether the right to consult could be considered as something more than a procedural right.[33] On the one hand, consultations are the first means of providing relief to a party that considers that its rights under the WTO Agreements are infringed. The fact that a Member is deprived of the opportunity to settle a dispute during the consultation stage, and that it is left with no choice other than to request a panel, seems to bring the right to consultations somewhat closer to a substantive right. On the other hand, there is no protection or enforcement of the right to consult as such.[34] Although a party whose right to consultations was violated can request a panel under an accelerated time frame (*i.e.*, ten or thirty days), the result will only be that the panel declares that the party refusing to consult violated its duty to consult. There are no further legal consequences attached, such as suspension of concessions, as would be the case when a panel finds that a substantive provision is violated. This takes the right to consultations out of the ambit of a substantive right.

VI. Procedure

A. Time Periods and Deadlines

Unlike the panel process,[35] many of the deadlines that frame the consultations process are flexible and parties can mutually agree to extend the relevant deadlines provided in

[31] Report of the WTO Panel, *Brazil—Measures Affecting Desiccated Coconut*, WT/DS22/R, ¶ 287 (1996) ("*Desiccated Coconut*").

[32] *Id*. ¶ 290.

[33] It should be noted in this context that the panel in *Guatemala—Cement* found that there is no reason to regard procedural rights differently from substantive rights, Report of the WTO Panel, *Guatemala—Definitive Anti-Dumping Measures on Grey Portland Cement from Mexico*, WT/DS156/R, ¶ 8.111 (2000) ("*Guatemala Cement*").

[34] The concept of "enforcement" of law between states is of a much more limited applicability in public international law than in domestic law, and enforcement in the WTO is limited to the suspension of concessions.

[35] *See* DSU, *Working Procedures*, App. 3.

the DSU. There are several different ways to pass through the consultations process to the stage where the Member requesting consultations can request a panel, each involving a different time frame. All deadlines for the consultations process run from the date of receipt of the consultations request.[36]

First, if the Member requested to hold consultations fails to respond after ten days from the receipt of the request, the Member that wishes to consult can request the establishment of a panel.[37] Second, the party requesting consultations has the same right if the party requested to consult fails to enter into consultations within thirty days from the receipt of the request.[38] This means that twenty days after the responding party's initial reply to the request, the responding party must actually meet and talk to the party requesting consultations unless the latter does not insist on that deadline. For practical reasons of its own, the party requesting consultations may not insist on maintaining the deadlines suggested by the DSU. Third, if, within sixty days from the receipt of the consultations request the Member requesting consultations decides that consultations have failed, it can request a panel. Fourth, at any time during the sixty day period the consulting parties can mutually agree that consultations have failed and the party requesting consultations can request a panel.

In a model case where the party requesting consultations seeks to get through the consultation process as quickly as possible, and where the responding party responds within its allotted deadlines under the DSU, the entire process will only take about two months. In that case, one Member will request consultations, the responding Member will reply within ten days, the parties will meet within twenty days and have an additional thirty days to continue consultations. After that point in time a panel can be requested without the agreement of the responding party. The elapsed time would be sixty days. In practice, however, such a swift proceeding is the exception. Under the flexible time frame for consultations set forth in the DSU there is no obligation on the party that requested consultations to request a panel after sixty days. Rather, Article 4.7 allows the discretion to continue consultations.[39] Thus, parties have the right to consult for as long as they wish and they make extensive use of this right.[40]

The minimum requirement of sixty days for the consultation period provides for a fairly streamlined process. Some, however, have considered it unduly long. This may be true, in particular, where the responding party has no interest in participating constructively in the consultation process. In such cases, consultations are nothing more than a necessary formality before litigation begins and it seems unfair that the party bringing the case must wait until the lapse of the sixty-day deadline in the face of non-cooperation by the responding party. Nevertheless, such stonewalling should be considered a worst-case scenario. It is questionable whether shorter deadlines should be introduced and a new standard created when a party fails to make an effort to resolve differences during

[36] DSU, Arts. 4.3, 4.7, & 4.8. The deadline for joining consultations starts running from the time of circulation of the request, DSU, Article 4.11.

[37] DSU, Art. 4.3. The DSU does not require a written response to the consultations request.

[38] *Id.*

[39] *See* the wording of DSU, Article 4.7: "the complaining party may request the establishment of a panel" (emphasis added).

[40] Among the currently pending proceedings a few cases have been pending for up to nine years. A large number of cases has been pending between five and seven years. *Dispute Update*, *supra* note 17. As pointed out earlier, however, the category of pending consultations likely includes a number of cases where parties do not actively pursue consultations and that could therefore be considered inactive or settled and are thus not necessarily indicative of the duration of active consultations.

consultations. Shortening the time period for consultations in such instances risks minimizing the importance of consultations and reducing it to a mere way station on the way to panel litigation. This runs counter to the priority the DSU attributes to settlement over litigation. In addition, the fact that a relatively large number of cases are settled during consultations is evidence that stalling tactics are not the norm. Lastly, sixty days for consultations is not that long a period, considering that the panel process can last up to nine months. In light of this, it seems unlikely that there will be agreement to shorten the time period for consultations. However, if time were added to one part of the dispute settlement proceeding, i.e. the panel or the appellate process, without extending the overall nine-month limitation, this time would likely be subtracted from the sixty-day consultations period.

B. Cases of Urgency

Article 4.8 of the DSU provides for a shorter timeframe for consultations in cases of urgency. In such cases, Members must enter into consultations within no more than ten days of the receipt of the consultations request. The challenging party can request the establishment of a panel within twenty days from the receipt of the consultations request if consultations fail to settle the dispute. The time frame set out in Article 4.8 DSU is a maximum deadline. It is different from consultations under the standard timeframe in that it does not provide for mutually-agreed extensions of deadlines. This point is made in Article 4.9 DSU which states that parties (but also panels and the Appellate Body) are required to "accelerate the proceedings to the greatest extent possible."

Article 4.8 DSU raises several important questions, including how to define situations of urgency, how to hold consultations within ten days of the request and, finally, how a party can request the establishment of a panel after twenty days. These points are discussed in the following three sections.

1. Cases Where Urgency has been Invoked in Consultations

Thus far, no Panel or Appellate Body decision has dealt with the issue of urgency. Parties, nevertheless, have invoked urgency in consultations requests under Article 4.8 and 4.9 DSU. Several urgent consultations requests have been based on "perishable goods", the example provided in Article 4.8.[41] The urgency of these requests is more or less self-explanatory because of the nature of the products involved. In these cases, the parties simply state that they wish to use the accelerated proceeding under Article 4.8 and 4.9 DSU. In other, less obvious cases, parties describe in more detail why they consider the case to be urgent.

In two earlier cases involving wheat exports to the Slovak and the Czech Republics, Hungary justified its request for urgent consultations on the "clear inconsistency" of the measure involved with fundamental obligations and the severe economic and trade losses

[41] *Korea—Measures Concerning the Testing and Inspection of Agricultural Products*, Request for Consultations by the United States, WT/DS3/1 (1995) does not indicate the agricultural product involved (consultations pending at time of writing); *United States—Anti-Dumping Investigation Regarding Imports of Fresh or Chilled Tomatoes from Mexico*, Request for Consultations by Mexico, WT/DS49/1 (1996) for fresh or chilled tomatoes (case apparently settled without panel request but settlement was not notified to the DSB). *Peru—Tax Treatment on Certain Imported Products*, Request for Consultations by Chile, WT/DS255/1 (2002) ("*Peru Tax Treatment*") for import tax treatment of fresh fruit, vegetables, fish, milk, tea and other natural products (a panel was requested in June 2002, WT/DS255/3).

in view of the planned duration of the measure.[42] In the more recent dispute *Romania—Wheat and Wheat Flour*, Hungary, after initially requesting consultations under the regular consultations procedures, modified its request and asked for urgent consideration. Hungary considered that the date Romania suggested for holding consultations was not timely and that the measure stopped all exports of wheat and wheat flour and thereby created critical circumstances.[43] In its panel request Hungary added the arguments that the product had a seasonal character and that exports of wheat represented a considerable part of total Hungarian exports to Romania.[44]

In *United States—Import Measures* the EC requested consultations with the United States regarding a U.S. decision to suspend liquidation on imports from the EC of products valued at over $500 million on an annual basis and to impose a contingent liability of one hundred percent duties on each individual importation of affected products. The EC held that this effectively imposed a one hundred percent duty, which stopped the products in questions from entering the United States. "Given the immediate and significant trade impact of this U.S. measure", the EC requested urgent consultations under Article 4.8 DSU.[45]

In its consultations request in *United States—Canada Softwood Lumber*, one of the most recent cases of urgency, Canada's justification for urgency under Article 4.8 DSU was that the preliminary CVD determination by the United States regarding exports of softwood lumber from Canada had an immediate and significant trade impact. Canada stated that the high trade volume involved represented a cost in potential countervailing duties of nearly one-half billion Canadian dollars, and that the cost to the Canadian lumber industry increased on a daily basis. Canada stated that lumber mills closures had already occurred, that more were imminent, and that significant layoffs of workers in mills still operating were taking place.[46] This case is discussed further in the following section.

2. Do Parties Actually Consult under the Reduced Time Frame?

Because of the confidential nature of consultations it is difficult to determine, for most of the above-mentioned cases, whether consultations were begun under the reduced time frame of Article 4.8. One of the more recent cases of urgency, *United States—Canada Softwood Lumber*, may serve as an example. The parties held consultations 27 days after the request for consultations was made, and not within the

[42] *Slovak Republic—Measures Affecting Import Duty on Wheat from Hungary*, Request for Consultations by Hungary, WT/DS143/1 (1998) (consultations pending at time of writing); *Czech Republic—Measures Affecting Import Duty on Wheat from Hungary, Request for Consultations by Hungary*, WT/DS148/1 (1998) (consultations pending at the time of writing).

[43] *See Romania—Import Prohibition on Wheat and Wheat Flour*, Request for Consultations by Hungary, WT/DS240/1 (2001) and the Addendum WT/DS240/2 where Hungary invoked urgency. Hungary initially requested consultations on October 18, 2001, to which Romania responded on October 26. Hungary added the urgency consultations request on October 30, twelve days after its initial consultations request.

[44] Hungary requested the establishment of a panel on November 27 (WT/DS240/2). *Id*. At its meeting on December 10 the DSB deferred the establishment of a panel. At the same day Hungary requested the DSB to hold a special meeting in order to establish a panel. Hungary withdrew its panel request on January 7, 2002 (WT/DS240/3) upon withdrawal by Romania of its legislation. *Id*.

[45] *United States—Import Measures on Certain Products from the European Communities*, Request for Consultations by the European Communities, WT/DS165/1 (1999) ("*U.S. Import Measures*"). In its subsequent request for a panel, the EC did not invoke the urgency provisions, *see id*., Request for Establishment of a Panel by the European Communities, WT/DS165/8 (1999).

[46] *United States—Preliminary Determinations With Respect to Certain Softwood Lumber from Canada*, Request for Consultations by Canada, WT/DS236/1 (2001) ("*Softwood Lumber*").

ten-day period requested by Canada. Evidently, the United States did not agree that this case required urgent consultations. In its panel request Canada did not invoke the urgency provisions.[47] Parties came somewhat closer to using the "urgency time frame" in *Peru—Tax Treatment for Imported Products*, where consultations were held after seventeen days. In addition, Chile's subsequent panel request referred to the urgency procedures.[48]

The fact that in past cases parties rarely (or possibly never) started consultations within the ten-day timeframe raises the question as to how to decide if there is a case of urgency. The party requesting consultations determines whether a matter is urgent. The decision as to whether consultations are held within ten days, however, can only be made by mutual agreement since the responding party can ultimately block the attempt to expedite matters. For example, it can respond to the request within ten days but not actually engage in consultations, then proceed by simply following the standard time frame for consultations. Where a responding party refuses to meet under the accelerated time frame there is little the party requesting consultations can do, since there is no neutral decision-maker to determine urgency (the DSB or a panel) at this early stage of the proceeding. There is no review of the refusal to consult under an accelerated time frame because the DSU generally does not provide for involvement by the DSB during consultations. Arguably, as a result, the provisions on urgency for the consultations process are practically useless.

It would be preferable to resolve disagreement over the invocation of the urgency provisions through a neutral decision-maker, such as a WTO panel. The panel could decide, as a matter of its jurisdiction and as a preliminary determination, whether the panel proceeding is urgent. In determining the urgency of its own proceeding, the panel would implicitly rule on the consultations, thus avoiding a direct determination regarding consultations. Panel decisions on urgency would help to define situations where the urgency provisions could legitimately be invoked. Such decisions, in accord with WTO panel and Appellate Body practice for many legal questions, could be made on a case-by-case basis rather than through a formula generally applicable to all cases. This process would establish precedent as to what should be considered a matter of urgency by consulting parties in future cases and should over time make the invocation of urgency at the consultation stage less problematic and contribute to a meaningful application of Article 4.8 and 4.9 DSU. It does not solve the problem, however, that a party requesting consultations under Article 4.8 DSU would not have immediate access to a panel determination at the time the request is made.

3. How to Get to the Request for Establishment of a Panel Within Twenty Days

There remains the question how to quickly select a panel. If the party requesting consultations requests a panel within twenty days, is the DSB automatically required to allow the panel request under the standard procedure of Article 6.1 DSU? The responding party will almost certainly object that the case was not urgent and that consultations should have been held under the sixty day standard time frame.

A fair solution would be to follow the reverse consensus rule under Article 6.1, allowing for the establishment of a panel unless there is consensus not do so. This should lead to the establishment of a panel within twenty days, since the party requesting the panel

[47] *See Softwood Lumber, supra* note 46, Request for Consultations by Canada, WT/DS236/2 (2001).
[48] *See supra* note 41.

will not vote against establishment.[49] The respondent could raise the question of urgency as a preliminary issue for the panel to rule upon if it felt inappropriately rushed during consultations or if consultations did not take place within the twenty day period before the panel request. The panel could either find that the complainant had inappropriately invoked urgency (and possibly send the parties back to the consultations phase to try again) or that the respondent had inappropriately refused to hold consultations because there was urgency and that the complainant therefore had the right to proceed to a panel under the reduced time frame.

It must be borne in mind that these ideas are speculative. The DSB has so far managed to steer around these controversies and it remains to be seen how it will deal with the legal and practical implications of future cases involving urgency.

C. Parties to Consultations

1. Plurilateral and Private Consultations

Under the basic GATT rules on consultations the party requesting consultations can choose between plurilateral consultations under Article XXII GATT 1994, and consultations held in private under Article XXIII:1 GATT 1994. It is thus the party requesting consultations that can determine whether only one specific party or multiple parties participate.[50] In GATT practice, the contracting parties started using Article XXII as the basis for plurilateral, working-party-like consultations. In 1958 the provision was used as the basis for plurilateral consultations in connection with questions arising out of the Treaty of Rome.[51] If, by contrast, a consultations request is made under Article XXIII:1, third parties are excluded from consultations and the two parties consult in private.[52] Such a request will be made when the requesting party considers that

[49] Another question is whether in matters where urgency is invoked the DSB should establish the panel at the first DSB meeting rather than deferring to the second request for a panel (if the responding party blocks the first request for establishment). As a matter of law, the DSB would have leeway to do so since Article 6.1 provides that "... a panel shall be established *at the latest* at the DSB meeting following that at which the request first appears as an item on the DSB's agenda, ..." (emphasis added).

[50] Article XXII:1 outlines a broad requirement to "accord sympathetic consideration to" and to "afford adequate opportunity" for consultations. The purpose of Article XXIII:1 overlaps with this requirement although it is more specific. Its language provides for consultations in the case of a complaint (*i.e.*, nullification or impairment or the impediment of the attainment of any objective of the Agreement) and upon a written representation by one party against another party. The party against whom the complaint is directed shall "give sympathetic consideration to the representations." It has been observed that the procedure of Article XXII to some extent duplicates that of Article XXIII but that there is no necessary connection between the provisions and that each procedure has its independent application. *See* JOHN JACKSON, WORLD TRADE AND THE LAW OF GATT 178 (1969).

[51] *Treaty Establishing the European Economic Community*, BISD, 7th Supp. 69–71 (1959). In the 1979 Understanding it is the section on consultations that explicitly requires parties to attempt to find a satisfactory adjustment under Article XXIII. By contrast, no reference is made to Article XXII. *See 1979 Understanding, supra* note 7 at 210, 211. The Mid-term Agreement refers to both, Article XXII:1 and Article XXIII:1 as a legal basis for consultations, *see The Mid-term Agreement, supra* note 10. It was also in the 1950s that the CPs established the practice that consultations under Article XXII are sufficient to fulfill the consultation prerequisite and to proceed to a panel request under Article XXIII:2. *See* II ANALYTICAL INDEX: GUIDE TO GATT LAW AND PRACTICE 673 (1995).

[52] *See e.g.*, the consultation request in *Chile—Price Band System* and *Safeguard Measures Relating to Certain Agricultural Products WT/DS201/1 (2000); Korea—Laws, Regulations and Practices in the Telecommunications Procurement Sector*, Request for Consultations by the European Communities, WT/DS40/1 (1996); Turkey—Restrictions on Imports of Textiles and Clothing Producers, Request for Consultations by India, WT/DS34/1 (1996). *See also Thailand—Anti-Dumping Duties on Angles, Shapes and Sections of Iron or Non-Alloy Steel and H-Beams from Poland*, Request for Consultations from Poland, WT/DS122/1 (1998),

confidential consultations will be more successful.[53] In the majority of cases consultations requests are made under Article XXII (plurilateral consultations). In case a request for consultations does not state a legal basis for consultations, the decision whether other parties should be allowed to join under Article 4.11 DSU or whether consultations should be confidential should remain with the party requesting consultations.

2. Multiple Consultations under Article 4.11 DSU: Third Party Rights and Substantial Trade Interest versus the Respondent's Discretion to Accept a Joinder

In the case of a consultations request under Article XXII:1 of the GATT 1994 or pursuant to the corresponding provision in a covered agreement, a WTO Member may decide to join consultations whenever it considers that it has a "substantial trade interest". In practice, joint consultations mean that the joining party or parties have the right to be present when the original consulting parties meet. They have access to the facts, legal arguments, discussions and documents produced during consultations in the same manner as the original consulting parties.

As a practical matter, a Member may join consultations for various reasons. A Member may already have the same trade problem as the party requesting consultations. It may have a high volume of trade in the good or service at issue. Members may also wish to join for strategic reasons since they will have access to the facts, legal arguments and counterarguments, theories and strategies that the consulting parties forward. Joining parties may also seek to use such information in a different, not necessarily related, proceeding against the same or other countries. This can raise problems concerning the confidentiality of the process.[54]

As a formal procedural requirement, the request to join must be notified to the DSB within ten days after the circulation of the request for consultations.[55] The decision as to whether the claim of a "substantial trade interest" is well founded, and therefore whether another Member can join consultations, lies with the party responding to the request.[56] A refusal to allow a Member to join consultations raises a problem for the party wishing to join, since the term "substantial trade interest" is not defined in the DSU and has never been defined or interpreted by GATT or WTO panels. The failure to develop a definition through jurisprudence stems in part from the fact that there is no possibility of immediate review when a party requested to hold consultations rejects the request by a third party to join.[57]

In the *Bananas* decision the Appellate Body only touched on the issue in its discussion of whether the United States needed to have standing in the form of a "legal interest" to bring claims under the GATT 1994. [58] For this purpose, the Appellate Body examined,

based on Article 17.3 of the Antidumping Agreement which is the corresponding provision to Article XXIII:1 of the GATT 1994.

[53] William J. Davey and Amelia Porges, Comment, *Performance of the System I : Consultations & Deterrence,* 32 INT'L LAW 695, 701–702 (Fall 1998).

[54] *See* Part X *below*.

[55] DSU, Article 4.11, 1st sentence.

[56] DSU, Article 4.11, 2nd sentence.

[57] The only way for a rejected third party to obtain review of the rejection of its request and thereby of whether it has a substantial trade interest would be through the original party that requested consultations if the case goes to a panel. The original party that requested consultations could raise the issue of the rejection of the third party request before the panel. Arguably, the consulting parties would have needed to consult on the issue before it can be raised in the panel request.

[58] *See* Report of the Appellate Body, *European Communities—Regime for the Importation, Sale and Distribution of Bananas*, AB-1997-3, WT/DS27/AB/R, ¶ 132–136 (1997) ("*Appellate Banana Regime*").

inter alia, Article 4.11 DSU and stated that in order to join multiple consultations, a WTO Member must have a "substantial trade interest". With respect to the standing of the United States to bring claims under the GATT 1994, the Appellate Body found that the United States was justified in bringing claims:

> The United States is a producer of bananas and a potential export interest by the United States cannot be excluded. The internal market of the United States for bananas could be affected by the EC banana regime, in particular, by the effects of that regime on world supplies and world prices of bananas.[59]

This standard provides a fairly low threshold for an issue as important as bringing claims under a WTO agreement. Although the question of standing is a different legal issue from that of a "substantial trade interest", it can reasonably be argued that the "substantial trade interest" standard for joining consultations should be interpreted just as broadly. WTO Members requested to hold consultations under Article XXII, however, have refused participation by countries that seem to have met the requirement of a substantial trade interest.[60] In such cases, the party that was not permitted to join must request separate consultations with the Member refusing the request for participation.[61] Objective reasons for rejecting a request for joinder may exist where a party wishing to join does not provide any evidence of a substantial trade interest or where the nature of the interest is not directly pertinent to the subject of the consultations.[62]

3. Direct Proceeding to a Panel for Joining Parties?

It has been argued that a WTO Member that has joined consultations under Article 4.11 should be able to request a panel without requesting separate consultations itself.[63] This would mean that the party joining consultations can step into the shoes of the party that originally requested consultations and change its status from being a joint party to consultations to becoming a party to the panel proceeding.

If, for example, the party that originally requested consultations decides to settle, the joining party could request a panel without starting new consultations. This seems sensible since it would save time. If the original requesting Member decides to settle during consultations but the joint party wishes to proceed to a panel, efficiency considerations suggest accepting the panel request rather than requiring new consultations. First, it is not obvious why a party joining consultations should not have the same rights as the party

[59] *Id*. ¶ 136.

[60] *See, e.g. U.S. Import Measures, supra* note 45, Request for the Establishment of a Panel by the European Communities, WT/DS165/8 (1999), stating that the United States refused participation of all third parties in the consultations.

[61] The incorporation of the substantial trade interest standard from the 1958 Procedures for Article XXII into the DSU seems to make little sense other than to allow a party that has been requested to hold consultations the strategic decision as to whether to avoid a teaming-up of efforts by the parties requesting consultations and thus to split or divide issues and disputes. In addition, the fact that, when requesting separate consultations as provided in Article 4.11 of the DSU no trade interest needs to be shown, and that in order to participate in a panel as a third party only a "substantial interest" needs to be demonstrated, makes the "substantial trade interest" standard an unnecessary obstacle to an efficient use of consultations. On the other hand, denying joinder is the only way for the party requested to consult to control the number of parties with which it must simultaneously consult. It would thus be more useful to allow the party that has been requested to hold consultations to reject a request for multiple consultations and to establish a requirement to enter into separate consultations with that party. The "substantial interest" requirement for third party participation before a panel was introduced in the 1979 Understanding. *1979 Understanding, supra* note 7.

[62] *See* Davey and Porges, *supra* note 53, at 700.

[63] *Id*. at 697, 704.

that originally requested consultations. Joining multilateral consultations is permitted under Article XXII:1 GATT 1994. The party originally requesting consultations and the party requested to consult are thus aware that consulting members may not be limited to the original group. The Article 4.11 DSU joinder puts the defending party on notice that any panel request may not be limited to the original parties to the consultations. This should be sufficient to protect the due process rights of the responding party. Second, there is nothing in the DSU or in the GATT 1994 that distinguishes between the parties originally requesting consultations and the parties that later join consultations. Requiring joining parties to request new consultations before making a panel request would merely drag out the process without serving any additional purpose. In cases where a joining party requests a panel, the responding party is likely to pay close attention to the issues raised in the panel request to make sure that there is sufficient congruence between the original consultations request and any panel request made by the joining party. In order to protect the due process rights of the responding party in such circumstances, the party requesting the panel can only raise issues before the panel that were discussed during consultations where the joining party was present. The burden to show that issues have been discussed during consultations is on the joining party requesting the panel.

VII. The Consultations Request

The consultations request is made directly to the defending Member. It will usually be addressed to a high-ranking government official, such as the minister or secretary in charge of the area covered by the WTO Agreement in question, or to the head of the Member's Mission in Geneva. Under Article 4.4 of the DSU, the DSB and the relevant Councils and Committees must be notified of the request. The DSB will circulate the request to all WTO Members within a short period of time (a few days maximum).[64] The request must be in writing and state the reasons for the request. It must list the "measures at issue", that is the domestic laws, regulations, practices etc., complained against. The request must also indicate the legal basis for the complaint; it must enumerate the WTO Agreement provisions allegedly violated.

A. Substantive Requirements and the Role of the Consultation Request

The requirement in Article 4.4 DSU that "the reasons for the request" must include the "identification of the measure at issue" and "an identification of the legal basis of the complaint" has given rise to questions before more than one panel, as well as before the Appellate Body. For obvious practical and due process reasons, it is in the interest of the party responding to a panel request that the consultations cover, to as wide an extent as possible, the issues that will be the subject matter of the panel dispute. Knowledge of the issues discussed during consultations will help the respondent prepare its panel submissions. Thus, there should be a broad overlap between the claims, measures and facts raised in the consultations request and those identified in the panel request, forming the substance of the dispute. Despite the close connection that exists between the consultations and the panel request there are differences between the legal requirements of the consultations request under Article 4.4 DSU and the request for the establishment

[64] Consultations requests for bilateral consultations under Article XXIII:1 are also notified to the DSB and the relevant Councils and Committees and circulated to the WTO Members, but this is for information purposes only.

of a panel under Article 6.2 DSU. Both requests are relevant to identify the disputed issues but different standards apply as to their completeness.[65]

In one of its earlier reports, *India—Patent Chemical Products*, the Appellate Body gave its ruling on the standard to be applied to assess the completeness of consultations and panel requests, *i.e.*, claims stated and facts disclosed during consultations, a wording that could have resulted in Article 4.4 DSU being interpreted as narrowly as Article 6.2 DSU. The report was interpreted by some trade litigators to require parties to state their claims fully in the consultations request, and in the event that they failed to do so, would have resulted in the foreclosure of new claims in panel proceedings.

India's appeal against the panel's ruling in the *Chemical Products* case was in part based on an incomplete panel request by the United States with respect to claims arising under the TRIPS Agreement.[66] India did not raise completeness of the U.S. consultations request, but only the panel's alleged lack of jurisdiction over portions of the dispute involving Article 63 of the TRIPS Agreement.[67] Arguably there was, therefore, no reason for the Appellate Body to rule on issues concerning consultations. Nevertheless, the Appellate Body provided broad guidance with respect to consultations. On the basis of the due process argument established for completeness of the panel request in *Desiccated Coconut* and *EC—Bananas,* the Appellate Body stated that:

> All parties engaged in dispute settlement under the DSU must be fully forthcoming from the very beginning both as to the claims involved in a dispute and as to the facts relating to those claims. Claims must be stated clearly. Facts must be disclosed freely. This must

[65] The Appellate Body has consistently interpreted Article 6.2 narrowly and has applied a high standard for completeness of the panel request. Laying out the foundations for its jurisprudence on the panel request in *Desiccated Coconut,* the Appellate Body interpreted the "matter" of a dispute to be the specific claims stated by the parties in the relevant documents specified in the terms of reference. Report of the Appellate Body, *Brazil—Measures Affecting Desiccated Coconut*, AB-1996-4, WT/DS22/AB/R at 21–22 (1997) ("*Appellate Desiccated Coconut*"). The "relevant documents" referred to will usually be the request for the establishment of a panel. The Appellate Body's argument is evidently based on the fundamental premise of fairness of the proceeding. Thus, the Appellate Body further states that "[T]erms of reference fulfill an important due process objective—they give the parties and third parties sufficient information concerning the claims at issue in the dispute in order to allow them an opportunity to respond to the complainant's case." *Id*. In *EC—Bananas* the Appellate Body expanded on this argument, focusing on the panel request. "It is important that a panel request be sufficiently precise for two reasons: first, it often forms the basis for the terms of reference of the panel pursuant to Article 7 of the DSU; and, second, it informs the defending party and the third parties of the legal basis of the complaint." *Appellate Banana Regime, supra* note 58, ¶ 142. Completeness of a panel request was also discussed in the Report of the Appellate Body, *Australia—Measures Affecting Importation of Salmon*, AB-1998-5, WT/DS18/AB/R ¶ 110 (1998). It follows from the Appellate Body's jurisprudence that the panel request has at least two important functions, first, to determine the panel's terms of reference and thereby to frame the subject matter of the dispute and, second, the due process element of informing the defending party and third parties to the disputes of the substantive claims. In light of the role of the panel request, the Appellate Body's narrow interpretation of Article 6.2 is warranted. Different standards, however, should apply to the consultations request. For additional information on these and additional objectives of the panel request, *see* Gary N. Horlick and Glen R. Butterton, *A Problem of Process in WTO Jurisprudence: Identifying Disputed Issues in Panels and Consultations*, 31 LAW & POL'Y INT'L BUS. 573, 576–578 (2000).

[66] The U.S. panel request referred to inconsistencies in India's legal regime "with the obligations of the TRIPS Agreement, including but not necessarily limited to Article 27, 65 and 70." *See India—Patent Protection for Pharmaceutical and Agricultural Chemical Products*, Request for the Establishment of a Panel, WT/DS50/4 (1996). The United States subsequently raised Article 63 of the TRIPS Agreement in its oral statement in the first substantive meeting of the parties with the panel and the panel decided to rule upon the alternative claim. Report of the WTO Panel, *India—Patent Protection for Pharmaceutical and Agricultural Chemical Products*, WT/DS50/R (1997) ("*India Chemical Products*").

[67] *Appellate India Chemical Products, supra* note 26, ¶¶ 14 & 28.

> be so in consultations as well as in the more formal setting of panel proceedings. In fact, the demands of due process that are implicit in the DSU make this especially necessary during consultations. For the claims that are made and the facts that are established during consultations do much to shape the substance and the scope of subsequent panel proceedings. If, in the aftermath of consultations, any party believes that all the pertinent facts relating to a claim are, for any reason, not before the panel, then that party should ask the panel in that case to engage in additional fact-finding. But this additional fact-finding cannot alter the claims that are before the panel—because it cannot alter the panel's terms of reference.[68]

The Appellate Body was extremely careful with its wording and did not directly state that a party's consultations request must include all claims that will later be raised in the panel request. The phrase that "claims must be stated clearly" does not mean that they must also be stated *completely*. The phrase that "claims made during consultations do much to shape the substance and the scope of subsequent panel proceedings" comes close to saying that the substance of the panel proceeding should not exceed the substance of the consultations and yet falls a little short of saying that it must be *all-inclusive*. The Appellate Body seems to request a high degree of disclosure from the consulting parties, but stops short of establishing a standard that requires panels to deal only with claims that were raised during consultations. Early disclosure of as many claims and facts surrounding these claims as possible would, of course, be ideal to protect, most importantly, the due process rights of the party requested to consult. It would also further adherence to the requirement to consult in good faith.[69] However, an overly narrow interpretation of Article 4.4. and the possible consequence of freezing the record for the subsequent panel request are not very practical nor necessary, and it is questionable if such an interpretation would be within the spirit and the wording of the DSU.

First, as a practical matter, parties may not be aware of all the facts and thus of all legal issues and claims when they draft the consultations request. This should not foreclose them from raising these claims in a panel request. Making the consultations request a mirror image of the panel request may result in parties being over-inclusive and thereby overburdening and frustrating the consultations. In addition, DSU consultations are designed as a party-controlled, settlement-oriented, and relatively informal process.[70] Formalizing this process and making it a mere preliminary stage before panel proceedings, with consultations requests being a mirror image of the claims before a panel would be detrimental to the idea of freely discussing ideas and exchanging information, as well as the idea of negotiating and compromising over issues. The purpose of consultations is to encourage parties to reach settlement in a less formalized environment before the dispute enters the more formal legal structure of the panel proceeding. However, given that parties sometimes employ litigation strategies during consultations, this idea of a free exchange of ideas and a good faith effort to a resolve a dispute during consultations might be considered just as idealistic as the Appellate Body's concept of complete disclosure of all claims and facts during consultations.

Since the discussion surrounding completeness of consultations in the *India—Patent Chemical Products* dispute, subsequent WTO panels dealing with completeness issues have been more liberal and pragmatic in their approach. Effectively, panels seem to have

[68] *Id*. ¶ 94.
[69] DSU, Art. 4.3.
[70] *See supra* Part IV.

"gained back some territory", finding that a panel's terms of reference are determined by the panel request and not by prior consultations. These panels have interpreted Article 4.4 broadly, both in terms of completeness of the *measure* complained against and the *claims* included in the panel request.

In the *Brazil—Aircraft* and *Canada—Aircraft* disputes, the parties alleged that the panel did not have jurisdiction over certain issues because they had not been included in the consultations request and had not been the subject of consultations. In the case against Brazil, the earlier of the two proceedings, Brazil argued on appeal that certain regulatory instruments of its PROEX program were not properly before the panel because they came into effect after consultations were held. The case thus dealt with the question of how completely the measures complained against and raised in the panel request must be covered during consultations.[71] The panel held that the consultations request and the request for establishment of the panel related to fundamentally the same "dispute", because they involved essentially the same practice, the payment of export subsidies under PROEX. The Appellate Body upheld this finding, based on the fact that the later regulatory instruments related to the administration of PROEX and "did not change the essence of that regime."[72] It further ruled that parties must hold consultations, but that Articles 4 and 6 of the DSU[73] do not "require a *precise and exact identity* between the specific measures that were the subject of consultations and the specific measures identified in the request for the establishment of a panel."[74] Therefore, even if one gives a narrow interpretation to the ruling in *India—Patent Chemical Products*, requiring more or less identity between the consultations and the panel request, the ruling in the *Brazil—Aircraft* case appears to allow additional leeway since other measures can be included in the panel request as long as they do not alter the "essence" of the measure. The Appellate Body did not define what exactly would be the "essence" of a measure, but it stated that "the specific measures at issue in this case are the Brazilian export subsidies for regional aircraft under PROEX. Consultations were held by the parties on these subsidies, and it is these same subsidies that was referred to the DSB for the establishment of a panel." [75] This general reference to subsidies under PROEX seems to leave the door relatively wide open for inclusion of additional measures, again, as long as the subject matter of the measure at issue is not modified. Some parties, however, have considered it safer to request additional consultations on certain issues that were not included, or not explicitly included, in the original consultations request. As an example, in *Mexico—Telecommunications Services* the United States requested a new round of consultations with respect to new regulations that Mexico had enacted after the original consultations.[76]

In *Canada—Aircraft*, Canada raised as a preliminary issue whether certain measures identified in Brazil's request for a panel under Article 4.4 SCM had been subject to

[71] *Brazil Aircraft Dispute, supra* note 26, ¶ 7.4. When Canada originally requested a panel in this case Brazil successfully disagreed with the legal claims Canada raised in its panel request. In its consultations request Canada listed violations of the SCM Agreement only. When requesting the establishment of a panel, it also alleged violations of the GATT 1994. Due to Brazil's objections in the DSB meeting, Canada had to resubmit a modified request, limiting its scope to the SCM Agreement.

[72] *Appellate Brazil Aircraft Dispute, supra* note 26, ¶ 130.

[73] Or Article 4, paragraphs 1 to 4 of the Agreement on Subsidies and Countervailing Measures.

[74] *Appellate Brazil Aircraft Dispute, supra* note 26, ¶ 132 (emphasis in original).

[75] *Id*.

[76] For the original request *see Mexico—Measures Affecting Telecommunications Services*, Request for Consultations by the United States, WT/DS204/1 (2000) and the additional request, Request for Establishment of a Panel by the United States, Addendum, WT/DS204/1/Add.1 (2000).

the consultations request and were in fact the subject of consultations. Canada claimed that because the term "financing" in the description of Canada's aircraft export subsidy program had been omitted from the consultations request but included in the panel request, the panel did not have jurisdiction over this issue.[77] Brazil responded that a request for establishment of a panel will often not be identical to a request for consultations because of the refinement of claims that will likely result from consultations. The panel rejected Canada's claim, stating that its jurisdiction was determined by its terms of reference as established in the panel request as set out in Article 7 DSU. Regarding the role of the consultations request, the panel stated that:

> a panel's terms of reference would only fail to be determinative of a panel's jurisdiction if, in light of Article 4.1–4.4 of the SCM Agreement applied together with Article 4.2–4.7 of the DSU, the complaining party's request for establishment were found to cover a "dispute" that had not been subject of a request for consultations.[78]

The panel continued by stating that "the 'matter' on which consultations are requested will not necessarily be identical to the 'matter' identified in the request for establishment of a panel."[79]

This ruling seems to indicate that there is some connection between the "dispute" and the "matter". It also seems to permit new issues, in the form of new measures and possibly even new legal claims, to be raised in the panel request. This is in accord with the findings in *Japan—Agricultural Products*, the latest panel addressing completeness. Japan argued that a claim raised for the first time in a panel request should be excluded from the panel's terms of reference since consultations were not held on it. The additional claim raised by the United States related to Article 7 of the Agreement on the Application of Sanitary and Phytosanitary Measures ("SPS Agreement"). In its preliminary ruling on the issue the panel rejected the argument, noting without further reference to earlier panel or Appellate Body reports that its terms of reference were based on the panel request and not on the issues covered in consultations.[80] In its consultations request the United

[77] Report of the WTO Panel, *Canada—Measures Affecting the Export of Civilian Aircraft from Brazil*, WT/DS70/R, ¶ 9.6 (1999) ("*Canada Aircraft*"). Brazil's consultations request referred to "EDC [Export Development Corporation] equity infusions into corporations specially established to facilitate the export of aircraft", and "EDC loan guarantees for exported aircraft." Brazil's request for establishment of a panel referred to "financing and loan guarantees provided by the [EDC], including equity infusions into corporations established to facilitate the export of civilian aircraft", thus including the additional term "financing" as opposed to just "loan guarantees". Canada claimed that "financing" is a distinct activity from either providing "equity infusions" or "loan guarantees" and that because of the omission of that term from the consultations request it could not have properly been included in the panel request. In Canada's view the panel could therefore not have jurisdiction over this issue. Pointing to the language in Article 4 SCM on remedies, Canada claimed that a "rational connection" must exist between "the subsidy in question" in Article 4.2 and the "matter" referred to the DSB. Canada argued that the SCM Agreement and due process would be violated if Canada were forced to respond to a "matter" in a panel dispute on which consultations had not been requested.

[78] *Id*. ¶ 9.12.

[79] *Id*.

[80] The panel stated: "We first examine Japan's request to exclude Article 7 of the SPS Agreement from our examination on the grounds that it was only mentioned for the first time in the U.S. panel request (document WT/DS76/2) and that no consultations were held on it. We note that our terms of reference (set out in document WT/DS76/3) direct us to examine the matter before us 'in the light of the relevant provisions of the covered agreements cited by the United States in document WT/DS76/2.' This document, the U.S. panel request, specifically cites Article 7 of the SPS Agreement. We thus consider that claims under that provision fall within our terms of reference." Report of the WTO Panel, *Japan—Measures Affecting Agricultural Products*, WT/DS76/R, ¶ 8.4 (1998).

States had identified claims both under the GATT 1994 and the SPS Agreement. It is possible the panel would have ruled differently if the new claim raised in the panel request had not been under the SPS Agreement but under an entirely different agreement, such as the Agreement on Technical Barriers to Trade. A claim raised under an agreement not identified in the consultations request adds a new area of substantive law that has not been subject to consultations, and might therefore be viewed by some of the parties as considerably changing the nature of the dispute, if not the entire dispute. Such a view would be in accord with the ruling in *Brazil—Aircraft*, where Brazil successfully contested the inclusion of new GATT 1994 claims when GATT claims had not been identified in Canada's consultations request.[81]

As to the practical question of how to draft a consultations request, the recent panel reports discussed above suggest that there is no absolute need to be all-inclusive. This applies for both the measures complained against and the claims identified, i.e., the legal provisions invoked. This advice, however, must be treated with care. The "dispute", as the panel in *Brazil—Aircraft* held, or the "matter" as stated by the panel in *Canada—Aircraft,* subject to consultations must be the same as that identified in the panel request. In order to be on the safe side when drafting the consultations request, it is advisable to cover the subject matter at issue as broadly as possible. All relevant measures, *i.e.*, domestic laws, regulations, practices etc., known to the complainant at the time the request is made should be included. Similarly, it seems advisable to identify and include in the consultations request all WTO Agreements that will be at issue in the dispute, if not all relevant provisions of these Agreements.

B. Issues not Raised in the Consultations Request but Actually Discussed

In *Canada—Aircraft* Brazil argued that the subject of Export Development Corporation ("EDC") "financing" had been discussed in consultations and that Canada's claim that the panel did not have jurisdiction over this claim was therefore unfounded. The parties disagreed over whether this discussion had occurred and the panel could not establish whether consultations had indeed been held on this issue.[82] The panel noted that if there had been consultations on the issue, this would normally dispose of the jurisdictional issues raised by Canada. The panel's decision was reasonable since the due process purpose of consultations, putting a party on notice of the issues that may be raised in the panel request and that may be raised before the panel, are fulfilled. The case also demonstrates the risk of not including issues in the request for consultations and expecting that discussion of issues in the consultation themselves will suffice to permit their inclusion in the panel request. The confidentiality of consultations and the fact that often there is no agreed record of the consultations makes it difficult to prove that consultations were held on a specific issue.[83] For issues not included in the request for consultations, jurisdiction of the panel will usually be limited to issues that the parties agree were the subject of consultations. As a result parties could also include an issue in the panel request that was not the subject of consultations, provided there are no objections from other parties.

[81] *See Brazil Aircraft Dispute, supra* note 71.

[82] *Canada Aircraft, supra* note 77, ¶ 9.11.

[83] *But see*, Report of the WTO Panel, *European Communities—Anti-Dumping Duties on Imports of Cotton-Type Bed Linen from India*, WT/DS141/R, ¶¶ 3.8 & 6.31 (2000), where India prepared verbatim reports of the consultations.

C. Is there a Duty to Consult in Compliance Review Proceedings?

In the first case involving an Article 21.5 compliance review by the original panel, the *High Fructose Corn Syrup* case, Mexico objected on appeal that the review panel had failed to examine the alleged lack of consultations. In Mexico's view, there should have been another round of consultations before the United States could request the reestablishment of the original panel for a compliance review. Mexico based its complaint before the panel on Articles 3.7 and 6.2 DSU (and did not raise Article 4).[84] Mexico argued, supported by the EU as a third participant, that consultations are an indispensable element in Article 21.5 proceedings since the phrase "these dispute settlement procedures" in Article 21.5 must be interpreted as a reference to all DSU procedures, including those involving Article 4.[85] In the U.S. view, the phrase referred to something less than all DSU procedures and the only condition established by Article 21.5 was that there is disagreement as to whether a Member has implemented the recommendations and rulings of the DSB.[86]

The Appellate Body found that Mexico had not properly brought the issue before the panel since it was not raised in an explicit or timely manner.[87] The Appellate Body further examined whether the panel still had the duty to examine the lack of consultations on its own motion. In its decision, not always using the clearest language, the Appellate Body avoided ruling on the issue of whether consultations were a necessary precondition for an Article 21.5 review. The Appellate Body stated that if Mexico were correct in its objection, then the panel would have needed to address the issue of consultations to ascertain its own jurisdiction and its authority to carry out a review under Article 21.5. If the panel's jurisdiction were in question because of the lack of consultations, the panel had the duty to examine this question *on its own motion*.[88] The Appellate Body *assumed* that the same procedures apply in Article 21.5 procedures as in original panel proceedings. Thus *assuming* that there is a requirement to consult, the Appellate Body examined whether the lack of consultations would be a defect serious enough to deprive the panel

[84] It was unclear from Mexico's appeal whether the issue raised was the lack of consultations or whether, in addition, the panel should have ruled on the failure of the U.S. panel request to indicate whether consultations had been held and the U.S.'s failure to exercise its judgment as to whether recourse to Article 21.5 would be "fruitful", *see* Report of the Appellate Body, *Mexico—Anti-Dumping Investigation of High Fructose Corn Syrup (HFCS) from the United States*, Recourse to Article 21.5 of the DSU by the United States, AB-2001-5, WT/DS132/AB/RW, ¶¶ 35 & 51 (2001). On the latter two issues, the Appellate Body ruled that the authority of the Panel was not invalidated by the absence in the Panel request of an indication whether consultations were held as required under Art. 6.2 DSU. It recognized that the requirement to indicate in a panel request whether consultations were held was certainly incumbent upon the complaining party, but since its purpose was "primarily informational" the failure to do so did not deprive the panel of jurisdiction. *Id*. ¶ 70. Finally, the AB determined that the Panel was not obliged to address the question of whether the United States satisfied its obligation under Art. 3.7 DSU to exercise its judgment as to whether dispute settlement would be "fruitful." Given the "largely self-regulating" nature of the requirement, it found that panels and the AB must presume that requests for establishment of a panel are made in good faith. The Panel was not required, nor authorized, "to look behind [a] Member's decision and to question its exercise of judgment," and therefore was not obliged to consider the issue on its own motion. *Id*. ¶ 74.

[85] *Id*. ¶ 52.

[86] *Id.*

[87] Mexico did not raise the lack of consultations during the DSB meeting at which the review panel was established. *Id.* ¶ 39. It also did not make any mention in its two written submissions to the panel, *id*. ¶ 40, but waited until the oral hearing to make a statement concerning "observations of a general nature" and the U.S. haste "in resorting to the Dispute Settlement Body", which in Mexico's view, "resulted in the presentation of a superficial and deficient case." *Id*. ¶ 41. The panel did not mention any of these issues in its report, and Mexico did not comment on this issue during the interim review stage. *Id*. ¶ 44.

[88] *Id*. ¶ 53.

of its jurisdiction to review the case.[89] The Appellate Body was "not persuaded that the undoubted practical importance of consultations to the WTO dispute settlement system is dispositive of the issue before us on appeal."[90] It argued that pursuant to Article 4.3 DSU the responding party could relinquish benefits from consultations by not responding to the request and that under Article 4.7 DSU it could forgo the potential benefits that continued consultations might bring, and that therefore the DSU explicitly allowed for circumstances where the absence of consultations would not deprive the panel of its jurisdiction:

> In our view, it follows that where the responding party does not object, explicitly and in a timely manner, to the failure of the complaining party to request or engage in consultations, the responding party may be deemed to have consented to the lack of consultations and, thereby, to have relinquished whatever right to consultations it may have had.[91]

In conclusion, the lack of consultations is not a defect that eliminates the jurisdiction of the panel in Article 21.5 proceedings—*even if* the general obligation of the DSU to consult were applicable to Article 21.5 proceedings. Thus, there is no obligation on the panel to consider the lack of consultations in an Article 21.5 proceeding on its own motion.[92]

As a result of the Appellate Body's decision to decline to rule on the question whether consultations are an indispensable element of proceedings under Article 21.5 DSU, the practice of WTO Members' regarding consultations in Article 21.5 proceedings differs. Some Members have formally requested consultations before requesting Article 21.5 review panels, whereas other Members have not, at least not formally.[93]

VIII. Adequacy of Consultations and the Requirement to Consult in Good Faith

Consultations will not always be carried out to the satisfaction of all parties involved in the process. Parties have thus claimed before panels that the consultations held were inadequate. A review of the adequacy of consultations by a panel would mean not only that there are substantive requirements as to how parties carry out consultations, but also that a panel would have jurisdiction over this subject matter. Furthermore, beyond the formal and procedural requirements of Article 4, the only substantive requirement that the DSU establishes for the conduct of consultations is that parties "consult in good faith" as required in Article 4.3. WTO panels and the Appellate Body have declined to

[89] *Id.*
[90] *Id.* ¶ 56.
[91] *Id.* ¶ 63.
[92] *Id.* ¶¶ 59–65.
[93] The European Communities in particular have consistently been of the view that consultations must be held under Article 21.5, s*ee e.g. United States—Tax Treatment for Foreign Sales Corporations*, Recourse by the European Communities to Article 21.5 of the DSU, Request for Consultations, WT/DS108/14 and Corr. 1 (2000). During the long-lasting battle surrounding EU compliance in the *Banana* case this provoked communications from the parties to the compliance proceedings, including a statement by Ecuador that, as a matter of principle, such consultations were not required under Article 21.5, *see European Communities—Regime for the Importation, Sale and Distribution of Bananas*, Request to Reactivate Consultations of September 17, 1998 by Ecuador, WT/DS27/30 (1998) ("*Banana Regime*"), and Request for Consultations by Ecuador, Guatemala, Honduras, Mexico and the United States, WT/DS27/18 (1998). Deviating from their position in *HFCS* the United States requested consultations in *Canada—Measures Affecting the Importation of Milk and the Exportation of Dairy Products*, Recourse by the United States to Article 21.5 of the DSU, Request for Consultations, WT/DS103/15 (2001).

review the adequacy of consultations and therefore, by implication, whether parties were consulting in good faith.

A. Adequacy

In the *Bananas* case the EC argued that the consultations held with Ecuador, Guatemala, Honduras, Mexico and the United States did not fulfill their minimum function of affording a possibility for arriving at a mutually satisfactory solution, and that the different claims making up the dispute were not clearly set out. The complainants responded that Article 4.5 of the DSU only requires an "attempt" to resolve the matter.[94] The Panel held that the DSU requires that "parties should consult in good faith and attempt to reach such a [mutually agreed] solution."[95] The panel continued stating that:

> Consultations are, however, a matter reserved for the parties. The DSB is not involved; no panel is involved and the consultations are held in the absence of the Secretariat. In these circumstances, we are not in a position to evaluate the consultations process in order to determine if it functioned in a particular way. While a mutually agreed solution is to be preferred, in some cases it is not possible for the parties to agree upon one. In those cases, it is our view that the function of a panel is only to ascertain that consultations, if required, were in fact held or, at least, requested.[96]

The Panel also disagreed with the EU's position that consultations must lead to an adequate explanation of the case, recognizing that if this were the case, any respondent could defeat the establishment of a panel by claiming a lack of understanding of the case, thereby "undermin[ing] the automatic nature of panel establishment under the DSU."[97] Thus, although clarification of the facts and the substance of the case may be desirable and one of the objectives of the consultations process, there is nothing in the DSU providing that a complainant can only request a panel once he has adequately explained its case to the respondent. The only prerequisite, per DSU Art. 4.7, for a panel request is that consultations have failed to settle a dispute within sixty days of the request.[98]

Panel jurisprudence merely requires that consultations were formally held. Even if a party could prove that the other side did not attempt to consult in good faith and settle the case, a panel will not review this issue because it does not have jurisdiction to do so. In conclusion, and in accordance with the finding in *Desicccated Coconut*, a panel will only declare that a party violated its duty to consult if it does not respond to the consultations request within ten days or refuses to actually meet for consultations. The substance of the consultations itself and their conduct, beyond the mere formal requirements, remains a black box, entirely controlled by the parties, and without involvement by any WTO bodies. This view was confirmed by the panel in the *Liquor Taxes* case. Korea argued that complainants did not engage in good faith consultations to reach a mutually agreed solution as required by Art. 3.3, 3.7 and 4.5 DSU. The Panel found that there is no recognized concept of "adequacy" of consultations, that the DSU only requires that consultations are held, or at least requested, and that a period of sixty days elapses from the time of the consultation request to the panel request.[99] The Panel continued that while

consultations "are a critical and integral part of the DSU", it had "no mandate to investigate the adequacy of the consultation process that took place between the parties . . . ", and further stated that "[w]hat takes place in those consultations is not the concern of a panel." [100] In the *Turkey—Textiles* case the respondent Turkey argued that the principle of procedural economy as well as the spirit of the WTO dispute settlement mechanism require that panel procedures be considered as an *ultima ratio* means to solve conflicts between Members for which they are unable to find a mutually agreed solution.[101] Referencing the *Banana* and *Liquor Tax* decisions, the panel rejected Turkey's argument.

B. The Principle of Good Faith

Closely related to the question of adequacy of consultations is the principle of good faith set out in Article 4.3 DSU and requiring that the "Member to which the [consultations] request is made . . . shall enter into consultations in good faith." If a responding party does not engage in consultations in good faith, a meaningful discussion of the problems at issue will not occur and the party requesting consultations could therefore claim before a panel that consultations were (1) inadequate, and (2) in violation of the good faith principle itself. In the context of consultations, the good faith requirement in Article 4.3 DSU has, to date, not been interpreted by the Appellate Body or panels. The principle has, however, been applied in numerous cases by WTO panels and the Appellate Body, mostly as a principle of interpretation of international treaties[102] and as a performance obligation on WTO Members.[103] This case law can only be applied to a limited extent to interpret Article 4.3.

1. Litigation Strategies

In the procedural law context, DSU, Article 3.10 establishes a general good faith requirement for DSU proceedings by stipulating that " . . . if a dispute arises, all Members will engage in these procedures in *good faith* in an effort to resolve the dispute." In its report in the *Foreign Sales Corporations* ("*FSC*") case, the Appellate Body found that this obligation of Article 3.10 DSU is another specific manifestation of the good faith principle

[100] *Id.*

[101] Report of the WTO Panel, *Turkey—Restrictions on Imports of Textile and Clothing Products*, WT/DS34/R, ¶ 9.19 (1999). Arguably, the panel in this case did not need to discuss the adequacy of consultations, since consultations did not take place because of Turkey's failure to appear. Turkey would not hold consultations without the participation of EU representatives, which India refused on the grounds that it had requested bilateral consultations pursuant to Article XXIII:1 GATT 1994 with Turkey. *Id*. ¶ 9.20. The panel could therefore have found that because of its failure to appear Turkey violated its duty to consult and forfeited its right to consult, with the result that an issue of adequacy never arose.

[102] *India Chemical Products, supra* note 66, ¶ 7.18; Report of the WTO Panel, *European Communities—Measures Affecting Asbestos and Asbestos-Containing Products*, WT/DS135/R, ¶ 8.29 (2000); Report of the WTO Panel, *United States—Section 301–310 of the Trade Act of 1974*, WT/DS152/R, ¶ 7.64 (1999); Report of the WTO Panel, *European Communities—Customs Classification of Certain Computer Equipment*, WT/DS62/R, WT/DS67/R, WT/DS68/R, ¶ 8.25 (1998); Report of the WTO Panel, *United States—Restrictions on Imports of Cotton and Man-Made Fibre Underwear*, WT/DS24/R, ¶ 7.20 (1996) ("*Underwear Imports*").

[103] Report of the WTO Panel, *Korea—Measures Affecting Government Procurement*, WT/DS163/R, ¶ 7.94 (2000) regarding non-violation complaints; *Argentina—Measures Affecting Imports of Footwear, Textiles, Apparel and Other Items*, WT/DS56/R, ¶ 6.14 (1997); Report of the Appellate Body, *United States—Definitive Safeguard Measures on Imports of Circular Welded Carbon Quality Line Pipe from Korea*, AB-2001-9, WT/DS202/AB/R, ¶¶ 55 & 110 (2002).

as a general principle of law and a principle of general international law, applying to both parties to a dispute. The Appellate Body interpreted good faith in the context of parties' due process rights and found that:

> This pervasive principle requires both complaining and responding Members to comply with the requirements of the DSU (and related requirements in other covered agreements) in good faith. By good faith compliance, complaining Members accord to the responding Members the full measure of protection and opportunity to defend, contemplated by the letter and spirit of the procedural rules. The same principle of good faith requires that responding Members seasonably and promptly bring claimed procedural deficiencies to the attention of the complaining Member, and to the DSB or the Panel, so that corrections, if needed, can be made to resolve disputes. The procedural rules of WTO dispute settlement are designed to promote, not the development of litigation techniques, but simply the fair, prompt and effective resolution of the trade disputes.[104]

If this interpretation is applied specifically to consultations the responding party (but, beyond that, likely also the party requesting consultations) must thus be "fair, prompt and effective" in order to conduct consultations in good faith. The ruling is similar to that of the decision in the *India—Patent Chemical Products* case where the Appellate Body held that parties must be fully forthcoming with information.[105]

Certain litigation strategies occasionally applied by Members, such as "stonewalling", are clearly in conflict with the good faith principle of Article 4.3, since they prevent the effective discussion of disputed issues. Stonewalling consultations is a preferred practice of the larger WTO Members whose negotiators try to disclose as little information as possible in order not to reveal their legal theories and to get the full benefit of surprise once a panel is established and proceeding begun. Thus, in some instances, parties do not cooperate during consultations—they do not openly discuss facts and law and little substantive information is exchanged. As a result, consultations are reduced to a mere formality, a necessary stage before the panel proceedings begins. Parties are unwilling to engage in good faith consultations because they have no interest in settling and do not want to admit that they are wrong. This will normally be the case for a responding party that concludes that it is likely its measures violate a WTO agreement, as well as for a party bringing a "false" complaint knowing that it actually does not have a case.

2. Further Elements of the Good Faith Principle

In the Article 21.5 proceedings of the *Shrimp-Turtle* case the panel dealt with the enforcement of a unilateral import prohibition by the United States relating to the protection of sea turtles. The parties disputed whether, if in order to justify such a measure under the chapeau of Article XX of the GATT 1994, the United States had to make a good faith effort to *negotiate* an international agreement on turtle protection, or if it had to *conclude* such an agreement. The question raised by the complainant Malaysia and discussed by the panel related to the requirements of Article XX's chapeau, rather than to the conduct of the negotiations by the United States, and whether it had acted in good faith.[106] Nevertheless, the panel stated:

[104] Report of the Appellate Body, *United States—Tax Treatment for "Foreign Sales Corporations,"* WT/DS108/AB/R, ¶ 166 (2000).

[105] *Appellate India Chemical Products, supra* note 26.

[106] Report of the WTO Panel, *United States—Import Prohibition of Certain Shrimp and Shrimp Products*, Recourse to Article 21.5 of the DSU by Malaysia, WT/DS58/RW, ¶¶ 5.42–5.75 (2001).

> The notion of good faith, in relation to the issue under examination in this section, [*i.e.*, the extent of the U.S. obligation to negotiate and/or reach an international agreement on the protection of sea turtles] implies a continuity of efforts which, in our opinion, is the only way to address successfully the issue of conservation and protection of sea turtles through multilateral negotiations, as demonstrated by the circumstances of this case.[107]

The panel thus found that there must be an element of continuity in the negotiating effort in order to be a "good faith" effort.[108] It is questionable to what extent this element could be applied to the good faith requirement of DSU consultations. The performance requirement imposed on the United States by the interpretation given to good faith in the *Shrimp-Turtle* case is based on the specific factual circumstances of the case, and is thus not a universally applicable definition that could easily be transferred to the specific situation of DSU consultations. In particular, the continuous, long-term effort that the panel required from the United States is somewhat at odds with the limited time period of DSU consultations.

IX. Confidentiality of the Proceeding, Article 4.6 DSU

Article 4.6 DSU requires that consultations be confidential. This means that parties to either bilateral consultations under Article XXII of GATT 1994 or multilateral consultations under Article XXIII:1 of GATT 1994 must not disclose information on what is discussed during consultations to third parties. This must, as a matter of course, include not only the spoken word but also any documents created or viewed in the course of consultations. Confidentiality of consultations is important because it can be conducive to reaching settlement. When parties are able to discuss an issue in private, knowing that what is said as well as information provided will not reach the outside world, they are more likely to lower their guard and reach a compromise on an issue than when they are under the scrutiny of other WTO Members, and ultimately the public. The question arises, however, whether there are limitations to the confidentiality of consultations and if so, when such limitations arise.

A. The Use of Facts and Evidence Obtained During Consultations Before the Panel

A question exists with respect to possible limitations to confidentiality. Should parties be allowed to submit to a panel information obtained during consultations to the panel, and should a panel be allowed to base its findings on such information. The wording of Article 4.6 DSU provides that "consultations shall be confidential *and without prejudice to the rights of any Member in any further proceedings*" (emphasis added). Taken literally, this seems to imply that information gained during consultations should not be used to the detriment of a party in a panel proceeding, *i.e.,* in a finding against that party. This,

[107] *Id*. ¶ 5.60. *See also* ¶ 5.67. The panel's interpretation of good faith was not disputed on appeal. *See* Report of the Appellate Body, *United States—Import Prohibition of Certain Shrimp and Shrimp Products*, Recourse to Article 21.5 of the DSU by Malaysia, WT/DS58/AB/RW, ¶¶ 115–124 (2001).

[108] On appeal, the Appellate Body found that under its application of the doctrine of *abus de droit*, the good faith principle required that the exercise of a right impinging on a field covered by a treaty obligation must be exercised *bona fide*, *i.e.,* reasonably. Report of the Appellate Body, *United States—Import Prohibition of Certain Shrimp and Shrimp Products*, WT/DS58/AB/R, ¶ 158 (1998). *See also* Report of the WTO Panel, *United States—Section 211 Omnibus Appropriations Act of 1998*, WT/DS176/R, ¶ 8.57 (2001), applying the same reasoning to Article 7 of the Agreement on Trade-Related Aspects of Intellectual Property Rights ("TRIPS").

however, would make little practical sense and would also conflict with the information-gathering function of the consultations process. WTO panels and the Appellate Body have thus admitted information that was acquired during consultations.

In the *Korean Liquor Taxes* case Korea claimed that references made by the complainant in its written submission to the panel to information supplied by Korea during consultations constituted a breach of Article 4.6 DSU. The panel rejected this argument, finding that "confidentiality extends only as far as requiring the parties to the consultations not to disclose any information obtained in the consultations to any parties that were not involved in those consultations."[109] The panel relied on the fact that the panel proceeding between the parties remains confidential[110] and that by disclosing information acquired during consultations to the panel, parties do not breach confidentiality.[111] Pointing out that the essence of consultations is for parties to gather information, the panel further stated that "[i]t would seriously hamper the dispute settlement process if the information acquired during consultations could not subsequently be used by any party in the ensuing proceedings."[112]

The panel in the *Bed Linen* case referenced the *Korean Liquor Taxes* decision. It found that "verbatim reports" of the consultations drafted by India did not have to be excluded from the panel proceeding because the panel's obligation under Article 11 DSU to make an objective assessment of the facts would be inhibited by an *a priori* limit on evidence.[113] The panel also referred to its broad right to seek evidence under DSU Art. 13.2.[114] It is important to note, however, that at the outset of its decision on this issue the panel in *Bed Linen* stated that there was nothing new or substantive in the verbatim reports of the substance of the consultations that was not otherwise before the panel.[115] This could indicate that the panel might have come to a different decision if India's verbatim transcripts had supplied important new information that was discussed during consultations but had not been raised before the panel. In light of the rule established in *Korea Liquor Taxes*, panels should not reject evidence based on reports made or notes taken by consulting parties during consultations, as long as the subject matter does not exceed what is covered by the panel request. It may be a different issue, however, if one party taped the consultations without the knowledge and consent of the other parties in order to introduce the transcript into the panel proceeding. None of the above panels made explicit reference to or interpreted the "without prejudice" clause in Article 4.6 DSU. The significance of the clause for parties to panel proceeding therefore remains somewhat unclear.

B. Settlement Offers Made During Consultations

In the *Underwear* case, one of the earlier WTO cases dealing with confidentiality of consultations, the complainant Costa Rica submitted to the panel information concerning settlement offers made by the United States during consultations. The offers related to levels of restrictions to be imposed under Article 6 of the Agreement on Textiles and

[114] Id. ¶ 6.34.
[115] Id. ¶ 6.32.

Clothing ("ATC"). Referring to the "without prejudice" clause of Article 4.6 DSU the panel found that:

> In our view, the wording of Article 4.6 of the DSU makes it clear that offers made in the context of consultations are, in case a mutually agreed solution is not reached, of no legal consequence to the later stages of dispute settlement, as far as the rights of the parties to the dispute are concerned. Consequently, we will not base our findings on such information.[116]

The panel's ruling refers explicitly only to settlement offers, no other type of information is mentioned. This seems to imply that information other than settlement offers may be used in a subsequent panel proceeding. Furthermore, there are obvious reasons why information from settlement offers should be treated differently from any other type of information disclosed during consultations. Settlement offers are the core objective of the consultations process and are, if made sincerely, the essence of a party's good faith effort to reach settlement. If a settlement offer could be used to the detriment of a party in a subsequent panel proceeding, the priority that the DSU places on settlement would be nullified, since settlement offers would become far less likely. A party making a settlement offer must be protected from any use of the offer against it in later proceedings.

C. Third Parties and Information Acquired During Consultations

The panel's approach in the *Korean Liquor Tax* case also raises questions regarding information that can be obtained by third parties who join at the panel stage and who were not parties to the consultations. Third parties have the right to receive the first submission to the panel and if information disclosed during consultations is part of that submission, parties that were not in the consultations will effectively have access to it.[117] Since parties to the dispute have little or no control over who joins the panel as a third party this seems especially problematic were bilateral consultations held to guarantee maximum privacy.[118]

X. Preparation and Logistics of Consultations

The DSU does not establish requirements regarding how consultations are to be conducted. Parties are free to meet as often and wherever they wish, and to conduct consultations as they please. WTO bodies such as the DSB are not involved in the organization and logistics of consultations, nor is the WTO Secretariat. No official record is kept of what is said by the parties in the course of the meetings between parties. Parties usually meet in Geneva but they may also decide to meet at another location, most likely the capital of one of the disputing parties. The composition of a delegation will often vary depending on the size of a country. The delegation of a WTO Member with a large bureaucracy will typically include legal specialists on the specific WTO agreement at issue in addition to higher-ranking officials with more representative functions. A smaller country will often be unable to devote similar resources to a dispute and will therefore appear with a less specialized delegation. Countries are free to include private lawyers in

[116] *Underwear Imports, supra* note 102, ¶ 7.27.

[117] DSU, Art. 10.3.

[118] Unlike the "trade interest" requirement for a joinder to consultations in DSU, Art. 4.1, the well-foundedness of the "substantial trade interest" requirement in DSU, Article 10.2 is not subject to the consent of the parties to the dispute.

their delegation. Consultations may last one day, or even less.[119] Or a series of meetings may be held over a number of days or an even longer period.

The complaining party may present the defending party with questions in writing before the first meeting in order to allow more time for preparing a response. During the meetings the parties may discuss factual and legal questions. Parties are also free to ask for information in writing. The duration of consultations will likely depend on the complexity of the issues discussed and the willingness of the parties to come to an agreement.

XI. Developing Countries, Article 4.10 DSU

One of the goals that Members had for the newly established WTO dispute settlement process was the increased use of the system by developing countries. This goal has been achieved. Developing countries are filing complaints in the WTO more frequently than under GATT 1947.[120] Among the total of 312 complaints filed in the WTO to date, developing countries were in the role of complainants in 71 instances.[121] Thus, compared to the 44 complaints brought by developing countries between 1948 and 1990, the number of complaints filed under the DSU over a period of eight years is substantially higher than the number of complaints brought during almost the entire existence of the GATT 1947.[122]

It is unlikely that Article 4.10 of the DSU, the provision on consultations with developing countries, has contributed much to this increase. Article 4.10 provides that: "during consultations Members should give special attention to the particular problems and interests of developing country Members." The provision only requires that Members "should" give special attention; its language is not mandatory and therefore rather weak. There is therefore little chance that developing country Members will be able to invoke the provision in any legally meaningful way.

[119] The consultations in *United States—Softwood Lumber* reportedly lasted for less than thirty minutes.

[120] For developing country participation in dispute settlement under the GATT, *see* ROBERT E. HUDEC, ENFORCING INTERNATIONAL TRADE LAW, THE EVOLUTION OF THE MODERN GATT LEGAL SYSTEM, 295–301 (1993). The author analyzes a total of 207 GATT complaints brought during the 42-year period between 1948 and 1990. Although this period does not cover the complete phase of GATT dispute settlement until 1994, it provides by far the most detailed and exhaustive statistical information and analysis on GATT 1947 dispute settlement. Among the 207 cases analyzed are several complaints involving multiple complainants and/or defendants which are counted on an individual-country basis. As a result there were 229 complainants and 223 defendants. *Id*. at 294. Out of 229 complaints, 44 were brought by developing countries, compared to 185 by developed countries. In its analysis, the author comes to the conclusion that developing countries withdrew their complaints twice as often (21 complaints) as developed countries. What is more, developing countries reached settlement in only 18 percent of their complaints (at total of eight complaints) as opposed to the 31 percent settlement rate (a total of 58 complaints) for developed countries. *Id*. at 316–317. Developing countries were defendants in 29 out of 223 cases. Further analysis shows that only 14 percent of complaints against developing countries are withdrawn (four complaints) by comparison to withdrawal of 27 percent of complaints against developed countries (53 complaints). By contrast, developing countries agreed to settle in 41 percent of the complaints brought against them (12 complaints) whereas developed countries only agreed to settlement in 27 percent of the complaints (52 complaints). *Id*. at 302–303. These data provide ample evidence that the relatively low participation of developing countries in GATT proceedings is a result of their weak negotiating position compared to developed countries. Please note that the term "settlement" used by Mr. Hudec is different from that of "formal settlement" as defined for DSU consultations in the context of this chapter. *See supra* note 20.

[121] *See Dispute Update supra* note 17. In case of multiple complainants each developing country was counted individually.

[122] *See supra* note 120.

Furthermore, WTO panels have consistently (and correctly) refused to review the substance of the consultations process. This makes the "special attention" clause of Article 4.10, like the DSU provisions on consultations in cases of urgency, more or less unenforceable and leaves a developing country Member with the mere hope that during consultations a developed country will have a "developed enough" sense of justice to give due consideration to the more difficult position of developing country Members.

Another core problem of the WTO dispute settlement process is that although the number of cases involving developing countries has increased, not all developing countries have realistic access to the dispute settlement system, including effective consultations. Thus, the group of developing countries participating in proceedings on the complaining side has been limited. The most frequent users are the newly industrialized countries such as Argentina, Brazil and Mexico. None of the least-developed country Members have brought a complaint. There are many reasons for this—an important one may be the desire not to offend the EU and the United States and risk losing aid and GSP benefits.

With respect to the outcome of consultations, developing countries are less likely to settle during consultations than developed countries, and frequently request the establishment of a panel when in the role of complainant. Among the formally settled cases, only two were brought by developing countries and one of the two cases involved another developing country as the defendant.[123] Despite the priority placed on settlement in the DSU it must be considered a positive development that developing countries do not settle easily when involved in disputes with developed countries. Due to their relative lack of bargaining power when opposing developed countries, developing countries are in a weaker position in a negotiation-type situation such as consultations. Neutral third-party adjudication is therefore more likely to achieve a fair outcome for developing countries than negotiations. The increasing number of panel requests made by developing countries also means that developing countries have become more assertive with respect to their rights and are not as easily bullied into obedience by larger trading nations as was the case under the GATT 1947. As a practical matter, the decreasing numbers of settlements and the increasing numbers of panel requests mean that developing country governments are willing to devote the resources required to go through a panel proceeding, and that they recognize that it is money well spent. An interesting strategy for a WTO dispute involving a developing country is to "team up" with a developed country and to benefit from its resources and expertise, as was the case in the *Bananas* dispute. In that case Ecuador, Guatemala, Honduras, Mexico and the United States consulted jointly and jointly went through a panel preceding.[124] The formation of such alliances could serve as a model for future cases. Another option for assistance for developing countries is the newly established Advisory Centre on WTO Law ("ACWL").[125]

[123] The parties were Brazil bringing a complaint against Argentina and India bringing a complaint against Poland. Ten out of 28 formally settled complaints involved developing countries as complainants or defendants.

[124] *See Banana Regime, supra* note 93, Complaint by Guatemala and Honduras, WT/DS27/R/GTM, WT/DS27/R/HND; Complaint by Mexico, WT/DS27/R/MEX; Complaint by the United States, WT/DS27/R/USA; Complaint by Ecuador, WT/DS27/R/ECU (1997); and *Appellate Banana Regime, supra* note 58. WT/DS234/R (2002). The same applies to *United States—Continued Dumping and Subsidy Offset Act of 2000*, WT/DS/217/R (the "Byrd Amendment" panel), where Australia, Brazil, Chile, the European Communities, India, Indonesia, Japan, Korea and Thailand jointly complained against the United States.

[125] The Centre describes its services as follows: The Centre will provide legal counseling on WTO law matters to developing-country and economy-in-transition Members of the Centre and all least developed countries free of charge up to a maximum of hours to be determined by the Management Board. It will also provide legal support throughout dispute settlement proceedings in the WTO at discounted rates for

By contrast, a case is likely to settle during consultations when the case involves a developing country as a defendant.[126] This is in line with the general trend that countries are more likely to settle when they have to defend a domestic measure alleged to be WTO-inconsistent than when they are launching a dispute against another Member.[127] It is, however, also a situation where the developing country's lack of leverage and power to resist political pressure will have the strongest impact.

Improvements in the situation of developing countries under WTO dispute settlement in general, and during the consultations phase in particular, are unlikely to result from procedural changes such as extended deadlines or "special attention". What developing countries need is additional funding and legal training in order to build up the necessary technical capacity of their officials so that they can handle a WTO case on their own. This will, first of all, be very expensive and the question is, who is going to pay. Second, such a development is strategically of limited interest for developed countries, if not against their interests. Why should large trading parties provide financial support to developing or least-developed countries when as a result they will be subject to increased trade litigation? Few countries are willing to make this sacrifice. Nevertheless, the ACWL constitutes a first (small) step in the right direction.[128]

XII. Conclusion

Taking stock of the consultations phase, Member practice demonstrates that since the introduction of the DSU a significant number of parties have formally settled their disputes during consultations. The settlement rate vindicates the claim that consultations are not merely a mandatory step, but a useful and necessary phase of the WTO dispute settlement process. Whether consultations will remain a meaningful phase will depend mostly on whether parties are willing to make a good faith effort to solve their conflicts at this early stage. The priority that the DSU attributes to a mutually agreed solution suggests that parties should at least attempt to negotiate such an outcome during consultations. It is evident, however, that there will always be a number of cases where settlement will not be reached and for which panel proceedings are inevitable.

The fruitful use by WTO Members of the consultations process will to some extent also depend on procedural issues. WTO Members should reconsider procedural elements that encourage stalling techniques, such as the right of the party responding to the consultations request to refuse a request for third party joinder when there are no objective

its Members and least developed countries in accordance with the schedule of fees set out in Annex IV of the Agreement establishing the Centre. The Centre thus functions essentially as a law office specialized in WTO law. In addition, the Centre will offer training on WTO jurisprudence on a regular basis. Intern and trainee programs will be developed for government officials from developing country Members and least developed countries. Its mandate and modest size require the Centre to stay within its own niche, to avoid overlap and to complement the training and technical co-operation provided by the WTO Secretariat and other international institutions. *See* http://www.acwl.ch.

[126] Out of the 28 formally settled complaints, developing country defendants challenged by developed countries settled in eight cases.

[127] In a WTO dispute settlement case,as in every other lawsuit, there is always a degree of unpredictability whether a case may win or lose. Nevertheless, a party launching a WTO dispute will usually carefully examine the merits of its case, refrain from bringing a weak case and only start such a proceeding where it considers that the case will most likely be successful. This may give such a country a better negotiating position during consultations than that of the country defending an allegedly WTO inconsistent measure.

[128] The developed-country Members to the ACWL and, therefore, its donors to date are only Canada, Denmark, Finland, Ireland, Italy, the Netherlands, Norway, Sweden and the United Kingdom.

reasons for such a refusal. (The same holds true for the unanswered question of whether compliance proceedings under Article 21.5 DSU require new consultations.) Issues of this type tend to make the proceeding more time consuming, cumbersome and frustrating than necessary. By the same token, certain "short cuts" that make the process speedier and smoother should be allowed, such as the possibility to proceed directly to panel requests for disputes involving joint parties rather than requesting new consultations with the joint parties before a panel can be requested.

Changes could be brought about by amending the DSU, but also by changing the practice of the parties. Is this because the parties can do what they want in the black box of consultations? Whether this will happen as a result of the ongoing DSU review is unknown.[129]

[129] The 1994 Marrakesh Ministerial Conference originally mandated a review of the DSU within four years of the entry into force of the WTO Agreement, thus by January 1, 1999. *See Decision on the Application and Review of the Understanding on Rules and Procedures Governing the Settlement of Disputes*, LT/UR/D-1/6 (1994).

I. Introduction

This paper provides an introduction to the panel process within the framework of the World Trade Organization ("WTO") dispute settlement mechanism. After this brief introduction (I), it discusses (II) the types of complaints (that is, "violation" complaints, "non-violation" complaints and "situation" complaints); (III) who may participate in panel proceedings (including whether private counsel and non-governmental organizations may participate and whether there is a need for a "legal interest" in initiating proceedings); (IV) the object of a complaint; (V) the consultations stage; (VI) panel establishment and terms of reference; (VII) multiple panel proceedings; (VIII) panel composition; (IX) procedural stages of panel proceedings (including organizational meeting, preliminary issues and procedural objections, written submissions and oral hearings, confidentiality of proceedings); (X) third party rights; (XI) burden of proof (including timing of evidence); (XII) panel's right to seek information (including expert review groups and duty to respond); (XIII) mandate of panels in respect of legal issues and factual issues; (XIV) interim review stage; (XV) contents of the final panel report (including the obligation to set out the basic rationale behind panel findings, duly exercise judicial economy, not to add to or diminish rights and obligations of Members, and the right to suggest how to implement the panel findings); and (XVI) conclusion of panel proceedings.[1]

The WTO *Understanding on Rules and Procedures for the Settlement of Disputes* ("DSU") contains detailed provisions regulating the functioning of the quasi-judicial WTO dispute settlement mechanism. The system is aimed at providing security and predictability to the multilateral trading system, clarifying existing provisions, ensuring consistent application of WTO law by all Members, and maintaining a proper balance between the rights and obligations of Members.[2] The rules and procedures of the DSU apply *generally to all* disputes raised before the WTO dispute settlement mechanism. However, a number of agreements covered by the WTO provide for *special and additional* dispute settlement rules and procedures.[3] Where particular agreements covered by the

[1] The appellate review and the implementation stages are covered by Chapters 27 and 28 of this book.

[2] Articles 1 and 3 of the DSU. Article 3.2 provides:

> The dispute settlement system of the WTO is a central element in providing security and predictability to the multilateral trading system. The Members recognize that it serves to preserve the rights and obligations of Members under the covered agreements, and to clarify the existing provisions of those agreements in accordance with customary rules of interpretation of public international law. Recommendations and rulings of the DSB cannot add to or diminish the rights and obligations provided in the covered agreements.

[3] Appendix 2 on "Special or Additional Rules and Procedures Contained in the Covered Agreements" to the DSU lists Article 11.2 of the Agreement on Sanitary and Phytosanitary Measures ("SPS Agreement"); Articles 2.14, 2.21, 4.4, 5.2, 5.4, 5.6, 6.9–6.11 and 8.1–8.12 of the Agreement on Textiles and Clothing ("ATC"); Articles 14.2–14.4 and Annex 2 to the Agreement on Technical Barrier to Trade ("TBT Agreement"); Articles 17.4–17.7 of the Agreement on Implementation of Article VI of the GATT 1994 ("Anti-Dumping Agreement"); Articles 19.3–19.5 and paragraphs 2(f), 3, 9 and 21 of Annex II to the Agreement on Implementation of Article VII of the GATT 1994 ("Customs Valuation Agreement"); Articles 4.2–4.12, 6.6, 7.2–7.10, 8.5 and footnote 35, and Articles 24.4 and 27.7 and Annex V to the Agreement on Subsidies and Countervailing Measures ("SCM Agreement"); Articles XXII:3 and XXIII:3 of the General Agreement on Trade in Services ("GATS"); paragraph 4 of the Annex on "Financial Services", paragraph 4 of the Annex on "Air Transport Services", and paragraphs 1–5 of the Decision on Certain Dispute Settlement Procedures for the GATS. This list includes provisions where only a part of the provision may be relevant in this context. This list does not contain special and additional rules contained in Plurilateral Trade Agreement (that is the Agreements on Government Procurement and Trade in Civil Aircraft).

WTO provide for special and additional rules and procedures on dispute settlement, these rules or procedures *prevail* over the general DSU rules and procedures to the extent that there is a conflict or a difference between them.[4]

II. Types of Complaints

Article XXIII of the GATT 1994 and the DSU define the *jurisdiction* of WTO dispute settlement panels broadly. Whenever a WTO Member considers that any benefit accruing to it directly or indirectly under the covered agreements of the WTO (covered agreements) is being nullified or impaired, or that the attainment of any objective of those agreements is being nullified or impaired as the result of:

(a) the failure of another Member to carry out its obligations under [that] Agreement, or
(b) the application by another Member of any measure, whether or not it conflicts with the provisions of [that] Agreement, or
(c) the existence of any other situation,[5]

such Member may seek redress through recourse to the WTO dispute settlement mechanism.[6] In dispute settlement practice, these types of complaints are referred to as (a) "violation" complaints; (b) "non-violation" complaints; and (c) "situation" complaints.

A. Violation Complaints

Given that the WTO dispute settlement system aims to preserve the rights and obligations of Members under the covered agreements, it is obvious that complaints of violations of the provisions of the covered agreements may be raised before dispute settlement panels.[7] It is questionable whether parties could—by mutual consent—submit complaints on breaches of international law *other than* the covered agreements to WTO panels and whether those panels would be acting consistently with their obligations under the DSU if they adjudicated such complaints.[8] In an increasing number of WTO disputes, issues arise that involve not only WTO law as such, but also matters relating to "non-trade concerns", such as environmental protection, labor standards and human rights, investment, taxation, and competition. Whenever infringements of WTO law are alleged, panels or the Appellate Body would have no authority to dismiss such a complaint simply because

[4] Article 1.2 of the DSU. The Appellate Body noted that:

> . . . it is only where the provisions of the DSU and the special or additional rules and procedures of a covered agreement *cannot* be read as *complementing* each other that the special or additional provisions are to *prevail*. A special or additional provision should only be found to *prevail* over a provision of the DSU in a situation where adherence to the one provision will lead to a violation of the other provision, that is, in the case of a *conflict* between them. An interpreter must, therefore, identify an *inconsistency* or a *difference* between a provision of the DSU and a special or additional provision of a covered agreement *before* concluding that the latter *prevails* and that the provision of the DSU does not apply. (Appellate Body Report, *Guatemala—Cement I*, ¶ 65. (*See* the Appendix to this chapter for full citations to the Panel and Appellate Body reports referred to in this chapter). *See also*, Appellate Body Report, *India—Quantitative Restrictions*, ¶¶ 84–86)

[5] Article XXIII:1 of the GATT 1994.

[6] Article 23.1 of the DSU.

[7] Article XXIII:1(a) of the GATT 1994 also requires that a Member's failure to carry out an obligation under the GATT 1994 results in the nullification or impairment of a benefit which another Member considers accrues to it under the GATT.

[8] Especially in light of Article 19 of the DSU.

it also involves "non-trade concerns".[9] Moreover, according to Article 3.2 of the DSU, WTO law must be interpreted in accordance with customary rules of interpretation of public international law. These rules of interpretation are codified in the Vienna Convention on the Law of Treaties ("Vienna Convention").[10] According to Article 31.1(c) of the Vienna Convention, these rules include "any relevant rules of international law applicable in the relations between the parties". One can argue that, consequently, provisions of WTO law may also be interpreted in light of relevant rules of other international treaty law or customary law applicable between the parties. For example, it has been argued that international law other than trade law is relevant in interpreting exceptions (including Article XX of the GATT 1994) authorizing Members to derogate from WTO free-trade and non-discrimination rules when pursuing legitimate non-economic objectives such as the protection of human, animal and plant life and health. The Appellate Body has stated that WTO law does not exist in "clinical isolation" from other areas of international law.[11] The covered agreements are not a "self-contained regime".

B. Non-Violation Complaints

There is a separate cause of action even if another Member's measure is *not in violation* of WTO law when the complaining Member considers that the measure otherwise nullifies or impairs benefits accruing to it directly or indirectly under the covered agreements.[12] The rationale underlying non-violation complaints is that the improved competitive opportunities that can legitimately be expected from a tariff concession can be frustrated, not only by measures proscribed by the GATT, but also by measures consistent with that Agreement. In order to encourage contracting parties to make tariff concessions, they must therefore be given a right of redress when a reciprocal concession is impaired by another contracting party as a result of the application of any measure, whether or not it conflicts with the GATT.[13] The GATS and the TRIPS Agreement contain specific rules with respect to the non-violation remedy.[14]

The Appellate Body and panels agree that the non-violation complaints should be approached with caution and should remain an exceptional remedy.[15] In order to establish

[9] Article 3.3 of the DSU and Article XXIII:1 of GATT: "If any Member should consider that any benefit accruing to it directly or indirectly under this Agreement is being nullified or impaired or that the attainment of any objective of the Agreement is being impeded . . . ". (*See* Panel Reports, *EC—Bananas III*, and Appellate Body Report, *EC—Bananas III*, ¶¶ 132 *ff*)

[10] Done at Vienna, May 23, 1969, 1155 U.N.T.S. 331 (1969); 8 *International Legal Materials* 679 (1969).

[11] Appellate Body Report, *U.S.—Gasoline*, at 17.

[12] Article XXIII:1(b) of the GATT 1994 and Article 26 of the DSU. E.-U. Petersmann, *Violation Complaints and Non-Violation Complaints in Public International Trade Law*, 34 GERMAN YEARBOOK OF INTERNATIONAL LAW 175, 225 (1991), mentions as other legal bases for the non-violation concept the effectiveness of concessions, reciprocity and bona fide protection of reasonable expectations. Non-violation complaints are discussed in Chapter 29 of this book.

[13] GATT Panel Report, *EEC—Oilseeds I*, adopted 25 January 1990, BISD 37S/86, at 128–129, ¶¶ 144 and 148, *quoted in* Appellate Body Report, *EC—Asbestos*, ¶ 185. The panel in *Japan—Film* noted that "[a]lthough the non-violation remedy is an important and accepted tool of WTO/GATT dispute settlement and has been 'on the books' for almost 50 years, we note that there have only been eight cases in which panels or working parties have substantively considered Article XXIII:1(b) claims. This suggests that both the GATT contracting parties and WTO Members have approached this remedy with caution and, indeed, have treated it as an exceptional instrument of dispute settlement." (Panel Report, *Japan—Film*, ¶ 10.36)

[14] Article XXIII:3 of GATS and paragraphs 2 and 3 of Article 64 of the TRIPS Agreement.

[15] The Appellate Body agreed, at ¶ 186 in *EC—Asbestos*, with the panel in *Japan—Film*. That panel stated that "[t]he reason for this caution is straightforward. *Members negotiate the rules that they agree to follow and only exceptionally would expect to be challenged for actions not in contravention of those rules.*" (Panel Report, *Japan—Film*, ¶ 10.36 (original emphasis))

a case of *non-violation* nullification or impairment of trade benefits in the absence of a breach of WTO law, a complainant must provide a "detailed justification"[16] in respect of essentially three conditions: (a) that a measure attributable to a Member's *government* exists; (b) that the measure "upsets the competitive relationship" between imported and like domestic products to the disadvantage of imported products; and (c) that the incidence of that measure could not have been reasonably anticipated at the time when the relevant tariff binding was negotiated.[17] When the complainant prevails with its non-violation case, the defendant need not withdraw the challenged measure as it is not in breach of WTO law. The defendant is instead required to offer a "mutually satisfactory adjustment", in other words, compensation by offering trade opportunities in alternative trade sectors.[18]

C. Situation Complaints

A third cause of action is "the existence of any other situation" that nullifies or impairs benefits which a Member considers to accrue to it directly or indirectly under the covered agreements.[19] It is unclear whether the so-called *situation* complaints could be stretched so far as to challenge "private conduct" allegedly nullifying or impairing trade benefits where such conduct is not attributable to a Member government and thus could not be challenged through violation or non-violation complaints.[20] Again, a detailed justification of a "situation complaint" is required.[21] Decisions by the Dispute Settlement Body (DSB) on the adoption of panel reports adjudicating "situation complaints" are exempt from the "negative consensus" rule. Accordingly, panel rulings on "situation complaints" would have to be adopted by the DSB and become binding upon the parties only if all Members including the "losing party" consent.[22]

III. Who May Participate in Panel Proceedings?

Only *governments* of WTO Members (that is, States or separate customs territories possessing full autonomy in the conduct of their external commercial relations) may initiate complaints and enjoy full party and third party status in panel proceedings.[23] The

[16] Article 26 of the DSU.
[17] Panel Report, *Japan—Film*, ¶¶ 10.41 *ff*.
[18] Paragraph 1(b) of Article 26 of the DSU.
[19] Article XXIII:1(c) of the GATT 1994.
[20] Article XXIII:1(c) has been invoked in only very few instances under GATT 1947. While the establishment of a panel or a working party under this article has been requested in a few cases, no panel has ever made a finding on such a situation complaint. WTO, II ANALYTICAL INDEX 668–670 (1995).
[21] Paragraph 2(a) of the Article 26 of the DSU.
[22] No "situation" complaint has ever led to the issuance of a panel report. "Situation" complaints are not foreseen under the GATS and the TRIPS Agreement.
[23] According to the Appellate Body:

> . . . access to the dispute settlement process of the WTO is limited to Members of the WTO. This access is not available, under the *WTO Agreement* and the covered agreements as they currently exist, to individuals or international organizations, whether governmental or non-governmental. Only Members may become parties to a dispute of which a panel may be seized, and only Members "having a substantial interest in a matter before a panel" may become third parties in the proceedings before that panel. Thus, under the DSU, only Members who are parties to a dispute, or who have notified their interest in becoming third parties in such a dispute to the DSB, have a *legal right* to make submissions to, and have a *legal right* to have those submissions considered by, a panel. Correlatively, a panel is *obliged* in law to accept and give due consideration only to submissions made by the parties and the third parties in a panel proceeding. (Appellate Body Report, *U.S.—Shrimp*, ¶ 101)

WTO Secretariat is not entitled to prosecute suspected breaches of WTO law on its own initiative; nor are non-governmental organizations or business or industry associations entitled to do so.

A. Private Counsel

Member governments have the right to decide who should represent them in panel proceedings. A Member may choose to include in its delegation public civil servants only or also private counsel. The Appellate Body found nothing in the WTO Agreement, the DSU or its Working Procedures, nor in customary international law or the prevailing practice of international tribunals, which prevents a WTO Member from determining the composition of its delegation in appellate review proceedings.[24] Therefore, it is for a WTO Member to decide who should represent it as members of its delegation in an oral hearing of the Appellate Body.[25] For the Appellate Body:

> representation by counsel of a government's own choice may well be a matter of particular significance—e specially for developing-country Members—to enable them to participate fully in dispute settlement proceedings. Moreover, given the Appellate Body's mandate to review only issues of law or legal interpretation in panel reports, it is particularly important that governments be represented by qualified counsel in Appellate Body proceedings.[26]

Prior to that ruling, some panels insisted that delegations be composed of government officials only.[27] Since then, panels have changed course and followed the Appellate Body's ruling.[28] Delegations representing parties in panel proceedings often include private counsel and in an increasing number of cases—instead of diplomats—private attorneys present the pleadings.

B. Non-Governmental Organizations

Despite the essentially inter-governmental nature of the WTO dispute settlement mechanism, non-governmental organizations ("NGOs") or inter-governmental organizations are not totally excluded from any form of participation in panel proceedings. In more than a dozen panel proceedings, NGOs (for example, civil society groups or business and industry associations) have submitted so-called *amicus curiae* briefs to panels.[29]

It is undisputed that Member governments are entitled to attach briefs authored by NGOs to their submissions and to endorse the arguments contained therein as their own.[30] However, there is a deep difference of views between WTO Members on whether

[24] Appellate Body Report, *EC—Bananas III*, ¶ 10.
[25] *Id*.
[26] *Id.*, ¶ 12.
[27] Panel Reports, *EC—Bananas III*, ¶¶ 7.10–7.12.
[28] Panel Report, *Indonesia—Cars*, ¶¶ 14.1–14.2.
[29] Some of the panels that received *amicus curiae* briefs mention this in express terms in their report (*See, e.g.*, panels in *U.S.—Shrimp,* ¶ 3.129; *U.S.—Section 110(5) Copyright Act,* ¶¶ 6.3–6.8; *EC—Asbestos,* ¶¶ 6.1–6.4; *EC—Bed Linen,* ¶ 6.1). *Amicus Curiae* briefs are discussed in Chapter 32 of this book.
[30] The Appellate Body has accepted this practice in the context of appellate review proceedings in noting "the attaching of a brief or other material to the submission of either appellant or appellee, no matter how or where such material may have originated, renders that material at least *prima facie* an integral part of that participant's submission. . . . [A] participant filing a submission is properly regarded as assuming responsibility for the contents of that submission, including any annexes or other attachments." (Appellate Body Report, *US—Shrimp*, ¶ 89)

panels are entitled to accept unsolicited *amicus curiae* briefs submitted by NGOs on their own initiative. In this respect, it should be recalled that a panel has the right to seek information and technical advice from any individual or body that it deems appropriate.[31] A panel may also seek information from any relevant source and may consult experts to obtain their opinion on certain aspects of the matter before it.[32] The reference to any relevant source and any individual or body includes the right to request information from non-governmental sources. In the view of the Appellate Body,

> [a] panel's authority includes the authority to decide *not to seek* such information or advice at all. [A] panel also has the authority to *accept or reject* any information or advice which it may have sought and received, or to *make some other appropriate disposition* thereof.[33]

However, the Appellate Body believes that the term "seek" need not necessarily be read in a too literal or formalistic manner in the sense that a panel cannot choose to accept unsolicited information submitted by an individual or body.[34] Thus the "authority to *seek* information is not properly equated with a *prohibition* on accepting information which has been submitted without having been requested by a panel."[35]

In most disputes where NGOs have submitted unsolicited *amicus curiae* briefs, the panels accepted such submissions but decided that relying on their content was not necessary for resolving the issues before them.[36] The Appellate Body has deemed admissible an *amicus curiae* brief submitted by a WTO Member government that did not enjoy party or third-party status in the proceeding at hand.[37] But this question has not yet arisen before a panel.

In summary, panels and the Appellate Body have decided that they are entitled—but not required—to receive and consider *amicus curiae* submissions even if they are unsolicited. They have also ruled that they are not obliged to rely in their rulings on such submissions. In the DSU review negotiations, Members have expressed widely divergent views on these questions. A few Members have suggested that the Appellate Body's interpretation be codified in the DSU, while the vast majority of Members demands that panels be expressly precluded by the DSU from accepting unsolicited briefs from non-governmental sources.

C. Need for Legal Interest?

In order to initiate panel proceedings, it is sufficient that a WTO Member *itself* considers that any benefits accruing to it directly or indirectly under a covered agreement are being

[31] Article 13.1 of the DSU. Article 14 and Annex 2 of the TBT Agreement and Article 11 of the SPS Agreement. Before seeking such information from any individual or body within the jurisdiction of a Member the panel shall inform the authorities of that Member. (Article 13.1 of the DSU)

[32] Article 13.2 of the DSU.

[33] Appellate Body Report, *U.S.—Shrimp*, ¶ 104.

[34] *Id.*, ¶ 107.

[35] *Id.*, ¶ 108.

[36] In the same vein, the Appellate Body stated in *EC—Sardines*:

> Accordingly, we believe that the objections of Peru with regard to the *amicus curiae* brief submitted by a private individual are unfounded. We find that we have the authority to accept the brief filed by a private individual, and to consider it. We also find that the brief submitted by a private individual does not assist us in this appeal. (Appellate Body Report, *EC—Sardines*, ¶ 160)

[37] *Id.*, ¶¶ 161–170.

impaired or nullified by a measure taken by another Member.[38] The Appellate Body noted that:

> . . . a Member has broad discretion in deciding whether to bring a case against another Member under the DSU. The language of Article XXIII:1 of the GATT 1994 and of Article 3.7 of the DSU suggests, furthermore, that a Member is expected to be largely self-regulating in deciding whether any such action would be "fruitful".[39]

The complainant does not have to show *actual* adverse trade effects before initiating a panel proceeding. The impairment of potential trade opportunities and the legal interest in the compliance by other Members with WTO law is sufficient for a Member to raise a complaint. With the increased interdependence of the global economy, Members have a greater stake in enforcing WTO rules than in the past since any deviation from the negotiated balance of rights and obligations is more likely than ever to affect them, directly or indirectly.[40] The Appellate Body agreed with a panel that neither Article 3.3 nor 3.7 of the DSU nor any other provision of the DSU or the WTO Agreement contain any explicit requirement that a Member must have a 'legal interest' as a prerequisite for requesting a panel.[41] Given the "largely self-regulating" nature of the requirement in the first sentence of Article 3.7, panels and the Appellate Body must presume, whenever a Member submits a request for establishment of a panel, that such Member does so in good faith, having duly exercised its judgment as to whether recourse to that panel would be "fruitful". Article 3.7 neither requires nor authorizes a panel to look behind that Member's decision and to question its exercise of judgment.[42]

IV. Object of a Complaint

A WTO Member may complain against any *measure* taken by or attributable to another Member's government. Such measures do not only encompass mandatory laws, regulations and other requirements enacted by a government, they may also include formally non-binding governmental actions such as "administrative guidance".[43] A Member government may also be challenged before the WTO for non-governmental measures adopted or maintained by public or private enterprises such as voluntary export restraints or orderly marketing arrangements when those measures are encouraged or supported by that government.[44] However, "not every utterance by a government official or study prepared by a non-governmental body at the request of the government or with some degree of government support can be viewed as a measure of a Member government."[45]

[38] Article 3.3 of the DSU and Article XXIII:1 of GATT:

> If any Member should consider that any benefit accruing to it directly or indirectly under this Agreement is being nullified or impaired or that the attainment of any objective of the Agreement is being impeded. . . .

Article 3.7 of the DSU provides in relevant part:

> Before bringing a case, a Member shall exercise its judgement as to whether action under these procedures would be fruitful.

[39] Appellate Body Report, *EC—Bananas III*, ¶ 135.
[40] *Id.*, ¶ 136.
[41] *Id.*, ¶ 132.

[43] Panel Report, *Japan—Film*, ¶ 10.43.
[44] Article 11 of the *Agreement on Safeguards*.
[45] Panel Report, *Japan—Film*, ¶ 10.43.

Complainants may challenge the application of a law or regulation in a *specific* case against specific economic operators.[46] The Appellate Body has also noted with approval that a number of panels have dealt with dispute settlement claims brought against a Member on the basis of its legislation as such, independent of the application of that legislation in specific instances, stating that:

> In *examining* such claims, panels developed the concept that mandatory and discretionary legislation should be distinguished from each other, reasoning that only legislation that mandates a violation of GATT obligations can be found as such to be inconsistent with those obligations.[47]

Complaints are usually directed against measures requiring positive action. In certain cases, a Member's inaction or omission to act can be challenged when a particular provision of a covered agreement requires the Member to take certain action.[48]

In the following sections, the different stages of WTO dispute settlement proceedings are discussed.

V. Consultation Stage

Consultations between the parties must precede litigation before a panel. These consultations are aimed at finding a satisfactory settlement of the dispute between the parties through diplomatic means.[49] A request for consultations must be submitted in writing and must give the reasons for the request. It has to identify the measures at issue and the legal basis for the complaint.[50] Requests for consultations must be notified to the DSB.[51]

Each Member is to "accord sympathetic consideration" to such a request and "afford adequate opportunity" for consultations.[52] Consultations are confidential.[53] The WTO Secretariat, the DSB, and the panelists are not involved. Consultations are "without prejudice to the rights of any Member in any further proceedings".[54] This means that arguments raised, partial compromises reached, and concessions made during consultations cannot

[46] The Appellate Body noted that:

> Prior to the entry into force of the *WTO Agreement*, it was firmly established that Article XXIII:1(a) of the GATT 1947 allowed a Contracting Party to challenge legislation as such, independently from the application of that legislation in specific instances. While the text of Article XXIII does not expressly address the matter, panels consistently considered that, under Article XXIII, they had the *jurisdiction* to deal with claims against legislation as such. Appellate Body Report, *U.S.—1916 Act*, ¶ 60.

[47] Appellate Body Report, *U.S.—1916 Act*, ¶ 61.

[48] For example, a particular provision of the Agreement on Trade-Related Intellectual Property Rights (TRIPS Agreement) requires Members to ensure in its domestic legislation a certain level of protection in respect of a certain intellectual property right.

[49] Article 4.5 of the DSU. The consultation stage is discussed in detail in Chapter 25 of this book.

[50] Article 4.4 of the DSU.

[51] WTO document WT/DSB/6.

[52] Article 4.2 of the DSU. The Appellate Body noted in *India—Patents (U.S.)*:

> All parties engaged in dispute settlement under the DSU must be fully forthcoming from the very beginning both as to the claims involved in a dispute and as to the facts relating to those claims. Claims must be stated clearly. Facts must be disclosed freely. This must be so in consultations as well as in the more formal setting of panel proceedings. In fact, the demands of due process that are implicit in the DSU make this especially necessary during consultations. (Appellate Body Report, ¶ 94)

[53] Article 4.6 of the DSU.

[54] *Id*.

be held against any party during subsequent panel proceedings. Even if consultations ultimately fail to resolve the dispute, they serve to define and delimit the scope of the matter actually in dispute between the parties.[55]

It is important that a request for consultations be detailed and comprehensive because a defendant could later raise procedural objections against a request for panel establishment that is allegedly broader than the request for consultations, on the grounds that a panel request must indicate whether the matter at issue was actually subject to consultations.[56] However, there is no requirement in the DSU as to the "precise and exact identity between the specific measures that were the subject of consultations and the specific measures identified in the request for the establishment of a panel."[57] One purpose of consultations "is to 'clarify the facts of the situation', and it can be expected that information obtained during the course of consultations may enable the complainant to focus the scope of the matter with respect to which it seeks establishment of a panel."[58]

When a Member other than the consulting Member considers that it has a "substantial trade interest" in consultations held pursuant to Article XXII:1 of the GATT 1994, or corresponding provisions in other covered agreements,[59] it may notify the consulting Member and the DSB of that interest within ten days of the date of circulation of the original request for consultations. The interested Member may join the consultations unless the Member to which the original request for consultations was addressed objects. When the Member initiating the consultations has made its request under Article XXIII:1 of the GATT 1994, such joining of consultations held between other Members is not permitted. In other words, by making its request under either Article XXII:1 or Article XXIII:1 of the GATT 1994, the Member initiating consultations determines whether it wants to offer the opportunity to other Members to join in—or to exclude them from—the consultations.

If the defending party fails to respond to the request for consultations within ten days, if it fails to enter into consultations within thirty days, or if the consultations fail to settle the dispute within sixty days, the complaining party may request the establishment of a panel by the DSB.[60] If parties mutually agree, or in cases of urgency, these deadlines are

[55] The Appellate Body noted in *Mexico—Corn Syrup (Article 21.5—US)*:

> Through consultations, parties exchange information, assess the strengths and weaknesses of their respective cases, narrow the scope of the differences between them and, in many cases, reach a mutually agreed solution in accordance with the explicit preference expressed in Article 3.7 of the DSU. Moreover, even where no such agreed solution is reached, consultations provide the parties an opportunity to define and delimit the scope of the dispute between them. (Appellate Body Report, ¶ 54)

[56] However, the requirement in Article 6.2 of the DSU to indicate "*whether* consultations were held . . . may be satisfied by an express statement that *no consultations were held*. In other words, Article 6.2 also envisages the possibility that a panel may be validly established without being preceded by consultations." (Appellate Body Report, *Mexico—Corn Syrup (Article 21.5—US)*, ¶ 62)

[57] Appellate Body Report, *Brazil—Aircraft*, ¶ 132.

[58] *Id.*

[59] These include Article XXII:1 of GATS. See Article 4.11 of the DSU and the cross-references to other covered agreements in footnote 4 to Article 4.11.

[60] Articles 4.3 and 4.7 of the DSU. The Appellate Body stated in *Mexico—Corn Syrup (Article 21.5—US)*:

> When the responding party does not respond to a request for consultations, or declines to enter into consultations, the complaining party may dispense with consultations and proceed to request the establishment of a panel. In such a case, the responding party, by its own conduct, relinquishes the potential benefits that could be derived from those consultations. (Appellate Body Report, *Mexico—Corn Syrup (Article 21.5—US)*, ¶ 59)

even shorter.[61] Developing country Members enjoy special and differential treatment. If consultations involve a measure taken by a developing country Member, the parties may agree to extend these time periods. If, after the relevant period has elapsed, the consulting parties cannot agree that the consultations have concluded, the Chairman of the DSB shall decide, after consultation with the parties, whether to extend the relevant period and if so, for how long.[62]

In recent years, litigation before a panel has occurred after no more than approximately one-third of the requests for consultations. Given widespread lack of compliance with the obligation of parties to notify the DSB of all "mutually agreed solutions", it is difficult to ascertain which disputes were fully settled. Nonetheless, the number of disputes that are settled through diplomatic means, prior to entering the litigation stage before a dispute settlement panel, is often underestimated.

In the course of the negotiations on DSU review, it has been suggested that consultation meetings between the parties be intensified and that the overall period for consultations be shortened. It has also been proposed that settlements agreed between the parties during these consultations should be made enforceable through the same means as foreseen by the DSU for enforcing the implementation of panel and Appellate Body findings adopted by the DSB.

VI. Panel Establishment and Panel Terms of Reference

If the consultations are not fruitful within a sixty day period, the complainant may start the contentious phase of a WTO dispute settlement proceeding by requesting the establishment of a panel by the DSB. At the second DSB meeting discussing the panel request (at the latest), the DSB "quasi-automatically" establishes the panel by "negative consensus". Except in the unlikely situation that the complainant would join a consensus to reject its own request, the decision to establish the panel will always be taken at that second DSB meeting.[63] In the DSU review negotiations it has been proposed to "quasi-automatically" establish the panel by "negative consensus" at the first DSB meeting discussing the panel request.

A panel's mandate or, in other words, its terms of reference, are usually defined by the matter as set out in the complainant's request for the establishment of a panel—unless the parties agree otherwise.[64] The Appellate Body observed:

> A panel's terms of reference are important for two reasons. First, terms of reference fulfill an important due process objective—they give the parties and third parties sufficient information concerning the claims at issue in the dispute in order to allow them an opportunity to respond to the complainant's case. Second, they establish the jurisdiction of the panel by defining the precise claims at issue in the dispute.[65]

[61] According to Article 4.8 of the DSU, Members shall enter into consultations within 10 days and if the consultations fail to settle the matter, the complaining party may request panel establishment within 20 days.

[62] Article 12.10 of the DSU.

[63] Article 6.1 of the DSU.

[64] According to Article 7.1 of the DSU, panels shall have the following terms of reference unless the parties to the dispute agree otherwise within 20 days from the establishment of the panel:

> To examine, in the light of the relevant provisions in (name of the covered agreement(s) cited by the parties to the dispute), the matter referred to the DSB by (name of party) in document . . . and to make such findings as will assist the DSB in making the recommendations or in giving the rulings provided for in that/those agreement(s).

[65] Appellate Body Report, *Brazil—Desiccated Coconut*, at 22, DSR 1997:I, 167, at 186.

Parties frequently disagree on the scope of the subject matter of a dispute. When the defendant raises procedural objections, a panel will have to examine at the outset of the proceedings whether the *request for the establishment of a panel* sets out the matter as *clearly and specifically* as required by Article 6.2 of the DSU.[66] According to the Appellate Body, the *matter* referred to the DSB consists of two major elements: the specific *measures* at issue and the *legal basis of the complaint* (or the *claims*).[67] More specifically:

> [w]hen parsed into its constituent parts, Article 6.2 may be seen to impose the following requirements. The request must: (i) be in writing; (ii) indicate whether consultations were held; (iii) identify the specific measures at issue; and (iv) provide a brief summary of the legal basis of the complaint sufficient to present the problem clearly.[68]

Article 6.2 obliges complaining parties to indicate "whether consultations were held" prior to requesting the establishment of a panel. This requirement may be satisfied by the inclusion, in the request for establishment of a panel, of a statement as to whether consultations occurred *or not*. In the Appellate Body's view, this is so because the DSU expressly contemplates that, in certain circumstances, a panel may deal with, and dispose of, the matter referred to it, even if no consultations took place.[69]

Article 6.2 requires, moreover, a "brief summary of the legal basis of the complaint sufficiently to present the problem clearly", or in other words, the sufficient identification of the *claims* raised. Regarding the obligation of the complainant to identify the claims in the panel request that may form part of a panel's terms of reference, the Appellate Body noted that:

> Article 6.2 demands only a summary—and it may be a brief one—of the legal basis of the complaint; but the summary must, in any event, be one that is "sufficient to present the problem clearly". It is not enough, in other words, that "the legal basis of the complaint" is summarily identified; the identification must "present the problem clearly".[70]

Therefore, if a *claim* is not specified in the request for the establishment of a panel, then a faulty request cannot be subsequently 'cured' by a complaining party's argumentation in its first written submission to the panel or in any other submission or statement made later in the panel proceeding.[71] Moreover, the convenient phrase, "including but not necessarily limited to", is not adequate to meet the standard set out in Article 6.2 of the DSU and thus is not sufficient to bring a claim within the terms of reference of a panel.[72] However, the Appellate Body also noted that:

[66] Article 6.2 of the DSU states:

> The request for the establishment of a panel shall be made in writing. It shall indicate whether consultations were held, identify the specific measures at issue and provide a brief summary of the legal basis of the complaint sufficient to present the problem clearly. In case the applicant requests the establishment of a panel with other than standard terms of reference, the written request shall include the proposed text of special terms of reference.

[67] Appellate Body Report, *Guatemala—Cement I*, ¶¶ 72 and 76.

[68] Appellate Body Report, *Korea—Dairy*, ¶ 120.

[69] Appellate Body Report, *Mexico—Corn Syrup (Article 21.5—US)*, ¶ 70. Moreover, "neither Articles 4 and 6 of the DSU, nor paragraphs 1 to 4 of Article 4 of the *SCM Agreement*, require a *precise and exact identity* between the specific measures that were the subject of consultations and the specific measures identified in the request for the establishment of a panel." (Appellate Body Report, *EC—Computer Equipment*, ¶ 132)

[70] Appellate Body Report, *Korea—Dairy*, ¶ 120.

[71] Appellate Body Report, *EC—Bananas III*, ¶ 143.

[72] Appellate Body Report, *India—Patents (US)*, ¶ 90.

> . . . there is a significant difference between the *claims* identified in the request for the establishment of a panel, which establish the panel's terms of reference under Article 7 of the DSU, and the *arguments* supporting those claims, which are set out and progressively clarified in the first written submissions, the rebuttal submissions and the first and second panel meetings with the parties.[73]

Thus, the complainant is required to specify sufficiently the *claims*, but not the detailed *arguments*, in the request for panel establishment in order to allow the defendant and any third parties to know the legal basis of the complaint.[74]

However, a mere listing of articles of a covered agreement alleged to have been breached would not necessarily, in each and every case, be a sufficient standard of precision—observance of which would always constitute sufficient compliance with the requirements of Article 6.2.[75] In assessing this question, the Appellate Body took into account whether the ability of the respondent to defend itself was prejudiced, given the actual course of the panel proceedings, by the fact that a panel request simply listed the provisions claimed to have been violated.[76] Thus, the fundamental issue in assessing claims of prejudice is whether a defending party was made aware of the claims presented by the complaining party sufficiently to allow it to defend itself.[77] Moreover, if a defendant fails to request the panel, in a timely fashion, to make a preliminary ruling on the sufficiency of the panel request, this may be, in the circumstances of a given case, a strong indication that the defendant did not, in fact, suffer prejudice on account of any lack of clarity in the panel request.[78]

Another major element for defining the panel's terms of reference is the identification by the complainant of the "*specific measures at issue*" in the dispute. The specific measure can be a measure of general application provided that its application to certain products is of a mandatory character or the specific application of the general measure to particular countries, traders, or products.[79] In respect of certain WTO obligations, in order to identify the "specific measures at issue", it may be necessary to identify the products subject to the measures in dispute.[80] In disputes regarding trade remedies, such as the imposition of anti-dumping measures, further specification may be required.[81]

When the defending party modifies or amends the measure specifically identified in the panel request in the course of the panel proceedings, it could argue that the original measure identified in the panel request is no longer in force and that the modified measure was not properly identified in the panel request. Along these lines, the defending

[73] Appellate Body Report, *EC—Bananas III,* ¶ 141.

[74] *Id.*, ¶ 143. In other words, what the panel request needs to set out with sufficient clarity are the claims, not detailed arguments. (Appellate Body Report, *Korea—Dairy*, ¶ 123)

[75] Appellate Body Report, *Korea—Dairy*, ¶ 123.

[76] *Id.*, ¶ 127.

[77] Appellate Body Report, *Thailand—H-Beams*, ¶ 95.

[78] *Id.*

[79] The Appellate Body considered that "measures" within the meaning of Article 6.2 of the DSU are not only measures of general application, i.e., normative rules, but also can be the application of tariffs by customs authorities. (Appellate Body Report, *EC—Computer Equipment*, ¶ 65)

[80] *Id.*, ¶¶ 67 and 103.

[81] The Appellate Body noted that "in disputes under the *Anti-Dumping Agreement* relating to the initiation and conduct of anti-dumping investigations, a definitive anti-dumping duty, the acceptance of a price undertaking or a provisional measure must be identified as part of the matter referred to the DSB pursuant to the provisions of Article 17.4 of the *Anti-Dumping Agreement* and Article 6.2 of the DSU." (Appellate Body Report, *Guatemala—Cement I*, ¶ 80)

party could demand that the panel refrain from ruling on the consistency with WTO law of either of those measures. According to the Appellate Body, whether the modified or amended measure falls, nonetheless, within the panel's terms of reference may depend on whether the amended measure is essentially the same as the original measure or whether the amendment has changed the measure in its essence.[82] The reason is that:

> a complaining party should not have to adjust its pleadings throughout dispute settlement proceedings in order to deal with a disputed measure as a 'moving target'. If the terms of reference in a dispute are broad enough to include amendments to a measure . . . and if it is necessary to consider an amendment in order to secure a positive solution to the dispute . . . then it is appropriate to consider the measure *as amended* in coming to a decision in a dispute.[83]

The Appellate Body did not wish "to condone a practice of amending measures during dispute settlement proceedings if such changes are made with a view to shielding a measure from scrutiny by a panel" or by itself.[84]

VII. Multiple Panel Proceedings

Article 9 of the DSU deals with two different situations: first, panel proceedings involving multiple *complaints* and, second, multiple *panels* dealing with the same matter.

Regarding multiple complaints, where more than one Member requests the establishment of a panel relating to the same matter,[85] a single panel *may* be established to examine these complaints.[86] While a single panel should be established to examine such complaints whenever feasible, any one of the complainants or defendants has the right to insist on separate panels. This rule takes into account the rights of all Members concerned as well as the need to use resources efficiently. Where a single panel is established, its work has to be organized and its findings have to be presented so as to avoid the impairment of rights that parties would have enjoyed had separate panels examined the complaints. To that end, the submission of each complainant has to be made available to all other complainants and each has the right to receive the pleadings of any other complainant. If one of the parties to the dispute so requests, the panel shall submit separate reports on the dispute concerned. However, this right is not unqualified.[87] A panel enjoys a certain margin of discretion on whether to accede to a request for a separate panel report in order

[82] Appellate Body Report, *Chile—Price Band System*, ¶ 139.

[83] *Id.*, ¶ 144.

[84] *Id.*

[85] It should be noted that Article 9 of the DSU uses the term "matter" somewhat loosely in the sense that it presupposes identity of the claims raised and the measure in dispute but obviously not in respect of the parties to the dispute.

[86] Article 9.1 of the DSU.

[87] The Appellate Body noted in *U.S.—Offset Act (Byrd Amendment)* that:

> Article 9.2 must not be read in isolation from other provisions of the DSU, and without taking into account the overall object and purpose of that Agreement. . . . Article 3.3 of [the DSU provides] that the 'prompt settlement' of disputes is 'essential to the effective functioning of the WTO.' If the right to a separate panel report under Article 9.2 were 'unqualified', this would mean that a panel would have the obligation to submit a separate panel report, pursuant to the request of a party to the dispute, at any time during the panel proceedings. . . . Such an interpretation would clearly undermine the overall object and purpose of the DSU to ensure the "prompt settlement" of disputes. (Appellate Body Report, ¶ 311)

to ensure that the rights of all parties are respected (not only the rights of the complaining party making the request).[88]

Where more than a single panel is established to examine complaints relating to the same matter, "to the largest extent possible" the same persons shall be chosen to serve on all those panels.[89] Again, this is a guideline, not an absolute requirement. Any party to those panel proceedings retains the right to reject a panelist for "compelling reasons" even if that person is to serve on another panel dealing with the same matter. However, such multiple panels dealing with the same matter are required to harmonize their timetable and work in other respects.[90]

There is no mention of multiple *defendants* in the DSU. In other words, a complainant may decide which Member to challenge before the WTO dispute settlement mechanism even if the challenged measure is imposed by several Members. For example, when an allegedly WTO-inconsistent measure is based upon a trade agreement between several Members, a complainant cannot be prevented from challenging that measure only with respect to one or some of the signatories which are bound by that trade agreement.[91]

VIII. Panel Composition

It is the prerogative of the DSB to take the decision to *establish* a panel. But the DSB does not determine which persons *compose* the panel. The decision as to which individuals serve on the panel is, in principle, taken by mutual agreement between the parties to the dispute. In other words, the WTO Director-General and Secretariat cannot, as a

[88] The Appellate Body stated in *U.S.—Offset Act (Byrd Amendment)* that:

> We do not believe that we should lightly disturb panels' decisions on their procedure, particularly in cases such as the one at hand, in which the Panel's decision appears to have been reasonable and in accordance with due process. We observe that, on appeal, the United States is not claiming that it suffered any prejudice from the denial of its request for a separate panel report. We also note that the first sentence of Article 9.2 refers to the rights of all the parties to the dispute. The Panel correctly based its decision on an assessment of the rights of all the parties, and not of one alone. (Appellate Body Report, ¶ 316)

[89] Article 9.3 of the DSU.

[90] The Appellate Body noted in *EC—Hormones* that it considered the panel's:

> decision to hold [in two parallel panel proceedings] a joint meeting with the scientific experts consistent with the letter and spirit of Article 9.3 of the DSU. . . .
>
> Clearly, it would be an uneconomical use of time and resources to force the Panel to hold two successive but separate meetings gathering the same group of experts twice, expressing their views twice regarding the same scientific and technical matters related to the same contested EC measures. . . . Having access to a common pool of information enables the panel and the parties to save time by avoiding duplication of the compilation and analysis of information already presented in the other proceeding. . . the Panel tried to avoid unnecessary delays, making an effort to comply with the letter and spirit of Article 9.3 of the DSU. (Appellate Body Report, ¶¶ 152–154)

[91] For example, in *Turkey—Textiles*, India chose to complain against Turkey only although the challenged measure was based on the agreement establishing a customs union between Turkey and the European Communities. Panel Report, *Turkey—Textiles* (WT/DS44/R), ¶ 9.4ff. Likewise, in *EC—Bananas III*, the complaining parties challenged the European Communities only, but not the African, Caribbean and Pacific ("ACP") States which were also signatories of the Lomé Convention between the ACP States and the European Union. Panel Report and Appellate Body Report, *EC—Bananas III* (WT/DS27/AB/R, WT/DS27/R). In both cases, the measures challenged before the WTO dispute settlement mechanism were based on treaties which the defending Member could not have changed without the consent of the other signatories to those treaties, that is, European Union and the ACP States, respectively.

rule, "impose" panelists on Members. However, if parties fail to agree on the panel's composition for a period of at least twenty days, either of the parties may request the Director-General to compose the panel by default.

A panel is usually composed of three individuals—unless the parties agree within ten days of the establishment of the panel that it be composed of five individuals.[92] Panels shall be composed of well-qualified governmental and/or non-governmental individuals, including persons who have served on or presented a case to a panel, served as representatives of a Member or of a contracting party to GATT 1947 or as representatives to the Council or Committee of any covered agreement or its predecessor agreement, or in the Secretariat, taught or published on international trade law or policy, or served as a senior trade policy official of a Member.[93]

To assist in the selection of panelists, the GATT Secretariat kept a "roster" of individuals who could be selected to serve on panels established under the GATT of 1947.[94] Similarly, the WTO Secretariat maintains an "indicative list" of governmental and non-governmental individuals possessing the qualifications mentioned above.[95] Members may periodically suggest names for inclusion on that list. Relevant information on the expertise of proposed individuals in international trade and the sectors or subject matters of the covered agreements shall be added to the nomination.[96] The "indicative list" also indicates whether the nominated person has expertise under the GATT, the GATS and/or the TRIPS Agreement. Usually, Members nominate qualified individuals holding their citizenship, although the DSU would not exclude the nomination of non-citizens. The names are added to the "indicative list" when approved by the DSB. Although the decision to approve nominations needs to be taken by the DSB by "positive consensus", it has been extremely rare that a Member objected to the inclusion of another Member's national on the list.

The WTO Secretariat should propose and the parties should agree on panel members with a view to ensuring independence, a sufficiently diverse background and a wide spectrum of expertise among the panelists.[97] To that effect, the Secretariat holds meetings with the parties and proposes names of well-qualified governmental or non-governmental experts for consideration. The parties also have the right to suggest names on their own initiative. The Secretariat may suggest names of persons other than those included on the "indicative list". This often happens in disputes where specialized knowledge in specific service sectors or intellectual property rights is required, because many of the persons included on the "indicative list" are identified therein as experts in trade in goods only.

The parties to the dispute may not oppose the Secretariat's nominations except for compelling reasons.[98] The DSU does not define the term "compelling". In panel composition practice, a party may feel compelled to reject a nomination if that person lacks pertinent expertise to resolve the matter in dispute. A person that has made public statements or published articles on the issues in dispute should not be selected to avoid the resolution of the case being affected by preconceived views. However, what a party itself believes to be a compelling reason for rejecting a nomination would often not withstand

[92] Article 8.5 of the DSU.
[93] Article 8.1 of the DSU.
[94] Established on 30 November 1984 (BISD 31S/9).
[95] Article 8.4 of the DSU. The WTO "indicative list" includes the "roster" of qualified individuals established under the GATT 1947.
[96] Article 8.4 of the DSU.
[97] Article 8.2 of the DSU.
[98] Article 8.6 of the DSU.

objective scrutiny from a more neutral perspective. It is certainly not a compelling reason for rejecting a nomination that the person served on a previous panel which ruled against the Member that is party to the new dispute. Of course, it is unlikely that any party would openly express such a reason, but it is always difficult to discern the true motives for a party's rejection of an individual proposed by the Secretariat. Sometimes, delegates participating in panel composition meetings may not even be instructed by their government to give a reason for a rejection. In some of those instances, the WTO Secretariat has requested that a party submit compelling reasons in written form. Nevertheless, Article 8.6 of the DSU, as it stands, provides no remedy against parties rejecting nominations for gratuitous reasons or pretexts.

Parties may also reject proposed individuals not for reasons relating to a specific person's qualifications, but rather because they perceive the "package" of the three individuals of which a panel is to be composed as unbalanced with respect to geographic diversity, technical expertise, or professional experience. In practice, panels are often composed of at least a lawyer and an economist; citizens of both developing and developed countries; individuals originating in different continents; Geneva-based diplomats; experts working in public service back in capital; and, more recently, experts working in private practice or academia.

In current WTO panel composition practice, it has become more difficult to discern such traditional panel composition patterns. This may be due to the complexity of many current disputes and the need for very specialized expertise to be represented on a panel. Another reason is that nationals of Members whose governments are parties or third parties to the dispute cannot serve as panelists unless both parties agree.[99] This rule is arguably designed to foster the independence and impartiality of panels and to avoid conflicts of interests. But it cannot be assumed that all nationals of a party or third party are, as a rule, biased or partial, neither with respect to public civil servants nor with respect to persons employed in private business or academia. Moreover, this rule makes it particularly difficult to find qualified panelists in disputes involving multiple parties and third parties. WTO Members forming part of major trading blocks are often parties or third parties to panel proceedings. At the same time, many highly qualified trade experts hold the citizenship of those Members and thus cannot serve on panels involving their countries of origin unless both parties agree. Therefore, the higher the number of Members participating in a dispute, the smaller the "pool" of trade experts with pertinent expertise from which panelists can be selected. This explains why many panelists are citizens of Members that are not part of, or are not closely associated with, the major trading powers.

The exclusion, in principle, of nationals of parties and third parties also makes it more difficult to ensure a sufficiently diverse geographic background of panelists. However, where a dispute involves a developed country and a developing country, upon request by the latter, the panel must include at least one national from a developing country.[100] In dispute settlement practice, the WTO Secretariat usually proposes names of developing-country nationals as panelists in disputes involving developing countries even if no such request has been made.

It is important that persons requested to serve on a panel do not give any appearance of dependence, partiality, or conflicts of interests. Even if they are working in public service, panelists serve in their individual capacity and not as government representatives, nor as

[99] Article 8.3 of the DSU.
[100] Article 8.10 of the DSU.

representatives of any organization. WTO Members are expressly precluded from giving instructions or seeking to influence them as individuals with regard to the matter before the panel.[101] Moreover, Members are called upon to permit their government officials to serve as panelists.[102]

Members have adopted a *Code of Conduct* that sets detailed standards to ensure the impartiality and independence of panelists, the confidentiality of proceedings, and the avoidance of conflicts of interests in a particular dispute. It applies to all panelists irrespective of whether they are working in public service, in private business, or in academia. Experts heard by a panel, arbitrators, Appellate Body Members, members of the Textiles Monitoring Body and Secretariat staff assisting in dispute settlement proceedings, are also bound by the *Code of Conduct*.

The experience with the panel composition process shows a number of problems. Often the selection process takes much longer than the twenty days implied by Article 8.7 of the DSU. A party frequently rejects proposed candidates for reasons that are not disclosed and may not in fact be "compelling". The high percentage of panels composed by default by the Director-General is proof of that problem. Definitions and an "illustrative list" of reasons that are acceptable as "compelling" could alleviate this problem. There seems also to be a need for additional remedies against the abuse of a party's right to reject panel candidates for compelling reasons.

There are other ways in which the "pool" of persons with pertinent expertise and eligible to serve as panelists could be enlarged. Arguably, strict enforcement of the *Code of Conduct* would make superfluous, and could replace, the rigid rule that nationals of parties and of third parties cannot serve as panelists unless the parties agree. As a more revolutionary solution, the European Communities has proposed—in the context of negotiations to improve and clarify the DSU—the creation of a standing panel body ("SPB"). According to this proposal, the SPB would be composed of at least 16, or up to 25, individuals. SPB members would serve for a non-renewable term of, for example, six years.[103] They would be selected on the basis of criteria such as geographical diversity and pertinent expertise in trade sectors and specific covered agreements of the WTO. Three SPB members would be assigned to each case on the basis of rotation. Parties would no longer enjoy the right to reject proposed panelists for "compelling" reasons. Likewise, the rule that nationals of parties and of third parties to the dispute cannot serve on a panel would be abolished. Accordingly, more citizens of developing-country Members, and least developing-country Members, as well as citizens of the "frequent users" of the system (including Canada, Japan, the European Communities and its Member States, and the United States) could serve as panelists. However, the *Code of Conduct* would continue to apply. SPB members would be excused from cases in which there could be an appearance of a conflict of interest.

This panel composition system would speed up the selection process and solve many of the problems arising under the current system. It would facilitate the prompt adjudication of procedural issues raised at the outset of a dispute which under the current system cannot be resolved before the panel is composed. SPB members would build up more expertise in dispute settlement practice than panelists selected *ad hoc* for one or only a few disputes. SPB members would probably adjudicate procedural objections and substantive legal issues from a different perspective than one-time panelists interested only in settling

[101] Article 8.9 of the DSU.
[102] Article 8.8 of the DSU.
[103] WTO document TN/DS/W/1, dated March 13, 2002, at 3.

the dispute at hand. They could likely develop a better sense of the implications of their rulings on future disputes. The European Communities' proposal could promote predictability and coherence of panel decisions and lead to further "judicialization" of the panel process.

On the other hand, the creation of an SPB could also make it more difficult to ensure that panelists have case-specific expertise. Even if an SPB had several dozen members, it is very unlikely that those members would have pertinent expertise in all matters relating to all aspects of the covered agreements. More frequent recourse by panels to technical advice by experts could, to some extent, solve this problem. However, as panelists must not delegate their responsibility for factual rulings and legal findings to experts, seeking advice from any appropriate source cannot fully make up for panelists who themselves have case-specific expertise.

Furthermore, selecting three SPB members for a panel on the basis of rotation could aggravate this problem because, for example, an anti-dumping expert could be assigned to a copyright case. Although Appellate Body Divisions are composed on the basis of the same principle, the problem appears more serious for panels who have to rule on issues of fact –Appellate Body jurisdiction is limited to rulings on issues of law (and "mixed" issues of law and fact). Moreover, diplomats and other trade experts working in public service could not simultaneously be SPB members. This would limit the "pool" of qualified individuals who could be appointed as SPB members. An SPB would also reduce the participation of trade diplomats in the dispute settlement process, which could undermine the credibility and acceptability of panel decisions for Members and their representatives.

A compromise between the European Communities' proposal and the present system of *ad hoc* selection would be a system where only the chairpersons of panels are selected from a "standing panel chairperson body". These chairpersons would be available to deal promptly with preliminary issues and procedural requests and they could provide a longer-term perspective to panel dispute settlement practice. The two remaining panel members would be selected according to the current panel composition rules. This solution would ensure that individuals with case-specific expertise, as well as individuals with experience (ensuring continuity), are represented on the panel. It could be said, however, that a system combining permanent panel chairpersons with *ad-hoc* panelists appointed for a given case would create two "classes" of panelists. Such a system could risk giving more influence to quasi-permanent panel chairpersons than to panelists appointed on an *ad hoc* basis.

IX. Procedural Stages of Panel Proceedings

When the parties have agreed on the persons that should serve as panelists, or when the Director-General has appointed them upon request, the panel's composition is completed and the panelists can begin their work.

A. Organizational Meeting

First, the panel must draw up a calendar for its work and decide, in consultation with the parties, on its working procedures. This should be done as soon as practicable and whenever possible within one week after the panel composition.[104] Panel working

[104] Article 12.3 of the DSU.

procedures should provide sufficient flexibility so as to ensure high-quality panel reports, while not unduly delaying the panel process.[105] Suggested time-periods for the calendar and tentative working procedures are set out in Article 12 and Appendix 3 to the DSU. Panels may deviate from the proposed time periods and adopt different working procedures after consulting with the parties.[106] In practice, panels tend to follow the working procedures suggested in Appendix 3 to the DSU but, where necessary, they adopt more detailed and additional procedures for the purposes of the specific proceedings at hand. Usually, panels hold a so-called organizational meeting to consult with the parties before deciding on the working schedule and procedures.

B. Preliminary Issues and Procedural Objections

Sometimes, parties raise preliminary issues and procedural objections at the organizational meeting if they have not done so by prior written communication or unless they decide to raise those objections in their first written submission to the panel. While the DSU contains no specific rules on how to deal with these issues, certain principles have been applied in panel and Appellate Body dispute settlement practice. When exercising its margin of discretion in dealing with procedural issues, a panel should be guided by the principles of due process and good faith.

Article 3.10 of the DSU commits Members to engage in dispute settlement procedures in good faith in an effort to resolve the dispute.[107] According to the Appellate Body,

> the principle of good faith requires that responding Members seasonably and promptly bring claimed procedural deficiencies to the attention of the complaining Member, and to the DSB or the Panel, so that corrections, if needed, can be made to resolve disputes. The procedural rules of WTO dispute settlement are designed to promote, not the development of litigation techniques, but simply the fair, prompt and effective resolution of trade disputes.[108]

Therefore, when a Member wishes to raise an objection in dispute settlement proceedings, it is always incumbent on that Member to do so promptly. A Member that fails to raise its objections in a timely manner, notwithstanding one or more opportunities to do so, may be deemed to have waived its right to have a panel consider such objections.[109]

Moreover, a procedural objection raised by a party to a dispute should be sufficiently specific to enable the panel to address it.[110] The requirements of good faith, due process and orderly procedure dictate that objections, especially those of potential significance, should be explicitly raised. Only in this way will the panel, the other party to the dispute, and the third parties, understand that a specific objection has been raised, and have an adequate opportunity to address and respond to it.[111]

In the Appellate Body's view, "the DSU, and in particular its Appendix 3, leave panels a margin of discretion to deal, always in accordance with due process, with specific

[105] Article 12.2 of the DSU.

[106] Article 12.1 of the DSU and ¶¶ 1 and 11 of Appendix 3.

[107] "This is another specific manifestation of the principle of good faith that, we have pointed out, is at once a general principle of law and a principle of general international law. This pervasive principle requires both complaining and responding Members to comply with the requirements of the DSU (and related requirements in other covered agreements) in good faith." (Appellate Body Report,*U.S.—FSC*, ¶ 166)

[108] Appellate Body Report, *U.S.—FSC*, ¶ 166.

[109] Appellate Body Report, *Mexico—Corn Syrup (Article 21.5—U.S.)*, ¶ 50.

[110] Appellate Body Report, *EC—Hormones*, ¶ 152.

[111] Appellate Body Report, *Mexico—Corn Syrup (Article 21.5—U.S.)*, ¶ 47.

situations that may arise in a particular case and that are not explicitly regulated".[112] An appellant requesting the Appellate Body to reverse a panel's ruling on matters of procedure must demonstrate the prejudice generated by the panel's legal ruling.[113] For example, observance of due process entails providing "parties adequate opportunity to respond to the evidence submitted."[114]

C. Written Submissions and Oral Hearings

Panels should set precise deadlines for written submissions and the parties should respect those deadlines.[115] The tentative calendar in Appendix 3 to the DSU expresses time periods in terms of the number of weeks for each step of the panel proceedings. Based on this proposed schedule, the panel adopts a "working schedule" setting out specific dates and deadlines for each stage of the specific panel proceeding. In determining the panel's working schedule, the panel shall provide sufficient time for the parties to prepare their submissions.[116] In addition, in examining a complaint against a developing country Member, the panel shall accord sufficient time for that Member to prepare and present its arguments.[117]

Pursuant to the working schedule, parties transmit a first set of written submissions to the panel, to each other, and to the third parties.[118] In their first written submissions, the parties present the facts of the case and their legal arguments.[119] The complaining party submits its first submission in advance of the responding party unless the panel decides, after consulting with the parties, that submissions should be filed simultaneously.[120]

At its first substantive meeting with the parties, the panel asks the complaining party to present its case. Subsequently, the responding party is asked to present its point of view.[121] The panel may at any time put questions to the parties and ask them for explanations either in the course of the meeting with the parties, or in writing.[122] Parties may answer the questions posed by the panel or the other parties during the substantive meeting with the panel or reserve their right to respond in writing within a time limit set by the panel.

Rebuttal submissions are due approximately three weeks after the panel's first substantive meeting with the parties. The rebuttals, as well as any subsequent written submissions, are to be filed by the parties simultaneously.[123] The parties present oral rebuttals at the

[112] Appellate Body Report, *EC—Hormones*, footnote 138 to ¶ 152.
[113] Appellate Body Report, *EC—Hormones*, footnote 138 to ¶ 152.
[114] Appellate Body Report, *Australia—Salmon*, ¶ 272. And in ¶ 278:

> A fundamental tenet of due process is that a party be provided with an opportunity to respond to claims made against it. In this case, we believe that the Panel *did* accord Australia a proper opportunity to respond by allowing Australia to submit a third written submission. We cannot see how the Panel failed to accord due process to Australia by granting the extra time it had requested.

[115] Article 12.5 of the DSU.
[116] Article 12.4 of the DSU.
[117] Article 12.10 of the DSU.
[118] Article 12.6 of the DSU envisages that the Secretariat receives and transmits the submissions to the panel and the other part(ies) to the dispute. In practice, the parties transmit submissions to the other part(ies) and third parties directly.
[119] ¶ 4 of Appendix 3 to the DSU.
[120] Article 12.6 of the DSU and ¶ 12(a) of Appendix 3 to the DSU.
[121] ¶ 5 of Appendix 3 to the DSU.
[122] ¶ 8 of Appendix 3 to the DSU.
[123] Article 12.6 of the DSU.

second substantive meeting of the panel. In making their oral statements, the responding party takes the floor first and is followed by the complaining party.[124]

To ensure transparency and to avoid any appearance of *ex parte* communications, each party's oral presentations, rebuttals, explanations and responses to questions shall be made in the presence of the other parties. Moreover, each party's written submissions, written responses to questions, written comments on the descriptive part and the interim report shall be made available to the other parties.[125]

As noted above, panel procedures should provide sufficient flexibility so as to ensure high-quality panel reports, while not unduly delaying the panel process.[126] While the procedural rules set out in the DSU and its Appendix 3 give panels a certain margin of discretion in drawing up working schedules and procedures, this flexibility has limits. A panel's discretion does not extend to disregarding or modifying the substantive provisions of the DSU.[127]

D. Confidentiality of Proceedings

WTO dispute settlement proceedings are confidential.[128] The panel meets in closed session. The parties to the dispute, and interested parties, shall be present at the meetings only when invited by the panel to appear before it.[129] There may not be any *ex parte* communications between the parties and the panel concerning matters under consideration by the panel.[130] The internal deliberations of the panel are confidential.[131]

Written submissions to the panel shall be treated as confidential, but shall be made available to the parties to the dispute.[132] Parties are not precluded from disclosing statements of their own positions to the public during the proceedings. However, parties must treat as confidential information submitted to the panel by another party when that party has designated it as confidential. A party to the dispute shall also, upon request of another party, provide a non-confidential summary of the information contained in its written submissions that could be disclosed to the public.[133] However, the DSU does not set a deadline by which such a non-confidential summary is to be provided. In dispute settlement practice, parties often fail to provide such summaries prior to the conclusion of the proceedings. In the DSU review negotiations, it has been proposed to insert in Article 18 of the DSU a deadline by which such a summary has to be provided or to make the parties' entire submissions public documents.

The final panel reports are accessible to the public (for example, on the WTO website) immediately after they are circulated to all WTO Members and regardless of whether they are appealed. The arguments raised by the parties in their written and oral submissions to the panel are published, in full or in summary form, as part of the descriptive part of the panel report.

Upon suggestion by the parties in disputes involving a great deal of company-specific factual information, several panels have developed additional procedures to ensure the

protection of business confidential information from dissemination through governments to competitors of those companies.[134]

X. Third Party Rights

Members other than the parties to the dispute, having a substantial interest in the matter before a panel, have the opportunity to express their views to the panel.[135] Any such Member must notify its interest at the DSB meeting when the panel is established or within ten days after that date.[136]

The notion of "substantial interest" has been interpreted broadly in dispute settlement practice. It is not limited to current trade interests. Potential trade interest or "systemic" interest in the legal issues at hand may be sufficient to qualify for third party status. One reason why there seems in practice to be no need to establish the "substantial" nature of a Member's interest is that during the initial stage of the proceedings, when third party rights are being reserved, no panel has yet been composed to adjudicate that question. This would not exclude however that a panel could, at a later stage of the proceedings, decide upon request whether a Member's interest is substantial enough to warrant third party status. Nonetheless, for all practical purposes, when a Member considers itself substantially interested and reserves its third party rights, the parties to the dispute or the panel will usually not second-guess that decision.

A third party is entitled to make a written submission to the panel and to receive the first written submissions of the parties.[137] Third parties may present their views at a special session of the first substantive meeting of the panel. All third parties may be present during the entirety of this session.[138] A third party may ask questions of the parties and other third parties and respond to questions posed by the panel or the parties.

Third parties are not entitled to receive the rebuttal submissions of the parties or to respond in writing to those submissions. Nor does the DSU give third parties the right to attend the second substantive meeting of the panel with the parties. In cases with particularly substantial effects for certain third parties, panels have granted—on an exceptional and case-specific basis—*enhanced* participatory rights to third parties, such as allowing them to receive the rebuttal submissions and the opportunity to attend and speak at the second substantive meeting of the panel.[139] Although Article 12.1 and Appendix 3 of the DSU do not specifically require a panel to grant enhanced third party rights in special circumstances, according to the Appellate Body, a decision to grant such rights falls within the discretion and authority of a panel, particularly if the panel considers it necessary for ensuring to all parties due process of law.[140]

[134] The Appellate Body has not found it necessary to follow that approach and has deemed the general DSU disciplines protecting confidential information as sufficient for the appellate review process. Appellate Body Report, *Brazil—Aircraft*, ¶ 125; Appellate Body Report, *Canada—Aircraft*, ¶ 147.

[135] Article 10.2 of the DSU.

[136] Practice agreed by the DSB.

[137] Paragraphs 2 and 3 of Article 10 of the DSU.

[138] ¶ 6 of Appendix 3 to the DSU.

[139] Panel Reports in *EC—Bananas III,* ¶¶ 7.4ff; Panel Report, *EC—Hormones (US)*, ¶¶ 8.12ff.

[140] Appellate Body Report, *EC—Hormones*, ¶ 154. According to the Appellate Body, a "panel's decision whether to grant enhanced participatory rights to third parties is thus a matter that falls within the discretionary authority of that panel. Such discretionary authority is, of course, not unlimited and is circumscribed, for example, by the requirements of due process." Appellate Body Report, *U.S.—1916 Act*, ¶ 150. In that case, the Appellate Body held that it had not been shown that the panel exceeded the limits of its discretionary authority by granting enhanced third party rights.

The provisions of Article 10 apply *mutatis mutandis* in panel proceedings pursuant to Article 21.5 of the DSU when a panel is reconvened to review whether the measures taken to comply with rulings adopted by the DSB are consistent with WTO law. Usually, compliance panels hold a single oral hearing with the parties and third parties. Therefore, in compliance panel proceedings the rebuttal submissions are most often exchanged before that oral hearing. In these circumstances, the Appellate Body found that third parties should be entitled to have access not only to the first submissions of the parties but also to their rebuttal submissions provided to the compliance panel.[141]

Compared to procedural rules governing other international dispute settlement mechanisms and tribunals, the rights of third parties before WTO panels are somewhat limited. A third party may present its views on the claims raised and the measures challenged by the complainant, but it cannot add to the claims raised or complain against measures additional to those challenged by the complainant.[142] Even if a third party's interest in the matter is very substantial, a panel does not have the power to confer full party status to an intervening third party in a proceedings initiated by a different complainant.

In the DSU review negotiations, proposals for enhanced third party rights have been made. For example, it has been suggested that third parties also be given access to the parties' rebuttal submissions, the panels' second substantive meeting, all responses of parties to panel questions, the interim report, the parties' interim review comments and the interim oral hearing, if any.

While a third party is not entitled to appeal a panel's findings and conclusions in its own right, it may participate in the appellate review procedure as a third participant and express its views on the points in the appeal raised by the appellant or cross-appellant. However, at any time, a third party may initiate a dispute settlement proceeding as a complainant in its own right when it considers that a measure which is already the subject of a panel proceeding nullifies or impairs benefits accruing to it under the covered agreements.[143] Such a dispute shall wherever possible be referred to the individuals serving on the original panel.[144]

It should be emphasized that in many panel proceedings, the legal and factual arguments submitted by third parties regarding the claims raised by, and the measures disputed between, the "main" parties have been thoroughly taken into account by panels. This is

[141] The Appellate Body stated that:

> Article 10.1 directs panels "fully" to take into account the interests of Members other than the parties to the dispute, and Article 10.2 requires panels to grant to third parties "an opportunity to be heard". Article 10.3 ensures that, up to a defined stage in the panel proceedings, third parties can participate fully in the proceedings, on the basis of the same written submissions as the parties themselves. Article 10.3 thereby seeks to guarantee that the third parties can participate at a session of the first meeting with the panel in a full and meaningful fashion that would not be possible if the third parties were denied written submissions made to the panel before that meeting. Moreover, panels themselves will thereby benefit more from the contributions made by third parties and will, therefore, be better able "fully" to take into account the interests of Members, as directed by Article 10.1 of the DSU. Appellate Body Report, *U.S.—FSC (Article 21.5—EC)*, ¶ 249.

[142] As the Appellate Body noted, "[t]hird parties to a dispute cannot make claims. It was for Argentina, as the claimant, to make its claim; Argentina cannot rely on third parties to do so on its behalf. Moreover, we note that Argentina did not adopt these arguments of the third parties in subsequent proceedings." Appellate Body Report, *Chile—Price Band System*, ¶ 163.

[143] Article 10.4 of the DSU.

[144] Thus right to initiate a separate panel proceeding under Article 10.4 is subject to the provisions on "procedures for multiple complainants" in Article 9 of the DSU.

the case in particular when third parties propose legal interpretations of a more systemic nature that go beyond the situation arising in the specific dispute (which tends to be the focus of the parties).

XI. Burden of Proof

The Appellate Body addressed the question of who bears the burden of proof in panel proceedings as follows:

> [V]arious international tribunals, including the International Court of Justice, have generally and consistently accepted and applied the rule that the party who asserts a fact, whether the claimant or the respondent, is responsible for providing proof thereof. Also, it is a generally-accepted canon of evidence in civil law, common law and, in fact, most jurisdictions, that the burden of proof rests upon the party, whether complaining or defending, who asserts the affirmative of a particular claim or defense. If that party adduces evidence sufficient to raise a presumption that what is claimed is true, the burden then shifts to the other party, who will fail unless it adduces sufficient evidence to rebut the presumption.[145]

The Appellate Body specified that as a general matter, the burden of proof rests upon the complaining Member. That Member must make out a *prima facie* case by presenting sufficient evidence to raise a presumption in favor of its claim.[146] A *prima facie* case is one which, in the absence of effective refutation by the defending party, requires a panel, as a matter of law, to rule in favor of the complaining party presenting the *prima facie* case.[147] However, "precisely how much and precisely what kind of evidence will be required to establish such a presumption will necessarily vary from measure to measure, provision to provision, and case to case."[148] If the complaining Member succeeds in establishing a *prima facie* case, the responding Member may then seek to rebut this presumption. Therefore, under the usual allocation of the burden of proof, a responding Member's measure will be treated as WTO-*consistent*, until sufficient evidence is presented to prove the contrary.[149]

By contrast, the party invoking an exception or raising a defense bears the burden of demonstrating that the measure at issue meets all the conditions or requirements attached to that exception or defense.[150] For example,

[145] Appellate Body Report, *U.S.—Wool Shirts and Blouses*, at 16, DSR 1997:I, 323, at 335.

[146] Appellate Body Report, *Canada—Dairy (Article 21.5—New Zealand and U.S. II)*, ¶ 66.

[147] Appellate Body Report, *EC—Hormones*, ¶ 104; Appellate Body Report, *Canada—Aircraft*, ¶ 192.

[148] Appellate Body Report, *U.S.—Wool Shirts and Blouses*, at 14, DSR 1997:I, 323, at 335. Moreover, "[t]here is nothing in the WTO dispute settlement system to support the notion that the allocation of the burden of proof should be decided on the basis of a comparison between the respective difficulties that may possibly be encountered by the complainant and the respondent in collecting information to prove a case." (Appellate Body Report, *EC—Sardines*, ¶ 281)

[149] Appellate Body Report, *Canada—Dairy (Article 21.5—New Zealand and U.S. II)*, ¶ 66. For example, under the SPS Agreement, this means that:

> [t]he initial burden lies on the complaining party, which must establish a *prima facie* case of inconsistency with a particular provision of the *SPS Agreement* on the part of the defending party, or more precisely, of its SPS measure or measures complained about. When that *prima facie* case is made, the burden of proof moves to the defending party, which must in turn counter or refute the claimed inconsistency. (Appellate Body Report, *EC—Hormones*, ¶ 98)

[150] Appellate Body Report, *U.S.—Gasoline*, at 22–23, DSR 1996:I, 3, at 20–21.

> Articles XX and XI:(2)(c)(i) [of the GATT 1994] are limited exceptions from obligations under certain other provisions of the GATT 1994, not positive rules establishing obligations in themselves. They are in the nature of affirmative defenses. It is only reasonable that the burden of establishing such a defense should rest on the party asserting it.[151]

A panel is not "required to state *expressly* which party bears the burden of proof in respect of every claim made."[152] Nor is a panel "required to make a separate and specific finding, in each and every instance, that a party has met its burden of proof in respect of a particular claim, or that a party has rebutted a *prima facie* case."[153]

XII. Timing of Evidence

The DSU does not establish time limits for the submission of evidence to a panel. Neither Articles 11 and 12, nor Appendix 3 to the DSU establish precise deadlines for the presentation of evidence by a party to the dispute. The Working Procedures in Appendix 3 do not prohibit submission of additional evidence after the first substantive meeting of a panel with the parties. However, according to the Appellate Body,

> . . . these Working Procedures do contemplate two distinguishable stages in a proceeding before a panel: the complaining party should set out its case in chief, including a full presentation of the facts on the basis of submission of supporting evidence, during the first stage. The second stage is generally designed to permit "rebuttals" by each party of the arguments and evidence submitted by the other parties.[154]

Nonetheless, especially in cases involving trade remedies, where a panel reviews the determination of a competent national authority, "[t]he exercise of due diligence by a Member['s competent authority] cannot imply . . . the examination of evidence that did not exist and that, therefore, could not possibly have been taken into account when the Member made its determination."[155] A *panel* reviewing the due diligence exercised by a Member in making its determination has to put itself in the place of that Member at the time it makes its determination. Consequently, a panel must not consider evidence that did not exist *at that point in time*.[156]

XIII. Panel's Right to Seek Information

The DSU gives panels different means or instruments for complying with its mandate under Article 11 of the DSU.[157] Among these is the right to seek information and technical

[151] Appellate Body Report, *U.S.—Wool Shirts and Blouses*, at 15–16, DSR 1997:I, 323, at 337–338.
[152] Appellate Body Report, *India—Quantitative Restrictions*, ¶ 137.
[153] Appellate Body Report, *Thailand—H-Beams*, ¶ 134. And in Appellate Body Report, *Korea—Dairy*, ¶ 145:

> We find no provision in the DSU or in the *Agreement on Safeguards* that requires a panel to make an explicit ruling on whether the complainant has established a *prima facie* case of violation before a panel may proceed to examine the respondent's defense and evidence.

[154] Appellate Body Report, *Argentina—Textiles and Apparel*, ¶ 79.
[155] The demonstration by a Member that a particular product is being imported into its territory in such increased quantities as to cause serious damage (or actual threat thereof) to the domestic industry can be based only on facts and evidence that existed at the time the determination was made. The urgent nature of such an investigation may not permit the Member to delay its determination in order to take into account evidence that might be available only at a future date. Even a determination on the existence of threat of serious injury must be based on projections extrapolating from *existing* data.
[156] Appellate Body Report, *U.S.—Cotton Yarn*, ¶¶ 77–78.
[157] Appellate Body Report, *Argentina—Textiles and Apparel*, ¶ 82.

advice provided for in Article 13 of the DSU.[158] Paragraph 1 of that Article gives a panel the right to seek information and technical advice from any individual or body that it deems appropriate. Paragraph 2 entitles a panel to seek information from any relevant source and to consult experts to obtain their opinions on certain aspects of the matter in dispute.

According to the Appellate Body, Article 13 provides for discretionary authority: a panel is not duty-bound to seek information in each and every case or to consult particular experts under this provision.[159] Panels enjoy discretion as to *whether or not* to seek information from external sources. Thus a "contravention of the duty under Article 11 of the DSU to make an objective assessment of the facts of the case cannot result from the due exercise of the discretion permitted by another provision of the DSU, in this instance Article 13.2 of the DSU."[160] Nor does a panel's duty to "actively review the pertinent facts" in order to comply with Article 17.6(i) of the *Anti-Dumping Agreement* imply that a panel *must* exercise its right to seek information under Article 13 of the DSU. There is nothing in the texts of Article 17.6(i) of the *Anti-Dumping Agreement* or Article 13 of the DSU to suggest that a reading of these provisions, in combination, would render *mandatory* the exercise of a panel's *discretionary* power under Article 13 of the DSU.[161] The mere fact that a panel does not consider it necessary to seek information does not, by itself, imply that the panel's exercise of its discretion was not "due". Where no specific provision of a covered agreement obliges panels to hear experts or seek information from a particular source, "panels enjoy a *discretion*, pursuant to Article 13 of the DSU, to seek information 'from any relevant source'"[162] and "Article 11 of the DSU imposes no *obligation* on panels to conduct their own fact-finding exercise, or to fill in gaps in the arguments made by parties."[163]

The authority of a panel to seek information and technical advice from any individual or body it may consider appropriate, or from any relevant source, includes the authority to decide *not to seek* such information or advice at all. In the Appellate Body's view,

> [a] panel also has the authority to *accept or reject* any information or advice which it may have sought and received, or to *make some other appropriate disposition* thereof. It is particularly within the province and the authority of a panel to determine *the need for*

[158] Article 13 of the DSU reads:

> *Right to Seek Information*
>
> 1. Each panel shall have the right to seek information and technical advice from any individual or body which it deems appropriate. However, before a panel seeks such information or advice from any individual or body within the jurisdiction of a Member it shall inform the authorities of that Member. A Member should respond promptly and fully to any request by a panel for such information as the panel considers necessary and appropriate. Confidential information which is provided shall not be revealed without formal authorization from the individual, body, or authorities of the Member providing the information.
>
> 2. Panels may seek information from any relevant source and may consult experts to obtain their opinion on certain aspects of the matter. With respect to a factual issue concerning a scientific or other technical matter raised by a party to a dispute, a panel may request an advisory report in writing from an expert review group. Rules for the establishment of such a group and its procedures are set forth in Appendix 4.

[159] Appellate Body Report, *Argentina—Textiles and Apparel*, ¶ 84.

[160] Appellate Body Report, *EC—Sardines*, ¶ 302.

[161] Appellate Body Report, *EC—Bed Linen (Article 21.5—India)*, ¶ 167.

[162] Appellate Body Report, *U.S.—Carbon Steel*, ¶ 153.

[163] For example, "given that the European Communities itself had submitted no evidence—other than the text of the provision—on this point, the Panel did not act inconsistently with Article 11 in refraining from seeking additional information on its own initiative". (Appellate Body Report, *U.S.—Carbon Steel*, ¶ 153)

> *information and advice* in a specific case, to ascertain the *acceptability* and *relevancy* of information or advice received, and to decide *what weight to ascribe to that information or advice* or to conclude that no weight at all should be given to what has been received.[164]

A panel is vested with ample and extensive discretionary authority to determine *when* it needs information to resolve a dispute and *what* information it needs. A panel may need such information before or after a complaining or a responding Member has established its complaint or defense on a *prima facie* basis.[165] However, some of the WTO agreements[166] suggest that panels seek experts' advice on scientific or other technical matters.

A. Expert Review Group

Panels may request opinions from individual experts in their personal capacity or request an advisory report from an Expert Review Group ("ERG").[167] An ERG works under the panel's authority. The panel decides on their mandate and working procedures.[168] Participation in an ERG is restricted to persons of professional standing and experience in the scientific field in question.[169] Citizens of the parties to the dispute shall not serve on an ERG unless both parties agree or when the panel considers in exceptional circumstances that the need for specialized scientific expertise cannot be fulfilled otherwise.[170] However, government officials of a party to the dispute shall not serve on the ERG. Members of an ERG serve in their individual capacity and not as representatives of a government or organization (which must not give them instructions concerning the matter at issue). An ERG may consult with and seek information and technical advice from any source it deems appropriate and Members shall respond promptly and fully to any such request.[171] Parties to the dispute shall have access to all relevant information provided to an ERG (unless it is of a confidential nature).[172] The ERG submits a draft report to the parties with a view to obtaining their comments, and taking them into account in their final report as appropriate. The final report of the ERG is issued to the panel and the parties simultaneously. The final report is of an advisory nature.[173] It is the sole prerogative of the panel to make, on the basis of the information contained in an ERG's final report, the factual determinations and legal findings required to resolve the dispute. In other words, the panel must not delegate its mandate to an ERG.

[164] Appellate Body Report, *U.S.—Shrimp*, ¶ 104. In doing so, a panel cannot realistically refer to all statements made by the experts advising it and should be allowed a substantial margin of discretion as to which statements are useful to refer to explicitly. (Appellate Body Report, *EC—Hormones*, ¶ 138)

The Appellate Body concluded that "the DSU accords to a panel established by the DSB, and engaged in a dispute settlement proceeding, ample and extensive authority to undertake and to control the process by which it informs itself both of the relevant facts of the dispute and of the legal norms and principles applicable to such facts." (Appellate Body Report, *U.S.—Shrimp*, ¶ 106)

[165] "A panel may, in fact, need the information sought in order to evaluate evidence already before it in the course of determining whether the claiming or the responding Member, as the case may be, has established a *prima facie* case or defense." Appellate Body Report, *Canada—Aircraft*, ¶ 192.

[166] Article 14 and Annex 2 of the TBT Agreement and Article 11 of the SPS Agreement.

[168] ¶ 1 of Appendix 4 to the DSU.

[169] ¶ 2 of Appendix 4 to the DSU.

[170] ¶ 3 of Appendix 4 to the DSU.

[171] ¶ 4 of Appendix 4 to the DSU.

[172] Confidential information shall not be released without the authorization from the government, organization or person providing it. Where no such authorization is given, a non-confidential summary shall be provided. Paragraph 5 of Appendix 4 to the DSU.

[173] ¶ 6 of Appendix 4 to the DSU.

In dispute settlement practice, panels have so far refrained from establishing ERGs. Panels seem to prefer hearing a broad spectrum of individual responses from selected experts, as well as responses to questions formulated, in consultation with the parties. One reason for this practice could be that advisory reports from ERGs would likely express compromise majority opinions (or rarely minority dissenting opinions) which may not fully reflect the entire spectrum of available scientific opinion. The Appellate Body has not found fault with the practice of panels to hear individual experts, instead of establishing ERGs, because in disputes involving scientific or technical issues, neither Article 11.2 of the SPS Agreement, nor Article 13 of the DSU prevents panels from consulting individual experts. Rather, both the SPS Agreement and the DSU leave to the discretion of a panel the determination of whether the establishment of an ERG is necessary or appropriate.[174]

However, the procedural rules set forth in Appendix 4 for ERGs have been used by panels, as appropriate, in selecting individual experts and in obtaining the parties' comments on individual expert opinions submitted to the panel. Once a panel has decided to request the opinion of individual scientific experts, there is no legal obstacle to the panel drawing up, in consultation with the parties to the dispute, *ad hoc* rules for those particular proceedings.[175]

It should be reiterated that individual—or groups of—experts operate under the panel's authority, and the legal assessment of the WTO-consistency of challenged measures in the light of scientific experts' opinions remains the sole responsibility of the panel.[176]

Where a request for information is addressed to an individual or body within the jurisdiction of a WTO Member, the authorities of that Member need to be informed.[177] In dispute settlement practice, panels are hesitant to "by-pass" governments by requesting information directly from individuals, companies, or institutions at national levels.

Nonetheless, panels are exceedingly active in asking questions of parties in oral and written form in order to clarify the facts of the case or to hear the parties' views on interpretations of legal provisions. In this respect, the Appellate Body rejected a respondent's argument that the complainant's claims were not sufficiently clear, and that the panel, therefore, overstepped the limits of its authority in asking questions of the parties. It stressed that "panels are entitled to ask questions of the parties that they deem relevant to the consideration of the issues before them."[178]

However, a panel may not use its discretionary right to seek information from any source in a way that interferes with the allocation of the burden of proof between the parties as addressed above. The Appellate Body held that, for example, that

[174] Appellate Body Report, *EC—Hormones*, ¶ 147.

[175] Appellate Body Report, *EC—Hormones*, ¶ 148.

[176] The question whether a panel has assessed, on its own responsibility, the WTO-consistency of a measure based on information received from another source is subject to appellate review. For example, the Appellate Body noted in a dispute that the panel "gave considerable weight to the views expressed by the IMF [International Monetary Fund] in its reply to these questions. However, nothing in the Panel Report supports India's argument that the Panel delegated to the IMF its judicial function to make an objective assessment of the matter. A careful reading of the Panel Report makes clear that the Panel did not simply accept the views of the IMF. The Panel critically assessed these views and also considered other data and opinions in reaching its conclusions." (Appellate Body Report, *India—Quantitative Restrictions*, ¶ 149)

[177] Article 13.1 of the DSU.

[178] Appellate Body Report, *Thailand—H-Beams*, ¶ 135. The Appellate Body also dismissed the argument that a panel had no authority to ask a question relating to claims for which the complaining party had not first established a *prima facie* case, and stated that such an argument was "bereft of any textual or logical basis". Appellate Body Report, *Canada—Aircraft*, ¶ 185.

> Article 13 of the DSU and Article 11.2 of the *SPS Agreement* suggest that panels have a significant investigative authority. However, this authority cannot be used by a panel to rule in favor of a complaining party that has not established a prima facie case of inconsistency based on specific legal claims asserted by it. A panel is entitled to seek information and advice from experts and from any other relevant source it chooses, . . . to help it to understand and evaluate the evidence submitted and the arguments made by the parties, *but not to make the case for a complaining party*."[179]

B. Duty to Respond

Whenever a panel makes a request for information that it considers necessary or appropriate the Member concerned *should* respond promptly and fully to such a request.[180] The Appellate Body has held that the word "should", in the third sentence of Article 13.1 and in the context of the whole of Article 13, is used in a normative, rather than a merely exhortative, sense. Members are, in other words, under a duty and an obligation to "respond promptly and fully" to requests made by panels for information under Article 13.1 of the DSU.[181]

The discretionary authority of a panel may be exercised to request and obtain information from *any Member*, including *a fortiori* a Member who is a party to a dispute before a panel. The "discretionary authority to seek and obtain information is *not* made conditional by [any] provision of the DSU upon the other party to the dispute having previously established, on a *prima facie* basis, such other party's claim or defense. Indeed, Article 13.1 imposes *no conditions* on the exercise of this discretionary authority."[182] A refusal to provide information requested on the basis that a *prima facie* case has not been made, would, in the Appellate Body's view, imply that the Member concerned believes that it is able to judge for itself whether the other party has made a *prima facie* case. "However, no Member is free to determine for itself whether a *prima facie* case or defense has been established by the other party. That competence is necessarily vested in the panel under the DSU, and not in the Members that are parties to the dispute."[183]

The Appellate Body noted that "[w]here a party refuses to provide information requested by a panel under Article 13.1 of the DSU, that refusal will be one of the relevant facts of record, and indeed an important fact, to be taken into account in determining the appropriate inference to be drawn."[184] A panel clearly has the legal authority and the discretion to draw inferences from all the facts before it—including the fact that a Member has refused to provide information sought by the panel.[185] It would be inevitable to draw "*negative inferences*" from a Member's refusal to disclose information that is in its sole possession and essential for the other party to establish a *prima facie* case.[186] The

[179] Appellate Body Report, *Japan—Agricultural Products II*, ¶ 129 (emphasis added).
[180] Article 13.1 of the DSU. However, confidential information that is provided shall not be revealed without formal authorization from the individual, body, or authorities of the Member providing the information.

[185] Appellate Body Report, *Canada—Aircraft*, ¶ 203.
[186] *Id.*, ¶¶ 187 and 203–204. And in Appellate Body Report, *U.S.—Wheat Gluten*, ¶¶ 171–173:

> [T]he refusal by a Member to provide information requested of it undermines seriously the ability of a panel to make an objective assessment of the facts and the matter, as required by Article 11 of the DSU. Such a refusal also undermines the ability of other Members of the WTO to seek the "prompt" and "satisfactory" resolution of disputes under the procedures for which they bargained in concluding the DSU.

Appellate Body characterized the drawing of inferences as a "discretionary" task falling within a panel's duties under Article 11 of the DSU.[187]

XIV. Mandate of Panels

According to Article 7 of the DSU, the task of a panel is to make such findings and conclusions on the matter referred to it upon request by the complainant as will enable the DSB to give rulings consistent with the WTO agreement(s) invoked.[188] Article 11 of the DSU provides more specifically:

> The function of panels is to assist the DSB in discharging its responsibilities under this Understanding and the covered agreements. Accordingly, a panel should make an objective assessment of the matter before it, including an objective assessment of the facts of the case and the applicability of and conformity with the relevant covered agreements, and make such other findings as will assist the DSB in making the recommendations or in giving the rulings provided for in the covered agreements. Panels should consult regularly with the parties to the dispute and give them adequate opportunity to develop a mutually satisfactory solution.

The panel's task of making an "objective assessment of the matter" is twofold. It includes the objective assessment of the *facts* relating to the challenged measures and the objective examination of the *claims* before the panel. Whether panels fulfill this mandate has given rise to considerable litigation before the Appellate Body.

A. Legal Issues

Insofar as *legal* questions are concerned, that is, the consistency or inconsistency of a Member's measure with the provisions of the applicable agreement, panels are required by Article 11 of the DSU to make an objective assessment of the facts of the case and the *applicability of and conformity with the relevant covered agreements*.[189] For example, a panel would act inconsistently with Article 11 of the DSU if it made a ruling *ultra petita*, that is, on a claim that has not been made and thus does not form part of the matter before it.[190]

Municipal law is relevant for a panel's examination of the claims before it. In public international law, an international tribunal may treat municipal law in several ways. Municipal law may serve as evidence of facts and may provide evidence of state practice. However, municipal law may also constitute evidence of compliance or non-compliance with international obligations.[191] Accordingly, although it is not the role of panels to

[187] Appellate Body Report, *U.S.—Wheat Gluten*, ¶¶ 171–173.

[188] Article 7 of the DSU.

[189] Appellate Body Report, *EC—Hormones*, ¶ 118.

[190] The Appellate Body stated in *Chile—Price Band System* that:

> [b]ecause it made a finding on a provision that was not before it, the Panel, therefore, did not make an objective assessment*of the matter before it*, as required by Article 11. Rather, the Panel made a finding on a matter that was *not* before it. In doing so, the Panel acted *ultra petita* and inconsistently with Article 11 of the DSU. (Appellate Body Report, ¶ 173)

[191] "There was simply no way for the Panel to make [a determination on the claims raised] without engaging in an examination of [domestic] law. But . . . the Panel was not interpreting [domestic] law "as such"; rather, the Panel was examining [domestic] law solely for the purpose of determining whether India had met its obligations under the *TRIPS Agreement*." Appellate Body Report, *India—Patents (U.S.)*, ¶¶ 65–67.

interpret a Member's domestic legislation as such, it is permissible for a panel to conduct a detailed examination of that legislation in assessing its consistency with WTO law.[192]

B. Factual Issues

Under Article 11 of the DSU, panels are also charged with the mandate to determine the *facts* of the case and to arrive at *factual findings*. In carrying out this mandate, a panel has the duty to examine and consider all the evidence before it, not just the evidence submitted by one or the other party, and to evaluate the relevance and probative force of each piece thereof.[193] Panels, therefore, are not required to accord to the parties' factual evidence the same meaning and weight as do the parties.[194] The determination of the significance and weight properly pertaining to the evidence presented by one party is a function of a panel's appreciation of the probative value of all the evidence submitted by both parties considered together.[195] It is generally within the discretion of the panel to decide which evidence it chooses to utilize in making findings.[196] A panel cannot realistically refer to all statements made by the experts advising it and should be allowed a substantial margin of discretion as to which statements are useful to refer to explicitly.[197]

In the Appellate Body's view, an allegation that a panel has failed to conduct the "objective assessment of the matter before it" is a very serious allegation which goes to the very core of the integrity of the WTO dispute settlement process itself.[198] In assessing the panel's appreciation of the evidence, the Appellate Body refused to base a finding of inconsistency under Article 11 of the DSU simply on the conclusion that it might have reached a factual finding different than the one the panel reached. Nor may every error in the appreciation of the evidence (although it may give rise to a question of law) be characterized as a failure to make an objective assessment of the facts.[199] Rather, the Appellate Body must be satisfied that the panel has exceeded the bounds of its discretion, as the trier of facts, in its appreciation of the evidence.[200] For example, it is not an error, let alone an egregious error, for the panel to fail to accord the weight to the evidence that one of the parties believes the panel should have accorded to it.[201] For the Appellate Body:

[192] Appellate Body Report, *U.S.—Hot-Rolled Steel*, ¶ 200. See also, Appellate Body Report, *U.S.—Section 211 Appropriations Act*, ¶¶ 105–106:

> Thus the municipal law of WTO Members may serve not only as evidence of facts, but also as evidence of compliance or non-compliance with international obligations. Under the DSU, a panel may examine the municipal law of a WTO Member for the purpose of determining whether that Member has complied with its obligations under the *WTO Agreement*.

[200] Appellate Body Report, *U.S.—Wheat Gluten*, ¶ 151.
[201] Appellate Body Report, *Korea—Alcoholic Beverages*, ¶ 164.

> The duty to make an objective assessment of the facts is, among other things, an obligation to consider the evidence presented to a panel and to make factual findings on the basis of that evidence. The deliberate disregard of, or refusal to consider, the evidence submitted to a panel is incompatible with a panel's duty to make an objective assessment of the facts. The willful distortion or misrepresentation of the evidence put before a panel is similarly inconsistent with an objective assessment of the facts. "Disregard" and "distortion" and "misrepresentation" of the evidence, in their ordinary signification in judicial and quasi-judicial processes, imply not simply an error of judgment in the appreciation of evidence but rather an egregious error that calls into question the good faith of a panel.[202]

In essence, Article 11 requires panels to take account of the evidence put before them and forbids them to willfully disregard or distort such evidence. Nor may panels make affirmative findings that lack a basis in the evidence contained in the panel record.[203] Provided that panels' actions remain within these parameters, however, it is generally within the discretion of the panel to decide which evidence it chooses to utilize in making findings and, on appeal, the Appellate Body "will not interfere lightly with a panel's exercise of its discretion".[204]

As far as the review by a panel of *fact-finding* determinations by competent national authorities is concerned:

> the applicable standard is neither *de novo* review as such, nor "total deference", but rather the "objective assessment of the facts". Many panels have in the past refused to undertake *de novo* review, wisely, since under current practice and systems, they are in any case poorly suited to engage in such a review. On the other hand, "total deference to the findings of the national authorities", it has been well said, "could not ensure an 'objective assessment' as foreseen by Article 11 of the DSU".[205]

The Appellate Body Reports in disputes under the *Agreement on Safeguards* spell out key elements of a panel's standard of review under Article 11 of the DSU in assessing whether the competent authorities complied with their obligations in making their determinations. This standard can be summarized as follows: panels must examine whether the competent authority has evaluated all relevant factors; they must assess whether the competent authority has examined all the pertinent facts and assessed whether an adequate explanation has been provided as to how those facts support the determination; and they must also consider whether the competent authority's explanation addresses fully the nature and complexities of the data and responds to other plausible interpretations of the data. However, panels must not conduct a *de novo* review of the evidence nor substitute their judgment for that of the competent authority.[206]

[202] "A claim that a panel disregarded or distorted the evidence submitted to it is, in effect, a claim that the panel, to a greater or lesser degree, denied the party submitting the evidence fundamental fairness, or what in many jurisdictions is known as due process of law or natural justice." Appellate Body Report, *EC—Hormones*, ¶ 133.

[203] Appellate Body Report, *U.S.—Carbon Steel*, ¶ 142.

[204] *Id.*, The Appellate Body stressed that panels enjoy discretion as the trier of facts; they enjoy a margin of discretion in assessing the value of the evidence, and the weight to be ascribed to that evidence. The Appellate Body will not intervene in the panel's appreciation of the evidence solely because it might have reached a factual finding different than the one the panel reached; the Appellate Body will intervene only if it is "satisfied that the panel has exceeded the bounds of its discretion, as the trier of facts, in its appreciation of the evidence". Appellate Body Report, *EC—Sardines*, ¶ 299.

[205] Appellate Body Report, *EC—Hormones*, ¶ 117.

[206] Appellate Body Report, *U.S.—Cotton Yarn*, ¶ 74. Article 17.6 of the *Anti-dumping Agreement* complements the standard of review set out in Article 11 of the DSU for disputes concerning anti-dumping measures. In the current negotiations reviewing the functioning of the *Anti-Dumping Agreement*, the United States has

Although panels are not entitled to conduct a *de novo* review of the evidence, nor to *substitute* their own conclusions for those of the competent authorities, this does *not* mean that panels must simply *accept* the conclusions of the competent authorities.[207] In this respect, the phrase "*de novo* review" should not be used loosely. If a panel concludes that the competent authorities, in a particular case, have *not* provided a reasoned or adequate explanation for their determination, that panel has not, thereby, engaged in a *de novo* review. Nor has that panel substituted its own conclusions for those of the competent authorities.[208]

XV. Interim Review Stage

Following the consideration of rebuttal submissions and oral arguments (at the second substantive meeting of the panel with the parties), the panel issues the descriptive section (including the parties' factual and legal arguments) of the draft report to the parties to the dispute. Within a time-period set by the panel—usually between one and two weeks—parties submit their comments in writing.[209]

As the next procedural step, the panel issues an interim report to the parties, including both the descriptive sections and the panel's findings and conclusions. The interim report remains confidential, but parties often leak the findings and conclusions to the public. Third parties are not entitled to receive the interim report. Within a time-period set by the panel, a party may submit a written request for the panel to review "precise aspects of the interim report" prior to circulation of the final report to Members.[210] In the early years of WTO dispute settlement practice, parties often submitted comprehensive comments on the interim report. Some feared that this could transform the interim review stage into some form of a "mini-appeal" process. In more recent years, however, parties have tended to limit the comments on the panel's legal interpretations and findings during the interim review, and to save for the appellate review stage their arguments on the legal errors allegedly committed by the panel. In the light of this practical experience, some have suggested that the appellate review stage is sufficient and that the interim review stage should be abolished altogether. Others have proposed that an interim review stage should be added even to the appellate review stage.

It is important to realize, however, that the interim review stage is the last chance for the parties to correct factual errors committed by the panel and to comment on purely factual rulings. While the Appellate Body is inclined to review "mixed" issues of law and fact, it will have to do so on the basis of the factual determinations made by the panel and facts in the panel record which are undisputed between the parties.[211]

In the Appellate Body's view, the interim review stage is not an appropriate time to introduce *new* evidence. At the interim review stage, the panel process is essentially complete; it is only—in the words of Article 15—"precise aspects" of the report that must

demanded to clarify the specific standard of review set out in Article 17.6 of that Agreement so as to ensure that panels and the Appellate Body show more deference to determinations made by national anti-dumping authorities.

[207] Appellate Body Report, *U.S.—Lamb*, ¶ 106.

[208] *Id.*, ¶ 107.

[209] Article 15.1 of the DSU.

[211] Article 17.6 of the DSU limits the appellate review to issues of law covered in the panel report and legal interpretations developed by the panel.

be verified during the interim review. And this cannot properly include an assessment of new and unanswered evidence. A panel would thus act properly in refusing to take into account new evidence during the interim review, and would not thereby act inconsistently with Article 11 of the DSU.[212]

At the request of either party, the panel must hold a further meeting with the parties on the issues identified in the written comments.[213] In recent WTO dispute settlement practice, it is rare for a party to request that an oral hearing be held to discuss the interim review comments. According to the working procedures adopted by most panels, if no such interim oral hearing is requested, the other party or parties are given the opportunity to respond in written form, within a brief time-period set by the panel, to the interim review comments received from the other party or parties. In the DSU review negotiations, it has been suggested that interim oral hearings be generally abolished and that the interim review stage be limited to written comments.

The findings in the final panel report must include a discussion of the arguments made at the interim review stage.[214] Usually, panel reports contain a separate chapter entitled "Interim Review". The interim review comments received from the parties are often addressed substantively in the panel report section containing the findings and conclusions on the relevant claim, but these comments are often not identified as having been made during the interim review stage. If no comments are received from any party during the interim review comment period, the interim report is to be considered the final panel report and circulated promptly to Members.[215]

XVI. Contents of the Final Panel Report

Unless the parties have found a mutually satisfactory solution to the dispute, the panel is to submit its findings, reasoning and conclusions in written form.[216] The reports of panels must be drafted without the presence of the parties to the dispute in the light of the information provided and the statements made.[217] Concurring and dissenting opinions by individual panelists are permitted—even though such opinions expressed by individual panelists are anonymous.[218] First, the final panel report is issued to the parties. When translations into all official languages of the WTO are completed, the final report is circulated to all Members and disclosed to the public at large (regardless of whether it will be appealed).

Where at least one developing country Member is party to the dispute, the panel report must explicitly indicate the form in which account has been taken of relevant provisions on differential and more-favorable treatment that form part of the covered agreements which have been invoked by the developing country Member in the course of the panel proceedings.[219]

[215] Article 15.2 of the DSU.
[216] Where a settlement of the matter among the parties to the dispute has been found, the panel report shall be confined to a brief description of the case and to reporting that a solution has been reached. Article 12.7 of the DSU.
[217] Article 14.2 of the DSU.
[218] Article 14.3 of the DSU.
[219] Article 12.11 of the DSU.

A. Basic Rationale Behind Panel Findings

The panel report shall set out the findings of fact, the applicability of relevant provisions and the basic rationale behind any findings and recommendations that it makes.[220] The obligation of a panel to set out the "basic rationale" behind its findings and conclusions has given rise to much argumentation in appellate review proceedings.

A panel complies with the obligation provided for in Article 12.7 of the DSU when it "set[s] out a detailed and thorough rationale for its findings and recommendations . . . [and goes to] some length to take account of competing considerations and to explain why, nonetheless, it made the findings and recommendations it did."[221] A panel has also set out a "basic rationale" for its finding and recommendation when it "identified the legal standard it applied, examined the relevant facts, and provided reasons for its conclusion . . . ".[222] Article 12.7 establishes a minimum standard for the reasoning that panels must provide in support of their findings and recommendations. Panels must set forth explanations and reasons sufficient to disclose the essential, or fundamental, justification for those findings and recommendations.[223] For the Appellate Body this duty reflects and conforms with the principles of fundamental fairness and due process that underlie and inform the provisions of the DSU:

> In cases where a Member has been found to have acted inconsistently with its obligations under the covered agreements, that Member is entitled to know the reasons for such finding as a matter of due process. In addition, the requirement to set out a "basic rationale" in the panel report assists such Member to understand the nature of its obligations and to make informed decisions about: (i) what must be done in order to implement the eventual rulings and recommendations made by the DSB; and (ii) whether and what to appeal. Article 12.7 also furthers the objectives, expressed in Article 3.2 of the DSU, of promoting security and predictability in the multilateral trading system and of clarifying the existing provisions of the covered agreements, because the requirement to provide "basic" reasons contributes to other WTO Members' understanding of the nature and scope of the rights and obligations in the covered agreements.[224]

Whether a panel has articulated adequately the "basic rationale" for its findings and recommendations must be determined on a case-by-case basis, taking into account the facts of the case, the specific legal provisions at issue, and the particular findings and recommendations made by the panel. Panels must identify the relevant facts and the applicable legal norms. In applying those legal norms to the relevant facts, the reasoning of the panel must reveal how and why the law applies to the facts. In this way, panels will, in their reports, disclose the essential or fundamental justification for their findings and recommendations.[225]

An appeal based on Article 12.7 will be unsuccessful if it implies that a panel, in setting out the "basic rationale", had to expound at length on the reasons for its findings and recommendations. The Appellate Body could, "for example, envisage cases in which a panel's 'basic rationale' might be found in reasoning that is set out in other documents,

[220] Article 12.7 of the DSU.

[224] *Id.*, ¶ 107.
[225] *Id.*, ¶ 108.

such as in previous panel or Appellate Body reports—provided that such reasoning is quoted or, at a minimum, incorporated by reference."[226]

B. Due Exercise of Judicial Economy

Neither the obligation of panels to set out the "basic rationale" for their findings and recommendations, nor the obligation in Article 11 of the DSU to "make such other findings as will assist the DSB in making the recommendations or in giving the rulings provided for in the covered agreements", nor previous GATT practice:

> . . . requires a panel to examine all legal claims made by the complaining party. Previous GATT 1947 and WTO panels have frequently addressed only those issues that such panels considered necessary for the resolution of the matter between the parties, and have declined to decide other issues.[227] . . . In recent WTO practice, panels likewise have refrained from examining each and every claim made by the complaining party and have made findings only on those claims that such panels concluded were necessary to resolve the particular matter.[228] (original underlining)

Under the DSU, "[a] panel need only address those claims which must be addressed in order to resolve the matter in issue in the dispute."[229] However, there are limits to applying the principle of judicial economy in WTO dispute settlement practice:

> This principle has to be applied keeping in mind the aim of the dispute settlement system. This aim is to resolve the matter at issue and "to secure a positive solution to a dispute". To provide only a partial resolution of the matter at issue would be false judicial economy. A panel has to address those claims on which a finding is necessary in order to enable the DSB to make sufficiently precise recommendations and rulings so as to allow for prompt compliance by a Member with those recommendations and rulings in order to ensure effective resolution of disputes to the benefit of all Members.[230]

For purposes of transparency and fairness to the parties, a panel should, in all cases, address expressly those claims which it declines to examine and rule upon for reasons of judicial economy. Silence does not suffice for this purpose.[231]

The Appellate Body also clarified that a panel comes under a duty to address and dispose of certain issues of a fundamental nature, even if the parties to the dispute remain silent on those issues. For example, the vesting of jurisdiction in a panel is a fundamental prerequisite for lawful panel proceedings. For this reason, "panels cannot simply ignore issues which go to the root of their jurisdiction—that is, to their authority to deal with

[226] For example, "a panel acting pursuant to Article 21.5 of the DSU would be expected to refer to the initial panel report, particularly in cases where the implementing measure is closely related to the original measure, and where the claims made in the proceeding under Article 21.5 closely resemble the claims made in the initial panel proceedings."(Appellate Body Report*, Mexico—Corn Syrup (Article 21.5—US)*, ¶ 109)

[227] "Thus, if a panel found that a measure was inconsistent with a particular provision of the GATT 1947, it generally did not go on to examine whether the measure was also inconsistent with other GATT provisions that a complaining party may have argued were violated." Appellate Body Report, *U.S.—Wool Shirts and Blouses*, at 18.

[228] Appellate Body Report, *U.S.—Wool Shirts and Blouses*, at 18.

[229] *Id*., at 19. Moreover, "[j]ust as a panel has the discretion to address only those *claims* which must be addressed in order to dispose of the matter at issue in a dispute, so too does a panel have the discretion to address only those *arguments* it deems necessary to resolve a particular claim." (Appellate Body Report, *EC—Poultry*, ¶ 135)

[230] Appellate Body Report, *Australia—Salmon*, ¶ 223.

[231] Appellate Body Report, *Canada—Autos*, ¶ 116.

and dispose of matters. Rather, panels must deal with such issues—if necessary, on their own motion—in order to satisfy themselves that they have authority to proceed."[232]

C. Not Adding to or Diminishing Rights and Obligations of Members

Article 3.2 of the *DSU* is not meant to encourage panels to "make law" by clarifying existing provisions of the *WTO Agreement* outside the context of resolving a particular dispute.[233] In making findings and conclusions, panels must keep in mind that only WTO Members have the authority to amend the DSU or to adopt authoritative interpretations pursuant to Article IX:2 of the *WTO Agreement*.[234] Determining what the rules and procedures of the DSU ought to be is not the responsibility of panels; it is the responsibility solely of the Members of the WTO.[235] However, the Appellate Body had "difficulty in envisaging circumstances in which a panel could add to the rights and obligations of a Member of the WTO if its conclusions reflected a correct interpretation and application of provisions of the covered agreements."[236]

D. Right to Suggest How to Implement

Where the panel concludes that a measure is inconsistent with a covered agreement, it shall recommend that the Member concerned[237] bring the measure into conformity with that agreement.[238] Most panels make such a declaratory judgment and leave it to the Member concerned to select the means to implement the panel's recommendations and rulings. However, a panel also has the power, upon request or on its own motion, to suggest ways in which the Member concerned could implement the recommendations.[239] Panels tend to refrain from using that power for a number of reasons. For example, there might be several ways to bring a measure into conformity with WTO law, and panels are hesitant to interfere with the sovereign right of Members to choose among different options as long as they bring about full conformity with WTO law.

XVII. Conclusion of Panel Proceedings

Panel proceedings should be completed within nine months of establishment of the panel by the DSB or within six months of the appointment of panelists by mutual accord of the parties or by the Director-General of the WTO.[240] In cases of urgency, including those relating to perishable goods, a panel shall aim to issue its report to the parties within three months.[241] In dispute settlement practice, these indicative time-frames are often

[232] Appellate Body Report, *Mexico—Corn Syrup (Article 21.5—US)*, ¶ 36.
[233] A panel need only address those claims which must be addressed in order to resolve the matter in issue in the dispute. Appellate Body Report, *U.S.—Wool Shirts and Blouses*, at 20.
[234] The Appellate Body noted that Article 3.2 of the DSU limits the tasks of panels "to preserv[ing] the rights and obligations of Members under the covered agreements, and to *clarify[ing] the existing provisions* of those agreements in accordance with customary rules of interpretation of public international law." (emphasis added)
[235] Appellate Body Report, *U.S.—Certain EC Products*, ¶ 92
[236] Appellate Body Report, *Chile—Alcoholic Beverages*, ¶ 79.
[237] The "Member concerned" is the party to the dispute to which the panel recommendations are directed.
[238] Article 19.1, first sentence, of the DSU.
[239] Article 19.1, second sentence, of the DSU.
[240] ¶ 9 of Article 12 of the DSU.
[241] Article 12.8 of the DSU.

not met, *inter alia*, because the panelist selection process takes a long time, parties ask for more time to prepare submissions, experts need time to give advisory opinions, or panelists have to deal with complex facts or novel legal issues under WTO agreements being interpreted for the first time. When the panel considers that it cannot issue its report within six months (or within three months in cases of urgency) it shall inform the DSB in writing of the reasons for the delay together with an estimate of the period within which it will issue its report.[242]

The panel may suspend its work at any time at the request of the complaining party for a period not to exceed twelve months. In the event of such a suspension, the time-frames mentioned above shall be extended by the time period for which the work is suspended. If the work of the panel has been suspended for more than twelve months, the authority for the establishment of the panel lapses.[243]

The findings and conclusions contained in panel reports are to be adopted by the DSB by "reverse" or "negative" consensus to the extent that they have not been modified or reversed on appeal (if any). To provide sufficient time for the Members to consider panel reports, they are not be considered for adoption by the DSB until twenty days after having been circulated to Members.[244] Members having objections to a panel report can explain their objections in writing for circulation at least ten days prior to the DSB meeting at which the panel report will be considered.[245] Members do not make much use of this provision in DSB practice. The parties to a dispute have the right to participate fully in the consideration of the panel report by the DSB, and their views are fully recorded. Parties, third parties, and other Members frequently make extensive comments on panel reports during the DSB meeting at which a report is to be adopted, both on factual and legal determinations made by the panel, and on systemic implications of a panel's legal interpretations for future disputes. The minutes of DSB meetings fully reflect those comments. The DSB minutes are usually derestricted 45 days after the date of their circulation to WTO Members.[246]

A panel report shall be adopted at a DSB meeting (unless a party to the dispute formally notifies the DSB of its decision to appeal or the DSB decides by consensus not to adopt the report) within sixty days after the date of its circulation to WTO Members.[247] In practice, this does not mean that a Member will always take the full sixty days to decide whether or not to appeal a panel report. A party may decide to file a notice of appeal on the very day that the panel report is circulated to Members in all official languages. If the party wants time to reflect on whether to appeal or to maximize the time to prepare its argumentation on appeal, it can benefit from the "grace period" of twenty days as of the report's circulation during which the DSB cannot consider the panel report for adoption. However, when this twenty day period has expired, another party to the dispute may put the report up for adoption by placing it on the agenda of the next regular DSB meeting or a special DSB meeting scheduled for that purpose (arguably subject to the ten day period for inscribing items on the DSB agenda). Once this has occurred, the only way for a potential appellant to avoid a panel report being quasi-automatically adopted

[242] Article 12.9 of the DSU.
[243] Article 12.12 of the DSU.
[244] Article 16.1 of the DSU.
[245] Article 16.2 of the DSU.
[246] DSB Decision of May 14, 2000 (WTO document WT/L/452).
[247] If a party has notified its decision to appeal, the report by the panel shall not be considered for adoption by the DSB until after the conclusion of the appeal. This adoption procedure is without prejudice to the right of Members to express their views on a panel report. (Article 16.4 of the DSU)

is to file a notice of appeal prior to that DSB meeting. In other words, any other party may effectively shorten the time-period for an appellant to prepare its argumentation on appeal to much less than the maximum period of sixty days.

40. Precedential Value of AB Reports—"Res judicata"? 1330

V. Appraisal of the Appellate Body 1332

I. Introduction

This chapter examines the Appellate Body and appellate procedures in WTO dispute settlement. Part II sets out a brief review of how the concept of appellate review arose and evolved during the Uruguay Round of trade negotiations. Part III describes the principal institutional aspects of the Appellate Body: the applicable legal instruments, the Appellate Body as an institution, and the individuals that have served on it. Part IV of the chapter focuses on the appeal process and provides, first, an overview designed to familiarize the reader with the conduct of an appeal, and second, a survey of specific issues that have arisen, or might arise, during an appeal. Part V attempts to take stock of the current state of Appellate Body procedures. This is done through a brief examination of certain comments that have been made by WTO Members, of proposals made in the current negotiations on reform of the Dispute Settlement Understanding ("DSU"), and of comments that have been made by outside observers. Overall, the objectives of this chapter are to familiarize readers with the detailed mechanics of WTO appeals and to provide them with some of the data necessary to judge for themselves the extent to which current appellate procedures are consistent with the Appellate Body's own description of the objective of dispute settlement in the WTO:

> The procedural rules of WTO dispute settlement are designed to promote, not the development of litigation techniques, but simply the fair, prompt and effective resolution of trade disputes.[1]

II. Uruguay Round Negotiations

The GATT contracting parties recognized, at the time that they launched the Uruguay Round of trade negotiations, that enhanced dispute settlement procedures would be indispensable in order to buttress a more sophisticated multilateral trading system. In addition, the GATT system had always contained a dispute settlement mechanism, and as this mechanism evolved over time, the contracting parties had become increasingly dissatisfied with certain aspects of that mechanism. One particularly troublesome feature of the system was the ability of contracting parties to block the adoption of panel reports.

Contracting parties held different views on the reasons why panel reports had been blocked. For some, it was due to the poor quality of particular panel reports. Others blamed "losing" parties for "abusing" the consensus decision-making process by which reports were adopted. Similarly, in the early phases of the negotiations, a number of different views as to how to cure the problem were put forward. Suggestions included procedures to ensure the selection of better-qualified panelists, an expanded interim review stage at the panel level, a formal process by which parties to the dispute could lodge written objections to the contents of the panel report, and modification of the consensus decision-making rules for the adoption of panel reports.[2]

[1] Appellate Body Report, *United States—FSC*, ¶ 166 (Note: full citations to Appellate Body reports are provided in the table at the end of this chapter).

[2] The contracting parties discussed, for example, the idea of a "consensus-minus" form of decision-making, where panel reports would still require consensus for adoption, but either the parties to the dispute, or the parties and any third parties to the dispute, would not participate in the decision. At least one delegation also favoured the idea of using Article XXV of GATT to take adoption decisions on panel reports, while another delegation suggested that panel reports could be divided into legal rulings on the GATT-consistency of the measures at issue (to be adopted by consensus) and recommendations as to implementation (where a modified consensus rule could be applied). *See* the summary of proposals in MTN/GNG13/W/29/Rev. 1.

The idea of a discrete appellate review stage was floated for the first time at a relatively late stage of the negotiations. Appellate review did not feature in the December 1988 mid-term review, nor in the Contracting Parties' Decision of April 12, 1989 to implement certain procedural reforms of the dispute settlement system on a trial basis as from May 1, 1989.[3] The idea of a standing appeals body appears to have been raised for the first time around the time of a meeting of the negotiating group on dispute settlement on September 28, 1989, as part of the discussions on the procedures for adopting panel reports.[4]

In an effort to synthesize discussions on the issue, Mexico's proposal explained that:

> 12. The purpose of establishing an appellate body is to compensate for the virtually automatic adoption of panel reports, by allowing parties to a dispute the opportunity to have reports reviewed in their entirety by a body specialized in GATT matters: in other words, by a body whose membership and permanent nature ensure that the final conclusions and recommendations are free from any doubt or error of interpretation concerning GATT rules and disciplines.
>
> 13. The appellate body would be available to all contracting parties. However, this remedy should not be used as just another procedure in dispute settlement. Parties to a dispute which so request must present their case in writing, indicating their grounds for considering that the panel report being appealed is unsound and the specific points they wish to have reviewed by the appellate body. In addition, all appeal applications must be accompanied by a formal declaration reiterating that the applicant will accept the final outcome of the appeal.[5]

In their subsequent discussions on the issue, many contracting parties expressed concern that the creation of an appellate review stage would unduly increase the duration and complexity of dispute settlement proceedings, and insisted that any appellate review stage must be structured so as to ensure that appeals occurred only in extraordinary cases, rather than becoming simply one more stage in dispute settlement that would be utilized in virtually every dispute.[6] One delegation suggested, instead, a form of appellate/interim review in which draft panel reports would be submitted to some form of expert body, which could then propose changes to the draft. The idea of appellate review also provoked discussion as to the legal effects of appellate reports, specifically whether they would need to be adopted and, if so, what the appropriate decision-making rules for such adoption would be.[7]

In December 1991, Chairman Arthur Dunkel released the "Draft Final Act Embodying the Results of the Uruguay Round of Multilateral Trade Negotiations", Sections S and T of which addressed dispute settlement.[8] Draft Article 15 of Section S dealt specifically with appellate review, and its provisions resemble very closely the current text of Article 17 of the DSU. Perhaps due to the novelty of appellate review in GATT dispute settlement and, almost certainly as a result of the late stage of the negotiations when the concept was introduced, only the broad parameters of what appellate procedures would look like were set out in the text. Little was added to this text when it later became Article 17 of the DSU.

[8] MTN/TNC/W/FA, December 20, 1991.

At the same time as the adoption of the DSU and the WTO Agreement, Ministers decided to establish a Preparatory Committee for the World Trade Organization.[9] Four sub-committees were established, including one on Institutional, Procedural and Legal Matters which was to address, *inter alia*, issues relating to the Appellate Body.[10] The discussions of this sub-committee revealed the extent to which WTO Members attached importance to the credibility and prestige of the Appellate Body, to its anticipated role as a cornerstone in the new WTO system, and to the equality of and collegiality among all seven members.[11] Discussions focused on the following issues: whether Appellate Body members should be appointed on a permanent or a part-time basis, where its members should be located, the remuneration they should receive and the type and number of support staff with which they should be provided.[12] The Sub-Committee concluded its work in a series of informal consultations, which yielded a set of recommendations on the establishment of the Appellate Body that were circulated on December 2, 1994.[13] A slightly revised version of the recommendations was circulated six days later.[14] These documents were approved by the General Council on January 31, 1995 through the adoption of the report of the Preparatory Committee as a whole, and forwarded to the Dispute Settlement Body ("DSB") for action.[15] The recommendations were then endorsed by the DSB at its meeting of February 10, 1995 and circulated on June 19, 1995 as document WT/DSB/1. The recommendations recognize that "the DSU does not answer all questions which must be settled before the Appellate Body can function effectively", but also that "not all issues connected with the Appellate Body require decisions or recommendations at this point" and that it "is not therefore necessary to tie up all loose ends at this stage."[16]

Overall, the legacy of the Uruguay Round was the creation of a new body to hear appeals from panel reports, along with the skeletal outlines of its procedures. The absence of detailed procedures was compensated for, in part, by the power given to the Appellate Body to adopt its own working procedures, in consultation with Members and the Chairman of the DSB.

III. Institutional Aspects of Appellate Review

A. Governing Instruments

The rules relating to the establishment, constitution, and operation of the Appellate Body are contained in three main legal instruments: (1) the DSU, in particular Articles 17 and

[9] Ministerial Decision of April 14, 1994 at Marrakesh, MTN.TNC/45(MIN), Annex IV.

[10] *See* minutes of the April 29, 1994 Meeting of the Preparatory Committee for the World Trade Organization, PC/M/1.

[11] The committee rejected an initial budget proposal from the Director-General that appeared to propose funding for three Appellate Body members to be hired on a permanent basis and four on a retainer basis. *See* the minutes of the 21 October 1994 meeting of the Sub-Committee on Institutional, Procedural and Legal Matters: PC/IPL/M/7, ¶¶ 84*ff*.

[12] *See*, in particular, the minutes of the October 21, 1994 and November 18, 1994 meetings of the Sub-Committee on Institutional, Procedural and Legal Matters: PC/IPL/M/7, ¶¶ 84–107; and PC/IPL/M/9, ¶¶ 59–61.

[13] PC/IPL/W/15.

[14] PC/IPL/13.

[15] WT/GC/M/1, p. 8. Certain matters referred by the Preparatory Committee to the WTO which concerned WTO bodies other than the General Council were, at the time that the Committee's Report was adopted, remitted to those bodies for further consideration and/or action as appropriate. Thus, "Establishment of the Appellate Body and Rules of Ethical Conduct" were referred to the Dispute Settlement Body.

[16] PC/IPL/13; PC/IPL/W/15; and WT/DSB/M/1, ¶¶ 1 and 2.

18; (2) the *Working Procedures for Appellate Review* (the "*Working Procedures*"); and (3) the *Rules of Conduct for the Understanding on Rules and Procedures Governing the Settlement of Disputes* (the "*Rules of Conduct*").[17] As indicated in Article 1.2 of the DSU, certain special or additional rules on dispute settlement in other covered agreements—listed in Appendix 2 to the DSU—also apply in disputes brought under those agreements, and prevail over the rules contained in the DSU in the event of a conflict.[18] For example, certain provisions of the *Agreement on Subsidies and Countervailing Measures* (the "*SCM Agreement*") set forth special, shortened time limits that apply to all stages—including the appellate stage—of disputes that involve prohibited or actionable subsidies within the meaning of that Agreement.[19] Some procedures used in appeals have been established through decisions taken by the Dispute Settlement Body (the "DSB") or through the practice of WTO Members participating in appeals.[20] Lastly, certain of the Ministerial Declarations and Decisions adopted at the conclusion of the Uruguay Round may have implications for Appellate Body procedures.[21]

1. Covered Agreements

The provisions of the covered agreements pertaining to Appellate Body procedures (such as the DSU and the *SCM Agreement*) can be modified only by the Members of the WTO, in accordance with the procedures set forth in Article X of the *WTO Agreement*. The Decision on the Application and Review of the Understanding on Rules and Procedures Governing the Settlement of Disputes provided for a "full review of dispute settlement rules and procedures under the World Trade Organization within four years after the entry into force" of the *WTO Agreement*, and invited the first Ministerial Conference after the completion of such review "to take a decision . . . whether to continue, modify or terminate such dispute settlement rules and procedures". Although Members engaged in extensive discussion between 1998 and 2000 pursuant to this "DSU Review" mechanism, ultimately no decision was taken and the DSU has continued to be applied without modification. The Doha Development Round of Trade Negotiations, launched in 2001, provides for negotiations on clarifications and improvements to the DSU, and these ongoing negotiations include discussion of possible amendments to certain aspects of appellate review.[22]

2. Working Procedures

The *Working Procedures* consist of detailed provisions regarding all aspects of appellate procedures, and they apply in all appeals. Article 17.9 of the DSU directs the Appellate Body to draw up its working procedures, "in consultation with the Chairman of the DSB

[17] WT/DSB/RC/1. The *Rules of Conduct* are also directly incorporated into the *Working Procedure*s as Annex II. *See* the communication dated January 20, 1997 from the Chairman of the Appellate Body to the Chairman of the DSB, WT/DSB/RC/2.

[18] *See Guatemala—Cement I*, ¶ 65.

[19] *See SCM Agreement*, Article 4, in particular paragraphs 8, 9, and 12 thereof, and Article 7, in particular paragraphs 6 and 7 thereof.

[20] *See*, *e.g., Rules of Procedure for Meetings of the Dispute Settlement Body* (WT/DSB/9); *Rules of Procedure for Sessions of the Ministerial Conference and Meetings of the General Council* (WT/L/161); *Working Practices Concerning Dispute Settlement Procedures*, as agreed by the DSB (WT/DSB/6); and *Expiration of Time-Periods in the DSU—Proposal by the Chairman and Secretariat Note* (WT/DSB/W/10 and WT/DSB/W/10/Add. 1), adopted by the DSB at its meeting of September 27, 1995.

[21] For example, the *Decision on Review of Article 17.6 of the Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994*; the *Declaration on Dispute Settlement Pursuant to the Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994 or Part V of the Agreement on Subsidies and Countervailing Measures*; and the *Decision on the Application and Review of the Understanding on Rules and Procedures Governing the Settlement of Disputes*.

[22] *See* Part V below.

and the Director-General", and requires them to be "communicated to Members for their information."[23] Rule 32(2) of the *Working Procedures* makes explicit that amendments to those Procedures are to be carried out in accordance with the process set forth in Article 17.9 of the DSU, and Rule 32(3) directs the Appellate Body to consider whether amendment of the *Working Procedures* is necessary in the event that WTO Members amend the DSU or the special or additional rules and procedures of the covered agreements.

The DSU explicitly directs the Appellate Body to consult with the Chairman of the DSB on proposed working procedures. In addition, the Chairman of the DSB is required to consult with WTO members on certain issues. Thus, for example, the DSB Decision on Establishment of the Appellate Body specifies that "the DSB Chairman, at the appropriate time, should consult with Members in order to obtain their views on the working procedures prior to advising the Appellate Body".[24] Furthermore, in December 2002, the DSB adopted additional procedures for consultations between Members and the Chairperson of the DSB with respect to amendments to the *Working Procedures*.[25] The existing *Working Procedures* also contain a mechanism to deal with procedural questions not otherwise covered by the *Working Procedures.* Rule 16(1) allows a division hearing an appeal, "in the interests of fairness and orderly procedure" to adopt an *ad hoc* procedure, for purposes of that appeal only, and "provided that it is not inconsistent with the DSU, the other covered agreements and these Rules." When a division adopts a special procedure pursuant to this Rule, it must immediately notify the participants to the appeal as well as the other members of the Appellate Body.

The *Working Procedures* were first adopted by the Appellate Body on February 7, 1996, and came into force on February 15, 1996.[26] The Procedures were drafted by the seven original Appellate Body members, primarily during January 1996. In drafting their procedures, the Appellate Body consulted with the Director-General and the Chairman of the DSB. In addition, the Chairman of the DSB held informal meetings on January 2 and February 1, 1996 in order to discuss the *Working Procedures* with delegations. The *Working Procedures* have been amended three times since their adoption. In 1997

[23] During the Uruguay Round, an early draft text prepared by the Secretariat contained bracketed language that would explicitly have required working procedures drafted by the Appellate Body to be approved by the Council. (MTN/GNG/NG13/W/45, September 21, 1990, *Appellate Review*, Article 2(a)). This language had disappeared by the time that the Draft Final Act Embodying the Results of the Uruguay Round of Multilateral Trade Negotiations (the *Brussels Draft Final Act*) was circulated on November 26, 1990 (MTN.TNC/W/35). A former Appellate Body Member has noted that although, at first blush, an institutional structure that leaves the adoption of working rules to the Appellate Body itself seems "astounding", the "wisdom" of this arrangement in fact becomes "immediately apparent if one considers the alternatives". He asks, in this regard:

> Is it realistic to assume that the Appellate Body would have been able to start its work with any working procedures, if their approval had been entrusted to the DSB, acting under the traditional rule of consensus? At what point in time would such consensus have been brought about? Is it totally unrealistic to assume that even today, the Appellate Body would have to operate without detailed working procedures if the approval of these working procedures had to [have] been left to the DSB, acting according to the traditional consensus principle?

Claus-Dieter Ehlermann, *Six Years on the Bench of the 'World Trade Court'*, 36(4) JOURNAL OF WORLD TRADE 605 at 610–611 (2002).

[24] WT/DSB/1 ¶ 14.

[25] WT/DSB/31. In broad outline, this document provides that, when the Appellate Body requests consultations, pursuant to Article 17.9 of the *Working Procedures*, the Chairperson of the DSB is to inform WTO Members "at the earliest opportunity", and to "inform the Appellate Body that he will seek the views of Members on the proposed amendments and that he will convey any such views to the Appellate Body". In addition, the Chairperson is to allow Members an opportunity to comment on the proposed amendments, allow for such proposed amendments to be discussed in an appropriate DSB meeting, convey to the Appellate Body the views expressed by Members and request the Appellate Body to take them into account.

[26] *Working Procedures,* Rule 32(1).

the Appellate Body amended Rule 5(2) to allow the first Chairman of the Appellate Body to serve for a term of two years, rather than one year.[27] Rule 5(2) was amended a second time in 2001 to provide for the possibility for an Appellate Body member serving as Chairman of the Appellate Body to be appointed to a second one-year term. Thirdly, in September 2002 the Appellate Body provisionally amended the provisions of the *Working Procedures* governing the participation of third parties in appeals.[28] The final version of those amendments came into effect on May 1, 2003.[29] On October 7, 2004, the final version of the most recent amendments to the *Working Procedures* was circulated to WTO Members in document WT/AB/WP/W/9.[30] The amendments to the *Working Procedures* come into force on January 1, 2005, and will apply to all appeals initiated after that date.[31]

3. Rules of Conduct

The *Rules of Conduct* were adopted by a decision taken by the DSB and could, presumably, be modified in the same way, although the Rules do not themselves stipulate any specific amendment procedure.[32] In February 1996, the Appellate Body provisionally attached the draft *Rules of Conduct* as Annex II to the *Working Procedures*, pending the future adoption of the Rules by the DSB. The *Rules of Conduct* were not formally adopted by the DSB until its meeting on December 3, 1996.[33] Thereupon, the Appellate Body confirmed, in accordance with Rule 8(2) of its *Working Procedures*, that the *Rules of Conduct*, as adopted by the DSB, were directly incorporated into the *Working Procedures* and superseded the original Annex 2 thereto. The *Rules of Conduct* were reviewed, in accordance with Section IX:1, within two years of their adoption. No Member objected to the existing text, and the DSB therefore decided to continue to apply the *Rules of Conduct* as originally adopted and "to review them at a later stage, as necessary."[34] The *Rules of Conduct* apply to "covered persons", namely: Members of the Appellate Body, panelists, arbitrators, experts and the staff of the WTO and Appellate Body Secretariats.

B. The Appellate Body Members

1. Legal Framework and Appointment Procedures

Certain general principles governing the establishment and composition of the standing Appellate Body, as well as the requisite qualifications of Appellate Body members, are

[27] WT/AB/WP/3; discussed at DSB meeting on February 25, 1997, WT/DSB/M/29.

[28] *See Third Parties, Third Participants and Passive Observers*, *infra* Subpart IV.B.12.

[29] WT/AB/WP/6.

[30] This document also sets out a new numbering system for documents relating to the *Working Procedures*. Readers should ensure that they are using the most recent version of the *Working Procedures* which, at the time of writing (October 2004) was WT/AB/WP/7, but which will be WT/AB/WP/5 as from January 1, 2005.

[31] Significant changes have been introduced regarding, in particular: the required content of Notices of Appeal; a new requirement to file a Notice of Other Appeal; amendments to Notices of (Other) Appeal; and the deadlines for filing an appellant's submission and for requesting authorisation to correct clerical errors in written submissions.

[32] However, as explained further below, Rule IX.1 does contemplate that a review of the Rules of Conduct would be conducted within two years of their adoption, and that the DSB would decide whether to continue, modify or terminate them.

[33] WT/DSB/M/27.

[34] DSB meeting of January 25, 28 and 29 and February 1, 1999, WT/DSB/M54, p. 42. Rule IX.1 stipulates that a review of the Rules of Conduct was to be conducted within two years of their adoption, and that the DSB was to decide whether to continue, modify or terminate them. At the DSB meeting of November 25, 1998, the Chairman of the DSB referred to this provision, noted that he had not detected a desire among Members for a comprehensive review of the Rules, and suggested that it might be better to wait to gain further experience with the application of the Rules before undertaking such a comprehensive review. WT/DSB/M/51, p. 29.

set out in the first three paragraphs of Article 17 of the DSU. Article 17.1 of the DSU provides that the DSB is to establish a standing Appellate Body composed of seven persons, three of whom will serve on any one appeal. Many of the criteria identified in Article 17 were elaborated upon in the DSB's 1995 Decision on the "Establishment of the Appellate Body" (the "1995 Decision").[35] Members recognized, in that Decision, that in selecting individuals to serve on the Appellate Body, "[i]ssues arise as to its members' expertise, representative balance, impartiality, conditions of employment, and the selection procedures to be used."[36] These issues have periodically been the subject of discussion amongst Members, especially during the processes for appointment of Appellate Body members. Yet even in 1995, the DSB explicitly recognized that, in establishing and composing the Appellate Body:

> The success of the WTO will depend greatly on the proper composition of the Appellate Body, and persons of the highest calibre should serve on it.[37]

(a) Representativeness. Paragraph 3 of Article 17 stipulates that the membership of the Appellate Body as a whole "shall be broadly representative" of membership in the WTO. In 1995, the DSB recognized that the requirement of representative balance implies that "factors such as different geographical areas, levels of development, and legal systems shall be duly taken into account". In 1995 the Chairman of the DSB summarized the views of many WTO Members on this criteria as follows:

> Many delegations believed that the strength of [the] Appellate Body would lie in its diversity of representation reflecting: (i) regional, developed and developing country balance; (ii) adequate representation from regions and countries who were active participants in the trading system including smaller as well as larger countries; (iii) different legal systems, on grounds that the credibility and authority of the Appellate Body had [to] be acceptable to all.[38]

The DSU does not explicitly reserve seats for specific regions and the WTO Members have, on occasion, objected to any suggestion that such an allocation would be proper. During the DSB meeting at which the seven original Appellate Body members were appointed, the DSB Chairman cautioned that:

> The decision to be taken at the present meeting on the Committee's proposal did not mean that the composition of the Appellate Body would remain the same over time and no rights might be derived from the initial composition. The particular regional or national distribution of initial appointments to the Appellate Body therefore, in no way compromised the scope for different regional or national compositions on future occasions.[39]

(b) Qualifications. As regards the requisite qualifications of the individuals who serve as Appellate Body members, Article 17.3 of the DSU prescribes four types of criteria. First, they must be "persons of recognized authority, with demonstrated expertise in law,

[35] WT/DSB/1, ¶ 14.
[36] 1995 Decision, WT/DSB/1, ¶ 4.
[37] 1995 Decision, WT/DSB/1, ¶ 4.
[38] Minutes of the DSB Meetings of May 31, 1995, WT/DSB/M/5, p. 13.
[39] Minutes of the DSB meeting of November 1 and 29, 1995, WT/DSB/M/9, p. 2. At the same meeting, Mexico highlighted that "the present composition of the Appellate Body would not constitute a precedent" (p. 5), Egypt noted that "[t]he composition of the Appellate Body would not mean that any country represented therein would have an automatic right." (p. 5) and Canada emphasized that "no fixed national or regional composition should be established or implied from the present composition." (p. 7) During the second appointment process, in 2000, Japan objected to the nomination letter submitted by Egypt in 2000, which referred to "the seat reserved to Africa and the Middle East". Canada, the United States and Slovenia also indicated that they did not agree that seats on the Appellate Body are reserved for certain countries or regions. Minutes of the DSB meeting of January 27, 2000, WT/DSB/M/74, pp. 21–22.

international trade and the subject-matter of the covered agreements generally." Second, they must be "unaffiliated with any government". Third, they must be "available at all times and on short notice". Fourth, the individuals serving on the Appellate Body are directed to "stay abreast of dispute settlement activities and other relevant activities of the WTO." In addition, as discussed further below,[40] individual Appellate Body members are prohibited from participating in the consideration of any appeals that would create a direct or indirect conflict of interest.

With respect to the first of these criteria, the 1995 Decision of the DSB repeatedly refers to the "overriding concern" that candidates be of high quality. During the first selection process, WTO Members debated whether it was necessary for *each* candidate for appointment to the Appellate Body to possess expertise in *all* of the areas identified in Article 17.3 of the DSU (law, international trade, and the subject-matter of the covered agreements). The Chairman of the DSB noted that consultations between the Selection Committee and Members:

> . . . had indicated widespread views that all individual appointees, whether persons having principally legal or trade policy expertise (including GATT/WTO experience), had to have some demonstrated expertise in all three aspects of the agreed guidelines, namely law, international trade and the subject matters of the WTO Agreement. For appointees who were primarily legal practitioners, a combination of academic, public law and arbitration experience had been judged by most delegations to be the most useful. In this regard, many had also referred to the need for appointees to be able to write their own legal opinions.[41]

As regards the second criteria, the 1995 Decision stipulates that Appellate Body members "should not . . . have any attachment to a government that would compromise their independence of judgment", but adds that this "would not necessarily rule out persons who, although paid by a government, serve in a function rigorously and demonstrably independent from that government." None of the individuals appointed to the Appellate Body to date have been in the pay of any government at the time of their appointment to the Appellate Body, although several had previously worked as government employees or consultants to governments.

The requirement that Appellate Body members be "available at all times and on short notice" suggests, according to the DSB, "that members of the Appellate Body have a priority working relationship with the WTO" but that, at the same time, they "may have other activities".[42] In order to attract high caliber candidates while also affording them the flexibility to pursue other activities, the DSB determined that individuals appointed to the Appellate Body should be offered contracts based on a monthly retainer plus a fee for actual days worked. The DSB also pledged itself to keep under review the issue of whether a move to the full-time employment of Appellate Body members would be warranted.[43] In practice, the growing work load of the Appellate Body in recent years, combined with the requirement that members be "available at all times and on short notice", has at times made it difficult for members to continue to pursue other activities.

(c) Terms of Office. Pursuant to Article 17.2 of the DSU, Appellate Body members are appointed by the DSB for a term of four years. They may be reappointed once, also by decision of the DSB. The terms of the Appellate Body members are staggered in two

[40] *See Conflicts of Interest*, *infra*, Subpart IV. B. 13.
[41] *See* the minutes of the DSB Meetings of May 31, 1995, WT/DSB/M/5, p. 12.
[42] 1995 Decision, WT/DSB/1, ¶ 10.
[43] 1995 Decision, WT/DSB/1, ¶ 11.

groups such that every two years the terms of either three, or four, of the Appellate Body members expire.[44] In order to ensure such staggered terms, three of the original seven Appellate Body members were appointed for an initial term of two—rather than four—years. In one instance, two Appellate Body members who declined to be considered for appointment to a second term had their terms extended by approximately three and a half months.[45] This enabled the Appellate Body to continue its work during a busy period pending the appointment of two new Appellate Body members. When an Appellate Body member is unable to complete his or her term, the person appointed as a replacement is appointed for the remainder of the term, rather than for a full four-year term.[46]

(d) Appointment Processes. Five separate processes have been conducted to appoint Appellate Body members: (i) in 1995, to appoint the original seven Appellate Body members;[47] (ii) in 2000, to replace two of the original Appellate Body members who chose not to seek reappointment;[48] (iii) in 2000, following the unexpected death of original Appellate Body member Christopher Beeby, to appoint a replacement for the remainder of his term;[49] (iv) in 2001, to appoint three members to replace the three original members who had reached the end of their second and final term;[50] and (v) in 2003, to appoint a replacement for James Bacchus, the only original Appellate Body member to serve two full four-year terms.[51] The procedures followed in each case have been very similar, and in accordance with the procedures laid out by the DSB in its 1995 Decision. A six-person Selection Committee is formed, composed of the WTO Director-General and the chairpersons of the DSB, the General Council, and the Councils for Trade in Goods, Trade in Services and TRIPS.[52] Delegations are invited to submit the names and *curricula vitae* of candidates for appointment to the Appellate Body by a designated date. WTO Members may nominate their own nationals or nationals of other Members. The Selection Committee meets with and interviews each candidate. In addition, each candidate is asked to make him or herself available to meet with interested delegations. Following completion of all interviews, the Selection Committee also makes itself available for short meetings with interested delegations. At the end of this process, the Selection Committee recommends to the DSB the specific candidate(s) to be appointed. The DSB then takes a decision on appointment. To date, the DSB has always appointed the candidate(s) recommended by the Selection Committee.

With respect to reappointment of sitting Appellate Body members to a second term, the DSB has, to date, always reappointed members willing to serve a second term. In 1997, when lots were drawn to determine which of the original seven members would

[44] Although all seven original Appellate Body Members were appointed at the same time, pursuant to Article 17.2 of the DSU, the first terms of three of the original seven—determined by lot—expired after only two years. This allowed the present system of staggered terms to come into effect.

[45] The terms of office of Said El-Naggar and Mitsuo Matsushita were extended from their end-date of December 11, 1999 to March 31, 2000. WT/DSB/M/70 , pp. 32–35.

[46] Thus, when Christopher Beeby died while serving as an Appellate Body Member, his replacement, Yasuhei Taniguchi, was appointed for the remainder of Mr. Beeby's term, rather than for a full four years. WT/DSB/M/82, ¶¶ 2 and 3.

[47] The DSB appointed the original seven Appellate Body Members at its meeting of November 1 and 29, 1995. WT/DSB/M/9.

[52] In accordance with the recommendations set forth in paragraph 13 of the 1995 Decision.

have first terms of only two years, the three members whose names were drawn were immediately reappointed for a second term.[53] When, in 1999, two members who had served a first term of four years indicated their willingness to be reappointed, the DSB Chair conducted consultations with delegations. Following this consultation period the DSB decided to reappoint the two individuals.[54] At that meeting, several WTO Members indicated that, in their view, the reappointment of Appellate Body members to a second term should not be "automatic".[55] In 2003, the Chairman of the DSB held consultations to assess whether Members wished to nominate candidates to replace three Appellate Body Members whose first terms were due to expire in late 2003 and early 2004.[56] The three sitting members had expressed their willingness to serve a second term. No WTO Member expressed any such wish.[57] On November 7, 2003, Georges Abi-Saab, A.V. Ganesan and Yasuhei Taniguchi were all appointed to a second term.[58]

(e) Conditions of Employment of Appellate Body Members. With respect to the conditions on which Appellate Body members are to be engaged, the DSU simply establishes the length of the terms, as well as the requirement that Appellate Body members are to be "available at all times and on short notice." Additional details on the conditions of employment were laid down in the DSB's 1995 Decision on the Establishment of the Appellate Body.[59] The DSB there noted that the conditions of employment "should reflect the overriding concern that candidates are of a high enough calibre to ensure the integrity and authority of decisions taken by the Appellate Body". The DSB considered that this concern could be met, while also allowing for the flexibility that would be necessary to allow Appellate Body members to engage in their other activities, by a contractual arrangement providing for compensation in the form of a monthly retainer plus a fee for actual days worked. The monthly retainer was fixed, in that decision, at 7,000 Swiss francs per month, and, as of the time of writing (October 2004) had not subsequently been modified. In addition, current Appellate Body members receive a *per diem* for each day that they are traveling to or working in Geneva (the amount of which is currently equal to the annually-established UN *per diem* rate for Geneva, plus a forty percent premium), a fee per day worked in Geneva or per eight hours worked outside Geneva, and a monthly administrative/communication fee.[60] Travel expenses for Appellate Body members are also covered. Appellate Body members are not considered "staff" of the WTO and do not participate in the WTO pension plan.

Pursuant to Articles 31 and 34 of the Headquarters Agreement between the WTO and the Swiss Confederation, Appellate Body members are entitled to "such privileges and immunities as are granted to diplomatic agents in accordance with the law of nations and

[60] The daily fee paid to Appellate Body Members is 600 Swiss francs, and the administrative/communication fee is 300 Swiss francs per month. As of October 1, 2003, the *per diem* was 451 Swiss francs. None of the current Appellate Body Members reside in Geneva.

international custom."[61] The specific privileges accorded to Appellate Body members include exemption from Swiss federal, cantonal and communal taxes on their compensation, as well from value-added tax on goods and services purchased for their personal use.[62]

The DSB's 1995 decision also provides for WTO Members to review the compensation package of Appellate Body members "to determine whether a move to full-time employment was warranted". Such a review was undertaken in 2001, during the selection process for three new Appellate Body members.[63] The review occurred following the busiest year (2000) that the Appellate Body had ever had, and the members debated, particularly in the light of information showing that, in the year 2000, four of seven Appellate Body members had actually worked more than one hundred per cent of an equivalent full-time position. Nevertheless, in their discussions on the issue, WTO Members could not reach consensus on whether action such as converting the positions into full-time positions, adding additional Appellate Body members, or other steps, was warranted in the light of the heavier than expected workload. The DSB accordingly left the terms of employment of the Appellate Body undisturbed, and agreed to consider reverting to the matter at a later date.

(f) Cost of Appellate Review. The Appellate Body is funded by contributions from WTO Members. Its budget is equivalent to about two percent of the overall WTO Secretariat budget.[64] Although there are no direct fees for initiating or participating in appeals, Members must bear the costs of their participation in appeals, namely, the costs of preparing written submissions on technical legal issues, copying and delivering documents, as well as the costs associated with the attendance of their representatives at Appellate Body hearings in Geneva.

2. The Individual Members

Appellate Body Member (nationality)	Term(s) of Office
Georges Michel Abi-Saab* (Egyptian)	June 1, 2000–May 31, 2004, June 1 2004 –May 31 2008
Luiz Olavo Baptista* (Brazilian)	December 11, 2001–December 11, 2005
Arumugamangalam Venkatachalam Ganesan* (Indian)	June 1, 2000–May 31, 2004, June 1 2004–May 31 2008
Merit E. Janow*(American)	December 11, 2003–December 10, 2007
John Lockhart* (Australian)	December 11, 2001–December 11, 2005
Giorgio Sacerdoti* (Italian)	December 11, 2001–December 11, 2005
Yasuhei Taniguchi* (Japanese)	May 25, 2000–December 10, 2003, December 11, 2003–December 10, 2007

(*Continued*)

[61] WT/GC/1.

[62] *Id.*, ¶ 2. The privileges and immunities granted to Appellate Body Members are equivalent to those granted to the Deputy Directors-General and senior staff of the WTO Secretariat.

[63] *See* the minutes of the DSB meetings held on March 12 and June 20, 2001, WT/DSB/M/101, pp. 25–26; and WT/DSB/M/106, pp. 12–15.

[64] The Appellate Body budget is separate from the WTO Secretariat budget. The 2003 budget for the Appellate Body and its Secretariat was 2,971,200 Swiss Francs. This figure includes fixed costs, such as Secretariat staff costs and the retainer for Appellate Body Members, but does not include variable costs, such as fees for court reporters and the travel and *per diem* costs of the Appellate Body Members, which vary with the number of appeals made in any given year. Such variable costs, which are covered by the Appellate Body Operating Fund, can reach two-thirds or more of the amount of fixed costs. *See Annual Report 2003* (World Trade Organization, Geneva) p. 158, Table IV.3.

Appellate Body Member (nationality)	Term(s) of Office
James Bacchus (American)	December 11, 1995–December 10, 1999, December 11, 1999–December 10, 2003
Christopher Beeby (New Zealand)	December 11, 1995–December 10, 1999, December 11, 1999–March 19, 2000†
Claus-Dieter Ehlermann (German)	December 11, 1995–December 10, 1997, December 11, 1997–December 10, 2001
Florentino Feliciano (Filipino)	December 11, 1995–December 10, 1997, December 11, 1997–December 10, 2001
Julio Lacarte-Muró (Uruguayan)	December 11, 1995–December 10, 1997, December 11, 1997–December 10, 2001
Mitsuo Matsushita (Japanese)	December 11, 1995–December 10, 1999, December 11, 1999–March 31, 2000‡
Said El-Naggar (Egyptian))	December 11, 1995–December 10, 1999, December 11, 1999–March 31, 2000‡

*Sitting Appellate Body member (as of August 31, 2004).
†Deceased March 19, 2000.
‡Term of office extended pending appointment by the DSB of new Appellate Body member.

3. The Chairman

Rule 5 of the *Working Procedures* provides for one of the Appellate Body members to serve as Chairman of the Appellate Body. Pursuant to this rule, the Appellate Body elects one of its members to serve as Chairman for a term of one year, which may be extended for a second consecutive year. When a new Chairman of the Appellate Body is elected, the outgoing Chairman informs the Chairman of the DSB in a communication that is circulated to WTO Members.[65] Rule 5 also identifies the circumstances in which a replacement Chairman will be elected for a full one-year term (permanent incapacity of the Chairman as a result of illness or death or by resignation or expiration of his/her term), and authorizes the nomination of a temporary Chairman in the event that the standing Chairman is temporarily absent or incapacitated. The Chairman is responsible for the overall direction of the Appellate Body business, including supervision of the internal functioning of the Appellate Body and such other duties as his colleagues may entrust to him. In practice, the Chairman represents and speaks on behalf of the Appellate Body in communications with the representatives of other WTO organs, most commonly with the Chairman of the DSB.

The following individuals have served as Chairman of the Appellate Body:

Julio Lacarte Muró	February 7, 1996–February 6, 1998
Christopher Beeby	February 7, 1998–February 6, 1999
Said El-Naggar	February 7, 1999–February 6, 2000
Florentino Feliciano	February 7, 2000–February 6, 2001
Claus-Dieter Ehlermann	February 7, 2001–December 10, 2001
James Bacchus	December 15, 2001–December 10, 2003
Georges Michel Abi-Saab	December 13, 2003–12 December 2004

4. The Appellate Body Secretariat

Article 17.7 of the DSU mandates that the Appellate Body be provided with "appropriate administrative and legal support as it requires." This support is provided through

[65] *See, e.g.*, WT/DSB/11, 5 December 1997; WT/DSB/15, 27 January 1999; WT/DSB/18, 31 January 2000; WT/DSB/22, 31 January 2001; WT/DSB/27, 17 December 2001; WT/DSB/30, 20 December 2002; WT/DSB/36, 17 December 2003.

the Appellate Body Secretariat. In 1995, the DSB approved the recommendations of the Preparatory Committee to the effect that the Appellate Body Secretariat should be "independent" and "administratively separate" from the WTO Secretariat.[66] The DSB also agreed that the size of the Appellate Body Secretariat should depend on the workload of the Appellate Body. At the time of establishment of the Appellate Body, this consisted of a Director, two legal professionals and two administrative support staff. In 2003, the staff of the Appellate Body Secretariat consisted of a Director, ten legal professionals and four administrative support staff.

IV. The Conduct of Appeals

A. Overview of the Mechanics of the Appeal Process

The appeal process within the WTO dispute settlement system consists of several stages: (i) written arguments, consisting primarily of the preparation and filing of the Notice(s) of Appeal and written submissions by the WTO Members participating in the appeal; (ii) oral arguments, presented at an oral hearing attended by the WTO Members participating in the appeal and division of three Appellate Body members assigned to the case; (iii) the Appellate Body's discussions, deliberations and drafting of the decision in the appeal. Strict deadlines govern the entire process. Appeals typically last ninety days, calculated beginning the day after a Notice of Appeal is filed and ending on the day that the Appellate Body report in the dispute is circulated to the Members of the WTO.

The WTO Members that participate in appeals are, by virtue of the *Working Procedures*, designated as "appellants", "other appellants", "appellees", or "third participants" according to their role in the appeal.[67] These labels differ from those given to these WTO Members while they participate in the proceedings before the panel in the dispute.[68] Essentially, an appellant initiates the appeal and makes certain allegations that the panel has erred in its legal analysis. An other appellant (sometimes referred to as a "cross-appellant") does not initiate the appeal, but also makes its own allegations of error on the part of the panel. Appellees (also referred to as "respondents") respond to the allegations of error made by the appellant(s) and other appellants. Third participants have no right to appeal the panel's findings, but have certain rights to participate in the appeal nonetheless.

The appeal process is commenced by an appellant formally notifying the DSB that an appeal is being made and filing a Notice of Appeal with the Appellate Body Secretariat. This must be done within sixty days of the circulation of the panel report and before the panel report is adopted by the DSB. In practice, appellants send one copy of the Notice of Appeal to the Chairman of the DSB and file a copy of the same Notice with the Appellate Body Secretariat.[69] The Secretariat reproduces the text of the Notice of Appeal in a WT/DS document which is then circulated to all Members, usually on the working day following the date on which the appeal is filed. Typically, a Notice of Appeal is a brief (one

[66] WT/DSB/1, ¶ 17. At present, the Appellate Body Secretariat is located in the same building as the WTO Secretariat, the Centre William Rappard in Geneva, and its employees engaged on the same terms as WTO Secretariat employees.

[67] *See Appellants/Other Appellants/Appellees*, *Participants and Parties,* and *Third Parties, Third Participants and Passive Observers* in Subparts IV.B.10, 11, and 12 respectively, below. An "other appeal" is sometimes referred to as a "cross-appeal".

[68] Appellants, other appellants and appellees are parties to the dispute that were a complainant or a respondent before the panel. Third participants were third parties before the panel.

[69] For details as to how this is done, see note 84 below.

to three page) document. Nevertheless, there are certain formal and substantive elements that must be contained in every Notice of Appeal, and Notices that do not comply with these requirements (set forth in Rule 20 of the *Working Procedures*) may be subject to challenge.[70]

On the day that the appeal is filed or the next working day, all of the parties and third parties to the dispute are notified by letter of the composition of the three-person division[71] that will hear the appeal, and of the working schedule for the appeal. The working schedule identifies the deadlines for the various written submissions to be made during the course of the appeal, as well as the date(s) for the oral hearing in the appeal. Careful attention should be paid to the working schedule and accompanying letter, which contain additional instructions to participants regarding their conduct of the appeal. For example, with respect to written submissions, parties are typically asked to file twelve hard copies and one electronic copy of their submission by 5:00 p.m. on the relevant due date. Participants are also requested to file, simultaneously with their submission, an executive summary of that submission. Participants are also requested to use font size 12 in their written submissions, and informed of the physical and e-mail addresses of the Appellate Body Secretariat for the purposes of filing documents. The accompanying letter also contains general instructions regarding the oral hearing in the appeal, specifying a date by which participants are asked to inform the Appellate Body Secretariat if they require official interpreters at the oral hearing, as well as another date by which participants are asked to supply the Appellate Body Secretariat with the names of the members of their delegation who will attend the oral hearing. Lastly, the letter accompanying the Working Schedule identifies the member(s) of the Appellate Body Secretariat staff who should be contacted in the event of questions relating to the appeal process.

Participants in an appeal typically elaborate their arguments most comprehensively in their written submissions. These are due between ten and twenty-five days after the date on which the Notice of Appeal is filed, depending on the participant concerned. The appellant's submission is due first, ten days after the filing of the Notice of Appeal. If another party to the dispute wishes to file its own appeal of the panel report, it does so through the filing of an "other appellant's submission", which sets out the grounds of the "other appeal" as well as all of the written arguments in support of that other appeal. The other appellant's submission, if any, is due fifteen days after the filing of the Notice of Appeal. The remaining submissions, namely appellees' submissions and third participants' submissions, are all due twenty-five days after the filing of the Notice of Appeal.

Although the *Working Procedures* do not formally contemplate such a procedural step, participants will occasionally request the division to make a preliminary ruling prior to the oral hearing. This may necessitate the submission of additional memoranda by the participants.[72] Usually, however, the phase of the appeal that follows the filing of the written submissions is the oral hearing, which is held 40–45 days after the filing of the Notice of Appeal.

In the week before the oral hearing the Secretariat sends, on behalf of the division, a letter to all parties concerning the oral hearing. Typically, this letter informs the party of the time at which the hearing will start (usually 9:30 or 10:00 am), the room in which it will held, and the expected duration of the hearing (most often one day, although occasionally

[70] *See Notice of Appeal* in Subpart IV.B.5 below.

[71] *See Divisions* in Subpart IV.B.8 below.

[72] *See Requests for a Preliminary Ruling, Requests to Change the Deadline for a Written Submission*, and *Requests to Change the Date of the Oral Hearing* in Subparts IV.B.17, 18 and 20, respectively, below.

two or even three days). The letter also informs the participants of the amount of time that they will be allocated to make an oral statement (typically twenty or thirty minutes for participants, ten or fifteen minutes for third participants), and the order in which they will be asked to present those oral statements. Generally speaking, the appellant will be asked to make its oral statement first, followed by the appellee and then the third participants. For participants intending to distribute a written copy of their oral statement, the letter specifies the numbers of copies of the statement that should be brought to the hearing. Finally, the letter reiterates that participants are to send a list of the members of their delegation to the Appellate Body Secretariat by a specified date and time prior to the oral hearing (usually by noon on the day before the hearing).

The room in which the oral hearing is held and the way in which it is laid out depends, to a certain extent, on the number of participants and third participants, and the size of their various delegations. As a general rule, the three members of the division hearing the appeal—with the Presiding Member in the middle—sit at one end of the room, flanked by staff of the Appellate Body Secretariat. The participants are seated in rows perpendicular to the table at which the division is seated. The appellant(s) and appellee(s) sit closest to the division, and the third participants further away. The precise space in which each delegation is to sit is indicated by means of a small notice-board with the name of the relevant WTO Member upon it.

The oral hearing begins with a brief statement from the Presiding Member, who describes how the hearing will proceed and then invites the participants to raise any preliminary matters. In practice, this rarely occurs. If no preliminary matters are raised, then the Presiding Member invites each participant to deliver its oral statement, beginning with the first appellant. Each participant is given a single opportunity to make its opening statement, regardless of whether there is an "other appeal"or not. In other words, an appellant that is also an appellee in the other appeal is expected to use the opportunity to make an opening statement to address *all* of the issues that it wishes to speak to whether those issues were raised in its own appeal, or in the appeal(s) brought by the other participant(s). Of course, no participant is obliged to speak to *all* of the issues, and it is a matter of strategy for each participant to decide how much time to devote to each issue, and when to rely on its written submissions alone regarding a particular issue. It is not uncommon for third participants to decline to make an oral statement during this first phase of the oral hearing.

Once the oral statements have been delivered, the next, and typically the longest stage of the hearing consists of the division asking questions of the participants. Some questions are asked of specific participants, others of all participants. Although control of the proceedings resides with the Presiding Member of the division, in general participants and third participants who wish to respond to a question or to comment on the responses of other participants will be afforded an opportunity to do so. Each delegation indicates its desire to speak by raising its notice-board or by turning the board so that it sits vertically in the holder. Participants are not permitted to pose direct questions to each other. Once the division has finished asking questions of the participants, the participants and third participants will be offered the opportunity to make brief concluding remarks, which typically do not exceed five or ten minutes.

Following the oral hearing, the participants and third participants do not usually have any further active role in the appeal. The Appellate Body holds, shortly after the oral hearing, an "Exchange of Views" in which the three members of the division hearing the appeal meet with the other four members of the Appellate Body to discuss the issues raised in the appeal and to hear the views of their colleagues. Then the division drafts its

report. If, as is usually the case, the report is not ready for circulation on the sixtieth day filing the Notice of Appeal, then the Chairman of the Appellate Body sends a letter to the Chairman of the DSB stating that the Appellate Body cannot provide its report within sixty days.[73] This letter is circulated as a WT/DS document. In the letter, the Chairman of the Appellate Body also indicates the estimated date on which the report will be circulated, which is usually on the ninetieth day following the filing of the Notice of Appeal. On the date of circulation of the report, the Chairman of the Appellate Body transmits the report to the Chairman of the DSB, along with a short cover letter. Both are circulated as WT/DS documents, and both are also distributed to all WTO Members, in their mailboxes at the WTO, late in the afternoon on the circulation date. As a courtesy, the participants in an appeal are usually invited to pick up a hard copy of the report a few hours in advance of circulation to all Members. The participants are asked to agree on a time, not before 12:00 noon, when they will pass by the Appellate Body Secretariat in order to pick up the report on the day of circulation, and to inform the Secretariat of the agreed time. General circulation typically occurs between four and five in the afternoon of the same day.

The Appellate Body is not involved in the process for adoption of the report, which is handled by the DSB and the Council Division of the WTO Secretariat, which services the DSB. By virtue of Article 17.14 of the DSU, an Appellate Body report must be adopted by the DSB and unconditionally accepted by the parties to the dispute within thirty days of their circulation unless the DSB decides by consensus not to adopt it. Every Appellate Body report that has been circulated has also been adopted by the DSB within this thirty-day period.

B. Specific Issues Arising in Relation to Appeals

This subpart discusses an illustrative list of discrete issues relating to Appellate Body procedures, many of which are explicitly dealt with under existing rules or which have arisen in specific disputes. For each issue, relevant rules and rulings by the Appellate Body are identified, and the cases, if any, in which the relevant issue arose are briefly discussed.

1. Right to Appeal

Only parties to the dispute that participated in the proceedings before the panel have the right to appeal the legal findings in a panel report. Third parties before the panel do not have such a right.[74] The right of the parties to appeal is unqualified. Either, both, or all parties may appeal. As long as the appeal is filed in the proper form within the applicable deadline, the right to appeal does not require leave from the Appellate Body, from the DSB, or from any other entity.[75]

[73] This communication is required by Article 17.5 of the DSU.

[74] Article 17.4 DSU. In *EC—Bed Linen* Egypt, a third participant, submitted its views on a number of issues that it considered "fundamental to a proper legal interpretation of the *Anti-Dumping Agreement*." The Appellate Body, however, observed that, "since none of these findings have been appealed, Egypt's comments do not directly bear upon this appeal." (¶ 35)

[75] During the Uruguay Round, contracting parties discussed whether, rather than being "automatic", a party's right to appeal should be contingent either upon the permission of the Council, or a decision by the Appellate Body itself, on "whether the case merited the appellate review". The European Communities suggested that "the body could reject cases where the appeal was groundless". (*See*, *e.g.*, the United States proposal dated April 6, 1990, MTN/GNG/NG13/W/40, Section I.B.3; Canada's proposal dated June 28, 1990, Section C; and the comments of the European Communities at the April 5, 1990 meeting of the Negotiating Group, MTN/GNG/NG13/16, ¶ 7).

2. Deadlines and Time-Limits in Appeals—Sixty-Day Deadline to Initiate the Appeal

By virtue of Article 16.4 of the DSU, any party to a dispute may appeal a panel report within sixty days of the date of circulation of the panel report, provided that the panel report has not been adopted by the DSB. There is no explicit minimum time-period following the date of circulation of the panel report that parties to a dispute must wait before appealing that report.[76] However, a potential appellant may not be able to wait the full sixty days before making its appeal. This is since, in practice, the "triggering event" for an appeal often occurs when one party to the dispute places the adoption of the panel report on the agenda of a DSB meeting within that sixty-day period. This compels any party desiring to appeal the panel report to do so *before* the DSB decides to adopt it.[77]

In one instance, affecting three separate disputes, the DSB agreed to extend the period within which the panel report had to be adopted or appealed. The sixty-day time-period set forth in Article 16.4 of the DSU was scheduled to expire, in those disputes, in the month of August, when there are normally no regularly-scheduled DSB meetings. Accordingly, at the July DSB meeting, the European Communities—the complainant in all three disputes—proposed "the postponement of consideration of these Panel Reports and the extension of the corresponding time-periods for appeal to a future meeting of the DSB at the beginning of September."[78] The three Members that had been respondents before the panel agreed to accept the proposal provided that all their rights were preserved. Two other Members indicated that they had no objection provided that the arrangement was viewed as an agreement among the parties to the disputes rather than a precedent.[79] Thus, these three panel reports were appealed more than sixty days after they had been circulated.

On one occasion, a panel report was appealed on the day that it was circulated. In *US—1916 Act*, the panel report in the complaint by Japan was scheduled to be circulated several weeks after the panel report addressing the complaint by the European Communities. In order to allow the two reports to be appealed simultaneously, the panel decided to circulate only the findings section of its report (not the descriptive part, which had not yet been translated).[80] Accordingly, this version of the panel report was circulated on May 29, 2000 and the United States appealed both panel reports on the same day.[81]

3. Deadlines and Time-Limits in Appeals—Calculating Dates

Rule 17 of the *Working Procedures* identifies the methods to be used for calculating relevant deadlines in appeals. In accordance with Rule 17(1), the date on which an action is taken that starts the clock running is *not* to be included in the calculation of a relevant time-period, but the last day of that period is to be included in the calculation. Thus, for

[76] In practice, parties tend to wait until the second half of the period within which appeal is possible before commencing their appeal. In the first 56 appeals made to the Appellate Body, the average time between circulation of the panel report and the filing of the Notice of Appeal was 42 days.

[77] However, by virtue of Article 16.1 of the DSU, Members have a minimum grace period of at least twenty days in order to consider the contents of the panel report. That provision prohibits the DSB from considering a panel report for adoption until at least twenty days have elapsed following circulation of that report.

[78] *See* the minutes of the DSB meeting held on July 26, 1999, WT/DSB/M/65, p. 19. The disputes affected were: *Chile—Alcoholic Beverages* (WT/DS87/R—WT/DS110/R); *Argentina—Footwear (EC)* (WT/DS121/R); and *Korea–Dairy* (WT/DS98/R).

[79] Minutes of the DSB meeting held on July 26, 1999, WT/DSB/M/65, p. 20.

[80] Mexico objected to this action and argued that early circulation of the Findings section of the panel report (without the descriptive part) in *US—1916 Act* (*Complaint by Japan)* was not consistent with the DSU. Communication from Mexico, WT/DS162/8, July 26, 2000.

[81] The panel report in *US—1916 Act (Complaint by the EC)* had been circulated on March 31, 2000.

example, the ninety-day appeal period begins to run on the first day *after* the filing of the Notice of Appeal (whether or not the day after filing is a working day). Neither the DSU nor the *Working Procedures* provide for any suspension of the running of the ninety-day period for any holiday or recess period, although the possibility of introducing such a system was floated by the Appellate Body in April 2004 in document WT/AB/WP/8. However, in accordance with Rule 17(2) of the *Working Procedures* and the decision of the DSB relating to the expiration of time periods in the DSU,[82] when the end of the ninety-day period falls on a non-working day (that is, on a weekend or a day that is an official WTO holiday[83]), then the deadline will be deemed to have been met when the Appellate Body Report is circulated on the first WTO working day following the day on which the deadline would otherwise fall.

4. Initiation of an Appeal

Article 16.4 of the DSU provides that panel reports are to be adopted by the DSB within sixty days of circulation unless, *inter alia*, "a party to the dispute formally notifies its decision to appeal" and Article 17.5 establishes that the time-period for the appeal begins as "from the date that a party to the dispute formally notifies its decision to appeal". The DSU does not, however, address the mechanics of this "formal" notification process. These are elaborated in Rule 20 of the *Working Procedures.* The first paragraph of Rule 20 stipulates that an appeal is to be commenced by simultaneously notifying the DSB in writing of the appeal and filing a Notice of Appeal with the Appellate Body Secretariat.[84] The second paragraph of Rule 20—dealt with under the next heading—prescribes the content of the Notice of Appeal.

5. Notice of Appeal

According to Rule 20(2) of the *Working Procedures*, a Notice of Appeal must satisfy four requirements. The first three requirements are formal in nature. The Notice must include (a) the title of the panel report under appeal; (b) the name of the party to the dispute filing the Notice of Appeal; and (c) the service address, telephone and facsimile numbers of that party. To date, there have been no allegations that a Notice of Appeal filed does not comply with these formal requirements. The fourth requirement, set forth in Rule 20(2)(d), is more substantive and requires the Notice to include:

> a brief statement of the nature of the appeal, including the allegations of errors in the issues of law covered in the panel report and legal interpretations developed by the panel.

In response to requests by participants in appeals, the Appellate Body has considered the scope of this requirement as well as the legal consequences that flow from

[82] WT/DSB/M/7, pp. 9–10, adopting the practice concerning the expiration of time-periods set forth in documents WT/DSB/W10 and WT/DSB/W/10/Add. 1. Although these documents do not explicitly list the deadline set forth in Article 17.5 of the DSU, the list of provisions contained in WT/DSB/W/10/Add. 1 is an illustrative one, and Rule 17 of the *Working Procedures* explicitly applies the DSB decision on the expiration of time periods to appeals.

[83] Rule 109.1 of the *WTO Staff Rules* identifies the following (which may be changed in any given year) as official WTO holidays: New Year's Day, Good Friday, Easter Monday, Ascension Day, Whit Monday, Jeûne genevois, the day after Jeûne genevois, Christmas Day and one other day to be designated by the WTO Director-General.

[84] The DSB has confirmed that the "working practice" to be followed in order to commence an appeal is to send the communication including the Notice of Appeal to the WTO Secretariat with a copy to the DSB Chairman (after having contacted the Council Division to "inform" them of the communication), and to also file the Notice of Appeal directly with the Appellate Body Secretariat. *See Working Practices Concerning Dispute Settlement Procedures*, WT/DSB/6, p. 2. For delivery to the Appellate Body, appellants typically have their Notice of Appeal hand-delivered to the office of the Administrative Assistant of the Director of the Appellate Body Secretariat, where it is date-stamped.

a defective Notice of Appeal. The Appellate Body has also adopted certain amendments to Rule 20(2)(d) which will come into effect on January 1, 2005, as explained document WT/AB/WP/W/9.

In *US—Shrimp*, the appellees asked that the appeal be dismissed on the grounds that the Notice of Appeal filed by the United States was "vague and cursory".[85] The appellees challenged, in particular, the fact that the Notice of Appeal did not identify the numbered paragraphs of the Panel Report containing the findings that were the subject of the appeal. In considering the scope of Rule 20(2)(d), the Appellate Body highlighted that the Notice is to contain a "*brief*" statement, and stressed that the Notice of Appeal is not expected to contain the reasons why the appellant considers the findings appealed to be erroneous, or to serve as a summary or outline of the arguments of the appellant in support of its appeal. These arguments are to be set out in the appellant's submission.[86] In that case, the Appellate Body held that the mere fact that the Notice of Appeal did not identify the numbered paragraphs of the Panel Report containing the findings that were the subject of the appeal was not fatal since "there [was] no mistaking which findings or interpretations of the Panel the Appellate Body [was] asked to review."[87]

In *US—Countervailing Measures on Certain EC Products*, the Appellate Body gave further details as to what it considers must be contained in the Notice of Appeal. In that case, the Notice of Appeal simply identified, without additional explanation, the specific paragraphs of the panel report in which the alleged errors were found.[88]

In examining the requirement in Rule 20(2)(d), the Appellate Body stressed:

> . . . the important balance that must be maintained between the right of Members to exercise the right of appeal meaningfully and effectively, and the right of appellees to receive notice through the Notice of Appeal of the findings under appeal, so that they may exercise their right of defence effectively. . . . [The] requirements under Rule 20(2) serve to ensure that the appellee also receives notice, albeit brief, of the "nature of the appeal" and the "allegations of errors" by the panel.[89]

With respect to two of the three issues identified by the European Communities, the Appellate Body held, in that particular case, that the reference in the Notice of Appeal to certain paragraphs of the panel report was sufficient to meet the requirements of Rule 20(2)(d), although the Appellate Body emphasized that:

> . . . generally, a Notice of Appeal that refers simply to the paragraph numbers found in the "Conclusions and Recommendations" section of a panel report, or that quotes them in full, will be insufficient to provide adequate notice of the allegations of error on appeal, and, hence, will fall short of the requirements set out in Rule 20(2)(d) of the *Working Procedures*.[90]

The third issue raised by the European Communities related to whether the panel had complied with the requirements of Article 11 of the DSU (which requires panels to make "an objective assessment of the matter before it, including an objective assessment of

[87] *US—Shrimp*, ¶ 96.
[88] The relevant portion of the Notice of Appeal is reproduced at paragraph 51 of the Appellate Body Report;. A copy of the original document, found at WT/DS212/7, is also attached as Annex I to the Report.
[89] ¶ 62.
[90] ¶ 70. In examining whether the specific Notice of Appeal at issue satisfied the requirements of Rule 20(2)(d), the Appellate Body found it appropriate to consider, as well, a document submitted by the United States three days after its Notice of Appeal following an invitation by the Appellate Body to respond to the request for particulars from the European Communities. (¶ 64)

the facts of the case and the applicability of and conformity with the relevant covered agreements"), an issue that was not mentioned in the Notice of Appeal. The Appellate Body noted, in this regard, that since an alleged failure by a panel to comply with Article 11 can, by definition, *only* be raised in an appeal (and not before the panel), any appellant seeking to rely on Article 11 in its appeal "must refer to it in Notices of Appeal in a way that will enable appellees to discern it and know the case they have to meet."[91]

In *Chile—Price Band*, the Appellate Body considered Argentina's argument that a particular issue raised by Chile should not be considered because it was not identified in Chile's Notice of Appeal. The Appellate Body drew an analogy between, on the one hand, the distinction between claims and legal arguments for purposes of Article 6.2 of the DSU and, on the other hand, the distinction between "allegations of error" and legal arguments for purposes of Rule 20 of the *Working Procedures*. In the same way that Article 6.2 requires claims, but not supporting arguments, to be included in a request for establishment of a panel,[92] Rule 20 requires allegations of error, but not supporting legal arguments, to be included in a Notice of Appeal. The Appellate Body considered that the issue raised by Chile—that the Panel had erred in the *order* in which it addressed certain legal issues—was a legal argument in support of the issues identified in the Notice of Appeal. Accordingly, the Appellate Body found no need for the issue of the order of analysis chosen by the Panel to be identified in the Notice of Appeal.[93]

The distinction drawn by the Appellate Body in *Chile—Price Band,* was also considered in *Japan—Apples*, where the Appellate Body did not agree with Japan that an allegation that the Panel failed to comply with Article 11 of the DSU is simply a "legal argument" underlying the issues on appeal. The Appellate Body observed that "Article 11 claims are distinct from those raised under substantive provisions of a WTO agreement". A claim of error under Article 11 is a distinct "allegation of error" and, as such, must be included in the Notice of Appeal.[94]

With respect to the *consequences* that flow from a failure to comply with the requirement in Rule 20(d)(d), the Appellate Body has never, as requested by the appellees in *US—Shrimp,* dismissed an appeal in its entirety on the grounds of a defective Notice of Appeal. The Appellate Body has, however, excluded discrete legal issues from the scope of the appeal when those issues have not been sufficiently clearly presented in the Notice of Appeal.

In *EC—Bananas III*, the Appellate Body excluded a contested panel finding from the scope of the appeal on the grounds that Ecuador, the appellee, had no notice that the European Communities was appealing that finding. The finding was not identified in the Notice of Appeal, and was only referred to in the conclusions of the European Communities' appellant's submission.[95] In *Japan—Apples*, the Appellate Body declined to rule on a claim that the panel had acted inconsistently with Article 11 of the DSU on the grounds that this claim of error was not included in Notice of Appeal.[96]

In *US—Countervailing Measures on Certain EC Products ,* the European Communities asserted that the Notice of Appeal failed to comply with Rule 20(2)(d) and requested

[91] *Id.*, ¶ 74.

the Appellate Body to "order the United States, pursuant to Rule 16(1) of the *Working Procedures*, immediately to file further and better particulars to its Notice of Appeal identifying the precise legal findings and legal interpretations that it is challenging."[97] At the invitation of the Appellate Body, the United States filed an additional document three days after its Notice of Appeal.[98] In assessing the conformity of the Notice of Appeal with the requirements of Rule 20(2)(d), the Appellate Body found it appropriate, in the particular circumstances of that case, to take account of the document filed by the United States. Having done so, the Appellate Body determined that the issue of whether the panel had complied with Article 11 of the DSU was not properly raised, since neither the Notice of Appeal nor the additional document submitted by the United States explicitly or implicitly referred to Article 11 of the DSU.[99]

In *US—Offset Act (Byrd Amendment)*, Canada filed a request for a preliminary ruling asserting that four questions of fact and law were improperly raised in the United States' appellant's submission because those issues had not been included in the United States' Notice of Appeal.[100] With respect to two of the issues, the Appellate Body examined the Notice of Appeal and held that it did not "provide notice . . . that the United States intended to make claims that the Panel exceeded its terms of reference."[101] The Appellate Body observed that "if an appellee has not received sufficient notice in the Notice of Appeal that a particular claim will be advanced by the appellant, that claim normally will be excluded from the appeal".[102] In that case, however, the Appellate Body observed, the two issues—regarding the panel's terms of reference—were jurisdictional in nature. The Appellate Body considered that "the issue of a panel's jurisdiction is so fundamental that it is appropriate to consider claims that a panel has exceeded its jurisdiction even if such claims were not raised in the Notice of Appeal."[103] Thus, the Appellate Body ruled on the two issues notwithstanding that it had concluded that the issues were not included in the Notice of Appeal.[104]

In three cases, the Appellate Body did not need to make any ruling based on an alleged failure to comply with Rule 20(2)(d) of the *Working Procedures*. In *US—Lead and Bismuth II*, the European Communities' contended that the United States' Notice of Appeal failed to identify its "claim" on appeal with respect to certain findings made by the panel in that case. The Appellate Body did not, however, need to resolve this issue since, at the oral hearing in that appeal, the United States acknowledged that the relevant findings were findings of fact, and that it did not challenge those factual findings.[105] Similarly, in *EC—Sardines*, the issue of the sufficiency of the Notice of Appeal was raised but not ruled upon. In that case, two days after the European Communities had filed its Notice of Appeal, Peru filed a request for a preliminary ruling asking that four of the nine points raised in that Notice be excluded from the appeal on the grounds that

[101] ¶ 206.
[102] ¶ 206.
[103] ¶ 208.
[104] In *US—Offset Act (Byrd Amendment)*, the Appellate Body also opined that, in accordance with the general principle that objections to jurisdiction should be raised as early as possible, "it would be preferable, in the interests of due process, for the appellant to raise such issues in the Notice of Appeal, so that appellees will be aware that this claim will be advanced on appeal." (¶ 208)
[105] Appellate Body Report, ¶¶ 65 and 66.

they did not satisfy the requirements of Rule 20(2)(d) of the *Working Procedures*.[106] Subsequently, however, the European Communities withdrew that Notice of Appeal and filed a replacement Notice of Appeal, thus rendering moot the issue of the conformity of the original Notice with the requirements of Rule 20(2)(d).[107] Lastly, In *US—Offset Act (Byrd Amendment)*), Canada filed a request for a preliminary ruling asserting that four questions of fact and law were improperly raised in the United States' appellant's submission because those issues had not been included in the United States' Notice of Appeal.[108] With respect to two of the issues, the United States clarified that it was not, in its appeal, asking the Appellate Body to make rulings under Articles 11 and 12.7 of the DSU, and the Appellate Body did not, therefore, need to consider whether it could make such rulings notwithstanding that they were not expressly mentioned in the Notice of Appeal.

6. Scope of Appellate Review

In addition to the limitations imposed by the Notice of Appeal filed in each case, the scope of review in appeals is defined primarily by Articles 17.6 and 17.13 of the DSU. The Appellate Body has identified at least three types of limitations on the scope of appellate review that flow from these provisions: (i) review is limited to *legal* issues; (ii) issues subject to review on appeal must have a sufficient nexus to those covered in the panel report; (iii) certain statements made by a panel that do not amount to a "legal finding or a conclusion" may not be reviewed by the Appellate Body.

With respect to the first criteria, in *EC—Hormones*, the Appellate Body confirmed that, by virtue of Article 17.6 of the DSU, factual findings are, in principle, not subject to review by the Appellate Body.[109] Factual findings made by panels that have been found to be beyond the scope of appellate review include: findings regarding the nationality, ownership and control of certain companies, as well as their respective market shares;[110] findings that fair market value was paid for all productive assets in a privatization;[111] a finding that certain information had not been disclosed to interested parties during a domestic anti-dumping investigation;[112] findings regarding the difference in the costs of production of an exporter and domestic producers made by an investigating authority that were affirmed by the panel;[113] and a finding regarding whether an international standard was adopted by consensus.[114] Similarly, in *Korea—Alcoholic Beverages*, the Appellate Body declined to review the factual basis for the panel's finding that the Korean alcoholic beverage soju is directly competitive with or substitutable for products such as whiskey, gin and vodka. The panel's finding was based on the its examination and weighing of factual evidence in the form of market studies comparing, for example, marketing practices,

[106] ¶ 11. The original Notice of Appeal is found at WT/DS131/10. Since the subsequently filed Notice of Appeal (WT/DS131/12) contains more elaborated versions of points (d), (f), (g) and (h) of the Notice of Appeal, it appears that these were the points, in the original Notice, that Peru contended did not conform to the requirements of Rule 20(2)(d).

[107] ¶¶ 12, 13, and 136. Note that the Appellate Body has adopted a new Rule 23 *bis* to the *Working Procedures*, which will come into effect on January 1, 2005, and which will allow an appellant to apply for leave to amend its Notice of Appeal. *See* WT/AB/WP/W/9.

[114] *EC—Sardines*, note 145 to ¶ 226.

methods of production, taste, colour, and places of consumption for all such alcoholic products.[115]

At the same time, the Appellate Body has ruled that the issue of the *consistency* of a given fact or set of facts with the requirements of a treaty provision is "a legal characterization issue" and, as such, a legal issue reviewable on appeal. For this reason, the Appellate Body held, in *Canada—Periodicals* that the panel's finding on "like products", for the purposes of Article III:2 of the GATT 1994, was reviewable.[116] In *US—Section 211 Appropriations Act*, the Appellate Body considered that, in order to address the issues raised in the appeal, it was compelled to examine the interpretation given by the panel to the relevant provision of U.S. legislation, observing that the "meaning given by the Panel to Section 211 is, thus, clearly within the scope of our review as set out in Article 17.6 of the DSU."[117] Furthermore, the Appellate Body has on several occasions employed the technique of "completing the analysis". This approach enables the Appellate Body, when it has reversed a legal finding in the panel report, to nevertheless seek to make a ruling so as to resolve the dispute between the parties and facilitate the prompt settlement of that dispute. As explained in *US—Section 211*, the Appellate Body has "completed the analysis where there were sufficient factual findings in the panel report or undisputed facts in the panel record to enable us to do so", has not where there were not, and, in one appeal, declined to complete the analysis with respect to a "novel" issue that had not been argued in sufficient detail before the panel.[118] The Appellate Body does not possess a "remand" power, that is, the ability to send a dispute back to the panel for a redetermination of the facts. This means that, in some appeals, when the Appellate Body has reversed the panel's legal findings and determined that the factual record was insufficient to allow for completion of the analysis, no ruling was made on those legal issues.[119]

Second, the Appellate Body has pointed out that the text of Article 17.6 contemplates a nexus between the issues appealed and the panel report—that any legal issues appealed will be legal issues that were covered in the panel report or developed by the panel. In *Canada—Aircraft*, the Appellate Body found that a new argument raised by Brazil was beyond the scope of review defined in Article 17.6, reasoning that although new arguments are not *per se* excluded from the scope of appellate review, Article 17.6 precluded the Appellate Body from ruling on a new argument that would require it to solicit, receive and review new facts that were not before the Panel, and were not considered by it.[120] Similar reasoning led the Appellate Body to decline to consider an argument in *US—FSC* because the panel "was simply not asked to address the issues raised by the United States' new argument."[121] In *EC—Asbestos* the Appellate Body declined to rule on Canada's claims under the *TBT Agreement* in part because the panel had not addressed these claims and, therefore "there are no 'issues of law' or 'legal

[115] *Korea—Alcoholic Beverages*, ¶ 161. In that appeal, the Appellate Body reviewed, and upheld, the panel's interpretation of the phrase "directly competitive or substitutable" in *Ad* Article III of the GATT 1994, but declined to "second guess" the panel's appreciation of the evidence that it used in applying its interpretation to the facts of that case.

[121] Appellate Body Report, ¶ 103.

interpretations' regarding them to be analyzed by the parties, and reviewed by us under Article 17.6 of the DSU."[122]

Third, the Appellate Body has also found that not every statement made by a panel when it addresses a legal issue can necessarily be characterized as a "legal finding or conclusion" which the Appellate Body may, in accordance with Article 17.13 of the DSU, "uphold, modify or reverse". Accordingly, "purely a descriptive and gratuitous comment" by the panel was held to be beyond the scope of review in *United States—Wool Shirts and Blouses*,[123] as was a descriptive comment contained in a footnote to the panel report in *European Communities—Poultry.*[124]

Finally, on two occasions, WTO Members, in commenting on Appellate Body reports at the time of their adoption, have raised issues that arguably relate to the scope of appellate review. At the time of the adoption of the Appellate Body Report in *US—Cotton Yarn*, Pakistan underlined the contents of Article 17.12 of the DSU, which states that the Appellate Body "shall address each of the issues" raised in the appeal. In Pakistan's view, the Appellate Body, in that case, had not fulfilled its mandate under Article 17.12 because it had not addressed all of the issues submitted to it.[125] The United States, at the meeting to adopt the Appellate Body Report in *US—Hot-Rolled Steel*, asserted that the Appellate Body, in that case, had exceeded the bounds of its authority by addressing an issue that neither the United States nor Japan had appealed.[126]

7. Standard of Review on Appeal

The DSU does not provide express guidance as to the degree of scrutiny that the Appellate Body is to apply to issues raised on appeal. The Appellate Body has seldom addressed this question directly, although examination of its reports suggest certain factors that influence the standard of review that is applied. Broadly speaking, at least four types of considerations may be distinguished.

First, with respect to issues of interpretation of the covered agreements, the Appellate Body seems to review a panel's work with a view to determining whether the panel properly employed the customary rules of interpretation of public international law in order to arrive at a correct interpretation of the provisions at issue,[127] and a proper application of the relevant legal norms to the facts of the case.

Second, as regards a panel's treatment of facts, the Appellate Body has consistently stated that, in principle, factual findings made by a panel fall beyond the scope of appellate review.[128] At the same time, the Appellate Body has recognized that, when a panel's treatment of the facts exceeds the bounds of the discretionary authority afforded to panels

[122] Appellate Body Report, ¶ 82.
[123] Appellate Body Report, p.17.
[124] Appellate Body Report, ¶ 107.
[125] Minutes of the DSB meeting of November 5, 2001, WT/DSB/M/112, ¶ 24.
[126] Minutes of the DSB meeting of August 23, 2001, WT/DSB/M/108, ¶ 68.
[127] The Appellate Body has consistently employed the general rule of interpretation set out in Articles 31 and 32 of the *Vienna Convention on the Law of Treaties*. In doing so, the Appellate Body focuses, first, on the text of the relevant provisions, seeking to ascribe meaning to all relevant provisions of the relevant agreement(s), and thereby to ascertain the common intentions of the WTO Members who drafted the treaty. *See*, e.g. Appellate Body Report, *US—Gasoline*, p. 17; Appellate Body Report, *Japan—Alcoholic Beverages II*, p. 11; Appellate Body Report, *India—Patents (US)*, ¶ 45; *EC—Computer Equipment*, ¶ 84; Appellate Body Report, *US—Carbon Steel*, ¶¶ 61–62; and Appellate Body Report, *US—Offset Act (Byrd Amendment)*, ¶ 271.
[128] "Findings of fact, as distinguished from legal interpretations or legal conclusions, by a panel are, in principle, not subject to review by the Appellate Body." (*EC—Hormones*, ¶ 132)

by virtue of the provisions of Article 11 of the DSU, then the panel's factual findings may constitute an error of law and, as such, be scrutinized on appeal.[129] However, in approaching factual matters, "the role of the Appellate Body differs from the role of panels".[130] Thus, on appeal, the Appellate Body will not conduct a new review of the evidence and make its own findings. Rather, the Appellate Body examines whether the panel's treatment of the facts met the standard of "objective assessment" prescribed by Article 11 of the DSU. In so doing, the Appellate Body will not find an error of law if it determines that it might have reached a different factual finding than the panel, but only if it determines that the panel's treatment of the facts was not "objective", for example if the panel willfully disregarded or distorted evidence, or made affirmative findings that lacked an evidentiary basis.[131]

Third, Article 12.7 of the DSU imposes an obligation on panels with respect to the *form* of their reports and the *reasoning* that they use to support their findings.[132] The Appellate Body has made clear that, in examining a claim that the panel failed to comply with its obligations under Article 12.7, the nature of the review to be undertaken is formal—rather than substantive—in nature. In assessing compliance with Article 12.7, it is irrelevant whether the Appellate Body agrees with the factual or legal findings of the panel. Rather, the Appellate Body will consider whether the panel sufficiently identified the relevant facts and the applicable legal norms, and explained how the law applies to the facts. Panels need not provide extensive reasoning, nor produce a wholly self-contained report, as long as the report, read in context and taking account of references made to other sources, reveals that the panel has satisfied the minimum standard of disclosing the essential or fundamental justification for its findings and recommendations.[133]

Finally, with respect to *procedural* issues dealt with by panels, the Appellate Body will examine whether a panel ruling has abrogated any rights given to parties under the DSU or infringed upon due process. Provided that these minimum guarantees have been respected, the Appellate Body has tended to afford panels a degree of latitude in making procedural rulings. In *EC—Hormones*, the Appellate Body suggested that an appellant requesting the Appellate Body to reverse a panel's ruling on a procedural matter in a specific situation that is not explicitly regulated "must demonstrate the prejudice generated by such legal ruling."[134]

8. Divisions

Article 17.1 of the DSU provides that three of the seven Appellate Body members are to hear any given case, and that the three shall serve on the basis of rotation, as set forth in the *Working Procedures*. A "division" is defined in the *Working Procedures* as

[129] *EC—Hormones*, ¶ 132; *US—Wheat Gluten*, ¶ 151.

[130] *US—Wheat Gluten*, ¶¶ 150–151.

[131] *EC—Hormones*, ¶¶ 131–142; *EC—Poultry*, ¶¶ 131–136*; Australia*—Salmon, ¶¶ 262–267; *Korea—Alcoholic* Beverages, ¶¶ 159–165; *Japan—Agricultural Products II*, ¶¶ 140–142; *India—Quantitative Restrictions*, ¶¶ 149 and 151; *Korea—Dairy Safeguard*, ¶¶ 137 and 138; *US—Wheat Gluten*, ¶ 151; *US—Carbon Steel*, ¶ 142; *EC—Bed-Linen (Article 21.5—India)*, ¶¶ 159–182, *US—Steel Safeguards*, ¶ 497; and *Japan—Apples*, ¶¶ 221 and 222.

[132] Article 12.7, among other things, requires the report of every panel to "set out the findings of fact, the applicability of relevant provisions and the basic rationale behind any findings and recommendations that it makes."

[133] Appellate Body Report, *Mexico—Corn Syrup (Article 21.5—US)*, ¶¶ 106–109 and 124–126; *Argentina—Footwear (EC)*, ¶ 149; *Chile—Alcoholic Beverages*, ¶ 78; *Korea—Alcoholic Beverages*, ¶¶ 166, 168.

[134] *EC—Hormones*, note 138 to ¶ 152.

"the three Members who are selected to serve on any one appeal in accordance with paragraph 1 of Article 17 of the DSU and paragraph 2 of Rule 6". According to paragraph 2 of Rule 6, divisions are to be composed "on the basis of rotation, while taking into account the principles of random selection, unpredictability and opportunity for all members to serve regardless of their national origin". Thus, unlike panelists[135], there is no bar on a member of the Appellate Body serving on a division assigned to hear an appeal involving the WTO Member of which he or she is a national.

Since its inception, the Appellate Body has employed a confidential process for determining the composition of divisions in accordance with these principles. The composition of a division is not known until the Notice of Appeal has been filed. A member assigned to a division may only be excused from that division for the reasons indicated in Rule 6(3) of the *Working Procedures*, namely: (i) a disclosed conflict of interest or a finding of a "material violation" within the meaning of the *Rules of Conduct*;[136] (ii) due to incapacity resulting from illness or "other serious reasons" which have been disclosed to and discussed with the Chairman of the Appellate Body and the Presiding Member of the division; or (iii) because that Appellate Body member has notified the Chairman of the Appellate Body in writing of his or her intention to resign. In such cases, Rule 13 provides that an alternate member will be selected, in accordance with the principles set forth in Rule 6(2) of the *Working Procedures*, for the division.[137] This has occurred three times. In *US—Lead and Bismuth II*, one member of the division hearing the appeal passed away shortly after the oral hearing in the appeal had been held, and a replacement was selected.[138] In *US—Offset Act* (*Byrd Amendment*), approximately one month after the filing of the Notice of the Appeal, but prior to the oral hearing, the participants were informed that, in accordance with Rule 13 of the *Working Procedures*, the Appellate Body had selected an Appellate Body member to replace the Presiding Member of the division hearing the appeal since the original Presiding Member "was prevented from continuing to serve on the division for serious personal reasons".[139] For the same reasons, a replacement was also selected for one member of the original *US—Softwood Lumber IV* division.[140]

As discussed in section 30 below, although decisions are made by divisions of the Appellate Body, under the "collegiality" rule the division is instructed to "exchange views" with all other members of the Body before issuing its decision.

9. Presiding Member

Pursuant to Rule 7 of the *Working Procedures*, one member of each division is elected as the Presiding Member of that division. The Presiding Member has responsibility for coordinating the overall proceedings in that appeal, chairing the oral hearing and meetings relating to that appeal, and coordinating the drafting of the Appellate Body Report. The Presiding Member is elected or agreed by the members of the division once the composition of that division is known. In electing a Presiding Member for the division, the practice of the Appellate Body to date has tended to reflect the principles of rotation and equal opportunity to serve as Presiding Member, rather than being based, for example, on seniority.

[135] Article 8.3 of the DSU precludes citizens of Members that are involved as a party or third party in a dispute from serving as a panellist in that dispute unless the parties to the dispute agree otherwise.

[136] *See Conflicts of Interest*, Subpart IV.B.13 below.

[137] Rule 13, referring to Rule 6(2) and (3) of the *Working Procedures*.

[138] ¶ 8.

[139] ¶ 8.

[140] ¶ 10.

10. Appellants/Other Appellants/Appellees

The DSU authorizes any WTO Member that was a party in panel proceedings to appeal the panel report. Third parties to the panel proceedings have no such right of appeal.[141] The *Working Procedures* define the party that files a Notice of Appeal and initiates the appeal process as the "appellant". For appellants, Rule 20 governs the filing of the Notice of Appeal and Rule 21 sets out the deadline (within ten days—to become seven days as of January 1, 2005—of the filing of the Notice of Appeal) and required content for the written submission to be made by the appellant.

Once an appellant has initiated an appeal by notifying the DSB and filing its Notice of Appeal, any other Member that was a party in the panel proceedings may also decide that it wishes, independently, to appeal issues of law and legal interpretation in the panel report. Such Members have, in principle, two options, which are laid out in Rules 23(1) and (4) of the *Working Procedures*. The first option, which is more commonly used, is for the Member to become what is called an "other appellant". "Other appellants" are also referred to as "cross-appellants".[142] An other appellant initiates its appeal, defines the scope of that appeal, and sets out the written arguments in support its appeal through the filing of a single document . This document is known as the "other appellant's submission". Rule 23(1) of the *Working Procedures* provides that other appellants' submissions—if any—must be submitted within fifteen days of the date of filing of the Notice of Appeal.[143] Although it may address some, all, or none of the issues appealed by the appellant, an other appellant's submission is not intended to be a direct response to the Notice of Appeal or appellant's submission. Rather, both appellants and other appellants are also "appellees", sometimes referred to as respondents. Appellees have the right to respond, through the filing of an appellee's submission (due 25 days after the filing of the Notice of Appeal) as well as in their oral arguments, to the issues appealed by another party.[144]

The second option for a Member that was a party in the panel proceedings to appeal the panel report is for that Member to file its own, separate Notice of Appeal, in accordance with Rule 23(4) of the *Working Procedures*. The panel report would then be the subject of two distinct appeals. In such circumstances, Rule 23(5) of the *Working Procedures* provides that "a single division shall hear the appeals". Although these rules appear to contemplate the possibility that multiple appeals of the same panel report could run on different time schedules if the different appealing parties do not file their respective Notices of Appeal on the same day, in practice this has never occurred. See the discussion under the heading *Multiple Appeals, "Joinder" of Cases on Appeal, Joint Hearing, Subpart IV.B.22* below.

In the first appeal to come before it, the Appellate Body made clear that an issue must be specifically appealed—by an appellant or other appellant—to be properly before the Appellate Body. Parties to the dispute that do not file a Notice of Appeal or an other appellant's submission cannot appeal issues in an appellee's submission. The appeal in *US—Gasoline*[145] was brought by the United States, which filed a Notice of Appeal and appellant's submission. In their appellees' submissions, Venezuela and Brazil made

[141] Article 17.4 DSU.

[142] Note that important changes affecting other appellants, including a new requirement to file a Notice of Other Appeal, will be introduced to Rule 23 of the *Working Procedures* as from January 1, 2005.

[143] Other appellant's submissions—often known as "cross-appeals"—are filed in roughly half of the appeals brought before the Appellate Body.

[144] Thus, the *Working Procedures* define an "appellee" as a party to the dispute that has filed a submission pursuant to Rule 22 or Rule 23(3) of the *Working Procedures*.

[145] Appellate Body Report, WT/DS2/AB/R, adopted May 20, 1996, DSR 1996:I, 3.

arguments on two issues that had not been appealed by the United States. Neither Venezuela nor Brazil had filed a Notice of Appeal pursuant to Rule 23(4) of the *Working Procedures* and Article 16.4 of the DSU, or an other appellant's submission pursuant to Rule 23(1) of the *Working Procedures*. The Appellate Body refused to rule on these two issues, reasoning, in part, that:

> Venezuela and Brazil could have appealed the Panel's finding and non-finding on the two matters by taking advantage of Rules 23(1) or 23(4) of the *Working Procedures* and thereby placing the Appellate Body in a position to dispose of those issues directly in one and the same appellate proceeding.[146]

11. Participants and Parties

The term "participant", which is defined in the *Working Procedures*, is used for WTO Members that participated as a party to the dispute in the proceedings before the panel and are also participating in the appeal. The term "party" is, by virtue of the *Working Procedures,* reserved for a Member that was a complaining or a defending party in the panel proceedings. A Member that was not a party before the panel cannot become a "participant" in the appeal in that dispute. A Member that was a complaining or defending party in the panel proceedings does not become a "participant" in the appeal until it takes the prescribed action—either the filing of the Notice of Appeal, the filing of an other appellant's submission, or the filing of an appellee's submission. Even if it does not take such action, however, a "party" enjoys essentially the same rights as "participants" under the *Working Procedures*, including to receive notification of various steps, and copies of all documents filed, in the appeal.[147] To date, no Member involved as a party in the panel proceedings has ever opted not to participate in the appeal in the dispute.

12. Third Parties, Third Participants and Passive Observers

These three terms all refer to WTO Members that are not parties to a dispute but which, at the time of establishment of the panel, notified the DSB, pursuant to Article 10.2 of the DSU, of their substantial interest in the matter. Such Members, known as "third parties" under the DSU, are also defined as "third participants" under the *Working Procedures* if they take one or more prescribed steps to participate in the appeal process.[148] By virtue of the definition of "third participant" and Rule 24 of the *Working Procedures*, a third party becomes a third participant in an appeal if, within 25 days of the filing of the Notice of Appeal, it files a written submission or notifies the Appellate Body Secretariat that it wishes to attend the oral hearing in the appeal. If more than 25 days have passed from the filing of the Notice of Appeal, a third party will still become a third participant if it notifies its intention to appear at the oral hearing, although in these circumstances the right of such third participant to make an oral statement and respond to questioning at the oral hearing will be subject to the discretion of the division hearing

[146] *Id.*

[147] The only provisions of the *Working Procedures* that, on their face, apply to participants without mentioning parties are Rules 10(1), (2) and (3) (filing of evidence of a material violation); 18(5) (correction of clerical errors in documents); 28(1) and (2) (additional written memoranda); and 29 (failure to appear).

[148] At a meeting to discuss changes to the definition of "third participant" in the *Working Procedures*, India noted that the DSU does not distinguish between "third parties" and "third participants" and expressed a desire for the Appellate Body to abolish the concept of "third participant" in any future comprehensive review of the *Working Procedures*. Minutes of the DSB meeting of January 27, 2003, WT/DSB/M/142, ¶ 76.

the appeal.[149] The text of the *Working Procedures* draws few distinctions between third parties and third participants.[150] It is not uncommon for WTO Members that were third parties in the proceedings before the panel to refrain from participating in the appellate proceedings.

Third participants enjoy many of the same rights as participants at the stage of appellate review. They are entitled to receive all documents in the case, to submit written briefs, and to appear at the oral hearing in the appeal and respond to questioning at the hearing. The principal difference between the rights of third participants and those of participants is that third participants have no right to appeal the panel report and, thus, no ability to influence the scope of the appeal. In addition, as a matter of practice, third participants are afforded less time than participants—typically half as much time—to make an oral statement at the oral hearing, and usually have fewer, or no questions directed specifically to them during the oral hearing.

In the light of recent amendments to the *Working Procedures*, the concept of "passive observers" is of historic interest only. The original *Working Procedures* did not contemplate participation in the oral hearing by third parties that had not filed a written submission within 25 days of the filing of the Notice of Appeal. Several Members expressed the view that the opportunity to attend the oral hearing and to be heard by the Appellate Body should not depend on the filing of a written submission. The Appellate Body thus adopted an *ad hoc* practice of allowing "passive participation" at oral hearings in certain appeals. Specifically, the Appellate Body allowed third parties that had not filed a third participant's submission to attend—but not to speak at—the oral hearing in the appeal.[151] This practice is no longer used since the Appellate Body amended the provisions of its *Working Procedures* (provisionally on September 27, 2002, and then definitively on May 1, 2003) governing third party participation in appeal proceedings.[152]

13. Conflicts of Interest

According to Article 17.3 of the DSU, Appellate Body members may not participate in the consideration of any dispute that would create a direct or indirect conflict of interest. This principle is buttressed by the more detailed rules and procedures set out in the *Rules of Conduct*, which require covered persons, including Appellate Body members, to "be

[149] Rule 27(3).

[150] Like third participants, third parties are entitled to be notified of various steps taken, and to receive documents filed in an appeal. Rule 28(4) appears to operate so as to limit the entitlement of third parties entitled to receive questions and requests for additional written memoranda, as well as the responses thereto, to circumstances in which such questions and requests are made *prior to* the oral hearing in the appeal whereas, under Rule 28(1) and (2), the right of third participants to receive such documents does not appear to be similarly limited.

[151] On this basis, Mexico attended the oral hearing in *United States—Import Prohibition of Certain Shrimp and Shrimp Products* (WT/DS58/AB/R); Paraguay attended the oral hearing in *Argentina—Safeguard Measures on Imports of Footwear* (WT/DS121/AB/R, ¶ 7); Zimbabwe attended the oral hearing in *European Communities—Measures Affecting Asbestos and Asbestos-Containing Products* (WT/DS135/AB/R, note 4, note 7); Canada and Japan attended the oral hearing in *United States—Safeguard Measures on Imports of Fresh, Chilled or Frozen Lamb Meat from New Zealand and Australia* (WT/DS177/AB/R and WT/DS178/AB/R, note 2, ¶¶ 8–9); Ecuador attended the oral hearing in *United States—Import Prohibition of Certain Shrimp and Shrimp Products—Recourse to Article 21.5 of the DSU by Malaysia* (WT/DS58/AB/RW, note 16 to ¶ 10)), Japan and Nicaragua attended the oral hearing in *Chile—Price Bands* (WT/DS207/AB/R, ¶ 6); and Colombia attended the oral hearing in *EC—Sardines* (WT/DS231/AB/R, ¶ 18). Japan was also authorized to attend the oral hearing on this basis in *India—Autos* but, in the event, the oral hearing was not held as a result of India's withdrawal of its appeal: WT/DS146/AB/R, WT/DS175/AB/R, ¶¶ 12 and 13.

[152] *See* WT/AB/WP/5; WT/AB/WP/6; and WT/AB/WP/7.

independent and impartial," and to "avoid direct or indirect conflicts of interest".[153] The *Rules of Conduct* set out two specific duties: (i) to disclose, and (ii) to avoid, actual or potential conflicts of interest.[154]

An Appellate Body member's duty to "disclose the existence or development of any interest, relationship or matter that that person could reasonably be expected to know and that is likely to affect, or give rise to justifiable doubts as to, that person's independence or impartiality"[155] applies upon a member's appointment.[156] In addition, once a Notice of Appeal has been filed, each Appellate Body member must review the factual portion of the relevant panel report and complete the disclosure form attached as Annex 3 to the *Rules of Conduct*. He or she may consult with the other Appellate Body members before completing the disclosure form.[157] In addition, during a dispute an Appellate Body member is subject to a continuing duty to disclose any new relevant information at the earliest time he or she becomes aware of it.[158] The "Illustrative List of Information to be Disclosed" contained in Annex 2 to the *Rules of Conduct* provides guidance as to the types of disclosure to be made.[159]

If, at the outset of an appeal, an Appellate Body member discloses an actual or potential conflict, then the Appellate Body—excluding the disclosing member—will consider the circumstances and decide whether the member concerned should, if assigned to the division hearing the appeal, continue to be assigned to the division or be excused from it.[160] Neither a member who is excused from a division nor a member who, had he or she been on the division, would have been so excused, may participate in the exchange of views relating to that appeal.[161]

14. Ex Parte *Communication*

There may be no *ex parte* communication concerning matters related to appeals being considered by the Appellate Body.[162] Rule 19 of the *Working Procedures* prohibits the division hearing an appeal and each of its members from meeting with or contacting a participant or third participant in the absence of the other participants and third participants, and also forbids any discussion between a member of the division and a participant or third participant in the absence of the full division, as well as discussions between an Appellate Body member not serving on the division and any participant or third

[153] Article II of the *Rules of Conduct*. *See* also paragraph 8 of the 1995 Decision, WT/DSB/1. The *Rules of Conduct* also apply to the staff of the Appellate Body Secretariat, but not to lawyers or other individuals who represent or advise WTO Members participating in dispute settlement. The latter may be subject to ethics rules in the jurisdictions in which they are qualified, but they are not covered by the WTO *Rules of Conduct*.

[154] Article III of the *Rules of Conduct.*

[155] Article III of the *Rules of Conduct.*

[156] Article VI:2 of the *Rules of Conduct*.

[157] Rule 9(1) of the *Working Procedures* and Article VI.4(b)(i) of the *Rules of Conduct*.

[158] Article VI:5 of the *Rules of Conduct*.

[159] These include such things as financial, professional, employment or family interests, as well as active participation in public interest groups with a declared position relevant to the dispute or published statements of personal opinion on issues relevant to the dispute. However, according to Article VI.3 of the *Rules of Conduct*, an Appellate Body Member's duty of disclosure does not extend to "the identification of matters whose relevance to the issues to be considered in the proceedings would be insignificant", and should not infringe upon "the personal privacy" of Appellate Body Members nor "be so administratively burdensome as to make it impracticable for otherwise qualified persons to serve on . . . the Standing Appellate Body. . . .".

[162] Article 18.1 DSU.

participant in the appeal. The prohibition on *ex parte* communication extends as well to communications involving the staff of the Appellate Body Secretariat.[163]

15. Confidentiality

Article 17.10 of the DSU requires that appellate proceedings be confidential, and Article 18.2 provides that written submissions to the Appellate Body shall be treated as confidential. These obligations apply to all Members of the WTO. Each WTO Member is also responsible for ensuring respect for these duties by its officials, as well as by any person that the Member selects as its representative, counsel or consultant.[164]

For Appellate Body members and the staff of the Appellate Body Secretariat, these broad confidentiality requirements are further elaborated in the *Rules of Conduct*. Pursuant to those Rules, "covered persons", defined to include, *inter alia*, members of the Appellate Body and Appellate Body Secretariat staff must, "at all times maintain the confidentiality of dispute settlement deliberations and proceedings together with any information identified by a party as confidential".[165] These obligations are also supplemented by a personal commitment, made by each member of the Appellate Body when he or she signs a Solemn Declaration on taking office.[166] In addition, at the beginning of each new appeal, all members of the Appellate Body sign the Disclosure Form annexed to the *Rules of Conduct*. In so doing, they acknowledge their "continuing duty . . . to respect [their] obligations regarding the confidentiality of dispute settlement proceedings."

These obligations of confidentiality extend to all aspects of appellate proceedings. As the Appellate Body explained in the *Canada—Aircraft* and *Brazil—Aircraft* cases:

> . . . we take "proceedings" to include, in an appellate proceeding, any written submissions, legal memoranda, written responses to questions, and oral statements by the participants and the third participants; the conduct of the oral hearing before the Appellate Body, including any transcripts or tapes of that hearing; and the deliberations, the exchange of views and internal workings of the Appellate Body. [167]

An allegation that a participant breached its obligations of confidentiality in an appeal has arisen in only one appeal to date. In *Thailand—H Beams*, Thailand alleged that an *amicus curiae* brief submitted by a private association revealed that this association had had access to Thailand's appellant's submission in the appeal. Thailand insisted that the only way for the association to have obtained such access was for the other participant (Poland) or a third participant in the appeal to have breached its obligation to maintain the confidentiality of Thailand's appellant's submission. Thailand underlined, in this regard, that the private law firm hired by Poland as an advisor in the dispute also acted as counsel to the association in question. Thailand requested the Appellate Body to make inquiries of the other participant and the third participants in the appeal in order to determine the source of the breach of confidentiality, and to then take such action as the Appellate

[163] Section VII:2 of the *Rules of Conduct*. *See* also Article 18.1 of the DSU.

[165] *See also* paragraph 9 of the 1995 Decision, WT/DSB/1.

[166] This Declaration, which parallels the language found in Article 17.10 of the DSU, requires the signatory to "respect the confidentiality of proceedings of the Appellate Body". Appellate Body Secretariat staff sign both a confidentiality undertaking and the Declaration required of all WTO Secretariat staff when commencing employment in the Appellate Body Secretariat.

[167] *Canada—Aircraft*, ¶ 143; *Brazil—Aircraft*, ¶ 121.

Body might deem appropriate.[168] Poland and the third participants in the dispute all insisted that they, and their officials and consultants, had respected the confidentiality of the proceedings. Nevertheless, the Appellate Body observed that there was "*prima facie* evidence that [the private association] received, or had access to, Thailand's appellant's submission in this appeal".[169] The Appellate Body declined to accept the written brief submitted by the private association on the grounds that it was not relevant.[170] The Appellate Body did not conduct any further inquiry as to how, or from whom, the private association had obtained access to Thailand's submission, and made no specific finding that any participant or third participant had breached its duties of confidentiality.

16. Business Confidential Information

In the *Canada—Aircraft* and *Brazil—Aircraft* cases, Canada and Brazil jointly requested that the Appellate Body adopt special, *additional* procedures, pursuant to Rule 16(1) of the *Working Procedures*, in order to ensure the protection of business confidential information, on the grounds that "Article 18.2 of the DSU does not provide adequate procedural protection for confidential proprietary business information of the type that is before the Appellate Body in this case."[171]

The Appellate Body declined this request. The Appellate Body reasoned that such additional procedures were not necessary given that the confidentiality obligations set forth in Articles 17.1 and 18.2 of the DSU apply to *all* WTO Members, their officials, representatives and consultants, to the Appellate Body and its Secretariat staff, and that those provisions cover *all* aspects of appellate proceedings.[172]

17. Requests for a Preliminary Ruling

In a number of appeals, parties have requested the Appellate Body to make preliminary rulings on issues such as: the attendance of private legal counsel at the oral hearing; changes to the Working Schedule for the appeal; the sufficiency of the Notice of Appeal and the proper scope of the appeal; the treatment of confidential information; the participation of private counsel and of third parties at the oral hearing; *amicus curiae* briefs, and the withdrawal and re-filing of a Notice of Appeal. At present, neither the DSU nor the *Working Procedures* set forth specific procedures or rules concerning the making by the Appellate Body of rulings prior to the circulation of the report in the appeal.[173]

[168] Thailand made a number of suggestions as to actions that might be appropriate, including:

> the disqualification from further participation in this appeal of any attorney or law firm which had disclosed the contents of Thailand's submission; the undertaking by such attorneys or law firm that they had destroyed or returned to the Appellate Body all copies of Thailand's written submission, or all written materials that were based on or referred to this submission; the undertaking by CITAC that it had destroyed or returned to the Appellate Body all copies of Thailand's appellant's submission or any written materials that were based on or referred to the submission; and the requirement that the attorneys for Poland or the third parties submit to the Appellate Body a written report setting out in detail all disclosures made by such attorneys to any party not involved in this appeal, including any memoranda they had prepared for, or discussions they had with, clients or potential clients in any way referring to the contents of Thailand's appellant's submission.

[170] *Id.*, ¶¶ 74 and 78.

[171] Appellate Body Report, *Canada—Aircraft*, ¶ 127; Appellate Body Report, *Brazil—Aircraft*, ¶ 105.

[172] Appellate Body Report, *Canada—Aircraft*, ¶¶ 141–147; Appellate Body Report, *Brazil—Aircraft*, ¶ 119–125.

[173] Indeed, in *US—Offset Act (Byrd Amendment)*, the United States argued that neither the DSU nor the *Working Procedures* permit the Appellate Body to make preliminary rulings. (¶ 186)

However, in the specific case of requests to modify deadlines in the Working Schedule while an appeal is ongoing, Rule 16(2) of the *Working Procedures* clearly contemplates the making and notification of decisions while the appeal is in progress. For that reason, requests to change the Working Schedule are not considered under this heading, but rather under *Requests to Change the Date for the Filing of Written Submissions* and *Requests to Change the Date of the Oral Hearing* in Subparts IV.B.18 and IV.B.20, respectively, below.

Generally, the Appellate Body has dealt with other types of requests for a preliminary ruling on a case-by-case basis, without commenting upon the legal framework or procedures that apply to such requests and rulings. The Appellate Body usually affords the other parties and third parties an opportunity to comment on the request before ruling on it. In one instance, the Appellate Body held a preliminary hearing on the request.[174] In most instances, the Appellate Body has ruled on the request shortly after it was made, although in certain cases the Appellate Body has refrained from ruling or declined to rule on requests at a preliminary stage of the appeal, and instead dealt with the issues only in its final report.[175] The time at which the Appellate Body deals with a request appears in some cases to be determined by the type of issue raised, since certain issues by their nature require some decision or ruling from the Appellate Body before the date of circulation of the report or before the oral hearing. Typically, even when it rules on a request at a preliminary stage, the Appellate Body also elaborates further, in its final report, the reasons that led it to grant or refuse a particular request.

In *EC—Bananas III*, Saint Lucia filed, on the same day as its joint third participants' submission, a request to allow two of its private legal advisors to participate in the oral hearing. Five days later two third parties filed letters supporting Saint Lucia's request, while the original complaining parties filed letters opposing the request. The next day—six days before the oral hearing was due to begin—the division hearing the appeal granted the request, providing brief reasons that were supplemented in the report in that appeal.[176]

On the 24th day of the appeals in *Canada—Aircraft* and *Brazil—Aircraft*, Canada and Brazil filed a joint request for the Appellate Body to adopt certain business confidential procedures. Four days later, the divisions hearing the two appeals invited Canada and Brazil to submit legal memoranda in support of their request, and offered each of them, as well as the third participants, an opportunity to comment on those memoranda. The divisions then held a joint preliminary hearing on the issue and, the next day, issued a preliminary ruling denying the requests. The four-paragraph ruling was later supplemented by additional reasons in the Appellate Body Reports issued in the two appeals.[177]

In *Thailand—H-Beams*, the Appellate Body received an *amicus curiae* brief submitted by a private industry coalition. Five days later, Thailand submitted a request for a preliminary ruling to the Appellate Body, observing that the *amicus curiae* brief revealed that its authors appeared to have been given access to Thailand's appellant's submission, in violation of the confidentiality obligations in Articles 17.10 and 18.2 of the DSU (*see* Subpart IV.B.15 above). Accordingly, Thailand requested that the Appellate Body reject the brief, but also that it inquire of the participants and third participants in the appeal whether they had disclosed the contents of Thailand's submission to anyone other than a participant or third participant in the appeal. Thailand also requested that, if it were

[174] A single hearing to address joint requests by Canada and Brazil for the Appellate Body to adopt procedures governing business confidential information was held in the simultaneous appeals in *Canada—Aircraft* and *Brazil—Aircraft*. WT/DS70, ¶ 126. WT/DS46, ¶ 104.

[175] *See*, *e.g., US—Offset Act (Byrd Amendment)*, ¶ 186.

[176] ¶¶ 9–12.

[177] ¶¶ 103–125.

determined that any participant or third participant had breached its obligations under Articles 17.10 and 18.2 of the DSU, the Appellate Body take such further action as it deemed appropriate.[178] The Appellate Body sought further information from Poland and from the third participants, all of whom stated that neither they nor their officials, representatives, counsel or consultants had disclosed Thailand's submission. However, Poland also stated that, although it had no reason to suspect wrongdoing, it had accepted the resignation of the private law firm that it had engaged for the appeal. The Appellate Body then issued a ruling in which it stated its belief that "there is *prima facie* evidence that [the private industry coalition] received, or had access to, Thailand's appellant's submission in this appeal" and stated that it had returned the *amicus curaie* brief to the coalition. Thailand then submitted another letter, requesting further action from the Appellate Body, in particular that it inquire directly of the industry association how it came to be in possession of Thailand's submission, that it seek further information from Poland regarding the withdrawal of its private legal counsel, and that the Appellate Body provide additional reasons for its rejection of the *amicus curiae* brief and fully reflect the issue in its report. The Appellate Body did not take any other preliminary measures in response to this request, although the issue was discussed at the oral hearing in the appeal, and additional reasons and explanations were provided in the final report.[179]

In *EC—Sardines*, two days after the European Communities had filed its Notice of Appeal, Peru filed a request for a preliminary ruling asking that four of the nine points raised in that Notice be excluded from the appeal on the grounds that they did not satisfy the requirements of Rule 20(2)(d) of the *Working Procedures*.[180] The Appellate Body sought the views of the participants as to this request, but ultimately did not rule on the sufficiency of the Notice of Appeal since the European Communities withdrew the original Notice of Appeal and filed a replacement Notice of Appeal, at which point Peru dropped its arguments concerning the insufficiency of the original Notice.[181]

In *US—Offset Act* (*Byrd Amendment*), Canada filed a request for a preliminary ruling asserting that certain questions of fact and law were improperly raised in the United States' appellant's submission either because they had not been included in the Notice of Appeal or because they amounted to new factual evidence. Canada sought a ruling that the relevant legal issues be struck from the appeal, and that both those issues and the alleged new factual evidence be declared beyond the scope of appellate review. The division hearing the appeal declined to issue a preliminary ruling, although it did address the substance of the objections raised by Canada both at the oral hearing in the appeal and in the eventual Appellate Body Report in that appeal.[182] The Appellate Body recorded the view of the United States that neither the DSU nor the *Working Procedures* permit the Appellate Body to issue preliminary rulings, but did not explicitly opine on whether it has the authority to do so.[183]

Lastly, prior to the recent changes to the *Working Procedures,* a number of requests to attend the oral hearing were made by third parties that had not filed a third participant's submission. In each case, the Appellate Body solicited the views of the other participants

[182] ¶¶ 9, 185 and 186*ff*.
[183] ¶ 186.

and third participants in the appeal and granted the requesting third party the right to attend the oral hearing as a "passive observer".[184]

18. Requests to Change the Deadline for a Written Submission

Rule 16(2) of the *Working Procedures* allows a participant or third party to request modification of a date for the filing of a document in "exceptional circumstances, where strict adherence to a time-period set out in [the *Working Procedures*] would result in manifest unfairness." To date, such requests have been made in eight cases. The initial requests were granted in seven of these cases, although subsequent requests made by other participants in two of those seven appeals were denied. The reports in those appeals contain no, or only very brief explanations of the reasons for granting or denying such requests in the reports, although a few reports give some indication as to the types of considerations that a division has found to be persuasive.[185]

Broadly speaking, the division will assess each request in the light of all the surrounding circumstances. In *US—Wool Shirts and Blouses*, the division extended the time for the United States to file its appellee's submission from a Friday to the following Monday, but did not provide reasons for such extension.[186] A two-day extension of the deadline for filing appellee's and third participant's submissions was also granted, without reasons, in *EC—Bananas III*.[187] In *Guatemala—Cement*, Guatemala and Mexico filed, respectively, an appellant's submission and an appellee's submission in Spanish. Taking account of the associated delay for the United States to obtain an English version of the appellant's submission, the division granted the United States an additional two weeks to file its third participant's submission. The division denied, however, Mexico's request that its appellee's submission, filed on the original due date for the United States' submission, be withheld from Guatemala and the United States until the United States had filed its submission.[188] In *EC—Bed-Linen,* the division decided, in the light of the "exceptional circumstances" of the appeal, to extend the time-period for filing the appellee's and third participant's submissions from January 2, 2001 to January 8, 2001.[189] Although the division did not explicitly identify the "exceptional circumstances", it seems likely to have been influenced by the fact that, in the absence of such an extension, these submissions would have been due on the first business day following the Christmas and New Year's holidays. At the time of the Article 21.5 proceedings in the *US—FSC* case, the anthrax scare had resulted in the temporary closure of certain buildings of the United States Congress, including those housing officials with jurisdiction over the issues raised in the appeal. The division specifically determined that these circumstances constituted "exceptional circumstances" within the meaning of Article 16(2) of the *Working Procedures*, and that maintaining the deadline for filing of the appellant's submission in such circumstances would result in "manifest unfairness to the United States". Accordingly, the division

[184] *See* the discussion under the heading *Third Parties, Third Participants and Passive Observers* in Subpart IV.B.12 above.

[185] In *US—Wool Shirts and Blouses* the division granted, without reasons, the request of the United States to extend the deadline for submission of its appellee's submission from Friday 21 March 1997 to Monday 24 March 1997: p. 2. Similarly, in *EC—Bananas III*, the division granted, without reasons, the request of the Complaining Parties to extend by two days the deadline for submission of the appellees' and third participants' submissions: ¶ 3.

[186] P. 2.

[187] ¶ 3.

[188] Appellate Body Report, *Guatemala—Cement I*, ¶ 4.

[189] Appellate Body Report, *European Communities—Anti-Dumping Duties on Imports of Cotton-Type Bed Linen from India* ("*EC—Bed Linen*"), WT/DS141/AB/R, adopted March 12, 2001, note 12 to ¶ 6.

granted the United States' request to extend the deadline for submission by seven days, and also extended the deadlines for all other written submissions by seven days.[190]

In *US—Softwood Lumber IV* the Appellate Body denied the request of the European Communities to extend the deadline for the filing of its third participant's submission on the grounds that such an extension would "significantly reduce the time available for the Division to consider carefully the arguments raised therein as well as the time available to the participants to respond to those arguments".[191] The division in that case did not accept the argument of the European Communities that the relevant deadline was "contrary to Rule 24(1) of the *Working Procedures*" because the due date was less than 25 days after the filing of the Notice of Appeal. The Appellate Body underlined that, in the particular circumstances of that case, the European Communities had known of the contents of the Notice of Appeal for more than 25 days, and had enjoyed the usual 15-day period following receipt of the appellant's submission in which to prepare its own submission.[192]

19. Written Submissions

(i) **Working Procedures** The *Working Procedures* provide certain explicit rules regarding written submissions, particularly:

Deadlines: the time periods within which the various submissions must be filed are indicated in the *Working Procedures.* The actual due date can be calculated once the Notice of Appeal has been filed, in accordance the relevant provisions of the *Working Procedures* as well as the DSB *Decision on Expiration of Time-Periods in the DSU.*[193] The specific dates are also indicated to the participants and third participants in the Working Schedule communicated to them at the outset of the appeal, which also specifies that the documents should be submitted by 5:00 p.m. on the date on which they are due. A document that is not filed within the prescribed time-period is not considered filed with the Appellate Body.[194]

Service on other parties to the dispute: Under Rule 18(2), every document filed by a party or third party to the dispute must be served on all of the other parties, participants, third parties and third participants in the appeal. The *Working Procedures* define the "service address" as the address of any party to the dispute, participant, third party or third participant as generally used in WTO dispute settlement proceedings, unless the party to the dispute, participant, third party or third participant has clearly indicated another address. Typically service is effected by delivery to a Member's Geneva Mission, although delivery to a Member's WTO mailbox is sometimes used instead.

Proof of service: Rule 18(3) requires each document filed with the Appellate Body Secretariat to be accompanied by proof that it has been served on all of the other parties, participants, third parties and third participants. "Proof of service" is defined in the *Working Procedures* as a letter or other written acknowledgement that a document has

[190] In so doing, the division did not accede to the European Communities' request that, should the Appellate Body extend the deadline for the filing of the appellant's submission by seven days, then it in turn extend the deadline for the filing of the European Communities' appellee's submission by fourteen days (that is, by the extra seven days afforded the United States *plus* an additional seven days). Appellate Body Report, *US—FSC (Article 21.5—EC)*, ¶ 8.

[191] ¶ 7.

[192] *Id.* In that case, the United States had withdrawn its original Notice of Appeal and re-filed the identical document nineteen days later, along with its appellant's submission. *See Withdrawal of an Appeal* in Subpart IV.B.36 below.

[193] WT/DSB/M/7. Rule 17 of the *Working Procedures* deals with the calculation of deadlines for appellate proceedings, and its paragraph 2 specifically applies this DSB decision to appeals.

[194] *Working Procedures*, Rule 18(1). A failure to file a submission in a timely manner may lead to an "appropriate" order by the division hearing the appeal pursuant to Rule 29 of the *Working Procedures*. *See* Subpart IV.B.35 below.

been delivered, as required, to the relevant Member(s). At present, the Appellate Body usually considers the attachment to a filed document of a list of all of the addressees to whom the document has been sent to constitute sufficient proof of service.

Correction of Clerical Errors: Paragraph 5 of Rule 18 allows Members to "correct" their written submissions, subject to three qualifications. First, correction may only occur "upon authorization by the division"; second, the types of errors that may be corrected are "clerical errors"; and, third, the correction "shall be made within three days of the filing of the original submission" (as of January 1, 2005, this will become within thirty days of the filing of the Notice of Appeal). In practice, Members have rarely had recourse to this rule.
(ii) **Current Practice** In any given appeal, the Appellate Body may also make certain requests regarding written submissions, usually in the letter sent to participants at the outset of the appeal along with the Working Schedule for the appeal. The requests below have commonly been made in recent appeals, but are examples only:

Number: At present, the Appellate Body requests that participants and third participants file twelve hard copies and one electronic copy of each written submission. The electronic version may be submitted on a diskette, delivered along with the hard copies, or by e-mail to the e-mail address indicated in the letter sent to all parties and third parties at the outset of an appeal.

Format: In recent appeals, the Appellate Body has expressed a preference for participants to use 12-point font size in their written submissions. The Appellate Body does not at present normally make other requests regarding the form of written submissions, such as page limits, type of binding, required cover pages, etc.

Executive Summaries: In recent appeals, the Appellate Body has asked participants and third participants making written submissions to submit executive summaries of their written submissions simultaneously with those submissions. The summaries provided by the participants themselves are intended to assist the Appellate Body in its preparation of the "front", or "descriptive" part of the report.

Place for Filing: All correspondence and written submissions filed in appeals must be filed with the Appellate Body Secretariat, *not* the WTO Secretariat. At the time of writing (late 2003) the Appellate Body Secretariat was located on the second floor of the North Wing of the William Rappard Building, and hand-delivered documents were to be brought to office number 2010 or 2011.

Language: Written submissions may be made in any of the three official languages of the World Trade Organization: English, French or Spanish. The Appellate Body typically requests that participants and third participants notify the Appellate Body Secretariat prior to submission of documents in French and Spanish in order that any necessary arrangements for translation can be made.

20. Requests to Change the Date of the Oral Hearing

Rule 16(2) of the *Working Procedures* allows a participant or third party to request modification of a date for the oral hearing in "exceptional circumstances, where strict adherence to a time-period set out in [the *Working Procedures*] would result in manifest unfairness." To date, the divisions involved have given no, or only very brief explanations of their reasons for granting or denying such requests in the reports. Hence, it is difficult to identify the types of circumstances that will in fact be deemed to "result in manifest unfairness" to the party concerned. The Appellate Body will, before deciding on such requests, inquire as to whether the other participants and third participants in the appeal join in, accede to, or oppose the request.

On July 10, 1997, pursuant to Rule 16(2) of the *Working Procedures*, the Government of Jamaica, a third participant in the *Bananas* appeal, asked the Appellate Body to postpone

the dates of the oral hearing from July 21–22, 1997 to August 4–5, 1997. This request was not granted as the Appellate Body was not persuaded that there were exceptional circumstances resulting in manifest unfairness to any participant or third participant that justified the postponement of the oral hearing in this appeal.[195] The division also refused a request by the United States to change the date of the oral hearing in *US—Shrimp (21.5)*.[196]

21. The Oral Hearing

Rule 27 of the *Working Procedures* contemplates that an oral hearing will be held, "as a general rule", thirty days after the filing of the Notice of Appeal. In practice, the oral hearing more typically occurs 40–45 days after the filing of the Notice of Appeal and Rule 27 has been amended, with effect from January 1, 2005, to reflect that practice. The parties and third parties to the dispute are notified of the date of the oral hearing in the Working Schedule for the appeal, which is communicated by the Appellate Body to them shortly after the filing of the Notice of Appeal. In the majority of cases the oral hearing lasts for one day, although in particularly complex cases the hearing may last for two, or even three, days. Participants and third participants are entitled to make their oral submissions in any of the three official languages of the WTO, but are requested to inform the Appellate Body Secretariat in advance if they intend to make their oral submissions in French or Spanish, or if they require interpretation from English into French or Spanish, so as to allow arrangements to be made for interpretation.[197] Due to the obligations of confidentiality that govern appellate proceedings, oral hearings are not open to the public nor to WTO Members not participating in the appeal.[198] However, WTO Members participating in the appeal have the right to include whoever they wish in their delegation.[199] The practice of WTO Members in this regard is quite varied. Delegations typically include government officials from capitals and from Geneva missions, but have at times also included privately-engaged lawyers or consultants, technical experts, and lawyers from the Advisory Centre on WTO Law. The size of delegations also varies considerably, from as few as one to as many as fifteen or more.

22. Multiple Appeals, "Joinder" of Cases on Appeal, Joint Hearing

The DSU does not contain an explicit provision, analogous to Article 9 of the DSU for panels, identifying how the Appellate Body is to deal with multiple appeals relating to the same subject-matter. Rule 23(5) of the *Working Procedures* provides that when there is more than one appeal of a panel report (as opposed to an "other" or "cross-" appeal), those multiple appeals will be heard by a single division. Rule 23(5) does not address the issue of whether a single or multiple reports will be issued in the event of multiple appeals.

In practice, in all appeals relating to the same measure and involving multiple parties, a single division has heard the appeal or appeals and a single report has been issued.[200] In

[195] *EC—Bananas III*, ¶ 4.

[196] *US—Shrimp*, ¶ 11.

[197] In two cases, a WTO Member participating in an appeal requested, and received, permission to bring its own interpreters to the oral hearing so as to have the benefit of interpretation into the language of that WTO Member, which was not an official WTO language.

[198] Thus, oral hearings are attended only by the delegations of Members, the division assigned to the appeal and Appellate Body Secretariat staff. Professional court reporters, who are subject to confidentiality requirements, also attend in order to prepare a transcript of the proceedings for internal Appellate Body records.

[199] In *EC—Bananas III* the Appellate Body ruled, at paragraph 10 of its Report, "that it is for a WTO Member to decide who should represent it as members of its delegation in an oral hearing of the Appellate Body". *See Private Counsel* in Subpart IV.B.25 below.

[200] No participant in an appeal has requested separate Appellate Body reports in an appeal involving multiple parties.

cases where multiple complaints were joined before the panel and a single panel report was issued, the cases have remained joined at the appellate stage.[201] A single Appellate Body report was also issued in *EC—Bananas III*, even though the panel established to hear the multiple complaints in that case had issued four separate panel reports. In that dispute, the European Communities filed a single Notice of Appeal in respect of all four panel reports.[202]

In two cases, *EC—Hormones* and *US—1916 Act*, the Appellate Body effectively "joined" cases that were treated, at the panel stage, by separate panels composed of the same persons. The two sets of proceedings before the panel were, in each case, conducted on somewhat different time schedules, and separate panel reports were issued. In each of these cases, the appellant filed two separate Notices of Appeal on the same day. The subsequent documents filed by the appellant, as well as the eventual Appellate Body Report, dealt with all issues together.[203] In *US—1916 Act*, the Appellate Body explained that, although the two Panel Reports were not identical, they were "alike in all major respects".[204] In view of the "close similarity" of the issues raised in the two appeals, "it was decided, after consultation with the parties, that a single division would hear and decide both appeals".[205]

The *Canada—Aircraft* and *Brazil—Aircraft* disputes related to different measures in different countries, and were decided by two different panels composed of different individuals. Nevertheless, these disputes both involved the same WTO Members as parties and third parties in both cases, and raised similar legal issues. The appeals in the two disputes, one by Canada and the other by Brazil, were filed on the same day. A preliminary issue, common to both cases, related to the issue of whether special procedures to protect business confidential information were necessary. In those circumstances, a preliminary hearing to address the issue was held, with the divisions on the two appeals sitting jointly, and the participants and third participants being given the opportunity to make oral statements and respond to questions posed by those divisions.[206]

23. Joint Submissions

Neither the DSU nor the *Working Procedures* address the possibility of participants making joint oral or written submissions during an appeal. In practice, both have occurred. In *EC—Bananas III*, the original complaining parties filed a joint appellant's submission and a joint appellee's submission, and two separate groups of third parties each filed a third participants' submission.[207] In *US—1916 Act*, the European Communities and Japan filed a joint other appellants' submission in respect of both appeals, but each filed its own, separate appellee's and third participant's submissions.[208] In *US—Offset Act* (*Byrd Amendment*), the European Communities, India, Indonesia and Thailand filed a joint appellees' submission, as did Japan and Chile.[209] In *US—Steel Safeguards*, Brazil,

[208] ¶ 7.
[209] ¶ 7.

Japan and Korea filed a joint other appellants' submission.[210] In a few cases, where there have been multiple participants sharing the same positions on issues, those participants have divided the issues amongst themselves for purposes of the oral hearing, presumably so as to avoid repetition and allow for the most efficient use of their combined total time for oral argument.

24. Objections

The Appellate Body has identified certain standards that are to be observed by parties to a dispute when they raise objections—for example of a procedural or jurisdictional nature—during the course of dispute settlement proceedings. First, the objection must be "sufficiently specific."[211] In *Mexico—Corn Syrup (Article 21.5—US),* the Appellate Body invoked the "requirements of good faith, due process and orderly procedure" in finding that parties must "explicitly" raise their objections so that the panel, the parties to the dispute, and the third parties, understand that a specific objection has been raised, and have an adequate opportunity to address and respond to it.[212] Second, the Appellate Body has ruled that a party to a dispute must raise its objections "promptly".[213] Otherwise, the Appellate Body has warned:

> A Member that fails to raise its objections in a timely manner, notwithstanding one or more opportunities to do so, may be deemed to have waived its right to have a panel consider such objections.[214]

In the specific context of appeals, the Appellate Body has established that "it would be preferable, in the interests of due process, for the appellant to raise [objections to jurisdiction] in the Notice of Appeal".[215] At the same time, the Appellate Body has held that certain issues going to jurisdiction are so fundamental that they are to be considered even if they are not raised at the earliest opportunity.[216]

25. Private Counsel

Both the DSU and the *Working Procedures* are silent on the issue of who may represent a participant or third participant in the oral hearing. In *EC—Bananas III*, Saint Lucia filed, on the same day as its joint third participants' submission, a request to allow two private legal advisors—not full-time employees of the Government of Saint Lucia—to participate in the oral hearing.[217] The request was opposed by the original complaining parties for a number of reasons, including that the rules of public international law regarding

[210] ¶ 8.

[211] *EC—Hormones*, ¶ 152.

[212] *Mexico—Corn Syrup (Article 21.5—US)*, ¶ 47. In that case, the Appellate Body found, at paragraph 46 of its report, that Mexico had never clearly identified a specific objection, and neither requested the panel to examine, nor to make a ruling on, any such objection.

[213] *Mexico—Corn Syrup (Article 21.5—US)*, ¶ 50. *See also* Appellate Body Report, *United States—FSC*, ¶ 166. Appellate Body Report, *Korea—Dairy Safeguard*, ¶¶ 127–131; and Appellate Body Report, *United States—1916 Act*, ¶ 54. At the same time, the Appellate Body has also held that certain issues going the root of the jurisdiction of panels are so fundamental that, even if parties fail properly to raise objections, panels may nevertheless be obliged to satisfy themselves that they have the requisite authority to proceed. *See* Appellate Body Report, *Mexico—Corn Syrup (Article 21.5—US)*, ¶ 26; Appellate Body Report, *United States—1916 Act*, ¶ 54.

[217] ¶¶ 9–12.

diplomatic relations do not afford governments *carte blanche* in naming individuals to represent them in international bodies; that the participation of outside counsel in other international tribunals is authorized only pursuant to specific rules agreed between states—which do not exist in WTO dispute settlement—and that allowing the request of Saint Lucia would constitute a departure from longstanding GATT practice and be inconsistent with the inter-governmental nature of WTO dispute settlement. The Appellate Body, however, decided to grant the request made by Saint Lucia, explaining that:

> . . . there are no provisions in the *Marrakesh Agreement Establishing the World Trade Organization* (the "*WTO Agreement*"), in the DSU or in the *Working Procedures* that specify who can represent a government in making its representations in an oral hearing of the Appellate Body. With respect to GATT practice, we can find no previous panel report which speaks specifically to this issue in the context of panel meetings with the parties. We also note that representation by counsel of a government's own choice may well be a matter of particular significance—especially for developing-country Members—to enable them to participate fully in dispute settlement proceedings. Moreover, given the Appellate Body's mandate to review only issues of law or legal interpretation in panel reports, it is particularly important that governments be represented by qualified counsel in Appellate Body proceedings.[218]

In practice, it is not uncommon for delegations to include private lawyers in their delegations at the oral hearing.[219] Even when such individuals do not attend the oral hearing, private counsel often assist Members throughout the various stages of dispute settlement, as the Appellate Body itself observed in the *Bananas* case.[220]

26. Additional Written Memoranda

Rule 28(1) of the *Working Procedures* authorizes a division, at "any time during the appellate proceeding" to address written questions to or to request additional written memoranda from the participants and third participants in the dispute. During the oral hearing in the first appeal brought before it, the Appellate Body requested the participants and third participants to submit the responses to certain questions, in writing, after the hearing, along with a final written statement of their positions.[221] Post-hearing responses to questions and written memoranda were also submitted in *Japan—Alcoholic Beverages*,[222] but in the third appeal brought before the Appellate Body the participants and third participants declined an invitation to submit post-hearing memoranda.[223] Since then, the Appellate Body has on occasion had recourse to this rule in order to request additional written submissions. During the first few years of its existence, the Appellate Body tended

[218] ¶ 12.

[219] The frequency of this practice may increase with the formation of the Advisory Centre on WTO Law, which offers legal services to developing country Members of the WTO, and whose legal staff have already been called upon to make presentations and respond to questioning at oral hearings on behalf of the WTO Member whose interests they represent. *See* www.acwl.ch.

[220] The Appellate Body stated, at ¶ 11 of *EC—Bananas III*, that:

> . . . it is well-known that in WTO dispute settlement proceedings, many governments seek and obtain extensive assistance from private counsel, who are not employees of the governments concerned, in advising on legal issues; preparing written submissions to panels as well as to the Appellate Body; preparing written responses to questions from panels and from other parties as well as from the Appellate Body; and other preparatory work relating to panel and Appellate Body proceedings.

[221] *US—Gasoline*, p. 3.

[222] *Japan—Alcoholic Beverages,* p. 3.

[223] *United States—Underwear*, p. 5. Nevertheless, the United States did submit a written clarification of one of its oral responses to a question, and Costa Rica responded in writing to that clarification.

to request such memoranda, if at all, *after* the oral hearing in an appeal.[224] In recent years, however, the Appellate Body has from time to time received and/or requested written submissions on discrete issues *before* the oral hearing, particularly in appeals presenting procedural issues or in which requests for preliminary rulings are made.[225]

27. Panel Record/Evidence on Appeal

Article 17.10 of the DSU provides, in part, that reports of the Appellate Body are to "be drafted . . . in the light of the information provided and the statements made." The information made available to the Appellate Body includes not only the contents of the panel report and the submissions made by the participants and third participants in the appellate proceedings, but also the record of the panel proceedings. Rule 25(1) of the *Working Procedures* stipulates that the "complete record of the panel proceedings" is to be transmitted to the Appellate Body upon the filing of a Notice of Appeal. Paragraph 2 of Rule 25 sets forth an illustrative list of the types of documents that comprise the panel record.

The limited nature of appellate review under Article 17.6 of the DSU excludes, in principle, the consideration of new evidence by the Appellate Body. The Appellate Body refused, in *US—Offset Act (Byrd Amendment),* to consider two documents referred to by the United States in its appellant's submission. The Appellate Body noted that the documents were not part of the panel record in the case, that Article 17.6 of the DSU limits the jurisdiction of the Appellate Body to issues of law covered in the panel report and legal interpretations developed by the panel, and that the other participants had not had any opportunity to comment on the documents and might not be able to so without themselves introducing new evidence. Accordingly, notwithstanding the United States' assertion that the documents were "available on the public record", the Appellate Body found that the documents constituted new evidence that could not be taken into account in the appeal.[226] The Appellate Body also invoked Article 17.6 in refusing to consider factual information of a scientific and economic nature contained in an *amicus curiae* brief submitted by Morocco in *EC—Sardines.*[227]

28. Experts

Article 17 of the DSU contains no express equivalent of Article 13, which permits panels to seek the assistance of outside experts, although such a power was once proposed during the Uruguay Round negotiations.[228] This may reflect the limited scope of appellate review and the fact that the Appellate Body is not normally called upon to examine factual issues. In practice, the Appellate Body has never sought the assistance of outside experts in an appeal.

[224] *EC—Poultry*, ¶ 6. In *US—FSC (Article 21.5—EC)*, the division requested the United State to reduce certain of its responses to questions to writing, and afforded the European Communities an opportunity to respond to that additional written submission. (¶ 11)

[226] *US—Offset Act (Byrd Amendment)*, ¶ 222.

[227] ¶ 169.

[228] Shortly after the idea of appellate review had first been raised, Mexico suggested that the Appellate Body "may call on the advisory services of experts outside GATT when it considers this to be necessary. The Chairman of the Panel whose report has been appealed may participate on invitation to clarify to the appellate body the conclusions and recommendations of the Panel report in question". (MTN/GNG/NG13/W/42, Proposal by Mexico dated July 12, 1990, ¶ 15.)

29. Amicus Curiae Briefs

The issue of whether the Appellate Body may accept and consider written submissions from states, entities, and individuals other than the WTO Members that participated in the dispute while it was before the panel has received much attention and generated much controversy in recent years. Both the DSU and the *Working Procedures* are silent on this issue.

The Appellate Body explained the legal basis for its treatment of such submissions in *US—Lead and Bismuth II*, where two briefs were received from industry associations. The appellee and the third participants considered the briefs "inadmissable" and argued that the Appellate Body does not have the authority to accept or consider *amicus curiae* briefs. The United States, the appellant, took the opposite position. In its ruling, the Appellate Body noted that nothing in the DSU nor in the *Working Procedures* either specifically allows or prohibits the acceptance and consideration of *amicus curiae* briefs. The Appellate Body, however, opined that Article 17.9 of the DSU, which allows the Appellate Body to draw up its own working procedures, reflects a "broad authority to adopt procedural rules which do not conflict with any rules and procedures in the DSU or the covered agreements."[229] The Appellate Body also referred to Rule 16(1) of the *Working Procedures*, which allows a division hearing an appeal to develop an appropriate procedure in certain specified circumstances where a procedural question arises that is not covered by the *Working Procedures*. The Appellate Body concluded:

> . . . that as long as we act consistently with the provisions of the DSU and the covered agreements, we have the legal authority to decide whether or not to accept and consider any information that we believe is pertinent and useful in an appeal.[230]

To date, the Appellate Body has never considered fully the contents of an "*amicus curiae*" brief, although it has stated on a number of occasions that it has the authority to do so. The case law does not positively identify the circumstances in which such briefs would be accepted and considered, but the Appellate Body has indicated that it will be inclined to exercise its discretion to refuse to consider such briefs: (i) where the brief is not pertinent or useful; (ii) where the brief contains primarily or exclusively factual information that is beyond the scope of appellate review; and (iii) where the brief is submitted late in the appellate proceedings, such that accepting the brief would interfere with the "fair, prompt and effective resolution of trade disputes" and could impose an undue burden on other participants in the appeal.[231] The four types of situations in which the issue of *"amicus curiae"* briefs has arisen are dealt with, in turn, below.

(i) Briefs attached to parties' submissions: The issue of "*amicus curiae"* briefs in appellate proceedings arose for the first time in *US—Shrimp*.[232] In that case, the United States appended to its appellant's submission three exhibits containing *amicus curiae*

[229] Appellate Body Report, *US—Lead and Bismuth II*, ¶ 39.

[230] *Id*. In paragraph 41 of that report, the Appellate Body emphasized that it has no legal duty to accept or consider *amicus curiae* briefs from individuals or organizations which are not Members of the WTO. It has a legal duty to accept and consider only submissions from WTO Members that are parties or third parties in a particular dispute.

[231] *Ec—Sardines*, ¶ 167.

[232] The concept of *amicus curiae*, or "friend of the court", exists, albeit in different ways, in certain national legal systems. Although the precise definition of an *amicus curiae* varies among different legal jurisdictions, and is unknown in many, it is generally understood to mean an entity or individual, not formally party to legal proceedings, who nevertheless seeks some form of participation in those proceedings, whether to afford the tribunal the benefit of the amicus' particular expertise or possibly in order to focus the tribunal's attention on interests that the parties themselves may not wish to highlight.

briefs from environmental non-governmental organizations. The appellees objected to these briefs and requested that the Appellate Body not consider them. The United States made clear that it agreed with the legal arguments contained in the appended *amicus curiae* briefs "to the extent those arguments concur with the U.S. arguments set out in [its] main submission".[233] The Appellate Body considered that the attachment of a brief or other material to the submission of an appellant or appellee "renders that material at least *prima facie* an integral part of that participant's submission."[234] Taking account of the limited nature of the United States' endorsement of the content of the *amicus curiae* brief, the Appellate Body admitted the briefs as part of the United States' appellant's submission, but added that:

> . . . considering that the United States has itself accepted the briefs in a tentative and qualified manner only, we focus in the succeeding sections below on the legal arguments in the main U.S. appellant's submission.[235]

In the appeal in the Article 21.5 proceeding in the *Shrimp* case, the United States again attached a submission by a non-governmental organization to its submission, and again qualified its endorsement of the arguments contained therein.[236] The Appellate Body decided to "focus [its] attention on the legal arguments in the appellee's submission of the United States."[237]

(ii) Briefs submitted directly to the Appellate Body by non-WTO Members: This is the most common means by which the issue of "*amicus curiae*" briefs has arisen in appeals. In *US—Lead and Bismuth II*, the Appellate Body received two briefs submitted by American steel industry associations. After deciding that it has the legal authority to accept information that it considers pertinent and useful, the Appellate Body declined to take the two briefs into account.[238] In *Thailand—H-Beams*, the Appellate Body received a written brief from a coalition of United States' companies and trade associations. Thailand, the appellee, requested the division to reject the brief. In a preliminary ruling issued on December 14, 2000, the division stated that it saw "no reason to accept the written brief" and that it had thus returned the brief to the coalition.[239]

In *US—Shrimp (Article 21.5—Malaysia)*, the Appellate Body received an *amicus curiae* brief from an individual acting "on his own behalf". The Appellate Body did not find it necessary to take the brief into account.[240] The same individual submitted a brief in the *EC—Sardines* case. There, the Appellate Body referred to the approach it had followed regarding *amicus* briefs in previous cases, confirmed that it has the authority to accept and consider briefs from private individuals and organizations which are not Members of the WTO, but found that the brief submitted by the private individual was

[233] *Letter from the United States*, dated August 13, 1998, quoted in relevant part in paragraph 86 of the Appellate Body Report.
[234] Appellate Body Report, *US—Shrimp*, ¶ 89.
[235] *Id.*, ¶ 91.
[236] In response to questioning at the oral hearing, the United States indicated that "'[t]hose are the independent views of that organization. We adopt them to the extent they are the same as ours but otherwise they are their independent views. We submit them for your consideration but not like our arguments where, for example, the panel is expected to address each one.'" Appellate Body Report, *US—Shrimp (Article 21.5—Malaysia)*, ¶ 77.
[237] *US—Shrimp (Article 21.5—Malaysia)*, ¶ 77.
[238] *Id.,* ¶ 42.
[239] Appellate Body Report, ¶ 74. The brief also raised an issue of breach of the confidentiality obligation, which is discussed under the heading *Confidentiality* in Subpart IV.B.15 above, as well as in Subpart IV.B.17.
[240] Appellate Body Report, *US—Shrimp (Article 21.5—Malaysia)*, ¶ 78.

not of assistance in that appeal.[241] The American Iron and Steel Institute submitted an *amicus curiae* brief in the appeal in *US—Countervailing Measures on Certain EC Products*. The Appellate Body did not find the brief to be of assistance and did not take it into account.[242] The Appellate Body reached similar conclusions with respect to a brief submitted by the American Institute for International Steel in *US—Steel Safeguards*.[243] The Appellate Body "did not find it necessary to take" the two *amicus curiae* briefs submitted in *US—Softwood Lumber IV* "into account in rendering its decision" in that case.[244]

(iii) Submission of an "*amicus curiae*" brief by a WTO Member: In the *EC—Sardines* case, a submission described as an "*amicus curiae*" brief was filed by a WTO Member (Morocco) that had not exercised its third party rights during the proceedings before the panel. The Appellate Body considered whether the specific rights of third-party participation contemplated in the DSU affect how the Appellate Body is to treat an *amicus curiae* briefs received from a WTO Member that did not exercise those rights. The Appellate Body found that it had the same authority to accept and consider *amicus curiae* briefs received from WTO Members as to accept and consider *amicus curiae* briefs received from non-WTO Members.[245]

With respect to the specific submission filed by Morocco, the Appellate Body indicated its willingness to exercise its discretion to *consider* some—though not all—parts of the *amicus curiae* brief. The Appellate Body explained that Morocco's brief set forth largely factual information of a scientific and economic nature and that, due to the limits in Article 17.6 of the DSU such information did not fall within the scope of appellate review and was not pertinent. The Appellate Body also declined to consider an unsupported legal allegation made by Morocco. However, with respect to certain other arguments of a legal nature made by Morocco, the Appellate Body indicated that it would consider whether Morocco's arguments were of assistance when it opined on the legal issues in respect of which Morocco's arguments were made. Ultimately, however, the Appellate Body did not reach those issues as they formed part of a conditional appeal made by Peru, and the condition on which the appeal of those issues was made was not satisfied.[246]

(iv) The Appellate Body's use of a "leave" procedure: In *EC—Asbestos*, the division acted pursuant to Rule 16(1) of the *Working Procedures* to adopt a "request for leave to file an *amicus curiae* brief" procedure in order to deal in a "fair and orderly manner" with anticipated submissions.[247]

At the outset of the appeal, the division invited the parties and the third parties to submit their comments on a number of questions relating to the potential adoption by the division of an "application for leave" procedure.[248] Having received these responses, and after

[244] ¶ 9.
[245] ¶ 166.
[246] ¶ 314.
[247] Rule 16(1) allows a division to adopt an additional procedure for the purpose of a particular appeal. In that case, a large number of *amicus curiae* briefs had been submitted during the proceedings before the panel, which led the Appellate Body to believe that the same would be true during the appeal phase.
[248] Canada, the European Communities and Brazil considered that issues pertaining to any such procedure should be dealt with by WTO Members themselves. The United States welcomed adoption of a "request for leave" procedure, and Zimbabwe indicated that it had no specific reasons to oppose adoption of a "request for leave" procedure. Without prejudice to their positions, Canada, the European Communities and the United States each made a number of suggestions regarding any such procedure that might be adopted.

consultations among all seven members of the Appellate Body, the division adopted an "Additional Procedure" to deal with written submissions received from persons other than the parties and third parties to this dispute. The Additional Procedure was communicated to the parties and third parties, circulated, in the form of a letter from the Chairman of the Appellate Body to the Chairman of the DSB, as a dispute settlement document to the Members of the WTO,[249] and posted on the WTO website on November 8, 2000.

The Additional Procedure required "[a]ny person, whether natural or legal, other than a party or a third party to this dispute, wishing to file a written brief with the Appellate Body" to submit an application for leave to file such a brief. The Additional Procedure specified a number of criteria to be met by each application,[250] and set a deadline of November 16, 2000 (the due date for the appellant's submission) for the filing of such applications. The Additional Procedure further explained that the Appellate Body would review and consider each application for leave to file a written brief and render a decision thereon. In the event that leave to file a written brief were granted, the Additional Procedure also set forth a deadline and a number of criteria that were required to be respected in such submissions.[251]

The Appellate Body received seventeen applications pursuant to the Additional Procedure requesting leave to file a written brief.[252] Six of these seventeen applications were received after the deadline specified in paragraph 2 of the Additional Procedure and, for this reason, leave to file a written brief was denied.[253] Eleven applications requesting leave to file were received by the Appellate Body within the November 16, 2000 deadline. Shortly thereafter, the Appellate Body decided to deny leave to file a written brief to the eleven entities that had submitted timely applications, in each case on the grounds of failure to comply sufficiently with all the requirements set forth in the Additional Procedure. Each applicant was sent a copy of the decision affecting its application.[254]

In the wake of these events, a special meeting of the General Council was held on November 22, 2000, where WTO Members expressed extreme dissatisfaction with the adoption by the Appellate Body of the Additional Procedure.[255]

The issue of *amicus curiae* briefs is also discussed in Chapter 32 of this book.

[249] WT/DS135/9, November 8, 2000.

[250] For example, applicants were required to limit their request to three pages, to identify themselves and the nature of their interest in the appeal, to identify the specific issues of law which the applicant wished to address in its written submission, explain why its submission would contribute to resolution of the dispute, and disclose any relationship with any of the parties or third parties in the case.

[251] For example, the submissions were not to exceed twenty pages, and were to include "a precise statement, strictly limited to legal arguments, supporting the applicant's legal position on the issues of law or legal interpretations in the Panel Report with respect to which the applicant has been granted leave to file a written brief."

[252] The Appellate Body also received thirteen written submissions from non-governmental organizations that were not submitted in accordance with the Additional Procedure. Each of these thirteen submissions was returned to its sender, along with a letter informing the sender of the procedure adopted by the division, together with a copy of the Additional Procedure. Only one of these non-governmental organizations subsequently submitted a request for leave in accordance with the Additional Procedure. (¶ 54)

[253] ¶ 55.

[254] ¶ 56. Three weeks after the oral hearing, the division received a written brief from a number of environmental organizations. As the division had already denied, in accordance with the Additional Procedure, an application from these organizations for leave to file a written brief in this appeal, the division did not accept this brief. (¶ 57)

[255] *See infra* Part V.

30. Conditional Appeals

On occasion, a party to a dispute brings a "conditional appeal" against a legal finding or interpretation by the panel. This involves a request that the Appellate Body review a particular legal finding or interpretation *only if* a specified condition—usually the reversal by the Appellate Body of another panel finding or interpretation—is satisfied. Rulings by the Appellate Body with respect to conditional appeals have indicated at least three criteria that must be met for the Appellate Body to rule on a conditional appeal. First, the conditional appeal must be properly brought.[256] Second, the condition on which the appeal is made must be satisfied.[257] Third, if ruling on the conditional appeal requires the application of relevant legal provisions to facts, then there must be sufficient factual findings or undisputed facts on the record for the Appellate Body to be able to "complete the analysis".[258]

The Appellate Body has declined to rule on conditional appeals in two additional circumstances. In *US—FSC*, the European Communities appealed one issue and asked the Appellate Body to rule on it *if* the Appellate Body considered that the United States could implement the recommendations and rulings of the DSB *without* repealing a particular statutory provision. The Appellate Body declined to address the issue, indicating that "we do not consider that it is appropriate for us to speculate on the ways in which the United States might choose to implement the rulings and recommendations of the DSB."[259] In other words, the Appellate Body found it inappropriate to consider whether the condition on which the European Communities' was made was satisfied. In *US—Steel Safeguards*, the conditions on which several appeals were made were satisfied, at least in part. Nevertheless, the Appellate Body declined to rule on the conditional appeals under Article 5.1 of the *Agreement on Safeguards* because the Appellate Body had already found the measures at issue to be inconsistent with Article XIX:1(a) of the GATT 1994 and with Articles 2.1, 3.1, and 4.2 of the *Agreement on Safeguards.* Hence, the Appellate Body deemed it "not necessary, for the purposes of resolving this dispute" to rule on the claims under Article 5.1 of the *Agreement on Safeguards*.[260]

31. Decision-Making—Opinions

The DSU does not identify a specific decision-making process for the division hearing an appeal, although Article 17.11 does require that any individual opinion expressed be anonymous. The *Working Procedures* elaborate the decision-making process. Rule 3(1) states that decisions relating to an appeal will be taken solely by the division hearing

[256] In the first case brought before the Appellate Body, Brazil and Venezuela requested the Appellate Body to make a ruling under the *TBT Agreement* in the event that the Appellate Body reversed the panel's findings on Article XX(g) of the GATT 1994. However, this request was made in Brazil and Venezuela's *appellee's* submission. Brazil and Venezuela did not file an other appellant's submission nor bring a separate appeal. Accordingly, the Appellate Body stated that, even if the condition on which the appeal was made had been satisfied, it would have been "most reluctant" to rule on the issues because "the route they chose for addressing the two issues in question is not contemplated by the *Working Procedures*, *and therefore, these issues are not properly the subject of this appeal*". (p. 12)

[257] Cases where the Appellate Body found that the condition on which an appeal was made was not satisfied and, in consequence, did not reach the conditional appeal include: *Brazil—Aircraft*, ¶ 196; *US—Lamb,* ¶ 196; *US—Hot-Rolled Steel*, ¶¶ 237 and 238; *US—FSC (21.5)*, ¶¶ 253–255; *EC—Sardines*, ¶¶ 312 and 313; and *US—Steel Safeguards*, ¶¶ 508–511.

[258] In *US—Hot-Rolled Steel*, the condition on which one of Japan's conditional appeals was made was satisfied. Nevertheless, the Appellate Body was unable to rule on the conditional appeal as there was an insufficient factual record to allow it to complete the analysis. (¶ 239)

[259] ¶ 175.

[260] ¶ 512.

the appeal, and Rule 3(2) directs the Appellate Body and divisions to "make every effort to take their decisions by consensus." Rule 3(2) further provides that, where consensus is not possible, "the matter at issue shall be decided by a majority vote." To date, all but one of the Appellate Body reports have been consensus opinions. In *EC—Asbestos*, one member of the division hearing the appeal wrote a separate but concurring opinion.[261]

32. Decision-Making—Collegiality

Rule 4 of the *Working Procedures* provides that, without prejudice to its authority to decide the appeal, a division hearing an appeal should, in the interests of collegiality, involve other Appellate Body members in the process. To this end, paragraph one sets out the objectives of ensuring "consistency and coherence in decision-making" and drawing "on the individual and collective expertise of the Members". More specifically, paragraph 3 of Rule 4 instructs the division hearing an appeal, before it finalizes its report, to "exchange views" with the other Appellate Body members who are not assigned to the division. To this end, all seven Appellate Body members receive the documents in all appeals. Following the oral hearing in each appeal the seven meet in Geneva in order for the three-member division hearing the appeal to discuss all of the issues raised in the appeal with their other four colleagues. Any Appellate Body member with a conflict of interest that did result or would have resulted in his or her being excused from the division does not participate in the exchange of views.

33. Interpretation of the Working Procedures

In *EC—Sardines*, the Appellate Body emphasized that the *Working Procedures* "must not be interpreted in a way that could undermine the effectiveness of the dispute settlement system". The Appellate Body referred, in this regard, to the "obligation to interpret the *Working Procedures* in a way that promotes the effective resolution of disputes", and observed that this obligation "is complemented by the obligation of Members, set out in Article 3.10 of the DSU, to 'engage in [dispute settlement] procedures in good faith in an effort to resolve the dispute.'"[262] Although the comment was not aimed specifically at the *Working Procedures*, the Appellate Body has also observed that the "procedural rules of WTO dispute settlement are designed to promote, not the development of litigation techniques, but simply the fair, prompt and effective resolution of trade disputes."[263]

34. Costs

At present, no provision of the DSU or the *Working Procedures* refers to the issue of costs. No participant in an appeal has ever requested—or been awarded—costs.

35. Failure to Appear or File a Timely Submission

Rule 29 of the *Working Procedures* authorizes the division hearing an appeal to "issue such order, including dismissal of the appeal, as it deems appropriate" in the event that a participant fails to file a submission within a required time-limit or fails to appear at the oral hearing. To date, the Appellate Body has not had recourse to this provision.

[261] ¶¶ 149–154.

[262] ¶¶ 139 and 140.

[263] Appellate Body Report, *US—FSC*, ¶ 166; also referred to in Appellate Body Report, *EC—Sardines*, ¶¶167 and footnote 71 thereto.

36. Withdrawal of an Appeal

The DSU does not address the issue of suspension or withdrawal of an appeal.[264] Rule 30(1) of the *Working Procedures* authorizes an appellant to withdraw its appeal at "any time during an appeal . . . by notifying the Appellate Body, which shall forthwith notify the DSB." The *Working Procedures* do not, however, elaborate the legal consequences that flow from such withdrawal.

In *EC—Sardines* the Appellate Body expressed certain views on Rule 30(1) and a party's right "conditionally" to withdraw an appeal and subsequently file it again. In that case, Peru challenged the sufficiency of the Notice of Appeal submitted by the European Communities. In response, the European Communities withdrew its Notice of Appeal "conditionally on the right of the European Communities to file [a] new Notice of Appeal" that was attached to the letter of withdrawal.[265] When Peru challenged the conditional withdrawal of the appeal, as well as the right of the European Communities to file a second appeal, the Appellate Body considered the proper scope of Rule 30(1) of the *Working Procedures*, and found that:

> Rule 30(1) permits conditional withdrawals, unless the condition imposed undermines the "fair, prompt and effective resolution of trade disputes", or unless the Member attaching the condition is not "engag[ing] in [dispute settlement] procedures in good faith in an effort to resolve the dispute." Therefore, it is necessary to examine any such conditions attached to withdrawals on a case-by-case basis to determine whether, in fact, the particular condition in a particular case in any way obstructs the dispute settlement process, or in some way diminishes the rights of the appellee or other participants in the appeal.[266]

The Appellate Body found "that the withdrawal of the original Notice on condition of filing a replacement Notice was appropriate and had the effect of conditionally withdrawing the original Notice" because the European Communities' conditional withdrawal and filing of a new Notice of Appeal was intended to remedy a deficiency perceived by Peru, and had been done in a timely manner.[267] The Appellate Body cautioned, however, that it would reach a different conclusion in circumstances where the withdrawal and filing of a replacement Notice of Appeal is "abusive and disruptive".[268]

Appellants have withdrawn their appeals four other times: in *US—FSC*, *US—Line Pipe, India—Autos* and *US—Softwood Lumber* IV.[269] In *United States—FSC; United States—Line Pipe,* and *US—Softwood Lumber IV*, the United States filed its Notice of Appeal quite soon after circulation of the relevant panel report.[270] For scheduling reasons, in each case, the United States withdrew its appeal on the condition that it could later be re-filed, and each time the appeal was re-filed at a later stage in the sixty-day appeal period for

[264] This compares with Article 12.12 of the DSU, which explicitly authorizes a panel to suspend its work for a period of up to one year at the request of the complaining party, and indicates that the panel's authority will lapse after that one year period.

[265] WT/DS231/11.

[266] *EC—Sardines*, ¶ 141.

[267] *Id.*, ¶ 145.

[268] *Id.*, ¶ 146. The Appellate Body gave, as an example of such an "abusive" practice, the withdrawal and re-filing of an appeal in order to "circumvent" the requirement in Article 16.4 of the DSU that a panel report be adopted or appealed within sixty days of its circulation.

[269] *See* WT/DS108/6; WTDS/202/8 ; WT/DS/146/9, WT/DS175/9; WT/DS257/7.

[270] In *US—FSC* the panel report was circulated on October 8, 1999 and appealed, for the first time, on October 28, 1999. In *US—Line Pipe* the panel report was circulated on October 29, 2001 and appealed, for the first time, on November 6, 2001. In *US—Softwood Lumber IV* the panel report was circulated on August 29, 2003 and appealed, for the first time, on October 2, 2003.

adoption or appeal of a circulated panel report.[271] In those cases the division hearing the appeal, as well as the appellees, had prior knowledge of, and accepted, the U.S. action.[272] However, at the first DSB meeting held following the U.S. withdrawal and re-filing of the appeal in *US—FSC*, India expressed concern that "no reasons [had] been given to justify the withdrawal". India also underlined that under Rule 30 of the *Working Procedures*, no reference is made to the effect that a withdrawn appeal may be launched again.[273]

In *India—Autos*, India withdrew its appeal on the day before the date scheduled for the oral hearing in the appeal. This withdrawal, which was made after the sixty-day period for the adoption or appeal of panel reports, was not conditional. The Appellate Body issued a short report detailing the procedural history of the case, and concluded that "[i]n view of India's withdrawal of the appeal by its letter of 14 March 2002, the Appellate Body hereby completes its work in this appeal."[274] The DSB then adopted the panel report and the Appellate Body report together at its meeting of April 5, 2002.[275]

37. Deadlines and Time-Limits in Appeals—Ninety Day Limit for Completion

Article 17.5 of the DSU states that, as a general rule, appellate proceedings shall not exceed sixty days from the date of the filing of the appeal to the date on which the Report is circulated and that, in "no case shall the proceedings exceed 90 days". In its early years, when its workload was lighter, the Appellate Body often circulated its reports before the ninety-day deadline. Since 1997, however, in the vast majority of cases, Appellate Body Reports have been circulated ninety days after the filing of the Notice of Appeal. This time-limit has been exceeded only four times, in *EC—Hormones*, *US—Lead and Bismuth II*, *EC—Asbestos* and *Thailand—H-Beams*. In three of these cases, the time-limit was extended due to a heavy workload, combined with the fact that the appeals ran over the Christmas/New Year holiday period.[276] In *US—Lead and Bismuth II* one of the members of the division hearing the appeal died suddenly during the course of the appeal. Another Appellate Body member was appointed to the division, and the newly-constituted division decided to hold a second oral hearing. In these extraordinary circumstances, the participants explicitly agreed in writing to a two-week extension of the ninety-day appeal period.[277]

[271] In *US—FSC* the United States withdrew its appeal on November 2, 1999 and re-filed the appeal on November 26, 1999. In *US—Line Pipe* the United States withdrew its appeal on November 13, 2001 and re-filed the appeal on November 19, 2001. In the latter case, the United States' filed its appellant's submission one day after its (re-filed) Notice of Appeal, and the other appellant's submission was filed five days after that. In *US—Softwood Lumber IV* the United States withdrew its appeal on October 3, 2003 and re-filed the appeal on October 24, 2003. The United States simultaneously filed its appellant's submission on that day.

[272] *See EC—Sardines*, note 31 to ¶ 138. In *US—Softwood Lumber IV*, the European Communities, a third participant, objected to the Working Schedule proposed by the division in the wake of the withdrawal and re-filing of the appeal, in particular to the deadline for its third participant's submission, which was set at fifteen days after the submission of the Notice of Appeal and appellant's submission. The division, however, refused the European Communities' request to modify this deadline: *see* ¶ 7 of the Appellate Body Report in that case.

[273] Minutes of the DSB meeting of at the DSB December 9, 1999, WT/DSB/M/72, p. 3.

[274] *India—Autos*, ¶ 18.

[275] WT/DS146/11, WT/DS175/11.

[276] In the case of *EC—Hormones*, *see* the Communication to the Chairman of the DSB from the Chairman of the Appellate Body dated December 10, 1997, referring to "the exceptional nature of this case" and "the time needed for translation and the intervention of the Christmas holiday period". (WT/DS48/9 and WT/DS26/11) *See* also Appellate Body Report, *EC—Asbestos*, ¶¶ 6 and 8; and Appellate Body Report, *Thailand—H-Beams*, ¶ 7.

[277] Appellate Body Report, *US—Lead and Bismuth II* ¶ 8.

By virtue of Article 4.9 of the *SCM Agreement*, when an appeal is made in the course of a dispute concerning a prohibited subsidy, the Appellate Body is to issue its report no more than sixty days after the filing of the Notice of Appeal. However, footnote 6 to Article 4 allows this deadline to be extended by mutual agreement of the parties. In practice, in disputes involving prohibited subsidies, parties have always agreed that the Appellate Body should deal with the appeal in its standard ninety-day period.[278]

38. Circulation of Report

Circulation of the report to the WTO Members is the last step in the appellate process that is within the control of the Appellate Body. Neither the DSU nor the *Working Procedures* prescribe a particular method of circulation. Typically, on the official date of circulation, Appellate Body Reports are distributed by placing hard copies of the report, in the three working languages of the WTO, in the mailboxes of the WTO Members.[279] At the same time, the three language versions of the report are placed on the WTO website. This usually occurs between 4 and 5 p.m. on the date of circulation. As a matter of practice, the Appellate Body will generally agree to allow the participants in an appeal—as long as the participants all agree—to pick up a hard copy of the final report a few hours in advance of the distribution to the mailboxes. In case of such early distribution, the Appellate Body reminds participants and third participants that the report is to remain confidential until such time as it is circulated to the membership as a whole.

Late in 2002, a work-to-rule action by the staff of the WTO secretariat threatened the usual practice of the Appellate Body with respect to circulation in two appeals that were ongoing at the time of the staff action. Accordingly, in his letter transmitting the report in *US—Carbon Steel* to the Chairman of the DSB, the Chairman of the Appellate Body warned that it might not be possible to circulate the report in all three languages, and that, if not, "then the Report will be circulated in its original language (English), with Spanish and French versions to be distributed once available."[280] Ultimately, it was possible for the report to be simultaneously circulated in the three languages. Shortly thereafter, the Chairman's letter to the DSB Chairman in the *US—Countervailing Duties on Certain EC Products* appeal cautioned that, due to the same work action, paper copies of the report would not be available in the three official WTO languages of the WTO on the planned circulation date but that, in order to ensure compliance with the ninety-day deadline prescribed by Article 17.5 of the DSU, an electronic version of the report in its original language (English) would be posted on the WTO website at 4 p.m. on that date.[281]

39. Precedential Value of AB Reports—"Stare decisis"?

There is no explicit doctrine of precedent in WTO dispute settlement that would require panels and/or the Appellate Body to follow previous Appellate Body decisions. In *Japan—Alcoholic Beverages*, the Appellate Body explained that, prior to the entry into force of the WTO Agreement, the generally-held view of the legal status of adopted GATT panel reports was that "subsequent panels did not feel legally bound by the details

[278] *See Canada—Aircraft,* ¶ 4.

[279] The covered agreements were concluded in English, French and Spanish, and each language version is authentic. In addition, Rule 30 of Chapter VIII of the rules of procedure for meetings of the General Council provides that "English, French and Spanish shall be the working languages." (WT/L/61)

[280] WT/DS213/8, December 2, 2002.

[281] WT/DS212/10, December 12, 2002. At an informal DSB meeting held shortly thereafter, several WTO Members expressed dissatisfaction with circulation in this manner.

and reasoning of a previous panel report." This, explained the Appellate Body, resulted from the fact that the decision by the CONTRACTING PARTIES to adopt a panel report did not "constitute agreement . . . on the legal reasoning in that panel report", nor express an intent "that their decision would constitute a definitive interpretation of the relevant provisions of GATT 1947."

The Appellate Body went on to explain that, today, the nature of adopted panel reports "continues to differ from interpretations of the GATT 1994 and the other Multilateral Trade Agreements under the *WTO Agreement* by the WTO Ministerial Conference or the General Council." Rather:

> Adopted panel reports are an important part of the GATT *acquis*. They are often considered by subsequent panels. They create legitimate expectations among WTO Members, and, therefore, should be taken into account where they are relevant to any dispute. However, they are not binding.[282]

In *United States—Shrimp (21.5)*, the Appellate Body referred to this passage and added that "[t]his reasoning applies to adopted Appellate Body Reports as well." In that case, Malaysia argued, on appeal, that the panel erred by virtue of the extensive references it made to the reasoning of the Appellate Body in its report in the original proceedings. The Appellate Body, however, rejected this ground of appeal, observing that, given the direct relevance of the Appellate Body's reasoning to the issues before the panel, the panel "was correct in using our findings as a tool for its own reasoning", and that:

> [t]he Panel had, necessarily, to consider our views on this subject, as we . . . had provided interpretative guidance for future panels, such as the Panel in this case.[283]

40. Precedential Value of AB Reports—"Res judicata"?

Article 17.14 of the DSU makes explicit that Appellate Body reports are binding on the parties to the dispute.[284] This provision does not, however, directly define whether, and to what extent the binding nature of adopted Appellate Body reports serves as a bar to future dispute settlement proceedings raising the same issues—whether, in other words, WTO dispute settlement recognizes a principle analogous to the concept of *res judicata*.[285] Nevertheless, certain comments made by the Appellate Body in the context of proceedings under Article 21.5 of the DSU shed some light on this issue. In particular, in *US—Shrimp (21.5)*, the Article 21.5 panel reasoned that "as long as the implementing measure before us is identical to the measure examined [in the original proceedings] by the Appellate Body in relation to paragraph (g) [of Article XX of the GATT 1994], we should not reach a different conclusion from the Appellate Body".[286] Using this logic, and having concluded that the measure at issue remained the same, the Article 21.5 panel went on to find that "since Section 609 as such has not been modified, the findings of the Appellate Body regarding paragraph (g) remain valid and the consistency of Section 609 as such

[282] Appellate Body Report, *US—Gasoline*, p. 14.

[283] Appellate Body Report, *US—Shrimp (Article 21.5—Malaysia)*, ¶¶ 107–109.

[284] It provides, in relevant part, that an adopted Appellate Body report shall be "unconditionally accepted by the parties to the dispute".

[285] In common law jurisdictions, the concept of *res judicata* means "a specific doctrine that precludes relitigation of claims and issues arising from the same cause of action between the same parties and their privies after a final judgment on the merits by a competent tribunal or after some other final determination having the same effect." MERRIAM WEBSTER'S DICTIONARY OF LAW 430 (Linda Picard Wood, ed. 1996).

[286] Panel Report, *US—Shrimp (Article 21.5—Malaysia)*, WT/DS58/RW, adopted 21 November 2001, as upheld by the Appellate Body Report, WT/DS58/AB/RW, ¶ 5.39.

with the requirements of paragraph (g) also remains valid".[287] On appeal, Malaysia challenged this approach, arguing that the panel had acted inconsistently with Article 21.5 of the DSU because it had failed to examine the consistency with the covered agreements of the measure taken to comply with the rulings and recommendations of the DSB in the original *United States—Shrimp* proceedings. The Appellate Body dismissed Malaysia's appeal on this issue, ruling that:

> the Panel properly examined Section 609 as part of its examination of the totality of the new measure, correctly found that Section 609 had not been changed since the original proceedings, and rightly concluded that our ruling in *United States—Shrimp* with respect to the consistency of Section 609, therefore, still stands.[288]

The Appellate Body has also ruled that, when findings in the original panel report are adopted without being appealed, then they cannot be revisited by the Appellate Body in subsequent proceedings under Article 21.5 of the DSU. In *Mexico—Corn Syrup (Article 21.5—US)*, the Appellate Body invoked three factors in refusing to re-examine findings in the original panel report: (i) the original proceedings and the Article 21.5 proceedings did not deal with the same measure; (ii) Mexico did not appeal the original panel's report; and (iii) "Articles 3.2 and 3.3 of the DSU reflect the importance to the multilateral trading system of security, predictability and the prompt settlement of disputes."[289] In *EC—Bed Linen (Article 21.5—India)* the Appellate Body elaborated its reasoning as follows:

> . . . a reading of Articles 16.4 and 19.1, paragraphs 1 and 3 of Article 21, and Article 22.1 [of the DSU], taken together, makes it abundantly clear that a panel finding which is not appealed, and which is included in a panel report *adopted* by the DSB, must be accepted by the parties as a *final* resolution to the dispute between them, in the same way and with the same finality as a finding included in an Appellate Body Report adopted by the DSB—with respect to the particular claim and the specific component of the measure that is the subject of the claim.[290]

Thus an adopted panel ruling on a particular claim made with respect to specific aspects of a measure constitutes final resolution of the matter between the parties. This was so whether the original panel had ruled that the measure was *consistent* (as in the *Shrimp* case) or that the complainant had failed to establish a *prima facie* case (as in *Bed Linen*).[291]

The above rulings of the Appellate Body suggest that where, in Article 21.5 proceedings, there is identity of parties, claims and of the measure at issue, then a concept akin in some respects to *res judicata* prevents the panel and the Appellate Body from revisiting matters already decided in the original proceedings. It is not yet clear, however, the extent to which the principle would have application beyond the particular circumstances of these cases—for example in ordinary proceedings, rather than those conducted pursuant

[287] Panel Report, *US—Shrimp (Article 21.5—Malaysia)*, 5.41

[288] *United States—Shrimp(Article 21.5—Malaysia)*, ¶ 96.

[289] *Mexico—Corn Syrup (Article 21.5—US)*, ¶ 79.

[290] *EC—Bed Linen (21.5)*, ¶ 93.

[291] However, in note 115 to paragraph 96 of its Report in *EC—Bed Linen (21.5),* the Appellate Body noted that a similar bar would not apply in circumstances where the original panel declined to rule on a specific claim because it exercised "false judicial economy" and only partially resolved the matter before it. In such circumstances, the Appellate Body stated:

> . . . a complainant should not be held responsible for the panel's false exercise of judicial economy, such that a complainant would not be prevented from raising the claim in a subsequent proceeding.

to Article 21.5 of the DSU; nor the extent of "identity" of parties, claims and measures that is necessary to bar further consideration of a matter.[292]

V. Appraisal of the Appellate Body

Over the first eight years of its existence, the Appellate Body has established a significant body of procedural rules and practices. These are considerably more detailed and sophisticated than the procedures employed by GATT panels, and more comprehensive than the procedures still used by WTO panels.[293] The adoption of the *Working Procedures* and the experience accumulated over eight years of confronting procedural issues in appeals have added flesh to the skeletal outlines of appellate procedures contained in the DSU. Procedural rules are informed by, and essential to ensuring respect for, the principles of due process, fairness, and good faith. Never has a procedural issue prevented the Appellate Body from complying with its responsibilities to decide an appeal. The Appellate Body has also been vigilant to prevent its procedural rules from being employed by Members as a tool for "abusive litigation techniques".[294]

It is significant that the vast majority of procedural rules adopted and procedural rulings made by the Appellate Body have attracted no comment from Members or outside commentators. The relatively smooth operation of these procedures demonstrates that, for the most part, the procedural aspects of appellate review are functioning well.

Experience has, inevitably, exposed a few gaps in the rules set out in the DSU and *Working Procedures*, as well as pockets of dissatisfaction amongst WTO Members. Chief among these is the highly contentious issue of *amicus curiae* briefs. Although some Members expressed negative views concerning the Appellate Body's treatment of *amicus* briefs in *US—Shrimp*[295] and *US—Lead and Bismuth II,*[296] the procedural action taken by the Appellate Body that generated the single greatest reaction from WTO Members was its decision to adopt, in the *EC—Asbestos* case, an additional procedure to deal with the anticipated submission of "*amicus curiae*" briefs. The General Council held a Special Meeting on November 22, 2000 to discuss the Appellate Body's approach to the *amicus curiae* brief issue in the *EC—Asbestos* case. Many WTO Members expressed strong

[292] In *Canada—Periodicals*, for example, the Appellate Body stated, in footnote 28 to p. 19, that:

> . . . a Panel finding that has not been specifically appealed in a particular case should not be considered to have been endorsed by the Appellate Body. Such a finding may be examined by the Appellate Body when the issue is raised properly in a subsequent appeal.

[293] Panels adopt *ad hoc* procedures that are typically more comprehensive than those set forth in Appendix 3 to the DSU. Although they seem to be moving in this direction, panels have not yet, notwithstanding Appellate Body exhortations to do so, adopted detailed, standard working procedures. *See* Appellate Body Reports, *European Communities –Bananas III*, ¶ 144; *India—Patents*, ¶ 95; and *Argentina—Footwear*, note 68 to ¶ 79.

[294] Appellate Body Report, *EC—Sardines*, ¶ 151.

[295] Minutes of the DSB meeting of November 6, 1998, WT/DSB/M/50.

[296] *US—Lead and Bismuth II* was the first appeal in which the Appellate Body was asked to accept the direct submission of *amicus briefs,* and the first time that it opined that it had the authority to do so. Several Members criticized this holding at the DSB meeting when the report was adopted, and asked the Chairman of the DSB whether he or the Director General had been consulted by the Appellate Body prior to taking the decision in that appeal. The Chairman made a statement at a subsequent DSB meeting explaining that neither he nor the Director-General had been consulted, but that such consultations were not necessary because the Appellate Body had not been adopting a new Working Procedure, but rather ruling on a specific procedural objection raised by one of the parties to the dispute. Minutes of the DSB Meeting of June 19, 2000, WT/DSB/M/84, p. 20. *See also* WT/DSB/W/137, June 21, 2000, and the minutes of the DSB meeting of June 7, 2000, WT/DSB/M/83.

opposition to the Appellate Body's approach.[297] A proposal was put forth to "order" the Appellate Body to revoke its procedure, although this was not agreed.[298] According to press reports, some Members even privately called for the resignation of the Appellate Body Chairman over the issue.[299] The Chairman of the General Council undertook to convey the sentiments expressed by Members to the Appellate Body and to instruct the Appellate Body to proceed with "extreme caution" when dealing with *amicus curiae* briefs in future, and to initiate discussions with Members on establishing procedures for such briefs.[300]

The criticism that has been directed at the Appellate Body on *amicus curiae* briefs reflects ongoing and lively debate amongst WTO Members, who have so far been unable themselves to reach consensus on this issue. Yet the controversy concerning Appellate Body rulings on *amicus curiae* briefs has also exposed two more fundamental issues. First, some Members appear to accept that the Appellate Body has significant discretion to adopt procedural rules, but not substantive rules. These Members argue that the issue of *amicus curiae* briefs is not procedural but substantive and, thus, an issue to be regulated by WTO Members alone. Accordingly, the *amicus* debate raises the question of how properly to distinguish between procedural and substantive issues. Second, some Members consider that, irrespective of whether the *amicus* issue is properly classified as procedural or substantive in nature, the problem to be resolved is who (WTO Members or the Appellate Body) should engage in "gap-filling" if existing rules make no explicit provision for dealing with particular issues? Chile has expressed its view as follows:

> [the Appellate Body's ruling regarding *amicus curiae* in *EC—Sardines* was] to a large extent based on the premise that, where an act or a procedural right was not specifically prohibited by the DSU or the Working Procedures, it existed and was allowed . . . . In other words, anything that was not prohibited was permitted. Since these Agreements had been negotiated among several parties, this premise could not be applied. The Agreements were the result of compromises and represented a balance of rights and obligations which the parties had specifically laid down in the text. This was why it was not possible to read between the lines and necessarily impose new rights and obligations. They provided the system with certainty and predictability. In the final analysis, what should prevail was the principle that only what was allowed in the Agreements would be permitted.[301]

A related question concerning Appellate Body control of its proceedings arose in connection with the Appellate Body's most recent amendments to its *Working Procedures.*[302]

[297] With regard to the general question of acceptance of *amicus curiae* briefs, the United States took the view that this is permitted under the Appellate Body's general powers under the DSU, and New Zealand and Switzerland also supported the action taken by the Appellate Body in the case. Japan and the European Communities took the position that in certain circumstances this might be appropriate. However, the vast majority of Members that expressed views during the meeting, including Egypt, India, Malaysia and Pakistan were opposed to the acceptance of *amicus curiae* briefs by panels and the Appellate Body.

[298] *WTO Members Warn Appellate Body on Amicus Procedures,* INSIDE US TRADE, December 1, 2000.

[299] *WTO General Council Slaps Appellate Body on Amicus Briefs*, BRIDGES WEEKLY TRADE NEWS DIGEST, Vol. 4, Number 45, November 28, 2000.

[300] *Id.* Criticism of the Appellate Body's handling of *amicus curiae* briefs has continued in DSB meetings where subsequent reports dealing with the issue have been adopted, s*ee* for example, minutes of the DSB meeting of 23 October 2002, where the report in *EC—Sardines* was adopted, WT/DSB/M/134.

[301] WT/DSB/M/134, ¶ 42. Mexico expressed a similar sentiment at the same meeting (¶ 48).

[302] Some Members objected to temporary amendments published by the Appellate Body on September 27, 2002, on the grounds that they had not been adequately consulted by the Chairman of the DSB. As a consequence, the DSB held an informal DSB meeting to air Members' views on the amendments. The relevant issues were discussed again at a subsequent DSB meeting, and the Chairman requested to convey the views of Members to the Appellate Body. *See* WT/DSB/M/134 and WT/AB/W/5.

After certain Members expressed concern that they had not been adequately consulted on the amendments, the DSB adopted agreed procedures for consultations between Members and the Chairperson of the DSB with respect to amendments to the *Working Procedures*.[303] These developments may signal that Members desire to be more involved in the process of developing the more detailed, technical rules relating to Appellate Body procedures in the future. In April 2004, the Appellate Body circulated possible amendments to the *Working Procedures*. Members made extensive comments thereon, and the Appellate Body expressly took account of these comments in adopting the final version of the amendments.[304]

Moreover, although WTO Members have discussed amendments to the DSU at length, first during the DSU review conducted in 1998–1999, and more recently during the Doha Development Round, relatively few of the proposals made by Members have related to appellate procedures.[305] To date, these proposals have generated comparatively little discussion relative to many other issues. While it is difficult to predict the outcome of the negotiations at this stage, the proposals that seem to have garnered widespread support among Members are ones that would result in only modest changes to appellate procedures.

Two proposed amendments illustrate the types of issues under discussion by Members. One idea that could alter the architecture of the overall dispute settlement system is the proposal to create a remand power. This would allow the Appellate Body to send cases back to the original panel in circumstances where appellate rulings mean that there are insufficient factual findings or uncontested facts on the record for the Appellate Body to resolve the dispute.[306] Some WTO Members have proposed adding a footnote to Article 17.6 of the DSU that would set forth certain requirements for the Notice of Appeal, including that the Notice identify issues sufficiently clearly so as to allow the parties and third parties to understand the issues that are appealed.[307]

[303] WT/DSB/M214.

[304] *See* WT/AB/WP/W/8, WT/DSB/M/169 and WT/AB/WP/W/9. The amendments to the *Working Procedures* will come into force on January 1, 2005.

[305] Members have proposed increasing the number of Appellate Body members, or providing that either the DSB or General Council may take a decision to increase their number. Others have proposed increasing the term that Appellate Body members are appointed to serve but making that term non-renewable. Increased third party rights before the Appellate Body have been proposed, including the possibility of WTO Members who did not reserve their third party rights before the panel being allowed to participate in the appeal. A number of other proposals have also been made that would affect different stages of the dispute settlement process, including appellate review. These include suggestions to increase the transparency of proceedings by, for example, making submissions, or at least non-confidential versions thereof, publicly available and opening panel and Appellate Body hearings to the public; adopting clear rules on *amicus curiae* briefs (proposals have been made both to allow and to prohibit consideration of such submissions); requiring each member of a panel or of an Appellate Body division to write a separate opinion in the report; and adding stronger rules on special and differential treatment for developing countries, including allowing for the award of litigation costs to developing country parties that prevail in dispute settlement proceedings. A more fundamental change to Appellate Body procedures was suggested by the United States and Chile. They jointly proposed that the maximum time-period for hearing appeals be extended from 90 to 120 days, and that the extra time be used to accommodate the insertion of a new "interim review" stage at the appellate level. In the same proposal, the United States and Chile suggested that appeals could be suspended upon agreement of the parties and applicable deadlines extended accordingly, and that the decision-making process by which the DSB adopts Appellate Body Reports could be amended to allow for the "partial adoption" of reports. This proposal would allow the DSB to decide, by consensus, not to adopt specific findings, or the basic rationale behind a specific finding in a report.

[306] *See* the proposals made by the European Communities and Jordan, TN/DS/W/38 and TN/DS/W/43.

[307] *See* the proposal by India *et al*, TN/DS/W/47. The suggestion to add such a footnote seems to respond directly to procedural rulings that have been made by the Appellate Body on the issue of the sufficiency of the Notice of Appeal. *See* Subpart IV.B.5 above.

The Chairman's text circulated to Members on June 6, 2003 included several proposed amendments to the DSU that would have a modest but important effect on appellate review within the WTO system. These include the enhancement of third party rights, the introduction of an interim review stage and a remand procedure, and the introduction into the DSU of the concept of the Notice of Appeal and certain requirements as to its content.[308] However, several parts of these proposals remain in bracketed text (indicating doubt on the part of the Chairman as to whether they can be agreed). In addition, it is not clear that this text will serve as the basis for continued negotiations in 2004.

There has been only limited commentary from outside observers on the procedures used by the Appellate Body. In addition to more extensive commentary on the high-profile *amicus curiae* issue, there have a few articles published on discrete issues such as the possibility of a remand authority,[309] the precedential value of Appellate Body Reports,[310] and the scope of appellate review.[311] More broadly, the increased use of procedural rules that has accompanied the creation of the Appellate Body and its pronouncements in the more than fifty reports that it has issued in eight years, are for many a sign of the increased "judicialization" of WTO dispute settlement.[312] Amongst commentators who have considered this theme, those who support such a trend tend to also support transparent, comprehensive procedures. Those who favor preserving a less formal, less legalistic form of dispute settlement are somewhat more skeptical of the need for detailed procedural rules.

In sum, the Appellate Body has been able, through application of the rules set out mainly in the DSU and the *Working Procedures*, as well as *ad hoc* rulings, to deal with all issues of procedure that have arisen in the appeals brought before it. This accomplishment is an important one, and one that is recognized in the fact that WTO Members have so far debated tinkering with, but not radically revising, the rules that structure and govern appellate procedures. The successful formulation and application of procedural rules is an essential foundation of WTO appellate review. Proper procedures serve the objectives of ensuring due process and fairness, help to guarantee the security and predictability of the dispute settlement process itself, and allow the parties and the Appellate Body to focus their energies on issues of substance. And this, in turn, enhances the efficacy and vigor of WTO dispute settlement as a whole.

*** Alexander W. Koff is a senior associate at Paul Hastings Janofsky & Walker LLP in Washington, D.C., practicing in the area of international dispute resolution.

I. Introduction

The implementation and enforcement mechanisms of the World Trade Organization Agreements are unprecedented in the realm of multilateral treaty regimes with a large membership. With the exception of the judicial system of the European Union, which has the benefit of a far smaller and less diverse membership, the Dispute Settlement Understanding ("DSU")[1] of the WTO provides the most detailed and rules-based system ever seen in international treaty law. From the WTO headquarters in Geneva, Switzerland, panelists and the Appellate Body are rendering judicial decisions in areas such as intellectual property protection, services, the environment, and health and safety, that extend far beyond the traditional role of its predecessor, the General Agreement on Tariffs and Trade ("GATT") 1947.[2] For the most part, Members have complied with the rulings of panels and the Appellate Body.[3]

The WTO attempts to establish a delicate middle ground between a dispute settlement mechanism that would "criminalize" the behavior of foreign governments and one that would allow Members to violate the Agreements with impunity. As one commentator has aptly stated:

> When a panel established under the WTO Dispute Settlement Understanding issues a ruling adverse to a member, there is no prospect of incarceration, injunctive relief, damages for harm inflicted or police enforcement. The WTO has no jailhouse, no bail bondsmen, no blue helmets, no truncheons or tear gas. . . Compliance with the WTO, as interpreted through dispute settlement panels, remains elective.[4]

But a Member does not violate the WTO Agreements without consequences. In an international legal system where the observance of the law depends heavily on extra-legal pressures, such as reputation in the trading and investment community, stability of the WTO system, and other foreign relations concerns, it is difficult for a Member to excuse its noncompliance with a ruling adopted and published by the WTO.

Moreover, as discussed in detail below, after a Member has been found to violate the WTO and has failed to bring its laws into compliance within a "reasonable" period of time, the Dispute Settlement Body ("DSB"), made up of one representative from each Member, can authorize retaliatory trade measures against the violating Member—assuming that the parties to the dispute have not been able to agree upon compensation. This provides a continuing incentive to change the offending measure and clearly brands the Member as a violator of the WTO. Viewing the WTO as a part of the larger realm of

[1] *Understanding on Rules and Procedures Governing the Settlement of Disputes*, Annex 2, Marrakesh Agreement Establishing the World Trade Organization (1994).

[2] For a complete account of GATT 1947 dispute settlement practice, *see* THE ANALYTICAL INDEX (GUIDE TO GATT LAW AND PRACTICE), (1994).

[3] The Secretariat of the WTO periodically publishes a summary of all cases at www.wto.org. For example, *see Update of WTO Dispute Settlement Cases*, WT/DS/OV/21 (June 30, 2004). Of the 312 complaints notified to the WTO as of June 16, 2004: (1) 44 have resulted in mutually agreed solutions; (2) 26 were inactive or were settled based on withdrawal of a panel request or termination of a contested measure; (3) 80 resulted in adopted panel or Appellate Body reports; and (4) 24 were currently being reviewed in active panels. *Id* at p. ii. These numbers do not add up to 312 because a number of the complaints were consolidated at the panel stage. As of June 16, 2004, only eight cases had reached the stage where it was necessary to determine a level of retaliation through arbitration pursuant to Article 22.6 of the DSU, and Four of these cases consisted of two pairs of related cases. *Id.* During this time, there was also one case in which the level of nullification and impairment was determined pursuant to arbitration under Article 25 of the DSU. *See US—Section 110(5) of the US Copyright Act*, WT/DS160/ARB25/1 (2001).

[4] Judith H. Bello, *The WTO Dispute Settlement Understanding: Less is More*, 90 AM. J. INT'L L. 416, 417 (1996).

international law, Professor Jackson points out that an "adopted dispute settlement report establishes an international law obligation upon the member in question to change its practice to make it consistent with the rules of the WTO Agreements and its annexes."[5]

The extent to which the WTO dispute settlement system has established an enforcement mechanism with "teeth," as that term is used in the jargon of international legal scholars, is subject to debate. What is clear, though, is that in the context of international treaty regimes, the WTO is unique in its ability to make a violation transparent, and then to authorize retaliation against the violator.

Because of the limitations on the enforcement "powers" of the WTO, the ultimate conclusion of any dispute requires negotiation by the Members concerned. Although retaliation and concerns for reputation motivate a Member to bring its measures into compliance, the WTO dispute resolution mechanism has no remedy beyond the authorization of retaliation to force a government to change its domestic laws. Ultimately, the offending measure will be changed only if the violating Member agrees to change it.

Indeed, in a dispute resolution mechanism applied by and to sovereign governments, negotiation is an indispensable element of the process. Adjudication on the merits—by panels, by the Appellate Body, and by arbitrators—merely changes the terms of the negotiation, but cannot replace the need for it.

Just as with any other system of dispute resolution, the WTO does not generally benefit when Members push the dispute settlement mechanism to its limits. While the meaning of the WTO Agreements may become more transparent as a result of published panel, Appellate Body, and arbitration decisions, the prompt settlement of individual disputes is the ultimate goal of the DSU. Article 3.3 of the DSU makes this clear:

> The *prompt settlement* of situations in which a Member considers that any benefits accruing to it directly or indirectly under the covered agreements are being impaired by measures taken by another Member *is essential to the effective functioning of the WTO* and the maintenance of a proper balance between the rights and obligations of Members. (emphasis added).

Disputes such as *EC—Regime for the Importation, Sale and Distribution of Bananas* ("*EC-Bananas*") and *EC—Measures Concerning Meat and Meat Products* ("*EC-Hormones*"), discussed below, that take years to conclude and result in the authorization of trade retaliation, have tested the stability and reputation of the WTO. Furthermore, the WTO Secretariat has limited resources to deal with such cases.

Thus, one of the central focuses of modifying WTO dispute settlement in the future must be on enhancing incentives and opportunities for settlement. Despite the already common occurrence of settlement in WTO disputes, both at the beginning and at the end of the dispute resolution process, WTO Members could do more to utilize the available mechanisms already established in the DSU to foster settlement.

This chapter explores the implementation and enforcement mechanisms of the WTO, both from a theoretical and practical perspective. In order to provide a proper context, it is necessary to analyze theories of negotiation and general theories of implementation in international law, as they apply to the WTO, before proceeding to a detailed discussion of the WTO in operation. This preliminary analysis is performed in Parts II and III. Part IV provides an overview of the WTO Dispute Settlement Understanding as it relates to implementation, and a discussion of some of the major issues that have arisen in its performance. Finally, Part V explores potential modifications to the dispute

[5] John H. Jackson, *The WTO Dispute Settlement Understanding—Misunderstandings on the Nature of Legal Obligations*, 91 Am. J. Int'l L. 60 (1997).

settlement mechanism that could, if agreed to by WTO Members, substantially increase the likelihood of timely implementation.

II. Bargaining in the Shadow of the WTO

Settlement by negotiation is an option at any point during a dispute between WTO Members, whether before consultations have taken place or after retaliation has been authorized by the DSB. But the negotiating and bargaining does not occur in a vacuum. Two sides in a dispute bargain "in the shadow of the law,"[6] or, in the case of WTO Members, "in the shadow of the WTO." In other words, each party to the dispute has an endowment, or bargaining chip, based on the outcome that the law will impose if no agreement is reached.[7] For Members engaged in WTO consultations, the key bargaining chip is the binding nature of the dispute resolution mechanism.[8]

If the outcome of a dispute is clear to all parties involved, this clarity will encourage settlement and, if necessary, implementation. Unfortunately, multilateral treaties are not generally known for their clarity, and the text of the various WTO Agreements is no exception. During negotiation of such treaties, often the only way to reach consensus is to draft ambiguous language that can be interpreted in different ways, allowing each negotiator to claim success before his or her domestic constituency. Greater levels of ambiguity in the language, however, decrease the ability of Members to predict how a panel or the Appellate Body would rule in a dispute. In turn, this reduces the possibility of settlement.

Thus, by interpreting the language of the WTO Agreements, the adopted decisions of the panels and Appellate Body of the WTO serve to clarify "the shadow of the law" and encourage future settlement and implementation. The introduction of an Appellate Body, with a membership that does not change with each case, and a policy of collegiality whereby all Appellate Body members are consulted on each case,[9] is one of the greatest advances of the WTO over the GATT and other international dispute settlement mechanisms.[10] Members involved in a dispute about portions of the WTO Agreements that have been previously interpreted by panels and the Appellate Body should be more likely to settle than to proceed to a predictable outcome at great expense.

To reach a mutually beneficial settlement, all parties involved in the dispute—the governments and the underlying parties at interest—must conclude that the expected net benefit of a settlement exceeds the expected net benefit of continuing the dispute. And these expected net benefits are evaluated not only based upon the expected legal decisions, but also upon the expected costs and benefits during the interim period while the parties await a final decision. Although legal fees and other transaction costs are expected costs for both parties, and increase the desirability of early settlement, the generally forward-looking retaliation mechanism of the WTO discourages settlement and implementation by the violating party. The WTO does not generally allow for retroactive remedies for

[10] The GATT dispute settlement process relied solely on *ad hoc* panels, with no appellate review.

violations of the Agreements.[11] Thus, if a Member benefits from its failure to obey a WTO obligation, the lack of retroactive remedies increases the incentive to both delay and extend the dispute settlement process as much as possible.[12]

The perverse incentives created by the lack of retroactive remedies is confirmed by Butler and Hauser's economic analysis of the WTO dispute settlement process.[13] They conclude as follows:

> Even if the probability of winning a case is slim, countries have an incentive to introduce trade restrictions, as rents continue to accrue during the litigation process, and sanctions or compensations for past damages do not exist.[14]

Consequently, Members defending their regulations have a strong tendency to appeal panel decisions even if their chances of overturning the decision are low, in order to delay implementation and retaliation measures.[15]

Another major deterrent to settlement in the WTO is the failure of Members to include enforcement mechanisms in settlement agreements. This factor, combined with the lack of retroactive remedies, allows a Member to breach a settlement agreement with impunity (unless the breach is itself inconsistent with WTO rules), while benefiting by delaying adjudication and maintaining the violation for a longer period of time. Given these perverse incentives, it is apparent that extra-legal concerns must weigh heavily in a Member's decision to comply with the terms of a settlement agreement. The lack of enforcement mechanisms in settlement agreements, however, may serve to diminish the number of settlements or delay the stage of the process when settlement occurs. Part V of this chapter proposes methods to allow for enforcement of settlement agreements.

Even with these problems, WTO Members have reached settlement agreements often, particularly during the early years of the WTO.[16] A study of combined statistics of GATT and WTO disputes revealed that in roughly 55 percent of disputes no panel was ever established, and that an additional eight percent of cases settled prior to the issuance of a panel report.[17] The study found that these statistics have not changed much over time, including under the WTO.[18] A 1997 report by the Office of the United States Trade Representative ("USTR") emphasized the success of the United States in reaching favorable settlements during the first years of the WTO.[19]

> The new dispute settlement rules often make it possible for us to enforce WTO Agreements without ever having to reach a panel decision. The fact that the WTO can and will authorize us to retaliate pays off in earlier settlements opening markets for more of our exports.[20]

[11] *But see* Art. 4.7 of the Agreement on Subsidies and Countervailing Measures ("SCM Agreement") (a Member must "withdraw" a prohibited subsidy) and the interpretation of the panel in Recourse to Art. 21.5 of the DSU by the United States, *Australia—Subsidies Provided to Producers and Exporters of Automotive Leather* WT/DS126/RW (2000), ¶¶ 6.48–6.49 ("repayment is necessary in order to 'withdraw' the prohibited subsidies").

[20] *Id.*

The report listed a number of cases that settled prior to a panel ruling. For example, in the case of *Korea—Measures Concerning the Shelf-life of Products* (WT/DS5), consultations regarding requirements that restricted imports of U.S. goods led to a commitment by Korea to phase out those restrictions.[21] The timing of this settlement is notable. The request for consultations was dated May 3, 1995 and the parties notified the settlement on July 31, 1995—less than three months later.[22] In *Japan—Measures Concerning Sound Recordings* (WT/DS28), the first request involving the TRIPS Agreement, the United States and Japan reached a settlement agreement in which Japan agreed to amend its law within a year of the request for consultations.[23] Other instances where settlement agreements were reached with the United States without panel adjudication include: (1) *Pakistan—Patent Protection for Pharmaceutical and Agricultural Chemical Products* (WT/DS36) (settlement within ten months of consultation request); (2) *Portugal—Patent Protection under the Industrial Property Act* (WT/DS37) (settlement within six months of request for consultations); (3) *Turkey—Taxation of Foreign Film Revenue* (WT/DS43) (settlement within thirteen months of request for consultations); and (4) *Hungary—Export Subsidies in Respect of Agricultural Products* (WT/DS35) (settlement within sixteen months of request for consultations).[24]

In one instance, *EC—Trade Descriptions of Scallops* (WT/DS7, WT/DS12, WT/DS14), the parties settled after the panel had already concluded its deliberations and issued an interim panel report, but before the final report was circulated to the public. The prospect of an adjudicated result that fell short of all parties' expectations led to a corresponding change in the motivation to reach settlement. It is, however, a settlement that went counter to the understanding that there is an "overwhelming incentive to appeal" rulings.[25] In the *EC-Scallops* case, the desire to keep a report "confidential" (and thereby avoid an unfavorable ruling) appears to have outweighed the incentive to appeal it.

III. Theories of Implementation in International Law

Countries, just as individuals, choose to obey or violate laws for various reasons.[26] In both cases, extra-legal sanctions, such as reputation-based concerns, prestige, credit, relationships, and other interests play an important role. Indeed, lacking a central international government with the authority to parse out and enforce sanctions, international law relies much more upon extra-legal sanctions for compliance than does domestic law. Despite a general absence of coercive sanctions in public international law (with the rare exception of military action authorized by the UN Security Council) and international treaty regimes, Henkin declares: "It is probably the case that *almost all nations observe almost all principles of international law and almost all of their obligations almost all of the time.*"[27] Yet, as the obligations become more technical and politically intrusive, such as those required by the WTO agreements, the pressures against compliance increase significantly.

[27] *Id.* at 47 (emphasis added).

Bello identifies four factors that motivate Members to comply with WTO rules and dispute settlement rulings.[28] First, Members comply because it benefits them when other Members do likewise.[29] In fact, this explains the basic motivation behind countries crafting and joining the WTO, and the GATT before it. It follows, then, that it is in the self-interest of Members to respect a system that they expect others to respect.

Second, Members lose "international credibility and clout through scofflaw conduct."[30] Credibility is critical in international relations, and countries must carefully consider whether maintaining a trade restriction is worth the harm to a country's credibility in successive trade negotiations.

Third, Bello states that a WTO Member complies in order to avoid "damage to [their] economic interests through compensation or retaliation."[31] She refers here to the legal penalties imposed under the WTO DSU, but properly places them in the context of the other motivating factors for implementation. Fourth, according to Bello, if Members do not comply with WTO rules and rulings, then international cooperation on other issues may be jeopardized.[32] These issues include national security, illicit drug trafficking, illegal immigration, arms control, environmental protection, and promotion of human rights. A trade dispute can be a thorn in the side of a relationship that makes it difficult to come to agreement on other issues that, in many cases, are far more important to a country's self-interest.[33]

Chayes and Chayes ("Chayes") provide an important commentary on the relationship between sovereignty, on the one hand, and participation in the international community, on the other, that is especially relevant here:

> In today's setting, the only way most states can realize and express their sovereignty is through participation in the various regimes that regulate and order the international system. Isolation from the pervasive and rich international context means that the state's potential for economic growth and political influence will not be realized. Connection to the rest of the world and the political ability to be an actor within it are more important than any tangible benefits in explaining compliance with international regulatory agreements.[34]

These concerns seem far greater than the individual issues at stake in specific WTO trade disputes.

Leaders operate within the confines of their own domestic legal and political systems, and often need to balance competing interest groups. An adverse ruling by a WTO panel or the Appellate Body may allow legislators to shift blame away from themselves when modification of a law upsets important interest groups. In response to outcries about a modified law or regulation, a legislator can argue that it was necessary to comply with its international obligations under the WTO.[35] In such instances, however, early settlement

[35] *See*, *e.g.*, *U.S. Will Comply With WTO Gas Panels But Does Not Say How*, INSIDE U.S. TRADE (June 21, 1996).

may not be an option because of the need for a published opinion declaring a law or regulation to be in violation of international rules.

In contrast to the realist's perspective that noncompliance is the result of conscious cost-benefit analysis, Chayes identifies three sources of noncompliance that may be outside the direct control of a particular country.[36]

First, ambiguity and indeterminacy of treaty language can lead to inadvertent violations and disputes.[37] In fact, the WTO panel and Appellate Body reports that interpret the WTO Agreements help to alleviate this concern. Although there is room for improvement, including the need to create a mechanism whereby the Appellate Body could remand cases back to the panel for further interpretation when it is unable to complete the reasoning of the panel,[38] the DSU provides a mechanism that can reduce the ambiguity of the WTO Agreements.

Second, the "limitations on capacity" of a country to comply with a treaty obligation constitute a clear obstacle to implementation.[39] Developing countries have long asserted lack of capacity in relation to compliance with trade agreements and sought special treatment in the DSU to address this difficult issue. For example, Article 24.1 of the DSU states as follows:

> At all stages of the determination of the causes of a dispute and of dispute settlement procedures involving a least-developed country Member, particular consideration shall be given to the special situation of least-developed country Members. In this regard, Members shall exercise due restraint in raising matters under these procedures involving a least-developed country Member.

Another capacity-related problem may arise from the constitutional structure of a country. If, for example, a state, province, or municipality issues a law or regulation that is not subject to the control of the national government, the country will still be liable for the treaty violation but will not have direct control over implementation.[40] Even if a country has the capacity to change its regulations, it may require a change that cannot be passed by an elected legislature.

Similar to capacity, the third barrier to compliance with international obligations identified by Chayes is "the temporal dimension."[41] This is the simple idea that "[s]ignificant changes in social or economic systems mandated by regulatory treaties take time."[42] Thus, Article 21.3 of the DSU provides Member governments a "reasonable period of time" (generally fifteen months) to comply with Panel and Appellate Body decisions.

Chayes proposes thoughtful solutions to deal with these three sources of non-willful noncompliance.[43] Because of the unintentional nature of these problems, coercive enforcement will not improve the situation because it will not solve the underlying

[41] CHAYES AND CHAYES, *supra* note 34, at 15–17.

[42] *Id.* at 15.

[43] *Id.* at 23–28.

problems. Instead, Chayes proposes solutions that the drafters of the WTO also seem to have had in mind.

First, a more transparent treaty regime contributes to compliance by facilitating coordination of treaty norms, providing reassurance to other countries that they are not being taken advantage of, and deterring countries from noncompliance.[44] Although the publication of panel and Appellate Body reports, minutes of the DSB, other committee reports, and other surveillance mechanisms of the DSU contribute to the transparency of the WTO, more can be done. For example, hearings and transcripts of hearings could be made accessible to the public, and the DSU could require publication of submissions to the panel and Appellate Body. Currently, the decision of whether to open these aspects of dispute settlement to the public is voluntary and, in large part, resisted by most Members.

Second, Chayes recommends dispute settlement as a method of decreasing the ambiguity of treaty language,[45] referring to the WTO mechanism as an example of a compulsory form of dispute settlement.[46]

Third, Chayes urges treaty organizations to assist with capacity building in the form of technical and financial assistance to achieve compliance. The WTO Secretariat[47] and WTO Members[48] understand the need for such capacity building exercises, but more must be done.

Finally, Chayes acknowledges that "persuasion" can be used to induce compliance.[49] By "persuasion," they do not refer to coercive sanctions, but rather to "an iterative process of discourse among the parties, the treaty organization, and the wider public."[50] The WTO dispute settlement system, and its implementation and retaliation procedures, create a type of "persuasion," although in a stronger form than Chayes envisioned.

Chayes argues that "coercive economic—let alone military—measures to sanction violations cannot be utilized for the routine enforcement of treaties in today's international system, or in any that is likely to emerge in the foreseeable future" and that the effort to devise and incorporate sanctions in these treaties "is largely a waste of time."[51] As a result, Chayes focuses on a "managerial" cooperative, problem-solving approach to treaty implementation rather than a coercive one.

Chayes makes two important points about economic sanctions. First, the cost of such sanctions is high for all parties involved:

> The costs of economic sanctions are also high, not only for the state against which they are directed, where the sanctions fall mainly on the weakest and most vulnerable, but also for the sanctioning state.[52]

[44] *Id.* at 23.
[45] *Id.* at 24.

[47] The WTO regularly conducts workshops on technical assistance and capacity building. *See*, *e.g.*, *WTO Workshop on Technical Assistance and Capacity Building in Trade Facilitation at* http://www.wto.org/english/tratop_e/tradfa_e/tradfac_workshop_may01_e.htm (accessed 7/25/01).
[48] For example, on May 9, 2001, the Government of Spain announced a contribution of 100,000 euros to the WTO to help finance technical assistance activities for Latin American countries. *Spain Donates 100,000 Euros to the WTO for Developing Country Technical Assistance at* http://www.wto.org/english/news_e/pres01_e/pr225_e.htm (accessed 7/25/01).

[50] *Id.* at 25.
[51] *Id* at 2.
[52] *Id.* at 2.

In the context of the WTO, this has been demonstrated several times. For example, Ecuador, in *EC-Bananas*, and Canada, in *Brazil—Export Financing Program for Aircraft* ("*Brazil—Aircraft*"), were both authorized to retaliate in the form of increased trade barriers, but neither country took advantage of this authority because, evidently, it was not in their economic self-interest to retaliate. Nevertheless, reputation-based and other extra-legal concerns are highlighted when a country is subject to authorized retaliation, even when it has not been imposed.

Second, Chayes criticizes the "intermittent and ad hoc" nature of sanctions.[53] The WTO dispute settlement mechanism attempts to satisfy this concern by placing sanctions within the overall structure of the DSU.

In light of these critiques, it is important to recall that the sanctions authorized by the WTO are limited. Article 22.4 of the DSU states that "the level of suspension of concessions or other obligations authorized by the DSB shall be equivalent to the level of the nullification or impairment." Whether the purpose of countermeasures is to induce compliance or to "maintain the balance of reciprocal trade concessions negotiated in the WTO Agreements,"[54] it seems fair to observe that WTO rules on sanctions are not optimally designed to "force" a violating Member to bring its measures into compliance. Members could have been granted the authority to impose sanctions disproportionately greater than the impact of the offending measure. But the effect of the sanction is to provide at least some incentive for a violating Member to bring its measures into compliance. The incentive will vary based on the economic base of the country and the size and nature of the suspension.

IV. Overview of Implementation and Enforcement Provisions

A. Basic Structure of the Dispute Settlement Understanding[55]

Before evaluating the relative success of the WTO dispute settlement mechanism in bringing about compliance after the adoption of a panel or Appellate Body report, it is necessary to first briefly review the process and relevant provisions of the DSU.

1. Recommendations with Respect to Panel and Appellate Body Reports

When the adjudication process has ended and the panel report, as modified by the Appellate Body report, if any, is adopted by the DSB, a Member is asked to make changes to comply with the relevant WTO Agreements that the report concluded were violated. The DSU states that "prompt compliance with recommendations or rulings of the DSB is essential in order to ensure effective resolution of disputes to the benefit of all Members."[56]

Article 19.1 of the DSU provides that "the panel or Appellate Body may suggest ways in which the Member concerned could implement the recommendations." In practice,

[56] DSU, Art. 21.1.

however, panel and Appellate Body reports do not generally recommend or suggest specific ways in which a WTO Member must bring its measures into compliance. In some cases, the remedy may be obvious, such as the elimination of a discriminatory tax or the lowering of a tariff. In other more complex cases, however, the remedy is far more ambiguous. If there is disagreement regarding the consistency of the measures taken by the infringing Member to comply with the relevant agreement, then the dispute is returned to the dispute settlement procedures, including the original panel, if possible.[57] Another potential problem arises when a Member, in complying with one ruling, adopts a measure that violates the relevant agreement in a different way, or that violates a different covered agreement. The Appellate Body has confirmed that these questions may be resolved as part of the expedited compliance review. Article 21.5 of the DSU provides that in the event that Members disagree as to whether measures taken to comply with panel rulings are themselves WTO-consistent, that disagreement should be settled by resort to DSU procedures. If possible, the matter is referred to the original panel, which then has ninety days to resolve the matter. Article 22.6 of the DSU addresses similarly expedited arbitration procedures should Members disagree as to the level of proposed retaliation.

2. Surveillance of Implementation

The party must state its intentions to implement the recommendations of the ruling at a DSB meeting held within thirty days after adoption of the report.[58] Pursuant to Article 21.3 of the DSU, in any dispute[59] the reasonable period of time in which the ruling must be implemented may be decided by (a) the Member concerned, subject to the approval of the DSB[60]; (b) agreement of the parties within 45 days of adoption of the report[61]; or (c) binding arbitration within ninety days after the adoption of the report by the DSB.[62] In practice, roughly half of the determinations of the reasonable period of

time have occurred through agreement of the parties, and roughly half through binding arbitration, but the method of decision by the Member concerned is rarely used. In the event that the reasonable period of time is determined by arbitration, the "guideline" is that the time period shall not exceed fifteen months from the date of adoption of the panel or Appellate Body report, although, as discussed below, arbitrators have become increasingly less dependent on this "guideline."

The DSB monitors the implementation of the adopted rulings, and any Member may raise the issue of improper implementation at any time before the DSB.[63] Beginning six months after establishment of the reasonable period of time, the infringing Member must submit a regular status report to the DSB.[64] The DSU directs the DSB to give special consideration to developing countries, both as infringing countries and injured countries.[65]

3. Compensation and Suspension of Concessions

If an infringing Member fails to bring a measure into compliance, the party or parties that invoked the dispute settlement procedures have several alternatives. First, in the time before the expiration of the "reasonable period of time," they may initiate negotiations with the infringing party in order to agree on mutually acceptable compensation for the delay in implementation.[66]

If the level of compensation is not agreed to within twenty days after expiration of the "reasonable period of time," then the parties that brought the case may take more drastic measures. They may request authorization from the DSB to suspend concessions or other obligations under the WTO Agreements granted to the infringing Member.[67] The DSU sets out guidelines to ensure that the level of retaliation is appropriate to the level of harm resulting from the infringing Member's violations.[68] The general principle is that the complaining party should first seek to suspend concessions or other obligations relating to the same sectors that the infringing Member had been found to violate.[69]

If the infringing Member believes that the proposed retaliation is excessive, the issue is referred to arbitration pursuant to Article 22.6 of the DSU.[70] The arbitration will be conducted within sixty days after the expiration of the "reasonable period of time" by the original panel, if available, or by an arbitrator appointed by the Director-General.[71] The concessions shall not be suspended during the course of the arbitration.[72] The arbitrator or panel decides whether or not the level of the suspension is equivalent to the level of nullification or impairment caused by the violation of the infringing Member, and this

ruling is not subject to appeal.[73] The DSB shall follow the ruling made at arbitration, unless by consensus the DSB disagrees with the ruling.[74] Then, the suspension of concessions may remain in effect until the infringing Member complies with the rulings, or until a mutually satisfactory solution is reached.[75] The DSB keeps the matter under surveillance until successful implementation.[76]

B. Limitations of the DSU

Although the WTO dispute resolution mechanism functions well in the majority of cases, certain especially problematic and high-profile cases have tested the limitations of the DSU. The discussion below examines some of the key concerns with the DSU and the overall structure of the WTO dispute settlement mechanism.

1. Ambiguity in Process: Articles 21.5 and 22 of the DSU

Even after years of WTO jurisprudence, the relationship between the Article 21.5 compliance review procedure and the Article 22.6 arbitration procedure, applied to judge whether retaliation levels are excessive, remains unclear.[77] Unless a Member concedes that it has failed to bring its measures into compliance, thereby eliminating the need for an Article 21.5 compliance review,[78] this issue arises in every case that reaches the implementation stage. At issue is the "sequence" of the two procedures and, in particular, whether it is possible or desirable for arbitrators to determine the level of appropriate retaliation pursuant to Article 22.6 of the DSU before a panel, or the Appellate Body, has determined whether a WTO Member has complied with the recommendations and rulings of the DSB pursuant to Article 21.5 of the DSU. The DSU does not prescribe a sequence for the two procedures. Yet, many Members have expressed concern at the prospect that a complaining Member would skip the Article 21.5 procedures, including a panel and possible Appellate Body ruling, and instead move directly to a retaliation evaluation under an Article 22.6 arbitration decision without recourse to appeal. In reaction to this uncertainty, Members have generally reached voluntary agreements regarding the sequence of the two procedures.

In *EC-Bananas*, the United States and EC battled over the relationship between Article 21.5 and Article 22.6. The EC argued that the failure to first utilize the Article 21.5 process before moving to retaliation constituted a unilateral determination by the United States of non-compliance and, therefore, a violation of the DSU.[79] The United States argued that not only was it appropriate to go directly to Article 22.6 retaliation, but that the language of Article 22.6 effectively (and perhaps inadvertently) required a party to request authorization to retaliate within twenty days after expiration of the reasonable period of time.[80] As the United States explained, based upon a plain reading of the text,

[73] DSU, Art. 22.7.
[74] *Id.*
[75] DSU, Art. 22.8.
[76] *Id.*
[77] For an extensive discussion of this issue, *see* Carolyn B. Gleason and Pamela D. Walther, *The WTO Dispute Settlement Implementation Procedures: A System in Need of Reform*, 31 LAW AND POL'Y IN INT'L BUS. 709, 721–728 (2000).
[78] *See* Report of the Appellate Body, *European Communities—Measures Concerning Meat and Meat Products* (*EC—Hormones*), WT/DS26/AB/R, WT/DS48/AB/R (1998).
[79] *See* Gleason and Walther, *supra* note 77, at 725.
[80] DSU, Art. 22.2; *See* Gleason and Walther, *supra* note 77, at 725.

Article 22.6 provides authorization for retaliation by the DSB upon negative consensus *only* if the decision is taken by the DSB within thirty days after the expiration of the reasonable period of time. Although the DSB could make a decision after that date to authorize retaliation, the normal decision rule (positive consensus) would apply—meaning that the losing party could block the decision. Although this could hardly have been the intent of the negotiators of the DSB, the United States appears to have been sufficiently concerned that the EC could block a decision to authorize retaliation if the DSB were to consider the request after the thirty-day period had expired. Consequently, both procedures took place simultaneously and the conflict was temporarily settled by virtue of the fact that the members of the Article 21.5 panel (established based on Ecuador's request) and the Article 22.6 Arbitrators were the same people, and essentially combined the two rulings into one.[81]

In *Brazil-Aircraft* and *Canada-Aircraft*, the Appellate Body heard the first appeals of Article 21.5 panel reports.[82] *Brazil-Aircraft* presented an unusual situation in which the ruling on authorization for retaliation (under Article 22.6) was scheduled for decision *before* the Appellate Body decision on the Article 21.5 panel report. The *ad hoc* solution was that the Article 22.6 Arbitrators issued an interim decision pending the Appellate Body decision. The Appellate Body subsequently upheld the Panel's ultimate findings,[83] and the Arbitrators concluded that the Article 21.5 Appellate Body report did not require changes in the final arbitration decision.[84] If the result of the Article 21.5 Appellate Body report had been different, this arrangement would have resulted in substantial inefficiency.

Although it was later dismissed by the Appellate Body as outside the panel's scope of review, a panel reviewing the EC's complaint regarding the unilateral actions taken by the United States in reaction to the *EC-Bananas* case attempted to define the relationship between Articles 21.5 and 22.6 of the DSU. In *U.S.—Import Measures on Certain Products from the European Communities* ("*U.S.—Import Measures*"), the Panel rejected the EC's claim that the United States had violated Article 21.5 by requesting an Article 22.6 arbitration before requesting a ruling under Article 21.5.[85] Instead, the Panel concluded, based on the terms of the DSU and "simple legal logic," that an Article 22.6 arbitration could conduct the Article 21.5 implementation analysis along with its determination of the appropriate level of retaliation:

> We consider . . . that if, at the time when the Article 22.6 arbitration is requested, no WTO determination of the compatibility of the implementing measure has yet taken place, those acting in arbitration are obliged to assess first whether the implementing measure nullifies or impairs the WTO rights of the Member requesting DSB permission to retaliate. This is a matter of simple legal logic: it is legally impossible to assess the level of suspension based on the level of nullification before assessing whether the implementing measure nullifies or impairs WTO rights. Only after having assessed the WTO compatibility of the implementing measure can a WTO adjudicating body assess the impact of any such WTO incompatibility,

> which will indicate the "equivalent level of suspension of concessions and other obligations." Since the Article 22.6 arbitration process was given the authority to determine "a level of suspension equivalent to the level of nullification," it has the authority to assess both variables of the equation, including whether the implementing measure nullifies any benefit and the level of such nullified benefits.[86]

If this Panel decision had been followed, however, it seems likely that a complaining party would generally try to speed up the implementation process by going directly to an Article 22.6 arbitration. As a result of the finality of Article 22.6 arbitration decisions, this would bypass not only an Article 21.5 determination by a panel, but also any appeals.

The Appellate Body, however, concluded that the Panel in *U.S.–Import Measures* had erred in its decision regarding the relationship between Article 21.5 and 22.6, because the matter was "outside its terms of reference."[87] The Appellate Body acknowledged the "important systemic issue of the relationship between Articles 21.5 and 22 of the DSU," but concluded that "[d]etermining what the rules and procedures of the DSU ought to be is not our responsibility nor the responsibility of the panels; it is clearly the responsibility solely of the Members of the WTO."[88] Thus, it will take a decision of the DSB and ultimately an amendment to the DSU before the issue will be resolved. Until then, absent voluntary agreements, this ambiguity remains an important flaw in the implementation mechanism of the DSU. It appears, though, that the Appellate Body ruling has provided at least some motivation for WTO Members, including Japan and Canada, to renew the push to clarify the DSU.[89]

2. The "Reasonable Period of Time" for Implementation

As discussed above, once the panel or Appellate Body report is adopted, assuming the defending party loses, the party must notify the DSB of its intentions to implement the adopted recommendations. If it is impracticable to comply immediately, generally the Member is given a reasonable period of time to bring its measures into conformity.[90] Arbitrators consider a number of factors when determining the appropriate time period for implementation, including the definition of "prompt compliance," the "particular circumstances" of implementing legislation, and the status of a WTO Member as a developing country. This process, discussed in detail below, has generally worked well over the years, but there remains the potential for abuse; Members could use the reasonable period as merely a delay tactic to maintain an inconsistent provision without facing retaliation.

(a) Prompt Compliance. The term "reasonable period of time" in Article 21.3(c) of the DSU must be interpreted in accordance with the customary principles of treaty

[86] *Id.* ¶ 6.122.

[87] Report of the Appellate Body, *United States-Import Measures on Certain Products from the European Communities*, WT/DS165/AB/R (2000), ¶¶ 88–90. For further discussion of this case, *see infra* Part IV(B)(3).

[88] *Id.* ¶¶ 91–92.

[89] *See WTO Appellate Decision Prompts Renewed Push for Change to DSU*, INSIDE U.S. TRADE, January 12, 2001, at 11.

[90] In the special rules and procedures for dispute settlement in the SCM Agreement, the DSU's reference to the "reasonable period of time" is replaced by more specific language. For example, when a measure has been found to be a prohibited subsidy in violation of Article 3 of the SCM Agreement (i.e., an export subsidy or an import substitution subsidy), the defending party is required under Article 4.7 of the Agreement to withdraw the subsidy "without delay". When a measure has been found to be an actionable subsidy in violation of Article 5 of the SCM Agreement, the defending party must, under Article 7.9 of the Agreement, "remove the adverse effects of the subsidy or withdraw the subsidy *within six months* from the date" of adoption of the panel or Appellate Body report. (emphasis added).

interpretation as set out in the Vienna Convention on the Law of Treaties[91] ("*Vienna Convention*"). Pursuant to Article 31.1 of the Vienna Convention, the meaning of a treaty term is to be determined in accordance with the ordinary meaning to be given to the term in its context and in the light of the object and purpose of the treaty.[92] In determining the ordinary meaning of a term, a treaty interpreter must begin with an examination of the words of the treaty itself.[93]

The text of the DSU is clear. Regarding implementation, the basic premise is that "prompt compliance" with the DSB recommendations and rulings is "essential" for the "effective resolution of disputes to the benefit of all Members."[94] The DSU recognizes, however, that requiring all Members "to comply immediately" with DSB recommendations and rulings may, in some situations, be "impracticable."[95] In such situations, the Member concerned is afforded "a reasonable period of time" to comply.[96] The question, therefore, is what constitutes a reasonable period.

If the dispute is submitted to binding arbitration, a guideline for the arbitrator is that the reasonable period should not exceed fifteen months, calculated from the date of adoption of a panel or Appellate Body report.[97] Although the first three arbitration decisions on the reasonable period followed the fifteen month guideline,[98] the trend has been toward shorter time periods.[99] For example, arbitrators issuing rulings in 2000 and 2001 decided on periods of time averaging approximately ten months, one-third less than the fifteen-month guideline.[100]

[91] U.N. Doc. A/CONF. 39/27 (1969). Article 3.2 of the DSU requires the WTO Agreements to be interpreted "in accordance with customary rules of interpretation of public international law."

[92] *See, e.g.,* Report of the WTO Panel, *Canada—Measures Affecting the Importation of Milk and the Exportation of Dairy Products*, WT/DS103/R, WT/DS113/R (1999), ¶ 4.496.

The covered agreements themselves offer the arbitrators very little guidance on what is a reasonable period of time for compliance. Indeed, no source of guidance is as important in an arbitration to determine the reasonable period of time as the reported decisions of prior arbitrators.[101] Although prior decisions do not have *stare decisis* effect, the WTO system has produced a set of precedents that arbitrators refer to but are not legally required to follow.[102]

One Arbitrator noted that the burden of proof is on the party seeking to prove that the "particular circumstances" warrant justifying a shorter or longer time.[103] Others, however, believe that the implementing Member bears the burden of proof in showing that the duration of *any* proposed period of implementation, including its supposed component steps, constitutes a "reasonable period of time."[104] If an arbitrator perceives that an implementing Member has not adequately begun implementation after adoption so as to effect "prompt compliance," the arbitrator might take this into account when determining the "reasonable period of time."[105]

The most important factor in establishing the length of the reasonable period of time is the interpretation of the phrase "prompt compliance."[106] One Arbitrator consulted a dictionary, which defines "prompt" as meaning "a. acting with alacrity; ready. b. made, done, etc. readily or at once."[107] In context, as interpreted by many arbitrators, this means "the shortest possible period within the legal system of the Member to implement the recommendations and rulings of the DSB."[108]

But the "shortest period possible within the legal system of the Member" refers to "normal legislative procedures"; it does not require a Member to utilize "an *extraordinary*

legislative procedure."[109] In other words, the ability to take extraordinary action to implement a DSB recommendation is irrelevant to the determination of the reasonable period for implementation.

As noted above, however, there is one situation in which the "reasonable period of time" standard does not apply.[110] The SCM Agreement requires a recommendation to "withdraw"[111] a prohibited subsidy "without delay."[112] Recommendations enacted pursuant to the prohibited subsidy provision, therefore, are not relevant for determining what may constitute a reasonable period of time for implementation of other recommendations.[113]

Recalling that all bargaining between Members takes place in the "shadow of" WTO precedent, it is not surprising that the mutually agreed reasonable periods of time pursuant to Article 21.3(b) of the DSU have also continued to decrease. For example, several agreements in 2001 were as short as eight months,[114] seven months,[115] and five months and two days.[116] Such agreements are promising developments.

(b) Particular Circumstances. Arbitrators are cognizant of the steps a Member must take to implement a recommendation to comply, and they are instructed by the DSU to consider "the particular circumstances"[117] of each case when determining the reasonable period of time. But, as the Arbitrators held in the *EC-Hormones* arbitration, the term "particular circumstances" does not go so far as to include "time to conduct studies or to consult experts to demonstrate the *consistency* of a measure already judged to be *inconsistent*."[118]

One of the common examples of "particular circumstances" examined by arbitrators is whether implementation must be enacted by legislation or administrative action. Typically, when implementation can be effected through an administrative as opposed to a legislative process, the reasonable period of time will be shorter.[119] Arbitrators have reasoned that absent evidence to the contrary, a legislative change is likely to be more time-consuming than an administrative change.[120] For example, in *Canada—Pharmaceutical Patents*, Canada, as the implementing party, argued for an implementation period of eleven months.[121] Surprisingly, the EC, the complaining party, asked for a

longer period of twelve months, arguing that implementation required legislative—not regulatory—action.[122] This brought two issues before the Arbitrator: whether Canada's proposed regulatory action was sufficient for implementation, and how long Canada should be afforded to implement that change.[123]

The proper concern of an arbitrator under Article 21.3(c) of the DSU is with *when*, not *what*.[124] *What* a Member must do to comply with a recommendation is addressed elsewhere in the DSU. An arbitrator determines only the "reasonable period of time" it should take for a Member to make the change that it proposes. With this mandate, the Arbitrator in *Canada—Pharmaceutical Patents* examined closely the process for implementing a *regulatory* change proposed by Canada, as opposed to the legislative change proposed by the EC. The Arbitrator stated that his mandate allowed only for an examination of the time period of Canada's implementation efforts and not the method, which was reserved for an Article 21.5 panel.[125]

The procedural time periods required by a Member's law or regulation are taken into account when determining the "reasonable period of time."[126] For other estimates not fixed by law or regulation, the implementing Member bears a greater burden of proof in demonstrating their accuracy and legitimacy.[127] The complexity of the proposed legislative change may be relevant to the determination of the appropriate time required to implement a decision.[128]

In *Canada—Pharmaceutical Patents*, after weighing the arguments of both parties and considering the substantive part of Canada's proposed regulatory change, the Arbitrator determined that *six months* was a reasonable period to implement the recommendation of the DSB.[129] The Arbitrator considered Canada's proposed regulatory change, which read in its entirety: "The *Manufacturing and Storage of Patented Medicines Regulations* are repealed."[130] Obviously, the short time period for implementation in this case took into account the simplicity of the proposed change. As the Arbitrator noted, "After all, how many other ways could this one sentence be written?"[131] What is clear is that the "particular circumstances" of each case influence the determination of what is a "reasonable period of time" for implementation.[132] The term "particular circumstances" includes whether implementation is by *administrative* rather than *legislative* means, the *complexity* of the proposed implementation, and the *legally binding* as opposed to the discretionary nature of the component steps leading to implementation.[133]

(c) Developing Countries. Developing countries have negotiated hard in the international trading system for special and differential treatment.[134] The WTO is no exception. Pursuant to Article 21.2 of the DSU, when determining the reasonable period of time to implement a decision, arbitrators are required to pay "particular attention" to dispute settlement matters affecting the interests of developing country Members.

In *Chile—Alcoholic Beverages*, although the Arbitrator noted Chile's reference to Article 21.2 of the DSU, he implied that the criteria for the determination of a reasonable period of time should not be qualitatively different for developed and developing country Members.[135] By contrast, in *Indonesia—Automobile Industry*, after considering the "dire economic and financial situation" in Indonesia and its status as a developing country, the Arbitrator awarded "an additional" period of six months over and above the six month period determined to be the shortest period for implementation.[136] Thus, Indonesia was given a total of twelve months—six months as the shortest period possible to complete its domestic rulemaking process and an additional six months as a transition to allow affected industries to make structural adjustments—to implement the recommendations of the DSB.

Article 21.2 of the DSU is cast in general terms and is not specific or concrete about how it should be applied to determine the length of the reasonable period.[137] Yet despite this, it is not simply to be disregarded.[138] Arbitrators must abide by the "fundamental principle of *effet utile* . . . that a treaty interpreter is not free to adopt a meaning that would reduce parts of a treaty to redundancy or inutility."[139] Rather an arbitrator must "be generally mindful of the great difficulties that a developing country Member may, in a particular case, face as it proceeds to implement the recommendations and rulings of the DSB."[140] What impact Article 21.2 will have on the determination of the reasonable period of time necessarily depends, therefore, on the facts of each particular case.

(d) Potential for Abuse of "Reasonable Period of Time". Perhaps even more important than the length of the "reasonable period of time" is the behavior that occurs during this time. According to the terms of Article 21.3 of the DSU, a Member is given this time period "if it is impracticable to comply immediately with the recommendations and rulings." But, other than the mandate that implementation measures should be taken by the end of the period, the DSU does not include guidance as to what must take place

during the course of this reasonable period of time.[141] There are no requirements to file an implementation plan, or opportunities for consultation regarding claims of bad faith for misusing the reasonable period as a delay tactic.[142] While Members sometimes voluntarily elect to cooperate closely on implementation during the period,[143] nothing prevents abuse of the period. For example, in *EC-Hormones*, the Arbitrator determined that the EC would be granted a fifteen-month period, after the EC had requested three to four years.[144] Despite the Arbitrator's ruling that the reasonable period of time should not include "time to conduct studies or to consult experts to demonstrate the consistency of a measure already judged to be inconsistent,"[145] the EC used its fifteen months to do exactly that and conducted scientific studies.[146] At the end of the reasonable period, the EC concluded that it would not modify its laws.[147] No remedy was available to the United States with regard to what it considered to be an abusive use of the reasonable period of time allotted as a means to delay the impending retaliation.

3. Incentives for Unilateral Sanctions

As detailed above, because of the lack of retroactive remedies for WTO violations, a WTO Member defending a complaint has an extra incentive to delay the authorization of retaliation. Many aspects of the DSU are conducive to such delay, and this upsets the complaining Members. Consequently, Members have considered taking unilateral retaliatory actions outside the framework of the DSU. Such action violates Article 23.1 of the DSU, which requires Members seeking redress for WTO violations to "have recourse to, and abide by, the rules and procedures of this Understanding." In *U.S.—Import Measures*, the Panel held, and the Appellate Body confirmed, that the issuance of increased bonding requirements by the United States (on March 3, 1999) as a response to its dissatisfaction with the *EC-Bananas* case, prior to DSB authorization of retaliation (on April 19, 1999) in that case, constituted unilateral action that violated the DSU.[148] The United States did not appeal the panel's findings that it had violated Articles 22.6, 23.1 and 23.2(c) of the DSU as a result of these unilateral actions, although it appealed other aspects of the decision. The Appellate Body concluded that the United States "has accepted the conclusion of the panel that, by adopting the 3 March Measure, the United States acted inconsistently . . . with the obligation in Article 23 of the DSU not to take unilateral action in redressing perceived breaches of WTO obligations by other WTO Members."[149]

[141] *See* Gleason and Walther, *supra* note 77, at 719–721.

[142] *Id.*

[143] *Id.* Gleason and Walther mention *U.S.—Reformulated Gasoline* and *U.S.—Restrictions on Imports of Cotton and Man-Made Fiber Underwear* as examples where a Member, the United States, had voluntarily traveled to the capitals of the complaining Members to provide assurances regarding implementation. *Id*. at 719–720. In both those cases, however, the United States faced enormous controversy about its implementation schedule, and thus, might have felt particular need to make extraordinary efforts to cooperate on its implementation plans.

[149] Report of the Appellate Body, *United States-Import Measures on Certain Products from the European Communities*, WT/DS165/AB/R (2000), ¶ 58.

Ironically, the lack of retroactive remedies worked in favor of the United States in this case. Because retaliation was ultimately authorized in *EC-Bananas*, and the United States consequently cancelled its unilateral measures prior to the panel decision in *US-Import Measures*, the panel in *US-Imports* found that the unilateral action by the United States no longer constituted a continuing violation. As a result, the United States was not subject to retaliation for its unilateral measures. Specifically, the Panel concluded that "the 3 March Measure is no longer in existence," but nevertheless recommended that the DSB request the United States to bring its measures into conformity.[150] The Appellate Body concluded that this latter recommendation was in error because the measure no longer existed at the time of the panel ruling.[151]The result is a situation whereby a WTO Member has the ability to take unilateral actions outside the scope of the DSU with no fear of retaliation. The United States was, in practice, able to begin its retaliation against the EC in the time and manner that it chose. In such situations, either retaliation will ultimately be authorized in the underlying case and a unilateral measure will no longer be necessary, or a Member could remove its unilateral measure anytime before retaliation is authorized in response to that unilateral measure. Thus, the lack of retroactive remedies becomes a double-edged sword for both parties in a WTO dispute.

4. Disproportionate Effect of Retaliation

WTO Members constitute a diverse group of countries with widely disparate economies. While the DSU recognizes some of these differences, such as the provisions in Article 24 for least-developed country Members, it generally does not distinguish between countries based on economic differences. As a result, a country like the United States will be treated no differently when it comes to measuring what constitutes appropriate retaliation than a country with a much smaller economy. Yet, retaliation may have a disproportionate effect on a smaller economy, both as the target of retaliation and as the Member authorized to retaliate.

In those situations where two Members face the same level of retaliation for a violation, a country with a small economy is at a significant disadvantage to a country with a large economy. For example, while $100 million per year in trade retaliation would have little overall impact on the U.S. economy, it would have a large impact on Ecuador's overall economy. As a result, the coercive effect of retaliation measures in influencing implementation of the DSB rulings and recommendations could be much greater for a country with a small economy. With economies as large and diverse as that of the European Union and the United States, it would take extremely high levels of retaliation before the overall economies will be noticeably impacted. The impact of retaliation should not be judged purely on the volume of trade affected, however. The same $100 million targeted at a few highly sensitive U.S. products could have a much greater effect on the willingness of the United States to comply with DSB recommendations than measures spread widely across $100 million of Ecuadorian products.

Moreover, as complaining Members, countries with smaller economies may be less likely to take advantage of authorization to retaliate than countries with large economies because of the potential costs associated with taking such retaliation. Increased trade

[150] Report of the WTO Panel, *United States-Import Measures on Certain Products from the European Communities*, WT/DS165/R (2000), ¶¶ 7.1, 7.3.

[151] Report of the Appellate Body, *United States-Import Measures on Certain Products from the European Communities*, WT/DS165/AB/R (2000), ¶ 81. The 3 March measure had expired on its own term, having been replaced by retaliatory duties.

barriers do not generally help the overall economy of the country that is retaliating. For example, on August 28, 2000, the Article 22.6 Arbitrators in *Brazil-Aircraft*, determined that Canada could retaliate with over $233 million per year (C$344 million) in trade sanctions.[152] Nevertheless, Canada never acted on this authorization. Because there is little trade between Canada and Brazil in the product at issue in the dispute (regional aircraft), increased trade barriers on imports of aircraft from Brazil to Canada would have had little, if any, impact. Thus, the alternative was for Canada to raise tariffs on unrelated products, such as coffee, sugar, and cocoa.[153] While this would have hurt Brazilian producers if these products were easily substitutable with products from other countries, it would also have hurt Canadian consumers and producers who use these Brazilian products for consumption or for industrial inputs, as a result of increased prices and decreased competition.

Similarly, in *EC-Bananas,* even though Ecuador was granted authorization to retaliate with up to $201.6 million in trade barriers against the EC,[154] it never took retaliatory measures. Moreover, because of the small value of imports from the EC into Ecuador, even if Ecuador had hoped to raise tariffs by $201 million, this would not have been possible. The Arbitrators acknowledged this problem and authorized Ecuador to seek retaliation in the areas of services and of intellectual property rights by, for example, allowing infringement of copyrights, industrial designs and geographical indications. The result in *EC-Bananas* (Ecuador) is ironic when one considers the great resistance of developing countries toward the TRIPS Agreement during the Uruguay Round. If Ecuador had not taken on TRIPS commitments, it would not have been possible to suspend those as part of the authorized retaliation! The EC and Ecuador settled the *EC-Bananas* controversy more than one year after Ecuador was authorized to retaliate. Ecuador had never taken advantage of its authorization to retaliate, presumably because Ecuador did not find retaliation to be in its economic interest.

Authorization to retaliate does not occur within a vacuum. As discussed above, WTO Members are part of the larger international community, and this provides additional extra-legal pressures to implement WTO obligations. Such extra-legal pressures are not felt equally by all countries. Pauwelyn illustrates this point:

> [N]egotiations [where a small economy is faced with noncompliance by a large economy] highlight and effectively uphold the inevitable economic and political inequality between WTO members (as equal as they may be in the eye of the law). Would it not be difficult in practice indeed, even counter-productive—for say, Burkina Faso or Estonia to take countermeasures against, for example, the United States or the European Community? Difficult because retaliation may, in turn, provoke counterretaliation in non-WTO-related fields such as development aid, and counterproductive because fencing off Burkina Faso's or Estonia's market from much needed U.S. or EC imports would mostly harm the former, not induce compliance by the latter.[155]

International law does not prevent countries from taking such "counter-retaliation" measures in areas of international relations in which there is no specific customary or treaty

law. Important areas like development aid, military support, loan guarantees, and support for creating new treaties are all elements in the war chest of a powerful country that do not fall under the provisions of the WTO Agreement.

V. Suggested Improvements to Enforcement Devices

The WTO dispute settlement process has performed quite well during its early years, but it is by no means perfect. The framers of the DSU attempted to create a middle ground that goes beyond reliance on extra-legal sanctions to motivate implementation, but that does not go so far as to create the highly coercive economic sanctions that are the subject of Chayes' critique. The WTO dispute settlement mechanism must continue to hold this middle ground, but the system can be modified to improve its effectiveness.

A. Enforceable Settlement Agreements

Given the central importance of settlement at every stage of the WTO dispute settlement process, it is critical that the DSU improve the incentives for settlement. As detailed in Part II, bargaining for settlement agreements takes place "in the shadow of the WTO." As the DSU is currently framed, a party can breach a settlement agreement with no fear of direct legal consequences, requiring the complaining party to restart the dispute settlement process from the beginning. In the meantime, the alleged violator may continue to violate the WTO Agreements without penalty, until retaliation is authorized at the end of a potentially very long process.

The DSU should facilitate implementation of settlement agreements at least as well as it facilitates the implementation of the rulings and recommendations of the DSB.[156] Although WTO Members appear to have the option of providing for arbitration of their agreements pursuant to Article 25 of the DSU, this has not been their practice. If Members did agree to such an arbitration, Article 25.4 would appear to bring this settlement agreement within the scope of surveillance under Article 21, as well as within the provisions of Article 22 on compensation and suspension of concessions.

To ensure that settlement agreements are subject to coverage by the DSU, the DSU could be modified in a way that transforms commitments made in settlements into WTO commitments. This could be done through a modification of Article 1 of the DSU to explicitly include within the scope of "covered agreements" mutually agreed solutions notified to the DSB and the relevant councils and committees pursuant to Article 3.6 of the DSU. These settlement agreements would then fall within the scope of the WTO dispute settlement process in the event that they were breached. Such a change would make settlement agreements in the WTO system more like settlement agreements under national law, where a breach of a settlement agreement is treated as a breach of contract subject to damages to be determined by a court or through arbitration.

B. Interim Relief

WTO Panels are not authorized by the DSU to grant interim relief—for example, to enjoin a Member from imposing a measure until after its WTO consistency has been adjudicated. The lack of interim relief is consistent with the basic assumptions underlying the DSU.

[156] *See* Andrew W. Shoyer, *The Future of Dispute Settlement*, American Society of International Law, Proceedings of the 92nd Annual Meeting, (April 1–4, 1998), at 75–76.

Sovereign governments are assumed to be applying the terms of the WTO Agreement in good faith[157]—they are presumed innocent until proven guilty.

Yet, the possibility of interim relief could greatly encourage settlement, and could be justified without shifting the presumption of good faith implementation. For example, panels could be granted the authority to recommend that Members withdraw a measure pending the adjudication of its WTO consistency in circumstances similar to those in which courts grant preliminary injunctions—to avoid irreparable harm to the trading interests of the complaining Member.[158] Panels could reach the issue as a preliminary matter upon the request of the complaining Member.

Interim relief would address one of the criticisms of the WTO dispute settlement system identified by private interests—that the period of time before Members are required to repeal or modify offending measures is too long. Although interim relief would not completely address this concern, it would safeguard the underlying commercial interests of the complaining Member while respecting the sovereignty of the defending Member. The enforcement of interim relief could, however, be difficult, and success would rely largely on voluntary compliance with the interim measures.

C. Emphasizing Compensation Over Retaliation

Although the DSU ultimately prefers compliance with WTO obligations over compensation and retaliation, compensation is the lesser of the two evils and is clearly preferred over retaliation.[159]

Article 22.2 of the DSU clarifies that retaliation should be an option only when Members are unable to agree to compensation. While retaliation results in the raising of trade barriers, compensation may have the opposite effect and, thereby, more closely follows the spirit of the WTO. Thus, the WTO dispute settlement mechanism would benefit by encouraging compensation, in the form of reduced trade barriers, over retaliation. Unfortunately, compensation is extremely difficult for a Member to offer, and retaliation dominates as the remedy of choice. Indeed, as of October 2002, there has only been one known example, *Japan—Taxes on Alcoholic Beverages*, in which the parties have agreed to compensation pending implementation.

The specifics of what constitutes compensation are not clear from the DSU, but it has generally been interpreted by Members to involve the lowering of trade barriers that are not directly at issue in the underlying dispute. In *Japan—Taxes on Alcoholic Beverages*, the United States and EC accepted Japan's offer of compensation, in the form of lower import tariffs on alcoholic beverages, in exchange for its failure to reduce taxes on foreign

[157] *See Vienna Convention*, *supra* note 91, Art. 26 ("*Pacta sunt servanda*: Every treaty in force is binding upon the parties to it and must be performed by them in good faith.")

[158] The U.S. Supreme Court has summarized the standard as follows: "The traditional standard for granting a preliminary injunction requires the plaintiff to show that in the absence of its issuance he will suffer irreparable injury and also that he is likely to prevail on the merits." *Doran v. Salem Inn, Inc.,* 422 U.S. 922, 931 (1975).

[159] Article 3.7 of the DSU provides, in relevant part, as follows:

> The provision of compensation should be resorted to only if the immediate withdrawal of the measure is impracticable and as a temporary measure which is inconsistent with a covered agreement. The last resort which this Understanding provides to the Member invoking the dispute settlement procedures is the possibility of suspending the application of concessions or other obligations under the covered agreements on a discriminatory basis vis-à-vis the other Members, subject to authorization by the DSB of such measures.

whiskey within the fifteen-month implementation period established by arbitration.[160] In *EC-Hormones,* the EC offered to compensate the United States by increasing the quota for imports of a product (beef raised without hormones) different than the one at issue in the underlying case (beef raised with hormones).[161] The United States rejected this offer, reportedly because it would not have received sufficient benefit from this change.[162] Compensation was also discussed as a possibility early on in the *U.S.-FSC* dispute.[163] It has been used successfully in *US—Section 110(5)*; the small amount of trade affected (roughly $1 million per year) made the circumstances unusually easy for the United States to offer compensation.[164]

One of the deterrents to compensation appears to be the requirement that it be "consistent with the covered agreements."[165] Thus, the basic principles of most favored nation (MFN), national treatment, and others must be followed. For example, if the EC lowers its tariffs on widgets in order to compensate for a trade barrier that affected the United States, all widget-exporting Members must benefit as a result of the EC's MFN obligations. Thus, WTO Members not involved in the dispute become "free riders" even if they are not affected by the trade barrier in the underlying dispute.

At the domestic policy-making level, the difficulties inherent in trade compensation go even deeper. Generally, a complaining Member pursues another Member's trade measure in WTO dispute settlements at the behest of an exporting (or otherwise interested) industry. In turn, the defending Member defends that measure, at least in part, to serve the interest of a competing domestic industry. To offer trade compensation as an alternative to compliance with an unfavorable ruling, the defending Member must select an area of its economy to be subject to increased competition from abroad. In *Japan—Taxes on Alcoholic Beverages*, Japan was able to "self-compensate"—that is, to offer compensation in the same sector that was the subject of the underlying dispute. This is rarely a viable option for the defending Member, which generally will need to select another industry or industries to pay for the maintenance of protection. As a political matter, the selection of a willing, innocent "victim" is extremely difficult. This is particularly true for a Member, such as the United States, that would need specific legislative authority to provide such compensation. For those reasons, it is generally easier for a defending Member to suffer retaliation than to offer compensation, because the blame can be shifted away from domestic politicians to the WTO.

If compensation places the complaining Member, as a whole, in the same position as it would have been in had there been no WTO violation, the complaining party is in a much better position than if it retaliates. As demonstrated above, retaliation generally hurts the economy of the Member that retaliates, with a disproportionate effect on smaller economies. Therefore, compensation, when politically feasible, would be a temporary solution that satisfies this concern.

Thus, WTO Members should establish incentives that encourage compensation as a viable alternative to retaliation, perhaps by temporarily allowing a country to breach its MFN obligations for the limited purpose of encouraging compensation over retaliation.

Nevertheless, compensation should never be so attractive that it is viewed as an alternative to bringing measures that are at issue in an underlying dispute into compliance with the WTO Agreement.

D. Retroactive Remedies

The introduction of retroactive remedies would strengthen the motivation of Members to comply with DSB recommendations. There should, however, not be a shift from a total absence of retroactive remedies to drastic punitive retroactive remedies. A regime where penalties begin to accrue at the beginning of a violation would most likely not be acceptable to WTO Members, as such a policy would create an element of coercion and punishment that, as Chayes has explained, could be more harmful than helpful to implementation and the overall stability of the WTO.

Nevertheless, WTO Members might be able to craft a middle ground for using retroactive remedies that could moderately increase the motivation to come to an early settlement and implement WTO obligations. For example, to reduce the incentives of Members to appeal a panel decision when they have no hope of overturning it,[166] perhaps the arbitrators could be granted the power to impose a temporary higher penalty to account for the lost time. This partial retroactive remedy would increase a Member's motivation to bring its measures into compliance more quickly when the likelihood of prevailing on appeal is low.

Alternatively, to ensure that a Member is making use of the implementation period to modify its regulations, the DSU could be amended such that a country that fails to implement during the allotted time is forced to bear substantially higher levels of retaliation than would otherwise be authorized.[167] While such a modification may be seen as a coercive economic sanction, it may be an appropriate response to the abuse of the WTO dispute settlement process. The additional retaliation would not be framed as a penalty for the breach of the WTO Agreements *per se*, but instead as a punitive remedy for abusing the very dispute settlement process that is central to the stability of the system. Such an amendment to the DSU would not be possible, however, until WTO Members have enough experience and confidence in the overall dispute settlement mechanism such that they are willing to give up this extra degree of control.

E. The Model of the European Community

The experience of the EC has demonstrated that one of the most effective ways to enforce international treaty obligations is to ensure that these obligations have the force and effect of law in the domestic legal systems.[168] Through "direct effect" in the EC, private actors can bring claims against national governments in domestic courts based on the failure to obey EC legislation. Then, if the domestic court finds in favor of the private actor, the government is penalized through an assessment of damages or another remedy designated by the court. Petersmann has called EC law "the most advanced, albeit imperfect example for . . . a foreign policy constitution based on complementary national and international guarantees of fundamental rights, separation of powers,

[166] *See supra* note 15 and accompanying text.

judicial review, respect for international law, and active participation in international organizations."[169]

Although individual countries have the option to establish the direct effect of the WTO Agreements, very few have done so. This is largely dependent on how countries treat international treaties, in general, in their domestic legal systems. For example, a number of Latin American countries, including Argentina,[170] Chile,[171] and Brazil,[172] appear to incorporate treaties, including the WTO Agreements, into their domestic law. In the case of the United States, however, the U.S. Congress specifically provided in its implementing legislation that private parties shall not "have any cause of action or defense under any of the Uruguay Round Agreements or by virtue of congressional approval of such an agreement."[173] Petersmann recommends direct effect, but does not believe that the United States is prepared to change its policy:

> In the United States . . . it seems doubtful that the U.S. Congress and the U.S. President will ever agree to a further constitutionalization of their power-oriented foreign policies. This constitutionalization would include accepting stricter judicial protection by domestic courts of reciprocal international guarantees of freedom and nondiscrimination in the transatlantic EC-U.S. relations.[174]

Similarly, although the EC Member States adopt direct effect for EC law, the European Council Directive implementing the Uruguay Round states that the WTO Agreements are "not susceptible to being directly invoked in Community or Member State courts."[175] Canada also follows the same philosophy.[176]

Even if WTO Members were prepared to create direct effect in their own legal systems, the WTO Agreements are not properly designed to adapt to such a development. In a situation where domestic courts around the world would attempt to interpret the language of treaties, there must be a way to create relatively uniform interpretations. In the EC, domestic courts can certify questions of EC law to the European Court of Justice in order to ensure uniform interpretation.[177] No such certification procedure currently exists in the WTO. This procedure could be established if, for example, the DSU were amended to permit the DSB (or the Appellate Body directly) to address questions referred by courts of Member governments. It would, however, require considerable resources, including a possible expansion of the Appellate Body.

The world is far away from agreeing to any multilateral commercial treaty that requires direct effect in domestic courts. Professor Jackson points out three main impediments to such direct effect.[178] First, the limited democratic participation of citizens of the various nations involved in treaty negotiations makes it less acceptable to countries that expect representative governance. Second, treaty rules are difficult to amend in response to the needs of citizens. Finally, countries simply are less likely to enter into treaties with strong teeth than those with less coercive enforcement mechanisms. As Amelia Porges has stated, "if all national systems 'constitutionalized' trade via direct effect the most likely result would be that any further progress internationally would become suddenly much more difficult, and international decision-making would become much stickier and more politicized."[179]

Yet, although it has a far smaller and much less diverse membership than the WTO, the experience of the EC demonstrates that direct effect of multilateral treaty regimes is not an impossible dream in the long term. As with other dramatic steps that countries made when they agreed to the WTO dispute settlement system, if countries determine that it is in their self-interest to create a treaty regime with direct effect, they will do so.

VI. Conclusion

The dispute settlement mechanism of the WTO does not rely on highly coercive economic sanctions to force Members into compliance. Nor does it depend solely on the extra-legal pressures of the typical international treaty regime for implementation. Instead, as demonstrated in this Chapter, the DSU combines both legal sanctions and extra-legal pressures to motivate Members to comply.

For the most part, early settlement is quite common, and countries comply with the WTO agreements, as interpreted by panel and Appellate Body decisions. The DSU, however, is far from perfect and certain WTO Members have demonstrated a proclivity to test the limits of these imperfections. The potential for multiple rounds of implementation challenges, procedural battles over the required sequence for determining implementation and retaliation, prolonged periods of litigation with appeals at every stage, and the abusive use of the "reasonable period of time," all in a system without retroactive remedies or remand authority, creates cause for concern and impetus for reform.

In spite of the unique framework established by the DSU, achieving a settlement between disputing countries remains the key force in successful implementation. Thus, it is imperative that the WTO harness the DSU in ways that increase the likelihood of early settlement. The possibilities of enforceable settlement agreements, partial retroactive remedies, and interim relief all would serve this purpose. Nevertheless, one must be careful to avoid the dangers of establishing truly coercive economic sanctions that punish Members. The delicate balance established by Members through the DSU must be maintained in order to ensure the stability and continued viability of the WTO, but the DSU should be modified in ways that make the most of the basic framework that has already been established.

I. Introduction

Dispute settlement procedures under international treaties are designed to resolve differences arising from the interpretation or application of the provisions of the treaty in question. The legal system of the World Trade Organization (WTO) goes further by allowing its Members recourse to its dispute settlement in order to resolve disputes arising from measures that violate the provisions of the WTO agreements as well as disputes relating to measures that do not violate the provisions of those agreements, but nonetheless nullify or impair benefits accruing under certain of the WTO agreements.

Prior to the establishment of the WTO in 1995, disputes under the General Agreement on Tariffs and Trade (GATT) were settled in accordance with the provisions of Articles XXII and XXIII of the GATT 1947. Article XXII established the framework for consultations and required contracting parties to accord sympathetic consideration to requests for consultations. Article XXIII set out the types of complaints or "causes of action" in respect of which requests for consultations could be made under the GATT. Article XXIII states, in relevant part:

> If any contracting party should consider that any benefit accruing to it directly or indirectly under this Agreement is being nullified or impaired or that the attainment of any objective of the Agreement is being impeded as the result of
>
> (a) the failure of another contracting party to carry out its obligations under this Agreement, or
> (b) the application by another contracting party of any measure, whether or not it conflicts with the provisions of this Agreement . . .
>
> the contracting party may, with a view to the satisfactory adjustment of the matter, make written representations or proposals to the other contracting party or parties which it considers to be concerned.

Articles XXII and XXIII, together with other articles of the original GATT, were incorporated into the Marrakesh Agreement Establishing the WTO as the GATT 1994. By incorporating Articles XXII and XXIII of the GATT 1947 into the GATT 1994, WTO Members demonstrated their commitment to the continuity of the principles underlying the GATT dispute settlement system. This is expressed in Article 3.1 of the DSU, where the WTO Members:

> . . . affirm their adherence to the principles for the management of disputes heretofore applied under Articles XXII and XXIII of GATT 1947, and the rules and procedures as further elaborated and modified herein.[1]

This expression of continuity is found in the GATT 1994, in the DSU, as well as in the other WTO agreements which call for disputes to be settled in accordance with the DSU. Most of the other WTO agreements contain a provision that defines the types of complaints or "causes of action" necessary to invoke the DSU. This is done by reference to Article XXIII[2] or using terms similar to those in Article XXIII.[3] Article XXIII:1(a) refers to the failure to carry out obligations, thus addressing omissions as well direct conduct that violates the provisions of the WTO agreements. In addition, Article XXIII:1(b) of the

[1] *See also DSU*, Article 1.1.

[2] *See e.g.* Article 14.1 of the *Agreement on Technical Barriers to Trade*, and Article 19 of the *Agreement on Agriculture*.

[3] *See e.g.* Article 17.3 of the *Agreement on the Implementation of Article VI of the GATT 1994* (Anti-Dumping Agreement).

GATT 1994 permits any WTO Member to bring a complaint whenever it considers that "any benefit accruing to it directly or indirectly under this Agreement is nullified or impaired . . . as a result of the application by another [WTO Member] of *any measure, whether or not it conflicts with the provisions of this* Agreement . . . " (emphasis added) Disputes arising under Article XXIII:1(b) are referred to as "non-violation complaints".

As will be discussed in further detail below, an exception applies in the case of disputes relating to the Agreement on Trade-Related Aspects of Intellectual Property Rights (the "TRIPS Agreement"). At the time of the negotiation of the TRIPS Agreement, it was decided to exclude non-violation complaints during a five-year transitional period which has now expired.[4] Article 64.3 of the TRIPS Agreement mandated the Council for TRIPS, during this period, to "examine the scope and modalities" for non-violation complaints and to submit recommendations to the Ministerial Conference for approval. The Decision on Implementation-Related Issues and Concerns adopted in Doha by the Fourth Session of the WTO Ministerial Conference on November 14, 2001, further directs the Council for Trade-Related Aspects of Intellectual Property Rights to examine this matter and make a recommendation to the Fifth Session of the Ministerial Conference. Further, the Decision states that "it is agreed that, in the meantime, Members will not initiate such complaints under the TRIPS Agreement".[5]

With the exception of disputes arising under the TRIPS Agreement, it is possible, by means of a "non-violation complaint", for a WTO Member to initiate dispute settlement proceedings against another Member even where such Member has not failed to carry out an obligation under a covered agreement. The elements of a successful non-violation claim are that there is a measure that nullifies or impairs benefits accruing directly or indirectly pursuant to a concession made to another WTO Member.

II. The Origin of Non-Violation Complaints[6]

The concept of non-violation nullification and impairment has its origins in the trade agreements that were concluded by the United States in the 1930s and 1940s. These agreements all contained a standard clause providing for the sympathetic consideration of any representation that a measure, whether or not it conflicted with the agreement, had the effect of nullifying or impairing an object of the agreement.[7] If the complaint did not bear fruit, the complaining party's only option was to withdraw from the agreement, an option that was readily available as the agreements could be terminated on short notice. In those circumstances, consultation on the interpretation or application of such

[4] Article 64.2 of the TRIPS Agreement states:

> Subparagraphs 1(b) and 1(c) of Article XXIII of GATT 1994 shall not apply to the settlement of disputes under this Agreement for a period of five years from the date of entry into force of the WTO Agreement

[7] *See e.g.* Article XIV of the Reciprocal Trade Agreement Between the United States of America and Mexico, December 23, 1942.

agreement was, at the same time, negotiation on its continued application. Consequently, the question whether a measure affected the object of the agreement was more important than the question whether such measure was consistent with the agreement. In the original GATT, one organ—the CONTRACTING PARTIES acting jointly—handled all such complaints. Against this background, it was natural for the drafters of Article XXIII to submit questions concerning all possible forms of impairment to the same decision-making procedures.

The possibility of bringing complaints relating to perfectly legal measures was introduced into the GATT because its founders realized that the intended effect of a tariff negotiation could be easily frustrated by measures that the GATT did not regulate, such as domestic subsidies. As the GATT did not contain any substantive commitments on such internal measures, a procedure for the adjustment of tariff concessions following the introduction of such measures was required. The purpose of Article XXIII:1(b) was to provide such a procedure.[8]

A finding that a measure, though consistent with a WTO agreement, nevertheless impairs benefits accruing under that agreement, has serious consequences for the Member concerned. A refusal to cease the impairment or to accord compensation is subject to the same sanction as a refusal to implement obligations, namely the suspension of equivalent obligations by the adversely affected Member that has brought the complaint.[9] Neither the original GATT nor the dispute settlement provisions of the WTO contain any definition as to the nature of these additional benefits that Members must accord lest they be exposed to the threat of retaliation. Many of the drafters of the GATT doubted whether Article XXIII should provide for the possibility of imposing sanctions when undefined, and hence un-negotiated, benefits were being impaired. As one of the drafters remarked:

> Of all the vague and woolly punitive provisions that one could make, this seems to me to hold the prize place. It appears to me that what it says is this: In this wide world of sin there are certain sins which we have not yet discovered and which after long examination we cannot define; but there being such sins, we will provide some sort of punishment for them *if* we find out what they are and if we find anybody committing them.[10]

III. Practical Experience with Non-Violation Complaints Under the GATT and the WTO

Non-violation complaints have been extremely rare both under the GATT and the WTO. Only eight cases were considered by working parties and panels under the GATT 1947.[11]

[8] *See* ROBERT HUDEC, THE GATT LEGAL SYSTEM AND WORLD TRADE DIPLOMACY 44–46 (1990).

In two of these cases, the panels found that the non-violation complaints were justified, but the panel reports were not adopted.[12] In three cases, the non-violation claims failed.[13] Thus only in three cases have non-violation complaints succeeded.[14]

Four panels have examined non-violation complaints since the establishment of the WTO.[15] In the *Japan—Film* dispute, the non-violation complaint failed. In the *EC—Computer Equipment* dispute, the non-violation issue was raised as a subsidiary issue and the panel did not have to address it because that panel found the measure at issue to be inconsistent with the concession claimed to have been impaired. The panels in *Korea—Government Procurement* and *EC—Asbestos* rejected the non-violation complaints. We start our survey of these cases with the three GATT cases in which non-violation complaints were sustained.

A. Experience Under the GATT 1947

In 1950, a working party established at the request of Chile examined a decision taken by Australia to remove a purchase subsidy on sodium nitrate, which was mainly imported, while maintaining it on ammonium sulfate, which was mainly of domestic origin. The working party concluded that the two fertilizers were not like products within the meaning of the national treatment provisions of Article III, so that the differentiation between them was not a failure to observe Australia's national treatment obligations. Instead, it found that the differentiation impaired a benefit accruing to Chile. The working party reached this conclusion after having agreed on the following test for determining the existence of an impairment within the meaning of Article XXIII:1(b):

> It was agreed that such impairment would exist if the action of the Australian Government which resulted in upsetting the competitive relationship between sodium nitrate and ammonium sulfate could not reasonably have been anticipated by the Chilean Government, taking into consideration all pertinent circumstances and the provisions of the General Agreement, at the time it negotiated for the duty-free binding on sodium nitrate.[16]

In 1952, in a case involving the tariff treatment of sardines by Germany, a panel established at the request of Norway declined to rule that two commercially equivalent types of sardines, one mainly exported by Portugal, the other mainly by Norway, were like products within the meaning of the most-favored nation provisions of Article I of

[16] *Australian—Ammonium Sulphate, supra* note 11, ¶¶ 193–194.

the GATT and that the tariff differentiation was therefore inconsistent with Germany's obligations under that provision.[17] The panel stated that:

> . . . although the Norwegian complaint rested to a large extent on the concept of 'like products' . . . the Panel was satisfied that it would be sufficient to consider whether in the conduct of the negotiations at Torquay the two parties agreed expressly or tacitly to treat these preparations as if they were 'like products' for the purposes of the General Agreement.

Based on an analysis of the course of the negotiations, it concluded that the differentiation between the two products impaired a benefit accruing to Norway under the tariff concession it had negotiated with Germany.[18]

The third successful case was the 1989 complaint by the United States against the subsidies paid by the EC to producers of oilseeds.[19] This panel ruled that these subsidies, which varied with the level of import prices, impaired benefits accruing to the United States under a zero tariff subsidy the EC had negotiated with the United States in 1962 because they systematically offset the economic effect of the negotiated tariff reduction. The Panel based its ruling on a decision adopted by consensus by the CONTRACTING PARTIES in 1955, according to which:

> . . . it was agreed that a contracting party which has negotiated a tariff concession under Article II may be assumed, for the purposes of Article XXIII, to have a reasonable expectation, failing evidence to the contrary, that the value of the concession will not be nullified or impaired by the introduction or increase of a domestic subsidy on the product concerned.[20]

The Appellate Body has confirmed that fiscal discrimination between directly competing products for the purpose of protecting a domestic industry, similar to that engaged in by the Australian Government in 1949, violates Article III:2 of the GATT.[21] The Appellate Body also ruled that the most-favored-nation provisions of the GATT apply to *de facto* discrimination of the kind Germany introduced against sardine imports in 1952.[22] Moreover, as Article 11 of the DSU requires panels to "make an objective assessment of the matter before it . . . including an assessment . . . of the applicability of and conformity with the relevant covered agreements", a WTO panel, unlike a GATT panel in 1952, cannot refuse to consider a violation complaint and examine it instead as a non-violation complaint. If the *Australian—Ammonium Sulphate* and the *German—Sardines* cases were to arise today, they would probably be resolved as violation complaints. Perhaps these early GATT cases were handled under the non-violation provisions to spare Australia and Norway the opprobrium of illegality and thereby promote a negotiated solution to the problem.

If the *Oilseeds* case were to arise today, a panel would most likely examine it, not under Article XXIII:1(b) of the GATT, but under Article 7 of the Agreement on Subsidies and Countervailing Measures (the "SCM Agreement"). Non-violation complaints against subsidies unexpectedly granted subsequent to an exchange of tariff concessions

are now subject to specific provisions that codify the decisions of the CONTRACTING PARTIES.[23]

This permits the following conclusions. If all the successful complaints under Article XXIII:1(b) were resubmitted to the WTO dispute settlement procedures, they would be resolved either as violation complaints under Article XXIII:1(a) of the GATT or under the special non-violation provisions of Article 7 of the SCM Agreement. The existence of Article XXIII:1(b) would not make a difference. This seriously calls into question the practical utility of non-violation complaints. In fact, because impairing subsidies of the type considered in the *EEC—Oilseeds* case are now covered by the SCM Agreement, it may be questioned whether this unusual legal institution is needed at all. We discuss this point in more detail below.

B. Experience under the WTO Agreement

The contracting parties to the GATT consistently called upon panels to exercise caution with respect to Article XXIII:1(b). Thus, in *EEC—Oilseeds*, the United States stated that it "concurred in the proposition that non-violation nullification or impairment should remain an exceptional concept. Although this concept has been in the text of Article XXIII of the General Agreement from the outset, a cautious approach should continue to be taken in applying the concept".[24] The EEC stated in that case that "recourse to the 'non-violation' concept under Article XXIII:1(b) should remain exceptional, since otherwise the trading world would be plunged into a state of precariousness and uncertainty".[25]

These attitudes appear to have carried over into the WTO legal regime, and are reflected in the findings of the *Japan—Film* panel. That panel stated:

> Although the non-violation remedy is an important and accepted tool of WTO/GATT dispute settlement and has been "on the books" for almost 50 years, we note that there have only been eight cases in which panels or working parties have substantively considered Article XXIII:1(b) claims. This suggests that both the GATT contracting parties and WTO Members have approached this remedy with caution and, indeed, have treated it as an exceptional instrument of dispute settlement. . . . The reason for this caution is straightforward. Members negotiate the rules that they agree to follow and only exceptionally would expect to be challenged for actions not in contravention of those rules.[26]

As already noted, non-violation complaints have been raised in WTO dispute settlement proceedings in four disputes. Of these, two cases, namely *Korea—Government Procurement* and *EC—Asbestos* warrant particular attention, the former because of the approach taken by the panel, the latter because of the approaches taken by both the panel and the Appellate Body.

1. Korea—Government Procurement

The panel report in *Korea—Government Procurement* seemed to abandon the "cautious approach" followed under the GATT and enunciated in *Japan—Film*, and instead developed its own interpretation of the non-violation remedy. This dispute concerned the interpretation of Korea's obligations under the plurilateral Agreement on Government

[23] Footnote 12 of the Subsidies Agreement makes clear that the existence of nullification or impairment resulting from a subsidy "shall be established in accordance with the practice of application of these provisions".

[24] *EEC—Oilseeds, supra* note 11, ¶ 118.

[25] *Id.*

[26] *Japan—Film, supra* note 15, ¶ 10.36.

Procurement (the "GPA"). The Panel was asked to consider certain claims made by the United States concerning procurement for the Inchon International Airport. The United States argued that all of the entities responsible for this project were covered under Korea's Appendix I of the GPA, so that Korea was obliged to abide by the provisions of the GPA in respect to this airport project. The United States also argued that, regardless of its obligation, Korea's measures nullified or impaired benefits accruing to the United States under the GPA.

In addressing this issue, the Panel drew a distinction between what it termed a traditional non-violation claim, and the non-violation claim in that case. The Panel noted that in the typical non-violation case, benefits accrue as the result of a concession, while in that particular case, benefits accrued as the result of a negotiation. The Panel stated:

> One of the issues that arises in this dispute is whether the concept of non-violation can arise in contexts other than the traditional approach represented by *pacta sunt servanda.* Can, for instance the question of error in treaty negotiation be addressed under Article 26 of the DSU and Article XXII:2 of the GPA?[27]

To this question, the Panel responded: "[w]e see no reason why it cannot",[28] and reasoned that:

> Parties have an obligation to negotiate in good faith just as they must implement the treaty in good faith. It is clear to us (as discussed . . . below) that it is necessary that negotiations in the Agreement before us (the GPA) be conducted on a particularly open and forthcoming basis.[29]

The Panel was of the view that the U.S. non-violation claim concerning promises made in the course of negotiations did not "fit well with the traditional theory".[30] Having said this, it might have been expected that the Panel would stop there, and find that the United States had failed to make its claim. However, despite the lack of arguments from the parties on this point, the Panel decided to examine the U.S. claim from the perspective of customary international law concepts of "error in respect of a treaty".[31] The Panel thus expanded the concept of nullification and impairment and further, confused the "non-violation remedy" with the "error in treaty concept".[32]

The Panel's ruling appears to contradict the text of the treaty, which clearly refers to nullification of a benefit accruing under the treaty, and not benefits accruing during negotiations. Thus the Panel's ruling flies in the face, not only of GATT jurisprudence on the interpretation of Article XXIII:(b), but also of the text of the treaty itself. Moreover, the linkage established by the Panel between the concept of error in treaty law and the non-violation remedy is unfortunate. The non-violation remedy was intended to prevent the frustration of the objectives of tariff concessions. Extending this concept to reasonable expectations in negotiations impermissibly broadens the scope of the

[32] Under public international law, and as expressed in Article 48 of the *Vienna Convention on the Law of Treaties,* the apparent consent of a state to a treaty may be vitiated in circumstances where the state acted on the basis of a fundamental error. As stated in Article 48, an error in a treaty may be invoked as invalidating consent "if the error relates to a fact or situation which was assumed . . . to exist at the time when the treaty was concluded and formed an essential basis of its consent to be bound by the treaty." See, generally OPPENHEIM'S INTERNATIONAL LAW, Ninth Ed. 1288–1289 (Robert Jennings and Arthur Watts eds. 1992).

non-violation remedy and upsets the balance of rights and responsibilities agreed by the negotiators. Further, in stating that had Korea made a concession regarding the Inchon Airport project, the dispute would have involved a violation claim, with the result that a traditional non-violation case could not have been sustained, the Panel clearly misunderstood the non-violation remedy. The Panel implies that a measure which conflicts with a provision of, for example, the GATT 1994, would not be subject to a non-violation complaint. While it may be better, from a strategic perspective to pursue a claim of violation, according to the wording of Article XXIII:1(b), a complaining party would be well within its rights to assert both violation and non-violation claims.[33]

2. European Communities—Asbestos

The most recent consideration of the non-violation remedy was in the *EC—Asbestos* dispute. This dispute involved a complaint by Canada with respect to a measure taken by the European Communities that banned the manufacture, processing, importation, sale, marketing, etc. of all varieties of asbestos fibers and products containing such fibers, with certain limited exceptions. Canada argued that this measure violated certain of the EC obligations under the GATT 1994 and the Agreement on Technical Barriers to Trade. Canada also claimed that the measure nullified or impaired benefits accruing to it under Article XXIII:1 (b) of the GATT 1994.[34]

The European Communities argued before the panel that the rules on non-violation, nullification or impairment in Article XXIII:1 (b) of the GATT 1994 apply only if the measure in question does not fall under other provisions of the GATT 1994. The European Communities also argued that, while there may be "legitimate expectations" in connection with a purely commercial measure, there can be no such expectations with respect to a measure necessary to protect human health and which can therefore be justified under Article XX:(b) of the GATT. The European Communities submitted that the purpose of Article XXIII:1(b) is to prevent abuse of the provisions of the GATT, and argued further that the Appellate Body had pointed out in the *United States—Shrimp* dispute that the conditions laid down in the chapeau of Article XX(b) are meant precisely to address situations in which a Member applies in bad faith, and in an abusive manner, the exceptions laid down in Article XX. Thus, the European Communities argued that there cannot be two sets of provisions that address the same problem twice.[35]

In response to this, Canada argued that the distinction between measures of a purely commercial nature and measures which have health-protection related aspects has no basis either in the texts of the WTO Agreement or in case law. A legitimate expectation does not in any way concern a particular measure adopted by a Member, but rather the opportunities for competition agreed during multilateral trade negotiations on a given product.[36]

The Panel recognized that:

> . . . the GATT 1947 and WTO panels have never discussed the situation with respect to a measure designed to protect public health. All previous cases have concerned situations in which a measure of a purely commercial nature was adopted pursuant to the negotiation of a concession.[37]

[33] This panel report was not appealed. As the DSB meeting at which the report was adopted, several WTO Members sharply criticised the Panel's approach.

[34] *EC—Asbestos Panel, supra* note 15, ¶ 3.2.

[35] *Id.,* ¶ 3.531.

[36] *Id.,* ¶ 3.530.

[37] *Id.,* ¶ 8.225.

However, the Panel did not consider this relevant because:

> . . . neither the text of Article XXIII:1(b) of the GATT 1994 nor that of Article 26:1 of the Understanding expressly incorporates the separation suggested by the EC between measures of a purely commercial nature and measures designed to protect human health. Although these articles require the existence of a *measure*—which neither of the Parties disputes—they do not distinguish between different *types* of measures.[38]

The Panel therefore concluded that "Article XXIII:1(b) applies to a measure whether it is consistent with the GATT because the GATT does not apply to it or is justified by Article XX."[39] As a result of this finding, the Panel did not examine whether it was *legitimate* for Canada to expect to be able to export a carcinogenic product—given the explicitly recognized right to restrict trade in such products accorded by Article XX(b)—but whether Canada could *as a matter of fact anticipate* the adoption of a measure restricting the use of asbestos. The Panel's conclusion that the asbestos ban does not impair the relevant tariff concessions was therefore exclusively based on the finding that the hazardous nature of chrysotile was already known when the relevant tariff concession was negotiated and that restrictions on the use of asbestos could therefore have been foreseen.[40]

The Panel's approach implies that Article XXIII:1(b) offers redress when the regulatory framework applicable to a product is adapted in response to new scientific knowledge concerning health risks. The European Communities considered that this right of redress is not among the benefits accruing under the GATT within the meaning of Article XXIII:1(b) and therefore appealed the panel's finding.

In dealing with the issue raised by the European Communities, the Appellate Body stated the obvious:

> The European Communities also contends that the Panel erred in finding that Article XXIII:1(b) applies to measures which pursue health, rather than commercial, objectives and which can, therefore, be justified under Article XX(b) of the GATT 1994. Once again, we look to the text of Article XXIII:1(b), which provides that "the application by another Member of *any measure*" may give rise to a cause of action under that provision. The use of the word "any" suggests that measures of all types may give rise to such a cause of action. The text does not distinguish between, or exclude, certain types of measure. Clearly, therefore, the text of Article XXIII:1(b) contradicts the European Communities' argument that certain types of measure, namely, those with health objectives, are excluded from the scope of application of Article XXIII:1(b).[41]

The EC argument was however not directed against the Panel's interpretation of the term "measure" in Article XXIII:1(b) but of the terms "benefit accruing . . . under this Agreement". The essence of the EC argument was to question whether there was a benefit accruing to Canada. In other words, was it a reasonable expectation of Canada to expect to export a carcinogenic product to the EC market? Was it a reasonable expectation to expect that the European Communities would not take measures to protect health?

However, the Appellate Body did not address the issue of whether Members can reasonably expect other Members not to take measures covered by the health provisions of Article XX(b). Instead, the Appellate Body stated:

[38] *Id.* ¶ 8.226.
[39] Id., . ¶ 8.264
[40] *EC—Asbestos Panel, supra* note 15, ¶ 8.295.
[41] Report of the Appellate Body, *European Communities—Measures Affecting Asbestos and Asbestos-containing Products,* WT/DS135/AB/R, ¶ 188 (2001).

> An important aspect of the European Communities' argument is that a Member cannot have reasonable expectations of continued market access for products which are shown to pose a serious risk to human life or health. However, the paragraphs of the Panel Report appealed by the European Communities involve *exclusively* the Panel's findings on the threshold issues of the scope of application of Article XXIII:1(b). This particular argument of the European Communities, important as it is, simply does not relate to those threshold issues. Rather, the European Communities' argument relates to the substance of a claim that has been determined to fall within the scope of application of Article XXIII:1(b) and, in particular, concerns the issue whether a "benefit" has been "nullified or impaired" by a measure restricting market access for products posing a health risk. Here, we emphasize that the European Communities does *not* appeal the Panel's findings relating to the "nullification or impairment" of a "benefit" through the frustration of reasonable expectations by application of the measure at issue. We do not, therefore, find it necessary to examine the European Communities' argument relating to reasonable expectations.[42]

By declining to address this argument, the Appellate Body missed an opportunity to clarify an important element of the non-violation claim. In the jurisprudence on Article XXIII:1(b) there are frequent references to the fact that an expectation, to be protected by Article XXIII:1(b) must be "legitimate" or "reasonable". Some panels have used these terms as if they were interchangeable; in fact however they designate entirely different aspects of the expectations that Article XXIII:1(b) protects. An expectation arising from a tariff concession can be described as *legitimate* if it has merit and therefore deserves to be protected by Article XXIII:1(b). To say that an expectation is legitimate is therefore equivalent to saying that its protection is "a benefit accruing under the GATT". To answer the question whether an expectation is legitimate, a panel must conduct a normative inquiry into the object and purpose of the WTO Agreement and the balance of rights and obligations established under it.

Under WTO law, tariff concessions are accorded subject to explicit conditions (such as the right to take safeguard actions under Article XIX or adopt public policy measures under Article XX). Members, when assessing the value of their trading partners' concessions and deciding on the commitments they "paid" for those concessions, take this into account. There is therefore no legitimacy in the expectation that a WTO Member will refrain from adopting a measure that is specifically foreseen in the WTO Agreement itself. The protection of this expectation under Article XXIII:1(b) would have the consequence that the Member could seek compensation for the loss of trading opportunities they did not "pay" for and should therefore not be regarded as a benefit accruing under the GATT.

Numerous provisions in the WTO Agreement expressly safeguard the right of WTO Members to adopt origin-neutral policy measures that do not create unnecessary obstacles to trade. Also this factor enters into the assessment of the value of tariff concessions by the negotiators. An expectation that Members that have granted a tariff concession will refrain from adopting measures that are part and parcel of the day-to-day conduct of the policies implemented by all responsible governments is not legitimate and its protection consequently not part of the benefits accruing under the GATT.

An expectation arising from a tariff concession can be described as *reasonable* if it was logical and based on sound judgment. This requires a factual inquiry into the circumstances prevailing at the time of the negotiation of the tariff concession. If the panel determines that the expectation that the measure at issue would not be taken after the grant of the tariff concession is "reasonable", it has found that an informed person

[42] *Id.* ¶ 190.

applying logic and sound judgment could have taken the possibility of such a measure into account in assessing the value of the concession. The measure at issue can then not cancel or weaken the value that the negotiators could realistically attach to the tariff concession. A determination that a measure had to be reasonably expected is therefore essentially a determination that it does not "nullify or impair" the value of the tariff concession within the meaning of Article XXIII:1(b).

In the *EC—Asbestos* case, the Appellate Body appeared to endorse the "cautious approach", and quoted with approval, the statement of the panel in the *Japan—Film* case.[43] However, the Appellate Body failed to clarify an important element of the non-violation remedy. The Appellate Body failed to address the essence of the EC argument, which was that a measure justified under Article XX, whose exceptions are known to WTO Members, can be anticipated, and thus, no legitimate expectations can flow in respect of such a measure. Addressing this issue would have had the benefit of significantly reducing the scope of the non-violation remedy to measures that could not be anticipated. As the scope of measures falling under the WTO Agreement is now vast, there is some need for clarification on this issue.

IV. Reflections on the Non-Violation Remedy

Pierre Pescatore has observed that the notion of nullification and impairment of benefits through measures that are legal is "a legal fantasy" which has turned into a "useless and dangerous construction" that should never have been included in the DSU.[44] The above survey of GATT and WTO rulings shows the correctness of this view. Outside the area of subsidies, which is now covered by the Agreement on Subsidies and Countervailing Duties, the concept of non-violation has proven useless over half a century. This raises the question whether Article XXIII:1(b) complaints should not be abolished altogether so as to ensure that the human and budgetary resources allocated to WTO dispute settlement proceedings are used more efficiently.

In addressing this fundamental question, it should be borne in mind that Article XXIII:1(b) was considered necessary because the provisions of the GATT do not realize the objectives of the GATT completely. The GATT 1947 served as a legal framework into which the results of tariff negotiations could be incorporated. The main purpose of this framework was to ensure that the value of tariff concessions was not impaired by non-tariff measures. However, the provisions of the GATT 1947 provided this assurance only in respect of border measures such as those covered by Article XI of the GATT, or discriminatory internal measures covered by Article III. In respect of non-discriminatory internal measures, such as subsidies accorded to certain producers or indirect taxes imposed on selected products, the GATT did not impose any obligations even though such measures might have had similar protective effects. The right of redress under Article XXIII:1(b) was granted as a counterpart to the freedom the contracting parties had retained with respect to their domestic economic policies.

The basic function of Article XXIII:1(b) is to protect the expectations that served as the basis for tariff concessions negotiated by WTO Members. It is to ensure that a WTO Member obtains compensation, or a right to the compensatory withdrawal of concessions,

[43] The Appellate Body stated that: "We consider that the remedy in Article XXVIII:1(B) should be approached with caution and should remain an exceptional remedy". *Id.* ¶ 186.

[44] Pierre Pescatore, *The GATT Dispute Settlement Mechanism: Its Present Situation and its Prospects,* 9 JOURNAL OF INTERNATIONAL ARBITRATION 41 (1993).

if a measure introduced subsequent to the negotiation of a concession frustrates one of those expectations. The phrase "benefits accruing under the GATT" in Article XXIII:1(b) must, therefore, be interpreted with the protection of expectations arising from a tariff concession in mind. As we have said above, the possibility of bringing complaints relating to perfectly legal measures was introduced into the GATT because its founders realized that the intended effect of a tariff negotiation could be easily frustrated by measures that the GATT did not regulate, such as domestic subsidies. As the GATT did not contain any substantive commitments on such internal measures, procedures for the adjustment of tariff concessions following the introduction of such measures were required.

The situation under the WTO Agreement is different to that pertaining under the GATT. The WTO Agreement addresses non-tariff measures such as subsidies which may have been particularly suited to non-violation complaints. The evolution of the multilateral trading system, and the expansion in the coverage of WTO Agreements to include non-tariff measures, appear to have removed the justification for non-violation complaints. It is therefore unclear which "benefits" could be deemed to be accruing to a Member under the WTO agreements governing non-tariff measures and the TRIPS Agreement, other than the right to the faithful observance of these agreements. A panel or the Appellate Body required to rule on this issue would be facing a normative void.

Moreover, it is difficult to reconcile the non-violation remedy with the binding nature of the WTO dispute settlement system. In assessing the value of the non-violation remedy, its origins as part of a non-binding dispute settlement mechanism should also be borne in mind. It has been observed that:

> The negotiators of the GATT . . . regarded the concept of non-violation nullification or impairment as a benchmark guiding consultations, negotiations and multilateral decision-making. They did not envisage the application of the concept in a binding third-party adjudication procedure. The Contracting Parties to the GATT 1947 applied the concept in the context of procedures under which each contracting party had the possibility to block the adoption of a finding of nullification or impairment. The open-ended nature of the concept of nullification and impairment therefore did not entail a threat to the sovereignty of the contracting parties.
>
> Under the WTO Agreement, however, the decisions determining the benefits that might accrue under a provision in addition to the benefit of its observation would be determined by the Appellate Body, whose decisions must be unconditionally accepted. What has thus happened, more by accident than by design, is that the power of an independent tribunal to hand out licenses to retaliate is defined by a legal concept that originally served to define the scope of the obligation to consult under bilateral trade agreements.[45]

There are few persuasive arguments for the continued existence of the non-violation remedy in the WTO. However, as long as the concept of non-violation is part of WTO law, WTO panels and the Appellate Body should use their unusual power to grant the right to retaliate against the denial of "un-negotiated benefits" only in those rare instances in which the membership of the WTO, through consensus decisions or consistent practice, has provided them with normative guidance. Such guidance exists so far only in respect to production subsidies impairing benefits accruing under tariff concessions. Panels and the Appellate Body should refuse to invent new, "un-negotiated benefits", on the ground that this would be inconsistent with the basic principle of law expressed in Article 3.2

[45] Frieder Roessler, *Should Principles of Competition Policy be Incorporated into WTO Law through Non-violation Complaints?* 2 Journal of International Economic Law 413, 418 (1999).

of the DSU, which stipulates that the recommendations and rulings of a panel and the Appellate Body cannot add to or diminish the rights and obligations set out in the WTO agreement.

V. The Non-Violation Remedy and the Trips Agreement

The concerns addressed above should inform any consideration of the application of the non-violation remedy in the context of the TRIPS Agreement. Article 64 of the TRIPS Agreement makes Articles XXII and XXIII of the GATT 1994 and the DSU fully applicable to disputes under that Agreement. It suspended the application of the non-violation provisions of Article XXIII until January 1, 2000. Why did the drafters of the TRIPS Agreement decide to include a reference to Article XXIII:1(b) and to suspend the application of this provision until January 1, 2000?

This solution was a compromise between two opposing views expressed mainly in informal meetings in the final stages of the Uruguay Round. Some negotiators, principally from developing countries, argued that there were no benefits accruing to WTO Members under the TRIPS Agreement beyond those arising from the observation of its provisions, and that there was consequently no place for complaints based on measures that are legal. Other negotiators, mainly from developed countries, argued that the complaints predicated on measures that are legal must be available to ensure that the obligations under the TRIPS Agreement are not be circumvented through measures not specifically covered by the TRIPS Agreement, such as high fees for patent registration, or through informal administrative guidance.

The concept of nullification and impairment as developed under the GATT cannot be transposed to the TRIPS Agreement. The basic legal conception of the TRIPS Agreement is fundamentally different from that of the GATT. As pointed out above, the obligation of WTO Members to accord redress if their domestic policies adversely affect their tariff concessions is a counterpart to the autonomy they enjoy with respect to those policies. However, the TRIPS Agreement is not intended to leave WTO Members with policy autonomy requiring redress and compensation under Article XXIII:1(b). The purpose of the TRIPS Agreement, unlike that of the GATT, can be achieved through the good faith performance of its obligations. WTO Members did not expect to obtain more from this Agreement than the good faith performance of its obligations. If additional advantages were accorded to Members under Article XXIII:1(b) in response to measures perfectly consistent with that Agreement, Members would be getting more than they "paid" for.

There was no common understanding among the negotiators that this Agreement creates a legitimate expectation of benefits that go beyond the effective protection of intellectual property rights. In particular, there was no common understanding that the Agreement is also intended to protect the *commercial exploitation* of intellectual property rights. Thus, authors who are nationals of a WTO Member can legitimately expect that their books will not be illicitly copied within the jurisdictions of any other WTO Member; the TRIPS Agreement, however, gives them no assurance that they can actually sell their books in those jurisdictions. In the legal system of the WTO, market access benefits accrue under the GATT, under the other multilateral agreements on trade in goods and the GATS, but not under the TRIPS Agreement. While the TRIPS Agreement certainly facilitates market access of goods and services, it is not a market access agreement as such.[46]

[46] The United States appears to support the unqualified application of the non-violation remedy in the TRIPS Agreement. The United States takes the view that the TRIPS Agreement is a market access agreement because

The TRIPS Agreement is a *sui generis* agreement that provides minimum standards in respect of the acquisition, exploitation, scope, and enforcement of intellectual property rights. If a WTO Member considers that an unexpected change in intellectual property rights protection impairs a negotiated market access concession, the complaint would therefore have to be brought under the GATT or the GATS, and not under the TRIPS Agreement.

A finding of nullification or impairment under the TRIPS Agreement would have legal consequences substantially different from such a finding under the GATT. Article XXIII:1(b) of the GATT operates as a legal device that can be applied to oblige WTO Members to renegotiate tariff concessions under Article XXVIII of the GATT when an unexpected or unanticipated measure affects what served as the basis of their exchange of scheduled concessions. However, the obligations under the TRIPS Agreement may not be unilaterally modified or withdrawn. If a WTO Member is found to be impairing a benefit accruing under a provision of the TRIPS Agreement, it could not unilaterally decide to maintain such a measure and renegotiate the impaired obligation. If the impairing measure is not withdrawn, the WTO Member whose benefits were found to have been impaired would, by refusing to accept compensation, expose the Member promulgating the measure to the threat of retaliation equivalent to that available in the case of a violation of the TRIPS Agreement.

Under the TRIPS Agreement the remedy of nullification and impairment could operate to create *completely unknown* new benefits and corresponding responsibilities. Members failing to accord such new benefits would be subject to retaliation equivalent to that applicable in the case of a violation.

The reasons which the proponents of Article XXIII:1(b) complaints under the TRIPS Agreement advance to justify their position are based on misconceptions. According to Article 3.2 of the DSU, one of the purposes of the dispute settlement system is to clarify the existing provisions of the agreements covered by the DSU "in accordance with the customary rules of interpretation of international law." Pursuant to these rules, treaties must be performed in good faith and, in interpreting their terms, their object and purpose must be taken into account. According to Articles 26 and 31 of the Vienna Convention all treaties must be interpreted and performed in good faith. The Appellate Body has confirmed the importance of the concept of good faith in interpreting obligations under the WTO Agreement. The Appellate Body has described the concept of good faith as a "pervasive principle" of general international law that guides the way in which Members should interpret their rights and obligations.[47] The Appellate Body has also explained that this principle affects the exercise of rights by WTO Members:

> [The principle of good faith], at once a general principle of law and a general principle of international law, controls the exercise of rights by states. One application of this general principle, the application widely known as the doctrine of *abus de droit*, prohibits the abusive exercise of a state's rights and enjoins that whenever the assertion of a right "impinges on the field covered by [a] treaty obligation, it must be exercised bona fide, that is to say,

it helps reduce market distortions that existed prior to its negotiations by establishing adequate standards and principles concerning the availability, scope and use of trade-related intellectual property rights, and by ensuring that effective and appropriate means for enforcement of these rights are available. *See Scope and Modalities of Non-violation Complaints Under the TRIPS Agreement,* Communication to the TRIPS Council from the United States, IP/C/W/194, July 17, 2000.

[47] Report of the Appellate Body, *United States—Tax Treatment for "Foreign Sales Corporations,"* WT/DS108/AB/R, ¶ 166 (2000).

> reasonably.[48] An abusive exercise by a Member of its own treaty right thus results in a breach of the treaty rights of the other Members and, as well, a violation of the treaty obligation of the Member so acting.[49]

Even if a measure, such as an excessive fee for patents, is not specifically regulated in the TRIPS Agreement, it may nonetheless constitute a violation of that Agreement if it is taken in bad faith or if it defeats the purpose of one of the provisions of the Agreement.[50]

The above considerations lead to the conclusion that the concept of nullification and impairment developed in the GATT for tariff concessions cannot be transposed into the field of intellectual property rights.[51] A new rationale for non-violation complaints specific to the TRIPS Agreement would need to be found to justify application of the concept. It is difficult to see what that rationale might be. The functions that some of the negotiators of the TRIPS Agreement wish to assign to the concept of non-violation in the TRIPS context are functions normally assigned to the process of constructive treaty interpretation in furtherance of the objectives of a particular agreement. We fear that the availability of Article XXIII:1(b) complaints will guide panels and the Appellate Body *away* from a constructive interpretation of the obligations under the TRIPS Agreement and therefore have effects contrary to what the proponents of non-violation complaints under the TRIPS Agreement seek.

There is no consensus among the WTO Members as to whether the concept of nullification and impairment developed under the GATT should be transposed into the TRIPS Agreement.[52] At the Fourth Session of the Ministerial Conference in Doha, the WTO Members issued a Decision on Implementation-related Issues and Concerns. Paragraph 11.1 of that Decision states:

> The TRIPS Council is directed to continue its examination of the scope and modalities for complaints of the types provided for under subparagraphs 1(b) and 1(c) of Article XXIII of GATT 1994 and make recommendations to the Fifth Session of the Ministerial Conference. It is agreed that, in the meantime, members will not initiate such complaints under the TRIPS Agreement.[53]

Whether this Decision is *legally* binding or not, it is clear that its effect is to extend the moratorium on the non-consideration of non-violation complaints under the TRIPS Agreement.

[53] *Decision on Implementation-related Isuues and Concerns, supra* note 5.

VI. Conclusion

Although the non-violation remedy has a long history in the GATT, it has been resorted to infrequently by both GATT contracting parties and WTO Members. Panels have circumscribed its use, some with more success than others, and it may now be time to question whether this remedy has any value in the WTO system. The multilateral trading system emerging from the Uruguay Round addresses the trade-distorting nature of a large number of non-tariff measures, and accordingly establishes rigid disciplines for their use. In view of this, it is necessary to ask whether the non-violation remedy is still relevant in the dispute settlement system. No decision has yet been taken on whether to transpose this remedy to the TRIPS Agreement, and the same considerations discussed above suggest that its application may not be necessary.

I. Introduction

This article is not intended to provide an overview of the appellate process at the WTO but to discuss a few specific issues of the appellate process which the writer thinks are interesting in light of his experience as a member of the Appellate Body from 1995 to 2000. A general account of the appellate process is covered by another chapter in this book (Chapter 27) by Victoria Donaldson of the Appellate Body Secretariat.

The appellate procedure is still in the process of formation. The WTO's dispute settlement process is said to have been judicialized as compared with that of the old GATT system. However, the WTO's dispute settlement process seems to fall somewhere between the judicial process and the political process that characterized the GATT dispute settlement system. It is judicial in the sense that panels and the Appellate Body rule on issues by interpreting and applying WTO agreements rather than by negotiation. They do not, in principle, decide cases on political considerations even if implications of their decisions may have political ramifications. It is also judicial because there is a guarantee that rulings of the Appellate Body will be adopted by the Dispute Settlement Body ("DSB") through the rule of automaticity, and because a *de facto* independent decision-making process like that of a judiciary is established.

However, it is not quite a full-fledged judiciary in the sense that as a formal matter panels and the Appellate Body do not make decisions, but simply recommend that the DSB adopt their reports and request the Member in violation to rectify the wrong. In this respect, the power of panels and the Appellate Body is different from the power of, say, the International Court of Justice ("ICJ") and the European Court of Justice ("ECJ"), as well as domestic courts, which are bodies vested with independent decision-making powers. Of course, under the rule of automaticity as mentioned above, it is certain (or almost certain) that rulings of panels and the Appellate Body will be adopted. But the above features of panels and the Appellate Body show that institutionally they are auxiliary to the DSB which is a political body.

Unlike judges in domestic courts and international courts such as the ICJ and the ECJ, panelists are appointed on an *ad hoc* basis to serve only in particular cases. They do not have full-time positions with the WTO. Members of the Appellate Body are appointed for a four-year period (and their terms are renewable only once). Their positions are also not full-time and their term as judges is much shorter than those of judges on domestic and international tribunals.

The structure of WTO panels and the Appellate Body was the result of a compromise. On the one hand, it was clear that the GATT dispute settlement procedure suffered from a number of defects. For example, panel reports could only be adopted by consensus, meaning that the losing party could block the adoption of the report. The dispute settlement process based on the consensus principle was thus inherently unstable. Furthermore, the timeframe for the process was not clearly established, which caused undue delay in the proceedings.[1] The Uruguay Round negotiating parties sought to establish a more stable dispute system in which the likelihood of the acceptance and, if necessary, rapid enforcement of rulings of the decision-making body was increased. The need for this change was related in part to the fact that the WTO would be a more complex body of treaties covering not only trade in goods, but also trade in services, as well as intellectual property.

[1] Despite these institutional defects, the GATT dispute settlement process performed its functions quite well and many disputes were successfully resolved through this process. Nevertheless, there were defects and there were important cases in which the adoption of panel reports was blocked. *See, e.g.,* Report of the Panel (unadopted), *United States-Taxes on Automobiles* (CAFE case), DS31/R (1994).

On the other hand, the prevailing sense of the negotiating parties was that the newly created WTO should be a member-driven organization. It should be the Members that make decisions, political or otherwise, and no WTO bodies independent of the Members should make important decisions. This shows that the international trading system is not mature enough yet to entertain the idea of an independent judiciary for the resolution of disputes among trading nations. WTO agreements indeed are based on a fine and delicate balance of interests among Members, and any pressure to tilt this balance one way or another would jeopardize the smooth functioning of the WTO.

II. Jurisdiction of the Appellate Body

A. Question of Facts and Question of Law

Article 17.6 of the Dispute Settlement Understanding ("DSU") states that "An appeal shall be limited to issues of law covered in the panel report and legal interpretations developed by the panel." The ordinary meaning of this provision is that the jurisdiction of the Appellate Body is limited to "issues of law" rather than "issues of facts". However, this provision needs some elaboration. Article 17.6 says that parties to a dispute cannot appeal issues of fact, but does not necessarily say that the Appellate Body cannot deal with any factual issue. This raises a question: "Can the Appellate Body deal with facts not dealt with by the Panel?"

This was an issue in the *Canada-Periodicals* case,[2] in which the United States claimed that the Canadian imposition of a heavy tax on advertisements contained in "split-run" U.S. magazines was contrary to Article III of the GATT. The Panel held that the Canadian imposition was contrary to Article III because the split-run U.S. magazines and Canadian magazines were "like products" and there was discrimination against the split-run U.S. magazines in the form of an advertisement tax. Therefore, the Panel applied Article III:2(1) of GATT 1994 and stated that the Canadian measure discriminated against foreign magazines.

The Appellate Body reversed the portion of the report in which the Panel ruled that split-run U.S. magazines and Canadian domestic magazines were "like products". The Appellate Body then proceeded to apply Article III:2(2) of GATT 1994, which states that a Member cannot discriminate through taxation against a foreign product in favor of a domestic product if the foreign and domestic products are "directly competitive products" and if the discrimination is imposed "so as to afford protection to a domestic industry". The Appellate Body held that the Canadian measure violated this provision. In finding that the split-run U.S. magazines and Canadian domestic magazines were directly competitive products, the Appellate Body relied on reports and other pieces of evidence mentioned in the panel report, but not relied upon by the panel when it made its ruling, i.e. a Canadian Task Force Report and statements by Canadian Government officials.

Although the Panel had not based its ruling on GATT Article III:2(2), the Appellate Body decided that it had jurisdiction to apply Article III:2(2) to this dispute. The disputing parties had no knowledge that the case would be disposed of under Article III:2(2). If the parties had known that Article III:2(2) would be applied, they (especially the Canadian Government) would have made arguments with regard to the reports and other items of evidence relied upon by the Appellate Body. For due process purposes, it seems that the

[2] *Canada-Certain Measures Concerning Periodicals* ("*Canada-Periodicals*"), Report of the Panel, WT/DS31/R; Report of the Appellate Body, WT/DS31AB/R (1997).

parties should be given a chance to comment on facts used by the Appellate Body if it decides a dispute by applying a provision that had not been invoked and relied upon at the panel level. Under the current system, it is impossible to do so since after the oral hearing there is no chance for disputing parties to comment on either legal or factual issues present in a case. This may be one of the aspects that the DSB should consider when it next reviews the DSU in order to increase due process.

The distinction between a legal question and a factual question appears in Article 11 of the DSU which states that ". . . a panel should make an objective assessment of the matter before it, including an objective assessment of the facts of the case and the applicability of and conformity with the relevant covered agreements. . . . " An objective assessment relates to: (a) the facts of the case, and (b) the applicability of and conformity with the relevant covered agreement. The latter is clearly a legal question.

What about the former? When the Appellate Body deals with the question of whether a panel infringed Article 11 by not making an objective assessment of the facts, it examines facts found by the Panel and the relationship between those facts and the application of a provision of a WTO agreement to this set of facts. In doing so, the Appellate Body deals with the characterization of facts, which may be regarded as a question of law.

However, the borderline between factual questions and legal questions is often blurred. Let us look at the *E.C.-Hormones* case.[3] One of the major issues in this case was whether or not the growth hormones that the EC banned were carcinogenic. The Panel received several submissions from experts regarding this issue. All except for one stated that there was no sign of carcinogenic risk if used under the "maximum residue level" established by the Codex Committee. One expert indicated that there was a risk of incurring cancer in one out of a million persons. The Panel relied on the majority view of experts and decided that the EC's ban was not based on a proper risk assessment.

The EC appealed against this ruling arguing that the Panel violated Article 11 of the DSU by ignoring and distorting some pieces of evidence. The Appellate Body had to examine whether or not the Panel violated Article 11. In order to do this, the Appellate Body reviewed all of the submissions made by these experts, together with other factual material submitted to the Panel, to ascertain whether the Panel had paid attention to each submission and made an appropriate assessment before reaching its conclusion. The Appellate Body concluded that the Panel had examined and evaluated each submission, but did not agree with the assertion of the EC that the hormones in question were carcinogenic. This was a review of how the Panel handled pieces of factual evidence and applied WTO agreements to them. In this operation, the Appellate Body handled a question of "mixed facts and law". Many Article 11 issues are of this nature.

B. The Scope of Appellate Review

Can the Appellate Body review legal issues not dealt with by a Panel? This issue has appeared in several cases. One of them is the *Canada-Periodicals* case, discussed above.[4] In this case, the Appellate Body relied upon Article III:2(2) of GATT 1994 which the Panel had not considered and which neither Canada nor the United States had invoked in the appellate proceeding. The issue of evidence with regard to this case has already been

[3] *EC—Measures Concerning Meat and Meat Products* ("*EC-Hormones*"), Report of the Panel, WT/DS26/R/USA, WT/DS48/R/Can; Report of the Appellate Body, WT/DS26/AB/R, WT/DS48/AB/R (1998).

[4] *See supra* footnote 2.

discussed. Setting aside the evidentiary issue, there is nothing in the DSU that prevents the Appellate Body from dealing with a provision in the WTO Agreement that a Panel has not cited or which neither party to the dispute has invoked. As long as a particular provision of a covered agreement is applicable to the subject matter of the dispute, the Appellate Body is authorized to apply it to resolve the dispute. It should be part of the discretion of the Appellate Body to decide which provision of the WTO Agreement applies to the subject matter of the dispute before it.

In *U.S.-Gasoline*,[5] the Panel had ruled that a U.S. trade measure applied to imported gasoline was discriminatory and did not fall under Article XX(g) of the GATT 1994 (the exception for the conservation of natural resources). On appeal, the Appellate Body reversed this ruling and held that the U.S. measure did fall under Article XX(g). However, Article XX of GATT 1994 requires that a measure which falls under any of the enumerated exceptions meet the requirements of the first paragraph of the Article ("the Chapeau") in order for that measure to be exonerated. The Chapeau states that a measure which falls under any of the exceptions provided for in Article XX must not constitute "a means of arbitrary or unjustifiable discrimination" or "a disguised restriction on international trade". The Appellate Body considered whether the U.S. measure satisfied these requirements, ruling that the U.S. measure was discriminatory and did not satisfy the requirements of the Chapeau. In this case, the Appellate Body took up and based its judgment on an issue that the Panel had not considered, i.e., the applicability of the Chapeau to Article XX. It was inevitable that the Appellate Body would consider and apply the Chapeau since, as long as the Appellate Body reversed the ruling of the Panel and held that Article XX(g) applied to the U.S. measure in question, the legal analysis would have been incomplete had the Appellate Body not considered this issue.

Another issue raised in the *U.S.-Gasoline* case was procedural. At the Panel level, the parties raised the question of the applicability of Article XX and the Panel examined this issue. Although the U.S. appeal was limited to the applicability of Article XX(b) and (g), Venezuela and Brazil argued in their appellees' submissions that provisions of the TBT Agreement (the Agreement on Technical Barriers to Trade) should be applied. The Appellate Body declined to consider the TBT issue because Brazil and Venezuela could have cross-appealed this issue but had chosen not to do so. To bring up this issue in their appellees' submissions was procedurally inappropriate. In any event, there was only a week or so between the appellees' submission and the oral hearing, and the time was too short for the United States to prepare a rebuttal. The refusal to hear the TBT issue was thus not grounded on lack of jurisdiction over the subject matter, but on due process because the way the issue was presented was procedurally wrong and the appellant should be given sufficient time for rebuttal.

In the *U.S.-Shrimp* case,[6] one of the issues was the applicability of Article XX(g) of the GATT 1994 to the unilateral prohibition exercised by the United States on imports of shrimp from countries in which "turtle exclusion devices" ("TEDS") were not required by governments.[7] The argument of the United States, the respondent, was that this prohibition was justified as it fell under the Article XX(g) exception. The Panel omitted the process of examining whether the U.S. measure fell under the Article XX(g) exception,

[5] *United States-Standards for Reformulated and Conventional Gasoline* ("*U.S.-Gasoline*"), Report of the Panel, WT/DS2/R; Report of the Appellate Body, WT/DS2/AB/R (1996).

[6] *United States-Import Prohibition of Certain Shrimp and Shrimp Products* ("*U.S.-Shrimp*"), Report of the Panel, WT/DS58/R; Report of the Appellate Body, WT/DS58AB/R (1998).

[7] TEDs are utilized on fishing boats to prevent sea turtles from being caught in shrimp nets.

went directly to the Chapeau, and decided that the U.S. measure was discriminatory and therefore contrary to the provisions of the Chapeau. The Panel reasoned that it was not necessary to examine whether the measure fell under Article XX(g) because, as long as the measure in question amounted to discrimination prohibited by the Chapeau, it made no difference to the result whether or not the measure in question fell under Article XX(g). The Appellate Body reversed this ruling and held that the Panel should have first determined whether the U.S. measure fell under Article XX(g) and, if so, that it then should have considered whether the measure satisfied the requirements of the Chapeau.

After reversing the Panel's method of analysis, the Appellate Body then proceeded to interpret Article XX(g). In doing so, the Appellate Body recognized that protection of the environment should be justified as part of GATT 1994. Although the Appellate Body considered this as a question of legal interpretation, it seems reasonable to assume that there was a policy consideration behind this ruling, i.e., that environmental protection be given legitimacy within the framework of the WTO.

C. Remand Power

Article 17:13 of the DSU states: "The Appellate Body may uphold, modify or reverse the legal findings and conclusions of the panel". The word "remand" is lacking. It is not clear whether or not this omission was intended. It is conceivable that the Appellate Body will face a situation in which the findings of a panel may be based on insufficient facts but could be justified given sufficient facts. In this situation in a domestic jurisdiction, an appellate court normally remands the case to the original court and instructs it to engage in further fact finding to ascertain whether the conclusion is justifiable.

What would the Appellate Body do in such a situation? One could argue that the Appellate Body has an inherent power to remand a case even if there is no clear textual authorization. However, without any clear wording in the DSU, the Appellate Body would be extremely reluctant to remand a case. There are many instances in which the Appellate Body has reversed a ruling but declined to go any further than merely to state that the Appellate Body could not rule on the subject due to a lack of sufficient facts. In the *Asbestos* case,[8] for example, the Appellate Body reversed the ruling of the Panel that a French ordinance which prohibited the manufacture, use or importation of asbestos and products which contain asbestos was not covered by the TBT Agreement. However, the Appellate Body did not go any further than to state that it could do no more because the panel had not made sufficient factual findings to judge whether the French measure was contrary to provisions of the TBT Agreement. This was unfortunate because, if the Appellate Body had remand power, it could have remanded the case to the original panel and the panel could have determined whether the French measure in question violated the TBT Agreement. This was the first time that the TBT Agreement was considered in a WTO dispute settlement proceeding, and it would have constituted an important decision regarding the applicability of the TBT Agreement on product safety issues.

However, the lack of remand power seems to have caused little problem so far. Perhaps serious problems just did not occur, or perhaps the present system is satisfactory. For the sake of completeness, however, it would probably be useful to provide the Appellate Body with remand power. There is, however, a means by which the Appellate Body could

[8] *European Communities-Measures Affecting Asbestos and Asbestos-Containing Products* ("*EC-Asbestos*"), Report of the Panel, WT/DS135/R, Report of the Appellate Body, WT/DSD135/AB/R (2001).

effectively exercise remand power. If an issue of remand comes up in a case in which the Panel's fact-finding was not sufficient, the Appellate Body could reverse the ruling of the Panel based on insufficient fact-finding and send its report to the DSB with a comment that the reversal is due to the lack of sufficient fact-finding rather than a deficiency in legal reasoning. The DSB could then decide to reconvene the original panel and commission it to engage in further fact-finding.[9]

III. Oral Hearings and Exchange of Views

A. Oral Hearings

Oral hearings are held usually one month after the initiation of an appeal. Oral hearings are held *in camera* and only members of the division, disputing parties, third parties, staff lawyers from the WTO Secretariat, translators and record-keepers are present. In oral hearings, parties are questioned with regard to issues argued in their submissions and related issues. Oral hearings are held so that members of the division understand the positions of each party and can thereby come to a fair judgment.

If the assertions of a party in oral hearings are different from those contained in its written submission, which should the Appellate Body base its judgment upon? This does not happen often since parties generally prepare their submissions carefully and argue their cases based on the reasoning contained in their submissions. However, it may happen, and it has happened in the past. In *U.S.-Lead Bars*,[10] one of the issues was whether the purchaser of the enterprise which had owned the steel production facility subsidized by the British government paid market value when it purchased the enterprise. The panel found that the purchase was made at fair market value. The United States, the appellant, appealed this finding on the grounds that it was wrong for the panel to have engaged in such a *de novo* investigation and to find that the purchase was made at fair market value. In the view of the United States, such a probe was an intrusion into the investigative power reserved to national governments and exceeded the panel's authority. In the oral hearing, however, the United States admitted that the panel's findings in this respect were factual findings, and chose not to challenge these factual findings. The Appellate Body interpreted this statement to mean that the United States had changed its position and withdrawn its allegation regarding this point. Thereupon, the Appellate Body decided that this issue had become moot.

A situation may, however, arise in which a party is faced with rigorous questioning and makes a response that contradicts a statement in its written submission. The question is whether the Appellate Body should base its judgment on this new statement. This writer believes that the answer depends on the circumstances in which such a statement is made. The purpose of oral hearings is not to put a party on the spot but to find out what it really wants to say. If a party is cornered at the oral hearing and admits something that contradicts its statement in its written submission, there should be an evaluation by the Appellate Body of the circumstances in which such a statement was made. The party might have spent many hours preparing its submission and its contradictory statement in the oral

[9] Although there is nothing to prevent the DSB from reconvening the original panel for further fact-finding, there is no guarantee that the original panelists would agree to serve again. A panel could be created composed of different panelists from those who serve on the original panel.

[10] *United States-Imposition of Countervailing Duties on Certain Hot-Rolled Lead and Bismuth Carbon Steel Products Originating in the United Kingdom* ("*U.S.-Lead Bars*"), Report of the Panel, WT/DS138/R; Report of the Appellate Body, WT/DS138/AB/R (2000).

hearing may be an inadvertent mistake made in a tense moment of rigorous questioning. It does not seem fair to take up this mistake in the spirit of faultfinding and dispose of the case on this basis. Nevertheless, it is highly recommended that parties prepare their submissions and their oral statements in such a way that there is no contradiction or inconsistency between them since otherwise this may adversely affect the credibility of submissions and statements.

B. Exchange of Views

Article 17.9 of the DSU authorizes the Appellate Body to draw up working procedures in consultation with the Chairman of the DSB and the Director-General of the WTO. Under the authority of this provision, the Appellate Body drafted its Working Procedures for Appellate Review ("Working Procedures") in early 1996 which, with a minor amendment, are currently applied. The Working Procedures set out details of the process by which an appeal is examined and treated.

Rule 4(3) of the Working Procedures states that the division responsible for deciding each appeal shall exchange views with the other Members before the division finalizes the appellate report. This process is called the "exchange of views". Rule 4(4) of the Working Procedures adds: "Nothing in these Rules shall be interpreted as interfering with a division's full authority and freedom to hear and decide an appeal assigned to it. . . ." Therefore, the decision of a division is not made *en banc* by the whole Appellate Body but by a division. However, an exchange of views is required before a division comes to its final conclusion in respect of a case.

Rule 4(3) of the Working Procedures is included in the section providing for "collegiality". Collegiality is necessary in order for divisions to make consistent judgments on various issues. The provision requiring an exchange of views is incorporated to maintain coherence between judgments among different divisions deciding the same or similar issues. In an exchange of views, members of the Appellate Body who are not members of the division provide input to the division and the division takes into account their views in reaching its conclusion. Rule 4(4) provides that the division is not bound by comments made by other members when deciding a case. The views of the other Appellate Body members constitute formal input which the division may or may not choose to accept.

However, if comments made by other Appellate Body members at a meeting of the members do not necessarily have any impact on the final judgment of the division, what is the point in conducting an exchange of views in every case? The views expressed by other members can serve a useful purpose for the division. These views are considered by the members of the division and may be incorporated in the judgment.

Because an exchange of views may have a substantial impact on a decision, the disputing parties may feel uneasy not having an opportunity to be heard by the full Appellate Body. The other members, of course, review the written submissions of the parties to a dispute. However, important statements may be made during the oral hearing, and those Appellate Body members not present might have formed different impressions had they attended the hearing.

This issue may be of some importance to the fairness of the appellate process, and the Appellate Body and the DSB may need to give some consideration to this point. As precedents accumulate and doctrines for interpreting provisions of WTO agreements become more firmly established, the need to emphasize collegiality and the exchange of views may not be as great as it is today. In the future, Article 17.1 of the DSU, which currently requires that three members of the Appellate Body serve on one case, may be changed to allow important cases to be heard in an "*en banc*" session (such as when

modification of precedents are discussed) and a "*petit*" session in which routine cases are discussed and resolved.

IV. Interpretation of the WTO Agreements—Article 31 and Article 32 of the Vienna Convention

Article 3:2 of the DSU directs that the bodies in charge of dispute settlements should: "... clarify the existing provisions of those agreements [covered agreements] in accordance with customary rules of interpretation of public international law." Customary rules of interpretation of public international law are incorporated in provisions in the Vienna Convention, in particular, Article 31 and Article 32 thereof. Article 31(1) provides that "A treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose." Article 32 provides that a treaty interpreter can consider preparatory documents of a treaty only when the "interpretation according to Article 31: (a) leaves the meaning ambiguous or obscure; or (b) leads to a result which is manifestly absurd or unreasonable."

Rules incorporated in the Vienna Convention regarding rules of treaty interpretation are similar to rules developed in civil law jurisdictions. In civil law countries, the task of jurists is to interpret provisions of the Civil Code and to apply them to particular situations. As a result, there are rules in civil law countries requiring that the ordinary meaning of words and their context be respected, as well as their object and purpose. Courts in civil law countries resort to the legislative history of a provision of the law far less than courts in some common law countries. In light of the above, there is something common to both treaty interpretation under Article 31 and Article 32 of the Vienna Convention and the interpretation of the Civil Code by domestic courts in civil law countries.

However, panels and the Appellate Body have put much more emphasis on the "wording" and "context" of a provision of a WTO agreement than domestic courts in civil law jurisdictions. Almost every panel and/or appellate report refers to the *Oxford* and *Webster* dictionaries. The Appellate Body must nevertheless sometimes interpret a word differently from what it literally says. This was the case in *Canada-Aircraft,*[11] in which the Appellate Body interpreted the word "should" in Article 13 of the DSU to mean "shall". This is, however, rare, and panels and the Appellate Body are generally faithful to the wording and context of a provision and do not easily deviate from them. In domestic jurisdictions, courts often interpret provisions of law more liberally if it is necessary to accomplish fairness and justice.

To give an example, Article 709 of the Civil Code of Japan (providing for tort claims) states that: "any person who infringes a right of another person by intention or negligence is liable to compensate damages caused by that act." The Supreme Court of Japan held in 1925 that the word "right" means "interests which deserve to be protected by law", as opposed to just a right provided in a law (such as "copyright").[12] However, panels and the Appellate Body would be hesitant to interpret the word "right" to mean "interests".

The strict adherence by panels and the Appellate Body to the words and the context of a provision in a WTO agreement is probably due to the unstable basis on which the WTO's dispute settlement system stands. The WTO agreements are the result of intensive

[11] *Canada-Measures Affecting the Export of Civilian Aircraft* ("*Canada-Aircraft*"), Report of the Panel, WT/DS70/R; Report of the Appellate Body, WT/DS70/AB/R (1999).

[12] Decision of the Supreme Court of Japan, 4 Minshu (Supreme Court Civil Cases Reporter) 670, (November 28, 1925).

negotiations between negotiators and reflect a fine balance of carefully negotiated interests. Any attempt to upset this balance will result in a loss of trust in the WTO system. In domestic jurisdictions, there is usually a solid community behind the legal system and there is frequently more respect and trust in domestic court systems than in the WTO's dispute settlement system. Compared with domestic judicial systems, the WTO system is more fragile and susceptible to collapse if the balance of interests reflected in the WTO agreements is upset. In the Uruguay Round, Members decided to part with a portion of their sovereignty to avoid trade wars (which may be likened to "the state of nature" in Thomas Hobbs' *Leviathan*). However, Members of the WTO are keenly conscious that they did not give up anything except that which is contained in the WTO agreements. With respect to the rest, they are jealous of protecting their sovereign prerogatives. The carefully negotiated balance of interests is reflected in the wording of the WTO agreements and the meaning of words in the WTO agreements is therefore vitally important.

This general sentiment among Members is reflected in several provisions of the Marrakesh Agreements. Article IX:2 of the Marrakesh Agreement Establishing the World Trade Organization states: "The Ministerial Conference and the General Council shall have the exclusive authority to adopt interpretations of this Agreement and of the Multilateral Trade Agreements." Article 3:2 of the DSU states: "Recommendations and rulings of the DSB cannot add to or diminish the rights and obligations provided in the covered agreements." Again Article 19:2 of the DSU provides: "In accordance with paragraph 2 of Article 3, in their findings and recommendations, the panel and Appellate Body cannot add to or diminish the rights and obligations provided in the covered agreements." This last provision is an admonition to panels and the Appellate Body to take the utmost care not to overstep the boundaries set by the WTO agreements.

V. Transparency and Access Issues

A. Transparency

How to promote transparency in the WTO process is an important policy consideration for the WTO. The breadth of transparency issues is wide and goes well beyond the appellate process. With regard to transparency of the appellate process, only one issue needs to be mentioned. Article 17:10 of the DSU requires the confidentiality of the appellate process by stating: "The proceedings of the Appellate Body shall be confidential. The reports of the Appellate Body shall be drafted without the presence of the parties to the dispute. . . ." It is obvious from this provision, as well as from the nature of the appellate proceeding, that the process of deliberations by divisions and the whole Appellate Body must be kept confidential. However, there seems to be little reason why attendance in oral hearings should be limited to the disputing parties, third parties, members of the division hearing the claims of the parties and staff lawyers. Allowing the general public to attend oral hearings would promote the transparency of the appellate process and increase the acceptance of the process by civil society by providing them with a glimpse of the process.

B. The Amicus Curiae Issue

The relationship between the WTO and civil society has recently become an important issue. This is partly due to the growing importance of NGOs as actors in WTO matters.

The WTO cannot ignore these actors. While the WTO is still an organization composed of governments and only governments can participate in WTO activities, it is not certain how long the WTO can cling to this traditional idea. In the long run, the WTO cannot exist unless it is accepted not only by governments, but also by civil society, including various groups such as NGOs, business associations, labor unions, professional groups and the general public.

The issue of whether the Appellate Body can (and should) accept *amicus curiae* briefs from persons outside the WTO should be considered from this broad perspective. This is a controversial issue, and many developing countries are opposed to allowing panels and the Appellate Body to accept and consider *amicus curiae* briefs.[13] This issue was first raised in connection with proceedings at the panel level. In *U.S.-Shrimp*,[14] the Panel decided that it did not have authority to accept and consider *amicus curiae* briefs. The Appellate Body reversed this ruling and held that panels were authorized to accept and consider *amicus* briefs. The Appellate Body reasoned that Article 13:1 of the DSU authorizes panels "to seek information and technical advice from any individual or body it deems appropriate" and that "the right to seek" should include the right to accept and consider information and advice including *amicus* briefs. Although there was much objection to this ruling among Members (especially among developing country Members), this appellate report was adopted and became an important precedent.

The issue of whether the Appellate Body can accept and consider *amicus* briefs was raised in *U.S.-Lead Bars*[15] in which two private U.S. groups filed *amicus* briefs with the Appellate Body. In its preliminary determination, the Appellate Body ruled that it could accept and consider *amicus* briefs. In holding that there was such authority, the Appellate Body cited Article 17:9 of the DSU which authorized the Appellate Body to draw up its own working procedures and compared this with the power of panels to establish working procedures. The Working Procedures for panels are provided in Appendix 3 of the DSU and panels are generally requested to follow these procedures, although a panel can choose to establish its own working procedures. The Appellate Body reasoned, comparing those two situations, that the Appellate Body is given greater authority to control its procedures as compared to that granted to panels. If panels are authorized to accept and consider *amicus curiae* briefs, why not the Appellate Body?

This writer agrees with the conclusion of the Appellate Body with respect to the power to accept and consider *amicus curiae* briefs. However, he would justify the power in the following way. *Amicus curiae* briefs are pieces of information of one kind or another which may be useful. The Appellate Body is required to examine submissions of the parties to a dispute. But it is also authorized to, and does consider academic writings, past panel precedents, decisions of ICJ and those of other international tribunals. They are pieces of information which may be useful. If the Appellate Body can consider academic writings, panel precedents, decisions of ICJ and so on, why should it not review *amicus* briefs? Is there any qualitative difference between them?

It is true that Article 13 of the DSU authorizes panels to seek information and advice from any person, but does not explicitly authorize the Appellate Body to do so. However, too much reliance on words may lead to absurdity. Article 11 states: "... a panel should

[15] *See supra* footnote 10.

make an objective assessment of the matter before it, including an objective assessment of . . . the applicability of and conformity with the relevant covered agreements. . . . " There is no equivalent language in the DSU for the Appellate Body. No one would argue, however, that the Appellate Body is not authorized to "make an objective assessment of the matter before it, including an objective assessment of the applicability of and conformity with the relevant covered agreements." Whether written or unwritten, Article 11 expresses the due process requirements which both panels and the Appellate Body must observe.

The Appellate Body is required to review an appeal and render its judgment objectively and judiciously. In order for the Appellate Body to carry out this task, it is important to collect as much relevant, necessary and useful information available from whatever sources. *Amicus* briefs may contain valuable information and insights which the Appellate Body can utilize to arrive at a balanced judgment. To deny the Appellate Body the opportunity to review *amicus* submissions would do a disservice to the appellate process. In light of this, it is submitted that the Appellate Body should be regarded as having inherent power to accept and consider *amicus* briefs. Even if this power is not written in the DSU, it is implicit in the process and part of the due process of law.

It should be emphasized, however, that panels and the Appellate Body are not obligated to accept and review *amicus* briefs. It should be left to the discretion of panels and the Appellate Body to decide whether or not to accept an *amicus* brief. It is equally important to emphasize that panels and the Appellate Body can (and should) control the process of accepting and reviewing such documents. There may be a risk that too many documents are filed and that this causes a delay in the proceedings. In *EC-Asbestos*,[16] the Appellate Body adopted a procedure which it applied to that case only and in which it required, *inter alia*, that a person wishing to file an *amicus* brief should request leave from the Appellate Body to file such a brief in an application no longer than three typed pages which sets forth why the applicant would make a contribution to the resolution of the dispute that is not likely to be repetitive of what has already been submitted. The Appellate Body further provided that if granted leave to file, an *amicus* submission could not exceed 20 typed pages and must set out a precise statement, strictly limited to legal arguments, supporting the applicant's legal interpretation.[17] This should establish an important precedent. The General Council of the WTO subsequently warned the Appellate Body that it should act with "extreme prudence" on the issue of accepting briefs from non-governmental organizations in dispute settlement proceedings.[18] A number of developing countries were concerned about this practice, since they feared that they would be "outgunned" in dispute settlement proceedings by amicus briefs filed by multinational companies, as well as by developed country NGOs.

Some have argued that, by allowing persons outside the WTO to file *amicus* briefs, the Appellate Body is giving more rights to persons outside the WTO than it does to Members that are not parties to a dispute. On this, two points should be made clear. First, the Appellate Body cannot give a "right" to persons outside the WTO to file *amicus curiae* briefs. It belongs to the discretion of the Appellate Body to decide whether to accept and consider such briefs if they are filed. Persons who file *amicus* briefs have no means to compel the Appellate Body to accept and review them. Secondly, there is nothing which prevents any Member of the WTO that is not a party to a dispute from

[16] *See supra*, note 8.
[17] Communication from the Appellate Body, WT/DS135/9 (November 8, 2000).
[18] INSIDE U.S. TRADE, December 1, 2000.

filing an *amicus curiae* brief. If it wishes to do so, it can certainly do so. However, such a brief would be handled in the same fashion as any other *amicus* brief.

VI. Dissenting Opinions

Article 17:11 of the DSU states that opinions expressed in an Appellate Body report by individuals serving on the Appellate Body shall be anonymous. The Appellate Body is required to refrain from identifying the name of a division member who expressed a certain opinion in regard to an appeal. However, the DSU is silent about whether the Appellate Body can publish a dissenting opinion on an anonymous basis. The Working Procedures state: "The Appellate Body and its divisions shall make every effort to take their decisions by consensus. Where, nevertheless, a decision cannot be arrived at by consensus, the matter at issue shall be decided by a majority vote." Under this rule, a division dealing with an appeal should make every effort to take its decision by consensus. This rule nevertheless anticipates that a consensus decision may not always be possible. If it is not possible, then the majority rule must be applied. This means that a decision would be arrived at by a vote of two to one. Here again, the Working Procedures remain silent about the publication of a dissenting opinion.

There is nothing in Article 17:11 of the DSU nor in the Working Procedures which prohibits the Appellate Body from publishing a dissenting opinion on an anonymous basis. However, a dissenting opinion has never been published by the Appellate Body. On one occasion, a "concurring opinion" was published (*EC-Asbestos*)[19]. Whether or not the Appellate Body should publish a dissenting opinion is a policy matter that the Appellate Body can decide. There are pros and cons to the publication of dissenting opinions. On one hand, if a dissenting opinion is published, this shows that there was not a unanimity of views within the division regarding the disposition of the appeal. This could have a negative consequence when the losing party seeks to change the domestic measure in question to conform to WTO rules. The fact that there is a dissenting opinion could be used by domestic opponents to delay or block the adoption of a new law or regulation.

On the other hand, if a dissenting opinion is not published, this would mean that the dissenting opinion was simply ignored or that a compromise was reached between the majority and the dissenting member. This could make the reasoning of the judgment somewhat unclear and ambiguous. This would lessen its value as a precedent.

This writer sides with the latter view. The publication of a dissenting opinion would promote the transparency of the appellate process. With regard to the concern that the publication of a dissenting opinion may weaken the effect of an Appellate Body judgment, this writer observes that in many domestic courts dissenting opinions are published without appearing to create problems. Appellate reports are the most authoritative source of precedents in the dispute settlement system of the WTO. The importance of promoting clarity and sharpness of reasoning in appellate reports far outweighs any other consideration.

VII. Reform of the Appellate Process?

Since the inauguration of the WTO, the performance of its dispute settlement system has been an outstanding success. In less than ten years, more than three hundred cases have been brought before the DSB. This figure is remarkable when compared to the

[19] *Supra*, note 8.

approximately three hundred cases that were brought under the GATT dispute settlement system during the nearly fifty years of its existence. The Appellate Body has played a key role in the successful operation of the dispute settlement system of the WTO. However, no institution is perfect and it is time to think about whether there is any room for improvement.

One of the striking features of the WTO's dispute settlement system is the rule of automaticity. Automaticity guarantees that reports of panels and the Appellate Body are adopted by the DSB by negative consensus. A *quid pro quo* of automaticity in the adoption of panel reports was the creation of an appellate process in which the Appellate Body reviews rulings of panels, and upholds, modifies or reverses them. However, reports of the Appellate Body are adopted by automaticity. There is no higher tribunal which reviews appellate reports and this means that the Appellate Body's decision is effectively the final voice deciding a dispute among Members. Some issues involved in disputes touch on the vital interests of the Members. Matters of vital interest to a Member are in the hands of the seven members of the Appellate Body. Therefore, the Appellate Body's responsibility is enormous.

In many domestic jurisdictions, the principle of checks and balances operates. Although supreme courts (and lower courts) are independent from other branches of the government, any mistake that a supreme court may make can be corrected by a legislative act overturning the decision of the supreme court. With regard to the Appellate Body, there is no realistic chance for such a correction. In theory a provision of an agreement could be renegotiated in a Ministerial Conference with a view to amending or abolishing it, but this is an extremely cumbersome procedure[20] and as a practical matter would be virtually impossible to achieve.

It must be asked whether a system of checks and balances is necessary for the Appellate Body. The lack of checks and balances may have strained the Appellate Body. Some of the cases handled by panels and the Appellate Body may be beyond the capacity of the dispute settlement system of the WTO. The *Hormones* case,[21] for example, tested the capacity of the dispute settlement system. The enormous burden on the Appellate Body in this case may have caused it to put too much emphasis on tests present in the WTO agreements and to formulate conservative interpretations.

It seems that, in any human institution, some form of checks and balances is necessary. If an institution lacks a mechanism of checks and balances, there is no chance of correction if its members have made a mistake. Since no human institution is infallible and the Appellate Body is no exception to this law, it seems sound to introduce some form of checks and balances into the system. However, the question remains, what type of mechanism should be created?

One approach may be to activate the exclusive authority of the Ministerial Conference and the General Council to adopt interpretations of WTO agreements. Article IX:2 of the Marrakesh Agreement states: "The Ministerial Conference and the General Council shall have the exclusive authority to adopt interpretations of this Agreement and of the Multilateral Trade Agreements." This article provides that the adoption of such interpretations be made by a three-fourths majority. This may be too stringent a requirement and could be eased to a two-thirds majority or a simple majority. Admittedly the General Council is a political body as opposed to a judicial or quasi-judicial body. If an interpretation made by the Appellate Body is overturned by the adoption of an interpretation of

[20] See Article X of the Marrakesh Agreement Establishing the World Trade Organization.
[21] *Supra*, note 3.

the General Council under Article IX:2 of the Marrakesh Agreement, this would mean that a decision of a judicial (or quasi-judicial) body has been overturned by a political decision and this may be contrary to the policy to judicialize the dispute settlement system. Considering, however, that the current dispute settlement system is not a one hundred percent judicial process, the above may be a possible compromise.

Another approach would be to create a body within the WTO specifically designed to review Appellate Body rulings. This body would not have the power to overturn rulings of the Appellate Body. Instead, this body would review rulings of the Appellate Body and evaluate and criticize them if there are any problems. Publication of such evaluations and criticisms could be instructive to the Appellate Body. It could learn something from and use them as one source to improve subsequent decisions.

CHAPTER 31

THE APPLICATION OF NON-WTO RULES OF INTERNATIONAL LAW IN WTO DISPUTE SETTLEMENT

* Associate Professor of Law, Duke University School of Law, formerly with the Appellate Body Secretariat and the Legal Affairs Division of the WTO Secretariat (1996–2002).

I. Introduction

Can WTO panels apply general rules on state responsibility? Can they apply provisions of the Vienna Convention on the Law of Treaties other than those on treaty interpretation? Are WTO panels mandated to apply non-WTO treaties, such as multilateral environmental agreements, or bilateral agreements concluded only as between the disputing parties? If so, what is the relationship between these non-WTO rules of international law and the WTO Agreement? Which prevails in the event of conflict? Those are some of the practical questions examined in this Chapter. Part I examines the nature of WTO law. Part II looks at how WTO law interacts in the abstract with other rules of international law. Then the jurisdictional scope of WTO panels is set forth (Part III) and the law that panels may apply and refer to in examining WTO claims (Part IV). The outcome of the interaction between WTO and other international law in practice before a WTO panel, is addressed in Part V. Part VI provides a summary of the chapter and offers some guidelines to WTO negotiators and other treaty-makers.

II. WTO Law *is* Public International Law

The WTO Agreement is part of public international law. It is a "treaty" in the sense of Article 2 of the Vienna Convention on the Law of Treaties ("VCLT"). The WTO treaty is not a "self-contained regime" in the strict sense of being a treaty that was somehow concluded *outside* the system of international law all together. Just as no U.S. statute can be enacted outside the framework of U.S. law, no treaty can be concluded outside the framework of international law.

III. WTO Law *Interacts* with Other Rules of International Law

Although any WTO agreement, as an agreement between states, had to be concluded as part of the system of international law, the WTO drafters could in theory have framed their agreement so as to seclude it completely from other rules of international law (other than those of *jus cogens*[1]). However, they did not do so. On the contrary, Article 3.2 of the Dispute Settlement Understanding ("DSU") explicitly confirms that WTO agreements must be interpreted "in accordance with customary rules of interpretation of public international law". These rules of interpretation—in practice, Articles 31–33 of the VCLT—direct, in turn, that in interpreting the WTO treaty, account must be taken not only of the treaty itself, but also of "any relevant rules of international law applicable in the relations between the parties".[2] As the Appellate Body acknowledged in its very first report,

> [t]hat direction [in DSU Article 3.2] reflects a measure of recognition that the *General Agreement* [GATT] is not to be read in clinical isolation from public international law.[3]

Hence, (1) WTO law is international law *and* (2) WTO law interacts with other norms of international law, albeit to a degree still to be determined.

[1] *Jus cogens* consists of rules of international law, such as the prohibition on genocide or slavery, that are binding on all states and from which no deviation is permitted (*see* Article 53 of the VCLT).

[2] Article 31.3(c) of the VCLT.

[3] Report of the Appellate Body, *United States—Standards for Reformulated and Conventional Gasoline*, WT/DS2/AB/R, at 17 (1996) ("*U.S.—Gasoline*").

At this juncture, it is useful to distinguish between "general international law"—that is, international law that is, in principle, binding on *all* states and consists mainly of general customary international law[4] and general principles of law[5]—and other, non-WTO treaties—that is, rules of international law binding *only* on some states, namely state parties to a particular treaty. We deal with them in turn.

A. General International Law

Rules on treaty interpretation—*explicitly* confirmed in Article 3.2 of the DSU—are but one set of international law rules that apply to, or interact with, the WTO Agreement. Indeed, it is generally understood that unless a new treaty overrules or deviates from existing international law, hereafter referred to as "contracting out", the existing law continues to interact with and, as the case may be, apply to, the new treaty. It is for the new treaty to *exclude* the rules of international law that the parties do *not* want to apply to the new treaty; not the reverse, i.e., the treaty does not have to positively list all such rules that are to apply to the new treaty. Just as private contracts are automatically born into a system of domestic law, so treaties are automatically born into the system of international law. Much the way private contracts do not need to list all relevant legislative and administrative provisions of domestic law for them to be applicable to the contract, so treaties need not explicitly set out pre-existing rules of international law for them to be applicable to, or interact with, the new treaty.

In that sense, there was no need for DSU Article 3.2 to explicitly confirm the application of international law rules on treaty interpretation. Absent "contracting out" in the WTO Agreement, these rules on interpretation—being rules of *general* international law binding on all WTO Members—would have applied automatically.[6] More generally, any explicit confirmation of rules of *general* international law in the WTO Agreement must be seen as made *ex abundante cautela*.[7] Absent "contracting out" in the WTO Agreement, these rules (be they general customary international law or general principles of law) would have applied. Hence, explicitly confirming some rules of general international law in the WTO Agreement does not amount to excluding all other rules.

The fact that general international law continues to apply to a new treaty unless that treaty overrules it or deviates from it (that is, "contracts out" of it), has been confirmed consistently in a series of international decisions, including decisions by the ICJ, and scholarly writings.[8] This approach was adopted also by a WTO panel (not appealed),

[4] Defined in Article 38(b) of the ICJ Statute as "international custom, as evidence of a general practice accepted as law".

[5] Defined in Article 38(c) of the ICJ Statute as "general principles of law recognized by civilized nations".

[6] For a plausible reason why the drafters considered it necessary to explicitly confirm international law rules on interpretation, *see* the panel report in *Korea—Measures Affecting Government Procurement*, WT/DS163/R, ¶ 7.96, n.753 (2000) ("*Korea—Government Procurement*"):

> The language of 3.2 in this regard applies to a specific problem that had arisen under the GATT to the effect that, among other things, reliance on negotiating history was being utilized in a manner arguably inconsistent with the requirements of the rules of treaty interpretation of customary international law.

[7] That is, just to make absolutely sure that the rules in question would apply.

[8] For an elaboration on those cases and the relevant scholarly writings, *see* Joost Pauwelyn, *The Role of Public International Law in the WTO: How Far Can We Go?*, 96 AMERICAN JOURNAL OF INTERNATIONAL LAW 535, at 541–542 (2001), referring, *inter alia*, to: *Georges Pinson (Fr.) v. United Mexican States*, 5 R.I.A.A. 327, 422 (Perm. Ct. Arb. 1928*); Chorzów Factory (Ger. v. Pol.), Merits*, 1928 PCIJ (ser. A) No. 17, at 29 (Sept. 13); *Legal Consequences for States of the Continued Presence of South Africa in Namibia (South West Africa)*

which found:

> We take note that Article 3.2 of the DSU requires that we seek within the context of a particular dispute to clarify the existing provisions of the WTO agreements in accordance with customary rules of interpretation of public international law. However, the relationship of the WTO Agreements to customary international law is broader than this. *Customary international law applies generally to the economic relations between the WTO Members.* Such international law applies to the extent that the WTO treaty agreements do not "contract out" from it. To put it another way, to the extent there is no conflict or inconsistency, or an expression in a covered WTO agreement that implies differently, we are of the view that *the customary rules of international law apply to the WTO treaties and to the process of treaty formation under the WTO.*[9]

On these grounds, the panel applied "general rules of customary international law on good faith and error in treaty negotiations",[10] in particular Article 48 of the VCLT.[11] The panel correctly rejected the argument to the contrary that the reference in DSU Article 3.2 only to rules of treaty interpretation, meant that all other international law is excluded.[12]

This approach has, more recently, been adopted also by the Appellate Body in the *Cotton Yarn* decision, this time with respect to the general international law principle of proportionality of countermeasures.[13] The Appellate Body first noted "the rules of general international law on state responsibility, which require that countermeasures in response to breaches by states of their international obligations be commensurate with the injury suffered", and DSU Article 22.4 which has a similar effect.[14] It then stated that it would be absurd not to have the same principle of proportionality applied to safeguard actions under the Agreement on Textiles and Clothing, such action being "a remedy to WTO-consistent 'fair trade' activity".[15] In what is a crucial passage, the Appellate Body found that:

> . . . such an exorbitant derogation from the principle of proportionality in respect of the attribution of serious damage could be justified only if the drafters of the [Agreement on Textiles and Clothing] had expressly provided for it, which is not the case.[16]

Therefore, at least in this particular case, the Appellate Body concurs with the view that as long as general international law—here, the principle of proportionality—has not been excluded or "contracted out" from in the WTO Agreement, it continues to apply to that agreement.

B. Other, Non-WTO Treaties

Having examined the interaction between the WTO treaty and general international law, how does the WTO treaty interact with other non-WTO treaties? It is argued here that for this type of interaction between treaties a similar approach should be taken as that set

Notwithstanding Security Council Resolution 276 (1970), Advisory Opinion, 1971 ICJ Rep. 16, 47, ¶ 96 (June 21); *Elettronica Sicula S.p.A (ELSI) (U.S. v. Italy)*, 1989 ICJ Rep. 15, 42, ¶ 50 (July 20); and *Amoco Int'l Finance Corp. v. Iran*, 15 Iran-U.S. Cl. Trib. Rep. 189, ¶ 112 (1987).

[14] *Id.* ¶ 120.

[15] *Id.*

[16] *Id.*

out above in respect to the relationship between the WTO Agreement and general international law, namely: unless the WTO Agreement somehow overruled, deviated from, replaced or terminated norms in pre-existing non-WTO treaties (be it the Tokyo Round Codes on Subsidies and Dumping or the Montreal Protocol on Substances Depleting the Ozone Layer), those pre-existing treaty norms continue to be relevant as between WTO Members bound by them. Similarly, any new treaties created as between certain or all WTO Members, subsequent to the conclusion of the WTO Agreement (say, the Cartagena Biosafety Protocol or any more recent UN, WIPO or WHO conventions) necessarily interact with, and may have an impact on, the rights and obligations of WTO Members bound by the new treaty. Just as there are no sealed compartments between general international law and WTO law, no such compartments separate the WTO treaty from other treaties. The WTO was not created in a vacuum, nor does its legal existence continue in a vacuum. As much as the WTO Agreement altered the landscape of international law in April 1994, so post-1994 rules can change the universe of law relevant to the WTO.

C. A Word of Caution

The fact that WTO law thus interacts with other rules of international law, be they general international law or other non-WTO treaties, is one thing. It means that the WTO is not a "self-contained regime" either (1) in the strict sense of being a treaty somehow concluded outside of the system of international law all together (as discussed above), or (2) in the broader sense of being a sub-system of international law hermetically sealed off from other branches of international law. The way in which this interaction between WTO law and other international law plays out in WTO dispute settlement and the question of which of these branches prevails in the event of conflict is another matter, discussed in the remaining parts. We first examine the limited jurisdiction of WTO panels (Part III), then the broader universe of relevant law that WTO panels may refer to or apply (Part IV), before, finally, setting out what may happen in the event of a conflict between WTO and non-WTO rules of international law (Part V).

IV. The Jurisdiction of WTO Panels

A. Substantive Jurisdiction

The potential impact of non-WTO rules of international law in WTO dispute settlement is limited, first and foremost, by the limited jurisdiction of WTO panels. By jurisdiction I mean the type of legal claims that a WTO Member can bring under the compulsory DSU system. Under Article 1.1, the DSU applies only to "disputes brought pursuant to the consultation and dispute settlement provisions of the agreements listed in Appendix 1 to the [DSU]", i.e., the so-called WTO-covered agreements. Hence, WTO panels have jurisdiction to examine only claims made under certain WTO agreements (not claims, for example, under the WTO's Trade Policy Review Agreement). The jurisdiction of an international adjudicator, like a WTO panel, depends on the consent of the disputing parties. Hence, unless disputing WTO Members were to agree to expand the jurisdictional scope of a particular panel (and even here there must be limits, such as the overall mandate of the WTO),[17] WTO Members cannot bring complaints to the WTO under

[17] They could do so, for example, under DSU Article 7.1 allowing parties to expand the standard terms of reference of WTO panels or DSU Article 25 providing for alternative arbitration procedures, but even in those cases it would seem that only claims that can be said to fall under the WTO umbrella, broadly defined (such as, arguably, mutually agreed solutions that ended a formal WTO dispute), can be covered.

rules of international law other than WTO-covered agreements. They cannot complain, for example, about non-compliance with certain multilateral environmental agreements ("MEAs"), nor about the non-implementation of rules of general international law (say, the prohibition of genocide), even if part of *jus cogens*.

B. Implied or Incidental Jurisdiction

Although the substantive jurisdiction of WTO panels is limited to claims under WTO-covered agreements, in the examination of those claims WTO panels may be required to decide on claims incidental to the exercise of their substantive jurisdiction. The power to determine whether one has substantive jurisdiction in the first place (the issue of *compétence de la compétence*) is one element of the implied jurisdiction of panels. The Appellate Body explicitly confirmed that WTO panels have such jurisdiction.[18]

Other claims incidental to the enforcement of WTO-covered agreements arise as a result of certain rules on the judicial settlement of disputes, such as rules on burden of proof[19] or due process, as well as rules on the implementation of state responsibility, such as rules on standing[20] and remedies, even if such rules are not explicitly incorporated into the WTO treaty.[21] A WTO panel does not exceed the bounds of its jurisdiction by making findings on these matters. Making such findings is inherent in the exercise of its judicial function. It flows directly from the fact, explored in previous parts, that both WTO law and WTO panels do not operate in a vacuum but in the context of the wider *corpus* of international law.

V. Relevant Law Before a WTO Panel

Given that the jurisdiction of WTO panels is limited to claims under WTO-covered agreements, most of the law applied by panels will, obviously, be WTO law. Nonetheless, a distinction must be made between the substantive jurisdiction of panels—WTO claims only—and the law that they may refer to or apply to decide the validity of claims.

The DSU limits the jurisdiction of WTO panels. For reasons explained below, it does not in my view limit the potentially applicable law. The fact that the substantive jurisdiction of WTO panels is limited to claims under WTO-covered agreements should not necessarily mean that the law potentially applicable to decide those claims must equally be limited to that found in WTO-covered agreements. The *Lockerbie* cases before the ICJ illustrate this point. There, the ICJ had jurisdiction to consider Libyan claims only under the Montreal Convention. However, this did not stop the Court from also examining other international law, in particular UN Security Council Resolution 748 invoked in defense by the United Kingdom and the United States, as part of its applicable law.

[18] Report of the Appellate Body, *United States—Anti-Dumping Act of 1916*, WT/DS136/AB/R, ¶ 54 n.30 (2000). *See also* International Tribunal for the Former Yugoslavia, *Prosecutor v. Tadic*, Appeal on Jurisdiction, No. ITB94B1BAR72, ¶¶ 18, 15 (Oct. 2, 1995).

[19] Report of the Appellate Body,*United States—Measures Affecting Imports of Woven Wool Shirts and Blouses from India* WT/DS33/AB/R, at p. 14 (1997) ("*U.S.—Shirts and Blouses*").

[20] Report of the Appellate Body, *European Communities—Regime for the Importation, Sale and Distribution of Bananas*, WT/DS27/AB/R, ¶ 133 (1997) ("*EC—Bananas*").

[21] It is generally accepted that when states confer jurisdiction on a tribunal to decide a particular claim, such jurisdiction includes the jurisdiction to grant the available remedies to redress the violation in case the claim is found to be valid. *See Chorzów Factory (Ger. v. Pol.), Merits*, 1928 PCIJ (ser. A) No. 17, at 29.

Importantly, the ICJ did so notwithstanding the fact that it was not conferred jurisdiction to entertain claims of violation under these UN resolutions.[22]

The instruction for panels in DSU Article 7 to examine the matter referred to them "in the light of the relevant provisions" of the covered agreement(s) cited by the parties to the dispute and to "address the relevant provisions in any covered agreement or agreements cited by the parties to the dispute", imposes an obligation on panels to address and possibly apply certain WTO rules. However, the way I see it, nothing in the DSU or any other WTO rule precludes panels from addressing and, as the case may be, applying other rules of international law so as to decide the WTO claims before them. That is not to say, of course, that all international law applies to each WTO dispute. This will depend on the facts of the case, the parties involved and the claims and defenses that they make.

Nonetheless, a commonly held (but, in my opinion, mistaken) view remains that WTO panels must limit themselves to the law set out in WTO-covered agreements and that any rules of international law not explicitly included, or referred to,[23] in the WTO treaty cannot play a role in WTO dispute settlement. Both theory and practice show that this view—limiting the law relevant to WTO panels to the "four corners" of WTO-covered agreements—is mistaken. Panels and the Appellate Body alike have referred to non-WTO rules of international law in the interpretation of WTO treaty terms and have applied such non-WTO norms directly, that is, independently of the process of treaty interpretation. We examine these two situations in turn.

A. International Law Referred to in the Process of "Interpreting" WTO Terms

As pointed out earlier, DSU Article 3.2 explicitly confirms that WTO-covered agreements must be interpreted in the light of "any relevant rules of international law applicable in the relations between the parties".[24] Hence, for purposes of giving meaning to the terms in WTO provisions, an important bridge exists between WTO law and other rules of international law "applicable in the relations between the parties". In principle, to give meaning to WTO terms, only non-WTO norms that reflect the "common intentions" of all WTO Members can be considered. As the Appellate Body put it in *EC—Computer Equipment*:

> The purpose of treaty interpretation under Article 31 of the *Vienna Convention* is to ascertain the *common* intentions of the parties. These *common* intentions cannot be ascertained on the basis of the subjective and unilaterally determined 'expectations' of *one* of the parties to a treaty.[25]

[22] *Questions of Interpretation and Application of the 1971 Montreal Convention Arising from the Aerial Incident at Lockerbie (Libya v. U.S.), Provisional Measures*, 1992 ICJ REP. 114, ¶ 42 (April 14). There is, of course, a difference between DSU Article 7 (making explicit reference to WTO-covered agreements only) and Article 38 of the ICJ Statute which explicitly refers to four sources of international law that the ICJ may apply. Nonetheless, practice has shown that these four sources explicitly mentioned in Article 38 do not exhaust the potentially applicable law before the ICJ. They do not include, for example, unilateral acts of states and acts of international organizations. Hence, DSU Article 7 and Article 38 of the ICJ Statute are not that different: neither of them sets out an exhaustive list of potentially applicable law.

[23] Such as the intellectual property conventions referred to in the TRIPS Agreement, certain international standards in the SPS and TBT Agreements or OECD interest-rate conventions in the SCM Agreement.

[24] Article 31.3(c) VCLT.

[25] Report of the Appellate Body, *European Communities—Customs Classification of Certain Computer Equipment,* WT/DS62/AB/R, ¶ 84 (1998) ("*EC—Computer Equipment*").

Hence, for non-WTO rules to be referred to pursuant to Article 31.3(c) VCLT, they must normally reflect the "common intentions" of all WTO Members.[26] For present purposes, it suffices to say that because of Article 31.3(c) of the VCLT, WTO-covered agreements cannot be read exclusively within the "four corners" of the WTO, but must be construed in the light of certain other, non-WTO rules of international law.

This is also what panels and the Appellate Body have done. In the interpretation of WTO terms, they have referred, for example, to the principle of good faith[27] and "the fundamental rule of due process".[28] The Appellate Body explicitly confirmed that the principle of good faith "informs the provisions of the *Anti-Dumping Agreement*, as well as the other covered agreements".[29] In another report, it referred to "the 'pervasive' general principle of *good faith* that underlies all treaties".[30] Nowhere in the WTO Agreement is the principle of good faith mentioned. Still, it has been consistently relied upon in WTO dispute settlement. In other instances, the Appellate Body has referred to other non-WTO treaties to interpret WTO terms. In U.S.—*Shrimp/Turtle*, it interpreted the WTO term "exhaustible natural resources" in GATT Article XX(g) with reference to, *inter alia*, the UN Law of the Sea Convention, the Convention on Biological Diversity and the Convention on International Trade in Endangered Species ("CITES").[31] Once again, if WTO dispute settlement were restricted to WTO-covered agreements, this reference to non-WTO treaties would not have been possible.

B. International Law Referred to Outside the Process of Treaty Interpretation

That WTO panels can refer to non-WTO rules of international law in the process of interpreting WTO treaty terms is now commonly accepted (although it was largely unheard of in the old GATT days). The process of direct application of non-WTO rules in the examination of a WTO complaint, independent of the interpretation of specific WTO terms, remains a vastly more controversial topic.[32] As pointed out earlier in the sub-section on implied or incidental jurisdiction, WTO claims cannot be enforced in a legal vacuum. In order to fulfill their judicial function, WTO panels must rely on certain general international law rules such as those on the judicial settlement of disputes and state responsibility. This is not a matter of choice, but one of necessity. How else would they discharge their mandate? Or should the absence in the WTO treaty of, for

[26] For an elaboration and an assessment of the question of whether this means that all WTO Members must be legally bound by a non-WTO rule before that rule can be referred to in the interpretation of a WTO treaty term, *see* Joost Pauwelyn, *How Far Can We Go?*, *supra* note 8.

[27] Report of the Appellate Body, *United States—Import Prohibition of Shrimp and Certain Shrimp Products,* WT/DS58/AB/R (1998)("*U.S.—Shrimp/Turtle")*, ¶ 158. In ¶ 166, n.157, of this report, the first and so far the only explicit reference to Article 31(3)(c) is made. *See also,* Report of the Appellate Body, *United States—Tax Treatment for "Foreign Sales Corporations",* WT/DS108/AB/R (2000), ¶ 166 (*referring* to the principle of good faith as "at once a general principle of law and a principle of general international law").

[31] *U.S.—Shrimp/Turtle*, *supra* note 27, ¶¶ 128–32.

[32] By "interpretation" I mean here the process of giving meaning to a particular term or word set out in a treaty.

example, explicit rules on burden of proof mean that in WTO dispute settlement the question of burden of proof does not apply? If so, how could WTO panels, when faced with contradictory evidence, decide a case?

Although these rules of international law are not referred to in the WTO Agreement, they remain relevant for WTO panels. Moreover, when referring to those rules, WTO panels are not doing so in the process of interpreting WTO treaty terms. It would strain the notion of treaty interpretation to say that when panels apply general international law norms on, for example, burden of proof, standing or representation before panels (be it as private counsel or *amicus curiae*), they are "interpreting" specific WTO terms.[33] The fact of the matter is that the WTO Agreement does not have an explicit provision on burden of proof, standing or representation before panels. There is, therefore, no WTO provision on those matters to be "interpreted" in light of general international law norms. Rather, given the silence of the WTO Agreement on the issue, general international law norms must be presumed to continue to apply to the issue as it arises before a WTO panel.[34] Hence, we are faced here with general international law "filling gaps" left open by the WTO Agreement; not with general international law that is used as a reference to interpret, that is, to give meaning to, specific WTO terms. Here again, if WTO dispute settlement were to operate only under WTO law, no such "gap filling" could occur.

The question remains, however, what type of international law rules can thus be applied by WTO panels? And whether panels can only apply such rules in case the WTO Agreement is silent on the matter, i.e., to "fill gaps" in the WTO treaty, or whether such non-WTO rules may also overrule a WTO provision? The first question is addressed in the following sub-section, distinguishing, once again, between general international law and other, non-WTO treaties. In Part V below, we examine the second question.

1. General International Law

For WTO panels and the Appellate Body, as international adjudicators, to apply general international law in the examination of WTO claims to issues on which the WTO Agreement itself remains silent (say, rules on burden of proof) should not come as a surprise, nor be very controversial. As noted earlier, the distinguishing feature of general international law is that it is binding on all states, hence, all WTO Members. Thus, to apply it in WTO dispute settlement in the examination of WTO claims—to the extent that the WTO Agreement has not "contracted out" of it and as long as it does not constitute a distinct substantive claim (for which WTO panels do not have

[33] *See supra* note 32.

[34] When first examining the question of burden of proof, the Appellate Body clearly was not interpreting a particular WTO provision, but applying general international law rules (more particularly, "general principles of law" it would seem) on burden of proof to the WTO treaty. It stated:

> In addressing this issue, we find it difficult, indeed, to see how any system of judicial settlement could work if it incorporated the proposition that the mere assertion of a claim might amount to proof. It is, thus, hardly surprising that various international tribunals, including the International Court of Justice, have generally and consistently accepted and applied the rule that the party who asserts a fact, whether the claimant or the respondent, is responsible for providing proof thereof. Also, it is a generally-accepted canon of evidence in civil law, common law and, in fact, most jurisdictions, that the burden of proof rests upon the party, whether complaining or defending, who asserts the affirmative of a particular claim or defense. If that party adduces evidence sufficient to raise a presumption that what is claimed is true, the burden then shifts to the other party, who will fail unless it adduces sufficient evidence to rebut the presumption. (*U.S.—Wool Shirts and Blouses, Supra* note 19, at p. 14.)

jurisdiction)—would only amount to applying law that is already legally binding on all WTO Members.

What is more, applying general international law rules in WTO dispute settlement may well be inevitable. Without those general rules—composed largely of (1) rules on the law of treaties, such as the principle of non-retroactivity of treaties and the good faith implementation of treaties; (2) state responsibility, such as standing and the principle of proportionality of countermeasures; and (3) the judicial settlement of disputes, such as burden of proof and due process—it would be practically impossible to enforce WTO rights and obligations. What would be the basis of the legally binding nature of the WTO treaty, how would the judicial function be circumscribed and how would claims of breach be entertained, if not against the backdrop of such general rules on the law of treaties, state responsibility and the judicial settlement of disputes? Finally, given that such general rules cannot themselves constitute the legal basis for a distinct claim (what case could be brought purely with reference, for example, to rules on burden of proof?), there is no risk that application of those rules would be made independent of WTO provisions. As a result, the general rules thus applied by WTO panels have sometimes been referred to as mere "adjuvants" or subsidiary tools required for the creation and enforcement of WTO rights and obligations.[35] The theory is that these general rules—call them "adjuvants" or "secondary" rules—can only be applied to the extent that they relate to the "life-cycle"—that is, creation, application, interpretation and enforcement—of WTO provisions themselves. Hence, the question of panels exceeding their jurisdiction does not really arise since a link with WTO provisions themselves—the "primary" rules—can always be found.

However, once it is accepted that such general rules or "adjuvants" can be applied in WTO dispute settlement (and a consensus is building in that direction), this practice should apply with respect to all such "adjuvants", e.g., all general international law rules on state responsibility and the law of treaties, not "contracted out" from in the WTO Agreement. For example, do Articles 21 and 22 of the DSU "contract out" of the general international law rule that reparation must be made for breach (including reparation for past damage)? There may be room for doubt. If so, to the extent that no such "contracting out" occurred, the general rule on reparations should also apply in the WTO. The same applies with respect to the general rule that treaty norms are subject to change by subsequent treaties, a rule set out in Articles 30 and 41 of the VCLT.[36] If, but only if, and to the extent that it were found that these rules of general international law were left intact by the WTO Agreement, they should continue to apply to the WTO Agreement.

2. Other, Non-WTO Treaties

Once it is accepted that certain general rules or "adjuvants" can be applied in WTO dispute settlement, a major problem arises as to where to draw the line between non-WTO rules that can, and those that cannot be applied by WTO panels. Should the line be drawn based on the distinction between general international law and other international law not binding on all states? Perhaps, but general international law is not only composed of

[35] The term "adjuvants" was coined by Pieter-Jan Kuijper, former Director of the Legal Affairs Division of the WTO Secretariat.

[36] Article 30 provides essentially that in the event of conflict a later treaty prevails over an earlier treaty. Article 41 sets out the conditions under which a limited number of state parties to a treaty may modify that treaty as between themselves only, the main condition being that in doing so they may not violate the rights of third parties.

the "adjuvants" or "secondary" rules we have referred to above; it also includes "primary" rules of law, directly imposing rights and obligations on all states, such as customary law and general principles of law on the use of force, genocide and human rights. Hence, to say that WTO panels may apply all rules of general international law in their examination of WTO claims would definitely go a step further than what has been done in case law to date.

What then if one were to draw the line between non-WTO rules that can and cannot be applied by WTO panels based on the concept of "adjuvants"? WTO panels would then only be mandated to apply non-WTO rules that regulate the "life-cycle" of WTO provisions themselves, from their creation to their enforcement (in particular rules on the law of treaties and state responsibility, e.g., rules on the conclusion, validity, interpretation and application of treaties, and rules on how to enforce international legal obligations). Two problems arise under this approach. First, it may not always be easy to distinguish "adjuvants" or "secondary" rules, from "primary" rules (for example would the precautionary principle, assuming it were a rule of general international law, be a primary or a secondary rule?). Second, and more importantly, the application of "adjuvants" to the WTO Agreement may, in turn, activate certain other rules which are *not* "adjuvants". This is particularly so in respect of rules on the law of treaties. For example, VCLT rules on the validity of treaties refer to "primary" rules of *jus cogens*. Article 53 of the VCLT states that "[a] treaty is void if, at the time of its conclusion, it conflicts with a peremptory norm of general international law". Hence, if a WTO provision were in conflict with *jus cogens*, the application of a mere "adjuvant" to the WTO Agreement (*in casu*, Article 53 of the VCLT) would, in turn, necessitate the application of non-WTO rules of international law that are *not* "adjuvants" (say, the prohibition on slave trading). Consequently, by opening the door to "adjuvants", one necessarily also allows in primary or more substantive rules of international law such as, in our hypothetical, the prohibition on slave trading or genocide. As a result, the distinction between "adjuvants" and other rules of international law—according to which the former could be applied by WTO panels, the latter not—loses its practical sense. Articles 30 and 41 of the VCLT are other examples which demonstrate that permitting the application of "adjuvants" in WTO dispute settlement will necessarily lead to applying other rules of international law.

Articles 30 and 41 relate to how a treaty can be changed. Article 30 provides that to the extent of conflict, a later treaty prevails over an earlier one. Article 41 essentially permits modifications to multilateral treaties as long as this is not explicitly prohibited in the treaty itself and does not affect third party rights. Applying these VCLT provisions, which are undoubtedly "adjuvants" regulating the "life-cycle" of WTO norms, to WTO treaty norms means that these WTO norms can be changed by later treaties, albeit only as between the parties to such later treaties. To define such change, WTO panels cannot limit themselves to the "adjuvant" set out in Articles 31 and 41. They will have to take account also of the non-WTO rules to which Articles 30 and 41 will direct them, for example, a post-1994 MEA that allegedly altered a WTO treaty provision (say, GATT Article XI in combination with GATT Article XX), albeit only as between the parties to the MEA. As a result, applying mere "adjuvants" to the WTO Agreement will often mean that WTO claims cannot be examined in isolation from subsequent treaties.

Thus applying other, non-WTO treaties, to which not all WTO Members are a party, would go another step further, beyond what has happened in case law and beyond the application only of rules of general international law that can be termed "adjuvants". Here as well, no case law is available either in support or against applying non-WTO

treaties, although one WTO panel did imply that IMF rules could potentially change WTO rules and in so doing referred also to rules set out in the Final Act that are not part of the WTO-covered agreements (in this case the Declaration on the Relationship of the WTO with the IMF).[37]

The difficulty of drawing a line between rules of international law that panels can and cannot apply indicates that perhaps no such line is needed. This is the position suggested here: all rules of international law may be relevant in coming to a decision on the validity of a WTO claim. The only limitations are the facts of the case, the parties involved and the defenses they decide to make. Within that framework, however, if a defending WTO Member can point to another non-WTO treaty to which the complainant is a party, this other treaty must be considered by a WTO panel as a potential defense. As long as both disputing parties are bound by such a non-WTO treaty, say, a subsequent MEA that grants an explicit right to restrict trade as between the parties to the MEA, a panel must, in my view, regard this MEA as part of the applicable law.

A recent case that surely goes in the direction of WTO panels having to take account of other, non-WTO treaties, even if they are not binding on all WTO Members, is the Article 21.5 *Shrimp/Turtle* dispute. There, the Appellate Body found that:

> to avoid "arbitrary or unjustifiable discrimination" [under the *chapeau* of GATT Article XX], the United States had to provide all exporting countries "similar opportunities to negotiate" an international agreement. Given . . . the decided preference for multilateral approaches voiced by WTO Members and others in the international community in various international agreements for the protection and conservation of endangered sea turtles . . . , the United States, in our view, would be expected to make good faith efforts to reach international agreements that are comparable from one forum of negotiation to the other.[38]

In other words, to conform to WTO rules, the United States had to negotiate or, even better, conclude treaties with other WTO Members on protecting sea turtles. Hence, it can be safely assumed that if a bilateral agreement between, say, the United States and Malaysia, were concluded, such an agreement would absolve the inconsistency that was found earlier in favor of Malaysia under the *chapeau* of GATT Article XX. If that is so, how could one possibly argue that WTO panels cannot take account of other, non-WTO treaties even if they are concluded only as between the disputing parties? If Malaysia were to sue the United States, subsequent to the conclusion of its bilateral agreement with the United States, would the United States then not be allowed to invoke that bilateral agreement as a defense?[39] In my view, the United States should be permitted to do so (even if the agreement allows the United States to impose import restrictions not justified under GATT Article XX) and any Malaysian argument that the bilateral agreement is not part of the applicable law before a WTO panel should be rejected. To say that in such a

[37] Report of the Appellate Body, *Argentina—Measures Affecting Imports of Footwear, Textiles, Apparel and Other Items,* WTO Doc. WT/DS56/AB/R, ¶¶ 65–74 (1998).

[38] Report of the Appellate Body, *United States—Import Prohibition of Certain Shrimp and Shrimp Products, Recourse to Article 21.5 DSU by Malaysia*, WT/DS58/AB/RW (2001)("*United States—Article 21.5 Shrimp-Turtle*"), ¶ 122.

[39] In the Article 21.5 *Shrimp/Turtle* dispute, *supra* note 38, the Appellate Body explicitly referred to a non-WTO treaty (the Inter-American Convention for the Protection and Conservation of Sea Turtles), albeit only as "a factual reference" (*Id.* ¶ 130), as "evidence that an alternative course of action based on cooperation and consensus was reasonably open to the United States" (*Id*. ¶ 128). There, it could not possibly have relied on this Convention as a U.S. defense since Malaysia, the complainant, was not bound by this Convention.

case it would be the WTO panel that somehow changed WTO provisions as they apply between the United States and Malaysia would be disingenuous. Obviously, it was the United States and Malaysia themselves who made this change by concluding the bilateral agreement.

Crucially, even though WTO panels should, therefore, "apply" certain non-WTO treaties (in particular as law in defense against claims of WTO violations), this does not mean that these treaties can form the legal basis of claims of violation. As pointed out, the jurisdiction of WTO panels is limited to claims under WTO-covered agreements. In our example, the United States could, therefore, invoke its bilateral turtle protection agreement with Malaysia in defense of a subsequent WTO claim brought by Malaysia. The United States could, however, not possibly bring a complaint for violation of this bilateral turtle protection agreement to a WTO panel.

In sum, it is suggested here that WTO panels may take account, not only of the provisions in WTO-covered agreements, but also of other rules of international law (1) in the process of treaty interpretation; or (2) in their further examination of the validity of WTO claims as between the disputing parties including, without doubt, certain rules of general international law, also referred to as "adjuvants", as well as, we suggest, all other rules of international law binding as between the disputing parties, including other non-WTO treaties.

3. A Second Word of Caution

At the end of Part II, I warned that the interaction between WTO law and other international law in the abstract is one thing, the way this interaction plays out in WTO dispute settlement, quite another. In this part, it is concluded that WTO panels may apply non-WTO law in the examination of WTO claims in a variety of ways. The effect of that non-WTO law and its impact on the validity of the WTO claims examined by the panel is another matter.

VI. The Outcome of the WTO/Public International Law Interaction Before a WTO Panel: Complement or Conflict?

As noted earlier, to apply non-WTO rules of general international law in respect of issues on which the WTO Agreement remains silent (say, rules on burden of proof or representation before panels) should not be particularly controversial. In that event, the non-WTO rule simply complements relevant WTO provisions. More generally, it can indeed be safely said that most non-WTO rules of international law add to, confirm or complement the WTO Agreement. Both WTO and non-WTO norms are made by the same state actors. Hence, it can be assumed that in most instances these actors will not want to contradict what they have agreed upon earlier, although they can, of course, do so when they decide to "change their mind". Some non-WTO rules are completely unrelated to the WTO Agreement, either in terms of subject matter or in terms of parties bound by them. Others may deal with the same subject matter, but may simply complement, rather than contradict WTO rules (say, regional trade agreements in conformity with GATT Article XXIV).

But what happens when a WTO panel, in its examination of a WTO claim, is directed to another, non-WTO rule that contradicts the WTO treaty? Two situations must be distinguished: WTO norms "contracting out" of general international law and non-WTO treaties contradicting WTO norms.

A. WTO Law "Contracting Out" of General International Law

There are cases where the WTO Agreement "contracts out" of general international law (for example, Article X of the Marrakesh Agreement on amendments, which "contracts out" of VCLT rules on treaty amendments; or DSU provisions "contracting out" of general international law rules on the judicial settlement of disputes or state responsibility).[40] Here, there can be no doubt that the WTO provision prevails and is the one to be applied by a WTO panel. This is so because the WTO provision is both the latest and the most specific expression of state intent, as compared to the rule of general international law. That treaty provisions can thus "contract out" of general international law is confirmed also in the VCLT[41] and the Draft Articles on State Responsibility of the International Law Commission.[42]

In this type of conflict, the general international law rule would only prevail in case it is either (1) part of *jus cogens* (making the WTO provision invalid pursuant to VCLT Article 53, quoted above), or (2) established subsequent to the WTO Agreement and the WTO Agreement does not continue to apply as the most specific law.

B. Non-WTO Treaties Contradicting the WTO Agreement

There may also be instances where the relevant non-WTO rule is a rule of particular international law (say, a treaty norm), which is in conflict with a provision in the WTO Agreement. In that case (and to the extent, of course, that the non-WTO rule is relevant and can be referred to in the examination of a particular WTO claim), should a WTO panel automatically give preference to the WTO provision, over and above the non-WTO treaty rule? Not so, in my view, for the following reasons.

First of all, there is no inherent hierarchy between WTO and non-WTO rules. With the exception of *jus cogens* and obligations under the UN Charter,[43] no rule of international law is inherently "more important" than another. Since all international law, in one way or another, derives from the same source, that is, state consent, it is alien to a hierarchy of sources.[44] Hence, in terms of the hierarchy of norms, it does not matter whether, for example, the United States binds itself in the WTO, the UN or at the IMF. The rules created in all three fora are equally binding and of the same legal value (that is, of course, only for those states that agree to be bound by them).

[40] For example, DSU Article 22 which explicitly provides that countermeasures can only be taken after DSB authorization. In contrast, in general international law, countermeasures do not need multilateral approval.

[41] Article 5 VCLT states that the Convention is "without prejudice to any relevant rules" of international organizations.

[42] Article 55 of the Draft Articles adopted in August 2001 (ILC, 53rd Session, report posted at http://www.un.org/law/ilc/reports/2001/english/chp4.pdf) provides: "These articles do not apply where and to the extent that the conditions for the existence of an internationally wrongful act or the content or implementation of the international responsibility of a State are governed by special rules of international law".

[43] Article 103 of the UN Charter provides: "In the event of a conflict between the obligations of the Members of the United Nations under the present Charter and their obligation under any other international agreement, their obligations under the present Charter shall prevail". The *lex posterior* rule in Article 30 of the VCLT is explicitly deactivated to give effect to Article 103 even as it applies to future treaties.

[44] *See, e.g.,* IAN BROWNLIE, PRINCIPLES OF PUBLIC INTERNATIONAL LAW 3 (1998); NGUYEN QUOC DINH, PATRICK DAILLIER, & ALAIN PELLET, DROIT INTERNATIONAL PUBLIC 114 (1999) (*stating* "pour les sources, il n'existe pas de hiérarchie en droit international" (emphasis omitted)); MARK E. VILLIGER, CUSTOMARY INTERNATIONAL LAW AND TREATIES, ¶ 85 (2d rev. ed. 1997) (noting that "an *a priori* hierarchy of sources is an alien concept" to the structure of the international legal order); Michael Akehurst, *The Hierarchy of the Sources of International Law*, 1974–75 BRIT. Y.B. INT'L L. 273, 274.

Second, although there is no inherent hierarchy between WTO and non-WTO rules, WTO Members, when enacting WTO rules, may have given preference to WTO rules in case they conflict with other rules. WTO Members could have done so, for example, in a general "conflict clause" such as Article 103 of the UN Charter.[45] Have WTO Members expressed such a general preference? With the potential exception of DSU Arts. 3.2 and 19.2 (discussed below), they have not done so.

The WTO Agreement does not explicitly state that it prevails in general over preexisting law, or that it does not derogate from preexisting law.[46] It simply contains a number of specific conflict clauses, e.g., with respect to UN Charter obligations for the maintenance of international peace and security,[47] the WIPO conventions incorporated into the TRIPS Agreement,[48] certain dispute settlement provisions,[49] and regional trade arrangements.[50] As for IMF rules, the Declaration on the Relationship of the WTO with the IMF provides, in essence, that GATT 1994 rules prevail over IMF rules unless otherwise provided for in the GATT itself. The Declaration on Trade and Environment covers preexisting environmental conventions. However, rather than setting out conflict rules, this declaration establishes the WTO Committee on Trade and Environment, one of whose major tasks is to examine the relationship between the WTO treaty and multilateral environmental agreements. So far, this mandate has not resulted in any clear conflict rules.[51] In paragraph 31(1) of the Doha Declaration of November 2001, WTO Members agreed to negotiations on "the relationship between existing WTO rules and specific trade obligations set out in multilateral environmental agreements".

WTO Members could also express preference for WTO rules when enacting the non-WTO rule in question. This was done, for example, in Article 4 of the European Energy Charter Treaty.[52] In contrast, other conflict clauses in non-WTO treaties (such as Article 103 of the UN Charter) may give preference to non-WTO rules.

In sum, no general conflict clause in favor of WTO rules can be found. The WTO Agreement contains only scattered and specific conflict clauses. When both the WTO Agreement and the non-WTO treaty are silent or inconclusive with respect to a particular conflict, general international law rules on the inter-play between norms, such as Articles 30 and 41 of the VCLT or the *lex specialis* principle, must be used to resolve the conflict.

Hence, a conflict will sometimes be resolved in favor of WTO rules (e.g., where the WTO rule is the later in time), while at other times WTO rules may have to give way

[45] *See supra* note 43.

[46] Note, in contrast, the very elaborate Article 311 of the UNLOS Convention, *Relation to Other Conventions and International Agreements*, which regulates both the relationship of the Convention to pre-existing treaties and subsequent treaties.

[47] GATT Article XXI(c), a limited mirror image of Article 103 of the UN Charter.

[48] Article 2.2 of the TRIPS Agreement provides that "[n]othing in Parts I to IV of this Agreement shall derogate from existing obligations that Members may have to each other under the Paris Convention, the Bern Convention, the Rome Convention and the Treaty on Intellectual Property in Respect of Integrated Circuits".

[49] *See* Article 11.3 of the SPS Agreement.

[50] GATT Article XXIV and GATS Article V.

[51] The Committee, however, did endorse multilateral solutions based on international cooperation and consensus as the best and most effective way for governments to tackle environmental problems of a transboundary or global nature, and said it preferred that trade disputes arising in connection with a multilateral environmental agreement be resolved through the mechanisms established by that agreement. WTO Doc. WT/CTE/1, ¶ 171 (1996).

[52] *European Energy Charter Treaty*, *opened for signature* Feb. 1, 1995, 34 ILM 360 (1995), as subsequently amended.

to the non-WTO rule in question (e.g., when the non-WTO rule, say an MEA, is more specific to the issue at hand and/or later in time). Crucially, if WTO rules must give way to non-WTO rules before a WTO panel, this can result only in the dismissal of the particular WTO claim. The non-WTO rule, for example, an MEA binding on the disputing parties, may excuse an otherwise WTO inconsistent measure (the MEA may, for example, lead to the dismissal of a claim of violation of GATT Article XI and this even if the conditions of GATT Article XX would not be met). However, WTO panels would not have jurisdiction to examine claims of violation under that treaty (a WTO panel would not have jurisdiction to enforce, for example, emission standards agreed upon in the MEA).

C. The Definition of "Conflict" and General International Law Rules on the Inter-Play of Norms

I do not intend to elaborate on either (1) the definition of a conflict, that is, when (and to what extent) does a WTO rule "contract out" of general international law or when is a WTO provision in conflict with a non-WTO treaty; or (2) the general international law rules on inter-play of norms. Both discussions are, however, crucial in any determination by a panel on the inter-play between WTO and other international law.[53]

In terms of defining "conflict", serious thought should be given to considering as a conflict the situation where one treaty grants an explicit right to do something that is prohibited by another treaty (for example an environmental convention granting the explicit right to impose a trade restriction on specific products that would otherwise be prohibited by GATT Article III and not be justified by GATT Article XX).[54]

In terms of general international law rules on the inter-play of norms, it may be useful to distinguish between (1) what one could call an "inherent normative conflict" where one of the two norms is, in and of itself, invalidated or terminated by the other norm or where one norm is illegal under the other norm (e.g., pursuant to VCLT Articles 41, 53, 59 or 64; this would be the case, for example, if a treaty norm conflicts with *jus cogens* as a result of which the treaty norm would simply disappear); and (2) a conflict in the applicable law, where both norms remain untouched and continue to apply but where one norm, in the particular circumstances of the case, is to be applied over and above the other norm (pursuant to explicit conflict clauses, Article 30 of the VCLT, or the *lex specialis* principle). Particularly in the latter situation, the definition of a "conflict" should be broad so as to include an explicit right contradicting an obligation (say, an explicit right to *restrict* trade under an MEA or a human rights convention as against a WTO obligation *not* to restrict trade in the same circumstances); not only mutually exclusive obligations.

The next section discusses in more detail the debate as to whether DSU Articles 3.2 and 19.2 constitute a general conflict clause in favor of WTO rules.

[53] For a discussion, *see* Joost Pauwelyn, *supra* note 8 and the same author's book CONFLICT OF NORMS IN PUBLIC INTERNATIONAL LAW, HOW WTO LAW RELATES TO OTHER RULES OF INTERNATIONAL LAW (2003).

[54] In support: Panel Report on *EC—Bananas*, *supra* note 20, ¶ 7.159 (including within the definition of conflict "the situation where a rule in one agreement prohibits what a rule in another agreement explicitly permits"). *Contra*: Report of the Appellate Body, *Guatemala—Anti-Dumping Investigation Regarding Portland Cement from Mexico*, WT/DS60/AB/R, ¶ 65 (1998), defining conflict very narrowly as "a situation where adherence to the one provision will lead to a violation of the other provision", thereby seemingly recognizing as a "conflict" only a situation where "mutually exclusive obligations" arise.

D. Does the Obligation on Panels Not to "add to or diminish the rights and obligations provided in the covered agreements" Constitute a General Conflict Clause in Favor of WTO Rules?

It has been submitted that DSU Article 3.2, as confirmed in DSU Article 19.2, is a general conflict clause addressing the relationship between WTO law and other norms of international law.[55] The last sentence of Article 3.2 provides:

> Recommendations and rulings of the DSB cannot add to or diminish the rights and obligations provided in the covered agreements.[56]

Should this provision be interpreted to mean that WTO panels cannot ever add to or diminish any of the rights and obligations explicitly set out in WTO-covered agreements, that is, that no other law, be it pre- or post-1994, can ever influence WTO-covered agreements? Should it, moreover, be interpreted to mean that, in the event of conflict between WTO-covered agreements and another rule of international law, the WTO rule must always prevail?

In my view, the answer must be no. If the answer to the first question were yes (that is, no source of law, other than WTO-covered agreements, can influence a panel), the entire preceding discussion, as well as a long series of Appellate Body reports where general international law *was* referred to, would be legally incorrect. There would even be no scope for WTO panels to apply general international law to "fill gaps" left open by the WTO Agreement (say, in respect of burden of proof, good faith or due process) nor, arguably, for panels to refer to previous Appellate Body case law (a source of law *not* explicitly referred to in the DSU).[57] Doing either of these would then unjustifiably "add to" the WTO-covered agreements.

The second question (is DSU Article 3.2 an automatic conflict clause in favor of WTO rules?) must also be answered in the negative. DSU Articles 3.2 and 19.2 do not address the jurisdiction of panels nor the applicable law before them. Nor do they proclaim that WTO-covered agreements must necessarily and always prevail over all past and future law. They deal rather with the inherent limits of a WTO panel as a judicial organ in interpreting WTO-covered agreements. In the exercise of this judicial function of interpretation, WTO panels may clarify and interpret what WTO-covered agreements mean, but they may not "add to or diminish the rights and obligations provided in the covered agreements". The immediate context of this passage in Article 3.2 confirms this reading. The sentence directly follows the instruction for panels to clarify WTO-covered agreements "in accordance with customary rules of interpretation of public international law". This is also an indication that the last sentence of Article 3.2 deals with the interpretative function of panels, not with the applicable law before a panel, nor with a conflict of norms.

[55] *See* Lorand Bartels, *Applicable Law in WTO Dispute Settlement Proceedings,* 35 JOURNAL OF WORLD TRADE 499 (2001).

[56] Article 19.2 provides that in their findings and recommendations, "the panel and the Appellate Body cannot add to or diminish the rights and obligations provided in the covered agreements".

[57] In contrast to, for example, Article 38, ¶ 1(d) of the ICJ Statute which explicitly refers to "judicial decisions . . . as subsidiary means for the determination of rules of law". Panels, nonetheless, refer constantly to previous Appellate Body holdings. In a recent case, the Appellate Body even obliged panels to take account of its earlier findings. Appellate Body report on *United States—Article 21.5 Shrimp Turtle*, *supra,* note 38, ¶ 107 ("The Panel had, *necessarily,* to consider our views on this subject, as we . . . had provided interpretative guidance for future panels", emphasis supplied).

To put it differently, the way I read Articles 3.2 and 19.2 is that as judicial organs WTO panels may not create new rights and obligations, they must apply those agreed upon by WTO Members. This limitation on the interpretative function of WTO panels was made *ex abundante cautela*.[58] Even without this limitation, this rule would have applied to WTO panels. As the ICJ noted in the *Interpretation of Peace Treaties* Advisory Opinion: "to adopt an interpretation which ran counter to the clear meaning of the terms would not be to interpret but to revise the treaty".[59] The Appellate Body, in turn, confirmed that "[a]n interpreter is not free to adopt a reading that would result in reducing whole clauses or paragraphs of a treaty to redundancy or inutility"[60] (pursuant to the principle of effectiveness). At the other end of the spectrum, the Appellate Body also stated that the "principles of interpretation [in the Vienna Convention] neither require nor condone the imputation into a treaty of words that are not there or the importation into a treaty of concepts that were not intended".[61]

Hence, within the process of treaty interpretation, non-WTO rules cannot add meaning to WTO rules that goes either beyond or against the "clear meaning of the terms" of WTO-covered agreements. Therefore, in the process of interpretation, WTO rules "prevail" over other rules. This is, in my view, what Articles 3.2 and 19.2 confirm: a most obvious limitation on the process of treaty interpretation, nothing more.

However, when international law is applied outside the process of treaty interpretation, as explained above, this restriction (confirmed in DSU Articles 3.2 and 19.2) does not apply. There is a major difference between stating what the judiciary can do with the law when interpreting the law (as done in DSU Articles 3.2 and 19.2) and stating what the legislature (i.e., WTO Members) have done, or can do, with the law. DSU Article 3.2 directs that the WTO judiciary, like any other judiciary, cannot "change" the WTO treaty when asked to apply that treaty. A conflict clause, in contrast, would (1) tell us that WTO Members, when negotiating the treaty, did not want any other existing rules of international law to prevail over the WTO Agreement, as well as (2) direct WTO Members that in their future dealings they cannot change or overrule the rights and obligations set out in the WTO Agreement (except pursuant to the amendment and other relevant provisions in the WTO treaty itself).

To read DSU Articles 3.2 and 19.2 as being such a conflict clause, thus imposing serious restrictions on the law WTO Members can create in the future, would severely restrict the sovereign will of WTO Members. The alternative reading suggested here—Articles 3.2 and 19.2 are about treaty *interpretation*, nothing more—would avoid this restriction. The reading proposed here also corresponds to political reality: if the WTO treaty would, in any event, always prevail over other treaties why do certain WTO Members go to such lengths to negotiate clauses in post-1994 treaties—in particular the Cartagena Biosafety Protocol, but also in the run up to the final statement made at the Johannesburg Summit on Sustainable Development—which would posit that these new treaties will not affect the WTO treaty?[62] If Articles 3.2 and 19.2 of the DSU were conflict clauses that always

[58] *See supra* note 7.

[59] ICJ Reports 1950, 229.

[60] *U.S.—Gasoline, supra* note 3, at 23, *confirmed in,* inter alia, Report of the Appellate Body, *Japan—Taxes on Alcoholic Beverages,* WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R (1996) at 12.

[61] Report of the Appellate Body, *India—Patent Protection for Pharmaceutical and Agricultural Chemical Products* , WT/DS50/AB/R (1998), ¶ 46.

[62] After long discussions, the preamble to the Cartagena Biosafety Protocol now provides: "this Protocol shall not be interpreted as implying a change in the rights and obligations of a Party under any existing international agreements". Nonetheless, it is followed by an "[u]nderstanding that the above recital is not

favor WTO rules, why would WTO Members bother? Moreover, if non-WTO rules could never prevail over the WTO treaty, why would WTO negotiators themselves have decided in Doha to negotiate on "the relationship between existing WTO rules and specific trade obligations set out in multilateral environmental agreements"? If WTO panels were not permitted to apply non-WTO treaties what would there be to negotiate? Moreover, if WTO rules, that is DSU Articles 3.2 and 19.2, already resulted in the WTO treaty always prevailing, why would this inter-relationship issue be raised as a "new" topic for negotiation?

If, as advocated here, WTO panels were to apply non-WTO rules, binding as between the parties, in their examination of the validity of a WTO claim, all they would do is to give effect to the law made and agreed upon by the disputing parties themselves. Panels would not be "adding to" or "diminishing" the covered agreements. All panels would be doing is giving effect to what the WTO Members themselves had done before them (and they would do so without exceeding their substantive jurisdiction, limited to WTO claims).

Moreover, when it comes to future, post-1994 treaties in conflict with the WTO Agreement, reading DSU Articles 3.2 and 19.2 as a conflict clause would have little effect. Article 30 of the VCLT sanctions only one conflict clause claiming priority over future treaties, namely Article 103 of the UN Charter.[63] For all other conflict clauses of the same type, the *lex posterior* principle continues to applies. The contractual freedom of WTO Members thus allows them to deviate from the WTO Agreement, including the alleged conflict clause. WTO Members could do so collectively, or as between a limited number of WTO Members as long as the conditions in Articles 41 and 58 of the VCLT are fulfilled, that is, in particular, as long as the modification is not explicitly prohibited by the WTO treaty itself (say, a regional arrangement not meeting the conditions of GATT Article XXIV) and as long as WTO Members by agreeing on modifications to the WTO treaty do not affect the rights of other WTO Members not a party to the modification. Hence, even if DSU Articles 3.2 and 19.2 were to constitute a conflict clause giving automatic preference to WTO rules over other rules—which, according to the view proposed here, is not the case—this purported conflict clause would have little or no effect with respect to post-1994 treaty norms as between WTO Members bound by these norms.

VII. Conclusions

This chapter addresses the relationship between public international law and WTO law. It offers the following conclusions. First, WTO law is public international law. Second,

intended to subordinate this Protocol to other international agreements". Although countries such as the United States and Australia strongly pushed for a statement to the effect that the JohannesburgDeclaration on Sustainable Development would be subject to existing WTO rules, the final declaration does not include such a statement due to a last minute intervention by a number of small developing countries (*see* http://www.johannesburgsummit.org/html/documents/summit_docs/1009wssd_pol_declaration.htm; based on an interview with Matthew Stilwell who attended the summit on behalf of the Center for International Environmental Law).

[63] Article 30, ¶ 1 states: "Subject to Article 103 of the Charter of the United Nations, the rights and obligations of States Parties to successive treaties relating to the same subject-matter shall be determined in accordance with the following paragraphs". Article 30 then goes on to provide for the "treaty later in time prevails" rule. This rule is only deactivated in Article 30, paragraph 1 for Article 103 of the UN Charter and in Article 30, paragraph 2, for treaties explicitly providing that "it is subject to, or that it is not to be considered as incompatible with, an earlier treaty or later treaty". No exception is made for conflict clauses claiming priority over future treaties other than Article 103 of the UN Charter.

both general international law and other, non-WTO treaties, interact with the WTO Agreement in the abstract. Third, the substantive jurisdiction of WTO panels is limited to claims under WTO-covered agreements. However, panels also have certain implied or incidental jurisdictional powers.

Fourth, although the jurisdiction of WTO panels is limited to WTO claims, in the examination of those claims, panels may have to refer to or apply other, non-WTO rules of international law. Based on explicit case law to date, it is by now beyond doubt that panels may do so in the interpretation of terms set out in WTO provisions (although the scope of non-WTO rules that can thus be referred to for interpretative purposes is rather limited). It is, moreover, standard practice for WTO panels and the Appellate Body also to apply certain rules of general international law to matters on which the WTO Agreement itself is silent (such as burden of proof, due process, representation before panels or error in treaty formation). It must be recognized that this application of non-WTO rules occurs outside the rather limited process of "treaty interpretation", that is, the process of giving meaning to words in the WTO treaty. In this context, especially the application of what has been called "adjuvants" or "secondary" rules of general international law binding on all WTO Members and from which the WTO treaty did not "contract out" (e.g., certain rules on the law of treaties, state responsibility and the judicial settlement of disputes), is no longer as controversial as it once was. However, once it is accepted that WTO panels can directly apply certain non-WTO rules of international law—something that is, essentially, the unavoidable consequence of WTO law being just a branch of public international law—it becomes very difficult to draw a line between non-WTO rules that panels can apply, and those that they cannot apply, in order to resolve a WTO claim. If one limits WTO panels only to rules of general international law (that is, rules binding on all WTO Members), it must be realized that such rules also include more substantive rules such as human rights, rules on the use of force and *jus cogens*, all of which are rules that cannot be said to be mere "adjuvants". If one were to limit WTO panels to non-WTO rules that are simply "adjuvants' in the process of defining and enforcing WTO provisions, it could be difficult in practice to decide which rules this includes and, more importantly, certain of these "adjuvants", such as VCLT provisions on how treaties can be changed or declared invalid based on *other* rules of international law, will unavoidably direct WTO panels to non-WTO rules that are of a more substantive nature (such as a subsequent MEA that may have altered pre-existing rights and obligations as between WTO Members party to that MEA).

The solution proposed in this chapter is the following: instead of trying to draw a strict line, all rules of international law should be recognized as potentially relevant law for the resolution of WTO claims. The only limits are the facts of the case, the rules applicable to the disputing parties and the claims and defenses they decide to invoke. Within those boundaries all rules of international law binding as between the disputing parties can be relied on by WTO panels. Obviously, applying non-WTO treaties, in particular as a defense against claims of violation of WTO law, is one thing; WTO panels examining claims of violation under these non-WTO treaties (say, claims of violation of certain emission standards under an MEA), is another. The latter is something for which WTO panels do not have jurisdiction.

Fifth, once it is accepted that WTO law and other rules of international law do interact also as a matter of practice, before WTO panels, it must be acknowledged that this interaction can take two forms. Either the norms in question complement each other or there is a contradiction or conflict between them. In the former case, the non-WTO rule simply "fills gaps" left open by the WTO treaty. In the latter case, that is, in the event

of conflict, the WTO Agreement does not provide a general conflict clause, either in favor or to the detriment of WTO rules. DSU Articles 3.2 and 19.2—prohibiting panels to "add to or diminish" WTO-covered agreements—restrict, under the reading advanced here, the interpretative process of panels. They do not restrict WTO Members from changing WTO provisions as between themselves. Some specific conflict rules are found in the WTO Agreement as well as other non-WTO treaties. However, in the absence of explicit conflict clauses, general international law rules on the inter-play between norms, in particular the *lex posterior* and *lex specialis* principles, must apply. In some cases, this will mean that the WTO rule prevails. In other cases, those general conflict rules may lead to a non-WTO rule overruling certain WTO provisions, only, of course, as between the WTO Members bound by this non-WTO rule (for example, a later MEA overruling GATT Article XI read in combination with GATT Article XX). In practice, this may lead to the dismissal of a WTO claim (e.g., the conclusion that a violation of GATT is justified on the basis of an MEA). Once again, panels do not have jurisdiction to entertain claims under non-WTO rules.

What are the lessons to be drawn from this Chapter by WTO negotiators and treaty-makers in other fora? First, since WTO panels can potentially apply all rules of international law, it does make sense for treaty-makers to specify the relationship between WTO rules and newly negotiated treaties, be it the Cartageno Biosafety Protocol or a new WHO treaty on tobacco. If no such conflict clauses are provided for by the negotiators themselves, the adjudicator, in particular WTO panels and the Appellate Body, will have to apply *general* international law rules on how to solve conflict between norms. Such general rules (e.g., the *lex posterior* and *lex specialis* rules) are not well developed and may not always offer predictable outcomes. This should be a strong incentive for treaty-makers to decide themselves which rules ought to prevail. For the same reason, paragraph 31(1) of the Doha Declaration—where WTO Members agreed to negotiations on "the relationship between existing WTO rules and specific trade obligations set out in multilateral environmental agreements"—is of crucial importance. If negotiators refrain from making a decision in this respect, WTO panels and the Appellate Body will one day be forced to do so. Second, if it were, indeed, accepted that WTO panels can potentially apply all rules of international law, part of the debate on whether the WTO should take on other responsibilities in non-trade related fields, or at least be more sensitive to those other fields, is resolved. Following the approach suggested here, the WTO could just continue regulating international trade while other organizations regulate the environment, human rights or labor issues. WTO panels would also continue to examine only claims under WTO-covered agreements. However, in case any of those other, non-WTO treaties were to offer a defense against a particular WTO claim, WTO panels would have to examine the validity of that defense. The WTO would thereby defer to other organizations when it comes to making non-trade rules while at the same time take full cognizance of those other rules in the enforcement of WTO claims as between WTO Members bound by both sets of rules. In this sense, both the unity of international law and the freedom of each individual state to decide where and what to make international law would be preserved.

IV. Concluding Remarks 1457

I. Introduction

In these days, the global legitimacy of the WTO is frequently being called into question by "civil society", and particularly by the NGOs. One of the chief criticisms is that the WTO's decisions, and especially those taken within the dispute settlement context, are arrived at "behind closed doors" and take into account only the trade-offs between State interests, with no consideration for the rights and interests of private individuals. To make up for these shortcomings, the NGOs and various private bodies, including those that represent the multinationals, are demanding, among other things, the right to join the proceedings as "friends of the court" and, in that capacity, to submit *amicus curiae* briefs.

This idea[1] has met with bitter opposition from within the WTO. Before proceeding to examine the nature of the protagonists and the interests at stake in this debate (in Part II of this chapter), I shall first outline the current position of the WTO's adjudicative bodies on this question of the participation of friends of the court—first private entities, but then also States other than the parties or third parties—in dispute settlement proceedings, at both the panel and Appellate Body stages (Part I).

II. The Position of the WTO's Dispute Settlement Mechanism on *Amicus Curiae* Briefs

A. The Systemic Approach

In order properly to appreciate the place that should be reserved for private party submissions, it is necessary to bear in mind the general architecture of the WTO's dispute settlement mechanism, which is essentially an *intergovernmental system*. The Appellate Body has made this very clear:

> It may be well to stress at the outset that access to the dispute settlement process of the WTO is limited to Members of the WTO. . . . Only Members may become parties to a dispute of which a panel may be seized, and only Members "having a substantial interest in a matter before a panel" may become third parties in the proceedings before that panel. Thus, under the DSU, only Members who are parties to a dispute, or who have notified their interest in becoming third parties in such a dispute to the DSB, have a *legal right* to make submissions to, and have a *legal right* to have those submissions considered by, a panel.[2]

However, although the system is intergovernmental, it is *not entirely indifferent to the interests of individuals*. As a panel has pointed out:

> Neither the GATT nor the WTO has so far been interpreted by GATT/WTO institutions as a legal order producing direct effect. Following this approach, the GATT/WTO did *not* create a new legal order the subjects of which comprise both contracting parties or Members and their nationals.

[1] For a general approach to the question of the role of the NGOs and *amicus curiae*, *see* Dinah Shelton, *The Participation of Nongovernmental Organizations in International Proceedings*, 88 AMERICAN JOURNAL OF INTERNATIONAL LAW 611–619 (1994); Raymond Ranjeva, *Les organisations non-gouvernementales et la mise en œuvre du droit international*, 270 RECUEIL DES COURS DE L'ACADÉMIE DE DROIT INTERNATIONAL 9–106 (1997); Hervé Ascensio, *L'*amicus curiae *devant les juridictions internationales*, 4 REVUE GÉNÉRALE DE DROIT INTERNATIONAL PUBLIC 897–929 (2001); Philippe Sands, *Le droit international, le praticien et les acteurs non étatiques,* in L'ÉMERGENCE DE LA SOCIÉTÉ CIVILE INTERNATIONALE—VERS LA PRIVATISATION DU DROIT INTERNATIONAL, (Pedone 2003).

[2] Report of the Appellate Body, *United States—Import Prohibition of Certain Shrimp and Shrimp Products*, WT/DS58/AB/R (1998),¶ 101 (emphasis in original).

> However, it would be entirely wrong to consider that the position of individuals is of no relevance to the GATT/WTO legal matrix. Many of the benefits to Members which are meant to flow as a result of the acceptance of various disciplines under the GATT/WTO depend on the activity of individual economic operators in the national and global market places. The purpose of many of these disciplines, indeed one of the primary objects of the GATT/WTO as a whole, is to produce certain market conditions which would allow this individual activity to flourish.[3]

Likewise, it should not be forgotten that, as stated by the Appellate Body in *Shrimp-Turtle*,[4] sustainable development is one of the WTO's objectives, and that, in general, this is inseparably bound up with consideration for the interests of the individuals for whose benefit this sustainable development has to be achieved. This close relationship is noted in Chapters 23 and 27 of Agenda 21.[5] Thus, according to Chapter 23, public participation is indispensable:

> One of the fundamental prerequisites for the achievement of sustainable development is *broad public participation in decision-making*. Furthermore, in the more specific context of environment and development, the need for new forms of participation has emerged. This includes the need of individuals, groups and organizations to participate in environmental impact assessment procedures and to know about and participate in decisions, particularly those which potentially affect the communities in which they live and work.[6]

Similarly, Chapter 27 stresses the partnership role of the NGOs in the pursuit of the objective of sustainable development:

> Society, Governments and international bodies should develop *mechanisms to allow non-governmental organizations to play their partnership role responsibly and effectively* in the process of environmentally sound and sustainable development.
>
> With a view to strengthening the role of non-governmental organizations as social partners, the United Nations system and Governments should initiate a process, in consultation with non-governmental organizations, to review formal *procedures and mechanisms for the involvement of these organizations at all levels* from policy-making and decision-making to implementation.[7]

No one could deny that consideration for the views of civil society has now become an inescapable issue in the area of international economic relations.

B. The Evolution of the GATT/WTO Approach to the Admissibility of **Amicus Curiae** *Briefs in Panel Proceedings*

1. The Origins

This question of *amicus curiae* briefs has evolved over time. During the GATT period, some documents of this type were in fact submitted to the Secretariat, but they were never

[3] Report of the WTO Panel, *United States—Sections 301–310 of the Trade Act of 1974*, WT/DS152/R (1999),¶¶ 7.72 and 7.73.

[4] *United States—Shrimp, supra* note 2, ¶ 129.

[5] Agenda 21 is an environmental protection program adopted at the United Nations Conference On Environment And Development ("UNCED"). The Conference was held in Rio de Janeiro, Brazil from June 3 to 14, 1992. The Conference is also called the Earth Summit and the Rio Summit. The Rio Declaration on Environment and Development is Annex 1 to the Report of the United Nations Conference on Environment and Development ("*Rio Declaration*"), A/CONF.151/26 (Vol. I), August 12, 1992. The Rio Declaration is available on the internet at www.un.org/documents/ga/conf151/aconf15126-1annex1.htm.

[6] *Rio Declaration, supra* note 5 (emphasis added).

[7] *Id*. (emphasis added).

taken into consideration by panel members, who stuck to the principle that the GATT dispute settlement system was for governments only.

The same solution was adopted when the WTO dispute settlement mechanism began to operate: thus, in the *Gasoline* and *Hormones* cases, in which *amicus curiae* briefs were submitted to the panels, they were disregarded, in accordance with previous practice from the GATT period. However, international society has evolved to such an extent[8] that this policy of abstention is no longer viable.

2. The Shrimp-Turtle *Case, a Turning Point*

The turning point came with the *Shrimp-Turtle* case. Having received *amicus curiae* briefs from environmental NGOs, the panel, on the basis of a literal reading of Article 13,[9] refused to take them into consideration as directly-submitted briefs, while allowing them to be attached to the parties' submissions. It considered that, in accordance with the text of Article 13 of the *DSU*, *amicus curiae* briefs could only be submitted at the panel's own request[10] and declared that "accepting non-requested information from non-governmental sources would be, in our opinion, incompatible with the provisions of the DSU as currently applied".[11]

The Appellate Body rejected this analysis:

> . . . authority to seek information is not properly equated with a prohibition on accepting information which has been submitted without having been requested by a panel. A panel has the discretionary authority either to accept and consider or to reject information and advice submitted to it, whether requested by a panel or not. The fact that a panel may *motu proprio* have initiated the request for information does not, by itself, bind the panel to accept and consider the information which is actually submitted. The amplitude of the authority vested in panels to shape the processes of fact-finding and legal interpretation makes clear that a panel will not be deluged, as it were, with non-requested material, unless that panel allows itself to be so deluged.[12]

However, inasmuch as the panel had allowed the United States to attach the NGOs' briefs to its own submission, the Appellate Body considered that this was a means that a panel could use to obtain certain information from NGOs. It also pointed out that the panel

[8] With regard to the diversification of the actors in international relations, *see* Brigitte Stern, *Etats et souveraineté: la souveraineté de l'Etat face à la mondialisation*, in UNIVERSITE DE TOUS LES SAVOIRS: QU'EST-CE QUE LA SOCIETE? 828–839 (Odile Jacob ed., 2000).

[9] Article 13 (Right to Seek Information) provides:

> 1. Each panel shall have the right to seek information and technical advice from any individual or body which it seams appropriate. However, before a panel seeks such information or advice from any individual or body within the jurisdiction of a Member it shall inform the authorities of that Member. A Member should respond promptly and fully to any request by a panel for such information as the panel considers necessary and appropriate. Confidential information which is provided shall not be revealed without formal authorization from the individual, body or authorities of the Member providing the information.
> 2. Panels may seek information from any relevant source and may consult experts to obtain their opinion on certain aspects on the matter. With respect to a factual issue concerning a scientific or other technical matter raised by a party to a dispute, a panel may request an advisory report in writing from an expert review group.

[10] "We note that, pursuant to Article 13 of the DSU, the initiative to seek information and to select the source of information rests with the Panel", Report of the Panel in *United States—Shrimp, WT/DS58/R (1998)*, ¶ 7.8.

[11] *Id.*

[12] Report of the Appellate Body, *United States—Shrimp, supra* note 2, ¶ 108.

had given the other countries two additional weeks to respond, which meant that the way in which the NGOs' submissions were taken into account had not infringed due process.

Thus, the conclusion is clear:

> We find, and so hold, that the Panel erred in its legal interpretation that accepting non-requested information from non-governmental sources is incompatible with the provisions of the DSU. At the same time, we consider that the Panel acted within the scope of its authority under Articles 12 and 13 of the DSU in allowing any party to the dispute to attach the briefs by non-governmental organizations, or any portion thereof, to its own submissions.[13]

Accordingly, the Appellate Body considered that, for a panel, the right "to seek information from any individual or body which it deems appropriate" includes:

— choosing the source of the information;
— deciding whether or not to request information;
— deciding whether to accept or reject a requested document;
— deciding whether to accept or reject a non-requested document;
— the authority to dispose of a requested document as it thinks fit;
— the authority to dispose of a non-requested document as it thinks fit.

The panel needed such extensive freedom of action in order to function properly. This wide discretion meant that panels would henceforth be free to deal with *amicus curiae* briefs as they thought fit:

> We consider that a panel also has the authority to *accept or reject* any information or advice which it may have sought and received, or to *make some other appropriate disposition* thereof. It is particularly within the province and the authority of a panel to determine *the need for information and advice* in a specific case, to ascertain the *acceptability* and *relevancy* of information or advice received, and to decide *what weight to ascribe to that information or advice* or to conclude that no weight at all should be given to what has been received.[14]

Thus, panels are required to make a series of decisions:

— to accept or reject;
— if they accept, to make a qualitative appraisal; and moreover
— if they accept, to make a quantitative appraisal, by deciding what weight to ascribe to the information and advice received in the form of *amicus curiae* briefs.

Clearly, it is a less felicitous consequence of this procedure that, to make these successive decisions, panels will have to read the documents submitted. This should be borne in mind later on, when solutions are being proposed.

It would appear, that following this decision, it will be necessary to make a distinction according to whether or not the *amicus curiae* briefs are attached to the Members' documents. It may be assumed that panels have an *obligation* to take attached briefs into account, whereas consideration of others is merely *optional*.

For some, the situation is less straightforward. Thus, the Appellate Body accepted the panel's position on briefs attached to Member submissions in these terms:

[13] *Id.* ¶ 110.
[14] *Id.* ¶ 104 (emphasis in original).

> The Panel was, accordingly, entitled to treat and take into consideration the section of the brief that the United States appended to its second submission to the Panel, just like any other part of the United States pleading.[15]

According to Arthur Appleton,[16] the fact that the Appellate Body used the term "entitled" rather than "obligated" means that even with respect to attached briefs panels retain a degree of discretion as regards the way in which they are to be taken into account. Arthur Appleton's reading finds some support in the Appellate Body's position on *amicus curiae* briefs appended to contracting parties' submissions to the Appellate Body itself, as indicated below, since it began by taking them into consideration only to the extent that they did not contradict the arguments of the parties.

Personally, I read this passage rather differently, viewing it as meaning merely that the decision to authorize the parties to attach an NGO brief lies within the powers of the panel but that, once the briefs had been attached, they have to be taken into consideration in exactly the same way as any other Member submission.

Since this decision, many *amicus curiae* briefs have been submitted to panels: the principle of the freedom of the panel has not again been called into question. And that freedom has been used to accept *amicus curiae* briefs, to reject them while giving reasons for their rejection—late submission or unnecessary duplication—and, finally, to reject them without the least word of explanation.

C. **Amicus Curiae** *Briefs in Appellate Body Proceedings*

The willingness of the Appellate Body to consider *amicus curiae* briefs addressed directly to it has developed more gradually and insidiously.

1. A Door Left Ajar in the Shrimp-Turtle *Case*

The question first arose in *Shrimp-Turtle* when the United States attached to its submission to the Appellate Body three "independent" NGO briefs, to which all the appellees objected. In addition to the arguments already put forward in connection with the submission of such documents to the panel, a further claim was made, namely, that taking them into consideration would be incompatible with the very essence of the appeal procedure: according to Article 17.6 of the DSU, an appeal should be limited "to issues of law covered in the panel report". However, the NGO documents contained a great deal of factual information which, according to the appellees, made them inadmissible on appeal. Moreover, after its brief had been presented as an attachment to the United States submission, one of the organizations had produced a revised version which it had forwarded directly to the Appellate Body.

In a preliminary procedural ruling, the Appellate Body decided to accept for consideration the information provided by the NGOs, without distinguishing between the different ways of submitting the briefs:

> On 11 August 1998, we issued a ruling on this preliminary procedural matter addressed to the participants and third participants, as follows:
>
> > We have decided to accept for consideration, insofar as they may be pertinent, the legal arguments made by the various non-governmental organizations in the three briefs attached as exhibits to the appellant's submission of the United States, as well as the

[15] Report of the Appellate Body, *United States—Shrimp, supra* note 2, ¶ 109.

[16] Arthur E. Appleton, *Shrimp/Turtle: Untangling the Nets*, 2 JOURNAL OF INTERNATIONAL ECONOMIC LAW 477, 485 (1999).

> revised version of the brief by the Center for International Environmental Law et al., which was submitted to us on 3 August 1998. The reasons for our ruling will be given in the Appellate Body Report.[17]

Thus the Appellate Body accepted the direct submission of an *amicus curiae* brief. In the report adopted, the Appellate Body gave only a partial explanation of how this information should be taken into account.

In actual fact, the Appellate Body had questioned the United States about the precise connection between its own submission and those of the NGOs. The United States had replied as follows:

> the three submissions prepared by non-governmental organizations reflect the independent views of those organizations . . . The United States agrees with the legal arguments in the submissions of the non-governmental organizations to the extent those arguments concur with the U.S. arguments set out in our main submission.[18]

On that basis, the Appellate Body accepted NGO briefs to the extent that the Member adopts them, that is to say, where, on the one hand, they form an integral part of the appellant's submission and, on the other, concur with the main submission:

> We consider that the attaching of a brief or other material to the submission of either appellant or appellee, no matter how or where such material may have originated, renders that material at least *prima facie* an integral part of that participant's submission.[19]

Thus, without being able to cite any specific authorization in the provisions of the DSU—which in the case of panels, even though generously interpreted, existed in embryonic form—in a preliminary ruling the Appellate Body accepted on the one hand, the possibility of attaching *amicus curiae* briefs to the submissions of the parties and, on the other, the direct submission of an *amicus curiae* brief, referring to the legal arguments in support of this twin decision which, ultimately, in the Appellate Body report were provided only in connection with the first point, the second being passed over in silence.

The Appellate Body seemed to acknowledge the right of governments to attach *amicus curiae* briefs to their submissions but without expressly doing so. Thus, having asked the United States whether it agreed with the legal arguments of the NGOs set out in the attached briefs and having received a partly negative and partly affirmative reply, the Appellate Body decided to focus on the main U.S. submission.

As for direct submission, there is no mention of it in the final report, which has led some authors to suggest that the Appellate Body made a prudent retreat, after the appellees objected to the acceptance of an *amicus curiae* brief addressed to it directly. Thus, Arthur Appleton writes: "The Appellate Body's decision not to explain its legal basis, if any, for accepting the CIEL submission brings into doubt its authority to accept *amicus curiae* briefs directly from non-members".[20]

To sum up what the Appellate Body decided in this case, nothing explicit was said, at this stage, about the direct admissibility of *amicus curiae* briefs whereas, at first glance, it appears that briefs appended to government submissions were taken into consideration

[17] Report of the Appellate Body, *United States—Shrimp, supra* note 2, ¶ 83.
[18] *Id.* ¶ 86.
[19] *Id.* ¶ 89.
[20] *See* Appleton, *supra* note 16, at 487.

only insofar as the government itself agreed with them: thus, the government screen or barrier seems to have been formally maintained.[21]

The relationship between a government submission and an NGO brief could be described as a combination of integration and subordination: integration of the latter in the former and subordination of the latter to the former, whenever there are discrepancies between them.

In reality, things are not quite so simple. As other authors have pointed out,[22] a careful examination of what the Appellate Body actually did reveals that it tacitly accepted a revised version of an NGO brief, initially appended to the U.S. submission, which had been communicated to it directly, without passing through the U.S. Government. Thus, a breach seems to have been made in the "governments-only fence" around Appellate Body proceedings. Although the intergovernmental nature of the proceedings at the appellate level seems to have been formally maintained, some have argued that, since that time, the WTO has been giving *de facto* consideration to submissions by NGOs and, in view of the importance of WTO issues for civil society, have suggested that this taking into consideration of *amicus curiae* briefs should also be provided for *de jure* when the procedures under the dispute settlement mechanism are revised.[23]

Even if the Appellate Body did not say in so many words that it could accept directly submitted *amicus curiae* briefs, it did implicitly accept such a document; however, it should also be borne in mind that, although the final version of the document was in fact directly submitted to the Appellate Body, the first version had nevertheless been appended to the U.S. submission. Thus, it was not possible to predict with any certainty what the Appellate Body's position would be with regard to an *amicus curiae* brief that was filed directly with it in the first instance.

Even by adopting a flexible interpretation, as it did in connection with the independent briefs submitted at panel level, the Appellate Body certainly had greater difficulty in finding a legal basis for accepting non-requested *amicus curiae* briefs. At the panel level, Article 13 refers to the possibility of seeking information "from any individual or body which it deems appropriate." There is no equivalent article for the Appellate Body and under Rule 28(1) of the *Working Procedures for Appellate Review* the Appellate Body may only request additional submissions "from any participant or third participant".

Thus, the situation still remained relatively fluid and as one author's analysis suggests: "The Appellate Body . . . appears to have opened the door for the limited admissibility of non-member submissions and *amicus curiae* briefs."[24]

Subsequent developments show that the Appellate Body has chosen to move resolutely towards a policy of opening up to the NGOs, despite the fusillade of criticism from the government side which followed its decision in the *Shrimp-Turtle* case.

[21] As Hélène Ruiz Fabri has pointed out, "the Appellate Body's final position amounts to neutralizing the problem . . . As with the composition of delegations (in the *Bananas* case), the government barrier may be regarded as having been maintained", in *Chronique du règlement des différends. 1996–1998*, 2 REVUE GÉNÉRALE DE DROIT INTERNATIONAL PUBLIC 497 (1999).

[24] *See* Appleton, *supra* note 16, at 494.

2. A Door Left Firmly Open in the United States-Carbon Steel *Case*

In *United States-Carbon Steel*, the Appellate Body explicitly considered that it had discretionary authority to accept directly-submitted *amicus curiae* briefs. In this case, certain submissions by industry associations, which had been rejected by the panel for being late, were resubmitted to the Appellate Body: these *amicus curiae* briefs came from the American Iron and Steel Institute and the Specialty Steel Industry of North America.

Having failed to do so in the *Shrimp-Turtle* case, in this report the Appellate Body finally explained the legal basis for accepting a directly-submitted *amicus curiae* brief:

> In considering this matter, we first note that nothing in the DSU or the *Working Procedures* specifically provides that the Appellate Body may accept and consider submissions or briefs from sources other than the participants and third participants in an appeal. On the other hand, neither the DSU nor the *Working Procedures* explicitly prohibit acceptance or consideration of such briefs. However, Article 17.9 of the DSU provides: "Working procedures shall be drawn up by the Appellate Body in consultation with the Chairman of the DSB and the Director-General, and communicated to the Members for their information." This provision makes clear that the Appellate Body has broad authority to adopt procedural rules which do not conflict with any rules and procedures in the DSU or the covered agreements. Therefore, we are of the opinion that as long as we act consistently with the provisions of the DSU and the covered agreements, we have the legal authority to decide whether or not to accept and consider any information that we believe is pertinent and useful in an appeal.[25]

Thus, the Appellate Body recognizes two types of limitations on its authority to adopt procedural rules: a formal limit, *i.e.*, the requirement to consult certain individuals, and a material limit, *i.e.*, consistency with the provisions of the DSU and the covered agreements. In an attempt to forestall predictable criticism, the Appellate Body made it very clear that the position it had taken did not confer any right to submit an *amicus curiae* brief on entities other than Members of the WTO:

> Individuals and organizations, which are not Members of the WTO, have no legal *right* to make submissions to or to be heard by the Appellate Body. The Appellate Body has no legal *duty* to accept or consider unsolicited *amicus curiae* briefs submitted by individuals or organizations, not Members of the WTO. The Appellate Body has a legal *duty* to accept and consider *only* submissions from WTO Members which are parties or third parties in a particular dispute.[26]

Nevertheless, it concludes:

> We are of the opinion that we have the legal authority under the DSU to accept and consider *amicus curiae* briefs in an appeal in which we find it pertinent and useful to do so. In this appeal, we have not found it necessary to take the two *amicus curiae* briefs filed into account in rendering our decision.[27]

Accordingly, it is on the basis of Article 17.9 of the DSU and, though mentioned only in a footnote,[28] Rule 16(1) of the *Working Procedures for Appellate Review* (both articles being quoted for the first time in connection with *amicus curiae* submissions) that the Appellate Body will, at its discretion, agree to accept *amicus curiae* briefs.

[25] Report of the Appellate Body, *United States—Imposition of Countervailing Duties on Certain Hot-Rolled Lead and Carbon Carbon Steel Products Originating in the United Kingdom*, ("*United States—Lead and Bismuth II* ") WT/DS138/AB/R (2000), ¶ 39.

[26] *Id*. ¶ 41.

[27] *Id*. ¶ 42.

[28] Text of the note: "In addition, Rule 16(1) of the *Working Procedures* allows a division hearing an appeal to develop an appropriate procedure in certain specified circumstances where a procedural question arises that is not covered by the *Working Procedures*".

Thus, the Appellate Body appears to have granted itself unlimited freedom of action and the only criterion it proposes to use for guiding its policy in this field and determining whether a brief is admissible or not is summed up in the phrase "if we find it pertinent and useful to do so."[29] This decision gives rise to certain questions of a legal nature to which I shall return later.

3. A "Trompe l'œil" Door Deliberately Left Open in the Asbestos *Case*

In the *Asbestos* case,[30] urged on by numerous NGOs, the Appellate Body, despite or perhaps because of the discussions in progress, decided to establish "operating instructions" for *amicus curiae* briefs, by adopting procedural and substantive rules for their admission, but restricted these rules exclusively to the case in progress, as indicated in a letter from the Presiding Member of the Appellate Body to the Chairman of the DSB:

> I am writing to inform you that the Division hearing the above appeal has decided, in the interests of fairness and orderly procedure in the conduct of this appeal, to adopt an additional procedure to deal with any written briefs received by the Appellate Body from persons other than a party or a third party to this dispute. This additional procedure has been adopted by the Division hearing this appeal for the purposes of this appeal only pursuant to Rule 16(1) of the *Working Procedures for Appellate Review*, and is *not* a new working procedure drawn up by the Appellate Body pursuant to paragraph 9 of Article 17 of the *Understanding on Rules and Procedures Governing the Settlement of Disputes*.[31]

It seems rather as if the Appellate Body wanted to reach a point of no return, by obliging governments to take a position on its reasonable attitude, now that the precondition of the admission of *amicus curiae* briefs, which it no doubt hoped would not again be called into question by Members, had been accepted.

In fact, it had very soon realized that the discretionary authority it had granted itself in the *United States-Carbon Steel* case needed to be consolidated. Thus, in *Asbestos*, the Appellate Body laid down rules enabling it to deal in a transparent fashion with requests for authorization to file *amicus curiae* briefs. It considered that "the fair and orderly conduct of this appeal could be facilitated by the adoption of appropriate procedures, for the purposes of this appeal only"[32] and accordingly proceeded to adopt such procedures.

In a document adopted on November 7, 2000, following, it should be noted, consultations among all seven members of the Appellate Body, the latter established an additional procedure, which included a number of requirements[33] to be met:

> An application for leave to file such a written brief shall:
>
> (a) be made in writing, be dated and signed by the applicant, and include the address and other contact details of the applicant;
> (b) be in no case longer than three typed pages;
> (c) contain a description of the applicant, including a statement of the membership and legal status of the applicant, the general objectives pursued by the applicant, the nature of the activities of the applicant, and the sources of financing of the applicant;

[29] Report of the Appellate Body, *U.S.—Carbon Steel*, *supra* note 25, ¶ 42.

[30] On this case *see*, in particular, Geert A. Zonnenkeyn, *The Appellate Body's Communication on Amicus Curiae Briefs in the Asbestos Case*, 35 JOURNAL OF WORLD TRADE 553 (2001).

[31] WT/DS135/9, November 8, 2001.

[32] Report of the Appellate Body, *European Communities—Measures Affecting Asbestos and Asbestos-Containing Products* ("*EC-Asbestos*") WT/DS135/AB/R (2001), ¶ 50.

[33] Requirements undoubtedly closely modeled on those suggested by Gabrielle Marceau and Matthew Stilwell in their article entitled *Practical Suggestions for Amicus Curiae Briefs Before WTO Adjudicating Bodies*, 4 JOURNAL OF INTERNATIONAL ECONOMIC LAW 155 (2001).

(d) specify the nature of the interest the applicant has in this appeal;
(e) identify the specific issues of law covered in the Panel Report and legal interpretations developed by the Panel that are the subject of this appeal, as set forth in the Notice of Appeal (WT/DS135/8) dated 23 October 2000, which the applicant intends to address in its written brief;
(f) state why it would be desirable, in the interests of achieving a satisfactory settlement of the matter at issue, in accordance with the rights and obligations of WTO Members under the DSU and the other covered agreements, for the Appellate Body to grant the applicant leave to file a written brief in this appeal; and indicate, in particular, in what way the applicant will make a contribution to the resolution of this dispute that is not likely to be repetitive of what has been already submitted by a party or third party to this dispute; and
(g) contain a statement disclosing whether the applicant has any relationship, direct or indirect, with any party or any third party to this dispute, as well as whether it has, or will, receive any assistance, financial or otherwise, from a party or a third party to this dispute in the preparation of its application for leave or its written brief.[34]

The additional procedure provided for in the *Asbestos* case did more than merely regulate the application for authorization to file an *amicus curiae* brief. It also laid down rules for the authorized brief itself, to save the Appellate Body from being deluged with submissions to read and study:

A written brief filed with the Appellate Body by an applicant granted leave to file such a brief shall:

(a) be dated and signed by the person filing the brief;
(b) be concise and in no case longer than 20 typed pages, including any appendices; and
(c) set out a precise statement, strictly limited to legal arguments, supporting the applicant's legal position on the issues of law or legal interpretations in the Panel Report with respect to which the applicant has been granted leave to file a written brief.[35]

After this additional procedure was adopted by the Appellate Body, it was widely circulated by the Secretariat, which published it on the WTO's web site and e-mailed it to all the NGOs on the WTO's distribution list the very day it was adopted. There were many Members of the WTO who felt that this amounted to an outright invitation to NGOs to file *amicus curiae* briefs, a further step taken by the Appellate Body which showed that it was not only willing to receive NGO submissions but was encouraging them and giving them its blessing.

Despite this apparent encouragement given by the Appellate Body to the submission of *amicus curiae* briefs as a result of its adoption of a specific procedure and despite the more diversified origin of the briefs submitted in the *Asbestos* case, both geographically and in terms of the institutions concerned—professors and university centers, environmental NGOs, associations of asbestos multinationals—, as will be seen later, the end result seemed particularly disappointing, since not a single application to submit an amicus *curiae* brief was granted.

4. Another Door Breached in the Sardines *Case*

Two *amicus curiae* briefs were submitted in the *Sardines* case, but the real innovation lies in the fact that one of the briefs was filed by Morocco, a Member of the WTO that did not exercise its third party rights in the panel stage of the proceedings and, moreover,

[34] WT/DS135/9, November 8, 2001.
[35] *Id.*

a member of the developing country group which up to then had been particularly hostile to the idea of accepting *amicus curiae* briefs. As the Appellate Body pointed out, "this is the first time that a WTO Member has submitted such a brief in any WTO dispute settlement proceeding".[36]

The novelty of the situation led to a discussion of the admissibility of Morocco's *amicus curiae* brief. All interested parties had their say, including the parties to the dispute—the European Communities at the hearing, and Peru in the written submission stage, as well as most of the third participants—Canada, Chile, Ecuador and the United States.

It was the European Communities that proved readiest to recommend acceptance of Morocco's *amicus curiae* brief, maintaining that, in principle, the Appellate Body had the discretionary power to accept it and that, in practice, it contained elements pertinent to the settlement of the dispute. The EC had the support of the United States as far the question of principle was concerned, although the Americans considered that the contents of the brief would be of no use to the Appellate Body.

Canada, while asserting that the brief did not contain any pertinent information, nevertheless seemed uncomfortable, noting the lack of clear agreement among WTO Members as to the role of *amicus curiae* briefs and contending that, according to the texts, "WTO Members have a legal right to participate in dispute settlement proceedings only if they reserve their third party rights at the outset of the dispute settlement process".[37] It was this aspect of the situation that Peru, in particular, chose to stress in expressing its firm opposition to the acceptance of the Moroccan brief:

> Peru further objects to the acceptance and consideration of the amicus curiae briefs submitted in this appeal. It states that, while it welcomes non-Member submissions where they are attached to the submission of a WTO Member engaged in dispute settlement proceedings, the DSU makes clear that only WTO Members can make independent submissions to panels and to the Appellate Body. Peru argues further that the DSU already provides conditions under which WTO Members can participate as third parties in dispute settlement proceedings. According to Peru, accepting amicus curiae briefs from WTO Members that did not notify their third party interest to the DSB would be allowing a WTO Member impermissibly to circumvent the DSU.[38]

Chile took a similar position, arguing that accepting Morocco's brief "would mean that those Members would be accorded more favorable treatment than those accorded passive observer status in an appeal",[39] a view shared by Ecuador.

In its report, the Appellate Body reaffirmed the policy it had already laid down, namely that of opening the doors in favor of all friends of the court, whoever they might be, declaring without any qualification: "We have the authority to accept *amicus curiae* briefs".[40] This power would now seem to be unlimited.

How did the Appellate Body come to extend to States the possibility of filing an *amicus curiae* brief, hitherto reserved for individuals and organizations that are not Members of the WTO? In arriving at this result, the Appellate Body referred to and expanded on some of its previous decisions. More particularly, it referred to *United States—Lead and Bismuth II*, in which it decided it could accept briefs from sources other than the

[36] Report of the Appellate Body, *European Communities —Trade Description of Sardines* ("*EC-Sardines*"), WT/DS231/AB/R (2002), ¶ 161.
[37] *Id.* ¶ 155.
[38] *Id*. ¶ 65.
[39] *Id*. ¶ 111.
[40] *Id*. ¶ 157.

participants and third participants in an appeal.[41] On this basis, the Appellate Body pursued its argument as follows:

> In so ruling, we did *not* distinguish between, on the one hand, submissions from WTO Members that are not participants or third participants in a particular appeal, and, on the other hand, submissions from *non*-WTO Members.[42]

In other words, from the moment that the possibility of filing *amicus curiae* briefs became available to individuals and organizations that were not Members of the WTO, it also became available to States that are not WTO Members, which are clearly "organizations" in the broader sense of the term. Thus, the Appellate Body did not believe that WTO Members should be treated differently from non-Members where the exercise of its powers to accept *amicus curiae* briefs was concerned. In this connection, the Appellate Body notes that both parties to the dispute were in favor of according the same treatment to Members and non-Members alike—without pointing out that whereas the European Communities wanted both to be allowed to submit *amicus curiae* briefs, Peru wanted both to be denied that right.

In reply to the objection that accepting *amicus curiae* briefs would be contrary to the specific procedures laid down in the DSU with regard to the participation of WTO Members as third parties in a dispute, the Appellate Body declared that it was nothing of the sort: if a Member notified a panel that it had a substantial interest in a case, the DSU gave that Member a right to participate, or more precisely *the right* to make written and, if necessary, oral submissions both to the panel and to the Appellate Body and, even if it did not file a written submission, the right to attend the hearing as a passive observer. No such right of this sort is accorded to Members that have not indicated a substantial interest in the case; they are only given the *possibility* of filing an *amicus curiae* brief which may or may not be accepted, at the discretion of the Appellate Body. As the Appellate Body pointed out:

> . . . WTO Members that are third participants in an appeal have the *right* to make written and oral submissions. The corollary is that we have a *duty*, by virtue of the DSU, to accept and consider these submissions from WTO Members. By contrast, participation as *amici* in WTO appellate proceedings is not a legal *right*, and we have no duty to accept any *amicus curiae* brief. We may do so, however, based on our legal authority to regulate our own procedures as stipulated in Article 17.9 of the DSU. The fact that Morocco, as a sovereign State, has chosen not to exercise its *right* to participate in this dispute by availing itself of its third-party rights at the panel stage does not, in our opinion, undermine our *legal authority* under the DSU and our *Working Procedures* to accept and consider the *amicus curiae* brief submitted by Morocco.[43]

However, noting the potential for confusion thus introduced into the well-ordered procedures of the DSU, the Appellate Body took care to add a serious *caveat*:

> We wish to emphasize, however, that, in accepting the brief filed by Morocco in this appeal, we are not suggesting that each time a Member files such a brief we are required to accept and consider it.[44]

Only the future will tell whether this new door for friends of the court will remain viable.

D. The Content of Amicus Curiae *Briefs: Factual and/or Legal Aspects?*

There is a final point that deserves to be mentioned, namely, the question of the permissible coverage of *amicus curiae* briefs, at both panel and Appellate Body stages. It would appear that the content of *amicus curiae* briefs can go well beyond anything that textual interpretation might suggest. According to the Appellate Body:

> The thrust of Articles 12 and 13, taken together, is that the DSU accords to a panel established by the DSB, and engaged in a dispute settlement proceeding, ample and extensive authority to undertake and to control the process by which it informs itself both of the relevant facts of the dispute and of the legal norms and principles applicable to such facts. That authority, and the breadth thereof, is indispensably necessary to enable a panel to discharge its duty imposed by Article 11 of the DSU.[45]

There can be no doubt that under Article 11 of the DSU, a panel has a general duty to "make an objective assessment of the matter before it, including an objective assessment of the facts of the case and the applicability of and conformity with the relevant covered agreements". This does not automatically mean, as the Appellate Body suggests in the passage cited, that it must be able to have recourse to *amicus curiae* briefs for all these tasks.

In particular, both the appellees in *Shrimp-Turtle* and the European Communities in *United States-Carbon Steel*, made it clear that, in their opinion, Article 13 could not be used as a basis for the admission of legal arguments or interpretations, inasmuch as the text refers only to "information and technical advice":

> The European Communities notes that Article 13 of the DSU does not apply to the Appellate Body and that, in any case, that provision is limited to *factual information and technical advice*, and would not include *legal arguments or legal interpretations* received from non-Members.[46]

Though an interpretation based on the ordinary meaning of the words would appear to lean more towards the analysis proposed by the European Communities, the Appellate Body's constructive reading is also plausible: in fact, it does not seem absolutely necessary to restrict the intervention of *amicus curiae* to the factual aspects as the generality of the language used in Article 13 would certainly allow technical points of law to be addressed.

Whereas there can be no doubt that, at the panel stage, *amicus curiae* briefs may address questions of fact—and possibly questions of law—it is equally certain that, at the Appellate Body level, they can only address questions of law. From this standpoint, it seems surprising that such briefs should have been admitted, inasmuch as Article 17.3 of the DSU stipulates that the Appellate Body must comprise "persons of recognized authority, with demonstrated expertise in law, international trade and the subject matter of the covered agreements generally", and should therefore have no need to resort to NGOs in order to determine the law applicable and its interpretation.

[45] Report of the Appellate Body, *United States—Shrimp*, *supra* note 2, ¶ 106 (emphasis in original).

[46] Report of the Appellate Body, *United States—Lead and Bismuth II*, *supra* note 25, ¶ 36. *Cf.* the position of the European Communities in another case cited below, namely, *United States—Section 110(5) of U.S. Copyright Act*—Report of the Panel, WT/DS160/R (2000), ¶ 6.5 (emphasis in original).

III. The Types of Private Party and the Consequences of Admitting *Amicus Curiae* Briefs

To assess the legitimacy, if not the legality, of the Appellate Body's interpretation, it might be useful to make an inventory of the types of organizations that have submitted *amicus curiae* briefs.

A. The Private Parties

1. The Shrimp-Turtle *Case*

In *Shrimp-Turtle*, two environmental NGOs[47] made submissions at the panel stage. A little later, the panel received another submission from a third environmental NGO.[48] As explained earlier, the panel refused to accept these submissions as directly filed, but did allow them to be attached to the parties' briefs.

More environmental NGOs wanted to participate at the Appellate Body stage: the United States appended to its appellant's submission[49] three "independent briefs" submitted by three groups of NGOs.[50] Later, as previously mentioned, one of these groups, the Center for International Environmental Law *et al*., submitted a lightly revised version of its submission directly to the Appellate Body, without passing through the United States government.

In this case, therefore, the submissions came mainly from *environmental NGOs*.

2. The Australia-Salmon *Case*

In *Australia-Salmon*, the *amicus curiae* issue came up at the implementation stage, *i.e.*, in connection with the Article 21.5 proceeding. The implementation panel received a letter from a group of concerned Southern Australian fishermen and fish processors. This letter related to Australia's treatment of, on the one hand, certain imports of pilchards for use as bait or fish feed and, on the other, salmon imports. Thus, it was a question of a submission not by an NGO in pursuit of some objective of general interest but by private economic operators ultimately concerned by the specific decision to be taken within the context of the WTO's dispute settlement mechanism.

In the preliminary stage, the panel considered that the information contained in this letter was relevant to its work and agreed to treat it as part of the file. It took this decision by virtue of the powers conferred upon it under Article 13.1 of the DSU.

[47] The Center for Marine Conservation and the Center for International Environmental Law.

[48] The World Wildlife Fund.

[49] In respect of these exhibits, the United States stated the following: "Encouraging the use of TEDs in order to promote sea turtle conservation is a matter of great importance to a number of nongovernmental environmental organizations. Three groups of these organizations—each with specialized expertise in conservation of sea turtles and other endangered species—have prepared submissions reflecting their respective independent views with respect to the use of TEDs and other issues. The United States is submitting these materials to the Appellate Body for its information attached hereto as U.S. Appellant Exhibits 1-3." United States Appellant's Submission, ¶ 2, n.1.

[50] The first was from the Earth Island Institute; Humane Society of the United States; and Sierra Club; the second was from the Center for International Environmental Law; Centre for Marine Conservation; Environmental Foundation Ltd; Mangrove Action Project; Philippine Ecological Network; Red Nacional de Accion Ecologica; and Sobrevivencia; and the third was from the Worldwide Fund for Nature and Foundation for International Environmental Law and Development.

In its final report, the panel confirmed its preliminary decision:

> We confirm this ruling recalling, in particular, that the information submitted in the letter has a direct bearing on a claim that was already raised by Canada, namely inconsistency in the sense of Article 5.5 of the SPS Agreement in the treatment by Australia of pilchard *versus* salmon imports.[51]

It is worth noting that this decision extends recognition of the panel's discretionary authority to admit *amicus curiae* briefs to a panel convened under Article 21.5 of the DSU.

3. The United States-Carbon Steel *Case*

In a third case, *United States-Carbon Steel,* the problem of accepting *amicus curiae* briefs was again raised before the panel. This time, too, it was a question not of environmental NGOs but of associations representing the manufacturers concerned, since the briefs came from the bodies representing the interests at stake in the dispute before the WTO.[52]

The panel recalled that it had broad discretionary authority with respect to the *amicus curiae* briefs and, exercising that authority, decided to reject them for having been submitted too late.[53]

The two associations also submitted non-requested briefs to the Appellate Body, which accepted them in principle, while deciding not to take them into consideration.

4. The United States-Copyright *Case*

In *United States-Section 110 (5) of the U.S. Copyright Act*, the bone of contention was the copying to the panel of a letter from a law firm representing the American Society of Composers, Authors and Publishers (ASCAP) to the U.S. Trade Representative.

It is important to make clear the position of the parties in relation to this letter. The United States, while favoring *amicus curiae* briefs in principle, did not think that, in this particular case, the letter should be accepted:

> . . . the United States, *inter alia*, distanced itself from positions expressed in the letter by that law firm and emphasized that in its view the letter was of little probative value for the Panel because it provided essentially no factual data not already provided by either party. But the United States supported in general the right of private parties to make their views known to WTO dispute settlement panels.[54]

As for the European Communities, they tried to define more precisely the extent of a panel's authority to take *amicus curiae* briefs into consideration:

> In referring to the Appellate Body's interpretation of Article 13 of the DSU in its report in the dispute *United States—Import Prohibition of Certain Shrimp and Shrimp Products*,[55] the European Communities also remarked that in its view, the authority of panels is limited

[55] Footnote omitted.

> to the consideration of factual information and technical advice by individuals or bodies alien to the dispute and thus did not include the possibility for a panel to accept any legal argument or legal interpretation from such individuals or bodies.[56]

The panel accepted the letter, but made no use of it, mainly because it contained nothing new and was therefore superfluous:

> In this dispute, we do not reject outright the information contained in the letter from the law firm representing ASCAP to the USTR that was copied to the Panel. We recall that the Appellate Body has recognized the authority of panels to accept non-requested information. However, we share the view expressed by the parties that this letter essentially duplicates information already submitted by the parties. We also emphasize that the letter was not addressed to the Panel but only copied to it. Therefore, while not having refused the copy of the letter, we have not relied on it for our reasoning or our findings.[57]

5. The European Communities-Cotton Linen *Case*

In this case, an *amicus curiae* brief was submitted by the "Foreign Trade Association",[58] in support of the Indian position. Though accepted by the panel, the brief was not taken into consideration. The ruling, contained in a footnote, is particularly succinct:

> The day before our first meeting with the parties, the Panel received an unsolicited *amicus curiae* brief in support of the complaint by India in this dispute, submitted on behalf of the Foreign Trade Association . . . We made copies available to the parties for comment. No party made any substantive comments regarding that submission. We did not find it necessary to take the submission into account in reaching our decision in this dispute.[59]

6. The European Communities-Asbestos *Case*

In *European Communities-Asbestos*, five *amicus curiae* briefs were submitted to the panel at different stages of the proceedings. Among the NGOs, there was a trade union, a Mexican trade association, and an Indian NGO ("ONE"),[60] reflecting geographical and structural diversification among the private interests involved.

The European Communities incorporated two *amicus curiae* briefs[61] in its own submissions and requested the panel to reject the others which, in its eyes, were of no relevance, whereas Canada argued for the rejection of all the briefs. In actual fact, the panel took into consideration the two briefs incorporated in the Communities' submissions "as they had been included by the EC in their own submissions on an equal footing",[62] and rejected the other two, with no explanation, as well as the last brief, for being submitted

[56] *Id.* ¶ 6.6.

[57] *Id.* ¶ 6.8.

[58] The only information about this entity is given in note 10 of the Panel Report where it is stated that "[o]n Tuesday, 9 May 2000, the day before our first meeting with the parties, the Panel received an unsolicited *amicus curiae* brief in support of the complaint by India in this dispute, submitted on behalf of the Foreign Trade Association by Dr. Konrad Neundörfer".

[59] Report of the WTO Panel, *European Communities—Anti-dumping Duties on Imports of Cotton-Type Bed Linen From India*, WT/DS141/R (2000), ¶ 6.1 and n.10.

[60] There was one from Collegium Ramazinni (before the first meeting of the panel); three others from: from Ban Asbestos Network, Instituto Mexicano de Fibro-Industrias AC, and the American Federation of Labor and Congress of Industrial Organizations (between the panel's first and second meetings); and the last, from Only Nature Endures, after the adoption of the interim report.

[61] Those from the Collegium Ramazinni and the American Federation of Labor and Congress of Industrial Organizations.

[62] Report of the Panel, *European Communities—Measures Affecting Asbestos and Asbestos-Containing Products*, WT/DS135/R (2000), ¶ 8.12.

too late. However, of the three independent briefs rejected, the last, rejected for late submission, was communicated to the parties for information, while the other two were not. No explanation was offered for this differential treatment.

The Appellate Body initially received thirteen independent briefs.[63] Then, once the additional procedure had been adopted, these thirteen briefs were returned to their authors for resubmission under this procedure. However, the only association to submit a request for authorization under the additional procedure was the Korea Asbestos Association. Finally, seventeen requests, including sixteen new ones, were received under this procedure, which suggests that the existence of a clear framework of rules tends to encourage *amicus curiae* briefs. Out of this total, six were received after the deadlines had expired.[64]

The eleven requests submitted within the deadlines came from a very wide range of natural and legal persons.[65] The Appellate Body did not accept any of the briefs, offering the following explanation—if explanation it is—of its position:

> We carefully reviewed and considered each of these applications in accordance with the Additional Procedure and, in each case, decided to deny leave to file a written brief. Each applicant was sent a copy of our decision denying its application for leave for failure to comply sufficiently with all the requirements set forth in paragraph 3 of the Additional Procedure.[66]

Nothing more. This reticence on the part of the Appellate Body may be attributable to the very harsh warnings it had been given by WTO Members at the extraordinary meeting of the General Council on November 22, 2000, which had been convened precisely to discuss the concerns aroused among Members by the adoption of the additional procedure.[67]

[63] From the following bodies: Asbestos Information Association (United States); HVL Asbestos (Swaziland) Limited (Bolenbu mine); South African Asbestos Producers Advisory Committee (South Africa); J & S Bridle Associates (United Kingdom); Associação das Indústrias de Produtos de Amianio Crisótilo (Portugal); Asbestos Cement Industries Limited (Sri Lanka); The Federation of Thai Industries, Roofing and Accessories Club (Thailand); Korea Asbestos Association (Korea); Senac (Senegal); Syndicat des Métallos (Canada); Duralita de Centroamerica, S.A. de C.V. (El Salvador); Asociación Colombiana de Fibras (Colombia); and Japan Asbestos Association (Japan).

[64] The six requests that arrived too late came from Association of Personal Injury Lawyers (United Kingdom); All India A.C. Pressure Pipe Manufacturers' Association (India); Confédération internationale des syndicats libres/Confédération européenne des syndicats (Belgium); Maharashtra Asbestos Cement Pipe Manufacturers' Association (India); Roofit Industries Ltd. (India); and Society for Occupational and Environmental Health (United States).

[67] *See infra* Subpart B.

7. The Thailand-Antidumping Duties *Case*

In this case,[68] the Appellate Body received a written brief from the Consuming Industries Trade Action Coalition ("CITAC"), a grouping of United States companies and trade associations. There was a sharp dispute between the Parties with regard to the ethics of the "friends of the court". The problem was that this *amicus curiae* brief included references to Section III of Thailand's submission, which indicated that the organization had been aware of the contents of the latter. Thailand protested vigorously, insisting that there had been a breach of the obligation to ensure confidentiality under Articles 17.10 and 18.2 of the DSU and calling on the Appellate Body to make a thorough investigation of the matter. In particular, Thailand suggested that the law firm that was defending Poland in this case before the WTO was also CITAC's counsel, and demanded meaningful action by the Appellate Body, as the latter indicated in its report:

> Thailand also requested that we take such action as we deemed appropriate, if we established that a participant or a third participant in these proceedings had breached its obligations under Articles 17.10 and 18.2 of the DSU. Thailand suggested that such action could include the rejection of the written brief submitted by CITAC; the disqualification from further participation in this appeal of any attorney or law firm which had disclosed the contents of Thailand's submission; the undertaking by such attorneys or law firm that they had destroyed or returned to the Appellate Body all copies of Thailand's written submission, or all written materials that were based on or referred to this submission; the undertaking by CITAC that it had destroyed or returned to the Appellate Body all copies of Thailand's appellant's submission or any written materials that were based on or referred to the submission; and the requirement that the attorneys for Poland or the third parties submit to the Appellate Body a written report setting out in detail all disclosures made by such attorneys to any party not involved in this appeal, including any memoranda they had prepared for, or discussions they had with, clients or potential clients in any way referring to the contents of Thailand's appellant's submission.[69]

To the questions put by the Appellate Body Poland gave an embarrassed reply. It acknowledged that a member of the law firm defending its interests had worked as a lawyer for CITAC, adding that "although it considered that there had been no proof of wrongdoing on the part of Hogan & Hartson L.L.P., Poland had decided to accept that law firm's proposal to withdraw as its legal counsel in this appeal."[70]

The Appellate Body appears to have been extremely timid in its handling of this matter, since it did no more than acknowledge that CITAC had had access to the Thai submission and refuse to accept the brief. At the same time, it failed to single out a "guilty party" and, above all, did not explicitly establish a link between its rejection of the brief and the events surrounding its preparation, as follows from its preliminary ruling of December 14, 2000 on this point:

> We believe that there is *prima facie* evidence that CITAC received, or had access to, Thailand's appellant's submission in this appeal. We see no reason to accept the written brief submitted by CITAC in this appeal. Accordingly, we have returned this brief to CITAC.[71]

Thailand, however, was not satisfied with this cryptic pronouncement and insisted on the Appellate Body stating its reasons for having rejected CITAC's brief. Its efforts were in vain since the Appellate Body merely replied as follows:

[68] Report of the Appellate Body, *Thailand—Anti-Dumping Duties on—Angles, Shapes and Sections of Iron or Non-Alloy Steel and H-Beams from Poland*, WT/DS122/AB/R (2001).

[69] *Id.* ¶ 67.

[70] *Id.* ¶ 72.

[71] *Id.* ¶ 74.

> We believe that we have done all that is possible within our mandate under the DSU to address Thailand's concerns. With respect to Thailand's suggestion that we seek an explanation from CITAC, we note that we have rejected the written brief filed by this organization. Under these circumstances, it would not be appropriate for the Appellate Body to communicate with this organization. With respect to a clarification of the reasons for rejecting the brief from CITAC, we would only add that we did not find the brief filed by CITAC to be relevant to our task.[72]

This case revealed the possibility of collusion between a party and the NGOs that backed its cause.[73] An important lesson to be learned from this case is that a friend of the court should not be a false friend and should therefore be independent of the parties, a principle which one author has expressed in the following terms: "the aim is to avoid confusion between the interests of the friends of the court and the interests of the parties or third parties, otherwise the manipulation of the one group by the other would render the institution meaningless."[74]

8. The Sardines *Case*

The *Sardines* case in which, as previously noted, two briefs were submitted, one by a private individual, or more precisely by a law professor at the University of Michigan, the other by a WTO Member, is doubly important. On the one hand, it appears to signal a turning point in the attitude of the developing countries toward *amicus curiae* briefs, since it was a developing country that decided to use the disinterested submission procedure. On the other hand, however, and above all, it marks the appearance of a new type of friend of the court, namely a WTO Member that is neither a principal party nor a third party to the dispute.

B. What is the Position of Governments?

Clearly, the rulings concerning NGO briefs raise a number of questions. Even at the meeting at which the DSB adopted the Appellate Body's ruling in *Shrimp-Turtle*, despite the ambiguity of that ruling, many voices were raised in criticism of what some governments regarded as an abuse of authority by the Appellate Body.[75] It is worth reproducing a few passages from the minutes in full.

According to Thailand:

> [w]ith regard to the procedural issues, it was apparent that the Appellate Body had used this case to extend its authority beyond that granted to it under the WTO Agreement. . . . His delegation believed that *Members, not the Appellate Body, should decide the extent to which NGOs might be involved in a dispute settlement process*. Thailand's long-standing

[72] *Id.* ¶¶ 76 and 78.

[73] To that should be added the possibility, if not of collusion, at least of a conflict of interest between an NGO and a member of a panel or the Appellate Body. It is worth recalling the withdrawal of an English law lord from the Pinochet case, because of his links with Amnesty International which had been authorized to submit an *amicus curiae* brief. This led to a second hearing before the House of Lords. *House of Lords, Regina v. Bartle and the Commissioner of Police for the Metropolis and Others (Appellants), Ex Parte Pinochet (Respondent) (On Appeal from a Divisional Court of the Queen's Bench Division); Regina v. Evans and Another and the Commissioner of Police for the Metropolis and Others (Appellants), Ex Parte Pinochet (Respondent) (On Appeal from a Divisional Court of the Queen's Bench Division)*, Judgment of March 24, 1999, 38 ILM 581–663 (1999).

[74] *See* Ascensio, *supra* note 1, at 918–919.

[75] Meeting of November 6, 1998, WT/DSB/M/50, December 14, 1998.

> position was that the WTO Agreement did not give NGOs the right to submit *amicus* briefs, nor did it allow Members to attach *amicus* briefs to their submissions that did not reflect their point of view. The Appellate Body's conclusion . . . had defied the rights and obligations of Members and the basic intention under the DSU. . . . The DSU did not grant the Appellate Body the right "to seek" information. . . . Thailand was also concerned that the "evolutionary" interpretative approach newly adopted by the Appellate Body was a formula for adding to or diminishing the rights and obligations of Members. . . . As demonstrated by the results in this case, this had diminished business confidence and had affected the interpretation of rights and obligations of Members in ways which were not contemplated under the WTO Agreement.[76]

According to Pakistan:

> the DSU did not give NGOs the right to submit *amicus* briefs or to give Members permission to attach briefs to their submissions that did not reflect their views. The DSU did not give NGOs greater rights to make submissions than those enjoyed by Members. The Appellate Body had disregarded the jurisdictional limits agreed by Members . . . *Those Members who had negotiated the DSU were aware that it had never been intended to permit NGOs to submit amicus briefs to panels and to the Appellate Body*. Pakistan strongly believed that Members, not the Appellate Body, should determine the extent to which NGOs might participate in the dispute settlement process.[77]

According to India:

> [t]he Panel had interpreted the word 'seek' in Article 13 of the DSU fully in accordance with the general rule of interpretation of the Vienna Convention on the Law of Treaties: i.e., that a treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms contained therein. The word 'seek' , in its ordinary meaning, implied a pro-active search on the part of the subject, which in this case was the Panel. Therefore, the right for the Panel to seek information which was different from NGOs having the unimpeded right to submit information to panels. The Appellate Body had alleged that the Panels' reading of the word 'seek' was too formal and technical. His delegation considered it unusual that the Appellate Body had stated this, because the discipline of law was both formal and technical, and the WTO constituted a forum in which legally binding commitments had been undertaken by Members . . . India, therefore, believed that *the Appellate Body might have interpreted one of the important provisions of DSU loosely and wrongly*, which could upset the balance of rights and obligations of Members . . . It appeared that by this approach the Appellate Body had transcended the strict boundaries of law and had entered into the political domain strictly preserved for Members. With regard to *amicus* briefs, the Appellate Body had appeared to have let itself to be overawed by the campaign of NGOs of major trading entities.[78]

Mexico also expressed concern about the systemic consequences of the Appellate Body' ruling:

> The Appellate Body's findings, in particular . . . had paved the way for diverse groups not related to the WTO to become active participants in proceedings, *with the result that cases would be discussed at a political level at the expense of argumentation of a legal nature*.[79]

According to Hong Kong, China, although it:

> reluctantly agreed that panels should in general have the discretion to accept or reject non-requested information, it was concerned that the ruling might open up *the floodgate*

[76] *Id.* at 2, 3 and 4 (emphasis added).
[77] *Id.* at 5 (emphasis added).
[78] *Id.* at 7 and 8 (emphasis added).
[79] *Id.* at 14 (emphasis added).

> *of non-requested submissions which would in turn have serious implications on the work of future panels in terms of workload and efficiency*. His delegation considered that the issue should be thoroughly and carefully considered by the DSB in the future. In doing so, Members should be mindful of rendering NGOs any treatment which was more favorable than that of Members and the rule-based and inter-governmental nature of the WTO.[80]

Japan also took a critical view of the Appellate Body's ruling:

> Allowing non-requested information from non-governmental sources to be directly submitted could pave the way for parties and subsequently the panel to deal with such information within a short period of time and placed an additional burden for both the parties and the panel . . . Japan supported the treatment of information from non-governmental sources by the Panel as approved by the Appellate Body, namely that if any party in this dispute had wished to put forward any documents or information it considered relevant to support its arguments as part of its submission to the Panel would be free to do so . . . One of the logical consequences of the Appellate Body's findings might be that *even those Members who were not third parties to the dispute would be allowed to submit their views to a panel at their own convenient time.*[81]

At the time of the DSB's adoption of the Appellate Body report in *United States-Carbon Steel*, governments also expressed contrasting points of view.[82] In particular, the European Communities considered that " . . . the way the Appellate Body had dealt with the issue of *amicus curiae* briefs was not entirely satisfactory . . . the Appellate Body had concluded that it had the legal authority under the DSU to accept and consider *amicus curiae* briefs in an appeal in which it found it pertinent to do so. However, the Appellate Body did not provide any guidance under what circumstances it might find it pertinent to consider *amicus curiae* briefs nor how this would be reflected in its Working Procedures."[83]

Argentina also gave vent to its concerns:

> The dispute settlement system established intergovernmental procedures and the authority to accept and consider unsolicited briefs submitted by individuals or organizations, not Members of the WTO, could distort the character of dispute settlement procedures. Access to the WTO dispute settlement procedure was restricted to WTO Members and panels, and the Appellate Body only had a duty to consider submissions from parties or third parties in a given dispute . . . Furthermore, recognition of the authority to accept *amicus curiae* briefs raised a number of doubts over the rights of Members that were neither parties nor third parties in a dispute. The question was whether those Members had the right to make voluntary submissions that might be accepted and considered by panels or the Appellate Body. If not, this would entail that they would have less rights than individuals or organizations that were not Members of the WTO.[84]

In addition, the representative of Hong Kong, China put forward an important argument when he pointed out that the authority which the Appellate Body had arrogated to itself was not one of the procedural powers conferred upon it by Article 17.9 of the DSU: "To justify its claim, the Appellate Body had relied upon its interpretation of Article 17.9 of the DSU. However, that Article concerned only procedures for Appellate Review and allowed the Appellate Body to draw up its working procedures under certain constraints. Therefore, the issues to be considered in this context had to be procedural. However, the acceptance by the Appellate Body of *amicus curiae* briefs *was not a procedural but a*

[84] *Id.* ¶ 14.

substantive matter. It affected the intergovernmental character of the WTO as well as Members' rights and the obligations.[85]

The Philippines considered that it was not the right time to take a decision on the subject of *amicus curiae* briefs since Members were still discussing the problem.[86] Similar concerns were expressed by Canada at the DSB's meeting on November 17, 2000,[87] during which it was decided to hold a special meeting of the General Council precisely to discuss the implications of the Appellate Body's rulings in the *Asbestos* case: "In Canada's view, it was for Members as a whole, not the Appellate Body, to decide how the issue of *amicus* participation should be dealt with in the future. Members had to ensure that the government-to-government nature of the dispute settlement process was not weakened or compromised by the procedural initiatives of panels or the Appellate Body. Thus, Canada was concerned that the Appellate Body division had chosen to adopt these new procedures at this time."[88]

This special meeting of the General Council, convened at the request of Egypt on behalf of the informal group of developing countries, met on November 22, 2001.[89] The meeting opened with a statement by the Chairman of the General Council, in which he endorsed a previous statement by the Chairman of the DSB who had said he was convinced that no Member in discussing the question of *amicus* briefs wanted to harm the reputation of the Organization. His preliminary statement was accompanied by a Note from the Secretariat[90] retracing the Appellate Body's various rulings on this issue.

In reality, rather than the content of the additional procedure, what governments most strongly objected to was the procedure for disseminating that additional procedure, which had been published on the WTO's web site and e-mailed to all the NGOs on the very day on which it was adopted. Many Members, such as India, regarded this as an outright invitation to submit *amicus* briefs. Thus, in the statement it made in the course of the meeting, India denounced the Appellate Body's approach in the following terms:

> . . . it was not unfair to conclude that the Appellate Body knew, or at least should have known, that putting the additional procedure on the WTO web site, which was said to have been designed to discipline the process and was supposed to have been adopted for the particular appeal only, would virtually amount to an invitation to hundreds of NGOs to file *amicus curiae* briefs.[91]

Reading these numerous statements, it could seem that there is unanimity against the broad acceptance of *amicus curiae* briefs. As a matter of fact, one State has a radically different position. It is symptomatic that in the course of this extraordinary meeting of November 22, 2000, out of the representatives of 24 countries and six groups of countries[92] that took the floor, only one, the United States, approved of the Appellate Body's decision to adopt an additional procedure.

[85] *Id.* ¶ 15 (emphasis added). In addition, "Brazil noted that the question of who could be heard by panels and the Appellate Body was not a 'procedural rule', but rather a very substantive component of the DSU rules, which affected the way the system operated and significantly altered the rights and obligations Members negotiated under the Uruguay Round", WT/GC/M/60 ¶ 43.

[92] Egypt on behalf of the informal group of developing countries, Colombia on behalf of the Andean countries, Singapore on behalf of ASEAN, Hungary on behalf of seven Central European countries, and the European Communities.

Earlier the United States had already expressed quite some enthusiasm for the positions taken by the Appellate Body concerning its authority to accept *amicus curiae* briefs at the appeal stage. While declaring itself to be disappointed with the ruling on the merits in *United States-Carbon Steel*, it approved of the procedural findings: "However, there was one positive aspect of the Appellate Body Report, namely, its finding that the Appellate Body had the authority to take into account submissions by interested private parties, so-called *amicus curiae* briefs."[93] During the meeting of November 22, 2000, the United States set forth its analysis of the reasons why the solution adopted is a good solution as far as *amicus curiae* briefs are concerned: "the Appellate Body has adopted procedures to manage this issue in a fair, legal and orderly manner, taking into account the interests of the members of civil society in having their views considered, the interests of the parties and third parties in being able to review and respond to any *amicus* submissions, and the interest of all in resolving the dispute."[94]

C. The Problems Raised

1. The Legal Issues

The interpretations that led the Appellate Body to acknowledge the possibility of a panel, and indeed the Appellate Body itself, accepting non-requested *amicus curiae* briefs inevitably pose some difficult legal problems.

(a) The Legal Basis for a Panel's Authority. First of all, with regard to the authority granted to panels under Article 13 of the DSU, there can be no denying that it relies upon an extremely flexible interpretation of the act of "seeking". To convince oneself of this it is sufficient to compare the wording of Article 13 with, for example, that of Article 61.3 of the Rules of the European Court of Human Rights. Article 61.3 provides:

> The President of the Chamber may, in the interests of the proper administration of justice, *invite or grant leave* to any Contracting State which is not a party to the proceedings, or any person concerned who is not the applicant, to submit written comments or, in exceptional cases, to take part in a hearing. Requests for leave for this purpose must be duly reasoned. . . .[95]

This article, contrary to DSU Article 13, uses two terms that refer respectively to the act of "asking" and the act of "accepting" something that has not been requested. It is therefore debatable whether the single verb "to seek" can be interpreted by turning what might be described as a "passive seeking" into an "active seeking", as the Appellate Body does, without assigning oneself a judicial law-forming role, which explains why there was no shortage of government criticism, as indicated above.

(b) The Legal Basis for the Authority of the Appellate Body. Next, with regard to the authority assumed by the Appellate Body on the basis of Article 17 of the DSU, and perhaps secondarily on Article 16.1 of the *Working Procedures for Appellate Review*, its legal interpretation is far from watertight.

The recourse to Article 17.9 of the DSU in *United States-Carbon Steel* merely indicates that the Appellate Body has wide discretion to adopt procedural rules, but the use of Article 17.9 depends on the observance of a consultation and notification procedure, which quite clearly was not followed in this particular case. Nor does it seem that

[93] *Id*. ¶ 8.
[94] *Report of the Meeting*, WT/GC/M/60, January 23, 2002, ¶ 74.
[95] Http://www.echr.int/Fr/fdoc/rulesofcourt.htlm (emphasis added).

Article 16.1 of the *Working Procedures for Appellate Review*, if it had been formally invoked, would have been able to provide a firm foundation for a new general procedural rule such as the Appellate Body claimed to have laid down in *United States-Carbon Steel*. In fact, this article is a sort of safeguard clause that enables the Appellate Body to give a ruling in unprecedented procedural situations; however, it is explicitly intended for use in specific and exceptional circumstances and not for laying down general procedural rules, since it stipulates that "a division may adopt an appropriate procedure for the purposes of that appeal only". Indeed, the Appellate Body acknowledged this in the *Asbestos* case, by establishing procedural rules for the admission of *amicus curiae* briefs applicable to that case only.

There can be no denying that any jurisdictional body has implicit powers that enable it to organize the proceedings taking place before it in the best possible way. But it is one thing to say that such *procedural* powers exist and quite another completely to upset the balance of a dispute settlement system by introducing a procedural innovation with far reaching consequences, which, it seems to me, is what happened in this case.

(c) Respect for the Procedural Guarantees Offered to Members and for their Rights. Furthermore, a number of procedural guarantees offered to Members in the two stages of the dispute settlement procedure appear to have been ignored. Firstly, the procedure for the acceptance of non-requested briefs by a panel undoubtedly deprives Members of the *right to be informed* of any request for information addressed to one of their nationals, conferred upon them by Article 10.2 of the DSU.

Secondly, the right to *transparency*, established in paragraph 10 of the *Working Procedures*, which provides for all presentations to panels to be made "in the presence of the parties", also seems to be infringed by allowing "friends of the court" to submit briefs directly to the panel.

It is also clear that the risk of breaches of *confidentiality* is particularly acute, as shown by the problems that arose in the *Thailand-Antidumping Duties* case. Indeed, governments have been guaranteed the confidentiality not only of panel and Appellate Body proceedings but also of communications between the parties, as follows from Article 18.2 of the DSU:

> Written submissions to the panel or the Appellate Body shall be treated as confidential, but shall be made available to the parties to the dispute. Nothing in this Understanding shall preclude a party to a dispute from disclosing statements of its own positions to the public.

Although a party is free to disclose statements of its own positions to the public, this freedom clearly does not extend to the statements of the other party.

Finally, procedural rulings adopted by the WTO's adjudicative bodies *cannot add to or diminish the rights of Members*, as stipulated in Articles 3.2 and 19.2 of the DSU. It is far from certain that the solutions adopted by the Appellate Body concerning the treatment of *amicus curiae* briefs—both as regards their being taken into consideration by a panel and their being taken into consideration by the Appellate Body itself—fully respect the provisions of these articles. In fact, the ability of Members to intervene in a case is subjected to strict limits, by Article 10.2 of the DSU for panels[96] and by Article 17.4 for the

[96] "Any Member having a substantial interest in a matter before the panel and having notified its interest to the DSB (referred to in this Understanding as a "Third Party") shall have an opportunity to be heard by the panel and to make written submissions to the panel. These submissions shall also be given to the parties to the dispute and shall be reflected in the panel report."

Appellate Body[97], limits which the rulings adopted in connection with *amicus curiae* briefs make it possible to ignore. Thus, either this additional procedure is open to Members—as legal persons—or it is not. If it is not, "a severe harm and a grave imbalance would be done to the rights of Members *vis-à-vis* external parties or individuals who were not even contractually committed to the obligations of the system."[98] If it is open to Members, then the new procedural opportunities made available to them mean that the position taken by the Appellate Body is actually changing the rights conferred on Members by the WTO Agreement, by adding to them. As Arthur Appleton pertinently remarks:

> Members that have not become third parties and notified the Appellate Body of a substantial interest might be able to circumvent the prohibition on filing written submissions simply by labeling their submissions as *amicus curiae* briefs and filing them with the Appellate Body.[99]

We know that since the *Sardines* case, it is the second alternative that has prevailed.

Moreover, as noted by the representative of Hong-Kong, China, the procedure is fundamentally *unfair*, since it was "prejudicial to those who did not have effective electronic access to the WTO web site or were not subscribers to the Secretariat's NGO bulletin."[100]

Lastly, there are serious problems with respect to the *law of evidence*. Thus, in their briefs the NGOs do not have to prove their assertions. If the facts they report or the provisions to which they refer are prejudicial to one of the parties, it will be for that party to rebut them: there can be no doubt that this represents a distortion of the rules concerning the burden of proof.[101]

Insofar as *amicus curiae* briefs have been widely admitted, the most pressing question is that of the control of the process by the contracting parties, and in particular the question of the evidential value of *amicus curiae* briefs.

Admittedly, the Appellate Body seems to be aware of the problem. Even though it has not addressed the actual question itself, it has addressed the parallel issue of the evidential value of the advice offered by experts consulted by a panel:

> Article 13 of the DSU and Article 11.2 of the *SPS Agreement* suggest that panels have a significant investigative authority. However, this authority cannot be used by a panel to rule in favor of a complaining party which has not established a *prima facie* case of inconsistency based on specific legal claims asserted by it. A panel is entitled to seek information and advice from experts and from any other relevant source it chooses, pursuant to Article 13 of the DSU and, in an SPS case, Article 11.2 of the *SPS Agreement*, to help it to understand and evaluate the evidence submitted and the arguments made by the parties, but not to make the case for a complaining party.[102]

[97] "Only parties to the dispute, not third parties, may appeal to a panel report. Third parties which have notified the DSB of a substantial interest of the matter pursuant of paragraph 2 of Article 10 may make written submissions to, and be given an opportunity to be heard by, the Appellate Body."

[98] Comment by Egypt on behalf of the informal group of developing countries at the meeting of the General Council on November 22, 2000, WT/GC/M/60,¶ 18.

[99] *See* Appleton, *supra* note 16, at 487–488; and *EC—Sardines*, *supra* note 36, ¶¶ 153–170, where the Appellate Body received an *amicus* submission from the Kingdom of Morocco.

[100] WT/GC/M/60 ¶ 27.

[101] As noted, for example, by Asif Qureshi, *Extraterritorial Shrimps, NGO's and the WTO Appellate Body*,48 INTERNATIONAL AND COMPARATIVE LAW QUARTERLY 205 (January 1999): "... The NGOs do not need to prove the veracity of their statements. The onus of rebuttal falls on the parties in question. Indeed, conceivably, NGO submissions could have the effect of shifting, or at any rate partly distorting, the onus of proof as set out in the Understanding."

[102] Report of the Appellate Body, *Japan—Measures Affecting Agricultural Products*, WT/DS76/AB/R (1999), ¶ 129.

Applying these tests of the sound administration of justice to the case before it, the Appellate Body criticized the panel, which had placed too much reliance on this advice in arriving at its conclusions:

> In the present case, the Panel was correct to seek information and advice from experts to help it to understand and evaluate the evidence submitted and the arguments made by the United States and Japan with regard to the alleged violation of Article 5.6. The Panel erred, however, when it used that expert information and advice as the basis for a finding of inconsistency with Article 5.6, since the United States did not establish a *prima facie* case of inconsistency with Article 5.6 based on claims relating to the "determination of sorption levels". The United States did not even *argue* that the "determination of sorption levels" is an alternative measure which meets the three elements under Article 5.6.[103]

Despite these precautions, it can hardly be denied that if pertinent arguments against a party to the proceedings are advanced in an *amicus curiae* brief, there is a risk of that party being obliged to rebut them, which introduces unenvisaged imbalances into the dispute settlement mechanism, as one author has already pointed out:

> . . . at least one party must respond to arguments stemming from a private person or entity which does not have the rights and obligations of a WTO Member . . . In other words, the acceptance of a submission from a non-state actor affects the balance between the parties to the dispute settlement and becomes a question of due process.[104]

2. The Political Implications

The first problem is that this broad acceptance of *amicus curiae* briefs is opening up access to the WTO dispute settlement system, which was intended to be intergovernmental, to private actors. As Hervé Ascencio has said, "the *amicus curiae* is the procedural breach in the dike through which individuals, companies and associations can pour when party status is reserved for states."[105]

It is the entire philosophy of international trade dispute settlement that is at stake. A comparative analysis[106] shows that *amicus curiae* briefs are not admitted in purely intergovernmental proceedings, whereas they are accepted in cases in which private persons are exclusively or partially involved.

If the opening of the WTO dispute settlement mechanism initiated by the rulings of the Appellate Body is not challenged, that "*retournement du monde*",[107] about which there is so much talk, will be confirmed. A new balance is emerging between the governmental and non-governmental actors, certainly.

But over and above that, tension between very different types of potential participants is beginning to develop. With regard to the interests represented, there is undeniably tension between the NGOs proper which are fighting, at least officially, in the *general interest* and the associations representing *commercial interests* and even—and why not—*governments* which failed to express in good time their desire to become third parties and which see in this development a means of catching up that enables them

to participate in the debate and assert their rights. Moreover, associations representing *State interests*, the notorious GONGOs ("Governmental Non-governmental Organizations"), may also participate, although this is not the only method of State intervention now that States that fail to declare their intention of becoming third parties in good time have also been given the right to submit *amicus curiae* briefs directly. Finally, no one should underestimate the disadvantages that could result from giving access—a doubtless unintended but scarcely avoidable development once the doors have been thrown open—to entities openly opposed to the WTO and the multilateral trading system or whose objectives are incompatible with those of the WTO and the multilateral trading system.

Apart from these possible abuses of procedure, another burgeoning question is whether this new deal is not insidiously creating other imbalances between different categories of governmental actors.

In particular, there is reason for concern about imbalances between Members, especially between developed and developing country Members, depending on which were better able to "elicit" "spontaneous" information from NGOs, as this might distort a panel's view of the facts. This is one of the arguments against admitting *amicus curiae* briefs advanced by Georg Umbricht:

> Critics of the admission of *amicus curiae* briefs at either level of WTO quasi-jurisdiction argue that if NGO's are allowed to have a voice within dispute settlement, the developed countries will gain even more power within the system, and, more specifically, within the dispute settlement process. It is their contention that most of the NGO's are from developed countries, and the few NGO's from developing countries are financed by their developed countries counterparts.[108]

The developing countries are constantly stressing this point. Thus, Egypt, intervening on behalf of the informal group of developing countries, has criticized the adoption of the additional procedure, pointing out that:

> the likely beneficiaries of such a decision were those individuals and NGOs who had the capacity in terms of resources and time. Those were entities which had more access to WTO work and documents, and were operating mainly in the developed world with few in developing countries. Electronic means did not help the disadvantaged in remote areas, who were increasing in number with the further widening of the digital divide.[109]

Even among the countries of the North, the unlimited acceptance of *amicus curiae* briefs would probably favor, in particular, the larger international NGOs, most of which would appear to be of American origin, as well as the extremely well organized and powerful U.S. lobbies. Subject to a more detailed analysis of the sociology of organizations, it seems very likely that if there were unlimited access for *amicus curiae* briefs the big winner, in terms of relative influence, would be the United States: in these circumstances it is hardly surprising that the United States should be the most enthusiastic—and indeed the only—advocate of such an opening, as it made clear at the time of adoption of the report in *United States-Carbon Steel*:

[108] Umbricht, *supra* note 104, at 785–786.

[109] WT/GC/M/60 ¶ 21. *Cf.* the similar comments of Pakistan: "[w]ith regard to the manner in which this communication had been sent, *i.e.*, to NGOs on the WTO e-mailing list, there was clearly an inherent discrimination since the largest number of NGOs from developing countries did not have access to the internet and were not on the WTO e-mailing list". *Id.* ¶ 66.

> By allowing affected private parties to present their views in WTO appeals, the Appellate Body had taken a positive step towards making the WTO more open and enhancing public confidence in the dispute settlement process . . . the United States was confident that the Appellate Body was fully able to adopt procedures for *amicus curiae* submissions so as to benefit from them without unduly burdening the system or the parties.[110]

Nor is it surprising that the developing countries should be fundamentally opposed to such a procedure, as illustrated by the passages from the minutes of WTO meetings quoted above, a hostility which has its roots in systemic problems as well as practical considerations.

3. The Practical Problems

The systemic aspects apart, the procedure could well become extraordinarily cumbersome if panels or the Appellate Body were to make too free use of the authority conferred on them, owing to: panels and the Appellate Body inundated with unsolicited information, the need to respond to every argument contained in these NGO briefs should a panel or the Appellate Body refer to them, and the difficulty of ensuring due process. To give some idea of the scale of the problem, even with the limitations introduced by the additional procedure, if only twenty *amicus curiae* briefs were submitted in connection with a case, that would represent up to four hundred pages of legal arguments, to which the parties would have to respond in a matter of days.

Admittedly, the additional procedure was supposed to have been adopted precisely for the purpose of screening requests and preventing them from becoming too numerous, and therefore requires a certain amount of information. Although, on the surface, this may seem like a reasonable approach, its actual implementation is more problematic. Thus, among other things, applicants are asked to show how their briefs would make a contribution that would avoid duplicating arguments already advanced by a party or a third party. It is hard to see how someone requesting authorization to file an *amicus curiae* brief could satisfy that requirement without having access to the submissions of the parties and third parties . . . Furthermore, for some the deadlines are totally unrealistic, as Jamaica made clear when it noted that:

> very few non-Members from developing countries would have become aware of this additional procedure, communicated on 8 November, and with a deadline of 16 November for leave to apply to file a written brief.[111]

This difficulty in managing the dispute settlement process, if the valves controlling the admission of independent briefs are opened too wide, has been highlighted by Hervé Ascensio, according to whom: "... it is sometimes friends who cause trouble, either by disturbing comfortable certainties with their inopportune remarks or, if they are too numerous, by creating noise and disorder."[112]

Finally, apart from the internal imbalances introduced by the proliferation of voices from the North, the purely material aspects must also be taken into account, that is to say, the imbalance in the resources available for following proceedings before the WTO's dispute settlement bodies, which could only be aggravated by a further flood of *amicus curiae* briefs. Some authors have already drawn attention to this aspect of the situation:

[110] DSB meeting of June 7, 2000, WT/DSB/M/83, July 7, 2000 ¶ 8.
[111] WT/GC/M/60 ¶ 91.
[112] Ascensio, *supra* note 1, at 898.

> Developing countries have noted that this may increase the burden on countries that have only limited resources to apply to WTO dispute settlement . . . Developing countries are particularly concerned that they may be deluged by submissions from northern NGO's with significant resources to devote to influencing the outcome of WTO disputes, including industry associations and firms.[113]

Of course, on the other side of the balance sheet, for civil society there is the increased transparency and the feeling of participation in the discussion of important social issues resulting from the Appellate Body's rulings, which can only encourage what might be called the democratization of international relations. However, transparency—which is admittedly desirable—should not be confused with the active participation of NGOs in a quasi-judicial process for settling disputes between states.

IV. Concluding Remarks

Whatever its advantages and disadvantages, it would seem difficult for the WTO to go into reverse on this question of the admission of *amicus curiae* briefs, particularly as it is obvious that the position taken by the Appellate Body is tending to spill over into other international disputes.[114]

In my opinion, the Appellate Body would certainly have done better to adopt a less evolutionary interpretation of the basic texts. However, there now exists a legal situation that takes into account the Appellate Body's very innovative reading of its authority and that of panels. Whatever the *legal criticisms* that might be leveled against the Appellate Body's decision, and that have indeed been voiced by different States, the decisions taken by the Appellate Body have been adopted by Members within the context of the DSB, because of the existence of the reverse consensus rule. According to Arthur Appleton, the ruling in *Shrimp-Turtle* shows "the Appellate Body's determination to maintain a degree of public support for the WTO among what is frequently termed 'civil society'."[115]

The same author has drawn attention to the "perverse" effect of reverse consensus, which results in any ruling of the Appellate Body being necessarily endorsed by Members, even if there is a large majority which considers that ruling to be legally unsound. Thus:

> The *Carbon Steel* decision . . . illustrates that automaticity is a double-edged sword. Although automaticity prevents losing parties from blocking the adoption of appellate reports, it also severely restricts the possibility that Members can limit the effects of the Appellate Body rule making. Because of automaticity, *amicus* submissions are now here to stay.[116]

In reality, even though it may be true that governments could adopt clear rules prohibiting the admission of non-requested *amicus curiae* briefs when the dispute settlement mechanism is reviewed from a *political point of view*, considering the strength of international feeling and the WTO's desire to establish its credibility in the eyes of civil society, it would seem difficult directly to oppose the movement initiated by the Appellate Body.

Canada*, October 17, 2001. On this question, see Brigitte Stern, *L'entrée de la societe civile dans l'arbitrage entre Etat et investisseur*, 2 REVUE DE L'ARBITRAGE 329 (2002).

[115] Appleton, *supra* note 16, at 494.

[116] Arthur E. Appleton, *Amicus Curiae Submissions in the Carbon Steel Case: Another Rabbit from the Appellate Body's Hat?,* 3 JOURNAL OF INTERNATIONAL ECONOMIC LAW 691, 699 (2000).

The author I have just quoted has also drawn attention to the "political" relevance of the Appellate Body's decision, not so much from the standpoint of the Members of the WTO, many of whom, to say the least, have reservations about it, but from the standpoint of the WTO itself, as an institution with ambitions to be at the center of the international trading and, indeed, economic system:

> From a political perspective this decision satisfies a public relations objective—reducing the distrust of the WTO which exists in the environmental community. This task is accomplished without seriously compromising the trade rights guaranteed under the WTO Agreement.[117]

There can be no denying that if in the future, by a decision of the Members of the WTO, NGOs were to be refused access to the dispute settlement system via *amicus curiae* briefs—which would mean a setback for civil society relative to the present situation—the credibility of the system would be seriously impaired; on the other hand, continuing to accept such briefs would reinforce, within that civil society, the feeling that economic justice was being done. This was the line taken by Ian Brownlie with regard to the general acceptance of *amicus curiae* briefs, long before the question was raised in the WTO:

> Even if the individual is not given procedural capacity a tribunal interested in doing justice effectively must have proper access to the views of individuals whose interests are directly affected whether or not they are parties as a matter of procedure.[118]

It remains for this movement to be properly channeled to make it an efficient means of improving economic justice. The additional procedure adopted by the Appellate Body in one specific case[119] could provide a template for new general procedural rules designed to control the flow of contributions by "friends of the court" to a better system of international economic justice.[120]

It must be acknowledged that the latest developments in international economic dispute settlement—whether it be in trade disputes between states or in investment cases between a state and a private investor—have led to a breakthrough for civil society, without it yet being possible to measure all the consequences, positive and/or negative.

[117] Appleton, *supra* note 16, at 477. One commentator has written that "Amicus briefs from nongovernmental organizations could further enhance the legitimacy, and acceptance, of the WTO dispute settlement process". *See* Thomas Cottier, *The WTO and Environmental Law: Three Points for Discussion*, in TRADE AND ENVIRONMENT: BRIDGING THE GAP 59 (James Cameron and Agata Fijalkowski eds. 1998).

I. Introduction

The purpose of this chapter is to describe and analyze the status and effect of the WTO Agreement in European Community law. These issues are of great constitutional and commercial significance to traders operating within the boundaries of one of the two largest trading blocks within the WTO's membership,[2] as well as to the Community's own trading partners within the WTO itself.

This chapter cannot hope to be exhaustive given the complexity of the issues raised and the length allowed, but sufficient references to the extensive literature on the subject will be made throughout the chapter.

The first part of this chapter describes the constitutional issues raised by the question of the Community's competence to conclude the WTO Agreement. The second part discusses whether the WTO Agreement can be used as a means to challenge the legality of Community measures, i.e. (to use EC legal terminology) whether it has "direct effect" in the Community legal order. Finally, the third part will analyze the means by which aggrieved private parties can challenge perceived third country breaches of the WTO Agreement by non-EC countries through the institutions of the Community.

II. Community Competence to Conclude the WTO Agreement

A. Status of the Community Under GATT 1947

1. Introductory Remarks

The European Community is the creation of the Treaty establishing the European Community, originally the Treaty of Rome of 1957 as subsequently amended by later Treaties. It is currently[3] composed of fifteen Member States[4] *and is* due[5] *to expand to 25 Member States on 1 May 2004*.[6] Being the creature of an international treaty, the Community's scope and powers are attributable to the terms and provisions of its constitutive instruments by a process of attributed powers; consequently, there will be areas where the EC Treaty has no application and where competence to act is divided, or rather shared, between the EC and its Member States. This situation is particularly relevant to accession to the WTO Agreement by the EC and its Member States as described below.

The EC must be distinguished from the European Union ("EU") which is the creation of the 1997 Treaty on European Union of Amsterdam. The Treaty on European Union is designed to promote the further integrated development of the EC's Member States by establishing a "European Union" embracing a wide range of additional areas of cooperation alongside the European Community itself (such as foreign policy, security and judicial and political cooperation). This chapter is therefore concerned with the European Community's external trade relations and reference throughout will be to the EC, rather than to the EU, unless the context otherwise requires.

[2] *U.S.-EU: The Biggest Trading Elephants in the Jungle—But Will they Behave?,* speech by Pascal Lamy to The Economic Strategy Institute, Washington D.C., June 7, 2001.

[3] This chapter was finalized in July 2003.

[4] Austria, Belgium, Denmark, Finland, France, Germany, Greece, Italy, Ireland, Luxembourg, the Netherlands, Portugal, Spain, Sweden and the United Kingdom.

[5] Subject to successful acceptance of membership under the constitutional procedures of each applicant state concerned.

[6] The new EC Member States would be: Cyprus, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia and Slovenia.

The Treaty of Amsterdam renumbered the EC Treaty extensively. Except where the context requires, we have used the new numbering throughout, amending quotations from pre-Amsterdam cases using the old numbering.

2. International Law

As GATT 1947 was only open to participation by governments,[7] the Community could never formally become a contracting party to GATT 1947. Accordingly, the Member States remained contracting parties and were individually responsible for the fulfillment of their GATT 1947 obligations.

Although the compatibility of the EEC Treaty with GATT 1947 was never conclusively determined,[8] the Community was given the *de facto* right to participate fully in sessions of the contracting parties, working groups and committees for matters within EEC competence. The Commission acted for the Community in most areas of GATT business, although the Member States retained competence over budgetary matters.

3. Community Law

In *International Fruit*,[9] the ECJ had to consider whether the Community could, as a matter of internal Community law, be regarded as a party to GATT 1947. This question arose in the context of a referral to the ECJ by the Dutch courts, which questioned whether Community legislation could be invalid as being contrary to GATT 1947.

The Court began its analysis by stating that before a Community measure can be impugned on the grounds of incompatibility with a provision of international law, the Community must first be bound by that provision.[10] The Court concluded that, in so far as under the EEC Treaty the Community had assumed the powers previously exercised by the Member States in the area governed by GATT 1947, the provisions of that agreement had the effect of binding the Community.[11] The Court's conclusion was based on:

(a) The fact that the Member States were bound by GATT 1947 at the time they concluded the EEC Treaty and that by concluding the Treaty they could not withdraw from their obligations to third parties;[12]
(b) The provisions of the EEC Treaty (in particular Articles 110[13] and 234[14]), which made clear the Member States' desire to observe the undertakings in GATT 1947;[15]
(c) The Community's assumption of the functions inherent in its tariff and trade policy, which showed the Member States' wish to bind the Community by GATT 1947 obligations;[16] and
(d) The fact that the Community, acting through its own institutions, had appeared as a partner in tariff negotiations and as a party to the agreements concluded within the framework of GATT 1947.[17]

However, although the Community was bound by GATT 1947 as a matter of Community law, the rights of individuals, Member States or Community institutions to challenge Community measures on the grounds that they were inconsistent with GATT 1947 were severely curtailed. The issues concerning such rights under both GATT 1947 and the WTO Agreement are considered below.[18]

B. Status of the Community Under the WTO Agreement

The WTO Agreement is open to acceptance by the "European Communities" and the Member States by virtue of their original membership of the WTO.[19] The Final Act embodying the results of the Uruguay Round was signed by the Member States and by the Presidency and the Commission on behalf of the Communities in Marrakech on April 15, 1994. The WTO Agreement was signed (subject to conclusion) on the same day. On December 22, 1994, the Council adopted a Decision concerning the conclusion on behalf of the European Community, as regards matters within its competence, of the agreements reached in the Uruguay Round multilateral negotiations (1986–94).[20]

As a member of the WTO, the Community has the right to vote and speak at the Ministerial Conference and the General Council. When the Community exercises its right to vote, the combined vote of the Community and the Member States equals the number of Member States that are members of the WTO.[21]

However, the provisions of the WTO Agreement belie a hidden conflict between the Commission and the Member States as to the nature of the Community's power or "competence" to conclude the WTO Agreement. The Commission maintained that the Community had "exclusive" competence to conclude all of the WTO Agreement. That is to say, the Commission claimed that the right of Member States to conclude the WTO Agreement and to speak and vote at its meetings should be *wholly* assumed by the Community. On the other hand, the Member States maintained that specific areas of the WTO Agreement, in particular GATS and TRIPS, were subject to "shared" competence between the EC and its Member States. That is to say, the Community and the Member States would conclude the relevant provisions as separate WTO Members, each able to act individually in votes and meetings. The ECJ ruled on these issues in *Opinion 1/94,*[22] pursuant to Article 300(6) EC, which gives the ECJ power to give interpretative rulings as to the compatibility of an agreement with EC law.

However, in order to analyze the reasoning in *Opinion 1/94* fully, it is first necessary to set out the relevant "competence" rules of Community external relations law. The reader should note that this brief survey is not exhaustive and deals only with those aspects of general Community external relations law which have a bearing on the case.[23]

[18] *See* PART B: THE EFFECTS OF THE WTO AGREEMENT IN THE COMMUNITY LEGAL ORDER, *infra.*

C. The Community's Relationship with the WTO: Determining the Existence of Community Competence

The Community only has those powers which have been attributed to it by the Member States. This principle of attribution of powers finds its expression in Article 5 EC, which provides that "[t]he Community shall act within the limits of the powers conferred upon it by this Treaty and of the objectives assigned to it therein." The principle was confirmed by the ECJ, when it stated in *Opinion 2/94* that the Community "has only those powers which have been conferred upon it."[24]

The Community's competence to conclude international agreements can arise expressly or implicitly from the Articles of the EC Treaty or from measures adopted by the Community institutions. Each source of competence will be considered in turn.

1. Express Competence: The Common Commercial Policy

In the context of the WTO Agreement, the most relevant provisions of the EC Treaty that give the Community competence to conclude international agreements are those governing the "common commercial policy".

Article 3(b) EC provides that one of the activities of the Community shall be a "common commercial policy". The provisions governing the common commercial policy are set out in Title IX, Articles 131–134 EC. Of these Articles, the following are germane:

Article 131 states that by creating a customs union, the Member States aim to contribute, in the common interest, to the harmonious development of world trade, the progressive abolition of restrictions on international trade and the lowering of customs barriers. Further, it also provides that the common commercial policy shall take into account the favorable effect which the abolition of customs duties between Member States may have on the increase in the competitive strength of undertakings in those States.

Article 133 provides that the common commercial policy shall be based on uniform principles, particularly in regard to changes in tariff rates, the conclusion of tariff and trade agreements, the achievement of uniformity in measures of liberalization, export policy and measures to protect trade such as those to be taken in the event of dumping or subsidies.

It also provides that where agreements with one or more States or international organizations need to be negotiated in the context of the common commercial policy, the Commission is to make recommendations to the Council, which can authorize the Commission to open the necessary negotiations. The Commission must conduct the negotiations in consultation with a committee appointed by the Council, which is commonly known as the Article 133 Committee. The Commission must also negotiate within the framework of such directives as the Council may issue to it. The internal procedure for the signing, conclusion and incorporation into EC law of any such agreements is then laid down in Article 300 EC.

2. Implied Competence

Implied external relations competence is an uncertain area of EC law.[25] However, for present purposes, it is arguable that competence can be implied in the following situations:

[24] [1996] ECR I-1759, ¶ 23.

[25] *See* MACLEOD, HENDRY AND HYETT, *supra* note 24, at 47–53.

(a) Where the Community has adopted internal measures in a specific area, the Community also has competence to conclude international agreements in that area;[26]
(b) Where the Community's objectives under the EC Treaty cannot be achieved by internal measures alone because third countries also have to participate in the relevant legislative scheme;[27] and
(c) More controversially, where the participation of the Community in an international agreement is necessary for the attainment of the objectives of EC Treaty.[28]

D. Nature of the Competence

It should be noted that the existence of the Community's competence to conclude the WTO Agreement has not been formally tested before the ECJ. Rather, arguments between the Commission and the Member States have focussed on the *nature* of that competence. As noted above,[29] there are two types of competence: exclusive and shared. Each will be considered in turn.

1. Exclusive Competence

In certain cases, the Community's competence in a given area leads to the exclusion of any Member State competence in the same area. It is therefore crucial to determine the circumstances when this "exclusive" competence can arise, and the implications of such a competence for Member States.

(a) Determining When Competence is Exclusive. In *Opinion 2/91*, the ECJ laid down a concise summary of the sources of exclusive competence:

> The exclusive or non-exclusive nature of the Community's competence does not flow solely from the provisions of the Treaty but may also depend on the scope of the measures which have been adopted by the Community institutions for the application of those provisions and which are of such a kind as to deprive the Member States of an area of competence which they were able to exercise previously on a transitional basis.[30]

Therefore, it may be said that exclusive competence arises from the following sources.

(b) Express Provisions of the Treaty. As regards Article 133 EC and the common commercial policy, the ECJ has held[31] that the common commercial policy was conceived in the context of the operation of the common market, for the defense of the common interests of the Community within which the particular interests of the Member States must endeavor to adapt to each other. The ECJ held that this common interest prevented the

[26] Case 22/70 *Commission v. Council* [1970] ECR 263; *Opinion 1/94* [1994] ECR I-5267; *Opinion 2/91* [1993] ECR I-1061; Joined Cases 3,4 and 6/76 *Cornelis Kramer* [196] ECR 1279.
[27] *Opinion 1/76* [1977] ECR 741; *Opinion 1/94*, *supra* note 25; *Opinion 2/92* ECR [1995] I-521.
[28] *Opinion 1/76*, *supra* note; *Opinion 2/91*, *supra* note 25. Although this interpretation is now doubtful after the delimitation of the scope of dicta in *Opinion 1/76* by *Opinion 1/94*, *supra* note 26. For comment prior to *Opinion 1/94 see, e.g.*, Pescatore, *External Relations in the Case Law of the ECJ*, 16 COMMON MARKET LAW REVIEW 615 (1979); Hardy, *Opinion 1/76 of the Court of Justice,* 14 COMMON MARKET LAW REVIEW 561, 588 (1977).
[29] *See The Community's Relationship with the WTO*, *supra* Part II C.
[30] *Opinion 2/91, supra* note 25, ¶ 9.
[31] *Opinion 1/75* [1975] ECR 1355, 1364.

Member States from acting concurrently (or independently) to secure their own interests. The provisions of Articles 133 EC,[32] on the conclusion of international agreements within the context of the common commercial policy, clearly showed that exercise of concurrent powers by the Member States and the Community was impossible. Thus the ECJ ruled that Community competence as regards the common commercial policy is exclusive.

The exclusive nature of Community competence under the common commercial policy was particularly relevant in *Opinion 1/94*, where the Commission argued that all of the WTO Agreement fell within its scope.[33]

(c) Internal Measures Adopted By the Community Institutions. The ECJ has stated in *ERTA* that:

> [E]ach time the Community, with a view to implementing a common policy envisaged in the Treaty, adopts provisions laying down the common rules, whatever form these may take, the Member States no longer have the right, acting individually or even collectively, to undertake obligations which affect those rules. As and when such common rules come into being, the Community alone is in a position to assume and carry out contractual obligations towards third countries affecting the whole sphere of application of the Community legal system.[34]

The jurisprudential base of the "*ERTA* principle" is said to be the rule that Community law is supreme over national law. That is to say, in the case of an actual or potential conflict between the Community legal order and the laws of Member States, the former must prevail. As the uniform legal environment of the Community common market could be undermined by the conclusion of independent agreements by individual Member States, the rule of supremacy forbids this scenario from arising. From an economic perspective, the *ERTA* principle also prevents Member States from creating trade diversions within the Community via independent agreements with third countries. External competition for foreign investment and trade is therefore eliminated to complement restrictions on intra-Community competition.[35]

Although the *ERTA* principle is easily stated, its precise scope is still uncertain, for there can be varying types of "common rules" within the Community legal order, each type having a differing scope and substantive content from the other. Nevertheless, the following statements of principle can arguably be deduced from the case law following *ERTA*.

First, if internal Community rules *completely or exhaustively* regulate a particular sphere, the Community also acquires exclusive external competence in respect of that sphere. If the Member States were to conclude agreements in that area, such agreements would affect the applicable Community rules by affecting their existing scope, and would accordingly be impermissible under the *ERTA* principle.[36]

The *ERTA* principle also applies where Community legislation is *not complete or exhaustive*. In *Opinion 2/91*, the ECJ determined that Part III of the ILO Convention was concerned with the area of social policy:

[32] And Art. 114 of the EC Treaty (now repealed).
[33] *See* E. Opinion 1/94—The Nature of the Competence Attaching to the WTO Agreement, *infra* Part II E.
[34] *Commission v. Council*, *supra* note 25, ¶ 17.
[35] *See, e.g.*, O'Keefe, *Exclusive, Concurrent and Shared Competence*, in Dashwood and Hillion, *supra* note 22, 179, 182.
[36] *See* Temple Lang, *The ERTA Judgment and the Court's Case Law on Competence and Conflict*, 6 REL 183 (1986).

> [W]hich is already covered to a large extent by Community rules progressively adopted since 1967 with a view to achieving an even greater degree of harmonization and designed, on the one hand to remove barriers to trade resulting from differences in legislation from one Member State to another and, on the other hand, to provide, at the same time, protection for human health and the environment.[37]

Despite the less than total coverage of Community rules in the area, the ECJ nevertheless held that the Community had exclusive competence within it, as Part III of the ILO Convention would "affect" those Community rules. Thus, according to some commentators, when determining whether exclusive competence arises from non-comprehensive Community rules:

> The question in any given case would be whether the internal Community rules are intended to fix standards or establish common rules and, if so, whether the extent of the Community's legislative activity is such that independent action by the Member States would inevitably have the effect of undermining or affecting these rules or altering their scope. Clearly, the greater the amount of Community legislation on a matter, or the more extensively a matter is regulated at Community level, the less room there would be for the Member States to act unilaterally; the more likely, therefore, that the Community's competence will be exclusive.[38]

The extent and coverage of Community legislation in the areas of services and intellectual property became particularly relevant in *Opinion 1/94*, when the ECJ had to determine the nature of the Community competence attaching to the GATS and TRIPS agreements.[39]

(d) Express Power in an Internal Measure. Community measures often give the Community authority to enter into agreements with third countries. In *Opinion 1/94*, the Court stated that "whenever the Community has included in its internal legislative acts provisions relating to the treatment of nationals of non-member countries are expressly conferred on its institutions powers to negotiate with non-member countries, it acquires exclusive external competence in the spheres covered by those acts."[40] Although this quotation is in broad terms, it should not be interpreted as meaning that every express external power in an internal measure creates exclusive Community competence. Each measure should be construed on its own terms in order to discover whether this is the case.

(e) External Powers Complement Internal Powers. The Community may also have exclusive external competence even if no internal rules have been adopted. However, this will only be the case where "the conclusion of an international agreement is necessary in order to achieve Treaty objectives which cannot be attained by the adoption of autonomous rules."[41] This principle is illustrated by *Opinion 1/76*.[42] The subject of the case was a draft Agreement establishing a European laying-up fund for inland waterway vessels. The proposed scheme was designed to eliminate disturbances arising from surplus carrying capacity for goods by inland waterway in the Rhine and Moselle basins. It would not have been possible fully to attain that objective through internal Community rules, because of participation on the inland trade by external Swiss vessels. Thus,

[37] *Opinion 2/91*, *supra* note 25, ¶ 25.
[38] MACLEOD, HENDRY AND HYETT, *supra* note 22, at 59.
[39] *See E. Opinion 1/94—The Nature of the Competence Attaching to the WTO Agreement, infra* Part II E.
[40] *Opinion 1/94*, *supra* note 25, ¶ 95.
[41] *Opinion 2/92*, *supra* note 26, ¶ 32.
[42] *Opinion 1/76, supra* note 26.

the Community had exclusive competence to conclude an international agreement with Switzerland, which is not an EC Member State, without any internal rules having been adopted.[43]

The interpretation of *Opinion 1/76* in *Opinion 1/94* is considered below.[44]

(f) Consequences of the Existence of Exclusive Community Competence. When it is established that the Community has exclusive competence in a given area, the Member States may no longer act in that area.[45] In legal theory, the powers of the Member States have been transferred completely to the Community, and the Member States cannot exercise concurrent powers. The rationale behind this position is that Member States should not be entitled to conclude international agreements which might affect or alter the scope of Community measures.[46]

The Member States may not adopt positions which differ from those which the Community intends to adopt in relation to third countries, nor take other action which would obstruct the Community in international relations in the relevant field.[47] Nor may they adopt internal legislation which undermines, or contradicts, measures adopted, externally or internally, by the Community.

A further result is that a Member State must not fetter the Community in exercising its external powers.[48] In addition, the Member States must employ all means at their disposal in order to ensure the participation of the Community in such agreements.[49]

Unilateral action by a Member State in an area within the Community's exclusive competence would be a violation of the Member State's obligations under the EC Treaty. The Commission, or other Member States, can then bring the alleged violation before the ECJ.[50]

However, in particular cases, the Member States may act in areas where the Community has exclusive competence. An example of this principle can be found in the conduct of the Member States in the context of GATT 1947. Member States then had to represent the interests of the Community when voting because of the Community's inability to become a Contracting Party. In such cases, the Member States act to protect the interests of the Community.[51]

2. Shared Competence

Community competence is not always exclusive. It may be truly "shared" between the Community and the Member States in a given sphere. That is to say, the Community and the Member States may both have the power to conclude a given agreement as independent contracting parties. Alternatively, within the confines of a particular agreement, some

[43] For other examples of this type of agreement include those relating to the conservation of fisheries; *see Opinion 1/94, supra* note 25.

[46] *Commission v. Council*, *supra* note 25, ¶ 22.

[47] *Opinion 1/75*, *supra* note 30, at 1364.

[48] *Ruling 1/78* [1978] ECR 2151, ¶ 32.

[49] *Kramer*, *supra* note 25.

[50] Under Arts. 226 and 227 EC respectively.

[51] *See Opinion 2/91*, *supra* note 25, ¶ 5. Another example of Member States acting in the Community's interest despite exclusive Community competence in a given area was the enactment of the Member States of limited measures, in the absence of Community legislation, to conserve fishing stocks. *See Kramer*, *supra* note 25; *Commission v. Ireland* [1978] ECR 417; Joined Cases 185–204/78 *Van Dam et al.* [1979] ECR 2345; Case 804/79 *Commission v. UK* [1981] ECR 1045.

provisions may theoretically be within the competence of the Community, while others remain within the competence of the Member States. Such agreements are commonly known as "mixed" agreements. Consequently, in some cases, it may be hypothetically possible to split the provisions of a mixed agreement into two groups: the first to be ratified by the Community, the second by the Member States. Thus, it may be strictly inaccurate to say that mixed agreements involve "shared" competence, as the respective competencies are in fact exclusive. However, we would suggest there is still an overall competence for such agreements, which is shared between the Community and the Member States.

Shared competence has not been consistently accepted by third countries, which have concerns as to whether the Member States or the Community is the legally relevant counter-party. Nevertheless, the ECJ has consistently recognized the validity of the principle as a matter of Community law.

(a) When Shared Competence Arises. There is some authority for the proposition that shared competence is to be presumed, unless exclusive competence has been established. Nevertheless, there are at least five situations in which shared competence has been found to exist:

- Where that consequence flows from the Treaty Article conferring power on the Community;
- Where the Community has potential competence which it has not exercised;
- Where an agreement includes provisions within Community competence and provisions within Member State competence;
- Where the Community's competence arises from the existence of internal "minimum rules";
- And in certain areas, such as intellectual property, where Community and Member State competence can co-exist without either displacing the other.[52]

(b) Member State Responsibility When Competence Is Shared. In the situation of shared competence, Member States do not have total freedom to act in their own interests. The ECJ has ruled that there should be a "close association" between the institutions of the Community and the Member States in the processes of negotiating, concluding and implementing an agreement.[53] Accordingly, Community co-ordination committees are established within the context of each agreement to ensure that a close association is achieved. It is in these committees that the day to day attribution of responsibility between Member States and the Community is discussed before third countries are engaged.

E. Opinion 1/94—The Nature of the Competence Attaching to the WTO Agreement

During the Uruguay Round, the Commission acted as sole negotiator on behalf of the Community and the Member States. However, that state of affairs was without prejudice to the question of competence and the WTO Agreement. On April 6, 1994, shortly before the WTO Agreement was due to be signed in Marrakech, the Commission sought the Opinion of the ECJ on the following questions.[54]

[52] MACLEOD, HENDRY AND HYETT, *supra* note 22, at 63–67.

[53] *Opinion 2/91*, *supra* note 25, ¶ 36; *Ruling 1/78*, *supra* note 47, ¶¶ 34–36.

[54] Under Art. 300(6) EC, the Council, the Commission or a Member State may obtain the opinion of the ECJ as to whether an agreement envisaged is compatible with the EC Treaty.

As regards the results of the Uruguay Round GATT trade talks contained in the Final Act of December 15, 1993:

(1) Does the European Community have the competence to conclude all parts of the Agreement establishing the WTO concerning trade in Services (GATS) and the trade-related aspects of intellectual property including trade in counterfeit goods (TRIPS) on the basis of the EC Treaty, more particularly on the basis of Article 113 EC alone, or in combination with Article 100a EC and/or Article 235 EC?
(2) Does the European Community have the competence to conclude alone also those parts of the WTO Agreement which concern products and/or services falling exclusively within the scope of application of the ECSC and the EAEC Treaties?
(3) If the answer to the above questions is in the affirmative, does this affect the ability of Member States to conclude the WTO Agreement, in the light of the agreement already reached that they will be original Members of the WTO?[55]

However, by the time that the ECJ came to deliver *Opinion 1/94*,[56] both the Community and the Member States had signed the Final Act and the WTO Agreement. An argument was put forward by Spain that the request for an Opinion was inadmissible. Spain claimed that the ECJ's jurisdiction to give Opinions on the conclusion of international agreements by the Community only existed where the Community had not yet entered into any international obligations. As the Community had signed the Final Act and WTO Agreement, it was under an international obligation to forward the text to the Community institutions for approval.[57]

The ECJ rejected this argument on the grounds that unless the Community had fully expressed its consent to be bound by an agreement, its jurisdiction to give Opinions remained valid.[58]

1. Multilateral Agreements on Trade in Goods

The Commission and the Member States were agreed that the majority of the Multilateral Agreements on Trade in Goods were within the scope of the common commercial policy

[57] *Id.* ¶ 10.

[58] *Id.* ¶¶ 11–12. See the converse situation in *Opinion 3/94* [1995] ECR I-4577, where Germany's request for an Opinion on the Banana Framework Agreement was declared inadmissible as the Community was already bound by its terms.

and thus exclusive Community competence. However, the ECJ clarified the following minor issues:

(a) Agreements concluded pursuant to Article 113 EC could cover trade in Euratom and European Coal and Steel Community products;[59]
(b) The Agreement on Agriculture, the SPS Agreement and the TBT Agreement all fell within the common commercial policy.[60]

2. Article 133 and GATS

The Commission's main submission was that GATS fell within the scope of Article 133 EC and thus within exclusive Community competence.[61] More specifically, it drew a distinction between services other than transport and services comprised in transport. All of the former were said to be within the scope of Article 133 EC. Of the latter, "international agreements of a commercial nature in relation to transport (as opposed to those relating to safety rules)" were claimed to be within the coverage of the common commercial policy.[62]

(a) Services Other Than Transport. The ECJ drew attention to the "open nature" of the common commercial policy, which had been recognized in *Opinion 1/75*[63] and *Opinion 1/78*,[64] and held that "trade in services cannot immediately, and as a matter of principle, be excluded from the scope of Article [133]."[65]

However, the Court then proceeded to analyze the "definition of trade in services" given in the GATS:

> Under Article I(2) of the GATS, trade in services is defined, for the purposes of that agreement, as comprising four modes of supply of services: (1) cross-frontier supplies not involving the movement of persons; (2) consumption abroad, which entails the movement of the consumer into the territory of the WTO member country in which the supplier is established; (3) commercial presence, i.e. the presence of a subsidiary or branch in the territory of the WTO member country in which the service is to be rendered; (4) the presence of natural persons from a WTO member country, enabling a supplier from one member country to supply services within the territory of any other member country.[66]

As regards mode 1, cross-frontier supplies, the ECJ declared that the situation was "not unlike trade in goods",[67] as neither the supplier nor the consumer moved from their respective countries. As trade in goods was within the scope of the common commercial policy, the ECJ held that "there is no particular reason" why cross-frontier supplies should not also fall within the scope of Article 133 EC.[68]

However, the ECJ held that none of modes 2, 3 or 4, that is consumption abroad, commercial presence or the presence of natural persons, came within the common commercial policy. Its reasoning was as follows:

[59] *Id.* ¶¶ 24–27.
[60] *Id.* ¶¶ 28–34.
[61] *Id.* ¶ 35.
[62] *Id.* ¶ 36.
[63] *Opinion 1/75, supra* note 30.
[64] *Opinion 1/78, supra* note 47.
[65] *Opinion 1/94*, *supra* note 25, ¶ 41.
[66] *Id.* ¶ 43.
[67] *Id.* ¶ 44.
[68] *Id.*

The ECJ noted the listing of the common commercial policy on the one hand, and "measures concerning the entry and movement of persons"[69] on the other, as separate activities of the Community in Article 3 EC. It also drew attention to the specific chapters in the EC Treaty on the free movement of natural and legal persons.[70] Accordingly, it held that "the treatment of nationals of non-member countries on crossing the external frontiers of Member States cannot be regarded as falling within the common commercial policy."[71] Thus, the crucial distinction between cross-frontier supply and the other modes, the movement of persons into the Community, took the remaining modes outside of the scope of Article 133 EC.

(b) Transport Services. The ECJ also approached transport services from a structural analysis of the EC Treaty. It held that transport services were subject to Title IV of the EC Treaty, as opposed to Title VII on the common commercial policy. As it had been decided in *ERTA* that only implied competence arose from measures adopted under Title IV, it followed that transport matters were not covered by Article 133 EC.[72] Further, the ECJ found that no distinction had been made in either *ERTA* or *Opinion 1/76* between agreements on transport safety rules and commercial agreements; both were outside the scope of the common commercial policy.[73]

The Commission had relied upon a series of embargoes based on Article 133 EC which had involved the suspension of transport services. However, these were dismissed as non-conclusive. The transport services embargoes were necessary adjuncts to the primary embargoes on goods. In any event, the ECJ stated, the embargo practice of the Council did not create a binding precedent for the Court.[74]

Thus, the ECJ concluded that "only cross-frontier supplies are covered by Article [133] of the Treaty and that international agreements in the field of transport are excluded from it."[75]

3. Article 133 and TRIPS

The Commission argued that TRIPS fell within the common commercial policy because TRIPS rules are closely connected to trade in the products and services to which they apply.[76]

The ECJ identified a similarity between Section 4 of Part III of TRIPS, which contains specific rules as to measures to be applied at border crossing points, and Council Regulation (EEC) No 3842/86 of December 1, 1986 laying down measures to prohibit the release, for free circulation, of counterfeit goods.[77] Confirming that the Regulation was correctly based on Article 133 EC, as it related to measures taken by customs authorities at the frontier of the Community, the ECJ reasoned that the equivalent anti-counterfeit "border" provisions of TRIPS were also within Article 133 EC.[78]

[69] Art. 3.1(d) EC.
[70] *Opinion 1/94*, *supra* note 25, at 46.
[71] *Id.* ¶ 47.
[72] *Id.* ¶ 48.
[73] *Id.* ¶¶ 49–50.
[74] *Id.* ¶¶ 51–52.
[75] *Id.* ¶ 53.
[76] *Id.* ¶ 54.
[77] OJ 1986 L 357, at 1.
[78] *Opinion 1/94*, *supra* note 25, ¶ 55.

The ECJ then ruled that the remainder of TRIPS was not within Article 133 EC for the following reasons:

First, it agreed that the exercise of intellectual property rights "has effects" on trade in goods, and that such rights are "specifically designed" to produce such effects. However, that was not enough to bring them within the common commercial policy, as intellectual property rights "do not relate specifically to international trade; they affect internal trade just as much as, if not more than, international trade".[79]

Secondly, as TRIPS laid down harmonized rules in areas where there were no internal Community harmonization measures,[80] its conclusion under Article 133 EC would enable the Community to achieve harmonization by the "back door". Such "back door" harmonization would circumvent the harmonization, voting and procedural rules expressly laid down in the EC Treaty.[81]

Thirdly, the Commission relied on the "New Commercial Policy Instrument",[82] the forerunner to the Trade Barriers Regulation, which had been adopted under Article 133 EC. Various Decisions taken under the New Commercial Policy Instrument were said to have been taken "to defend the Community's intellectual property interests".[83] However, the ECJ stated that such Decisions were unrelated to harmonization, which was the "primary objective" of TRIPS. They were concerned with matters which fell within the common commercial policy.[84] Similarly, the suspension of tariff preferences against Korea for its discrimination in relation to intellectual property rights[85] was not persuasive. As the grant of preferences was within Article 133 EC, so too was their suspension.[86]

Fourthly, the fact that the Community had concluded international agreements containing intellectual property provisions and based them on Article 133 EC[87] did not bring TRIPS within the Article as well. Their scope was limited to consultation procedures and hortatory clauses encouraging non-Community counter-parties to bring the level of their intellectual property protection up to that of the Community.[88]

Finally, exclusive Community agreements with Austria[89] and Australia,[90] which contained provisions relating to the reciprocal protection of descriptions of wines, were

[79] *Id.* ¶ 57.

[90] Agreement with Australia of January 26 and 31, 1994, on trade in wine (OJ 1994 L 86, at 3).

considered. However, the ECJ found that these agreements were directly linked with the common agricultural policy and Community rules on wine, not with the common commercial policy.[91] Further, these agreements had no bearing on competence to conclude the provisions of TRIPS which dealt with patents and designs, the protection of undisclosed technical information, trade marks or copyright.[92] In this context, it may be asked why on this analysis, the Agreement on Agriculture was held to fall squarely within the common commercial policy and not within the common agricultural policy.[93]

4. Implied Competence—Generally

As an alternative argument to achieve exclusive competence in relation to both GATS and TRIPS, the Commission maintained that such competence arose implicitly from the provisions of the EC Treaty establishing internal Community competence, from internal Community measures, or from the need to enter into international commitments with a view to achieving an internal Community objective. Finally, it claimed that exclusive competence existed by virtue of Articles 95 and 308 of the EC Treaty.[94]

5. Implied Competence and GATS

(a) Treaty Provisions Establishing Internal Community Competence. The Commission cited the internal Community powers on the right of establishment, freedom to provide services and transport as a basis for the exclusive external competence to conclude the whole of GATS.[95]

However, this argument was rejected. As regards transport, the ECJ affirmed its judgment in *ERTA* that competence only becomes exclusive when "common rules" which could be affected by Member State commitments come into existence. As not all transport matters were covered by such common rules, exclusive competence could not attach to them.[96]

As regards the right of establishment and freedom to provide services, it was found that the relevant Treaty Articles "contain no provisions on the problem of the first establishment of national of non-member countries and the rules governing their access to self-employed activities."[97] Consequently, exclusive competence could not be inferred from those provisions, save for access to service markets which were the subject of cross-border supplies. The latter were within the scope of Article 133 and thus the exclusive competence of the Community.[98]

(b) Achieving Internal Community Objectives. The Commission maintained, on the basis of *Opinion 1/76*,[99] that internal measures were not necessary to create exclusive competence. It could arise where international agreement was necessary for the attainment

[91] *See* Council Decision 94/184/EC of January 24, 1994, concerning the conclusion of an Agreement between the European Community and Australia on trade in wine (OJ 1994 L 86, at 1).

[99] *Opinion 1/76, supra* note 26.

of an internal Community objective identified in the Treaty. Thus, the Commission identified the cohesion of the internal market and the participation of the Community in international relations as relevant objectives in this context.[100]

The Court rejected this interpretation of *Opinion 1/76*. The scope of the case, it decided, was limited to a situation where the achievement of an internal Community objective (short-term over-capacity elimination on the Rhine and Moselle basins) could only be achieved through the participation of a non-member country (Switzerland, due to the participation of Swiss vessels in the trade). The ECJ found another example of this scenario in the international restriction of fishing on the high seas. If this was the Community's objective, it could only be effected through the participation of non-member countries. Only in this case would exclusive competence arise without the adoption of internal measures.[101]

However, attainment of the internal freedom of establishment and freedom to provide services was not "inextricably linked" to the treatment to be afforded to national of non-member countries in the Community or to Member State nationals in non-member countries.[102] Thus, the provisions of the Treaty governing these internal freedoms could not create exclusive competence in relation to the GATS.

As regards Articles 95 and 308 EC, the ECJ repeated its ruling that external competence cannot be conferred if an internal power has not been exercised,[103] and found that there was not complete harmonization in all service sectors; thus, exclusive competence in relation to all those sectors could not arise.[104]

6. Implied Competence and TRIPS

(a) Internal Measures Which Could Be Affected by Member State Participation. The ECJ summarily rejected the Commission's TRIPS arguments based on *Opinion 1/76*[105] and Articles 95 and 308 EC for the reasons stated above. In relation to the former, the ECJ held that "unification or harmonization of intellectual property rights in the Community context does not necessarily have to be accompanied by agreements with non-member countries in order to be effective."[106]

Thus, all that remained was the Commission's final argument that internal Community measures would be affected within the meaning of the *ERTA* principle if Member States were to conclude TRIPS. This argument was also rejected, as harmonization within the Community was not co-extensive with the areas covered by TRIPS. Thus, the essential requirement of exclusive competence, the exercise of Community internal powers, had not been fulfilled.[107]

(b) Summary of Competencies and Future Developments. In summary, therefore, the result of *Opinion 1/94* was that competence was shared in relation to GATS (save for cross-frontier services) and TRIPS (save for anti-counterfeit "border" measures). Conversely, Community competence was exclusive in relation to the Multilateral Agreements on Trade in Goods.

[107] *Id.* ¶¶ 102–103.

It should be noted that Article 133 will be amended by the Treaty of Nice, which is yet to enter into force.[108] The Nice text provides that agreements in the fields of trade in services and the commercial aspects of intellectual property will come within the scope of the common commercial policy, thereby avoiding such agreements being subject to mixed competencies in the future. However, it is also provided that agreements relating to areas where the Community has no internal competence, such as internal harmonization in the areas of education, human health and culture, shall not be concluded by the Community alone. These agreements must still be concluded jointly by the Community and the Member States. In addition, agreements in the field of transport are still expressly excluded from Article 133, being governed by Title V of the EC Treaty.

F. Opinion 1/94, International Law and Responsibility

Commentators have reacted critically to *Opinion 1/94*, chiefly from the perspective of Community law.[109] However, in this chapter, we wish to develop an analysis of the issue which is based on international law. Further, we will consider how the issue of competence affects the respective responsibilities of the Community and the Member States under the WTO Agreement.

1. Law and Competence

In our view, international law and the provisions of the WTO Agreement (which were not considered in any detail by the ECJ) provide the answer to the vexed question of competence. In summary, we suggest that the concept of "trade" in international law leads one to conclude that the whole of the WTO Agreement falls within the exclusive competence of the Community.

As noted, the Community and the Member States signed the WTO Agreement before *Opinion 1/94* was delivered. Under the general law of treaties, therefore, the Community and each of the Member States had authenticated the text of the WTO Agreement and undertook an obligation of good faith to refrain from acts calculated to frustrate its objects prior to ratification.[110] As such, the ECJ was faced with a non-binding, but authenticated "mixed" agreement before it had even commenced its analysis. It is therefore unsurprising that *Opinion 1/94* resulted in the finding that the WTO Agreement was subject to shared competencies. The ECJ was, we suggest, conscious of the factual and political reality of the Community's conclusion of the WTO Agreement and shaped its judgment accordingly.

However, there are grounds for holding that, despite the joint signing of the WTO Agreement by the Community and the Member States, exclusive competence for the whole of the WTO Agreement should lie with the Community.

First, we would suggest that the true scope of Article 133 is far wider than that suggested by the ECJ. If one bears in mind the development of international trade law, culminating in the signing of the WTO Agreement, it is clear that the Community legal concepts of "commerce" and "trade" should not be limited to trade in goods. The Uruguay Round and the transition from GATT 1947 to the WTO Agreement were clear, wide-spread State

[108] *Treaty of Nice Amending the Treaty on European Union, the Treaties Establishing the European Communities and Certain Related Acts*, Art. 2(8) (OJ 2001 C 80, at 1).

[109] *See supra* note 25.

[110] *See Vienna Convention on the Law of Treaties*, Art. 18; BROWNLIE, PRINCIPLES OF PUBLIC INTERNATIONAL LAW 611 (5th ed., 1998).

practice evidencing the fact that international law now defines the concept of "trade" widely, so as to encompass both trade in services and trade-related intellectual property rights.[111] We would submit that the ECJ erred in appreciating the full significance of this development. Further, it would have been advantageous for the ECJ to have considered the overall scope of the WTO Agreement, which is stated in Article II as follows:

1. The WTO shall provide the common institutional framework for the conduct of trade relations among its Members in matters related to the agreements and associated legal instruments included in the Annexes to this Agreement.
2. The agreements and associated legal instruments included in Annexes 1, 2 and 3 (hereinafter referred to as "Multilateral Trade Agreements") are integral parts of this Agreement, binding on all Members . . .

These provisions show that the Uruguay Round negotiators intended the various Annexes to the WTO Agreement to be viewed a cohesive unit of obligations relating to general "trade relations" between the WTO Members. Consequently, Community law should also have classified the whole of the WTO Agreement as relating to "commerce" and "trade" under Article 133 EC. As Bourgeois states, can one seriously sustain the view that the negotiating with a third country of an agreement on the establishment of subsidiaries of financial institutions, on the exchange of air traffic rights, or on the mutual protection of intellectual property rights, is not part and parcel of a State's commercial policy?[112]

Indeed, confirmation of this view can be found in the Treaty of Nice amendments discussed above.[113] The Member States themselves have now ultimately conceded that the Community should, as a general rule, have exclusive competence for all matters of trade.

A finding that the Community had exclusive competence for the whole of the WTO Agreement would not have been inconsistent with the fact that the Member States and the Community were all to become WTO Members. Article IX of the WTO Agreement states that "where the European Communities exercise their right to vote, they shall have a number of votes equal to the number of their member States which are members of the WTO." Consequently, it was necessary for the Member States to participate alongside the Community as original WTO Members in order to enable the Community to participate effectively in WTO proceedings—without their Membership, the numerical voting strength of the Community would have been diminished. Consequently, the WTO Membership of the Member States could be seen as an exercise of the Community's competence through the Member States.[114]

However, it must be recognized that the legal reality of the WTO is now that the Community shares competence with the Member States in respect of TRIPS and GATS. This internal division of power requires a day to day co-ordination of policy between the Community (in the form of the Commission) and the Member States. However, the real question is whether the division of competencies has any legal effect on the

[111] Paradoxically, the ECJ noted a trend for basic industry to be concentrated in developing countries, while services and goods with high value-added content were primarily exported from developed nations. This trend was "borne out by the WTO Agreement and its annexes, which were the subject of a single process of negotiation covering both goods and services"; *Opinion 1/94*, *supra* note 25, ¶ 40. One must therefore ask why the ECJ did not consider this relevant in defining the scope of the commercial policy in the remainder of the Opinion.

international responsibility of the Community and the Member States under the WTO Agreement.

2. Competence and Responsibility[114]

The WTO Agreement, and in particular the DSU, are silent on the respective liabilities of the Community and the Member States. According to the law of treaties, the Community and the Member States are separately responsible for the performance of the WTO Agreement.[115] However, in *Parliament v Council*,[116] AG Jacobs expressed the view, in his advisory opinion to the ECJ,[117] that "under a mixed agreement, the Community and the Member States are jointly liable unless the provisions of the agreement point to the opposite conclusion."[118] However, as the following paragraphs demonstrate, we would suggest that in the context of the WTO Agreement, the Community and the Member States cannot be accurately described as joint parties for the purposes of the DSU, and that the nexus between the potential liability of a Member State and of the Community is a matter of internal Community law alone.

(a) Areas within Member State Competence. Take the following example; a Member State's national measures infringe a provision of the GATS within Member State competence. Must the complaining WTO Member proceed by making a joint claim against both the Member State and the Community, or against the Member State alone, or may it ultimately go against the Member State and the Community separately? Conversely, if the complaining WTO Member goes against the Member State alone, does the Community have the right to be joined as a party to the dispute?

We suggest that the complaining WTO Member is under no international obligation to make a joint claim against both the Member State and the Community. Nor must it make two separate claims against the Member State and the Community on the same subject matter.[119] Instead, it is entitled to engage the sole responsibility of the State which promulgated the offending measure. Indeed, the practice of the United States indicates that it considers itself to have such a right.[120]

Conversely, if the complaining WTO Member pursues the Member State alone, the Community can only become party to consultations under the procedure laid down in

[114] For detailed reviews of this issue *see* Heliskoski and Ni Chathain, *supra* note 55.

[115] *Vienna Convention on the Law of Treaties between States and International Organizations or between International Organizations*, Article 26.

[116] *Parliament v. Council,* Case C-316/91 [1994] ECR I-625, ¶ 69.

[117] In the EC system, the Judges of the ECJ are assisted by eight Advocates-General whose function is to give advisory opinions on the case and who recommend a particular conclusion to the ECJ: *see* Article 222 EC. This advisory function closely resembles that of the Commissaire du Gouvernement of the French Conseil d'Etat. The opinions of the AGs are not binding on the ECJ, but are influential in shaping the Court's final judgments. The lower court of the EC system, the Court of First Instance, has powers to appoint one of the CFI judges to act as an AG, but this is seldom used.

[118] *Id.,* ¶ 69.

[119] Of course, it may pursue these options if they are politically and legally advantageous, e.g., assuring itself that at least one of the two will accept retaliation under DSU Article 22 should the need arise.

[120] *See, e.g., Ireland—Measures Affecting the Grant of Copyright and Neighbouring Rights*, WT/DS82; *Belgium—Measures Affecting Commercial Telephone Directory Services*, WT/DS80; *Denmark—Measures Affecting the Enforcement of Intellectual Property Rights*, WT/DS83; *Greece—Enforcement of Intellectual Property Rights for Motion Pictures and Television*, WT/DS125; *Sweden—Measures Affecting the Enforcement of Intellectual Property Rights*, WT/DS86; *Portugal—Patent Protection under the Industrial Property Act*, WT/DS37. It should be noted that the Community became a party to the consultations in WT/DS83 and WT/DS86. Parallel proceedings against the Community were launched with WT/DS82 (*see* WT/DS115) and WT/DS125 (*see* WT/DS124).

Article 4.11 of the DSU, i.e. it must claim to have a "substantial trade interest" in the matter. From the perspective of Community law, it is certainly arguable that under the duty of co-operation, the Member State must agree that the Community's claim of substantial interest is "well-founded" so as to facilitate the latter's participation in the case. However, there does not seem to be any formal record of the Community expressly using the Article 4.11 procedure in cases where the United States has pursued individual Member States. There appears to have been an acquiescence on the part of the United States, allowing the Community to bypass the formal requirements of the Article.

Equally, if the establishment of a panel is requested by the complaining WTO Member, the establishment of the panel cannot be blocked by the Community or the Member State on the grounds that the Community should be a party to the dispute. The Community must use the Article 10 procedure to become a third party to the dispute. Again, the Member State would arguably be under a Community law obligation not to oppose the Community's application.

If the case were to proceed all the way to the approval of retaliation against the Member State, the question would be whether the complaining WTO Member could also retaliate against the Community. For example, if the Member State were to breach its GATS obligations, could the complaining WTO Member suspend concessions against services from the Community (i.e. from other Member States) or cross-retaliate against goods or intellectual property rights of the same origin? We suggest that it could not do so. The wording of Article 22.2 speaks of retaliation against only "the Member concerned", i.e. the party to the dispute to which the panel or Appellate Body recommendations are directed.[121] If the Community (or any other Member State) is not party to the dispute, it cannot be the target of retaliation in any form. Accordingly, we respectfully question the assertion made by some commentators that cross-retaliation would be "likely to spill over to the other Member States and may affect them and the EC at large".[122]

(b) Areas within Community Competence. We would also suggest that WTO Members are entitled to pursue an individual Member State if its measures breach an area of the WTO Agreement which is within Community competence.[123] However, the key issue, as demonstrated by the *LAN* case,[124] is establishing whether the Community or the Member State is responsible for the offending measure.

In the *LAN* case, the United States alleged that the tariff reclassification by the European Communities, Ireland and the United Kingdom of certain Local Area Network (LAN) adapter equipment and personal computers with multimedia capability violated Article II of GATT 1994. The issue of the responsible counter-party was argued in the proceedings. The reports give no final answer to the question. However, and although its language is ambiguous in parts, the panel emphasized that the substance of the dispute was concerned

[121] DSU, Article 19, note 9.

[122] *See* Ni Chathain, *supra* note 55, at 463.

[123] *See* the United States practice in *Belgium —Administration of Measures Establishing Customs Duties for Rice*, WT/DS210; *France—Measures Relating to the Development of a Flight Management System*, WT/DS173; *France—Certain Income Tax Measures Constituting Subsidies*, WT/DS131; *Ireland—Certain Income Tax Measures Constituting Subsidies*, WT/DS130; *Greece—Certain Income Tax Measures Constituting Subsidies*, WT/DS129; *Netherlands—Certain Income Tax Measures Constituting Subsidies*, WT/DS128; *Belgium—Certain Income Tax Measures Constituting Subsidies*, WT/DS127.

[124] *European Communities, United Kingdom and Ireland—Certain Classification of Certain Computer Equipment*, WT/DS62, 67, and 68 (1998).

with tariff treatment of the relevant goods by authorities in the Community and not in any of the Member States individually.[125] Similarly, the Appellate Body stated that the relevant export market was the Community, constituting a customs union, and not the Member States.[126] Consequently, we suggest that the panel and Appellate Body correctly identified the Community as being responsible for the common customs tariff. Indeed, the Community, rather than the individual Member States had entered a tariff schedule to GATT 1994. The United States claims against the United Kingdom and Ireland were therefore misplaced, as these countries were the agents of the Community in the implementation and administration of the tariff.

As regards the Community joining consultations or panel proceedings against single Member States in areas of exclusive Community competence, our comments above on areas of mixed competence also apply. Again, it appears that the United States has unilaterally waived the formal procedural requirements for the Community's participation in the relevant cases.[127]

Concerning retaliation, a complaining WTO Member would strictly have no right to retaliate against the Community if the Member State were to be the sole "Member concerned".[128] However, the complaining WTO Member could take advantage of the internal division of competence at this point. The Community, having exclusive competence for the relevant area, could not validly disown any responsibility for the Member State's legislation without undermining its legal powers in Community law. Moreover, from a practical perspective, the Member State's conduct in the dispute will have been closely coordinated with the Community position. Thus, the Community would have shared in the responsibility for failure to implement the DSB reports and retaliation against trade from other Member States is a real possibility in this scenario.

G. Conclusions

In conclusion, we suggest that the division of competence in relation to the WTO could have been avoided by a fuller consideration of the negotiating history and express wording of the WTO Agreement, rather than a somewhat myopic analysis of the structure of the EC Treaty and Community practice.

Further, we also believe that the Member States and the Community are not jointly responsible for their WTO obligations; from the perspective of international law, they are separately responsible for their own measures. Consequently, from a strict perspective, retaliation against a responsible Member State cannot be extended to the Community and the other Member States. However, from a practical viewpoint, the Community and the other Member States cannot object to an extension of retaliation against them when the offending Member State measure is concerned with an area within Community competence.

[125] Report of the WTO Panel, *European Communities, United Kingdom and Ireland—Certain Classification of Certain Computer Equipment*, *supra* note 124, ¶¶ 8.18 and 8.28.

[126] Report of the Appellate Body, *European Communities, United Kingdom and Ireland—Certain Classification of Certain Computer Equipment*, *supra* note 124, ¶ 96.

[127] E.g., the request for consultations and for the establishment of a panel in *Belgium—Administration of Measures Establishing Customs Duties for Rice*, *supra* note 23, was addressed solely to Belgium. However, it was the Community and the United States which requested the panel to suspend its work pursuant to DSU, Article 12.2 (*see* WT/DS210/4). There is no formal record of a request to join consultations or become a party by the Community.

[128] *See Areas Within Member State Competence*, *supra*, Part II.F.L.(a).

III. The Effects of the WTO Agreement in the Community Legal Order

A. Introduction

This part of the chapter will now deal with the effect of the WTO Agreement within the Community's legal system. This issue is many-faceted, since it involves consideration of the various ways in which individuals may invoke the WTO Agreement before EC Courts or before the courts or tribunals of EC Member States. One aspect of this issue is whether the WTO Agreement is capable of "direct effect", the EC term for a self-executing treaty provision. Another aspect of this issue is the extent to which individuals may avail themselves of the various procedural avenues that are available for bringing suspected violations of WTO law to the attention of the Commission or of the Member States. The next part of this chapter will therefore deal with the various "WTO complaints mechanisms" that exist, such as the Trade Barriers Regulation. Finally, the final part of this chapter will also describe the Commission's initiatives in raising awareness of WTO issues in the EC business community.

1. The Issue of the Potential "Direct Effect" of the WTO Agreement

An enduringly controversial issue in EC law is whether the WTO Agreement can be given "direct effect" in the Community legal order or otherwise be invoked by private parties in European Community courts or in the courts of EC Member States. In this context, "direct effect" means that individuals, Member States and the Community institutions can rely on the provisions of the WTO Agreement before national and/or Community courts as giving them enforceable rights. This question has generated a very considerable body of legal literature[129] and the pages which follow will attempt to summarize the current state of the law on this issue.[130] In order to answer this difficult question, the law relating to the status of GATT 1947 in Community law will be briefly surveyed. Attention will then be given to the leading case on the WTO Agreement, *Portugal v Council*,[131] and its subsequent application in the case law of the Community courts.

[129] Among the many commentaries, the following may be of interest to those seeking to research the matter further: K.J. KUILWIJK ,THE EUROPEAN COURT OF JUSTICE AND THE GATT DILEMMA: PUBLIC INTEREST VERSUS INDIVIDUAL RIGHTS (1996); N. Neuwahl, *Individuals and the GATT*, and F.E. Jacobs, *Judicial Review of Commercial Policy Measures after the Uruguay Round,* in THE EUROPEAN UNION AND WORLD TRADE LAW AFTER THE URUGUAY ROUND 313, 329 (N. EMILIOU AND D. [131] Case C-149/96 *Portugal v. Council* [1999] ECR I-8395.

2. The Doctrine of "Direct Effect": A Brief Summary

The doctrine of "direct effect" has played a key role in ensuring the compliance of EC Member States to Community law. In essence, it permits individual citizens to enforce the legal rights conferred on them by EC law (be it in the form of an EC Treaty Article, a Community Directive or other provision of EC legislation). EC law describes as "vertical direct effect" as the enforcement of a provision of EC law by a citizen against a Member State, the emanation of a Member State (such as a local authority or governmental agency) or a Community Institution. "Horizontal direct effect" describes the situation where a Community law provision is enforced by one EC citizen against another.

Since Community law derives from a treaty between sovereign states,[132] the possibility of "direct effect" raises the issue whether such law can generate rights capable of being enforced in national courts (or Community courts) without:

(a) this procedural right being expressly granted, or
(b) the Community law provision being transposed into national law.

The original case on "direct effect"[133] dates from 1962 and concerned a Dutch transport operator who sought to challenge a Dutch border tax on imports from Germany on the grounds that such a tax was contrary to the Customs Union created by the EEC Treaty, following the expiry of the relevant transitional period.[134] The crucial question referred to the ECJ by the Dutch national court for an interpretative ruling was whether, in the absence of any right under Dutch law, such a right could derive simply by virtue of the EEC Treaty. This issue raised fundamental constitutional questions and, in their submissions to the ECJ, the Netherlands government argued that the EC Treaty was no different from traditional international treaties and that the concept of "direct effect" would contradict the intentions of the Treaty negotiators. It even raised the prospect of Member States refusing to cooperate with the ECJ if they granted individuals the right to invoke the EC Treaty in national courts.

The ECJ, in a landmark ruling, dismissed these arguments:

> To ascertain whether the provisions of an international treaty extend so far in their effects it is necessary to consider the spirit, the general scheme and the wording of those provisions.
>
> The objective of the EEC Treaty, which is to establish a Common Market, the functioning of which is of direct concern to interested parties in the Community, implies that this Treaty is more than an agreement which merely creates mutual obligations between the contracting states. This view is confirmed by the preamble to the Treaty which refers not only to governments but to peoples. It is also confirmed more specifically by the establishment of institutions endowed with sovereign rights, the exercise of which affects Member States and also their citizens. Furthermore, it must be noted that the nationals of the states brought together in the Community are called upon to cooperate in the functioning of this Community through the intermediary of the European Parliament and the Economic and Social Committee. . .
>
> The conclusion to be drawn from this is that the Community constitutes a new legal order of international law for the benefit of which the states have limited their sovereign rights, albeit within limited fields, and the subjects of which comprise not only Member States but also their nationals. Independently of the legislation of Member States, Community law

[132] *See, i.e.*, the European Community Treaty of Rome of 1957 as amended and amplified by subsequent Treaties.

[133] Case 26/62 *Van Gend en Loos v. Nederlandse Administratie der Belastingen* [1963] ECR 1.

[134] The relevant provision of the EC Treaty, Article 12, reads as follows: "Member States shall refrain from introducing between themselves any new customs duties on imports or exports or any charges having equivalent effect and, from increasing those which they already apply in their trade with each other."

> therefore not only imposes obligations on individuals but is also intended to confer upon them rights which become part of their legal heritage. These rights arise not only where they are expressly granted by the Treaty, but also by reason of obligations which the Treaty imposes in a clearly defined way upon individuals as well as upon the Member States and upon the institutions of the Community.[135]

The *Van Gend en Loos* judgment established that certain Articles of the EC Treaty could have "direct effect". Over the years, the jurisprudence of the ECJ has established a number of tests for the creation of "direct effect"; to have such legal consequence, the EC provision:

(a) must be clear and unambiguous
(b) must be unconditional
(c) its operation must not be dependent on further action being taken by Community or Member State authorities to give it legal force (i.e. enactment in national law or some other measure of transposition).

Cases following the *Van Gend on Loos* ruling expanded the scope of the doctrine of "direct effect" to other types of provisions of EC law, such as Directives or EC Decisions. Thus, certain provisions in Directives (which set an objective to be achieved by Member States by a given deadline, while leaving them the discretion to decide how to do this under their national laws)[136] can be directly effective after the deadline has expired in the event a Member State has failed to comply.[137]

3. Application of the Doctrine of "Direct Effect" to the WTO Agreement

For the present purposes, therefore, the essential question is whether the 1947 GATT or the WTO Agreements are capable of "direct effect". It will be seen that the question appears to have been answered in the negative by recent judgments of the ECJ. However, it is settled EC law that an agreement's potential "direct effect" is gauged by an analysis of the provisions own terms, in the light of its aim and content.[138] As regards external trade agreements to which the EC is a party, the ECJ has granted direct effect to several provisions of bilateral agreements which were clearly designed to grant individual rights.[139] As regards the WTO Agreements, the jurisprudence of the ECJ now appears to

[135] ¶¶ 19, 20 and 24 of the Judgment.
[136] *See* Article 249 EC.
[137] *See*, *e.g.*,Case 148/78 *Pubblico Ministero v. Ratti* [1979] ECR 1629.
[138] *Van Gend en Loos* at ¶ 19.
[139] Examples of provisions which were found to have *no* direct effect are: Art. XI GATT (Joined Cases 21–24/72, *International Fruit Company NV. Produktschap voor Groenten en Fruit* (1972) ECR 1219); Art. II GATT (Case 9/73 *Schlüter v. Hauptzollamt Lörrach* [1973] ECR 1135); the GATT generally (Case C-280/93 *Germany v. Council* [1994] ECR 1–4973); Art. 12 EEC—Turkey Association Agreement and Art. 36 of the Additional Protocol thereto (Case 12/86, *Demirel v. Stadt Schwäbisch Gmûnd* (1987) EUR/3719 above); Lomé Convention provisions on right of establishment (Case 65/77 *Razanatsimba* [1997] ECR 2229); Art. v. GATT (Case 266/81 *SIOT v. Ministero delle Finanze* [1983] ECR 731); GATT Tariff Protocols (Joined Cases 267–269/81 *Amministrazione delle Finanze dello Stato v. SPI and SAMI* [1983] ECR 801). Provisions which *were* found to have direct effect include: Art. 2(1) Yaoundé Convention 1963 (Case 87/75 *Conceria Daniele Bresciani v. Amministrazione delle Finanze dello Stato* [1976] ECR 129); Art. 21(1) EEC—Portugal Free Trade Agreement (Case 104/81, *Hauptzollamt Mainz v. Kupferberg*); (1982) ECR 3641; Art. 6 EEC—Sweden Agreement (Case C-163/90 *Administration des Douanes et Droits Indirects v. Legros* [1992] ECR I-4625); Art. 18(1) EEC-Austria Free Trade Agreement (Case C-312/91 *Metalsa Srl v. Italy* [1993] ECR 3751); Art. 41(1) EEC-Morocco Cooperation Agreement (Case C-18/90 *Office National de l'Emploi v. Kziber* [1991] ECR I-199 and Case C-58/93 *Yousfi v. Belgium* [1994] ECR I-1353 and Case C-126/95 *Hallouzi-Choho v. Bestuur Van de Sociale Verzekeringsbank* [1996] ECR I-4807; Art. 39(1) EEC—Algeria Cooperation

preclude the possibility of direct effect, although in certain very specific circumstances, as will be discussed below, the matter is not yet settled.

It will be readily understood that whether or not a provision of an international agreement which binds the Community is capable of "direct effect" is a question of the highest constitutional and practical importance. By ruling on the question whether individuals can enforce the international agreements entered into on their behalf by their governments, the ECJ is determining the boundaries of Community law, international law and the limits of the powers of national governments or the Community to conduct their external relations.

4. Procedural Routes for Invoking the WTO Agreement in the EC Legal System

However, in order to place the discussion in its correct legal context, it is first necessary to explain the relevant remedial actions under Community law that feature in the jurisprudence.[140] First, a Member State may request the ECJ to review the legality of an act of any of the Community institutions.[141] The consequence of the ECJ finding the measure to be unlawful is that the measure is annulled. Secondly, private individuals may, where they can establish that the act is of "direct and individual concern" to them, seek the annulment of a Community measure by a direct action before the EC Court of First Instance under Article 230, which confers judicial review powers to the EC Courts on the grounds of "lack of competence, infringement of an essential procedural requirement, infringement of [the EC] Treaty or any rule of law relating to its application, or misuse of powers". Alternatively, under Article 232 EC, an action for failure to act can be brought by individuals where they must establish that the Community Institution they are challenging "has failed to address to that person any act other than a recommendation or opinion". In addition, under Article 288(2)EC an individual may sue the Community for non-contractual damages if an unlawful act of one of the Community Institutions has caused them loss.

An alternative route to direct action before the Community courts is to challenge the application of the EC obligation by the national authorities of Member States in domestic courts, raising constitutional EC issues relating to the lawfulness of the contested measure under EC law and the relevant international treaty provision. Under the EC system, such constitutional issues must be "referred" by the national court to the ECJ for an interpretative ruling: such rulings are binding on the referring national court and are the main source of challenges testing the "direct effectiveness" of Community acts as implemented by EC Member States.[142]

Agreement (Case C-103/94 *Krid*, (1995) ECR I-719) the EEC-Yugoslavia co-operation agreement of 1980: Case C-162/96 *Racke v. Hauptzollamt Mainz* (1998) ECR I-3655. The direct effectiveness of the Ankara Agreement between the EC and Turkey has been considered in Case 12/86 *Demirel* [1987] ER 3719; Case C-129/89 *Sevince* [1990] ECR I-3461 Case C-237/91 *Kus v. Landeshaupstadt Wiesbaden* [1993] 2 COMMON MARKET LAW REVIEW 887; Case C-355/93 *Eroglu v. Land Baden-Württemberg,* unreported [1994] ECR I-5113; Case C-434/93; *Boz Kurt v. Staatssecretaris Van Justitie* [1995] ECR I-1475; Case C-285/95 *Kol v. Land Berlin* [1997] 3 COMMON MARKET LAW REVIEW 1175; Case C-351/95 *Kadiman v. 5. The Status of GATT 1947 in the Community Legal Order—An Overview

The ECJ consistently refused to give direct effect to GATT 1947 or its supplementary Codes, except in two very limited circumstances.

The basic rule was laid down in *International Fruit*,[143] where the ECJ was asked to determine whether Community measures concerning the import of apples were invalid because of their inconsistency with Article XI of GATT 1947. The ECJ held that there was "great flexibility of provisions" in GATT 1947.[144] The ECJ particularly focused on negotiation and consultation in dispute settlement and the right of contracting parties to act unilaterally in cases of disagreement or economic difficulty. This lack of formalism and prevalence of political application in GATT 1947 led the ECJ to hold that the agreement was not intended to confer rights on individuals.[145] The operative parts of the ECJ's judgement are worth quoting in full since they were built on and expanded in later cases:

> It is also necessary to examine whether the provisions of the general agreement confer rights on citizens of the Community on which they can rely before the courts in contesting the validity of a Community measure.
>
> For this purpose, the spirit, the general scheme and the terms of the general agreement must be considered.
>
> This agreement which, according to its preamble, is based on the principle of negotiations undertaken on the basis of "reciprocal and mutually advantageous arrangements" is characterized by the great flexibility of its provisions, in particular those conferring the possibility of derogation, the measures to be taken when confronted with exceptional difficulties and the settlement of conflicts between the contracting parties.
>
> Consequently, according to the first paragraph of Article XXII, "each contracting party shall accord sympathetic consideration to, and shall afford adequate opportunity for consultation regarding, such representations as may be made by any other contracting party with respect to . . . all matters affecting the operation of this agreement".
>
> According to the second paragraph of the same Article, "the contracting parties"—this name designating "the contracting parties acting jointly" as stated in the first paragraph of Article XXV—"may consult with one or more contracting parties on any question to which a satisfactory solution cannot be found through the consultations provided under paragraph (1).
>
> If any contracting party should consider "that any benefit accruing to it directly or indirectly under this agreement is being nullified or impaired or that the attainment of any objective of the agreement is being impeded as a result of", inter alia, "the failure of another contracting party to carry out its obligations under this agreement", Article XXIII lays down in detail the measures which the parties concerned, or the contracting parties acting jointly, may or must take in regard to such a situation.
>
> Those measures include, for the settlement of conflicts, written recommendations or proposals which are to be "given sympathetic consideration", investigations possibly followed by recommendations, consultations between or Decisions of the contracting parties, including that of authorizing certain contracting parties to suspend the application to any others of any obligations or concessions under the general agreement and, finally, in the event of such suspension, the power of the party concerned to withdraw from that agreement.
>
> Finally, where by reason of an obligation assumed under the general agreement or of a concession relating to a benefit, some producers suffer or are threatened with serious damage, Article XIX gives a contracting party power unilaterally to suspend the obligation and to withdraw or modify the concession, either after consulting the contracting parties

[145] *Id.* at ¶¶ 19–27.

> jointly and failing agreement between the contracting parties concerned, or even, if the matter is urgent and on a temporary basis, without prior consultation.
>
> Those factors are sufficient to show that, when examined in such a context, Article XI of the General Agreement is not capable of conferring on citizens of the Community rights which they can invoke before the courts.[146]

The *International Fruit* judgment closed the door to individuals invoking the direct effect of the 1947 GATT in actions before EC courts or the national courts of Member States. However, while direct effect was thus denied to the 1947 GATT, this did not mean that it had no force in the judicial examination of Community law or measures. There were two aspects to this.

First, the ECJ ruled that the lack of GATT direct effect "in no way affects the Community's obligation to ensure that the provisions of the GATT are observed in its relations with non-Member States which are parties to the GATT."[147]

The second exception to this rule applied where the Community intended to implement a particular obligation assumed in the context of GATT 1947, or where the Community measure referred expressly to the precise provisions of GATT 1947.[148] In *FEDIOL*,[149] the applicants challenged a Commission decision to reject their complaint against Argentina under Regulation 2641/84, the so-called "New Commercial Policy Instrument"[150] (the precursor to the Trade Barriers Regulation discussed below). This Regulation allowed the Commission to scrutinize third country trade practices which were "incompatible with international law or with the generally accepted rules". Since the Regulation envisaged individuals relying on GATT 1947 to challenge those trade practices, the ECJ held that the applicants could request it to review the Commission's decision by reference to GATT 1947. In *Nakajima*,[151] the ECJ held that the applicants were entitled to invoke the GATT 1947 Anti-Dumping Code when challenging the Community's anti-dumping regulation. This was because the regulation expressly stated its intention to implement Article VI of the Code.

Subsequently, it delivered a similar ruling as regards actions by Member States challenging Community measures on the grounds of alleged incompatibility with the 1947 GATT. In *Germany v. Council,*[152] the ECJ was faced with a challenge brought by a Member State based on the 1947 GATT where Germany, attacking the Community's banana import regime had argued that compliance with GATT rules was a condition of the lawfulness of Community acts, regardless of whether the GATT was capable of direct effect. This argument was considerably strengthened by the fact that a GATT Panel had advised that the Community's banana import regime was inconsistent with the 1947 GATT. Germany's argument in the *Bananas* case has a certain compelling logic. Article 230 provides that the ECJ may review the lawfulness of Community acts, since these constitute "acts of the institutions of the Community" and are therefore subject to the

[146] Case C-280/93 *Germany v. Council* [1993] ECR I-4973 where Germany, attacking the Community's banana import regime had argued that compliance with GATT rules was a condition of the lawfulness of Community acts, regardless of whether the GATT was capable of direct effect. This argument was considerably strengthened by the fact that a GATT Panel had advised that the Community's banana import regime was inconsistent with the 1947 GATT: *see EEC—Import Regime for Bananas*, Report of the Panel (DS27/R, May 22, 1997).

[152] *See* note 146.

jurisdiction of the ECJ under Article 234 EC.[153] Article 230 also confers on the ECJ power to review such "acts" on the grounds of infringements of the Treaty, "or of any rule of law relating to its application". Since the ECJ had consistently stressed the obligation on the Community to fulfil its international obligations, including the GATT,[154] it would not be stretching EC constitutional interpretation too far to treat the GATT and any other international agreement which is binding on the Community as a "rule of law relating to [the Treaty's] application", since all acts of the Community Institutions are based on powers granted by the Treaty.

The Commission countered the arguments submitted by Germany by questioning whether, in the light of the GATT's general scheme, spirit and terms, the GATT could be subject to "direct effect". It stressed that the GATT was enforced through diplomatic negotiations rather than legal procedures, without at its basis, a set of legal rights and obligations. Accordingly, it would be inappropriate for the ECJ to find direct effect in a GATT provision: first, in principle, the GATT was not susceptible to direct effect and, second, any finding by the ECJ of direct effect in the GATT would undermine the negotiating freedom which Member States or the Commission needed in the conduct of GATT-related external relations.

The ECJ dealt with the case by merely restating its ruling in *International Fruit*. Since the 1947 GATT was not capable of "direct effect", it followed that this precluded an action under Article 230 by a Member State for the same reason.[155] However, it will be noted that the Commission's more political view of the need to avoid direct effect for the GATT, on the grounds that to do so would curtail the Community's negotiating position, adumbrated the ECJ's later reasoning denying "direct effect" to the WTO Agreements as well.[156]

6. Is the WTO Agreement Capable of Direct Effect?

(a) The Opinions of the Advocates-General[157]. In several cases brought after the conclusion of the WTO Agreement, the question of direct effect was discussed by the Advocate-Generals advising in the cases. However, the ECJ effectively discarded their reasoning in the body of its judgments.

In *Affish v Rijksdienst*,[158] the ECJ was referred questions by a Dutch national court testing the validity of a Commission fish conservation measure in the light of the SPS Agreement. AG Cosmas applied the rule in *International Fruit* to the WTO Agreement and in particular the SPS Agreement. He stated that the flexibility of the provisions in the WTO Agreement and the lack of clear, unconditional rules in the SPS Agreement

[153] An interpretation of Article 234 which has rightly been described as "an apparently literal reading" of the text of that Article, *see* I. Cheyne, *Haegeman, Demirel and their Progeny*, in THE GENERAL LAW OF EC EXTERNAL RELATIONS 29 (A. Dashwood and C. Hillion eds., 2000).

[154] *See, e.g.*, Case 104/81 *Kupferberg* [1982] ECR 3641, ¶ 11; Case 266/81 *SIOT* [1983] ECR 731, ¶ 28; Case 142/88 *Hoesch AG v. Bergrohr GmbH* [1989] ECR 3413, ¶ 30; and Case 312/91 *Metalsa* [1994] LCMLR 121.

[155] ¶ 109 of the Judgment.

[156] *See infra* section F2.

[157] The Advocate Generals of the ECJ resemble the "commissaire du gouvernement" in the French Conseil d'Etat and have no equivalent in Anglo-Saxon judicial systems. They assist the Judges of the Court by presenting reasoned opinions on the issues of law and fact before them. Their opinions review the facts and legal issues in the case, presenting an influential but personal view. *See* Article 222 (former Article 166) of the EC Treaty and Chapter 4 of L.N. BROWN AND T. KENNEDY, BROWN & JACOBS: THE COURT OF JUSTICE OF THE EUROPEAN COMMUNITIES (5th ed., 2000).

[158] Case C-183/95 *Affish v. Rijksdienst voor de Keuring van Vee en Vlees* [1997] ECR I-4315.

prohibited their direct effect.[159] The ECJ, however, noted that the national court which had made the Article 234 Reference to it had not asked the ECJ to consider the contested measures in the light of the SPS Agreements. Consequently, the ECJ declared that there was no need for it to rule on the issue.[160]

In *T Port v Hauptzollant*,[161] the ECJ was referred questions by a German national court testing issues relating to the timing of the application of WTO rules. AG Elmer was of the view that the ECJ should continue to apply its GATT 1947 reasoning to the WTO Agreement, but he gave no detailed reasons for this conclusion.[162] However the ECJ was able once again to avoid ruling on this issue since it held that the nature of the issues in the case[163] did not make it possible for GATT 1947 or GATT 1994 to be invoked.

Finally, in *Hermes International*,[164] the ECJ was referred questions by a Dutch court concerning the adequacy of the Netherlands' implementation of the procedural rules of Article 50 of TRIPS concerning provisional protective measures. AG Tesauro indicated that there was nothing in principle to prevent the direct effect of the WTO Agreement, given that other agreements with flexible dispute settlement regimes had been given direct effect.[165] However, AG Tesauro sounded a note of caution by recognizing that the WTO Agreement had not been given reciprocal effect by the Community's major trading partners.[166] In the Advocate General's view, it would be more correct to "line recognition of direct effect with the principle of reciprocity in the implementation of the agreement", rather than to "repeat formulas that were perfectly acceptable in the context of GATT 1947 but are no longer relevant in the context of the WTO Agreement, and would merely lend weight to the already wide spread view that this is a political not a legal solution."[167]

In its judgment, the ECJ stressed that, although EC legislation must be interpreted consistently with the TRIPS agreement,[168] it was not being required to rule on direct effect by the reference from the national court. Rather, it was being asked to assist the national referring court in the interpretation of TRIPS procedural rules and expressly declined to address the issue of direct effect from the outset.[169] However, as will be seen

[159] *Id.* ¶¶ 119–126.
[160] *Id.* ¶ 28.
[161] Cases 364–365/95 [1998] ECR I-1023 *T Port GmbH v. Hauptzollamt Hamburg-Jonas* [1998] ECR I-1023.
[162] *Id.* at ¶¶ 27–29.
[163] The central issue in the case concerned the status of Ecuador as regards whom Germany allegedly owed international legal obligations. However Ecuador had not been a Contracting Party to the 1947 GATT and did not become a WTO Member until after the date of the contested EC measure.

[165] *Id.* ¶¶ 27–30.
[166] It would appear that Japanese law precludes the judicial enforceability of the WTO Agreements: *see* Y. Iwasawa, *Constitutional Problems Involved in Implementing the Uruguay Round in Japan*, in IMPLEMENTING THE URUGUAY ROUND 136 (Jackson and Sykes, eds.,1997). In the United States, their direct applicability is expressly precluded by the U.S. Uruguay Round Agreements Act, Section 102(a) and (b)(2). For a recent survey of the situation in the U.S., *see* Simon N. Lester, *WTO Panel and the Appellate Body Interpretations of the WTO Agreements in U.S. Law*, 35(3) JOURNAL OF WORLD TRADE 521 (2001). In Canada, the judicial enforceability of the WTO Agreements would also appear to be excluded by that country's dualist approach to international law: *see* D.P. Steger, 'Canadian Implementation of the Agreement Establishing the World Trade Organization', in JACKSON AND SYKES, *supra* at 242 and especially at 261–2. For a useful broad survey WTO's members' treatment of justiciability in their domestic laws (covering the US, EC as well as Asia, African, Latin-American WTO Members) *see*: Xin Zhang, *supra* note 129.
[167] *Id.* at ¶ 35.
[168] *Id.* ¶ 28.
[169] *Id.* ¶ 35.

below, the issue of reciprocity was later adopted by the ECJ as the touchstone of direct effect in *Portugal v Council*. It is to that case that discussion will now turn.

(b) Portugal v Council

(i) The Case *Portugal v Council* concerned an application by Portugal for the annulment of Council Decision 96/386/EC of February 26, 1996 concerning the conclusion of Memoranda of Understanding between the European Community and the Islamic Republic of Pakistan and between the European Community and the Republic of India on arrangements in the area of market access for textile products.[170] The application was brought under Article 230 EC, which permits Member States to request the ECJ to review the legality of acts of the Council.

Following the closure of the Uruguay Round negotiations, the Commission pursued negotiations on market access for textile and clothing products with, amongst other countries, India and Pakistan. These negotiations continued following the signing of the WTO Agreement by the Community. On October 15, and December 31, 1994 the Commission, and India and Pakistan respectively, signed two Memoranda of Understanding between the Community and India and Pakistan on arrangements in the area of market access for textile products. On a proposal from the Commission of 7 December 1995, the Council adopted on February 26, 1996 the contested Decision which was approved by a qualified majority. Spain, Greece and Portugal voted against it. The Memoranda of Understanding with India and Pakistan were signed on March 8 and 27, 1996 respectively.

Portugal claimed that the contested Decision constituted a breach of GATT 1994, the Agreement on Textiles and Clothing and the Agreement on Import Licensing Procedures. Portugal therefore had to establish that it was entitled to rely on those rules and fundamental principles before the ECJ. Thus, the issue was whether the WTO Agreement created rights capable of being enforced by Member States against Community institutions.[171]

(ii) The Judgment of the ECJ First, the ECJ construed the WTO Agreement to determine whether it laid down the legal effect it was to have in national legal systems.

In doing so, the ECJ found that the WTO Agreement differs significantly from the provisions of GATT 1947, in particular by reason of the strengthening of the system of safeguards and the mechanism for resolving disputes. However, it nevertheless maintained that the WTO system still "accords considerable importance to negotiation between the parties."[172] This conclusion was based on an analysis of the DSU as follows:

> Although the main purpose of the mechanism for resolving disputes is in principle, according to Article 3 (7) of the Understanding on Rules & Procedures Governing Settlement of Disputes (Annex 2 to the WTO), to secure the withdrawal of the measures in question if

[170] OJ 1996 L 153/47. *See, e.g.*, G.A. Desmedt, *European Court of Justice on the Effect of WTO Agreements in the EC Legal Order*, 27(1) LEGAL ISSUES OF EUROPEAN INTEGRATION 93 (2000); Stefan Griller, *Judicial Enforceability of WTO Law in the European Union: Annotation to Case C-149/96, Portugal v. Council* 3 JOURNAL OF INTERNATIONAL ECONOMIC LAW 441 (3–2000); Allan Rosas, *Case C-149/96, Portugal v. Council. Judgment of the Full Court of 23 November 1999*, 37(3) COMMON MARKET LAW REVIEW 797 (2000); G.A. Zonnekeyn, *The Status of WTO Law in the Community Legal Order: Some Comments in the Light of the Portuguese Textiles Case*, 25(3) EUROPEAN LAW REVIEW 293 (2000).

[171] It should be noted that A.G. Saggio concluded in *Portugal v. Council* that the WTO Agreement did have direct effect in the Community legal order, but that the Council had not breached its provisions on the facts of the case (opinion of February 25, 1999).

[172] *Portugal v. Council, supra* note 131, ¶ 36.

> they are found to be inconsistent for the WTO rules, that understanding provides that where the immediate withdrawal of the measures is impracticable compensation may be granted on an interim basis pending the withdrawal of the inconsistent measure.
>
> According to Article 22(1) of that Understanding, compensation is a temporary measure available in the event that the recommendations and rulings of the dispute settlement body provided for in Article 2(1) of that Understanding are not implemented within a reasonable period of time, and Article 22(1) shows a preference for full implementation of a recommendation to bring a measure into conformity with the WTO agreements in question.
>
> However, Article 22(2) provides that if the member concerned fails to fulfil its obligation to implement the said recommendations and rulings within a reasonable period of time, it is, if so requested, and on the expiry of a reasonable period at the latest, to enter into negotiations with any party having invoked the dispute settlement procedures, with a view to finding mutually acceptable compensation.[173]

Consequently, the ECJ held that the WTO Agreement did not specify the legal effect it should have in national legal systems. This, the ECJ surmised, was because direct effect and its remedy of disapplication of WTO-inconsistent measures would have the consequence of depriving WTO Members' political institutions of the opportunity of entering into negotiating arrangements under Article 22 of the DSU either for compensation or in relation to retaliatory suspension of concessions.[174] Thus, the ECJ was free to determine whether the WTO Agreement should have direct effect in the Community legal system.

As regards this question, the ECJ stressed that the WTO Agreement, according to its preamble, is still founded (like GATT 1947) on the principle of negotiations with a view to entering into "reciprocal and mutually advantageous arrangements".[175] This emphasis on reciprocity and mutuality was in contrast to "agreements concluded between the Community and non-member countries which introduce a certain asymmetry of obligations, or create special relations of integration with the Community" which had previously been given direct effect.[176]

Finally, the ECJ considered the issue of reciprocity. As some of the Community's major trading partners (i.e., the United States, Japan and Canada) had denied direct effect to the WTO Agreement in their legal systems,[177] the granting of direct effect by the Community could lead to the non-uniform application of WTO rules.[178] The ECJ's underlying policy is apparent as it was also particularly conscious that the lack of judicial control in the legal systems of those trading partners gave their representatives "scope for maneuver" in WTO negotiations. The effect of judicial control in the Community could deny its institutions an equivalent scope for maneuver, and they would thus be disadvantaged in implementation discussions.[179]

The Court therefore concluded:

> It follows from all of these considerations that, having regard to their nature and structure, the WTO Agreements are not in principle among the rules in the light of which the Court is to review the legality of measures adopted by the Community institutions.

> That interpretation corresponds, moreover, to what is stated in the final recital in the Preamble to Decision 94/800,[180] according to which by its nature, the Agreement establishing the World Trade Organization, including the Annexes thereto, is not susceptible to being directly invoked in Community or Member State Courts.[181] (Recital II)

The ECJ then transposed the two exceptions to the non-justiciability of GATT 1947 commitments, that is the rules in *FEDIOL* and *Nakajima*, without significant analysis into the context of the WTO. Accordingly, the ECJ considered whether through Decision 96/386/EC the Community intended to implement a particular obligation assumed in the context of the WTO, or whether the Decision referred expressly to the precise provisions of the WTO Agreement.[182]

The ECJ concluded that the impugned Decision was not within those exceptions given that its purpose was merely to approve the Memoranda of Understanding negotiated by the Community with Pakistan and India.[183]

(c) The Consequences of Portugal v Council—Denial of Direct Effect for Private Parties but "Indirect" Remedies Continue to be Available

(i) Introduction Although the ECJ's ruling in *Portugal v Council* (and the cases which followed it) closed the door to the possibility of direct effect for the WTO Agreements, attempts to invoke the WTO Agreement "indirectly" were tried in two ways:

(a) suits for damages against Community Institutions;
(b) invoking the doctrine of WTO consistent interpretation of Community law.

[180] The effect of the Council's Decision of December 22, 1994 "concerning the conclusion on behalf of the European Community, as regards matters within its competence, of the agreements reached in the Uruguay Round multilateral negotiations" (Decision 94/800/EC in OJ 1994 L 336/1) has generated considerable controversy: *see* P. Ruttley "The Effect of the WTO Agreements in EC Law" in THE WTO AND INTERNATIONAL TRADE REGULATION 144 (Ruttley, MacVay and George eds., 1998). That Council decision purported unilaterally to exclude the justiciability of the WTO Agreements within the Community with the following declaration: "*. . . by its nature, the Agreement establishing the World Trade Organization, including the Annexes thereto, is not susceptible to being directly invoked in Community or Member State Courts"* (Recital 11). In its Explanatory Notes to the draft Council Decision, the Commission stated that the rationale for this declaration was as follows: "it is important for the WTO Agreement and its annexes not to have direct effect, that is whereby private individuals who are natural or legal persons could invoke it under national law. It is already known that the United States and many other of our trading partners will explicitly rule out any such direct effect. Without express stipulation of such exclusion in the Community instrument of adoption, a major imbalance would arise in the actual management of the obligations of the Community and other countries" (Doc Com (94) 143 final). However, it should be noted that if the Community had wished to declare its views on the legal effect of an external agreement, it would be normal practice for it to do so at the time of the conclusion of the negotiations of the relevant agreement; the Community failed to do this and had been criticised for this omission (*see* P.J. Kuijper "The Conclusion and Implementation of the Uruguay Round Results by the European Community" 6 EUROPEAN JOURNAL OF INTERNATIONAL LAW 222, 236 (1995). The Council's declaration remains, it is submitted, a unilateral act and one which cannot *ex post facto* alter the legal character of its actions, such as concluding the Marrakech agreements, since only the ECJ is competent to decide the nature of such effects: *see* Case 104/81 *Hauptzollamt Mainz v. Kupferberg* (1982) ECR 3641. However, it should be noted that the Council's declaration was particularly influential in persuading national courts to deny direct effect to the TRIPS in two early UK court cases both decided before the *Portugal v. Council* judgment: see *R v. the Controller of Patents, Designs and Trademarks* ex parte *Lenzing AG* (Jacob J.) (1997) Reports of Patents Cases 245, and *Azrak-Hamway International Inc's Licence of Right (Design Right and Copyright) Application* (1997) RPC 134 (Dennehey J.).

[181] *Id.* ¶ 47.

[182] *Portugal v. Council, supra* note, ¶ 49.

[183] *Id.* ¶ 50.

These two routes will now be considered in turn. At the time of finalizing the text of this chapter[184], new possibilities of allowing limited means of bringing actions for damages against Community Institutions for alleged failure to implement WTO law have been opened up by the Advocate General's opinion in the *Biret* case. While it is considered unlikely that the European Court of Justice will follow AG Alber's reasoning, the opinion is dealt with separately below.

(iii) The Possibility of Community Financial Liability for WTO Breaches Although the ECJ's judgment in *Portugal v Council* reveals an understanding of the political and legal reality of DSU implementation, the ECJ did not consider the impact of its ruling on private industry. Despite the ECJ's emphasis on preserving the Community's ability to offer compensation for infringements under Article 22 of the DSU, dispute settlement practice within the WTO shows that no WTO Member has ever had an offer of compensation accepted in implementation proceedings. Instead, the inevitable consequence of the European Community's, failure to implement recommendations and rulings of Panels or of the Appellate Body to the satisfaction of its opponents has been retaliation by the complaining WTO Member.[185] Thus, although the Community is advantaged on a "macro" level by the maintenance of its infringing measures, private industries have paid for this advantage "on the ground" by suffering severe increases in their export costs or having their minimum rights under the WTO Agreement suspended.

Consequently, private industries that have been caught in the crossfire of disputes between the Community and other WTO members have sought to hold the Community responsible for their consequential loss and damage. Article 288 EC provides the basis for Community "non-contractual" or tortious liability:

> In the case of a non-contractual liability, the Community shall, in accordance with the general principles common to the laws of the Member States, make good any damage caused by its institutions or by its servants in the performance of their duties.

The ECJ has jurisdiction to deal with such disputes under Article 235. The exercise of this right has, in practice, been restrictively interpreted by the ECJ,[186] but is available to repair economic harm resulting from unlawful Community acts.

The question in this area, therefore, is whether private parties can rely on the provisions of the WTO Agreement in actions for non-contractual damages against the Community and its institutions, pursuant to Article 288(2) EC. The European Court of First Instance (CFI) has recently considered this issue in three cases: *Cordis v Commission*,[187] *Bocchi Food Trade International v Commission*[188] and *T. Port v Commission*.[189] The judgments contain duplicate wording on the issue of direct effect. In all three cases, the applicants

[188] Case T-30/99 *Bocchi Food Trade International GmbH v. Commission of the European Communities* [2001 ECR II-943 (hereinafter "*Bocchi*").

[189] Case T-52/99 *T Port GmbH & Co KG v. Commission of the European Communities* [2001] ECR II-981 (hereinafter "*T Port*").

were wholesale fruit traders who claimed that they had suffered loss as a result of the adoption by the Commission of Regulation (EC) No 2362/98 of October 28, 1998 which laid down detailed rules for the implementation of Council Regulation (EEC) No 404/93 regarding imports of bananas into the Community.[190] Regulation No 2362/98 had been adopted following the condemnation of the Community import arrangements for bananas in European Communities—Regime for the Importation, Sale and Distribution of Bananas[191] (*EC—Bananas*). Put succinctly, the detailed rules of Regulation No 2362/98 had the effect of reducing the applicants' provisional quotas for the import of bananas into the Community. The applicants therefore attempted to recover the monetary value of that trading loss from the Commission in actions for damages.

A further nine cases were subsequently lodged by undertakings claiming to have suffered economic loss as a result of U.S. retaliation against the EC, each suing the Commission, Council and European Parliaments (depending on the nature of the EC legal instrument being challenged) with claims for monetary compensation under Article 288(2) EC (formerly Article 215(2) EC). These cases are *Fiam*;[192] *Le Laboratoire du Bain*;[193] *Biret*;[194] *Cartonbruck*;[195] *de Solène*;[196] *Fremaux*;[197] *Beamglow*;[198] and *Fedon*.[199]

Of these only the two *Biret* cases have so far come to judgment before the Court of First Instance, which dismissed the application on grounds of lack of direct effect of WTO law following *Portugal v. Council*.[200] The CFI's rulings are currently under appeal before the European Court of Justice.[201] The Advocate General in these joined cases has very recently issued an advisory opinion which, to the extent it proposes a basis for permitting actions for damages against Community Institutions following alleged failures to implement WTO obligations is dealt with separately below.

In these complex cases, the applicants attempted to establish their *locus standi* to invoke WTO law in a variety of unsuccessful but instructive ways:

(A) a straightforward claim for damages under Article 288(c) for alleged breaches of WTO law;
(B) a restatement of (a) above but on the grounds that the breach of WTO law was, in reality, a breach of EC law, the WTO obligation having been transposed into EC law; and
(C) a claim that the ECJ had jurisdiction to rule whether the EC could regulate in a manner allegedly contrary to WTO obligations.

[201] Case C-93/02 P and C-94/02 P*Biret International SA and Etablissements Biret et Cie v. Council*.

Each of these three arguments will now be examined in turn.

(A) The straightforward claim for damages for breach of WTO law

The applicants all alleged that despite the Community's response to *EC—Bananas*, Regulation No 2362/98 was still in conflict with GATT 1994, GATS and the Agreement on Import Licensing Procedures. However, after pleadings had closed, the ECJ delivered its judgment in *Portugal v Council*, where it held that:

> [H]aving regard to their nature and structure, the WTO agreements are not in principle among the rules in the light of which the Court is to review the legality of measures adopted by the Community institutions.[202]

Portugal v Council was therefore clear authority for the proposition that Member States could not rely on the provisions of the WTO Agreement to challenge the legality of Community measures. It is submitted that it must have followed, *a fortiori*, that the WTO Agreement could have no direct effect for individuals either.[203] Indeed, the applicants all conceded in additional observations to the CFI that WTO provisions did not have "general direct effect" within the Community legal system.[204]

(B) The Restatement of the Damages Claim as an Action for Breach of EC Law

However, the applicants then attempted to re-frame their arguments as complaints that the Community institutions, by adopting Regulation No 2362/98, were guilty of "misuse of powers" as a matter of Community law. More specifically, the applicants argued that because the Community arrangements for banana imports had been declared incompatible with WTO rules in the adopted panel and Appellate Body reports,[205] and that the Community had undertaken to rectify the infringements concerned, the Community was then precluded as a matter of Community law from adopting further provisions in breach of those rules. The Commission, they claimed, had deliberately infringed WTO rules in order to achieve the organization of the banana market and had therefore misused its powers.[206]

The practical consequences of this argument were obvious. The issue of direct effect would become irrelevant if it could be shown that the adoption of a measure infringing WTO rules was a "misuse of power". The focus of judicial attention would no longer be on whether WTO rules were precise and unconditional enough to be given direct effect: instead, they would be directed towards the content of the contested "act" and "subjective" intentions of the Community, when adopting this "act", in the light of its international obligations.

The CFI, no doubt conscious of the fact that the "misuse of power" argument thus had the effect of undermining the ECJ's ruling in *Portugal v Council*, denied the applicant any relief based on the WTO Agreement.

First, the CFI (noting the applicants' concessions) applied *Portugal v Council* and held that WTO rules are not in principle intended to confer rights on individuals, and that

[203] *See* Nicholas J. Forwood, *The Status of WTO Law in the Community Legal Order* (Paper presented at the 4th Annual Conference of the World Trade Law Association, London, November 10, 2000) at 10.

[204] *Cordis supra* note 187, ¶ 33; *Bocchi supra* note, ¶ 38; *T Port supra* note 189, ¶ 33.

[205] *See supra* note 28.

[206] *Cordis supra* note 187, ¶¶ 31–37; *Bocchi supra* note 188, ¶¶ 36–42; *T Port supra* note 189, ¶¶ 31–37.

consequently the Community cannot incur non-contractual liability under Article 288(2) as a result of their infringement.[207]

In relation to the alternative "misuse of power" submissions, the CFI determined that an act of a Community institution is vitiated by misuse of powers only if it was adopted "with the exclusive or main purpose of achieving an end other than that stated".[208] Further, it held that a finding of misuse of powers may only be made on the basis of "objective, relevant and consistent evidence".[209] The applicants' submission that the Commission had adopted Regulation No 2362/98 "to achieve its ends, namely the organization of the market in bananas",[210] was thus fatal to their claims. Without identifying or proving an ulterior aim behind the legitimate objective stated in the Regulation, i.e. the detailed implementation of Regulation No 404/93 as amended, their claim of misuse of powers could not be substantiated.[211]

In addition, the CFI stressed that the applicants' reliance on misuse of powers to challenge the substance of Regulation 2362/98 for breach of WTO rules was ill-conceived. Misuse of powers, according to the CFI, involves the Community Courts reviewing the "purpose of a measure and not its content".[212] This would seem to have closed the door for further applications for damages pursuant to Article 288 EC.

The Biret *case: a Coda*

However, a series of actions were brought before the Court of First Instance in 2000 by EC undertakings which allegedly suffered economic loss as a result of U.S. retaliatory measures against the EC in the Banana dispute. Most of them are still pending but one, *Biret,*[213] has now reached the European Court of Justice (on appeal) where Advocate-General Alber's advisory opinion of May 15, 2003 has reopened the controversy.

It is not possible to predict whether the Judges of the European Court of Justice will follow AG Alber's reasoning: ECJ Judges often follow an Advocate-General's opinion but in a controversial case such as this, with its wide systemic implications, it is submitted that the probability of this happening is low. However, AG Alber's reasoning is novel and presents a new approach to the issue of monetary compensation for breaches of WTO law by Community Institutions. Moreover, his approach would also have similar implications for the liability of EC Member States.

Biret, a French food trading company (particularly in meat), alleged that it had suffered damage as a result of the EC's continuing ban on the import into the EC of beef treated with certain hormones. However, the relevant EC measures effecting the ban was declared WTO inconsistent in February 1998,[214] and the "reasonable period" for implementation of the ruling expired on May 13, 1999. The Commission presented a draft Directive

adoption to the EC Council on May 24, 2000, but no further action was taken by the EC. *Biret* brought two actions for damages the Council under Article 288(2) EC (formerly 215(2) EC) before the EC Court of First Instance,[215] but these were dismissed by the CFI applying the case-law of the ECJ since *Portugal v. Council*. The CFI also ruled that the applications did not fall under the Nakajima or FEDIOL exceptions which allow judicial review of Community acts and legislative measures purporting to implement WTO obligations.[216]

Biret appealed to the European Court of Justice.[217] In his Advisory opinion of May 15, 2003, AG Alber advised the ECJ to allow the claim for damages. First, this was not a situation where it was essential to preserve the negotiating maneuver of Community negotiators in the WTO: the EC's obligations following the DSB's adoption of the Appellate Body's report and the expiry of the "reasonable period" for implementation became absolute. No further negotiations of the primary obligation can occur and the DSB's decision must be unconditionally implemented only the *manner* of implementation remains within the EC's discretion. It follows that the failure on the part of the Council to act amounts to a failure to implement Community law (since international treaties to which the EC has adhered become provisions to which the Community Institutions must adhere). The recognition of a right to obtain damages in appropriate circumstances for failure to fulfil obligations having been established in a long line of cases,[218] and the liability of the Council was similarly established in the present case. Moreover, AG Alber suggested that EC law recognized a fundamental right to freedom of economic activity: it was therefore unfair to deny a citizen damages where the Community legislature, through its inaction, had restricted the enjoyment of this right for a period of four years from the expiry of the "reasonable period".

AG Alber concluded that WTO law is directly applicable where the incompatibility of a Community measure with WTO law has been found in DSB recommendations or decisions and the Community has failed to implement the recommendations or decisions within the "reasonable period" of time allowed. In addition, he examined whether the purpose of the WTO rules was to protect the individual. He emphasized that, in States organized on market economy principles, trade is primarily conducted by private individuals and, consequently, restrictions of trade have an effect on the scope of their freedom of economic activity. It was therefore clear from EC case-law that the fact that a legal rule is for the protection of general interests (in the instant case, the liberalization of world trade) did not rule out the possibility that it is also for the protection of individuals. The Council had therefore infringed a rule of Community law, on which an individual could rely.

AG Alber's advisory opinion raises the prospects of a new strand of exceptions to the rule against direct applicability of WTO law. It is submitted that it is consistent both with the underlying principles of the ECJ's ruling in *Portugal v. Council* (in that it would preserve the room for maneuver of Community WTO negotiators) and also consistent with EC precedents establishing a right to monetary compensation where legislative inaction by the Community Institutions or EC Member States have caused damage.

[215] Case T-174/00 and Case T-210/00 cited *Supra* in note 201.

[218] See for example Case C-6/90 *Francovich and Bonifaci v. Italy* (1991) ECR I-5357.

(C) The Alleged Inability of the EC to Legislate in a Manner Arguably Contrary to WTO Obligations

The CFI also rejected the argument that the Community was precluded from adopting a regulation which infringed (or continued to infringe) WTO rules, when the Community had previously undertaken to comply with those rules.[219] It ruled that, in effect, the applicants were attempting to bring the adopted WTO Panel and Appellate Body reports within the *Nakajima*[220] and *FEDIOL*[221] exceptions to the non-justifiability of the GATT/WTO which had been identified in *Portugal v Council*. That is to say, the ECJ and CFI can review the legality of Community measures in the light of WTO rules only where:[222]

(a) The Community intends to implement a *particular obligation* assumed in the context of the WTO; or
(b) The Community measure refers expressly to the precise provisions of the agreements contained in the annexes to the WTO Agreement.

The CFI refused to apply the exceptions to the adopted reports, as they did not include any "special obligations" which the Commission intended to implement within the meaning of *Nakajima*. Nor did they come within *FEDIOL*, as they did not "make express reference either to any specific obligations arising out of the reports of WTO bodies, or to specific provisions of the agreements contained in the annexes to the WTO Agreement."[223]

Consequently, the CFI ruled in each case that:

> The applicant cannot therefore base its action on an alleged infringement of certain agreements contained in Annex 1 to the WTO Agreement in this case or on an alleged misuse of powers.[224]

(b) Further Application of Portugal v Council: Denial of Direct Effect to the TRIPS, GATT 1994 and TBT Agreements. The reasoning in *Portugal v Council* has also been applied by the ECJ to deny direct effect to the TRIPS agreement in *Dior and Others*,[225] to the GATT 1994 in *OGT*[226] and (per Advocate-General Alber) to the TBT.[227] In *OGT*, the ECJ also confirmed the limited scope of the *Nakajima* and *FEDIOL* exceptions, where it held that, even though the contested Community measure had been condemned by an Article 21.5 DSU panel in *EC-Bananas,* expressly stating that "the Community's international commitments under the World Trade Organisation (WTO) . . . should be met", such a ruling did not grant direct effect to the applicable GATT provision and a challenge could

not be brought against the WTO-inconsistent Community measure[228] under the *FEDIOL* or *Nakajima* exceptions. The ECJ ruled that it was not designed to ensure implementation in the Community legal order of a particular obligation assumed in the context of GATT 1994, nor did it refer expressly to specific provisions of GATT 1994.[229]

Further, in *OGT* it was argued that the first paragraph of Article 307 EC applied to GATT 1994. The first paragraph of Article 307 EC reads:

> The rights and obligations arising from agreements concluded before 1 January 1958 or, for acceding States, before the date of their accession, between one or more Member States on the one hand, and one or more third countries on the other, shall not be affected by the provisions of this Treaty.

In this context, the ECJ was prepared to assume[230] that GATT 1994 was an agreement within the paragraph. However, it correctly stated that GATT 1994 is legally distinct from GATT 1947 under Article II:4 of the WTO Agreement and that it differs significantly from GATT 1947 as part of the overall WTO regime. Moreover, GATT 1994 was concluded by the Community and not by the Member States.[231]

Even under this assumption, the ECJ referred to its previous case law in *Buroga*,[232] where it held that agreements to which Article 307 EC applies do not become part of Community law, and no new rights are created under them for individuals or economic operators. If a national of a Member State could not claim rights under the agreement before the EC Treaty entered into force for the Member State, he cannot derive any such rights by virtue of Article 307 EC.[233] The ECJ did not expressly apply *Buroga* in detail to the case, being content simply to repeat its essential findings. Nevertheless, one can interpret the ECJ's implicit reasoning to be that since GATT 1994 was not directly effective, Article 307 EC could not alter its legal effect.[234]

B. The Duty of WTO Consistent Interpretation of EC Legislation and Measures

The denial of direct effect to the WTO Agreements and the closure of any prospect to recover damages for alleged breaches of WTO law came as a disappointment to many, particularly those concerned with the transparency and accessibility of the new WTO system.

[228] Council Regulation (EC) No. 1637/98 of July 20, 1998 amending Regulation (EEC) No. 404/93 on the common organization of the market in bananas (OJ 1998 L 210 at 28), preamble, ¶ 2.

[229] *OGT supra* note 226, at ¶ 28.

[230] *Id.* at ¶ 29.

[231] *See Opinion 1/94 supra* note 25. In this context, it is also difficult to see how *OGT* could successfully argue that GATT 1947 could be given direct effect without undermining the ECJ's existing case-law, which consistently denied individuals and Member States the general right to rely on its provisions. *See . The Status of GATT 1947 in the Community Legal Order—An* Overview, *supra* section IX(E).

[232] Case 812/79 *Attorney General v. Buroga* [1980] ECR 2787.

[233] MACLEOD, HENDRY AND HYETT, THE EXTERNAL RELATIONS OF THE EUROPEAN COMMUNITIES 229 (1996).

[234] The analysis of Article 307 EC in *OGT* has been taken further in Case T-52/99 *T Port GmbH & Co KG v. Council of the European Communities* (2001) ECR I-2093 (hereinafter *T Port II*) and Case T-3/99 *Bananatrading GmbH v. Council of the European Communities* (2001) ECR II-2123 (hereinafter *Bananatrading*). In both these cases, the CFI found that GATT 1994 was legally distinct from GATT 1947 and was therefore not within the scope of Article 307 EC (*see T Port II*, ¶¶ 79–81; *Bananatrading*, ¶¶ 73–77). Second, the obligations arising from GATT 1994 fell on the Community and not the Member States (*T Port II*, ¶ 82; *Bananatrading*, ¶ 76). Third, Article 307 was not intended to confer rights on individuals and therefore its alleged breach could not be a separate ground for claiming damages (*T Port II*, ¶¶ 83–84; *Bananatrading* ¶¶ 78–79). Finally, any argument that Article 307 (ex 234) gave GATT 1994 direct effect was inconsistent with existing case-law on the issue (*T Port II*, ¶ 85; *Bananatrading*, ¶ 80).

Nevertheless, the WTO Agreements are *not* devoid of legal effects in the Community legal order. Apart from the various avenues open to private individuals to present complaints of WTO violations to their national governments or the EC Commission (discussed in the final section of this chapter), the ECJ has developed the doctrine of WTO consistent interpretation of EC legislation or measures which provides an effective method of invoking WTO law before EC or national courts.

Thus the ECJ has ruled that in fields to which TRIPS applies and in respect of which the Community has already legislated, the national courts are required to apply national provisional measures in the light and purpose of TRIPS.[235] As Advocate General Jacobs noted in his recent Opinion in *Schieving-Nijstad and others*:

> That principle reflects the Court's earlier approach[236] to the effect of GATT 1947, where it stated for example that "it is important that the provisions of GATT should, like the provisions of all other agreements binding the Community, receive uniform application throughout the Community.[237]

However, in its recent judgment in *Schieving-Nijstad*,[238] the ECJ ruled that the procedural rules of Article 50 of the TRIPS "are not such as to create rights upon which individuals may rely directly before the Community courts and the courts of the Member States.[239] Nevertheless, the ECJ was prepared to analyze the contested Dutch legislation implementing Article 50 of the TRIPS to give some guidance on issues of drafting and interpretation.[240]

It remains to be seen how far this principle of consistent interpretation will be taken. Professor Griller suggests that WTO-consistent interpretation "could result in the most effective means of judicially enforcing, in the absence of specific measures of transformation, WTO law within the Community legal order."[241] We believe that the obligation of consistent interpretation should not be overstated, especially if issues of construction are referred to the ECJ by the national courts. The ECJ will naturally be astute to ensure that its ruling in *Portugal v Council* is not undermined and any interpretations will, we suspect, not result in disapplication "by the back door".

C. Is the EC Under a Duty to Legislate in Conformity with WTO Obligations?

1. General Discussion of the ECJ's Case Law

If a Community measure is found to breach the WTO Agreement, is the Community under any international obligation to bring that measure back into conformity with WTO rules? Secondly, if such an obligation exists, there is the further question of whether such an obligation can create directly effective rights in the Community legal order.

It is submitted that the answer to these questions is given implicitly by *Portugal v Council*. In deciding whether the WTO Agreement specified a mandatory form for its implementation, the ECJ noted in *Portugal v Council* that the main purpose of the DSU was

[235] *Dior and Others*, *supra* note 225, ¶ 49; and Case C-89/99 *V.O.F. Schieving-Nijstad Nof and Others v. Groeneveld*, (2001) ECRI-5851 ¶¶ 35 and 55.

[238] *Id.*

[239] ¶ 55 of the Judgment.

[240] The issues raised concerned the necessity of a defendant's request to determine the continuance of interim relief under Art. 50(6) of the TRIPS, and the duration of provisional measures and the exercise of a Member State's discretion under TRIPS 50(6).

[241] Griller *supra* note 170, at 468.

"to secure the withdrawal of the measures in question if they are found to be inconsistent with the WTO rules".[242] In addition, it stated that DSU Article 22.1 on compensation and retaliation "shows a preference for full implementation of a recommendation to bring a measure into conformity with the WTO agreements in question".[243] Thus, the ECJ expressly recognized that, in the words of Jackson, "an adopted dispute settlement report establishes an international law obligation upon the member in question to change its practice to make it consistent with the rules of the WTO Agreement and its annexes."[244]

However, it is submitted that the determination of the existence of an obligation is a separate question from the determination of its *precise content*. The content of the "obligation of conformity" referred to by Jackson can be discerned from the wording of DSU Article 3.7, which speaks of compensation being "resorted to" only if the immediate withdrawal of the offending measure is impracticable, and of retaliation as "the last resort". In addition, Article 22.1 states that:

> [N]either compensation nor the suspension of concessions or other obligations is preferred to full implementation of a recommendation to bring a measure into conformity with the covered agreements. (emphasis added)

The implication of these provisions must therefore be that the DSU, in Jackson's words, "clearly establishes a preference for an obligation to perform the recommendation".[245] Indeed, the above quotation from *Portugal v Council* indicates the identical conclusion of the ECJ. However, it is suggested that the use of the word "preferred" in Article 22.1 and the overall structure of the DSU indicates that the obligation of conformity is "soft". That is to say, under the obligation of conformity, a WTO Member must at least *attempt* to bring its measures into line with WTO rules. Nevertheless, that WTO Member's failure to achieve conformity within a reasonable period of time[246] does not mean that it is in breach of its international obligations. For in this situation, the WTO Member is expressly permitted by the WTO Agreement to enter into Article 22 DSU arrangements in lieu of full implementation. It is suggested, therefore, that the obligation of conformity will only be breached where the WTO Member makes it clear that it has no intention of implementing an adopted report for whatever reason.[247]

[246] Determined pursuant to DSU Art. 21.3.

[247] *See* Desmedt, *supra* note 170, at 100; Griller, *supra* note 170, at 450–454; Rosas, *supra* note 170, at 809; Zonnekeyn, *supra* note 170, at 300–302. This interpretation is confirmed by the most recent practice of the Community. Regulation No 1515/2001 was introduced to allow the Community to adapt its anti-dumping and anti-subsidy legislation in the light of unfavorable dispute settlement reports. However, the Regulation speaks of the Community bringing its laws into conformity with a report's recommendations "where it considers this appropriate"; Council Regulation (EC) No 1515/2001 on the measures that may be taken by the Community following a report adopted by the WTO Dispute Settlement Body concerning anti-dumping and anti-subsidy measures (OJ L 2001, p. 10, preamble ¶¶ 4 and 5 and Articles 1(1)(4), 2(1)(4)). Indeed, the explanatory memorandum to the Commission proposal for the Regulation states expressly that: "WTO rules do not oblige the Community to implement a report adopted by the DSB" (*see* COM/2001/0379 final).

The ECJ implicitly recognized this limitation on the content of the obligation of conformity when setting out the decisive justification for its decision in *Portugal v Council*, which appears at two separate points of the judgment:

> Consequently, to require the judicial organs to refrain from applying the rules of domestic law which are inconsistent with the WTO agreements would have the consequence of depriving the legislative or executive organs of the contracting parties of the possibility afforded by Article 22 of [the DSU] of entering into negotiated arrangements even on a temporary basis . . . (paragraph 40).
>
> To accept that the role of ensuring that [WTO] rules comply with Community law devolves directly on the Community judicature would deprive the legislative or executive organs of the Community of the scope for maneuver enjoyed by the counterparts in the Community's trading partners. (paragraph 46).

In other words, the ECJ was concerned to ensure that the Community was on a "level playing field" with other WTO Members who had not given the WTO Agreement direct effect. The remedial consequences of direct effect in the Community legal order (i.e., disapplication of the impugned Community measure) could unilaterally restrict the Community's ability to maintain infringing measures through temporary compensation arrangements. In contrast, those political institutions of other WTO Members whose actions were not subject to such judicial scrutiny would have the full ability to enter into compensation arrangements (or accept retaliation), while simultaneously maintaining their own WTO-inconsistent measures.[248] It is therefore submitted that the ECJ's concern not to undermine the Community's right to enter into compensation arrangements was based on an appreciation of the fact that the Community was not bound to achieve full implementation by the obligation of conformity. It still had the right to enter into DSU Article 22.1 arrangements, albeit in tandem with a soft obligation to attempt to comply with the DSB ruling.

Moreover, the ECJ's reasoning in *Portugal v Council* appears to have assumed the existence of an adopted dispute settlement report.[249] For its focus on compensation presupposes the adoption of "the panel or Appellate Body report" which activates the implementation procedures under DSU Article 21. At this juncture it must be admitted that the ECJ did not consider the impact of the still unsettled "sequencing" issue, which was the subject of intense debate in the DSB during the implementation of *EC—Bananas*.[250] In essence, the sequencing issue is whether a DSU Article 21.5 panel report finding that a WTO Member has not correctly implemented an "original" dispute settlement report must be obtained before Article 22 procedures can be activated.[251] Nevertheless, the resolution of the sequencing issue would, it is submitted, have no effect on the outcome of *Portugal v Council* or the subsequent jurisprudence. The sequencing issue is concerned with when Article 22 DSU procedures can be validly commenced. However, after the adoption of either the original report(s) or the Article 21.5 report(s), the *possibility* of Article 22 arrangements still exists. As has been seen above, this possibility is enough

[248] *See* Griller, *supra* note 170, at 455; Zonnekeyn, *supra* note 168, at 299.

[249] *See* Rosas, *supra* note 170, at 811.

[250] *See* in particular WT/DSB/M/54.

[251] The United States has maintained that a WTO Member has the right to suspend concessions under Art. 22 without having first obtained a favorable Art. 21.5 report. However, as can be seen from WT/DSB/M/54, this view is not shared by the majority of WTO Members. The sequencing issue awaits determination in the DSU review, which it is hoped will be reactivated after the 2001 Ministerial Conference in Doha, Qatar. In this context, *see European Communities—Regime for the Importation, Sale and Distribution of Bananas*, Recourse to Art. 22.2 of the DSU by the United States—Communication from Japan, WT/DSB/W/91.

to limit the content of the obligation of conformity, so that the Community is only under a "soft" obligation to attempt full implementation after the adoption of any dispute settlement report.

Therefore, in conclusion, it is submitted that the Community Courts have correctly ruled in *Portugal v Council* and the subsequent case law that if a Community measure breaches the WTO Agreement, it is only under a soft obligation to attempt to bring its law back into conformity with the WTO Agreement. If it fails to achieve this target, it is not in breach of its international obligations, as it has the express right to participate in Article 22 DSU arrangements while maintaining the offending measure.

As such, were the Community Courts correct to rule that the obligation of conformity cannot have direct effect in Community law? It is suggested that they were for the following reasons.

First, despite its analysis in *Portugal v Council*, the ECJ has often held that to determine whether a rule in an international agreement has direct effect, it is necessary first to ascertain whether the content of that rule is clear, precise and unconditional, and then to evaluate the content in the light of the aims and context of the agreement.[252] It is suggested that the obligation of consistency cannot be classified as clear, precise or unconditional.

As to clarity and precision, Jackson states that the language of the DSU does not solidly "nail down" the question of the legal effect of a DSU report. Indeed, Jackson's correct conclusion as to the existence of the obligation of consistency is drawn from the cumulative effect of at least eleven DSU provisions.[253] It is simply not possible to identify a stand-alone provision in the DSU which gives a clear and precise legal basis for the obligation of consistency. Further, as to unconditionality, it has been seen that the activation of Article 22 DSU procedures does not simultaneously mean that a WTO Member has breached the obligation of consistency. The ability of WTO Members to engage freely in Article 22 arrangements, despite the existence of an original or Article 21.5 report, means that the obligation of consistency is conditional and, therefore, does not satisfy the first limb of the test of direct effect.

What of the second limb of the test? It is submitted that the ECJ in *Portugal v Council* did not accurately assess the legal force of the WTO Agreement when it characterized it, like GATT 1947, as being founded on negotiations with a view to "reciprocal and mutually advantageous arrangements."[254] The 1947 GATT dispute resolution system was more than a mere "soft" law forum for the settlement of disputes by diplomatic means: indeed, the record of compliance with 1947 GATT Panel Reports was much better than normally appreciated.[255] The new WTO dispute settlement system is, it is submitted, far more effective as witnessed by the impressive record of compliance of WTO Members to DSB rulings. The ECJ was also incorrect in considering that the structure of the DSU and the wording of Article 22 means that the aims and context of the WTO Agreement

[252] Case 87/75 *Bresciani* [1976] ECR 129, ¶ 16; Case 270/80 *Polydor Ltd v. Harlequin Record Shops Ltd* [1982] ECR 329, ¶ 14 *et seq* Case 17/81 *Pabst & Richarz AG v. [255] *See* W.J. Davey, *An Overview of the General Agreement on Tariffs and Trade*, in HANDBOOK OF GATT DISPUTE SETTLEMENT 78–79 (Pescatore, Davey and Lowenfeld eds., 1992), and the literature cited therein; and E-U. Petersmann, *Constitutional Principles Governing the EEC's Commercial Policy* in THE EUROPEAN COMMUNITY'S COMMERCIAL POLICY AFTER 1992: THE LEGAL DIMENSION 21 (M. Maresceau ed., 1993).

require the ECJ to refrain from scrutinizing Community legislation in the light of WTO rules.

As to the "soft" nature of the WTO, Advocate General Saggio correctly states in his Opinion in *Portugal v Council* that:

> It must be recognised that many provisions of the agreements attached to the Agreement establishing the WTO give rise to obligations and prohibitions that are unconditional and include specific undertakings for commitments by the contracting parties in the context of their reciprocal relations …
>
> [A]nd it has rightly been held that the present system gives little latitude to States who believe they are victims of illegal conduct on the part of another contracting party.[256]

Thus, the ECJ's analysis of the WTO Agreement as based on reciprocal and mutually advantageous arrangements is, to say the least, questionable, particularly in the light of its compulsory dispute settlement procedures.[257] Further, this characterization led the ECJ to draw an uncomfortable distinction between the WTO Agreement and "agreements concluded between the Community and non-member countries which introduce a certain asymmetry of obligations, or create special relations of integration with the Community", the latter having been given direct effect.[258] As Professor Griller notes, the ECJ drew no clear borderline between "asymmetric" and "reciprocal and mutually advantageous" agreements.[259] In addition, it is even more difficult to apply these rather simplistic labels to complex international trade agreements in which commitments may appear to be evenly balanced, but in fact are asymmetric when implemented in the relevant markets. For example, economic opportunities for the vast majority of WTO Members in the Community market are much bigger than could be offered to the Community in return.[260]

However, as regards the appropriateness of the ECJ's interpretative role, the ECJ was right to conclude that judicial scrutiny and potential disapplication of measures which the Community is entitled to maintain temporarily under Article 22 would both frustrate the Community's *express rights* under the WTO Agreement and unilaterally disadvantage the Community vis-à-vis foreign governments who are not under equivalent restraints. It is therefore not the general nature of the WTO Agreement which means that the obligation of consistency fails the second limb of the direct effect test. Rather, this failure is the result of the express wording of Article 22 and the structure of the DSU as a whole. Direct effect of WTO rules would run counter to the "aims and context" of the WTO dispute settlement system.[261]

Finally, the lack of certainty, precision and unconditionality in the obligation of legislative consistency also leads one to conclude that it cannot be brought within the *Nakajima* exception to *Portugal v Council*. Although the scope of the *Nakajima* exception has yet to be fully clarified,[262] *Nakajima* itself was concerned with the situation where the

[256] *Portugal v. Council*, Opinion of Advocate General Saggio, *supra* note 131, ¶ 21.

[257] *See* Desmedt, *supra* note 170, at 98; Griller, *supra* note 170, at 457; Rosas, *supra* note 170, at 808; Zonnekeyn, *supra* note 170, at 300. The European Court of Justice's analysis of the WTO agreements should be contrasted to its approach to the Rio Convention on Biological Diversity. The latter convention was characterised by the ECJ as "not strictly based on reciprocal and mutually advantageous arrangements": while the ECJ declined to rule on whether the Rio Convention had created directly effective rights in the narrow sense, it confirmed the Convention's broader "invocability" which allowed the Court to review the Community's compliance with the obligations contained in the Convention: Case C-377/98 *Netherlands v. European Parliament and Council* (2001) ECRI-7079, ¶¶ 52–54.

[260] *See* Griller, *supra* note 170, at 458.

[261] Rosas, *supra* note 170, at 811.

[262] *See* Griller, *supra* note 170, at 463–467; Rosas, *supra* note 170, at 815.

Community stated its intention to implement a precise GATT 1947 Anti Dumping Code provision, i.e. Article VI of the Code.[263] Advocate General Saggio recognized in *Portugal v Council* that *Nakajima* was "more consistent with the general case-law on international agreements and is based on different criteria from those used to evaluate the effects of the GATT with regard to Community legislation".[264] That is to say, Article VI of the Code was implicitly considered clear, precise and unconditional. It is therefore suggested that the *Nakajima* exception ultimately requires an application of the first limb of the direct effect test referred to above. As can be seen from *OGT*, it is not enough for the Community legislation to identify the Community's general obligation to conform to WTO rules. The legal compulsion for the relevant Community measure must be a clear, precise and unconditional provision in the WTO Agreement. Consequently, the lack of precision and conditional nature of the obligation of consistency means that the Community Courts were correct to hold that it is not a "particular obligation"[265] of the WTO Agreement, as that term is understood in Community law.

2. Practical Application

In practice, the doctrine of legislative WTO-consistency operates in a fairly narrow range of situations, often referred to as the "*Nakajima*" and "*FEDIOL"* exceptions. These two situations will now be discussed in some detail.

(a) Assessment of WTO Consistency in Legislative Enactments: the Nakajima Doctrine. An application of the doctrine of legislative WTO-consistency is the so-called "Nakajima" exception, which derives its name from the eponymous case brought by Japanese exporters challenging definitive anti-dumping duties imposed on them by the EC Council in breach of the GATT Anti-Dumping Code.[266] Article 241 EC provides a mechanism whereby a party affected by an EC Regulation may challenge the applicability of such measure even if the normal two months deadline for bringing a direct challenge set by Article 230 EC has expired. This provides a necessary "safety valve" in cases where a party is affected by a Regulation several years subsequent to its adoption by the Community. Without the so-called "plea of illegality" provided by Article 241 the party contesting the lawfulness of the Regulation would be "time-barred". The ECJ ruled that the Japanese exporters could challenge the Council Regulation imposing definitive duties,[267] not as a consequence of any "direct effect" of the GATT Anti-Dumping Code pursuant to Article 230 EC, but rather "*in an incidental manner under Article* [241] *EC*".[268]

The ECJ stressed that the EC Council's Anti-Dumping Regulation[269] stated that it was adopted in accordance with existing Community obligations, in particular those arising from the GATT and the Anti-Dumping Code:

> In those circumstances, it is necessary to examine whether the Council went beyond the legal framework thus laid down, as Nakajima claims, and whether by adopting the disputed provision, it acted in breach of Article 2(4) and (6) of the Anti-Dumping Code.[270]

[263] *Nakajima supra* note 170, ¶ 30. See the Opinion of Advocate General Gulmann in *Germany v. Council*, *supra* note 146, ¶¶ 145–151.
[264] *Portugal v. Council*, Opinion of Advocate General Saggio, *supra* note 131, at note 21.
[265] *OGT*, *supra* note 226, ¶ 27.
[266] Case C-69/89 *Nakajima v. Council* (1991) ECRI-2069.
[267] Council Regulation 3651/88 in OJ 1998 L317/33.
[268] ¶ 28 of the judgment.
[269] Council Regulation 2943/88 in OJ 1988 L264/56.
[270] ¶ 32 of the judgment.

Although the ECJ concluded by rejecting Nakajima's plea on its substance, it had opened an important avenue for obtaining "WTO compliance reviews" of EC measures, particularly in areas such as anti-dumping where, of necessity, EC legislation will be forced to reflect (and then transpose) precise WTO obligations into Community law.[271]

(b) The Scope of the Nakajima Exception. Too much must not be made of the *Nakajima* and *FEDIOL* exceptions as they have been narrowly interpreted by the Courts. As the ECJ held in *Germany v Council*[272]:

> it is only if the Community intended to implement a particular obligation entered into within the framework of GATT, or if the Community act expressly refers to specific provisions of GATT, that the Court can review the lawfulness of the Community act in question from the point of view of the GATT rules[273].

This statement was repeated almost verbatim in *Portugal v Council* in the case of the WTO Agreements[274].

This statement of the ECJ requires careful scrutiny since it raises the following questions: (1) is WTO-compliance review only permitted where the contested EC measure is "intended" to implement a particular WTO obligation? (2) Must this intention be express (such as in the basic Anti-Dumping Regulation,[275] or (3) can it be inferred from the context and content of the Regulation in question? (4) If the latter, it is clear that providing specific reference would provide an easy means of excluding judicial review under the *Nakajima* doctrine.

A great number of the EC legislative measures adopted to implement WTO obligations contain express references to the WTO Agreement that inspired them: consequently a *Nakajima*-style "compliance review" should be possible, at least in principle. A wide range of EC instruments[276] make express reference to the WTO obligations that they are

[271] *See* M.C.E Bronckers, *WTO Implementation in the European Community: Anti-dumping, Safeguards and Intellectual Property*, 29(5) JOURNAL OF WORLD TRADE 73 (1995); and P. Didier, *The WTO Anti-Dumping Code and EC Practice: Issue for Review in Trade Negotiations*, 35(1) JOURNAL OF WORLD TRADE 33 (2001). *See* Case C-76/00 P *Petrotub and Republica v. Council* (judgment of January 9, 2003, not yet reported) where the ECJ ruled that the requirement to state reasons in Article 2.4.2 of the WTO Agreement on the implementation of Article VI of the GATT 1994 had been subsumed under the general requirement in Article 190 of the EC Treaty for EC institutions to state reasons for their acts.

[272] Case C-280/93 *Germany v. Council* (1994) ECRI-4973.

[273] ¶ 111 of the judgment.

[274] Case C-149/96 *Portugal v. Council* (1999) ECR, ¶ 49, *supra* note 131.

[275] Council Regulation 384/96 (OJ 1996 L56/1) expressly states that it is implementing the WTO Agreement on the implementation of Article VI of the 1994 GATT: *see* Recitals 3, 4 and 5 in particular. For an analysis of how successfully the EC has achieved this, *see* M.C.E. Bronckers, *supra*, note 271, and P. Didier, *supra*, note 271.

[276] *See* the package of Regulations adopted by the Council to implement the WTO agreements which became binding on the Community from the date of its membership, published in the December 31, 1994 issue of the EC Official Journal (OJ L 349). These measures are: Council Regulation 3283/94 on protection against dumped imports form countries not members of the European Community (OJ 1994 L 349/1) implementing the GATT Anti-Dumping Code; Council Regulation 3284/94 on protection against subsidized imports from countries not members of the European Communities, (OJ 1994 L 349/22) implementing the GATT Subsidies Code; Council Regulation 3285/94 on the common rules for imports (OJ 1994 L 349/53) implementing the GATT and the Agreement on Safeguards; Council Regulation 3286/94, the Trade Barriers' Regulation discussed below; Council Regulation 3287/94 on pre-shipment inspections for exports from the Community (OJ 1994 L349/79) implementing the Agreement on pre-shipment inspection; Council Regulation 3288/94 (OJ 1994 L 349/83) amending the Community trade mark for the implementation of the TRIPS; Council Regulation 3289/94 (OJ 1994 L 349/85) implementing the Agreement on Textiles and Clothing; Council Regulation 3290/94 (OJ 1994 L 349/105) implementing the Community's obligations in the agriculture sector

purporting to implement and should, on the Nakajima principle, be susceptible to judicial review to ascertain whether they have been successful in transposing the relevant WTO obligation. However, the availability of such a procedure will vary from case to case, making the application of the *Nakajima* doctrine difficult to determine with any degree of certainty.

One example will suffice. The Agreement on Government Procurement ("GPA") led to the adoption of a number of Community Directives on government procurement after the GPA entered into force,[277] which make several references to the GPA in their Recitals. The Community has exclusive competence as regards procurement in goods, and the relevant Recitals of the Directives are therefore the expression of the Community draftsman's intention both to implement the EC's obligations as a signatory to the GPA and to oblige the EC's Member States to apply the Directives to goods procured from other GPA signatories. On the *Nakajima* principle, these Directives should be subject to judicial review in the light of the GPA. However, the position as regards procurement in services is different, since this is an area of mixed competence; consequently, the susceptibility of the Directives to judicial review of the *Nakajima* type will not be possible in the case of procurement in services, (where the relevant passages of the Directives, insofar as they address procurement in services, will have to be interpreted as a prohibition on discrimination of Community suppliers).[278]

The experience of the ECJ's interpretation of the Memoranda of Understanding with India and Pakistan[279] in the *Portugal v Council* case should serve as a warning to those arguing for too sweeping an application of the *Nakajima* principle. In that case, Portugal had argued that the Memoranda and the Council Decision that approved them[280] had the express purpose of applying the relevant WTO rules in the GATT 1994 and the Agreement on Textiles. The two Memoranda in question were intended to reduce quota restrictions and customs duties for Indian and Pakistani exports to the EC, both of which could only be done in the context of the WTO membership of the EC, India and Pakistan. The second Recital to the Council Decision adopting the Memoranda recorded that they were negotiated "in the framework of the GATT market access negotiations" between the Commission and these two countries as regards textile products[281]. Consequently, Portugal submitted that the Council Decision that it was challenging was judicially reviewable based on the *Nakajima* principle. The ECJ did not accept that argument:

> The contested decision is not designed to ensure the implementation in the Community legal order of a particular obligation assumed in the context of the WTO, nor does it make express reference to any specific provisions of the WTO agreements. Its purpose is merely to approve the Memoranda of Understanding negotiated by the Community with Pakistan and India.[282]

following the Agreement on Agriculture; and Council Decision 94/824/EC on the extension of the legal protection of topographies of semiconductor products to persons from a Member of the WTO, implementing TRIPS obligations. It should be noted that some of these instruments have subsequently been amended.

[277] *See* Council and European Parliament Directive 97/52 (OJ 1997 L328/1) and Council and European Parliament Directive 98/4 (OJ 1998 L 101/1).

[278] For a fuller discussion of this issue, *see* Griller, *supra* note 170, at 463–4.

[279] Memorandum of Understanding between the European Community and the Islamic Republic of Pakistan on arrangements in the area of market access for textile products, OJ 1996 L-153/48; Memorandum of Understanding between the European Community and the Republic of India on arrangements in the area of market access for textile products, OJ 1996 L 153/53.

[280] Council Decision 96/386/EC of 26 February 1996 (OJ 1996 L 153/47).

[281] Council Decision 96/386, Recital 2.

[282] *Portugal v. Council, supra* note 131, ¶ 51 of the judgment.

The ECJ was correct to state that contested Council Decision did not expressly refer to a precise obligation contained in GATT 1994 or in the Agreement on Textiles in the body of its text. However, it is clear that the Council draftsman was writing with the intention of creating a legal instrument that would be consistent with the EC's obligations under the aforementioned WTO provisions. The conclusion to be drawn is that the mere intention to act in accordance with WTO obligations does not automatically render a provision of EC legislation susceptible to judicial review under the *Nakajima* principle. The narrow test applied by the ECJ appears to require the contested Community measure to be "designed to ensure the implementation in the Community legal order of a particular obligation assumed in the context of the WTO" or that it should "make express reference to [a] specific provisions of the WTO agreements". That considerably restricts the scope of a *Nakajima*-style compliance review.

(c) Assessment of WTO-consistency of EC-incorporated Remedies and Obligations: The FEDIOL Doctrine. Another variant of "WTO consistency review" occurs where an international obligation is incorporated into Community law, for example where Community legislation is aimed expressly at dealing with practices which are illicit under an international agreement (such as the rules of non-discrimination in GATT Article III) to which the EC is a party. The legality of any Community measure taken to deal with the allegedly illicit third country practice is, by virtue of the EC legislation, dependent on the GATT-consistency of the third country practices being challenged. In such circumstances, therefore, the ECJ has concluded that it has jurisdiction and competence to assess that conformity and can perform its own analysis of the GATT obligations at issue.

In *FEDIOL*,[283] the applicant trade association presented a complaint against alleged Argentinean breaches of Articles III, XI and XXIII of the 1947 GATT agreement. This complaint was brought under Regulation 2641/84, then the applicable complaints mechanism for alleged third country violations of GATT obligations. The case turned on whether the Commission correctly exercised its discretion under Regulation 2641/84 in rejecting FEDIOL's complaint.

The ECJ ruled that even though GATT was not capable of direct effect, that did not prevent individuals from requesting the Court to examine the Commission's assessment of whether the Argentinean measures constituted a violation of the GATT agreement. In effect, the ECJ was being asked to review the legality of the Commission's decision applying the provisions of Regulation 2641/84.[284]

One could imagine the same reasoning being applied in other situations, such as a challenge under Article XX of the Agreement on Government Procurement, alleging a breach of that plurilateral agreement's rules in the award of a Community tender. An analysis of such a claim would be likely to lead the Community Court seized with the matter to examine the terms of the GPA and the remedies it provides.

IV. Private EC Complaints Procedures for the Enforcement of WTO Obligations

A. Introduction

Even if the doors to private enforcement of the WTO Agreement have largely been closed by the ECJ's judgment in *Portugal v Council* and the cases that followed it,

[283] Case 70/87 *Fédération de l'industrie de l'huilerie de la CEE (FEDIOL) v. Commission* (1989) ECR 1781.
[284] ¶ 22 of the judgment.

the EC provides several other means for private interests to submit complaints of perceived violations of the WTO Agreements by non-EC countries. There are three main avenues:

(a) informal complaints to the Commission via its Market Access Strategy Program;
(b) formal complaints under the Trade Barriers Regulation; and
(c) complaints via an EC Member State in the Article 133 Committee.

The final part of this chapter will describe each of these avenues in turn.

B. The Community's "Market Access Strategy"

Very soon after the WTO Agreement came into force, the European Commission's Directorate-General for Trade (DG Trade) launched an important political initiative: the "Market Access Strategy".[285] This was a large-scale exercise composed of several elements. First, information was gathered from Community traders by creating a database listing trade barriers experienced by Community industry in third countries. DG Trade's website[286] contains an interactive dialog box where the WTO Members' commitments in their national schedules can be compared with actual experiences, questions can be e-mailed to the Commission and specific complaints submitted. Any trade barrier identified through this process is then investigated by DG Trade. First, the suspected trade barrier is reported to the Commission's Market Access Unit and sufficient information collected to enable the discussions to be started with the authorities of the WTO Member concerned. If a trade barrier, contrary to WTO obligations, is proved to exist, the Member States and the Commission, meeting in the so-called "Article 133 Committee",[287] decide on an appropriate course of action, such as bilateral consultations between the EC and the third country concerned, activating the WTO dispute settlement procedure, or even, where appropriate, the inclusion of a commitment to the removal of the trade barrier in WTO accession negotiations. The Article 133 Committee produces annual reports of its activities.

C. The Trade Barriers Regulation: Council Regulation 3286/94[288]

The Trade Barriers Regulation (TBR) has been the subject of extensive commentary[289] and constitutes a major procedural innovation, providing a clear and transparent

[285] *See* Commission Communication, *The Global Challenge for International Trade: A Market Access Strategy for the European Union*, COM (96) 53 final. The Commission has held several symposia on market access: *see* Symposium on Market Access—Summary of Proceedings, Brussels, November 4, 1997 and December 2000. An informative and detailed account of the Market Access Strategy can be found in MacLean and Zarpellon, *Tackling Barriers to Trade Through the European Community's Market Access Strategy*, 5 INTERNATIONAL TRADE LAW & REGULATION 109 (1999).

[286] The Market Access Database can be found at: http://mkaccdb.eu.int.

[287] *See* D. The Article 133 Committee *infra* Part IV D.

[288] Council Regulation (EC) No. 3286/94 (OJ 1994 L 349 at 71) as amended by Council Regulation (EC) No. 356/95 (OJ 1995 L 41 at 3) laying down Community procedures in the field of the common commercial policy in order to ensure the exercise of the Community's rights under international trade rules, in particular those established under the auspices of the World Trade Organization.

[289] *See* in particular: Marco Bronckers, *Enforcing WTO Law through the EC Trade Barriers Regulation*, 3 INTERNATIONAL TRADE LAW AND REGULATION 76 (1997); MACLEAN AND VOLPI, EU TRADE BARRIER REGULATION (2000); M. Bronckers and N. McNelis, *The EU Trade Barriers Regulation Comes of Age* 35 JOURNAL OF WORLD TRADE 427 (2001).

complaints procedure for EC industry against violations of the WTO Agreement.[290] The length of this chapter does not allow a very detailed description of the TBR and reference should be made to the literature cited above.[291] In essence, the TBR provides a means by which Member States or Community industrial interests can submit complaints to DG Trade. If the complaint is substantiated, the Commission's services investigate the obstacle to trade and, where consultations fail to achieve an acceptable result, the EC Council may exercise its discretion to activate the WTO dispute settlement mechanism.

1. Scope of the TBR

The TBR is designed to deal with two types of obstacles to trade, as defined in Article 2(1) of the Regulation: "any trade practice adopted or maintained by a third country in respect of which international trade rules establish a right of action". The statement of the TBR's aims in Article 1 of the Regulation makes it clear that this covers "primarily" the WTO Agreement, but also other trade agreements to which the EC is a party, such as the various Association Agreements it has concluded with a number of non-WTO States:[292]

> This Regulation establishes Community procedures in the field of the common commercial policy in order to ensure the exercise of the Community's rights under international trade rules, in particular those established under the auspices of the World Trade Organisation which, subject to compliance with existing international obligations and procedures, are aimed at:
>
> (a) responding to obstacles to trade that have an effect on the market of the Community, with a view to removing the injury resulting therefrom;
> (b) responding to obstacles to trade that have an effect on the market of a third country, with a view to removing the adverse trade effects resulting therefrom.

2. Permitted Subject—Matter of TBR Complaints

(a) Governmental Measures. The TBR is aimed at governmental measures which are alleged to breach the WTO Agreement, rather than the acts of private parties. Article 2(1) of the TBR defines "obstacles to trade" as "any trade practice adopted or maintained by a third country". Clearly, both violation and non-violation complaints are covered.[293] However, general systematic obstacles to trade which are not specifically referable to a definite provision of the WTO or other trade agreements appear to be excluded.[294] Accordingly, a complaint of anti-competitive conduct or infringements of intellectual property rights by third country enterprises would fall outside the scope of the TBR.

[290] As well as the rights and obligations contained in other bilateral EC-third country trade agreements or multilateral and plurilateral agreements to which the EC is a party. Bronckers (2001), *supra* note 271, at 433, suggests that "it cannot be excluded that a TBR complaint could be based on customary international law", a situation that might arise in cases of expropriation without adequate compensation.

[291] *See supra* note 289.

[292] A full list is available on the Commission's website at <http://europa.eu.int/comm/trade/pdf/ecrtagr.pdf>.

[293] *Compare* Article 2(1) of the TBR with Article XXIII (1) of the 1994 GATT.

[294] As Bronckers, *supra* note 271 points out,"It is difficult to see how the Indonesian sound recording case could have been admitted under the TBR", referring to *IFPI v. Indonesia* (1987), where the European sound recording industry complained about piracy of its sound recordings in Indonesia, claiming that these activities were essentially tolerated by Indonesia: OJ 1988 L 213, at 51. It should be noted that the EC attacked Indonesia for the acts of individual citizens in its territory according to standards of intellectual property protection contained in treaties to which it was not a party.

A more difficult question is whether the TBR could cover government inaction or discriminatory reluctance to enforce its domestic laws against anti-competitive conduct by its own nationals. The evidential burden that would need to be met to lodge a TBR complaint based on the points at issue in *Fuji-Kodak*[295] or *Indonesian Sound Recording*[296] would be a considerable challenge. This point should not be stressed unduly: after all, a non-violation complaint under Article XXIII(1) of the GATT will often be directed at "sins of omission" on the part of a government rather than at national measures containing outright breaches of WTO obligations.[297]

(b) Economic Activities Covered by the TBR. The TBR covers the international trade rules "established under the auspices of the WTO".[298] It therefore covers any alleged breach of the WTO Agreement, the multilateral agreements annexed to it such as the TRIPS or the GATS,[299] as well as the plurilateral agreements such as the GPA.

(c) Issues of Mixed Competence and the TBR. As has been seen, the ECJ has ruled that the EC shares competence with the Member States as regards most services and intellectual property issues.[300] Arguably this permits greater Member State involvement in TBR procedures relating to those areas, something that may be to the advantage of complainant EC industries with good relations with their governments. Although the Nice Treaty of 2001 has changed the situation, by providing that the EC has competence to negotiate and conclude agreements in services and the commercial aspects of intellectual property,[301] this Treaty is not (at the time of writing) yet in force, and indeed may not be if opposition to it in Ireland (and other Member States) continues.

In practice, however, the Commission has taken action in several cases relating to intellectual property without apparent Member State objection, no doubt on the grounds that the TBR offers an effective way of dealing with individual country WTO violations and a recognition that the Community has the necessary expertise and resources to defend EC industry.[302]

A precondition of a TBR complaint is the definition of the relevant product by reference to its characteristics, including its use or purposes or the degree of its substitutability with other products. In the *Brazilian Proex* case,[303] which concerned a TBR complaint against subsidies given by the Brazilian government to its aircraft manufacturers to encourage exports, the Commission required the complainant to justify its narrow definition of the

[295] In *Japan—Measures Affecting Consumer Photographic Film and Paper* (WT/DS44), adopted Panel Report of April 22, 1998, the United States attacked alleged governmental tolerance of anti-competitive conduct in the film distribution market—in the event unsuccessfully.

[296] In *Indonesia—Sound Recordings* (OJ 1987 C136/3) privacy of sound recordings allegedly tolerated by the Indonesian government led to a procedure being initiated under the predecessor to the TBR, the so-called "New Commercial Policy Instrument", Council Regulation 2641/84 in OJ 1984 L252/1. This led to an amicable settlement and the Indonesian government agreed to adopt measures to strengthen intellectual property rights protection. *See* OJ 1988 L 123/51.

[297] *See*, in particular, the list of "non-violations" in Article XXIII(1) of the GATT which, after covering failure to carry out WTO obligations and the "application" of measures, then covers "the existence of any other situation".

[298] TBR, Art.2(2).

[299] *See* TBR Articles 2(5) and 2(6).

[300] *See supra* Part II, for a discussion of the allocation of Community and Member State competence as regards WTO law resulting from Opinion 1/94 (1994) ECR I-5267.

[301] Article 133(5), Treaty of Nice.

[302] *See* Bronckers and McNelis, *supra* at note 289.

[303] *See* OJ 1999 C108, at 33, re: *Brazil Proex Export Financing*.

relevant market as being confined to "regional aircraft" rather than all types of aircraft, using definitions used in the recent Boeing/MCD merger decision.[304]

(d) Locus Standi for the Submission of Complaints. Complaints can be submitted by Member States[305] or Community industry,[306] or by any Community enterprises or any association (regardless of whether or not they have legal personality), acting on behalf of one or more Community enterprises.[307]

There are three types of complaints allowed by the TBR. The "first track" covers complaints by Member States against adverse effects resulting from obstacles to trade. The "second track" covers complaints by Community industry against "injury" caused by "obstacles to trade that have an effect on the market of the Community". Thus only a Community industry (rather than individual companies) may use the TBR to complain of effects felt *within* the Community markets of foreign trade practices. By contrast, both trade associations and individual companies are given the right to complain against obstacles to trade affecting a third country market (the "third track").

Each "track" has its own procedure and individual evidentiary requirements and will analyzed in turn below.

(i) Member State Complaints A Member State has an automatic right to submit a TBR complaint,[308] provided it is able to supply "sufficient evidence" to the Commission to support the request for action "as regards obstacles to trade" and the effects resulting therefrom.[309] The evidence submitted to the Commission must follow the illustrative list in Article 10 of the Regulation where the complaint deals with injury or adverse trade effects.[310] Upon receipt, the Commission notifies the other Member States of the complaint[311] and must take a decision whether or not to act on the complaint "as soon as possible" and normally within 45 days of the referral.[312] The procedure can be suspended to permit further fact finding.[313]

It is significant that no Member State has activated the procedure to date, probably reflecting political sensitivity of being too obviously seen to attack a third country. By contrast, sixteen complaints have been accepted by the Commission following the initiation of procedures under Article 8(1)(a) of the TBR.

(ii) Complaints by a Community Industry against Effects within the Community from Foreign Trade Practices Article 3(1) of the Regulation provides that "any natural or legal person, or any association not having legal personality, acting on behalf of a Community industry" may lodge a written complaint when it "considers that it has suffered injury as a result of obstacles to trade that have an effect on the market of the Community".

Article 2(5) of the Regulation defines a Community industry as "all Community producers or providers" of either:

[304] Commission Decision of July 30, 1997, OJ 1997 C 136, at 3.
[305] TBR, Art. 6.
[306] TBR, Art. 3(1).
[307] TBR, Art. 4(1).
[308] TBR, Art. 6(1).
[309] TBR, Art. 6(2).
[310] TBR, Art. 6(2).
[311] TBR, Art. 6(3).
[312] TBR, Art. 6(5).
[313] TBR, Art. 6(5).

(a) products or services identical or similar to the product or service which is the subject of an obstacle to trade; or
(b) products or services competing directly with that product or service; or
(c) who are consumers of processors of the product or consumers or users of the service which is the subject of an obstacle to trade.

The complaint must contain sufficient evidence of the existence of the obstacles to trade and of the injury resulting therefrom. Evidence of "injury" must be given on the basis of the illustrative list in Article 10 of the TBR, namely:

(i) the volume of Community imports or exports concerned, notably where there has been a significant increase or decrease, either in absolute terms or relative to production or consumption on the market in question;
(ii) the prices of the Community industry's competitors, in particular in order to determine whether there has been, either in the Community or on third country markets, significant undercutting of the prices of the Community industry;
(iii) the consequent impact on the Community industry and as indicated by trends in certain economic factors such as: production, utilization of capacity, stocks, sales, market share, prices (that is depression of prices or prevention of price increases which would normally have occurred), profits, return on capital, investment, and employment.[314] (An example of a Community industry complaints of this type was (in part) the complaint by COTANCE, the Confederation of National Association of Tanners and Dressers of the EU against Argentinean measures relating to the export of raw and semi-tanned hides and the import of finished leather.[315] COTANCE argued that the restrictions on exports of hide had a negative effect on the internal EC market.)

(iii) Complaints by Individual Community Enterprises The third (and most common) type of complaint covers complaints brought by individual companies or trade associations against adverse trade effects as a result of obstacles to trade that have an effect on the market of a *third* country[316] (rather than "injury as a result of obstacles to trade that have an effect on the market of the Community", which is dealt with under the Community industry procedure described above). Again, the evidence supplied to the Commission must be on the basis of the illustrative list in Article 10 of the TBR cited above.

Alternatively, a complaint can be presented by a grouping of producers or service providers "whose combined output constitutes a major proportion of total Community production of the products or services in question".[317] For these purposes, to prevent the blocking of a complaint by related Community users or importers of the product alleged to be the subject of the trade obstacle, manufacturers within the Community who are related to the producers of the products under investigation may be excluded.[318] There are also special rules for regional Community industries; where the complainants' collective output constitutes "the major proportion of the output" of the relevant product originating from one or a set of Member States, and "provided that the effect of the obstacle to trade is concentrated" in that Member State or set of Member States, then

[314] TBR Art. 10 (a)–(c).
[315] OJ 1997 C59/6.
[316] TBR, Art. 4(1).
[317] TBR, Art. 2(5).
[318] TBR, Art. 2(5)(a).

a TBR complaint on behalf of Community industry may be submitted.[319] An example of this procedure occurred in the complaint against Chilean restrictions on shipping of swordfish presented by a Spanish trade association located in Galicia which was found to represent a major proportion of the Community's frozen swordfish industry.[320]

This category of complainants is limited to complaints against violations or nullification of the WTO Agreement,[321] and does not cover bilateral agreements between the EC and third countries.[322]

(iv) Threatened Injury Where the complaint addresses threatened injury, the evidence presented to the Commission must be sufficient for it to assess whether it is clearly it is clearly foreseeable that a particular situation is likely to develop into actual injury. In this regard, Article 10(2) of the TBR allows account to be taken of factors such as:

(a) the rate of increase of exports to the market where the competition with Community products is taking place;
(b) export capacity in the country of origin or export, which is already in existence or will be operational in the foreseeable future, and the likelihood that the exports resulting from that capacity will be on the market referred to in point (a) above.

3. Post Complaints Procedure

Once the complaint is received, the Commission's services examine the evidence. If a *prima facie* case is made out, the Commission formally initiates a procedure[323] by a notice in the Official Journal of the EC, which indicates the product or service and countries concerned, gives a summary of the information received, and requests that all relevant information be communicated to the Commission. The Commission states the period within which interested parties may apply to be heard orally by the Commission.[324]

The Commission notifies the authorities of the third country complained against and may offer consultations.[325]

During the investigation phase, the Commission will consult importers, traders, producers and other parties concerned and may conduct on-site visits (where permitted by the third country complained against).[326] Third parties who can demonstrate that they are "primarily concerned by the result of the procedure" may apply to be granted a

[319] TBR, Art. 2(5)(b).

[320] *See* Commission Report on this TBR Complaint, OJ 1998 C 215/2 and press release of January 25, 2001 announcing the amicable settlement of the dispute.

[321] *See* TBR, Art. 4(1), second sentence: "Such complaint, however, shall only be admissible if the obstacle to trade alleged therein is the subject of a right of action established under international trade rules laid down in a multilateral or plurilateral trade agreement". Thus the WTO Agreements and the two remaining plurilateral agreements in Annex 4 to the WTO Agreement (on trade in civil aircraft and government procurement) are covered, but not, it would seem, the bilateral agreement of the EC with third countries.

[322] This limitation on "third track" complaints appears to have been the result of a political compromise within the EC Council reflecting a concern that sensitive bilateral relations between the EC and Central and Eastern European countries should not be undermined by EC industry complaints. *See* Marco Bronckers: *Enforcing WTO Law through the EC Trade Barriers Regulation*, 3 INTERNATIONAL TRADE LAW AND REGULATION 76, 80 (1997). However, EC bilateral trade agreements generally have their own dispute resolution procedures which may offer an avenue for private industry complaints.

[323] TBR, Art. 8 (1) (a).

[324] This is pursuant to TBR, Art. 5.

[325] TBR Art. 8 (1) (b).

[326] TBR Art. 8 (2) (a) and (b).

hearing.[327] Subject to the consent of the parties, the Commission may also organize a meeting of the different sides to the dispute "so that opposing views may be presented and any rebuttal argument put forward".[328] This examination procedure takes between five and seven months from the date of initiation of the procedure.[329]

After the Commission has concluded its investigations, it then reports to the TBR Committee, composed of EC Member State representatives,[330] with the Commission representative as chairman of the TBR procedure, usually within five months of the announcement of the initiation, although that period can be extended to seven months.[331]

4. The Outcome of the TBR Procedure: Termination, Suspension or WTO Dispute Settlement

Once the Commission has concluded its investigations and after consultation with Member States, there are three possible outcomes.

The first is that the investigation has led to the conclusion that no action by the Community is required (either because it is not in the interests of the Community to take action or because the third country has rectified the situation by the adoption of new measures or new legislation): in that eventuality, the TBR procedure may be terminated.[332]

Alternatively, the TBR procedure may be suspended.[333] In that eventuality, the Commission monitors the situation at regular intervals which allows the third country complained against to alter its laws or measures and for the Commission to examine whether, over a set period of time, the change of practice has remedied the situation. A recent example of this procedure was the suspension of the complaint by the European Federation of Pharmaceutical Industries and Associations against alleged Korean restrictions on local manufacturing.[334]

An additional option is for the obstacle to trade to be dealt with by means of a bilateral agreement.[335]

However, where no satisfactory solution can be found, and if it is in the interests of the Community to do so, the European Communities may activate WTO dispute settlement procedures.

5. Initiation of WTO Proceedings

If the complaint is justified, the Council may exercise the option to initiate proceedings before the WTO DSB. However, it is not obliged to do so since Article 12 of the TBR confers very wide discretion in deciding whether or not to proceed in the WTO DSB; as Article 12(1) provides, the Council must decide that it is "in the interests of the Community" to take action.

No time limit is set by the TBR for the Council's decision whether or not to take the complaint to WTO dispute settlement proceedings. For obvious practical reasons, the

Diagrammatic description of TBR procedure and time limits.

Council has an almost complete discretion in the matter, although one might envisage an admissible legal challenge against deliberate and manifest "foot dragging".[336] Recent cases have witnessed very considerable delays in initiating WTO procedures.[337]

Before the TBR procedure can be initiated, the Commission must conclude that "there is sufficient evidence to justify initiating an examination procedure and that it is necessary in the interests of the Community" to do so.[338]

TBR cases raise complex issues of international economic law, diplomacy and external relations policy. It is obvious that the decision whether to initiate WTO dispute procedures will only be taken after very careful consideration of the effect of such a step on relations with the third country concerned. This is particularly the case where there is a possibility that the WTO procedure will lead to retaliatory suspension of concessions pursuant to Article 22 DSU. In deciding whether to proceed to WTO dispute settlement, the Commission will have to balance other conflicting commercial interests i.e., those of Community exporters compared to those of consumers. Sometimes, for example, certain

[336] *See, e.g.*, the action brought by a Member of the European Parliament to challenge the Council's failure to start on the common aviation policy: Case 246/81 *Lord Bethell v. Commission* [1982] ECR 2277.

[337] Fourteen months from the initiation of the TBR procedure to activation of the DSU in United States — *Antidumping Act of 1916* (OJ 1997 C58/14: initiation), OJ 1998 L126/36, request for consultations on June 9, 1998); thirteen months in *Japan—Imports of Leather* OJ 1997 C110/2 (initiation), request for consultations on October 8, 1998 (though announced in May 1998: OJ 1998 L159/65); and twenty months in *Argentina—Leather Exports and Imports* (OJ 1997 C59/6) (initiation), decision to proceed to WTO consultations in October 1998 (OJ 1998 L295/46) and official request on December 23, 1998.

[338] TBR Art. 8 (1).

Community interests will have managed to find an "accommodation" with the country whose actions gave rise to the TBR complaint. They may be less enthusiastic about the prospect of WTO proceedings compared to the complainants. It is noteworthy that, unlike the current EC Anti-Dumping Regulation,[339] the TBR gives no guidance on how this balancing of competing interests should be achieved.

Another noteworthy aspect of the TBR procedure is the requirement that complainants establish that the alleged violation of WTO law has created adverse trade effects. By contrast, under WTO law, a complainant Member does not have to establish the existence of adverse trade effects, but merely that the contested provision is in breach of WTO obligations.[340] This additional requirement on TBR complainants is, of course, designed to give the Council a greater margin of discretion in deciding whether or not to take up the complaint and to start WTO dispute settlement proceedings.

An unreasoned or unjustifiable refusal to initiate a TBR procedure is an act of the Commission[341] capable of judicial review by the ECJ[342] since it alters the legal position of the complainant. However, the circumstances in which the Community courts will exercise their review powers are limited to verifying whether the relevant procedural rules or applicable laws have been observed, whether the Commission has properly addressed the facts before it, or whether there has been a misuse of powers.[343]

The Council's wide discretion makes it unlikely that a successful judicial review action could be brought by an aggrieved party whose complaint has been rejected (for instance under the procedure for challenging a Community institution's failure to act under Article 232 EC).[344] In the predecessor Regulation to the TBR,[345] an attempt to challenge the Commission's rejection of a complaint was unsuccessful as the European Court of Justice effectively declined to substitute its interpretation of the legal situation for that of the Commission.[346] The results of the TBR have been mixed, with industry often complaining about the TBR's cumbersome procedure and the heavy evidential burden that must be met to ensure that the Commission's discretion is exercised in its favor.

To date, there have been twenty two TBR cases (two of which were "continuations" of previous complaints under the TBR's predecessor Regulation).[347] A full list of these cases, with references to the relevant notices of initiation, suspension and termination

[341] *See* the definition of a Community "act" in Case 60/81 *IBM v. Commission* (1981) ECR 2639: "any measure the legal effects of which are binding on, and capable of affecting the legal interests of, the applicant by bringing about a distinct change in his legal position is an act or decision which may be the subject of an action under Article [230] for a declaration that it is void. However, the form in which such acts or decisions are cast is, in principle, immaterial as regards the question whether they are open to challenge under that article. "In this case of acts or decisions adopted by a procedure involving several stages, in particular where they are the culmination of an internal procedure, it is clear from the case-law that in principle an act is open to review only if it is a measure definitely laying down the position of the Commission or the Council on the conclusion of that procedure, and not a provisional measure intended to pave the way for the final decision". D. The Article 133 Committee[349]

An alternative to the formal complaints mechanism of the TBR is presenting a complaint to a Member State, whose representatives meet with their Community counterparts in the Committee established under Article 133 EC.[350] This Article establishes:

> [A] special Committee appointed by the Council to assist the Commission in the establishment of the Common Commercial Policy.

The Committee is composed of a representative of each EC Member State (known as "Titulaires") with the Commission representative holding the Chair. It is an organ of the EC Council.[351]

The 133 Committee is a key forum where authoritative officials meet to deal with the increasingly technical issues of international trade relations. Functionally, it is subdivided into the "Titulaires" Committee, which is attended by the most senior Commission officials, meets monthly, and is responsible for overall policy. The Titulaires' work is

[349] For a recent survey, *see* JOHNSON, EUROPEAN COMMUNITY TRADE POLICY AND THE ARTICLE 113 COMMITTEE (1998).

[350] Formerly Art. 113 of the EC Treaty.

[351] JOHNSON, *supra* note 349, at 17.

assisted by a weekly meeting of the Deputies Committee. The Deputies Committee deals with technically detailed issues and prepares the work of the Titulaires.

In addition, and within the framework of the 133 Committee, there is a weekly meeting of the Member States and Commission representatives in Geneva to discuss WTO matters. It is chaired by the representative of the EC Member State currently holding the Presidency of the Council[352]. To reflect the increased specialization of trade issues, subgroups focused on specific matters have been established (e.g., the Article 133 Textiles Committee and the Article 133 Services Committee).[353]

Although it has only a limited consultative role under Article 133, the Committee advises the Council of Ministers on all matters concerning the implementation of the Common Commercial Policy and participates in the formulation of trade policy. To the extent required by the applications of the doctrine of Community Competence, the Commission proposes new measures to the Council and acts as the spokesman of the Community in the WTO, other multilateral *for a*, and in bilateral meetings with trading partners on policy matters.

While the Article 133 Committee does not itself vote, issues opinions on Commission proposals or on the handling of particular trade disputes. These opinions are not formal documents issued in its own name, but serve to express the consensus of Member States' views.

The Article 133 Committee provides an effective mode for private industry interests of raising WTO compliance issues, without the need to face the considerable administrative and evidential burdens imposed by the Trade Barriers Regulation.[354] It is the more popular vehicle for the presentation of private party complaints against WTO inconsistent measures than the Trade Barriers Regulation and, indeed, several such complaints which have led to successful EC actions in the WTO dispute settlement system originated from Committee 133 complaints rather than Trade Barriers Regulation complaints.[355]

V. Conclusions

The relationship between Community and WTO law has not been easy. The issue of competence within the WTO demonstrates the tension between a multilateral, unified concept of international trade and the fragmented spheres of competence within the structure of the EC Treaty. Moreover, the issue of direct effect reveals the difficulties that are created when a regional organization, designed to improve and unify the legal rights of the individual, participates in a system which, by its very nature, is inter-governmental. However, as we have suggested above, the Community Courts have correctly recognized that the inter-State rights created by the WTO system do not necessarily create rights within the Community system. Finally, the TBR and Article 133 Committees, the gateways through which private parties can access inter-governmental dispute settlement procedures, encapsulate the difficult question of what procedural and substantive hurdles should be overcome by private parties in order to make their voice heard. In summary, these three areas lead one to conclude that, whilst the Community can rightly be classified as a political giant of world trade, the legal structure supporting this position does not bear such a confident assessment.

BIBLIOGRAPHY 1570

I. Developing Countries in the GATT-WTO System

The intellectual keystone of the GATT-WTO multilateral trade system is that economic development is best achieved through non-discriminatory trade patterns, the progressive reduction of tariffs, and the elimination of nontariff barriers that block trade flows. Still, non-discrimination is not a shibboleth in the GATT-WTO system. To cite just one example, the scores of regional trade arrangements that have proliferated over the past decade honor the MFN obligation in the breach. And so it is with developing countries under GATT 1994 and the WTO MTAs. During the initial GATT-ITO negotiations in 1947 the view was accepted that the principle of equality of treatment among countries is inappropriate when countries are not economic equals. Within the GATT-WTO system, the concept of preferential treatment of developing countries (or special and differential treatment in GATT parlance) made its way into the permanent legal structure of GATT 1947 and its many subsidiary agreements. In a nutshell, the rules requiring MFN treatment of imported goods regardless of origin were altered in the case of imports from developing countries.[1]

A. Defining the Term "Developing Country"

Many labels have been applied over the years to the group of countries that are the focus of this Chapter. Developing countries have been referred to as less developed countries. The poorest of the developing countries have been referred to as least-developed developing countries or "LDDCs." A subset of the group of countries comprising developing countries has been called the newly industrialized countries or "NICs," such as the four Asian "tigers" or "dragons" of Korea, Hong Kong, Taiwan, and Singapore. As a group developing countries are not all at the same stage of economic development. Rather, they can be placed on a continuum that runs from the extremes of abject poverty (e.g., the 50 least developed countries), to comparative wealth in the case of Taiwan with per capita GDP of $13,200 in 2000, to actual wealth in the case of Singapore with per capita GDP of $26,360 in 2000. While all developing countries may avail themselves of the WTO provisions on special and differential treatment, under national programs to benefit developing-country trade preferential tariff treatment ends for those developing countries which attain a certain level of wealth. For example, under the U.S. Generalized System of Preferences ("GSP") program, graduation from the GSP program is mandatory once a beneficiary developing country becomes a "high income" country under World Bank criteria (*i.e.*, per capita annual GNP of $8,600 in 1994 dollars).[2] The most noteworthy exercise of the President's authority to graduate beneficiary developing countries

[2] 19 U.S.C. § 2462(e).

occurred in 1988 when President Reagan graduated the four Asian "tigers" of Hong Kong, Korea, Singapore, and Taiwan.[3] In 1996, President Clinton withdrew Malaysia's GSP designation, effective January 1, 1997, because it had made sufficient progress in economic development and international competitiveness.[4] Five countries were notified in 1996 that they were being graduated from GSP as "high income" countries, effective January 1, 1998: Aruba, Cyprus, Greenland, Macao, and the Netherlands Antilles.[5] If a country loses its beneficiary designation, it thereafter receives the prevailing MFN duty rate on its exports to the United States.

Although no formal definition of the term "developing country" has ever been adopted by the GATT Contracting Parties or the WTO Members, GATT Article XVIII:1 contains a rough definition of a developing country as one whose economy "can only support low standards of living and [is] in the early stages of development." The WTO divides its membership into three groups: developed countries, developing countries, and least developed countries. The difference between a developed country and a developing country traditionally has been a matter of self-selection.

A country typically joins the WTO as a developing-country Member through self-selection, that is, it declares itself to be a developing country, and that declaration generally goes unchallenged. Because of the many WTO rules extending special and differential treatment to developing countries, this self-selection process is more than a matter of form. However, a challenge to such self-selection arose in the WTO accession negotiations with China, which insisted on accession as a developing country in the services and agricultural sectors. Some WTO Members, especially the United States and the EU, resisted China's accession on such terms.[6] In the end, China acceded to the WTO as a hybrid, with treatment in some contexts the same as a developed-country Member, in other instances on terms the same as a developing-country Member, and still in other cases on terms worse than either a developed- or developing-country Member.[7] For example, in connection with safeguards relief, during a twelve-year period starting from the date of accession there will be a special Transitional Safeguard Mechanism in cases where imports of products of Chinese origin cause or threaten to cause "market disruption" to the domestic producers of other WTO Members. The "market disruption" test is an easier one for an importing country to satisfy than is the standard "serious injury" test contained in Article 2 of the Safeguards Agreement. In the agricultural sector, China agreed to limit its subsidies for agricultural production to 8.5 percent of the value of farm output (the comparable figures for developed and developing countries are 5 percent and 10 percent, respectively).

Regarding the least-developed countries, Article XI:2 of the Marrakesh Agreement Establishing the World Trade Organization accepts the United Nations' designation of a country as least-developed for purposes of the WTO agreements. Fifty

countries are currently designated by the United Nations as "least developed countries" ("LDCs"). As of 2004, the United Nations recognized the following 50 countries as least-developed:

Afghanistan	Madagascar
Angola	Malawi
Bangladesh	Maldives
Benin	Mali
Bhutan	Mauritania
Burkina Faso	Mozambique
Burma	Nepal
Burundi	Niger
Cambodia	Rwanda
Cape Verde	Samoa
Central African Rep.	Sao Tome & Principe
Chad	Senegal
Comores	Sierra Leone
Djibouti	Solomon Islands
Equatorial Guinea	Somalia
Eritrea	Sudan
Ethiopia	Tanzania
Gambia	Timor Leste
Guinea	Togo
Guinea Bissau	Tuvalu
Haiti	Uganda
Kiribati	Vanuatu
Laos	Yemen
Lesotho	Zaire
Liberia	Zambia

The list is reviewed every three years by the United Nations Economic and Social Council ("ECOSOC"). The criteria underlying the current list of LDCs are:

- a low income, as measured by per capita gross domestic product ("GDP") (the current maximum is $900);
- weak human resources, as measured by a composite index called the Augmented Physical Quality of Life Index that is based on indicators of life expectancy at birth, per capita calorie intake, combined primary and secondary school enrolment, and adult literacy; and
- a low level of economic diversification, as measured by a composite index called the Economic Diversification Index that is based on the share of manufacturing in GDP, the share of the labor force in industry, annual per capita commercial energy consumption, and UNCTAD's merchandise export concentration index.

Different thresholds are used for inclusion in, and graduation from, the LDC list. A country qualifies to be added to the list of LDCs if it meets inclusion thresholds on all three criteria. A country qualifies for graduation from the list if it meets graduation thresholds on two of the three criteria. For the low-income criterion, the threshold on

which inclusion in the current list is based is a GDP per capita of $900, and the threshold for graduation is a GDP per capita of $1035.[8]

Of the 50 LDCs, 31 are WTO Members. Eleven of the 50 (Bhutan, Cambodia, Cape Verde, Equatorial Guinea, Ethiopia, Laos, Nepal, Samoa, Sudan, Vanuatu, and Yemen) are in the process of accession to the WTO. The remaining LDCs—Afghanistan, Comoros, Eritrea, Kiribati, Liberia, Somalia, Timor Leste, and Tuvalu—are not currently in the process of acceding to the WTO.[9]

In addition to this list of 50 LDCs, the former Soviet bloc countries in Central and Eastern Europe are referred to in GATT-WTO parlance as "economies in transition" or "transition economies" and are usually excluded from the list of developing countries. With the exception of Romania, the transition economies of other East and Central European countries have not and will not accede to the WTO with developing-country status.

B. Developing Countries' Two-Track Approach to Trade

Developing countries showed little enthusiasm for participating in GATT-sponsored MTN rounds based on a perception of GATT as an economic club of rich countries dominated by what was eventually to become known as the "Quad Members" of Canada, the EU, Japan, and the United States. The Quad Members were not forthcoming in meeting the demands of developing countries to lower tariffs and other trade barriers to goods of export interest to developing countries, such as textiles and clothing, steel products, and tropical agricultural products. "Free trade" was a hollow promise for developing countries. A major failure of the MTN negotiations prior to the Uruguay Round from a developing-country perspective was a lack of progress in liberalizing trade in two key sectors, textiles and agriculture.[10]

In reaction to the intransigence of the developed countries, developing countries pursued a two-track approach at the international level, one within GATT and the other within the United Nations Conference on Trade and Development ("UNCTAD"). Within GATT, developing countries pressed for special and differential treatment in connection with tariffs, subsidies, and import quotas. As described below, they have achieved some success in securing such special and differential treatment. The track pursued by developing countries outside GATT was initiated in the 1960s under the auspices of UNCTAD.[11] UNCTAD was established in 1964 in the hope that, at least for developing countries, it

[8] *See Least Developed Countries (LDCs),* at www.un.org. In its July 2000 review, in the light of recommendations by the WTO Committee for Development Policy, ECOSOC declared the eligibility of Senegal for designation as an LDC (subject to Senegalese Government so desiring), and decided to postpone until 2001 its consideration of Maldives' graduation. The criteria for determining the list of LDCs are under review. The Committee for Development Policy has recommended that the Economic Diversification Index be replaced by an Economic Vulnerability Index reflecting the main external shocks to which many low-income countries are subject, and incorporating the main structural elements of the countries' exposure to the shocks, including their smallness and lack of diversification.

[9] For a list of LDCs that are WTO members and of those that are in the process of acceding or that have observer status, *see* WTO, Understanding the WTO: The Organization, Least-Developed Countries, available at http://www.wto.org/english/thewto_e/whatis_e/tif_e/org7_e.htm.

UNCTAD is composed of all UN members, plus Monaco, Switzerland, and Vatican City.

would act as a counterweight to GATT. To that end UNCTAD rejected the MFN principle as an inappropriate basis for conducting trade among countries of disparate economic power.[12] Deeply influenced by its dynamic first Secretary-General, Raul Prebisch, and his 1964 book, *Towards a New Trade Policy for Development*, UNCTAD called for a complete reorganization of the world trading system to realign the tilted playing field on which developing countries had been invited to compete. For example, UNCTAD supported commodity price stabilization schemes,[13] import substitution policies, and increased market access in developed countries for developing-country goods. At its second session in 1968 ("UNCTAD II"), UNCTAD called for the establishment of a mutually acceptable system of generalized, non-reciprocal and non-discriminatory preferences, a call that was embodied in the Generalized System of Preferences three years later.[14]

The zenith (or nadir, depending on one's perspective) of UNCTAD's efforts came in 1974 with its demand for a New International Economic Order, coupled with the UN General Assembly's manifesto, the Charter of Economic Rights and Duties of States.[15] Not only did the Charter sanction commodity cartels, but it also approved expropriation of property without compensation. The Charter found few supporters among the developed countries, with Belgium, Denmark, the Federal Republic of Germany, Luxembourg, the United Kingdom, and the United States voting against adoption of the Charter, and Austria, Canada, France, Ireland, Israel, Italy, Japan, the Netherlands, Norway, and Spain abstaining.

Today, UNCTAD continues to be a voice for developing countries, but its influence in the field of international trade has been eclipsed by the WTO.[16] UNCTAD provides a forum for advancing the economic development of LDCs, having held three decennial conferences that focus on this subject. In May 2001, UNCTAD held its Third United Nations Conference on the Least Developed Countries in Belgium. Under the program of action, participants commit to good governance, to building human and institutional capacities, to enhancing the role of trade in development, and to mobilizing financial resources.[17] UNCTAD convenes at the ministerial level every four years, and oversees the Generalized System of Preferences, discussed below. It also monitors the operation of a number of international commodity agreements between producing and consuming countries designed to stabilize markets for a range of primary products of importance to developing countries. Those agreements include the International Cocoa Agreement, the International Coffee Agreement, the International Sugar Agreement, the International

Wheat Agreement, the International Tropical Timber Agreement, the International Jute Agreement, and the International Rubber Agreement.[18]

Whatever the merits of the economic arguments for and against special and differential treatment of developing countries in the GATT-WTO system, the fact is that they do receive such treatment. The principle that developing countries should receive preferential treatment is reflected in two amendments to GATT 1994 (Article XVIII, as substantially amended in 1955, and Part IV, added in 1965); the 1971 GATT waiver for GSP, codified in the Tokyo Round Enabling Clause; a handful of formal Decisions reached during the Uruguay Round; and several articles in the WTO multilateral trade agreements ("MTAs"). In addition, the MTAs in a number of instances accord special treatment that is reserved exclusively for LDCs. The following pages survey the joint efforts made by developed and developing countries to improve the economic status of developing countries within the GATT-WTO system.

II. The GATT Rules on Special and Differential Treatment of Developing Countries

Voting in the WTO is based on the United Nations' rule of one-nation, one-vote,[19] and is not weighted by economic power, as is the case in the International Monetary Fund. Nevertheless, influence in the WTO is measured by economic power, not on the sovereign equality of states. Consequently, although developing countries comprise more than 75 percent of the WTO's membership, their influence in the WTO is not in proportion to their numbers. Nevertheless, the WTO endeavors to work by consensus,[20] and has demonstrated a keen awareness of the economic plight of developing countries. The proposition that developing countries should receive special and differential ("S&D") treatment has found concrete expression in several GATT articles and in many of the WTO MTAs. Developing countries received S&D treatment in the WTO MTAs in the form of extended transition periods for bringing their national laws into compliance with the substantive provisions of the MTAs. With the exceptions of the Agriculture, Safeguards, and Subsidies Agreements, developing countries are in general required ultimately to observe all of the substantive provisions of the WTO Agreements on the same terms as developed countries.

In the negotiations leading up to the Havana Charter (the organic document of the still-born International Trade Organization), the United States proposed that developing countries join the ITO on terms equal to those of all other countries, regardless of their stage of economic development.[21] The principle of equality of treatment was totally unacceptable to the developing countries. Consequently, Articles 8 through 15 of the Havana Charter on economic development and reconstruction were drafted to take into account the concerns of developing countries. These Articles covered access to capital and other financing arrangements, international investment, preferential arrangements among developing countries, and commodity agreements. In a parallel development, Article XVIII was also included in GATT 1947. Article XVIII, the principal provision in the General Agreement

[18] For a brief overview of these agreements, *see* U.S. INT'L TRADE COMM'N, THE YEAR IN TRADE 1993: OPERATION OF THE TRADE AGREEMENTS PROGRAM 75–78 (USITC Pub. 2769, 1994); U.S. INT'L TRADE COMM'N, THE YEAR IN TRADE 1994: OPERATION OF THE TRADE AGREEMENTS PROGRAM 63–66 (USITC Pub. 2894, 1995).

[19] *See WTO Agreement,* Art. IX:1. The EC holds a block of twenty-five votes, one for each member country.

dealing with developing countries, allows governmental assistance for economic development, including the now-discredited domestic economic policy of import substitution. With the stillbirth of the ITO and the Havana Charter, it fell to GATT Article XVIII to accommodate the demands of developing countries for S&D treatment within the GATT legal and institutional framework.

It was becoming increasingly clear in the late 1950s that the economic condition of developing countries was not improving despite the highly touted benefits of an increasingly liberalized world trade regime. The 1958 GATT Report, *Trends in International Trade* (the so-called Haberler Report), concluded that the trade policies of the developed countries restricted market access of developing-country exports and prevented developing countries from realizing the full benefits of liberal trade.[22] The GATT Contracting Parties responded by establishing a Programme for Trade Expansion[23] that same year which, through its Committee III, was charged with the task of identifying developed countries' barriers to developing countries' export trade. The Committee found that high tariffs and quantitative restrictions in developed countries on primary products, in particular agricultural commodities, were chiefly responsible for frustrating the economic development efforts of developing countries.[24] This GATT initiative was followed by the 1961 Declaration on Promotion of the Trade of Developing Countries,[25] and by a seven-point Action Programme in 1963.[26] The Declaration and Action Programme called for preferential tariff treatment of developing-country exports to developed countries. The upshot of these developments was the 1965 amendment of GATT that added Part IV, entitled *Trade and Development.*[27]

A. GATT Article XVIII

1. Background and Overview

In a prelude to the 1958 Haberler Report and the addition of Part IV to GATT 1947, the Contracting Parties took steps in 1955 to assist developing countries in integrating into the world trading system by substantially redrafting Article XVIII, *Governmental Assistance to Economic Development*. The current text of Article XVIII, which took effect in 1957, is derived from two 1955 GATT Working Party reports, the Report of the Review Working Party on Quantitative Restrictions,[28] and the Report of the Review Working Party on Schedules and Customs Administration.[29]

The Report of the Review Working Party on Quantitative Restrictions summarized the new direction of the redrafted Article XVIII in the following words:

> The general concept of the new Article is that economic development is consistent with the objectives of the General Agreement and that the raising of the general standard of living of the underdeveloped countries which should be the result of economic development will facilitate the attainment of the objectives of the Agreement. In that sense, the new text

> represents a new and more positive approach to the problem of economic development with the obligations undertaken under the General Agreement regarding the conduct of commercial policy.[30]

The principle that economic development is within GATT's competence (as it would have been for the ITO under Articles 8–15 of the Havana Charter) finds expression in Article XVIII's preamble and its four sections.[31] Without attempting to provide a bright-line, quantitative definition of "developing country," Section A authorizes countries whose economies can only support a low standard of living and are in the early stages of development to modify or withdraw tariff concessions in order to promote the establishment of an industry. Section B authorizes such countries to impose import quotas for balance-of-payment purposes. Section C authorizes resort to certain GATT-inconsistent measures as necessary to promote the establishment of a particular industry. Section D permits countries whose economies are in the process of development but which do not have a "low standard of living" to nevertheless derogate from GATT for the purpose of establishing a particular industry, provided it receives the approval of the other GATT Contracting Parties.

2. Article XVIII, Preamble

The preamble of Article XVIII begins:

> The contracting parties recognize that the attainment of the objectives of this Agreement will be facilitated by the progressive development of their economies, particularly of those contracting parties the economies of which can only support low standards of living and are in the early stages of development.[32]

To that end, Article XVIII:2–4 gives developing countries that meet the criteria of having a low standard of living and of being in the early stages of development *carte blanche* to adopt trade protectionist measures in the name of economic development. For example, such developing countries are given broad authorization to maintain flexibility in their tariff structures so as to enable them to grant tariff protection to "a particular industry." A "particular industry" is defined as applying not only to a new or "infant" industry, but also to a new branch of an existing industry, to the substantial transformation of an existing industry, and to the substantial expansion of an existing industry supplying a relatively small proportion of domestic demand.[33] Developing countries also may impose quantitative restrictions for balance-of-payments purposes. If neither of these measures are efficacious, then developing countries may derogate from other GATT provisions and adopt additional trade protectionist measures, as provided in Section C of Article XVIII.

[30] *Working Party Report on Quantitative Restrictions, supra* note 28, at 179, ¶ 35.

[31] *See generally* WORLD TRADE ORGANIZATION, ANALYTICAL INDEX: GUIDE TO GATT LAW AND PRACTICE, vol. 1, at 488–511 (1995).

[32] GATT Art. XVIII:1. GATT 1994 does not provide a quantitative definition of eligibility as a "developing country," such as, for example, by using per capita GDP benchmarks. Regarding the phrase "can only support low standards of living," Interpretative Note *Ad* Article XVIII:1 provides that the determination whether a country can only support low standards of living is not to be based on a temporary situation where exceptionally favorable conditions exist for the export products of a developing country. Regarding the phrase "in the early stages of development," Interpretative Note *Ad* Article XVIII:2 states that it is not limited to countries that have just started their economic development, but also covers countries that are industrializing in order to reduce their dependency on exports of primary products.

In Report of the GATT Panel (adopted), *Ceylon—Article XVIII Applications*, BISD, 6th Supp. 112 (1957), the panel used the criteria of per capita GNP ($128) and the percentage of manufacturing, mining, and construction in GNP (10 percent) to conclude that Ceylon (the present Sri Lanka) was eligible to invoke Article XVIII. *See id*. at 113, ¶ 4.

[33] *See* GATT Art. XVIII, Interpretative Note *Ad* Article XVIII, ¶ 2.

3. Article XVIII, Section A

According to the GATT working party:

> Section A of Article XVIII was drafted to permit a qualifying developing country to enter into negotiations for the modification of a concession, in order to promote the establishment of an industry, with the country with which it was initially negotiated and with other substantially interested countries. . . . [T]he applicant may modify or withdraw concessions in cases where it is unable, for good reasons, to provide adequate compensation.[34]

In pre-Uruguay Round practice, Section A played an insignificant role in the economic development of most developing countries because developing countries as a group had few bound tariffs on imported goods prior to the Uruguay Round.[35] Accordingly, they remained free to raise their tariffs for any reason at any time without being obligated to compensate other GATT contracting parties. Section A had been invoked only nine times by five countries: Suriname in 1958; Greece in 1956 and 1965; Korea in 1958; and Sri Lanka in 1955 (twice), 1956, and 1957.[36]

4. Article XVIII, Section B

Article XVIII, Section B authorizes the imposition of import quotas taken for balance-of-payment ("BOP") purposes under criteria slightly less stringent than the normal BOP criteria set out in GATT Article XII. The Working Party Report on Quantitative Restrictions noted that "countries coming under Section B of Article XVIII face special additional problems which the provisions have been adjusted to meet."[37] Article XII:2(a) permits the implementation of BOP measures to forestall an "imminent" threat of a serious decline in a country's monetary reserves and to correct a situation of "very low monetary reserves." Article XVIII:9(b), on the other hand, which parallels the language of Article XII:2 for the most part, omits the term "imminent" and instead refers to a situation of "inadequate reserves." In addition, under Article XII:12 a country imposing BOP restrictions is required to consult with other Members every year. In contrast, consultations under Article XVIII:4 are required only every two years.

Supplementing the special BOP provisions of Article XVIII is the Tokyo Round Declaration on Trade Measures Taken for Balance-of-Payments Purposes.[38] In that Declaration the Contracting Parties agreed to the following: (1) BOP measures taken under either Articles XII or XVIII should be ones that have the least disruptive effect on trade; (2) the simultaneous application of more than one type of trade measure (e.g., a tariff increase on specific goods coupled with a quota on imports of those same goods) should be avoided; and (3) a time schedule for removing the measure should be announced.[39]

[34] *Working Party Report on Schedules and Customs Administration, supra* note 29, at 215, ¶¶ 22–23.

[35] Developing countries had agreed to tariff bindings on only 13 percent of imported industrial products in the pre-Uruguay Round period. The percentage of imported industrial products subject to bound duty rates shot up to 61 percent as a result of Uruguay Round concessions. *See* Richard Blackhurst, Alice Enders and Joseph F. Francois, *The Uruguay Round and Market Access: Opportunities and Challenges for Developing Countries, in* THE URUGUAY ROUND AND THE DEVELOPING COUNTRIES, *supra* note 1, at 97, 99.

[36] *See* GUIDE TO GATT LAW AND PRACTICE, *supra* note 31, vol. 1, at 501.

[37] *Working Party Report on Quantitative Restrictions*, *supra* note 28, at 183, ¶ 44.

[38] *Declaration on Trade Measures Taken for Balance-of-Payments Purposes*, BISD, 26th Supp. 205 (1979).

[39] *Id*. ¶ 1. Footnote 1 of the Declaration adds a cryptic statement that "the less-developed contracting parties must take into account their individual development, financial and trade situation when selecting the particular measure to be applied." Because it is hard to imagine that they would do otherwise, this admonition may amount to little more than a call to exercise self-restraint.

Paragraph 2 of that Declaration further provides that if a developed country imposes import quotas for BOP purposes, "it shall . . . take into account the export interests of the less-developed contracting parties and may exempt from its measures products of export interests to those contracting parties."[40] Finally, paragraph 8 of the 1979 Declaration and the Uruguay Round Understanding on the Balance-of-Payments Provisions of the General Agreement on Tariffs and Trade 1994 introduce a simplified consultation procedure that permits a documentary presentation (as opposed to a formal meeting) by the developing country imposing the BOP measures. The Committee on Balance-of-Payments Restrictions is responsible for consulting with and reporting on Members which impose BOP restrictions under Article XVIII:B.[41]

The question of whether an invocation of Article XVIII:B is justified was examined in 1989 in three parallel GATT panel reports.[42] Korea had maintained import quotas on beef, ostensibly on BOP grounds, for more than twenty years, notwithstanding the earlier conclusion of the Committee on Balance-of-Payments Restrictions in 1987 that Korea's import restrictions no longer could be justified under Article XVIII:B. The panel found that in light of Korea's much improved BOP situation (it held monetary reserves of $12 billion, equal to three months' worth of imports), Korea should establish a timetable for phasing out its BOP restrictions on beef.[43]

The Appellate Body in *India—Quantitative Restrictions*, ruled that under Article XVIII:11 a Member imposing BOP restrictions need not change its development policies as a condition precedent to imposing such measures.[44] However, the Appellate Body agreed with the panel that India's BOP restrictions were inconsistent with Articles XI:1 and XVIII:11 of GATT 1994.[45]

5. Article XVIII, Section C

Section C of Article XVIII:13 provides:

> If a [developing country] finds that governmental assistance is required to promote the establishment of a particular industry with a view to raising the general standard of living of its people, but that no measure consistent with the other provisions of this Agreement is practicable to achieve that objective, it may have recourse to the provisions and procedures set out in this Section.

Section C may be invoked in situations where tariff withdrawals under Section A or the imposition of import quotas for BOP purposes under Section B fail to improve a country's economic development. Section C permits developing countries whose "economy can only support low standards of living" (suggesting a reference to least developed countries) to derogate from other GATT provisions in order to promote the establishment of a particular industry.

[40] *See id.* at 207.

[42] Reports of the GATT Panel (adopted), *Republic of Korea—Restrictions on Imports of Beef*, BISD, 36th Supp. 202, 234, 268 (1989).

[43] *See id*. at 98–101, 120–23, 114–17.

[44] *See* Report of the Appellate Body, *India—Quantitative Restrictions on Imports of Agricultural, Textile and Industrial Products*, WT/DS90/AB/R, ¶¶ 126, 134 (1999).

[45] *See id*. ¶ 154.

Section C contemplates that prior consultations will be held before a Member implements Section C measures.[46] In contrast, Section A or B measures require only *post hoc* consultations. Once consultations are completed, and an agreement is reached or attempts to reach an agreement are exhausted, then "[t]he contracting party having recourse to this Section shall thereupon be released from its obligations under the relevant provisions of the other Articles of this Agreement [with the exceptions of Articles I on MFN treatment, II on tariff bindings, and XIII on the nondiscriminatory administration of quantitative restrictions[47]] to the extent necessary to permit it to apply the measure."[48] Given the severe limitations on the kinds of GATT-inconsistent measures that may be taken when invoking Section C, Section C's chief value appears to be in permitting derogations from the Article III national treatment obligation and the Article XI prohibition on quantitative restrictions.

Section C is a provision most often honored in the breach. A handful of countries have been granted releases under Section C,[49] and a handful more have ever bothered notifying other contracting parties of measures taken under Section C.[50] It was blandly reported in 1986 that "countries invoking . . . Article XVIII:C had not followed the prescribed procedures."[51]

6. Article XVIII, Section D

Finally, Section D of Article XVIII focuses on middle-income developing countries, that is, countries that do not fall into the category of a country whose economy can only support low standards of living. Section D permits such middle-income developing countries to invoke Article XVIII:A–C. However, no measures may be implemented without the concurrence of the other WTO Members.[52] Section D has never been invoked.

B. GATT Part IV

1. Background and Overview

In 1957, the GATT Contracting Parties appointed a panel of experts to report on trends in international trade, "in particular the failure of the trade of less developed countries to develop as rapidly as that of industrialized countries, excessive short-term fluctuations in prices of primary products, and widespread resort to agricultural protection."[53] The Report, *Trends in International Trade* (also known as the "Haberler Report" after Gottfried Haberler, the panel's chairman), galvanized the Contracting Parties to examine ways in which developing countries could achieve greater access for their exports in world markets.[54] The end product of the 1958 Haberler Report was Part IV of GATT, *Trade and*

Development, which was added to GATT 1947 by the Protocol Amending the General Agreement on Tariffs and Trade to Introduce a Part IV on Trade and Development,[55] effective in 1966.[56]

Part IV is comprised of three Articles, Articles XXXVI through XXXVIII. Although Part IV is an integral part of a binding legal instrument, *i.e.*, GATT 1994, it is drafted in language that is hortatory, not mandatory. In other words, developed countries apparently made few, if any, binding legal commitments to developing countries in Part IV. In brief, Article XXXVI is a statement of principles and objectives whose thrust is greater market access for the products of developing countries. Article XXXVII states the commitments the Members agree to make to ensure developing countries do in fact attain increased access to world markets. Article XXXVIII provides for joint action by the WTO Members.

2. Article XXXVI

The first article of Part IV, Article XXXVI, according to Kenneth Dam, "follows the elegant but indefinite style which has tended to characterize the work of those international organizations where the appearance of action has too often been substituted for action itself."[57] For example, Article XXXVI:2 provides, "There is need for a rapid and sustained expansion of the export earnings of the less-developed contracting parties." Article XXXVI:3 states, "There is need for positive efforts designed to ensure that less-developed contracting parties secure a share in the growth in international trade commensurate with the needs of their economic development." Article XXXVI proclaims, "The adoption of measures to give effect to these principles and objectives shall be a matter of conscious and purposeful effort on the part of the contracting parties both individually and jointly." It is hard to disagree with Professor Dam's sobering characterization of Article XXXVI.

Despite the criticism that Article XXXVI is long on exhortation and short on a compulsory plan of action, a GATT panel concluded that the EC had failed to live up to its Article XXXVI commitments. In the 1980 *Report on Refunds of Sugar*,[58] in response to a complaint by Brazil that EC subsidization of sugar exports was inconsistent with Part IV commitments, the panel concluded that "increased Community exports of sugar through the use of subsidies . . . [amounted to a failure to] collaborate[] jointly with other contracting parties to further the principles and objectives set forth in Article XXXVI . . ."[59] In the 1989 *Report on Restrictions on Imports of Dessert Apples*,[60] another GATT panel addressed Chile's complaint that in restricting Chilean imports of apples, the EC had not considered the special needs of Chile as a developing country as the EC was obliged to do under Part IV. The panel stated that it "could not find that the EC had made appropriate efforts to avoid taking protective measures on apples originating in Chile."[61] Nevertheless, because the panel concluded that the EC's import restrictions

[61] *Id*. at 134, ¶ 12.32.

were in violation of other articles of the General Agreement, the panel did not consider it necessary to reach any conclusions on the claims based on Part IV.[62]

Article XXXVI contains the most important provision of Part IV. This provision marks the first substantive reform of one of the basic (albeit implicit) GATT commitments, that is, non-reciprocity of concessions. Developing countries are relieved of any obligation to reciprocate in tariff negotiations. Article XXXVI:8, which codifies a practice adopted during the Kennedy Round,[63] plainly states that "developed contracting parties do not expect reciprocity for commitments made by them in trade negotiations to reduce or remove tariffs and other barriers to the trade of less-developed contracting parties." Interpretative Note *Ad* Article XXXVI to paragraph 8 further states:

> It is understood that the phrase "do not expect reciprocity" means, in accordance with the objectives set forth in this Article, that the less-developed contracting parties should not be expected, in the course of trade negotiations, to make contributions which are inconsistent with their individual development, financial and trade needs, taking into consideration past trade developments.

The Tokyo Round Decision on Differential and More Favorable Treatment, Reciprocity and Fuller Participation by Developing Countries (the "Enabling Clause"), discussed below, reaffirms that developing countries are not expected to make reciprocal tariff concessions in MTN rounds.

3. Article XXXVII

Article XXXVII, *Commitments*, is a standstill provision that obligates developed countries "to the fullest extent possible—that is, except when compelling reasons, which may include legal reasons, make it impossible,"[64] (1) to give high priority to the reduction and elimination of tariff and nontariff barriers to trade in products of particular export interest to developing countries, (2) to refrain from introducing or increasing such barriers to trade, and (3) to refrain from imposing new fiscal measures that would discourage consumption of primary products produced in developing countries.[65] Article XXXVII:2 directs developed countries to consult with developing countries on the implementation of these admittedly soft commitments. Article XXXVII:3 further instructs developed countries to "make every effort" and "give active consideration" to adopting other unspecified measures for the promotion of imports from developing countries. According to a 1976 GATT Secretariat Note on the application of Part IV, such other measures include refraining from the use of safeguards actions affecting developing-country imports, and excluding developing-country imports from the assessment of antidumping and countervailing duties.[66]

4. Article XXXVIII

As a complement to Article XXXVI:8's modest substantive changes to GATT 1994, Article XXXVIII, *Joint Action*, makes an important procedural change by creating the

[62] *See id*.

[63] *See* LONG, *supra* note 12, at 99; DAM, *supra* note 1, at 238.

[64] The text interpreting the phrase "to the fullest extent possible" was added at the insistence of developing countries. They feared that without this interpretative gloss, developed countries would be the exclusive judge of the applicability of the provisions of Article XXXVII:1. *See* GUIDE TO GATT LAW AND PRACTICE, *supra* note 31, vol. 2, at 1061.

[65] *See* GATT Art. XXXVII:1(a)–(c).

[66] *See* GUIDE TO GATT LAW AND PRACTICE, *supra* note 31, vol. 2, at 1065.

Committee on Trade and Development under authority of Article XXXVIII:2(f).[67] The Trade and Development Committee's original terms of reference included keeping under continuous review the application of Part IV, formulating proposals for consideration by the Contracting Parties in connection with any matter relating to Part IV, and determining the eligibility of a country as a "developing country" for purposes of Part IV.[68] New terms of reference for the Committee were agreed to in 1995 by the WTO General Council at its first meeting, which include the following: (1) to serve as a liaison between the WTO and other multilateral agencies concerned with development, (2) to review the participation of developing countries in the WTO, and (3) to review and consider any questions that may arise in connection with the application of the special provisions in the Uruguay Round Agreements and Decisions in favor of developing countries.[69] Recent activities of the Committee on Trade and Development are discussed in Part V. C below.

Finally, Article XXXVIII directs the Contracting Parties not only to work collaboratively *inter se*,[70] but also with other international organizations, including UNCTAD.[71]

III. The Generalized System of Preferences

A. Background

The 1955 amendment to Article XVIII and the addition of Part IV to GATT in 1965 do not alter the fact that GATT still requires nondiscriminatory MFN treatment in trade between and among contracting parties. In the absence of some agreement to the contrary, any S&D treatment that a developed country gives to a developing country has to be generalized and accorded to all other WTO Members. With the exception of validating historical preferences in existence at the time GATT 1947 entered into effect or when a country acceded to GATT,[72] there is no authorization for S&D treatment of developing countries by developed countries.[73] To be sure, in exceptional circumstances, a Member may be granted a waiver of its GATT obligations pursuant to GATT Article XXV:5. But such waivers may be granted only in "exceptional circumstances," and must be approved by a three-fourths absolute majority of WTO Members. What constitutes "exceptional circumstances" warranting an Article XXV:5 waiver has been the subject of some

[67] BISD, 13th Supp. 75 (1964). Article XXXVIII:2(f) provides that the Contracting Parties shall "establish such institutional arrangements as may be necessary . . . to give effect to the provisions of this Part." For a discussion of the work of the Committee on Trade and Development under GATT 1947, *see* DAM, *supra* note 1, at 242–44. The problems and positions of developing-country Members of the WTO are heard by the Committee on Trade and Development, and its Subcommittee on Trade of Least-Developed Countries. The Committee reports to the WTO's General Council. *See, e.g., Report (2001) of the Committee on Trade and Development and the Sub-Committee on Least-Developed Countries*, WT/COMTD/33 (2001).

[68] BISD, 13th Supp. 75–76 (1964).

[69] WT/L/46 (1995).

[70] *See* GATT Art. XXXVIII:2(a), (c), & (e).

[71] *See* GATT Art. XXXVIII:2(b).

[72] The protocols of accession to the General Agreement of a number of countries which were not original GATT contracting parties include preferences between the acceding country and other countries listed in the protocol of accession. For example, when Argentina joined GATT, it included preferences in existence at the time of its accession with several border countries in South America. For a list of such protocols of accession, *see* GUIDE TO GATT LAW AND PRACTICE, *supra* note 31, vol. 1, at 48–49.

[73] *See* GATT Art. I:2; Annexes A–F.

controversy within GATT.[74] There is no generally accepted definition or standard criteria to identify what circumstances are deemed "exceptional."

The amendments to Article XVIII, the addition of Part IV to GATT, and the work of UNCTAD on behalf of developing countries created momentum for more changes within the GATT system to assist developing countries in their economic development. The notion of expanding import preferences for developing countries was gaining popularity.

Developing countries argued that Part IV was itself authorization to developed countries to grant tariff preferences to developing-country imports that would otherwise derogate from the MFN clause. Developed countries disagreed.[75] What was needed was some legal device by which Members could give preferential tariff treatment to developing countries without simultaneously violating the MFN commitment.

B. The Origins of GSP

The concept of a Generalized System of Preferences ("GSP") was introduced by UNCTAD at its first conference held in 1964.[76] Developing countries argued that preferential tariffs in developed-country markets on developing-country imports would have several salutary benefits for developing countries. First, of course, developing countries would increase their exports. Second, they would diversify into industries that produce and export higher value-added goods, making them less reliant on primary products as their main source of exports. Third, GSP would reduce their dependence on foreign aid.

At UNCTAD's second conference held in 1968, with the support of the United States and other developed countries, the GSP concept was formally adopted. The GSP system as originally conceived had three features: (1) developed countries would grant temporary and unilateral tariff preferences to developing countries; (2) tariff preferences would be on goods of export interest to developing countries in which they were not competitive internationally; and (3) tariff preferences would not be extended to goods produced by an industry in the importing country if that industry was vulnerable to import competition.[77]

C. The Ten-Year Waiver

In 1970, the GATT Contracting Parties adopted the GSP, under which the major developed countries give tariff preferences to the imported products of developing countries. The tariff preferences generally are in the form of lower tariffs on or duty-free treatment of imports originating from designated beneficiary developing countries.To bring the GSP system into legal effect within the GATT framework, the Contracting Parties considered three options: (1) amend GATT, (2) grant an Article XXV:5 waiver, or (3) adopt a

[74] *See, e.g.*, Report of the GATT Working Party, *United States—Caribbean Basin Economic Recovery Act, BISD*, 31st Supp. 180 (1980). In that Report, the Working Party recognized that there are a number of different approaches within the GATT framework to the establishment of preferential schemes and that each case must be analyzed on the basis of all the circumstances peculiar to it. "Having considered these alternative approaches," the Working Party noted, "a number of the members of the Working Party concluded that the waiver procedure under paragraph 5 of Article XXV was the most appropriate alternative with respect to the CBERA." *Id*. at 198, ¶ 62. For an analysis of the Article XXV:5 waiver procedure, *see* GUIDE TO GATT LAW AND PRACTICE, *supra* note 31, vol. 2, at 882–88.

declaration by the Contracting Parties authorizing new preferences on a temporary basis, notwithstanding the Article I MFN commitment.[78] The Contracting Parties settled on the second option, a temporary ten-year waiver under Article XXV:5, adopted on May 25, 1971.

The waiver was criticized on the ground that it did violence to the language of Article XXV:5, which calls for waivers of GATT obligations only "in exceptional circumstances." However, the first option, an amendment to GATT, was considered excessively time-consuming. Regarding the third option, the necessary political will for issuing a declaration, which would have given permanent legal status to the GSP system within GATT, could not be mustered at the time.

The Decision on a Generalized System of Preferences of June 25, 1971,[79] temporarily waived the provisions of Article I for ten years with respect to GSP tariff preferences. Even though the GSP Decision did not refer to Article XXV:5, the intent was to grant a waiver under that Article based on communications from the prospective donor countries that had applied for an Article XXV:5 waiver. The waiver made possible the implementation of a system of generalized, non-reciprocal, nondiscriminatory preferences as agreed to at the 1968 UNCTAD conference. In other words, all developing countries, but no developed country, were potential beneficiaries of any GSP program established by a developed country, and beneficiary countries would receive preferential tariff treatment on a non-reciprocal basis. The waiver did not identify beneficiary countries by name. Rather, the waiver provided that beneficiary countries would self-identify.

The only GATT Article affected by the GSP waiver is the MFN obligation of Article I. The 1971 waiver makes GSP legally possible, but it in no way obligates developed countries to offer tariff preferences to developing countries. Any donor country is free to withdraw or modify its GSP program at any time.

In 1971, the original six members of the EEC implemented the world's first GSP program. The benefits were generally available to the so-called "Group of 77" developing countries. By the 1970s, twenty OECD countries—Australia, Canada, Hungary, Japan, New Zealand, Norway, Switzerland, the United States, and the EC (on behalf of its then 12-member countries)[80]—had notified GATT of GSP programs they had established. The GSP is monitored by UNCTAD's Special Committee on Preferences.

D. The Problem of Discriminatory Preferences

Developed countries were expected to extend GSP benefits on a nondiscriminatory basis among all beneficiary developing countries. No one beneficiary, or group of beneficiaries, was to be singled out among developing countries for preferential treatment. However, discriminatory trade preference programs created by developed countries in favor of selected developing countries appeared almost immediately after the GSP was approved by the Contracting Parties. For example, under the first Lomé Convention in 1976, the EU extended GSP benefits to a large but under-inclusive group of nearly seventy developing countries in Africa, the Caribbean, and the Pacific ("ACP"). Most of these ACP countries were former colonies of EU-member countries.[81] The United States at first protested

Matthews, *Lomé IV and ACP/EEC Relations: Surviving the Lost Decade,* 22 CAL. W. INT'L L.J. 1 (1991); Kele Onyejekwe, *GATT, Agriculture, and Developing Countries,* 17 HAMLINE

the EU's discriminatory trade preferences that offered preferential tariff treatment to a broader range of goods than was offered to other GSP beneficiary countries. The U.S. complaint became moot in 1983 when it too followed the EU's lead with the enactment of the Caribbean Basin Economic Recovery Act ("CBERA").[82] CBERA provides discriminatory tariff treatment in favor of two dozen countries in the Caribbean and Central America by offering CBERA beneficiary countries preferential duty treatment on approximately 1,700 more items than is the case under the U.S. GSP program.[83] Other discriminatory trade programs for select developing countries include the Andean Trade Preference Act[84] (in favor of Ecuador, Columbia, Peru, and Bolivia) and the African Growth and Opportunity Act.

In a parallel development, the developing countries undertook to provide preferential treatment to one another's imports under GATT auspices. In the Decision on Trade Negotiations among Developing Countries of November 26, 1971,[85] the obligations of Article I:1 were waived to permit a developing country participating in the arrangement to accord preferential treatment with respect to products originating in other developing countries which are signatories to a protocol implementing the Decision. That protocol is open for accession to all developing countries, but has been ratified by only fifteen developing countries.[86]

E. The Tokyo Round Enabling Clause

1. Background

Developing countries were generally disappointed with the results of the 1967 Kennedy Round. Tariff cuts made by developed countries did not significantly improve market access for developing countries because those cuts tended to be on goods that were not part of the export trade of developing countries.

Developing countries hoped for better results in the Tokyo Round. The expectations of developing countries were raised by the Ministerial Declaration that launched the

L. Rev. 77 (1993). The Lomé Convention was overhauled in 2000 in the form of a 20-year agreement that focuses on regional free-trade agreements among the 71 ACP beneficiary countries. *See EU and 71 Developing Nations Agree to Overhaul of Lomé Convention*, 17 Int'l Trade Rep. (BNA) 240 (2000); *EU Requests WTO Waiver on New Pact Giving ACP Countries Preferential Access*, 17 Int'l Trade Rep. (BNA) 596 (2000). The EU received an Article I MFN waiver at the Doha Ministerial Conference for its successor agreement to the *Lomé* Convention, the ACP-EC Partnership Agreement. The waiver expires on December 31, 2007. *See Decision of 14 November 2001 of the Ministerial Conference, ACP-EC Partnership Agreement*, WT/MIN(01)/15 (2001).

[82] *See* 19 U.S.C. §§ 2701–33.

[83] Because CBERA extends discriminatory tariff treatment to a limited number of developing countries, it does not qualify for the blanket MFN waiver available under the GSP. In September 1995, pursuant to Article IX of the WTO Agreement, the United States requested the WTO to renew the waiver previously granted CBERA for an additional ten years. The U.S. request was granted on November 15, 1995. *See* Decision of the WTO General Council of Nov. 15, 1995, WT/L/104 (1995).

[84] Pub. L. No. 102–182, tit. II, 105 Stat. 1236 (1991), *codified at* 19 U.S.C. §§ 3201–3206. The Andean Trade Preference Act ("ATPA"), commonly referred to as the Andean Initiative or Andean Trade Pact, was enacted on December 4, 1991, to authorize preferential trade benefits for the Andean nations of Bolivia, Ecuador, Colombia, and Peru. ATPA benefits are similar to, but not identical with, the benefits accorded beneficiary countries under CBERA.

[85] *Decision on Trade Negotiations among Developing Countries of November 26, 1971*, BISD, 18th Supp. 26 (1971).

[86] Bangladesh, Brazil, Chile, Egypt, India, Mexico, Pakistan, Peru, Korea, Romania, Tunisia, Turkey, Uruguay, and Yugoslavia have ratified the protocol relating to trade negotiations among developing countries. India withdrew on March 29, 1993. *See* Guide to GATT Law and Practice, *supra* note 31, vol. 1, at 51.

Tokyo Round. The Declaration provided that one of the Round's goals was "to secure additional benefits for the international trade of developing countries so as to achieve a substantial increase in their foreign exchange earnings, the diversification of their exports, the acceleration of the rate of growth of their trade, . . . [and] a substantial improvement in the conditions of access for the products of interest to the developing countries . . ."[87]

With the ten-year waiver granted under the 1971 GSP Decision set to expire, affirmative action was required by the Contracting Parties to keep GSP alive. Whereas the political will did not exist in 1971 to make GSP and S&D treatment of developing countries a permanent GATT fixture, by 1979 opinion had shifted, as reflected in four agreements adopted by the Contracting Parties in November 1979 relating to the legal framework for the conduct of international trade:

- the Declaration on Trade Measures for Balance-of-Payments Purposes[88]
- the Decision on Safeguard Action for Development Purposes[89]
- the Understanding Regarding Notification, Consultation, Dispute Settlement and Surveillance[90]
- the Decision on Differential and More Favorable Treatment, Reciprocity and Fuller Participation of Developing Countries.[91]

The 1971 waiver granted in the GSP Decision was not renewed in light of the Tokyo Round Decision of November 18, 1979 on Differential and More Favorable Treatment, Reciprocity and Fuller Participation of Developing Countries,[92] commonly referred to as the "Enabling Clause."[93] The Enabling Clause gives GSP permanent legal status under GATT.[94]

2. The Terms of the Enabling Clause

The Enabling Clause, as its title suggests, *enables*, but does not *obligate*, developed countries to accord preferential tariff treatment to developing countries.[95] Paragraph 1 provides that "[n]otwithstanding the provisions of Article I of the General Agreement, contracting parties may accord differential and more favorable treatment to developing countries, without according such treatment to other contracting parties." Paragraph 2 identifies four areas in which such preferential treatment may be accorded, but the list is not exhaustive:

[87] BISD, 20th Supp. 19, 20 (1974).

[88] *Declaration on Trade Measures for Balance-of-Payments Purposes*, BISD, 26th Supp. 205 (1979).

[89] *Decision on Safeguard Action for Development Purposes*, BISD, 26th Supp. 219 (1979).

[90] *Understanding Regarding Notification, Consultation, Dispute Settlement and Surveillance*, BISD, 26th Supp. 210 (1979).

[91] *Decision on Differential and More Favorable Treatment, Reciprocity and Fuller Participation of Developing Countries*, BISD, 26th Supp. 203 (1979).

[92] *Decision of November 18, 1979 on Differential and More Favorable Treatment, Reciprocity and Fuller Participation of Developing Countries*, BISD, 26th Supp. 203 (1979).

[93] *See* Abdulqawi A. Yusuf, *"Differential and More Favourable Treatment": The GATT Enabling Clause,* 14 J. WORLD TRADE L. 488 (1980).

[94] *See* LONG, *supra* note 12, at 101.

[95] In Report of the GATT Panel (adopted), *United States—Denial of Most-Favored-Nation Treatment as to Non-Rubber Footwear form Brazil*, BISD, 39th Supp. 128 (1992), the panel concluded that the Enabling Clause permits only preferential tariff treatment of products from developing countries without obligating the importing developed country to accord that treatment to imports of other countries, but does not permit such preferential treatment in connection with other rules and regulations (in this case, the use of an injury test in countervailing duty actions). *Id*. at 152–53, ¶¶ 6.14–6.17.

(a) preferential tariff treatment accorded by developed contracting parties to products originating in developing countries in accordance with the [1971 Decision on a] Generalized System of Preferences;
(b) differential and more favorable treatment with respect to the provisions of the General Agreement concerning non-tariff measures governed by the provisions of instruments multilaterally negotiated under the auspices of the GATT [referring to the Tokyo Round Codes, many of which contained provisions on special treatment of developing countries];
(c) regional or global arrangements entered into amongst less-developed contracting parties for the mutual reduction or elimination of tariffs and . . . of non-tariff measures, on products imported from one another;
(d) special treatment of the least developed among the developing countries in the context of any general or specific measures in favor of developing countries.

Acknowledging the risk that preferential tariff treatment of developing countries might harm trade liberalization efforts among developed countries, paragraph 3 of the Enabling Clause states that preferential tariff treatment is "to facilitate and promote the trade of developing countries and not to raise barriers to or create undue difficulties for the trade of any other contracting parties." Paragraph 3 further cautions that preferential tariff treatment must not retard the pace of reduction or elimination of tariffs and other restrictions to trade on an MFN basis. Paragraph 4 is a procedural provision obligating any developed country that introduces a GSP program to notify and consult with GATT.

The Enabling Clause does not impose any reciprocity obligation in trade concessions upon developing countries. In fact, paragraph 5 of the Clause reiterates the principle of Article XXXVI:8 by specifically relieving them of any commitment to make reciprocal tariff concessions in exchange for preferential treatment.

The United States, the EU, and Japan are the largest GSP donors measured in terms of tariff benefits to beneficiary countries.[96] Developing countries, including Argentina,

[96] A nagging issue under the Enabling Clause is whether donor countries can discriminate among beneficiary countries by conditioning eligibility for GSP, for example, on the basis of enforcement of worker rights. The U.S. GSP program denies GSP treatment to countries that take or fail to take certain specified actions. A country may lose or be denied GSP beneficiary status if it (1) has nationalized or expropriated, *de facto* or *de jure*, property owned by U.S. citizens or businesses which are at least fifty per cent beneficially owned by U.S. citizens, unless the President determines either that prompt, adequate, and effective compensation has been paid; that good faith negotiations on compensation are in progress; or that the dispute has been submitted to binding international arbitration; (2) fails to recognize or enforce arbitral awards in favor of U.S. citizens or businesses which are at least fifty per cent beneficially owned by U.S. citizens; (3) aids or abets, by granting sanctuary from prosecution to, any individual or group which has committed an act of international terrorism; and (4) has not taken or is not taking steps to afford internationally recognized worker rights to its workers. A beneficiary developing country may also forfeit GSP beneficiary status if it has failed to take the necessary steps to provide market access to U.S. exports, to protect intellectual property rights, and to reduce barriers to investment and trade in services. *See* 19 U.S.C. §§ 2462(c), 2463(d). For example, in 1995, Maldives was suspended as a GSP beneficiary following a determination that it had not taken and was not taking steps to afford its workers internationally recognized workers' rights. In 1996, President Clinton suspended certain GSP benefits from Pakistan for its failure to make sufficient progress in protecting worker rights. *See* RAJ BHALA AND KEVIN KENNEDY, WORLD TRADE LAW 464–68 (1998). Such conditionality and the consequent discrimination have been challenged as violative of the Enabling Clause. *See, e.g.,* Committee on Trade and Development, Special Session, *Application of the Special and Differential Treatment Provisions Contained in the Agreements and Decisions of the WTO*, Communication from Paraguay, TN/CTD/W/5 (2002).

Chile, Egypt, Indonesia, Morocco, Mauritius, Thailand, and Turkey, have also established their own tariff preference programs for LDCs.[97] In addition, some of the leading regional trade arrangements among developing countries *inter se* have been notified under the Enabling Clause, including the Andean Pact, MERCOSUR, ALADI, and the ASEAN Free Trade Area.[98]

3. The Problem of Graduation

Paragraph 7 of the Enabling Clause for the first time formalizes the concept of graduation from GSP into a legal principle. Although not referring to graduation *in haec verba*, paragraph 7 alludes to graduation from GSP with the statement that as the economic condition of developing countries improves, "they would accordingly expect to participate more fully in the framework of rights and obligations under the General Agreement." The former Director-General of GATT, Olivier Long, was more candid on the subject of graduation:

> The contention that equality of treatment creates a condition of inequality between developed and developing countries was the main justification and motive for the introduction of preferential treatment. A logical consequence of this precept is that, as the economic situation of developing countries improves, equality should become progressively the rule . . . . [C]ertain developing countries are already competitive in particular sectors. In fact, some of them have lost the benefit of preferences for certain of their exports within the framework of the GSP.
>
> ******
>
> Differential treatment should not be looked upon as immutable. If it were, the results of the efforts made through national and international policies to promote development would amount to little.[99]

Olivier Long's observation raises a question that has yet to be answered satisfactorily: When should a developing country graduate from the GSP?

The principle of graduation from GSP became increasingly popular among donor developed countries during the pre-Uruguay Round years.[100] While developed countries have tried to push developing countries down the road to fuller participation in the GATT-WTO system, developing countries have resisted.[101] In fact, no developing country has

At least a partial resolution of the issue of conditionality was provided by the Appellate Body in 2004 in *European Communities—Conditions for the Granting of Tariff Preferences to Developing Countries*, WT/DS246/AB/R (2004). The Appellate Body concluded that the Enabling Clause "does not prohibit developed-country Members from granting different tariffs to products originating in different GSP beneficiaries . . . [provided that] identical treatment is available to all similarly-situated GSP beneficiaries . . . ." *Id.* ¶¶ 173–174.

[97] *See* World Trade Organization, Sub-Committee on Least-Developed Countries, *Market Access Conditions for Least Developed Countries*, WT/LDC/SWG/IF/14/Rev.1 (2001).

[98] As of December 2003, nineteen regional trade agreements among developing countries *inter se* have been notified to the Committee on Trade and Development under the Enabling Clause. *See Report (2003) of the Committee on Regional Trade Agreements to the General Council*, WT/REG/13, ¶ 4 (2003).

[99] LONG, *supra* note 12, at 103–04.

[100] *See* Hindley, *supra* note 24, at 71–74; Gregory O. Lunt, *Graduation and the GATT: The Problem of the NICs*, 31 COLUM. J. TRANSNAT'L L. 611 (1994).

[101] *See, e.g.*, Hindley, *supra* note 24, at 72, where the author notes that in 1979 the Group of 77, a bloc of developing countries, rejected the concept of graduation being introduced by developed countries. In the 1982 Report of UNCTAD's Secretary-General, ASSESSMENT OF THE RESULTS OF THE MULTILATERAL TRADE NEGOTIATIONS, the graduation principle in paragraph 7 of the Enabling Clause was criticized to the extent

ever volunteered to be graduated. Donor developed countries have reminded beneficiary developing countries that preferential tariff treatment is neither an end in itself nor is it meant to last in perpetuity.[102]

The theory of graduation was put into practice in the years leading up to the Uruguay Round. Under the U.S. GSP program, for example, the process of graduation can be gradual. GSP benefits are removed on a product-by-product basis once a beneficiary country's exports of a particular product reach a specified value (around $100 million) or capture fifty percent of total U.S. imports of the product.[103] Graduation can also be total. For example, as noted, in 1989 Korea, Hong Kong, Taiwan, and Singapore—which collectively accounted for 57 percent of U.S. GSP imports in 1985—were removed from the list of beneficiary countries under the U.S. GSP program because of the high level of economic development and international trade competitiveness achieved by all four.[104] Obviously, the economies of these countries did not collapse following the loss of their U.S. GSP beneficiary status.[105] More recently, Malaysia (in 1997), and Aruba, the Cayman Islands, Cyprus, Greenland, Macao, and the Netherlands Antilles (in 1998) also were graduated from the U.S. GSP program.[106]

Pre-Uruguay Round assessments of the GSP program were mixed. In a 1983 OECD report on the first ten years of the GSP, the GSP was seen as playing an important role in opening developed countries' markets and expanding developing countries' trade.[107] Other assessments were less upbeat, concluding that GSP benefits had not been distributed evenly among the beneficiary developing countries.[108] A 1986 study estimated that 44 percent of total GSP benefits went to three countries: Hong Kong, Taiwan, and Korea. Each received three times the benefits of the next largest beneficiary, Brazil.[109] What is more, the benefits of GSP have been eroded as a result of the progressive reduction in tariff rates in each MTN round. The margin of tariff preference has shrunk, and in some cases it has disappeared altogether.[110]

it would permit developed countries to discriminate among developing countries in their trade relations. *See* REPORT OF THE SECRETARY-GENERAL OF UNCTAD, ASSESSMENT OF THE RESULTS OF THE MULTILATERAL TRADE NEGOTIATIONS 29, ¶ 179, UNCTAD Doc. T/B/778/Rev. 1 (1982).

[102] Within the Committee on Trade and Development, the view was expressed that the Enabling Clause and GSP contemplated differentiation among developing countries, given that they were at different stages of economic development. *See* GUIDE TO GATT LAW AND PRACTICE, *supra* note 31, vol. 1, at 58.

The entire program of differential and more favorable treatment of developing countries received a thorough reexamination in the Uruguay Round. Although the GSP program was not abandoned outright, increased pressure was brought to bear on many newly industrialized developing countries to join the GATT-WTO family as full-fledged equals.

IV. The Uruguay Round Decisions and Agreements Affecting Developing Countries

A. Background

On the eve of the Uruguay Round, many developing countries were at best ambivalent about participating in the Round.[111] Brazil and India openly opposed launching the Uruguay Round based on a lack of evidence that OECD countries were committed to trade liberalization in the areas of textiles and steel.[112] In the Punta del Este Ministerial Declaration that launched the Uruguay Round, developing countries were assured they would not be expected to make "concessions that are inconsistent with [their] development, financial and trade needs."[113] That assurance was probably a hollow one. As described in the next sections, although developing countries were in many instances given extended transition periods within which to implement Uruguay Round commitments relative to developed countries, they were not exempted from most of the substantive Uruguay Round obligations. In the Uruguay Round Decisions and MTAs, developing countries as a whole are formally divided into two groups: developing countries and least-developed countries. The least developed among the developing countries are given special treatment in two Uruguay Round Decisions and in several of the Uruguay Round MTAs. Such treatment takes the form of (1) extended transition periods before various substantive commitments become binding, and (2) complete exemptions from some commitments. With few exceptions developing countries are not relieved of the obligation to comply with the substantive trade liberalization commitments in the MTAs. They also receive shorter transition periods than least-developed countries to bring those commitments into binding effect. Thus, for the first time in GATT's history, developing countries agreed to trade liberalization commitments as near-equals with developed countries.

B. Decisions in Favor of Least-Developed Countries

As part of the Final Act Embodying the Results of the Uruguay Round (Final Act), two Decisions were reached affecting least-developed countries.

1. Decision on Measures in Favor of Least-Developed Countries

The first Decision was intended to implement Article XI:2 of the Agreement Establishing the World Trade Organization ("WTO Agreement"). That Article provides that

[111] For an assessment of developing countries' attitudes toward the GATT system at the start of the Uruguay Round, *see* THE URUGUAY ROUND AND BEYOND: THE FINAL REPORT FROM THE FORD FOUNDATION SUPPORTED PROJECT ON DEVELOPING COUNTRIES AND THE GLOBAL TRADING SYSTEM (John Whalley ed. 1989).

[112] For a discussion of developing countries' role in the Uruguay Round, *see generally* JOHN CROOME, RESHAPING THE WORLD TRADE SYSTEM: A HISTORY OF THE URUGUAY ROUND (1995); GARY CLYDE HUFBAUER & JEFFREY J. SCHOTT, TRADING FOR GROWTH: THE NEXT ROUND OF TRADE NEGOTIATIONS 33 (1985); Michael Rom, *Some Early Reflections on the Uruguay Round as Seen from the Viewpoint of a Developing Country*, 28 J. WORLD TRADE 5 (1994); Raymond F. Hopkins, *Developing Countries in the Uruguay Round: Bargaining Under Uncertainty and Inequality, in* WORLD AGRICULTURE AND THE GATT 143 (William P. Avery ed. 1993).

[113] Ministerial Declaration on the Uruguay Round, Part I:B(v), *reprinted in* GATT Focus (Oct. 8. 1986).

"[t]he least-developed countries recognized as such by the United Nations will only be required to undertake commitments and concessions to the extent consistent with their individual development, financial and trade needs or their administrative and institutional capabilities." Supplementing this principle is the Decision on Measures in Favor of Least-Developed Countries, included in the Uruguay Round Final Act. The Decision acknowledges the economic predicament of least-developed countries and reaffirms the commitment made in paragraph 2(d) of the Enabling Clause to provide "special treatment of the least developed among the developing countries in the context of any general or specific measures in favor of developing countries." To that end, the Decision extended for one year (until April 1995) the time within which the least-developed countries were required to submit schedules of tariff concessions with the WTO. The Decision also gives least-developed countries assurances in the following five areas:

(i) Expeditious implementation of all special and different measures taken in favor of least-developed countries . . . .
(ii) To the extent possible, MFN concessions on tariff and non-tariff measures agreed in the Uruguay Round on products of export interest to the least-developed countries may be implemented autonomously, in advance and without staging. Consideration shall be given to further improve GSP and other schemes for products of particular interest to least-developed countries.
(iii) The rules set out in the various agreements and instruments and the transitional provisions in the Uruguay Round should be applied in a flexible and supportive manner for the least-developed countries . . . .
(iv) In the application of import relief measures and other measures referred to in paragraph 3(c) of Article XXXVII [in particular, safeguards actions] . . . , special consideration shall be given to the export interests of least-developed countries.
(v) Least-developed countries shall be accorded substantially increased technical assistance in the development, strengthening and diversification of their production and export bases including those of services, as well as in trade promotion, to enable them to maximize the benefits from liberalized access to markets.

The fourth assurance may prove knotty. What does "special consideration" mean? Does it refer to restraint in the frequency with which such actions brought? Does "special consideration" mean exercising restraint in the type and duration of any relief granted against least-developed country goods? Does it refer to an application of domestic administrative procedures that are more favorable to least developed countries? Whatever the term "special consideration" means, plainly it does bar developed countries from bringing import relief actions against least-developed countries.

2. Decision on Measures Concerning the Possible Negative Effects of the Reform Program on Least-Developed and Net Food-Importing Developing Countries

The second Uruguay Round Decision whose focus is on least-developed countries is the Decision on Measures Concerning the Possible Negative Effects of the Reform Program on Least-Developed and Net Food-Importing Developing Countries. There was some concern that the strengthened legal disciplines governing agricultural trade under the Agreement on Agriculture could result in a reduction of food aid to least-developed countries. The availability of food supplies on reasonable terms and conditions might be threatened by the Agreement on Agriculture's provisions limiting export subsidies

on agricultural shipments. Accordingly, the Decision provides that implementation of the Agreement on Agriculture should not threaten the availability of food aid at a level that is sufficient to meet the food needs of the least-developed and net food-importing developing countries.[114] The Decision further provides that the level of food aid is to be reviewed periodically by the Committee on Food Aid under the 1986 Food Aid Convention, and to provide food aid to least-developed and net food-importing developing countries in grant form consistent with the Food Aid Convention.[115]

C. MTAs Providing Special and Differential Treatment of Developing Countries

Most of the WTO MTAs contain clauses providing S&D treatment of developing countries. In total, there are 97 S&D provisions in the WTO agreements. The S&D provisions can be divided into six categories: (1) provisions aimed at increasing trade opportunities, (2) provisions that require WTO Members to safeguard the interests of developing-country Members, (3) flexibility of commitments, (4) transitional time periods, (5) technical assistance, and (6) provisions relating to measures to assist least-developed country Members.[116]

The MTAs covering trade in goods that have S&D clauses include (1) the Agreement on Agriculture, (2) the Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994 (the Antidumping Agreement), (3) the Agreement on Subsidies and Countervailing Measures (the SCM Agreement), (4) the Agreement on Safeguards (Safeguards Agreement), (5) the Agreement on the Application of Sanitary and Phytosanitary Measures (the SPS Agreement), (6) the Agreement on Technical Barriers to trade (the TBT Agreement), (7) the Agreement on Trade-Related Investment Measures (the TRIMs Agreement), (8) the Agreement on Implementation of Article VII of the General Agreement on Tariffs and Trade (the Valuation Agreement), (9) and the Agreement on Textiles and Clothing (the ATC).[117]

In addition to the WTO MTAs covering trade in goods, three other WTO MTAs—the General Agreement on Trade in Services (GATS), the Agreement on Trade-Related

[114] The WTO list of developing countries eligible as beneficiaries under the Decision include (1) the fifty least-developed countries recognized by the Economic and Social Council of the United Nations, and (2) Barbados, Botswana, Cote d'Ivoire, Dominica, Dominican Republic, Egypt, Honduras, Jamaica, Jordan, Kenya, Mauritius, Morocco, Pakistan, Peru, Saint Lucia, Senegal, Sri Lanka, Trinidad and Tobago, Tunisia, and Venezuela. *See* Committee on Agriculture, *WTO List of Net Food-Importing Developing Countries for the Purposes of the Marrakesh Ministerial Decision on Measures Concerning the Possible Negative Effects of the Reform Programme on Least-Developed and Net Food-Importing Developing Countries*, G/AG/5/Rev.5 (2002). *See also Decision on Measures Concerning the Possible Negative Effects of the Reform Program on Least-Developed and Net Food-Importing Developing Countries, Actions Taken Within the Framework of the Decision as Notified by Members*, Background Paper by the Secretariat, G/AG/NG/S/4 (2000).

[115] *See Annual Monitoring Exercise in Respect of the Follow-Up to the Ministerial Decision on Measures Concerning the Possible Negative Effects of the Reform Program on Least-Developed and Net Food-Importing Developing Countries*, G/AG/GEN/46 (2000).

[116] *See* Committee on Trade and Development, *Concerns Regarding Special and Differential Treatment Provisions in WTO Agreements and Decisions*, Note by the Secretariat, WT/COMTD/W/66, ¶ 4 (2000). *See also Committee on Trade and Development Implementation of WTO Provisions in Favour of Developing Country Members*, Note by the Secretariat, WT/COMTD/W/35 (1998).

[117] One other Uruguay Round MTA, the Agreement on Preshipment Inspection, does not contain any special treatment of developing countries *per se*. Rather, it is an agreement to establish an international framework of rights and obligations of both user Members (*i.e.*, developing countries) and exporter Members (*i.e.*, developed countries). The practice of preshipment inspection, while not reserved for developing countries, is most often used by them to verify the quality, quantity, and price of imported goods. Preshipment inspections operate as a non-tariff barrier to trade in many developing countries. *See* Chapter 13 of this book.

Aspects of Intellectual Property Rights (the TRIPS Agreement), and the Understanding on Rules and Procedures Governing the Settlement of Disputes (the DSU)—contain special provisions for the benefit of developing and least-developed countries.

A survey of the relevant clauses in these Uruguay Round Agreements follows.

1. Agreement on Agriculture

The Agreement on Agriculture accords developing countries S&D treatment in several respects. First, the preamble—which, of course, is precatory only—states that developed-country Members are to take fully into account the needs of developing-country Members by providing greater market access for agricultural products of export interest to developing-country Members.

Second, WTO Members agree to a process called "tariffication" whereby all non-tariff barriers to agricultural trade are converted into ordinary customs duties, and then bound in the individual Member's Schedule of Concessions. Tariffs on agricultural products in developed countries are to be reduced 36 percent over six years. For developing countries, the commitment is a 24 percent reduction over ten years. For least-developed countries, the commitment is to enter into tariff bindings only, with no commitment on tariff reductions.[118]

Third, under Article 4.2, WTO Members agree not to maintain, resort to, or revert to any measures "of the kind which have been required to be converted into ordinary customs duties, except as otherwise provided for in Article 5 and Annex 5." A footnote to this Article provides an illustrative list of prohibited measures that includes quantitative restrictions on imports or exports. Annex 5, Section B excepts from this obligation "a primary agricultural product that is the predominant staple in the traditional diet of a developing country Member." This exception is subject to minimum access opportunities that initially are set at one percent of base domestic consumption of the product (as listed by the developing country), and that gradually increase over a ten-year period to four percent of base domestic consumption. After the tenth year, the level of minimum access opportunities resulting from the application of this minimum-access opportunity formula must be maintained in the Schedule of the developing country, subject to negotiation of the continued special treatment beyond the tenth year.[119] Because it is limited to staple diet products, this exception will affect only a few developing countries and a handful of agricultural products.

Fourth, while developed-country Members are committed generally to reducing their domestic subsidies in the agriculture sector by twenty percent,[120] developing-country Members are committed to a 13.3-percent reduction. Least-developed country Members made no commitment.[121] In addition, developing-country Members are exempted under Article 6.2 from reducing domestic agricultural subsidies in three areas: (1) investment subsidies that are generally available to agriculture, (2) agricultural input subsidies that are generally available to low-income or resource-poor producers, and (3) domestic support to producers to encourage diversification from growing illicit narcotic crops.

Fifth, the *de minimis* provision of five percent for developed countries in their grant of agricultural subsidies is increased to ten percent for developing countries.[122]

[118] *See* Agreement on Agriculture, Art. 4 and Schedules. *See also* U.S. INT'L TRADE COMM'N, THE YEAR IN TRADE 1993: THE OPERATION OF THE TRADE AGREEMENTS PROGRAM 7 (USITC Pub. 2769 1994).

[119] *Agreement on Agriculture,* Annex 5, Section B, ¶¶ 8–10.

[120] *See id.* Art. 6.1; THE YEAR IN TRADE 1993, *supra* note 18, at 7.

[121] *See* THE YEAR IN TRADE 1993, *supra* note 18, at 7.

[122] *See Agreement on Agriculture,* Art. 6.4.

Sixth, under Article 8 and the Schedules, WTO Members agree generally not to provide export subsidies otherwise than in conformity with the Agreement and with the commitments in their Schedules. The Schedules include annual reduction commitments during a five-year implementation period totaling 36 percent in terms of budgetary outlay, and 21 percent in terms of the volume of exports benefiting from export subsidies.[123] Developing countries commit to reducing their export subsidies by only 23 and 14 percent, respectively, over a ten-year period.[124] Least-developed countries are exempted from these reductions.[125]

Seventh, during the implementation period, developing countries are not required to undertake commitments to reduce two types of export subsidies: (1) subsidies that lower the costs of marketing exports of agricultural products, such as international transportation and freight costs; and (2) preferential domestic transportation and freight charges on export shipments.[126] This exemption is subject to a proviso that the exempted subsidies "are not applied in a manner that would circumvent reduction commitments."[127]

Eighth, WTO Members that institute any new export prohibitions or restrictions on foodstuffs in accordance with the short-supply provision of GATT Article XI:2(a) are required to follow procedural rules on advance notification of the restriction and its projected duration.[128] Developing countries are exempted from this requirement, unless they are net-food exporters of the particular foodstuff.[129]

Ninth, Article 15, entitled *Special and Differential Treatment*, provides that "[d]eveloping country Members shall have the flexibility to implement [subsidy] reduction commitments over a period of up to ten years. Least-developed country Members shall not be required to undertake [subsidy] reduction commitments."[130] The normal implementation period for reducing subsidies is six years.[131]

Tenth, Article 16 directs developed countries to take the action that is provided for in the Decision on Measures Concerning the Possible Negative Effects of the Reform Programme on Least-Developed and Net Food-Importing Developing Countries.[132]

Finally, Annex 2 provides that developing country Members are to receive S&D treatment with regard to public stockholding for food security purposes and domestic food aid.[133]

2. Agreement on Implementation of Article VI of the GATT 1994 (Antidumping)

The Antidumping Agreement contains only one provision according developing countries special treatment. Article 15, *Developing Country Members*, provides:

> Special regard must be given by developed country Members to the special situation of developing countries Members when considering the application of anti-dumping measures under this Agreement. Possibilities of constructive remedies provided for by this Agreement

[123] *See* THE YEAR IN TRADE 1993, *supra* note 18, at 8.
[124] *See Agreement on Agriculture*, Art. 15.2 and Schedules.
[125] *See* THE YEAR IN TRADE 1993, *supra* note 18, at 8.
[126] *See Agreement on Agriculture,* Art. 9.4.
[127] *See id.*
[128] *See id.* Art. 12.1.
[129] *See id*. Art. 12.2.
[130] *See id*. Art. 15.2.
[131] See *id.* Art. 1(f). Under the due restraint clause of Article 13 of the Agriculture Agreement, support measures that are consistent with the Agriculture Agreement may not be challenged in the WTO for a period of nine years, although domestic countervailing duty actions are not foreclosed.
[132] *See id.* Art. 16.
[133] *See id.* Annex 2, ¶ 3 n.5, ¶ 4 n.6.

> shall be explored before applying anti-dumping duties where they would affect the essential interests of developing country Members.

In *EC—Bed Linens*, a WTO panel considered India's argument that the EU had failed to consider "constructive remedies" as called for under Article 15.[134] The panel concluded:

> We cannot come to any conclusions as to what might be encompassed by the phrase "constructive remedies provided for under this Agreement"—that is, means of counteracting the effects of injurious dumping—except by reference to the Agreement itself. The Agreement provides for the imposition of anti-dumping duties, either in the full amount of the dumping margin, or desirably, in a lesser amount, or the acceptance of price undertakings, as a means of resolving an anti-dumping investigation resulting in a final affirmative determination of dumping, injury, and causal link. Thus, in our view, imposition of a lesser duty, or a price undertaking would constitute "constructive remedies" within the meaning of Article 15. We come to no conclusions as to what other actions might in addition be considered to constitute "constructive remedies" under Article 15, as none have been proposed to us.[135]

Thus, as an alternative to the imposition of antidumping duties, Article 15 contemplates that price undertakings should receive careful consideration in cases where exporters are from a developing country. There is nothing in the language of Article 15 to preclude the possibility that developed countries establish higher *de minimis* dumping margins and/or higher negligible import volumes for developing countries, but such alternative measures are not mandatory.

3. Agreement on Subsidies and Countervailing Measures

Article 27 of the SCM Agreement, *Special and Differential Treatment of Developing Country Members*, contains special *de minimis* rules for subsidized imports from developing countries. First, countervailing duty investigations of imports from developing-country Members must be terminated once it is determined either that the *ad valorem* subsidy is less than two percent[136] (the normal *de minimis* margin is one percent under Article 11.9), or that the volume of imports from a developing country is less than four percent of total imports of the product under investigation, unless cumulated imports from all developing countries with import shares of less than four percent is greater than nine percent of total imports.[137] This exemption might have the unintended consequence of creating a perverse incentive to file an antidumping petition against more developing countries in order to clear the nine-percent threshold.

Second, least-developed and low-income developing countries are exempted from the Agreement's prohibition on export subsidies unless they achieve "export competitiveness" in a product, in which case the export subsidies on that product must be phased out over eight years.[138] Other developing countries receive an eight-year exemption, with a

[134] Report of the WTO Panel, *European Communities—Anti-Dumping Duties on Imports of Cotton-Type Bed Linen from India,* WT/DS141/R (2000). Although the panel report was appealed, the Article 15 issue was not one of the issues before the Appellate Body.

[135] *Id.*, ¶ 6.229.

[136] The *de minimis* subsidy amount is increased to three percent until 2003 for developing countries that have eliminated export subsidies, or which are listed in Annex VII of the Agreement, being the 50 least-developed countries as designated by the United Nations, plus twenty countries with per capita annual income of less than $1,000 (Bolivia, Cameroon, Congo, Cote d'Ivoire, Dominican Republic, Egypt, Ghana, Guatemala, Guyana, India, Kenya, Morocco, Nicaragua, Nigeria, Pakistan, Philippines, Senegal, Sri Lanka, and Zimbabwe). *See* SCM Agreement Art. 27.11, Annex VII.

[137] *See SCM Agreement,* Art. 27.10.

[138] *See id*. Art. 27.2(a).

commitment to phase out export subsidies during that period.[139] The eight-year period is reduced to two years for any product receiving export subsidies in which the developing country has achieved "export competitiveness" in that product.[140]

Third, the general prohibition on domestic subsidies contingent upon the use of goods of local-origin is waived for an eight-year period for least-developed and low-income developing countries. It is waived for five years for other developing countries.[141]

Fourth, Articles 27.8 and 27.9 provide special rules for developing countries regarding when developing-country subsidies are actionable and when serious prejudice has resulted to another WTO Member as a result of developing-country subsidized imports.

Fifth, certain subsidies, such as debt forgiveness and social welfare payments that are directly linked to a privatization program instituted by a developing country are not actionable under the SCM Agreement.[142]

Finally, although excluded from the developing-country category, centrally-planned economies which are in the process of transforming into a market economy are accorded special treatment, including a seven-year subsidy phase-out period for prohibited subsidies.[143]

4. Agreement on Safeguards

The Safeguards Agreement prohibits safeguard actions taken against products originating in a developing country as long as its share of the imported product does not exceed three percent of total imports, unless cumulated imports from all developing countries with imports of less than three percent exceed nine percent of total imports.[144] Article 9.2 further provides that developing countries may extend their own safeguard measures for two years beyond the normal maximum period of eight years that is available to developed countries. Finally, although safeguard measures applied against an imported product may not be applied again "for a period of time equal to that during which such measure had been previously applied, provided that the period of non-application is at least two years,"[145] the hiatus period is cut in half for developing countries.[146]

5. Agreement on Sanitary and Phytosanitary Measures

The SPS Agreement provides that S&D treatment is to be accorded to developing-country imports in the application of SPS measures "[w]here the appropriate level of

[139] *See id*. Art. 27.4. The Committee on Subsidies and Countervailing Measures has established procedures for extending the transition period under Article 27.4 for certain developing-country Members. *See* Committee on Subsidies and Countervailing Measures, Procedures for Extensions Under Article 27.4 for Certain Developing Country Members, G/SCM/39 (2001). Programs eligible for extension pursuant to these procedures, and for which Members will grant extensions for calendar year 2003, are export subsidy programs (i) in the form of full or partial exemptions from import duties and internal taxes, (ii) which were in existence not later than 1 September 2001, and (iii) which are provided by developing country Members (iv) whose share of world merchandise export trade was not greater than 0.10 per cent, (v) whose total Gross National Income for the year 2000 as published by the World Bank was at or below US $20 billion, and (vi) who are otherwise eligible to request an extension pursuant to Article 27.4.

[140] *See* SCM Agreement Art. 27.5. Article 27.6 defines "export competitiveness" as the point at which a developing country accounts for a 3.25-percent share in world trade of that product for two consecutive calendar years.

[141] *See id*. Art. 27.3.

[142] *See id*. Art. 27.13.

[143] *See id*. Art. 29.2.

[144] *See Agreement on Safeguards,* Art. 9.1.

[145] *Id*. Art. 7.5. For example, if the period of safeguard measures was three years, a three-year hiatus must exist before such measures may again be imposed on that product.

[146] *See id*. Art. 9.2.

sanitary or phytosanitary protection allows scope for the phased introduction of new [SPS] measures."[147] Developed-country Members are to provide technical assistance to developing countries in the preparation and implementation of SPS measures.[148]

Developed countries are to take into account the special needs of developing-country and LDC Members in the preparation and application of SPS measures. One way of achieving this commitment, for example, would be to have longer time periods apply to developing countries within which to comply with new SPS measures.[149] Developed-country Members are also directed to encourage and facilitate the participation of developing countries in international standards-setting organizations such as the Codex Alimentarius Commission.[150]

Article 14 gave developing and least-developed countries extended transition periods of two years and five years, respectively, within which to bring their domestic SPS measures into compliance with the Agreement. The two-year transition period only applied, however, if compliance with the Agreement was impaired due to lack of technical expertise, technical infrastructure, or resources.[151]

6. Agreement on Technical Barriers to Trade

The TBT Agreement directs WTO Members to give developing-country Members a reasonable opportunity to adapt their products or methods of production to new standards.[152] Members are to provide technical assistance to developing countries in the preparation of technical regulations and the establishment of national standardizing and regulatory bodies.[153]

Article 12 of the TBT Agreement, *Special and Differential Treatment of Developing Country Members*, is a loose collection of exhortations to developed countries to be sensitive to the special needs of developing countries. For example, developed countries are instructed to be circumspect in the preparation and application of technical regulations, standards, and conformity assessment procedures that might fall disproportionately hard on developing countries.

7. Agreement on Trade-Related Investment Measures

The TRIMs Agreement provides for special treatment of developing countries in two respects. First, Article 4 permits developing countries to deviate temporarily from the Agreement for balance-of-payments purposes. Second, developing countries were given five years to eliminate all prohibited TRIMs; least-developed countries were given seven years.[154] The transitional period for developed countries was two years.

[147] *SPS Agreement,* Art. 10. *See also id.* preamble.

[148] *See id.* Art. 9. *See, e.g.,* Committee on Sanitary and Phytosanitary Measures, *Technical Assistance to Developing Countries*, Statement by the European Communities at the Meeting of 14–15 March 2001, G/SPS/GEN/244 (2001).

[149] *See id.* Arts. 10.1, 10.2.

[150] *See id.* Art. 10.4. A fund has been proposed to be administered by the Food and Agriculture Organization to enhance the participation of LDCs in standards setting in the Codex Alimentarius Commission, as well as to improve infrastructure to produce safe and high quality food products in LDCs. *See* Sub-Committee on Least Developed Countries, *Enhancing Least Developed Countries' Participation in International Trade: Food Safety and Quality, Standards and Technical Regulations*, WT/LDC/SWG/IF/10 (2001).

[151] *See SPS Agreement,* Art. 14. The SPS Committee is also authorized to grant specific exemptions to developing-country Members, in whole or in part, from the obligations of the SPS Agreement. *See id.* Art. 10.3.

[152] *See TBT Agreement,* Arts. 2.12, 5.9.

[153] *See id.* Art. 11.1–11.6.

[154] *See TRIMs Agreement*, Art. 5.2

In 2000 eight developing countries (Argentina, Chile, Colombia, Malaysia, Mexico, Pakistan, the Philippines, and Romania) sought an extension of the five-year period within which to eliminate all prohibited TRIMs.[155] In 2001, they were granted a waiver of the obligation to comply with the TRIMs Agreement's transition period and were given until December 31, 2003 to comply with the Agreement.[156]

8. Agreement on Implementation of Article VII of the GATT 1994 (Customs Valuation)

The Customs Valuation Agreement provides that developing countries may postpone application of the Agreement for five years. The five-year period may be extended for good cause shown pursuant to Annex III:1 of the Agreement. Eight developing countries sought and were granted such an extension.[157] The Valuation Agreement also authorizes the deferral of the provision on the computed value method of valuation for as long as eight years, provided the developing country seeking this extension was not a party to the Tokyo Round Valuation Code, the predecessor agreement to the Valuation Agreement.[158]

Second, Annex III of the Agreement permits developing countries to enter three reservations to the Agreement: (1) a reservation that permits developing countries for a limited time to value goods on the basis of officially established minimum values (fourteen countries entered such a reservation, with only six still maintaining it as of October 2002 (Colombia, Gabon, Guatemala, Honduras, Nicaragua, and Jamaica)); (2) a reservation to use deductive value before computed value, reversing the normal rank order of these alternative valuation methods (29 countries have entered such a reservation); and (3) a reservation to use deductive value based on the price after processing, whether or not the importer so requests, despite the normal rule in Article 5.2 requires an importer request before this valuation method is employed (29 countries have entered such a reservation).[159]

Third, developed countries are required to provide technical assistance to developing countries upon request.[160]

9. Agreement on Textiles and Clothing

Under the Agreement on Textiles and Clothing, Members agree to provide "meaningful improvements in access" for small suppliers, new entrants, and in general through accelerated increases in quota growth rates.[161]

If transitional safeguard measures are put in place, Members whose export volumes are comparatively small are to be accorded S&D treatment in the setting of

[155] *See Philippines Urges U.S. to Refrain from Panel Request in TRIMS Dispute,* 17 INT'L TRADE REP. (BNA) 942 (June 15, 2000); *WTO Clinches Deal on Addressing Implementation by Developing Nations*, 17 INT'L TRADE REP. (BNA) 741 (May 11, 2000).

[156] *See, e.g.,* WTO, *Extension of the Transition Period for the Elimination of Trade-Related Investment Measures Notified under Article 5.1 of the Agreement on Trade-Related Investment Measures, Argentina,* G/L/460 (Aug.7, 2001). *See also* Ravi Kanth, *WTO Approves Extending Deadline for TRIMS Compliance for Eight Members*, 18 INT'L TRADE REP. (BNA) 1255 (Aug. 9, 2001).

[157] For a list of the eighteen Members which have requested and been granted an extension, *see* Committee on Customs Valuation, *Invocation of Special Provisions Available to Developing Country Members*, Note by the Secretariat, G/VAL/2/Rev.10 (2000).

[158] *See Valuation Agreement,* Art. 20.1–20.2.

[159] *See* Committee on Customs Valuation, *Invocation of Special Provisions Available to Developing Country Members, Note by the Secretariat*, G/VAL/2/Rev.10 (2000).

[160] *See Valuation Agreement* Art. 20.3.

[161] *See Agreement on Textiles and Clothing,* Arts. 1.2, 2.18. Article 1.4 further provides that the particular interests of cotton-producing exporting Members should be reflected in the Agreement's implementation.

quotas.[162] Article 6 further provided that in cases where a safeguards measure is to be imposed by an importing Member during the Agreement's transition period, "least-developed country Members shall be accorded treatment significantly more favorable than that provided to the other groups of Members. . . ."[163] However, no details regarding the nature of such treatment are provided.

10. Agreement on Import Licensing Procedures

Administrative procedures used to implement licensing schemes are to take into account the development, financial, and trade needs of developing-country Members.[164] Developing countries not parties to the Tokyo Round Import Licensing Agreement were given a two-year transition period on implementing the rules for the issuance of automatic licenses.[165] Developing countries "would not be expected" to incur an additional administrative burden in order to provide import statistics for products subject to non-automatic licensing.[166] Finally, special consideration is to be given to developing countries in allocating non-automatic licenses.[167]

11. Other Uruguay Round MTAs

Outside of the Uruguay Round MTAs dealing with trade in goods, three other MTAs have rules on special treatment of developing countries.

(a) General Agreement on Trade in Services. Article IV of the GATS, entitled *Increasing Participation of Developing Countries*, contains special provisions for increased participation by developing countries in trade in services through measures designed to (1) strengthen their domestic services capacity and efficiency, (2) improve their access to distribution and information networks, and (3) liberalize market access. GATS Article IV:3 further charges developed countries not to expect specific commitments from least-developed countries in trade in services. The GATS also contains flexible and special rules for developing countries that are members of a regional trade arrangement that includes liberalized trade in services as part of the arrangement.[168] Article XIX:2 of GATS gives developing countries the flexibility to open fewer sectors, to liberalize fewer types of transactions, and to attach conditions when providing market access.

(b) The Agreement on Trade-Related Aspects of Intellectual Property Rights. The transition provisions of the TRIPS Agreement permit developing countries to delay the application of the Agreement for five years, and up to ten years in the case of certain patent protection.[169] (The implementation period for developed-country Members was one year from the effective date of the TRIPS Agreement, *i.e.*, January 1, 1996.) Least-developed countries were entitled to delay application of the Agreement for eleven years,

[162] *See id.* Art. 6.6(b). Similar consideration is to be given to wool-exporting Members. *See id.* Art. 6.6(c). Developing country exports of cottage industry handlooms, hand-made products, and traditional handicraft products are exempt from any transitional safeguard measure. *See id.* Annex, ¶ 3.

[163] *Agreement on Textiles and Clothing,* Art. 6.6(a).

[164] *See Agreement on Import Licensing,* Art. 1.2.

[165] *See id.* Art. 2.2 n.5.

[166] *Id.* Art. 3.5(a)(iv).

[167] *See id.* Art. 3.5(j).

[168] *See General Agreement on Trade in Services,* Art. V.

[169] *See TRIPS Agreement,* Arts. 65.2–65.3. This transition period coincides with the ten-year phase-out of textile and clothing quotas. The two transition periods are contingent upon each other: if one does not happen, neither will the other.

until January 1, 2006.[170] In June 2002 WTO Members approved a proposal that extends the deadline for LDCs to provide patent protection for pharmaceutical products until January 1, 2016, a ten-year extension.[171]

Developed countries are obligated to provide technical assistance to developing and least-developed countries, and to offer incentives to domestic firms to transfer technology to least-developed countries.[172] Such assistance includes help in the preparation of laws and regulations for intellectual property protection and enforcement.[173]

(c) The Dispute Settlement Understanding. While not a special treatment provision for developing countries *per se*, the DSU contains several special provisions relating to developing countries. Generally, the DSU has introduced to the GATT-WTO system a much stronger rules-based versus power-based approach to dispute settlement. In their dealings with economically more powerful developed countries, economically weaker developing countries would prefer a rules-based versus power-based approach to dispute settlement. Specifically, the DSU provides that developing countries that are parties to a dispute are entitled to have a panelist from a developing country appointed.[174] Due restraint is to be exercised in bringing dispute settlement proceedings against an LDC, as well as in seeking compensation or suspending concessions in a proceeding brought against an LDC.[175] If consultations are unsuccessful in a case involving an LDC, the LDC may ask the Director-General of the WTO or the Chairman of the Dispute Settlement Body to exercise good offices in order to try to settle the dispute.[176]

In October 2001, the Advisory Centre on WTO Law was established in Geneva, independent from the WTO. Its mission is to conduct seminars on WTO law and provide legal advice and representation to LDCs and developing countries involved in a WTO dispute settlement proceeding.

12. Agreement on Government Procurement

The plurilateral Agreement on Government Procurement provides that developing countries, and in particular least-developed countries, are to be given special treatment in procurement under the national treatment clause.[177] Developed countries are also to establish information centers for the benefit of developing countries.[178]

V. WTO Assistance to Developing and Least-Developed Countries

Since the conclusion of the Uruguay Round, the WTO has been actively studying and suggesting ways in which to integrate developing and least-developed countries more fully into the GATT-WTO system. This work is being conducted at all levels of the WTO—Ministerial, Council, Committee, and Sub-Committee.

A. The Singapore Ministerial Conference

At the conclusion of the Singapore Ministerial Conference in 1996, the trade ministers of the WTO Members issued a Declaration covering more than twenty subjects, including the integration of developing and least-developed countries into the GATT-WTO system.

The Singapore Ministerial Declaration acknowledges that developing country Members have undertaken significant new substantive and procedural commitments.[179] The Ministerial Conference Declaration further acknowledges the range and complexity of the efforts developing countries are making to comply with these commitments. In order to assist them in these efforts, the Ministerial Conference Declaration states that the WTO "will improve the availability of technical assistance under agreed guidelines."[180] To that end, Guidelines for the WTO's Technical Cooperation were adopted by the Committee on Trade and Development in October 1996. Those Guidelines are discussed below.

The Singapore Ministerial Conference also expressed concern over the economic problems of least-developed countries. They therefore agreed to (1) a Plan of Action aimed at improving least-developed countries' overall capacity to respond to the opportunities offered by the GATT-WTO system, and (2) hold an international conference, co-sponsored by UNCTAD and the International Trade Center, to develop an integrated approach to assisting least-developed countries in enhancing their trading opportunities.[181]

B. Plan of Action for Least-Developed Countries

In order to implement the Uruguay Round Decision on Measures in Favour of Least-Developed Countries and other WTO MTA provisions in favor of least-developed countries, the Singapore Ministerial Conference adopted a *Comprehensive and Integrated WTO Plan of Action for the Least-Developed Countries*.[182] The WTO Plan of Action covers the fifty least-developed countries designated as such by the United Nations which are also WTO Members, and has four elements: (1) implementation of the Decision on Measures in Favour of Least-Developed Countries, (2) human and institutional capacity-building, (3) market access, and (4) other initiatives, including the promotion of foreign direct investment in least-developed countries.

First, with regard to the implementation of the Decision on Measures in Favour of Least-Developed Countries, the Plan of Action calls upon WTO Members to increase their efforts to improve the capacity of least-developed countries to meet their notification obligations under the WTO MTAs and to assist them in implementing their WTO commitments.[183] The Committee on Trade and Development also is charged with the responsibility of conducting a biennial review (to coincide with the Ministerial Conference) on the progress of the implementation of measures in favor of least-developed countries.[184]

Second, with regard to human and institutional capacity-building, least-developed countries are to be given priority when technical assistance is provided pursuant to the Guidelines for WTO Technical Cooperation (discussed below).[185] In the area of

[179] *See Singapore Ministerial Declaration,* adopted on 13 December 1996, ¶ 13, WT/MIN(96)/DEC (1996).

[185] *See id.* ¶ 6.

institutional capacity-building to facilitate trade and investment, the WTO has developed a comprehensive approach and division of labor with relevant international organizations, including UNCTAD, the International Trade Center, the World Bank, the IMF, and the United Nations Development Program.[186]

Third, with regard to market access, the Plan of Action proposes several options WTO Members should consider to improve market access for least-developed country exports. Among them are: (a) expanded duty-free access for items of export interest to least-developed countries that are not currently receiving preferential duty treatment under the GSP,[187] (b) improved access for least-developed country exports under the Agreement on Textiles and Clothing, and (c) unilateral extension and early implementation of benefits to least-developed countries provided for in WTO MTAs.[188] In an April 2001 report by the Sub-Committee on Least-Developed Countries on market access conditions for LDCs,[189] the data indicate that tariff peaks and tariff escalation continue to exist for products of interest to LDCs. The LDC Sub-Committee also found that non-tariff barriers (e.g., product standards, SPS measures, and rule of origin requirements) pose serious impediments to the trading opportunities for LDCs.[190] The LDC Sub-Committee also found that there have been progressive improvements by LDC trading partners to secure more open and predictable trading conditions for LDCs since the Singapore Ministerial Conference in 1996, including measures to provide duty and quota-free access to all or essentially all products exported by LDCs.[191] Such preferential tariff treatment of LDCs—to the exclusion of other developing countries—became possible pursuant to a 1999 WTO waiver.[192]

Fourth, other initiatives that WTO Members are directed to undertake include working with multilateral and regional institutions to encourage investment in least-developed countries, and adopting binding preferential tariff rates applicable to least-developed countries on an exclusive basis.[193] In this connection, in 2001 the EU announced its

[191] *See id.* ¶ 26.

[192] *See Waiver on Preferential Tariff Treatment for LDCs*, WT/L/304 (1999). The WTO Members to have notified their market access improvements for LDCs to the WTO pursuant to the 1999 waiver are Canada, Egypt, the EC, Japan, Korea, Mauritius, New Zealand, Norway, Singapore, Switzerland, Turkey, and the United States. *See* Report of the LDC Sub-Committee, *supra* note 189, ¶ 27. As of late 2002, 28 WTO Members have on an autonomous basis announced steps they have taken to enhance market access for imports from LDCs. Those Members are Argentina, Australia, Bulgaria, Canada, Chile, Czech Republic, Egypt, the EU, Hong Kong, Hungary, Iceland, India, Indonesia, Japan, Korea, Malaysia, Mauritius, Morocco, New Zealand, Norway, Poland, Singapore, Slovak Republic, Slovenia, Switzerland, Thailand, Turkey, and the United States. *See* Sub-Committee on Least-Developed Countries, The High-Level Meeting on Integrated Initiatives for Least-Developed Countries' Trade Development, WT/COMTD/LDC/W/22, ¶ 4 & n.4 (2001).

[193] *See WTO Plan of Action, supra* note 182, ¶¶ 13–14. The WTO also began accepting contributions from non-governmental, nonprofit organizations in May, 2001, to help finance projects aimed at helping LDCs meet their WTO obligations. *See Voluntary Contributions, Gifts or Donations From Non-Governmental Donors*, Guidelines approved by the General Council on 15 December 2000, WT/L/386 (2001; *WTO Ready to Accept Private Sector Contributions to Aid Poorer Members*, 18 Int'l Trade Rep. (BNA) 739 (2001).

"Everything But Arms" initiative that grants duty-free access to almost all exports from LDCs. In May 2001, the EU also announced its decision to unilaterally refrain from imposing antidumping duties on imports from LDCs.[194]

1. High-Level Meeting on Least-Developed Countries

Pursuant to the Singapore Ministerial Declaration, a high-level, inter-organizational meeting on least-developed countries was held in Geneva at the end of October 1997 under the joint auspices of the WTO, UNCTAD, and the International Trade Center.[195] The High-Level Meeting on Integrated Initiatives for Least-Developed Countries' Trade Development (the High-Level Meeting) was aimed to boost efforts to further the integration of the least-developed countries into the multilateral trading system. All least-developed countries, regardless of their membership in the WTO (nineteen of them are not Members), were invited to participate and to prepare a comprehensive assessment of their needs for trade-related technical cooperation.

The meeting focused on three subjects: (1) launching initiatives to improve market access for least-developed country exports, (2) building the capacity to trade in least-developed countries, and (3) encouraging investment in least-developed countries. Because least-developed countries as a group account for only 0.4 per cent of world trade, removing barriers to their trade thus would pose no serious threat to any WTO Member. One of the chief aims of the High-Level Meeting, therefore, was to encourage increased market access for the products originating in the least-developed countries. At the High-Level Meeting, WTO Members were invited to announce steps they had taken, or would be taking, on an autonomous basis to enhance market access for imports from least-developed countries. A number of developed and developing Members made such announcements. Some developing-country Members were concerned about the existence of a legal basis under which they could grant preferences to products originating in least-developing countries. Following consultations, a draft "umbrella" waiver from GATT Article I was adopted by the General Council on June 15, 1999.[196]

Improved market access alone, however, is only a small part of the overall development picture. Least-developed country delegations have repeatedly stressed the serious constraints they face on supply capacity and, therefore, the need for assurance in capacity building. To that end, the High-Level Meeting endorsed the Integrated Framework for Technical Assistance to assist least-developed countries in their trade and trade-related activities.

2. Integrated Framework for Trade-Related Technical Assistance

The 1997 High-Level Meeting endorsed the Integrated Framework for Trade-Related Technical Assistance to support LDCs in their trade activities ("Integrated Framework"

[194] *See* Joe Kirwin, *U.S., EU, Japan, Canada to Expand, Speed Up Concessions for Poor Countries*, 18 INT'L TRADE REP. (BNA) 847 (May 31, 2001).

[195] *See Report of the High-Level Meeting on Integrated Initiatives for Least-Developed Countries' Trade Development,* WT/LDC/HL/23 (1997). Notes on the proceedings of the High-Level Meeting are contained in documents WT/LDC/HL/M/1 and Add.1 (1997). Details on the preparations for the meeting can be found in two WTO documents, WT/COMTD/W/28 and WT/COMTD/W/28/Add.1 (1997). The WTO Sub-Committee on Least-Developed Countries took the lead in making preparations for the meeting. *See* WT/COMTD/LLDC/M/7 and Corr.1 (1997). For other work of the Sub-Committee on Least-Developed Countries, *see Measures to Assist and Facilitate the Expansion of Trade and Investment Opportunities of Least-Developed Countries,* WT/COMTD/LLDC/W/1 (1996).

[196] *See supra* note 192.

or "IF").[197] The six core international agencies working together with LDCs to coordinate their trade assistance programs through the Integrated Framework are the International Monetary Fund, the International Trade Center, UNCTAD, the United Nations Development Program, the World Bank, and the WTO. The Integrated Framework "seeks to increase the benefits that least-developed countries derive from the trade-related technical assistance available to them from the six Agencies involved in designing this Framework, as well as from other multilateral, regional and bilateral sources, with a view to assisting them to enhance their trade opportunities, to respond to market demands and to integrate into the multilateral trading system."[198]

Although the IF is structured on the basis of eight steps,[199] in practice it focuses on five main steps: (1) country-needs assessments prepared by individual LDCs, (2) integrated responses by the six core agencies, (3) preparation of a multi-year country program and the holding of a round table meeting, (4) implementation and monitoring of trade-related technical assistance activities, and (5) regular evaluation by the staff of the six core agencies and officials of the least-developed countries.

Criticism has been raised that the process has been slow and bureaucratic. Coordination is often difficult because the Integrated Framework aims at coordinating 50 LDCs, the six core agencies, other multilateral partners, and the donor community. Coordination has proven to be a particular challenge within the least-developed countries where a large number of ministries and other government agencies, private-sector groups, and local non-governmental organizations are frequently involved.[200]

Least-developed countries have criticized the Integrated Framework for not living up to their expectation that, in its implementation, it should address supply-side constraints and infrastructure requirements, as well as trade-related capacity and institution building.[201]

As of late 2001 the IF was bogged down in bureaucratic squabbles and an inadequate governance structure. In 2001 an IF Steering Committee was created that is independent of the WTO. Its task is to address the concern of other IF agencies that mandates are being established that involve them but without sufficient consultation and without their participation in decision making.[202] On a more positive note, a pilot scheme was launched in 2001 to improve the operation of the IF. As a first element of IF reform, the WTO decided to proceed with a pilot scheme that will assist countries that have demonstrated a clear choice and commitment to mainstream a "trade integration chapter" as part of

[197] *Integrated Framework for Trade-Related Technical Assistance, Including for Human and Institutional Capacity-Building, to support Least-Developed Countries in Their Trade and Trade-Related Activities,* WT/LDC/HL/1/Rev.1 (1997).

[198] *Id.*

[199] The eight steps are (1) needs assessment by individual LDCs, (2) integrated responses by the six core agencies, (3) country-specific round table meetings, (4) coordination among the six agencies involved, (5) financing, (6) implementation and monitoring, (7) review and evaluation of country programs, and (8) maintenance and publication of a core inventory. *See id.* ¶ 5.

their country development strategies.[203] Eleven LDCs have been chosen to participate in the pilot scheme: Burundi, Djibouti, Ethiopia, Eritrea, Guinea, Lesotho, Malawi, Mali, Nepal, Senegal, and Yemen.[204]

C. The Committee on Trade and Development

The Committee on Trade and Development continues the work of its GATT predecessor to facilitate the integration of developing countries into the GATT-WTO system. The Committee's work program has three priority tasks: (1) review the implementation of provisions in the WTO Agreements and instruments in favor of developing-country Members,[205] (2) work towards increasing the participation of developing countries in the GATT-WTO system,[206] and (3) recommend positive measures aimed at ensuring that least-developed country Members achieve their development objectives.[207]

A fourth priority task of the Committee was completed in 1997: the preparation of guidelines for the WTO's technical cooperation activities. The Guidelines for WTO Technical Cooperation were adopted by the Committee on Trade and Development on October 15, 1996.[208] The Guidelines are administered by the WTO Secretariat and divided into two parts: objectives and principles, and operational directives. Among the objectives and principles are (1) to assist in the full integration of developing and least-developed countries into the GATT-WTO system; (2) to keep a geographical balance, while giving priority to least-developed countries, in particular African countries; and (3) to coordinate closely with other multilateral and bilateral institutions that provide technical assistance in order to avoid overlap and duplication of effort.[209]

The operational directives cover (1) modes of delivery (*e.g.*, training courses and materials), (2) long-term engagement (*e.g.*, training local trainers, using local technical expertise, and establishing links with academic and research institutions), (3) international coordination (*e.g.*, close dialogue with UNCTAD and the International Trade Center to define and execute joint projects and avoid duplication), and (4) management of the technical cooperation program (*e.g.*, annual reporting by the Secretariat on program implementation, funding and cost-sharing, and monitoring by the Committee on Trade and Development).[210]

[210] *See id.* at 2–5. In July 1999, the WTO established the Global Trust Fund for Technical Assistance as an adjunct to the Guidelines on Technical Assistance. The objectives of the Trust Fund are based on the Guidelines and are designed (1) to improving the management and implementation of WTO technical cooperation, (2) to supporting and complementing the WTO regular budget, (3) to enhancing technical assistance, and (4) to enabling the Secretariat to deliver technical cooperation in a flexible, timely, and

D. The Doha Ministerial Conference and the Development Round

Following the debacle in 1999 at the third Ministerial Conference in Seattle, developing countries, especially the LDCs, were determined not be marginalized at the next biennial meeting of the Ministerial Conference. Two important meetings occurred in 2001 that helped put the spotlight at the Doha Ministerial Conference on the economic plight of LDCs. The first meeting was the Third United Nations Conference on the Least Developed Countries held in Belgium in May 2001. Out of the Conference came a document entitled *Draft Programme of Action for the Least Developed Countries for the Decade 2001–2010*, calling for coherent action by the United Nations, the WTO, the World Bank, and the IMF to integrate LDCs into the global economy.[211]

The second meeting was the LDC trade ministers' meeting held in Zanzibar, Tanzania in July 2001. In the Zanzibar Declaration the LDCs agreed to take steps to reverse the process of their exclusion and marginalization in world trade.[212] The trade ministers identified no fewer than nine items that they requested the Doha Ministerial Conference to agree to, including full implementation of the commitments undertaken at the Third United Nations Conference on the Least Developed Countries and full implementation of the Integrated Framework.[213] Attached to the Zanzibar Declaration was an annex entitled *LDCs Development Agenda at the Fourth Ministerial Conference, Negotiating Objectives and Proposals of the Least Developed Countries*.[214] The LDCs' agenda listed no fewer than 21agenda items for Doha, including implementation issues in the areas of agriculture, services trade, subsidies, SPS and TBT technical assistance, textiles and clothing, TRIMs, TRIPS, customs valuation, antidumping and countervailing duties, and safeguards.[215]

Speaking on behalf of a broader range of developing countries, the Group of 77, together with China, issued a separate declaration in October 2001 calling on the Ministerial Conference to, *inter alia*, make the S&D provisions of the WTO MTAs "legally binding . . . operationalized . . . and enforceable so that these do not remain merely 'best endeavour clauses.'"[216] The Declaration also called for increased technical assistance in order to bring their national laws into compliance with WTO obligations.[217]

The WTO has not been indifferent to the complaints from developing countries and LDCs about marginalization and lack of technical and institutional capacity. In the years since the Singapore Ministerial Conference the WTO has held countless training seminars and workshops, undertaken technical assistance activities, and conducted capacity building exercises to assist LDCs and other developing countries become fully integrated into the international trading system.[218] Yet, despite these efforts, more clearly needs to be done.

pertinent manner. All WTO Members may participate in the Trust Fund, which was open to receive voluntary financial contributions on July 1, 1999. *See* General Council, Minutes of Meeting held on 15 July 1999, WT/GC/M/45, at 25 (1999).

[211] *See* Third United Nations Conference on the Least Developed Countries*, Draft Programme of Action for the Least Developed Countries for the Decade 2001–2010*, A/CONF.191/L.18, ¶ 65 (2001).

[216] *Declaration of the Group of 77 and China on the Fourth WTO Ministerial Conference at Doha, Qatar,* WT/L/424*,* ¶ 7 (2001).

[217] *See id*. ¶ 18.

[218] *See, e.g.*, WTO, *The WTO, Capacity Building and Development, A Proposal* (2001); General Council, Special Session on Implementation, *Actions to Increase the Participation of Developing Country Members*

Around 100 implementation issues were raised prior to the Doha Ministerial Conference either in the LDC Zanzibar Declaration, in the Draft Programme issued at the Third U.N. Conference on LDCs, or in the Group of 77 Declaration. At the fourth Ministerial Conference held in Doha, Qatar, in November 2001, the trade ministers launched a "work program" that includes on its agenda many of these implementation-related issues and concerns. Although the trade ministers carefully avoided the use of the politically-charged phrase, "multilateral trade negotiation round"—perhaps out of a concern that it would conjure up the seemingly interminable eight-year Uruguay Round—the "work program" has been informally called the "Development Round." The Ministerial Declaration issued at the conclusion of the Doha session provides:

> We attach the utmost importance to the implementation-related issues and concerns raised by Members and are determined to find appropriate solutions to them . . . . [W]e further adopt the Decision on Implementation-Related Issues and Concerns in document WT/MIN(01)/17 to address a number of implementation problems faced by Members. We agree that negotiations on outstanding implementation issues shall be an integral part of the Work Programme we are establishing, . . .[219]

With regard to the specific concerns of LDCs, the Ministerial Declaration acknowledged the concerns expressed by LDCs in the Zanzibar Declaration. The Declaration also endorsed the Integrated Framework and reaffirmed that the S&D treatment provisions are an integral part of the WTO Agreements. The Declaration states that "all special and differential treatment provisions shall be reviewed with a view to strengthening them and making them more precise, effective and operational. In this connection, we endorse the work programme on special and differential treatment set out in the Decision on Implementation-Related Issues and Concerns."[220]

The Decision on Implementation-Related Issues and Concerns referred to in paragraph 12 of the Ministerial Declaration identifies more than 40 implementation issues and proposed action by the WTO Members.[221] Most of the 40-plus items were settled at or before the Doha Conference. The majority of the remaining items are the subject of negotiations. The following is a list of the highlights of the Implementation Decision as they relate to LDCs and other developing countries:

1. *GATT 1994*—Article XVIII on balance of payments is a special and differential treatment provision for developing countries and recourse to it should be less onerous than to Article XII of GATT 1994.
2. *Agreement on Agriculture*—Members are to exercise restraint in challenging measures notified under the green box by developing countries to promote rural development and to address food security concerns.

in the Work of Relevant Sanitary and Phytosanitary International Standards-Setting Organizations, Second Report by the Director-General, WT/GC/45 (2001); Committee on Subsidies and Countervailing Measures, *Chairman's Report on the Implementation-Related Issues Referred to the Committee at the Request of the Chairman of the General Council on 2 August and 15 October 2001 and in the 15 December 2000 Decision of the General Council*, G/SCM/38 (2001).

[219] WTO Ministerial Conference, Fourth Session, 9–14 November 2001, *Ministerial Declaration Adopted on 14 November 2001*, WT/MIN(01)/DEC/W/1, ¶ 12 (2001). The Declaration adds that where a specific negotiating mandate is established in the Declaration, the relevant implementation issues are to be addressed under that mandate. Otherwise, the other outstanding implementation issues are to be addressed as a matter of priority by the relevant WTO bodies, which shall report to the Trade Negotiations Committee by the end of 2002 for appropriate action.

[220] *See id*. ¶ 44.

[221] *See* Ministerial Conference, Fourth Session, *Decision on Implementation-Related Issues and Concerns*, WT/MIN(01)/W/10 (2001).

3. *SPS Agreement*—Members are to provide, to the extent possible, the financial and technical assistance necessary to enable LDCs to respond adequately to the introduction of any new SPS measures that may have significant negative effects on their trade. Members are to ensure that technical assistance is provided to LDCs with a view to responding to the special problems faced by them in implementing the SPS Agreement.
4. *Agreement on Textiles and Clothing*—the Council for Trade in Goods is to examine the following proposals: (a) that when calculating the quota levels for small suppliers for the remaining years of the Agreement, Members will apply the most favorable methodology available in respect of those Members under the growth-on-growth provisions from the beginning of the implementation period; extend the same treatment to least-developed countries; and, where possible, eliminate quota restrictions on imports of such Members; and (b) that Members will calculate the quota levels for the remaining years of the Agreement with respect to other restrained Members as if implementation of the growth-on-growth provision for stage 3 had been advanced to January 1, 2000.
5. *TBT Agreement*—Members are to provide, to the extent possible, the financial and technical assistance necessary to enable LDCs to respond adequately to the introduction of any new TBT measures that may have significant negative effects on their trade. Members are to ensure that technical assistance is provided to LDCs with a view to responding to the special problems faced by them in implementing the TBT Agreement.
6. *TRIMs Agreement*—the Council for Trade in Goods is to consider positively requests that may be made by LDCs under Article 5.3 of the TRIMs Agreement or Article IX.3 of the WTO Agreement for extending the transition period, as well as to take into consideration the particular circumstances of LDCs when setting the terms and conditions including time-frames.
7. *Antidumping Agreement*—while Article 15 of the Antidumping Agreement on special treatment of exports from developing countries is a mandatory provision, the modalities for its application would benefit from clarification. Accordingly, the Committee on Anti-Dumping Practices is instructed to examine this issue and to draw up appropriate recommendations within twelve months on how to operationalize this provision.
8. *Customs Valuation Agreement*—the Council for Trade in Goods to give positive consideration to requests that may be made by LDC Members under paragraphs 1 and 2 of Annex III of the Customs Valuation Agreement regarding extensions of time for implementation of the Agreement and the use of minimum values, as well as to take into consideration the particular circumstances of LDCs when setting the terms and conditions including time-frames.
9. *SCM Agreement*—subject to the provisions of Articles 27.5 and 27.6, it is reaffirmed that LDC Members are exempt from the prohibition on export subsidies set forth in Article 3.1(a) of the SCM Agreement, and thus have flexibility to finance their exporters consistent with their development needs. It is understood that the eight-year period in Article 27.5 within which an LDC Member must phase out its export subsidies in respect of a product in which it is export-competitive begins from the date export competitiveness exists within the meaning of Article 27.6. Having regard to the particular situation of certain developing-country Members, the Committee on Subsidies and Countervailing Measures is to extend the transition period under Article 27.4

of the SCM Agreement for certain export subsidies provided by such Members.[222]

10. *TRIPS Agreement*—under the provisions of Article 66.2 of the TRIPS Agreement making technology transfer mandatory, the TRIPS Council will put in place a mechanism for ensuring the monitoring and full implementation of this obligation. To this end, developed-country Members are to submit prior to the end of 2002 detailed reports on the functioning in practice of the incentives provided to their enterprises for the transfer of technology in pursuance of their commitments under Article 66.2. These submissions are to be subject to a review in the TRIPS Council and information is to be updated by Members annually.[223]
11. *Cross-Cutting Issues*—the Committee on Trade and Development is to undertake a review of S&D treatment and (a) identify those S&D treatment provisions that are already mandatory in nature and those that are non-binding in character, (b) consider the legal and practical implications for developed and developing Members of converting S&D treatment measures into mandatory provisions, (c) identify those that Members consider should be made mandatory, (d) examine additional ways in which S&D treatment provisions can be made more effective, (e) consider ways, including improved information flows, in which developing countries, in particular the least-developed countries, may be assisted to make best use of S&D treatment provisions, and (f) consider how S&D treatment may be incorporated into the architecture of WTO rules.

Negotiations in the Development Round were to be concluded not later than January 1, 2005, with a stocktaking of the progress of the negotiations to take place at the fifth Ministerial Conference in 2003.[224] With the collapse of the Cancun Ministerial Conference, that deadline will be missed. The negotiations were put back on track in August 2004, with the decision by the General Council on the framework for future negotiations.[225] As was the case with the Uruguay Round agreements, all agreements reached during the Development Round are to be treated as a single undertaking, that is, a package deal with no opt-outs.

Independent of the Development Round negotiations, the WTO Secretariat continues to provide and coordinate technical assistance to developing countries. In its Coordinated Technical Assistance Plan for 2002, the WTO Secretariat has identified training programs and workshops for LDCs and developing countries agriculture, competition policy, customs valuation, dispute settlement, government procurement, investment, market access,

[222] On September 19, 2002, the Quad Members agreed to approve requests from nineteen developing-country Members for a one-year deadline extension—through 2003—allowing them to maintain investment and export promotion subsidies that are otherwise illegal under the SCM Agreement. Extension requests are renewable through 2007. *See* Daniel Pruzin, *Quad Group Gives Approval to Extensions for Developing Countries' Export Subsidies*, 19 INT'L TRADE REP. (BNA) 1630 (Sept. 26, 2002).

[223] In a separate declaration involving the TRIPS Agreement and the AIDS epidemic, the Ministerial Conference issued a declaration acknowledging that every WTO Member has the right to grant compulsory licenses and to determine what constitutes a national emergency. *See* Ministerial Conference, Fourth Session, *Declaration on the TRIPS Agreement and Public Health*, WT/MIN(01)/DEC/W/2 (2001). At the end of 2003, the General Council reached an agreement on implementing the Doha TPIPS Declaration. *See Implementation of Paragraph 6 of the Doha Declaration on the TPIPS Agreement and Public Health, Decision of 30 August 2003*, WT/L/540 (2003).

[224] *See* Doha Ministerial Declaration, *supra* note 221, ¶ 45.

[225] *See Doha Work Programme Decision Adopted by the General Council on 1 August 2004*, WT/L/579 (2004).

services, and intellectual property.[226] Among these efforts are special sessions for LDCs with no permanent mission in Geneva that are designed to enhance their participation in the Development Round negotiations.[227]

VI. Summary and Appraisal

Explanations abound for why many developing countries, especially LDCs, have performed poorly in the world trading system. Examples of the exogenous factors conspiring against developing countries include political fallout from the New International Economic Order, barriers to trade in developed-country markets, restrictive business practices of multinational enterprises headquartered in developed countries, the debt crisis of the 1970s and 1980s, and the reduced flow of foreign direct investment into these countries.[228] Examples of the endogenous factors include macroeconomic policies, infrastructure problems, foreign exchange mismanagement, policies based on import substitution rather than export-led growth, and rampant corruption. In the view of some WTO Members, the main conclusion to be drawn about the different rates of growth of developing countries is that while market access is important to determine the export performance of countries, little can be achieved if the appropriate domestic policies (e.g., a stable economic environment and a liberal trade regime) are not in place.[229] In the view of other WTO Members, domestic policies, while important, do not constitute the main reason for the divergent performance of developing countries. On the contrary, this latter group believes that trade barriers play a more significant role than domestic policies.[230]

Precisely how developing countries should respond has been widely debated. Broad agreement does exist that a strong link exists between open trade, open investment, and development.[231] The post-World War II experience of the four Asian "tigers" or "dragons" demonstrates that trade can be an engine of growth.[232] Accordingly, the notion of developing countries needing and, therefore, being permitted to impose high levels of protection against import trade has fallen into disfavor among economists.[233] Indeed, many economists argue that developing countries would experience improved terms of trade and economic growth if their high levels of trade protection were removed.[234] The infant-industry argument and its associated policy of import substitution—legitimized

and enshrined in GATT Article XVIII—have been used as a justification for resort to trade protection measures by developing countries. This policy may have worked at cross-purposes with developing countries' ultimate goal of achieving lasting economic prosperity. During the 1960s and 1970s, the concept of preferential treatment of developing countries in lieu of market-based principles received an indirect boost from the developed countries as they began to use "managed" trade to restrict imports, adversely affecting an increasing number of sectors within their domestic economies.

Today, developing countries receive special and differential treatment not only in GATT-WTO rules, but also in special trade programs established for them by developed countries. In the long run, however, such special tariff treatment is of limited value to developing countries in achieving the goal of a stable, healthy economy. Tariff reductions associated with preferential treatment regimes are inherently uncertain because they depend entirely on the trade policies of the donor countries. In addition, as MFN tariff rates are progressively lowered in developed countries following successive MTN rounds, the benefit to beneficiary developing countries of preferential tariff treatment is marginalized.

The notion that tariff preferences are the means for offsetting trade restrictions imposed by importing countries has been an attractive distraction. Nontariff barriers to trade in products in which developing countries enjoy a comparative advantage, e.g., textiles and clothing, as well as persistently high tariffs on those products are probably more to blame for impeding developing countries' full integration into the world trading system.

Full integration of the developing countries into the world trading system must proceed on several tracks. The first track should be greater and assured access to export markets for all product groups, not just primary and unprocessed goods. Market access is of greater help to developing countries in the long term than tariff preferences on commodities and semi-manufactured goods. Steps in this direction were taken in the Uruguay Round. For example, the Uruguay Round Agreement on Textiles and Clothing progressively eliminates quotas imposed by importing developed countries on textiles and clothing in which developing countries enjoy a competitive strength because of the labor-intensive nature of the manufacturing process. Still, because quota and tariff reduction commitments are backloaded, developing countries will not enjoy the full benefit of trade liberalization in the textile and clothing sector until 2005.

A second track should pursue integrating developing countries through the vehicle of regional trade arrangements as a step toward full integration in the GATT-WTO system. Several of the existing regional trade arrangements, such as MERCOSUR and ASEAN, have a membership comprised exclusively of developing countries. By integrating their economies on a regional basis, developing countries can pool their economic strength in order to pry trade concessions from developed countries. Pursuing this course to the exclusion of others poses risks, however: integrating their economies on a regional basis will not serve as a hedge when one or more of the major developed countries experience an economic downdraft.

A third track that developing countries should pursue is cultivating a hospitable environment for foreign direct investment ("FDI"). Much of the recent literature confirms that the effects of investment for investor country and host country alike are beneficial. For example, the OECD noted the beneficial effects of FDI in a 1998 communication to the WTO:

> Direct investment by MNEs [multinational enterprises] has the potential rapidly to restructure industries at a regional or global level and to transform host economies into prodigious exporters of manufactured goods or services to the world market. In so doing, FDI can

> serve to integrate national markets into the world economy far more effectively than could have been achieved by traditional trade flows alone. As with private sector investment more generally, the benefits from FDI are enhanced in an environment characterized by an open trade and investment regime, an active competition policy, macroeconomic stability and privatization and deregulation. In this environment, FDI can play a key role in improving the capacity of the host country to respond to the opportunities offered by global economic integration, a goal increasingly recognized as one of the key aims of any development strategy.[235]

National laws and regulations that discriminate against foreign direct investment distort international trade in much the same way as do tariffs, quotas, and other NTBs. By favoring domestic investors or discriminating against foreign investors, the most efficient producers may not be able to penetrate a market due to government interference in the market. Since the 1980s, the worldwide trend in national legislation regulating FDI has been to adopt laws that attract foreign investors by creating a favorable investment climate.[236] UNCTAD reported that in 1997, 151 changes in FDI regulatory regimes were made by 76 countries, 89 percent of which in the direction of creating a more favorable environment for FDI.[237] UNCTAD has also reported that the network of bilateral investment treaties (BITs) is expanding as well, quintupling during the 1990s, reaching 2,099 by the end of 2001, compared to some 400 at the beginning of 1990.[238] One BIT was concluded on average every 2-1/2 days in 1997. The number of double taxation treaties also increased, numbering 1,794 at the end of 1997. "The common thread that runs through the proliferation of both types of treaties," UNCTAD concludes, "is that they reflect the growing role of FDI in the world economy and the desire of countries to facilitate it."[239]

The effects of these liberalization measures are reflected in the growth of foreign direct investment. Worldwide FDI grew 25 percent in 1999 to a record $827 billion, up from $660 billion in 1998.[240] Developing countries received nearly $200 billion of that total, an increase of 15 percent.[241] The FDI total reached an all time high in 2000 of nearly $1.3 trillion, with $240 billion going to developing countries.[242] Many developing countries still restrict FDI, however, by restricting foreign ownership in local companies to a minority stake. While many developing countries defend these investment restrictions on the ground of sovereignty and complain about the restrictive businesses practices of large multinational firms in their countries that harm local firms, another perspective is that multinational enterprises (MNEs) bring with them not only fresh capital, but

[240] *Id.*

[241] The tremendous FDI spurt was fueled by cross-border mergers and acquisitions ($797 billion), rather than greenfield investment in new plants and factories. *See* Daniel Pruzin, *UN Agency Says FDI Jumped by 25 Percent in '99 to $827 Billion*, 17 INT'L TRADE REP. (BNA) 234 Feb. 10, 2000); THE ECONOMIST, Feb. 12, 2000, at 3, 105; THE ECONOMIST, Feb. 5, 2000, at 5.

[242] *See* UNCTAD, WORLD INVESTMENT REPORT 2001, at xiii (2001).

they also introduce modern managerial and organizational practices that local firms in developing countries can emulate. They often bring with them the latest technologies and train indigenous populations in their use. Because of their high visibility, some evidence exists that MNEs are often better corporate citizens that pay better, do less environmental damage, and adhere closer to industrial codes of good conduct.[243] In sum, developing countries must view MNEs not as instruments of neo-colonialism, but rather as integral players in their economic development strategies.

Conversely, MNEs may be pivotal to resolving immigration pressures on developed countries. UNCTAD considers FDI an important source of job creation within developing countries, reducing the attraction of migration to rich, developed countries for the poor living in developing countries who are struggling to eke out an existence. If developed countries are sincere in wanting to stem the flow of migration from poor countries to rich countries, then they must remove barriers to trade in goods produced in developing countries. Even if developing countries liberalize their rules on FDI, FDI in developing countries will still not be attractive if MNEs are prevented from exporting the goods that they make there to developed-country markets.[244]

While it is argued—mostly by developing countries—that MNEs are able to engage in restrictive business practices in host countries that result in monopoly profits, lower efficiency, and barriers to entry by potential competitors, the WTO Secretariat has made the alternative argument that the entry of an MNE "might have the effect of breaking up a comfortable domestic oligopolistic market structure and stimulating competition and efficiency. . . . The empirical evidence, however, points strongly to pro-competitive effects."[245] The WTO Working Group on the Interaction between Trade and Competition Policy has also noted that open policies toward FDI and properly functioning competition polices are mutually supportive. Liberal investment rules make markets contestable, thereby challenging domestic oligopolies and reducing the likelihood of cartels and monopolies.[246] At the same time, effective competition polices can ensure against possible abuses of market power by foreign investors. Thus, for example, with open investment rules in place, an exporter who finds itself unable to penetrate a foreign market because incumbent wholesalers and retailers, owned or controlled by local producers of competing goods, will not handle its goods could establish a new distribution channel or purchase an existing one, thereby eliminating the local distribution bottleneck. A liberal investment policy, in short, can simultaneously promote competition and trade in the host-country market, and perhaps in the global market as well.

One final reflection: Calls for dismantling the WTO at the Seattle Ministerial Conference in 1999 were incredibly shortsighted. Such demands evidence no appreciation for the tremendous contribution that GATT 1994 and the WTO have made to increasing world wealth and improving the daily life of millions of persons throughout the world. To cite just one example, without a legal instrument like GATT 1994 to promote liberal

trade, and the legal and political commitment of WTO Members to support liberal trade, developing countries would find markets in developed countries largely closed to their exports of textiles, clothing, and other goods that are the product of labor-intensive industries. The critics would presumably prefer seeing the developing world locked into a state of perpetual economic stagnation and poverty, with the people of those countries working behind a water buffalo plowing a malarial-infested field. As Jeffrey Schott has noted, "[A]s the weaker partners in the trading system, developing countries benefit the most when the major trading powers play by a common set of rules."[247] A liberal trade policy is a policy of increased competition and opportunity. Such a policy holds great promise for the world's developing countries.

I. Introduction

The Contracting Parties to the General Agreement on Tariffs and Trade ("GATT") understood that they might need to take independent security and defense policy measures that would be exempted from the general legal obligations contained in the GATT. This exception to the GATT rules is contained in Article XXI titled "Security Exceptions" ("Article XXI").[1]

On its face Article XXI is a most powerful exception to the general obligations undertaken by WTO members. The element of Article XXI with the greatest potential for abuse is subsection (b)(iii), which allows any WTO member to ignore its general WTO obligations in situations "which it considers essential to its security interests . . . in time of war or other emergency in international relations". American legal scholar Raj Bhala, who has written extensively on the national security exception, has described the potential for protectionist mischief sanctioned by Article XXI as "cowboy behavior".[2] Yet the infrequent invocation of Article XXI suggests that it is not much more than a potential threat. Article XXI has yet to be relied upon to justify a significant impediment to the openness of the global trading system. In practice, GATT/WTO members have not undermined the liberalizing objectives and obligations in the GATT/WTO through extensive recourse to the Article XXI exception. However, the question remains: Despite the absence of 'cowboy behavior' historically, and infrequent recourse to the exception, can we be confident that member countries will be equally restrained in the future, especially in a post-September 11th world where terrorism and national security have become such large concerns? Trade policymakers need to assess the continuing potential for "mischief" created by Article XXI and its potential impact on the global trading system.

II. Historical Overview of GATT Article XXI

The drafters of Article XXI understood the extremely broad scope of the exception they were creating. The debates on the ITO Charter reveal concern about the critical balance required between national security and national sovereignty on the one hand, and the need to promote commerce and to protect an open trading system on the other. One of the drafters of the original ITO Charter described the care that the Contracting Parties took in fashioning this critical exception:

> We gave a good deal of thought to the question of the security exception, which we thought should be included in the Charter. We recognized that there was a great danger of having too wide an exception and we could not put it into the Charter, simply by saying: "by any member of measures relating to a Member's security interests," because that would permit anything under the sun. Therefore we thought it well to draft provisions which would take care of real security interests and, at the same time, so far as we could, to limit the exception so as to prevent the adoption of protection for maintaining industries under every conceivable circumstance . . . [T]here must be some latitude here for security measures. It is really a question of balance. We have got to have some exceptions. We cannot make it too tight,

[1] Article XIVbis of the *General Agreement on Trade in Services* and Article 73 of the *Agreement on Trade Related Aspects of Intellectual Property Rights* contain almost identically worded exceptions. No disputes have arisen involving these exceptions. Similar exceptions can be found in regional agreements such as the *North American Free Trade Agreement* at Article 2102.

[2] Raj Bhala, *National Security and International Trade Law: What the GATT says, and What the United States Does*, 19(2) U. PA. J. INT'L ECON. L. 263, 273(1998). *See also* RAJ BHALA AND KEVIN KENNEDY, WORLD TRADE LAW 154–57(1998) and in particular 1999 SUPPLEMENT at 220–231("BHALA AND KENNEDY").

> because we cannot prohibit measures which are needed purely for security reasons. On the other hand, we cannot make it so broad that, under the guise of security, countries will put on measures, which really have a commercial purpose.[3]

As discussed in this chapter, a number of serious issues have been raised over the national security exception. Although Article XXI has been the subject of several dispute settlement proceedings, as well as discussions in the GATT Council, most of these issues remain unresolved. Given the broad scope of the exception and the protection of national sovereignty that all Members agree is fundamental to the modern global trading system, how is it that the exception has not been more prone to abuse since it came into effect as part of the GATT 1947? Before attempting to answer this question, it is necessary to examine the legal text of Article XXI and how member countries have treated elements of the exception in the few disputes that have arisen regarding its use.

III. The Text of GATT Article XXI

GATT Article XXI ("Article XXI") reads as follows:

> Nothing in this Agreement shall be construed to:
>
> (a) require any contracting party to furnish any information the disclosure of which it considers contrary to its essential security interests; or
> (b) prevent any contracting party from taking any action which it considers necessary for the protection of its essential security interests;
> (i) relating to fissionable materials or the materials from which they are derived;
> (ii) relating to the traffic in arms, ammunition and implements of war and to such traffic in other goods and materials as is carried on directly or indirectly for the purpose of supplying a military establishment;
> (iii) taken in time of war or other emergency in international relations; or
> (c) prevent any contracting party from taking any action in pursuance of its obligations under the United Nations Charter for the maintenance of international peace and security.

Few Panels have examined the precise meaning and scope of the Article XXI exception. The key issue, as yet unresolved, is the jurisdictional argument – relied upon more than once by the United States—that the phrase "which *it* considers necessary" (emphasis supplied) in the chapeau of paragraph (b) means that a country's decision to take action on national security grounds under Article XXI:1(b) cannot be challenged in the dispute resolution system.

IV. GATT/WTO Jurisprudence on Article XXI

One of the most influential GATT experts, Professor John Jackson, has argued that Article XXI is "so broad, self-judging, and ambiguous that it obviously can be abused. It has even been claimed that maintenance of shoe production facilities qualifies for the exception because an army must have shoes!"[4] Despite dire warnings such as this, contracting

[3] Quoted in GATT, ANALYTICAL INDEX: GUIDE TO GATT LAW AND PRACTICE, 6TH EDITION (1994), 554 ("GATT LAW AND PRACTICE, 1994").

[4] JOHN H. JACKSON, THE WORLD TRADING SYSTEM: LAW AND POLICY OF INTERNATIONAL ECONOMIC RELATIONS 230(1997). *See* discussion of the Swedish footwear case below.

parties have rarely relied on the exception to justify restrictions on trade in goods. Few decisions have therefore considered the national security exception in any detail.

A. GATT Decisions

1. Czechoslovakia v. United States

In the *Czechoslovakia v. United States* dispute,[5] the United States invoked Article XXI to justify its ban on imports of various goods from Czechoslovakia. Czechoslovakia countered that "the United States Government had used and interpreted the expression 'war material' so extensively that no one knew what it really covered."[6] However, the United States pointed out that only two hundred of the three thousand items on Czechoslovakia's tariff classification list were actually affected by the ban. The Contracting Parties voted overwhelmingly in favor of the United States.[7]

While there was virtually no analysis or reasons provided for the decision, the materials available indicate that the discussion focused very generally on the policy reasons underlying the national security exception. It is likely that the decision was motivated by political concerns at the very beginning of the Cold War, when countries were reluctant to offend the most powerful member of the nascent GATT, only two years old at the time.

2. Swedish Import Restrictions on Certain Shoes

A clearer and more restrained voice was expressed by some contracting parties in the GATT Council's consideration of an import quota imposed in 1975 by Sweden on certain footwear. The concern was the need to distinguish "commercial purpose" from *bona fide* national security action. The GATT Council paid particular attention to the term "essential security interests" in the Chapeau of Article XXI. Sweden argued that its import ban conformed to at least the spirit of Article XXI and stated:

> [D]ecrease in domestic production had become a critical threat to the emergency planning of Sweden's economic defence . . . The policy necessitates the maintenance of a minimum domestic production capacity in vital industries. Such a capacity is indispensable in order to secure the provision of essential products necessary to meet basic needs in case of war or other emergency in international relations.[8]

During the GATT Council debates many of the contracting parties expressed their reservations as to whether Sweden's import quota measure could be justified under Article XXI. While Sweden revoked its measure on July 1, 1977, without prompting from the GATT, the argument that Sweden's measure was likely more for a commercial purpose rather than for national security seems to have been compelling. To identify a link between a commercial interest and national security puts the country invoking the exception on a slippery slope toward protectionism. A country invoking the national security exception should be obliged to justify its measure in order to weed out trade policies that are for commercial rather than national security interests. Otherwise, as Professor Bhala suggests[9], the potential exists for protection of far too many non-critical industries and sectors. As Professor Bhala reminds us, other remedies, such as Article XIX (known as

the "Safeguards Clause"), are available to provide temporary relief for dealing with non-military threats posed by fair competition from imports.[10] The Swedish case represents the "edge" of the slippery slope in the history of the Article XXI debate that countries have for the most part wisely avoided to date.

3. Argentina

In 1982, soon after the temporary forced annexation of the Falkland Islands by Argentina, several Western countries (the European Economic Community, Australia and Canada) imposed trade restrictions on Argentina. Argentina complained that the two-month ban on Argentinean goods violated GATT Articles I (MFN), II (bound tariffs), and XI (quantitative restrictions). While no formal dispute panel was ever convened, on November 30, 1982, the Contracting Parties adopted a "Decision Concerning Article XXI of the General Agreement" setting out interpretative guidelines regarding the acceptable use of Article XXI. The Contracting Parties articulated the limits of Article XXI in the following manner:

1. Subject to the exception in Article XXI:a (right to withhold sensitive information), contracting parties should be informed to the fullest extent possible of the trade measures taken under Article XXI; and
2. When action is taken under Article XXI, all contracting parties affected by such action retain their full rights under the General Agreement.[11]

4. Nicaragua I

The dispute in the *Nicaraguan Sugar Case (Nicaragua I)*[12] arose out of the Reagan Administration's drastic reduction of sugar imports from Nicaragua as a part of its larger Central American foreign policy. Nicaragua argued that the U.S. sugar restrictions violated Articles XI (general elimination of quantitative restrictions), II (national treatment), XIII (non-discriminatory administration of quantitative restrictions) and Part IV of the GATT (trade and development). In that case, the United States did not explicitly invoke the Article XXI exception. However the United States did claim that its measure was beyond the scope of the GATT Panel and not a trade issue. Specifically, the United States argued:

> [T]he reduction of Nicaragua's sugar imports was not solely motivated by trade considerations, nor did this action secure any economic or trade benefit for the United States or for the sugar producers or any other industry of the United States...the United States did not believe that the review and resolution of that broader dispute was within the ambit of the GATT.[13]

The Panel noted that the United States had not invoked any of the exceptions available to it under the GATT, and therefore would not comment or issue a ruling on whether the US measure could be justified under an exception. In the end, the Panel found the U.S. measure to be inconsistent with GATT Article XIII (2) obligation and suggested that the Contracting Parties recommend the United States "promptly allocate to Nicaragua

a sugar import quota consistent with the criteria set out in Article XIII (2)."[14] As noted below, the United States changed its legal strategy in *Nicaragua II*, where it did invoke the Article XXI national security exception.

5. Nicaragua II[15]

Trade relations between the United States and Nicaragua were the subject of a second GATT dispute settlement proceeding a few years later, after President Reagan issued an Executive Order on May 1, 1985 prohibiting all trade and transactions relating to air and sea transportation between Nicaragua and the United States. The United States initially objected to a Panel being struck to hear the dispute but later agreed to the creation of a Panel on the condition that it not examine or judge the validity of, or motivation for, the United States invoking Article XXI (b)(iii). Therefore, while the dispute proceeded, the Panel's terms of reference were framed extremely narrowly.

Nicaragua argued that the United States could not properly invoke Article XXI because the US embargo was not consistent with an "essential security interest," and the measure was not taken during a time of "war or other emergency in international relations". To support its claim, Nicaragua relied on a decision of the International Court of Justice and two UN Resolutions that condemned the US embargo as being a violation of international law.[16] The United States replied that the text of Article XXI left the validity of the security justification to the exclusive judgment of the Contracting Party invoking the exception. The United States also pointed to the narrow terms of reference given to the Panel and argued that it was not required to debate the merits of the Article XXI exception any further.

The Panel declined to rule on the dispute. It took the position that the narrow terms of reference precluded it from determining whether the United States had violated any of its GATT obligations within the meaning of Article XXIII:1(a). Although it concluded that the terms of reference did not prevent it from considering whether Nicaragua's GATT benefits had been nullified or impaired within the meaning of Article XXIII:1 (b) (non-violation), it held that there was no point in doing so unless a practical solution was available. Since the United States had indicated that it would not lift the embargo without a solution to the underlying political problem, a recommendation by the Contracting Parties that the embargo be withdrawn would have no effect. The alternative solution, providing Nicaragua authority to retaliate against the United States, would be equally ineffective since the U.S. embargo applied to exports from the United States to Nicaragua as well as to imports from Nicaragua.

Nevertheless, clearly frustrated by the narrow terms of reference, the Panel did ask the question whether "[i]f it were accepted that the interpretation of Article XXI was reserved entirely to the Contracting Party invoking it, how could the Contracting Parties ensure that this general exception to all obligations under the General Agreement is not invoked excessively or for purposes other than those set out in this provision?"[17] While acknowledging that the GATT was not intended to require contracting parties to forego their essential security interests, the Panel observed that the GATT could not achieve its basic aims of fostering non-discriminatory and open trade policies unless

each contracting party, whenever it invoked Article XXI, carefully weighed its national security needs against the need to maintain stable trade relations. In its frustration and anger over the Panel failing to make recommendations, Nicaragua blocked adoption of the report

B. The WTO Era

The first and so far only dispute in the WTO involving GATT Article XXI was a challenge by the EU of the U.S. Helms-Burton Act of 1996 ("Helms-Burton").[18] Helms-Burton, signed into law by President Clinton on March 12, 1996, was designed to tighten the 1962 embargo on communist-controlled Cuba. Title III of the legislation permitted U.S. nationals to bring legal action in the United States against foreign companies that were dealing or trafficking in U.S. property confiscated by Cuba after Fidel Castro came to power in 1959,[19] while Title IV authorised the U.S. State Department to deny visas to officials and to shareholders of such companies that benefit from such trafficking.[20]

The EU's complaint against Helms-Burton argued that the legislation violated GATT Articles I (MFN), III (National Treatment), V (Freedom of Transit), XI (Quantitative Restrictions), as well as several obligations under the General Agreement on Trade in Services ("GATS"), including Articles I (MFN), III (Transparency), VI (Domestic Regulation), XVI (Market Access) and XVII (National Treatment) as well the Annex on the movement of natural persons.[21]

As in *Nicaragua II*, the United States took the position that the legislation fell under the Article XXI exception, and that a dispute settlement panel was not competent to examine the justification or the motivation of the United States.[22] Indeed, U.S. officials made it clear that the United States would not even appear before the panel. According to one unnamed U.S. official: "We would not show up [to the panel proceedings]. This is a matter that touches on the foreign policy and national security of the United States, as to which no panel in the WTO is competent."[23]

This was potentially one of the most explosive cases to have reached the dispute settlement stage. Had the Panel and/or the Appellate Body ruled in favour of the

[18] *Cuban Liberty and Democratic Solidarity (LIBERTAD) Act of 1996*, Pub. L. No. 104–114, 110 Stat. 785.

[19] However, the President was authorized to waive application of Title III for six-month periods. On July 16, 1996, President Clinton suspended the right of U.S. citizens to file suit under Title III, and the waiver has been renewed at six-month intervals ever since.

[20] Executives of three companies and their families were banned from entering the United States pursuant to Title IV: Grupos Domos, a Mexican telecommunications company, Sherritt International, a Canadian mining company, and BM Group, an Israeli citrus company. Grupos Domos disinvested in the Cuban property at issue in 1997 and the ban was lifted. Visa exclusion for officials from an Italian telecommunications company, STET, was averted when STET agreed to pay US-based ITT Corporation $25 million for the use of ITT-claimed property in Cuba for a ten-year period. In addition, the U.S. State Department has investigated the Spanish hotel Sol Melia that apparently had invested in Cuban property that was confiscated from U.S. citizens in 1961, though there is no confirmation that the US State Department has denied visas to officials of that company. *See State Department. Official Promises Strict Enforcement of Helms-Burton*, INSIDE US TRADE, (April 13, 2001) and *Overview and Compilation of US Trade Statutes, 2001 Edition*, COMMITTEE ON WAYS AND MEANS, US HOUSE OF REPRESENTATIVES 219(June 2001).

[21] *See* EU Request for Consultations, *United States—The Cuban Liberty and Democratic Solidarity Act,* WT/DS38/1(May 13, 1996). Canada and Mexico joined the case as third parties.

[22] However, European officials suggested that the case could be distinguished from *Nicaragua II* on the basis that that case involved a primary boycott, whereas Helms-Burton created a secondary boycott. *See, e.g., Paeman Raises Possible WTO Challenge to National Security Measures*, INSIDE US TRADE (March 29, 1996).

[23] *US Says it will not Participate in WTO Panel on Helms-Burton*, INSIDE US TRADE, (February 21, 1997).

United States, the way would have been open for any Member to justify any trade restriction on national security grounds without fear of challenge. Moreover, a victory for the United States when it had failed even to appear in the proceedings would have seriously undermined the legitimacy of the new organization. On the other hand, had the ruling gone against the United States the U.S. Congress, already uneasy about the perceived loss of sovereignty entailed by the new WTO dispute settlement process,[24] would have reacted extremely negatively.

Fortunately, however, wiser heads prevailed. After a panel had been struck, the EU and the United States signed a Memorandum of Understanding ("MOU") on April 11, 1997.[25] In the MOU, the parties agreed, among other things, to develop agreed disciplines and principles for the strengthening of investment protection governing expropriation and nationalization. The United States indicated that it would continue to suspend operation of Title III provided that the EU and other allies stepped up their efforts to promote democracy in Cuba. The United States agreed to consult with Congress with a view to obtaining a Presidential waiver for Title IV once bilateral consultations had been completed and the EU had adhered to the agreed disciplines and principles.[26] Finally, the EU agreed to suspend the WTO proceedings.[27]

Thus, the question whether the invocation of Article XXI to justify actions that would otherwise violate provisions of the WTO agreements can be challenged in the WTO dispute settlement system is still open.[28]

V. Conclusions

As discussed in this chapter, countries have for the most part exercised a good deal of self-restraint with respect to the use of Article XXI to justify trade restrictions, and no GATT or WTO dispute resolution panel has had to rule on the precise meaning of its provisions. However, with the shift towards a more proactive U.S. foreign and defense policy since September 11, 2001, and growing international attention to national security, it may only be a matter of time before a substantive ruling on the parameters of Article XXI will be sought. National security imperatives in the wake of international terrorism could well weaken the historical constraint on "cowboy behavior" described in this Chapter. The use of Article XXI in the face of the real problems posed by the threat of international terrorism may well prove not to be too troublesome. However, if WTO governments take the opportunity to invoke sanctions where terrorism and national security threats are not readily apparent, but the protection of domestic interests are, or where foreign policy

[24] Under the GATT dispute settlement system the losing party could block adoption of a panel report, a right quite frequently invoked by the United States. Under the WTO system, panel and Appellate Body reports are automatically adopted unless blocked by a consensus of the members. The only sop to the proponents of undiminished sovereignty was that the WTO could not force a losing party to comply with the panel or Appellate Body recommendations; the losing party could instead offer compensation or face retaliation.

[25] *European Union-United States: Memorandum of Understanding Concerning the US Helms-Burton Act and the US Iran and Libya Sanctions Act*, 36 INTERNATIONAL LEGAL MATERIALS 529 (1997).

[26] No amendment to Title IV as contemplated by the MOU has ever been passed by Congress [Conversation with Angela Ellard, Majority Staff, Committee on Ways and Means, US House of Representatives, December 1, 2003].

[27] The proceedings lapsed in 1998, since cases cannot be suspended for more than one year. *See Dispute Settlement Understanding,* Article 12:12.

[28] Kees Jan Kuilwijk has argued that claims to a national security exception are subject to both procedural and substantive review. *See* Kees Jan Kuilwijk, *Castro's Cuba and the U.S. Helms-Burton Act: An Interpretation of the GATT Security Exemption,* 31(3) JOURNAL OF WORLD TRADE 49(1997).

concerns that do not appear to have direct national security implications are dominant, as in the *Helms-Burton* case, difficult questions could be presented to the WTO.[29]

Whether or not a panel or the Appellate Body would actually delve into the merits of an Article XXI defence is an open question. Activist adjudicators might be willing to consider the meaning of such terms as "war or other emergency in international relations", "necessary", and "essential security interests". But "Realpolitik", according to some experts, would be more likely to incline the WTO to accept that Article XXI was intended to give members a great deal of sovereign freedom to act in ways that they believe to be in their national security interests, without being subject to second-guessing in the dispute settlement system.[30] In such case, only continued self-restraint by Members will prevent abuse of the national security exception.

[29] For example, at the time of China's accession to the WTO, the U.S. Congress created the United States-China Economic and Security Review Commission (*see* 22 U.S.C. § 7002) to assess and to report annually to Congress on the national security implications and impact on U.S. interests of the bilateral trade and economic relationship between the United States and China. The legislation specifically requires:

> Each report under paragraph (1) shall also include recommendations for action by Congress or the President, or both, including specific recommendations for the United States to invoke Article XXI (relating to security exceptions) of the General Agreement on Tariffs and Trade 1994 with respect to the People's Republic of China, as a result of any adverse impact on the national security interests of the United States. 22 U.S.C. § 7002(c)(3).

The first Commission report issued in July 2002 includes the following recommendation:

> Recommendation 11: Congress mandated the Commission to evaluate and make recommendations on invoking Article XXI of the General Agreement on Tariffs and Trade (GATT), relating to security exceptions from GATT obligations. The Commission believes that the steel industry is a positive candidate for using Article XXI. If the Administration's current safeguard measures prove ineffective, the Commission recommends that Congress consider using Article XXI to ensure the survival of the U.S. steel industry. *Report to Congress of the U.S.-China Security Review Commission—The National Security Implications of the Economic Relationship Between the United States and China Executive Summary* <http://www.uscc.gov/execsum02.htm>

I. Introduction

States which agree with other states the levels of duties which they each will levy on specific goods require a means of identifying exactly which goods will be subject to which duty rates. Customs classification rules assist in effecting this identification. The rules should specify which goods are eligible for particular treatment, which other goods should receive the same treatment on the ground that they are "like" the specified goods, and which characteristics are to be regarded as conclusive when in doubt. The rules should also be non-discriminatory and should not lend themselves to national favouritism. This may be illustrated by some hypothetical examples. Is orange juice made from blood oranges to be regarded as if it were orange juice made from ordinary oranges? Should butter with a lower incidence of certain fat solids (so-called spreadable butter) be treated in the same fashion as normal butter? Is a large photocopier producing ninety copies per minute "like" a smaller copier making fifty copies per minute, so that imports of the former may be subjected to anti-dumping duties designed to protect domestic producers of the latter?

Most countries base their customs classification systems on the Harmonized System of Classification ("HS"). The HS is administered not by the WTO but by the World Customs Organization ("WCO"), based in Brussels. However, classification issues can be significant in matters that fall within the competence of the WTO, and several GATT and WTO disputes have involved questions relating to classification. Because customs classification as such is not governed by the WTO, this chapter does not attempt to provide a comprehensive discussion of the subject.[1] Instead, it discusses customs classification as it has arisen in the context of the GATT and the WTO. It first outlines the nature and purposes of customs classification (Part II). Next, it examines current WTO rules directly and indirectly related to classification (Part III). Finally, it analyses WTO/GATT case law relating to classification (Part IV).

II. The Nature and Purpose of Classification

A. The Harmonized System

Article 1 of the International Convention on the Harmonized System provides:

> "the Harmonised System means the Nomenclature comprising the headings and subheadings and their related numerical codes, the Section, the Chapter and Subheading Notes and the General Rules for the interpretation of the Harmonised System, set out in the Annex to this Convention."

The HS classifies over 5000 separate groups of goods in a logical structure comprising over 1200 headings broken down into 96 chapters organized in 21 sections, starting with cruder products. Subdivisions run to up to six digits. Each heading is identified by a four-digit code whose first two digits indicate the chapter where the heading appears, while the second two indicate the chapter heading. Fifth and sixth digits respectively identify one and two-dash subheadings. A zero indicates that there is no sub-heading[2].

[1] The WCO has published a classification course on a CD-ROM entitled "HARMONIZER: computer-based Training in the HS" developed by the Swedish Customs Administration. Details are available on the WCO website, www.wcoomd.org.

[2] For example, consider HS category 0902.10, corresponding to "Flavored Green tea (not fermented) in immediate packings of a content not exceeding 3 kg". The first two digits of the code 0902.10 indicate that the product belongs to chapter 9 entitled "Coffee, Tea, Maté And Spices". The third and fourth digits indicate

The HS includes six General Rules of Interpretation,[3] as well as headnotes to sections, chapters, headings and subheadings which provide additional guides to interpretation for particular categories of product.[4]

B. Origins of the HS

After World War II, a European Customs Union Study Group was established in Brussels to respond to the need for a standardized, internationally accepted classification system by developing a classification system known as the Brussels Tariff Nomenclature ("BTN") of the Customs Cooperation Council ("CCC"). It was considered that harmonised classification would facilitate international trade flows and tariff negotiations and make international trade statistics more reliable and useful. By 1967 all leading GATT members except the United States and Canada had adopted the BTN as their tariff classification. The United States finally joined the CCC in 1970, but did not adopt the BTN which it considered inadequate. The CCC, including the United States, developed the HS, which entered into force on January 1, 1987 and was adopted by the United States with effect from January 1, 1989, and by Canada with effect from January 1, 1988. The HS, which is based in part on the Standard International Trade Classification("SITC"), used by the United Nations statistical commission to report trade statistics, has now been adopted for customs tariffs and trade statistical purposes by countries representing ninety percent of all world trade.

The CCC evolved into the World Customs Organisation ("WCO") in 1994. The WCO, based in Brussels, is responsible for maintaining the HS. The WCO takes measures to secure uniform interpretation of the HS and amends it to take account of technological developments. A country can be a member of the WCO and also be party to the HS Convention: there are 159 members of the WCO and 104 signatories to the Convention. A number of countries that have not formally adopted the Convention nonetheless apply the HS in practice. All WCO members may become party to the HSC; non-WCO members may be invited by the WCO Council to become parties to the HSC (only Chad currently falls into this category).

The HS is amended every five years. The HS Committee, which acts by consensus, may draw up amendments after consulting Members. The Committee meets regularly to consider specific classification problems, review the operation of the HS and update it and the explanatory notes as necessary. Private companies or trade associations should raise classification concerns or suggestions for amending the HS with their national customs authorities, which may then ask the WCO Secretariat to raise the issue with the HS Committee.

The WTO Appellate Body and GATT and WTO panels have often referred to the HS during WTO dispute settlement procedures for comparisons or to obtain more information

that the product falls under Heading 2 which corresponds to "Tea, whether or not flavored". The fifth and sixth digits indicate that the product is further classified as subheading 1, corresponding to "Green tea (not fermented) in immediate packings of a content not exceeding 3 kg".

[3] For example, GRI 2(a) provides: "Any reference in a heading to an article shall be taken to include a reference to that article incomplete or unfinished, provided that, as entered, the incomplete or unfinished article has the essential character of the complete or finished article. It shall also include a reference to that article complete or finished (or falling to be classified as complete or finished by virtue of this rule), entered unassembled or disassembled".

[4] For example, Subheading Note 1 to Chapter 85 provides: "For the purposes of subheading 8542.10, the term "smart cards" means cards which have embedded in them an electronic integrated circuit (microprocessor) of any type in the form of a chip and which may or may not have a magnetic stripe."

on the reasoning behind a certain classification. A key fact in *Japan-SPF Lumber*,[5] for instance, was that there was no comparable independent tariff line for dimension lumber under the HS. In the *EC-Computer Classification* dispute[6], the Appellate Body held that the HS and its explanatory notes constituted a supplementary means for interpretation of classification decisions. These disputes are discussed in greater detail in Part IV of this chapter.

Close cooperation exists between the WTO and the WCO on questions related to the Harmonized System. The WTO participates as an observer at the sessions of the Harmonized System and usually a representative of the WCO's Nomenclature and Classification Division participates as an observer in the meetings of the WTO Market Access Committee. The two organizations however, differ in their areas of competence.

C. The WCO and the WTO: Distinction in Competence

The WTO and WCO exist as two separate entities with different areas of competence that do not overlap. The instruments of both organizations are distinct and complementary—although this is not always clear—once they have been implemented (and integrated) at the national level. The WCO is charged with "promoting an honest, transparent and largely predictable customs environment"[7]. It is the only inter-governmental worldwide organization competent in customs matters aiming to enhance the effectiveness and efficacy of customs administrations. The WTO on the other hand, deals with the rules of trade between nations. The target groups therefore are also different, with the WCO dealing solely with national customs administrations. Given the different types of "clients" or members, it has not been considered logical to merge both organisations, although some parts of their instruments are closely linked to each other. The WTO, for example, has little to do with cigarette smuggling, an issue which falls within the WCO's domain on the basis that diversions of trade due to differences in price and excise duty give rise to technical problems of enforcement.

The WCO is the only global international organization having competence in the classification of commodities in the Harmonized System. The WTO has no such competence. Classification at the national level rarely takes place simply for the sake of classification. It is usually designed to carry out specific government policies. The protection of domestic industries through tariffs is one such policy,[8] and one that the WTO concerns itself with. A standard classification system, applicable at the international level uniformly all over the world, however, must be designed purely from a classification point of view. The WCO in administering the HS Nomenclature aims to do exactly this and in doing so, differs in its objectives from the WTO.

Products under the HS are classified on the basis of likeness rather than on that of tariff applicability as in WTO Members' tariff schedules; Article 9 of the HS Convention states "Contracting Parties do not assume by this Convention any obligation in relation to rates of Customs duty". WTO Members' tariff schedules on the other hand, are not

[5] Report of the GATT Panel (adopted), *Canada/Japan: Tariff on Imports of Spruce, Pine, Fir (SPF) Dimension Lumber,* L/6470, 36th Supp. BISD 167 (1990).

[6] *European Communities—Customs Classification of Certain Computer Equipment,* WT/DS62, WT/DS67, and WT/DS68 (1998) ("*EC—Customs Classification*").

[7] *The Institution of Customs*, WCO Brochure, *About Us* (http://www.wcoomd.org)

[8] Another policy, the raising of revenue, is far less important in developed countries than it was historically. But duties still constitute a major proportion of government revenue in much of the developing world, particularly least-developed countries.

required to follow any particular classification system as long as like products receive identical tariff treatment; the motivation here quite clearly is tariff application. WTO Members often refer to the WCO's classification instrument in the context of Customs tariff negotiations and other Customs tariff-related issues. Again, the application of duty rates at the national level is a result of the classification of the commodity at issue in the Customs tariff nomenclature (which for most countries is based on the HS).

Disputes over the application of the HS Convention and its Nomenclature (and, therefore, over the classification of commodities in the HS) fall within the competence of the WCO and should be brought before the appropriate WCO body (i.e., the Harmonized System Committee). The Committee has power to issue opinions that are advisory only, not binding. It should be noted that although disputes in the HS Committee are settled from a purely classification point of view, those responsible for this classification should take classification decisions within the context of trade policies. Correctness of decisions must be verified with regard to such policies. For example, if the context of the question is whether a specific category of products may be included within a broader category of products made subject to anti-dumping measures, those deciding the controversy will doubtless endeavour to find a conclusion which acknowledges, even if it does not reconcile, the sentiments of the countries involved, one of which seeks to afford wide protection against unwelcome imports coming from the other country. To date, the HS Committee has solved many disputes, thus contributing to achieving uniform classification and ensuring transparency with regard to HS classification. The Committee is the single international body which can provide authoritative advice with regard to tariff classification.

Although the WTO does not have competence in the classification of commodities in the HS, WTO members sometimes discuss the HS classification of certain goods within the context of an informal WTO forum. WTO panels and appellate bodies continue to make judgments on "like products". This raises the question whether disputes over classification issues can be taken to the WTO or to the WCO or to both? The *EC-Customs Classification* case[9] is an instance of a dispute discussed both at the WTO level and at the WCO. It is noteworthy however, that in *EC-Customs Classification* the question before the WTO concerned the application of the correct duty rates and not the correct classification of LAN equipment. As explained above, the correct application of the negotiated duty rates depends on (i) the integration at the national level of these duty rates into the Customs tariff nomenclature, and (ii) the correct classification of the commodity at issue in that nomenclature. Consider the following excerpt from the report of the Appellate Body in the *EC-Customs Classification* case, demonstrating that classification issues may still be relevant to a dispute that is not directly about product classification:

> "We note that the United States referred, before the Panel, to the decisions taken by the Harmonized System Committee of the WCO in April 1997 on the classification of certain LAN equipment as ADP machines. Singapore, a third party in the panel proceedings, also referred to these decisions. The European Communities observed that it had introduced reservations with regard to these decisions and that, even if they were to become final as they stood, they would not affect the outcome of the present dispute for two reasons: first, because these decisions could not confirm that LAN equipment was classified as ADP machines in 1993 and 1994; and, second, because this dispute "was about duty treatment and not about product classification". We note that the United States agrees with the European Communities that this dispute is not a dispute on the *correct* classification of LAN equipment, but a dispute

[9] *Supra,* note 6.

on whether the tariff treatment accorded to LAN equipment was less favourable than that provided for in Schedule LXXX. However, we consider that in interpreting the tariff concessions in Schedule LXXX, decisions of the WCO may be relevant; and, therefore, they should have been examined by the Panel."[10]

D. The Purposes of Classification

1. Classification as the First Step in Customs Valuation

The need to classify products in tariff schedules stems from the fact that tariff rates for products differ. Classifying products in separate categories and sub-categories facilitates determination by customs authorities of the appropriate level of duty to be applied to individual products. Before deciding what *ad valorem* or other duty is applicable to an imported product, customs officials must first establish the exact category in the national tariff schedule under which that product is classified. If they cannot find an exact denomination for the commodity, they must charge the level of duty applicable to a "like product". Thus, a decision that one product is "like" another may form the basis for determining the valuation of, and duty on, that product. Is Corian, a building material used for bathroom and kitchen surfaces and made from crushed mineral and polymethylmethacrylate, to be regarded as "artificial stone" (at say a six percent duty), or as a "plastic" (at say an eleven percent duty)?[11]

2. Classification in the Context of Other "Like Product" Issues

The significance of the HS classification in helping to determine likeness is not restricted to identifying the appropriate tariff to be levied on a product. The concept of "like products" runs like a leitmotif in WTO disciplines, ranging beyond the National Treatment obligations to trade remedy and other rules. Likeness debates therefore arise not only in the context of tariff treatment of an imported product, but extend more generally to the realm of non-tariff barriers. For example, the issue in the *EC—Asbestos* case[12] was whether an imported asbestos product was "like" another domestically produced product in the context of a claim of violation of the National Treatment obligation of GATT Article III. As another example, GATT Article VI:1 establishes as the normal benchmark for anti-dumping comparisons the price of the "like product" in the domestic market of the exporting country. Standard product classification lists like the HS, as guides to decisions regarding the "likeness" of goods, may thus acquire a broader usage beyond the context of tariff treatment.

3. Classification as a Method for Determining Origin

A change in the level of a product's tariff heading is often considered sufficient to confer product origin on the country where that change took place, since it is deemed to reflect "substantial transformation" of the product—a criteria frequently used in rules of origin.[13] This is important in a number of contexts. So-called "preferential" rules of origin determine when a product is considered to have been produced in a country

[10] Report of the Appellate Body, *European Communities—Customs Classification of Certain Computer Equipment,* WT/DS62/AB/R, WT/DS67/AB/R, and WT/DS68/AB/R (1998), ¶ 90 (footnotes omitted, emphasis in original).

[11] This question was addressed in *E.I. Du Pont de Nemours Inc. v. Commissioners of Customs & Excise*, Case 234/81, 1982 ECR 3515.

[12] *European Communities—Measures Affecting Asbestos and Asbestos-Containing Products*, WT/DS135 ("*EC—Asbestos*").

[13] Rules of origin are discussed in Chapter 15 of this book.

entitled to preferential treatment, for example a fellow member of a free trade agreement. Non-preferential rules of origin are necessary for purposes such as country-of-origin marking and coverage of trade-restrictive measures such as quotas and anti-dumping duties. However, using the change-in-tariff method to determine origin may not always be reliable, as even in the HS products are not always categorized in a uniform manner.[14]

4. Classification as Disguised Discrimination: a Means of Refusing MFN Treatment

The flexibility of the WTO rules on constructing classification lists gives Members the possibility of using them to evade the MFN obligation. For instance, Member A could subdivide its automobile classification into "green" and "non-green" cars in order to grant a preferential tariff rate for a particular "environmentally-friendly" model from country B. If B is the only country which exports "green" cars to A, even on an MFN basis A would be able to grant preferential tariff treatment exclusively to country B, without having to establish a formal MFN exemption. Legally speaking, this would not amount to a violation of MFN, provided that all "green" cars imported into A received the same tariff treatment and no other WTO Member claimed that "green" and "non-green" cars were like products. The best-known "real-life" example of such evasion is provided by a 1904 Swiss-German Treaty which reduced German tariffs on imports of: ". . . large dapple mountain cattle or brown cattle reared at a spot at least 300 meters above sea level and having at least a month's grazing each year at a spot at least 800 meters above sea level".[15] Few if any other European countries raise cattle at the same heights above sea level as Switzerland, and this provision would have been vulnerable to a claim by another country with MFN rights that cattle raised closer to sea level were "like" the Swiss cattle and therefore should not be subject to higher German tariffs.

In this sense, therefore, classification may be viewed as a technique for giving effect to reciprocal tariff commitments in as narrow as possible a fashion.

E. Classification as a Criterion for Determining "Like Products"

Can standard product classifications such as the HS be used to demonstrate or determine "like-ness"? If so, can WTO Members' schedules of tariff concessions ("tariff classification") be put to the same use? The criteria considered as relevant for establishing likeness have been determined on a case-by-case basis. No exhaustive list of such criteria has so far been established. However, in *Japan—SPF Lumber*, discussed in detail in Part III below, a GATT panel rejected Canada's argument that Japan's application of an eight percent duty to imports of SPF dimension lumber, as compared with a zero tariff on dimension lumber of other species, was inconsistent with Article 1. Canada had argued that "dimension lumber" was a term recognized by the Canadian industry and to some extent the U.S. and Japanese industries as well, and that all lumber falling within the term should be treated as "like products", no matter what the species. The Panel said that this fact alone did not mean that dimension lumber could be considered a tariff classification category, and placed great significance on the fact that it did not belong to any internationally accepted classification.[16]

[14] For example, preserved fruit are classified in a different chapter of the HS than fresh fruit, while frozen fruit appear in the same chapter. It is not immediately obvious why preserving fruit would be enough to constitute "substantial transformation", while freezing would not, yet this would be the result if a change of chapter were the test. See HS 0803 *et seq*., HS 0811, and HS 2008.

[15] JOHN H. JACKSON, THE WORLD TRADING SYSTEM: LAW AND POLICY OF INTERNATIONAL ECONOMIC RELATIONS 151 (2000).

[16] *Japan—SPF Lumber*, *supra,* note 5, ¶ 5.14.

More recently, in *European Communities-Measures Affecting Asbestos and Asbestos Containing Products*,[17] the Appellate Body endorsed an approach using four general criteria for establishing "likeness":

(i) the properties, nature and quality of the products
(ii) the end uses of the products
(iii) consumers' tastes and habits
(iv) the *international* tariff classification of the products[18]

By classifying like products under a single heading, the HS links the analysis of likeness to the question of classification. A decision on classification thus automatically establishes the like nature of products, while analysis of the likeness of products will be based on the way in which they have been classified. Neither the General Agreement nor WTO rulings provides a precise definition of the term "like product", which appears in many places in the GATT 1994 and the other Uruguay Round agreements on trade in goods.[19] The Appellate Body has held that the term acquires different meanings in different contexts of the agreements.[20] Analysis of the likeness of products under the HS is therefore inextricably linked with their classification. However, the WTO rules do not explicitly require members' tariff classification lists to follow any particular classification system or adhere to the principle of likeness. Article I of GATT 1994 stipulates that the same level of duty be levied on like products, but does not require that they be classified under the same heading. As New Zealand pointed out in *Japan-SPF Dimension Lumber*, WTO rules create an obligation for Members to extend identical tariff treatment to like products but not to harmonize their classification.[21]

It is therefore possible to argue that a standard product classification system such as the HS may be a more reliable criterion than tariff classification for determining the likeness of products. This can be explained by the varying aims of classification systems: the HS system seeks to classify products according to their likeness, while the aim of tariff classification is to classify products according to the applicable duty treatment. For instance, a decision as to whether regular butter and spreadable butter should be classified under the same heading of the HS would be based on considerations of their likeness. For country X's tariff schedule, however, the decision could be based on whether the two types of butter would be subject to the same tariff. Country X might consider that its domestic spreadable butter industry needed protection, while its regular butter industry required more competition from imports, and therefore decide to impose a high tariff on imported spreadable butter and a zero tariff on regular butter. X's tariff classification

[17] Report of the Appellate Body, *European Communities—Measures Affecting Asbestos and Asbestos-Containing Products*, WT/DS135/AB/R (2001), ("*EC—Asbestos*"), ¶ 101.

[18] The first three criteria were listed by the Working Party Report, *Border Tax Adjustments,* L/3464, BISD 18th Supp. 97 (1970). The last, international tariff classification, was not mentioned by the Working Party, but was included by subsequent panels (see for instance, Report of the GATT Panel (adopted), *EEC Measures On Animal Feed Proteins*, L/4599—25S/49 (1978), footnote 58, ¶ 5.6; Report of the WTO Panel, *Japan—Taxes on Alcoholic Beverages*, WT/DS8/R, WT/DS10/R, WT/DS11//R, footnote 58, at 113 (1996).

[19] The Appellate Body has noted that the term appears in Articles I:1, II:2, III:2, III:4, VI:1, IX:1, XI:2(c), XIII:1, XVI:4 and XIX:1 of the GATT 1994. *EC—Asbestos, supra* note 12, para. 88.

[20] "The concept of "likeness" is a relative one that evokes the image of an accordion. The accordion of "likeness" stretches and squeezes in different places as different provisions of the *WTO Agreement* are applied. The width of the accordion in any one of those places must be determined by the particular provision in which the term "like" is encountered as well as by the context and the circumstances that prevail in any given case to which that provision may apply." Report of the Appellate Body, *Japan—Taxes on Alcoholic Beverages*, WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R, at 21 (1996).

[21] *Japan—SPF Lumber, supra* note 5, ¶ 4.14.

would therefore classify the two types of butter under two distinct headings or "tariff lines" under the heading prescribed by the HS for butter.[22] As a result, it would be unwise to use tariff schedules as the sole basis for determining whether or not regular and spreadable butter are like products.

Questions regarding the likeness of products may arise in the context of the tariff or non-tariff treatment of imports in the territory of another Member. When the objective is to determine the tariff applicable to an imported product, the WTO rules (Article II of GATT 1994) provide no means of interpretation other than the Member's tariff schedule. In some cases, however, it may not be easy to determine the appropriate level of duty because the tariff schedule does not list the product in question clearly. It is in these ambiguous cases, where the need to identify the most closely alike product arises, that the case law indicates a potential role for standard classifications like the HS. The United States argued in *EC-Customs Classification* that the HS and its Explanatory Notes could be considered to form part of the "circumstances of the conclusion" of the WTO Agreement in the sense of Article 32 of the Vienna Convention and could therefore be used as a "supplementary means' for interpreting classification decisions.[23] The WTO Appellate Body supported the relevance of the HS in interpreting the tariff concessions within the EC's tariff schedule[24]. Product classification lists such as the HS can, therefore, help countries to ascertain whether their products are receiving the appropriate treatment for like products, so that they can "monitor and protect the value of tariff concessions".[25]

F. Conversion of GATT Tariff Schedules to HS Nomenclature

As noted above, neither the GATT nor the WTO has required members to adopt the HS. However, the 1983 Decision on "GATT Concessions under the Harmonised Commodity Description and Coding System" recommended adoption of the HS to achieve "greater uniformity among countries in customs classification and thus a greater ability for countries to monitor and protect the value of tariff concessions."[26] This Decision outlined the basic principles and guidelines for facilitating what it described as the "considerable" changes related to the introduction of the HS. It instructed Members not to change existing tariff bindings on adopting the HS unless retaining them would make national tariffs unduly complex. In any event, adoption should not involve a significant or arbitrary increase in customs duties collected on a particular product and Members should not modify or renegotiate bindings for reasons unrelated to the adoption of the

[22] The separate classification and duty treatment could of course be challenged under GATT Article 1 on the basis that the two types of butter were "like products". An exporter of spreadable butter subject to the high tariff could complain that imports of regular butter—the "like product"—were being imported from a different country at a zero tariff, and that this violated the Article I MFN obligation. See *Spain—Tariff Treatment of Unroasted Coffee*, Report of the GATT Panel (adopted), L/5135—28S/102 (1981) ("*Spain—Unroasted Coffee*"), discussed below.

[23] *Supra*, note 10, ¶ 38 (footnotes omitted).

[24] In *EC-Customs Classification*, *supra* note 10, the Appellate Body also ruled that the classification practice *in the European Communities* during the Uruguay Round was part of the "circumstances of [the] conclusion" of the WTO Agreement and could therefore be used as a supplementary means of interpretation under Article 32 of the Vienna Convention. *Id.*, ¶ 92. The Appellate Body, however, made this finding in the context of considering to what extent the United States was entitled to derive legitimate expectations from the classification practices of the EC.

[25] *Decision on GATT Concessions under the Harmonised Commodity Description and Coding System*, 12 July 1983, L/5470/rev.1, 30th Supp. BISD 17, ¶ . 1.2.

[26] *Id.*

HS. GATT contracting parties could request explanations of changes in tariff schedules. The Decision considered that bindings would have to be renegotiated, as adoption of the HS would lead to the combination of previously separate bound and unbound tariff lines or tariff lines with different bound rates under one heading. It laid down negotiating procedures based on the provisions of GATT Article XXVIII.

G. Legal Effect

Can signatories to the HS modify HS divisions and subdivisions at their own discretion? Article 3 of the HS Convention stipulates that contracting parties (with certain exceptions for developing countries) must use all the HS headings and subheadings and their related numerical codes, without addition or modification. It also requires signatories to apply the general rules for the interpretation of the HS, as well as all the section, chapter and subheading notes, and prohibits them from modifying the scope of sections, chapters, headings or subheadings.

Under Article 3.3 of the Convention:

> "Nothing in this Article shall prevent a Contracting Party from establishing in its Customs tariff or statistical nomenclatures, subdivisions classifying goods beyond the level of the Harmonised System, provided that any such subdivision is added and coded at a level beyond that of the six-digit numerical code set out in the Annex to this Convention."

Signatories are therefore bound to adopt the six-digit HS as a minimum, and WTO Members which are also signatories of the Convention must observe this rule to remain in compliance with their obligations under the Convention. In contrast, the WTO does not explicitly prevent its Members from amending classification rules, provided they do so transparently. As a result, most WTO Members adopt the HS in its entirety, i.e. up to the six-digit level with discretion to introduce additional subdivisions beyond that level. However, other WTO rules may indirectly limit a Member's freedom to classify as it wishes, as discussed in Part III below.

III. WTO Rules on Classification

As mentioned above, GATT 1994 does not require WTO Members to follow any particular system for classifying goods, leaving them free to introduce new headings or subheadings in their customs tariffs as they see fit. The only specific rules on customs classification in the GATT 1994 impose a requirement on members to publish regulations and provide for fair and judicial-type procedures (Article X:1) and to provide for negotiation and "compensatory adjustment" (Article II:5) in the event that classification rulings undermine the value of a concession.

Article X:1 stipulates that the:

> "laws, regulations, judicial decisions and administrative rulings of general application, made effective by any contracting party, pertaining to the classification or the valuation of products for customs purposes, or to rates of duty, taxes or other charges, or to . . . , shall be published promptly in such a manner as to enable governments and traders to become acquainted with them."

GATT and WTO panels and the Appellate Body have interpreted Article X:1 to imply that the stipulated measure does not have to be published before their entry into force, as no time limit or delay between publication and entry into force of the

measure is specified therein.[27] The use of back-dated measures, however, is prohibited under Article X:1.[28]

Article II:5 provides for negotiations "with a view to a compensatory adjustment" in the event that classification rulings undermine a negotiated concession. This language implies that in principle Members are allowed to modify their tariff classification, but if another Member challenges that modification as undermining the value of the corresponding negotiated concession, negotiations must take place with a view to achieving a compensatory adjustment. Article XXVIII of the GATT specifies the consultative procedures to be followed pursuant to modification of tariff schedules. The Appellate Body in *EC-Customs Classification*[29] clarified that while Article II:5 recognizes the possibility that the treatment *contemplated* with respect to a concession may differ from the treatment *accorded* and thereby provides a compensatory balancing mechanism, nothing in the provision suggests that *only* the expectations of the *exporting* Member can serve as the basis for interpreting a Member's schedule to determine whether it has acted consistently with GATT Article II. The Appellate Body explained that the purpose of treaty interpretation under Article 31 of the Vienna Convention on the Law of Treaties is "to ascertain the *common* intentions of the parties".[30] Noting that a tariff concession schedule is made an integral part of the GATT treaty by GATT Article II:7, it concluded that the concessions provided for in that schedule are part of the terms of the treaty. The interpretation of a tariff concession schedule must therefore be based on the rules of interpretation set out in the Vienna Convention on the Law of Treaties.

Reclassification which extends differential treatment to like products could also be challenged as violating MFN obligations under Article I:1. In Part IV of this chapter, immediately following, we will draw upon WTO and GATT jurisprudence, to illustrate how discriminatory tariff classification could be challenged under the following GATT 1994 Articles:

1. Article I:1: nullification or impairment of benefit by violating MFN treatment of "like products".
2. Article II:1, which requires "no less favourable" treatment than that specified in the tariff schedule.
3. Article XXIII 1:(b): nullification or impairment of benefit through non-violation.

The case law on classification issues throws light on how these provisions are to be applied.

IV. WTO/GATT Case Law Relating to Classification

Tariff reclassifications violate Article I:1 of the GATT 1994 if they result in different tariff rates being applied to like products imported from different countries, or Article II:1 if they result in a higher tariff rate than that specified in the country schedule being applied

[27] *See, e.g.,* Report of the GATT Panel (adopted), *European Economic Community—Restrictions on Imports of Dessert Apples—complaint by Chile*, L/6491, 36th Supp. BISD 93, ¶ 12.29 (1989) ("*EEC—Dessert Apples*").

[28] *EEC—Dessert Apples, supra* note 27. *See also*, Gabrielle Marceau and Peter N. Pedersen, *Is the WTO Transparent? A Discussion of the Relationship of the WTO with Non-governmental Organizations and Civil Society's Claim for more Transparency and Public Participation*, 33 (1) JOURNAL OF WORLD TRADE 5 (1999).

[29] *Supra,* note 10.

[30] *Id.*, ¶ 84 (emphasis in original).

to a particular product. Both situations can be the subject of a "violation" complaint under Article XXIII:1(a). *Spain—Roasted Coffee*[31] and *Japan—SPF*[32] both involved claims of Article I:1 violations, and *EC—Customs Classification*[33] involved an alleged violation of Article II:1. However, even if there is no violation of Article I:1(a) or any other WTO rule, a reclassification can give rise to a "non-violation" claim of nullification or impairment of benefits under Article XXIII:1(b).[34] The *Germany—Sardines*[35] case involved a non-violation claim.

A. Violation Claims

1. Article I:1: Reclassifications That Deny MFN Treatment to "Like Products"

"*Whatever the tariff classification adopted, Article I:1 required that the same tariff treatment be applied to like products"*[36]

A tariff reclassification may violate Article I:1 of the GATT by infringing the obligation to accord MFN treatment to like products originating in the territories of all contracting parties. Cases have involved complaints that modifications to classification schedules have led to refusal to grant MFN treatment to the complainant's products, or that following reclassification, the treatment accorded to their products was different from that accorded to essentially similar products from other countries. Such claims depend for their success on establishing the likeness of the products in question, so that product classification for tariff purposes is linked to the determination of "like product".

(a) Spain—Tariff Treatment of Unroasted Coffee[37]. In the 1981 *Spain—Unroasted Coffee* case, Brazil claimed that Spain had modified its sub-tariff classification of unroasted coffee so that imports into Spain of "mild" coffee received more favourable tariff treatment than imports of unroasted non-decaffeinated "unwashed Arabica" and Robusta coffees. Prior to 1 March 1980, Spain had classified all imports of unroasted coffee under a single tariff heading, so they were subject to identical tariff treatment. Spain had not bound its customs duties on unroasted coffee. After that date Spain split the tariff heading into five tariff lines to which different rates of duty applied.[38] Brazil alleged that Spain had violated Article I:1 of the GATT by fixing a seven percent tariff rate for imports of certain types of unroasted, non-decaffeinated coffee, while granting duty-free treatment to other types of coffee. The basis of Brazil's claim was that the categories of coffee receiving different treatment were like products.

The Panel dismissed Spain's argument that the MFN requirement only applied to bound tariff items, pointing out that Article I of GATT applied to both bound and unbound tariff items. Changes to tariff classification resulting in different tariff treatment for like products would violate the MFN obligation irrespective of whether the tariffs in question

[31] *Spain—Unroasted Coffee, supra,* note 22.
[32] *Supra,* note 5.
[33] *Supra,* note 6.
[34] *See* Chapter 29 of this book.
[35] Report of the GATT Panel (adopted), *Treatment by Germany of Imports of Sardines*, 1st Supp. BISD 53(1952), ("*Germany—Sardines*").
[36] *Spain—Unroasted Coffee*, supra note 22, ¶ 4.4.
[37] *Supra,* note 22.
[38] This change occurred as a result of the Spanish Government's concern over the impact on prices of its decision to abolish the state monopoly over imports of coffee and return the product to the private sector. Coffee accounted for more than two per cent in the Spanish consumer price index. Panel Report at ¶ 3.14.

were bound or unbound. In reply to Spain's claim that the Brussels nomenclature allowed contracting parties to add subdivisions to their tariff headings, the Panel clarified that the GATT allowed such modification only when it did not create a new classification which led to different tariff treatment of like products, as this would violate Article I:1.

Spain argued that qualitative differences between the types of unroasted coffee in question, such as different chemical composition, different aromas and richness in soluble solids and different taste, led to different quotations for each type on international trade and commodity markets, and to distinct markets for each type of coffee. This was particularly true in the Spanish market where the use of blends was prohibited until March 1980. There was an obligation to market coffee under the designations of "superior", "regular" and "popular", which corresponded to "mild", "unwashed Arabica" and "Robusta" coffee respectively. Consumer preferences for each type of coffee were well established. Spain acknowledged the increasing market share of blends outside Spain but argued that the existence of blends proved that the various types of coffee were not like products.

The Panel, however, found that the differences between the various types of coffee, particularly in aroma and taste, resulted from geographical factors, cultivation methods, the processing of the beans and genetic factors, and did not consider them significant enough to justify different treatment for the products in question. The Panel concluded that all unroasted, non-decaffeinated coffee beans should be considered as "like products" within the meaning of Article I:1, *inter alia* because:

> "[u]nroasted coffee was mainly, if not exclusively, sold in the form of blends, combining various types of coffee, and that coffee in its end-use, was universally regarded as a well-defined and single product intended for drinking. . . . No other contracting party applied its tariff regime in respect of unroasted, non-decaffeinated coffee in such a way that different types of coffee were subject to different tariff rates."[39]

Was the Panel justified in basing its analysis of the likeness of the products in question on universal perception? Should not the analysis have been specific to local tastes and perceptions in Spain as opposed to the rest of the world? For instance, the use of blends was not common in Spain—yet the Panel took into consideration only the "universal" usage of blends despite Spain's intervention that a distinctive market existed for each of these products within Spain. Products that are deemed "like" from a legal perspective could be viewed differently in the market. Consumer tastes and preferences, reflected in prices, could force a distinction in the market between products that would otherwise be considered "like". Consumer tastes and preferences (and hence, price differences) may often be influenced by factors external to the intrinsic qualities of the products in question. Such factors as advertising, promotional campaigns and packaging could be unrelated to the physical properties and the real value of the product in question. Arguably, although mentioned in the Working Party Report on *Border Tax Adjustments*,[40] consumer habits and preferences are not the most reliable indicators of the likeness of products. The weight accorded to this criterion should be lower than that to the other more objective criteria mentioned in the report.

(b) Japan—Tariff on Import of Spruce Pine-Fir (SPF) Dimension Lumber[41]. This dispute, initiated by Canada, concerned Japan's discrimination between types of lumber on the basis of species. Japan imposed a ten percent duty (temporarily eight percent) on

[39] *Id.,* ¶¶ 4.7, 4.8.
[40] *Supra,* note 18.
[41] *Supra,* note 5.

spruce, pine, fir ("SPF") and larch, while granting duty-free treatment to cedar, hemlock, Douglas fir and other coniferous species. Canada argued that "dimension lumber" (lumber of standard sizes used in construction) made from SPF and dimension lumber made from other species were like products within the meaning of GATT Article I:1. Canada therefore asserted that the eight percent duty applied by Japan to imports of SPF dimension lumber, as opposed to duty-free treatment for dimension lumber of other species, violated Article I:1.

Japan made two main arguments in response to the Canadian complaint. First, Japan claimed that dimension lumber was not a separate "finished" product irrespective of its species. Japan argued that dimension lumber was not a universal, clearly defined product, and that no country had established it as a separate tariff line in its tariff classification, pointing out that no independent tariff line existed for dimension lumber under the HS. Japan also asserted that classification according to species was justified because different lumber species were marketed separately from each other and not in mixtures.

Second, Japan claimed that the lumber quality of SPF was lower than that of other species. Pine lumber usually had large knots and did not have a straight grain; fir and spruce had insufficient decay resistance. Owing to its lower quality, the profitability of SPF lumber was low and it therefore required protection. On the other hand, the higher quality of the other species led to higher profitability and a higher demand, which in turn meant that they had to be imported.

The Panel concluded that Japan's tariff treatment of dimension lumber imports from Canada was not inconsistent with its obligations under Article I:1 of the GATT. This ruling was based on the fact that dimension lumber did not belong to any *internationally accepted customs classification*. The fact that it was a standard applied by the Canadian industry and, to some extent also in the United States and Japan, was not sufficient reason for considering it as a separate category for tariff classification purposes.

The *Japan-SPF Panel*, like the *Spain-Coffee Panel*, therefore examined the issues from the viewpoint of "any internationally accepted customs classification". Unlike the *Coffee Panel*, however, the *Japan-SPF Panel* did not determine the likeness of the products in question by analysing their physical properties or end use, but based its findings solely on the consideration that "dimension lumber" was basically a standard applied by the Canadian industry which "did not belong to any internationally accepted customs classification". The Panel did not take into account Canada's specific arguments on classification of the products. It could have undertaken a more thorough analysis of likeness, including factors going beyond tariff classification, but instead reached a narrowly-based conclusion which is less persuasive than the comparable deliberations on coffee.

2. Reclassification Decisions that Violate GATT Article II:1.

The landmark case of *European Communities-Customs Classification of LAN Equipment*[42] concerned a complaint by the United States against the customs classification in the EC of certain computer equipment associated with local area networks (LAN). According to the United States, the EC, Ireland and the UK charged higher duties than they had undertaken in their schedules of concession on LAN equipment and certain personal computers with multimedia capability by granting them less favourable treatment than that provided for in Schedule LXXX of the EC. The countries in question were therefore acting contrary to their obligation under GATT Article II:1. The United States claimed that the EC had formerly imposed on LAN equipment the tariff applicable under heading 84.71 for "automated data processing" ("ADP") machines. Since 1995 some EC

[42] *Supra,* note 6.

Member States had charged imports of LAN equipment the higher rate of duty applicable under heading 85.17 to telecommunications equipment. Additionally, the United States argued that the EC had increased tariffs on certain PCs with multimedia capability by reclassifying them from heading 84.71 to other categories bearing higher duties.

The Panel examined whether LAN equipment fell under tariff headings 84.71 or 85.17, noting *inter alia* that EC Tariff Schedule LXXX did not refer explicitly to "LAN equipment". The Panel found itself unable to determine for the purposes of Article II:1 whether LAN equipment should be regarded as ADP machines purely on the basis of the ordinary meaning of the terms used in Schedule LXXX, taken in isolation. It posited that the meaning of the term "ADP machines" in this context could be determined on the basis of evidence of the "legitimate expectations" of an exporting Member[43], given that the protection of such expectations was one of "the most important functions" of Article II of the GATT. The Panel noted that such expectations

> "are normally based, at a minimum, on the assumption that the actual tariff treatment accorded to a particular product at the time of the negotiation will be continued unless such treatment is manifestly anomalous or there is information readily available to the exporting member that clearly indicates the contrary."

After examining evidence from the United States of tariff treatment of LAN equipment as ADP machines before and during the Uruguay Round, the Panel ruled that such a prevailing practice formed a basis for the legitimacy of U.S. expectations that it would continue to receive the same treatment, and concluded:

> "... the European Communities, by failing to accord imports of LAN equipment from the United States treatment no less favourable than that provided for under heading 84.71 or heading 84.73, as the case may be, in Part I of Schedule LXXX, acted inconsistently with the requirements of Article II:1 of GATT 1994."[44]

The EC appealed various legal findings and interpretations made by the Panel, including its finding of inconsistency with Article II: 1, and argued that the Panel had erred in interpreting the EC's tariff schedule in both its consideration of a "legitimate expectations" standard and its use of GATT Article II: 5 as confirmation of this standard.

The Appellate Body overturned the Panel's analysis and conclusion under GATT Article II. Firstly, the Appellate Body rejected the Panel finding that the EC's tariff schedule could be interpreted in terms of the exporting Member's *legitimate expectations*. The Appellate Body ruled that in a violation complaint such as this, the Panel's reference to the concept of reasonable expectations (which the Panel referred to as "legitimate expectations") was legally irrelevant, as the concept applies only to non-violation complaints.

Additionally, the Appellate Body disagreed with the Panel's invocation of GATT Article II:5 which the latter relied upon to confirm its consideration of a "legitimate expectations interpretation". Article II:5 provides a *compensatory balancing mechanism* in instances where the treatment contemplated with respect to a concession may differ from the treatment accorded. The Appellate Body argued furthermore that nothing in the provision suggested that *only* the expectations of the *exporting* Member could serve as the basis for interpreting a Member's schedule to determine whether it has acted consistently with GATT Article II.

The Appellate Body did not consider this "legitimate expectations" standard to be consistent with Article 31 of the Vienna Convention on the Law of Treaties (VCLT) on good faith interpretation. In the *India—Patents* case, it had overturned a similar use of

[43] *Id.*, ¶ 8.31.

[44] *Id.*, ¶ 9.1. However, the Panel rejected the U.S. claim with respect to multimedia PCs.

legitimate expectations in the name of a good faith interpretation. The Appellate Body explained that the purpose of treaty interpretation under VCLT Article 31 is "to ascertain the *common* intentions of the parties".[45] Given the GATT Article II:7 stipulation that the concessions provided for in Members' schedules are part of the terms of the GATT treaty, the only rules, which may be applied in interpreting the meaning of a concession, are the general rules of treaty interpretation set out in the VCLT. The Appellate Body listed the series of rules contained in VCLT Article 31 and explained that these rules "will usually allow a treaty interpreter to establish the meaning of a term". Pursuant to Article 31(1) of the *Vienna Convention*, the meaning of a term of a treaty is to be determined in accordance with the ordinary meaning to be given to this term in its context and in the light of the object and purpose of the treaty.

The Appellate Body explained that if application of Article 31 does not help establish the meaning of the term, Article 32 allows a treaty interpreter to have recourse to:

> "... supplementary means of interpretation, including the preparatory work of the treaty and the circumstances of its conclusion."

According to the Appellate Body, the "circumstances of [the] conclusion" may be interpreted, in appropriate cases, as allowing the examination of the historical background against which the treaty was negotiated.

The Appellate Body concluded that the Panel had not followed the principles of treaty interpretation, given that it had not undertaken a textual analysis of Schedule LXXX in accordance with Articles 31 and 32 of the Vienna Convention. Noting that the Panel did examine the EC's classification practice during the Uruguay Round, the Appellate Body explained that such evidence constituted "supplementary means of interpretation" under VCLT Article 32, a provision not specifically invoked by the Panel in this context. Moreover, it asserted that the value of this evidence as a supplementary means of interpretation is subject to certain qualifications. For example, the Panel should have also considered relevant the U.S. practice with regard to the classification of this equipment, emphasising that the purpose of treaty interpretation under Article 31 of the Vienna Convention is to ascertain the *common* intentions of the parties. If this method fails, Article 32 allows reference to additional texts, including *travaux préparatoires*. The Appellate Body found that the EC did not follow a consistent classification practice during the Uruguay Round, and criticised the Panel for failing to consider additional means of interpretation within the meaning of Article 32 of the Vienna Convention, such as:

- The HS and its explanatory notes as *travaux préparatoires* or in the context of the conclusion of the GATT 1994 under Article 32 of the Vienna Convention. The Appellate Body found that the Panel should have examined the Harmonized System and its Explanatory notes as context in its interpretation of the terms of the Schedule, given that it was undisputed that the Uruguay Round negotiations were held on the basis of the HS nomenclature.
- The 1997 decision[46] by the World Customs Organisation on the proper classification of LAN equipment, as the Appellate Body declared that a proper

[45] *Id.*, ¶ 84.

[46] The WCO HS Committee at its eighteenth session in November 1986, ruling in favor of the United States, concluded that a PC with television and audio capabilities was properly classified as an automatic data processing machine in HS Chapter 84 at sub-heading 8471.49. *Classification Opinion* 8471.49, Amendments to the Compendium of classification opinions, 22nd Session (NN. 1998).

interpretation "would have included an examination of the existence and relevance of subsequent practice."[47]

- EC customs classification legislation. The Appellate Body considered that the Panel should have examined how the EC had bound LAN equipment during the Tokyo Round, given that the U.S. position relied on its alleged expectations of a continuation of the *status quo*.

The Appellate Body therefore reversed the Panel's findings on the grounds that the latter had not interpreted the EC's Schedule in light of the documentary evidence in accordance with the relevant provisions the Vienna Convention. It is noteworthy however that the Appellate Body did not itself examine any of this evidence. After defining the correct method of interpretation, it stopped short of applying the method to determine the legality of the measure in question, i.e. whether there was a "violation" in the sense of Article XXIII:1(a) of GATT 1994.[48]

B. Article XXIII 1:(b): Non-Violation Nullification or Impairment of Benefit

One early GATT case, *Germany—Sardines*,[49] recognised that a *legitimate tariff reclassification could nullify or impair the reasonable anticipation of a party*, thereby giving rise to a claim for compensation under GATT Article XXIII:1. Thus, a complainant could argue that a modification to the classification was inconsistent with its "reasonable expectations" of tariff treatment deriving from classification agreed at earlier negotiations, so that an expected benefit did not materialise or was impaired, even though there was no violation of WTO rules.

In 1951 Norway complained that West Germany had imposed on preparations of *culpea pilchardus* a different rate of import duty from those imposed on preparations of *culpea sprattus* and *culpea harengus*. The products were also subject to different treatment with regard to internal taxes and quantitative restrictions. Canned *culpea pilchardus* products had previously received the same customs treatment in Germany as canned *culpea sprattus* and *culpea harengus* products, in accordance with notes exchanged between the two governments guaranteeing equality of treatment. Whether the products were like products in the sense of GATT Articles I and XIII was central to the dispute. The Panel's conclusion, however, was based solely on the negotiating history, and not on whether the difference in treatment violated GATT Articles I and XIII[50].

[47] *EC—Customs Classification, supra* note 10, ¶ 90. *See also*, Joel P. Trachtman, *European Communities-Customs Classification of Certain Computer Equipment*, 9(3) European Journal of International Law 551 (1998).

[48] Although the Appellate Body has in general applauded the exercise of judicial economy by panels, there have been several cases in which it has disagreed with the panel's interpretation of a core issue and in order to complete the case has found it necessary to analyse other provisions or facts themselves. In the *Australia—Salmon* case (Report of the Appellate Body, *Australia—Measures Affecting Importation of Salmon*, WT/DS18/AB/R (1998), ¶ 279), for instance, the Body found that the panel wrongly exercised judicial economy, leaving a key issue unresolved. These issues form part of the current debate over "creative interpretation" by the Appellate Body. Although the Body is confined by DSU Article 17 to "law not facts", it has been quite expansive in deciding what are issues of law.

[49] *Supra*, note 35, ¶ 39.

[50] Article XIII:1 provides: "No prohibition or restriction shall be applied by any contracting party on the importation of any product of the territory of any other contracting party or on the exportation of any product destined for the territory of any other contracting party, unless the importation of the like product of all third countries or the exportation of the like product of all third countries is similarly prohibited or restricted."

> "The Panel did not feel that it was called upon to give a definition of "like products" or that it was necessary for the consideration of the Norwegian complaint to decide whether the preparations of *culpea pilchardus, culpea sprattus* and *culpea harengus* had to be generally treated as "like products". Although the Norwegian complaint rested to a large extent on the concept of "like products" as set out in the Agreement and the German reply addressed itself also to that concept, the Panel was satisfied that it would be sufficient to consider whether in the conduct of the negotiation at Torquay the two parties agreed expressly or tacitly to treat these preparations as if they were "like products" for the purposes of the General Agreement."[51]

The Panel ruled in favour of Norway, arguing that given the history of the negotiations, its expectations were reasonable. In other words, Norway could reasonably assume on the basis of its prior agreement with Germany that the products in question would continue to receive equal treatment. The Panel therefore found that Norway was justified in claiming that a benefit accruing to it under GATT Article XXIII had been impaired.

> "It would seem therefore that the Norwegian Government, in order to secure the extension of advantages or privileges granted to preparation of *culpea pilchardus* to preparations of *culpea sprattus* and *culpea harengus*, relied on assurances which it considered it has obtained in the course of the negotiations rather than on the automatic operation of the most-favoured-nation clause.[52]"

The Panel declined to rule on whether the products were "like" within the meaning of Articles I:1 and XIII, and instead concluded that the different treatment of the products impaired a benefit accruing to Norway under the tariff concession it had negotiated with Germany. The Panel's finding of nullification and impairment of benefits can be understood within the meaning of GATT Article XXIII:1(b), although the Panel did not specify whether its ruling was based on Article XXIII:1(a) (violation) or on Article XXIII:1(b) (non-violation). However, it can be inferred from the fact that the Panel refrained from determining if there was a violation of Article I:1 or Article XIII that it viewed this as an Article XXIII(b) case. Clear evidence of non-violation does not rule out the possibility of violation: ideally the Panel should have begun by deciding whether or not there had been a violation before reaching a judgment on non-violation. The ruling exemplifies an instance where "the question of whether a measure affects the negotiated balance of interests tends to be more important than its legal status."[53] It is possible that the Panel failed to examine the legality of the measure because at the time no clear distinction had been established between the consequences of a measure that was found to nullify and impair through violation, and a measure that did so through non-violation.

V. Conclusion

> "The WTO/GATT left wide discretion to the contracting parties in relation to the structure of national tariffs and the classification of goods in the framework of that structure. The HS, . . . had brought about a large measure of harmonization in the field of customs classification of goods, but this system did not entail any obligation as to the ultimate detail in the respective tariff classifications. Indeed, this nomenclature has been on purpose structured in such a way that it leaves room for further specifications."[54]

[51] *Supra,* note 35, ¶ 12.
[52] *Id.,* ¶ 13.
[53] Frieder Roessler, The Legal Structure, Functions and Limits of the World Trade Order, 70(2000).
[54] *Japan—SPF Lumber, supra,* note 5, ¶ 5.8.

There is no obligation under the GATT/WTO rules to follow any particular system for classifying goods, and a Member has the right to introduce in its customs tariff new positions or sub-positions as appropriate. Flexibility was built into WTO rules and the harmonized system precisely to enable Members to adapt their classification system to their trade policy interests, including their protection needs as well as their requirements for the purposes of tariff and trade negotiations. This flexibility is better appreciated if one considers that it allows Members to target their protection precisely on the product that requires protection, rather than penalizing products that may be similar but are not "like". It may appear curious that WTO Members are on the one hand, given the freedom to classify their products as finely as they wish precisely so as to allow tariff differentiation; on the other, limits are imposed on tariff differentiation. The key to understanding this balancing act is to recognize that WTO rules allow tariff imposition in order to protect domestic industry; they do not, however, allow that protection be accorded differently across products that are "like". As the Panel found in the *Japan-SPF* case,

> "Tariff differentiation being basically a legitimate means of trade policy, a contracting party which claims to be prejudiced by such practice bears the burden of establishing that such tariff arrangement has been diverted from its normal purpose so as to become a means of discrimination in international trade. Such complaints have to be examined considering simultaneously the internal protection interest involved in a given tariff specification, as well as its actual or potential influence in the pattern of imports from different extraneous sources[55]."

Canada further clarified this principle in the context of the same dispute, positing that it:

> "did not deny that a contracting party has the right to structure its tariff as it wishes (subject, however, to its international obligations), and to create as many sub-divisions as it wishes, whether it be for statistical or other valid reasons, but the "like product" obligation was paramount and superseded any classification structure. Similarly, contracting parties were free to protect domestic industries as they saw fit, but only in ways compatible with their GATT obligations, and tariff discrimination among like products was not consistent with the obligation of Article I."[56]

Thus, no WTO rules exist that impose an obligation on Members to adopt a particular method of tariff classification, which enables *precise* tariff differentiation in Members' schedules. In having the flexibility to classify as finely as possible, a Member can grant tariff protection where it wishes to and lower such protection where it does not. On the other hand, WTO rules that do impose, albeit indirectly, obligations on Members with regard to classification, ensure that the tariff differentiation undertaken by a Member does not nullify or impair the benefits accruing to other Members under the GATT, either through violation of GATT Articles I:1 or II:1 or through frustration of that other Member's reasonable expectations as to the tariff treatment agreed to be accorded to a particular product. The treatment of classification in the WTO/GATT system therefore illustrates well the adage that what is not written in the legal texts is no less significant than that which is.

Author Biographies

Alan Alexandroff is currently the Research Director for the Program on Conflict Management and Negotiation Munk Centre for International Studies at the University of Toronto. He has been for a number of years on the Chapter 19 NAFTA Binational Panel Roster for Canada presiding or participating on a number of AD and CVD cases. He has acted, also, as Counsel to Appleton & Associates on a number of Chapter 11 NAFTA investor-state cases. In the last few years, Dr. Alexandroff has been involved in a major project on China's Accession to the WTO and has published with co-authors Sylvia Ostry and Rafael Gomez, CHINA AND THE LONG MARCH TO GLOBAL TRADE: THE ACCESSION OF CHINA TO THE WORLD TRADE ORGANIZATION (2002). In addition Dr. Alexandroff has been fellow-in-residence in international policy for the C.D. Howe Institute. With Don Guy he recently published, "What Canadians Have to Say About Relations with the United States," C.D. Howe Institute Backgrounder No. 73 (July 2003). He is completing an edited book for the C.D. Howe Institute on investment in North America and the global trading system.

Arthur E. Appleton is a Counsel at White & Case LLP. His practice consists of WTO work and international arbitration (both as counsel and arbitrator). He has appeared as lead counsel before the WTO's Appellate Body, and has published and lectured throughout the world on many different aspects of the WTO Agreement. His practice frequently brings him to developing countries. Dr. Appleton is a Faculty Member of the World Trade Institute (Berne), an Adjunct Faculty Member of the International Law Institute, and a visiting lecturer at the University of Amsterdam School of Law and the International Development Law Organization. He is based in Geneva. Dr. Appleton is a Co-editor of this book.

Nigel Balchin is Vice-President, SGS Société Générale de Surveillance S.A., Trade Assurance Services, Geneva. Originally a Research Chemist, Mr. Balchin joined the SGS Group in 1976 and held various positions in UK, Nigeria, Indonesia and Switzerland in government assistance programs and quality management. He is currently the Geneva Representative of the International Federation of Inspection Agencies.

Marco C. E. J. Bronckers received his law degrees from the University of Amsterdam (J.D., Ph.D.) and the University of Michigan (LL.M.). He has been practicing EU law and international trade law since 1980. He is a partner in the Brussels office of Wilmer, Cutler Pickering Hale and Dorr LLP. In 1997 he was appointed Professor of Law at the University of Leiden, where he holds the chair of WTO and EU External Trade Relations Law. In addition, he is a faculty member of the World Trade Institute, University of Bern. From 1999 to 2004 he served a term as member of the WTO's five person Permanent Group of Experts on Subsidies. In December 2000 he was included in the roster of WTO panelists. He is an associate editor of the JOURNAL OF INTERNATIONAL ECONOMIC LAW.

Peggy Clarke is a partner at the firm Wilmer Cutler Pickering Hale and Dorr LLP in the International Trade and Market Access Group. Ms. Clarke spent five years at the U.S. Department of Commerce, Import Administration, where she administered the U.S. antidumping and countervailing duty laws and advised on GATT subsidy and antidumping issues. Ms. Clarke received her J.D. from Georgetown University and holds a master's degree in international relations from the Johns Hopkins School of Advanced International Studies. Ms. Clarke has authored several articles on U.S. antidumping and countervailing duty laws, the WTO Agreements on antidumping and subsidies, and NAFTA treatment of antidumping.

Thomas Cottier is a full professor of European and International Economic Law at the University of Berne and managing director of the World Trade Institute, Berne, Switzerland. He was educated at the University of Berne, the University of Michigan Law School, and was a visiting fellow at Cambridge University, UK. He taught at the Universities of St. Gallen, Neuchâtel and the Geneva Graduate Institute in Geneva. During the Uruguay Round, he served as a Swiss negotiator with responsibilities including intellectual property. He served a member and chairman of several GATT and WTO panels. He is a member of the ILA Trade Law Committee, chairman of the ILA Committee on Biotechnology and a Member of the Swiss National Research Council until 2004. He has published widely in the field of international trade regulation and intellectual property. He was a member of the Swiss Council for Scientific Research untill 2004.

Richard O. Cunningham is senior international trade partner in the Washington, D.C.-based law firm of Steptoe & Johnson LLP. He currently co-chairs the American Bar Association Task Force on the Relationship of Trade and Competition Policy and is a member of the Advisory Committee to the Canada-United States Law Institute. Mr. Cunningham has chaired numerous international trade-related committees in the ABA Sections of International Law & Practice, Administrative Law, Litigation and Public Contract Law, and has served frequently as advisor on trade negotiations and trade legislation to Congressional Committees and U.S. Government Agencies. His international trade practice involves representation of both U.S. and foreign clients in import relief cases, in WTO litigation and in trade policy matters. Mr. Cunningham received his Juris Doctor from The George Washington University Law School in 1968.

William J. Davey is the Edwin M. Adams Professor of Law at the University of Illinois College of Law, where he has taught courses in international trade law, European Community law and corporate/securities law since 1984. From 1995 to 1999, he was the Director of the Legal Affairs Division of the World Trade Organization. Professor Davey is the author of LEGAL PROBLEMS OF INTERNATIONAL ECONOMIC RELATIONS (fourth edition 2002, with Jackson & Sykes), EUROPEAN COMMUNITY LAW (second edition 2002, with Bermann, Goebel & Fox), PINE & SWINE: CANADA-UNITED STATES TRADE DISPUTE SETTLEMENT (1996), and the HANDBOOK OF WTO/GATT DISPUTE SETTLEMENT (1991–2000, with Pescatore & Lowenfeld), as well as many articles on various international trade law issues. After his graduation from the University of Michigan Law School in 1974, he served as a law clerk to Judge J. Edward Lumbard (U.S. Court of Appeals-New York) and Justice Potter Stewart (U.S. Supreme Court) and worked in Brussels and New York for the law firm of Cleary, Gottlieb, Steen & Hamilton. He is a member of the American Law Institute.

Victoria Donaldson is a Counsellor in the Appellate Body Secretariat, where she has worked since 1999. Prior to joining the Appellate Body Secretariat, she worked for three years as an associate at the Brussels office of Cleary, Gottlieb, Steen & Hamilton, and for one year as a law clerk to Justice Peter deC. Cory at the Supreme Court of Canada.

Mary Footer is Deputy Director of the Amsterdam Center for International Law and a Member of the Faculty of Law at the Universiteit van Amsterdam. She is also a dozent (visiting) at the Europa-Institut (Sektion Rechtswissenschaft), Universität des Saarlandes in Saarbrücken, Germany, Faculty Member (visiting) at the World Trade Institute, Bern. She has previously taught at University College London, Erasmus University Rotterdam, University of Kent at Canterbury and University of Warwick. She is currently a listed consultant on trade and development for the WTO and consultant on investment for UNCTAD.

Ms. Footer is Of Counsel to the firm of Hunton & Williams, London, Washington, D.C. and Brussels on matters of international trade law. She is a Member of the Committee on International Trade Law of the International Law Association, a Member, of the Advisory Board, Law, Social Justice and Global Development and a Member, of the Consultative Committee, NAFTA: Law and Business Review of the Americas. She writes and speaks frequently on WTO matters and is completing a book on *Rule Making in the World Trade Organisation: An Institutional and Normative Analysis*, which is due for publication in 2005.

Ian Forrester practices European law in Brussels with White & Case. He also practices as an advocate in Scotland and as a barrister before the English courts. He has participated in many cases before the European Courts, and the European Commission. He represented the Government of Gibraltar before the European Court of Justice in litigation about Gibraltar airport; he represented the European Commission before the European Courts in the Magill case about refusals to license by dominant companies; and represented UEFA in the Bosman case about professional football. He specializes in the fields of competition, customs, trade, sport, telecommunications, broadcasting, software and pharmaceutical regulation. He has lectured on EC legal and policy topics to academic and private bodies in many countries, and has published extensively on these themes, having been co-author since 1981 of the annual review of EC competition law and policy in the Oxford Yearbook of European Law. He was appointed Queen's Counsel in 1988 and Visiting Professor in European Law at Glasgow University in 1991.

Petina Gappah obtained a Dr.iur. degree from the Karl-Franz University in Graz, Austria, where she wrote a doctoral thesis on the regulation of investment and competition in the World Trade Organization. She holds a Master of Laws degree from Cambridge University, and a Bachelor of Laws Honors degree from the University of Zimbabwe. From 1999–2002, Petina Gappah worked as a legal affairs officer in the Appellate Body Secretariat of the World Trade Organization. She is currently a lawyer with the Advisory Centre on WTO Law.

Carol George coordinates the global WTO Practice Group of Baker & McKenzie, from the Firm's London office. She holds an LLM in Public International Law from the London School of Economics (1995), and an LLB (1984) and B.Sc. (1981), both from the University of British Columbia in Vancouver, Canada. Having practiced commercial law in Canada, she lectured in International Economic Law at the University of London from 1996 to 2000 and requalified as a UK solicitor in 1998, before joining Baker & McKenzie in 2001. She provides technical assistance to Governments in relation to the implementation of WTO agreements and dispute settlement matters, and acts for private clients in the preparation of WTO-consistent business strategies and the pursuit of competitive market conditions through WTO negotiations. She has written or co-authored several trade-related publications.

Dale B. Honeck is a Counselor in the Trade in Services Division of the World Trade Organization, and is Secretary of the WTO Working Party on Domestic Regulation (WPDR). Other major responsibilities include servicing the professional services and tourism aspects of the current WTO negotiations, and technical cooperation lectures on services and the General Agreement on Trade in Services. From June 1997 until the creation of the WPDR in April 1999, he served as Secretary of the former WTO Working Party on Professional Services. His first five years in the GATT/WTO, from 1992 to 1997, were spent in the Trade Policies Review Division as a Trade Policy Analyst, researching

and writing Trade Policy Review studies on Japan, Korea, Malaysia, the Philippines, and Thailand. In addition to WTO/GATT publications and documents, he has written numerous articles on regulatory issues and services trade.

Gary N. Horlick is a partner in the law firm of Wilmer Cutler Pickering Hale & Dorr, LLP. He taught international trade law at Yale and Georgetown. He was a member of the World Trade Organization's Permanent Group of Experts dealing with subsidies (serving as the first Chairman). He was responsible for U.S. investigations of antidumping and countervailing duty complaints as Deputy Assistant Secretary of Commerce for Import Administration. He served as International Trade Counsel for the Senate Finance Committee. He is a graduate of Dartmouth College, Cambridge University, and Yale Law School.

Hiroshi Imagawa was Senior Technical Officer responsible for the Origin Sub-Directorate of the World Customs Organization ("WCO"). From 1994 to 2003 he was involved in the Secretariat work on the negotiations for harmonizing non-preferential rules of origin, particularly in the drafting of technical documents related to the architectural issues and the product-specific rules for the machinery sector. Prior to joining the WCO, he worked from 1985 to 1990 with the UNCTAD/UNDP Technical Assistance Projects on GSP and Other Trade Laws, for Asia and the Pacific based in Jakarta and Kuala Lumpur and at the interregional level based in Geneva. He is now back in the Japan's Customs and Tariff Bureau of the Ministry of Finance as Deputy Director, Office of International Trade Organizations, dealing mostly with origin issues related to FTAs and WTO. He has a background in Law and in International Relations.

Rolf Jeker. Executive Vice President at SGS (SGS Sociéte Générale de Surveillance S.A.) responsible for Government contracts in the field of pre-shipment inspection, customs modernization, trade facilitation as well as forestry and aid monitoring. Currently also President of the Swiss Chambers of Commerce overseas (SwissCham); Chairman of the Board of Swiss Export Promotion Office (OSEC); Member of Foreign Economic Relations Committee of Economiesuisse; Member of Swiss Consultation Committee on Foreign Economic Relations of Swiss Government. He was formerly Ambassador and Delegate of the Swiss Government for International Agreements (in Trade, Foreign Assistance and Investment), Chairman of Swiss Export and Investment Guarantee Risk Board; Executive Director of African Development Bank.

Tashi Kaul is Director of WTO Affairs at the Washington DC office of White & Case LLP. She specializes in trade policy analysis, with a focus on regulatory issues and commercial opportunities arising from commitments under WTO Agreements. She helped establish in 2001, WCI Consulting PTE Ltd., the WTO consulting unit of White & Case in Geneva. She served as Director at WCI Consulting for two years and Trade Policy Analyst at White & Case, Brussels, before moving to Washington DC. Ms. Kaul worked as Economic Consultant at the WTO secretariat from August 1997 to October 1999, initially at the Trade in Services Division and later at the Development Division. She holds an M.Phil. in Development Economics from the University of Cambridge and a B.A. (Honors) in Economics from Smith College (*magna cum laude, phi beta kappa*).

Kevin Kennedy. Prior to joining the faculty of Michigan State University College of Law in 1987, Kevin Kennedy was a trial attorney at the U.S. Department of Justice where he was responsible for defending Commerce Department antidumping and countervailing determinations and International Trade Commission injury determinations before the

U.S. Court of International Trade and the Court of Appeals for the Federal Circuit. Before joining the Justice Department, Kennedy was a law clerk at the U.S. Court of International Trade. He currently serves as a NAFTA Chapter 19 binational dispute settlement panelist. Kennedy teaches courses in International Trade Regulation, International Litigation, and International Arbitration. He is the co-author, with Professor Raj Bhala, of the treatise, WORLD TRADE LAW: THE GATT-WTO SYSTEM, REGIONAL TRADE ARRANGEMENTS, AND U.S. LAW. His monograph, Competition Law and the World Trade Organization: The Limits of Multilateralism, was published in 2001 by Sweet & Maxwell.

Sydney J. Key, who received her A.B., A.M., and Ph.D. in economics from Harvard University, is on the staff of the Federal Reserve Board's Division of International Finance in Washington, D.C. In the 103rd U.S. Congress (1993–94), she was staff director of the Subcommittee on International Development, Finance, Trade and Monetary Policy of the House Banking Committee. In 1990–91, she served as a national expert in the European Commission's Internal Market Directorate-General. Dr. Key has been a lecturer on law at Harvard Law School (2001), an adjunct professor at the Stern School of Business at New York University (1999–2000), and a lecturer at the Morin Center for Banking and Financial Law at Boston University School of Law (1988–2000). She has also been an academic visitor in the Department of Accounting and Finance at the London School of Economics (1990–91). She has written extensively on international trade in financial services, international aspects of financial regulation, and the EU single market for financial services. Her book THE DOHA ROUND AND FINANCIAL SERVICES NEGOTIATIONS was published in 2003.

Alexander Koff is an attorney in the Washington, D.C. office of Paul, Hastings, Janofsky & Walker. His practice concentrates on trade policy and dispute settlement, international business and regulatory law, and international trade litigation. Representative matters at the WTO include the first case decided by the dispute settlement system, the first trade dispute between the U.S. and Japan, and the first prohibited subsidies case before the Appellate Body. He also helped draft the unanimously adopted Resolution and Recommendation advocating the right to private counsel in WTO dispute settlement for the American Bar Association. His work for clients in matters involving international arbitration and commercial litigation includes representing the claimant in the first NAFTA chapter 11 case to permit amicus curiae submissions and to open its proceedings to the public. He also advised U.S. and Vietnamese policy-markers on issues raised by the U.S.-Vietnam bilateral trade agreement, such as how to reform Vietnam's market-planned economy, how to increase predictability and transparency to attract investment, and how to reduce trade barriers for goods and services to assist commercial actors. In addition to his experience in private practice, Mr. Koff served as an intern in the legal office of the Office of the U.S. Trade Representative (in Geneva), the U.S. National Security Council, the U.S. Agency for International Development, and the United Nations (in New York). Prior to law school, he served as an intern in the Office of Politico-Military Affairs of the U.S. Department of State. He has published articles in various journals, including the Journal of Commerce, the Berkeley Journal of International Law, and the Michigan Journal of International Law. In addition, he has served as a guest-lecturer on international economic issues. His graduates degrees are from the University of Michigan Law School and the University of Cambridge.

Martha Lara de Sterlini is a Counselor in the Trade and Finance Division of the WTO Secretariat. She is responsible for the Committee on Trade-Related Investment Measures and is also involved in other activities of the WTO Secretariat relating to the interaction

between trade and investment, including technical assistance in this area. Prior to joining the WTO Secretariat, she worked for 15 years as a trade official and negotiator with the Mexican Ministry of Trade and Industrial Development, where she held several positions including Deputy Director General for Multilateral Trade Affairs and Counselor at the Permanent Mission of Mexico to the WTO in Geneva. She was a member of Mexico's negotiating team for the NAFTA and for other bilateral and regional trade agreements. She holds a master degree in International Law from the Graduate Institute of International Studies in Geneva.

Pierre Larouche is Professor of Competition Law at Tilburg University and Vice-Director of the Tilburg Law and Economics Center (TILEC). He is a member of the Quebec Bar (1991). He graduated from the Faculty of Law of McGill University (Montreal) in 1990. He clerked at the Supreme Court of Canada in 1991–1992. In 1993, he obtained a masters degree from the Rheinische Friedrich-Wilhelms Universität Bonn. Thereafter he practiced law for three years within the European Community law unit of Stibbe Simont Monahan Duhot in Brussels. From 1996 to 2002, he was at the Universiteit Maastricht for the Ius Commune Casebooks Project (*Casebook on Tort* (2000)). He obtained his doctorate in 2000 on the balance between competition law and sector-specific regulation in the telecommunications sector. His teaching and research interests include competition law, telecommunications law, media law, basic Community law and the common European law of torts.

Yong-Shik Lee (Y.S. Lee) is Associate Professor at Hamline University School of Law (St. Paul, Minnesota). Prior to joining the Hamline Law faculty, he served as a Legal Counsel for the Ministry of Foreign Affairs and Trade of South Korea and also taught at law schools and business schools in USA and South Korea. Professor Lee has published extensively in the area of international trade law and has also written on the issues of business law and arbitration. He is a qualified legal practitioner in USA and UK and a current member of the Korean Commercial Arbitration Board. He is considered the foremost authority on safeguard measures in world trade: he handled the first WTO panel case on safeguards, appearing at the WTO panel and the Appellate Body hearings, and wrote the first comprehensive treatise on safeguards titled, *Safeguard Measures in World Trade* (Kluwer Law International, 2003; 2nd ed. forthcoming 2005) as well as numerous other articles on this issue. He has also participated in various multilateral and bilateral negotiations relating to international trade and investment, including the negotiations at the United Nations Commission on International Trade Law (UNCITRAL) and the bilateral investment treaty (BIT) negotiations with Japan. He is currently conducting research on the impact of international trade law on economic development. This research has been sponsored by Hamline University School of Law and the University of Tokyo Institute of Social Science and has been scheduled for publication in a book titled, *Reclaiming Development in the World Trading System* (Cambridge University Press, forthcoming 2005). Professor Lee received his undergraduate degree in economics from the University of California at Berkeley and another Bachelor's degree (law) from the University of Cambridge. The University of Cambridge recently awarded him a Ph.D. under Special Regulations based on his scholarly publications. He is currently an Associate Editor of the Journal of World Trade and International Business Law Review.

Simon Lester is the President and co-founder of WorldTradeLaw.net LLC, which runs an on-line subscription service on WTO disputes (http://www.worldtradelaw.net). Mr. Lester previously worked as a Legal Affairs Officer in the WTO's Appellate Body Secretariat, where he assisted the Appellate Body Members with the conduct of individual appeals.

Prior to working at the WTO, he spent several years in private practice at Willkie Farr & Gallagher, where he worked on WTO disputes as well as trade cases before U.S. courts and agencies. He is a graduate of Harvard Law School.

Peter Lichtenbaum is the Assistant Secretary for Export Administration at the United States Department of Commerce. Mr. Lichtenbaum is responsible for developing the policies of the Commerce Department's Bureau of Industry and Security's (BIS) regarding controls on the export of dual-use items for national security, foreign policy, nonproliferation, and short supply reasons. He chairs the inter-agency Advisory Committee on Export Policy, and manages BIS's participation in multilateral export control regimes. Mr. Lichtenbaum joined the Commerce Department from the Washington, D.C.-based law firm of Steptoe & Johnson LLP, where he was a partner in the firm's international practice group. He principally handled matters involving international trade, including U.S. export controls and economic sanctions programs, and the application of the WTO Agreements. He is a graduate of Harvard Law School and the Kennedy School of Government.

Patrick Macrory practiced for three years as a barrister in London before moving to the United States. He was a senior partner with Arnold & Porter and subsequently with Akin, Gump, Strauss Hauer & Feld. He is now the Director of the International Trade Law Center at the International Law Institute, Washington, D.C. He has taught trade law at universities in London, Tokyo, and Washington, D.C., and has written and lectured extensively on the subject. He is Editor-in-Chief of this book.

Mitsuo Matsushita is a professor emeritus of Tokyo University and a counsel to Nagashima, Ohno & Tsunematsu, a leading international law firm in Tokyo. He served as one of the founding members of the Appellate Body of the World Trade Organization from 1995 to 2000. He has been attached to the Ministry of Finance, the Ministry of Economics, Trade and Industry and the Ministry of Telecommunications and Posts of the Japanese government as a member of various councils dealing with telecommunications, customs and tariffs, export and import transactions, and industrial property. Currently he is a member of the Industrial Structure Council attached to the Ministry of Economics, Trade and Industry and a member of the Office of Trade and Investment Ombudsman which is part of the Japanese government dealing with market access issues. He is also a member of the advisory board attached to the Academy of the World Intellectual Property Organization. He holds a Ph.D. degree from Tulane University (1962) and a D.Jur. degree from Tokyo University (1968). He has held professorships in Japan at Sophia University, Tokyo University and Seikei University. He has been a visiting professor at Harvard Law School, Michigan Law School, Columbia Law School, the Monash University in Australia and at the College of Europe in Bruges, Belgium. He has written many books and articles on various aspects of international trade and competition and investment law. Mitsuo Matsushita is admitted to Tokyo Bar (Daiichi Tokyo Bengoshi Kai).

Joseph McMahon is Professor of Commercial Law at University College Dublin, where he teaches International Trade Law on the graduate program in International Commercial Law. After his undergraduate studies in the Queen's University of Belfast, he undertook doctoral research at the University of Edinburgh. His doctoral thesis on *European Trade Policy in Agricultural Products* was published by Martinus Nijhoff. He writes extensively on international agricultural issues, for example, *Agricultural Trade, Protectionism and the Problems of Development: A Legal Perspective* (1992) and *Trade and Agriculture: Negotiating a New Agreement* (2001) (editor and contributor), the European Community's

Common Agricultural Policy (for example, *The Law of the Common Agricultural Policy* (2000)) and its Development Co-operation Policy (for example, *The Development Co-operation Policy of the European Community* (1998)). He has also contributed to various edited collections and published articles in major legal journals on each of these issues and their interconnection. He has previously been a member of staff at the Queen's University of Belfast, the University of Leicester and Victoria University of Wellington, New Zealand.

Mike Moore was the Director-General of the WTO 1999–2002 and the Prime Minister of New Zealand in 1990. He held numerous portfolios including Foreign Affairs and Trade, Tourism and Sports and Recreation. He has been honored and recognized by over a dozen Governments and Universities. He was awarded New Zealand's highest honor the Order of New Zealand and is also a member of the Privy Council. He is the author of nine books. He is a member of several Company Boards including SGS, and is a Councilor to New Zealand's largest company Fonterra. An adjunct Professor at a number of Universities including La Trobe and Adelaide Universities, Mr. Moore is also a regular columnist to papers such as *The Australian Financial Review* and the *South China Morning Post*, as well as being an advisor to several Governments.

Omar E. Odarda is an Argentine attorney, currently working as an associate of White & Case, LLP, based in Geneva. He worked for the Argentine government in the MERCOSUR agriculture negotiations between 1997 and 2000. In 2001, he joined White & Case, L.L.P. where he practiced International Trade Law in the Brussels and Washington, D.C. offices. He has extensive expertise in a wide range of trade-related matters, with a focus on regulatory issues and commercial opportunities arising from commitments under WTO Agreements. He has published on MERCOSUR, dispute settlement and trade in services. Mr. Odarda holds a law degree from the National University of Cordoba, Argentina, an L.L.M. in International Trade Law from the George Washington University, Washington, D.C., and a D.E.A in European Community Law from the University of Toulouse, France.

Joost Pauwelyn is Associate Professor at Duke University, School of Law. Prior to joining the Duke Law faculty, he served as a Legal Affairs Officer for the World Trade Organization in Geneva (1996–2002), first, in the Legal Affairs Division, then in the Appellate Body Secretariat. His areas of concentration are international economic law, in particular, the law of the World Trade Organization and public international law, with a focus on international law and development. Professor Pauwelyn received his Bachelor's degree in law (*Cand. Jur.*) from the University of Namur, Belgium; his Master's degree in law (*Lic. Jur.*) from the Catholic University of Leuven, Belgium; his *Magister Juris* from the University of Oxford, Corpus Christi College, UK; and Ph.D. in law, from the University of Neuchâtel, Switzerland. He is the author of *Conflict of Norms in Public International Law, How WTO Law Relates to Other Norms of International Law*, published in 2003 by Cambridge University Press.

Denise Prévost is a research associate at Maastricht University (the Netherlands), where she teaches a course on the external relations of the European Union. She is currently conducting research towards a Ph.D on the WTO's Agreement on Sanitary and Phytosanitary Measures, from a developing country perspective. She is also a consultant for UNCTAD, for which she has written a training module on the SPS Agreement and lectures in capacity-building workshops for developing country delegates. Before her arrival in Maastricht in 1997, she worked as a researcher at the University of South Africa (1995–1996). She obtained her BLC (1992) and LL.B (1994) degrees cum laude

from the University of Pretoria and has an LL.M in International Economic Law from UNISA (2000) and an LL.M in European Law summa cum laude from the University of Maastricht (1998).

Frieder Roessler has worked for the World Bank, the GATT and the World Trade Organization. In 1989 he was appointed Director of Legal Affairs of the GATT, a post which he held until 1995. Mr. Roessler's main task was to advise dispute settlement panels and to prepare drafts of their reports or supervise their preparation by his staff. He was also closely involved in the legal aspects of the Uruguay Round negotiations and participated in the legal drafting process at the end of the Round. After leaving the WTO, Mr. Roessler remained actively involved in WTO legal matters, and advised WTO Members involved in WTO dispute settlement proceedings and worked as a consultant on WTO-related matters for governments, professional organizations and law firms. Mr. Roessler was an adjunct professor at the Jean Moulin University of Lyon and at Paris I. He also taught at the universities of St. Gallen in Switzerland and of Minnesota and at Georgetown University in the United States. He has published extensively, mainly in the field of international trade law. A collection of his essays was published in 2000 by Cameron May under the title "The Legal Structure, Limits and Functions of the World Trade Order". Since July 2001, Mr Roessler has been the Executive Director of the Advisory Centre on WTO Law.

Philippe Ruttley is a Partner in the EC and WTO Group of the London office of the international law firm, Clyde & Co. He was educated at Oriel College, Oxford, and was called to the English Bar in 1980, subsequently being admitted as a Solicitor in 1991. His career has included practice as an EC lawyer in Brussels, international development projects with the UN in Rome and a period on the EC staff of H.M. Treasury Solicitor's Department. He has been in private practice since 1989, specializing in EC and international trade law, making frequent appearances in hearings before the EC Commission and EC Courts in Luxembourg. Since 1997, he has served as Secretary of the World Trade Law Association and has coauthored and edited several books and articles on international trade.

Christiane Schuchhardt has been a foreign lawyer at Wilmer Cutler Pickering Hale and Dorr LLP in Washington D.C. since December 2002. Previously she worked with the International Trade Group at O'Melveny & Myers in Washington, D.C. Before joining the private sector in 1999 she was a visiting fellow at Georgetown University Law Center and worked with the WTO Appellate Body Secretariat for a period of time. She did her legal studies and trained as a lawyer in Germany and holds a Master's degree from the University of London.

Rajeev Sharma is a Barrister and Solicitor with the law firm of Heenan Blaikie LLP in Toronto, Canada. Mr. Sharma specializes in all aspects of international trade, international arbitration and anti-trust/competition law. He regularly advises clients on anti-dumping, countervail, NAFTA, customs, WTO Agreements and law, government procurement and contracting, investor-state arbitration under NAFTA Chapter 11, and bilateral investment treaties worldwide. Mr. Sharma is an adjunct professor of Law & Economics at Glendon College, York University in Toronto and has previously held teaching positions at the Faculties of Law at Queen's University (Kingston, Ontario) and the University of Western Ontario where he has taught international business transactions and NAFTA law. He holds degrees from the London School of Economics, Osgoode Hall Law School and York University (Toronto).

Andrew W. Shoyer is a partner in the Washington, D.C. office of Sidley Austin Brown & Wood LLP. His practice focuses on the implementation and enforcement of international trade and investment agreements. Mr. Shoyer spent seven years in the Office of the United States Trade Representative, serving most recently as Legal Advisor in the U.S. Mission to the World Trade Organization in Geneva. He was the principal negotiator for the United States of the rules implementing the WTO Dispute Settlement Understanding, and has briefed and argued numerous WTO cases before dispute settlement panels and the WTO Appellate Body. Previously, Mr. Shoyer was Assistant General Counsel at USTR in Washington, D.C., where he served as principal legal counsel in the negotiation of the market access rules of the North American Free Trade Agreement. He is an adjunct professor of international trade policy at the Georgetown University School of Foreign Service, and an author of numerous articles on WTO and NAFTA jurisprudence and practice.

Eric M. Solovy is an associate at Sidley Austin Brown & Wood LLP. He counsels companies, trade associations and governments on international trade dispute settlement and a variety of intellectual property matters. He has represented a WTO Member in proceedings before the Appellate Body of the World Trade Organization, and has participated in ICSID arbitrations. He has provided advice regarding patent law policy to major biotechnology and e-commerce companies, and has represented clients as amicus curiae in cases before the Federal Circuit and the U.S. Supreme Court. Mr. Solovy also counsels clients on issues of international trademark protection, and border enforcement of intellectual property rights. In addition to his experience in private practice, Mr. Solovy was a law clerk to the Honorable Pauline Newman of the U.S. Court of Appeals for the Federal Circuit. He also served in the Office of Legal Adviser of the U.S. Department of State, and in the Office of Foreign Commercial Services at the U.S. Embassy in Madrid, Spain. Mr. Solovy is a graduate of Harvard Law School (*cum laude*) and Duke University (*summa cum laude*).

Brigitte Stern is Professor of International Law at the University of Paris I, Panthéon-Sorbonne, as well as Associate Professor at the Graduate Institute of International Studies in Geneva, and Director of the CEDIN-Paris I, Centre of Research in International Law. She has been a visiting Professor in many universities and schools including the Diplomatic School in Daar-es-Salam, the Institute of Foreign Languages at Shanghai, the Global Law School Program at New York University, Tokyo and Sao Paulo Universities. She serves as an Expert for International Organizations and Governments—for example she is a member of the legal team of the Bosnian Government in the Genocide Case against Yugoslavia before the International Court of Justice. She has also served as counsel in several arbitrations, and as an ICSID Arbitrator. She is a Vice-president of the United Nations Administrative Tribunal (UNAT), and was a Member of the Asian Development Bank Administrative Tribunal. She is also the President of the French Commission for the Elimination of Landmines.

Peter Denis Sutherland is Chairman of BP p.l.c. (1997–current). He is also Chairman of Goldman Sachs International (1995–current). Of Irish nationality, he was born on 25 April 1946 and was educated at Gonzaga College, University College Dublin and the King's Inns. Mr. Sutherland graduated in Civil Law. He was also admitted to practice before the Supreme Court of the United States of America. Mr. Sutherland currently serves on board of The Royal Bank of Scotland Group plc and is associated with, amongst others, the following organizations: Trilateral Commission (Europe) Chairman, World

Economic Forum, Foundation Board Member. Previously he served as, Attorney General of Ireland (1981–1984), EC Commissioner responsible for Competition Policy (1985–1989), Chairman of Allied Irish Banks (1989–1993), and Director-General of GATT and then The World Trade Organization on its inception. He has received fourteen honorary doctorates from universities in Europe and America. He was awarded an honorary fellowship of the London Business School in recognition of his contribution to business and trade (1997).

Peter Trepte is a UK barrister at Littleton Chambers specializing in European and international trade law with particular reference to government procurement, competition and the utilities. In the case of international regulated procurement, he advises and represents before administrative and judicial tribunals public bodies and commercial undertakings in matters relating to the application and enforcement of the UK, EU and WTO/GPA procurement rules. He was one of the panel members in DS 163, *Korea—Measures Affecting Government Procurement*. He also acts as a consultant to the World Bank, the Asian Development Bank, OECD, the EU and a number of national aid agencies and as an adviser to foreign governments on the introduction and development of procurement regulations and dispute resolution mechanisms, mainly in Central and Eastern Europe, the Balkans, the Caucusus and the Far East. He is a Fellow of the Chartered Institute of Arbitrators and the author of Public Procurement in the EC (CCH, 1993) and Regulating Procurement (OUP, 2004).

Peter L.H. Van den Bossche, Lic. jur., LL.M., Ph.D., is Professor of International Economic Law at Maastricht University. From February 1997 to August 2001, he was first Counselor, and then Acting Director, of the Appellate Body Secretariat of the World Trade Organization in Geneva. Born in 1959, he studied law at the University of Antwerp (Lic. jur., 1982), the University of Michigan, Ann Arbor (LL.M., 1986) and the European University Institute, Florence (Ph.D., 1990). Peter Van den Bossche has lectured and published on institutional and substantive issues of European Union law and WTO law. He is the author of numerous publications in the trade field, and is a member of the Editorial Board of the *Journal of International Economic Law* and a consultant to UNCTAD on international economic dispute settlement matters.

Edwin Vermulst is a founding partner of Vermulst Waer & Verhaeghe Advocaten in Brussels. After having studied at the Universities of Utrecht and Ann Arbor, Michigan, law schools, he has practiced international trade law in Washington D.C. and Brussels. He has been a panelist in a WTO dispute settlement proceeding and has been a member of delegations pleading their case before WTO panels. Mr. Vermulst has coauthored five books and numerous articles on various aspects of international trade law.

Marc Weisberger is an associate in the EC & WTO Group at Clyde & Co, London. He holds an MA (Law) from Queens' College, Cambridge University and an LLM from the London School of Economics and Political Science. He specializes in international trade law, with an emphasis on EC external relations. He is the author of several trade-related articles.

Gilbert R. Winham is Professor Emeritus of Government and Political Science at Dalhousie University, Halifax, Canada. He teaches and conducts research on international political economy, and specializes in international trade policy and negotiation. Dr. Winham is a Fellow of the Royal Society of Canada, and a past Woodrow Wilson Fellow (2001/02). He has served frequently on NAFTA dispute settlement panels dealing

with antidumping and countervailing duty actions. In 1996 he worked on changes to the Special Imports Measures Act (SIMA) for a Sub-committee of the Parliament of Canada. He has over twenty years of experience in training government officials from developing countries in trade policy and negotiation at the GATT/WTO in Geneva, and has conducted training sessions in numerous countries. He has served as on-site consultant for countries applying for accession to the WTO, e.g., Jordan and the Kyrgyz Republic. He is the author of numerous books and articles.

Werner Zdouc, Ph.D. is an attorney in the Appellate Body Secretariat of the World Trade Organization. He worked from 1995–2001 as an attorney in the Legal Affairs Division of the World Trade Organization. Dr Zdouc studied law at the University of St. Gallen, the University of Michigan and the University of Graz. He writes and speaks frequently on WTO issues.
