This complex landscape suggests to this author the following: first, that the next steps at the WTO are likely to be fairly modest. The more general and less binding the framework, the more support there appears to be for it. Indeed, in this sense the discussion of

[73] *See* Remarks by Assistant Attorney-General Joel I. Klein, Antitrust Division, Department of Justice, Presented at Fordham Law Institute, 24th Annual Conference on International Antitrust Law and Policy (New York, October 16, 1997).

competition policy and the WTO is somewhat akin to the curious paradox occurring in other areas of domestic economic regulation. For example, countries around the world have unilaterally liberalized their investment regimes to attract foreign capital and much of the antipathy to foreign investment that characterized the 1960s and 1970s appears to have vanished. At the same time, many countries have been willing to do far more by way of liberalization of their domestic investment regimes than they have been willing to commit to in binding international agreements. Similarly, many countries have introduced competition laws in the last decade. Both mature systems, such as the United States, and some new systems are worried about the potentially intrusive consequences of WTO rules in this policy area. For a number of developing countries, there appears to be concern that the introduction of WTO competition principles or rules will constrain developing countries in their ability to utilize infant industry policies, social policies, or other development tools. This anxiety also translates into a call for long-phase ins or other ways of giving developing countries the equivalent of special and differential treatment should some new rules or principles be developed.

Second, if this first somewhat cautious assessment of the next steps proves accurate, it may suggest that the more general the framework, the less useful it is likely to prove with respect to particular disputes between nations. For example, transparency and nondiscrimination are useful and important underpinnings to a competition policy regime, but one is still left asking whether embedding procedural screens of that sort at the WTO are likely to be truly useful in the competition policy context? Do market access tensions stem from facially discriminatory competition policies? One suspects the numbers are limited. Moreover, there are situations where the legal and institutional competition policy infrastructure is in place, largely transparent, and reasonably well funded, but the end result is not a well-functioning or effective enforcement regime. Is this a problem that could be challenged effectively at the WTO? Importantly, are WTO members prepared to take additional steps, in the form of supporting capacity building in this policy area, and use the WTO as a forum for supporting the development of sound competition policy regimes around the world? If so, then the consequences of general undertakings on competition policy could, over time, prove useful.

Currently, there is no agreement that the WTO should become an instrument for full market integration. Instead, the WTO is only tugging gently, and with no shortage of opposition, in that direction. Its main focus remains on trade-distorting governmental practice—which in the competition policy context would be a narrow slice of global competition policy challenges.

How issues are linked will also prove important. For example, some may favor the inclusion of competition policy into the WTO as a way of limiting, over time, the scope for antidumping measures. But in this author's view, the linkage of competition policy commitments to antidumping reform has only served to chill and further politicize multilateral discussion of competition policy.

Third, and more positively, even if one has some skepticism about the practical utility of WTO rules on competition policy, for the foreseeable future there is both a need and apparently some international interest in further developing effective competition laws, policies, and enforcement capabilities at the national level. For some countries, bilateral cooperation agreements are realistic next steps, and an expanding web of these arrangements seems to hold few, if any, dangers to the international trading system. Additional bilateral or even regional cooperation agreements may be constructive incremental steps for addressing practical enforcement problems and building a degree of trust across agencies.

Fourth, a host of global competition issues are not trade issues, but are perceived as costly and burdensome to firms involved with international commerce. It seems unlikely that the WTO can do much to advance procedural harmonization of merger practices, but these soft convergence and best practices efforts are now underway in multiple fora such as the ICN and the OECD. A soft convergence framework does not necessarily mean talk without progress.

As the recent record suggests, an active and public dialogue about the general internationalization of competition law and policy is now well under way. This degree of international engagement on the subject is both new and in my view, constructive. Yet, improvements in competition rules and their enforcement may be a necessary but insufficient condition for effective market access; many areas will require additional initiatives in terms of trade liberalization and regulatory reform. Some experts argue that it is important for the WTO to create new rules and institutional frameworks that allow for democratic experimentalism at the domestic level with new institutional structures and approaches at the international level. This viewpoint suggests that any resulting arrangements at the WTO may not be rules-based but could, for example, be an analytical exercise, plurilateral in membership, subject to opt-in provisions, and so forth.[74] This conceptualization of a possible architecture for integrating competition policy into the WTO is in fact a systemic question for the WTO itself, and it will surely be an important part of the post-Doha Agenda.

It is now obvious that all roads do not lead to the World Trade Organization as the forum for settlement of competition-related disputes or negotiation of rules. Indeed, at the Cancun Ministerial Conference in September 2003, the majority of developing countries objected to the launching of formal negotiations on a multilateral framework on competition as proposed by the European Union. The reasons appeared to be various but included concerns about capacity constraints in the developing world, uncertainty about the benefits of multilateral rules, and concerns that negotiated rules might impose constraints on other economic policies that developing countries might pursue. These concerns then translated into an agreement among the WTO Members in the summer of 2004 that no work towards negotiations on competition policy will take place within the WTO during the Doha Round. Thus, current conditions suggest that substantial public and private engagement on competition law and policy matters is well underway in various international settings but multilateral negotiations at the WTO are unlikely for the foreseeable future.

I. Introduction

This chapter provides an overview of a broad range of issues that arise at the interface of trade and the environment. After this introduction, Section II considers trade and environment in the context of the WTO, by examining relevant WTO agreements, recent trade disputes with environmental implications, the WTO's Committee on Trade and Environment ("CTE"), and relevant mandates resulting from the recent WTO Fourth Ministerial in Doha, Qatar. Section III then seeks to place the traditional issues of trade and environment in the broader context of sustainable development, a concept that connotes a development path that optimizes human activities within economic, social and environmental spheres, and that meets the needs of present generations without compromising the ability of future generations to meet their own needs. This is followed in subsequent sections by a thematic discussion of the main trade and environment issues, organized according to three main categories: 1) issues arising from *material linkages* between trade and other facets of the world we live in (Section IV); 2) *legal and policy-related issues* arising between trade and other fields of law and policy (Section V); and 3) *organizational issues* arising between the WTO and other institutional arrangements (Section VI). Section VII concludes with some thoughts on the future development of international economic law and policy as it applies to the environment and sustainable development. The scope, diversity and complexity of this field prevent a single chapter from covering the subject in detail; this chapter, consequently, is designed to provide a sketch of some of the main issues of trade and environment and to complement the discussion of related issues as they are addressed in other chapters of this work.

II. The WTO, Environment and Sustainable Development

A. Relevant WTO Agreements

The WTO legal system does not address the relationship between trade, environment and sustainable development in one comprehensive document. Rather, issues relating to the environment are scattered through many of the agreements annexed to the Marrakesh Agreement Establishing the World Trade Organization. The main ones are described below, with an emphasis on those obligations and exceptions that are especially relevant in the field of trade and environment.

1. The Marrakesh Agreement Establishing the World Trade Organization ("WTO Agreement")

The WTO Agreement establishes the WTO as the preeminent international institution governing international trade. It encompasses the original GATT 1947, augmented by the amendments of the past fifty years, as well as the other agreements negotiated during the Uruguay Round of trade talks. Its preamble includes reference to the objective of sustainable development and the need to protect and preserve the environment. It states in the relevant part:

> *Recognizing* that their relations in the field of trade and economic endeavor should be conducted with a view to raising standards of living, ensuring full employment and a large and steadily growing volume of real income and effective demand, and expanding the production of and trade in goods and services, *while allowing for the optimal use of the world's resources in accordance with the objective of sustainable development, seeking both to protect and preserve the environment and to enhance the means for doing so in a*

manner consistent with their respective needs and concerns at different levels of economic development.[1] (emphasis added)

To achieve these objectives, WTO rules are directed at the "substantial reduction of tariffs and other barriers to trade and to the elimination of discriminatory treatment in international trade relations."[2] In addition, the WTO Agreement recognizes the "need for positive efforts designed to ensure that developing countries, and especially the least developed among them, secure a share in the growth in international trade commensurate with the needs of their economic development."[3]

2. The General Agreement on Tariffs and Trade ("GATT")

The GATT sets down the original framework for the liberalization of trade in goods, a framework that has been augmented by subsequent agreements such as the Agreement on the Application of Sanitary and Phytosanitary Measures ("SPS Agreement")[4] and the Agreement on Technical Barriers to Trade ("TBT Agreement").[5] Through its two most fundamental principles, the GATT seeks to reduce trade protectionism and liberalize trade by obliging its signatories to avoid discrimination between "like" foreign products ("most favored nation" obligation or "MFN", contained in Article I), and between "like" foreign and domestic products ("national treatment obligation", contained in Article III). These and other GATT obligations are qualified by an exception in Article XX, which allows WTO Members to derogate under certain conditions from their obligations for certain non-trade policy reasons. Measures covered by Article XX include those "necessary for the protection of human, animal or plant life or health" (Article XX(b)) or "relating to the conservation of exhaustible natural resources" (Article XX(g)). The chapeau to Article XX provides that these measures may not, however, be applied in a manner that causes "arbitrary or unjustifiable discrimination between countries where the same conditions prevail" or "disguised restrictions on international trade." The GATT formed the backbone of the multilateral trading system for over half a century, and these provisions have been interpreted and applied in a number of GATT/WTO disputes, some of which are discussed below.

3. The Agreement on Technical Barriers to Trade ("TBT Agreement")

The TBT Agreement is among the most important WTO agreements from an environmental perspective. It augments the GATT by providing more specific disciplines

[1] *Agreement Establishing the World Trade Organization, Preamble*, Reprinted in WORLD TRADE ORGANIZATION, THE LEGAL TEXTS—THE RESULTS OF THE URUGUAY ROUND OF MULTILATERAL TRADE NEGOTIATIONS 3-14 (1999), ("WTO AGREEMENT"). The WTO Appellate Body has referred to the Preamble of the WTO Agreement in several disputes. In the Report of the Appellate Body, *United States—Standards for Reformulated and Conventional Gasoline*, WT/DS2/AB/R (1997), at 28, the Appellate Body emphasized the importance of the objective of environmental protection, as contained in the preamble; in *United States—Import Prohibition of Certain Shrimp and Shrimp Products*, WT/DS58/AB/R, ¶ 159, the Appellate Body referred to the Preamble as support for its evolutionary interpretation of the term "exhaustible natural resources", stating that in view of the current state of ecological management, the term could not be understood as comprising only non-living natural resources. The Preamble to the WTO Agreement also reflects the extent to which the GATT/WTO system has developed to encompass environmental objectives in addition to its originally exclusively economic purpose. The Preamble to the GATT 1947 did not refer to the protection of the environment; rather it recommended the "full use of the resources of the world".

regarding two categories of national rules: *technical regulations*, which are mandatory rules establishing the characteristics that products or their related processes and production methods must have; and *standards*, which are non-mandatory rules, guidelines or characteristics for products or related processes and production methods.[6] These include a range of national measures designed to protect the environment, such as certain efficiency standards, eco-labeling schemes, laws for waste management, energy conservation, and natural resource preservation, as well as a variety of measures designed to implement multilateral environmental agreements ("MEA"s). The TBT Agreement requires Members to ensure that these standards and regulations are non-discriminatory, and are not more trade restrictive than necessary to achieve a legitimate objective, such as protection of human health or safety, animal or plant life or health, or the environment.[7] The TBT Agreement also seeks to improve market access by encouraging harmonization of the regulations used by different countries. Members must use international standards "as a basis for their technical regulations" unless they can demonstrate that the relevant international standard "would be an ineffective or inappropriate means for the fulfillment of a legitimate objective".[8]

4. The Agreement on the Application of Sanitary and Phytosanitary Measures ("SPS Agreement")

The SPS Agreement applies to a variety of national measures that are designed to protect human, animal and plant life or health within a WTO Member's territory. It covers measures that are designed to ensure that food is free of risks due to contaminants, additives, toxins or disease-causing organisms; to prevent the spread of animal, plant and other disease-causing organisms; and to control pests. The SPS Agreement requires Members to ensure that their SPS measures are "based on scientific principles . . . [and] sufficient scientific evidence" and are applied "only to the extent necessary to protect human, animal or plant life or health".[9] As a further requirement, SPS measures are not to be "applied in a manner which would constitute a disguised restriction on international trade"[10] and must display a certain degree of consistency in the stipulated levels of protection in comparable situations.[11] The principle that SPS measures must be consistent with ("based on") scientific evidence permeates the entire SPS Agreement; measures which "conform to international standards, guidelines or recommendations shall be . . . presumed to be consistent with the relevant provisions of this Agreement and of the GATT 1994",[12] while the scientific basis of SPS measures which do not conform to international standards must be established in every individual case. However, in cases where "relevant scientific evidence is insufficient", the Agreement allows Members to "provisionally adopt measures on the basis of available pertinent information, including that from the relevant international organizations as well as from measures applied by other Members".[13] The SPS Agreement is important from both environmental and health perspectives. While the Agreement covers measures designed to protect human, plant and animal *life and health*, these measures will often be broad enough to acquire general

environmental significance. The SPS Agreement, for example, covers measures to control invasive species and could also cover measures regulating certain aspects of trade in genetically modified organisms. At a general and systemic level, the SPS Agreement is an attempt to balance Members' rights to set and effectively enforce their own levels of protection, including in situations of scientific uncertainty, and the need to ensure that measures are not used as disguised protectionist restrictions by ensuring, among other things, that SPS measures are supported by scientific evidence.

5. The Agreement on Subsidies and Countervailing Measures ("SCM Agreement")

The SCM Agreement[14] imposes disciplines both on trade distorting subsidies, and on the countervailing measures that may be taken by individual countries in response to them. As subsidies can cause over-production and environmental degradation, their removal can bring both trade and environmental benefits. At the same time, some environmental subsidies are necessary to address market failures and to protect the environment. The SCM Agreement divides subsidies into three main categories along a spectrum according to their effect on trade. At one end of the spectrum are *prohibited ("red light") subsidies,* which are the most problematic from a trade perspective and so are subject to special dispute settlement procedures, and must be withdrawn immediately if identified. At the other end of the spectrum are *non-actionable ("green light") subsidies* (i.e., subsidies that are non-specific and certain defined specific subsidies), which were protected from challenge through 2000 and included certain subsidies to encourage environmental improvement. These provisions were not extended by WTO Members upon their expiry in 1999. Between these extremes are *actionable ("yellow light") subsidies* (i.e., those that are neither prohibited nor non-actionable), which are permissible, but may be challenged in WTO dispute settlement if they cause adverse effects to the interests of other WTO Members.

6. The Agreement on Agriculture

The Agreement on Agriculture[15] embodies a move towards increased market orientation in agricultural trade. It seeks to liberalize trade in agricultural products and to reform certain domestic agricultural policies. In relation to trade liberalization and market access, the Agreement requires Members to replace non-tariff border measures with tariffs ("tariffication"), and to reduce these tariffs over time. It also requires Members to reduce export subsidies. In relation to domestic agricultural policies, it provides for a reduction of so-called Aggregate Measures of Support ("AMS"), a matrix embodying a large part of domestic support granted to the agricultural sector. The Agreement on Agriculture contains several references to environmental protection: the preamble states that the commitments made under the Agreement should have regard for the environment, and Article 20 links the continued negotiations toward further agricultural reform to non-trade concerns, including the environment. These references, however, merely hint at the complex set of ecological implications arising from agricultural liberalization. Broadly speaking, there are concerns, on one hand, that liberalization of agricultural trade may have implications for food security and increase pressure on traditional farming practices, leading to a loss of agricultural biodiversity. In other cases, however, extensive subsidization of the agriculture sector contributes to agricultural overproduction and excessive use of soil, water and other natural resources. Consequently, a reduction of

[14] *Reprinted in* WTO AGREEMENT, *supra* note 1, at 231–274.
[15] *Reprinted in* WTO AGREEMENT, *supra* note 1, at 33–58.

certain agricultural subsidies may have positive environmental effects. The Agreement on Agriculture aims to reduce domestic agricultural subsidies substantially, but seeks to provide for environmentally beneficial support by including within the so-called "green box" subsidies for research, infrastructure and food security, making them exempt from the reductions commitments.[16]

7. The General Agreement on Trade in Services ("GATS")

The GATS[17] establishes binding rules to liberalize international trade in services. While not always immediately apparent, the ecological implications of services liberalization are potentially significant. On one hand, liberalization of environmental services such as sewage, refuse and sanitation services may reduce environmental pressures (e.g., due to efficiency or knowledge gains); on the other hand, liberalization of transportation, mining or energy services, in the absence of adequate regulation, may increase environmental pressures (e.g., it may increase the level or intensity of such activities).

Services are covered by a series of GATS disciplines and commitments designed to liberalize their trade. These services are, according to the GATS, traded through four "modes of delivery": cross-border delivery, consumption abroad, foreign direct investment, and movement of natural persons supplying the service. The GATS includes basic principles of national treatment, most favored nation treatment, market access, and transparency. Most favored nation treatment and transparency apply "horizontally" to all services sectors except those specifically exempted at the time the Agreement was negotiated. National treatment and market access, by contrast, apply only to the specific services sub-sectors as well as modes of supply that a Member agrees to liberalize. The GATS includes a general exception to these and other GATS obligations in Article XIV, which is similar to Article XX of the GATT (except that it includes no provision explicitly protecting exhaustible natural resources similar to GATT Article XX(g)). The GATS also includes provisions requiring an assessment of the application of the agreement, which some WTO Members have proposed should include an assessment of the agreement's economic, social, and environmental implications.[18]

8. The Agreement on Trade-Related Aspects of Intellectual Property ("TRIPS Agreement")

The TRIPS Agreement [19] establishes uniform minimum standards for the protection and enforcement of intellectual property rights by all WTO Members. According to its preamble, it is designed to "promote effective and adequate protection of intellectual property rights" and to "reduce distortions and impediments to international trade" that result from the enforcement of intellectual property rights. The TRIPS Agreement's stated objectives include "the promotion of technological innovation and . . . the transfer and dissemination

[16] The "green-box" subsidies are set out under Annex 2 of the Agreement on Agriculture. Article 13 of the Agreement stipulates that such subsidies cannot be challenged in the WTO dispute settlement system and that they are non-countervailable. It may be noted that the term "green-light" subsidy does not refer to the ecologically friendly nature of the subsidies; rather, it signals, according to the "traffic-light" approach adopted also by the SCM Agreement, that these subsidies can be used freely, as long as they qualify for the "green box". The common link between the various types of green box subsidies is that they are "decoupled" from production decisions. In addition to the "green box", so called "blue box" payments are exempt from reduction commitments. This category comprises direct payments to agricultural producers under production limiting programs. These payments are only partially decoupled.

[17] *Reprinted in* WTO AGREEMENT, *supra* note 1, at 284–319.

[19] *Reprinted in* WTO AGREEMENT, *supra* note 1, at 321–353.

of technology, to the mutual advantage of the producers and users of technological knowledge. . . "[20] The TRIPS Agreement covers a broad range of intellectual property rights, such as copyright, trademarks, geographical indications, trade secrets, and patents. A number of these forms of intellectual property rights have implications for environmental management. For instance, Article 27.3(b) requires WTO Members to offer patents on certain elements of life (e.g., micro-organisms), and to protect plant varieties through either patents or *sui-generis* systems. The TRIPS Agreement's provisions on technology transfer are also relevant to efforts to transfer and disseminate environmental technology, including in the context of MEAs.[21] The TRIPS Agreement allows Members to exclude inventions from patentability where such exclusions are necessary to protect human, animal or plant life or health. However, unlike WTO agreements governing trade in goods and services, the TRIPS Agreement includes no general exception for the protection of health and the environment.

9. The Understanding on Rules and Procedures Governing the Settlement of Disputes ("DSU")

The DSU[22] sets out detailed procedures for the settlement of disputes arising out of the implementation of WTO agreements. As it provides the framework within which WTO adjudication bodies balance trade and non-trade issues, including environmental matters, it is important in the context of trade and environment discussions. In addition to setting forth the rules governing the conduct of adversarial inter-governmental dispute resolution at the WTO, the DSU includes provisions for a minimum period of pre-litigation consultations and for good offices, mediation, and/or conciliation, which may be used to prevent tensions—including those relating to trade and the environment—from escalating into full trade disputes. The DSU establishes a two-tiered dispute settlement system to address issues that are not resolved through consultations. The first tier is comprised of panels, which have the responsibility of fact-finding, determining the applicability of and conformity with relevant WTO agreements, and making findings to assist WTO Members acting collectively as the Dispute Settlement Body ("DSB"). If a disputing party is not satisfied with the legal interpretation of the panel, it may appeal to the Appellate Body, which, however, is limited to making findings of law. An Appellate Body or panel report will be adopted by the DSB, the political organ of the dispute settlement system, unless all WTO Members agree by consensus to reject it.[23]

At the panel level, the DSU also empowers panels to seek information and technical advice from any individual or body, and to establish expert review groups to offer advisory opinions on specific issues (this latter possibility may be relevant in environmental-related WTO disputes as a means of obtaining information from scientists and relevant environmental organizations). As discussed in Section IV below, provisions of the DSU

[20] *TRIPS Agreement*, Article 7.

[22] *Reprinted in* WTO AGREEMENT, *supra* note 1, at 354–379.

[23] DSU, Art. 17.14. Once the Appellate Body has rendered its decision, it "shall be adopted by the DSB and unconditionally accepted by the parties to the dispute unless the DSB decides by consensus not to adopt the Appellate Body report within 30 days following its circulation to the Members". If a Member fails to bring into compliance a measure found to be inconsistent with a covered agreement, then the complaining Member may seek to negotiate mutually acceptable compensation, failing which the DSB may authorize the complaining Member to suspend concessions or other obligations to the Member that is contravening WTO rules. (DSU, Art. 22.2).

have recently been interpreted by the Appellate Body to allow both panels and the Appellate Body to accept non-requested information such as *amicus curiae* (or friend of the court) briefs from non-governmental sources.

In addition to the WTO agreements discussed above, a number of other WTO agreements may have important implications for environment and sustainable development, including the Agreement on Government Procurement,[24] and the Agreement on Trade-Related Investment Measures.[25]

B. Relevant WTO Disputes

Since its inception, the WTO's dispute settlement system has adjudicated a number of disputes that touch directly on issues of trade and environment. The principal cases are considered below.

1. United States—Gasoline

United States—Gasoline[26] involved a challenge by Venezuela and Brazil to a U.S. regulation designed to address air quality problems in urban areas by reducing emissions of toxic and smog-causing agents from motor vehicles. Among other things, the regulation required domestic and foreign petroleum refiners to establish baselines against which the "cleanliness" of fuels could be measured. These baselines treated domestic and foreign refiners differently. Domestic refiners were permitted to set their baselines against either a statutory level, or against actual 1990 gasoline quality. Foreign refiners, due to perceived difficulties in monitoring and enforcing rules abroad, were permitted only to use the more onerous statutory baselines. These regulations were challenged by Venezuela and Brazil, who argued that the rules discriminated against gasoline from their refineries, were inconsistent with GATT provisions, and were not justified in the light of Article XX. Their complaint was ultimately upheld by the Appellate Body, which agreed that while the U.S. measure satisfied Article XX(g), it failed to satisfy Article XX's introductory paragraph or "chapeau".[27]

The Appellate Body commenced by examining Article XX(g)'s requirement that measures must "relat[e] to the conservation of exhaustible natural resources". The U.S. measure satisfied this requirement as clean air was identified by the Appellate Body as a "natural resource" that could be depleted, there was a "substantial relationship" between the baseline establishment rules and the conservation of clean air in the United States, and, finally, the measure was not merely "incidentally or inadvertently" aimed at that end.[28] In examining this requirement, the Appellate Body established a number of important propositions. One is that WTO agreements are "not to be read in clinical isolation from public international law" recognizing the importance of coherence between WTO and

[24] Available at http://www.wto.org/english/docs_e/legal_e/gpr-94_e.pdf (last visited February 28, 2003).

[25] *Reprinted in* WTO AGREEMENT, *supra* note 1, at 143–146.

[26] *United States—Standards for Reformulated and Conventional Gasoline, supra* note 1.

[27] The U.S. regulations could also have been challenged on the grounds of the so-called product-process distinction, a subject-area of great interest for the trade-environment agenda. *See* section V(A) dealing with process and production methods ("PPMs"). For a more detailed discussion of the product-process doctrine in the context of *United States—Standards for Reformulated and Conventional Gasoline, see* Robert E. Hudec, *The Product-Process Doctrine in GATT/WTO Jurisprudence*, in NEW DIRECTIONS IN INTERNATIONAL ECONOMIC LAW 187, 207–211 (Bronckers and Quick eds. 2000).

[28] *United States—Standards for Reformulated and Conventional Gasoline, supra* note 1, at 19.

certain other sources of international law.[29] The Appellate Body also identified the need to read GATT provisions in their context, and to strike a careful balance between rights and obligations. Consequently, "the phrase 'relating to the conservation of exhaustible natural resources' may not be read so expansively as seriously to subvert the purpose and object of Article III:4. Nor may Article III:4 be given so broad a reach as effectively to emasculate Article XX(g) and the policies and interests it embodies."[30] The Appellate Body also established that Article XX paragraphs (a) to (j) were not intended to establish the same kind or degree of connection between the measure and the policy sought to be realized, and consequently that Article XX(g)'s "relating to" test sets a different threshold than does the "necessary" test elsewhere in Article XX.[31]

After determining that the U.S. measure was one "relating to" the conservation of exhaustible natural resources, the Appellate Body examined the U.S. measure in light of Article XX(g)'s requirement that measures are "made effective in conjunction with restrictions on domestic production or consumption", which it characterized as a "requirement of *even-handedness* in the imposition of restrictions, in the name of conservation, upon the production or consumption of exhaustible natural resources."[32] The U.S. measure satisfied this requirement as it affected both domestic and imported gasoline, and restrictions on the consumption or depletion of clean air by regulating the domestic production of "dirty" gasoline were established jointly with corresponding restrictions with respect to imported gasoline.[33]

Following its examination of Article XX(g), the Appellate Body examined the U.S. measure in light of Article XX's "chapeau", which requires measures not to be "applied in a manner which would constitute a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail, or a disguised restriction on international trade". The Appellate Body noted that the "chapeau by its express terms addresses, not so much the questioned measure or its specific contents as such, but rather the manner in which that measure is applied",[34] and that "measures falling within the particular exceptions must be applied reasonably, with due regard both to the legal duties of the party claiming the exception and the legal rights of the other parties concerned."[35] In applying the chapeau, the Appellate Body "located two omissions on the part of the United States: to explore adequately means, including in particular cooperation with the governments of Venezuela and Brazil, of mitigating the administrative problems relied on as justification by the United States for rejecting individual baselines for foreign refiners; and to count the costs for foreign refiners that would result from the imposition of statutory baselines."[36] Accordingly, the "resulting discrimination must have been foreseen, and was not merely inadvertent or unavoidable" and constituted "unjustifiable discrimination" and a "disguised restriction on international trade."[37] In its consideration of the U.S. measure, the Appellate Body emphasized the importance of international

cooperation in resolving environmental problems, without foreclosing the possibility that in some cases unilateral measures may find justification under Article XX.

2. United States–Shrimp and United States-Shrimp 21.5 (implementation decision)
The second WTO decision to consider the provisions of Article XX was *United States–Shrimp.*[38] This case involved a challenge by India, Pakistan, Malaysia and Thailand (the Complainants) to a ban by the United States on imports of shrimp harvested with equipment that kills sea turtles, an endangered marine species. The ban was imposed pursuant to a 1989 amendment to its Endangered Species Act (known as "Section 609"), which requires exporting countries, as a prerequisite for access to the U.S. market, to certify that their shrimp fisheries do not threaten endangered sea turtles. In practice the law required foreign fishing fleets to equip their trawling gear with "turtle excluder devices", a mechanism allowing turtles to escape from shrimp nets without any significant loss of shrimp.

The Complainants successfully challenged the U.S. measure arguing that it was inconsistent with GATT obligations. The Appellate Body commenced by examining and upholding the U.S. measure under the three main elements of Article XX(g). First, it agreed that endangered sea turtles are "exhaustible natural resources". According to the Appellate Body, sea turtles constitute "natural resources" which are threatened with extinction and therefore "exhaustible".[39] Notably, the Appellate Body determined that the term "natural resources" should be read in an "evolutionary" manner (i.e., it is a term that cannot remain unaffected by the subsequent development of law) and so should be interpreted in light of the term's use in other international conventions and declarations such as the Convention on Biological Diversity.[40] The Appellate Body did not rule on the jurisdictional application of Article XX, and thus upon whether the United States was permitted to use trade measures to protect natural resources located outside its territorial limits. It stated:

> We do not pass upon the question of whether there is an implied jurisdictional limitation in Article XX(g), and if so, the nature or extent of that limitation. We note only that in the specific circumstances of the case before us, there is a sufficient nexus between the migratory and endangered marine populations involved and the United States for purposes of Article XX(g).[41]

Second, the Appellate Body determined that the U.S. measure was one "relating to the conservation of" exhaustible natural resources. It stated that:

> In its general design and structure, therefore, Section 609 is not a simple, blanket prohibition of the importation of shrimp imposed without regard to the consequences (or lack thereof) of the mode of harvesting employed upon the incidental capture and mortality of sea turtles. Focusing on the design of the measure here at stake, it appears to us that Section 609 . . . is not disproportionately wide in its scope and reach in relation to the policy objective of protection and conservation of sea turtle species. The means are, in principle, reasonably related to the ends. The means and ends relationship between Section 609 and the legitimate policy of conserving an exhaustible, and, in fact, endangered species, is observably a close and real one, a relationship that is every bit as substantial as that which we found in *United States—Gasoline* between the EPA baseline establishment rules and the conservation of clean air in the United States.[42]

[38] *United States—Import Prohibition of Certain Shrimp and Shrimp Products, supra* note 1, ¶ 159.
[39] *Id.*, ¶ 132.
[40] *Id.,* ¶ 109.
[41] *Id.,* ¶ 133.
[42] *Id.,* ¶ 141.

Third, the Appellate Body agreed that the U.S. measures "were made effective in conjunction with restrictions on domestic production or consumption". The Appellate Body determined that this requirement of "even handedness" was satisfied as the U.S. requirements on imported shrimp were also imposed in respect of shrimp caught by U.S. shrimp trawl vessels.[43]

After determining that the U.S. measure satisfied each of Article XX(g)'s requirements, and that it was therefore eligible for provisional protection under Article XX(g), the Appellate Body went on to examine the measure under Article XX's chapeau. According to the Appellate Body, the chapeau:

> . . . embodies the recognition on the part of WTO Members of the need to maintain a balance of rights and obligations between the right of a Member to invoke one or another of the exceptions of Article XX, specified in paragraphs (a) to (j), on the one hand, and the substantive rights of the other Members under the GATT 1994, on the other hand.[44]

The U.S. measure failed, according to the Appellate Body, to meet the chapeau requirements. Among other things, the measure's "intended and actual coercive effect on the policies of other governments",[45] the U.S. failure to "have prior consistent recourse to diplomacy as an instrument of environmental protection policy",[46] and the absence of predictable procedures (including opportunities for hearing, written reasons for decisions, and opportunities for review and appeal)[47] were identified by the Appellate Body as reasons the U.S. measure constituted "arbitrary and unjustifiable discrimination" for the purposes of Article XX. Additionally, the United States had negotiated seriously with some, but not with other WTO Members that export shrimp to the United States—a discriminatory practice the Appellate body determined was "unjustifiable", as it resulted in a unilateral rather than a negotiated solution, in shorter time for "phase in" of the requirements, and in reduced efforts by the United States to transfer TED technology.[48]

In addition to the above findings, the Appellate Body made a number of comments that are relevant when considering the relationship between trade, the environment and sustainable development. First, it established that the WTO Agreements' preambular reference to *sustainable development* "must add colour, texture and shading" to the interpretation of the WTO agreements.[49] This statement, in conjunction with its statement in *United States-Gasoline* that the agreements cannot be read in "clinical isolation", may provide the basis for a coherent interpretation and application of WTO rules and other international rules that seek to promote sustainable development. Second, the Appellate Body considered whether panels could receive non-requested *amicus curiae* ("friend of the court") briefs from non-WTO Members. Finally, the Appellate Body's decision seems to retain room for the use of measures based on the process and production methods used in an exporting country (in this case turtle excluder devices); a conclusion bolstered by the Appellate Body's subsequent implementation decision in *United States-Shrimp 21.5*. The extent to which such measures are permissible remains to be developed in future cases. A number of these issues are considered further in Sections IV and V.

[48] *Id.,* ¶¶ 172–176.
[49] *Id.,* ¶ 153.

In *United States-Shrimp 21.5*, Malaysia challenged the implementation of the Appellate Body decision in *United States-Shrimp* by the United States. This case was brought under Article 21.5 of the DSU, on the basis that the United States had failed to bring its measures into conformity with WTO rules as recommended by the Appellate Body. Malaysia argued that the United States had failed to satisfy the requirements of the Article XX chapeau, including its obligation to pursue international cooperation for the protection of sea turtles. The Appellate Body considered the nature and extent of the U.S. duty to pursue international cooperation, and found that, in view of the "serious, good faith efforts made by the United States to negotiate an international agreement, Section 609 is now applied in a manner that no longer constitutes a means of unjustifiable or arbitrary discrimination".[50] Consequently, the U.S. measure "as applied so far" is justified under Article XX "as long as the conditions stated in the findings of this Report, in particular the ongoing serious good faith efforts to reach a multilateral agreement, remain satisfied."[51]

3. The SPS "Trilogy"—European Communities-Hormones, Australia-Salmon, and Japan-Varietals

Since the SPS Agreement establishes disciplines for national measures taken to protect human, animal, and plant life and health, its interpretation and application may have implications for certain measures designed to protect the environment. At the time of writing, the Appellate Body has considered three cases that directly apply the SPS Agreement: *European Communities-Hormones*,[52] *Australia-Salmon*,[53] and *Japan-Varietals*.[54]

(a) European Communities—Hormones ("EC-Hormones"). The first case to consider the SPS Agreement, *EC—Hormones,* involved challenges by the United States and Canada to the European Union's ban on the import of meat from cattle to which bovine growth hormones ("BGH") had been administered for the purpose of promoting the animals' growth. The import ban was an integral part of an EC directive that also prohibited the use of hormones for domestic growth promotion and the domestic sale of any meat products from animals so treated.

The Appellate Body found that the EC's measure was inconsistent with WTO law as it was not sufficiently "based on" a risk assessment, as required by Article 5.1 of the SPS Agreement. In the course of its ruling, the Appellate Body made several important interpretations of key provisions of the SPS Agreement and began to define the equilibrium of rights and obligations established in the SPS Agreement, the role of international standards, and the degree of flexibility that WTO Members retain when defining their national SPS measures. First, the Appellate Body confirmed that the burden of proof under both Articles 3.1 and 3.3 is on the Member challenging another Member's SPS measure.[55] Thus, even if a Member establishes a level of (health or environmental) protection that is higher than that contained in an international standard, another Member

[55] *European Communities—Measures Concerning Meat and Meat Products (Hormones), supra* note 52, ¶¶ 102, 104, and 108.

challenging this measure must still make a *prima facie* demonstration of inconsistency with the SPS Agreement.[56]

Second, the Appellate Body held that Members are not obliged by Article 3.1 to conform their domestic regulations to standards enacted by international standard setting bodies.[57] The view of the Appellate Body is that, although the SPS Agreement seeks to *promote* international harmonization, it does not create an *obligation* for Members to abide by such international standards.

Third, as a consequence and corollary of the previous finding, the Appellate Body held that Members have a right under Article 3.3 to depart from levels of protection established by international standards and to establish their own levels of protection, in accordance with their societal preferences and usage.[58] The SPS Agreement recognizes the prerogative of Members to establish levels of protection higher than those reflected in relevant international standards.[59]

Fourth, the Appellate Body stressed the obligation of Members to base their SPS measures on a risk assessment, and interpreted Articles 5.1 and 5.2 as an obligation of Members to demonstrate a "rational relationship" between (scientific) risk assessment and the SPS measures.[60] The Appellate Body described this requirement as a "counterbalancing element" to Member's freedom to establish their own levels of protection under Article 3.3.[61] Nevertheless, the Appellate Body stated that where scientific opinion is not unanimous and where diverging risk assessments exist, Members have significant discretion as to which risk assessment should be the basis of their regulation, and may rely on "a divergent opinion coming from qualified and respected sources".[62]

Fifth, the Appellate Body also provided useful clarification of Articles 5.5 and 5.6. According to these provisions, Members may not establish arbitrarily different levels of protection in situations involving the same or similar types of risk so as to create disguised restrictions to international trade. While setting an appropriate level of protection under Article 3.3 remains a fundamental sovereign prerogative, the SPS Agreement requires Members to maintain a degree of consistency in the choice of levels of protection across comparable situations. Nevertheless, arbitrarily different levels of protection across comparable situations do not *automatically* imply a disguised restriction on trade.[63]

Finally, although the EC had not explicitly relied on Article 5.7, the Appellate Body discussed the relationship of the precautionary principle and the SPS Agreement in the context of Article 5.7. It recognized that Article 5.7 was a reflection of the precautionary principle, but held that the principle could not override other explicit provisions of the SPS Agreement, in particular Article 5.1's requirements that a Member's SPS measures

[56] This seemingly technical finding is of significant importance. Although standards for a *prima facie* case may vary from one international tribunal to another, in international law a not insignificant number of cases are essentially decided by the allocation of the burden of proof.

[57] *European Communities—Measures Concerning Meat and Meat Products* (*Hormones*), *supra* note 52, ¶ 166.

[58] *Id.,* ¶ 177.

[59] This is in line with an economic approach that regulatory diversity at the national level, in light of diverse preferences, can be an important tool of overall welfare maximization.

[60] *Id.,* ¶ 193.

[61] *Id.,* ¶ 177.

[62] *Id.,* ¶ 194. The Appellate Body added that this is true "... especially where the risk involved is life-threatening in character and is perceived to constitute a clear and imminent threat to public health and safety." *Id.*

[63] *European Communities—Measures Concerning Meat and Meat Products* (*Hormones*), *supra* note 52, ¶¶ 239–246.

be based on a risk assessment.[64] Consequently, WTO Members must comply with the risk assessment requirement contained in Article 5.1 of the SPS Agreement, an interpretation that was largely the basis for the ultimate finding that the EC's measure was inconsistent with the SPS Agreement.

(b) Australia—Salmon. In *Australia—Salmon*,[65] the second case under the SPS Agreement, Canada challenged Australia's prohibition on the importation of uncooked salmon. The Australian measure was based on studies of several fish disease agents that were found in uncooked salmon of Canadian (and U.S.) origin, and that were considered a risk to Australian salmon populations.

The central issue of this case was whether the Australian measure was "based on a risk assessment" as required by Article 5.1 of the SPS Agreement. The Appellate Body first determined that risk assessment in relation to animal life or health consists of three elements: 1) identification of the diseases a Member seeks to prevent within its territory as well as the potential biological and economic consequences of their entry of the pests or diseases; 2) evaluation of the likelihood of entry and of the consequences of entry in the absence of the SPS measure; and 3) evaluation of the likelihood of entry if the SPS measure were applied.[66] The Appellate Body then held that Australia's import ban failed to meet the second and third of these elements.[67] In essence, the Appellate Body interpreted "risk assessment" as a quantitative (and to some extent also qualitative) statement of probability, resulting from the application of scientific methodology, and added that the "risk" evaluated in a risk assessment must be an ascertainable risk and must be sufficiently specific to the subject matter at hand. The Appellate Body reiterated its finding in *EC—Hormones* that theoretical uncertainty is "not the kind of risk which, under Article 5.1, is to be assessed."[68] The systemic implication of this finding is that Members must follow strictly scientific criteria and methodology in the context of a risk assessment.[69] The Appellate Body stated that Members have the right to choose the level of protection they consider appropriate and stated that Members may legitimately follow a policy of zero risk. Nevertheless, balancing this discretion is the requirement that Member's health measures must be based on sufficient scientific evidence. In *Australia–Salmon*, the Appellate Body tightened the methodological requirements for risk assessments necessary to satisfy the SPS Agreement.

Next, the Appellate Body found that Australia violated Article 5.5 of the SPS Agreement, because it applied a different, higher level of protection to imports of salmon than to imports of other fish species; this difference was arbitrary and unjustifiable; and it resulted in a disguised restriction on international trade. The Appellate Body's decision confirms the approach adopted under *EC—Hormones* that an arbitrarily different level of protection applicable in similar or comparable situations does not of itself violate Article 5.5. While the Appellate Body in *EC—Hormones* had not found a violation of Article 5.5, in *Australia-Salmon* it held that Australia's measure resulted in a disguised restriction on international trade based on: (1) the extent of the differential treatment,

[64] *Id.,* ¶¶ 124–125.
[65] *Australia—Measures Affecting Importation of Salmon, supra* note 53.
[66] *Id.,* ¶ 121.
[67] *Id.,* ¶¶ 126–35.
[68] *Id.,* ¶ 125.
[69] Although risk assessment will have to fulfill different criteria based on whether the national measure in question is designed to protect plant or animal life or health on the one hand and human life or health on the other, it is clear that a risk must always be scientifically ascertainable and quantifiable.

(2) the fact that the measure was not based on a risk assessment, and (3) the significant difference between the draft and the final version of the Report which served as the basis for the Australian measure. The Appellate Body reasoned that the third factor might have been "inspired by domestic pressures to protect the Australian salmon industry".[70]

The findings in the *Australia—Salmon* case suggest that the Appellate Body is likely to follow a case-by-case balancing approach when applying Article 5.5 of the SPS Agreement. If applied flexibly, this approach would appear to leave room (albeit with respect to Article 5.5 only) for *bona fide* health protection measures. This approach also provides room for the upward revision of protection, reflecting the reality that national policymakers often cannot address uniformly all similar situations at one time, and so different levels of protection in comparable situations may provide evidence of piecemeal, upward revision of protection, rather than evidence of protectionist behavior. To avoid creating a chilling effect on environmental and health standards, Article 5.5 should arguably continue to be read flexibly to retain the right of Members to harmonize their health protection measures upwards over a period of time.

(c) Japan—Varietals. In the *Japan—Varietals*[71] case, the United States challenged a Japanese prohibition on the import of apples, cherries, and six other orchard crops, which was established on the ground that the imports could carry pests (codling moths) that could damage Japanese fruit crops. The Japanese law allowed the importation of fumigated products if exporters demonstrated that fumigation is effective to eliminate the risk of carrying the pest; however, this demonstration had to be effectuated on a variety-by-variety basis for each crop. The United States argued that it was sufficient to demonstrate the effectiveness of the fumigation for one variety per crop.

The Appellate Body first determined that the Japanese measure violated Article 2.2's requirement that SPS measures not be maintained without "sufficient scientific evidence".[72] The Appellate Body interpreted this requirement to mean that there must be a rational and objective relationship between the SPS measure and scientific evidence, and found no such relationship between scientific evidence and the Japanese measure. As the scientific underpinnings of the Japanese measure were indeed limited, it is unclear what the Appellate Body would consider to be a "rational and objective relationship" in more complex and nuanced cases. Guidance might be obtained from the Appellate Body's Article 5.1 finding in *EC—Hormones* that responsible governments may reasonably base decisions on minority scientific opinion.

Next, the Appellate Body found that Japan failed to satisfy the requirements of Article 5.7 which, as already noted, sets forth the precautionary approach under the SPS Agreement.[73] The Appellate Body identified four cumulative requirements under Article 5.7.[74] First, provisional measures must be imposed in respect of a situation where "relevant scientific information is insufficient." Second, provisional measures must be adopted "on the basis of available pertinent information." Third, provisional measures may not be maintained unless Members "seek to obtain the additional information necessary for a more objective assessment of risk". Finally, the Member invoking Article 5.7 must demonstrate that it has reviewed the measure within a reasonable period of time.

[70] *Australia—Measures Affecting Importation of Salmon, supra* note 53, ¶ 170.
[71] *Japan—Measures Affecting Agricultural Products, supra* note 54.
[72] *Id.,* ¶ 85.
[73] *Id.,* ¶ 94.
[74] *Id.,* ¶ 89.

The Appellate Body's analysis focused only on the third and fourth requirements and concluded that Japan had failed to fulfill both of these requirements.

The Appellate Body's report in *Japan-Varietals* is the first to examine in detail the elements of Article 5.7, and thus provides important guidance from the Appellate Body on the types of provisional or "precautionary" measures that are permitted under the SPS Agreement. The Appellate Body focused on the requirements of Article 5.7 relating to the concept of a "reasonable period of time" (which in this case was approximately four years, but will likely vary on a case-by-case basis). It was not asked, however, to provide a detailed analysis of the first two elements of Article 5.7, which determine the circumstances under which precautionary action is permissible under the SPS Agreement. The questions associated with these two requirements—namely, the situation in which scientific information can be regarded as "insufficient", and the precise nature of the "available pertinent information" upon which precautionary measure are to be adopted—have yet to be examined by the Appellate Body.

4. EC—Asbestos

The *EC—Asbestos* case[75] involved a challenge by Canada to a French ban on the manufacture, sale, and import of asbestos fibers and any product containing asbestos fibers. The statutorily stated purpose of this ban was the protection of the health of workers and consumers, in the light of the carcinogenicity of asbestos fibers. The decree provided for certain limited exceptions to the ban on chrysotile asbestos fibers (also called white asbestos). Canada claimed that the French measure was discriminatory, in that it accorded less favorable treatment to imported (Canadian) asbestos and asbestos-containing products than to domestic (French) "like" products, namely substitute fibers and products containing these fibers, thereby violating GATT Article III:4's non-discrimination requirement.

The Appellate Body first examined whether the French decree at issue fell within the purview of the TBT Agreement. For this purpose, the Appellate Body examined the definition of "technical regulation" under Annex 1.1 of the TBT Agreement, and noted that a technical regulation must lay down, on a mandatory basis, "product characteristics" of an identifiable product or a group of products. The Appellate Body noted that the French decree prescribed certain characteristics of all products, in the sense that it required that "all products" not contain asbestos fibers.[76] Consequently, the French measure fell within the definition of a technical regulation. The Appellate Body therefore reversed the panel's finding that the TBT Agreement did not cover the French measure. Nevertheless, given the specifics of the case, the Appellate Body felt that it did not have an "adequate basis" to complete the analysis and to examine Canada's substantive claims under the TBT Agreement.[77]

Subsequently, the Appellate Body examined whether asbestos fibers and certain less hazardous substitute fibers are "like products" for the purposes of Article III:4 of the GATT 1994 (a question which the panel had answered in the affirmative). The Appellate Body found that "like products" are products in a competitive relationship, since imported products which are in a competitive relationship with domestic products can conceivably

[75] Appellate Body Report, *European Communities—Measures Affecting Asbestos and Asbestos-Containing Products*, WT/DS135/AB/R (2001).

[76] *Id.,* ¶ 72.

[77] *Id.,* ¶ 84.

be subject to "less favorable" treatment.[78] The Appellate Body referred extensively to GATT/WTO precedents and noted that in the past, four broad criteria had been used to determine "likeness": (1) physical properties of the products, (2) their end-uses, (3) consumers' tastes and habits, their perceptions and behavior, and (4) tariff classification. However, the Appellate Body stated that these four categories are not the only criteria that could be relevant. Contrary to the panel, the Appellate Body found that the health "risk" associated with a product (in the specific case, the carcinogenicity of asbestos fibers) is a relevant physical property to be taken into consideration under the analysis of "likeness".[79] The Appellate Body also critiqued other aspects of the panel's findings and repeatedly referred to the focus of Article III:4 as one of "competitive relationships in the marketplace". After considering the evidence on record, the Appellate Body concluded that Canada had not demonstrated that the two sets of products were "like" and therefore had not proven that the measure was inconsistent with Article III:4.[80]

The Appellate Body also examined whether the French ban was justified by Article XX(b) as a measure "necessary" for the protection of human life or health. Canada argued that the panel had erred in finding that "controlled use" was not a reasonably available alternative to the outright ban imposed by the French decree. The Appellate Body referred to its report in *Korea—Beef*[81] and the GATT *Thailand—Cigarettes*[82] case and recalled the "necessary test" under Article XX(b) involves an examination of whether there is an alternative measure consistent with the GATT (or less inconsistent with it) that a Member could be reasonably expected to employ to achieve its objectives. In this context, the Appellate Body stated that the more important the policy question at issue, the easier it will be for a Member to demonstrate that a measure is indeed necessary to achieve these objectives. The Appellate Body then stated that the preservation of human life and health is a value that is important "to the highest degree".[83] With these statements in mind, the Appellate Body determined that "controlled use" had not been demonstrated to be a reasonably available, less trade-restrictive alternative measure able to achieve the same result as the measure at issue.[84]

The significance of the *Asbestos* case in the fields of environmental and health protection lies in the Appellate Body's confirmation that toxicity and other risks associated with a product are relevant when considering its likeness to other products.[85] Another important result is the consideration of reasonably available alternatives under Article XX(b). The Appellate Body noted that the more important the policy objective pursued,

[78] *Id.,* ¶ 99.

[79] *Id.,* ¶¶ 114–116.

[80] It is important to note that the Appellate Body did *not* state that the two sets of products at issue were "not like". In a "concurring statement", one Member of the Appellate Body stated that the Appellate Body rather should have found expressly that the sets of products at issue were not like and expressed his reservation towards the "'fundamentally' economic interpretation" of the term "like products" under Article III:4.

[81] *Appellate Body Report, Korea—Measures Affecting Imports of Fresh, Chilled and Frozen Beef*, WT/DS161/AB/R, WT/DS169/AB/R (2000).

[82] GATT Report, *Thailand—Restrictions on Importation of and Internal Taxes on Cigarettes*, DS10/R, BISD 37th Supp. 200 (1990).

[83] *European Communities—Measures Affecting Asbestos and Asbestos-Containing Products, supra* note 75, ¶ 172.

[84] *Id.,* ¶ 174.

[85] Whether health risk is considered for the purpose of "likeness" under Article III:4 or under Article XX(b) is of potentially great significance to the Member whose measure is under challenge. Whereas under the affirmative defense of Article XX(b), the burden of proof is on the defending Member, under Article III:4 the burden of proof for establishing "likeness" and less favorable treatment rests upon the complaining Member.

the easier it will be to prove that a measure is "necessary" to meet those objectives and that alternatives are not reasonably available. Specifically, the Appellate Body stated that the preservation of human life or health by eliminating a known and grave risk is a value that is "vital and important" to the "highest degree".[86] Finally, the Appellate Body may have broadened the "like products" test under Article III:4 by moving an additional step towards determining "likeness" from the perspective of the market place and the consumer.[87] The implications of the Appellate Body's views on "like products" for certain environmental measures are discussed in Section V(A).

C. Committee on Trade and Environment

The traditional trade and environment debate is largely reflected in the agenda of the WTO's Committee on Trade and Environment ("CTE"). The CTE was established under the Marrakesh Ministerial Declaration with a broad mandate to examine the relationship between trade and environment in all areas of the multilateral trading system, including goods, services and intellectual property. Pursuant to the Decision on Trade and Environment, the CTE has the twofold responsibility to:

> (a) to identify the relationship between trade measures and environmental measures, in order to promote sustainable development;
> (b) to make appropriate recommendations on whether any modifications of the provisions of the multilateral trading system are required, compatible with the open, equitable and non-discriminatory nature of the system, as regards, in particular:
>
> — the need for *rules to enhance positive interaction between trade and environmental measures*, for the promotion of sustainable development, with special consideration to the needs of developing countries, in particular those of the least developed among them; and
> — the *avoidance of protectionist trade measures*, and the adherence to effective multilateral disciplines to ensure responsiveness of the multilateral trading system to environmental objectives set forth in Agenda 21 and the Rio Declaration, in particular Principle 12; and
> — *surveillance of trade measures used for environmental purposes*, of trade-related aspects of environmental measures which have significant trade effects, and of effective implementation of the multilateral disciplines governing those measures. . . .[88]

As set forth in the Decision on Trade and Environment, the CTE's agenda comprises the following ten items:

[86] *European Communities—Measures Concerning Meat and Meat Products (Hormones), supra* note 52, ¶¶ 169–172.

[87] Robert Howse and Elisabeth Tuerk, *The WTO Impact on Internal Regulations: A Case-study of the Canada-EC Asbestos Dispute,* in THE EU AND THE WTO: CONSTITUTIONAL AND LEGAL ASPECTS (BÚRCA AND SCOTT eds., 2001). This is significant for the so-called PPM issue (*see infra* Section V(A)). Conceptually, determining "likeness" through substitutability in the market place—as opposed to the physical characteristics of a product—would make it easier for national regulation based on non-product related PPMs to survive a challenge under Article III:4. However, it has to be noted that the Appellate Body did not consider PPM issues in the *EC—Asbestos* case.

[88] *Decision on Trade and Environment, reprinted in* WTO AGREEMENT, *supra* note 1 (emphasis added).

- [1] The relationship between trade provisions of the multilateral trading system and trade measures for environmental purposes, including those pursuant to multilateral environmental agreements;
- [2] the relationship between environmental policies that are relevant to trade and environmental measures and that have significant trade effects, and the provisions of the multilateral trading system;
- [3] the relationship between the provisions of the multilateral trading system and:
  (a) charges and taxes for environmental purposes;
  (b) requirements for environmental purposes relating to products, including standards and technical regulations, packaging, labeling and recycling;
- [4] the provisions of the multilateral trading system with respect to the transparency of trade measures used for environmental purposes and requirements that have significant trade effects;
- [5] the relationship between the dispute settlement mechanisms in the multilateral trading system and those found in multilateral environmental agreements;
- [6] the effect of environmental measures on market access, especially in relation to developing countries, in particular to the least developed among them, and the environmental benefits of removing trade restrictions and distortions;
- [7] the issue of the exports of domestically prohibited goods;
- [8] that the Committee on Trade and Environment will consider the work program envisaged in the Decision on Trade in Services and the Environment and the relevant provisions of the Agreement on Trade-Related Aspects of Intellectual Property Rights as an integral part of its work, within the above terms of reference;
- [9] that, pending the first meeting of the General Council of the WTO, the work of the Committee on Trade and Environment should be carried out by a Sub-Committee of the Preparatory Committee of the World Trade Organization (PCWTO), open to all members of the PCWTO;
- [10] to invite the Sub-Committee of the Preparatory Committee, and the Committee on Trade and Environment when it is established, to provide input to the relevant bodies in respect of appropriate arrangements for relations with intergovernmental and non-governmental organizations referred to in Article V of the WTO.

The CTE's work on these agenda items is to be given careful consideration when exploring the field of trade and environment. At the same time, this work does not delimit the scope of future discussions of trade and environment, and the field will continue to develop and evolve as new issues arise and old ones are resolved. While the documents issued by the CTE are not binding, they nevertheless constitute an important contribution to the on-going debate on the relationship between trade and environment.

The CTE and the parallel committee for development, the Committee on Trade and Development, were given a mandate by WTO Members at the Fourth WTO Ministerial Meeting (held in Qatar from November 9–14, 2001) to act as fora to identify and debate environmental and developmental aspects of upcoming WTO negotiations, in order to help achieve the objective of having sustainable development appropriately reflected in those negotiations.

D. The WTO's Fourth Ministerial Mandate on Trade and Environment

In addition to these specific mandates for the Committee on Trade and Environment and the Committee on Trade and Development, WTO Members agreed at the Fourth Ministerial (Doha) to a range of elements and mandates relating to trade, environment and sustainable development. The Ministerial Declaration includes:

- "Negotiations on the relationship between existing WTO rules and specific trade obligations set out in multilateral environmental agreements (MEAs);"[89]
- Negotiations on "procedures for regular information exchange between MEA Secretariats and the relevant WTO committees, and the criteria for granting observer status;"[90]
- Negotiations on "the reduction or, as appropriate, elimination of tariff and non-tariff barriers to environmental goods and services;"[91]
- Negotiations on subsidies which "aim to clarify and improve WTO disciplines on fisheries subsidies, taking into account the importance of this sector to developing countries;"[92]
- Establishment of "a Working Group under the auspices of the General Council to examine the relationship between trade and transfer of technology, and of any possible recommendations on steps that may be taken within the mandate of the WTO to increase flows of technology to developing countries;"[93]
- Instruction to the TRIPS Council to examine "the relationship between the TRIPS Agreement and the Convention on Biological Diversity, the protection of traditional knowledge, and other relevant new developments. . . ";[94]
- Encouragement "that expertise and experience be shared with Members wishing to perform environmental reviews and assessments at the national level;"[95] and
- Recognition of "the importance of technical assistance and capacity building in the field of trade and environment to developing countries, in particular to the least developed among them."[96]

In addition to these elements, the CTE was instructed in paragraph 32 of the Ministerial Declaration to give particular attention in pursuing its work to "the effect of environmental measures on market access, especially in relation to developing countries", "the relevant provisions of the Agreement on Trade-Related Aspects of Intellectual Property Rights" and "labelling requirements for environmental purposes". Finally, the WTO's mandate on trade and investment may have significant implications for environment and sustainable development.[97]

These references in the Ministerial Declaration reflect the belief by a number of WTO Members that more can be done within the context of the WTO to promote a mutually supportive relationship between trade and the environment. While celebrated by some NGOs and governments, the addition of new negotiating mandates on trade and environment mandates has not been universally welcomed. Some developing countries,

for example, have expressed concern that new negotiations will increase the burden on their already limited resources. Whatever view is adopted of these aspects of the Ministerial Declaration, the implications of these elements are significant and are thus examined in further detail as appropriate in Sections V and VI.

III. Placing the Trade and Environment Debate in Context

The relationship between international trade and the environment raises a complex and interrelated web of issues that cut across the various WTO agreements, as well as the work of the committees and councils responsible for administering them. Before examining the principal trade and environment issues, this section offers some comments to place the trade and environment debate in the broader context of sustainable development, a concept that connotes identifying development paths (at all levels, from the local to the global) that balance and optimize the economic, social and environmental aspects of human behavior, and that meet the needs of present generations without compromising the ability of future generations to meet their own needs.

First, issues of trade and environment are part of and should be considered together with the broader economic, social and environmental challenges facing humanity. The last few decades have seen a significant expansion in international economic activity. This expansion has been driven, at least in part, by the removal of barriers to the trans-border movement of goods, services and capital, and has contributed to a significant increase in the wealth and well-being of many, but not all, segments of human society. The same period, however, has seen rapidly growing pressure on the life-support system that sustains human activity—the environment. Human behavior is heralding a wave of mass extinctions; by some estimates the world is losing 27,000 species a year (i.e., 27 a day, three every hour) at a rate more than a thousand times faster than the natural rate as determined through the fossil record.[98] Eighty percent of the forests that originally covered the Earth have been cleared, fragmented or otherwise degraded, and of the remaining twenty percent, about two fifths are threatened by logging, mining and other large-scale development projects.[99] Approximately sixty percent of the Earth's fisheries are depleted, and many local communities have suffered catastrophic reductions in annual harvests.[100] Human behavior is changing the global climate with potentially profound implications for weather systems, ecosystems and human well-being.[101] In the last seventy years, the world's population has tripled, and is projected to peak at around 9 billion people in 2050.[102] At the dawn of a new century, humanity is faced with an unparalleled challenge: How to continue to raise the material well-being of a growing population while respecting the constraints of the Earth's biosphere? The lessons of the previous century include the

[98] Edward O. Wilson, THE DIVERSITY OF LIFE 280 (1992). In 1996, 25 percent of mammal species and 11 percent of bird species were assessed as at significant risk of total extinction, and countless other species now exist in reduced numbers and fragmented populations. *See also*, UNEP, GLOBAL ENVIRONMENT OUTLOOK 39 (2000).

[99] UNEP, GLOBAL ENVIRONMENT OUTLOOK 38 (2000).

[100] *Id.,* at 45.

[101] The Intergovernmental Panel on Climate Change ("IPCC") has concluded that "recent regional climate changes, particularly temperature increases, have already affected many physical and biological systems", for example, by causing shrinkage of glaciers, thawing of permafrost, delayed freezing of ice on rivers and lakes, pole-ward shifts in plants and animal ranges, a decline of some plant and animal populations, and earlier flowering of trees, emergence of insects and egg-laying birds. The Intergovernmental Panel on Climate Change, *Summary for Policymakers of the Third Assessment Report of Working Group 1 of the IPCC* (Climate Change 2001: The Scientific Basis 1–8 (2001)).

[102] *See* UN Population Fund, *State of the World Population* (2001).

realization that the various spheres of our activity—economic, social, environmental and others—are intimately related. Achieving a minimum level of well-being for all humans in a 2050 world, and avoiding serious environmental and social dislocation, will require a highly sophisticated and integrated approach that is implemented through a coherent and balanced architecture of laws, policies and other institutional arrangements across different jurisdictions and levels of governance. The laws, policies and institutions governing international trade, and environmental management, form an essential part of this coherent architecture.

Second, the trade and environment debate should be considered in light of its historical context. Historically, the contours of the trade and environment debate were influenced by a number of factors that defined the positions of its parties, and the lines of their disagreement. Among these factors were two disputes between Mexico and the United States, known as the *Tuna-Dolphin* disputes,[103] which polarized discussions and helped to establish the commonly held perception that the trade and environment debate is a North-South battle, pitching Southern economic development against the protection of Northern environmental concerns. In reality, however, the debate is more complex. In some cases developed rather than developing countries have collectively promoted a strong environmental agenda in trade. Developing countries have, for example, championed the cause of the Convention on Biological Diversity at the TRIPS Council. In other cases, mixed North-South coalitions promote or oppose environmental issues. In the debate about trade in genetically modified organisms and biosafety, for instance, the coalitions of developed and developing countries that promote (or oppose) strong biosafety rules, are similar to those that oppose (or promote) strong proposals to liberalize agricultural trade at the WTO. Agricultural importing countries want the security of international rules on biosafety, whereas agricultural exporting countries want a laissez-faire system for their agricultural exports that does not have to contend with biosafety rules. The relative positions of developed and developing countries should thus be examined carefully, on a case-by-case basis, for each trade and environment issue, including those addressed below.

Third, as the number of economic sectors covered by the multilateral trading system has expanded during the last decade, so too has the number and diversity of non-economic, social, environmental, and other issues that must be considered by the trading community. Trade liberalization is no longer confined to the relatively technical task of removing tariffs and ensuring non-discrimination between goods, as it was in the early days of the GATT. Rather, the trading system has expanded to reach deep into the territory of national governance to promote economic liberalization, with the potential to affect many national policy areas. Indeed, the term "trade" seems no longer adequate to describe the breadth of issues covered by the multilateral trading system, which includes not only rules regarding trade in goods, but also address the areas of intellectual property, services, investment, government procurement, and so on. Similarly, the term "environment" does not seem broad enough to cover the diversity of non-economic issues often considered in the context of the WTO under the trade and environment banner. Some of these issues—such as scientific uncertainty and precaution—span the environmental field and other fields, leaving the "trade and environment" rubric as an insufficiently broad framework within which to examine the issues holistically. And other issues arise that are closely linked to, but are not primarily, environmental issues, including food safety, consumer's right to know, human rights, and the protection of traditional knowledge. As yet many of these

[103] Report of the GATT Panel, *United States—Restrictions on Imports of Tuna*, Complaint by Mexico, BISD, 39th Supp. 155 (1993) (unadopted).

issues—which would be better subsumed under a broader "sustainable development" banner—do not have a formal institutional home within the WTO.

Fourth, the role of key players in the debate is changing. One source of change is the increasing congruence in the interests of developing countries and many civil society organizations, illustrated by common calls by developing countries and NGO coalitions to reform the TRIPS Agreement to promote access to drugs and protect biodiversity, to comprehensively assess the impact of the Services agreement, and to delay consideration by the WTO of additional issues such as investment, competition and government procurement. The importance of this shift in alliances, evident particularly since the WTO's Third Ministerial Meeting in Seattle, remains to be seen, but could prove significant in future discussions about trade, environment and sustainable development.

Finally, the linkages between trade and the environment are complex, and should be examined carefully on a case-by-case basis. These relationships can also be explored in a variety of ways and from a variety of perspectives. In the following sections of this chapter, we explore some of the principal issues in the context of three main categories: 1) material; 2) legal and policy-related; and 3) organizational.[104] We emphasize that this is not the only or even necessarily the best approach to these issues. Nevertheless, we consider it one useful framework by which the issues can be examined. As these categories provide the organizing framework for discussions in the remainder of this chapter, we explain them briefly here before elaborating on them in Sections IV–VI.

At the level of the material or physical world, international trade can have both positive and negative economic, social and environmental effects. These effects arise because the economic and social systems, and the ecosystems upon which they rely, are linked in the material world through a complex web of inter-relationships. As a result of these *material linkages*, trade liberalization may change the pattern or nature of activity in one sphere, with resulting implications for the pattern or nature of activity in another sphere.

Responding to these material linkages and regulating human activity accordingly to maximize long-term welfare is one of the key roles of law and policy. Just as linkages exist in the material world, linkages arise among the different systems of law and policy that are responsible for promoting trade and managing the environment across different levels of governance—local, national, regional and international. These relationships between different fields of law and policy give rise to a range of *legal and policy issues* discussed below. Some of these arise between rules at the international and national level (for example, between international trade rules and domestic environmental policies), and others arise at the international level among different trade rules and rules for environmental management (such as multilateral environmental agreements or MEAs).

Legal and policy issues are for the most part created and ultimately resolved by institutions. *Organizational issues* arise between the different bodies responsible for developing, interpreting and executing law and policy at the trade and environment interface. The institutions responsible for economic, social and environmental policy are related, giving rise to a complex web of organizational linkages. In the following three sections, respectively, we examine a selection of issues arising from relationships in the

[104] These categories—material, legal/policy, and organizational—are not mutually exclusive, and many trade and environment issues will exhibit a mixed character; they will arise in the material world, raise questions of law and policy, and/or require action by organizations or other institutional arrangements for their resolution. Here we use the framework to offer generic comments on the nature of trade and environment issues, and to structure discussions by organizing issues according to their primary character, with an emphasis on the legal and policy aspects of trade and environment issues. A similar framework was adopted in the United Nations Environment Programme/International Institute for Sustainable Development, ENVIRONMENT AND TRADE—A HANDBOOK 50 (2000).

material world, from relevant laws and policies, and between the institutions responsible for trade, environment and sustainable development.

IV. Material Linkages—Economic, Social and Environmental

We live in a highly interdependent world. Trade and trade liberalization are closely tied to numerous other economic and social aspects of human behavior. These, in turn, are intimately connected to each other, and to the natural environment. As a result of these material linkages between the economy, society and the environment, changes in trade and or trade policy may have significant economic, social and environmental effects. The goal of policy-makers should be to understand these linkages and to act in a manner that maximizes positive impacts and minimizes negative impacts by adjusting both proposed trade policy and other associated policies as part of an integrated package of measures to maximize the net gains from trade liberalization.

A. Nature of Material Linkages

As with any set of complex systems, the material linkages between trade liberalization (and associated economic activity), society and the environment are not easily reducible to a set of simple categories or relationships. While a number of analytic frameworks are available, a frequently used framework suggests that trade may affect society and the environment by introducing new *products*; disseminating new *technologies*; affecting the *structure of economic activity*; or increasing the *scale* of impacts on the environment.[105] *Product effects* are related to the flow of products or services between countries, and will depend both on the nature of products (which may be environmentally benign or environmentally risky) and on the volume of trade.[106] *Technology effects*, which are closely related to product effects, arise from the transfer and dissemination of environmentally sound or hazardous production technologies between countries.[107] *Structural effects* arise as trade liberalization often affects the underlying composition of economic activity both within and between countries—for example, between primary secondary or tertiary production—with associated implications for the environment.[108] *Scale effects* arise as trade liberalization may spur an increase in the volume of goods and services consumed, with resulting implications for the amount of material and energy required by the economy.[109] By increasing aggregate consumption it may increase pressure on environmental "sources" (e.g., natural resources that provide an input into the human economy) and/or "sinks" (e.g., the assimilative capacity of air, land or water to absorb the outputs and waste of the human economy).

B. Positive and Negative Linkages

Across each of these categories, trade liberalization may have positive or negative (or neutral) effects. In many cases, both positive and negative effects of some kind and degree will occur simultaneously. Positive effects will arise when trade liberalization causes changes in economic activity that, in turn, reduces pressure on the environment.

[105] *See* OECD, Methodologies for Environment and Trade Reviews, OECD/GD(94) 103 (1994). *See also* UNEP, Reference Manual for the Integrated Assessment of Trade-Related Policies (2001).
[106] *Id.*
[107] *Id.*
[108] *Id.*
[109] *Id.*

Positive *product effects*, for example, may arise where environmentally benign substitutes replace more harmful products (such as polluting automobiles, inefficient electric goods, or high-sulfur coal). Positive *technology effects* arise from the transfer of more efficient or environmentally sound technologies. *Structural effects* may be positive where trade provides opportunities for countries to re-orient their economic activity towards less resource-intensive or polluting industries (for example, away from certain primary industries into services sectors). Finally, positive *scale effects* may arise from three main sources: allocative efficiency may arise as a country specializes according to its comparative advantage; competitive efficiency may arise as competition forces firms to become more efficient and innovative; and production efficiency may arise as firms benefit from economies of scale.[110] In addition, in some cases, an increased scale of economic activity may be accompanied by rising incomes and an associated higher level of demand for environmental protection.

While trade liberalization may in some cases strengthen environmental protection, it may also have significant negative impacts, especially when national regulatory frameworks are inadequately developed or enforced. Negative *product effects* might include the damage associated with transboundary movement of dangerous products such as hazardous wastes or chemicals. Negative *technology effects* may arise where obsolete or inappropriate technology is transferred through international trade. Negative *structural effects* may include shifts into resource intensive sectors or highly polluting sectors. And negative *scale effects* will often accompany an increase in the volume of traded goods, although these may be at least partially offset by the potential positive scale effects mentioned above.

C. Direct and Indirect Linkages

These positive and negative material linkages may also be more or less direct. In some cases, small changes in trade policy may have major implications for social and environmental welfare. In other cases, the positive or negative impacts of trade liberalization may be less direct, or may take longer to materialize. In designing policy, it is important for policy-makers to understand not only the nature of linkages, but also their degree. The degree of interdependence will depend in many cases on the particular sector being liberalized. Liberalization of some services sectors, for example, may have only indirect implications for the environment. But the liberalization of energy or mining services is likely to have greater environmental implications than the liberalization of accountancy services. Liberalization of trade involving environmentally sensitive sectors (such as agriculture, fisheries, forestry and mining) is likely to have considerable implications for environmental protection. Ensuring that trade liberalization maximizes its contribution to human welfare and to national development objectives requires a careful evaluation of the complex linkages between trade, the economy, society and the environment, on a sector-by-sector basis, before liberalization takes place.

V. Legal and Policy Issues

Addressing the material linkages between trade, the economy, society and the environment, and regulating human activity accordingly in order to maximize long-term welfare,

[110] *See* UNEP, *supra* note 105, at 26. Under this classification, the categories of structural and scale effects are not mutually exclusive; allocative efficiency leading to positive scale effects, for example, may arise through structural changes in an economy.

is a key role of law and policy. Laws and policies play an important role in shaping the nature and pattern of economic activity, and consequently on a range of important factors including employment, social standards, resource use, and environmental protection. Just as linkages exist in the material world, linkages arise among different systems of law and policy, across different jurisdictions, and between different levels of governance—local, national, regional and international—giving rise to a range of legal and policy issues at the interface of trade and environment.

Many trade and environment debates center on legal and policy linkages. One set of linkages arises "horizontally" across the international level between WTO rules and the rules established in other fields of international law, such as those embodied in multilateral environmental agreements. In many cases legal and policy issues arise because the same underlying issues or activities are addressed by more than one field of international law. For example, transboundary movement of certain hazardous waste has both trade and environmental effects, giving rise to efforts to ensure its coverage by international rules in the fields both of trade and the environment. Linkages between MEAs and the WTO also arise in areas as diverse as depletion of the ozone layer, biodiversity conservation and intellectual property rights, trade and trade-related measures in MEAs, and approaches to scientific uncertainty and precaution.

Another important set of linkages arises "vertically" between international trade law and the national laws and policies to which it applies. International trade rules often seek to promote trade and to reduce protectionism by delimiting the kinds of rules national regulators may use to protect social and environmental assets. In certain cases, the "liberalizing tendency" of trade rules operates in tension with the need to ensure that governments retain regulatory authority to protect health, safety and the environment; policy areas whose management presupposes the existence of effective regulation. Trade rules, unless carefully defined, interpreted and applied, may operate in tension with national rules designed to protect health or environment, affecting the scope of government discretion to adopt regulations tailored to existing social preferences.

WTO rules thus seek to define a careful line of equilibrium that, on one hand, promotes trade and, on the other, preserves the ability of governments to protect health, safety and the environment through rules at the national and international level. This balance is inherent in the substantive rules of the WTO agreements, and in the exceptions to these rules. As noted by the WTO Appellate Body in relation to the GATT Article XX(g) exception, the appropriate balance will depend on the measure under consideration and the circumstances of the case.[111] Such a case-by-case approach may ensure the needed flexibility in a particular dispute, but it does vest WTO adjudication bodies with significant discretion.

Ensuring a coherent and balanced architecture of rules to realize the benefits of trade liberalization while protecting social and environmental capital—at each level of governance and between levels of governance—remains a major challenge; one that will likely increase as the economic, social, environmental and other interdependencies between

[111] *See United States—Import Prohibition of Certain Shrimp and Shrimp Products*, *supra* note 1, ¶¶ 119–120. The Appellate Body, discussing the introductory paragraph of the Article XX exceptions to the GATT 1994, stated: "The task of interpreting and applying the chapeau is, hence, essentially the delicate one of locating and marking out a line of equilibrium between the right of a Member to invoke an exception under Article XX and the rights of the other Members under varying substantive provisions (e.g., Article XI) of the GATT 1994, so that neither of the competing rights will cancel out the other and thereby distort and nullify or impair the balance of rights and obligations constructed by the Members themselves in that Agreement. The location of the line of equilibrium, as expressed in the chapeau, is not fixed and unchanging; the line moves as the kind and the shape of the measures at stake vary and as the facts making up specific cases differ" (¶ 159).

States increase. In this section, we provide a brief overview of the legal and policy aspects of ten of the most prominent trade and environment issues, as they are presently defined, with a focus on discussions that have taken place within the WTO's formal institutions such as the Committee on Trade and Environment. Where appropriate, we also offer some preliminary thoughts on areas where the debate about trade, environment and sustainable development could be advanced.

A. Process and Production Methods

Among the first and most fundamental issues is whether importing countries should be entitled to ban or regulate products based on how they are produced in an exporting country. This issue—known as the *process and production methods* or the "*PPM*" issue—has been at the forefront of the trade and environment debate. In many ways, it epitomizes the challenge of striking a balance between the right of governments to regulate in order to protect health and the environment, and the need for international trade law and policy to ensure that such regulations are not used for protectionist purposes.

From a trade perspective, allowing importing countries to treat products differently because of how they are produced in an exporting county threatens to allow the former to impose their environmental and social standards on the latter, and/or to use such standards as a pretext for protectionism. From the perspective of many environmentalists, by contrast, regulators should encourage the consumption of environmentally- and socially-friendly products by distinguishing between products according to their impact over a product's life cycle—its production, use and disposal—including certain transboundary impacts, and impacts in exporting countries.

This debate has played out in discussions of the term "like product" included in WTO non-discrimination obligations (Notably Article III GATT). The term "like products" was interpreted restrictively by GATT panels, which generally required likeness to be determined not by reference to the *processes* by which products were made, but by reference to other factors, including their *physical* characteristics. Under this approach, products were "like products" if they were physically similar, even though they were produced using more or less environmentally friendly processes or production methods.[112] While these decisions provided a bright line for the trading community, for some environmentalists they lacked the flexibility required to strike an appropriate balance between economic, social and environmental factors in different cases.

The PPM distinction has not been directly addressed by the WTO's Appellate Body. Although three cases since 1995 have touched on the issue,[113] the Appellate Body has

[112] *See* Report of the GATT Panel *United States—Restrictions on Imports of Tuna*, Complaint by Mexico, BISD, 39th Supp. 155 (1993) (unadopted). The PPM distinction was first formulated in the *Tuna/Dolphin* case in the context of GATT Article III and *Ad* Note to Article III. Although the precise legal basis for the PPM distinction was not spelled out clearly in this report, it rested on several suppositions; that the *Ad* Note to Article III and Article III did not cover regulations which did not apply to "products as such" and that the "like product" distinction under Article III does not permit distinction based on non-product related characteristics, i.e., on process-related matters. Upon closer analysis, the latter argument seemed to be the most convincing as the basis for the PPM theory and was confirmed in subsequent GATT jurisprudence. *See* Report of the GATT Panel, *United States—Measures Affecting Alcoholic and Malt Beverages*, Complaint by Canada, BISD, 39th Supp. 208 (1993). (adopted June 19, 1992). *See also* Report of the GATT Panel, *United States—Taxes on Automobiles*, Complaint by the European Community, DS31/R (1994). The question therefore became whether otherwise similar products are rendered "unlike" because of how they were produced and processed, and therefore can be the subject of different treatment. For a comprehensive critique of the legal basis of the PPM doctrine, *see* Hudec, *supra* note 27, at 193–200.

[113] *United States—Standards for Reformulated and Conventional Gasoline, supra* note 1; Report of the WTO Panel, *Canada—Certain Measures Concerning Periodicals*, (WT/DS31/R (1997) and Appellate Body

not definitively expressed its agreement with the distinction. A leading scholar has questioned whether the distinction was actually being adopted by the Appellate Body.[114] While not addressing the PPM distinction as such, recent Appellate Body decisions have clarified the scope and content of key WTO obligations including GATT Articles III and XX, both of which are likely to be considered when determining whether and how WTO Members can ban or regulate products based on their process and production methods.

In *EC-Asbestos*, the Appellate Body acknowledged the value of the traditional "like product" test established by the Report of the Working Party on *Border Tax Adjustments,* which consists of "employing four general criteria in analyzing 'likeness': (i) the properties, nature and quality of the products; (ii) the end-uses of the products; (iii) consumers' tastes and habits—more comprehensively termed consumers' perceptions and behavior—in respect of the products; and (iv) the tariff classification of the products. . . ".[115]

According to the Appellate Body, however, these general criteria are neither treaty-mandated nor are they a closed list of criteria, and their use "does not dissolve the duty or the need to examine, in each case, *all* of the pertinent evidence."[116] The Appellate Body stated:

> . . . the kind of evidence to be examined in assessing the "likeness" of products will, necessarily, depend upon the particular products and the legal provision at issue. When all the relevant evidence has been examined, panels must determine whether that evidence, as a whole, indicates that the products in question are "like" in terms of the legal provision at issue. We have noted that, under Article III:4 of the GATT 1994, the term "like products" is concerned with competitive relationships between and among products. Accordingly . . . it is important under Article III:4 to take account of evidence which indicates whether, and to what extent, the products involved are—or could be—in a competitive relationship in the marketplace.[117]

While the *EC-Asbestos* case did not directly address PPM-based measures, the Appellate Body's approach to "like product" requires consideration of "all the relevant evidence". In a future case it is at least conceivable that this may comprise non-product-related or non-trade concerns (including those arising out of a product's process or production methods), at least to the extent they relate to elements of the traditional test—such as consumer's perceptions and behavior—or to the nature and extent of a competitive relationship between and among products.[118]

Report, *Canada—Certain Measures Concerning Periodicals*, WT/DS31/AB/R (1997); Report of the WTO Panel, *Indonesia—Certain Measures Affecting the Automobile Industry*, WT/DS54, DS55, DS59, DS64/R (1998).

[114] Hudec, *supra* note 27, at 207.

[115] *European Communities—Measures Affecting Asbestos and Asbestos-Containing Products, supra* note 75, ¶ 85.

[116] *Id.,* ¶ 102.

[117] *Id.,* ¶¶ 101–103.

[118] From an economic standpoint, if PPMs issues are significant in consumers' perceptions such that they reduce the substitutability and thus the cross-price elasticity between products, then such products are clearly less "like". Thus, an economic, market-oriented approach to the "like product" question, taking into account consumers' perceptions, could arguably—at least in theory—accommodate very well a differentiation between products based on PPMs. However, it could be argued that there is an in-built limit to this "marketization" or "economization" of the "like product" concept—GATT Article III:2 clearly differentiates between "like" and "directly competitive" products, such that a more "market competition-based" approach to the "like products" issue could arguably not cross a conceptual line which would blur the distinction between "like" and "directly competitive" products—this would largely deprive Article III:2 of meaningful legal effect.

Even in the event that a PPM-based measure is struck down under Article III's "like product" test, it may still be allowed under the more permissive standard embodied in the GATT Article XX exception. The Appellate Body has established that Article XX addresses a higher degree of discrimination between domestic and imported products than does Article III:4.[119] A question nevertheless arises regarding the conditions under which a Member may be permitted to condition market access based on PPM requirements. The recent decisions in *United States—Shrimp* and *United States—Shrimp 21.5* suggest that PPM-based measures may, under certain circumstances, be permissible under Article XX. In those cases, the U.S. measure effectively required exporting countries to use a production method involving "turtle excluder devices" as a precondition to market entry for their shrimp products. Effectively, the Appellate Body's decision in *United States—Shrimp 21.5* permits the United States to retain its PPM-based measure as long as it continues to satisfy the requirements set out by the Appellate Body, including the requirement to seek a negotiated solution.[120]

It is important to note that a distinction has been made between two kinds of PPMs. Those discussed above are PPMs that do not affect the physical properties of the final product (for instance, where paper is produced from timber which is managed in accordance with sustainable forestry policies). Because they do not affect the product, these PPMs are known as non-product-related PPMs or "NPR-PPMs". In contrast, some PPMs do affect the physical characteristics of the product (and so are known as product-related PPMs). Product-related PPMs do not raise significant concerns under the GATT, and have traditionally been considered as a possible basis for distinguishing between otherwise "like products". This distinction has been important in some WTO discussions, including those about labeling.

B. Labeling

Labeling, including labeling for environmental purposes, has featured prominently in trade law.[121] Labeling for environmental purposes (also referred to as "eco-labeling") may be defined as product labeling that provides consumers with ecological information about a product's characteristics or life-cycle.[122] Eco-labeling is an important

[119] *United States—Standards for Reformulated and Conventional Gasoline, supra* note 1, at 22, *stating*: "The provisions of the chapeau cannot logically refer to the same standard(s) by which a violation of a substantive rule has been determined to have occurred. To proceed down that path would be both to empty the chapeau of its contents and to deprive the exceptions in paragraphs (a) to (j) of meaning. Such recourse would also confuse the question of whether inconsistency with a substantive rule existed, with the further and separate question arising under the chapeau of Article XX as to whether that inconsistency was nevertheless justified".

[120] Although it flows from the obligation to avoid "arbitrary and unjustifiable discrimination between countries where the same conditions prevail", the Appellate Body has not yet offered a clear and textually-based rationale for the implied obligation to seek a negotiated solution.

[121] The relationship between labeling requirements and free trade is somewhat ambiguous. Labeling has traditionally been regarded as a less restrictive alternative to many other types of regulatory measures. *See* for instance GATT Report, *Thailand—Restrictions on Importation of and Internal Taxes on Cigarettes*, *supra* note 82. On the other hand, far-reaching and varying labeling requirements can impose high compliance costs upon a producer and prevent market access. Even if market access is not foreclosed, labeling requirements varying from jurisdiction to jurisdiction can, like all other technical regulations, prevent a producer from taking advantage of economies of scale.

[122] *See* Arthur E. Appleton, ENVIRONMENTAL LABELING PROGRAMMES: INTERNATIONAL TRADE LAW IMPLICATIONS 1 (1997). Some studies refer to "environmental labeling" as labeling of any type pertaining to environmental concerns, while taking the term "eco-labeling" to refer to labels awarded on the basis of a life-cycle analysis. *See* for instance GATT Document No. TRE/W/12 (June 14, 1993), at 1.

tool of sustainable development policy, providing an effective market-based instrument to assist consumers to make environmentally sound purchasing decisions, and to create an incentive for the production of environmentally sound products and production technologies.

Labeling has potential implications for consumer demand, market access and thus trade. For some WTO Members, particularly developing countries, eco-labeling schemes have raised trade concerns. They note the potential for labeling schemes to create multiple, different requirements for their producers and distributors that limit their effective market access. Many labeling schemes are based on PPM considerations[123] or other criteria that reflect the environmental conditions, preferences and priorities of importing countries, but not necessarily those of exporting countries.[124] Some developing countries are also concerned about the potential for labeling to be used as a form of green protectionism and trade discrimination.[125]

These concerns have stimulated discussion about a number of related issues at the WTO, such as which of the WTO agreements apply to labeling schemes, how these agreements apply to mandatory and voluntary labeling schemes, and how they apply to labels based on product characteristics or their related process and production methods (PPMs) (e.g., labels referring to food content), and to labels based on non-product related PPMs (e.g., labels referring to whether a product is produced sustainably or humanely where that production process has no effect on the final product).

First, a question arises about how the various WTO agreements apply to labeling. The main WTO agreement to cover labeling is the TBT Agreement, which applies disciplines to both mandatory "technical regulations" and to non-binding "standards" (both of which are defined to include "packaging, marking or labeling requirements as they apply to a product, process or production method").[126] The SPS Agreement, similarly, applies to "packaging and labeling requirements directly related to food safety".[127] Accordingly such schemes must comply with the SPS Agreement's rules regarding risk assessment and sufficient scientific evidence. The precise relationship between the SPS and TBT disciplines on labeling remains unclear, and has not been the subject of a WTO dispute at the time of writing. Consequently, it is unclear whether some labels (for example those relating to levels of fat, or cholesterol, or genetically modified content) would fall under the SPS Agreement as labels "directly related to food safety" or under the

[123] *See supra* section V(A) for a discussion of PPMs. In practice, the distinction between PPM regulations and purely product-related regulations may not always be clear. For example, when comparing a certain quantity of organically produced vegetables with conventionally-produced vegetables, the first category will, on the average, contain a lower concentration of, say, pesticide residues. An eco-label attached to each individual organically-grown vegetable in this situation would signal physical differences with respect to the conventionally produced vegetable. However, *each single* piece of organically-grown vegetable does not necessarily contain a lower concentration of such substances; in this situation, an eco-label attached to *each single* product would seem to refer, at least partially, also to a production method. *See* WTO Docs. No. WT/CTE/W192 and G/TBT/W/162 (June 19, 2001).

[124] *See Trade and Environment in the GATT/WTO*, Background Note by the Secretariat (1999), WTO Special Studies No. 4, Annex I, ¶ 58; WT/CTE/W/101, *Technical Barriers to the Market Access of Developing Countries*, Background Note by the Secretariat (January 25, 1999), ¶¶ 4–15.

[126] *TBT Agreement*, Annex 1.

[127] *SPS Agreement*, Annex A.

TBT Agreement as relating to a "product, process or production method".[128] Based on discussions in WTO Committees and notifications pursuant to both agreements, however, it is very probable that most labeling issues will fall under the TBT Agreement. Finally, the GATT, in particular Articles III:4 and XX, will also apply to labeling to the extent that its provisions do not conflict with those of the SPS and TBT Agreements.

Second, to the extent they are covered by the TBT Agreement, eco-labeling schemes may be classified as either mandatory technical regulations or voluntary standards. Labeling schemes that fall under the definition of technical regulations will be covered by requirements relating to, among other things, non-discrimination,[129] least trade restrictive measure,[130] preferential use of international standards,[131] notification requirements,[132] transparency,[133] technical assistance,[134] and special and differential treatment.[135] In practice, however, most eco-labeling schemes are the result of voluntary programs enacted by governmental standardizing bodies or private institutions. Voluntary schemes that fall within the Agreement's definition of "standards" will be considered under the Code of Good Practice for the Preparation, Adoption and Enforcement of Standards. The Code largely mirrors the Agreement's requirements for technical regulations, and may be adopted by governmental and non-governmental bodies enacting voluntary standards.[136] Member States are required to take "such reasonable measures as may be available to them" to ensure that their local- and non-governmental bodies do in fact adopt the Code.

Third, broadly speaking, both mandatory and voluntary eco-labeling schemes based on product characteristics or product-related PPMs are covered by the TBT Agreement.[137] In the case of voluntary programs, the applicability of the TBT Agreement would additionally depend on whether the body administering such program has adopted the Code of Good Practice. While Members must ensure that central government standardizing bodies adopt the Code, it is not entirely clear how much due diligence Members would have to exercise with respect to local and non-governmental standardizing bodies. Furthermore, apart from the non-discriminatory character of the criteria set forth for the granting of a label, questions may arise about the implementation and management of eco-labeling programs, for example, issues of transparency and technical support for developing countries.

Finally, with respect to measures based on non-product related PPMs (such as labeling schemes relating to child labor or to sustainable forest management, where these practices do not affect the physical characteristics of the final product), it is unclear from the

[128] The TBT Agreement states in Article 1.5 that its provisions "do not apply to sanitary and phytosanitary measures as defined in Annex A of the [SPS Agreement]". The SPS Agreement provides in Article 1.4 that "[n]othing in this Agreement shall affect the rights of Members under the [TBT Agreement] with respect to measures not within the scope of this Agreement".

[129] *TBT Agreement*, Article 2.1.

[130] *Id.,* Article 2.2.

[131] *Id.,* Article 2.4.

[132] *TBT Agreement*, Article 2.9.

[133] *Id.,* Article 10.

[134] *Id.,* Article 11.

[135] *Id.,* Article 12.

[136] The difference between mandatory regulations and voluntary standards may of course become largely theoretical in a context where compliance with a standard (e.g., qualifying for an eco-label) becomes such an important competitive factor in the market-place that from a business perspective the voluntary standard in fact becomes binding.

[137] *See* Appleton, *supra* note 122, at 94–132.

language of the TBT Agreement whether such regulations and standards fall under the scope of the TBT Agreement.

Some WTO Members and some scholars are of the view that measures based on non-product related PPMs do *not* fall within the purview of the TBT Agreement, emphasizing the definition of the term "technical regulation" in Annex 1 to the TBT Agreement and the expression "product characteristics or *their related* processes and production methods" (emphasis added).[138] Some other WTO Members, by contrast, have expressed the contrary view that such measures are covered on the basis that the definition of technical regulations in the second sentence of Annex 1 paragraph 1 does not contain the word "related" and merely speaks about "requirements as they apply to a product, process or production method".[139]

It is unclear from this controversy what consequence the exclusion of such PPM-based measures from the purview of the TBT Agreement would have for their permissibility under other provisions of WTO law. In other words, if the TBT Agreement does not apply, then which other covered agreement, if any, would govern non-product related PPMs and would such PPMs be permissible under that agreement?

In this regard, it has been claimed by some developing countries that non-product related PPMs fall outside the scope of coverage of WTO law *altogether*.[140] Others Members are of the view that PPMs falling outside the scope of the TBT Agreement *are* covered by the GATT 1994, a view also shared by some commentators.[141] If the GATT 1994 should be found to apply, would non-product related PPMs be consistent with its provisions? Certain WTO Members are of the view that non-product related PPMs are inconsistent with Articles I and III of the GATT 1994.[142] However, the issue remains open, as neither a WTO panel nor the Appellate Body have ruled on this question.

If Articles III:1 and III:4 of the GATT 1994 do apply, then an examination of eco-labeling schemes would necessitate the examination of the "like product" and "no less favorable treatment" criteria. It also remains unclear whether Article III:4 can apply to *voluntary* labeling schemes because they are voluntary and may conceivably fall outside the definition of "laws, regulations and requirements" contained in Article III:4, and which WTO agreement should apply where an eco-labeling scheme falls partly within the ambit of the TBT Agreement and partly outside.[143] Eco-labeling schemes found to be in violation of Article III:4 would have to be justified under the affirmative defense of Article XX, most likely under paragraph (g). Under the Article XX chapeau, a key question would be whether an eco-labeling scheme was applied in a manner that constitutes arbitrary or unjustifiable discrimination or a disguised restriction on international trade.

[138] *Id.,* at 52, with further references. This view is also shared by most developing country Members of the WTO; *See, e.g.,* Statement by India, contained in WTO Doc. G/TBT/M/5 (September 19, 1996), ¶ 78; and Statement by Egypt, *id.,* ¶ 79.

C. Scientific Uncertainty and Precaution

Scientific uncertainty is endemic. In many cases, threats to health and environment are too complex to be resolved scientifically in time to take effective policy action, yet their potential consequences may be too great to defer policy action until clear scientific evidence emerges. Consequently, policymakers are regularly required to make important policy decisions in the absence of clear scientific evidence. At the same time, governments may abuse the existence of scientific uncertainty to justify unwarranted restrictions on their trading partners' market access. Consequently, requiring a sound scientific basis for national measures offers an important safeguard against protectionism. Balancing these two priorities—making decisions under conditions of scientific uncertainty, and preventing protectionist abuse by requiring measures to be based on science—is a complex and often controversial task.

The need to make decisions under conditions of scientific uncertainty is addressed by the precautionary principle. The principle's most commonly cited formulation is found in the Rio Declaration, which states:

> Where there are threats of serious or irreversible damage, lack of full scientific certainty shall not be used as a reason for postponing cost-effective measures to prevent environmental degradation.[144]

The precautionary principle addresses the relationship between the quest to reduce scientific uncertainty and the need to make policies in light of incomplete scientific information. The principle has a scientific basis—to the extent that scientific data on a given subject does exist, such data should be taken into account, and further efforts should be made to improve scientific knowledge. Nevertheless, the principle acknowledges that consideration of the soundest science currently available does not obviate the need for decision-makers to make decisions under conditions of uncertainty. While the concept of precaution appeals to common sense and is present in many policy areas, its operational requirements and implications are difficult to state in the abstract, and will depend on the specific circumstances. Like other principles, precaution is designed to provide a guide to policy-makers. Consequently, the precise threshold level of scientific knowledge or evidence of harm necessary to invoke the principle, as well as the specific steps that should be undertaken once the principle has been identified as relevant, must be identified by policy makers in view of the particular risks and possible responses.[145] While the precautionary principle appears to be a well-accepted tool in the field of environmental management, its application to issue of food safety has proven more controversial due generally to its potential implications for trade in agricultural products, and due in particular to its potential impact for trade in genetically modified food products.

Notions of precaution give rise to a number of interrelated issues in the context of the multilateral trading system. First, to what extent is the precautionary principle reflected in existing WTO rules? According to the Appellate Body in *Hormones "*the precautionary principle has been incorporated in, *inter alia*, Article 5.7 of the *SPS Agreement",*[146] which addresses the right to take provisional SPS measures where "relevant scientific information is insufficient", and "in the sixth paragraph of the preamble and in

[144] *Rio Declaration on Environment and Development*, Principle 15 (June 14, 1992), UN Doc. A/Conf. 151/5/Rev. 1 (1992), *reprinted in* 31 I.L.M. 876 (1992).

[145] Jan Bohanes, *Risk Regulation in WTO Law: A Procedure-based Approach to the Precautionary Principle*, 40 Col. J. Trans. L 323, 333 (2002); Steve Charnovitz, *The Supervision of Health and Biosafety Regulation of World Trade Rules*, 13 Tul. Envtl. L. J. 271, 291 (2000).

[146] *EC-Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 52, ¶¶ 124 and 253.

Article 3.3".[147] The Appellate Body stated that:

> . . . a panel charged with determining, for instance, whether "sufficient scientific evidence" exists to warrant the maintenance by a Member of a particular SPS measure may, of course, and should, bear in mind that responsible, representative governments commonly act from perspectives of prudence and precaution where risks of irreversible, e.g. life-terminating, damage to human health are concerned.[148]

The Appellate Body noted that the precautionary principle "does not, by itself, and without a clear textual directive to that effect, relieve a panel from the duty of applying the normal (i.e., customary international law) principles of treaty interpretation in reading the provisions of the *SPS Agreement*."[149] The Appellate Body has not been requested to explore the extent to which precaution is reflected in other WTO agreements.

A second and closely related issue is how WTO rules (including those that "reflect" precaution and others) apply to national measures that are based on notions of precaution. A brief discussion of the SPS Agreement's provisions requiring measures to be based on scientific principles and not maintained without sufficient scientific evidence, for example, are included in Section II above, and in more detail in the SPS chapter of this work.[150] How these rules apply to individual measures will require a case-by-case analysis, and will have important implications for the balance between national discretion to take measures under conditions of scientific uncertainty, and oversight by the multilateral trading system to prevent protectionist abuse of such measures. In this context we merely note that the precautionary principle now provides the basis for many domestic measures that are covered by WTO rules. References to precaution are now found in the laws of both developed and developing countries, and in countries representing the major legal systems and the major regions of the world.

A third issue is whether the precautionary principle can itself influence how WTO rules are interpreted and applied. The role of this principle will depend, in part, on its status in international law. In dispute settlement, some WTO Members have argued that the principle has fully crystallized as a principle of customary international law and therefore constitutes a relevant "rule of international law applicable in the relations between the parties" that must be used to interpret WTO agreements.[151] Other Members,

[147] Similar provisions are found in the TBT Agreement's preamble, which provides that:

> . . . no country should be prevented from taking measures . . . for the protection of human, animal or plant life or health [or] of the environment, . . . at the levels it considers appropriate, subject to the requirement that they are not applied in a manner which would constitute a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail or a disguised restriction on international trade, and are otherwise in accordance with the provisions of this Agreement.

[148] *See EC-Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 52, ¶ 124.

[149] *Id.,* ¶ 124.

[150] *See* Chapter 7.

[151] *See EC-Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 52, ¶ 16, where the Appellate Body notes that "[t]he precautionary principle is already, in the view of the European Communities, a general customary rule of international law or at least a general principle of law, the essence of which is that it applies not only in the management of a risk, but also in the assessment thereof." *See also Japan—Measures Affecting Agricultural Products*, *supra* note 54, ¶ 10, where the Appellate Body notes that "[i]n Japan's view, the Panel failed to give due regard to the precautionary principle, which was recognized in both *European Communities—Measures Concerning Meat and Meat Products (Hormones)* and *Australia—Measures Affecting Importation of Salmon*. Having lawfully established a prohibition on the importation of host plants of codling moth, Japan submits that it is in a position which warrants a precautionary approach and that Japan's varietal testing requirement, therefore, needs to be understood in the context of the precautionary principle, a principle which is echoed by the practice of Member States and reflected in the *Codex Alimentarius* and the *FAO Guidelines for Pest Risk Analysis*." (citations omitted).

by contrast, have argued that the precautionary principle is not a customary rule of law, and is thus not relevant to the interpretation of WTO provisions.[152] The Appellate Body has not offered a definitive ruling on this issue.[153] In *EC-Hormones*, under the heading "*The Relevance of the Precautionary Principle in the Interpretation of the SPS Agreement,*" the Appellate Body referred to the question of whether the precautionary principle constitutes a principle of customary international law that should be taken into account in the interpretation of WTO agreements, but felt that it was unnecessary to take a position on this question.[154]

Finally, issues of precaution also arise in the relationship between the trading system and MEAs. Many obligations in MEAs—including those that directly affect international trade—are based on the precautionary principle. The principle is embodied explicitly in preambular language and provides the basis for a range of substantive obligations that address issues as diverse as biodiversity conservation, climate change, management of hazardous waste and chemicals, protection of the seas, management of fisheries, and prevention of air and water pollution. The recently concluded Cartagena Protocol on Biosafety goes further and includes explicit reference to precaution in its operative text. In the event of a trade dispute regarding trade in genetically modified agricultural products, the meaning of the Protocol's provisions permitting precautionary trade restrictions, and

[152] *See EC-Measures Concerning Meat and Meat Products (Hormones)*, *supra* note 52, ¶ 43, where the Appellate Body notes: "In the view of the United States, the claim of the European Communities that there is a generally-accepted principle of international law which may be referred to as the 'precautionary principle' is erroneous as a matter of international law. The United States does not consider that the 'precautionary principle' represents a principle of customary international law; rather, it may be characterized as an 'approach'—the content of which may vary from context to context. The *SPS Agreement* does recognize a precautionary approach; indeed, Article 5.7 permits the provisional adoption of SPS measures even where the relevant scientific evidence is insufficient. Thus, the United States believes that there is no need to invoke a 'precautionary principle' in order to be risk-averse since the *SPS Agreement*, by its terms, recognizes the discretion of Members to determine their own level of sanitary protection." *See also id.,* ¶ 122, where the Appellate Body notes that "Canada, too, takes the view that the precautionary principle has not yet been incorporated into the corpus of public international law; however, it concedes that the 'precautionary approach' or 'concept' is 'an *emerging* principle of law' which may in the future crystallize into one of the 'general principles of law recognized by civilized nations' within the meaning of Article 38(1)(c) of the *Statute of the International Court of Justice*."

[153] *Id.,* ¶ 123: "The precautionary principle is regarded by some as having crystallized into a general principle of customary international *environmental* law. Whether it has been widely accepted by Members as a principle of *general* or *customary international law* appears less than clear. We consider, however, that it is unnecessary, and probably imprudent, for the Appellate Body in this appeal to take a position on this important, but abstract, question." (citations omitted).

[154] The Appellate Body seems to have defined two points on a continuum. On one hand, it has stated that the precautionary principle "finds reflection" in certain *existing* WTO provisions (*European Communities—Measures Concerning Meat and Meat Products (Hormones)*), *supra* note 52, ¶ 124). On the other hand, it has stated "the precautionary principle does not, by itself, and without a clear textual directive to that effect, relieve a panel from the duty of applying the normal (i.e., customary international law) principles of treaty interpretation". *Id*. Thus, according to the Appellate Body "the precautionary principle does not override" specific WTO provisions. Whereas the Appellate Body has stated that the principle may find reflection in, but may not override, specific provisions, it seems to have left open the question of whether, and, if so, to what extent, the principle may be used to *interpret* specific WTO rights and obligations in order to clarify how they should be applied on a case-by-case basis. *See also Japan—Measures Affecting Agricultural Products*, *supra* note 54, ¶ 81. "We note Japan's argument that the requirement in Article 2.2 not to maintain an SPS measure without sufficient scientific evidence should be interpreted in light of the precautionary principle. In our Report in *EC—Hormones*, we stated that the precautionary principle finds reflection in the preamble, Article 3.3 and Article 5.7 of the *SPS Agreement* and that this principle:

> . . . has not been written into the *SPS Agreement* as a ground for justifying SPS measures that are otherwise inconsistent with the obligations of Members set out in particular provisions of that Agreement.

their relationship to the provisions of relevant WTO agreements, would probably require clarification.

In each of these cases, science and precaution play a role in determining both when and how policy-makers should act, and the distribution of the benefits and burdens of action and inaction among different interests, both within and between countries. Faced with uncertainty, those who benefit most from the status quo will generally prefer inaction by policy-makers, thereby avoiding immediate and known costs, and imposing unknown future costs on others. By contrast, those who benefit most from change will generally prefer action by policy-makers, thereby avoiding unknown future costs, and imposing immediate known costs on others. Caught between these different interests, science and uncertainty regularly become tools of political influence. The challenge for policy-makers is to identify specific principles and criteria upon which national laws and policies can be evaluated, and to identify mechanisms to reduce scientific uncertainty more rapidly. In an integrated international economy, where the benefits and burdens of risk and uncertainty and of regulatory action and inaction are distributed across national borders, it is likely that issues of science and precaution will remain hotly contested for the foreseeable future.

D. Market Access

Improving market access through the reduction of both tariff and non-tariff trade barriers (such as tariff peaks, tariff escalation, export restrictions and subsidies) has the potential to yield economic, environmental and other benefits. At a general level, secure and predictable market access can provide WTO Members with the trading opportunities that allow them to generate income, reduce poverty, and obtain resources to implement and enforce effective environmental policies.[155] In the long-run, improved market access has the potential to foster economic development and growth in developing countries, and may provide increased resources to address environmental and social concerns.

The environmental benefits of enhancing market access are particularly clear where products, technologies or services are themselves environmentally friendly. In these cases, market access may improve the state of the environment in both importing and exporting countries. Importing countries may benefit from new products and technologies whose use and disposal require fewer environmental resources (e.g., energy, other inputs, and sinks to absorb pollution and waste). Exporting countries may benefit by exporting products whose production involves lower environmental costs (e.g., organic products that avoid extensive fertilizer use and/or maintain soil quality).

Improving market access may also have benefits in specific sectors. In the agriculture sector, for example, improving market access opportunities for developing countries may have trade and environment benefits due to the small initial size of environmental niche markets, and limited use of harmful chemicals in many developing countries. Similarly, environmentally friendly services, such as eco-tourism, carbon sequestration and, biodiversity protection also hold promise for some developing countries. The benefits of liberalizing market access for "environmental goods and services" were recognized in the Fourth Ministerial Declaration, which provides for negotiations for the "reduction or, as appropriate, elimination of tariff and non-tariff barriers to environmental goods and

[155] *See, e.g.,* James Andreoni and Arik Levinson, *The Simple Analytics of the Environmental Kuznets Curve,*NBER Working Paper No. W6739 (1998). Elisabetta Magnani, *The Environmental Kuznets Curve, Environmental Protection Policy and Income Distribution*, XXXII Ecological Economics 431 (2000).

services". The Ministerial Declaration does not define the term "environmental goods and services", and at the time of writing no definition has been agreed by WTO Members. The precise scope of the negotiation therefore remains largely undefined.

Improving market access is, of course, not necessarily consistent with strengthening environmental protection (see Section IVB above). Many legitimate environmental measures may themselves limit market access, and increasing market access for environmentally harmful products may have serious adverse effects. Legal and policy tensions between environmental protection and market access may also arise where regulations—for example those applying to eco-labeling or to conservation of water resources—may restrict trade in certain products.[156]

The net effect of these environmental measures is often difficult to ascertain as the lost benefits of market access for less environmentally-friendly products (e.g., income and related demand for environmental protection) may, at least in part, be compensated for by the creation of new niche markets for environmental goods. In empirical terms, the extent to which domestic environmental requirements will act as market entry barriers for overseas goods will vary from sector to sector. Trade-related environmental requirements in developed countries are often sector-specific, affecting products from specific industries such as fisheries and forestry.[157] Several studies argue that existing environmental policies of developed countries on the whole do not have widespread negative effects on market access for developing countries.[158] To minimize the potential negative impact of environmental measures on market access, a cooperative and transparent approach, coupled with technical support for developing countries to enable them to maintain market access while complying with non-protectionist environmental regulations, appears essential.

E. Subsidies

Subsidies are broadly-speaking state-sponsored benefits to businesses. They have mixed blessings, both economic and environmental. Economically, subsidies can distort otherwise efficient markets, or they can correct existing market failures to enhance efficiency. Environmentally, subsidies can encourage overuse of scarce environmental resources, or they can provide incentives for environmentally sound behavior.

Inspired by neo-liberal economics, trade law generally views subsidies with suspicion on the grounds that they distort product prices, production costs, and the allocation of resources and, by creating an artificial comparative advantage, distort trade flows. The regulation of subsidies under international trade rules is contained in the SCM Agreement and in Articles VI and XVI of GATT 1994.[159] From the standpoint of the SCM Agreement, the fact that a particular state action is classified as a subsidy does not *per se* imply anything about its compatibility with international trade law.[160] The SCM

[156] *See, e.g.,* the study on Colombian-grown flowers, WTO Doc. G/TBT/W/60 (March 9, 1998).

[157] Veena Jha, Anil Markandya & René Vossenaar, RECONCILING TRADE AND ENVIRONMENT (1999).

[158] *See* references in WTO Doc. WT/CTE/W/101, *Technical Barriers to the Market Access of Developing Countries*, Background Note by the Secretariat (January 25, 1999), ¶¶ 19–23. This Note also states that studies suggesting the contrary exist, but concludes that the overall effect is not negative.

[159] The provisions of the GATT and the SCM Agreement apply cumulatively. *See* Appellate Body Report, *Brazil—Measures Affecting Desiccated Coconut*, WT/DS22/AB/R (1997), at 17–20.

[160] The Appellate Body has expressly stated in Appellate Body Report, *Canada—Measures Affecting the Export of Civilian Aircraft* (Recourse by Brazil to Article 21.5 of the DSU), WT/DS70/AB/RW (2000), ¶ 47, that "[t]he universe of subsidies is vast. Not all of them are incompatible with the SCM Agreement."

Agreement prohibits two types of subsidies: those contingent upon export performance or on the use of domestic over foreign products ("import-substitution" subsidies), and those which are granted specifically to certain firms or industries and which have an adverse effect on another Member State.[161]

From the standpoint of environmental management, subsidies are widely considered to have the potential for both good and bad outcomes. On one hand, subsidies may be required to address insufficient incentives to protect the environment due to market failures arising from externalities, the treatment of resources as public goods, or other spill-over effects. On the other hand, certain domestic subsidies—including some provided to fishing, fossil fuel and agricultural industries—can promote environmental harm (often referred to as "perverse subsidies"). Due to this complex relationship between subsidies and environmental management, the application of trade rules to remove subsidies may produce both ecologically desirable and deleterious results.

Desirable results—from both a trade and environmental perspective—arise from the removal of "perverse subsidies". For instance, if subsidies to fishing industries are held incompatible with WTO law or reduced in the framework of negotiations, ecologically harmful over-fishing is likely to be reduced. The importance of tackling environmentally and economically perverse fishing subsidies was emphasized in the WTO's Fourth Ministerial Declaration. Similarly, if trade law were to limit the extent to which WTO Members subsidized their coal industries, then alternative renewable energy generation may become more competitive and, as a result, carbon dioxide emissions may be reduced. Nevertheless, the ability of trade law to regulate such harmful subsidies is limited. For instance, where harmful subsidies are not contingent on export, or on the use of domestic goods (under Article 3 of the SCM Agreement), or are not granted "specifically" to an export-oriented industry (within the meaning of Article 2 of the SCM Agreement), WTO law would not apply to prevent a Member State from granting such subsidies.[162]

Deleterious environmental effects may arise where trade law stands in the way of subsidies that provide an efficient and effective environmental policy tool. For instance, a State may decide to grant subsidies to firms that invest in "cleaner" production technologies, or to subsidize the production of renewable energy. If such subsidies are held to be specific within the meaning of the SCM Agreement, they could violate WTO law.[163] Prior to 2000, the SCM Agreement established an automatic exemption for limited government subsidies to industries for the purpose of adapting existing facilities to new environmental requirements.[164] However, the exemption for these and the other categories of

[161] The latter group are so-called actionable subsidies. Unlike export and import-substitution subsidies, the harmful effect of such domestic subsidies on international trade flows is not immediately discernable. As a result, the SCM Agreement requires evidence of harmful effects is required before such subsidies can be found to be inconsistent with the Agreement. This is in contrast to export subsidies, where such a trade-distorting effect is assumed.

[162] This can happen for instance if energy itself is not traded and the subsidization of one particular type of energy occurs across the board in the domestic economy. In these circumstances, the lack of specificity of this energy subsidy excludes the application of the SCM Agreement. Even if a subsidy is specific, it still has to be shown that it has adverse effects, i.e., causes injury to a trading partner within the meaning of Article 5 of the SCM Agreement.

[163] Again, however, this would be contingent on finding that such subsidies cause adverse effects within the meaning of Article 5 of the SCM Agreement. On the link between subsidies and differential taxation, *see* Ole Kristian Fauchald, Environmental Taxes and Trade Discrimination (1998).

[164] *SCM Agreement*, Article 8. Other green-light subsidies were subsidies granted for research purposes and for regional development.

"green-light" subsidies had an initial duration of five years and was not extended.[165] Furthermore, the SCM Agreement does not have a provision on subsidies designed to offset positive externalities. For instance, a State may want to promote programs in order to increase "carbon sequestration" (i.e., the removal of carbon dioxide from the atmosphere).[166] Carbon sinks and other measures to promote carbon sequestration are endorsed in the UN Convention on Climate Change and its Kyoto Protocol.[167]

So far disputes under the SCM Agreement have involved only export subsidies and subsidies contingent upon the use of domestic over imported goods. At the time of writing, no environmentally motivated domestic subsidy has been challenged under the WTO Dispute Settlement Understanding. The absence of disputes, however, does not necessarily mean that further clarification of the Agreement's application would not help to increase certainty and protect subsidies granted for sound environmental purposes. At the same time, the lack of disputes may mean that, among other things, WTO Members consider environmental subsidies as legitimate, or are aware of the legal and political difficulties such challenges might cause.

F. Biosafety

Considerable controversy exists among WTO Members on the subject of biotechnology, biosafety and trade in genetically modified organisms ("GMO"). Some Members have voiced concerns about the risks associated with the introduction of genetically modified organisms into the food chain and the environment. Other Members, by contrast, have emphasized the potential benefits of the production of and trade in genetically modified organisms. This debate has raised a range of issues, and is likely to remain among the most controversial questions in international trade law and policy for the foreseeable future.

Issues of biosafety and trade in genetically modified organisms reach across various areas of the WTO's work-program. They may arise under the SPS Agreement, which covers certain national measures protecting human, animal or plant life or health from risks relating to genetically modified organisms. They may arise under the TBT Agreement, which covers national technical regulations and standards, including those requiring the labeling of genetically modified organisms. They may arise under the TRIPS Agreement, which requires WTO Members to offer intellectual property protection over certain plant genetic resources. They may arise under the Agreement on Agriculture, which addresses both market access and non-trade concerns arising from trade in agricultural products. And issues of biosafety may arise under the GATT, which will govern trade in genetically modified organisms to the extent that its obligations do not conflict with those in other WTO agreements.[168]

[165] *See SCM Agreement*, Article 31.The green-light exemption was not extended due to the uncertainty surrounding the period prior and subsequent to the failed Seattle Ministerial Conference, as well as opposition by many but not all developing countries. *See* Minutes of the November 1–2, 1999, Meeting of the Committee on Subsidies and Countervailing Measures, WTO Doc. G/SCM/M/24.

[166] *See, e.g.,* the 1992 European Commission Proposal for a Council Directive, *Introducing a Tax on Carbon Dioxide Emissions and Energy*, COM (92) 226 final, at 21 (1992), noting that forests are CO_2 sinks since they absorb CO_2 via photosynthesis and thus decrease the greenhouse effect.

[167] *See Framework Convention on Climate Change*, Art. 4(2)(a), U.N. Doc. FCCC/1992 (1992), *reprinted in* 31 I.L.M. 854 (1992) (entered into force Mar. 21, 1994); *Kyoto Protocol*, Art. 2(1)(a)(ii), UN Doc. FCCC/CP/1997/L.7/Add.1 (1997), *reprinted in* 37 I.L.M. 22 (1998). For a discussion, *see* Hyung-Jin Kim, *Reflections on the Green Light Subsidy for Environmental Purposes*, 33 JOURNAL OF WORLD TRADE 167–175 (1999).

[168] *See Interpretative Note to Annex 1A of the WTO Agreement.*

Biosafety has also proved an important issue in other international forums, including the UN Food and Agriculture Organization, the Codex Alimentarius Commission, the Organization for Economic Cooperation and Development ("OECD"), and the UN Conference on Trade and Development ("UNCTAD"). Among the most comprehensive frameworks to address issues arising from trade in certain types of genetically modified organisms is a protocol to the Convention on Biological Diversity, the Cartagena Protocol on Biosafety.[169]

The Cartagena Protocol on Biosafety seeks to protect biological diversity from the potential risks posed by certain genetically modified organisms resulting from modern biotechnology (defined in the Protocol as "living modified organisms" or "LMOs"). It establishes an "advanced informed agreement" ("AIA") procedure to ensure that countries are provided with the information necessary to make informed decisions before agreeing to the import of such organisms into their territory. In both its preamble and its operative provisions, the Protocol refers to a precautionary approach and reaffirms the language of Principle 15 of the Rio Declaration. The Protocol also establishes a Biosafety Clearinghouse to facilitate the exchange of information on living modified organisms and to assist countries to implement the Protocol.

Potential for tension between the Protocol and the WTO regime (particularly the SPS Agreement) arises from a number of sources. First, the Protocol and the SPS Agreement adopt somewhat different approaches to risk assessment: whereas the Protocol explicitly permits importing countries to require exporters to carry out risk assessments,[170] the SPS Agreement makes no such explicit provision. Second, the Protocol and the SPS Agreement use different language regarding decisions under conditions of scientific uncertainty: whereas the Protocol explicitly states that countries may decide to prohibit the import of certain LMOs,[171] the SPS Agreement in Article 5.7 only allows Members to "provisionally adopt sanitary or phytosanitary measures", and requires them to "review the sanitary or phytosanitary measure accordingly within a reasonable period of time". Third, issues may arise over measures regarding a specific category of LMOs (known as LMOs "intended for direct use as food or feed, or for processing"): the Protocol does not explicitly note the right of countries to prohibit the import of such LMOs, but rather states that they may make "a final decision regarding domestic use, including placing on the market, of a living modified organism".[172] In the event of a trade ban, an exporting Member may conceivably challenge the measure under the SPS Agreement's requirements, which would require an examination of the provisions of, and relationship between, the two agreements. Finally, in the event of a dispute regarding trade in LMOs, a question may arise about whether the Convention on Biological Diversity or the WTO is the appropriate forum for addressing the dispute.

There are a number of possible approaches to reducing these potential tensions. Could, for example, the Protocol be considered as an international standard for the purposes of WTO agreements? The SPS Agreement in Article 3.1 states that Members are generally to base their sanitary or phytosanitary measures on international standards, in order "to harmonize sanitary and phytosanitary measures on as wide a basis as possible."[173]

[169] The Cartagena Protocol on Biosafety (adopted January 29, 2000), is available on the website of the Convention on Biological Diversity http://www.biodiv.org/biosafety/protocol.asp.

[170] *Id.,* Article 15.

[171] *Id.,* Article 10.3.

[172] *Id.,* Article 11.1.

[173] Use of the Biosafety Protocol as an international standard for the purposes of the SPS Agreement would require it to fall within the definition of "international standards, guidelines and recommendations" included in Annex A of the SPS Agreement.

A second approach might be for each agreement to be interpreted in light of the other, in accordance with the international law presumption against conflicts.[174] In *United States—Shrimp*, for example, the Appellate Body interpreted the term "natural resources" in light of obligations imposed by international environmental law. Third, "fact-finding" under the Protocol could be used by panels if called upon to determine whether scientific evidence is insufficient within the meaning of Article 5.7 of the SPS Agreement.[175] Finally, one author has suggested that if both parties to a WTO dispute are signatories of the Protocol, the theory could be followed according to which an "*inter se*" agreement between WTO Members would supersede, in their mutual relationship, their WTO obligations.[176]

G. Agriculture

Agriculture is intimately related to many aspects of the human and natural world. In many countries it affords income and livelihoods, provides food and sustenance, supports social values and culture, and is deeply linked to environmental resources such as the earth, water, air and ecosystems. Consequently, liberalizing trade in agricultural products, and moving to a more market-based international agricultural system, raises a constellation of non-trade issues for many WTO Members, including poverty alleviation, rural development, food security, food safety, consumer protection, animal welfare, and conservation of the environment.

Reducing barriers to trade in agricultural products is one of the goals of the WTO's Agreement on Agriculture. The international trade system gives trade in agricultural products a special status, allowing protection of domestic agricultural producers and export subsidization to a greater extent than in other domains.[177] The Agreement on Agriculture initiates a process of successive reductions of protection and subsidization, and provides a framework for future commitments.[178] The three main areas of commitments are market access (import limitations and high tariffs), domestic support, and export subsidies.

The Agreement on Agriculture includes reference to the importance of non-trade concerns including the environment. The preamble states that commitments made under the reform program should have regard for the environment,[179] and Article 20 requires negotiations for further liberalization commitments to take account of non-trade concerns. Non-trade concerns, including protection of the environment, ensured that agriculture was a contentious element of the Fourth Ministerial Declaration, which calls for a phasing out of export subsidies for agricultural products.

[174] *See* Barbara Eggers and Ruth MacKenzie, *The Cartagena Protocol on Biosafety*, 3 JOURNAL OF INTERNATIONAL ENVIRONMENTAL LAW, 525, 541 (2000) for an excellent discussion of the relationship between the two agreements.

[175] *Id.* at 542.

[176] *See* Joost Pauwelyn, *The Role of Public International Law in the WTO: How Far Can We Go?*, 95 AMERICAN JOURNAL OF INTERNATIONAL LAW 535, 547–550 (2001).

[177] *See* Chapter 6 of this work addressing the Agreement on Agriculture. For an overview of the history of protection of agriculture under GATT, *see* William J. Davey, *The Rules for Agricultural Trade in GATT*, in GATT AND TRADE LIBERALIZATION IN AGRICULTURE 4–55 (Masayosi Homna, Ako Shimizu & Hideki Funatsu eds., 1993).

[178] In some areas, the Agreement establishes a more stringent regime for agricultural products than is applied by other WTO agreements to non-agricultural products; the agreement requires Members to bind *all* tariffs, and requires quantitative commitments on the reduction of domestic as well as export subsidies. *See* BHAGIRATH LAL DAS. THE WORLD TRADE ORGANIZATION—A GUIDE TO THE FRAMEWORK FOR INTERNATIONAL TRADE 227 (1999).

[179] *Agreement on Agriculture*, ¶ 6 of the Preamble.

Improving market access for agricultural products requires the reduction of the unusually high tariffs in this sector, as well as the reduction of tariff escalation. SPS measures are also important: while food safety concerns are high on the political agenda in many developed countries, many developing country producers are finding it difficult and costly to comply with the high SPS standards imposed by developed countries. However, as the three cases so far decided under the SPS Agreement have demonstrated, market access issues linked to SPS measures are very contentious even among developed countries.[180] Reconciling improved market access with robust national food safety policies and environmental management will require increased transparency in the promulgation of health standards, a reasonable degree of harmonization of international standards (which must, nevertheless, leave enough space for countries to establish the risk management policies they deem most appropriate), and financial and technical assistance to developing countries.

Another element of the Agreement on Agriculture is the removal of production subsidies and other forms of support linked to production. In some cases, subsidies encourage overproduction and thus exacerbate many of the ecological problems linked to agricultural production, such as excessive use of water resources for irrigation and of inputs like pesticides and fertilizers.[181] Their reduction is thus a shared area of interest for trade and sustainable development advocates. By contrast, subsidies not related to production (known as "decoupled support" to agricultural producers) are afforded some protection under WTO law, as are certain payments linked to research and structural adjustment programs (green box)[182] and, in a less privileged manner, payments for production limiting programs (blue box).[183]

An emerging concept in the subsidies debate is "multifunctionality"—the notion that agriculture not only produces food, but fulfills a variety of other purposes, such as protecting biodiversity, conserving soil, ensuring self-sufficiency and national food security and preserving landscapes.[184] Some countries would like to see these benefits paid for by the State and be exempted from international trade rules by placing such payments in the "green box" (which would make these subsidies non-countervailable); other countries reject these considerations as another form of protectionism.

The environmental implications from a reduction of export subsidies are likely to follow the same pattern as the elimination of domestic support. A reduction in export

[180] For a summary of the SPS cases, *see supra* Part II(B)(3).

[181] *Trade and Environment in the GATT/WTO*, Background Note by the Secretariat (1999), WTO Special Studies No. 4, Annex I, ¶ 99.

[182] Annex 2 of the Agreement on Agriculture provides a very detailed set of criteria for determining which subsidies are exempt from the requirements of the Agreement. One of the fundamental requirements common to all green-box subsidies, however, is that they may not have any, or at most minimal, trade distortion effects or effects on production. Article 13 of the Agreement stipulates that such subsidies are non-countervailable and may not be challenged under WTO dispute settlement procedures.

[183] Unlike measures falling into the "green box", these measures are not completely exempt from challenge in the WTO dispute resolution system, nor are they exempt from countervailing measures, however, WTO Members are enjoined to exercise "due restraint" in the initiation of countervailing investigations against blue box subsidies, which fall under Article 6.5 of the Agreement on Agriculture. *See Agreement on Agriculture*, Article 13.

[184] Yet another claimed benefit is the preservation of a traditional way of life, an aspect particularly difficult to capture in economic terms. For a summary of these and related claims, *see* B. Wilson and Peter Finkle, *Is Agriculture Different? Another Round in the Battle Between Theory and Practice*, in AGRICULTURAL TRADE: DOMESTIC PRESSURES AND INTERNATIONAL TENSIONS 17 (Grace Skogstad and Andrew F. Cooper eds., 1990). For a useful clarification of the terms "multifunctionality" and "non-trade concerns" and their relation, *see* Fiona Smith, "*Multifunctionality*" *and* "*Non-trade Concerns*" *in the Agriculture Negotiations*, 3 JOURNAL OF INTERNATIONAL ENVIRONMENTAL LAW 707–713 (2000).

subsidies has the potential to decrease the incentives for overproduction and decrease the concomitant strain on the environment. Moreover, by reducing the dumping of agricultural products on world markets and artificial price wars, the reduction of export subsidies may contribute to ensuring viable agricultural markets in developing countries and to avoiding some of the social and ecological problems associated with the decline of rural communities in these countries.

H. Services

Many services are linked closely to environmental resources. Some services—such as waste treatment, sewage, and sanitation services—play an important role in mitigating humanity's impact on the environment. Other services—such as mining, transportation and energy services—can have negative consequences for the environment, and must be carefully regulated to ensure a balance between environmental and other objectives.

The relationship between services and the environment has been on the WTO agenda since the conclusion of the Uruguay Round, and discussed in the negotiations carried out under the General Agreement on Trade in Services ("GATS"). During the Uruguay Round, a number of governments expressed concern about whether the general exceptions contained in Article XIV of the GATS are sufficient to address the agreement's environmental implications. At the first meeting of the Council for Trade in Services, a Ministerial Declaration on Trade in Services was adopted acknowledging that "measures necessary to protect the environment may conflict with the provisions of the Agreement" and noting that "since measures necessary to protect the environment typically have as their objective the protection of human, animal or plant life or health, it is not clear that there is a need to provide for more than is contained in paragraph (b) of Article XIV."[185]

WTO Members also agreed that the Committee on Trade and Environment should examine the relationship between services trade and the environment in two main areas. The first area for examination is whether any modification of Article XIV is required to protect the environment. The CTE was required to "report, with recommendations if any, on the relationship between services trade and the environment including the issue of sustainable development".[186] The second area for examination is the "relevance of inter-governmental agreements on the environment and their relationship to the Agreement. . . "[187]

Progress at the CTE on the issue of services trade and the environment has been relatively slow. The 1996 CTE Singapore Report stated that the GATS is a new agreement which is still evolving and includes concepts which are not contained in the GATT. It stated that preliminary discussions have not led to the identification of environmental protection measures that would not be adequately covered by Article XIV. However, it acknowledged that further work by the CTE on this item "is necessary before it could be in a position to draw any conclusions on the relationship between services trade and the environment, or on the relevance of inter-governmental agreements on the environment and their relationship to the GATS in the context of sustainable development."[188]

Since the Singapore meeting WTO Members have discussed the potential environmental benefits of liberalizing trade in environmental services, but little emphasis has been given to the potential environmental effects of liberalizing trade in other services

sectors such as mining, transportation or tourism. Recently, some WTO Members have called for a more comprehensive assessment of the GATS to examine the potential impacts of liberalization on the standards of services provided, especially to populations that are poor, vulnerable or socially disadvantaged.[189] It is hoped that such an assessment if undertaken would also consider the potential environmental impacts of the GATS, both positive and negative.

In such an assessment, at least two areas of law and policy stand out as requiring further examination. One is the possible environmental implications of future negotiations under Article VI. Article VI(4) includes a mandate to negotiate additional disciplines on certain national regulations to ensure they do not "constitute unnecessary barriers to trade in services" and are "not more burdensome than necessary to ensure the quality of the service". At the time of writing the scope and content of these proposed future obligations remain undefined. What, in practice, would be considered "more burdensome than necessary"? Is the "quality of services" the only legitimate objective of such measures, and should other non-trade justifications be considered? If so, how could this be achieved?

A second area for further inquiry is the relationship between GATS and MEA rules. Although these linkages remain largely unexplored, it is possible that both services liberalization and GATS disciplines may influence the successful implementation of MEAs. For example, liberalization of waste management services may affect the transboundary movement and disposal of hazardous waste covered by the Basel Convention; liberalization of tourism or mining services may affect the conservation of biodiversity as required by the Convention on Biological Diversity; and liberalization of energy or transport services may affect global warming, the subject of the UN Framework Convention on Climate Change and its Kyoto Protocol. Similarly, GATS disciplines—including those negotiated under Article VI—may define and delimit the domestic legal and policy measures available to implement MEAs. To ensure that MEAs and the GATS are mutually supportive, WTO Members may wish to examine these and other areas of overlap as part of the mandated assessment of the GATS, with input from national environmental policy-makers and Secretariats of the MEAs.[190]

I. Intellectual Property

Intellectual property protection affects the process of innovation, the development and use of technology, and the patterns of economic development, and as a result may have significant implications for environment and sustainable development. Forms of intellectual property protection, such as patents, may influence the development of new environmentally friendly (or harmful) technologies; and intellectual property protection over plant varieties may influence the development of crops, with implications for agriculture, food security and biodiversity. The importance of the relationship between intellectual property rights and the environment is reflected in Item 8 of the CTE's agenda (see above).

Among the main international agreements establishing minimum standards for the protection and enforcement of intellectual property rights is the WTO TRIPS Agreement. Arising from the TRIPS Agreement is a range of issues concerning the relationship

[189] *See Communication of Cuba, Dominican Republic, Haiti, India, Kenya, Pakistan, Peru, Uganda, Venezuela and Zimbabwe*, WTO Doc. S/CSS/W/114 (October 9, 2001).

[190] Discussion on these issues is also underway in the CTE, where under Agenda Item 9, the WTO Secretariat has been asked to conduct a literature survey on the environmental impacts of services liberalization with a focus on tourism, transport, energy and the environmental services sector. While these efforts are to be welcomed, it is crucial to conduct a comprehensive assessment of trade in services and its liberalization in the Council on Trade in Services ("CTS"), the main services negotiating body, to ensure that any results are adequately fed into the negotiating process.

between intellectual property rights and the environment. Prominent among these environmental issues are the development, transfer and dissemination of new technologies and products; and the relationship between the TRIPS Agreement and the Convention on Biological Diversity.

The development, transfer and dissemination of technology is widely recognized as a critical determinant of sustainable development. Agenda 21 affirms that ". . . access to and transfer of environmentally-sound technology are essential requirements for sustainable development".[191] Technology transfer is an important aspect of the TRIPS Agreement. Article 7, entitled *Objectives,* states that "the protection and enforcement of intellectual property rights should contribute to the . . . transfer and dissemination of technology, to the mutual advantage of producers and users of technological knowledge and in a manner conducive to social and economic welfare, and to a balance of rights and obligations". Article 8, entitled *Principles,* notes that abuse of intellectual property rights may adversely affect the international transfer of technology.

These general provisions are complemented by specific obligations to assist least-developed countries. Article 66.2 requires developed country Members to "provide incentives to enterprises and institutions in their territories for the purpose of promoting and encouraging technology transfer to least-developed country Members in order to enable them to create a sound and viable technological base". This article reflects that, unless the price of the technology can be brought within manageable limits, the cost of technology may impose a burden on the development of least-developed countries.

Despite these references, many developing countries remain unconvinced that the Agreement's substantive provisions in fact promote technology transfer.[192] Empirically the relationship between intellectual property rights and technology transfer remains unclear.[193] To explore the relationship between technology transfer and other aspects of the WTO's mandate, WTO Members have established a Working Group under the auspices of the General Council to examine the relationship between trade and transfer of technology, and of "any possible recommendations that might be taken within the mandate of the WTO to increase flows of technology to developing countries."[194]

Ensuring a positive relationship between intellectual property and technology transfer would be helped by more targeted analyses of the relationship between trade rules and technology transfer in specific sectors and regions. One such area that WTO Members may wish to consider is the relationship between relevant WTO processes (including the TRIPS Council, CTE and the Working Group on Technology Transfer), and discussions in the international environmental system. Recent UNEP-sponsored meetings, for example, have noted the potential for synergies in the implementation of the TRIPS Agreement's technology transfer obligations, and the technology transfer provisions in selected MEAs.[195] Similarly, technology transfer is likely to remain an important issue in

[191] *Agenda* 21, ¶ 34.7. Agenda 21 is available on the website of the United Nations Division for Sustainable Development http://www.un.org/esa/sustdev/documents/agenda21/english/agenda21toc.htm. It was adopted at the United Nations Conference on Environment and Development, held in Rio de Janeiro from June 3–14, 1993.

[193] *See, generally, UNCTAD, The TRIPS Agreement and Developing Countries,* UNCTAD/ITE/1 (1996); and UNCTAD, World Investment Report 1997: Transnational Corporations, Market Structure and Competition Policy(1997).

[194] *WTO Fourth Ministerial Declaration, supra* note 89, ¶ 37.

[195] *See Chairman's Summary*, UNEP Meeting on Enhancing Synergies and Mutual Supportiveness of Multilateral Environmental Agreements and the World Trade Organization, October 23, 2001, www.unep.ch, *stating*, in relation to technology transfer, that "there are significant synergies to be realized in the implementation of these measures in MEAs and the WTO, including in relation to technology transfer."

the implementation of Agenda 21, and at future meetings in the Rio process. To maximize their benefits from future negotiations, WTO Members wishing to promote technology transfer may consider exploring the linkages between technology transfer issues as they arise on the WTO's agenda, and in international environmental forums.

A second area of law and policy where intellectual property rights and the environment intersect is the relationship between the TRIPS Agreement and the Convention on Biological Diversity. The importance of this relationship was highlighted in the WTO's Fourth Ministerial Declaration, which called on the TRIPS Council to "examine, *inter alia*, the relationship between the TRIPS Agreement and the Convention on Biological Diversity" ("CBD").[196] The TRIPS Agreement includes a number of forms of intellectual property protection of relevance to the conservation of biodiversity. Patents and *sui generis systems* for plant variety protection are relevant to the implementation of the CBD because they play a key role in defining what technologies are developed and transferred, how genetic resources are conserved and used, and how the benefits of use are shared (including with traditional communities).

The conservation and use of genetic resources may be affected by intellectual property rights in a number of ways. On one hand, intellectual property rights may provide an incentive for the conservation of certain kinds of genetic resources. For example, patents or geographical indications may provide a financial incentive to conserve commercially valuable plant or animal species. On the other hand, there is concern that intellectual property rights may also operate in tension with attempts to conserve biodiversity. For example, some governments and non-governmental organizations are concerned about the patenting by Northern companies of genetic resources taken from countries of the South. In the TRIPS Council, a number of developing countries have raised concern that intellectual property rights may affect the objectives of the CBD. Brazil, for example, has stated that "... patents over a Member's genetic resource, but granted outside its territory raises the issue of potential conflict with the principle of the sovereignty of the Contracting Parties of the CBD over their own genetic resources" and that "amending Article 27.3(b) of TRIPs to accommodate principles of the CBD will be a necessary outcome of the review of that Article. Failure to clarify this relationship may turn out to be detrimental to both instruments."[197] Other WTO Members, by contrast, have argued that changing patent procedures is unnecessary, and that a more effective system of contracts between the users and custodians of genetic resources would address the concerns of developing countries.[198] The need for international cooperation to resolve issues of this type is recognized in the Convention on Biological Diversity, which states that:

> The Contracting Parties, recognizing that patents and other intellectual property rights may have an influence on the implementation of this Convention, shall cooperate in this regard subject to national legislation and international law in order to ensure that such rights are supportive of and do not run counter to its objectives.[199]

[196] *See WTO Fourth Ministerial Declaration, supra* note 89, ¶ 19. *See also,* www.wipo.org for an overview of the work of the World Intellectual Property Organization's ("WIPO") Intergovernmental Committee on Genetic Resources, Traditional Knowledge and Folklore, which is discussing models for intellectual property-related provisions in access contracts, the possibility of a requirement for the disclosure of origin of biological resources in patent applications, and methods for defensive and positive *sui generis* protection of traditional knowledge.

[197] *See Communication from Brazil*, WTO Doc. IP/C/W/228, ¶¶ 21–22 (November 24, 2000).

[198] *See Communication from the United States*, WTO Doc. IP/C/W/209, at 5–6 (October 3, 2000).

[199] Article 16.5, *Convention on Biological Diversity*, June 5, 1992, UNEP/Bio.Div./N7-INC5/4; 31 I.L.M. 818 (1992).

Closely related to issues of biodiversity protection are questions concerning the relationship between intellectual property rights and the protection of traditional knowledge. Article 8(j) of the CBD requires Parties to "respect, preserve and maintain knowledge, innovations and practices of indigenous and local communities embodying traditional lifestyles relevant for the conservation and sustainable use of biological diversity". Again, the relationship between intellectual property rights and the protection of traditional knowledge is complex. On one hand, IPRs may provide some local and traditional communities with a tool to protect their traditional knowledge. On the other hand, western-style intellectual property systems may prove too expensive for poor communities, and fail to recognize community rights, as opposed to individual rights. There is also the additional concern of free riding on, and misappropriation of, knowledge across national borders. Some developing countries have noted in the TRIPS Council that innovations based on the traditional knowledge of communities in the South are patented in the North without any effort to share the benefits with the source communities or countries.[200] The importance of addressing these issues was emphasized in the Doha Ministerial Declaration, which called on the CTE to "examine, *inter alia*, the relationship between the TRIPS Agreement and the Convention on Biological Diversity, the protection of traditional knowledge and folklore".[201]

These issues are likely to remain a subject of controversy in the WTO's discussions of intellectual property. Making progress will require a well-defined agenda and a clear division of competence between the relevant reviews of the TRIPS Agreement (including the Article 27.3(b) and Article 71.1 reviews), among relevant WTO bodies (including the TRIPS Council, CTE, and Working Group on Technology Transfer), and between the WTO other international bodies such as the CBD, the World Intellectual Property Organization and UNCTAD.

J. Multilateral Environmental Agreements ("MEAs")

MEAs are agreements among states to address shared environmental problems. The importance and scope of MEAs has increased dramatically as the international community struggles to address growing global environmental problems. They provide the preferred way to deal with transboundary and global environmental problems such as climate change, biodiversity loss and ozone depletion. From an economic perspective, MEAs may also help reduce unnecessary economic and trade effects by harmonizing measures and preventing a proliferation of different national rules. Compared to unilateral measures, they also embody cooperative approaches that reflect an equitable sharing of the benefits and burdens of environmental protection.

The policies and rules embodied in MEAs and the WTO Agreement intersect in a number of ways. They apply to many of the same issues, products and parties, albeit from different perspectives. Individual MEAs and WTO agreements may simultaneously touch on issues of scientific uncertainty and precaution, intellectual property protection, biodiversity protection, and the transboundary movement of living modified organisms, endangered species, invasive species, and hazardous waste, to name a few issues. In some cases, these linkages may give rise to unrealized synergies and in others to unresolved tensions. Identifying ways to realize synergies, resolve tensions and maximize the supportiveness of these rapidly evolving regimes would make an important contribution to a

[200] *See, e.g., Communication from Brazil, supra* note 197.
[201] *Ministerial Declaration, supra* note 89, ¶ 19.

coherent intellectual architecture for sustainable development. One of the primary sets of linkages—those arising out of the relationship between trade-related measures in MEAs and WTO rules—is addressed in this section.

Trade-related measures are used in over twenty MEAs including those addressing the transboundary movement of hazardous waste (Basel Convention on Transboundary Movements of Hazardous Wastes and their Disposal),[202] genetically modified organisms (Cartagena Protocol on Biosafety),[203] ozone depleting substances (Montreal Protocol on Substances that Deplete the Ozone Layer),[204] persistent organic pollutants (Stockholm Convention on Persistent Organic Pollutants),[205] and endangered species (Convention on International Trade in Endangered Species of Wild Flora and Fauna (CITES)).[206] Among other things, trade-related measures serve to regulate trade in environmentally harmful products, remove the economic incentives that encourage environmental destruction, ensure compliance with an MEA's provisions, and encourage broad country participation, thereby reducing the potential for non-parties to undermine a treaty's objectives. (See Box 1).

Box 1 Trade-related measures serve a variety of purposes. They may:

- *Ban transboundary movement*: Where the threat posed by a product or substance to the environment is significant, trade-related measures may prohibit trade in the product altogether. The Basel Convention, for example, bans trade under conditions where the importing country lacks the capacity to manage the waste in an environmentally sound manner;
- *Remove market incentives that promote environmental harm:* In some cases, access to foreign markets through trade provides an incentive for environmentally harmful activity. Trade-related measures may reduce or remove these incentives. CITES, for example, bans trade in endangered species thereby removing the economic incentive to kill them;
- *Encourage compliance:* As is the case with the non-compliance with WTO obligations, some MEAs permit targeted trade-related measures as a response to non-compliance. The Montreal Protocol, for example, allows the meeting of the parties to use trade-related measures to address non-compliance by a party to the Protocol; and
- *Promote broad participation:* In relation to global environmental problems, broad membership may be critical to the success of an MEA. Trade-related measures may be used to create incentives for non-parties to join the agreement, or to establish a comparable bilateral, multilateral or regional agreement. Bans on trade with non-parties remove incentives to remain outside the Montreal Protocol and have increased its coverage, and prevented its goals from being undermined by the actions of non-parties.

[205] *Reprinted in* 40 I.L.M. 531 (2001). The Convention has not yet entered into force but is being applied on a voluntary basis in the meantime.
[206] *Convention on Trade in Endangered Species of Flora and Fauna* ("CITES"), March 3, 1973, 993 U.N.T.S. 243, 12 I.L.M. 1085 (1973), in force since July 1, 1975.

The relationship between MEA trade-related measures and WTO rules was identified by WTO Members at the end of the Uruguay Round in Items 1 and 5 of the CTE's mandate.[207] This mandate was augmented at the WTO's Fourth Ministerial where Members agreed to negotiations on the "relationship between existing WTO rules and specific trade obligations set out in multilateral environmental agreements (MEAs)".[208]

Although there has been no formal WTO dispute directly involving an MEA, the potential for a WTO dispute has arguably increased as a result of the decision by some States not to join key conventions such as the Convention on Biological Diversity, the Cartagena Protocol on Biosafety, the UN Convention on the Law of the Sea, and the Kyoto Protocol. While the WTO has stated a preference for multilateral solutions to environmental problems, it remains unclear whether trade-related measures involving non-parties to an MEA are consistent with the WTO.[209] Particularly at risk are trade-related measures that apply to non-parties to an MEA, as these are more likely to contravene the WTO's non-discrimination requirements, and would likely fall within the ambit of the WTO's (rather than an MEA's) dispute settlement system.

Clarifying the relationship between trade-related measures in MEAs and WTO rules is an important step towards promoting a coherent framework of international rules and institutions. WTO negotiations under paragraph 31(i) of the Doha Ministerial Declaration will likely raise some complex issues regarding what constitutes "specific trade obligations" and an "MEA" for the purposes of the negotiating mandate. Developing countries may seek to keep the mandate narrow by limiting the scope of these terms; while the proponents of the negotiations seem likely to seek to broaden the mandate to protect not only the trade-related provisions embodied in the MEAs, but also national measures taken pursuant to them. Both the *form* of any outcome to the negotiations (e.g., ranging from a simple political declaration to a legally binding amendment of WTO rules) as well its *content* will likely be hotly debated by WTO Members. As they continue discussions in the CTE, WTO Members can take note of and build on past statements by relevant WTO bodies, including the Ministerial Council and relevant Committees. Among other things, they could conceivably seek to build on the CTE's 1996 joint statement that "if a dispute arises between WTO members, Parties to an MEA, over the use of trade measures they are applying between themselves pursuant to the MEA, they should consider trying to resolve it through the dispute settlement mechanisms available under the MEA."[210]

[207] *See Decision on Trade and Environment, supra* note 88 and accompanying text.

[208] WTO *Fourth Ministerial Declaration, supra* note 89, ¶ 31(i).

[209] Non-parties to an MEA may file a complaint in the WTO. In such a case, the WTO would be required to hear the dispute and to apply the WTO rules. Recent WTO cases have interpreted Article XX—especially its chapeau—as restricting the extent to which countries may use trade measures to pressure other countries to change their environmental policies. The Appellate Body in *United States—Shrimp, supra* note 1, stated that, "the policy goal of a measure at issue cannot provide its rationale or justification under the standards of the chapeau of Article XX." (¶ 149). In *United States—Shrimp 21.5*, the panel stated:

> The Appellate Body Report [in the *Shrimp* case] found that, while a WTO Member may not impose on exporting Members to apply the same standards of environmental protection as those it applies itself, this Member may legitimately require, as a condition of access of certain products to its market, that exporting countries commit themselves to a regulatory program deemed comparable to its own. . . .

While these statements may go some way in creating policy space for certain MEA measures that are aimed at non-Parties, the situation remains unclear.

[210] Committee on Trade and Environment, *supra* note 188, ¶ 178.

VI. Organizational Issues

Many of the legal and policy issues such as those discussed above are created and ultimately resolved by organizations, and other institutional arrangements. Organizations perform the function of developing, interpreting and executing rules to achieve agreed objectives. Where more than one body is responsible for defining objectives and related laws and policies in a particular arena—such as trade and the environment—then an examination of organizational or institutional linkages and issues is required.

Organizational linkages exist at a number of levels. At the national level, relationships exist among trade and non-trade ministries. At the international level, relationships exist among formal bodies of trade and non-trade international organizations. They also exist among the secretariats of international organizations. This section examines a selection of these institutional relationships, focusing on those that are particularly important for ensuring that the multilateral trading system is able to maximize its contribution to sustainable development.

A. Assessment

Integrated sustainability assessments provide a powerful tool for examining the material effects of trade liberalization on economic, social and environmental systems; for exploring the legal and policy implications of trade rules for other sub-systems of law and policy at the local, national, regional and international level; and for identifying opportunities to increase the cooperation of institutions at and between all levels. According to UNEP, "an integrated assessment considers the economic, environmental and social impacts of trade measures, the linkages between these effects, and aims to build upon this analysis by identifying ways in which the negative consequences can be avoided or mitigated, and ways in which positive effects can be enhanced."[211]

Integrated assessments may be conducted prior to, concurrently with, or subsequent to trade negotiations. They can focus on implications for a particular sector (such as agriculture, forestry, fisheries or mining), across a particular country or geographic region, or for a particular social or environmental structure or system. The ultimate goal of integrated assessments is to maximize the net benefits of trade and trade liberalization, by enabling countries to design and implement integrated policies that minimize associated social and environmental problems.

The importance of assessing the impacts of trade rules and liberalization was recognized in the WTO's Fourth Ministerial Declaration, which notes the role of technical assistance and capacity building in the field of trade and the environment, and encourages "expertise and experience [to] be shared with Members wishing to perform environmental reviews at the national level".[212] Such expertise and experience has been gained through recent national level assessments conducted in a number of countries. These studies, conducted with the assistance of UNEP's methodology for integrated assessment of trade-related policies, took place in countries including Argentina, China, Ecuador, Nigeria, Senegal and Tanzania, and in relation to sectors including agriculture, fisheries and forestry. According to UNEP's summary report, the studies revealed significant positive and negative linkages between trade liberalization, society and the environment, and underpin the importance of integrated policy-making.[213]

[212] WTO *Fourth Ministerial Declaration, supra* note 89, ¶ 33.

[213] UNEP, *Integrated Assessment of Trade and Trade-Related Policies: UNEP Country Projects-Round II, A Synthesis Report* (2002).

Just as there is value in assessment at the national level, so there is also value in the collective assessment of trade rules and policies at the multilateral level. Assessments, of one form or another, are mandated in the provisions of a number of WTO agreements. GATS Article XIX, for example, calls on future negotiation of specific commitments to be guided by negotiation guidelines which themselves are prepared in light of "an assessment of trade in services in overall terms and on a sectoral basis with references to the objectives of this Agreement." WTO Members have subsequently agreed that the "Council for Trade in Services in Special Sessions shall continue to carry out an assessment of trade in services in overall terms and on a sectoral basis . . . and negotiations shall be adjusted in the light of the results of the assessment."[214] Similarly, in relation to the Agreement on Agriculture, WTO Members agreed to continue negotiations, taking into account "the experience . . . from implementing reduction commitments; the effects of the reduction commitments on world trade in agriculture; non-trade concerns, special and differential treatment to developing country Members, and the objective to establish a fair and market-oriented agricultural trading system . . . ".[215] These assessments provide WTO Members with a valuable opportunity to examine the effects of existing policies, and to design future trade policies to maximize the welfare of WTO Member countries and their citizens.

As with assessment of the existing agreements, assessment of proposed negotiations (for example, on investment, government procurement and market access for non-agricultural products) could help to refine negotiating positions and to ensure that future negotiations maximize their contribution to WTO Members' sustainable development objectives. In the longer term, WTO Members may wish to consider ways to institutionalize procedures for assessment, in order to examine more systematically the impacts of past liberalization, and to ensure that proposed future liberalization supports the WTO preamble's commitment to ensuring that trade occurs in "accordance with the objective of sustainable development".

B. Transparency and Public Participation

The CTE is mandated under Item 10 of its agenda to "provide input to the relevant bodies in respect of appropriate arrangements for relations with inter-governmental and non-governmental organizations referred to in Article V of the WTO".[216]

To what extent should the public have access to and participate in WTO processes? On one hand, it is clear that the WTO is an intergovernmental organization and so its decisions should be made by Member governments on behalf of their citizens. On the other hand, WTO processes increasingly reach beyond traditional trade issues (such as reduction of tariff barriers) into the domestic policymaking territory of national parliaments. Many NGOs, and some governments, have therefore argued that greater openness and transparency is required to ensure that WTO decision-making is legitimate and accountable, and reflects an appropriate balance between trade and other goals, including the need to protect the environment. Indeed, NGOs representing many different perspectives—environment, development, consumer, gender, indigenous and others—have claimed that

[214] *See, Guidelines and Procedures for the Negotiation on Trade in Services*, adopted by the Special Session of the Council for Trade in Services on March 28, 2001, paragraph 14, (S/L/93). *See also* Communication from Cuba, Dominican Republic, Haiti, India, Kenya, Pakistan, Peru, Uganda, Venezuela and Zimbabwe to the Council for Trade in Services, *supra* note 189, calling for assessment of the economic and social impacts of the GATS.

[216] WTO *Decision on Trade and Environment*, *supra* note 88.

the interests of citizens could be better reflected in WTO decision-making procedures, and have thus demanded greater opportunities for "public participation".

The WTO has taken some steps towards improving transparency and public participation. The WTO's General Council is empowered by Article V of the WTO Agreement to make arrangements with other organizations.[217] In 1996, the General Council adopted Guidelines for Arrangements on Relations with Non-Governmental Organizations, which recognized the role of NGOs in the relationship between the WTO and the broader public, and agreed to improve transparency and develop better communications with NGOs.[218] One practical implication has been that WTO documents are now derestricted earlier than in the past.[219] At the same time, however, the guidelines state "there is currently a broadly held view that it would not be possible for NGOs to be directly involved in the work of the WTO or its meetings"[220] and note that "the primary responsibility for closer consultation and cooperation [lies] at the national level."[221]

This view is repeated in the Doha Ministerial Declaration, which stresses the "intergovernmental character of the organization", while reaffirming the Members' commitment "to making the WTO's operations more transparent, including through more effective and prompt dissemination of information, and to improve dialogue with the public."[222] Despite the formal view of WTO Members, some non-state actors already participate indirectly in WTO dispute settlement proceedings. For example, governments often initiate disputes in close collaboration with—and frequently at the initiative of—private firms,[223] and NGOs participate in WTO-organized symposia and meetings.

Some observers claim that the real question is not whether public participation should occur, but rather in which way it should be formalized and institutionalized.[224] Calls for strengthened participation by NGOs are based on the view that NGOs can provide new perspectives, know-how and values that national governments do not adequately supply.[225] Discussions of enhanced public participation can be divided into two main

[217] Article V of the WTO Agreement, entitled "*Relations with Other Organizations*", stipulates in paragraph 1: "The General Council shall make appropriate arrangements for effective cooperation with other intergovernmental organizations that have responsibilities related to those of the WTO." Paragraph 2 authorizes the General Council to "make appropriate arrangements for consultation and cooperation with non-governmental organizations concerned with matters related to those of the WTO."

SHAFFER, *The World Trade Organization Under Challenge: Democracy and the Law and Politics of the WTO's Treatment of Trade and Environment Matters*, 25 HARV. ENVTL. L. REV. 1 (2001).

areas, which give rise to distinct but related issues: participation in WTO meetings and decision-making processes; and participation in dispute settlement.[226]

Should WTO Members decide to enhance public participation in WTO meetings, this could occur in a variety of ways. A minimal level of participation could involve passive observer status in selected WTO meetings (such as the CTE). The public could also be offered limited rights to comment after governments have made statements, as is the case in some international environmental negotiations. Whereas some other international bodies, such as the International Labor Organization, include direct participation by non-governmental actors, it seems unlikely that the WTO can or would adopt such an approach.

Participation in WTO dispute settlement raises an additional set of issues. The expansion in the coverage of trade policy culminating with the conclusion of the Uruguay Round has increased the number and scope of disputes involving trade and other policy considerations, notably health and environmental protection.[227] In these disputes, participation by affected NGOs, if desired, could provide factual information and know-how ensuring that WTO adjudication bodies have access to all relevant facts and arguments (including those not put forward by governments).[228] It could also enhance the persuasive authority of the WTO by making dispute settlement proceedings more transparent and dispelling their aura of secrecy.

The debate about public participation in dispute settlement has focused on the issue of *amicus curiae* (or friend of the court) briefs.[229] The Appellate Body has stated that both panels and the Appellate Body have the right to consider unsolicited *amicus* briefs. The Appellate Body in *United States—Shrimp* stated that "[a] panel has the discretionary authority either to accept and consider or to reject information and advice submitted to it, whether requested by a panel or not".[230] In relation to *amicus* briefs submitted to the Appellate Body, the Appellate Body has stated that Article 17.9 of the DSU gives it "legal authority . . . to accept and consider *amicus curiae* briefs in an appeal in which we find it pertinent and useful to do so."[231] It is equally within the discretion of adjudicating bodies to adopt procedures governing the submission of such briefs.[232]

Amicus briefs have met with protest from many WTO Members, who feel that participation by non-state actors changes the inter-governmental character of the organization.[233] Some developing countries have expressed concern that commercial interests from developed countries may gain an additional avenue through which to influence WTO

[226] *See* Schneider, *supra* note 225, 93–95. A third possible area related to the "public participation issue" would be to give private actors legal standing, e.g., to bring claims under the WTO Dispute Settlement. *See, e.g.,* Steve Charnovitz, *Participation of Nongovernmental Organizations in the World Trade Organization*, 17 U. PA. J. INTL. ECON. L. 331 (1996).

processes.[234] Some others have noted that, while WTO Members must fulfill procedural conditions to participate as third parties (e.g., time limits, involvement at the panel stage to be eligible as participant at the Appellate level, etc), no such requirements exist for the filing of *amicus* briefs.[235] A few other WTO Members, by contrast, support the Appellate Body's approach to *amicus* briefs. Regardless, it seems from the decision of the Appellate Body that both panels and the Appellate Body itself may accept and consider *amicus* briefs. In the absence of explicit guidance by WTO Members (for example, in the form of criteria or other procedures) it will be left to WTO adjudicating bodies to develop procedures for the use of *amicus* briefs on an *ad hoc* basis.

C. Information Exchange and Observer Status

To promote cooperation, the WTO Secretariat is regularly invited to attend the meetings of UNEP and MEA Secretariats. UNEP and MEA Secretariats may, in turn, participate as observers in selected WTO forums such as the Committee on Trade and Environment. An interest in streamlining observer status for environmental organizations in WTO bodies, as well as delays in the granting of some requests, however, gave rise at the Doha Ministerial to a mandate for negotiations on "procedures for regular information exchange between MEA Secretariats and the relevant WTO committees, and the criteria for observer status".[236]

In future negotiations, procedures for regular information exchange between MEA Secretariats and relevant WTO Committees could be developed to build on existing informal practices. WTO Members may wish to consider discussing ways to encourage the two regimes to notify each other about any work programs and projects of mutual interest; to exchange technical documents; to share draft documents for comment; to provide national legislation notified to the WTO or an MEA Secretariat upon request; to give access to relevant computerized databases; and to exchange information concerning scientific and technical experts. Criteria for observer status could also build from a baseline of existing practice by examining the membership and geographical coverage of existing observer organizations, the nature and scope of their interests and activities, and the degree of connection between these interests and activities and those of the WTO. Given the acknowledged need to improve cooperation among trade and environment institutions, criteria for observer status should presumably be negotiated with the goal of expediting requests for observer status, and providing new opportunities for environmental organizations to participate as observers in relevant WTO Committees and Councils.

When exploring ways to expand institutional cooperation between the WTO and MEA Secretariats, trade and environmental policy-makers may wish to draw on the models of cooperation developed between the WTO and other international organizations. The most informal of these are the memoranda of understanding signed between the WTO and other international agencies to promote their mutual work on technical cooperation. These agreements are often developed by individual WTO Divisions, and describe areas of intended cooperation and a framework for carrying out joint activities.

Another model of inter-institutional cooperation is the agreement between the WTO and the United Nations. This agreement involves an exchange of letters among chief

[234] *Id.*

[235] *See* Daniel Pruzin, *Key WTO Members Score Appellate Body for its Decision to Accept Amicus Briefs*, 17 Int'l Trade Rep. (BNA), No. 24, at 924 (June 15, 2000).

[236] *WTO Ministerial Declaration, supra* note 89, ¶ 31(ii).

executive officers, and reflects the pre-existing relationship of cooperation between the GATT and the United Nations. While it is still relatively informal, this model has provided a useful basis for cooperation between the WTO and UN organizations, especially UNCTAD. Cooperation with UNCTAD has included exchange of information, reciprocal representation in accordance with decisions of competent bodies of both organizations, participation by the WTO in various UNCTAD Committees, and cooperation among secretariats. Paralleling the exchange of letters between the UN and the WTO is an exchange of letters between the WTO and UNEP. [237] This sets out a number of areas of mutual cooperation, and could be augmented and strengthened as part of an effort to improve cooperation among MEAs (many of which are UNEP-administered) and the WTO.

More detailed than the letters between UN organizations and the WTO is the formal agreement between the World Bank and the World Trade Organization, which establishes a High Level Working Group on Coherence to oversee cooperation between the three organizations and prepare joint reports.[238] This agreement promotes a range of cooperative activities, including the participation at meetings, information sharing, and contacts between staff on specific projects. The WTO also has formal agreements with the World Intellectual Property Organization, and the International Telecommunications Union,[239] which may provide useful models for future frameworks for cooperation between environment and trade institutions.

D. Compliance, Enforcement and Dispute Settlement

Another set of linkages among institutions arises out of the provisions for compliance, enforcement and dispute settlement included in MEAs and the WTO. Generally, *compliance* refers to measures designed to assist parties to honor their treaty obligations, and would include technical cooperation and technology transfer. *Enforcement* may be used to refer to multilateral measures designed to respond to a party's failure to comply, and would include suspension of certain rights and privileges or trade-related measures. And *dispute settlement* may be used to refer to procedures designed to address bilateral (or plurilateral) disputes between parties, and would include provisions for consultation, good offices, mediation, arbitration or judicial settlement. In each of these areas there are overlaps between the institutional mechanisms in MEAs and the WTO, giving rise to the potential for synergies and conflicts. Joint technical cooperation, for example, has been identified at recent meetings as an area of mutually supportive cooperation between MEAs and the WTO.[240]

The area most likely to give rise to challenges to institutional coherence, however, is dispute settlement. The provisions of MEAs and the WTO may apply simultaneously

[237] *See* WTO Press Release 154 (1999), available at www.wto.org/english/news_e/pres99_e/pr154_e.htm, (last visited March 2, 2003).

[239] *Agreements between WTO and WIPO*, WIPO Publication No. 223(E), (January 1, 1996); Agreement between WTO and ITU, on file with the authors (October 10, 2000).

[240] *See Chairman's Summary*, UNEP Meeting on Enhancing Synergies and Mutual Supportiveness of Multilateral Environmental Agreements and the World Trade Organization, October 23, 2000, www.unep.ch, *stating* "Technical cooperation and capacity building were identified as areas requiring the enhanced and concerted efforts of UNEP, MEAs and the WTO. The UNEP-UNCTAD Capacity Building Task Force on Trade, Environment and Development was identified as being able to make an important contribution in this context."

to the same countries and activities. In the event a dispute arises—over, for example, transboundary movement of genetically modified organisms or hazardous chemicals—different parties may seek to have the dispute resolved in different fora, according to different rules, with potentially different results. A lack of clarity about the relationship between dispute settlement systems gives rise to the risk of forum shopping, and for the potential for uncoordinated, inconsistent or conflicting outcomes.

The importance of coherence between MEA and WTO dispute settlement systems was recognized by WTO Members in Item 5 of the CTE's agenda, which empowers the Committee to examine and make recommendations on the "relationship between the dispute settlement mechanisms in the multilateral trading system and those found in multilateral environmental agreements". A joint UNEP-WTO paper on compliance and dispute settlement mechanisms in MEAs and the WTO notes "the two regimes emphasize different approaches to securing compliance with their respective agreements":

> The WTO system, while encouraging Members to resolve their disputes through consultation, focuses on a legalistic approach to resolving conflicts. MEAs, on the other hand, have concentrated on developing measures to promote compliance . . . and rely on a process of facilitation, not adjudication.[241]

While the two regimes emphasize different approaches, the potential for overlapping jurisdiction does arise. For example, in a trade/fisheries dispute between the European Union and Chile over swordfish, a last-minute settlement narrowly averted parallel proceedings at the WTO and the International Tribunal on the Law of the Sea. The potential for overlapping jurisdiction raises a series of interesting legal and practical issues, including which forum should be primarily responsible for resolving a dispute.[242]

Determining which forum should decide which matter requires an examination of a number of factors. Explicit treaty language on dispute settlement may help to clarify the relationship between dispute settlement forums. The SPS Agreement, for example, provides that "nothing in this Agreement shall impair the rights of Members under other international agreements, including the right to resort to the good offices or dispute settlement mechanisms of other international organization or established under any other international agreement."[243] More general treaty language on the relationship between treaties may also exercise some influence on choice of forum. The Convention on Biological Diversity, for example, provides that "the provisions of this Convention shall not affect the rights and obligations of any Contracting Party deriving from any existing international agreement, except where the exercise of those rights and obligations would cause a serious damage or threat to biological diversity."[244] Finally, general principles of law, such as the duty of good faith and *res judicata* (the principle that the same matter cannot be decided twice), might require consideration in a case of overlapping jurisdiction. In the absence of explicit guidance by governments, dispute settlement bodies will be required to answer these questions on an *ad hoc* basis. How these different factors play out in a particular dispute will require an analysis of all relevant rules and evidence.

[241] *See* Joint Paper by WTO and UNEP Secretariats, entitled *Compliance and Dispute Settlement Provisions in the WTO and in Multilateral Environmental Agreements*, WTO Doc. WT/CTE/W/191 (June 6, 2001), ¶ 140.

[242] Different dispute settlement bodies may be responsible for addressing different aspects of a dispute. Nevertheless, the resolution of one overarching dispute by two dispute settlement bodies, in the absence of some coordination mechanism, raises considerable challenges.

[243] DSU, Article 11.3.

[244] DSU, Article 22.1.

While explicit guidance by governments is preferable, there are less direct approaches to reducing the potential for conflict. According to the joint UNEP-WTO paper strengthening compliance mechanisms in MEAs would "enhance the effective implementation of MEAs, and . . . prevent MEA-related disputes from arising in the WTO dispute settlement system".[245] Additionally, the WTO could "put less focus on judicial settlement of disputes, and more on mediation and conciliation combined with technical assistance and capacity building for implementation."[246]

In the event an MEA-related dispute does arise at the WTO, the DSU also includes a number of mechanisms that allow the dispute settlement system to consider environmental factors. These include the use of procedures for good offices, mediation and consultation (Article 5) to encourage dispute avoidance and to ensure participation by MEA Secretariats and other experts; use of experts on an *ad hoc* basis under Article 13(1); establishment of Expert Review Groups under Article 13(2) and Appendix 4 to provide non-binding advisory opinions; and increased use of environmental experts as panelists.

VII. Looking Forward

This chapter has examined a range of issues arising at the interface of trade and the environment. It has sketched the WTO agreements, disputes, institutional forums and new negotiating mandates that we believe are most relevant to trade and environment discussions, and it has examined a range of issues that arise from the relationships between trade and environment at the levels of the real or material world, laws and policies, and institutions.

The linkages within and across each of these areas are complex. An understanding of them, however, is central to any effort to ensure trade liberalization maximizes its contribution to the well-being of individuals and communities, and to the economic and social development of any nation. We believe that, until now, too little attention has been paid to the real-world intersection between trade and other areas of human activity. Indeed, despite years of successive rounds of liberalization the impact of past liberalization has not been comprehensively assessed by many WTO Members. The increasing emphasis given by some countries and international organizations to assess the impacts of both current and proposed future trade liberalization and trade policies is therefore to be welcomed.

Trade liberalization is potentially a powerful tool. Yet, the goal of the WTO as set out in its preamble is not merely the liberalization of trade. Liberalization is not an end in itself. As recent studies have shown, inappropriate liberalization may lead to economic de-industrialization, social dislocation and/or environmental damage.[247] On the other hand, conducted under the right conditions, at the right pace, and accompanied by the right policy measures, liberalization may yield significant economic, social and environmental benefits. A major challenge facing all WTO Members is thus to encourage trade that promotes their national developmental goals; to increase the *quality* of trade, and not merely its volume.

[245] Joint Paper by WTO and UNEP Secretariats, *supra* note 241, ¶ 141.

[246] *Id.*

[247] *See, e.g.*, UNEP country study entitled "Integrated Assessment of Trade Liberalization and Trade-Related Policies: A Country Study on the Fisheries Sector in Argentina", available at http://www.unep.ch/etu/publications/CSII_Argentina.pdf, which documents that unchecked trade expansion in Argentina, combined with an absence of appropriate fisheries policies in the 1990s had a *net economic cost* of about US$ 500 million for one fish species (hake).

Institutions grow and change over time. We believe that in the longer term the goal of the WTO must be explicitly one of promoting a human-centered development process that meets the needs of current generations—especially the poorest individuals, communities and countries—without compromising the capacity of future generations to meet their needs. Such an approach is at least partially reflected in the WTO's preamble, which identifies trade liberalization as a means to the end of "raising standards of living . . . in accordance with the objective of sustainable development, seeking both to protect and preserve the environment" with "positive efforts designed to ensure that developing countries, and especially the least developed among them, secure a share in the growth in international trade commensurate with the needs of their economic development."

Truly achieving these goals—and realizing the benefits for all people and countries rather than for a privileged few—will require a deeper effort to understand the linkages between the social, environmental and economic aspects of human life on a sector-by-sector, country-by-country, region-by-region basis across countries at vastly different levels of development, and with different social, cultural and environmental attributes. As WTO Members adopt policies and rules that more deeply affect the lives and aspirations of people and communities around the world, they must also assume the responsibility to measure the performance of the multilateral trading system against the standard established in the WTO Agreement's preamble.

I. Introduction and Background

A. Preliminary Remarks

During the closing stages of the Uruguay Round of multilateral trade negotiations, the question was raised as to whether the rules governing international trade should include provisions in the social field. The ensuing debate has not been limited to trade ministers and scholars, but has spilled onto the streets in sometimes-violent protests, first at the 1999 Third World Trade Organization Ministerial Conference in Seattle, and later at subsequent international conferences covering a variety of topics all over the world. While such protests may have sharpened police crowd control methods and made the prospect of hosting international conferences a double-edged sword for municipal officials hungry for international prestige, the World Trade Organization ("WTO") position on social issues, especially those related to international labor standards, has remained the *status quo* established at the First WTO Ministerial conference at Singapore in 1996. The challenge to labor leaders and others who hope to bring the social field into the trade regime is to reinvigorate the debate to create some movement on the trade-labor front. Those who wish to keep trade rules free of environmental and labor concerns need to demonstrate that increased trade will improve overall social welfare leading to improved regulation and enforcement of environmental and labor standards.[1]

B. Themes and Issues

Some have referred to the trade connection of both environmental and labor standards as "social issues".[2] This term, undoubtedly, has a certain evocative resonance. But by attempting to map out an area for discourse that appears separate from, if not antagonistic to that of trade, the term risks further polarizing these mono-dimensional constituencies and obscuring the need for their reconciliation. Defining labor standards as a social issue may frame the debate in a perspective favorable to those trade purists who eschew any connection between trade rules and labor standards. Labor advocates may be well advised to focus their efforts on reconnecting labor with trade the same way that capital is connected with trade. Given the centrality of low labor costs to the workings of comparative advantage, one could argue that labor standards are more relevant to trade than intellectual property rights, which the United States successfully brought into the trade regime through the Agreement on Trade-Related Aspects of Intellectual Property Rights ("TRIPS").[3] Placing labor standards within the framework of comparative advantage has the advantage of framing the debate in a context already envisioned by the International Labor Organization's ("ILO") Declaration on Fundamental Principles and Rights at Work, which "[s]tresses that labor standards should not be used for protectionist

[1] The author would like to thank James Chalker for his research assistance. Portions of this essay are drawn from a chapter by the author entitled *International Recognized Labor Standards and Trade*, INTERNATIONAL ECONOMIC LAW WITH A HUMAN FACE 79–115 (Friedl Weiss, Erik M.G. Denters and Paul J.I.M. de Waart eds., 1998).

[2] S. Charnovitz, *The World Trade Organization and Social Issues*, 28(5) JOURNAL OF WORLD TRADE 17–33 (1994); S. Charnovitz, *Fair Labor Standards and International Trade*, 20(1) JOURNAL OF WORLD TRADE 61 (1986).

[3] For an argument as to why both labor standards and TRIPS do not belong in the WTO, *see* Jagdish Bhagwati, *Afterword: The Question of Linkage*, 96 AMERICAN JOURNAL OF INTERNATIONAL LAW 126 (2002) (stating that, "[b]y putting TRIPS into the WTO, in essence we legitimated the use of the WTO to extract royalty payments").

trade purposes, and that nothing in this Declaration and its follow-up shall be invoked or otherwise used for such purposes; in addition, the comparative advantage of any country should in no way be called into question by this Declaration and its follow-up."[4] Can advocates of the trade-labor link define comparative advantage in such a way as to legitimate the role of labor standards in assessing the relevant advantage, or does comparative advantage hold such an esteemed place in the international trade regime that discussion of labor standards is foreclosed? By affirming its support for the notion of comparative advantage in almost the same breath as it warns against the use of labor standards for protectionism is the ILO signaling a reluctance to see comparative advantage connected with labor standards?[5]

Since the relevant substantive standards involved are not in question, whether for the conduct of multilateral trade or the protection of fundamental human rights pertaining to working conditions, the central issue revolves around the suitability of using trade measures as a means of enforcing international labor standards. This, then, is primarily an institutional and procedural matter. However, while the case for global environmental protection can be based to some extent on the survival of humanity at large, backed up to a degree by objective scientific evidence, it has been far more difficult to strike a balance between the trade and labor standards constituencies. There is little common ground between countries which advocate the effective enforcement of recognized international labor standards and those countries that see such concerns as merely a facade for protectionism.

C. International v. Fair Labor Standards

Confusingly, the proximate yet distinct concepts of "international labor standards" and "fair labor standards" have often been used interchangeably. The former concept refers to international agreements and instruments based on values widely shared in the international community. All countries, whether bound by these instruments or not, are encouraged to accept and respect them. In dealing with countries unable or unwilling to incorporate such international standards in their own social legislation, the ILO's distinctive tripartism has relied on consensus and persuasion rather than on sanctions or penalties.[6] This much criticized "lack of teeth" is exactly the reason why the United States previously sought the inclusion of a social clause in the WTO framework, "policed" by the WTO Understanding on Rules and Procedures Governing the Settlement of Disputes ("DSU"). However, no concerted efforts were made by the United States to introduce a "social clause" in the Doha Negotiations. By contrast, labor standards are only considered fair by particular countries which seek to use their own "fair" standards as the socially correct yardstick for unilateral coercive action in an attempt to raise their competitors' production costs.[7] It is pursuant to such a "domestic" perspective that the United States has persistently attempted to internationalize its own national "fair labor standards" and to justify economic or trade sanctions in case of their breach. More recently, the United

States has pursued the inclusion of core international labor standards into its bilateral and multilateral trade agreements.[8]

D. From Marrakesh to Singapore

At the Ministerial Conference held at Marrakesh on April 15, 1994, the United States, supported by France and a few other countries, requested that a reference be made to internationally recognized workers' rights in the Final Ministerial Declaration.[9] The United States also requested the establishment of a WTO Committee on Labor Standards similar to the Committee on Trade and Environment. Both requests were rejected, but it was agreed that the issue of the "social clause" or "trade-labor link", *i.e.*, that of "the relationship between the trading system and internationally recognized labor standards" should be made a new agenda item for future consideration by the WTO.[10] Similarly, the issue of a social clause appeared dormant in the ILO after inconclusive debates on the constitutionality of a "trade-labor link" during the 1994 International Labor Conference and in its Governing Body.[11] Since then, however, there was a remarkable resurgence of interest in international labor standards and in their role in an open trading system, as reflected in a considerable amount of academic writing on the subject.[12] The Final Declaration of the First WTO Ministerial Conference held in Singapore in December 1996 signaled the reemergence of this issue when it devoted a paragraph to the subject. It stated:

> We renew our commitment to the observance of internationally recognized core labor standards. The International Labor Organization (ILO) is the competent body to set and deal with these standards, and we affirm our support for its work in promoting them. We believe that economic growth and development fostered by increased trade and further trade liberalization contribute to the promotion of these standards. We reject the use of labor standards for protectionist purposes, and agree that the comparative advantage of countries, particularly low-wage developing countries, must in no way be put into question. In this regard, we note that the WTO and ILO Secretariats will continue their existing collaboration.[13]

Those who wanted the WTO to stay out of labor standards found this provision's acknowledgment of the primacy of comparative advantage supportive of their position.

Others, however, considered it an important first step towards such standards. To date, the interpretation of the former has prevailed; leaving those who wondered what form WTO support for the ILO might take, still wondering.

II. Evolution of the Link Between Trade and Labor Rights

A. From Integrated to Segregated Standards and Back?

Human welfare derives from peace as well as socio-economic and cultural well-being.[14] As a complex, pluri-dimensional concept it also encompasses labor standards and a range of human rights, including the right to development. This matrix of complex issues was recognized after the Second World War, when international economic and social co-operation tackled unemployment and trade barriers simultaneously.[15] Thus, the abortive Havana Charter, once described as "the high watermark in the post-1945 world of liberal and social democratic thinking in the field of international economic relations,"[16] was a multilateral agreement on trade and employment. It was a comprehensive instrument designed for the implementation of one of the objectives of the United Nations, the attainment of higher standards of living, full employment, and conditions of economic and social progress and development.[17] Since then, various regulatory regimes governing trade, human rights and labor standards co-existed in "splendid isolation", supposedly as self-contained regimes, without being attuned to one another. In the free-wheeling debate over globalization, however, attempts are being made to integrate these separate but related concerns by such methods as bringing labor rights within the competence of the trade regime, matched by equally determined forces committed to keeping such concerns segregated.

B. The Impact of Globalization

Under the neoliberal model, which has been in the ascendancy since the collapse of the Soviet Union, it is common to speak of the "global market place" and the "global economy". Neoliberals argue, *inter alia*, that the globalization of markets, the internationalization of investment, production and distribution is the key to economic dynamism and growth, competitiveness and wealth. Integral to the globalization of markets is the removal

Scammell, *International Economic Co-operation and the Problem of Full Employment*, 6 YEARBOOK OF WORLD AFFAIRS 222–245 (1952).

of barriers to the transnational movement of capital and goods. The internationalization and free movement of labor is not on the neoliberal agenda, however.[18] Globalization's detractors warn of economic dislocation, unemployment, and environmental degradation and of the risk of friction or conflict between states due to the divergence of their regulatory systems and standards and to competition between them.[19] This is because economic and trade policy-making are no longer matters self-contained within a "national jurisdiction", but are part of the "global economy" where developments in major economies are significantly reflected in others. Yet national governments and international institutions continue to work mostly within traditional, fragmented jurisdictional frameworks and, as a result, have to deal with difficulties arising from such fragmentation. For example, unemployment is often seen as a trade problem caused by import competition from low wage economies with little or no social regulation affecting the price of labor. At the height of protectionism in the 1930s, Keynes saw the trade link clearly and offered a prescription which would make a neoliberal blanch:

> If nations can learn to provide themselves with full employment by their domestic policy (. . .) there need be no important economic forces calculated to set the interest of one country against that of its neighbors. There would still be room for international division of labor (. . .). International trade would cease to be what it is, namely, a desperate expedient to maintain employment at home (. . .), but a willing and unimpeded exchange of goods and services in conditions of mutual advantage.[20]

European and U.S. trade barriers against *e.g.*, Japanese imports constitute governmental action against trade-induced unemployment.[21] While economists admit that the pursuit of private interests in the market does not lead automatically to a socially acceptable outcome,[22] some doubt that trade policy is the right way to create jobs.[23]

C. The Link: ILO, GATT and Unilateral State Practice

A link between labor rights and trade is certainly not a recent issue, neither in the ILO nor even the GATT itself. From its inception, the ILO promoted international labor legislation—a certain equalization of levels of social protection between countries—so

[18] For two different perspectives on the neoliberal recipe for Latin America, *see* Paul Craig Roberts and Karen LaFollette Araujo, THE ECONOMIC DEVELOPMENT OF LATIN AMERICA AND ITS PRINCIPAL PROBLEMS (1997); and María Eugenia Padua, *Mexico's Part in the Neoliberal Project*, 8 UNIVERSITY OF CALIFORNIA DAVIS JOURNAL OF INTERNATIONAL LAW & POLICY 1 (2002).

as to provide a remedy for what became later known as "social dumping", *i.e.*, the risk of unfair competition based on the exploitation of workers.[24]

In the GATT, which unlike the Havana Charter made no reference to workers' rights,[25] the issue was discussed under labels such as "social dumping",[26] "social clause" and "workers or labor rights". Such debates past and present reflect a common fear that wages in developed countries are being forced down in a "race to the bottom" by unfair competition from countries with much lower labor costs. In the developed countries of the "North", the issue has normally manifested itself in the form of pressure by interest groups, often trade unions, on their governments to use market access as a lever for improving labor conditions in developing countries in the "South". Hitherto, a variety of strategies, including penalties and incentives, have been used to that end. Thus, unilateral trade measures resorted to in the past included antidumping duties[27] and countervailing duties.[28] More recently, import prohibitions were sought under unfair competition legislation[29] and under suspension of the MFN clause,[30] and preferences accorded under the Generalized System of Preferences ("GSP"), and other preferences made conditional upon the recognition by beneficiary countries of internationally-recognized workers rights. Thus, under the U.S. Trade Promotion Authority Act 2002 ("TPA")[31] it is envisaged that future TPA agreements should ensure that trading partners do not systematically fail to enforce their labor laws in a manner that affects their trade with the United States. It also includes provisions designed to promote the ability of trading partners to enforce, and raise their labor standards. Likewise, under the Andean Trade Preference Act ("ATPA") as amended by the US Andean Trade Promotion and Drug Eradication Act ("ATPDEA")[32] benefits for beneficiary countries depend, *inter alia*, on the extent to which the country provides internationally recognized workers rights, including whether it has implemented its commitments to eliminate the worst forms of child labor. Similarly

[24] F. Maupain, *Trade and Core Labor Standards*, 44, 6 WIRTSCHAFTSPOLITISCHE BLÄTTER 582 (1997); Jackson sees in "social dumping" the exploitation of prison or "sweated labor" (forms of forced labor including child labor), JACKSON, WORLD TRADE AND THE LAW OF GATT § 16.02 (1969).

[25] The GATT preamble merely mentions "raising standards of living" and "ensuring full employment"; Article XX (general exceptions) permits restrictive measures relating to the production of prison labor.

[26] The problem was considered as early as 1927 at the League of Nations World Economic Conference. It is based on the idea that lower wages paid to poorer workers in developing countries means that firms are able to compete unfairly against employers in more advanced countries, who must provide more benefits for their workers; the underlying reasoning is flawed because it undermines the very foundation and essence of free trade based on competition according to comparative advantage and because it tends to make things worse for poorer countries.

[27] For example, in 1924 Austria authorized penalty duties of up to 1/3 of the statutory rate on goods produced by labor working excessive hours. *See* ¶ 4(c) of the Federal Law of September 5, 1924 (Tariff Act, BGBl. No. 4 as amended), cited in Annex 4 to GATT Study on "Anti-Dumping and Countervailing Duties", Study of the GATT Secretariat, GATT July 1958, at 153.

[28] In 1926 the CSSR authorized countervailing duties on goods produced under "unfavorable social conditions of labor" that threatened domestic production.

[29] A 1980 action by a German asbestos producer under the German Unfair Competition Act for an import prohibition of Korean asbestos and a mandatory information of potential buyers failed because the court considered that unethical conditions of production even if in breach of an ILO Occupational Cancer Convention was not of essential importance to buyers.

[30] Uruguay, Colombia and Mexico unsuccessfully proposed amendments to the Havana Charter so as to permit "reasonable and equitable measures to protect its industry from the competition of like products produced under substandard conditions of labor and pay". The United States suspended Poland from MFN treatment in 1982 *inter alia* because of the outlawing of the independent trade union Solidarity.

[31] The Trade Act of 2002 (Pub.L.107210) was enacted on August 6, 2002.

[32] 19 U.S.C.3201, *et seq*.

the U.S. African Growth and Opportunity Act, as amended by the Trade Act of 2002 ("AGOA II"),[33] includes these conditions as best practice criteria. More recently, the bilateral Textiles Agreement between the Governments of the United States of America and the Socialist Republic of Vietnam stipulated that the Parties:

> reaffirm their commitments as members of the International Labour Organization (ILO), and agree to further cooperation with the ILO . . . [to] support the implementation of codes of corporate social responsibility by enterprises on a voluntary basis and in compliance with domestic laws and regulations, as a means to improve working conditions in the textiles sector.[34]

Reference is also made to a November 2000 Memorandum of Understanding between their respective Labor Ministries in accordance with which they are mandated to consider a cooperative program to improve working conditions in the textiles sector in Vietnam.[35]

Occasionally, boycotts were used to keep imports out.[36] Such international coercive reactions are spasmodic and, above all, primarily unilateral. Besides, it only provides temporary relief from import competition. Sadly, it is true that internationally recognized labor standards are disregarded, that children perform hazardous jobs, that labor laws are not enforced and, that trade union activists are harassed, jailed, disappear and are murdered.

Discussions of a "social clause" have been protracted, fraught with controversy and are replete with economic and political complexity and conflicting value systems. However, social issues are accepted as part of the global agenda which must be addressed by means of international cooperation, as was made clear, most recently, at the Johannesburg World Summit on Sustainable Development.[37] It is also clear that so called "social dumping" cannot be assessed on the basis of national "fair labor standards" of particular countries, but only with reference to international labor standards.

III. The Changing Framework

A. Integrating Separate Concerns

Globalization and related "one-world" views signal a new intellectual climate that appears to favor integrating the interdependent sectoral world orders of economic, trade and monetary relations.[38]

The WTO is mandated to "provide the common institutional framework for the conduct of trade relations among its Members (. . .)."[39] But it is also deemed well suited for wider economic, legal and political cooperation and for the development of "an integrated, more

[33] *See Section* 3108 of the Trade Act of 2002 on trade benefits under the African Growth and Opportunity Act, www.sice.oas.org/Trade/tradeact/act10.asp#SEC.%203108 visited November 25 2003).

[38] The three guiding principles are: freedom, equality and reciprocity and values derived from principles of market economies, in particular private ownership, competitive enterprise and free trade.

[39] Article II(1) of the Agreement Establishing the WTO.

viable and durable multilateral trading system."[40] Some have argued that, as a matter of law, such integration must take place in harmony with peremptory norms and fundamental human rights and labor standards.[41] There is also the view that full respect for a minimum core content of universal and inalienable human rights for every person is essential for the implementation and enforcement of economic, social and cultural rights.[42] These views point to the relatively new concepts of "sustainable development"[43] and "good governance"[44] which evidently seek to reconcile civil and political human rights with economic, social and cultural rights.

However, governments will probably continue to use protectionist measures when these are deemed necessary, fair and reasonable, *e.g.*, for environmental reasons, or to uphold fair labor standards as originally envisaged in the Havana Charter.[45] The question then arises whether these measures will be employed unilaterally or in accordance with WTO disciplines interpreted in the light of their "social dimension".[46] Realistically, unilateral action is only within the arsenal of economically powerful nations and its use by such nations at the expense of economically vulnerable developing countries, even when deemed necessary, fair and reasonable by the former, will be perceived as protectionist by the latter. Turning to the multilateral approach, the critical issue is not primarily a formal but improbable link between the respective complaint procedures of the ILO and the WTO, it is instead the emerging consensus on the necessity of introducing "social aspects" into the multilateral trade regime or "economic aspects" into the setting and the supervision of international labor standards, as was clearly identified by the ILO in 1994.[47] Three options remain, leaving aside the punitive element inherent in the intermittent use or threat of unilateral trade restrictions to sanction or "enforce" certain labor standards.[48] One somewhat haphazard and slow approach could be based on case law from relevant domestic and international litigation, especially the GATT/WTO mechanism of dispute settlement.[49] A second approach could involve the insertion of references to relevant labor standards into various trade agreements. The third approach could involve the obverse inclusion of a "trade liberalization dimension" into the ILO's multilateral labor standards.

B. Historical Antecedents

1. From Linkage to Social Policy Conditionality

A linkage between labor rights and standards and multilateral trade rules has been proposed repeatedly in multilateral GATT negotiation rounds, but was consistently opposed

by developing countries suspecting a protectionist ploy. The regular rejection of such a linkage prompted U.S. statutory actions in the 1980s,[50] some of which link trade and investment policies to performance with respect to U.S. labor standards,[51] some providing for unilateral trade sanctions against countries that violate basic workers' rights.[52]

More recently, various trade agreements contain provisions on "social policy conditionality". For instance, some refer to the improvement of living standards or employment or working conditions,[53] or even full employment[54] or generally to the need to uphold labor standards.[55] Some agreements require labor cooperation in a broad range of areas,[56] and others explicitly require coordination of policies on labor relations in accordance with ILO conventions and recommendations.[57] Such "linkage" discussions are therefore not new. To date, however, they have yet to result in the integration of carefully selected minimum international labor standards into the multilateral trading system, using the WTO as a permanent negotiating forum.

2. The ITO Connection

Member states of the League of Nations agreed to "endeavor to secure and maintain fair and humane conditions of labor for men, women and children, both in their own countries

and in all countries to which their commercial and industrial relations extend (. . .).”[58] After the Second World War, the ITO—which of course failed to come into being—was mandated to curtail unemployment and eliminate trade barriers, thereby implementing one of the objectives of the United Nations.[59]

The Havana Charter, the ITO’s constituent treaty, would have revolutionized international trade relations by prohibiting, restricting or controlling the right of governments to interfere with the free flow of private trade, thereby curbing potential misuse or arbitrary use by states of their monopoly of regulation.[60] However, developing countries pointed out at that time “the apparent equality of the procedure can involve the most tremendous and unjust inequalities”[61] and that “free trade means free competition” which “implies the elimination of those who find themselves in less favorable conditions.” Consequently, “a policy of trade freedom should be developed in harmony with the peculiar conditions prevailing in industrially backward countries.”[62] In the end, Article 7(1) of the Havana Charter on “Fair Labor Standards” required Members to recognize that all countries have a common interest in the achievement and maintenance of fair labor standards related to productivity, and thus in the improvement of wages and working conditions as productivity may permit, and that unfair labor conditions, particularly in production for export, create difficulties in international trade. Such conditions had to be eliminated by appropriate action within the territory of each Member.[63] In cases of dispute settlement regarding complaints relating to labor standards, the ITO was required to consult and cooperate with the ILO.[64] Such implicit hedging of free trade ideology reflected the views of Keynes and Robbins on the eve of the creation of the Bretton Woods institutions.[65]

C. Labor in GATT Practice

1. Proposals by Contracting Parties

Already in 1953 the United States unsuccessfully proposed a provision declaring that unfair labor standards “create difficulties in international trade which nullify or impair benefits under this Agreement”.[66] Unfair standards were defined broadly, and vaguely, as the “maintenance of labor conditions below which the productivity of the industry and the economy at large would justify”. The United States also contended that trade problems attributable to unfair labor standards were actionable under Article XXIII GATT. A 1955 Working Party rejected New Zealand’s proposal for a GATT article on full employment,

inter alia, on the ground that "the interest of every member-country to seek to maintain the highest possible level of productive employment and growing demand in its own territory was so obvious that an international commitment on this point would add little if anything to this already compelling incentive."[67] Likewise, during the mid-fifties the British Government was urged by the British Trade Union Congress to press for a fair labor clause in GATT and to use Article XXIII GATT "to impose sanctions on countries which did not take steps to eradicate unfair labor standards". Suggestions of that kind were probably made in contemplation of the possibility of a non-violation complaint[68] claiming "nullification or impairment" of tariff concessions in cases where the competitive position of an imported product had been upset by a subsequent domestic measure, which could not have reasonably been anticipated by the complaining party at the time it negotiated the tariff concessions on the imported product. Similar suggestions were made by other bodies from time to time.[69]

2. The Request of the United States for a Working Party

In June 1986 the issue was raised again in GATT when the United States attempted to inscribe "workers' rights" on GATT's agenda, a term later changed to "labor standards". In April 1987 the U.S. House of Representatives defined as one of the U.S. Uruguay Round negotiating objectives the adoption "as a principle of GATT, that the denial of worker rights should not be a means for a country or its industries to gain competitive advantage in international trade."[70] In July 1987, the United States formally requested the establishment of a Working Party to discuss the issue of the relationship of internationally recognized worker rights to international trade.[71] This led to some polarization amongst GATT contracting parties, some giving cautious support (Nordic countries, the European Communities, Japan and Israel), others, mainly the developing countries, either doubting GATT's competence in the matter, or reserving their position[72] or considering the ILO to be the proper forum for the issue.[73]

In support of their formal request, the United States invoked Article XXIX GATT according to which the contracting parties undertake to observe the general principles of certain chapters of the Havana Charter (I to VI & IX), including Article 7(1) of Chapter II relating to "Fair Labor Standards".[74] In requesting a Working Party the U.S. government attempted to prevent the adoption of protectionist U.S. legislation after the ILO's

[74] When, in September 1948, Article XXIX GATT on the relation of this Agreement to the Havana Charter was redrafted by a Working Party on Modifications to the General Agreement it stated that "by virtue of the Final Act signed at Havana, the contracting parties must regard themselves *morally bound* not to go back on the principles evolved at Havana" (emphasis added), Analytical Index, 2 GUIDE TO GATT LAW AND PRACTICE 996 (1995); see also WTO Analytical Index, 1st edition (2003).

refusal to consider the matter on the ground that it belonged to the GATT.[75] The United States also indicated that it was ready to exclude from discussion in GATT any issues related to *comparative advantage*. This stance shows awareness beyond tactical calculation that comparative advantage crucially reflects differences of economic development, including "cheaper" labor which does not necessarily mean ill-treated or oppressed labor. Nonetheless, its request for a Working Party was repeatedly rejected. Lastly, it should be noted that pursuant to the 1988 U.S. Omnibus Trade and Competitiveness Act, worker rights became a principal U.S. objective for the Uruguay Round negotiations.[76]

3. Deliberations in GATT Councils

Informal consultations in search of a consensus on the Working Party continued.[77] In seeking to win broader support, the United States stressed that the purpose of the Working Party would be to examine the "possible relationship" of internationally recognized labor standards to trade, without prejudice to the position of any country as to whether such a relationship would be found to exist. The United States also offered other reassurances: it was not seeking to impose its own labor standards on the world, nor to negotiate an international minimum wage. It also recalled that workers' rights were not a new issue in GATT, making reference to its Preamble,[78] as well as to Articles XX(e),[79] and XXIX.[80] However, Mexico and many other contracting parties, considered internationally-recognized labor standards to be those found in numerous ILO Conventions, rather than in legislation or domestic practices of some countries. These countries also argued that the GATT and the ILO should not get involved in matters of each other's competence.[81] Pakistan, echoing the anxieties of others, thought the request for a Working Party motivated by protectionist considerations and ultimately designed to neutralize whatever comparative advantage developing countries had. In that context, it recalled the bitter experience of developing countries with the establishment of the Working Party on Market Disruption in the 1950s, which had culminated in the imposition on developing countries of the Multifibre Arrangement.[82]

In re-submitting to the GATT Council of October 3, 1990 its request in slightly amended form, the United States sought to dispel two types of concerns: the issue of GATT relevance, and the possible misuse of GATT discussions of this matter toward protectionist ends. Once again the United States stressed that the very issue of GATT relevance was without prejudice to any delegation's view of the matter and that, like other

[75] The proposed terms of reference were: "to examine the possible relationship of internationally-recognized labor standards to international trade and to the attainment of the objectives of the GATT". *See* GATT/CP.2/22/Rev.1, BISD II/39adopted on September 1 and 2, 1948.

[76] Section 1101(b)(14); the Act also envisages a review of their relationship to GATT articles, objectives, and related instruments with a view to ensuring that the benefits of the trading system are available to all workers as well as the adoption as a principle of the GATT that the denial of worker rights should not be a means for a country or its industries to gain competitive advantage in international trade.

[77] *See, e.g.*, C/M/217, 8.3.1988, at 32.

[78] ¶ 1 of the preamble requires trade and economic relations to be conducted with a view to raising "standards of living".

[79] Article XX(e) GATT permits contracting parties to prohibit imports of "products of prison labor".

[80] Article XXIX(1) GATT stipulates: "The contracting parties undertake to observe to the fullest extent of their executive authority the general principles of Chapters I to VI inclusive and of Chapter IX of the Havana Charter pending their acceptance of it in accordance with their constitutional procedures." This incorporation by reference includes the Havana Charter's provisions on internationally-recognized labor standards; C/M/220, 8.6.1988, at 26.

[81] *Id.* at 27.

[82] *Id.* at 30; *see also*, C/M/234, July 31, 1989, at 74–76.

delegations, it was determined to prevent misuse of the discussion of internationally recognized labor standards as a justification for protectionist measures. Therefore, the proposed Working Party should not put into question *legitimate* comparative advantage or limit the range of internationally-recognized labor standards to only a select few.[83]

IV. GATT Panel Practice

A. Adjudication Without Law?

As mentioned above, one of several approaches to the integration of separate concerns extrinsic to the WTO into the WTO framework might consist of WTO panel adjudication as between competing regulatory standards of WTO Members. However, in the absence of a "social clause" in the WTO framework and of an express general exception in the GATT, on what legal basis could a WTO panel seek to reconcile protecting "free trade" with trade restrictions? For instance, could a panel condone restrictions on the basis that they are used against products supposedly made in breach of international labor standards?

As to the approach itself, it might be instructive to consider relevant WTO practice with proximate "trade and environment" issues. It is noteworthy that while these issues have been discussed extensively in the WTO Committee on Trade and Environment, considerably more progress was made in the Dispute Settlement Body ("DSB") administering the DSU and the panel process, than at the political level. This is not surprising. On the contrary, there would seem to be an emerging pattern according to which WTO panels, by default of WTO Members, have virtually exercised law-making power delegated by WTO Members unable or unwilling to take decisions on new standards. For the time being, interests and positions of WTO Members engaged in the debate on a social clause in trade agreements are simply too far apart for such an agreement to be reached. On the other hand, while the panel process might in certain instances yield "markers" for the ongoing debate, it is, nonetheless, restricted to preserving the rights and obligations of Members and to clarifying the existing provisions of covered agreements in accordance with customary rules of interpretation of public international law. It should be recalled that "recommendations and rulings of the DSB cannot add to or diminish the rights and obligations provided in the covered agreements."[84]

B. Protection of Domestic Labor

A 1960 GATT Report of Experts on "Anti-Dumping and Countervailing Duties"[85] discussed "labor" as a factor of production in connection with dumping and noted "(. . .) that the term "production costs" covered all those items involved, directly or indirectly, in the cost of producing an article" including labor. However, measures seeking to improve domestic labor or employment conditions, directly or indirectly, have not been accepted as justifying exemptions from the prohibition of import restrictions. A 1958 Panel Report examined the alleged inconsistency with GATT Article III:4 of an Italian law which provided special credit facilities to some categories of farmers for the purchase of

[83] Relevant but not exhaustive standards included the freedoms of association, organization and collective bargaining, and from forced or compulsory labor nor should it attempt to interject the GATT into the process of establishing labor norms. C/M/245, November 1, 1990.

[84] Article 3.2 DSU.

[85] L/1141, BISD 9S/194, adopted on May 27, 1960.

agricultural machinery produced in Italy. Italy's defense was that the law only concerned the improvement in the employment of labor and was not, therefore, related to the matters covered by Article III:4, namely the sale, purchase or transportation of imported and domestically produced products. The Panel, however, rejected this defense, and observed that while the GATT does not limit the right of contracting parties to adopt measures for improving the conditions of employment, or to protect a domestic industry, it will not condone discriminatory measures which might adversely modify the conditions of competition between the domestic and imported products on the internal market.[86]

Similarly, a Working Party was not swayed by Italy's argument that it needed import restrictions against potassium sulphate imported from Israel because it wanted to establish a domestic industry in areas of high unemployment and, consequently, urged Italy to dismantle them.[87]

Another Panel held Japanese import restrictions, quotas and import licenses on leather products, to be contrary to Article XI:1 GATT, even though Japan had claimed that they operated for the benefit of a distinct underprivileged population, the Dowa people. That Panel narrowly adhered to its terms of reference under which it was required to examine the matter "in the light of the relevant GATT provisions." It pointed out that Japan had failed to invoke any provision of the GATT to justify the import restrictions, and therefore declined to take the special historical, cultural and socioeconomic circumstances into account, deciding that it was not for the Panel to establish whether the present measures would be justified under any of the GATT provisions.[88]

Similarly, the European Community failed to persuade another Panel that Article XI GATT did not constitute an absolute prohibition of quantitative import restrictions and that it should not, therefore, be applied in an absolute and legalistic manner. Again the Panel rejected both the EC's defense that the relevant import restrictions were necessary to deal with economic and social problems, and its contention that historical and general factors must be taken into account, as well as the specific economic and social situation in each sector, such as the threat of serious injury to domestic production and employment through increases in imports and competition with lowpriced foreign products. As the European Community did not claim any GATT justification for these arguments, the Panel considered such matters to be outside the purview of Articles XI and XIII of the GATT and, therefore, outside its consideration.[89]

In the course of the proceedings of the *First Tuna Panel*, Venezuela as an interested third party submitted that the U.S. import prohibition was inconsistent with Article XI:1 of the GATT and not covered by any of the exceptions in Article XI:2. It also observed that to allow a country to impose a non-discriminatory ban on the sale of both domestic and imported goods because their production causes harm would potentially allow any nation to justify unilaterally imposing its own social, economic or employment standards as a criterion for accepting imports. If that were accepted, it would mean that influential contracting parties could effectively regulate the internal environment of others simply by

[89] Report of the GATT Panel, *EEC—Quantitative Restrictions Against Imports of Certain Products from Hong Kong*, BISD 30S/129, adopted on July 12, 1983.

erecting trade barriers based on unilateral environmental policies which was, of course, contrary to the fundamental premises of the GATT.[90]

The Panel Report also determined that while contracting parties are free to adopt environmental policies to any standard of their own choice, they must not in so doing either prohibit imports from countries with lower standards nor expect that their unilateral higher standards will be accepted as being higher to and exempted from their GATT obligations by virtue of the general exemptions laid down in Article XX GATT. The Panel further concluded that the concerns of the drafters of Article XX(b) GATT had focused on the use of sanitary measures to safeguard life or health of humans, animals or plants within the jurisdiction of the importing country.[91] It also indicated ways in which the Contracting Parties could establish trade restrictions considered desirable beyond those limited by Article XX GATT, namely either by amending that article, or by waiving GATT obligations, or indeed by developing standards on a case-by-case basis or through multilateral standard setting for instance under the auspices of the United Nations.

In the *Second Tuna Panel* case[92] the EC and the Netherlands contended, contrary to the view of the United States, that when interpreted contextually, the provisions of paragraphs (b) and (g) of Article XX GATT, as indeed those of other paragraphs of Article XX GATT, were subject to a jurisdictional limitation. Consequently, the exception in paragraph (e) in respect of the products of prison labor was not intended to eliminate prison labor practices in other contracting parties, because paragraph (e) was not conceived as a humanitarian provision. Virtually all contracting parties operated systems of prison labor, not necessarily forced or hard labor. Contracting parties simply wanted to be able, if necessary, to protect themselves against the "unfair competition" resulting from the low cost labor employed in the production of products of prison labor. Nevertheless, the Panel observed that the example of Article XX(e) GATT relating to products of prison labor showed that the GATT did not proscribe in an absolute manner measures that related to things or actions outside the territorial jurisdiction of the party taking the measure.[93]

Another Panel found Canada's export restrictions of unprocessed herring and salmon contrary to Article XI:1 GATT and neither justified by Article XI:2(b) nor by Article XX(g) GATT.[94] However, the Panel did not directly endorse the U.S. argument that the purpose and effect of the export restrictions was not the conservation of resources but the protection of Canadian processors and the maintenance of employment for Canadians in British Columbia.

All the aforementioned Panel Reports clearly show that GATT Panels have not condoned trade restrictions as a means of enforcing domestic legislative or regulatory standards, unless these can be justified under specific provisions of the GATT.

While panels under the WTO DSU have not abandoned the requirement that trade restrictions be justified under specific provisions of the GATT, they have signaled a

[90] Report of the GATT Panel, *United States—Restrictions on Imports of Tuna,* BISD 39S/155, ¶ 4.27, circulated September 3, 1991 (unadopted); note that Venezuela was more sympathetic to an exception to Article XI for agreed compliance measures taken under an international environmental treaty regime.

willingness to allow such restrictions if they are implemented in a non-discriminatory manner. The Appellate Body in *US—Shrimp*, held that U.S. trade restrictions on the importation of shrimp fell within the exception offered by Article XX(g) GATT, but they were "applied by the United States in a manner which constitutes arbitrary and unjustifiable discrimination between Members of the WTO, contrary to the requirements of the chapeau of Article XX."[95] Confirming the suitability of unilateral trade restrictions that meet the requirements of both the chapeau and a specific provision of Article XX GATT, a later Appellate Body ruling found that the United States had brought its application of its *s*hrimp regulations into compliance with its GATT/WTO obligations.[96] The original Appellate Body *US—Shrimp* decision did not decide the question of whether there was any implied territorial limitation to jurisdiction under Article XX(g) GATT, deciding that since all five species of sea turtles protected by the U.S. regulation passed through U.S. territorial waters, there was a sufficient "nexus" between the United States and the sea turtles.[97] The issue of an implied territorial limitation to jurisdiction under Article XX GATT may prove of primary importance should a Member implement trade restrictions to protect the life or health of workers in other Members under Article XX(b) GATT.

C. Protection of Foreign Labor

1. Potential Legal Bases in GATT/WTO Law

In view of the apparent readiness of WTO panels to address the growing interface between trade and other issues within the existing GATT/WTO legal framework, it might be interesting to survey GATT provisions that could serve potentially as a legal basis for trade restrictions against imports produced in violation of workers' rights or other international human rights standards. Not surprisingly, a recent study concluded that "little support exists for interpretations permitting such restrictions on imports" based on rules governing antidumping, subsidies, safeguards and general exceptions for restrictions relating to the products of prison labor.[98]

Last but certainly not least, there is Article XX(b) GATT under which measures restrictive of trade could be adopted or enforced provided they can be shown to be "necessary to protect human, animal or plant life or health." The critical question is whether it can be interpreted in such a way that domestic regulations adopted pursuant to international standards protecting workers rights may be relied upon to restrict imports of products made under conditions of production which fall short of those international standards. Panel case law to date holds little promise in that respect.

2. The Implications of United States—Reformulated Gasoline

The Panel Report on *United States—Standards for Reformulated and Conventional Gasoline* of 1996 ruled that regulations of the U.S. Environmental Protection Agency adopted

[98] Diller and Levy, *supra* note 12, at 695–96; Article VI GATT and Agreement on Implementation of Article VI GATT 1994; Agreement on Subsidies and Countervailing Measures; Article XIX and Agreement on Safeguards; Article XX(e) GATT.

under the 1990 Clean Air Act Amendments (P.L.101–549 §219) unlawfully assigned different methods for measuring emission standards for "reformulated" and "conventional" gasoline to domestic and foreign refiners respectively. The Panel found that the U.S. regulations "are not consistent with Article III:4 of the GATT, and cannot be justified under paragraphs (b), (d) and (g) of Article XX of the GATT."[99] The Panel rejected the general exemption invoked by the United States under Article XX(b) GATT, taking the view that the contested measure was not necessary for the protection of human life or health as required by that Article because alternative measures "less inconsistent" with the GATT were "reasonably available".

The Appellate Body partly upheld the appeal of the United States by reversing the Panel's main legal conclusion.[100] However, the Appellate Body also examined a question that was not addressed by the first-instance panel: whether the regulations also meet the requirements of the introductory provisions of Article XX GATT, its head note or "chapeau". According to that "chapeau", all exceptions under Article XX GATT are only available on condition that the qualifying measure is not applied "in a manner which would constitute a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail or [be] a disguised restriction on international trade."

The Appellate Body found that provision to be aimed at preventing abuse or misuse of the exceptions contained in Article XX GATT in the sense that "the measures falling within the particular exceptions must be applied reasonably, with due regard both to the legal duties of the party claiming the exception and the legal rights of the other parties concerned." But the Appellate Body neither clarified the notion of "legal rights of the other parties concerned", a notion which may well hold the key to future interpretations of Article XX GATT, nor whether due regard for those rights would have to involve some balancing of interests. The Appellate Body also criticized the United States for its failure to pursue the possibility of cooperative arrangements with the governments of the complainants, Venezuela and Brazil. Again, the Appellate Body failed to indicate whether by describing the non-pursuance of cooperative arrangements as an omission, it meant to establish a legal requirement that negotiations be sought as a condition for invoking Article XX GATT. Picking up this thread, the *United States—Shrimp* Appellate Body report found that the United States' unilateral attempts to protect sea turtles via trade restrictions amounted to unjustifiable discrimination under the chapeau.[101] More pertinently, the Appellate Body in the *Gasoline* report also censured the failure of the United States "to count the costs for "foreign refiners" resulting from the use of a different method",[102] but again did not explain why regulators have a legal obligation to take foreign costs into account, nor how this should be done. Could these reasons, placed in the context of labor standards, justify resort to the exception of Article XX(b) GATT, at least *vis-à-vis* a defendant Member who has accepted relevant international labor standards, but has failed to implement them effectively? Would prior cooperative arrangements need to involve assistance toward such implementation? Could it be argued that governments must henceforth weigh the regulatory impact of their measures on foreigners, and if so

[102] *United States—Standards for Reformulated and Conventional Gasoline*, *supra* note 101.

could a ban on products made for instance with child labor ever succeed,[103] considering that throughout WTO panel proceedings special consideration is to be given to the interests of developing countries?[104] How are these interests defined? Even in the face of mounting evidence of the long-term damage done to developing countries by the use of child labor, the interests of developing countries may continue to be defined by trade ministers in such a way that any restriction on their trade may be viewed with hostility.

However, despite present doubts about the suitability of the WTO's case-by-case approach for the reconciliation of trade rules and labor standards, there are also more hopeful developments. Although leaving many of the questions raised by the Appellate Body in *United States—Reformulated Gasoline* unanswered, subsequent Appellate Body decisions have addressed the necessity requirement of XX(b) GATT. In a case involving France's prohibition of the import of certain asbestos containing products, the Appellate Body held that the restrictions were "necessary to protect human life or health within the meaning of Article XX(b) of the GATT."[105] Drawing from the *Korea—Beef* case, the Appellate Body reasoned that a trade restrictive measure cannot be deemed "necessary" if there is "an alternative measure which it could reasonably be expected to employ and which is not inconsistent with other GATT provisions is available to it." If such a measure is not available, a Member "is bound to use, among the measures reasonably available to it, that which entails the least degree of inconsistency with other GATT provisions."[106] Such an interpretation of Article XX(b) GATT offers the possibility that a trade restrictive measure designed to combat child labor would be tenable if it were shown that alternative measures, not inconsistent with GATT had failed and no reasonable alternative remained. In determining the appropriateness of trade restrictive measures the record of U.S. actions to promote the abolition of child labor, within the ILO and elsewhere would no doubt be integral.

Another hopeful sign is that panels increasingly invoke general principles of international law and have always extensively used the Vienna Convention on the Law of Treaties, at least for purposes of textual interpretation.[107] Such relatively greater openness to international law has been confirmed by the Appellate Report in *United States—Standards for Reformulated and Conventional Gasoline*. In that case, the Appellate Body not only observed that the "GATT is not to be read in clinical isolation from public international law", but also cited decisions of the International Court of Justice, the European Court of Human Rights and of the Inter-American Court of Human Rights.[108] In *United States—Shrimp*, the Appellate Body looked to the United Nations Convention on the Law of the Sea and other international agreements to determine that sea turtles constituted an exhaustible natural resource.[109] Such efforts to interpret GATT provisions in light of other principles of international law may bode well for those who advocate the use of unilateral trade restrictions to promote respect for international labor standards, which are highly codified within international law.

[103] S. Charnovitz rhetorically raised the question whether future panels might require this for a ban on elephant ivory or a pesticide residue restriction, S. Charnovitz, *New WTO Adjudication and its Implications for the Environment,* 19 INTERNATIONAL ENVIRONMENT REPORTER 851–856 (September 18, 1996).

V. Standard Setting

A. Merits and Demerits of the Incorporation of Standards

In view of the restrictive interpretation of Article XX GATT in GATT panel practice, and of the limited scope within the dispute settlement mechanism for integrating some kind of social clause in the multilateral trading system, it is necessary to consider alternative approaches. Based on the integrative objective of "sustainable development" laid down in the preamble to the Agreement Establishing the World Trade Organization,[110] such an alternative approach might consist of introducing labor standards either by reference to the ILO or other conventions, or by the insertion of appropriate language in the WTO Agreement. The terms of the preamble are wide enough to permit action pursuant to a social clause in the sense of a "floor" governing working conditions everywhere. But should there be such a clause in the multilateral trading system? The supporters of a social clause have argued, *inter alia*, that it would promote fair competition between exporters of developing countries while ensuring that those respecting minimum labor standards are not penalized for their efforts to promote social development; that it would prevent increased international competition from leading to a destructive "race to the bottom" in the conditions of work and life of workers worldwide; that it would prevent industrialized countries from collaborating in the exploitation of workers in developing countries if they failed to press for the adoption of universal minimum labor standards; and above all that it would strengthen the resolve to resist pressures for increased protectionism.

Developing countries on the other hand oppose such a clause because they view it as disguised protectionism potentially obstructing their industrial development and depriving them of their key comparative advantage which is the productive use of low-cost labor; and because they resent interference in their domestic affairs as well as being asked for reciprocity in social obligations in return for trade concessions.

Whatever the merits of any of these points of view, much will depend on agreement being reached as to the standards to be included in a social clause.

B. Selection of Standards for a Social Clause

The first question is whether ILO Conventions should be used; secondly, whether all or most of them should be selected; and thirdly, on what basis such a selection should be made?

If ILO Conventions are to be chosen, the standards concerned would have to be both fairly precise to be enforceable and reasonably flexible to secure worldwide acceptance by countries with different social structures, climates and cultures at different stages of economic development.[111] Thus, reference could be made in the WTO Agreement to certain ILO minimum standards which command widespread respect, do not appreciably impact on developing countries competitive position in world trade, and are subject to monitoring and enforcement by appropriate machinery. The approach would be reminiscent of the

[110] The Parties recognize, *inter alia*, that "their relations in the field of trade and economic endeavour should be conducted with a view to raising standards of living, ensuring full employment (. . .) and expanding the production and trade in goods and services, while allowing for the optimal use of the world's resources in accordance with the objective of sustainable development (. . .)"; see N. Schrijver and I. Weiss, INTERNATIONAL LAW AND SUSTAINABLE DEVELOPMENT, PRINCIPLES AND PRACTICE (2004).

[111] For a review of different proposals see, G. van Liemt, *Minimum Labor Standards and International Trade: Would a Social Clause Work?*, 128 (4) INTERNATIONAL LABOR REVIEW 433, 436 *et seq.* (1989).

debate concerning TRIPS which originated in a desire, mostly on the part of the United States, to use the "teeth" of the GATT dispute settlement system to enforce existing standards of intellectual property rights.[112]

Relevant minimum labor standards would have to include the Freedom of Association and Protection of the Right to Organize Convention 1948 (Nr.87),[113] the Right to Organize and Collective Bargaining Convention 1949 (Nr.98), the Convention concerning Forced or Compulsory Labor 1930 (Nr.29), the Convention concerning the Abolition of Forced Labor 1957 (Nr.105), the Discrimination (Employment and Occupation) Convention and Recommendation 1958 (Nr.111), which promotes equality of opportunity and treatment in respect of employment and occupation.[114] To these must be added the Worst Forms of Child Labor Convention (Nr.182). At present, however, it must be doubted that the WTO could become an enforcement agency in respect of social standards evolved by the tripartite ILO and under its supervisory machinery. The WTO obviously lacks competence and experience in the matter, not to mention a tripartite structure. Moreover, developing countries might feel that rich countries police poor countries, using trade restrictions to penalize them for falling below certain human rights standards. Such an approach would also involve the risk of being extremely divisive and contrary to the spirit of Article 14 of the Charter of Economic Rights and Duties of States.[115] For these reasons, institutional collaboration between the ILO and the WTO, if any, should be established on "ILO turf", for instance by introducing some kind of trade liberalization component. On the other hand, existing flexibilities built into the WTO's system of dispute settlement which benefit developing countries might yet induce them to accept the enforcement of agreed standards in accordance with the provisions of the DSU.

C. Supervision of Compliance

The United States pushed TRIPS into the Uruguay Round of multilateral trade negotiations, *inter alia*, so as to secure compliance with a future TRIPS Agreement in accordance with the planned WTO dispute settlement mechanism. For the same reason the United States and other developed WTO Members prefer the WTO forum.

A broad approach to "enforcement" of labor standards would grant a large number of people and institutions some supervisory role, as is the case, for instance, in the United States where organizations and individuals have standing to request the President each year to review the status of labor rights within the GSP, or the system of written communications by individuals to the UN Human Rights Committee under the Optional Protocol to the International Covenant on Civil and Political Rights. A narrow approach to "enforcement" would restrict complaints to those brought against governments, as is

[112] *See* F. Weiss, *Trade Related Intellectual Property Rights and the Uruguay Round Negotiations*, in LIBERALIZATION OF SERVICES AND INTELLECTUAL PROPERTY IN THE URUGUAY ROUND OF GATT 87–113 (Georgio Sacerdoti ed. 1990).

currently the case under the ILO and WTO regimes which exclude complaints against individual companies. However, states are notoriously reluctant to act against each other in the labor field as this is seen as an unfriendly act involving risks of counter-claims, and small economies feel particularly vulnerable to retaliation.[116] Techniques such as consultation, negotiation and conciliation should be given priority. The withdrawal of trade advantages—always amounting to some contraction of free trade—should only be used as a last resort.

VI. Beyond Singapore?

A. WTO Ministerial Meetings

Since Singapore there have been four WTO ministerial meetings, but there has been no progress on labor standards. Although the 1999 Seattle Ministerial sparked street protests, there was little movement inside the ministerial itself. The United States and the European Union came to Seattle armed with trade-labor working group proposals, but the divisions and tensions between developed and developing country delegates were as deep as those between protestors and police out on the streets. The ministers left Seattle with no declaration. Two years later, the WTO ministers sidestepped the issue, suggesting that those who interpreted the Singapore Declaration as removing labor issues from the competence of the WTO may have been correct. The Doha Declaration states, "[w]e reaffirm our declaration made at the Singapore Ministerial Conference regarding internationally recognized core labor standards. We take note of work under way in the International Labor Organization on the social dimension of globalization." Reference to the ILO's ongoing investigative work into the social dimension of globalization doubly reaffirms the interpretation of the Singapore Declaration that the ILO, not the WTO is the correct arena for international labor standards. For its part, it is doubtful that the ILO is going to advocate that states be granted the weapon of unilateral trade sanctions to further workers' rights.[117] One wonders how long the WTO can keep pushing the trade-labor debate onto the ILO.

B. Using Multilateral and Bilateral Agreements as a Model for WTO Action

The lack of progress since Singapore has not dampened U.S. support for bringing labor standards into the WTO, but the United States has adopted a new approach to further the attainment of this goal. In recently enacted legislation granting the U.S. President "trade promotion authority", which limits Congress' ability to consider trade agreements piecemeal, the Congress reiterated its support for the inclusion of labor standards in trade agreements.[118] This legislation requires U.S. trade negotiators to pursue as "principal negotiating objectives" assurances that trade agreement partners enforce their labor laws, strengthen their respect for core labor standards, and that labor "policies and practices of the parties to trade agreements with the United States do not arbitrarily or unjustifiably discriminate against [U.S.] exports or serve as disguised trade barriers." Core labor standards are identified as, "the right of association[,] the right to organize and bargain collectively[,] a prohibition on the use of forced or compulsory labor[,] a minimum age

[116] *See* S. Leckie, *The Inter-state Complaint Procedure in International Human Rights Law: Hopeful Prospects or Wishful Thinking?*, 10 HUMAN RIGHTS QUARTERLY 249 (May 1988).
[117] International Labor Office, *ILO Activities on the Social Dimension of Globalization: Synthesis Report*, (July 12, 2002) http://www.ilo.org/public/english/wcsdg/docs/synthesis.pdf (visited November 16, 2003).
[118] 19 U.S.C.A. § 3802 (b) (11) *et seq*.

for the employment of children[,] and acceptable conditions of work with respect to minimum wages, hours of work, and occupational safety and health."[119]

The United States has shifted its focus from bringing workers' rights into the WTO to reaching bilateral and multilateral trade agreements that incorporate core labor standards into their regimes. Washington hopes that such agreements can serve as models for the WTO and "contribute to the WTO system by introducing innovation and strengthened disciplines."[120] Among the regional trade agreements that the United States is trumpeting with regard to promoting labor rights is the North American Agreement on Labor Co-operation ("NAALC"), a side agreement accompanying the North American Free Trade Agreement ("NAFTA"). The United States is negotiating similar multilateral agreements and bilateral trade pacts throughout the globe. One such bilateral agreement with Jordan includes an article on labor standards. Each nation pledges to enforce its labor laws and offers a set of core labor standards, which are the same five standards enunciated in the aforementioned trade promotion authority legislation.[121] The agreement also sets up a dispute resolution process which, after a panel and conciliation process, allows for an aggrieved party "to take any appropriate and commensurate measure."[122]

Although it remains to be seen how bilateral arrangements like that with Jordan will play out and if they will have a didactic effect on the WTO, it is questionable if many labor rights advocates would join the U.S. government in offering the NAALC as a possible model for the WTO. A recent Human Rights Watch report found the NAALC's protections of workers rights somewhat wanting.[123] Labor organizations have even embarked on inter-American cooperation as a new range of trade agreements are negotiated. The AFL-CIO and the Central Unitaria de Trabajo ("CUT"), a Chilean labor organization, have issued joint declarations regarding trade negotiations between their respective countries calling for the inclusion of labor protection in any final agreement.[124] There have also been specific campaigns targeting countries for their failure to live up to their obligations to respect international labor standards. For example, a recent Human Rights Watch Report on child labor in the Ecuadorian banana industry called upon international trade agreements to include fundamental workers' rights provisions and recommended that "failure to effectively enforce or progressively implement such standards should trigger the same dispute settlement, enforcement procedures, or penalties available to other issues covered by these agreements."[125] Perhaps the most aggressive campaign is that of the International Confederation of Free Trade Unions ("ICFTU"), which is endeavoring to hold WTO Members accountable for their statements made in Singapore and reiterated at Doha regarding their "commitment to the observance of internationally recognized core labor standards." To date the ICFTU has issued over seventy country reports in which it examines a WTO Member's respect for and enforcement of international core labor

standards.[126] The reports are issued at the same time as the WTO General Counsel's review of the trade policies of the subject country, which is not to suggest that the reports are part of the WTO trade policy review process. Not surprisingly the reports often demonstrate the links between trade and workers' rights violations. For example, the ICFTU report on India highlights the direct link between trade and poor working conditions, such as the absence of trade union rights in special export processing zones.[127]

The efforts of human rights and labor groups are going to have to be sustained and imaginative if they are going to bring the protection of labor rights into the competence of the WTO. The AFL-CIO/CUT joint campaign may signal the increase of meaningful collaboration between trade organizations in the developed and developing worlds, which could go a long way toward easing the criticism of poor countries that talk of labor standards is really just disguised protectionism. NGO reporting processes like that being used by the ICFTU could provide weighty evidence to trade ministers, if not WTO panels, that WTO compliant measures like those offered by the ILO are not solving the worst problems of labor rights violations and that WTO Members are not meeting their oft-stated commitments to observe internationally recognized core labor standards. Such and similarly inspired campaigns could ultimately prod a WTO Member into instituting unilateral trade restrictions against another WTO Member as "a measures necessary to protect human life or health", under Article XX(b) GATT. However, it remains questionable whether such an attempt would survive the WTO panel process. In addition to the previously discussed potential pitfalls under Article XX(b) GATT, there is the remaining difficulty of getting evidence from NGOs, like that gathered by the ICFTU, before a WTO panel.[128]

[126] *See* http://www.icftu.org/list.asp?Language=EN&Order=Date&Type=WTOReports&Subject=ILS&start=0&finish=19 where these reports are available (visited November 16, 2003).

[127] International Confederation of Free Trade Unions, *Internationally Recognized Core Labor Standards in India*, Report for the WTO General Council Review of Trade Policies of India (June 2002).

[128] There are a variety of initiatives attacking the labor-trade issue from outside the multilateral and bilateral trade frameworks. One, the social labeling movement seeks to empower consumers to make informed choices about the products they buy, but at least some critics have found such initiatives ineffectual. *See* Alakh N. Sharma, Rajeev Sharma and Nikhil Raj, *The Impact of Social Labelling on Child Labor in India's Carpet Industry*, 78 ILO/IPEC Working Paper, (2000) at http://www.ilo.org/public/english/standards/ipec/publ/policy/papers/india/india.pdf (visited November 14, 2003). Another tactic used of late by numerous human rights groups to try to hold multinational corporations liable for human rights abuses, including workers' rights violations, which occur in their operations in developing countries, is the United States Alien Tort Claims Act. In one such case a U.S. Federal Circuit Court of Appeals held that plaintiffs, villagers who were subjected to forced labor in Myanmar (a/k/a Burma), could proceed with their claims against multinational energy corporation Unocal. Although the court split as to the grounds on which Unocal could be held liable for the forced labor practices of the Myanmar military units providing security and construction services for the pipeline project of a Unocal joint venture, all three judges agreed that Unocal could be held liable either under international law or under federal common law. *John Doe I v. Unocal Corp.* 2002 WL 31063976. *See also, John Doe etc., et al. v. Unocal Corp.,* 110 F.Supp.2d 1294 (C.D. Cal. 2000); *John Doe etc., et al. v. Unocal Corp.,* 963 F.Supp. 880 (C.D. Cal. 1997). Reader may also wish to consult an excellent overview of the legal analysis in the BNA Overview, Daily Labor Report No. 187, at A-1, *International Labor Ninth Circuit Lets Burmese Citizens Bring ATCA Suit Against Unocal for Forced Labor,* at A-1 (September 26, 2002); *see also,* Tam, *Myanmar Human-Rights Suit Against Unocal Is Reinstated*, Wall Street Journal, September 19, 2002; Girion, *U.S. Ruling Says Firms Liable for Abuse Abroad*, Los Angeles Times, September 19, 2002; Kravets, *Court Reinstates Suit Against Unocal*, Washington Post, September 19, 2002. It remains to be seen what role, if any, such initiatives may play in prompting WTO action on labor standards. On February 14, 2003, the Ninth Circuit granted the motion for rehearing en banc and ordered that the panel decision could not be cited as precedent within the Circuit. (*Doe v. Unocal Corp*., Nos. 00-56603, 00-57197 (9th Cir. February 14, 2003); Girion, *U.S. Court Will Rehear Case Against Unocal*, Los Angeles Times, February 15, 2003; Tam, Appeals Court Will Revisit Ruling in Suit Against Unocal, Wall Street Journal, February 14, 2003.)", *see* www1.umn.edu/humanrts/intlhr/supp-chapter14.html (visited November 28, 2003).

VII. Concluding Remarks

The Uruguay Round Ministerial Declaration on the contribution of the WTO to achieve greater coherence in global economic policymaking recognized that the globalization of the world economy has led to ever-growing interactions between the economic policies pursued by individual countries, including interactions between the structural, macroeconomic, trade, financial and development aspects of economic policymaking.[129] Labor standards are necessarily part of this panoply of economic policies.

Since the end of the process of decolonization there has been a remarkable and somewhat paradoxical shift in international standard setting. For a period of time after the influx of developing countries into the United Nations, it was the diversity of the (largely developing country) UN membership, rather than the globalization of markets and economic processes that demanded additional standard setting. At first it was the developing countries who fought, *inter alia*, for the replacement of "international standards" governing the adequacy of amounts of compensation to be paid in cases of nationalization.[130] At present it is overwhelmingly developed industrialized countries which display regulatory zeal in respect of globalized markets, whether for trade, services, intellectual property, investment, environmental protection or labor standards.

There is growing concern about the appalling conditions of work in many places in the world. However, before a multilateral social clause can be established, several issues need to be addressed.

In the first place, to operate fairly such a clause would have to reflect a balance of principles and interests and of degrees of trade dependence and hence vulnerability to sanctions. Secondly, a social clause would need to give special consideration to the interests of small and weak economies and, where poor labor conditions are attributable to a low level of development additional financial, economic and technical assistance should be provided. Thirdly, if surveillance of worldwide labor standards is to be linked to sanctions, it would be necessary to assess case-by-case whether sanctions (loss of trade preferences) are appropriate at all, given that poor working conditions may also be attributable to factors such as high levels of indebtedness, low world market prices for primary commodities or difficulties in securing market access for developing countries' exports.

The ILO and the WTO share a common interest in eliminating unfair labor conditions, the former by vocation, the latter in the interest of free trade based on common labor standards rather than on the parochial standards of certain countries. The WTO to some extent embraces policies and goals that reflect the internationalization of production. The unreformed ILO on the other hand has become a constraint upon social change rather than an accelerator of it because it is still steeped in the ideology of tripartism rooted in industrial organization that pre-dates that internationalization.[131] At its core, the idea of international fair labor standards is not protectionist. On the contrary, agreed minimum standards, establishing a floor for workers' rights, potentially remove one of the chief justifications for import restrictions. In the final analysis, of course, the best way to disprove the charge of protectionism would be to couple a social clause with reduced trade barriers for complying countries. It seems probable that the issue of a social clause in multilateral trade will remain on the agenda for the foreseeable future. However, as a highly complex and controversial issue it is unlikely to be resolved anytime soon.

I. Introduction: Trade and Labor in a Broader Context

We live in times that challenge multilateral approaches to resolving persistent global problems like poverty and conflict. The unilateral exercise of economic and military power threatens the international system of co-operation as we know it. However, notwithstanding their sharp divergence in method, proponents of both unilateral and multilateral approaches often invoke similar ultimate aims as their motivation. Their common aims reflect values[1] that are shared at a very fundamental level—values such as peace, justice, and human dignity and security. The means for achieving these basic objectives are collectively valued as well; these include poverty reduction, economic development, and conflict resolution. Progress toward these common goals necessarily involves the markets and workplaces of the world, and the rules and relationships that govern economic and social transactions within and across borders.

For most people, a sustainable job is the only secure way out of poverty. In principle, economic growth and enterprise development, fueled by trade and market access, bring more jobs.[2] Multiplied many fold, decent jobs raise standards of living and contribute to a universal and lasting peace based on social justice.[3] Yet, the evident interaction between promoting jobs and freer trade has failed to diminish the labor-trade debate at international level. Many questions remain on how application of the principles of "decent work"[4] and "free trade"[5] could be better coordinated to more effectively bring

[1] In this chapter, the term "values" connotes the beliefs and perspectives of individuals, groups or communities that certain goals and ways of behaving are important. For further detail, *see infra* notes 38, 42 and accompanying text.

[2] See *infra* Part B discussing trade, growth and poverty.

[3] *International Labor Organization Constitution*, June 28, 1919, preamble, 49 Stat. 2712, 15 U.N.T.S. 35 ("ILO Constitution").

[4] The International Labor Organization's ("ILO") mission, defined as "decent work" in modern terms, is to find sustainable opportunities for women and men to obtain decent and productive work, in conditions of freedom, equity, security and human dignity. *See, e.g., Report of the Director General, Decent Work: International Labor Conference,* ILO, 87th Session, 3ff (1999). Four pillars support the objective of decent work according to the ILO and are informed by international labor standards: rights at work; employment protection; security and social protection; and representation and dialogue. The interconnected dimensions of decent work are central to whether that work meets social goals, including peoples' needs for livelihood, dignity and poverty elimination. The term "rights at work" refers to four categories of core labor standards: freedom of association and effective recognition of the right to collective bargaining, elimination of discrimination in employment and occupation, elimination of all forms of forced or compulsory labor, and effective abolition of child labor. *Id.* at 14. These enabling rights have achieved global scope through the acceptance at the 1995 United Nations ("UN") Copenhagen Social Summit, *Copenhagen Declaration on Social Development*, U.N. Doc. A/CONF/.166/9 (1995), (adopted by the World Summit for Social Development, March 6–12, 1995) ("*Copenhagen Declaration*") and subsequently the ILO Declaration of Fundamental Principles and Rights at Work, June 18, 1998, 37 I.L.M. 1233 (1998) ("*ILO Fundamental Principles*").

[5] The principle of "free trade" or "liberal trade" motivates the international trading rules though the terms themselves are not explicitly used in the WTO Agreement itself. See *generally Marrakesh Agreement Establishing the World Trade Organization*, April 15, 1994, *Final Act Embodying the Results of the Uruguay Round of Multilateral Trade Negotiations*, 33 I.L.M. 1125, 1146 (1994) ("*Uruguay/WTO Agreement*"). Trade flows between countries with a minimal amount of restrictions by governments are often described by reference to their benefits to individual economies and the society of nations. As stated by the leading economist Paul Samuelson, "there is essentially only one argument for free trade or freer trade, but it is an exceedingly powerful one, namely: Free trade promotes a mutually profitable division of labor, greatly enhances the potential real national product of all nations, and makes possible higher standards of living all over the globe." Paul Samuelson, ECONOMICS 651 (11th ed., 1980). Given a fixed stock of productive resources, free trade in principle permits the consumption possibilities available to the economy to expand beyond the economy's production possibilities; in contrast, in an isolated economy without trade, domestic consumption is limited to production. Melvyn Kraus, THE NEW PROTECTIONISM: THE WELFARE STATE AND INTERNATIONAL TRADE, 2–4, 6 (1978).

economic growth, jobs, and development as well as decreased poverty and ultimately justice, peace, and dignity.

This chapter examines the quest for coherence in the global governance of work and trade.[6] I use the term "global governance" to refer to the system of international institutions, rules, and processes that guide the conduct and relations of states and non-state actors across borders.[7] I first review the origins and effects of the current deficit of coherence within the global governance system. I consider the extent to which the growing cohesion among universally-accepted values offers a means for building normative and institutional coherence between the WTO and the ILO in the context of other international institutions and actors. In pointing out the resulting sense of "shared responsibility" among those concerned, I propose that such values should continue to inform the development of governance and accountability mechanisms to guide international organizations, States, and non-state actors in more effectively co-ordinating their policies and practices in the market and the workplace.

A. The Apartheid of Labor and Trade

For more than half a century, the institutions mandated to facilitate international relations and cooperation in trade and labor have operated largely in isolation from each other. The International Labor Organization ("ILO") and World Trade Organization ("WTO") and its predecessor Secretariat for the General Agreement on Tariffs and Trade ("GATT"),[8] have functioned in large part like two productive units side by side, with chimneys pumping outputs into a common space yet leaving the air-quality effects unmeasured. No inter-institutional agreement governs their relationship, and ad hoc consultations, while increasing in frequency, remain irregular.[9]

[6] Coherence does not mean harmonization or standardization; it contemplates a sufficient coordination of effective governance which, *inter a lia*, is marked by plurality of participation and an appropriate balance of national and international levels of jurisdiction. See, e.g., *infra* note 101 and accompanying text. Applying the principle of subsidiarity in allocating jurisdiction helps ensure effective governance and the achievement of common ultimate goals. *Cf.* Katharina Pistor, *The Standardization of Law and Its Effect on Developing Countries*, 50 Am. J. Comp. L. 97 (2002).

[7] The term "state actors" includes national and local governments and inter-governmental organizations. The term "non-state actors" encompasses multinational and local enterprises, trade unions and business associations, consumer, investor and other civic organizations, religious and ethnic groups, and the media, among others; and in the private sector.

[8] The ILO was created in 1919 with functions defined in its Constitution, *supra* note 3. The General Agreement on Tariffs and Trade (GATT) 1947, 55 U.N.T.S. 194, as amended and in force as the General Agreement on Tariffs and Trade 1994, Annex 1A to the WTO Agreement, was a provisional agreement designed to cover the period prior to entry into force of the Havana Charter, *infra* note 10. Upon the latter's stillbirth, the GATT, serviced by a Secretariat, remained in force as the forum for multilateral trade negotiations until the vacuum was filled by the WTO Agreement, *supra* note 5, and the World Trade Organization formally came into being on January 1, 1995.

[9] The World Trade Organization ("WTO") General Council is to make appropriate arrangements for cooperation with international organizations that have "responsibilities related to those of the WTO." *Uruguay/WTO Agreement*, *supra* note 5, Article V(1). According to guidelines on observer status of international governmental organizations, participation in WTO proceedings can be obtained by request or by invitation. However, the ILO has no observer status permitting participation at WTO General Council meetings. The WTO, for its turn, has participated in public meetings of the ILO Governing Body and other ILO bodies. In a discussion held with the Governing Body Working Party on the Social Dimension of Globalization, the then Director-General of the WTO, Mr. Mike Moore, emphasized the role of values such as universalism and solidarity in putting into place redistributive mechanisms to assist workers displaced by trade-related shifts in labor demand. *E.g., Report of the Working Party on the Social Dimension of Globalization*, ILO Doc. GB.283/15, at ¶ 2 (March 2002). The ILO Director-General further reported that the Director-General

The current deficit in coherence developed following the demise of the integrated vision expressed in the Havana Charter for an International Trade Organization of 1947.[10] In the Havana Charter, fifty-three States devised an interdependent approach to international cooperation in fields including employment, development and trade.[11] Their purpose was to realize the aims envisaged in Article 55 of the UN Charter, notably higher standards of living, full employment, and conditions of economic and social progress and development.[12] In pledging national and international action, individually and collectively, to realize these aims, Havana Charter aspirants sought to "foster and assist industrial and general economic development," and "further the enjoyment by all countries, on equal terms, of access to markets, products and productive facilities which are needed for their economic prosperity and development."[13] Chapter II stressed the centrality of employment to the achievement of these general purposes and objectives and the need for concerted action within the UN, in collaboration with the appropriate inter-governmental organization, to supplement domestic measures to avoid unemployment.[14] The parties recognized that fair labor standards were a matter of common interest among all countries and that "unfair labor conditions, particularly in production for export, create difficulties in international trade."[15]

Since its failure to enter into force, no institutional project to integrate the global governance of trade, labor, and development as ambitious as the Havana Charter has been attempted.[16] The ILO, which was created several decades before the United Nations and the attempted Havana Charter,[17] supervises a singular remnant of the quest for coherence from that era. The 1944 Declaration of Philadelphia, incorporated as an annex to the ILO Constitution, calls for prioritizing the pursuit of the conditions necessary for social justice as a central policy objective, both in national and international policies and measures, and in particular those of an economic and financial character.[18] Along

of the WTO, Mr. Supachai Panitchpakdi, had held discussions with the ILO-convened World Commission on the Social Dimension of Globalization. *E.g., Report of the Working Party on the Social Dimension of Globalization*, ILO Doc. GB.285/16, at ¶ 34 (March 2003). The World Commission is an independent body with a mandate to review the implications of globalization for economic and social progress, and to recommend innovative ways to respond to the needs of people ; a final report is to be released in early 2004. http://www.ilo.org/public/english/wcsdg/index.htm, accessed on May 9, 2003.

[10] *UN Conference on Trade and Employment: Final Act and Related Documents*, March 24, 1948, U.N. Doc. E/CONF 2/78, U.N. Sales No. 1948.II.D.4 (1948) ("*Havana Charter*"), never entered into force.

[11] *See, e.g.*, *id,* Chs. II (employment), III (development), IV (tariffs, quotas, subsidies, etc.),

[12] *Id*., Chapter I, Article 1. The first two aims are re-articulated in the preamble to the WTO Agreement, *supra* note 5.

[13] *Id.* Chapter I, arts. 2 (economic development) and (3) (equal access). These goals do not appear in the preambular principles and objectives of the WTO Agreement, which recognizes in pertinent part "the need for positive efforts designed to ensure that developing countries . . . secure a share in the growth in international trade commensurate with the needs of their economic development". *WTO Agreement, supra* note 7, preamb. ¶. 2.

[14] *Id*. Chapter II, Article 2(1) and (2).

[15] *Id*. Chapter II, Article 7.

[16] The Havana Charter never entered into force, a development precipitated by the failure of the U.S.Senate to ratify. John Jackson, The World Trading System: Law And Policy Of International Economic Relations 38 (2002).

[17] The ILO was created in 1919. ILO Constitution, *supra* note 3.

[18] *Declaration Concerning the Aims and Purposes of the International Labor Organization* (May 10, 1944), ILO Constitution, *supra* note 3, at Annex, Article II (revised 2001) ("*Declaration of Philadelphia*"): "Believing that experience has fully demonstrated the truth of the [1919 constitutional premise] that lasting peace can be established only if it is based on social justice, the International Labour Conference affirms that (a) all human beings, irrespective of race, creed or sex, have the right to pursue both their material well-being and their spiritual development in conditions of freedom and dignity, of economic security and

with national level commitments, the governmental and social partner representatives of the ILO Member States conferred upon the Organization itself the responsibility "to examine and consider all international economic and financial policies and measures" in the light of "the fundamental objective" of achieving lasting peace based on social justice, and to "include in its decisions and recommendations any provisions which it considers appropriate".[19] They further pledged "the full cooperation of the ILO with such international bodies as may be entrusted with a share of the responsibility" in the fields of international trade, development, and financial stability.[20] While no direct constitutional mechanism for implementation of the entire Philadelphia Declaration exists,[21] its call for coherence is reflected in ILO instruments and mechanisms relating to employment policy[22] and fundamental principles and rights at work,[23] and in a complaints mechanism relating to freedom of association.[24]

B. The Unfulfilled Promise of Liberalized Trade

The growing disparity in ownership of the gains of trade, both within and between countries, demonstrates the gaps in fulfillment of the promise of a better life for all through liberalized trading rules, both in principle and practice. As a system based on and designed to exploit inequalities among states, international trade, in theory, promises to benefit a particular country when its "peculiar powers bestowed by nature" are put to the

equal opportunity; (b) the attainment of the conditions in which this shall be possible must constitute the central aim of national and international policy; (c) all national and international policies and measures, in particular those of an economic and financial character, should be judged in this light and accepted only in so far as they may be held to promote and not to hinder the achievement of this fundamental objective . . . "

[19] *Id*, Article II (d), (e).

[20] *Id*., Article IV.

[21] ILO constitutional principles have inspired the development of follow-up reporting involving fundamental principles and rights at work, *infra* notes 37, 100–101, and complaints procedures on freedom of association, *infra* note 24.

[22] States parties to the Employment Policy Convention assume an obligation to promote full and free employment "within the framework of a co-ordinated economic and social policy". *Employment Policy Convention*, ILO Convention No. 122 (1964), arts. 1, 2. The preamble to the Convention recalls the relevant provisions of the Philadelphia Declaration. Two non-binding recommendations further instruct ILO Members on how to co-ordinate the social objectives of employment policy with other measures of economic and social policy, including fiscal, monetary, and trade policies, at both national and international levels. *Employment Policy (Supplementary Provisions) Recommendation*, ILO Recommendation No. 169 (1984), Article IX; *Annex to Employment Policy Recommendation*, ILO Recommendation No. 122 (1964), Article I(2).

[23] All ILO member states share a commitment to a minimum social floor of fundamental principles and rights at work by virtue of obligations arising from the ILO constitution, including the Declaration of Philadelphia. The four categories of fundamental principles and rights are recognized in the 1998 Declaration of Fundamental Principles and Rights at Work, *supra* note 4.

[24] Two mechanisms permit complaints concerning infringement of constitutionally-based freedom of association principles in respect of countries which have ratified the freedom of association Conventions and, contingent upon consent of the country concerned, those which have not. In 1950, the Philadelphia Declaration's emphasis on freedom of expression and of association as a fundamental principle provided constitutional inspiration for creating an independent Fact-Finding and Conciliation Commission on Freedom of Association (FFCC), created by agreement with ECOSOC. Composed of nine independent members, the body examines complaints of infringement of trade union rights. In 1951, a tripartite Committee on Freedom of Association of the ILO Governing Body was established which has examined nearly 2000 cases to date. See http://www.ilo.org/public/english/standards/norm/enforced/foa/index.htm, visited May 13, 2003. The relevant fundamental conventions on freedom of association and collective bargaining are *Freedom of Association and Protection of Right to Organize Convention*, ILO Convention No. 87 (1948), 68 U.N.T.S. 17 and *Right to Organize and Collective Bargaining Convention*, ILO Convention No. 98 (1949), 96 U.N.T.S. 257.

most efficacious use.[25] Moreover, economic growth supported by trade is recognized, in theory, as a key determinant of levels of employment and working conditions, including enhanced wage equality, income distribution, and poverty reduction.[26]

Yet, in practice, the application of the principle of comparative advantage is complicated by a number of intervening variables, including levels of development and technological capacity, foreign direct investment, skills and adaptability of work forces, and multinational enterprise global strategies.[27] Trade liberalization in some developing countries, especially those less advantaged, appears to be producing exactly the opposite of the promised gains: marginalization, de-industrialization, and increasing wage inequality and poverty within and between countries.[28] Developing countries, civil society organizations, trade unions, and local businesses adversely affected by export competition have expressed growing discontent with the effects of a liberalized trading regime. Empirical studies on the impact of trade on real income, poverty reduction and development have sought positive correlations but the conclusions have faced challenges on grounds of limited evidence and methodological shortcomings.[29] Developing countries

[25] The theory of comparative advantage is based on the presumption that, under a system of perfectly free commerce, each country naturally devotes its capital and labor to such employments as are most beneficial to each, admirably connecting the pursuit of individual advantage with the universal good of the whole. David Ricardo, *On Foreign Trade*, in On the Principles of Political Economy and Taxation, *reprinted in* George T. Crane and Abla Amawi, The Theoretical Evolution of International Political Economy, 74–75 (1991).

[26] Under the Heckscher-Ohlin model, in a two-factor world comprising capital and labor as the only factors of production, comparative advantage would turn on either capital or labor abundance; the Stolper-Samuelson theorem extended this model to predict that free trade would increase the demand for unskilled labor in labor-abundant countries and raise wages once any labor surplus is eliminated. *See, e.g.*, *Trade Liberalization and Employment,* ILO Doc. GB.282/WP/SDG/2, ¶¶ 15–19 (Nov. 2001). Global systems encouraging liberalization of trade and, in many applications, development policy reflect similar presuppositions. *Cf.* J. Jackson, The World Trading System 11–25 (2000).

[27] The economic vulnerability of developing countries in the context of a trading system dominated by industrialized states intensified during colonization and post-war decolonization periods, even as developing countries sought U.N. alternatives to post-Havana GATT frameworks. *See, e.g.*, Frank Garcia, *Trade and Inequality: Economic Justice and the Developing World*, 21 Mich. J. Int'l. L. 981–985 (2000). Deterioration associated with trade imbalances may be attributable to a confluence of factors, including the marginalization of low-income countries due to debt burdens, commodity price fluctuation, lower skills levels of work forces, and environmental degradation. Some observers have noted that trading between unequal size economies creates heightened vulnerability for less dominant trading partners due to such factors as the relative openness of small economies to external transactions in relation to total economic activity, and the relatively undiversifed economic base and heavy reliance on primary product exports of small economies *See, e.g. id.* at 987.

[28] Observers have blamed trade liberalization for employment ills within advanced and developing countries alike, although empirical research has cast doubt on some such views. *See generally,* ILO Doc. GB.282/WP/SDG/2, *supra* note 20. In advanced economies, rising unemployment and wage inequality have been linked to the perceived exodus of low-skilled jobs due to the lifting of import barriers, resulting in increasing imports from low-wage economies, together with the relocation of labor-intensive industries to those countries. *Id*. ¶ 9. In developing economies, the liberalization of trade has been perceived as stimulating a "race to the bottom" in exercising a low-wage comparative advantage, and at the root of increased exploitation of workers in developing countries, deteriorating working conditions and labor standards. For a review of such perceptions, see Kimberley Elliott and Richard Freeman, Can Labor Standards Improve under Globalization?, 17–22 (2003).

[29] *See, e.g.,* P. Agenor and J. Aizenman, *Trade Liberalization and Unemployment,* 5 J. Int'l Trade & Econ. Dev., 265 (1996); D. Greenaway, *Liberalizing Foreign Trade Through Rose-Tinted Glasses*, 103 Econ. J. 208 (1993). *questioning* D. Papageorgiou et al., *Liberalization of Foreign Trade in Developing Countries: The Lessons of Experience* (World Bank, 1990). See also *Coherence in Global Economic Policymaking and Cooperation between the WTO, the IMF and the World Bank*, WTO Doc. WT/TF/COH/S/7, 29 April 2003 (*Coherence Note*), ¶ 36 ("the links between trade liberalization and poverty reduction are complex, and

confront inequitable trade-offs in allocation of fiscal and administrative resources to local needs, on the one hand, or international institutional requirements, on the other hand.[30]

Left unmoored from an integrated social and economic framework, the system of international trade cooperation is being challenged as unfair in outcome and process.[31] Limited resources and know-how hinder developing countries in making effective use of dispute settlement mechanisms and of trade policy tools designed to provide preferential access and special protection to their markets.[32] In principle, the legal right to retaliation provides recourse in the face of inadequate compliance but, in practice, economic inability significantly reduces the value of this right for those with less economic "staying power".[33]

Experience illustrates that the rules for integration within the world economy do not present economically sustainable propositions for all, even when trade openness is coupled with institutional reforms like social safety nets and labor market adjustments.[34] While "the mutually profitable division of labor" plays a central role in trade theory,[35] the interaction between trade undertakings and working conditions, wages, and levels of employment is left largely unaddressed in international policy and practice. In 1997, the WTO Ministerial Conference expressed a desire to maintain "existing collaboration" at Secretariat level between WTO and ILO.[36] Within the ILO, the 1998 Declaration of

in some respects controversial. While it is well-established that trade openness and growth are mutually supportive, and that poverty reduction requires economic growth, the direct impact of trade liberalization on different groups among the poor can vary").

[30] Trade-offs have been noted in the area of legal reforms, public health, industrial strategy, economic policy transparency. In each area, reforms may serve more the interests of foreign investors and markets rather htan building capacity to meet local needs. *See* Dani Rodrik, *The Global Governance of Trade as if Development Really Mattered*, 30 (UN Development Programme, 2001); Ben Thirkell-White, *The IMF, Good Governance and Middle-Income Countries*, 15 EUR. J. OF DEV. RSCH. 99, 118–19 (2003).

[31] Critics have claimed that issues in trade negotiating rounds are set for discussion without transparency or consensus and conclusions arrived at without the effective participation of all. *E.g.*, Deepak Nayyar, *The Existing Systems and the Missing Institutions*, in GOVERNING GLOBALIZATION 377–78 (Deepak Nayyar ed. 2002). The greatest fissure in the multilateral trading system has been identified as that between developed and developing countries. Raj Bhala, *Assessing the Modern Era of International Trade*, 21 FORDHAM INT'L L. J. 1647, 1658 (1998). The inconclusive results of the fifth WTO Ministerial Conference, particularly the lack of consensus on "Singapore" issues (investment, competition policy, transparency in government procurement), reflect a new filibustering power on the part of developing countries. Ministerial Conference, Fifth Sess. (cancan) *Ministerial Statement*, WT/MIN(03)/20, Sept. 23, 2003, reproduced in the Appendix to this book.

[32] *See, e.g.*, Gerry Helleiner, *Global Economic Governance,* in Nayyar, *supra* note 31, at 323–26.

[33] For the use of retaliatory measures for lack of full compliance, *see generally* the *Understanding on Rules and Procedures Governing the Settlement of Disputes* ("*DSU*"), Article 22.

[34] *See, e.g.,* Rodrik, *supra* note 30, at 31. "WTO rules on anti-dumping, subsidies and countervailing measures, agriculture, textiles, TRIMS, and TRIPs are utterly devoid of any economic rationale beyond the mercantilist interests of a narrow set of powerful groups in the advanced industrial countries." Id. *See also* Thirkell-White, *supra* note 30. Critics claims that the so-called "enlightened standard view", which augmented the Washington Consensus by espousing the need for more than simply removal of trade and investment barriers, further burdened developing countries by requiring a full complement of other institutional reforms to ensure favorable economic outcomes. Those included tax reforms, policies to enhance labor mobility across industries, technological assistance to upgrade domestic firms affected by import competition, training programs to ensure skilled labor market for export-oriented firms, etc. *See, e.g.,* Rodrik, *supra* note 30, at 29.

[35] See *supra* notes 5 and 25.

[36] The relationship of labor to trade was addressed in brief at the Singapore Ministerial Conference of WTO: "We renew our commitment to the observance of internationally recognized core labor standards. The International Labor Organization ("ILO") is the competent body to set and deal with these standards, and we affirm our support for its work in promoting them. We believe economic growth and development fostered

Fundamental Principles and Rights at Work committed all Member States to a minimum social floor of fundamental principles and rights at work reinforced by a follow-up procedure that combines reporting and technical cooperation, and affirming the premise that adherence by all to this floor will preclude any principle effect on comparative advantage.[37]

II. Values in Markets and the Workplace

Values play an important role in markets and at work that offers an opportunity for bridging the current gaps in the governance of trade and labor to seek higher standards of living for all. At local and national levels, values shared across society[38] serve to shape the social institutions and customs which, to a large extent, organize work and trading activities. By nature, markets and workplaces are embedded in society and operate on the basis of social expectations. How well they function depends in part on the level of shared attitudes and expectations that build trust between people.[39] The greater the coherence of moral norms or values, the more common interests generate the confidence that facilitates market transactions and approaches to negotiating and resolving differences.[40] This sort of dynamic in the workplace, fostered by commonly agreed expectations, is at the heart of industrial relations systems based on social dialogue and freedom of association for workers and employers.[41]

by increased trade and further trade liberalization contribute to the promotion of these standards. We reject the use of labor standards for protectionist purposes, and agree that the comparative advantage of countries, particularly low-wage developing countries, must in no way be put into question. In this regard, we note that the WTO and ILO Secretariats will continue their existing collaboration." Ministerial Conference, *Singapore Declaration*, WTO Doc WT/MIN/96/DEC, Dec. 13, 1996, ¶¶ 4, 13 I.L.M. 220, 221 (1997), reproduced in the Appendix to this book.

[37] See discussion *infra* at notes 96–97, 100–101 and accompanying text. While not directly addressing the Declaration's premise, empirical and economic analyses on the interaction of trade, labor, and globalization have informed policy-level discussions in the ILO Governing Body. *E.g., Country Studies on the Social Impact of Globalization: Final report*, ILO Doc. No. GB.276/WP/SDL/1 and Add.1; GB.283/15, ¶¶ 10–15 (2002) (panel discussion of paper: *Trade Liberalization and Employment*, ILO Doc. GB.283/WP/SDG/1 (2002)). The results of a recently-convened independent World Commission on the Social Dimension of Globalization, mandated by the ILO to prepare a Report on related issues, are pending at date of writing. *See supra* note 9.

[38] For a working definition of values, *see supra* note 1. Values common to a society may be reflected in social contracts or customs, or expressed through behavioral patterns at individual or societal level. Philip Nichols, *Trade Without Values,* 90 NW. U. L. Rev. 658 (1996). Values theory distinguishes various perspectives on values: contractarian (social contracts embodying behavioral norms which derive from shared perspectives); utilitarian (promoting self or societal interest), skeptic individualism (matter of personal taste) and universalism (values founded on universal truth). *Id.* at note 72 and accompanying text.

[39] *See, e..g.*, Hazel Henderson, Beyond Globalization: Shaping A Sustainable Global Economy (1999).

[40] Shared values breed predictability of expectation and, in optimal situations, trust. *See, e.g.,* F. Fukuyama, Trust, The Social Virtues And Creation Of Prosperity (1995). According to some analysts, it is possible to economize substantially on transaction costs in a modern market-oriented economic system if market institutions are supplemented by social capital and trust. In this view, trust is understood to be the expectation that arises within a community from regular behavior based on commonly shared moral norms or values. *Id*. at 26; K. A. Elliott, *The Role of Incentives, Trust, and Institutions in Sustainable Single Markets*, prepared for "Lessons for a Globalizing World? Historical Experiences of Europe and the United States in Market Integration", sponsored by the European Union Center, Maxwell School, Syracuse University, N.Y. (2002) (unpublished manuscript on file with author).

[41] *See, e.g., Your Voice at Work: Global Report on Freedom of Association and Effective Recognition of the Right to Collective Bargaining,* ILO (2000). Social dialogue is defined by the ILO to include all types of negotiation, consultation or simply exchange of information between, or among, representatives of governments, employers and workers, on issues of common interest relating to economic and social policy. The

At international level, the expanded reach of communications networks has increasingly linked the global and the local, raising public awareness of the imbalance in resources and power between haves and have-nots within and across countries, businesses, and communities. The emerging conscience is building a consensus on core values and commitments to common goals. Expectations and goals common both to open markets and to decent work and life are converging from a wide range of State and non-state actors across different cultures, beliefs, and economic contexts.[42] At the heart of this advance is a conviction that solidarity must accompany individual gain; the world's markets must incorporate morals to sustain themselves and to function effectively in the workplace and in society.[43] There is a recognition that market forces alone cannot guarantee equity, freedom, or human dignity and diversity, nor can they alone produce the enabling conditions for development like sustainable and decent work.[44] Rather, the co-ordinated commitments of public, market and social actors signal a new process for implementing common goals through the sharing of responsibility in respective spheres of competence.[45] In a manner akin to local interactions, the sharing of universal values is critical to building trust and allocating responsibility for achieving common goals

definition and concept of social dialogue varies from country to country and from region to region and it is still evolving. http://www.ilo.org/public/english/dialogue/ifpdial/sd/index.htm, visited January 24, 2004. Respect for freedom of association rights is considered by the ILO as essential to social dialogue, which in turn is a vital component of "decent work", *See supra* note 3. For economic analyses of such systems, *see, e.g.*, Toke Aidt and Zafiris Tzannatos, UNIONS AND COLLECTIVE BARGAINING: ECONOMIC EFFECTS IN A GLOBAL ENVIRONMENT, 14–16 (World Bk., 2002); David Kucera, *Core Labour Standards and Foreign Direct Investment*, 141 INT'L LABOUR REV. 1–2, 31 (2002).

[42] Values that are shared at some fundamental level, across cultures and peoples, provide a common threshold for identifying commitments to certain objectives and expectations of certain conduct. As in the context of individual societies, values shared across societies may result in widespread customs or expectations that, over time, create a mutual trust strengthening economic, social and cultural exchanges across the groups involved. Between countries, some of these values may find official expression in treaties or other agreements, or even trading and security alliances. When values are shared on a widespread, or global scale, their strength or primacy in guiding the conduct and objectives of multinational relations may be embodied in multilateral treaties, declarations and other sources of international law or political commitments.

[43] For an approach to understanding the causal links between institutional market arrangements and the realization of fundamental social values of well-being, freedom, and justice, *see* Amartya Sen, *The Moral Standing of the Market*, in ETHICS AND ECONOMICS (Ellen Frankel Paul *et al*., eds. 1985). A more recent political effort within the United Nations itself, the Global Compact, seeks to promote universal values for global markets through learning, policy, and active partnerships among business, labor, civil society, and the public sector. *See* www.unglobalcompact.org. The three categories of universal values consists of human rights, the environment, and labor; the labor category is comprised of the fundamental principles and rights at work found in the ILO Declaration of the same name. *See* ILO Fundamental Principles, *supra* note 4 and accompanying text. Among relevant international organization initiatives, the Multilateral Investment Guaranty Agency of the World Bank Group excludes support for projects that use forced labor or harmful child labor. *See* Multilateral Investment Guarantee Agency: *Operational Regulations*, June 22, 1988, ¶ 3.08, 27 I.L.M. 1227 (1988); *Standard Contract of Guarantee and General Conditions of Guarantee for Equity Investments*, Jan. 27, 1989, at Schedule A, Articles 10.1, 32, 28 I.L.M. 1233 (1989).

[44] *See, e.g.*, *Universal Declaration on Cultural Diversity*, United Nations Educational, Scientific and Cultural Organization ("UNESCO"), Article 11 (2002), (market forces need public policy and partnership with private sector and civil society to ensure diversity). *Prague Declaration*, approved by the Fifth Forum 2000 Conference, at Section 2, Prague, Czech Republic, 17 Oct. 2001, available at www.forum2000.cz/2001/declaration, ("effective policies for the global economy have to be addressed by social and political institutions . . . [to increase] social capital and develop human capacities and opportunities").

[45] *See, e.g.*, *UN Millennium Declaration*, GA Resolution 55/2, UN Doc. A/RES/55/2, Sept. 18, 2000 ("*Millennium Declaration*"), Article I(6) (shared responsibility is a fundamental value essential to international relations in the 21st century); *Copenhagen Declaration*, *supra* note 4, ¶¶. 26, 27 (while States have primary responsibility of social development, we acknowledge the interdependence of public and private spheres of activity).

through agreed methods. Through this dynamic, a growing framework of globally-shared values essential to a balanced operation of trade and labor offers a platform for coherent governance at international level.

III. Discovering Shared Values

Examining the values common to trade and labor requires looking at the surrounding context of international cooperation. Trade and work function in markets and society together with other international efforts to achieve global public goods, including social and economic development, monetary stabilization, democratic governance, and public health.[46] Because the various regimes governing international cooperation operate interdependently, the relationship between trade and labor is only effectively addressed within this larger "community" of global actors which includes states, international organizations, business and worker associations, and civil society organizations. Shared values, discernible across these public and private spheres, are the starting point for a system to manage trade and labor at global level.

A. Values Instruments

At local and national levels, shared values may be expressed through unwritten customs in socio-economic relationships and structures, or in written texts like popular manifestos and official laws and regulations.[47] At international level, values shared across borders may find expression in international customary or conventional law, in general principles of international law or in political resolutions of international and regional organizations.[48] Such "values channels" vary in their binding or authoritative character. Internationalized values are also found in influential popular declarations and collective statements of business and civil society groups, scholars, and global commissions. While these commitments may have no direct legal force, they sometimes lead to the adoption or more effective recognition of officially-endorsed values.[49]

A common core of shared values connects official and popular declarations at international level.[50] One key element is the call to balance the pursuit of private gain

[46] Relevant institutions that manage international cooperation in these areas include the World Bank Group, the International Monetary Fund, World Health Organization, and a number of UN bodies and agencies.

[47] In the case of official instruments, fuller meaning may be given the underlying values by structures and people that interpret or apply the legal regimes. Nichols, *supra* note 38, at note 72 and accompanying text. Law's relationship to values may be in serving as a "tool for arranging today's social relations and expressing today's social values." Alex Aleinikoff, cited in *id.* note 70.

[48] *See Statute of the International Court of Justice*, June 26, 1945, 1977 UN Yearbook 1190, Article 38.

[49] In the context of global commissions of eminent persons, the principles annexed to the report of the Brundtland Commission on Environment and Development laid the foundation for the Rio Declaration on Environment and Development, UN Doc. A/CONF.151/26 (Vol. 1) (1992). Summary of Proposed Legal Principles for Environmental Protection and Sustainable Developed adopted by the WCED Experts Group on Environmental Law, Our Common Future, Report of the World Commission on Environment and Development, Annexe I (1987). One example of the influence of non-governmental scholars is found in the Siracusa Principles on the Limitation and Derogation of Provisions in the International Covenant on Civil and Political Rights, *infra* note 52, initially adopted by a group of legal scholars, which has grown in authoritative recognition within UN bodies themselves. *Siracusa Principles on the Limitation and Derogation of Provisions in the International Covenant on Civil and Political Rights*, UN Doc E/CN.4/1985/4, Annex (1985).

[50] The "essential values" proclaimed by the UN Millennium General Assembly, and the resulting Millennium Development Goals derived from it, provide an authoritative model for building a universally-recognized

with collective effort to enhance the common good.[51] This general directive embodies a fledgling mandate for governing the markets and workplaces of a globalizing world. The balance sought is reflected in three types of common values: over-arching objectives, and applied through normative principles and instrumental rules for working, trading, and living together. The following sections examine these three types of common values that help to build the framework for international governance in the fields of work and trade.

B. Values as Over-Arching Objectives

The specialized frameworks governing labor and trade, along with other regimes, are based upon ultimate objectives that guide international cooperation. These overarching *objectives* of the world community echo the intrinsic desires of humanity that reflect our longings for freedom, dignity, equity and peace.[52]

The objectives underlying the international labor regime encompass such aims in striving for conditions of decent work[53] that are essential to achieving social justice, or equity. The ILO Constitution recognizes social justice as the foundation for universal

values framework that encompasses public and non-state actors in trade and labor. *See Millennium Declaration, supra* note 45, Sec. 6..For other declarations on point, see *infra* note 52.

[51] A wide range of texts reflect consensus in calling for balance, including treaties that use the language of obligation, and political or civil declarations and statements of public and private actors that employ the language of commitment. These articulations have originated in the course of dialogue within multilateral forums, UN-led world conferences, independent global commissions, and gatherings of civil society, labor, business, and religious leaders. While the values-based expressions may not yet be fully put into practice, the various sources do reflect a solemn and consistently-expressed commitment to achieve ultimate objectives through the use of agreed principles and means.

[52] *See, e.g., Charter of the United Nations*, June 26, 1945, 59 Stat. 1031 (1945); *Universal Declaration on Human Rights*, Dec. 10, 1945, UN GA Resolution 217 (A)III, GAOR, 3d. Session, UN Doc. A/810 (1948) *("UDHR"); International Covenant on Civil and Political Rights ("ICCPR")*, Dec. 16, 1966, 999 U.N.T.S. 171 (1966); *International Covenant on Economic, Social and Cultural Rights*, Dec. 16, 1966, 993 U.N.T.S. 3 (1966); *Copenhagen Declaration supra* note 3; *Vienna Declaration and Programme of Action for Human Rights*, UN Doc. A/CONF.157/23, as adopted by the World Conference on Human Rights (1993); *Cairo Report of the International Conference on Population and Development*, UN Doc. A/CONF.171/13 (1994); *Beijing Declaration and Plan of Action on the Advancement of Women*, A/CONF.177/20 (1995); *Final Outcome of the International Conference on Financing for Development*, A/CONF/198/3 (2002) ("*Monterrey Consensus*"); *Report of the World Summit for Social Development, Johannesburg Plan of Implementation*, A/CONF.199/20 (2002) ("*Johannesburg Declaration*"); *Global Compact*, *supra* note 43. The charters of various specialized agencies, including the WTO, *supra* note 5, and ILO, *supra* note 3, reflect the determination of the global community to cooperate together in advancing progress and resolving challenges in trade, labor and other international spheres of activity. For popular declarations reaffirming the fundamental principles of the global constitutional order and echoing the calls of the UN Charter, International Bill of Rights, Millennium Declaration, and cooperative treaty systems, *see, e.g., Our Global Neighborhood*, The Report of Commission on Global Governance (1995); *The Earth Charter*, www.earthcharter.org/earthcharter/charter.htm, ("Earth Charter"); *Prague Declaration, supra* note 44; *Private Sector Declaration*, The World Economic Forum available on-line at www.weforum.org/pdf/Latin_America/Private_Sector_Declaration.pdf; *World Social Forum Charter of Principles*, approved and adopted by the World Social Forum Organizing Committee in Sao Paulo on April 9, 2001, as modified by the World Social Forum International Council on June 10, 2001; *The Principles for Business*: Caux Round Table (1994) at www.cauxroundtable.org; OUR COMMON FUTURE, *supra* note 49; OUR CREATIVE DIVERSITY, World Commission on Culture and Development (1995). While the ethical framework of the emerging global community is not yet fully put in practice, the values and principles do reflect a solemn commitment, repeatedly expressed by states, public organizations, and non-state actors, to adhere to a core of ultimate objectives, and principles and means for achieving them.

[53] *Id.*, preamb. ¶ 2. "Decent work", a term adopted by the ILO to refer to work performed under standards, terms and conditions that affirm respect for the dignity of the human being, *See also supra* note 4 defining "decent work".

and lasting peace.[54] Freedom is vital to improving conditions of labor and establishing peace, particularly freedom of association.[55] In the family and society, the opportunity for a decent job represents a source of human dignity and identity as well as livelihood; for the individual, decent jobs contribute to material well being, fulfill human rights, and enable spiritual development.[56] At a macro level, decent work promotes a more equitable distribution of resources and opportunities within and among countries and people.[57]

Ultimate objectives of like nature underlie the multilateral trade regime. The act of trading itself is an exercise in freedom—freedom of commerce within and between countries.[58] While such freedom is itself beneficial, the purpose of the multilateral trading system is deeper: the system is to serve as a means for a better life, developing the conditions necessary for people and countries to improve their livelihoods and live in dignity. Parties to the WTO Agreement recognize that their relations in the multilateral trading system are to be conducted with a view to raising standards of living, ensuring full employment and growth of real income and effective demand, and expanding the production of and trade in goods and services while allowing for use of the world's resources in accordance with the objective of sustainable development.[59] Security and predictability are acknowledged pre-requisites for the durable and viable functioning of the trading system, and they account for the centrality of the dispute settlement mechanism in the system.[60] Trade rules designed to secure for developing countries a share in the growth in international trade commensurate with their economic development needs reflect the value of equity between nations, at least in principle, though not always in outcome.[61]

[54] *ILO Constitution, supra* note 3, at preamb. ¶ 1. Conditions of work involving injustice, hardship and privation to large numbers of people produce unrest so great that the peace and harmony of the world are imperiled; for this reason, improvement of those conditions is urgently required through regulation of working terms and conditions, and provision for old age and injury, as well as recognition of fundamental principles and rights at work. See ILO Constitution, *supra* note 3, preamble.

[55] *ILO Convention 87, supra* note 24, at preamble.

[56] *See, e.g., ILO Declaration of Philadelphia, supra* note 18, Articles II and III; *ILO Fundamental Principles, supra* note 4, Article 2(b); *UDHR, supra* note 52, Articles 22 and 23.

[57] The guarantee of fundamental principles and rights at work links social justice with economic growth, ILO Fundamental Principles *supra* note 4, at preamble, and informs the proportional balance of rights and freedoms with other common goods. *See, e.g.*, ICCPR, *supra* note 52, Article 19(3), ICESCR, *supra* note 52, Article 4, and *Limburg Principles on the Implementation of the International Covenant on Economic, Social and Cultural Rights*, UN Doc. E/CN.4/1987/17, ¶¶ 46–69 (1987).

[58] Freedom of commerce is a general principle of international economic law recognizing "the right—in principle unrestricted—to engage in any commercial activity, whether it be concerned with trading properly so-called, that is the purchase and sale goods, or whether it be concerned with industry, and in particular the transport of business; or, finally whether it is carried on inside the country or, by the exchange of imports and exports, with other countries." *Oscar Chinn Case*, P.C.I.J. (Ser. A/B) No. 63 (1934). *See also* Georg Schwarzenberger, I Recueil De Cours 47–48 (1966). The related principle of freedom of contract is of paramount importance in the context of international trade. International Institute for Unification of Private Law ("UNIDROIT"), *Principles of International Commercial Contracts*, Article 1.1 Commentary, ¶ 1, 33 I.L.M. 1395 (1994). On the interdependence of economic, political and social freedoms and capacities, *see* generally Amartya Sen,Development As Freedom. 35–41 (1999).

[59] *WTO Agreement, supra* note 5, at preamb. ¶ 1. With several notable exceptions, the goals specified in the WTO preamble parallel those of the original GATT 1947, *supra* note 8. New provisions within the preambular framework include the referenced proviso regarding sustainable development, and a paragraph addressing the need for positive efforts to ensure that developing countries secure a share in the growth in international trade commensurate with their needs for economic development. For a development-oriented perspective on trade, see Rodrik, *supra* note 30.

[60] *DSU, supra* note 33, Article 3(2). See also *WTO Agreement, supra* note 5, preamb. ¶ 4.

[61] *WTO Agreement, supra* note 5, at preamb. ¶ 2. Part IV of the GATT on "Trade and Development" (Articles XXXVI, XXXVII and XXXVIII) establishes the principle of non-reciprocity in trade negotiations between developed and developing countries, and provides for developed countries to adopt special measures to

C. Values as Normative Principles

Normative principles are essential building blocks in reaching the over-arching objectives grounding international cooperation. They include human rights; equality among states and among individuals; full, productive and freely-chosen employment; higher standards of living and economic development; and respect for the environment. Treaties and political declarations across general and specialized fields of international law, including in trade and labor, reflect a broad consensus on this level of values.[62]

International labor law is built upon values-based normative principles. The ILO is founded on the development-oriented premise that decent work must be made available in every nation because "poverty anywhere is a threat to prosperity everywhere."[63] Core international labor standards focus on fundamental human rights and equality as enabling pre-requisites to claiming one's fairshare of the fruits of labor.[64] The promotion

promote the expansion of imports from developing countries. Various provisions, including the special and differential treatment provisions, exempt developing countries from aspects of such basic trading principles as Most-Favored-Nation treatment for all (GATT, Article I), tariff bindings (Article II), national treatment (Article III), and non-tariff barriers (Articles X and XI). A waiver from Article I(1) for example was granted the members of the African, Caribbean, and Pacific States-European Economic Community under the now-expired ACP-EEC Convention of Lomé, Dec. 15, 1989, 29 I.L.M. 783 (1990), to permit preferential treatment for products originating in ACP states as required by that Convention, noting that the parties to the convention consider that it is compatible with obligations under Article XXIV in view of Part IV. For a critique of the results of the "special treatment" principle, see Peter Lichtenbaum, *Special Treatment vs. Equal Participation: Striking a Balance in the Doha Negotiations*, 17 Am. U. Int'l L. Rev. 1003 (2002). Action on the mandate to review the S&D provisions agreed in the Doha Ministerial Declaration (¶ 44) and its Decision on Implementation-related Issues and Concerns (¶ 12) remained pending as of date of writing. For an analysis of the impact of other GATT rules on "late industrializing countries" *see* Alice H. Amsden, *Industrialization under New WTO Law*, UN Doc. No. TD(X)/RT.1/7, paper presented at UNCTAD X, High-level Round Table on Trade and Development, Directions for the Twenty-first Century, Bangkok, Feb. 12, 2000, available on-line at http://www.unctad-10.org/pdfs/ux_tdxrt1d7.en.pdf.

[62] For human rights, *see generally UN Charter, supra* note 52, Articles 1(3), 55(c); *UN Millennium Dec., supra* note 45, Article I(4); UDHR, *supra* note 52; *ICCPR, supra* note 52; ICESCR, *supra* note 52; *Earth Charter, supra* note 52. For equality among states, *see, e.g., UN Charter, supra* note 52, at Article 2(1); *Declaration on Principles of International Law Friendly Relations and Cooperation Among States in Accordance with the UN Charter*, UN GA Resolution 2625, UN Doc. A/55/L.56/Rev.1 (1970); *Millennium Dec., supra* note 45, Article I(6). Equality among individuals is a fundamental value essential to international relations in the 21st century. Millennium Dec., *id.,* Article I(6). It is recognized within the UN Charter, *supra* note 52, Article 1(2) and in a number of general and specific human rights treaties and declarations as well as labor law conventions. *E.g.*, ICCPR, *supra* note 52, Article 2; ICESCR, *supra* note 52, Article 2(2), and *generally International Convention on the Elimination of All Forms of Racial Discrimination ("ICERD")*, March 7, 1966, 660 U.N.T.S. 195, I.L.M. 352 (1966); *Convention on the Elimination of All Forms of Discrimination Against Women ("CEDAW")*, Dec. 18, 1979, 1249 U.N.T.S. 13, 19 I.L.M. 33 (1980). Special measures to ensure equality are called for in various contexts. *E.g., ICERD, id.*, Article 1(4), 2(2); *CEDAW*, at Article 4. Democracy involves a comprehensive set of rights to government by the will of the people. *E.g., UDHR, supra* note 52, Article 21; *Respect for the principles of national sovereignty and non-interference in the internal affairs of States in electoral processes as an important element for the promotion and protection of human rights, UNGA Resolution 56/154*, UN Doc. A/RES/56/154 (2001), preamble; *ICCPR, supra* note 52, Article 25. The principle of development entitles individuals and peoples to the process and results of States' efforts, individually and collectively, to promote economic and social progress and solve related problems. *E.g., Vienna Dec., supra* note 52, Article I(10); *Declaration on the Right to Development*, UNGA Resolution 41/128, UN Doc. A/RES/41/28 (1986), Article 1. Environmental respect is an essential value leading to the sustainability of healthy and productive human life and economic and social activity in harmony with nature and the environment. *E.g., UN Millennium Dec., supra* note 45, Article I(6), *Johannesburg Declaration, supra* note 52, Chapter IV. For labor, *see infra* notes 63–65; for trade, *see infra* notes 66–71.

[63] *Philadelphia Declaration, supra* note 18, Article I(c).

[64] *See ILO Fundamental Principles, supra* note 3, Article 2; *Equal Remuneration Convention*, ILO Convention No. 100 (1951); *Discrimination in Employment and Occupation Convention*, ILO Convention No. 111 (1958); *Workers with Family Responsibilities Convention*, ILO Convention No. 156 (1981). Special measures

of full employment, decent working terms and conditions, and income security are all rights-based development objectives of the ILO.[65]

International trade rules correspondingly reflect normative principles common to the international system. The principle of equality in principle among states underlies the obligation of non-discrimination in most-favored nation ("MFN") and national treatment principles,[66] and in the right to take sanitary and phyto-sanitary measures necessary to protect human, animal or plant life or health.[67] In turn, the pursuit of equality in effect can be seen in the commitment to reciprocity *subject to mutuality of advantage*, and in special clauses for more favorable treatment of developing countries with a view to their fuller participation in international trade.[68] The principle of development has become increasingly recognized at political level in calls for positive efforts to ensure that developing countries secure a share in the growth of world trade and to improve effective participation of least-developed countries in the multilateral trading system.[69] The value of preserving the world's resources is reflected in the WTO Agreement preamble; this pledge was not part of the earlier GATT framework.[70] Various exceptions to protect "legitimate objectives" in the areas of human life, health, and safety, and environmental resources, also implicate WTO Members' commitments to human rights and the environment.[71]

D. Values as Instrumental Tools

The means by which countries put shared values into practice differ depending upon circumstances and local preferences. While maintaining the necessary freedom of choice for differing situations, certain common approaches are evolving that form patterns of consultation, negotiation, and the settlement of disputes at both national and international levels. These *instrumental values* guide the way actors in the international community relate, individually and collectively. They address methods of conduct like

to ensure equality are called for in the Indigenous and Tribal Peoples Convention, ILO Convention No. 169 (1989).

[65] *ILO Constitution, supra* note 3, preamble. *See, e.g., Employment Policy Convention, supra* note 22; *Protection of Wages Convention*, ILO Convention No. 95 (1949); *Minimum Wage Fixing Convention*, ILO Convention No. 131 (1970); *Occupational Safety and Health Convention*, ILO Convention No. 155 (1981); *Vocational Rehabilitation and Employment (Disabled Persons) Convention*, ILO Convention No. 159 (1983).

[66] E.g., *GATT, supra* note 8, Articles I and III.

[67] E.g., *Agreement on the Application of Sanitary and Phytosanitary Measures (SPS)*, Article 2.1.

[68] E.g., *DSU, supra* note 33, Articles 3.2 and 19.2 (rights and obligations); Differential and More Favorable Treatment, Reciprocity and Fuller Participation of Developing Countries, GATT, BISD (1980).

[69] *Doha Ministerial Declaration*, WT/MIN(01)/DEC/1, Nov. 20, 2001, ¶¶ 2, 3, *passim* reproduced in the Appendix to this book); *see also* Monterrey Consensus, *supra* note 52. Concrete steps include duty-free and quota-free access for LDC exports; conducting a work program and negotiating process with a view to development needs including on agriculture, trade in services, intellectual property rights, and a review of all S&D treatment provisions; and supporting technical cooperation and capacity building in coordination with other agencies as core elements of the development dimension of the multilateral trading system. *See also Johannesburg Declaration, supra* note 52, Chapters V, IX (supporting Doha and Monterrey work programs for action to address needs and interests of developing countries).

[70] *See, e.g., WTO Agreement supra* note 5, preamble (expanding the production of and trade in goods and services while allowing for use of the world's resources in accordance with the objective of sustainable development).

[71] E.g., *GATT, supra* note 8, Article XX; *Agreement on Technical Barriers to Trade (TBT Agreement*), Article 2.2. See also *Decision on Trade and Environment*, Ministerial Decision adopted by Ministers at the Meeting of the Trade Negoitations Committee in Marrakesh (14 April 1994) (establishing Committee on Trade and Environment); *United States—Import Prohibition of Certain Shrimp and Shrimp Products*, Report of the Appellate Body, WT/DS58/AB (1998) ("*Shrimp*"), ¶¶ 129–31, 152–53.

transparency, participatory decision-making, and accountability.[72] Such "process values" underlie international relations in various fields, including the labor and trade regimes.

In the labor sphere, consultative decision-making is at the heart of the way decent work is promoted and sustained, and underlies central ILO standards.[73] At the international level, by constitutional mandate, the Organization's decision-making is shared by representatives of governments, employers and workers organizations.[74] Other members of the international community, such as non-governmental international organizations and official international organizations, when accredited as observers, have the right to participate and take the floor under certain circumstances.[75] Documents for discussion at the ILO Governing Body are, as a rule, made public in advance, a transparency which aids meaningful consultation.[76]

In the multilateral trade regime, transparency operates as a motivating principle in a number of contexts. The Trade Policy Review Mechanism is mandated to use greater transparency in WTO Members' trade policies and practices as the primary means to contribute to improved adherence to WTO rules, disciplines, and commitments.[77] Transparency is at the heart of public notice and comment rules for national level decision making on technical regulations with trade effects.[78] Recent steps have been taken to achieve more participation as well as transparency in trade negotiations[79] and in dispute settlement procedures.[80]

IV. Normative Implications of a Values Framework for Trade and Labor

A. Toward the Internationalization of Values

The drive for a values-based mandate to balance the power of trading with the pursuit of public good resembles in some ways the movement toward internationalization of human

[72] The responsibility for implementing good governance rests with states. UN Commission on Human Rights, *The Role of Good Governance in the Promotion of Human Rights*, UN Doc. E/CN.4/RES/2002/76, CHR Resolution 2002/76 (2002). Attributes of good governance are a "transparent, responsible, accountable and participatory government, responsive to the needs and aspirations of the people" *Id.* at ¶ 1; see also ILO Governing Body, *Policies and Social Partnerships for Good Governance*, ILO Doc. GB.288/WPSDG/2 (Nov. 2003). Good governance also rests on the rule of law and democracy. *Copenhagen Declaration, supra* note 4, at Commitment 18(f) and Copenhagen Programme of Action, ¶ 14(b); *Johannesburg Declaration, supra* note 52, ¶ 31. Economic systems are "based on the principles of . . . democracy . . . participation, transparency, accountability and inclusion. *Monterrey Consensus, supra* note 52, Article I(9). Therefore, both trade and labor have intersecting interests in the enabling conditions of good governance: the rule of law and democracy, transparency, accountability, and participation in the government, promoting universal values and open markets. *See UN Global Compact, supra* note 43. Important in the concept of good governance and accountability is the right of redress for personal and economic injury. *See, e.g., UDHR, supra* note 52, Article 12, *ICCPR, supra* note 52, Article 2.

[73] *ILO Tripartite Consultation (International Labour Standards) Convention* No. 144 (1976).

[74] *ILO Const., supra* note 3, Article 3 (General Conference), Article 7 (Governing Body). Established procedures permit examination of the credentials of delegates and their advisers to the International Labour Conference and of any objection thereto. *Standing Orders of the International Labour Conference LC*, adopted by ILC, 1st Sess. (1919) ("*ILC Standing Orders*") (as amended), Articles 5, 26.

[75] *ILO Const., supra* note 3, Article 12; *ILC Standing Orders*, Articles 14, 56.

[76] *Standing Orders of the Governing Body* (adopted 1920, as amended), Article 14.

[77] *WTO Agreement, supra* note 5, Annex 3 (Trade Policy Review Mechanism), § A(i).

[78] *E.g.,, TBT Agreement, supra* note 71, Article 2.9.

[79] At the Doha Ministerial Conference in 2001, a Trade Negotiations Committee was established to supervise trade negotiations under the authority of the General Council. *Doha Declaration*, *supra* note 69, ¶ 46, reproduced in the Appendix to this book. Explicit directives that negotiations shall be open to all WTO members and "shall be conducted in a transparent manner among participants in order to facilitate the effective participation of all." *Id*., ¶¶ 48–49.

[80] *Shrimp, supra* note 71, ¶¶ 79–91.

rights of the past century. Like its earlier counterpart, this modern-day movement seeks to empower the weak and vulnerable.[81] However, the human rights movement grew in response to the abuse of public power, while the values movement of today seeks to address imbalances in economic power associated with the globalization of markets and workplaces. Today's movement seeks to ensure that needy individuals, peoples, and countries are not only protected from market abuses, but affirmatively benefit from market gains.

The normative framework of the new movement builds upon human rights law yet differs in its orientation and effect. Human rights law has traditionally focused upon State obligation, in both negative and positive terms, with relatively recent attention to the roles of non-state actors.[82] In contrast, the emerging framework of values for governing trade and labor activities stresses shared responsibility among public and private actors for the processes and outcomes of globalization in markets and society. While the primary responsibility of States, and state actors, is still recognized, the new system calls for commitment and effort by the entire international community. This community, which is voluntarily coming together on the basis of common values, includes a wide variety of actors, from international and regional public organizations and local authorities to businesses, unions, the media, and religious and other civil society groups.

The shared responsibility of all actors that marks today's movement reflects the distinctive premise that everyone in society and the market stand to benefit from a values-based governance of economic activity. In this respect, the focus on intended beneficiaries of the human rights system and the modern approach differs. While both systems seek to benefit individuals and peoples, today's quest for values in globalization aims at strengthening the governance of States themselves as well as the effective functioning of markets. This approach draws upon emerging norms of accountability in international law in aiming to transform the relationships, rules and systems that dominate the worlds of work and trade.

B. Ordering Priorities

The emerging values-based foundation for international cooperation encourages interdependence and coherence among trade, work and other economic and social activities

[81] Responding to unprecedented abuses of public power in World War II, the human rights movement recognized and applied the basic values of humanity in establishing a universal, rules-based framework to protect individuals and peoples from the State, and from each other. *See, e.g.*, P.H. Kooijmans, *Human Rights—Universal Panacea?* 37 NETHERLANDS INT'L L. REV. 315 (1990).

[82] State obligations in human rights law are commonly understood as a multi-faceted commitment to respect, protect and fulfill human rights. Asbjorn Eide, *Economic, Social and Cultural Rights as a Human Right* in ECONOMIC, SOCIAL, AND CULTURAL RIGHTS: A TEXTBOOK 21–40 (A. Eide, Catarina Kraus, and Allan Rosas eds., 1995). Human rights theory has expanded the focus on the role and responsibility of non-state actors in a duties-based approach. UDHR, *supra* note 52, Article 29. *See also* Erica Daes, *Status of the Individual and Contemporary International Law*, UN Doc. E/CN.4/Sub.2/1989/40; Andrew Clapham, HUMAN RIGHTS IN THE PRIVATE SPHERE 343–56 (Ian Brownlie, ed., 1993); *Duties sans Frontiéres: Human Rights and Global Social Justice* (Int'l. Council on Human Rights Policy, 2003) available on-line at www.ichrp.org/ac/excerpts/137.pdf Nonetheless, enforcement mechanisms for holding non-state actors directly accountable for commission of human rights abuses are found primarily in international criminal law. "Since the latter half of the nineteenth century it has been generally recognized that there are acts or omissions for which international law imposes criminal responsibility on individuals and for which punishment may be imposed, either by properly empowered international tribunals or by national courts and military tribunals." Ian Brownlie, PRINCIPLES OF PUBLIC INTERNATIONAL LAW 565 (1998). A recent effort within the UN human rights system to broaden enforcement to civil responsibility remains controversial and, to date, inconclusive. *See Draft Norms on the Responsibilities of Transnational Corporations and Other Business Enterprises with Regard to Human Rights*, UN Doc. E/CN.4/Sub.2/2003/12 (2003).

of a globalizing world. In cases of conflict or trade-off, a balancing of the competing priorities based on universally-recognized social expectations and needs leads to greater synergy between international requirements and local needs. Applying a shared values framework contributes to resolving conflicts over social values in trade negotiations, international economic policy making, and the trade disputes.

The mandate for coherence finds support in a growing presumption that there need be no policy contradiction between an open, non-discriminatory and equitable multilateral trading system, on the one hand, and contemporary non-trade-specific concerns of the international community on the other. At the WTO policy level, the importance and legitimacy of strategies of development and poverty reduction beyond trade openness have been explicitly acknowledged. Ministerial Decisions and Appellate Body rulings have highlighted the social values enshrined in the WTO Agreement Preamble relating to the environment and sustainable development.[83]

Further support for the use of a values framework is found in the interpretation of trading rules. Obligations under the international trade regime are to be clarified "in accordance with the customary rules of interpretation of public international law".[84] The modern international conventions and declarations giving expression to international social values are thus considered a relevant part of the broader legal context for interpretation of the treaty rules which embody these concepts.[85] Indeed, application of a framework of shared values has proved dispositive in some cases and has encouraged predictability and fairness in determining when a State may autonomously pursue a policy choice subject to challenge as inconsistent with trade rules. In the *Asbestos* case, for example, a challenged measure was considered, in purpose and application, to be consistent with commonly agreed values that informed trade rules, and the measure at issue was considered sustainable.[86] However, as demonstrated in the *Shrimp* case, if a

[83] E.g., *Shrimp, supra* note 71, ¶ 129. A similar presumption is reflected in the mandate of the Committee on Trade and the Environment. Decision on Trade and Environment, supra note 71, preamble, also noting *Rio Declaration, supra* note 49, *cited in Shrimp, supra* note 71, ¶ 151, note 146 (""[c]onsidering that there should not be, nor need be, any policy contradiction between upholding and safeguarding an open, non-discriminatory and equitable multilateral trading system on the one hand, and acting for the protection of the environemtn, and the promotion of sustainable development on the other").

[84] *DSU, supra* note 33, Article 3(2). That provision is seen as a measure of recognition that the General Agreement on Tariffs and Trade is not to be read in clinical isolation from public international law. For an application of the mandate, *see, e.g., United States—Standards for Reformulated and Conventional Gasoline ("Gasoline")*, Report of the Appellate Body (WT/DS2) (1996), at 15–16 (turning to a basic principle of treaty interpretation based in customary and treaty law to analyze Article XX in context and the meaning of specific provisions of Article XX (g)). *See* also *Shrimp*, *supra* note 71, ¶¶ 158, 131, applying the principle of good faith and effectiveness in treaty interpretation, respectively.

[85] Where concepts embodied in a treaty are "by definition, evolutionary" their interpretation requires resort to modern international conventions and declarations. *Shrimp, supra* note 71, ¶ 130, applying the principle to interpret GATT, The reference in Article XX(g) to "natural resources", *quoting Namibia (Legal Consequences) Advisory Opinion* (1971), I.C.J. Rep., at 31: "An international instrument has to be interpreted and applied within the framework of the entire legal system prevailing at the time of the interpretation".

[86] This type of result occurred in the Asbestos case, which reviewed a challenge against France's public health measure which targeted an objective that was higher than relevant international requirements. *European Communities—Measures Affecting Asbestos and Asbestos-Containing Products*, Report of the Appellate Body, WT/DS135/AB/R (2001) ("Asbestos"). The measure was deemed, in relevant part, to not be a disguised protectionist measure since it had been taken at the insistence of the public in democratic fashion. *E.g., id*., ¶ 8.238. Critical to the analysis was the panel's decision that it could not question France's autonomy in setting this objective by democratic process. See *id*., note 176 and accompanying ¶ 8.210 (XX(b) of GATT does not impose same constraints as Article 3.3 of SPS Agreement on Members wishing to apply measures that involve a level of protection higher than that obtained by basis on relevant international standards).

measure conforms with commonly agreed values in one respect but not another, it may still be found objectionable.[87]

While environmental and social values have been the subject of dispute settlement, no disputes have squarely turned specifically on labor or employment values. None has invoked the only explicit reference to labor found in the Article XX exceptions.[88] Yet the approach that has been adopted, one in which evolving concepts embodied in trading obligations are interpreted consistently within the broader legal context, logically lends itself to giving priority to internationally-agreed goals of decent work when conflicts arise.[89] The major planks of the social floor of decent work qualify for such prioritization as they reflect commonly-agreed ethical values of widespread application[90] as may even be said to contribute to the evolution of obligations *erga omnes*[91] Other pillars of decent work, such as promoting full employment and raising standards of living through social protection, are recognized as explicit policy objectives in the WTO Agreement itself.[92] While these objectives have not been the subject of dispute settlement to date, there is no evident reason to treat them differently than those objectives involving protection of the environment and sustainable development.

[87] In *Shrimp*, a measure was found consistent with universal values in purpose, but not in application. Shrimp, *supra* note 71, ¶¶ 166–72. The U.S. measure at issue in *Shrimp* was consistent on its face with the international community's value expressed in a number of international instruments calling for environmental respect and conservation of nature, yet its application was found inconsistent with the value placed by the international community on bilateral or multilateral cooperation in achieving the substantive objective. The Appellate Body reasoned in part that, although the measure itself fell within the exception of Article XX(g), the highly selective pursuit by the United States of negotiations to establish consensual means of protecting and conserving the marine resources at issue constituted unjustifiable discrimination against excluded WTO members that exported shrimp to the United States.

[88] *See GATT, supra* note 8, Article XX(e) (measure relating to the products of prison labor).

[89] For a discussion of decent work, see *supra* note 4.

[90] The fundamental principles and rights at work apply at constitutional level across all ILO member states, *see supra* note 2, and share common ground with human rights imperatives of the UN chapter, *supra* note 52, at Arts. 55 and 56, This broad-based consensus within and across countries offers additional weight to a challenged State measure that is consistent with the Declaration's expression of the international community's values.

[91] Obligations *erga omnes* arise from fundamental principles necessary for humanity and concern the universal enforceability of norms of international law, the violation of which is deemed to be an offence not only against the state directly affected by the breach, but also against all members of the international community. P. Malanczuk, Akehurst's Modern Introduction To International Law 58–59 (1997), noting that the ICJ has so far not addressed the legal consequences of breach of such obligations. *Erga omnes* obligations, such as those bearing on human rights, have been viewed as more compelling for multilateral enforcement than those that would involve responsibility to other states seeking to espouse commercial rights, for example, of foreign investors. *See, e.g.*, C. Wilfred Jenks, *The General Welfare as a Legal Interest* in Jus Et Societas: Essays In Tribute To Wolfgang Friedmann 151–58 (1979). For ICJ dictum on the subject, *see Barcelona Traction. Light and Power Co., Ltd.*, (Belgium v. Spain), Judgment, I.C.J. Reports, 1970, at 3. Such rules rest upon general principles of international law calling for the primacy of *erga omnes* obligations in cases of conflict. For example, peremptory norms of international law prevail over conflicting treaty provisions. *Vienna Convention on the Law of Treaties*, May 23, 1969, Article 53, 1155 U.N.T.S. 331, U.N.Doc. A/CONF.39/27 (1969) (a treaty is void if, at time of conclusion, it conflicts with peremptory norm; such norms are accepted and recognized by the international community of States as a whole as a norm from which no derogation is permitted). *See* IV Encyc. of Public International Law 938 (1999); *UNIDROIT Principles, supra* note 49, at Article 1.1, Comment, ¶¶ 2, 3 (both public and private law rules of mandatory character enacted by States may prevail over contracting principles).

[92] *WTO Agreement, supra* note 5, at preamb. ¶ 1 ("with a view to raising standards of living and ensuring full employment"). See *supra* notes 71, 86 and accompanying text, discussing *Asbestos* and *Shrimp* cases.

V. Institutional Implications of a Cohesive Framework

In practice as well as principle, placing the goal of decent work in a central position in international economic policy making will serve to discipline and guide the growth that trade generates in the direction of more and better jobs as well as other conditions necessary to eliminate poverty. It also expands the openings for policy space at local levels to democratically pursue domestic economic and social strategies with the public good in mind.[93] Doing so requires normative innovations toward greater coherence in the governance and accountability of the three main types of actors: international organizations, states and non-state actors.

A. Coherence among National Policies in Trade and elsewhere

The structure of the multilateral trading regime presupposes a world in which trading activities are one part of a larger set of national policies in which, under certain safeguards, social or other policies may take priority over the fundamental principles governing trading obligations.[94] Yet the various interpretations applying these provisions are as yet unpredictable, reflecting the fact that few agreed standards exist at global level to govern the processes by which States exercise discretion in setting and applying the non-trade related objectives of Article XX.[95] Similarly, little guidance exists on how to apply

[93] *See generally* John Jackson, *Sovereignty*, *Subsidiarity, and Separation of Powers* in THE POLITICAL ECONOMY OF INTERNATIONAL TRADE LAW, 13–31 (Daniel L. M. Kennedy and James D. Southwick eds. 2002); Rodrik, *supra* note 30. Recently debate has arisen regarding trade rights and the rights of WTO Members to refuse genetically modified organisms ("GMOs"). For example, the Cartagena Protocol to the Convention on Biological Diversity allows for countries to refuse genetically altered food for a variety of reasons, including safety and the value of biological diversity to indigenous and local communities. *Cartagena Protocol on Biosafety to the Convention on Biological Diversity*, Jan. 29, 2000, Articles 1, 2, and 26, 39 I.L.M. 1027 (2000). Another important aspect of the debate centers on intellectual property rights and the obligations of states to respect, preserve and maintain collective knowledge of indigenous peoples and developing countries. *See, e.g., International Treaty on Plant and Genetic Resources for Food and Agriculture and the Convention on Biological Diversity*, Nov. 3, 2001, Article 1.1, <www.fao.org/Legal/TREATIES/033s-e.htm> (not yet entered into force); *Convention on Biological Diversity*, June 5, 1992, Article 8(j), 31 I.L.M. 818 (1992). Autonomy over matters in the public interest is also important for developed countries who have worked to pass stricter food safety and public health rules. *See generally* SPS Agreement, *supra* note 67.

[94] Consider, for example, the balance between trade and non-trade related policies in Article XX of the GATT, *supra* note 8. *See, e.g., Asbestos, supra* note 86 (asbestos-related prohibitions qualified under Article XX(b) as exception). *Accord, United States—Import Prohibition of Certain Shrimp and Shrimp Products—Recourse to Article 21.5 of the DSU by Malaysia*, Report of the Appellate Body, WT/DS58/AB/RW (2001), ¶ 153 (compliance merited exception for measure, particularly on-going serious good faith efforts to reach a multilateral agreement). *Cf. United States—Restrictions on Imports of Tuna* (*Tuna II*), DS 29/R, June 10, 1994 (not adopted), ¶ 5.42 (sustainable development, though a widely recognized goal shared among parties, was insufficient to qualify trade embargo as an exception under Article XX). *See* Article XX cases discussed generally in Raj Bhala, *The Jurisprudence of GATT Article XX: (B) and (G)*, in INTERNATIONAL TRADE LAW: THEORY AND PRACTICE 2091 (2001); *Paul de Waart, Quality of Life at the Mercy of WTO Panels: GATT's Article XX an Empty Shell?* in INTERNATIONAL ECONOMIC LAW WITH A HUMAN FACE, 109–30 (Friedl Weiss, Erik M.G. Denters, Paul J.I.M. de Waart eds. 1998) ("HUMAN FACE").

[95] A number of decisions demonstrate that at the heart of the matter is the Organization's concern with the governance of State discretion over non-trade related objectives that may have trading effects. This concern for the scope and conditions under which governmental discretion is exercised underlies the analytical emphasis restricting the application of the "necessary to" or "relating to" prongs of the Article XX tests. *E.g., Thailand—Restrictions on Importation of and International Taxes on Cigarettes*, BISD 37 S/200–228, November 7, 1990 ("*Thai Cigarettes*") ("necessary to" requirement is only met if no other reasonable alternative is available). Similar concerns underlie analyses under Article XX chapeau provisions. In these cases, the Dispute Settlement Body has sought to avert measures that are applied in a manner constituting arbitrary or

or interpret the provision in the ILO Fundamental Principles and Rights Declaration, which states that "labor standards should not be used for protectionist trade purposes, and . . . nothing in this Declaration and its follow-up shall be invoked or otherwise used for such purposes; in addition the comparative advantage of any country should in no way be called into question by this Declaration and its follow-up."[96] Read *in pari materia*, the references would appear to underscore the coherence between principles in trade and labor regimes. The first reference affirms the general principle against protectionism in the context of labor standards, as reflected in the WTO Singapore Declaration, while the second reference could be interpreted as emphasizing the fact that the commitments of the Declaration, which arise from the constitutional obligations of each Member State, represent a global social floor which is not to be subject to cross-border competition inherent in comparative advantage.[97]

The experiences above illustrate the need for clarifying international expectations on State responsibility for national policymaking in areas that are likely to have cross-border effects within the nexus between labor and trade. Responsible exercise of this type of autonomy depends largely upon effective governance structures within each Member State and extends beyond any one international organization's mandate.[98] While the outcomes of effective governance differ across national contexts, generally-established principles of State responsibility and effective governance help to enable participatory and accountable systems for using public resources, including labor, fiscal, and trading policies.[99]

unjustifiable discrimination between countries where the same conditions prevail, or to prevent a disguised restriction on international trade. *Shrimp, supra* at ¶ 145 ("close and real" relationship between means and ends found to satisfy "relating to" prong of Article XX (g)). Reflecting similar concerns, applications of the Article XX chapeau provisions have sought to "maintain a balance of rights and obligations between the right of a Member to invoke one . . . of the exceptions of Article XX . . . and the substantive rights of the other Members under [the trading system]." *Shrimp, supra* note 71, at ¶ 160. In seeking this balance, the standards of the chapeau are considered to be "*necessarily broad in scope and reach"* and, "when applied in a particular case, the actual contours and contents of [the chapeau] standards will vary as the kind of measure under examination varies." *Shrimp, supra* note 71, at ¶ 123 (emphasis supplied) (explaining *e.g.*, that the standard of arbitrary discrimination could be different for a measure involving public morals than for one involving products of prison labor). Several cases have involved the definitional boundaries of the objectives themselves, *e.g., Shrimp, supra* note 71 (clarifying meaning of "exhaustive natural resources" under Article XX(g)). Formally, no challenges have been filed involving measures relating to products of prison labor under Article XX(e).

[96] See Article 5, *ILO Fundamental Principles, supra* note 4. While no mechanism for formal challenges under Article 5 exists, perceived risks to comparative advantage may influence, in certain cases, governmental decisions concerning relevant law and practice, and negotiation of bilateral and other economic treaties.

[97] *WTO Singapore Declaration supra* note 36, reproduced in the Appendix to this book. The Fundamental Principles Declaration "[d]eclares that all Members, even if they have not ratified the Conventions in questions, have an obligation arising from the very fact of membership in the Organization to respect, to promote and realize, in good faith and in accordance with the Constitution, the principles concerning the fundamental rights which are the subject of those Conventions." *Id.* at Article 3.

[98] A cohesive framework for sharing responsibility based on universal values incorporates expectations for such governance among State actors, built upon mechanisms for transparency, participation and accountability. See *supra* note 72.

[99] Effective governance of states is a process based on transparent, responsible, accountable and participatory government operating under the rule of law. *E.g., CHR Resolution* 2002/76, *supra* note 72; *Copenhagen Dec., supra* note 3, at ¶ 26(n), and *Programme of Action*, ¶ 14(b). *See also* OUR COMMON FUTURE, *supra* note 49, at Annexe, Principle 6; *The Earth Charter, supra* note 52, at Principle 13. Institutions of effective governance include, but are not limited to, electoral systems for periodic and genuine elections, an independent judiciary, a transparent and accessible legislature, and participatory systems for effective management of public resources. *See, e.g., Monterrey Consensus, supra* note 52, at I (9); II (15) *Vienna Dec., supra* note 52, at I (27); and *UDHR, supra* note 52, at preamb. ¶ 3.

B. Coordination of Mandates among International Organizations

Rarely is coordination with other specialized regimes mandated expressly within an international organization's charter.[100] In this regard, WTO and ILO are no exception. As international organizations, their governance, based on the rule of law, comprises interconnected domains including relationships with Member States, third/external parties, and each other. While the charters of the two organizations bear no express mandates for coordination with each other, such mandates can arguably be implied, particularly in the context of relationships with other international economic institutions. WTO has the duty to pursue consistent and mutually supportive policies with other international institutions responsible for monetary and financial matters through cooperation with them.[101] While follow-up of this mandate delivered at Marrakesh has focused primarily on WTO's relationship with IMF and the World Bank,[102] the coherence mandate more broadly targets the need for complementary and supportive policies to strengthen the relationship between trade liberalization as an engine for growth, and other economic policies affecting growth and development.[103] The development dividends of national and international economic policies that promote employment, transferable skills and other conditions for decent work are vital to making market access meaningful as well as distributing market gains more broadly.

In turn, the ILO possesses a mandate to examine and consider all international economic and financial policies and measures in light of the fundamental objective of attaining conditions necessary for social justice.[104] As with WTO's coherence mandate, ILO responsibility is presumably exercised in accordance with the subsidiarity principle

[100] International organizations exercise authority effectively when they operate within the powers and responsibilities granted to them. The functions and powers, express or implied, of international organizations are limited; they are defined by constituent instruments, decisions and resolutions adopted in accordance with them, and established practices. The Organization has an obligation to carry out its functions and exercise its powers in accordance with the rules set down under this authority. *E.g., Vienna Convention on the Law of Treaties between States and International Organizations or Between International Organizations*, March 21, 1986, Article 1(j), 25 I.L.M. 543; *Reparation for Injuries Suffered in the Service of the United Nations*, 1949 I.C.J. 174 (Advisory Opinion) ("*Reparations Case*"); *International Status of Southwest Africa*, 1950 I.C.J. 128 (Advisory opinion); *Certain Expenses of the United Nations*,1962 I.C.J. 151 (Advisory Opinion) ("*Certain Expenses*"). *See also* International Law Association, Committee on Accountability of International Organizations, Third Report Consolidated, Revised and Enlarged Version of Recommended Rules and Practices (New Delhi Conference, 2002), Section I, available on-line at http://www.ila-hq.org/pdf/Accountability/Accountability%20Of%20International%20Organisations%202002.pdf ("*Accountability of Int'l Orgs. Third Report*").

[101] *Declaration of the World Trade Organisation to Achieving Greater Coherence in Global Economic Policymaking*, Ministerial Decisions and Declarations adopted by the Trade Negotiations Committee on 15 December 1993, reprinted in THE LEGAL TEXTS: THE RESULTS OF THE URUGUAY ROUND OF MULTILATERAL TRADE NEGOTIATIONS 386 (WTO, 1999) ("*WTO Coherence Declaration*"), ¶ 5. The Declaration recognizes that international coherence is subsidiary to national-level pursuit of harmony between economic policies. *Id.*, ¶¶ 1–4. This coherence is to be achieved under the subsidiarity principle with deference to national jurisdiction: "While the task of achieving harmony between these policies is seen to fall primarily on governments at the national level, their coherence internationally is an important and valuable element in increasing the effectiveness of these policies at national level." *Id.*, ¶ 1.

[102] See *Coherence Note*, *supra* note 29 (cooperation in policy, research, and technical assistance).

[103] Punta del Este Mandate, Preamble and Part A (Objectives) (20 September 1986), cited in *Coherence Note, supra* note 29, at Annex 1, ¶ 4.

[104] *Declaration of Philadelphia, supra* note 18, Article II. The ILO is mandated to cooperate fully with international bodies entrusted with a share of the responsibility for international and national action to secure fuller use of the world's productive resources necessary to achieve social justice and peace, including measures to expand production and consumption, avoid severe economic fluctuations, and assure greater stability in world prices of primary products and promote international trade. *Id*. at Article IV.

granting to national jurisdiction a primary role in achieving harmony in economic and social policymaking.[105] Follow-up to this mandate within ILO has involved research cooperation,[106] participation in the World Bank process of Poverty Reduction Strategy Papers,[107] and development of the follow-up to the Declaration on Fundamental Principles and Rights at Work.[108] The terms of reference of the ILO-convened World Commission on the Social Dimension of Globalization further this mandate to seek ways to make economic and social policies and goals mutually reinforcing.[109]

In addition to implied mandates for coherence, general rules of international law also support a level of policy and operational consistency between WTO and ILO. As subjects of international law,[110] both organizations operate under general rules of international law that recognize the principle of internal coherence within public international law, and the particular priority to be given to obligations involving fundamental human and workers' rights.[111]

C. Beyond Coherence to Accountability

Beyond coherence in principle, mechanisms are needed in practice to ensure the accountability of international organizations, including WTO and ILO, to each other, their Member States, and third parties to operate consistently with common underlying global values. Evolving recommended rules and practices for the effective governance of international organizations contemplate transparent, participatory and rules-based decision making, procedural attributes which help to secure participation by Member States on

[105] *Compare, e.g., WTO Coherence Declaration*, *supra* note 101, with *Employment Policy Convention, supra* note 22, Article 2(a). Article 2 of the Employment Policy Convention directs States Parties to adopt measures to promote full, productive and freely chosen employment "within the framework of a co-ordinated economic and social policy".

[106] *See, e.g., Country Studies on the Social Dimension of Globalization: Final Report*, ILO Doc. No. GB.276/WP/SDL/1 (Nov. 1999); *Overview of Global Developments and Office Activities Concerning Codes of Conduct, Social Labelling and Other Private Sector Initiatives Addressing Labour Issues*, ILO Doc. No. GB.273/WP/SDL/1 (Nov. 1998).

[107] *E.g., Poverty Reduction Strategy Papers (PRSPs), An Assessment of the ILO's Experience*, ILO Doc. No. GB.283/ESP/3 (March 2002).

[108] See *supra* notes 9, 37, 100–101.

[109] The objectives of the Commission are to identify policies for globalization which reduce poverty, foster growth, employment and development in open economies, and widen opportunities for Decent Work; to identify policies which can make globalization more inclusive, in ways which are acceptable and seen to be fair to all, both between and within countries; and to assist the international community forge greater policy coherence in order to advance both economic and social goals in the global economy. See *Enhancing the Action of the Working Party on the Social Dimension of Globalization: Next Steps*, ILO Doc. No. GB.282/WP/SDG/1 (Nov. 2001), ¶¶ 9–11; *Report of the Working Party on the Social Dimension of Globalization: Report by the Chairperson of the Working Party, Ambassador Jean-Jacques Elmiger of Switzerland*, GB.282/12 (Nov. 2001), ¶¶ 11, 13.

[110] The legal personality of an international organization depends upon its constituent treaty, and exists with the limits of the Organization's purpose and functions. Once international legal personality is conferred, the Organization enjoys specific rights and exercises certain obligations. *E.g.*, *Reparations Case*, *supra* note 67. *See also* II ENCYCL. PUBLIC INT'L LAW, *supra* note 61, at 1299.

[111] Authoritative expert declarations have confirmed the priority of human rights in the conduct of international organizations. *Maastricht Guidelines on Economic, Social and Cultural Rights*, 15 NETH. QUARTERLY OF H. RTS., 244–52 (1997); 20 H. RTS. QUARTERLY 3, ¶ 19 (1998) (crucial for international organizations to correct their policies and practices so that they do not result in deprivation of ESC rights). *See also UDHR, supra* note 52, at Article 28 (everyone is entitled to a social and internal order in which the rights and freedoms set forth in this Declaration can be fully realized).

the basis of functional equality and, as possible, participation by non-state actors.[112] Sound governance procedures encourage meaningful access and participation by both state and private actors within the international community. They help to guide the policies and practices of international organizations such as ILO and WTO consistently with the emerging framework of common values developed by the international community, even in areas of accountability beyond legal responsibility.[113]

The accountability of the ILO and WTO directly to the people whom their mandates are intended to serve is essential to coordinating labor and trade with other economic policies and practices at global and local levels. International organizations with international legal personality exercise certain rights and responsibilities that are reasonably well-settled in the contexts of internal accountability and responsibility for binding acts.[114] However, the responsibility of international organizations to third parties is not subject to judicial review in national or international courts absent consent to be sued, as in treaties or arbitral clauses of agreements, or in keeping with the rules of international law for internationally wrongful acts.[115] In practice, certain international institutions are developing self-governance mechanisms that permit claims by people directly and adversely affected by the organization's operations. The most long-standing practice in this regard—still only a decade old—involves the operation of independent inspection mechanisms by the World Bank and several regional multilateral development banks.[116] In some instances, these types of mechanisms have encouraged greater public participation in decision-making and administration, and greater respect for human and peoples' rights.[117]

A further frontier for ensuring accountability among global actors involves the responsibility of member States to protect the rights of third parties in situations where the States act collectively through international organizations. Whether States have concurrent or

[112] *Accountability of Int'l Orgs. Third Report, supra* note 100. *See also* Christian Dominicé, *Organisations Internationales et Démocratie* in THE INTERNATIONAL LEGAL SYSTEM IN QUEST OF EQUITY AND UNIVERSALITY / L'ORDRE JURIDIQUE INTERNATIONAL, UN SYSTÈME EN QUETE D'ÉQUITÉ ET D'UNIVERSALITÉ, LIBER AMICORUM GEORGES ABI-SAAB 731–743 (L. Boisson de Chazournes and V. Gowlland-Debbas eds. 2001).

[113] *See discussion infra* notes 114–117 and accompanying text.

[114] The legal responsibility of an international organization with international legal personality encompasses internal accountability and judicial review for binding acts. On internal accountability to its staff and member states, *see generally Certain Expenses, supra* note 67. On judicial review, *see, e.g.*, Elihu Lauterpacht, *Judicial Review of the Acts of International Organizations* in INTERNATIONAL LAW, THE INTERNATIONAL COURT OF JUSTICE AND NUCLEAR WEAPONS 92–102 (L. Boisson de Chazournes and Philippe Sands eds. 1999).

[115] Legal responsibility to third parties for internationally wrongful acts is based upon the fact that international organizations are, by their very nature, subjects of international law. II ENCY. OF PUBLIC INT'L LAW, *supra* note 90, at 1318 ff. Legal responsibility to external third parties to ensure compliance with principles and rules, and in cases of liability for damage caused by its own acts, is commonly accepted to be governed as agreed by treaty and without prejudice to the rules of international law. *See, e.g., Treaty on the Principles Governing the Activities of States in the Exploration and Use of Outer Space, Including the Moon and Other Celestial Bodies*, Jan. 27, 1967, Article VI, 610 U.N.T.S. 205 ("*Outer Space Treaty"); United Nations Convention on the Law of the Sea*, December 10, 1982, Article 139, 1833 U.N.T.S. 3 (responsibility to ensure that the activities of international organizations are conducted in conformity with the treaty is on the organization and member states).

[116] In the World Bank Inspection Panel, complaints are received from one or more persons who claim to be directly and adversely affected by Bank-supported projects on grounds of the Bank's failure to abide by its own binding policies and procedures in design appraisal and implementation of projects it finances. Resolution 93–10 IBRD and Resolution 93–6 IDA, The World Bank Inspection Panel, Sept. 22, 1993.

[117] *See, e.g., Annual Report*: August 1, 2001 to June 30, 2002, Vol. I (Inspection Panel, IBRD and IDA, 2002).

subsidiary liability for fulfillment of international organization's obligations due solely to their membership is a matter of international law, to be determined by reference to rules of the Organization.[118] States' accountability for their own actions through international organizations is limited by the presumption against derivative liability of member States for the actions of the organization, members of an organization may be liable for its obligations in accordance with a relevant general principle of international law, such as acquiescence, or abuse of rights.[119] Practice in organizations administering common spaces may lend relevant analogies for the WTO and ILO. Expressly agreed by treaty in those instances, the organization and member States share collective responsibility to ensure compliance with governing principles and rules for cooperation in managing the resources of common spaces, and liability under certain conditions for damages due to non-compliance.[120] While neither WTO nor ILO operate within such frameworks of collective responsibility, these types of cooperative arrangements could ultimately offer a way to share responsibility with accountability across international organizations and States in managing the practical effects on growth, employment, income equity, and poverty related to the implementation of their mandates.

The theory of shared responsibility focuses not only on accountability of international organizations and States but also on the duties of non-state actors. Non-state actors bear duties to respect the rule of law and deal in good faith in a manner that facilitates market and workplace environments based on freedom and dignity.[121] These duties reflect the starting point for pursuit of new horizons in developing effective means for non-state actor accountability to shared global value systems. Dialogue among States, international organizations and market and workplace actors represents a first step toward the effective functioning of internationally-accepted social values in a trading world.

[118] The responsibility of an international organization is exercised separately from that of its Member States in the absence of express or implied consent to collective responsibility. *See* Brownlie, *supra* note 82, at 686–88.

[119] Annuaire de l' Institut de Droit International, *The Legal Consequences for Member States of the Non-fulfilment by International Organizations of their Obligations toward Third Parties* 449, Vol. 66-II, Article 5 (1996).

[120] The collective responsibility extends to liability for damage caused by non-compliant activities, provided that the organization has declared that it accepts the rights and obligations of the relevant Liability Convention and that the majority of its members are parties to both the liability Convention and the underlying treaty. *See Convention on International Liability for Damage Caused by Space Objects*, March 29, 1972, Article XXII, 961 U.N.T.S. 187, referencing responsibility for activities under *Moon Treaty and Outer Space Treaty, supra* note 115.

[121] Well-functioning markets depend for success on respect for the rule of law, good faith dealings, absence of corruption and presence of transparency and accountability, and a culture of decent work. On respect for law, *see Copenhagen Programme of Action, supra* note 4, ¶ 14(b); *Johannesburg Declaration*, ¶ 29 and *Organization for Economic Cooperation and Development Declaration on International Investment and Multi-National Enterprises* ("OECD Guidelines on MNEs"), June 21, 1976 ¶ II(5), DAFFE/IME(200) 20; ILO *Tripartite Declaration of Principles Concerning MNEs and Social Policy* (adopted 1977 and amended November 17, 2000), ¶ 8, 41 I.L.M. 186 (2000). On good faith dealings, *see, e.g., UN Sales Convention*, A/CONF.97/19, Article 8 (1980); *UNIDROIT Principles of International Commercial Contracts, supra* note 58, at Article 1.3; II Encycl. of Public Int'l Law 1995, *supra* note 90, at 599. On corrupt practices, *see* prohibitions in OECD Convention on Combating Bribery of Foreign Public Officials in International Business Transaction, Nov. 21, 1997, OECD/IME/BR(97)20; *OECD Guidelines on MNEs*, Chapter VI, OECD/GD(97)40 (1997); *UN Convention Against Transnational Organized Crime*, Jan. 8, 2001, Articles 7, 9, A/RES/55/25. Supportive rules-based relationships, built on public law and policy and on partnerships across public and private sectors, help markets operate for public good and achieve fairer distribution of resources and benefits. *See also* Oscar Schacter, *The Erosion of State Authority and its Implications for Equitable Development*, in Human Face, *supra* note 94, at 36–38.

VI. CONCLUSION

The long-standing deficit in coherent governance of international economic activities has provoked calls for improved coordination across international trade, financial, development and labor regimes, as envisioned at the outset of the modern multilateral system. The dislocation has left unfulfilled, particularly in developing countries, the promise that liberalized trading systems will lead to more productive employment and higher standards of living. Social values contribute to cohesion by building common expectations and priorities in markets and the workplace, both nationally and increasingly at global level. International instruments reflect a broadening consensus that markets must incorporate shared values that enable progress toward fundamental objectives like freedom, dignity, equity and peace.

The emerging values-based foundation for international cooperation offers a means for developing interdependence and coherence among labor, trade and other economic and social priorities of a globalizing world. A growing presumption that trade and non-trade related aims need not be contradictory is evident in specific instances of policy making and dispute settlement. While environmental, health and development-based values have led the way, the prioritization of labor rights and decent work policies is likewise merited in cases where globally-shared values are implicated. In practice, giving equal priority to labor and employment values will help guide the growth that trade generates in the direction of more and better jobs, and contribute to eliminating poverty. Recent trends in policy negotiation and dispute settlement have invoked shared values in opening necessary policy spaces at national level for the democratic pursuit of economic and social strategies with particular local needs in mind.

While coordination of national policies and international organization mandates appears feasible in principle, more and better accountability mechanisms are required to bring the international system, including labor and trade regimes, into harmony with the globally-declared values that the system is intended to serve. Market and social actors, along with public authorities, will need to be held accountable for their influence and conduct among each other and with States and international organizations. While a coherent system of global governance is still evolving, the time for interdependence is approaching as widely-shared social values inform policy making, dispute settlement, and private transactions within markets, workplaces and society.

I. Introduction: A "Human Rights Approach" to International Trade?

From the 1648 peace treaties of Westphalia to the 1945 U.N. Charter, public international law has evolved as a system of reciprocal rights and obligations among states based on sovereign equality and non-intervention into the internal affairs of states.[1] The state-centered U.N. Charter, and its collective security system established by the victorious powers of World War II,[2] assert legal priority over other conflicting international treaties.[3] The one-sided focus of the traditional "international law of states" on the freedom and power of governments, rather than on the human rights of their citizens is, however, increasingly challenged by national parliaments and civil society groups as being incompatible with the universal recognition of inalienable human rights and with the need for democratic legislation protecting human rights and "democratic peace".[4]

From the perspective of human rights and constitutional democracies, the validity of inalienable human rights no longer depends on the consent of the rulers; democratic legitimacy of all governments and of intergovernmental organizations derives from the consent of their citizens and from respecting and promoting their "constitutional contracts" and universally recognized, inalienable human rights. In case of conflicts, the inalienable core of human rights—especially in so far as they have become recognized as *ius cogens*—must be given priority over intergovernmental power politics, as acknowledged in Article 53 of the Vienna Convention on the Law of Treaties ("VCLT"). Citizens and civil society groups increasingly claim that, similar to the regional integration law in Europe and North America, the democratic legitimacy and effectiveness of the global integration law of the World Trade Organization ("WTO") could be enhanced by interpreting WTO rules as part of a democratic "international law of peoples",[5] and of a cosmopolitan "integration law of citizens",[6] rather than only as "international law among states".

The Agreement establishing the WTO establishes rights and obligations for states and other "members" (like the EC) to liberalize market access barriers and market distortions "with a view to raising standards of living, ensuring full employment, and a large and steadily growing volume of real income and effective demand, and expanding the production of and trade in goods and services, while allowing for the optimal use of the world's resources in accordance with the objective of sustainable development" (Preamble). As goods and services are produced and consumed by individuals, WTO dispute settlement panels have emphasized that "one of the primary objects of the GATT/WTO . . . is to produce certain market conditions which would allow . . . individual activity to flourish" by protecting the international division of labor against discriminatory

[1] Article 2 U.N. Charter.

[2] Chapter VII, U.N. Charter.

[3] Article 103 U.N. Charter.

[4] On the emerging "human right to democratic governance" *see, e.g.,* T.M. Franck, *The Emerging Right to Democratic Governance*, 86 American Journal of International Law ("AJIL") 46–91 (1992); E. Stein, *International Integration and Democracy: No Love at First Sight*, 95 American Journal of International Law 489–532 (2001). On empirical evidence that democracies very seldom fight each other, and on the reasons why constitutional democracy and accountability tend to limit abuses of foreign and military policies, *see, e.g.,* P.K. Huth and T.L. Allee, The Democratic Peace and Territorial Conflict in the 20th Century (2002).

[5] *Cf., e.g.,* J. Rawls, The Law of Peoples (1999).

[6] *Cf., e.g.,* E.U. Petersmann, *Human Rights in European and Global Integration Law: Principles for Constitutionalizing the World Economy*, in Festschrift für C.D. Ehlermann 383–402 (A. Bogdandy, P. Mavroidis and Y. Mény eds. 2002).

trade restrictions and other distortions.[7] Yet, the same dispute settlement panel also emphasized that "(n)either the GATT nor the WTO has so far been interpreted by GATT/WTO institutions as a legal order producing direct effect", *i.e.*, creating rights and obligations not only for WTO members but also direct individual rights for traders, producers and consumers.[8] In accordance with these intergovernmental structures and functionally limited economic objectives of GATT and the WTO, the words "human rights" are nowhere mentioned in the text of GATT 1947 and in the WTO Agreement. WTO obligations have been recognized as an "integral part of the Community legal order" inside the EC and have been incorporated into the domestic laws of many WTO members. But the EC Court of Justice—like the domestic courts of some other WTO members—has concluded from the intergovernmental structures and reciprocity principles of WTO law that the "purpose of the WTO agreements is to govern relations between States or regional organizations for economic integration and not to protect individuals" which, as a consequence, "cannot rely on them before the courts and . . . any infringement of them will not give rise to non-contractual liability on the part of the Community."[9]

All 146 WTO Members have accepted obligations to respect, protect and fulfill human rights under international law as well as under their respective domestic laws. All WTO Members have also recognized, for instance in various U.N. resolutions like the 1948 Universal Declaration of Human Rights ("UDHR"), that "[e]veryone is entitled to a social and international order in which the rights and freedoms set forth in this Declaration can be fully realized".[10] If, as universally recognized in Principle 1 of the "Stockholm Declaration" of the U.N. Conference on the Human Environment of 1972, "(m)an has the fundamental right to freedom, equality and adequate conditions of life, in an environment of a quality that permits a life of dignity and well-being", such rights and "sustainable development" must be protected in international relations no less than inside states.[11] Hence, the U.N. resolutions on the "right to development" define development in terms of fulfillment of basic needs and of human rights.[12] U.N. human rights bodies increasingly insist that all WTO Members should adopt a "human rights approach to trade" which:

(i) sets the promotion and protection of human rights as objectives of trade liberalization, not exceptions;
(ii) examines the effect of trade liberalization on individuals and seeks to devise trade law and policy to take into account the rights of all individuals, in particular vulnerable individuals and groups;

[7] *See United States—Sections 301–310 of the Trade Act of 1974*, Report of the Panel, WT/DS152/R, (2000), ¶¶ 7.73 *et seq*.

[8] *Id.* ¶ 7.72. The Panel makes the following important reservation: "The fact that WTO institutions have not to date construed any obligations as producing direct effect does not necessarily preclude that in the legal system of any given Member, following internal constitutional principles, some obligations will be found to give rights to individuals. Our statement of fact does not prejudge any decisions by national courts on this issue."

[9] According to the same judgment, "it is only where the Community intended to implement a particular obligation assumed in the context of the WTO, or where the Community measure refers expressly to the precise provisions in the WTO agreements, that it is for the Community judicature to review the legality of the Community measure in question in the light of the WTO rules", *cf. Etablissement Biret SA v. EU Council,* EC Court of Justice, Case T-210/00, 31 COMMON MARKET LAW REPORTS, 787 808 (2002), (¶¶ 71–73).

[10] Article 28 UDHR.

[11] *Cf.* M. Pallemaerts, *The Human Right to a Healthy Environment as a Substantive Right*, in HUMAN RIGHTS AND THE ENVIRONMENT 11–21 (M. Déjeant-Pons and M. Pallemaerts eds., 2002).

[12] *See, e.g.,* U.N. General Assembly Declaration 41/128 of December 4, 1986 on the "Right to Development".

(iii) emphasizes the role of states in the process of liberalization—not only as negotiators of trade law and setters of trade policy, but also as the primary duty bearers of human rights;
(iv) seeks consistency between the progressive liberalization of trade and the progressive realization of human rights;
(v) requires a constant examination of the impact of trade liberalization on the enjoyment of human rights;
(vi) promotes international cooperation for the realization of human rights and freedoms in the context of trade liberalization.[13]

This chapter shows that—as a result of the universal recognition of human rights in international treaty law and in general international law—human rights are relevant for the interpretation and application of WTO rules, especially for WTO guarantees of freedom, non-discrimination, rule of law, private property, access to courts, due process of law, and for the numerous WTO exceptions that permit restrictions of freedom of trade so as to protect human, animal or plant life or health, public morals and other "human rights values". Just as human rights law recognizes the need for protecting and mutually balancing human rights through non-discriminatory democratic legislation, international trade law, e.g., in the WTO Agreements Preamble, acknowledges its instrumental function for the promotion of non-economic policy goals, such as "raising standards of living", promoting "sustainable development" and "preserv(ing) the environment". The "balancing principles" in the "exception clauses" in international trade law—such as non-discrimination, necessity and proportionality of restrictions of individual freedom,[14] and rights of individual access to courts,[15] are similar to the "balancing principles" in the "exception clauses" in human rights treaties;[16] from a human rights perspective, both serve complementary functions for protecting individual freedom, non-discrimination and rule of law. Human rights and the corresponding obligations accepted by all WTO members require to interpret and design national and international trade rules—like other democratic legislation—as instruments for the promotion and protection of human rights, with due respect for the broad regulatory discretion of democratic legislatures and governments regarding the domestic implementation and balancing of human rights and of related WTO rules for the protection of freedom and non-discrimination in the international division of labor among producers, traders and consumers.

This contribution focuses on *international* human rights rather than on *domestic* human rights guarantees that may provide for additional obligations and legal requirements to take into account human rights in the domestic interpretation and application of WTO rules. Even though parliaments in constitutional democracies, such as the U.S. Congress, and civil society groups increasingly insist that WTO decision-making processes must become more transparent and, as expressed in the U.S. Trade Act of 2002, must respect the legislative intent of parliaments when they ratify WTO agreements, this chapter does not discuss the legal and political implications of the emerging "human right to democracy"

[13] Report of the High Commissioner for Human Rights on *Liberalization of Trade in Services and Human Rights*, document E/CN.4/Sub.2/2002/9, p. 2.
[14] *Cf.* Articles XX GATT, XIV GATS.
[15] *Cf., e.g.*, GATT Article X.
[16] *Cf., e.g.*, the indirect references to the principles of non-discrimination, necessity and proportionality in Article 4 of the 1966 International Covenant on Economic, Social and Cultural Rights ("ICESCR"): "The States Parties to the present Covenant recognize that, in the enjoyment of those rights provided by the State in conformity with the present Covenant, the State may subject such rights only to such limitations as are determined by law only in so far as this may be compatible with the nature of these rights and solely for the purpose of promoting the general welfare in a democratic society."

for the WTO, such as the need to promote transparent discussion and decision-making, more effective parliamentary control and democratic participation in WTO matters.[17]

II. Human Rights Obligations of WTO Members as Part of the Context for the Interpretation of WTO Rules

A. Human Rights Obligations of WTO Members

There exist today more than one hundred multilateral and bilateral international treaties on the protection of human rights.[18] For instance, as of 2002, 112 WTO member states had ratified the 1966 U.N. Covenant on Economic, Social and Cultural Human Rights ("ICESCR"), and all but the United States had ratified the 1989 U.N. Convention on the Rights of the Child. There are also hundreds of unanimous U.N. Resolutions, such as the Universal Declaration on Human Rights ("UDHR") and the 1993 Vienna Declaration on Human Rights, in which all U.N. member states have committed themselves to protect inalienable human rights as part of *general international law*. In addition, most states and some international organizations[19] recognize human rights in their respective constitutional laws as constitutional restraints on government powers, sometimes with explicit references to human rights as legal restraints also on the collective exercise of government powers in international organizations.[20]

The International Court of Justice ("ICJ") has recognized that all U.N. member states have legal obligations to respect human rights under the U.N. Charter and under general international law, and that at least some human rights constitute not only *individual rights* but also, in the case of universally recognized human rights, *erga omnes* obligations of governments.[21]The quasi-universal ratification of some human rights treaties, such as the U.N. Convention on the Rights of the Child ratified by 190 states, and the recognition in these treaties "of the equal and inalienable rights of all members of the human family" as set out in the UDHR,[22] reflects a worldwide *opinio iuris* on the *inalienable erga omnes* character of certain core human rights.

This *opinio iuris* on essential and inalienable core human rights is not contradicted by the diversity of views on the precise scope, meaning and *ius cogens* nature of many specific human rights whose legal definition in domestic constitutions, and implementation through democratic legislation and international agreements may legitimately differ from country to country and from treaty to treaty. In contrast to the EC Court of Justice which construed the common human rights guarantees of EC member states as constituting general constitutional principles limiting the regulatory powers also of the EC,[23]

[17] *Cf.* E.U. Petersmann, *European and International Constitutional Law: Time for Promoting Cosmopolitan Democracy in the WTO*, in THE EU AND THE WTO 81–110 (G. de Burca and J. Scott eds., 2001); S. Charnovitz, *WTO Cosmopolitics*, 34 NEW YORK UNIVERSITY JOURNAL OF INTERNATIONAL LAW AND POLITICS 299–354 (2002).

[18] *See, e.g.,* Council of Europe, HUMAN RIGHTS IN INTERNATIONAL LAW (2000).

[19] *Cf.* Article 6 of the EU Treaty.

[20] *See, e.g.,* Article 23 of the German Basic Law and Article 11 EU Treaty.

[21] *See, e.g., The Barcelona Traction* judgment, ICJ REPORTS 32 (1970), and the *Nicaragua* judgment, ICJ REPORTS 114 (1986).

[22] The quoted words are from the preamble to the 1989 U.N. Convention on the Right of the Child and, arguably, confirm the universal recognition of rights set out in the UDHR. *See* HUMAN RIGHTS IN INTERNATIONAL LAW, *supra* note 18, at 169.

[23] In *Internationale Handelsgesellschaft* (Case 11/70, ECR 1970, 1125,1134), the ECJ held that respect for human rights forms an integral part of the general principles of Community law: "the protection of such rights, whilst inspired by the constitutional traditions common to the Member States, must be ensured within the framework of the structure and objectives of the Community" (¶¶ 3–4).

the ICJ has not yet specified to what extent human rights entail constitutional limits also on the U.N., *e.g.*, the Security Council, and on Specialized U.N. Agencies. Likewise, the WTO jurisprudence has not yet clarified the impact of human rights, including the right to human health and food, on the interpretation of, for example, the intellectual property rights guaranteed in the WTO Agreement on Trade-Related Intellectual Property Rights ("TRIPS"), or on the numerous WTO exceptions protecting national policy autonomy for non-trade concerns. Closer cooperation between the WTO and U.N. Specialized Agencies could facilitate clarification of the extent to which human rights recognized in the law of the International Labor Organization ("ILO") and of the World Health Organization, and other international organizations, are relevant also for the interpretation and application of WTO rules.

As a result of the universal recognition of human rights, international law is increasingly confronted with the "constitutional problems" addressed in the human rights jurisprudence of the EC Court of Justice: What is the essential core of human rights that must be recognized today as *erga omnes* obligations and *ius cogens*? Can governments evade their human rights obligations by exercising government powers collectively in specialized international organizations? Can the legal supremacy of international law over national law remain effective and be judicially enforced if human rights are not effectively protected in all fields of international law? Can international courts ignore the worldwide experience of states that seems to demonstrate that the protection of human rights risks to remain ineffective without respect for complementary due process guarantees and other "constitutional principles" of rule of law, democratic governance and judicial review? How are we to interpret and, in case of conflict, reconcile "state sovereignty", "popular sovereignty" and "individual sovereignty" in a manner respecting the constitutional primacy of "inalienable" human rights?[24]

B. Limited WTO Jurisdiction and Customary International Law Rules for the Interpretation of WTO Law

Articles II and III of the WTO Agreement emphasize the limited jurisdiction of the WTO. Article II:1 provides:

> The WTO shall provide the common institutional framework for the conduct of trade relations among Members in matters related to the agreements and associated legal instruments included in the Annexes to this Agreement.

Article III:1 provides:

> The WTO shall facilitate the implementation, administration and operation, and further the objectives, of this Agreement and of the Multilateral Trade Agreements, and shall also provide the framework for the implementation, administration and operation of the Plurilateral Trade Agreements.

Article III:2 authorizes the WTO to "provide the forum for negotiations among its Members concerning their multilateral trade negotiations", and Article III:5 authorizes the WTO to "cooperate, as appropriate, with the International Monetary Fund and with the International Bank for Reconstruction and Development and its affiliated agencies". Article V:1 further requires "the General Council [to] make appropriate arrangements for effective cooperation with other intergovernmental organizations that have responsibilities related to those of the WTO". Yet, notwithstanding the few explicit references in

[24] *Cf.* E.U. Petersmann, *From State Sovereignty toward "Popular Sovereignty" and "Individual Sovereignty" in the International Relations Law of the EU?* in SOVEREIGNTY IN TRANSITION (N. Walker ed., 2003).

WTO provisions to other international organizations and international agreements concluded outside of the WTO, the jurisdiction of WTO bodies is essentially limited to the application and implementation of WTO rules. This is confirmed by Article 3.2 of the WTO Dispute Settlement Understanding ("DSU") which "serves to preserve the rights and obligations of Members under the covered agreements", and Article 7.1 DSU which limits the jurisdiction ("terms of reference") of dispute settlement panels to the examination "of the relevant provisions in . . . the covered agreement(s) cited by the parties to the dispute".

Government representatives in specialized international organizations sometimes appear to believe that governments retain sovereign powers to exclude human rights from the law of specialized agencies, for example from the interpretation of the "covered agreements" of WTO law. Despite the *lex posterior* and *lex specialis* rules for the relationships between successive international treaties[25] states cannot derogate from the *ius cogens* nature of the obligation of all national and international governments to respect the "inalienable" core of human rights.[26] The U.N. Charter likewise prescribes human rights obligations for all 197 U.N. member states, for example in Articles 55 and 56 which, in case of conflict, assert legal primacy over other international treaties.[27] The precise scope of the "inalienable" core of universally recognized human rights obligations remains controversial. U.N. human rights law,[28] and the jurisprudence of the EC Court of Justice and the European Court of Human Rights,[29] explicitly recognize that human rights entail obligations also for intergovernmental organizations. From a human rights perspective, all national and international rules—including economic agreements like the International Monetary Fund ("IMF") and WTO agreements that protect liberty, non-discrimination, property rights and other "human rights values" in transnational economic relations—derive their democratic legitimacy from protecting human rights which today constitutionally restrain all governmental and intergovernmental powers. Arguably, universally recognized "inalienable" human rights limit the powers not only of WTO members but also of intergovernmental WTO bodies.

General international law, as codified in Article 31.3 of the VCLT, requires interpreting international treaties "in their context", including "any relevant rules of international law applicable in the relations between the parties" such as universal human rights. Article 3 of the DSU imposes the requirement "to clarify the existing provisions of those agreements in accordance with customary rules of interpretation of public international law". Universally recognized human rights can be applied by WTO dispute settlement bodies as a relevant context for the interpretation and application of WTO rules, yet not as separate legal claims independent from applicable WTO rules.[30] They may be important for interpreting not only "general exceptions" such

[25] As laid down in Articles 30, 41 and 58 of the 1969 VCLT.

[26] *See* Article 53 VCLT.

[27] *Cf.* Article 103.

[28] *See, e.g.*, Article 28 of the UDHR, quoted in the introduction above.

[29] *Cf.* E.U. Petersmann, *Time for Integrating Human Rights into the Law of Worldwide Organizations*, Jean Monnet Working Paper 7/2001 (Harvard Law School), at 24–25.

[30] This follows from the limited terms of reference of WTO dispute settlement panels as stipulated in the DSU (*e.g.*, Article 7). *Cf.* G. Marceau, *The WTO Dispute Settlement System and Human Rights*, 13 EUROPEAN JOURNAL OF INTERNATIONAL LAW 753–814 (2002), who rightly emphasizes that human rights and WTO rights and obligations are cumulatively binding on states, but are enforceable under different and complementary rules and procedures. Mainstream human rights specialists often overlook the limited scope of jurisdiction of WTO dispute settlement panels and misinterpret calls for interpreting WTO rules with due respect for

as GATT Article XX, but also the "objective of sustainable development" found in the WTO Agreement's Preamble, the basic guarantees of freedom found in GATT Articles I-XI, the WTO rules on non-discrimination, property rights, and individual access to courts, and the WTO's "necessity" requirements for safeguard measures restricting individual freedom of trade so as to protect "public interests" such as the respect for human rights.

The text of the WTO Agreement offers no indication of an intention of WTO Members to deviate from their human rights obligations. A good faith interpretation of WTO rules leads to a legal presumption that all WTO rules must be legally interpreted and applied consistent with the human rights obligations of WTO members. This is in line with the welfare-creating function of WTO rules, *i.e.*, to prohibit welfare-reducing trade restrictions and discrimination, subject to broad discretionary WTO exceptions designed to safeguard the sovereign rights of WTO members to "protect human, animal or plant life or health" and adopt other "measures necessary to protect public morals" or other public interests.[31] Both the welfare-increasing function of WTO rules and the numerous WTO exceptions suggest that, just as GATT dispute settlement practice has never identified a conflict between GATT rules and the human rights obligations of GATT contracting parties, conflicts between WTO obligations and human rights can and must be avoided by interpreting WTO rules and WTO decisions in conformity with the human rights obligations of WTO Members. The Doha Declaration on the TRIPS Agreement and Public Health of November 2001 illustrates the commitment of all WTO members to ensuring that the rules-based trading system remains compatible with public health interests and universally recognized human rights.[32]

The generously drafted "exceptions" in global and regional integration law, and the usually deferential jurisprudence of international dispute settlement bodies vis-à-vis national restrictions necessary for protecting public interests—such as import restrictions on asbestos and other products endangering human health,[33] confirm that, in cases of conflict, the essential core of human rights must prevail. As in EC law, the obligations of states to respect, promote and fulfill human rights must be recognized as extending also to their participation in worldwide organizations like the WTO. Neither the "progressive realization" commitment in Article 2 of the ICESCR,[34] nor the proviso in its Article 24 that "[n]othing in the present Covenant shall be interpreted as *impairing* the provisions of the Charter of the United Nations and of the constitutions of the specialized

universally recognized human rights as a "proposal for the enforcement of human rights through the WTO", *e.g.*, P. Alston, *Resisting the Merger and Acquisition of Human Rights by Trade Law,* 13 EUROPEAN JOURNAL OF INTERNATIONAL LAW 815 (2002).

[31] *See* Article XX GATT and Article XIV GATS.

[32] For the text and a discussion of the Doha Ministerial Declaration on the TRIPS Agreement and Public Health *see, e.g.,* WHO and WTO Secretariat,WTO AGREEMENTS AND PUBLIC HEALTH (2002), reproduced in the Appendix to this book.

[33] *See, e.g., EC—Import Restrictions Affecting Asbestos and Asbestos-Containing Products*, Report of the Appellate Body, WT/DS135/AB/R (2001).

[34] *Cf. General Comment No.3 on The Nature of States Parties Obligations (Art.2, ¶ 1 of the Covenant*), adopted by the U.N. Committee on Economic, Social and Cultural Rights in 1990 and reproduced *e.g.*, in ECONOMIC, SOCIAL AND CULTURAL RIGHTS 442–445 (A. Eide, C. Krause and A. Rosas eds., 1995). The fact that the ICESCR formulates some rights in terms of *principles* rather than precise *rules* only indicates that some economic and social human rights, like certain civil and political rights (such as the right to vote), need to be concretized through implementing legislation and administrative or judicial decisions. On the distinction between *principles* and *rights see, e.g.,* R. DWORKIN, TAKING RIGHTS SERIOUSLY 23 *et seq*. (1977).

agencies" (emphasis supplied), can serve as pretexts for non-compliance by governments and international organizations with their human rights obligations.

C. Diversity of National and International Implementation of Human Rights

Human rights protect individual and democratic diversity, such as human dignity in the sense of the moral, rational and legal autonomy of individuals. This diversity of individual preferences, of "constitutional contracts" and human rights traditions at the national and international level, and of national forms of democracy, confirm that democratic legislatures must enjoy a broad "margin of appreciation" in regulating and mutually balancing human rights. International human rights jurisprudence, including that of the European Court of Human Rights, emphasizes the need to respect the regulatory discretion of domestic democratic institutions.[35]

The scarcity and uneven distribution of resources entail that protection of individual liberty, property and of other human rights inevitably gives rise to competition among utility-maximizing individuals (*e.g.*, producers and consumers in economic markets, politicians and citizens in political markets), as well as among groups (*e.g.*, competition among "rent-seeking" interest groups, "regulatory competition" among states so as to attract mobile international financial and other resources). The resulting conflicts of interests require a "limiting constitution" to limit abuses of power so as to protect human rights, as well as an "enabling constitution" to enable the individual and collective supply of private and public goods and services, in the economy no less than in the polity. Effective protection of human rights in, and of democratic control over, bi-level rule-making and policy-making at national and international levels requires constitutional limitations on abuses of private and public power not only inside states but also in international organizations.[36]

At the international level, the human rights guarantees in the six major worldwide U.N. human rights treaties,[37] and in the regional human rights treaties in Europe, Africa and in the Americas, differ from treaty to treaty. Each human rights treaty has set up its own institutions and its separate monitoring and implementation procedures, with at present inadequate coordination among these treaty systems.[38] The EC Treaty provides for comprehensive legal and judicial protection of fundamental individual "market freedoms", non-discrimination and social rights. Other regional integration agreements, such as NAFTA, and worldwide economic agreements, including the WTO Agreement, do not link their legal protection of market access and economic freedom to protection of human rights. Yet, as explained in Part III, the international guarantees in NAFTA and

[35] On the "margin of appreciation" doctrine in the case-law of the European Court of Human Rights *see* H.C. Yourow, THE MARGIN OF APPRECIATION DOCTRINE IN THE DYNAMICS OF EUROPEAN HUMAN RIGHTS JURISPRUDENCE (1996).

[36] This dependence of effective protection of human rights on national as well as "international constitutionalism" tends to be ignored by many human rights specialists, *e.g.*, Alston, *supra* note 30, and is explained in Petersmann, *Human Rights and International Economic Law in the 21st Century*, 4 (3) JOURNAL OF INTERNATIONAL ECONOMIC LAW 39 (2001).

[37] The 1966 Covenants on Civil and Political Rights ("ICCPR"), Economic, Social and Cultural Rights ("ICESCR") and on Elimination of all Forms of Racial Discrimination ("ICERD"), the 1980 Convention on the Elimination of all Forms of Discrimination against Women ("ICEDAW"), the 1984 Convention against Torture ("ICAT"), and the 1989 Convention on the Rights of the Child ("ICRC").

[38] *Cf.* C. Scott, *Institutional Integration of the Core Human Rights Treaties*, in GIVING MEANING TO ECONOMIC SOCIAL AND CULTURAL RIGHTS (I. Merali and V. Osterveld eds., 2001).

WTO rules of freedom of trade across frontiers, non-discrimination and rule of law can serve "human rights functions" by protecting individual freedom, non-discrimination, legal security and social welfare across frontiers. Economics demonstrates that "individual rights are a cause of prosperity";[39] economic welfare can be increased by the "successful struggle for rights of which the right to property is the most fundamental";[40] and "almost all of the countries that have enjoyed good economic performance across generations are countries that have stable democratic governments".[41] The U.N. Development Program[42] likewise emphasizes that national human rights and international legal protection of individual rights establish incentives for people to become not only "better democrats" but also to save, invest and become "better economic actors".

As long as so many areas of human rights, such as the nature and contents of economic and social human rights, and their interrelationships with other fields of international law which historically evolved without reference to human rights, remain controversial, any examination of the legal relevance of human rights for the law of the WTO risks being influenced by the particular human rights perspectives and "constitutional premises" of the interpreter (*e.g.*, as regards the "inalienable character" of core human rights). This entails legal uncertainty and suggests that WTO dispute settlement bodies must respect the diversity of human rights traditions and interpret the relevance of trade-related human rights with due deference to agreed U.N. human rights practice and to the margin of discretion of democratic legislatures.

D. Constitutional Primacy of Human Rights in International Law?

Numerous regional and worldwide human rights treaties and other human rights instruments, like the December 2000 Charter of Fundamental Rights of the EU,[43] commit states to "recognition of the inherent dignity and of the equal and inalienable human rights of all members of the human family [as] the foundation of freedom, justice and peace in the world".[44] Most national human rights instruments likewise recognize inalienable "birth rights" of every human being which precede and constitutionally limit government powers. Human dignity, in the sense of respect for the moral, rational, personal and legal autonomy of each individual to decide on one's personal goals in life, has become the common value premise of national and international human rights law.[45]

Human rights need to be legally specified, mutually balanced and implemented by democratic legislation which tends to vary from country to country. Their inalienable core, however, is "acknowledged" rather than "granted" by governments, as recognized

[39] M. Olson, POWER AND PROSPERITY 43 (2000).

[40] *See* R. PIPES, PROPERTY AND FREEDOM 291 (1999).

[41] Olson, *supra* note 39, at 187. *See, e.g.,* the annual reports on "Economic Freedom in the World" published by the Fraser Institute in Vancouver, which emphasize the empirical correlation between economic freedom, economic welfare, relatively higher average income of poor people and, with a few exceptions (such as Hong Kong), political freedom. Already Adam Smith's inquiry into the NATURE AND CAUSES OF THE WEALTH OF NATIONS (1776) concluded that the economic welfare of England was essentially due to its legal guarantees of economic freedom, property rights and legal security for investors, producers, traders and consumers.

[42] *Cf.* UNDP, HUMAN DEVELOPMENT REPORT 2000: HUMAN RIGHTS AND HUMAN DEVELOPMENT (2000).

[43] Reproduced in OFFICIAL JOURNAL OF THE EC, C 364/1 of December 18, 2000.

[44] Preamble of the UDHR.

[45] *See, e.g.,* Council of Europe, THE PRINCIPLE OF RESPECT FOR HUMAN DIGNITY (1999); HUMAN DIGNITY: THE INTERNATIONALIZATION OF HUMAN RIGHTS (A. Henkin ed., 1979).

in national as well as international legal practice: "Human dignity is inviolable. It must be respected and protected".[46] U.N. human rights conventions are explicitly based on "recognition of the inherent dignity and of the equal and inalienable rights of all members of the human family [as a] foundation of freedom, justice and peace in the world", and emphasize—like many national constitutions—that human rights "derive from the inherent dignity of the human person."[47] In U.N. practice, the "right to development" and the corresponding government obligations are defined in terms of the realization of all human rights.[48]

The legal consequences of the universal recognition of an "inalienable core" of human rights as, arguably, part of international *ius cogens* remain to be clarified. International legal practice, such as the 1998 ILO Declaration on Fundamental Principles and Rights at Work, confirms an increasing *opinio iuris* that membership in the U.N. and ILO entails a legal obligation to respect core human rights.[49] Dictatorial governments can no longer freely "contract out" of their human rights obligations by withdrawing from U.N. human rights covenants or ILO conventions.[50] Legal practice suggests that not only the prohibitions of genocide, slavery and apartheid, but also the core of other human rights must be respected even "in time of public emergency"[51] and have become *erga omnes* obligations of a *ius cogens* nature.[52]

E. Indivisibility and Incomplete Enumeration of Specific Human Rights?

Human rights instruments recognize an ever larger number of specific "civil", "political", "economic", "social" and "cultural" human rights in response to changing civil society demands and human rights problems. How can this dynamic evolution and diversity of human rights law be reconciled with the "inalienable" character of human rights? For instance, does the non-ratification by the United States of the ICESCR mean that economic and social human rights cannot be part of the legal context relevant for the interpretation of the WTO obligations of the United States? Does the non-ratification of the ICCPR by China have similar consequences for the interpretation of its WTO

[46] Article 1 of the Charter of Fundamental Rights of the European Union. Similar statements are to be found in many U.N. human rights instruments (*e.g.*, Article 1 of the UDHR: "All human beings are born free and equal in dignity and rights") as well as in national constitutions (*e.g.*, Article 1 of the German Basic Law: "Human dignity is inviolable. To respect and protect it shall be the duty of all state authority").

[47] The quotations are from the preambles of the ICCPR and of the ICESCR of 1966. Article 1 of the German Basic Law of 1949 states in a similar manner: "The German people therefore acknowledge inviolable and inalienable human rights as the basis of every community, of peace and of justice in the world" which "shall bind the legislature, the executive and the judiciary as directly applicable law".

[48] *See* U.N. General Assembly Declaration 41/128 of December 4, 1986 on the "Right to Development".

[49] ILO, The ILO Declaration on Fundamental Principles and Rights at Work (1998) at 7, adopted by the International Labour Conference on June 18, 1998, recognizes in ¶ 2 "that all Members, even if they have not ratified the Conventions in question, have an obligation, arising from the very fact of membership in the Organization, to respect, to promote and to realize, in good faith and in accordance with the Constitution, the principles concerning the fundamental rights which are subject of those Conventions, namely: (a) freedom of association and the effective recognition of the right to collective bargaining; (b) the elimination of all forms of forced or compulsory labour; (c) the effective abolition of child labour; and (d) the elimination of discrimination in respect of employment and occupation".

[50] *See* General Comment 5 on Article 4 of the U.N. Covenant on Civil and Political Rights, adopted by the Human Rights Committee on July 31, 1981 and recently revised. *Cf.* D. GOLDRICK, THE HUMAN RIGHTS COMMITTEE 315 (1994).

[51] *Cf.* Article 4 of the ICCPR, Article 15 of the European Convention on Human Rights ("ECHR").

[52] For detailed references to state practice *see* I. SEIDERMAN, HIERARCHY IN INTERNATIONAL LAW (2001).

obligations? Are only universally recognized human rights part of the "relevant context" for the interpretation of WTO rules? Or can regional human rights treaties be part of the relevant context for the interpretation of WTO rules among WTO members that are parties to the human rights treaty concerned?

Several human rights treaties recognize that "[t]here shall be no restriction upon or derogation from any of the fundamental human rights recognized or existing in any State Party to the present Covenant pursuant to law, conventions, regulations or custom on the pretext that the present Covenant does not recognize such rights or that it recognizes them to a lesser extent".[53] The enumeration of specific human rights in international legal instruments is thus recognized as incomplete and without prejudice to more comprehensive human rights guarantees in domestic laws. All U.N. member states have also acknowledged in numerous U.N. resolutions that "all human rights are universal, indivisible and interdependent and interrelated."[54]

Just as Article 6 of the EU Treaty, and the Charter of Fundamental Rights of the EU, recognize human rights as general constitutional principles limiting the powers of the EU and of all EU member states, the universal recognition of the "inalienable nature" and "indivisibility" of human rights can be interpreted to imply that international human rights treaties recognize the existence of "inalienable human rights" as general principles of national and international law.[55] Recognition of core human rights as general "constitutional principles" reduces the dangers of a "positivist" reliance on separate "civil", "political", "economic", "social" and "cultural" human rights that were acknowledged by governments at particular times in particular human rights instruments, such as the risk of leaving non-enumerated "inalienable" human rights without legal protection. Treating separate human rights treaties as mutually agreed codifications of how inalienable core human rights should be understood in relations between the contracting states better protects the diversity and holistic nature of human personality and helps to overcome partial human rights perspectives, such as the widespread resistance to protecting human rights in "economic markets" no less than in "political markets." Human liberty rights, property rights, non-discrimination rights, social rights, and procedural and democratic rights can be protected more effectively if they are understood as part of national and international constitutional law that dynamically evolves in particular national and international contexts, in response to new human rights preferences and challenges, for example those formulated in the December 2000 EU Charter of Fundamental Rights.

The universal recognition of the indivisibility of civil, political, economic, social and cultural human rights has contributed to increasing jurisprudence by national and international courts that economic and social rights, such as the EC Treaty guarantees of

[53] *See, e.g.*, Article 5.2 ICCPR.

Scott, *supra* note 38, at 7, 8, who argues for a "radical breaking down of the normative boundaries among the categories framed by each of the human rights treaties", and recommends to the six U.N. human rights committees to "consider their six treaties as interconnected parts of a single human rights constitution and thereby consider themselves as partner chambers within a consolidating supervisory institution".

freedom of trade and non-discrimination against women, may be no less justiciable than civil and political rights.[56]

F. Obligations by Governments and Intergovernmental Organizations to Respect, Protect and Promote Human Rights

U.N. human rights practice, such as the "General Comments" and "Concluding Observations" adopted by U.N. human rights treaty bodies, emphasizes that human rights entail obligations to *respect* human rights (*e.g.*, by not interfering with human rights), to *protect* human rights (*e.g.*, by means of implementing legislation, administrative and judicial protection), and to *fulfill* human rights (*e.g.*, by making available essential goods and services necessary for the survival and personal development of human beings).[57] The U.N. High Commissioner for Human Rights[58] and the U.N. Committee on Economic, Social and Cultural Human Rights[59] have endorsed calls for developing human rights approaches to the interpretation and application of WTO rules,[60] taking into account the human rights obligations of all WTO members to respect, protect and fulfill human rights at home and abroad. Some U.N. Specialized Agencies, such as the U.N. Educational, Scientific and Cultural Organization ("UNESCO") and the ILO, explicitly commit themselves to the promotion of human rights, such as the right to education and to core labor standards. Other U.N. Specialized Agencies, like the IMF and the World Bank, have so far avoided explicitly recognizing that international organizations are legally bound by universally recognized international human rights.[61] A few organizations—like the World Bank, the Organization for Economic Cooperation and Development ("OECD") and the EU Commission—have committed themselves to "principles of good governance", including transparency, participation, accountability, effectiveness and coherence, so as to legitimize their "international governance" and "integration law".[62] But such commitments to often vague "good governance principles", without clarification of

[56] European jurisprudence, by the EC Court of Justice and the European Court on Human Rights, has long since recognized that obligations to respect, protect and fulfill economic and social human rights may be "justiciable" even if they entail not only "negative" but also "positive" obligations (*e.g.*, to promote non-discriminatory access to education). On the particular problems of "welfare rights" (such as indeterminacy of redistributive rights, their dependence on personal responsibility), the distinction between social rights in welfare states and social human rights, and the need for constitutional safeguards against abuses of welfare institutions, *see, e.g.*, K. ARAMBULO, *supra* note 54. Many civil and political human rights (like the right to vote) also imply not only "negative" but also "positive obligations" (*e.g.*, to render the right effective through legislation and administrative procedures).

their human rights implications, offer no effective legal and judicial protection of human rights and constitutional democracy.

G. Principles for the Mutual Balancing of Human Rights: Non-Discrimination, Rule of Law and Necessity Principles

Human rights treaties and the jurisprudence of human rights bodies emphasize that governmental limitations on human rights are subject to requirements of non-discrimination, necessity and proportionality. Non-discrimination requirements are to be found in all human rights instruments.[63] The numerous provisions on restrictions and limitations of human rights often state that such limitations must be "prescribed by law",[64] and must be "necessary" or "proportionate" to the legitimate aim pursued.[65] Article 29:2 of the UDHR, for instance, states:

> In the exercise of his rights and freedoms, everyone shall be subject only to such limitations as are determined by law solely for the purpose of securing due recognition and respect for the rights and freedoms of others and of meeting the just requirements of morality, public order and the general welfare in a democratic society.

In Article 4 of the ICESCR, for instance, the:

> States Parties to the present Covenant recognize that, in the enjoyment of those rights provided by the Sate in conformity with the present Covenant, the State may subject such rights only to such limitations as are determined by law only in so far as this may be compatible with the nature of these rights and solely for the purpose of promoting the general welfare in a democratic society.

1. Are the Balancing Principles of Human Rights Law Relevant for the Interpretation of WTO Rules?

The "exception clauses" in regional and worldwide economic integration agreements[66] often provide for similar "balancing principles" limiting the right to restrict imports or exports for non-economic public policy purposes. The non-discrimination, "necessity" and "proportionality" requirements in the "general exceptions" of WTO law[67] may raise legal questions similar to those that arise from the corresponding requirements of non-discrimination, necessity and proportionality in human rights treaties. WTO law gives clear priority to the sovereign right to restrict trade if this is necessary for the protection of life, health and other human rights objectives. The WTO panel and Appellate Body reports in *United States—Import Restrictions of Shrimps* confirmed that import restrictions may be justifiable under WTO law for protecting non-economic values, not only inside the importing country but also in other countries and on the High Seas.[68] WTO jurisprudence has progressively relaxed the traditionally strict interpretation of some of the "necessity"

[63] For a list of such non-discrimination requirements, *see, e.g.*, P. SIEGHART, THE INTERNATIONAL LAW OF HUMAN RIGHTS (1983), Chapter 7.

[64] *Cf.* Articles 9–11 ECHR.

[65] For a list of such limitations clauses, and of the pertinent jurisprudence, see SIEGHART, *supra* note 63, Chapter 8.

[66] *See, e.g.*, GATT Article XX and GATS Article XIV.

[67] *See, e.g.*, in GATT Article XX and GATS Article XIV.

[68] *See United States—Import Prohibition of Certain Shrimp and Shrimp Products*, *Recourse to Article 21.5 by Malaysia,* Report of the Appellate Body, DS58/AB/RW (2001), with references to the earlier WTO panel and Appellate Body reports. The restrictions at issue were aimed at protecting endangered species of sea turtles.

requirements in WTO law (*e.g.*, in the sense of requiring the "least-trade restrictive measure") so as to permit more policy discretion in balancing legitimate trade and non-trade concerns.[69] For example, in the *Korea Beef case*, the Appellate Body bifurcated the necessity test by distinguishing (1) situations where the claim may be that a measure is indispensable, *i.e.* where the measure is the only available; and (2) situations where a Member may be able to justify its measure as "necessary" within the meaning of Article XX, even if there would be other measures available. For the second situation, the Appellate Body adopted the following approach:

> A measure with a relatively slight impact upon imported products might more easily be considered as "necessary" than a measure with intense or broader restrictive effects.[70]
>
> [. . .] [D]etermination of whether a measure, which is not "indispensable", may nevertheless be "necessary" within the contemplation of Article XX(d), involves in every case *a process of weighing and balancing a series of factors* which prominently include the contribution made by the compliance measure to the enforcement of the law or regulation at issue, the importance of the common interests or values protected by that law or regulation, and the accompanying impact of the law or regulation on imports or exports.[71]

If human rights, the customary international law rules on treaty interpretation, and WTO law[72] require interpreting WTO rules "in their context", with due regard to the human rights obligations of WTO members which may be applicable "in the relations between the parties" in the sense set forth in Article 31:3(c) of the VCLT, does this imply that the general principles for the balancing of the rights and obligations under human rights law may be legally relevant also for the interpretation of the corresponding "balancing principles" when reconciling rights and obligations under WTO law? For instance, does the universal recognition of the right to liberty and of other human rights, such as the protection of human health, call for an interpretation of the numerous public interest clauses in WTO law in conformity with the human rights requirement that personal freedom and other human rights "shall not be subject to any restrictions except those which are provided by law, are necessary to protect national security, public order, public health or morals or the rights and freedoms of others, and are consistent with the other rights recognized in the present Covenant" (*e.g.*, Article 12:3 ICCPR)? How are we to construe human rights concepts, such as "the right to liberty", non-discriminatory treatment, "necessity", the "right of everyone to the enjoyment of the highest attainable standard of physical and mental health", and similar WTO concepts, for instance those regarding non-discrimination, "necessity" and protection of "public health" in GATT Article XX, in a mutually consistent manner?

2. Legal Consequences of a "Human Rights Approach to International Trade"

From a state-centered perspective, the traditional "international law of states" serves the "sovereign equality" of states and of their governments. In view of the intergovernmental structures of GATT and WTO law, it is hardly surprising that in GATT and WTO practice

[69] The quotations are from the Appellate Body report on *Korea—Various Measures on Beef*, WT/DS161/AB/R (2002), ¶ 164. For a survey of the WTO jurisprudence, *see* GATT/WTO Note by the WTO Secretariat, *Dispute Settlement Practice Relating to GATT Article XX*, of March 8, 2002 (WT/CTE/), at 14–16, which concludes from the evolution in the judicial interpretation of the necessity requirement of GATT Article XX (b) and (d) "that there might be differing levels of scrutiny applicable to the analysis of the necessity text, depending on the importance of the 'interests or values' it served".

[70] *Korea Beef*, *supra* note 69, ¶ 163.

[71] *Id.* ¶ 164.

[72] *See, e.g.*, Article 3:2 of the DSU.

governments have only very rarely referred to human rights in their invocations of the "general exceptions"[73] and other safeguard clauses in GATT and WTO law so as to justify measures "necessary to protect human, animal or plant life or health."[74] There appears to be no evidence, however, that past GATT practice under Article XX has been inconsistent with human rights. GATT dispute settlement jurisprudence, for instance, has never challenged the legality of non-discriminatory and "necessary" safeguard measures under GATT Article XX. Also WTO practice seems to be consistent so far in interpreting the "general exceptions" in WTO law[75] in conformity with human rights.[76]

The "human rights approach to international trade" advocated by U.N. human rights bodies "sets the promotion and protection of human rights as objectives of trade liberalization, not exceptions."[77] Human rights instruments emphasize that protection of "human dignity" and of inalienable rights to liberty and to other human rights are the ultimate objective and source of legitimacy of national and international law. Legal respect for "human dignity" requires legal protection of moral, rational, and personal liberty and individual responsibility,[78] with due regard to the scarcity and uneven distribution of the economic and other resources necessary for the enjoyment of human rights. Especially in England where liberty of the person has been constitutionally guaranteed since the Magna Carta of 1215,[79] the right to liberty is often construed narrowly as protecting the physical liberty and freedom from arrest and detention. In the constitutional democracies that emerged from anti-colonial struggles, like the United States and India, Supreme Courts have interpreted and protected rights to liberty in a much broader manner to encompass

[73] *See, e.g.*, GATT Articles XX and XXV. The recent "waiver" granted by the WTO Council for Trade in Goods for the "Kimberley Process Certification Scheme for Rough Diamonds" justifies the need for regulating trade in "conflict diamonds" by, *inter alia*, "recognizing the extraordinary humanitarian nature of this issue and the devastating impact of conflicts fuelled by the trade in conflict diamonds on the peace, safety and security of people in affected countries and the systematic and gross human rights violations that have been perpetrated in such conflicts". *Cf.* WTO document G/C/W/432/Rev.1 of February 24, 2003.

[74] For an exception, *see* the submission from Mauritius in WTO document G/AG/NG/W/36/Rev.1 of November 9, 2000, which claims that Article 20 of the Agreement on Agriculture (regarding the taking into account of "non-trade concerns") should be read in conjunction with Article 11 of the ICESCR recognizing the right of everyone to adequate food.

[75] *See, e.g.* , Article XIV GATS and Article 8 TRIPS Agreement.

[76] A computer search of references to human rights in WTO panel and Appellate Body reports indicates ten reports between 1996 and 2001 where parties, third parties, experts, panelists or the Appellate Body referred to human rights. In the negotiations for the WTO Ministerial Declaration of November 2001 on access to medicines and review of Article 27.3(b) of the TRIPS Agreement, the "Africa Group", for instance, referred explicitly to human rights as criteria for interpreting the TRIPS Agreement. The WTO Secretariat actively contributed to the discussions leading to the report of the U.N. High Commissioner for Human Rights on *The Impact of the TRIPS Agreement on Human Rights* (UN document E/CN.4/Sub.2/2001/13 of June 27, 2001) and to Resolution 2001/21 by the U.N. Sub-Commission on Human Rights on "Intellectual Property and Human Rights" (E/CN.4/Sub.2/RES/2001/21 of August 16, 2001).

[77] *Cf. supra* note 13 and the accompanying text.

[78] Whereas most courts have avoided legal definitions of the concept of "human dignity", such as whether "human dignity" should be understood as an "intrinsic value" inherent to personhood or as an "extrinsic value" dependent on merit or achievement, the German Federal Constitutional Court has determined human dignity not only in negative terms (*i.e.*, by deciding case-by-case on infringements) but also by adopting the "object formula": "it contradicts human dignity to turn man into an object within the state". 27 BUNDESVERFASSUNGSGERICHT ENTSCHEIDUNGSSAMMLUNG 1, at 6: "The maxim 'man must always be an end in itself' applies without limitation for all areas of law; for the dignity of a human being as a person, which cannot be lost, exists precisely in the fact that he continues to be recognized as an autonomous personality." *Cf.* D. Ullrich, *Concurring Visions: Human Dignity in the Canadian Charter of Rights and Freedoms and the Basic Law of the Federal Republic of Germany*, in 3 GLOBAL JURIST FRONTIERS 1–103 (2003).

[79] "[N]o freeman shall be taken or imprisoned . . . but . . . by the law of the land".

additional rights and liberties that are essential to the orderly pursuit of happiness by free men, including freedom of contract, liberty to pursue any livelihood or lawful vocation, and the right to travel abroad.[80] German constitutional law and European Community law have reacted to the historical experiences of abuses of economic and regulatory powers, such as the cartelization of German industries under the Hitler dictatorship, by extending constitutional protection of liberty rights[81] to professional and economic liberties across frontiers, subject to democratic legislation.[82]

If constitutional protection of "personal liberty" is extended to mutually beneficial private cooperation across frontiers, then international government obligations in, for example, EC, GATT and WTO law, to protect freedom and non-discrimination among citizens across frontiers can serve "constitutional functions" for limiting welfare-reducing abuses of government powers and for reinforcing judicial protection of individual rights.[83] Legal and judicial protection of the rights to equality of liberty and of non-discriminatory treatment across frontiers enables a higher degree of legal autonomy, empowerment and responsibility of individuals, without unduly limiting the regulatory discretion of democratic legislatures and governments, than does a state-centered reliance on foreign policy discretion of governments without legal and judicial protection of individual freedom and non-discrimination across frontiers (as in many foreign policy areas).[84] For example, the GATT and WTO prohibitions of discriminatory and protectionist abuses of trade policy powers offer precise legal criteria for reconciling freedom of trade with the "human rights functions" of the various GATT and WTO exceptions for the protection of human rights and social security in the importing country. In such legal and judicial balancing processes, human rights may be relevant for interpreting not only the WTO's "exceptions" and safeguard clauses; they may also be relevant for the interpretation of the basic WTO guarantees of freedom, non-discrimination, property rights and rule of law which protect the corresponding human rights guarantees of individual liberty, non-discrimination, private property and access to courts. For instance, the recent statement by the U.N. Committee on Economic, Social and Cultural Rights on "Human Rights and Intellectual Property"[85] has been criticized for interpreting the TRIPS obligations too one-sidedly in the light of social human rights without recognizing that property rights, including the "moral and material interests" of the holders of intellectual property rights, are protected as human rights themselves.[86] The rights and obligations of the importing country to protect the human rights of its citizens

[80] *See* the texts and jurisprudence referred to in SIEGHART, *supra* note 63, Chapter 14.2.

[81] *See, e.g.*, the individual right to general freedom of action and free development of a person's personality in Article 2.1 of the German Basic Law which has been recognized by the courts to protect also individual rights *e.g.*, to import and export goods and services subject to democratic legislation. On the legal and procedural advantages and problems of such a broad constitutional guarantee of general individual freedom *see, e.g.*, Robert Alexy, THEORIE DER GRUNDRECHTE (1994), Chapter 7.

[82] For a comparative analysis of protection of economic liberties in federal states and in the EC, *see* E.U. PETERSMANN, CONSTITUTIONAL FUNCTIONS AND CONSTITUTIONAL PROBLEMS OF INTERNATIONAL ECONOMIC LAW (1991), Chapters VIII and IX.

[83] For an explanation of these "constitutional functions" *see id*. Chapter VII.

[84] *Cf*. Petersmann, *supra* note 55, at 850.

[85] *See supra* note 59, notably ¶ 12: "The Committee wishes to emphasize that any intellectual property regime that makes it more difficult for a State party to comply with its core obligations in relation to health, food, education, especially, or any other right set out in the Covenant, is inconsistent with the legally binding obligations of the State party."

[86] *Cf., e.g.*, Article 17 of the UDHR ("Everyone has the right to own property") and Article 15 UNCESCR, together with Article 27 of the UDHR, requiring "the protection of the moral and material interests resulting from any scientific, literary or artistic production" of authors.

also need to be balanced with the corresponding rights and obligations of the exporting country, as well as with the economic insight that trade restrictions are only rarely an efficient instrument for correcting "market failures" and supplying "public goods."[87]

An explicit recognition of universally recognized human rights as part of the legally relevant context for the interpretation of WTO rules could enhance the legitimacy of WTO decision-making processes and WTO law. Yet, in view of the numerous WTO exceptions and safeguard clauses and the regulatory discretion of WTO Members regarding their legislative implementation and administrative protection of international human rights obligations, WTO decisions and dispute settlement rulings explicitly referring to human rights would presumably remain rare. It is illustrative in this respect that, even though the EC has insisted on including explicit "human rights clauses" into its international economic agreements with more than one hundred countries, such human rights provisions have been used only rarely as a legal justification for the adoption of trade restrictions in response to foreign human rights violations.[88] Although European Community law explicitly commits the EC institutions to respect for human rights,[89] there appears to have been not a single judgment by the EC Court invalidating an EC measure on human rights grounds.

H. Human Rights as Institutional and Constitutional Guarantees: The Example of the Human Right to Health

U.N. human rights law and practice emphasize that human rights need to be protected and mutually balanced through legislation, administrative and judicial protection. For example, General Comment No.14 (2000) by the U.N. Committee on Economic, Social and Cultural Rights on the right to the highest attainable standard of health states that "the right to health must be understood as a right to the enjoyment of a variety of facilities, goods, services and conditions necessary for the realization of the highest attainable standard of health"; the obligations to protect and fulfill this human right should be implemented "preferably by way of legislative implementation, and . . . a national

[87] In its Resolution 1999/30 of August 26, 1999 on *Trade Liberalization and its Impact on Human Rights*, the Sub-Commission (of the U.N. Commission on Human Rights) on the Promotion and Protection of Human Rights declared "that sanctions and negative conditionalities which directly or indirectly affect trade are not appropriate ways of promoting the integration of human rights in international economic policy and practice." *See also* Resolution 1998/12 on *Human rights as the Primary Objective of Trade, Investment and Financial Policy* adopted by the U.N. Sub-Commission on the Promotion and Protection of Human Rights, and Resolution 1999/30 on *Trade Liberalization and its Impact on Human Rights* adopted by the same U.N. Sub-Commission in 1999.

[88] The EC's suspension of trade preferences for Yugoslavia in November 1991, for instance, was initially motivated by the military hostilities in the former Yugoslavia rather than by human rights violations. In the context of the Lomé Convention, the EC reacted to human rights violations (*e.g.*, in Rwanda) by suspension of financial and technical assistance rather than trade restrictions. The EC's Generalized System of Tariff Preferences ("GSP") offers additional preferences to developing countries which respect basic ILO guarantees (such as freedom of association and minimum age for admission to employment); temporary withdrawal of GSP benefits by the EC in response to violations of human rights have been rare (*e.g.*, in the case of Myanmar). It is difficult to find an empirical basis for the criticism (*e.g.*, by P. Prove, *Human Rights at the WTO* ? in HUMAN RIGHTS AND ECONOMIC GLOBALISATION 32 (M. Mehra ed., 1999) of an alleged "bias of the WTO" because "the primary entry point for human rights concerns would be as justifications for sanctions and trade conditionalities".

[89] *Cf.* Article 6 EU Treaty.

health policy with a detailed plan for realizing the right to health."[90] General Comment No.14 further recognizes that "any person or group victim of a violation of the right to health should have access to effective judicial or other appropriate remedies at both national and international levels."[91] "Depending on the availability of resources, States should facilitate access to essential health facilities, goods and services in other countries, wherever possible and provide the necessary aid when required."[92] As the essential medicines, food (including drinking water) and health services are tradable, the U.N. Commission on Human Rights has emphasized that WTO rules on access to such goods and services may be of direct relevance for the protection and fulfillment of the human right to health.[93]

International human rights instruments provide for numerous specific obligations to protect human rights through implementing legislation and through judicial or other effective remedies.[94] Some of these rights include institutional guarantees, for example to "periodic and genuine elections . . . by universal and equal suffrage and . . . held by secret vote",[95] and to representative legislatures and independent judicial institutions. Such human rights obligations may be of relevance for the interpretation of corresponding WTO obligations, for instance the obligation in Article X:3 GATT to "administer in a uniform, impartial and reasonable manner all its laws, regulations, decisions and rulings" and "maintain, or institute . . . judicial, arbitral or administrative tribunals or procedures".

III. Human Rights as Constitutional Restraints on the Powers of WTO Bodies?

In Europe, human rights have become recognized as "constitutional restraints" on government powers, not only at the national level but also at the level of international organizations which exercise government powers collectively through intergovernmental, parliamentary or judicial organs.[96] The European Court of Human Rights has likewise held:

> Where States establish international organizations, or mutatis mutandis international agreements, to pursue cooperation in certain fields of activities, there may be implications for the protection of fundamental rights. It would be incompatible with the purpose and object of the (European Convention on Human Rights) if Contracting States were thereby absolved from their responsibility under the Convention in relation to the field of activity covered by such attribution.[97]

UK*, the European Court of Human Rights found the United Kingdom in violation of the human right to participate in free elections of the legislature even though the law which denied voting rights in Gibraltar implemented a treaty concluded among EC member states on the election of the European Parliament: "there is no difference

Other international courts, like the ICJ, and quasi-judicial bodies, like the WTO Appellate Body, might follow the example of the EC Court of Justice and of the European Court of Human Rights and recognize that human rights, such as due process of law and judicial protection, bind not only *national governments* but also collective rule-making and decision-making in international organizations. The U.N. Commission on Human Rights has called upon all states parties to the ICESCR to "ensure that the Covenant is taken into account in all of their relevant national and international policy-making processes."[98]

A. Due Process of Law in the WTO: The Controversy over Amicus Curiae Briefs

According to Article 3:2 of the DSU, the "dispute settlement system of the WTO is a central element in providing security and predictability to the multilateral trading system", and "serves to preserve the rights and obligations of Members under the covered agreements, and to clarify the existing provisions of those agreements in accordance with customary rules of interpretation of public international law." Article 31 of the VCLT gives priority to the "ordinary meaning" of the terms of the treaty "in their context and in the light of its object and purpose". The ICJ has, however, made clear that "... an international instrument has to be interpreted and applied within the framework of the entire legal system prevailing at the time of the interpretation"[99]. The universal recognition of human rights, including procedural guarantees of access to courts and due process of law, may therefore be part of the relevant "context" for the interpretation and progressive development of the dispute settlement procedures set out in the DSU. The differences of view regarding the WTO Appellate Body findings on admissibility of *amicus curiae* (friend-of-the-court) briefs in panel and appellate proceedings illustrate the potential legal relevance of human rights considerations for the interpretation of DSU rules.

The DSU contains no provision on the admissibility of *amicus curiae* briefs. In *United States—Shrimp*, the Appellate Body decided that panels have the right to accept *amicus* briefs based on a broad interpretation of the panels' right in Article 13 of the DSU to seek information.[100] As for the three briefs that had been attached to the appellant's submission of the United States, the Appellate Body found that they had become part of the U.S. submission and were therefore no longer *amicus curiae* briefs.[101] This interpretation of Article 13 of the DSU, and the acceptance by the Appellate Body itself of an unsolicited *amicus curiae* brief by the Center for International Environmental Law ("CIEL") without providing any reasons, were criticized by several WTO Members. In

between European and domestic legislation, and no reason why the United Kingdom should not be required to 'secure' the rights (under the ECHR) in respect of European legislation in the same way as those rights are required to be 'secured' in respect of purely domestic legislation". *Cf.* European Court of Human Rights, judgment of February 18, 1999 on complaint No. 24833/94, *see* EUROPÄISCHE GRUNDRECHTSZEITSCHRIFT ("EUGRZ") 200 (1999).

[98] Resolution 2002/24, ¶ 7, quoted by the Special Rapporteur on *The Right of Everyone to the Enjoyment of the Highest Attainable Standard of Physical and Mental Health* whose report likewise emphasizes "the fundamental principle that international human rights law, including the right to health, should be consistently and coherently applied across all relevant national and international policy-making processes" (*supra* note 93, ¶ 8).

[100] *United States—Shrimp, supra* note 68, ¶¶ 100–110.

[101] *Id.* ¶ 89.

United States—British Steel,[102] the Appellate Body confirmed its own right, without any duty, to consider *amicus* briefs based on Article 17.9 of the DSU.[103] This provision gives the Appellate Body the authority to adopt procedural rules, which do not conflict with any rules and procedures in the DSU or the covered agreements. The Appellate Body also held that Rule 16(1) of the Working Procedures allows it to fill gaps in the Working Procedures by adopting new rules.[104]

In the Appellate Body decision in *EC—Asbestos*,[105] the Appellate Body established special rules applicable to *amicus* briefs based on Rule 16(1) of the Working Procedures.[106] In these rules the Appellate Body stated specific requirements that *amicus* briefs were expected to meet and posted them on the WTO website. At an extraordinary meeting of the General Council, many WTO member countries expressed their concern about these legal interpretations and activities of the Appellate Body. The additional rules were criticized as a legislative act that exceeded the Appellate Body's competence and granted non-governmental third parties access to the intergovernmental dispute settlement process. As most NGOs come from developed countries, and the "friends of the court" might turn out to be no friends of the governments concerned, less-developed WTO members, in particular, expressed concern that *amicus curiae* briefs might render their complaints and defenses in WTO dispute settlement proceedings more burdensome. The General Council meeting ended with the chairman asking the Appellate Body to approach the issue of the admissibility of *amicus* briefs with "*extreme caution*" in the future. In addition, it was agreed that the chairman would lead informal discussions with the member countries on formulating rules for the consideration of *amicus curiae* briefs.

The text of Articles 13 and 17.9 of the DSU does not mention *amicus curiae* briefs. The national legal and judicial systems of most WTO member countries do not appear to recognize a right of domestic courts to accept such briefs. The different interpretations of the "ordinary meaning" of the terms of Articles 13 and 17.9 DSU—by the Appellate Body *in favor* of the admissibility of *amicus curiae* briefs, and by most WTO Members *against* their legal admissibility—are to be explained in terms of divergent interpretations of "their context" and of the "object and purpose" of these WTO provisions. Human rights considerations were neither mentioned in the extremely scant reasoning by the Appellate Body, nor in the debates among WTO Members in the General Council. Yet, human rights considerations—such as the human rights guarantees of due process of law,[107] and the universal commitment[108] to incorporate human rights into the policies of international organizations[109] so as to promote participation of individuals and civil society organizations in the work of international organizations[110]—could offer legal arguments to dispute

settlement bodies to construe WTO rules, including the due process guarantees of the DSU, in favor of the admissibility of *amicus curiae* briefs by those private citizens who are affected by the administration, judicial application and implementation of WTO rules.

It is characteristic in this respect that the common law concept of *amicus curiae* briefs has become accepted only in international dispute settlement proceedings directly affecting individuals, notably in international human rights courts, international criminal courts, WTO and NAFTA dispute settlement bodies, but neither in the ICJ nor in intergovernmental arbitration. In the *Asbestos Case*, the conditions imposed by the Appellate Body for application for leave to file *amicus curiae* briefs made it clear that the Appellate Body was prepared to authorize the submission of *amicus curiae* briefs only if the brief was likely to promote due process of law and proper administration of justice in the dispute at hand. Unfortunately, the Appellate Body did not adequately explain how admission of *amicus curiae* briefs with new legal arguments could be reconciled with protection of the rights of the parties to the dispute (*e.g.*, rights to control the "legal claims", rights to defend themselves against legal arguments in *amicus curiae* briefs within the strict time-limits) and of third WTO Members intervening in the dispute (*e.g.*, their interest in being treated no less favorably than *amici curiae*).

B. Substantive Restraints: The Example of the Human Right to Health and Access to Medicines

According to the Constitution of the World Health Organization ("WHO"), "(t)he enjoyment of the highest attainable standard of health is one of the fundamental rights of every human being without distinction of race, religion, political belief, economic or social condition." In Article 12.1 of the ICESCR, the so far 146 ratifying "States Parties to the present Covenant recognize the right of everyone to the enjoyment of the highest attainable standard of physical and mental health." Article 12:2 adds:

The steps to be taken by the State Parties to the present Covenant to achieve the full realization of this right shall include those necessary for:

(a) The provision for the reduction of the stillbirth-rate and of infant mortality and for the healthy development of the child.
(b) The improvement of all aspects of environmental and industrial hygiene.
(c) The prevention, treatment and control of epidemic, endemic, occupational and other diseases.
(d) The creation of conditions which would assure to all medical service and medical attention in the event of sickness.

1. Trade-Related Aspects of the Right to Health: General Comment No. 14

In its General Comment No. 14 (2000), the U.N. Committee on Economic, Social and Cultural Rights has emphasized that the human right to health is recognized in numerous worldwide, regional and national human rights instruments and "includes certain components which are legally enforceable."[111] Moreover, the "right to health is closely related to and dependent upon the realization of other human rights . . . , including the rights to food, housing, work, education, human dignity, life, non-discrimination, equality, the prohibition against torture, privacy, access to information, and the freedoms of association, assembly and movement. These and other rights and freedoms address integral

[111] *See* General Comment No. 14, *supra* note 90, ¶ 1.

components of the right to health."[112] "The right to health contains both freedoms and entitlement", such as "the right to a system of health protection which provides equality of opportunity for people to enjoy the highest attainable level of health",[113] and the "right to the enjoyment of a variety of facilities, goods,services and conditions necessary for the realization of the highest attainable standard of health."[114] The right to health is thus interpreted as:

> an inclusive right extending not only to timely and appropriate health care but also to the underlying determinants of health, such as access to safe and potable water and adequate sanitation, an adequate supply of safe food, nutrition and housing, healthy occupational and environmental conditions, and access to health-related education and information, including on sexual and reproductive health. A further important aspect is the participation of the population in all health-related decision-making at the community, national and international levels.[115]

The right to health thus depends upon the availability, acceptability, quality and non-discriminatory, physical as well as economic accessibility of health goods and health services which are tradable and subject to legal regulation and liberalization in WTO law. General Comment No. 14 confirms this potentially transnational legal effect of the human right to health: "States parties have to respect the enjoyment of the right to health in other countries"; depending on the availability of resources, "States should facilitate access to essential health facilities, goods and services in other countries, wherever possible and provide the necessary aid when required."[116] More generally:

> [t]he right to health, like all human rights, imposes three types or levels of obligations on States parties: the obligations to *respect, protect* and *fulfill.* In turn, the obligation to fulfill contains obligations to facilitate, provide and promote. The obligation to *respect* requires States to refrain from interfering directly or indirectly with the enjoyment of the right to health. The obligation to *protect* requires States to take measures that prevent third parties from interfering with Article 12 guarantees. Finally, the obligation to *fulfill* requires States to adopt appropriate legislative, administrative, budgetary, judicial, promotional and other measures towards the full realization of the right to health.[117]

While Article 2 of the ICESCR provides for progressive realization and acknowledges the constraints due to limits of available resources, General Comment No. 14 recalls that the Covenant:

> imposes on States parties various obligations which are of immediate effect. States parties have immediate obligations in relation to the right to health, such as the guarantee that the right will be exercised without discrimination of any kind (Art.2:2) and the obligation to take steps (Art.2.1) towards the full realization of Article 12. Such steps must be deliberate, concrete and targeted towards the full realization of the right to health.[118]

As regards governmental limitations of human rights, General Comment No. 14 infers from the limitation clauses in Articles 4 and 5 of ICESCR that:

[112] *Id.* ¶ 3. On national and international jurisprudence relating to the right to health, *see also* TOEBES, *supra* note 57.
[113] *See* General Comment No. 14, *supra* note 90, ¶ 8.
[114] *Id.* ¶ 9.
[115] *Id.* ¶ 11.
[116] *Id.* ¶ 39.
[117] *Id.* ¶ 33.
[118] *Id.* ¶ 30.

> such limitations must be proportional, *i.e.* the least restrictive alternative must be adopted where several types of limitations are available. Even where such limitations on grounds of protecting public health are basically permitted, they should be of limited duration and subject to review.[119]
>
> States parties should refrain at all times from imposing embargoes or similar measures restricting the supply of another State with adequate medicines and medical equipment. Restrictions on such goods should never be used as an instrument of political and economic pressure.[120]

2. WTO Practice on Access to Medicines

The expanding subject matters and "universalization" of both human rights and intellectual property law have prompted negotiations in various U.N. bodies, and also in the WTO, on the clarification of the complex interrelationship between the TRIPS Agreement and human rights. The advantages of intellectual property as both a reward and an incentive for research and development, for example in the area of new pharmaceuticals products, are no longer contested.[121] However, the proper balancing between the social objectives of the TRIPS Agreement,[122] its "regulatory exceptions",[123] and the appropriate scope of intellectual property protection, for example for genetic and other living materials, or the protection of rights of indigenous peoples, raise numerous controversial questions.[124]

There seems to be broad agreement so far that the TRIPS provisions are flexible enough to permit necessary health protection measures so as to ensure access to affordable medicines to treat AIDS and other pandemics.[125] In the WTO Ministerial Declaration on "The TRIPS Agreement and Public Health" of November 2001, all WTO Members "affirm that the Agreement can and should be interpreted and implemented in a manner supportive of WTO Members' right to protect public health and, in particular, to promote access to medicines for all". WTO Members also "reaffirm the right of WTO Members to use, to the full, the provisions in the TRIPS Agreement, which provide flexibility for this purpose."[126] Rather than granting a general waiver from WTO law in favor of the human right to health, WTO members preferred to specify those TRIPS provisions which they understand to grant sufficient flexibility for promoting public health and access to medicines for all. This approach seems consistent with the general principle that human rights must be legally implemented through legislative measures taking into account all other human rights.

Paragraph 6 of the Doha Ministerial Declaration on TRIPS and Public Health reads:

> We recognize that WTO Members with insufficient or no manufacturing capacities in the pharmaceutical sector could face difficulties in making effective use of compulsory licensing

[119] *Id.* ¶ 29.

[120] *Id.* ¶ 41. In this regard, the Committee recalls its position, stated in General Comment No. 8, on the relationship between economic sanctions and respect for economic, social and cultural rights.

[121] *Cf.* WTO AGREEMENTS AND PUBLIC HEALTH, *supra* note 32, at 91–93.

[122] *See* Articles 7 and 8 TRIPS.

[123] *See, e.g.*, Article 6 TRIPS regarding "parallel imports", Article 31 TRIPS regarding "compulsory licensing", and Article 40 concerning abuses of intellectual property rights.

[124] *See, e.g.*, G. DUTFIELD, INTELLECTUAL PROPERTY RIGHTS, TRADE AND BIODIVERSITY (2000).

[125] *See also* the Report of the Joint WHO/WTO Workshop on Differential Pricing and Financing of Essential Drugs of April 8–11, 2001 (which notes that about 95 percent of the WHO list of "essential drugs" are not or no longer patented, and differential pricing and international financing of essential drugs are consistent with the TRIPS Agreement).

[126] *See* WTO document WT/MIN (01)/DEC/W/2 of November 14, 2001, ¶ 4.

> under the TRIPS Agreement. We instruct the Council for TRIPS to find an expeditious solution to this problem and to report to the General Council before the end of 2002.[127]

Similar technological, financial and trade problems may exist in case of exports of healthcare technologies, lack of know-how or trade secrets necessary for manufacturing medicines or other medical devices, or if a compulsory license for the production of an expensive drug for one single market would not justify the production costs without authorization of exports to third markets. For example, while countries may authorize, pursuant to Article 31 of the TRIPS Agreement, non-voluntary and non-exclusive uses of inventions, Article 31(f) stipulates that "any such use shall be authorized predominantly for the supply of the domestic market of the Member authorizing such use", subject to certain exceptions.[128] Some controversial Canadian practices designed to speed up introduction of generic drugs following the expiration of patents were reviewed in the WTO dispute settlement ruling on the EC's complaint against Canada's use of Article 30 of the TRIPS Agreement to permit "pre-expiration testing" and warehousing of generic drugs before the expiry of the patent.[129] Various proposals to permit the use of Article 30 of TRIPS for exports of medicines needed to address public health emergencies and necessary for achieving economies of scale continue to be under negotiation in the WTO.

As of April 2003, the United States and the U.S. pharmaceutical industry continued to block consensus on a WTO decision clarifying the rights of WTO Members (*e.g.*, under Articles 30 or 31 of the TRIPS Agreement) to authorize exportation of the predominant part of medicines produced under compulsory license to other WTO member countries that lack sufficient pharmaceutical manufacturing capacities. In view of paragraph 4 of the Doha Ministerial Declaration ("the TRIPS Agreement does not and should not prevent Members from taking measures to protect public health") and the necessity (recognized in paragraph 6 of the Doha Declaration) to address the health problems of WTO Members without adequate domestic manufacturing capacities, the human right to health may be invoked as relevant legal context for interpreting the TRIPS Agreement (*e.g.*, Articles 30 or 31) in a manner also enabling less-developed countries to address public health emergencies effectively.

C. Judicial Deference vis-à-vis Democratic Legislation: The Example of the Hormone Beef Dispute

The European Court of Human Rights and other international human rights bodies have emphasized the "margin of appreciation" which democratic governments enjoy in implementing and mutually balancing different human rights. In the U.S. complaint in *EC—Import Restrictions on Meat and Meat Products*, involving restrictions that the EC adopted under the Council Directive Prohibiting the Use in Livestock Farming of Certain Substances Having a Hormonal Action,[130] the panel report found that the EC ban on

[127] *See note* 90, ¶ 6. At a Ministerial Meeting of 25 WTO members at Sidney in November 2002, agreement was reached on further relaxing TRIPS rules for poor countries' access to patented drugs and to cheap generic copies so as to address public health emergencies (*cf.* FINANCIAL TIMES, November 16–17, 2002). Yet, neither the TRIPS Council nor the WTO's General Council could reach agreement, by the end of 2002, on additional WTO rules as envisaged in paragraph 6 of the Doha Declaration.

[128] *See, e.g.*, Article 31(k) TRIPS.

[129] Report of the WTO Panel, *Canada—Patent Protection of Pharmaceutical Products*, WT/DS114/R (2000).

[130] EC Council Directives 81/602, 88/146 and 88/299 were replaced by Council Directive 96/22 of April 29, 1996, Official Journal of the EC, No. L 125, May 23, 1996, p. 3.

imports of meat and meat products from cattle treated with any of six specific hormones for growth promotion purposes was inconsistent with Articles 3.1, 3.3, 5.1 and 5.5 of the WTO Agreement on Sanitary and Phytosanitary Measures ("SPS"). The Appellate Body upheld the Panel's finding that the EC import prohibition was inconsistent with Articles 3.3 and 5.1 of the SPS Agreement, but reversed the Panel's finding that the EC import prohibition was inconsistent with Articles 3.1 and 5.5.[131]

Article 3.1 of the SPS Agreement provides:

> To harmonize sanitary and phytosanitary measures on as wide a basis as possible, Members shall base their sanitary or phytosanitary measures on international standards, guidelines or recommendations, wherever they exist, except as otherwise provided for in this Agreement, and in particular paragraph 3.

The Appellate Body disagreed with the Panel's interpretation that "based on" should be construed in the sense of "conform to":

> The Panel's interpretation of Article 3.1 would . . . transform those standards, guidelines and recommendations into binding *norms*. But . . . the SPS Agreement itself sets out no indication of any intent on the part of the Members to do so. We cannot lightly assume that sovereign states intended to impose upon themselves the more onerous, rather than the less burdensome, obligation by mandating *conformity* or *compliance* with such standards, guidelines and recommendations. To sustain such an assumption and to warrant such a far-reaching interpretation, treaty language far more specific and compelling than that found in Article 3 of the SPS Agreement would be necessary.[132]

The Appellate Body referred, in this context, to the interpretative principle of interpreting treaties in deference to the sovereignty of states ("*in dubio mitius"*). This objective of protecting domestic sovereignty is similar to the objective of the "margin of appreciation doctrine" to protect the legitimate discretion of democratic legislatures. The Appellate Body emphasized that the right of a WTO Member to determine its own appropriate level of sanitary protection pursuant to Article 3.3 of the SPS Agreement is an important "autonomous right and not an 'exception' from a 'general obligation' under Article 3.1".[133] "The object and purpose of Article 3 is to promote the harmonization of SPS measures of Members on as wide a basis as possible, while recognizing and safeguarding, at the same time, the right and duty of Members to protect the life and health of their people."[134]

The concern to take into account "not only risk ascertainable in a science laboratory operating under strictly controlled conditions, but also the risk in human societies as they actually exist, in other words, the actual potential for adverse effects on human health in the real world where people live and work and die",[135] permeates numerous findings of the Appellate Body in favor of domestic regulatory discretion to protect "the ordinary lives of people."[136] This functional interpretation of WTO rules coincides with the objective of a "human rights approach" according to which all national and international law must be designed and applied so as to promote human rights (*e.g.*, to

life, food and health), including the human right to democratic legislation implementing and mutually balancing human rights.[137]

IV. "Human Rights Functions" of WTO Rules: Promotion of Human Rights in Domestic Legal Systems by Means of WTO-Consistent Interpretations of Domestic Law

Most national legal systems and domestic courts recognize a legal obligation to construe domestic law in conformity with the international legal obligations of the country concerned. The WTO guarantees of freedom of trade, non-discrimination, rule of law and access to courts can thereby reinforce corresponding legal guarantees in the domestic laws of WTO member countries and protect individual freedom of choice (*e.g.*, of traded goods, services, related professions and investments), non-discrimination and the rule of law for the benefit of individual traders, producers, investors and consumers. For instance, many national constitutions,[138] the EU Charter of Fundamental Rights,[139] and human rights instruments[140] guarantee "everyone . . . the right to liberty" subject "only to such limitations as are determined by law solely for the purpose of securing due recognition and respect for the rights and freedoms of others and of meeting the just requirements of morality, public order and the general welfare in a democratic society".[141] Especially in the increasing number of countries where such personal liberty rights are construed as protecting not only physical liberty (*e.g.*, in the sense of freedom from arbitrary arrest and detention) but personal liberty in a wide sense covering also economic and social dimensions of personal self-development (*e.g.*, freedom of contract, freedom of movement, freedom of occupation), the WTO guarantees of freedom, non-discrimination and rule of law may reinforce the corresponding guarantees in constitutional law and human rights law.

A. WTO Guarantees of Freedom, Non-Discriminatory Conditions of Competition, Necessity and Proportionality

The WTO prohibitions of tariffs, non-tariff trade barriers, trade discrimination and trade distortions protect freedom (*e.g.*, market access) and non-discriminatory conditions of competition in international trade for the benefit of traders, producers, investors and consumers. In EC law, the EC Treaty prohibitions of tariffs, non-tariff trade barriers and trade discrimination—notwithstanding their formulation in terms of rights and obligations of governments—have long been construed by the EC Court as directly applicable *individual freedoms* of trade that must be protected by national and EC courts in conformity with "freedom of trade as a fundamental right"[142] and "freedom to conduct a

[137] On the gradual emancipation of the individual, and the emergence of a human right to democracy in national and international law see above note 4 and *e.g.*, T.M. Franck, THE EMPOWERED SELF: LAW AND SOCIETY IN THE AGE OF INDIVIDUALISM (1999).

[138] *See*, *e.g.*, Article 2 of the German Basic Law.

[139] *See id.*, Article 6.

[140] *E.g.*, Article 3 UDHR, Article 9 ICCPR.

[141] Article 29 UDHR, Article 4 ICESCR.

[142] *See, e.g.*, Case 240/83, *ADBHU*, ECR 1985 531, ¶ 9: "the principles of free movement of goods and freedom of competition, together with freedom of trade as a fundamental right, are general principles of Community law of which the Court ensures observance." Especially the freedom of movements of workers and other persons, access to employment and the right of establishment have been described by the EC Court as "fundamental freedoms" (Case C-55/94, *Gebhard*, ECR 1995, I 4165, ¶ 37) or "a fundamental

business in accordance with Community law and national laws".[143] By contrast, the corresponding GATT and WTO prohibitions of tariffs, non-tariff trade barriers and trade discrimination continue to be construed by most WTO Members as rights and obligations of governments without corresponding rights and obligations of their citizens.

In spite of the intergovernmental legal structure of many WTO rules, the parallels between WTO guarantees and corresponding national and international constitutional guarantees of liberty, non-discrimination, "necessity", and "proportionality" of government restrictions remain evident. This is particularly so in national and international legal systems which—like German and European constitutional law and U.N. human rights law—recognize that all legislative, executive and judicial government measures must aim at promoting "human dignity" by empowering individuals and protecting their human rights.[144] Similar to domestic legislation implementing human rights obligations, WTO rules and their domestic implementation can serve mutually reinforcing "human rights functions" for the benefit of individual freedom, non-discrimination and the welfare-increasing division of labor among citizens across frontiers. This can be illustrated by the numerous general and specific exceptions in WTO law, for example in GATT Articles XX and XXI, that recognize the comprehensive right of governments to restrict trade so as to protect non-economic values considered by WTO Members to be more important than access to foreign markets.

1. WTO Dispute Settlement Practice Relating to Protection of Health and Environment and to the Necessity, Proportionality and Non-Discrimination Principles in GATT Article XX

The increasing number of national and international laws and agreements establishing individual rights to a clean environment, often formulated in terms of human rights,[145] are not referred to in WTO law. Yet, the WTO Agreement contains an explicit commitment to "the optimal use of the world's resources in accordance with the objective of sustainable development, seeking both to protect and preserve the environment and to enhance the means for doing so".[146] Prior to April 1, 2003, there have been six GATT panel proceedings, and three WTO panel and appellate proceedings, involving an examination of environmental measures or human health-related measures under GATT Article XX (b), (d) or (g). They have made it clear that, in the words of the Appellate Body, "WTO Members have a large measure of autonomy to determine their own policies

right which the Treaty confers individually on each worker in the Community". *Heylens*, Case 22/86, ECR 1987, 4097, ¶ 14. The ECJ avoids "human rights language" for the "market freedoms", the right to property and the freedom to pursue a trade or business in EC law, and some of these "market freedoms" (*e.g.*, for free movement of persons) are limited to EC citizens. Yet, such "fundamental rights" and "citizen rights" remain functionally linked to broader human rights.

[143] *See* Article 16 EU Charter of Fundamental Rights.

[144] For references to the relevant guarantees of human dignity and human rights in German, EU and U.N. law, *see supra* notes 45–47 and 78 and accompanying text. This author's long-standing arguments, *cf.* E.U. Petersmann, *Application of GATT by the Court of Justice of the EC*, 20 COMMON MARKET LAW REVIEW 397–437 (1983), in favor of "direct application" by domestic governments and courts of precise and unconditional GATT/WTO guarantees of freedom, non-discrimination, "due process" and rule of law for the benefit of traders, producers, investors and consumers have always been primarily motivated by the human rights objective of empowering individuals and treating citizens as legal subjects rather than mere objects of public law, *cf. supra* note 78, on the "object formula" used by the German Constitutional Court for defining and protecting "human dignity".

[145] *Cf., e.g.,* M. Déjeant-Pons and M. Pallemaerts, *supra* note 11; HUMAN RIGHTS APPROACHES TO ENVIRONMENTAL PROTECTION (A. Boyle and M. Anderson eds., 1998).

[146] *Preamble to the WTO Agreement.*

on the environment (including its relationship with trade), their environmental objectives and the environmental legislation they enact and implement."[147] None of the panel and Appellate Body reports questioned the environmental or health policy choices made by the government parties. Already in the 1990 *Thailand—Cigarettes* case, the "Panel noted that this provision [Article XX] clearly allowed contracting parties to give priority to human health over trade liberalization."[148] In the *EC—Asbestos* case, the Appellate Body likewise confirmed each WTO Member's "right to determine the level of protection of health that [it] considers appropriate in a given situation."[149]

According to WTO jurisprudence, GATT Article XX requires a two-tiered test: the defending party has the burden of proving that the measure (i) falls under at least one of the ten exceptions listed under Article XX paragraphs (a) to (j), and (ii) satisfies the requirements imposed by the opening clause of Article XX, *i.e.*, is not applied in a manner which would constitute "a means of arbitrary or unjustifiable discrimination between countries where the same conditions prevail", and is not "a disguised restriction on international trade." The provisional justification of the measure as falling under one of the exceptions must precede examination of the conditions of the introductory clause which, according to the Appellate Body, is "but one expression of the principle of good faith"[150] aimed at prevention of "abuse of the exceptions of Article XX".[151]

The judicial interpretation of the necessity requirement of Article XX(b) and (d) has evolved from a "least-trade restrictive" to a "less-trade restrictive" standard, supplemented by a proportionality test:

> determination of whether a measure, which is not 'indispensable', may nevertheless be 'necessary' within the contemplation of Article XX(d), involves in every case a *process of weighing and balancing a series of factors* which prominently include the contribution made by the compliance measure to the enforcement of the law or regulation at issue, the importance of the common interests or values protected by that law or regulation, and the accompanying impact of the law or regulation on imports or exports.[152]

In the *Asbestos* case, the Appellate Body observed that "the more vital or important [the] common interests or values" pursued (as the preservation of human life and health through import restrictions on asbestos), the easier it would be to accept the measures designed to achieve those ends as "necessary".[153] Again, this balancing among competing values recognized in WTO law is similar to, and influenced by, the mutual balancing of human rights principles.

Another important evolution in the judicial application of Article XX has been the justification of import restrictions to protect non-economic values, not only inside the importing country, but also on the High Seas and inside the exporting countries through measures differentiating among countries. In *United States—Tuna (Mexico)*, a GATT panel found that Article XX(b) did not justify unilateral import restrictions designed to protect human, animal or plant life or health outside of the jurisdiction of the country taking the measure; even if Article XX(b) were interpreted to apply "extrajurisdictionally", the United States had failed to demonstrate that it had exhausted all options reasonably

available to it to pursue its dolphin protection objectives through measures consistent with the GATT, such as the negotiation of an international cooperative agreement which seemed desirable in view of the fact that dolphins roam the waters of many states and the High Seas.[154] This narrow interpretation of Article XX was partly corrected in *United States—Tuna (EEC)* where the GATT panel held that Article XX(b) and (g), and the jurisdiction over nationals and national vessels, could also justify policies related to the protection of human, animal or plant life, or health or to the conservation of natural resources, located outside the territory of the contracting party.[155] In *United States—Shrimp*, the Appellate Body confirmed that the U.S. measures for the protection of sea turtles in U.S. territorial waters and on the High Sea qualified for provisional justification under Article XX(g); however, the import restrictions were found to discriminate, in violation of the chapeau of Article XX, among WTO Members exporting shrimp to the United States.[156] In *United States—Shrimp (Article 21.5)*, the Appellate Body upheld the panel's finding that, in order to implement the dispute settlement rulings, the United States had made serious good faith efforts to negotiate an international agreement on the protection and conservation of sea turtles and was entitled under Article XX to condition market access on the adoption by the exporting country of a program comparable in effectiveness to the sea turtle protection measures of the importing country.[157]

WTO dispute settlement practice thus seems to confirm that import restrictions may be inconsistent with WTO law if they do not take into account legitimate rights of exporting countries (*e.g.*, their regulatory sovereignty over production methods in their own country, rights to market access and to non-discriminatory treatment), and that protection of human rights may be an important criterion in the process of balancing the respective rights of exporting and importing WTO member countries.

2. Balancing of Economic and Non-Economic Values in WTO Dispute Settlement Practice Relating to GATT Article III

The *Asbestos* case illustrates that human rights considerations may be legally relevant for the interpretation not only of the exception clauses in WTO law, but also of the basic WTO guarantees of freedom and non-discrimination in the economic area. Even though the Appellate Body did not refer to the human right to health, it emphasized the relevance of health risks associated with the physical properties of products in the examination of "like products" and regulatory distinctions made under Article III GATT.

The Panel had found that chrysotile asbestos fibers and synthetic fibers that can be substituted for them, as well as asbestos-cement products and fibro-cement products, were "like products" within the meaning of GATT Article III:4, and that the health and safety objectives leading to the regulatory distinction among like products could only be taken into account in the analysis under Article XX, *not* in the analysis under Article III:4 where the "likeness" of products had to be determined solely on the basis of commercial factors.[158]

The Appellate Body rightly disagreed and concluded "that, given the textual difference between Articles III:2 and III:4, the 'accordion' of 'likeness' stretches in a different way in

[156] *United States—Shrimp, supra* note 68, ¶¶ 165–166.
[157] *United States—Import Prohibition of Certain Shrimp and Shrimp Products*, Recourse to Article 21.5 by Malaysia, WT/DS58/AB/RW (2001), ¶ 144.
[158] *EC—Import Restrictions Affecting Asbestos and Asbestos-Containing Products*, Report of the Panel, WT/DS135, (2001), ¶¶ 8.132, 9.1.

Article III:4. . . . "[159] A "determination of 'likeness' under Article III:4 is, fundamentally, a determination about the nature and extent of a competitive relationship between and among products", and "evidence relating to the health risks associated with a product may be pertinent in an examination of 'likeness' under Article III:4 of the GATT 1994".[160] As "carcinogenicity, or toxicity, constitutes . . . a defining aspect of the physical properties of chrysotile asbestos fibers", the Appellate Body could "not see how this highly significant physical difference *cannot* be a consideration in examining the physical properties of a product as part of a determination of 'likeness' under Article III:4 of the GATT 1994."[161] As the Appellate Body could "not agree with the Panel that considering evidence relating to the health risks associated with a product, under Article III:4, nullifies the effect of Article XX(b) of the GATT 1994", it found "that the Panel erred . . . in excluding the health risks associated with chrysotile asbestos fibers from its examination of the physical properties of that product."[162] The Appellate Body reversed the "like product" findings of the panel and concluded that—in view of their different properties and end-uses—the products concerned were not "like products" for the purposes of Article III:4 of GATT 1994 and, hence, the different regulatory treatment applied to these products was not in violation of Article III:4.

The *Asbestos* case illustrates the potential relevance of the human right to health for the interpretation of apparently "technical" trade law concepts such as "like products". Even though the Appellate Body did not refer to human rights as part of the relevant legal context for determining the treatment of toxic products, trade law must be construed in a manner consistent with effective protection of universally recognized human rights. The *Asbestos* case further demonstrates the legal relevance of trade law for non-economic human rights objectives: Division of labor through trade and trade law not only enable each trading country to increase resources necessary for the enjoyment of human rights, they may also require trade regulations restricting dangerous products and protecting human rights in exporting and importing countries.

3. Primacy of Non-Economic Values in WTO Dispute Settlement Practice Relating to the WTO Agreement on Sanitary and Phyto-Sanitary Measures ("SPS")

GATT Articles II and III imply a large degree of national sovereignty to decide on the level of tariff protection for domestic import-competing producers, on national taxes, product and production regulations, consumer protection, and other domestic laws, provided they do not treat imported products less favorably than competing domestic products. The border adjustment rules in GATT Articles II, III and VI likewise protect broad government discretion on how to respond to "regulatory competition", for example by exempting exported products from domestic taxes and regulations, or by applying domestic taxes and regulations to imported products. By contrast, the WTO rules on technical barriers to trade, phytosanitary standards, services and trade-related intellectual property rights have introduced far-reaching new obligations on the "necessity", mutual recognition and harmonization of domestic regulations. WTO jurisprudence has so far interpreted these rules in favor of national policy autonomy to decide, *e.g.*, on the national level of health protection measures and to deviate from

[159] *EC—Asbestos*, Report of the Appellate Body, *supra* note 33, ¶ 96.
[160] *Id.* ¶¶ 99, 113.
[161] *Id.* ¶ 114.
[162] *Id.* ¶ 116.

relevant international standards in favor of stricter domestic health, environmental, security and other standards.

In the disputes over the complaints by the United States and Canada against the EC's import restrictions on meat and meat products (the *Hormones* cases), the two panel reports reached the same conclusion that, *inter alia*, the EC, "by maintaining sanitary measures which are not based on existing international standards without justification under Article 3.3 of the Agreement on the Application of Sanitary and Phytosanitary Measures, has acted inconsistently with the requirements of Article 3.1 of that Agreement."[163] The Panel noted that "Article 3.2 . . . equates measures *based on* international standards with measures which *conform to* such standards", and concluded that "based on" and "conform to" are identical in meaning also in Article 3.1. As already mentioned above,[164] the Appellate Body disagreed that "based on" could be equated with "conform to". It found instead that a measure "based on" an existing relevant international standard could "adopt some, not necessarily all, of the elements of the international standard", and that the "right of a Member to establish its own level of sanitary protection under Article 3.3 of the SPS Agreement is an autonomous right and *not* an "exception" from a "general obligation" under Article 3.1."[165] Moreover, to:

> the extent that the Panel purported to require a risk assessment to establish a minimum magnitude of risk, we must note that imposition of such a quantitative requirement finds no basis in the SPS Agreement . . . the risk that is to be evaluated in a risk assessment under Article 5.1 is not only risk ascertainable in a science laboratory operating under strictly controlled conditions, but also risk in human societies as they actually exist, in other words, the actual potential for adverse effects on human health in the real world where people live and work and die. [166]

As regards the SPS requirement that "Members shall ensure that their sanitary or phytosanitary measures are based on an assessment . . . of the risks to human, animal or plant life or health",[167] the Appellate Body found that "'based on' a risk assessment is a substantive requirement that there be a rational relationship between the measure and the risk assessment."[168]

The Appellate Body jurisprudence so far suggests that, in the interpretation of WTO rules, WTO dispute settlement bodies will respect the broad discretion of governments to restrict trade by means of non-discriminatory domestic rules necessary for the protection of human health and other human rights values. As human health can be perceived as a "primary good"[169] that is a condition of "dignity" (in terms of the philosopher Immanuel Kant) rather than a matter of "price", the Appellate Body's reasoning could also have been supported by human rights arguments to the effect that the rights and obligations of WTO Members to protect human health must rank higher than their sovereign rights to regulate merchandise trade and "instrumental freedoms" (*e.g.*, to buy and sell commercial goods).

B. WTO Guarantees of Property Rights: WTO Disputes over TRIMS and TRIPS

The WTO rules on pre-shipment inspection, government procurement, services trade, intellectual property rights and trade-related investment measures reflect an increasing trend to go beyond the traditional scope of GATT rules by protecting, albeit in an indirect manner, also private rights, for instance rights of "service suppliers",[170] holders of intellectual property rights, exporters subject to pre-shipment inspection, bidders in government procurement proceedings, or foreign investors subjected to purchase and sales "requirements" in terms of GATT Article III:4. The frequent characterization of intergovernmental WTO disputes by referring to the names of the company interests involved (*Kodak/Fuji, Bacardi/Pernod-Ricard*) illustrates that, notwithstanding the intergovernmental structures of WTO dispute settlement proceedings, the underlying conflicts often relate to private operators and to their private rights (*e.g.*, Pernod-Ricard's rights in the trademark *Havana Club*). The proposals to negotiate, in the Doha Development Round, additional WTO rules on the protection of international competition and investment are likely to lead to further WTO rules protecting the private rights of traders and investors, for example "due process rights" during the investigations of domestic competition authorities and in the proceedings of domestic investment authorities screening the admission of foreign direct investments.

The 1999 complaint by the EC against Section 110(5) of the U.S. Copyright Act illustrates that WTO dispute settlement proceedings can be used as a basis for WTO arbitration proceedings leading to financial compensation of private holders of intellectual property rights. The Panel report, adopted on July 27, 2000, found that the "business exemption" provided for in Section 110(5)—which allows the amplification of music broadcasts, without authorization and a payment of a fee, by certain food service and drinking establishments—did not meet the requirements of Article 13 of the TRIPS Agreement and was thus inconsistent with Articles 11 and 11*bis* of the Bern Convention on Copyright (1971).[171] In July 2001, the United States and EC pursued arbitration pursuant to Article 25 of the DSU that led to an award in November 2001 which determined the level of EC benefits being nullified or impaired as a result of Section 110(5) to be Euro 1,219,900 per year.[172] The U.S. administration subsequently requested Congressional approval to set up a compensation fund for adversely affected holders of property rights until the U.S. legislation can be brought into conformity with WTO law.

Most WTO Members recognize the domestic legal right of private actors to invoke WTO rules as a means to demonstrate the relevant legal context for interpreting domestic laws and regulations in conformity with the international legal obligations of the country concerned. Yet, in most WTO member countries, domestic courts deny private rights to invoke WTO rules to override subsequent domestic laws; they also deny granting individuals direct rights to challenge domestic laws that are inconsistent with WTO obligations in domestic courts. Under both Section 301 of the U.S. Trade Act as well as under the EC Trade Barriers Regulation, however, private economic operators can request domestic governments to introduce GATT and WTO dispute settlement proceedings against perceived violations of GATT and WTO rules by other WTO Members.[173] There

[170] *Cf.* Article XXVIII GATS.

[171] *United States—Section 110(5) of the U.S. Copyright Act*, Report of the Panel, WT/DS160/R (2000).

[172] *United States—Section 110(5) of the U.S. Copyright Act*, Report of the Appellate Body, WT/DS160/ARB/25/1 (2001).

[173] *Cf.* C.T. Garcia Molyneux, Domestic Structures and International Trade: The Unfair Trade Instruments of the United States and the EU (2001). Out of nineteen private complaints submitted under

are numerous GATT and WTO dispute settlement proceedings that were initiated at the request of private exporting industries or foreign investors and resulted in dispute settlement findings protecting private rights.

For example, the 1984 GATT panel proceeding in *Canada—Administration of the Foreign Investment Review Act of Canada* was initiated at the request of U.S. investors in Canada and, following a GATT dispute settlement ruling that "requirements to purchase from Canadian suppliers . . . are contrary to Article III:4" of GATT,[174] led to the cancellation of these discriminatory purchase requirements adversely affecting the property rights of the U.S. investors concerned. Similarly, the panel report, adopted in July 1998, examining the complaints by the EC, Japan and the United States in *Indonesia—Certain Measures Affecting the Automobile Industry* upheld prior complaints by automobile producers that Indonesia granted discriminatory benefits to "national vehicles" and components thereof in violation of, *inter alia*, its national treatment obligations under Article 2 of the WTO Agreement on Trade-Related Investment Measures ("TRIMS").[175] In a communication dated July 15, 1999, Indonesia informed the WTO that its new automotive policy had effectively implemented the dispute settlement rulings and recommendations.

As explained by economic theory, trade and investments, and their legal protection through national and international guarantees of freedom of trade and property rights, are preconditions for creating the resources necessary for realizing human rights and democratic self-government. Human rights, trade law and investment law condition each other: Human rights protect individual demand for, and supply of, scarce goods and services and, at the same time, require legal limitations on "market failure" as well as on "government failure".[176] In order to maximize the benefits from trade and investments for the enjoyment of human rights, and minimize the potential risks of unregulated market competition for human rights, trade and investment law, including WTO law, must be interpreted and applied in conformity with human rights law. For example, intellectual property rights and other trade and investment rules (*e.g.*, for the private supply of drinking water and essential health services) must be legally protected as well as limited by human rights law. What is expressed as a right to regulate under WTO law may be a duty to regulate under human rights law. The less effective international legal and judicial remedies in U.N. human rights conventions than those existing in WTO law illustrate that the needed "balancing" and mutual coherence between trade law and human rights law continue to be inadequate in many ways.

C. WTO Legal Restraints on Discrimination and Trade Sanctions for Political Ends

The WTO rules on non-discriminatory conditions of trade and competition (*e.g.*, the prohibitions of discrimination among "like products", "like service suppliers" and among

the EC's Trade Barriers Regulation (until summer 2002), eight led to the initiation of WTO dispute settlement proceedings by the EC.

[174] *Canada—Administration of the Foreign Investment Review Act of Canada,* BISD 30S/140, 159–161, ¶ 5.11.

[175] *See Indonesia—Certain Measures Affecting the Automobile Industry*, Report of the Panel, WT/DS54,55,59,64/R (1998). In the three other WTO dispute settlement proceedings in which the complainants claimed violations of the TRIMS Agreement (*EC-Bananas III*, WT/DS27/R; *Canada-Auto Pact*, WT/DS139 and 142/R; *India-Autos,* WT/DS146 and 175/R), the panels did not consider it necessary to examine the consistency of the contested measures with the TRIMS Agreement after having found violations of GATT Article III:4.

[176] *Cf.* E.U. Petersmann, *Constitutional Economics, Human Rights and the Future of the WTO*, 58 AUSSENWIRTSCHAFT 49–91 (2003).

WTO Members) act as legal constraints on the use of trade restrictions as instruments for discrimination among WTO member countries for political ends (*e.g.*, so as to impose the labor, environmental or human rights standards of the importing country as preconditions for the admission of "like products" from exporting countries with different production standards). Yet, WTO law[177] admits production and consumption subsidies that may prove necessary for fulfilling the non-discrimination requirements of human rights law as well as other social human rights (*e.g.*, so as to ensure non-discriminatory individual access to drinking water and to essential health services if their deregulation and privatization entail commercial prices that are not affordable for poor people). The GATT and the WTO Agreement also include numerous "general exceptions"[178] and "security exceptions"[179] that grant WTO members broad governmental discretion to restrict trade and introduce "justifiable discrimination" for non-economic reasons.

According to GATT Article XXI(c) and GATS Article XIV *bis*:1(c), "[n]othing in this Agreement shall be construed . . . (c) to prevent any contracting party from taking any action in pursuance of its obligations under the United Nations Charter for the maintenance of international peace and security." As, "(i)n the event of a conflict between the obligations of the Members of the United Nations under the present Charter and their obligations under any other international agreement, their obligations under the present Charter shall prevail",[180] economic sanctions based upon Chapter VII of the U.N. Charter have never been challenged in GATT and WTO dispute settlement proceedings.[181] The very broad formulation, in paragraph (b) of these "security exceptions", that "[n]othing in this Agreement shall be construed . . . (b) to prevent any contracting party from taking any action which it considers necessary for the protection of its essential security interests". . . , has prompted most GATT and WTO members to take the view that, as expressed many times in GATT practice, "every country must be the judge in the last resort on questions relating to its own security."[182] Thus, the human rights obligations to protect the life and security of domestic citizens clearly prevail over conflicting WTO obligations to promote non-discriminatory conditions of trade and competition.

In the dispute between the EC and the United States over the economic sanctions applied by the United States against Cuba pursuant to the "Cuban Liberty and Democratic Solidarity Act",[183] the DSB established a dispute settlement panel in November 1996 so as to examine the EC claims that the U.S. trade restrictions on goods of Cuban origin, as well as the refusal of visas and the exclusion of non-U.S. nationals from U.S. territory, were inconsistent with U.S. obligations under the WTO Agreement.[184] Following the invocation by the United States of the security exceptions in GATT Article XXI and GATS Article XIV *bis* and a bilateral EC-U.S. agreement on the settlement of this dispute, the panel suspended its work at the request of the EC in April 1997 without deciding on the U.S. claim that the United States alone had the right to decide on

U.S. security interests.[185] Similarly, the joint WTO panel established in October 1998 to examine complaints by the EC and Japan that an act adopted by Massachusetts restricting state contracts with companies doing business with Burma (Myanmar) violated U.S. obligations under Articles III, VIII(b), XIII:4(b) and XXII.2 of the WTO Agreement on Government Procurement, suspended its work at the request of the complainants after the dispute had been settled based on a U.S. Supreme Court decision finding the legislation by Massachusetts to be in violation of the U.S. Constitution.[186] Due to the scarcity of GATT and WTO jurisprudence in this field, it remains controversial whether it is legally consistent with WTO law, more specifically the Government Procurement Agreement of 1994, to limit government contracts with companies that deal with non-democratic governments engaged in human rights violations, or to impose other trade sanctions as a means to promote respect for human rights and ILO labor standards abroad.[187]

V. The Future of the WTO Constitution: Explicit Recognition of Human Rights so as to Better Protect Social Welfare and Democratic Governance in the WTO?

The WTO Agreement and the related implementing legislation of WTO Members include formal as well as substantive "constitutional principles" limiting welfare-reducing abuses of policy powers to tax and restrict producers, traders and consumers.

A. Formal and Substantive "Multi-Level Constitutionalism" in WTO Law

The WTO Agreement asserts legal priority over the multilateral trade agreements listed in its Annexes,[188] and over certain domestic "laws, regulations and administrative procedures" of WTO Members.[189] It establishes intergovernmental, administrative and quasi-judicial organs with limited legislative, administrative and quasi-judicial powers to adopt amendments to WTO rules, authoritative interpretations, "waivers" from WTO obligations, and dispute settlement rulings binding on WTO members. The intergovernmental rule-making by WTO Members, regular review of domestic legislation and trade policies in WTO bodies, *ad hoc* decisions on matters such as "waivers", panel and Appellate Body reports, and their review and adoption by the Dispute Settlement Body have evolved into a dynamic system of mutual "checks and balances" where, for instance, the legal interpretations by the "judicial branch" (for example on the admissibility of *amicus curiae* briefs in panel and Appellate Body proceedings) have been criticized and challenged by the "administrative branch"—*e.g.*, the chairman of the WTO General Council, and

[185] WTO Document, WT/DS/OV/9 (October 2002), at 151.

[186] *Id.* at 152. The U.S. Supreme Court judgment in *Crosby v. National Foreign Trade Council* of June 19, 2000 is reproduced in 39 INTERNATIONAL LEGAL MATERIALS 1234 (2000).

[187] *Cf., e.g.*, C. McCrudden, *International Economic Law and the Pursuit of Human Rights: A Framework for Discussion of the Legality of 'Selective Purchasing' Laws under the WTO Government Procurement Agreement*, in: 2 JIEL 3–48 (1999); S. Griller, *International Economic Law as a Means to Further Human Rights: The WTO Agreement on Government Procurement*, in INTERNATIONAL ECONOMIC GOVERNANCE AND NON-ECONOMIC CONCERNS (S. Griller ed. 2003). As Article VI of the Government Procurement Agreement permits technical specifications of the contract based on process and production methods, and the "public order exceptions" in WTO law may justify safeguard measures to prevent human rights violations, non-discriminatory human rights considerations may be lawful criteria also under the Government Procurement Agreement, especially if human rights clauses are included into the procurement documentation.

[188] *Cf.* Article XVI:3.

[189] *Cf.* Article XVI:4.

have prompted suggestions for new authoritative interpretations or formal amendments of WTO rules by the WTO's "legislative branch" pursuant to Articles IX or X of the WTO Agreement.

As illustrated by the U.S. "fast track legislation" of 2002, granting a limited mandate to the U.S. government for multilateral negotiations in the Doha Development Round, the intergovernmental decision-making processes in the WTO are subject to parliamentary and political control in WTO Members. This results in interrelated "bi-level negotiations" at national and international levels, and in additional constitutional constraints on national and international trade policy-making. For instance, the periodic WTO "rounds" of multilateral rule-making depend on prior mandates by domestic legislatures and on subsequent domestic legislation approving and implementing newly agreed WTO rules in domestic legal systems. By committing WTO member governments to international legal obligations to protect freedom of trade, non-discrimination and the rule of law among producers, traders and consumers across frontiers, the legal and judicial guarantees of the WTO Agreement serve "constitutional functions" by limiting abuses of foreign policy powers and by protecting individual freedom of choice and the welfare-increasing division of labor across frontiers for the benefit of domestic citizens.

The legal obligations of all WTO member states, under general and conventional human rights law, to respect and promote human rights in all national and intergovernmental activities form part of the legal context of the "WTO constitution."[190] As subjects of international law, international organizations have obligations under international human rights law and have no mandate for undermining the human rights obligations of their member states. The comprehensive agenda of the Doha Development Round reflects the increasing agreement among WTO Members that further liberalization of international trade needs to be supplemented by multilateral regulation of trade and by multilateral adjustment assistance for less-developed WTO member countries. Future WTO negotiations risk failure unless their legitimacy and respect for human rights are recognized by civil society and by parliaments through democratic deliberation and parliamentary ratification of future WTO agreements.

B. Explicit Recognition of Human Rights in WTO Law so as to Promote Social Welfare and Democratic Governance in the Trade Policy Area?

In the process of European integration, the institutions of the EC committed themselves to respect for human rights long before the incorporation of explicit human rights clauses into the EC Treaty.[191] A similar commitment by WTO bodies—for instance in a WTO Ministerial Declaration—could enhance the democratic legitimacy of WTO law and the WTO decision-making process. By acknowledging the constitutional limits of WTO law and of WTO bodies, such a WTO declaration could make it more evident that the WTO objective of promoting "sustainable development" through non-discriminatory trade liberalization and trade regulation, and WTO law in general, must be construed with due regard to the universal human rights obligations of WTO members. Although such a declaration would neither change the existing legal rights and obligations of WTO Members nor enlarge the powers of WTO bodies, it could enhance public understanding of the WTO and facilitate the successful conclusion and parliamentary ratification of future WTO agreements.

[190] On these "multi-level constitutional constraints" on trade policy-making *see, e.g.*, E.U. Petersmann, *The WTO Constitution and Human Rights*, 3 JOURNAL OF INTERNATIONAL ECONOMIC LAW 19–25 (2000).
[191] *Cf., e.g.*, L. BETTEN AND N. GRIEF, EU LAW AND HUMAN RIGHTS LAW (1998).

In contrast to the anti-market bias of earlier U.N. reports that condemned the world trading system as a "nightmare" for less-developed countries,[192] the recent reports by the U.N. High Commissioner on the human rights dimensions of WTO rules acknowledge the constitutional significance of a rules-based trading system for producing and supplying the goods and services demanded by consumers.[193] The reports rightly emphasize that poverty, in the sense of deprivation of human capacities resulting from "transformation of a person into a being incapable of satisfying his minimum needs for survival", is often due to inadequate local, regional, national and international rules, governance systems and policies.[194] Human rights offer legal incentives for the personal self-development of individuals, and for private savings, investment, and the division of labor among free citizens, by empowering individuals, limiting abuses of powers, and by defining the welfare objectives of governments in a non-discriminatory manner that promotes the general interests of citizens and consumer welfare.[195] Explicit recognition of the human rights dimensions of WTO law could reinforce rights-based struggles against unnecessary poverty, and strengthen legal incentives for creating the economic goods and services needed for the enjoyment of human rights and for the satisfaction of consumer demand.[196]

Mainstream human rights specialists often perceive creation of welfare as a legislative and administrative task of "benevolent governments" and neglect the constitutive function of human rights for empowering individuals and for protecting their dignity, self-development, private division of labor and common social interests in economic markets no less than in "political markets."[197] As in European integration law, the protection of human rights in WTO law can make citizens not only "better democrats" but also "better economic producers and consumers", and more vigilant guardians against the abuse of government power at national and international levels, such as the centuries-old practice of "rent-seeking" rulers to discriminate, tax and restrict foreign goods, foreign services, foreign traders and foreign producers in a manner that reduces the welfare of domestic consumers.

[192] *Cf. Globalization and its Impact on the Full Enjoyment of Human Rights* (E/CN.4/Sub.2/2000/13 of June 15, 2000), ¶ 15: "for certain sectors of humanity—particularly the developing countries of the South— he WTO is a veritable nightmare."

[193] In addition to the reports mentioned *supra* notes 13, 58, and 76, *see also* the report by the High Commissioner on the WTO Agreement on Agriculture and Human Rights (E/CN.4/2002/54).

[194] *Cf. Poverty and Human Rights* (E/CN.4/Sub.2/2002/15 of June 25, 2002), *e.g.*, ¶¶ 9 and 14.

[195] *Cf.* also Petersmann, *Constitutional Economics, Human Rights and the Future of the WTO, supra* note 176.

[196] On the contribution of the international division of labor and trade to poverty reduction, *see, e.g.*, D. Ben-David, H. Nordström and I.A. Winters, Trade, Income Disparity and Poverty (2000). The report on *Poverty and Human Rights, supra* note 194, at 2 states: "While it can be said that poverty in general violates the enjoyment of economic, social and cultural rights in many ways, extreme poverty is a gross violation of the right to life and human dignity and thus strikes at the heart of the human rights system, which is the foundation of world peace, security and human society."

[197] See the careless accusations invented by Alston, *supra* note 30, and refuted by Petersmann, *supra* note 55. The "Alston/Petersmann debate" in 13 EJIL 815 and 845 (2002) illustrates the difficulties that some human rights specialists have in understanding and discussing the need for protecting human rights, "normative individualism" and "constitutional democracy" in economic markets no less than in political markets.

My thanks to Paul Hunt, Director of the Essex Centre for Human Rights for valuable assistance with sources, and to Alexis Kontos, Sabine Michalowski, Steve Peers, and the editors for their careful review of and insightful comments on drafts of this chapter.

I. Introduction

What difference do human rights potentially make to the logic and practice of international trade; and—running in the opposite direction—what difference does trade make to the way in which human rights are understood and deployed? The importance of these questions is highlighted by the fact that, as one authority has recently observed, the relationship between these two domains "... is one of the central issues confronting international lawyers at the beginning of the twenty-first century."[1] The challenge, of course, reaches well beyond lawyers to all of those individuals and institutions ultimately responsible for pulling these two domains into a viable relationship.

There is mutual suspicion on both sides of the divide between the practices of trade and human rights, manifested both by the heat of recent academic debate and by confrontations on the street. Each side worries that the other might sabotage its best-laid plans. Yet the international community has less and less tolerance for this standoff. It demands an effective and workable synthesis, allowing the two disciplines to widen and to coordinate their agendas. This chapter is concerned with this prospect. It raises two broad issues: which, if any, human rights have a relevant role to play in shaping the rules of trade; and how should we understand the relative priority among, and balances between, rights in trading relations? If analysis can provide an appropriate map for working out the problem of priorities and balances, then it might be possible to see respect for human rights as being—as the United Nations puts it—the objective of international trade, while at the same time preserving the ability of a robust system of trade to pursue, within that framework, many of its traditional goals as well.[2]

The focus here is on the existing framework of WTO rules. It does not follow existing interpretations of the rules that make up this framework, but looks closely at alternative ways of construing them. There is, in these constructions, potential for including a wide range of human rights within the work of the WTO, extending from entitlements that run with the grain of widening trading relationships, through to those that cut across and limit the reach of such trading relationships. The prospect for such a wide inclusion depends on a choice from among foundation principles that are at once political and legal.

The chapter proceeds by first setting out fundamentals. It aims to show how the different ways of understanding the WTO's mandate have an effect on deciding which human rights should be linked to the work of the institution. It also sketches some features of the integration of markets, both within the developed world and between it and the developing world, that affect the exercise of human rights. With these pieces of the picture in place, the chapter then considers some of the problems of priority and balance among rights and other interests in the global trading system.

II. The Challenge

If it is to be successful, this enquiry will have to follow certain background principles.

Commission On Human Rights, Fifty-Ninth Session, *The Fundamental Principle of Non-discrimination in the Context of Globalization*, E/CN.4/2003/50, December 2002.

A. Navigating Among Rival Political Philosophies

The international trading system should be able to plausibly link regimes animated by different and sometimes incompatible foundation principles. Even were all Members to subscribe to the same set of international human rights instruments, they are often deeply divided over the way these instruments integrate social values and economic relations. How should international norms regulate a world in which some societies assign priority to market-oriented liberty and property rights, with a relatively lower rank given to any human rights that would limit market freedom; while others arrange their priorities in the opposite way—along with many other different solutions located in between? Can a trading system bring these actors together in an impartial way? The system aspires to bridge these differences while avoiding, in principle, a structure in which the values of the strong Members dominate those of the weak. It may well fall far short of this ideal as things stand, but that criticism tacitly endorses the benchmark of political impartiality as one way of measuring progress by the system. It is this benchmark that is our concern here, for there is more to it than meets the eye.

In part, one can achieve the objective of impartiality in the regulation of trade by seeing where the traps lie. For example, the advocates and skeptics of free trade argue about whether or not the practice benefits the poorest parts of the world's population. The WTO has published work aimed at showing that the opening of markets in goods and services to international competition serves the interests of more than the richer parts of the world, also having a good deal to offer the least well-off.[3] Critics of the WTO look at the same opening of markets and find damage rather than gains for the poorest.[4] In part, this is a difference over the facts and in part a difference over principles: the latter guiding views about what *counts* as benefiting the least well-off. It pits advocates of competitive individualism against those who favor various species of communitarian position; or those who believe that political liberalism requires market liberalism against those who believe the latter works against the former. The result, in this portion of the confrontation, appears to be an intense disagreement over the relationship between trade and human rights, but it is not at bottom a disagreement about that at all. It is instead a conflict between visions of society and of social justice. As such, this ought ideally to be the province of Member states, each with their local mandate to further one or another of these social ideals.

We can properly focus on the relationship between trade and human rights only if we try to follow the approach taken by the U.N. Committee charged with interpreting the International Covenant on Economic, Social and Cultural Rights. In deciding whether or not one of the rights has been violated, the Committee insists that the Covenant "... cannot accurately be described as being predicated exclusively upon the need for, or the desirability of a socialist or a capitalist system, or a mixed, centrally planned, or laissez-faire economy, or upon any other particular approach."[5] This does not mean that we can shelve the politically divisive issues in working out the proper relationship between international trade and human rights. Some such issues have to be confronted. However, as this chapter will try to illustrate, we can be optimistic about reaching consensus on them only if we can build on a platform that gives all participants—the weak as well

[3] *See e.g.* DAN BEN-DAVID, HAKEN NORDSTROM, AND LALAN WINTERS, TRADE, INCOME DISPARITY AND POVERTY (WTO Special Studies 2001).

[4] *See e.g.* MICHEL CHOSSUDOVSKY, THE GLOBALIZATION OF POVERTY 35 ff. (1997).

[5] Committee on Economic, Social and Cultural Rights, *General Comment 3, Concerning the Nature of States Parties' Obligations Under Art*. 2, ¶ *1 of the Covenant*. ¶ 8, U.N. Doc. HRI\GEN\1\Rev.1 at 45 (1994).

as the strong—the conviction that their priorities have the chance of making an impact on trading rules. There is a difference between forcing a compromise onto a trading partner, and forcing that partner to abandon a set of priorities among values it thinks are fundamentally important to its social health. The trading system must navigate in this terrain. It is here that new strategies for assigning priorities to and adjusting conflicts between basic rights can make a difference.

B. Institutional Identity

We must not blur the line between the WTO and a state. The trading body has a specific and distinct role in international society. When it is called on to conform to international human rights requirements, this does not mean that it must do so in the same way that its Members do. The rights must be fitted to its distinct and defining purpose, which is set out in the preamble to its constitution. However, although the WTO is different in kind from a state, it pools the power of states into rules and policies of greater impact than most states can wield singly. In turn, these impacts have the potential to affect the ability of any one of its Members to pursue policies that their own human rights obligations might call for. If the WTO is asked to move away from what it sees as its core mission, easing the pressure it exerts on some of its members because of its respect for human rights standards, then there is a problem of translation. How is it possible to take rights standards fitted to the work of states and transfer them to a non-state actor with a specialized mission that seems at first glance to have nothing to do with human rights?

III. A Closer Look at Human Rights

Before we go any further, it is important to fix some fundamental points about the nature of human rights. As a working definition we shall say that "human" rights are those entitlements that people have, anywhere in the world, by virtue of their being human beings. That starting point is in turn built on the perception that certain basic human needs are the same, whatever the society is in which one is located. There are also sets of needs that are more variable, being dependent on the culture in which one is located. However, traversing all cultures is this set of common requirements. They are divided into two categories. First, there are needs to be protected from the wrongful use of coercive power, underpinning the civil and political rights to freedom of expression; the right to a fair trial; the right not to be tortured; the right to freedom of association; and others. A second category of rights is labeled economic and social. They have to do with the basic needs for fair access to all to the basic goods that society produces. Here we find the rights to an adequate education; health protection, and others.

The initial source to which those linking global trade and rights often make reference is the Universal Declaration of Human Rights.[6] In turn, we find the two categories of rights just mentioned in two legal instruments: the International Covenant on Civil and Political Rights ("ICCPR")[7] and the International Covenant on Economic, Social and Cultural Rights ("ICESCR").[8] This second set of rights has an evolutionary side to it: parties to the Covenant are obligated not simply to refrain from reducing the provision

[6] U.N. Doc A/810 at 71 (1948).
[7] *International Covenant on Civil and Political Rights*, U.N. Doc A/6316 (1966)
[8] *International Covenant on Economic, Social and Cultural Rights*, U.N. Doc A/6316 (1966)

of basic goods and services that they guarantee, but are also required progressively to improve on their provision insofar as their resources permit.[9]

The WTO is not a party to either of the international covenants (nor, indeed, to any other), although most of the states that are its Members adhere to them. Nevertheless, there are two ways in which these rights could affect the organization's work. First, there are some basic rights that are considered to be so firmly established that they do not need to be formally placed in any treaty. They occupy a place as part of what is known as customary international law, and arguably bind both states and non-state actors such as the WTO. The list of these rights is not firmly established, but a core of understanding covers matters such as the right not to suffer discrimination on grounds of race.[10] Secondly, as has been mentioned, WTO rules and their interpretation have the potential for placing Member states in the position of not satisfying human rights requirements themselves.[11] To the extent that this is so, the way is open to the WTO to decide to give direct attention to these standards as it goes about its work. While the WTO is not in a position to force Members to obey human rights norms, it is in a position to interpret its own rules in a way that gives different degrees of room for Members to satisfy those norms themselves.

A. Selecting and Balancing the Basic Rights

It is tempting to resolve different views about the proper relation between trade and human rights by filtering out the particular rights to be taken into account. Some authors argue, for example, that the rights associated with freedom to trade do not fall within the range of recognized human rights.[12] Others are firmly of the view that the rights do have this quality.[13] There is something to be said for both positions, but there is also a trap for those who put too much store in ultimately deciding who is right. For it is tempting to allow an answer to the question of whether or not a given right exists tacitly to decide the question of what priority that right should have. Even if the exercise of the right to freedom of trade qualifies as fundamental in the international system, it does not follow that the WTO should give it systematic priority over other rights. In this chapter, we want to focus on the issue of priorities, and so will be relatively accommodating on the issue of whether or not a given candidate for consideration qualifies as a human right *per se*. This will allow us to concentrate on the next steps: working out the basis on which the list

[9] This is a feature, *inter alia*, of ICESCR Article 11, the "... right to an adequate standards of living ... including adequate food, clothing and housing, and to the *continuous improvement* of living conditions." For the implications of this principle as it might or might not apply to the IMF and World Bank, *See* S. Skogly, The Human Rights Obligations of the World Bank and International Monetary Fund (2001); and the review by Leader, Kings College Law Journal forthcoming (2003).

[10] On human rights as part of customary international law *see* Restatement (Third) of Foreign Relations Law of the United States, ¶ 102 (1986) cited in R. Howse, and M. Mutua, *Protecting Human Rights in the Global Economy: Challenges for the WTO*, Rights and Democracy (www.ichrdd.ca) (2000). For an argument linking human rights to trade *see* Ernst-Ulrich Petersmann, *Time for Integrating Human Rights into the Law of Worldwide Organizations*, Working Paper 7/01 Jean Monnet Program, Harvard Law School (2001)

[11] Examples are to be found in several UN reports on trade and human rights, considered in various places in the text to follow, and cited *supra*, note 2

[12] See e.g. Alston, supra note 1.

[13] *See e.g.* Petersmann, *supra* note 10. Recent support for such a right can be found in *Biret International SA and Etablissements Biret et Cie. SA v Council of the European Union* Cases C-93/02 P and C-94/02 P, Opinion of Advocate General Siegbert Alber, 15 May 2003

of human rights is properly brought within the ring of WTO concerns; and then looking at the priorities among those rights that are included.

Consequently, the important question for us is not whether human rights *per se* are to be linked to the global trading regime, but rather how extensive that linkage is to be. The real choice is between alternative clusters, or sets, of rights, and between alternative weightings of elements within a cluster. We will examine a position that draws the WTO into the terrain of norms about human health, education, and environment, and we will contrast this with a position in favor of a narrow range of commitments, keeping the organization on the more familiar ground of human rights focused on secure and stable commercial relations and the protection of property.

When we come to the principles governing priorities within the group of rights that a trading system should respect, we are forced to deal with a problem that occupies human rights lawyers whatever the context is in which they work. Few, if any, human rights have absolute priority, such that they should not be partly compromised in order to satisfy another right. Some highly abstract rights might have this absolute status, such as the right of one person to be treated as the equal of another.[14] However, when they are brought down to concrete inclusion in human rights law and policy, they often enter into mutual conflict, making it impossible to completely satisfy the demands of one without limiting the satisfaction of another. Some of these conflicts are between individuals or groups holding the same right, as when two or more vie, in the name of freedom of expression, for the chance to speak at a public meeting; or two or more vie for scarce resources in the name of the right of access to adequate protection of health. There may also be conflict between holders of different rights, as when the right to freedom of expression for demonstrators competes with the right to freedom of movement by normal users of the highway; or the right to adequate protection of health is in competition with the right to respect for one's intellectual property.[15] Since these fundamental competitions for priority take place in all human rights regimes, there is no reason to think that the conflicts would be less acute when these regimes are linked to trading relations. Does this mean that even if their place was made secure within the working of the WTO, we must nevertheless expect to see the promise of human rights diluted or diverted as the disputes mechanism and policy makers administering trade go about the work of balancing one right against another? That depends on how the objectives of the organization are located within a wider set of basic principles, which is investigated in the following discussion.

IV. Linking the WTO's Objectives to Human Rights

The stated goals of the WTO can be found in its preamble, which provides a useful source for both lawyers and non-lawyers wanting to see what the Members of the organization have committed themselves to achieve. There is room for debate over the best way to interpret these paragraphs, and this difference of view can affect the potential entry points for, and character of, the human rights that can be recognized by the institution. There are seven overlapping goals within the preamble. While they are run together in the text, it is useful to separate them as commitments to:

[14] This was made famous in the work of the legal philosopher Ronald Dworkin as the "right to equal concern and respect". *See* R. DWORKIN, SOVEREIGN VIRTUE 1 ff (2000).

[15] The right to intellectual property is recognized in Article 15(1)(c) of the International Covenant on Economic, Social and Cultural Rights (1966). For this distinction between types of conflict among basic rights, *See* Jeremy Waldron, *Rights in Conflict* 99 (3) ETHICS 503, 509–512; 516–18 (1989); and S. Leader, *Integration, Federation, and Rights* in MORALE ET POLITIQUE DES DROITS DE L'HOMME (Monique Costillo ed. 2003) at 63.

1) Raising standards of living,
2) Ensuring full employment,
3) Ensuring a large and steadily growing volume of income and effective demand,
4) Expanding the production of, and trade in, goods and services,
5) Allowing the optimal use of the world's resources in accordance with the objective of sustainable development,
6) Seeking both to protect and preserve the environment, consistent with the contracting parties respective needs and concerns at different levels of economic development, and
7) Assure developing countries, especially the least developed, a share in the growth in international trade commensurate with the needs of their economic development.

In addition, the preamble describes a particular objective, which serves the others.

8) The Members aim at "contributing to these objectives by reciprocal and mutually advantageous arrangements directed to substantial reduction of tariffs." It will do this by developing ". . . an integrated, more viable and durable multilateral trading system. . . ".

The first thing to note about these objectives is that they can and often do complement one another, and are sometimes furthered by the kind of market integration addressed in the preamble. The U.N. Commission on Human Rights has published a series of recent reports on the impact of international trade on intellectual property rights,[16] agriculture,[17] and the provision of services.[18] In each of these reports, which are considered later, the beneficial effects of free trade for some parts of the population are described. However, the reports then go on to indicate areas in which trade can damage other parts of the population. At this point, a tension arises between the latter's entitlement under human rights standards, and the central mission of the WTO to sustain and encourage trade.

A. Embedded and Imported Rights

Human rights are not explicitly mentioned in the preamble of the WTO Agreement. However, they can be linked to the text, depending on how it is read. Some of the rights are embedded in some of the objectives, as necessary for their attainment. Take, as an example, the commitment to "sustainable development". As a report from the United Nations Development Program argues:

> Development is unsustainable where the rule of law and equity do not exist; where ethnic, religious or sexual discrimination are rampant; where there are restrictions on free speech, free association and the media; or where large numbers of people live in abject and degrading poverty.[19]

That is, societies must be in a position to remove internal obstacles to their ability to renew themselves. If the least well-off are provided with these rights, then the U.N. argues

that they will be less likely to deplete their own key resources such as land, water, or human capital, in the effort to survive.[20] Certain rights are therefore embedded in the goal of sustainable development.

While important, this way of picking out certain rights that the WTO must respect has its limits. It treats human rights as means to ends rather than as goals worth of pursuit in their own right. To continue with our example, if a commitment to give effect to certain human rights is grounded on and flows from a particular feature of development—its sustainability—then before the WTO was to take seriously any given right it would have to be convinced that it plays a demonstrable role in helping a society to renew its basic resources, both material and non-material. That does not fully cover the wider goals of a human rights agenda, such as that of the ICESCR, which is aimed at progressively improving access to certain basic social goods because of their intrinsic worth, quite apart from their ability to contribute to a society's ability to husband and renew its resources.[21]

For several other objectives announced in the preamble, it is not possible to find human rights embedded in them. Any connection to such rights therefore has to come from importing the relevant guarantees into the text. For example, the institution can pursue the first item on the list, raising aggregate or even average standards of living, without necessarily satisfying the right of *all* relevant portions of society to an adequate standard as would be called for by the ICESCR.[22] It is notoriously possible to increase the average standard while allowing the level enjoyed by the least well-off to fall. Any concern for the least well-off engages entitlements to distributive justice. *Prima facie,* this falls within the province of Members' domestic policy, and is not the business of the WTO. However, the trade treaties draw a balance between objective of furthering trade and various permissions given to member states to refuse to trade. In the latter case, the member might be motivated by a concern that the terms on which a good or service are entering the country might damage the well being of the least well-off. The question that then arises is, to what extent do the trade treaties have to be sensitive to the demands of social and economic rights as part of the legitimate reason that Members can have for the refusal to trade? That is, to what extent is it appropriate to take the rights standards that bind Members and import them into the legitimate concerns of the WTO as it interprets the relevant treaties? Is it possible to go further and call on the WTO itself to formulate policies with the avowed intention of actually facilitating (rather than simply not obstructing) the task of Members in meeting their required social and economic targets?

Would it be necessary to amend the organization's Articles in order to open up these possibilities? That depends on how the Articles are interpreted.[23]

[20] E. Barbier, *The Concept of Sustainable Economic Development*, 14 Environmental Conservation 101 (2–1987) ("... the primary objective is reducing the absolute poverty of the world's poor through providing lasting and secure livelihoods that minimize resource depletion, environmental degradation, cultural disruption and social instability"); R. Goodland and G. Ledoc, *Neoclassical Economics and Principles of Sustainable Development*, 38 Ecological Modelling. 38 (1987) ("Sustainable development is a policy which optimizes the economic and societal benefits available in the present, without jeopardizing the likely potential for similar benefits in the future.") B. Techniques of Interpretation: (I) Institutional Purpose and Founders' Intentions

The U.N. Sub-Commission on the Prevention of Discrimination and the Protection of Minorities, has declared that "the full and indivisible range of human rights should be the 'primary objective' of trade, investment, and financial policy."[24] As attractive as this might sound in general terms, it is an opening that will make sense to a lawyer—and to others interpreting WTO rules—only if certain fundamental options are chosen when it comes to working with the Articles.[25] The first involves an approach whereby an international organization is understood to have not only those powers and competence which are explicitly conferred upon it but also those powers and competences which may reasonably be inferred from inspection of the purposes and functions of the organization.[26] One is not bound by the literal words in the body of the instrument if they are manifestly inadequate to achieve the relevant purposes and functions.[27]

How should content be given to these purposes and functions? When lawyers answer this question, they sometimes add what they call a teleological element to this principle of interpretation.[28] According to this element, the significance to be attached to the organization's statement of its goals is not limited by what its founders happen to intend at the time they set up the institution. It is instead also to be interpreted in the light of wider understandings of those purposes held by the community on whose behalf the institution acts—be that community global or local. The content of this wider understanding can be seen in other basic commitments that the community has made, such as those found in its formulation of human rights norms. As one legal philosopher put it, one does not look at what the founders of the institution said, but at what they did.[29] What they did is properly subject to changing interpretations, and properly brought into line with the evolution of the wider community's basic understanding of what makes any exercise of institutional power legitimate. Human rights norms therefore form a central part of this wider foundation, even if their inclusion was not intended by the founders of the WTO. On this approach, they should be read into the existing preamble, without needing to amend it, and in turn should inform a reading of all of the detailed provisions in the remainder of the Articles.

This view of interpretation can be contrasted with one which is not necessarily hostile to incorporating human rights norms into the WTO mandate, but admits them on a more restrictive basis. It takes as its point of departure a quite different protocol, according

[25] For the particular principles applicable to the interpreting of constituent instruments, *see* P. Sands and P. Klein, BOWETT'S LAW OF INTERNATIONAL INSTITUTIONS ¶ 14–023 (2001).

[26] H. G. Schermers & N. M. Blokker, INTERNATIONAL INSTITUTIONAL LAW (3rd ed) 141–2, (1997), Kelsen, PRINCIPLES OF INTERNATIONAL LAW 284–5, 833–4 (1966). For similar possibilities in the interpretation of the powers of the World Bank and IMF, *see* Skogly, *supra* note 9, at 72.

[27] Sands and Klein, *supra* note 25, ¶ 14–023. This approach "... looks to the object and purpose of the organization, rather than adopt a literal (and therefore restrictive) approach to what the constituent instrument does or does not say". It is an approach that takes "... into account the object pursued by the organization rather than the text of its constituent instrument".

[28] *Id*. ¶ 14–021. "There is some authority for the proposition that a treaty of a constitutional character should ... allows for the 'intrinsically evolutionary nature of a constitution"'.

[29] Ronald Dworkin, LAW'S EMPIRE, Chapter 10 *passim* (1986).

to which an international organization may only perform such acts as are expressly laid down in the statutes of the organization, and any acts that are not mentioned there will be outside the scope of the organization's range of maneuver. On this basis, the only human rights the WTO is bound to respect are those that the contracting parties agreed to respect when they came together and formulated the objectives of the organization in the Articles.[30]

The difference between the teleological approach and that rooted in the intentions of the contracting parties is fundamental in any project connecting the WTO and human rights. Both approaches are open to such rights, but in very different ways. The latter starts from within the organization, and looks to the moment of its foundation. The former starts from outside the organization, and looks to the way in which it fits into wider and evolving understandings of what makes power—both of states and of organizations transcending states—legitimate.

C. Techniques of Interpretation (II): Functional versus Civic Inclusion

A teleological approach to the interpretation of WTO treaties, with its eye on the evolution of standards, can itself develop in two distinct directions. One of these takes a functional view of power, and another takes what can be called a civic view.[31] The difference can best be appreciated by going back to the eight objectives in the WTO Agreement's preamble. The first seven are general goals: they are shared by a number of other national and international organizations along with the WTO. The eighth is a special objective. That is, it specifies the particular way in which the WTO is meant to pursue its general objectives: its commitment to achieve a "substantial reduction of tariffs" and "an integrated, more viable, and durable multilateral trading system". Now, according to the functional approach, it is the special and not the general objectives of the institution that fix the appropriate scope of its responsibilities. Its duties are, for the functionalist, to the actors who are directly involved in the process of this movement to integrated trade, and no further. Thus, even if it could be shown that opening markets to certain goods and services damages the prospects of certain local populations, the functionalist claims that this is not enough to attach the responsibility for those effects to the WTO. The proper concern of the organization, from this perspective, is not to achieve *comprehensive* fairness, but only to achieve the limited sorts of fairness that its commitment to non-discrimination among goods and service providers involves. Debra P. Steger, former Director of the WTO Appellate Body Secretariat, has recently articulated this view. She refuses to include concerns about users of services or of goods within the scope of WTO responsibility, confining herself to their producers. "The WTO's mandate," she says:

> is to promote freer trade and market access through the application of the principles of non-discrimination. Although I would equate the principle of non-discrimination with the fight against protectionism, nowhere in the GATT is the term "fairness" used. That does not mean that the GATT is "unfair"; it simply means that "fairness" in trading relations is not a GATT principle or norm—non-discrimination is.[32]

[30] Sands and Klein, *supra* note 25, at 450 (2001).

[31] The functional outlook described here is different from functionalism as it normally figures in the literature on trade. See e.g. Ernst-Ulrich Petersmann, *supra* note 24, text associated with his footnote 6. Compare this with the distinction between civic and functional approaches in S. Leader,*Three Faces of Justice and the Management of Change*, 63 MODERN LAW REVIEW 55–83 (January 2000) passim.

[32] Debra P. Steger, *The "Trade and . . . ." Conundrum—A Commentary*, 28 AMERICAN JOURNAL OF INTERNATIONAL LAW 135, 139 (2002)

This is a position standing in sharp contrast with that which embraces users; producers; as well as potential beneficiaries and victims of both. Several recent reports by the U.N. take this wider view, as do commentators such as Steve Charnovitz and Ernst- Ulrich Petersmann.[33] They implicitly endorse what can be called a civic approach. This does not tie the WTO's responsibility to its special objectives, but roots these objectives within wider concerns. To illustrate this difference, consider the WTO rules that affect access to education or health, or affect the full range of labor rights. Based on the civic approach, if those effects are significant then the organization is responsible for them. Based on the functional approach, the organization might not be responsible for these same effects. For the functionalist, there is an additional issue of institutional identity at stake: the special mission of the WTO distinguishes it from a state, and in turn from the International Labor Organization, the World Health Organization, etc. A *Member* may well be responsible for implementing policies that violate its own commitments to basic rights, but it does not follow for the functionalist that the WTO is therefore also responsible.[34]

Even if the Members, working collectively as the WTO, make demands on one of their number to open its markets, the way in which the latter then copes with any negative effects of such an opening is, for the functionalist, not the proper concern of that organization. It is an issue that calls on the state's particular range of responsibilities that are wider than those of the trading body. It may, for example, be appropriate that the Member seek the international assistance to which the ICESCR refers so as to obtain the technical advice, and possibly the resources necessary, to protect any human right that would be jeopardized as a by-product of opening its markets.[35] This would call, *inter alia*, for contributions from specialized agencies of the U.N. to provide the requisite assistance—to fill the gap that might be opened up by market integration. The civic approach is fundamentally different. It is not primarily concerned with the distinct or special *roles* of states and other institutions, but instead focuses on their overlapping *power*. If the policies of a given Member, and those of all Members working as the WTO, have equivalent effects on a population, then on applying the civic view the responsibility of each member singly, and their responsibility collectively could well be similar.

This is one of the fundamental points of division in the free trade / fair trade debate. The parties to that confrontation are not, whatever the appearances, divided about whether "fairness" as a value does or should form part of the WTO's existing principles. This is true despite the way in which Steger has expressed her point. For the principle of non-discrimination to which she refers is itself a species of fairness—and as Brian Languille

[33] *See* Steve Charnovitz, *Triangulating the World Trade Organization*, 28 AMERICAN JOURNAL OF INTERNATIONAL LAW 28, 41 (2002): "The capacity of horrendous working conditions to render trade unfair was acknowledged by the parties to the Covenant of the League of Nations . . . Whether the addition to the WTO Agreements of a provision on workers' rights would enhance fairness or erode it depends upon what that provision would require. Yet it can hardly be doubted that the labor issue fits the trade fairness frame." Petersmann, *supra* note 24, text associated with his fn 16.

[34] For this approach in international economic law,*see* FRANCOIS GIANVITI, *Economic, Social and Cultural Rights and the International Monetary Fund* WORKING PAPER FOR THE U.N. COMMITTEE ON ECONOMIC AND SOCIAL AND CULTURAL RIGHTS, E/C 12/2001/WP.5, para 6 ff. (2001). *See* also the discussion of functionalists in Charnovitz, *supra* note 33 at 48.

[35] ICESCR, *supra* note 9, Article 2, ¶ 1: "Each state party to the present Covenant undertakes to take steps, individually and *through international assistance and cooperation* . . . with a view to achieving progressively the full realization of the rights recognized in the present Covenant . . . ." For an example of such damage as a by-product, consider the U.N.'s analysis of the possible effects of trade policy on the ability of the least well off to gain access to education and health facilities. See *Liberalization of Trade in Services*, *supra* note 3, ¶ 60

has pointed out, some degree of concern for fairness is therefore built into the very fabric of free trade.[36] The real clash between the fair trade and free trade advocates is over the *scope* of the demand for fairness.

Telling against the civic view of appropriate scope is the fact that the WTO is clearly not a state, and therefore would not seem to have the same range of responsibilities as a state. But telling against the functional alternative is the possibility that Member states may be caught between the twin pressures of market integration and human rights concerns, each sometimes pointing in opposite directions. It does not seem right, or realistic, to offload the negative affects of trade onto other international organizations meant to assure respect for labor, health or environmental standards. That creates tension and rivalry among international organizations that should be complementing the work of one another. A clash of international demands becomes particularly aggravated when a state finds that the steps it takes to satisfy a requirement of one of the trade treaties places it in possible violation of one of the human rights treaties. While all sides—within and outside the WTO—would deplore this situation, the devil lies in the detail: as will be explored in Part V.

D. Two Types of Market Integration

These legal concerns have to be placed alongside the concrete work of the WTO as it gives daily effect to the development of an integrated trading system. Here, it is important to note the difference between "positive" and "negative" integration of markets, and the potential effect of each on a human rights policy.[37] A negative strategy requires that a Member of a trading system not use domestic policy to erect undue barriers to trade. Market integration in this mode happens via a series of prohibitions of such obstacles. Examples include the prohibitions against discrimination among sources of imports; against discrimination in favor of domestic producers; and against unjustified non-tariff barriers to trade. A positive strategy takes the demand for market integration a step further, requiring that the terms on which goods, services, or people are allowed to penetrate the borders of another country should be based on common standards fashioned through a policy set by the institution administering trade. The distinction is between the different degrees of centralization required to implement the integration sought. Speaking of the European Community, for example, Nicholas Bernard says that:

> Negative integration leaves instruments of policy, such as regulatory powers or fiscal powers, at the national level, although the use of those instruments is prohibited when it creates or maintains impediments to trade between Member states. On the other hand, positive integration entails the centralization of policy instruments at Community level.[38]

E. Human Rights from the Center: Positive Integration

When they are linked to positive market integration, human rights are a potentially critical tool deployed at the center. At the moment they play no such role, and exploring their

[36] A point ably demonstrated in Brian A. Languille, *Labour Standards in the Globalised Economy and the Free Trade/Fair Trade Debate*, in INTERNATIONAL LABOUR STANDARDS AND ECONOMIC INTERDEPENDENCE 329–339 (W. Sengenberger and D. Campbell eds, 1994).

[37] *See* the seminal work of Prof. Petersmann on this point, Petersmann, *From Negative to Positive Integration in the WTO: Time for Mainstreaming Human Rights into WTO Law?*, 37 COMMON MARKET LAW REVIEW 1363 (2000).

[38] Nicolas Bernard, *The Future of European Economic Law in the Light of the Principle of Subsidiarity*, 33 COMMON MKT. L. REV. 633, 636 (1996)

potential takes us into an area of possible reform. The changes could come at several levels of strength. One could imagine making the WTO a party to the several international human rights covenants, including the ICCPR and ICESCR. This would require it to make and to interpret the agreements it administers such that they have no effects that violate such rights. Less radically, the WTO could, without becoming a party to the covenants, voluntarily incorporate their standards into its own internal order. A further mode of linking human rights to a positive integration strategy would involve not simply looking at the internal order of the WTO, but outwards to the Members themselves. One could imagine a fresh agreement demanding that each Member adopt adequate human rights standards as a condition of it engaging in international trade. Here, we have a partial analogy in the Agreement on Trade-Related Aspects of Intellectual Property Rights ("TRIPS"). TRIPS takes a step towards a human rights demand: that the contracting parties implement adequate protection for intellectual property entitlements.[39] The right to this species of property has also acquired a place in the ICESCR's declaration that everyone is entitled "to benefit from the protection of the moral and material interests resulting from any scientific, literary or artistic production of which he is the author."[40]

Is this overlap between the demand made by TRIPS and the demand made by the Covenant enough for us to say that the former is requiring Member states to respect a human right? If so, we already have an example of the WTO including respect for human rights as part of its mission. But TRIPS is not making a human rights demand, and the reasons for reaching this conclusion are instructive. It is certainly calling for the protection of an interest that overlaps with the interest that the ICESCR is protecting. However, more is needed for this to overlap to turn into a human rights approach. The difference lies in the gap between a functional and a civic outlook. The functionalist approach, which is popular in interpretations of the agreement, focuses on one of what we have called the special objectives in the preamble of the WTO: the aim of developing an integrated, more viable, and durable multilateral trading system. It ties TRIPS to this objective. The agreement is thereby predominantly focused on the need to create an integrated system by protecting a producer's intellectual property. Those applying the agreement do not consider it appropriate to *demand* that Member states provide a fair balance between those producer needs and the needs of local populations for e.g. the adequate provision of health protection. That is, the TRIPS agreement does not require that other interests be protected alongside the protection given to producer interests. True, Member states are given a certain margin of *liberty* to protect the latter. But this margin is seen as derogation from a core requirement of the agreement, with a presumption against it. It is a presumption that can be rebutted, but the protection of non-producer interests has to swim against the tide: it faces a burden of justification, as going against the spirit of the agreement.

A civic approach to the interpretation of TRIPS comes closer to capturing what is characteristic of a human rights approach. It would focus on the terms of Article 7 of TRIPS, which provides that:

> The protection and enforcement of intellectual property rights should contribute to . . . the mutual advantage of producers and users of technological knowledge, and in a manner conducive to social and economic welfare, and to a balance of rights and obligations.

[39] On the ability of this portion of the TRIPS Agreement to fit human rights criteria, see the discussion in the text accompanying notes 41 to 43 *infra*

[40] ICESCR, *supra* note 8, Article 15.

Article 7 could be taken as establishing a wider objective for the protection of intellectual property than that which would be established by the functionalists. The TRIPS agreement can be understood, on this approach, as inducing countries to adopt an intellectual property regime that provides both protection of intellectual property and room for overriding that protection, where both are on an equal footing.[41]

In both its strengths and its weaknesses, the TRIPS example provides several lessons. The TRIPS regime has spawned confrontation on its own terrain: having taken the step to demand a property right on behalf of one set of actors in the trade relationship, what about other actors wanting to enjoy potentially competing basic rights, such as the right to adequate protection of health? A human rights approach demands that any instrument that starts by focusing on one right, must tacitly make room for other basic rights and allow them to be brought into a fair balance.

But there is something more: the balances sought by Article 7 of TRIPS open further questions about what it is for the agreement to operate in the spirit of human rights protection. Does the concern for users' rights extend to contributing to the progressively greater levels of welfare that the ICESCR calls for, or is the system at most required to refrain from pulling the least well-off further down? When we observe the decision by the TRIPS Committee to extend to the least developed countries ("LDC's") an additional period of time before they will be required to comply, it is useful to consider what the benchmarks for their progress should be.

Should their obligations arise once it becomes clear that no significant part of their populations will be made substantially worse off by adhesion; or is it appropriate to apply the more ambitious principle that application of the TRIPS will actually give them enough control over their domestic policy so as to progressively improve basic social, economic, and cultural goods? In considering these questions, it is important to note the dual emphasis in the Doha Declaration on the TRIPS agreement. In part the Declaration highlights the importance of interpreting the agreement so as not to *prevent* Members from taking measures to protect public health, and it also emphasizes the more dynamic need to *assist* them in their effort to promote greater access to medicines for all. This could be interpreted as incorporating the positive obligation to gradually improve certain health protection standards as required by the ICESCR, Arts 2(1) and 12.[42]

F. Human Rights, Refusals to Trade, and the Discipline of Negative Integration

In this portion of the chapter we enter a different domain, one in which there is a greater prospect for seeing human rights brought to bear within the existing trade rules, because they can be initiated by one particular WTO Member rather than depending on achieving

[41] This is a central point about TRIPS made by the U.N. Sub-Commission on the Promotion and Protection of Human Rights. It argues that as presently implemented (not as presently formulated) the agreement "does not adequately reflect the fundamental nature and indivisibility of all human rights, including the right of everyone to enjoy the benefits of scientific progress . . . (and) the right to health . . . " *Intellectual Property Rights and Human Rights,* Sub-Commission Resolution 2000/7, ¶ 2. August 16, 2001

[42] WTO, *Ministerial Declaration on the TRIPS Agreement and Public Health*, 2001 WT/MIN(01)/DEC/2, ¶ 4, reproduced in the Appendix to this book. On the extra time given for compliance to LDCs the Declaration says, "We also agree that the least-developed country Members will not be obliged, with respect to pharmaceutical products, to implement or apply Sections 5 and 7 of Part II of the TRIPS Agreement or to enforce rights provided for under these Sections until January 1, 2016, without prejudice to the right of least-developed country Members to seek other extensions of the transition periods as provided for in Article 66.1 of the TRIPS Agreement." *Id*. ¶ 7.

a new consensus among all.[43] The GATT, GATS and TRIPS all create space within which a Member can refuse to accept a given good or service, or can override a claim of intellectual property, because of the demands of its domestic policy.[44] Depending on how the existing rules are read, human rights can figure as acceptable reasons for such a refusal to accept market integration.

There are two possible scenarios, which we shall illustrate by focusing on the GATT. In one, prompted by what can be called outwardly-directed concerns, country X refuses to import goods or services from country Y because it is concerned that Y is violating the human rights of its own population. In another, prompted by inwardly-directed concerns, X refuses to import from Y because it is concerned about the effect that the entry of such goods and services might have on the human rights of its, X's, population.

As an example of the outwardly-directed concern, Y might have acted so abusively that it is considered by the U.N. Security Council to be a threat to international peace and security, as South Africa was when it practiced apartheid. If so, Article 41 of the U.N. Charter provides for the legitimate use of economic sanctions. Article XXI(c) of the GATT in turn permits Members to refuse to import goods from that country for reasons of international peace and security. Similarly, objections to the importing of products that have been made by prison labor might overlap with human rights concerns, and this refusal is permitted under Article XX(e).[45] What about objections that X might raise to Y's non-respect of the basic trade union rights of its labor force? What about its objections to abuses of other human rights?[46] While these fall outside the explicit grounds mentioned in the treaties, there is potential room within their more general terms. For example, Article XX(a) of GATT permits refusals to trade when this is "necessary to protect public morals." Steve Charnovitz has suggested that, under suitable constraints, this clause could accommodate refusals to trade based on human rights violations, given the centrality of such standards at the core of the moral standards of many societies.[47]

There is a danger in this outwardly-directed strategy, however. One country, particularly if it is powerful, might be able to unilaterally impose its own understanding of human rights requirements on another. It might do this for protectionist reasons, or for reasons that arise from a good faith interpretation of the importance of a given right with which its trading partner disagrees. Given free reign, refusals to trade for such reasons would cause the system to fragment. The WTO decisions show some sensitivity to this possibility. While, as was said, human rights issues have not yet been directly raised in past cases, decisions have made it clear that WTO will allow a Member to refuse to import from another because of outwardly—directed concerns about issues such as the protection of

[43] Note that decisions reached by panels or the Appellate Body no longer need a consensus for adoption. Instead a consensus is required to block a decision. The losing party therefore no longer has the power to block the adoption of a decision of the Dispute Settlement Body, as was the case under the GATT dispute settlement system. DSU Article 17 ¶ 14

[44] *See inter alia* GATT, Article XX; GATS, Article XIV; and TRIPS, Article VIII.

[45] Concerns about prison labor and about human rights potentially overlap. Note, however, that other chapters in the book make it clear that the original purpose of this provision was protection, not respect for human rights. Many countries which take human rights seriously, including the United States, produce prison goods

[46] An example is the abuse of human rights in Myanmar, and the reaction of Massachusetts with the "Burma" law. The law restricts the authority of the Commonwealth to buy goods and services from companies that do business with Burma/Myanmar. Mass. Gen. Laws Ann. Ch. 7, §§ 22G–22M (West 1998 Supp.). The matter was not dealt with by a panel, but it is not difficult to imagine circumstances in which an issue like this would reach that stage.

[47] *See* Steve Charnovitz, *The Moral Exception in Trade Policy*, 38 VIRGINIA JOURNAL OF INTERNATIONAL LAW 689 (1998).

endangered species, and not simply because of concerns about its own domestic situation. However, the Appellate Body in the famous *Shrimp-Turtle* litigation has also made it clear that before a country can refuse to trade on such Article XX grounds, it must have made good faith efforts to negotiate with other countries a common understanding of the content of any such standard. The negotiation need not be with all interested parties, and indeed it might not result in an agreement before the embargo is imposed, but the coverage of parties must be substantial enough to be convincingly multilateral, and the efforts to reach agreement must be made in good faith.[48]

Turning to inwardly-directed concerns, the Member refusing to accept a WTO demand for entry into its market, or a demand for shaping its intellectual property rights, can also rely on the same provision in the GATT and its equivalent in GATS and TRIPS. It is worth noting in particular the scope for inwardly-directed human rights concerns potentially available in Article 8 of TRIPS. As they give effect to the agreement's core provisions, Members may adopt measures "... necessary to protect public health and nutrition, and to promote the public interest in sectors of vital importance to their socio-economic ... development.... Provided that such measures are consistent with the provisions of this Agreement."[49] The Doha Declaration on TRIPS and Public Health gave added emphasis to the need to interpret the Agreement such that it gives scope to Members' "... right to protect public health and ... to promote access to medicines for all".[50] If there is room for a Member's *right* to protect public health, then there must equally be room for a Member's *obligation* to protect public health—an obligation arising, *inter alia*, from the ICESCR.[51]

At this stage, we can see why the trading system is likely to have a built-in resistance to a human rights claim, when these claims prompt Members to refuse to accept goods, services, or the recognition of intellectual property rights. As was true of the earlier example of derogations from TRIPS, they are all claims to carve out an exception to demands that a trading partner go along with market integration.[52] As a result, the system looks at human rights much as it does other non-tariff barriers. It may reluctantly admit them but on condition that, like other barriers, they do "least damage" to the core objective to free trade from among alternatives available. In other words, when they prompt refusals to trade, human rights demands face the rigors of a policy of negative integration. Quite apart from any views trade officials or adjudicators might have about the proper place for such rights in a trading system, this is an institutional influence on the way in which they see the problem. The result might radically shrink the force of any

[48] For a statement of these principles, see the views of the Appellate Body in *United States—Import Prohibition of Certain Shrimp and Shrimp Products* ("*Shrimp-Turtles I*"), WT/DS58/AB/R (1998), followed by *United States—Import Prohibition of Certain Shrimp and Shrimp Products—Recourse to Article 21.5 of the DSU by Malaysia* ("*Shrimp-Turtles II") WT/DS58/AB/RW* (2001). *See also* Joanne Scott, *On Kith and Kine (and Crustaceans)*, in THE EU, THE WTO AND THE NAFTA 162 ff (J. Weiler ed. 2000).

[50] *WTO Ministerial Declaration on the TRIPS Agreement and Public Health*, *supra* note 42.

[51] *Id.*

[52] When a refusal to import a good is accompanied by local production of the same or a similar good, then there is *prima facie* a violation of the ban by Article III:4 on according domestic goods better treatment than is given to imported goods. This can happen in the situations we are considering, since the country refusing an import because of the policies or conditions surrounding the production of a good in another country, or because of its impact on the basic rights of its own citizens, might not have the same objections to similar goods produced in its own borders. At that point, while the Member might look benignly on local producers, there is a case to answer under Article III: 4. The Member will only be able to overcome the presumption against such differential treatment by relying on one of the Article XX or XXI exceptions.

given human right—taking it well below the promise it offers in other quarters, where it does not have to be provided in a version that is the least trade restrictive. This is one factor that fuels the feeling of many skeptics that international trade is inherently corrosive of social standards. It is a product of a functionalist vision of the mission and responsibility of the WTO. We shall explore more of the civic alternative in a moment.

G. Human Rights and Trade with Developing Countries: A Special Case?

This is a further part of our map, raising some of the most politically-charged issues about the place of human rights in a trade regime. Some developing country Members have been called on to respect certain human rights demands as a condition of their enjoying certain special trading advantages. The demands concerning the rights do not come from the WTO itself but from certain countries that are developed country Members.[53] In return for preferential access to their markets—that is, a degree of access that is not granted to other WTO Members—these richer partners demand in return that the recipients of the preference accept certain conditions. The European Community, for example, splits its preferential treatment into several tiers, and offers what it calls "special incentive arrangements" if the recipient country incorporates into its national legislation the substance of the standards laid down in key ILO conventions, including those on forced labor and on freedom of association, and the right to collective bargaining.[54] The special inducements take the form of additional tariff reductions at twice the level of the basic preferences accorded.[55] It offers similar incentives for measures to protect the environment and to control drug trafficking.[56] Under the U.S. Generalized System of Preferences ("GSP") scheme, all eligible items are duty-free. The main conditions attached to granting this eligibility to particular countries relate to protection of intellectual property, the respect of labor rights (including the elimination of the worst forms of child labor), and the resolution of investment disputes. No specific mention is made of ILO Conventions or TRIPS, but these standards have been referred to in decisions about non-compliance.[57]

These arrangements have been the subject of a debate that raises many of the headline items in the politics of trade, about which feelings run strongly. It is a debate that is fundamental to the future role for human rights in this portion of the trading regime. On one side, there are those who argue that the conditions attached to preference are objectionable because they are often prompted by protectionist motives; are impositions by the powerful on the sovereignty and distinct values of weaker countries; and that some of the conditions erect obstacles to developing countries' ability to pursue economic growth.[58] On the other side, defenders of the system deny each of these points, and they sometimes add the argument that the GSP scheme is entirely voluntary. Developing

[53] Or groups of countries, such as those belonging to the European Union.

[55] *Id. Preamble*, ¶ 16.

[56] *Id. Section* IV

[57] *A Preliminary Analysis of the GSP Schemes in the Quad,* Note by the Secretariat, WT/COMTD/W/93. For a reference to ILO standards in US decisions, see the report on Indonesia's worker rights laws in 1992 *GSP Annual Review*, Case 007-CP-92, July 1993. The original authority for the U.S. GSP scheme is Title V of the Trade Act of 1974 (19 USC 2461 et seq.). The scheme was originally introduced in January 1976 for a ten-year period and has since been renewed at various times.

[58] *See e.g.* the complaint brought by Brazil in 1987, *U.S. Actions On GSP Assailed In GATT,* discussed in http://www.sunsonline.org/trade/process/during/uruguay/gsp/05160087.htm. The dispute never reached the hearing stage.

countries, they say, make the choice to opt for the extra margin of reduced tariff that carries the conditions to which they object. If they are unhappy, they could simply decide to choose the basic amount of reduction in the core of the EC's preferential scheme and forego the additional special incentive of doubling the tariff reduction that is offered. In the case of the U.S. system, they could give up any preference at all.[59]

This series of disputes expresses some classic stand-offs in political economy. One side is claiming that labor rights impede wealth creation, while the other side denies that; one side claims that there is an imbalance of power that vitiates developing countries' free consent to conditions attached to preferences, while the other side insists that the consent is freely given. However, and this is of central importance in drawing our map, the clash also raises a fundamental structural issue. Alongside the question about which strings are legitimately attached to the grant of preferences, runs the fundamental question about power: who is, and who should be, entitled to affix the strings in the first place? Core WTO law, as we have seen, does allow Members to attach conditions to their willingness to trade, but at the same time does not allow those Members a free hand in deciding the exact nature of those conditions, even when these are prompted by their strong convictions on matters of social or environmental ethics. They have to meet the requirement that the conditions be negotiated with a significant number of affected partners[60], and that they satisfy other elements of the requirement of "necessity" in e.g., Articles XX of the GATT and Article IV of the GATS, examined more fully below.

The programs set up under GSP, for the moment, contain none of these restraints. Trading partners granting preferential terms of access to developing countries do so at their own initiative, and are entitled to pick and choose the terms on which the grant will be made or withheld. True, the international benchmark of ILO standards for labor rights is contained in the EC scheme, and is also followed by others, but this reference is the free choice of those setting the standards, and in all cases it is for the trading partners granting the preference to decide unilaterally whether or not those standards have been violated.[61] It is therefore not surprising that GSP schemes are often political tools. That is, the grant and refusal to trade on the terms contained in a particular GSP scheme are linked to a calculation that takes into account which developing countries a particular Member can or cannot afford to alienate; which local industries a Member wants to protect; and so on.[62] Indeed, the European Court of Justice has recently acknowledged this role for politics in the EC scheme.[63]

Whatever the bill of health this structure might have received from certain WTO Members, the political confrontation that it engenders continues to smolder. Those who

[59] For example, the United States responded to the Brazilian complaint with the claim that it was fully entitled to do what it had done under its "autonomous" GSP scheme. *See*.

[60] *See*, for example, the requirement of good faith attempts to reach agreement on shared standards with a significant number of potentially affected trading partners in *United States—Import Prohibition of Certain Shrimp and Shrimp Products—Recourse to Article 21.5 of the DSU by Malaysia ("Shrimp-Turtles II")* WT/DS58/AB/RW (2001). ¶ 123 ff.

[61] Compliance is determined by committees designed to monitor compliance established by each of the GSP grantors.

[62] For the political factors influencing GSP decisions, *see* J. H. JACKSON ET AL, LEGAL PROBLEMS OF INTERNATIONAL ECONOMIC RELATIONS § 24.3 (1995).

[63] *See DuPont Teijin Films Luxembourg SA v. Commission of the European Communities* ECJ, Court of First Instance, September 12, 2002, Case T-113/00, ¶ 85, "... the decision to withdraw the benefit of the preferential arrangements is pre-eminently a political issue concerning the Community and the beneficiary countries." This is the view taken by the ECJ in administering its scheme within the terms of its own GSP regulation. A WTO panel could well take a view that gives less discretion in a decision to withdraw preference, as discussed *infra*.

defend the imposition of conditions, as a *quid pro quo* for preferences accorded, consider GSP essentially to be an autonomous set of arrangements, lying outside the purview of WTO regulation.[64] On this view, two types of decisions might be thought to be voluntary, and therefore to be left alone: that of the developed country to offer preference, and that of the developing country to accept the offer. These voluntary choices should, on this view, seal off these arrangements from regulation by the rest of the trading world.

Developing countries are not convinced. India has taken steps toward a legal challenge of the EC GSP scheme before the WTO and, if it is successful, such schemes could become less of a discretionary political tool in the hands of the developed world.[65] The challenge is based on the terms of the agreement between GATT contracting parties that authorizes these schemes to be set up, known informally as the "Enabling Clause".[66] This instrument states that if one of their Members decides to offer certain developing countries special and more favorable access to their markets than other trading partners enjoy, then the grantor will not be in violation of the most favored nation requirement of Article I of the GATT, which would otherwise apply. The Clause also makes it clear that any conditions attached to the grant of preferential access must be focused on the development needs of the recipient.[67] India's complaint is that this latter demand is not met by the EU. The conditions attached to the preference granted which require protection of labor rights; protection of the environment; and the elimination of drug trafficking are, it is argued, either unrelated to or actually damage those development needs. If this claim were ever to be successful, then the EU scheme could fall outside the terms of the special permission given by the Enabling Clause. In turn, when the EU uses such conditions to differentiate among those developing countries that receive preferential treatment and those that do not, then those who lose out would have grounds for a complaint of discrimination based on Article I of the GATT.

It remains to be seen whether the Enabling Clause is to be given a status that raises issues for a WTO panel of such a fundamental and politically divisive nature. However, the legal terms in which the challenge is framed express the political issue with which the organization will have to grapple in any event, and which is central to our concerns in this chapter. India's claim is that the permission to engage in preferential treatment given by the WTO is not a blank check, but a partial opening: any conditions attached to trade preferences must be focused on the development needs of the recipients. Any given condition must, on this view, be matched against the requirements of the Clause. There could be two consequences if this argument were to succeed, either as a matter of legal or of political principle: one would be that the trading partners would not be able to use GSP schemes with as free a hand as they have hitherto. Conditions attached to preferential access to markets would still be possible, but they would need policing to see if in any given case they satisfy development needs. The second consequence takes us back to the divisive issue of voluntary choice. What looks to powerful countries like voluntary acceptance of their offer of preference with conditions attached, looks to some Members in the developing world like forced imposition. However, looked at through the lens of

[64] *Cf* the U.S. response to Brazil's 1987 complaint *supra* note 59.

[65] *India Seeks WTO Talks With EU Over Labor, Drugs Clauses in GSP Program*, 19 INTERNATIONAL TRADE REPORTER 456, (Number 11, March 14, 2002). As of the time of going to press, it has been announced on 28 October 2003 that a WTO panel has upheld India's complaint. See BRIDGES: WEEKLY TRADE NEWS DIGEST—Vol. 7, Number 37, 5th. The panel report will be released in early December, 2003

[66] *Differential and More Favorable Treatment, Reciprocity and Fuller Participation of Developing Countries,* GATT No. L/4903, Decision of November 28, 1979.

[67] *Id*. ¶ 3(c)

the Enabling Clause, the question of voluntary choice is *irrelevant*. If any given condition attached to preferential access does not fall within the opening for differential treatment of trading partners allowed by the Clause, then it does not matter that the condition was freely accepted. The Member setting the condition had no power to make that demand in the first place.[68] The Clause grants a special permission to a developed country to do something that would otherwise be illegal: to give a degree of special access to certain less developed trading partners. If country X grants less developed country Y preferred access to its markets which it denies to similarly situated country Z, because the former is willing but the latter is not to comply with a given condition, then Z can complain of a violation of the requirements of GATT Article I *if* that condition does not fall within the limited permission given by the Clause. Once it is clear that the boundaries set by the Clause have been exceeded by a particular condition attached to market access, then it is not relevant to Z's complaint that the condition is voluntarily accepted.

The scope for attaching conditions to the granting of GSP might therefore shrink. However, that does not mean that a Member could not impose a larger set of human rights concerns on those countries wanting access to its markets. Now, however, its refusal would fall within the principles governing what was earlier called 'outwardly directed' refusals to trade, as permitted *inter alia* by GATT Article XX.

H. Taking Stock

Before moving on, it is useful to stand back and briefly summarize the points made in Parts III and IV, since they will figure in what follows. We have been primarily concerned to see which pieces belong in the puzzle. This involved a look at the candidates for the group of human rights that the global trading system should respect and further. We then explored different possible linkages: prospects for linking trade to different sets of rights are affected by ideas about the WTO's institutional responsibility. We sketched two possible foundations for such responsibility: functional and civic principles. In turn, these distinct notions of the basis of the WTO's responsibility affect the approach to positive and negative integration of markets, as well as relations with the developing world. In Part V we will move from a static to a dynamic picture. We now look more closely at the priorities and balance between competing rights. This is a set of issues faced both by the WTO and by Member states. As the national and international systems interact, we will investigate the reasons for which free trade is condemned for wrongly imposing on national priorities, and where it has the potential to be—and be seen to be—impartial between the rival visions of the good society and of social justice held by trading partners.

V. Putting the System to Work in a Cosmopolitan Democracy[69]

As we watch the trading system relate to national priorities—moving in the same direction of some and upsetting others—it is important to see where this influence fits. Does the system of trade law stand a chance of being seen as an extension of the mandates of all of

[68] It is also irrelevant, from this perspective, that a system of preferences is left to developed countries to institute or not, as they see fit. It is *once* they decide to extend this benefit that they should then be required not to discriminate in its implementation. The requirement is similar to the one most national systems place on employers, who freely choose whether or not to create a type of employment, but once they do are required to offer it on a basis that does not discriminate on grounds of gender, race, etc.

[69] See S. Leader, *The Reach of Democracy and Global Enterprise*, 8 (4) CONSTELLATIONS 538 (2001).

its Members towards their citizens, or are there in-built features that risk pulling it away from that democratic ideal as a benchmark for measuring progress?

The political theorist David Held argues that the promise and challenge that globalization presents lies in its potential for bringing forth what he calls "cosmopolitan democracy". This he defines as an order in which there is ". . . the increasing diffusion of responsibility for the maintenance of human rights, or the defense of cosmopolitan rights and duties, across different agencies at different levels of governance."[70] It is democracy protected by supra-national human rights organs which are also sensitive to layers of power and authority, both state and non-state, aiming to move in the direction of global standards of social justice.[71] If the general idea of cosmopolitan democracy is to assist us, we need to face up to a fundamental threat to it. Alongside questions about unilateralism and multilateralism in the worlds of trade and of human rights, there is what can be called the issue of "collateralism".

A. The Problem of Collateralism

If and when the protection of human rights becomes a concern of bodies such as the WTO, the form of protection offered to them risks undergoing change of focus. Whereas many states aim to hold the whole range of such rights in an equitable balance with one another—limiting the exercise of some so as to make room for others—this balance can lose a central place in the work of certain international organizations: organizations that have the most power to influence the domestic policies of those same states. In place of the sort of equilibrium among rights that democratic states seek, we find that some rights receive automatic preference over others in some international organizations: the latter becoming collateral concerns of the organization, while the former are deemed to lie at the core of its objectives.

If the WTO is thought to draw its legitimacy from its particular mandate to promote an integrated trading system—what was identified earlier as item 8 in the preamble—then it can seem reasonable to conclude that this core function should generate the basic rights that deserve its prior attention. Others will become collateral concerns. However seriously human rights are taken by an organization such as the WTO, they are easily prone to being filtered through this perspective. Thus, those who make and interpret the norms of the organization might fully accept that they should respect the obligations on member states arising from social, economic and cultural rights. However, they might also insist that while these ICESCR rights constrain what the WTO does, they cannot constrain it in the way they would constrain a state. When a hard choice has to be made between the objectives of market integration and concerns to protect those who might lose out from such integration, then on this view the WTO must stick by its special function and shape the rights involved so as to impede as little as possible its central mission.

True, the rules of the various agreements managed by the WTO do build in room for allowing its Members to assign ultimate priority to certain non-trade concerns, as we have seen. However, this deference to national priorities is sometimes accorded at a price. The Member might be required to compromise on their preferred content and method of achieving those non-trade objectives more than it would in other settings. This downward pressure on certain human rights standards may well occur even if one were

[70] Interview with Montserrat Guibernau, 8 (4) CONSTELLATIONS 427, 432 (2001).
[71] *Id*.

to place the objectives of the WTO on a human rights foundation. This link does not alter the fact that, as was seen at the outset, the particular means by which the WTO is committed to achieving those objectives is via the instruments of the mutual reduction of tariffs, and the development of an integrated multilateral trading system. This is a way of reaching its fundamental goals that distinguishes the WTO from the ILO, WHO, World Bank, and other international bodies that share many of the same general objectives such as the promotion of sustainable development and the raising of standards of living.

The result of this reasoning is not that human rights are compromised *per se*, but that particular priorities within the cluster of relevant rights will be established in advance of any given situation to which trading rules are applied. Those human rights that complement the goal of market integration will be given priority over those human rights that cut across the aim of such integration. As a result, when hard choices have to be made between the protection of economic freedoms that animate the goals of free trade, as against the protection of other welfare rights involving health, labor standards, and the environment—where the latter cause a Member to derogate from free trade principles—then, from the perspective offered by what we are calling collateralism, the WTO must shape the welfare rights so as to do least damage to economic liberties. The social and economic rights in the ICESCR are seen as incapable of rising to more than a secondary concern in a body that defines its tasks in what was earlier called functionalist terms.

The result is what we are familiar with: the perceived bias towards market liberalism in WTO policies. This priority flows as much from the institutional constraints faced by the organization as it does from deeper convictions on matters of political economy in the hearts of those running it. The price paid is a high one, since the system loses its ability to show Members that, while it might put pressure on their domestic agenda, it does so in a politically impartial way, and in doing so truly respects their other international human rights commitments. Things could conceivably be different.

B. From Collateralism Towards an Impartial Order for Trade Relations

It is possible to frame the work of the WTO in a way that reduces the damage done by collateralism. States are certainly not forbidden by their entry into the organization to pursue a strong domestic human rights agenda. Yet, this is a permission that is more formal than real for many weaker states and economies. It can be turned into a live option by appropriate balances within the trade treaties. These balances would carve out greater space for human rights in the pursuits of both positive and negative integration explored in Part IV. That is, the treaties could give greater priority to human rights in framing the demands for engaging in trade; and also in framing the terms on which trade can be refused or diminished so as to protect other non-trading interests.

In order to explore these possibilities, we can draw on our earlier distinction between civic and functional principles.[72] These, we saw, provide fundamentally different starting points in deciding on the standards that should guide the formulation and interpretation of trading rules. Those different starting points in turn lead to two distinct ranges of human rights that the organization might respect. A civic order incorporates a wide range, since it looks for continuity in regulating principles across a large spectrum of different institutions, from the nation state through to international bodies. A functional order—which

[72] For these distinctions, *see* S. Leader, *supra* note 69, at 538–553; S. Leader, *Three Faces of Justice and the Management of Change*, 63 MODERN LAW REVIEW 55–83 (January 2000); S. Leader, *Integration, Federation, and the Ethics of Rights* in MORALE ET POLITIQUE DES DROITS DE L'HOMME (Monique Costillo, ed., Zurich: Olms Verlag, 2003).

underpins collateralism—is different in that it divides up the terrain, looking for unique matches between particular organizations and their particular domains of responsibility. We can now go further with this distinction, using it to see the different ways of balancing disparate concerns in a trading regime.

C. Approaching the Balance between Trade and Non-Trade Interests

As indicated in Part III of this chapter, we will assume that respect for *some* human rights calls for the opening up of markets to trading relations, while respect for *other* human rights calls for closing or limiting access to those markets. Everything turns on the balance between the two sets of considerations. How does a civic order approach such a balance? Whereas in a functional order the special, defining objectives of an organization fix priorities among rights, in a civic order human rights are assigned priorities for reasons that are independent of the specific functions assigned to the organization. Even if the WTO has the special objective of promoting free trade this does not, on civic principles, dictate the relative weight of rights that the organization must respect. There is no reason for trading rules to give priority to a service provider's claim for market access over a state's claim to close its markets to such a service in order to protect a competing and fundamentally important priority. Instead, a civic order calls—in a distinctive way—for mutual adjustment between the rights.

We can see what is distinctive in a civic approach by comparing it with the functional approach to the well-known "necessity" requirement in the balance between trade and non-trade interests. When systems are confronted by competing rights, calling for their impartial adjustment, they often resort to the device of saying that one right may be limited if doing so is necessary for the fair exercise of the other. For example, the International Covenant on Civil and Political Rights ("ICCPR") requires respect for the right to freedom of expression, and then permits the right to be restricted if doing so is necessary for achieving, *inter alia*, respect of the rights of others and the protection of public morals.[73] Similar phrases also figure in the structure of the GATT, the GATS and TRIPS, as a qualification to their ability to protect public health, public morality, and other fundamental interests. In all such treaties, "necessary" does not mean what it seems to. That is, one does not have to show that any given measure is indispensable to the protection of the countervailing objective, such that there is no alternative measure that would protect it. There are usually several such routes available to protecting something like public morality, each sufficient to yield the result while none is literally the only way to go about it. Instead, the notion of necessity points at something quite different: it identifies the core objectives of the treaty in question, and then asks whether a Member state's overriding of those objectives by its domestic policy does the least damage to that treaty commitment, as compared with alternative possible domestic measures. The implicit question is not, "do you need to protect e.g., your public morality?", but rather "is this the way of protecting public morality that imposes the least cost on the ability of the treaty to do what it is designed to do?" We can call this the "least impact" feature of necessity.

Along with the requirement of least impact, there is sometimes a requirement of proportionality. Even if a particular policy has the least impact on a core value advanced by a trading system, that may not be enough to justify the policy since its impact on the core value may be deemed disproportionate. For example, a state might begin with a particular

[73] ICCPR, *supra* note 8, Article 19(2) and (3).

level of commitment to consumer protection, or a level of commitment to access by the least well-off to health or education. The state might have adopted means to achieve these ends that have the least impact on trade, from among reasonably available alternatives. Nevertheless—to take the example of consumer protection—its decision to pursue a particular *level* of commitment to such protection in the first place might be considered as imposing a disproportionately heavy burden on trade. As an example of this thinking in the analogous setting of the European Community, there is the *Danish Bottles* case. Here, the European Commission challenged a Danish environmental protection regulation that restricted the use of certain drink containers by imposing two requirements: a deposit and return scheme, and a ceiling on the total number of containers each firm could use. The European Court of Justice found this second element to be an illegal quantitative restriction.[74] It said that the deposit and return scheme would be enough by itself to render the containers environmentally friendly. The Court was aware that the full set of Danish restrictions achieved a higher level of protection for the environment than would the pared-down set, but was tacitly prepared to sacrifice this extra margin in order to allow an extra margin of access to markets for foreign goods. In the name of proportionality, the Court was willing to frustrate the country in question in its choice of level of commitment to a non-trade objective.[75]

In a functional order, these two parts of the necessity requirement—least impact and proportionality—receive an interpretation that is familiar, but of which many are suspicious. It demands that domestic priorities protecting public morals, and human, animal, plant life or health, all be pursued in a way that does least damage to international trade. There is clear room in the trade agreements for domestic priorities to prevail, but this is a potential that is largely lost—say the critics—when the Member state is forced to select that version of its priorities that is most friendly to the commercial interests of international providers of goods and services.[76] As Esty puts it, "... a policy approach that intrudes less on trade is almost always conceivable and therefore in some sense 'available'." As a result the non-trade exception is eviscerated.[77] In considering this critique, we should notice that the "least trade restrictive" demand does not necessarily flow from the fact that these agreements place the intrinsic merits of free trade above the protection of morals or human life. Instead, this priority is a result of a functional reading of the agreements. As was indicated in the earlier discussion of functional interpretation in Part IV, it is the special and not the shared general objectives of WTO that set the priorities among the interests the organization is to satisfy. That is, the market integration goals that give the institution its particular role among international organizations are primary, and any other interests that are contained in the shared, general objectives—which the WTO pursues along with many other organizations—are to be given a place that does least to upset the special objectives. It follows, based on this approach, that the shared, general aim of promoting, say, sustainable development, to which the WTO is committed along with other international bodies, should be interpreted so as to least trouble the special objective of market integration via free trade. Shared, general objectives are to be adjusted in favor of special ones and not vice versa, says the functionalist.

[74] *Commission of the European Communities v Denmark* Case 302/86 [1988 E.C.R. 4607]. It was held to be inconsistent with Article 28 (ex Article 30) of the Treaty Establishing the European Community. *See especially* ¶¶ 17 ff.

[77] D. Esty, GREENING THE GATT 48 (1994) *cited* by M. J. Trebilcock, and R. Howse *supra* note 75, at 140.

Before looking further into the civic alternative, notice that the direction in which functional adjustment moves can cut quite deeply into domestic priorities. This is because functional alternatives do not just put pressure on the means selected to achieve certain policy goals; they can—as in *Danish Bottles*—also affect the content of those goals. We can see this by contrasting two WTO cases, *Thai Cigarettes*[78] and *Asbestos*[79].

In the *Thai Cigarettes* case, Thailand limited imports of tobacco while permitting their domestic manufacture and sale. The limitation partly took the form of a refusal to grant licenses to import, raising a complaint under GATT Article XI(1); and partly a tax regime favoring local manufacturers, raising complaints of a violation of the national treatment provisions of GATT Article III:4. Thailand sought to defend the measures, *inter alia*, as necessary for the protection of human health within the terms of GATT article XX(b). It claimed to be concerned to keep domestic demand from growing beyond its present level.[80] The entry of foreign producers would, it argued, lead to expertly targeted marketing that would increase consumption among parts of the population who smoked far less than their foreign counterparts.[81] This result, it said, would damage the GATT's own objectives as set out in its preamble. For, smoking "... lowered the standard of living, increased sickness and thereby led to billions of dollars being spent every year on medical costs, which reduced real income and prevented an efficient use being made of resources, human and natural."[82] The Thai Government also claimed to be concerned about harmful ingredients in the imported cigarettes. The United States countered that these reasons were a thinly disguised attempt to carve out special protection for Thai producers.[83] It also argued—and this is central for our purposes—that Thailand would be able to protect public health by less trade restrictive methods: there were other ways of limiting consumption, and regulations could require requiring that the potentially harmful ingredients in different sorts of cigarettes, domestic or foreign, be clearly indicated to the consumer.[84] The panel decided in favor of the US. It found that labeling and ingredient disclosure regulations, as well as price rises induced by non-discriminatory taxation strategies, were less trade restrictive methods of reducing domestic demand.[85] Thailand's measures were therefore not necessary for the protection of public health.[86]

Of interest here is the *character* of the non-trade objective that a member state can pursue, such as the protection of public health or the environment. Objectives such as these do not stand on their own. The level at which they are pursued domestically is tied up with other social values demanding satisfaction. One society, placing a high value on consumer sovereignty, will also accept the greater risks to public health that go with allowing people to make up their own minds about a product. Another society will aim at a higher level of health protection because it feels less constrained by the value placed on informed consumer choice. The second was true of Thailand. Assuming for these purposes their bona fides when they denied protectionist motives, they did not trust the

[86] Id. ¶ 75—setting the issue in terms of 'necessity'

average consumer to react appropriately to warning labels on cigarette packages, nor to price increases. In short, they took a paternalist approach to the proper balance between achieving certain health objectives and respecting freedom of consumer choice.

The GATT panel did not reject this paternalist approach as a matter of ethical principle. That would not be within its brief. It rejected the approach because of the need to find the solution with least impact on trade. The effect—if not in intention—substituted a different weighting for the value of free consumer choice, and this in turn yielded a different level of health protection that would probably be attained. Labeling requirements place public health objectives more in the hands of individuals deciding the level of risk they will run. Within a population, the pattern of choice is likely to result in more smoking related illness than would an outright ban on imports. It is a lesser level of protection, but one that gives greater place to other important values in keeping with what was identified earlier as the proportionality element, rather than the 'least impact' element, in the requirement that a measure must be necessary for the promotion of a non-trade objective.

From a functionalist perspective, this decision makes sense. If one's point of departure is that the WTO's distinctive mission is to bring about "... an integrated, more viable and durable multilateral trading system ...", then this is the dominant concern, and the panel should require Members to arrange their local values so as to do least damage to that objective.

A different approach can be seen in the more recent *Asbestos* case.[87] There, the Appellate Body was willing to allow France to ban imports of asbestos and products containing asbestos. It found, *inter alia*, that the prohibition was 'necessary' to protect human life or health within the terms of GATT Article XX(b). It specifically said, "WTO members have the right to determine the *level* of protection of health that they consider appropriate in a given situation."[88] [SL's emphasis] Canada had argued that the French could not unilaterally fix the level of risk to health to be avoided, but this was precisely what the Appellate Body said did fall within the prerogative of a WTO member.[89]

The approach to levels of health protection in *Asbestos* certainly gives more room to domestic priorities than does the approach taken in *Thai Cigarettes*. However, this result might be thought to have gone too far in the opposite direction. For if, as Prof. Petersmann argues,[90] the objective of free trade is thought to be underpinned by a fundamental 'right to freedom of economic activity', then it is not clear that a member state should be able to pitch the level of protection it seeks at just the level it desires. That would fly in the face of other fundamental rights jurisprudence. By way of analogy, the international human rights system sets itself to protect freedom of expression, and the system allows that right to be balanced against a member state's need to protect national security.[91] If the state were allowed to unilaterally set the level of national security it wanted, and then to fix restrictions on speech that were necessary to attain *that level*, the result of fixing the ultimate objective so high could easily shrink freedom of expression to a vanishing point.

An impasse threatens here. Too little deference to the priorities of WTO Members risks unduly shrinking the room for them to make basic value choices; and too great a deference to those priorities risks unduly shrinking the place of the right to freedom of

economic activity, insofar as this is considered to be a fundamental right. Both of these are routes that this chapter has set itself to avoid, for the sake of an approach that is not a hostage to the sometimes deep political cleavages among trading partners. An impartial solution might lie in looking more closely at the proper adjustments between trade and non-trade interests.

D. Rethinking the Directions of Adjustment between Trade and Non-Trade Interests

Elements of a different approach can be borrowed from the constitutional traditions of modern democracies, though they do require some alteration in this context, since we need to keep in mind the fundamental differences between an organization like the WTO on the one hand, and the state on the other. On a functional approach to the balance between trade and non-trade interests, as has been seen, the basic rights located in the shared, general objectives of the WTO—such as those embedded in the promotion of sustainable development—must always be adjusted so as to have least impact on the rights furthered by its unique, special objective: the promotion of free trade. In a civic order, the adjustment runs in the opposite direction. It is the general objectives that are primary, even if they are widely shared with other institutions, and the special objectives that must be read so as to do least damage to them. Respect for the human rights furthered by free trade, as well as for those potentially damaged by free trade, are all to be shaped in the light of the general objectives, with no automatic priority for one set over the other. Instead, any one of the basic rights can be adjusted in favor of any of the others. This is so even if, once mutual adjustment is accomplished, one of the rights does take ultimate priority.

To draw an analogy from another constitutional domain, the preservation of life is ultimately more important than is the interest in freedom of movement along the highway. But it is not true that each and every level of risk of death is more important to prevent than is any given level of freedom of movement. Evidence shows that the death rate on highways is reduced by a significant but decreasing number for every mile per hour of reduction in permitted speed. Assume that the reduction in a given country is 10,000 deaths in a given population for every mile of reduction between 100 and 90 mph; 1000 from 50 to 40 mph; and 100 from 40 to 20, and 10 between 20 and 10. Even though the preservation of life is more important than is freedom of movement along the highway, it does not follow that the right to freedom of movement must always be adjusted downwards so as to have the least impact on the death rate. At a certain point a polity may, and sometimes must, *reverse the direction of compromise*, limiting the attention paid to the risk of death in favor of the right to freedom of movement, however clearly a certain number of deaths is linked to a further reduction in speed.[92]

Looking at the same point in a trade setting, consider the example of a country that wants to ban imports of a certain product on grounds of risk to health, but allows local producers to manufacture and market a like product. Assume that it wishes to exclude the imports because their pricing and packaging will substantially increase their consumption per person. Now consider two such products: the higher *per capita* consumption of one carries a marginally higher risk of threat to life-threatening illness, and another that carries a substantially higher risk of a life threatening illness. An example of the former could be a food that, beyond a certain level of consumption, tends to cause obesity which in turn can marginally increase the incidence of certain diseases such as cancer;

[92] This argument builds on some points made by Waldron, *supra* note 15, at 503, 509–512, 516–18 (3-1989)

and an example of the latter could be another food which, beyond a certain level of consumption, radically increases the incidence of that cancer. Assume finally that, as in *Thai Cigarettes*, it is not practical or desirable for a country to totally ban the domestic consumption of these products, the local variety of which is much less attractive to the population.

In the first situation, if the local production and sale of such food is allowed then it seems appropriate for the WTO to demand that all regulations aimed at controlling level of its consumption be effected in the least trade-restrictive way: such as by non-discriminatory labeling requirements that carry appropriate warnings. Leaving the choice of the imported product up to the consumer—where it and its domestic cousin carry the appropriate warning label—would be likely to yield a greater number of cases of obesity, than would an outright ban of the import. Nevertheless, it would be an equitable way of balancing the two competing concerns of sustaining non-discriminatory access to markets and protecting this domain of public health. There would be compromise on the level at which the non-trade objective could be pursued.

In the second situation, if the state allows increased consumption of a product which leads to a substantial threat to life, it might be in violation of relevant international conventions for a failure to act.[93] How should the trading system approach the options in front of it? Once again, the options range from labeling requirements through to outright bans on imports. Here, it is submitted, the state should be allowed to choose the import-reducing measure that will do most to reduce the risk to life which it is obliged by other international conventions to pursue. The direction of adjustment is reversed: rather than finding a method of protecting human life that has the least negative impact on trade; the state would be allowed here to adjust the flow of trade in a way that has the least impact on human life.

It is, of course, not easy to draw lines between degrees of risk of harm arising from the import of different sorts of goods and services, and hence to know when it would be appropriate to alter the direction of adjustment between trading and non-trading interests in the light of human rights requirements. However, the bodies charged with the primary duty of interpreting the meaning of these basic rights do provide us with guidelines: either in the form of guidelines coming from organizations that specialize in a particular domain, such as the ILO or WHO; or from bodies with a more general mandate, such as the Committee on Economic Social and Cultural Rights, General Comments and Statements on the meaning of provisions in the ICESCR. These can be drawn upon by WTO panels in order to see when a Member should be given the scope by the trading treaties to adjust the requirements of trade so as to do least damage to a non-trading interest, and when it should be required to adjust the non-trading interest to the requirements of trade.

The important thing is to move away from a *blanket* commitment to a 'least trade restrictive' reading of the 'necessity' requirement. There are indeed principles established in some WTO cases that take us in this direction, acknowledging the right of a state to restrict imports in order to meet its international obligations, and allowing the level at which that commitment is to be fixed to flow from that undertaking rather than be

[93] For a recent example in which the failure by the state to secure individuals against a reasonably apprehend danger to health and safety that was so grave as to amount to a violation of the right to life under Article 2 of the European Convention on Human Rights, *see Oneryildiz v Turkey* No 48939/99 Judgement of 18 June 2002

compromised by the 'least trade restrictive' demand. [94] Unless this is done, a commitment to the least trade restrictive solution can sit like a lid on top of a wide range of states' engagements to their subjects. The result is something we are familiar with: the world wide complaint that the WTO weakens the ability of Member states to pursue policies that are valuable in themselves, but which when pursued might make the promotion of free trade more difficult. The approach considered here aims to keep an equitable balance of the full range of basic rights at stake in trading relations. This is the approach called for by civic principles of interpretation.

E. Factoring in Trading Interests

It is important that we not lose sight of our initial willingness to place human rights on both sides of the divide between trade and non-trade interests, as indicated in Part III. Those offering goods and services, as well as those potentially damaged by the terms on which those offers are made, have fundamental rights potentially at stake. This means that when a WTO panel is considering, for example, whether or not a Member state has violated TRIPS by refusing to grant a local patent to the inventor of an important drug, as is normally required by Article 27 of the TRIPS Agreement, then the panel should take into account the inventor's fundamental property rights as provided for by Article 15 (1) (c) of the ICESCR. However, as was argued earlier, the inventor's property right under TRIPS will also count as a property right in the human rights instrument only if it is brought within the full set of other relevant rights, and adjusted against them. Sometimes, as was argued above, the direction of adjustment must be from the dominant objective of the treaty towards having least impact on an objective lying outside the treaty. If these balances are made part of the approach, then the U.N. Sub-Commission on the Promotion and Protection of Human Rights is likely to conclude that all facets of the applicable intellectual property rights have been respected.[95]

This cannot be adequately done in the functionalist mode, requiring as it does that those who might suffer from an abuse of intellectual property rights should have their own rights regularly adjusted so as to do least damage to the interests of those who claim their property rights under TRIPS. The Member is allowed by the WTO administered treaties to give ultimate priority to certain non-trade interests, including the space provided by Article 8 of TRIPS. Mutual compromise among rights, along the lines sketched in the previous section, would be the better route.

F. Cosmopolitan Democracy, Political Impartiality, and the WTO

Recall the element of global democracy that can be potentially enriched by world trade. These are what David Held calls the "... the increasing diffusion of responsibility for the maintenance of human rights ... across different agencies at different levels of governance."[96] We have seen how the WTO has a role to play as one of these levels of governance. It can be one of a handful of international bodies that have the power to

[94] See the "*Shrimp/Turtle*" litigation, supra note 48.

[95] The Sub-Commission's report "... affirms that the right to protection of the moral and material interests resulting from any scientific, literary or artistic production of which one is the author is a human right, subject to limitations in the public interest, in accordance with Article 27, ¶ 2, of the Universal Declaration of Human Rights and Article 15, ¶ 1 (c), of the International Covenant on Economic, Social and Cultural Rights", *Sub-Commission on Human Rights Resolution 2000/7* ¶ 1.

[96] See 8(4) *Constellations, supra* note 70, at 432.

make human rights meaningful. However, the "diffusion" of responsibility for human rights can lead international society in one of two directions. It will either move towards a fragmented set of interpretations of the meaning and force of these rights, with the nation state giving one result; the WTO another; and specialist international human rights bodies yet another—or there can be an attempt towards greater coherence and integrity in the system. If the former is the course taken, then the WTO is likely to collide with its Members, as well as with bodies such as the U.N. commission on Human Rights—not because it ignores human rights, but because it interprets them in its own way. It is this suspicion that has led Philip Alston to want to prevent what he calls the "merger and acquisition" of human rights by trade law.[97] He does not want to see the cluster of values around market liberalism being considered the only appropriate way of spelling out the impact of human rights on trade relations, leading to pressure on nation states to adopt such values at the core of their policies.

This facet of the problem emerges most clearly from a clash of political philosophies that often divides national policy makers: individualist, choice-based approaches on the one hand, and strategies of social solidarity on the other. Some authors seem to think international trade carries within it an inevitable bias in favor of the former. For example, writing about labor rights, Christopher McCrudden and Anne Davies argue that some, but only some, of the core labor rights ". . . are not only theoretically consistent with the ideology of free trade, but [are] also required by it." These are, they say, those rights that serve to increase individual freedom of choice and freedom of contract.[98] If this is correct, then those who are concerned that national political will is undermined when their country signs up to a free trade regime would indeed have reason to worry. For individualist values are by no means the necessarily dominant ones in the core of fundamental labor rights. Many rights related to trade union organization and collective bargaining are based precisely on a rejection of individualist solutions. The ILO provides a large menu of such rights, and states configure them in a variety of ways, reflecting their different commitments to values of individual choice, social solidarity, or a particular mixture of the two.[99] At certain crucial points, the international trading system overreaches itself when it delves so deeply into domestic political preferences that it effectively bars one or another of these options. This is a particular problem when a human right protecting a non-trading interest is at stake, as has been seen. If an interpretation of the WTO administered treaties forces on a Member one route rather than another in trying to satisfy that right, then the WTO is moving beyond the boundary of impartiality that we saw the Committee on Economic, Social and Cultural Rights fix itself as it interprets the relevant human rights.[100]

This danger of unintentional bias is vivid when we turn to national policies that favor cross-subsidies. A recent U.N. report highlights the importance of these strategies, as well as their vulnerability to certain incursions of trade policy. It points out that:

> . . . cross-subsidization, such as government schemes ensuring that wealthy people subsidize access to health care for the poor or maintaining lower interest rates for loans in rural as

[98] C. McCrudden and A. Davies, *A Perspective on Trade and Labor Rights,* in F. FRANCIONI (ED.), ENVIRONMENT, HUMAN RIGHTS AND INTERNATIONAL TRADE 187 (2001).

[99] Thus the ILO Committee on Freedom of Association says that Member states are allowed to make their own adjustments between free choice of union Membership and the demands unions make that Membership be a condition of having a job. *See* DIGEST OF DECISIONS, Number 323. *Cf* S. L. Leader, FREEDOM OF ASSOCIATION (1992)

[100] *Supra* note 8.

> compared to urban areas, can be a means of reducing poverty, assisting the development of local infant service suppliers, increasing universal access to essential services and thus promoting human rights.[101]

Cross-subsidization can also operate within the group of the least well-off: it does not only run from rich to poor. Sometimes such subsidies involve a transfer from the young and healthy to the old and vulnerable or from the old to children needing health care that will help their access to education. It sometimes reaches across the various institutions providing for the distinct human rights needs of these groups, and demands that there be compromises, or trade-offs among them. When this course is taken, some of those previously high in order of priority of need might then legitimately find themselves lowered on the scale in order to account for a cross-cutting set of needs that come from the right to a decent education. In such situations, institutions vary their priorities in order better to serve a basic right that does not fall strictly within their purview.

What exactly is it about the push towards free trade that can cause such policies of cross-subsidy to break apart? The Report considers the point in the framework of the provision of services, and points out that:

> GATS subjects the grant of subsidies to the trade principle of non-discrimination. According to the non-discrimination (national treatment) principle, where a Government has made commitments in a particular service sector in its schedule under national treatment, GATS requires subsidies to national service suppliers or services to be available to like foreign service providers and services, unless an exception is specifically made in the national schedule. Thus, for example, where commitments were made in the education sector, the Government that provides a subsidy to a domestic not-for-profit education service provider might have to provide the same subsidy to foreign for-profit service providers.[102]

The result, says the Report, is that governments might withdraw their subsidies to this sector altogether, due to lack of resources, with consequent damage to universal access.[103] Apart from this, we can add the observation that when for-profit providers are brought in, they will avoid a strategy of cross-subsidy within a given population, since it costs more. As explained by the World Bank:

> . . . rural borrowers may pay lower interest rates than urban borrowers, and prices of local telephone calls and public transport may be kept lower than the cost of provision. This structure of prices is often sustained through cross-subsidization within public monopolies, or through government financial support. Liberalization threatens these arrangements.[104]

[101] *Liberalization of Trade in Services and Human Right*, *supra* note 2, ¶¶ 60 ff. For further criticisms of current WTO policy, arguing that because of it "The long tradition of European welfare states based on solidarity through community risk-pooling . . . is being dismantled." *See* Albert *supra* note 76, in section entitled 'When and why is trade harmful?'

[103] *Id*.

[104] *Id.* ¶ 61 n.66 *quoting* World Bank, GLOBAL ECONOMIC PROSPECTS 80 (2001). *See also* Perrine Lhuillier, *The Impact Of The Privatization Of Water And Sanitation Services On The Implementation Of The Child's Rights To Drinking Water And Sanitation*, (Master's Thesis, University of Essex 2002) at 22, drawing on oral evidence presented to the Committee on the Rights of the Child, Sept 20, 2002 "Governments . . . tend to promote an integrated approach of service delivery that is lost when the service is privatized. It has been pointed out, for instance, that the privatization of the healthy system in the UK resulted in the breaking up of service delivery, resulting in the abolition of risk sharing strategies such as cross-subsidization and in the collapse of the planning system. (S)tates being legally accountable with respect to human rights results in children's rights being more likely to figure among the items of the agenda when the delivery of public services is envisaged."

As with earlier examples, this impact on local policy does not simply emerge from enthusiasm about the virtues of market liberalism among those setting trading rules. Whatever the inherent merits or demerits of such a set of values, it is more likely that alternative positions will take hold because of something quite distinct: it arises from the functional way in which an international organization such as the WTO structures its priorities. Where a civic order integrates institutional responsibilities in civil society, a functional order tends to separate them. Each institution, based on the latter view, has its specialized role and must remain faithful to its organizing objective. A civic perspective widens the scope of interests that should be within the WTO's mandate. It places providers alongside users of services, and the two are often in tension: the more a system aims at fairness towards providers, putting the for-profit and not-for-profit service providers on a par, the less it may be possible to achieve fairness towards users, yielding a distribution of the service that skews access towards the better off. If domestic priorities of a Member state are aimed at giving priority to fairness to users over fairness to providers, in those situations where it is impossible to achieve both, then a politically impartial WTO should avoid forcing the Member into the opposite position: making it give fairness to providers systematic priority over fairness to users. It can do this if it abandons a functionalist outlook.

VI. Conclusion

What has been discussed in this chapter is the need to give concrete meaning to the U.N.'s claim that human rights should be the "primary objective" of trade, investment, and financial policy.[105] In doing so, we have tried to navigate between two poles of a dilemma. On the one hand, it is essential to respect the fact that the WTO is qualitatively different from a state: it has a mandate to promote free trade that is stronger and more narrowly focused than are the agendas of its constituent Members, while its Members have an obligation to further values such as the right to freedom of expression that the WTO as an organization does not have. On the other hand, if the WTO is encouraged to focus too narrowly on its particular mandate, this can disrupt the wider domestic agendas of its Members, so pulling them away from their attempt to achieve a fair balance of all relevant human rights. We have tried to reconcile these two elements by insisting that there is one thing that the trading body and Member states have in common: they must both respect the *relationships of equitable balance* among human rights in the same way. This need for a fair balance means several concrete things. It means that the Members of the organization should consider a wider range of rights than allowed by a functional understanding of the WTO's powers. It also means that none of these rights, including trade-related rights, is to be given systematic priority over other rights. Instead, the priorities to be achieved are more varied, depending on the rights concerned and on the circumstances surrounding their realization—a variety of solutions that a civic outlook encourages.

The civic approach might also permit the trading system to respond to the criticism that it is only willing to take account of non trade interests as exceptions to its core objectives.[106] The argument here is designed to move the system beyond this occasional

[105] U.N. Human Rights Commission, *Resolution of September 4, 1998*. (http://www.pdhre.org/involved/uncommission.html

[106] "The fundamental nature of these entitlements as rights requires an approach that sets the promotion and protection of human rights as objectives of trade liberalization, not as exceptions." *Liberalization of Trade in Services*, *supra* note 2, para 7

and exceptional status for such values. It calls for two possible directions of adjustment—shaping trading rules to be least restrictive of non-trading interests in some cases, and shaping the protection of non-trading interests to be least trade restrictive in others.

The civic rather than the functional approach to human rights can make a concrete difference to the possible inclusion of concern for these rights in the positive and negative integration of markets; in working out the place of conditions on preferential market access for developing countries; and in understanding the necessity and proportionality principles by which trade and non-trade interests are brought into balance. This might make it possible to move beyond some of the traditional rhetoric in debates. There is, for example, the fear that linking human rights to trade is a protectionist ploy designed by strong Members to filter out inconvenient demands from weaker Members. In response, we have seen how it might be possible to be attentive to this worry while also preserving a major role for rights as conditions attached to trade: by removing the ability of richer countries to unilaterally dictate the terms of GSP schemes and placing the schemes under the jurisdiction of the WTO's disputes settlements mechanism.

There is also the fear that linking trade to a human rights agenda will wrongly mix politics and economics. For some, this translates into a worry that the economic agenda at the centre of the WTO will dominate the domestic political agendas of Member states. We have considered how it might be possible to avoid this result, while preserving a distinct and robust role for the WTO as a trade body. There are also those who fear that linking trade and human rights draws the WTO into politics, and that this is to be avoided. However, there is no such thing as a free trade agenda that does not carry within it some priorities with political significance. Whichever way the WTO turns, its decisions will have an affect on available political options. The same is true for international human rights: however they are interpreted, they will also have an impact on political choices. What we need in both cases is a way of setting an international benchmark for what is minimally acceptable in the relationship between the two domains. We can no longer allow the standards set by international trade and those set by international human rights to function separately. Human rights can frame world trade, so that trade can in turn be a motor for bringing about what these rights promise.

Overall, globalization to date has done too little to minimize gender inequalities. While in some circumstances it may have decreased them (particularly in countries where it [has] led to an unprecedented employment of female labour), in other cases it has intensified them.[1]

Men and women are affected differently by globalization because of their different social positions and command over resources. An assessment of these issues is needed, in order to identify ways of promoting gender equality in the process of globalization.[2]

Trade falls in the intersection between economics and law, both of which are very mysterious fields . . . that claim to be gender-neutral.[3]

I. Introduction

The gender dimensions of international trade and investment, and the related fields of trade economics and international trade law, are attracting increasing attention from academic and policy researchers, policymakers and civil society groups. While these issues are now on the agendas of United Nations bodies, some international financial institutions and development organizations, they are still at the periphery of international trade negotiations and World Trade Organization ("WTO") operations. However, the gender-differentiated effects of trade liberalization and other trade-related processes are extremely relevant to the mandate and operations of the WTO, particularly in the context of the Doha Development Agenda.[4] This chapter provides an overview of current research, policy analysis and advocacy on gender, trade and investment issues; preliminary gender analysis of selected WTO agreements and processes; and suggestions for integrating a gender perspective in future trade negotiations and implementation of trade commitments.

Part II of the chapter includes an introduction to gender concepts and their relevance to international trade and investment; activities of international organizations, regional bodies, bilateral agencies and civil society groups related to gender, trade and investment; and gender-aware empirical research, economic modeling and legal analysis related to trade and investment. Part III highlights gender issues in trade and investment agreements related to key economic sectors and trade-related areas, and in WTO processes such as trade negotiations, dispute settlement, trade policy review and trade-related capacity building. Part IV includes recommendations for integrating a gender perspective in trade policy formulation, trade negotiations and implementation of trade commitments within the WTO and other trade fora.

II. Relevance of Gender to International Trade and Investment

A. Gender Concepts and Terms

Gender as an analytical concept originated in the social sciences and quickly crossed over into other fields, including law, and into national, regional and international policy. The Development Assistance Committee of the Organization for Economic Cooperation and Development ("OECD"), for example, defines gender as

> The economic, social, political and cultural attributes and opportunities associated with being male and female. In most societies, men and women differ in the activities they undertake, in access and control of resources, and in participation in decision-making. In most societies, women as a group have less access than men to resources, opportunities and decision-making. These inequalities are a constraint to development because they limit the ability of women to develop and exercise their full capabilities, for their own

[4] The Doha Development Agenda refers to the agenda outlined in outcome documents of the Fourth WTO Ministerial Conference held in Doha, Qatar in November 2001. This chapter also refers to "developed," "developing" and "least-developed" countries, mindful that these terms are contested, and that countries' self-categorization in terms of "development" can vary from one context to another. *See, e.g.*, ARTURO ESCOBAR, ENCOUNTERING DEVELOPMENT: THE MAKING AND UNMAKING OF THE THIRD WORLD (1995) (critiques "development" as an "historically produced discourse" rooted in particular Western concepts of tradition, modernity and progress); WTO, *Who Are the Developing Countries in the WTO?,* at http://www.wto.org/english/tratop_e/devel_e/d1who_e.htm (WTO agreements do not define "developed" and "developing" countries; a new member's status depends on the outcome of accession negotiations with existing members; however, WTO recognition of "least-developed" countries is based on designation as such within the United Nations system).

> benefit and for that of society as a whole. The nature of gender definitions (what it means to be male and female) and patterns of inequality vary among cultures and change over time.[5]

As the OECD definition implies, the concept of gender is closely related to normative goals such as *gender equity* or *gender equality*.[6] As the definition also suggests, gender is an extremely fluid and dynamic concept. In any gender analysis, attention needs to be paid to differences and disparities among groups of women and men, even within the same country or community, which may be related to age, race or ethnicity, citizenship, class, religion, marital status, geographic location, individual characteristics, or other factors.[7] Gender roles and relations are also subject to change, most noticeably in times of rapid social change, economic growth, or economic or political crisis.

In this regard, economists have noted a two-way interaction between gender and economics: on the one hand, economic change can affect groups of women and men differently, for example, because of their different access to employment and resources; on the other hand, because gender assumptions and relations influence the division of labor, distribution of work, income, wealth, education levels, access to public goods and services, and other aspects of economic life, these gender differences can influence the outcome of economic policy changes, such as agriculture reform or the promotion of particular industries.[8] The interactions between gender and economics, including trade economics, are discussed further in Part II.D of this chapter.

[5] Organization for Economic Cooperation and Development ("OECD"), *DAC Guidelines for Gender Equality and Women's Empowerment in Development Co-operation* (1998), at 10, *available at* http://www.oecd.org; *see also* INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT ("WORLD BANK"), ENGENDERING DEVELOPMENT THROUGH GENDER EQUALITY IN RIGHTS, RESOURCES AND VOICE, World Bank Policy Research Report (2001), at 34–35; CANDIDA MARCH ET AL., A GUIDE TO GENDER-ANALYSIS FRAMEWORKS, Oxfam GB Publication (1999), at 18.

[6] Although these terms are sometimes used interchangeably, they can be distinguished. For example, the United Kingdom Department for International Development ("DFID")makes a distinction between *equality of opportunity* and *equity of outcomes*: "equality of opportunity . . . means that women should have equal rights and entitlements to human, social, economic and cultural development, and an equal voice in civic and political life; equity of outcomes . . . means that the exercise of these rights and entitlements leads to outcomes which are fair and just." DFID, *Gender Manual: A Practical Guide for Development Policy Makers and Practitioners* (2002), at 7, *available at* http://www.dfid.gov.uk. Similarly, the World Bank defines *gender equality* in terms of "equality under the law, equality of opportunity—including equality in access to human capital and other productive resources and equality of rewards for work—and equality of voice." WORLD BANK, *supra* note 5, at 35. The World Bank stops short of defining gender equality in terms of outcomes for several reasons, including the possibility that different societies may pursue gender equality through different means, and the need to allow for women's and men's individual preferences and goals, which may lead to different outcomes. *Id.* In international law, the concept of *equity* has been used to justify positive measures to overcome structural inequalities or to achieve *substantive* (rather than *formal*) *equality*, for example, between women and men, or between differently situated women. However, it has been argued that the term *gender equity* can also be misused to dilute the principle of *gender equality* and thereby diminish women's status and possibilities. *See* Dianne Otto, *Holding Up Half the Sky, But for Whose Benefit?: A Critical Analysis of the Fourth World Conference on Women*, 6 AUSTL. FEMINIST LAW J. 7, 14–15 (1996).

[7] In the context of international development, for example, Chandra Mohanty has cautioned against generalizations about "women" or "gender relations" in "the Third World", or even within a particular country. Chandra Talpade Mohanty, *Under Western Eyes: Feminist Scholarship and Colonial Discourses*, in THE WOMEN, GENDER AND DEVELOPMENT READER (N. Visvanathan ed. 1997).

[8] *See, e.g.*, NILÜFER ÇAĞATAY, TRADE, GENDER AND POVERTY, United Nations Development Programme ("UNDP") Background Paper (2001), at 14; LORRAINE CORNER, WOMEN, MEN AND ECONOMICS: THE GENDER-DIFFERENTIATED IMPACT OF MACROECONOMICS, United Nations Development Fund for Women ("UNIFEM") Publication (1996).

In international policy, attention to "gender issues" can be traced to the 1970s, when the United Nations ("UN") General Assembly made the integration of women into development efforts an objective of its International Development Strategy for the Second United Nations Development Decade (1971–1980), and the First World Conference on Women was held in Mexico City in 1975, launching the UN Decade for the Advancement of Women.[9] In the area of human rights, the Convention on the Elimination of All Forms of Discrimination Against Women ("CEDAW") was adopted by the UN General Assembly in 1979 and entered into force in 1981.[10] The focus of early "women in development" programs was on increasing women's participation in economic activities in developing countries. However, many of these initiatives were structured as small, stand-alone "women's projects", and were evaluated to have had only marginal impact on women's lives. Moreover, it became apparent that an "add women and stir" approach did not address structural barriers to women's fuller involvement in social, economic and political life.

By the time of the Fourth World Conference on Women in Beijing in 1995, most international and bilateral development agencies and national machineries for women's affairs had shifted from a "women in development" to a "gender and development" approach. In principle, this policy change signaled a greater attention to differences in power relations between women and men (and among groups of women and men based on other social factors), and also to ways that gender assumptions influence social, political and economic institutions and policies.[11] The shift to a "gender and development" approach was accompanied by the introduction of various methodologies for gender analysis—geared originally to the planning, implementation and evaluation of externally-funded development projects in sectors such as agriculture, education and health.[12] These methodologies reflected a number of goals, including improved welfare, efficiency, equity and empowerment. Some of these methodologies also lent themselves to the "mainstreaming" of gender concerns in planning, budgeting and other institutional processes. "Gender mainstreaming," which was promoted at the Fourth World Conference on Women in 1995, was adopted by the UN Economic and Social Council ("ECOSOC") in 1997 as an operative goal for the entire UN system.[13] It was subsequently endorsed by the UN General Assembly in 2000,[14] and is being implemented by a large number of international and bilateral development agencies and national governments. Within the UN system,

[9] United Nations "UN"), 1999 World Survey on the Role of Women in Development: Globalization, Gender and Work (1999), at viii. By the end of this decade, 127 countries had established national institutions to promote women's advancement and participation in development, and UNIFEM and the International Research and Training Institute for the Advancement of Women had been established within the UN system. *Id*. During the same period, "women in development" units were established in a number of UN and bilateral development agencies, and several international networks of women's organizations were formed.

> Mainstreaming a gender perspective is the process of assessing the implications for women and men of any planned action, including legislation, policies or programmes, in all areas and at all levels. It is a strategy for making women's as well as men's concerns and experiences an integral dimension of the design, implementation, monitoring and evaluation of policies and programmes in all political, economic and societal spheres so that women and men benefit equally and inequality is not perpetuated. The ultimate goal is to achieve gender equality.[15]

B. Gender Differences and Trends in Global Economic Activity

In 1999, the UN Secretariat published an analysis of statistics on women's participation in the global economy. This analysis confirmed a number of trends that highlight some of the "gendered" aspects of international trade and investment:

- In newly industrializing countries, the share of women workers in export manufacturing—including labor-intensive industries located in export-processing zones established to attract foreign investors—has increased substantially, although the demand for women's labor in some middle-income countries weakened starting in the late 1980s as export production became more capital- and skill-intensive;
- The rapidly expanding international services sector—including tourism, finance and information processing—also employs a high proportion of women;
- In some regions, export crop expansion has displaced women from permanent, subsistence agriculture to seasonal work on export crops, including non-traditional agricultural exports;
- For every formal sector job created by trade and foreign direct investment, it is believed that several jobs are created in the informal sector (for example, through subcontracting chains), where workers are predominantly women;
- On the other hand, there is evidence that the expansion of certain *imports* under trade liberalization has had a *negative* multiplier effect on women's employment in the informal sector, as local producers lose market share to cheaper imports;
- Despite the global increase in women's paid employment, labor markets continue to be segregated by sex; women continue to be employed in a narrower range of occupations than men; and in general "women's jobs" pay less, and have lower status and opportunities for advancement;
- Women's employment in export industries in developing countries tends to be concentrated in lower-paying, labor-intensive work involving little or no training, poor working conditions and high turnover;
- Evidence is mixed as to whether female-male pay differentials (the "gender wage gap") are diminishing as more women enter the paid workforce;
- Full-time formal sector employment in both developed and developing countries is giving way to more irregular types of employment, including part-time work, home-based work and other informal sector activity. While these "flexible" jobs can allow women to juggle paid work with childcare and other responsibilities, many of these jobs are also characterized by low pay, few or no benefits, little training, insecurity and few opportunities for advancement; and

[15] U.N. ESCOR, 1997 Sess., 33rd mtg, Agreed Conclusions 1997/2, in *Official Records of the General Assembly, Fifty-second Session, Supplement No. 3*, ch. IV, para. 4, U.N. Doc. A/52/3.

- Women comprise an increasing proportion of migrants, particularly in the categories of temporary and irregular migrants.[16]

Based on these trends, the UN Secretariat found that "[g]lobalization has given rise to ambiguous and at times contradictory effects on gender equality."[17] It concluded that "[t]rade policy initiatives need to identify their likely social impact beyond producer interests and to include broadly conceived welfare support measures."[18]

More recently, the UN reported that women now represent nearly half of the total number of people infected with the HIV virus. However, in Sub-Saharan Africa, close to 60 percent of HIV-positive adults are women and about twice as many young women as men are infected.[19] Women's risk of HIV infection from heterosexual contact is estimated to be two to four times that of men, with girls and young women at the highest risk. Research has also found that gender roles and relations affect exposure to (and infection from) a number of tropical diseases, as well as influencing access to prevention and treatment programs.[20] These facts underscore the gender dimension of current debates about the impact of the Agreement on Trade-Related Aspects of Intellectual Property Rights and similar agreements on access to patented, life-saving drugs in developing countries.

C. International Attention to Gender and Trade Liberalization

Reflecting growing concern about potential negative aspects of trade liberalization for women, particularly in developing countries, a number of commitments have been made at international and regional levels to address these concerns. The Beijing Platform for Action, which was adopted unanimously at the Fourth World Conference on Women in 1995, called on governments to "ensure that national policies related to international and regional trade agreements do not have an adverse impact on women's new and traditional economic activities," and called on the UN General Assembly to "give consideration to inviting the World Trade Organization to consider how it might contribute to the implementation of the Platform for Action, including activities in cooperation with the United Nations system."[21] In its review of progress in implementing the Beijing Platform in 2000, the UN General Assembly found that

> Globalization has presented new challenges for the fulfillment of the commitments and realization of the goals of the Fourth World Conference on Women. . . . Although in many countries the level of participation of women in the labour force has risen, in other cases the application of certain economic policies has had such a negative impact that increases in women's employment often have not been matched by improvements in wages, promotions and working conditions.[22]

The General Assembly followed the recommendation of the Fourth World Conference on Women and called on the WTO, as well as the Bretton Woods institutions, UN organizations, and other international and regional intergovernmental bodies, to "support government efforts and, where appropriate, develop complementary programmes of their own to achieve full and effective implementation of the Platform for Action."[23]

The UN Commission on the Status of Women ("CSW") and the CEDAW expert committee have also addressed gender issues related to increased global trade and investment. In considering the challenges of reducing poverty and empowering women in a globalizing world, the CSW has urged governments, international organizations and other stakeholders to mainstream a gender perspective in development, trade and financial institutions; to enhance market access for developing countries and transitional economies, particularly in sectors that provide greater employment opportunities for women; and to help women-owned businesses benefit from international trade and investment.[24] In its concluding comments on the reports submitted by state parties to CEDAW, the CEDAW expert committee has also expressed concern about some of the negative aspects of increased integration in global markets. Recently, for example, the committee noted the poor working conditions of women in export-processing zones in Fiji, Guatamala, Mexico and Sri Lanka, and urged governments to more effectively enforce their labor laws and to require foreign investors to adhere to codes of conduct. The committee also expressed concern about the increased incidence of trafficking of women and girls related to the expansion of tourism in Barbados and Saint Kitts and Nevis.[25]

Other UN bodies have also identified gender issues in their work on trade and investment. For example, in 1999 the UN Conference on Trade and Development ("UNCTAD") organized an expert workshop on trade, sustainable development and gender, which made a number of recommendations for mainstreaming the consideration of gender issues in its activities and publications.[26] A subsequent expert meeting made further recommendations to UNCTAD and governments for mainstreaming gender concerns in the areas of commodities, trade in services, foreign direct investment policy, enterprise development,

[26] UNCTAD, *supra* note 1, at 445–451.

and information and communication technologies. Based on the outcomes of this expert meeting, UNCTAD's Commission on Enterprise, Business Facilitation and Development recommended a number of actions by governments, the international community and UNCTAD, including that UNCTAD should appoint focal points on gender in each of its divisions to integrate a gender dimension in all substantive areas.[27] In 2003, a UN inter-agency task force on gender and trade was created, headed by UNCTAD, to coordinate research, capacity building and advocacy activities within the UN system. Gender and trade was also a cross-cutting issue considered at UNCTAD XI, which took place in Sao Paolo, Brazil in 2004.[28]

Regional trade bodies have also taken steps to mainstream gender concerns in trade policy. In 1997, the Southern Common Market ("Mercosur") initiated broad consultations to decide on a mechanism for integrating a gender perspective in its activities, resulting in the establishment of a gender advisory unit within Mercosur.[29] In 1999, members of the Asia-Pacific Economic Cooperation ("APEC") forum endorsed a Framework for the Integration of Women in APEC.[30] APEC's Second Ministerial Meeting on Women, held in September 2002 in Guadalajara, recommended that APEC and the APEC economies intensify their work on gender analysis, collection of sex-disaggregated data and inclusion of more women in all APEC activities. APEC ministers also recommended that APEC economies take account of the gender-differentiated impacts of trade liberalization in the design of trade policies, and address the negative impact on women workers of industry restructuring resulting from trade liberalization. The ministers also endorsed the establishment of an APEC Gender Focal Point Network, which began activities in 2003.[31] Other regional bodies that have taken steps to mainstream gender concerns in their trade-related work include the Caribbean Community (CARICOM), the Pacific Islands Forum and the Southern African Development Community (SADC).[32] The Commonwealth Secretariat is also promoting gender mainstreaming more generally in trade and industry.[33]

Several international agencies have commissioned research and policy analysis on gender and trade issues. Even before the establishment of the WTO, the United Nations Fund for Women ("UNIFEM") commissioned a background paper on the implications of the WTO and other trade initiatives for women.[34] More recently, the United Nations Development Programme ("UNDP") commissioned a background study on gender, trade and poverty for a publication on trade and human development.[35] The International Monetary Fund ("IMF") and World Bank are also beginning to consider gender implications of trade liberalization through their poverty and social impact analyses of macroeconomic policy changes in certain countries.[36] A World Bank research project currently under way is also examining the gender dimensions of trade liberalization through cross-country analysis and country-level studies in Latin America and Asia.[37] Similar studies and policy briefs have also been prepared for bilateral development agencies.[38]

Civil society organizations and networks have also been extremely active in raising gender concerns related to trade liberalization and foreign direct investment at international and regional levels, and with national governments. Women's organizations from several regions organized a Women's Caucus at the First Ministerial Conference of the WTO in Singapore in 1996, where they issued a press statement calling on the new WTO to adopt gender-aware policies and procedures. The Women's Caucus evolved into an Informal Working Group on Gender and Trade ("IWGGT"), which met with WTO officials in 1997 to discuss opportunities for addressing gender issues within the WTO, for example, through the work of the Trade Policy Review Body. IWGGT members subsequently produced briefing papers on gender and trade and participated in civil society activities around the Second Ministerial Conference in Geneva in 1998 and the Third Ministerial Conference in Seattle in 1999.[39] A second network, the International Gender and Trade Network (IGTN) was formed in early 2000, and includes seven regional networks of women involved in research, economic literacy and advocacy on trade and investment issues. IGTN members participated in civil society activities around the Ministerial Conferences in Doha and Cancún, and are also engaged in regional and bilateral trade developments.[40] Many members of the IWGGT are also active in the IGTN.

Several of these organizations have also participated in civil society activities related to other international conferences, where they have raised trade-related concerns.[41] Geneva Women in International Trade, a professional association, also organized programs on women as economic players in sustainable development and international trade as part of the June 2003 and 2004 public symposia hosted by the WTO in Geneva.[42]

The IWGGT originally called on governments and WTO officials to collect sex-disaggregated data and undertake gender impact assessments of trade policies, and to develop in-house capacity to undertake gender analysis in all trade sectors and trade-related areas.[43] Several women's organizations and researchers are now working to develop gender-and-trade indicators and other tools for carrying out gender assessments of existing or proposed trade commitments.[44] Women's organizations are also calling for greater attention to gender issues in the sustainability impact assessments of trade that are being carried out, for example, within the European Union.[45] Recommendations have also been made to establish "gender desks" within national trade ministries;[46] and to establish an independent focal point to monitor the coherence between policies and practices of the WTO and international financial institutions and the operations of UN programs and specialized agencies, as well as coherence between WTO agreements and other international instruments such as the Universal Declaration of Human Rights, CEDAW and the Convention on Biological Diversity.[47] The IGTN's current advocacy

position is that thé comprehensiveness of the Uruguay Round agreements interferes with governments' responsibilities to ensure food security, protect public health and determine their own development agendas. The IGTN therefore has opposed the introduction of new issues into the WTO agenda, and believes that the scope of WTO rules should be scaled back essentially to the regulation of trade in goods.[48]

D. Socioeconomic Approaches to Gender, Trade and Investment

A growing number of economists are now studying international trade and foreign direct investment from a gender perspective. Their work, which includes empirical research, economic modeling and policy analysis, draws on several related areas of study: the gender biases in economic development programs; the gender dimensions of the international division of labor; gender-differentiated impacts of structural adjustment programs; and gender analysis of macroeconomic policies.

Since the early 1970s, economists and other social scientists have documented the ways in which development programs financed by external agencies have ignored the important economic activities of women in developing countries, and even undermined their position, for example, through the introduction of land-titling systems that ignored women's traditional land use rights.[49] Research since the 1980s has also documented the evolution of an "international division of labor", as manufacturing firms in industrialized countries have relocated or subcontracted more labor-intensive production processes to countries with lower labor and other costs, and developing countries have established duty-free zones to attract more of these firms. This research also has highlighted the preference of many firms operating in duty-free zones to employ young women workers for labor-intensive tasks—arguably on the grounds of their greater "manual dexterity," but also implicitly based on assumptions about their "docility" and willingness to accept lower wages than men.[50] As a consequence, the "international division of labor" has been observed to be highly "gendered," with significant job segregation on the basis of sex and age.[51]

The macroeconomic stabilization and structural adjustment policies promoted by the IMF and World Bank for developing countries have also attracted considerable attention from economists, social scientists and policy analysts. A collection of studies commissioned by the United Nations Children's Fund ("UNICEF") was among the first to highlight the social costs of adjustment.[52] A large number of studies followed which highlighted the adverse impacts of adjustment policies on poor households, and particularly

[51] This research has been updated more recently to take account of gender differences and trends in employment in export agriculture and cross-border services, as well as manufacturing. *See supra* note 16; *see also* UNIFEM, PROGRESS OF THE WORLD'S WOMEN 2002, VOL. 2 (2002), at 30–39.

[52] ADJUSTMENT WITH A HUMAN FACE, UNICEF Publication (Giovanni Andrea Cornia et al., eds., 1987).

on women and girls. Among the impacts noted were the layoffs of women from formal sector jobs due to industry restructuring and public sector downsizing; women's increased employment in the informal sector; and women's and girls' reduced access to education and health services due to cutbacks in social services and the imposition of "cost recovery" measures in schooling and health services.[53] Gender-differentiated impacts have also been identified in countries in transition from planned to market economies[54] and in countries affected by financial crises.[55]

In the field of economics, a gender perspective was first introduced at the micro and meso levels, to explain the allocation of roles, income and resources within households and the pervasive segregation and wage discrimination between women and men in labor markets.[56] However, the stabilization and adjustment policies of the IMF and World Bank prompted a number of economists in the 1990s to begin examining macroeconomics as well from a gender perspective. At a conceptual level, these economists identified several levels of "gender blindness" in mainstream macroeconomic theory and modeling. First, they noted that assessments of macroeconomic performance based on conventional indicators such as Gross Domestic Product ("GDP") are incomplete because the national accounts on which GDP measures are based generally ignore or undercount home-based production carried out primarily by women.[57] Second, they pointed out that the macroeconomic models used to formulate stabilization and adjustment policies ignore women's unpaid labor in reproductive and care-giving activities, and therefore fail to recognize that reductions in basic services, such as health care, effectively shift the related costs from the public sector to the "reproductive" or "care" sector. Third, they noted that mainstream macroeconomics fails to recognize that labor markets are dependent on the "reproductive" or "care" sector, and therefore that cutbacks in basic services such as education and health care can have a negative effect on the welfare of the future labor force, and thus on future economic performance.[58]

[56] *See, e.g.,* JOYCE P. JACOBSEN, THE ECONOMICS OF GENDER (1998).

[57] Established by the United Nations in 1953, the System of National Accounts ("SNA") is intended to provide a consistent basis for calculating national income. In its earliest formulations, the SNA excluded most forms of subsistence production and other household activities such as cooking, cleaning and care of children and elders—tasks carried out primarily by women in most societies. However, statisticians who advised developing countries such as Papua New Guinea and Jamaica on setting up their SNAs did make adjustments to include subsistence production and other unpaid work performed (or assumed to be performed) by men. MARILYN WARING, IF WOMEN COUNTED: A NEW FEMINIST ECONOMICS (1988), at 103–111. The most recent version of the SNA methodology now recommends counting a variety of tasks related to subsistence production. However, these tasks are still "undercounted" because of weaknesses in data-gathering. Unpaid work such as cooking, cleaning and childcare is still considered outside the "production boundary" of the SNA. UNIFEM, PROGRESS OF THE WORLD'S WOMEN 2000 (2000), at 22–24.

[58] Nilüfer Çağatay et al., *Introduction to Special Issue on Gender, Adjustment and Macroeconomics*, 23 WORLD DEV. 1827, 1828–29 (1995); *see also* CORNER, *supra* note 8; THE STRATEGIC SILENCE: GENDER AND ECONOMIC POLICY (Isabel Bakker ed. 1994); Ingrid Palmer, *Social and Gender Issues in Macro-Economic Policy Advice*, GTZ Social Policy Series No. 13 (1994).

Based on these insights, several economists began developing approaches to integrate gender in macroeconomic modeling. Initial approaches included the disaggregation of key variables by gender; the introduction of gender as an additional variable; the use of a two-sector or two-system approach, for example, to model interactions between the "paid" and "unpaid" economies; and combinations of these methods.[59] More recently, economists have begun applying these methods to topics in international economics, including the relation between gender inequality and trade liberalization in manufacturing and agriculture, and the gender-differentiated impacts of financial liberalization and financial crises.[60] They are also integrating gender in a wider range of economic models, including computable general equilibrium models.[61]

One of the key insights from this work is that there is a two-way interaction between gender and macroeconomic or trade policy: on the one hand, macroeconomic and trade policies are likely to have different impacts on women and men (and within groups of women and men) because of different access to resources, different household responsibilities, gender segregation and discrimination in labor markets, and other gender-related factors; on the other hand, these gender differences can influence the outcome of macroeconomic and trade policies, for example, by affecting the "supply response" to the liberalization of a particular sector.[62] Stated differently, to the extent women and men in a particular country or locality face different opportunities and constraints, this may influence their ability to benefit from trade liberalization and also to adjust to any adverse changes that result from it.

Nilüfer Çağatay, one of the leading economists working on the gender dimensions of trade and trade policy, has suggested that a comprehensive assessment of the gender-related impacts of a particular trade reform should consider

- changing patterns and conditions of work, including paid and unpaid work;
- changes in gender gaps in wages, earnings, patterns of ownership and control over assets;

[59] Çağatay et al., *supra* note 58, at 1830–31. While these economists believe it is important to introduce gender into formal economic modeling, they also emphasize the limitations of economic models and their underlying assumptions. Therefore, they stress the importance of seeing models as complements—not substitutes—for other types of analysis. *Id*. at 1829.

[60] Caren Grown et al., *Introduction to Special Issue on Growth, Trade, Finance, and Gender Inequality*, 28 WORLD DEV. 1145, 1149–1153 (summarizing articles included in the special issue). For information on current research in these areas, see the website of the International Working Group on Gender, Macroeconomics and International Economics (http://www.genderandmacro.org). The extension of gender analysis from macroeconomic policy to international trade and investment was a logical one, particularly since the stabilization and structural adjustment policies that first attracted the attention of gender-aware economists frequently included measures to liberalize trade and attract foreign direct investment. *See* Anne O. Krueger and Sarath Rajapatirana, *The World Bank Policies Towards Trade and Trade Policy Reform*, 22 WORLD ECON. 717, 718–20 (1999); World Bank, *World Bank Support for Developing Countries on International Trade Issues*, DC/99–19 (Sept. 14, 1999) (between 1990 and 1998, 68 percent of World Bank adjustment loans included support for trade and exchange rate policy reforms).

[62] ÇAĞATAY, *supra* note 8, at 15.

- changes in consumption patterns and use of technology by men and women;
- changes in public provisioning of services and their gendered impacts; [and]
- the gender-differentiated empowerment implications of trade flows.[63]

Other "transmission channels" that could be examined include the impact on the government budget of lost tariff revenues (in the case of tariff liberalization) and the implementation costs of the trade reform;[64] the social and economic impact of changes in migration patterns attributable to the trade reform;[65] and the impact of the trade reform on existing laws and regulations.[66] The scope of such a gender assessment depends on the availability of relevant statistics, disaggregated by sex, age, ethnicity and other relevant categories, and including baseline data against which to measure changes. It may also be difficult methodologically to distinguish the effects of a particular trade reform from the effects of other economic policies and global or regional events and trends.

To date, most of the research and analysis related to gender, trade and investment has focused on the positive employment and income effects of export promotion. Much less work has been done on the displacement effects of trade liberalization in import-competing sectors, and on the impact of trade liberalization on consumption patterns. In terms of sectors, most of the research thus far has focused on export manufacturing, including in particular duty-free zones, and traditional export crops. Relatively less work has been done on non-traditional agricultural exports (such as specialty vegetables and flowers) and services. Because of the difficulty of obtaining relevant data, little research has been done on trade links with the informal and reproductive sectors.[67] New areas covered by international trade rules, such as intellectual property protection, are also just beginning to be analyzed.

E. Legal Analysis of Gender, Trade and Investment

As trade agreements expand into new sectors such as services and into "trade-related" areas such as intellectual property rights, and as greater attention is paid to "behind-the-border" issues, "the central domain of 'trade' policy is increasingly domestic regulation and legal systems."[68] However, domestic laws and regulations are also critical tools for redressing discrimination and structural disadvantages experienced by women and other groups (including indigenous people and ethnic minorities), and many countries have enacted laws to fulfill international obligations under treaties such as CEDAW and

[63] *Id*. at 19. *See also* GAMMAGE ET AL., *supra* note 44 (gender assessments of trade agreements should consider likely effects on prices, employment, wages, consumption, access to public goods and services, laws and regulations important to women and other disadvantaged groups, unpaid household and community work, and migration trends, as well as implementation costs); Fontana et al., *supra* note 16 (effects of trade policy reform on income distribution are typically analyzed in terms of effects on employment, relative prices and government expenditure); Sparr, *supra* note 44 (gender analysis of trade or investment policy could start with study of gender-differentiated impacts on "reproductive" and "productive" work at the family/household and community levels; or gender differences in employment and consumption patterns within a tradeable sector).

[64] *See infra* text accompanying notes 100–104.

other international commitments such as the Beijing Platform for Action.[69] Therefore, policymakers, academics, practicing lawyers and activists interested in gender equality and women's rights have become increasingly concerned about the implications of trade liberalization and specific trade and investment agreements for national and subnational laws that benefit women and other historically disadvantaged groups. A number of critical approaches to international economic law have also pointed to ways in which specific trade and investment agreements, and related institutions and processes, may themselves be "gender-biased," or at least "gender-blind."

In recent years, a number of "new approaches" to international law have been extended to international economic law, and specifically trade law.[70] Several of these new approaches are multidisciplinary, including international law and international relations[71] and law and economics.[72] The new approaches also include a variety of critical perspectives on legal norms, rules and institutions, sometimes described as "critical jurisprudence."[73] The earliest of these perspectives, referred to as "Third World," "Southern" or "postcolonial" critiques of international law, emerged in the 1970s and highlighted the Western origins and biases in international legal principles, as well as the dominance of European and North American countries in the international law-making processes and international institutions.[74] Other critical perspectives—sometimes referred to as "new-stream" approaches—challenge the neutrality, objectivity and coherence of international law rules, and emphasize the extent to which they are grounded in substantive political values.[75] A third set of critical approaches to international law has emerged from the

various strands of feminist theory.[76] While reflecting diverse viewpoints and drawing on a variety of disciplines, feminist and other gender-aware approaches to international law highlight the ways in which international legal norms, rules and institutions tend to reflect predominantly Western "male" perspectives and experiences, and ignore or stereotype the roles and experiences of women.

Gender-aware approaches to international law have increasingly focused on international economic law and institutions, including the policies and practices of the IMF and World Bank,[77] the WTO[78] and regional trade agreements,[79] and international commercial

arbitration.[80] Jurists have also examined the impact of globalization on women, and the inadequacy of state-centered human rights law to address the conduct of non-state actors such as the IMF, World Bank, WTO and multinational companies.[81] In the areas of trade liberalization and foreign direct investment, gender-aware scrutiny has been applied to the conditions of women workers (particularly those working in duty-free zones),[82] the precarious circumstances of women migrants[83] and the increased trafficking of women and girls (linked to regional economic integration, improved transport systems and expansion of tourism).[84] Gender analysis has also been applied to specific aspects of WTO agreements, including the Agreement on the Application of Sanitary and Phytosanitary Measures[85] and the Agreement on Subsidies and Countervailing Measures.[86]

Hilary Charlesworth and Christine Chinkin, two of the first international jurists to apply feminist analysis to international law, have suggested several possible levels of analysis to uncover gender biases or "silences" in particular areas of international law. These include inquiries about the relative presence of women and men in international legal institutions; the vocabulary used in international law instruments (such as the use of the term "security" to refer to military security, rather than food, health, livelihood or other forms of "human" security); and underlying concepts of international law (including the use of dichotomies such as public/private, economic/political, and binding/non-binding).[87] In the area of trade law, commentators have also noted how the links made to the "neutral science" of

economics and the increasingly technical nature of trade discourse both contribute to the appearance of trade rules as neutral and objective.[88]

One way to analyze particular trade or investment agreements from a gender perspective would involve consideration of (1) the text of the agreement; (2) related implementation and enforcement mechanisms; and (3) possible interactions with the various laws and norms that influence gender roles and women's opportunities and constraints within a particular country.[89] This analysis should also be informed by an understanding of the social, economic and political context in which the relevant trade or investment activity is taking place, including the opportunities and constraints facing women and other disadvantaged groups.

Under this approach, a trade or investment agreement would first be examined to identify any overtly "gender-biased" provisions, or apparently "gender-neutral" provisions that might have a disparate effect on women and men (or on groups of women or men) in light of their different social and economic circumstances. Second, the related implementation and enforcement mechanisms would be considered, including the gender composition and gender awareness of the decision-making bodies involved. Finally, the agreement would be analyzed in terms of its possible interactions with domestic laws and regulations, taking into account the range of laws and norms that influence women's and men's status and rights in a particular country, the different circumstances of women within the same country (which could be related to age, ethnicity, religion or other factors), and institutional and practical constraints on the enforcement of laws and access to justice.[90]

More specifically, a trade or investment commitment could be examined to determine whether it supports or conflicts with any of the following:

(1) The country's international commitments relevant to gender equality and human rights;[91]

[88] Sara Dillon, *A Farewell to "Linkage": International Trade Law and Global Sustainability Indicators*, 55 RUTGERS L. REV. 87, 110–12 (2002); Pahuja, *supra* note 76, at 44–47. As discussed in Section II.D, there is a growing body of literature that identifies and addresses gender biases in economic concepts, indicators, research and models. *See supra* text accompanying notes 56–61.

[89] This approach to legal/regulatory analysis is based on GAMMAGE ET AL., *supra* note 44, at 23–27.

[90] The legal framework shaping gender relations and women's rights in a particular country includes the country's international treaty commitments, such as CEDAW and International Labour Organization ("ILO") conventions, international consensus documents such as the Beijing Declaration and Platform for Action, and its national constitution, statutes, regulations and judicial rulings. WORLD BANK, *supra* note 5, at 113. In federal systems, state or provincial laws, regulations and judicial decisions may also need to be considered. In many countries, religious, traditional or customary laws—which may be interpreted and enforced by a separate system of courts—will also be relevant. Taken together, this web of laws and norms may either support or undermine a country's international commitments to gender equality and rights. CHRISTINE CHINKIN, GENDER MAINSTREAMING IN LEGAL AND CONSTITUTIONAL AFFAIRS: A REFERENCE MANUAL FOR GOVERNMENTS AND OTHER STAKEHOLDERS, Commonwealth Secretariat Gender Management System Series (2001), at 14–15. Institutional, cultural and practical factors can also influence the rights and opportunities of women and other disadvantaged groups. For example, beneficial laws may not be vigorously enforced because regulatory agencies are underfunded and understaffed. Judges and government officials may be insensitive or biased toward women (or other groups) in their interpretation and enforcement of laws. In many countries, women also are not aware of their rights, or may be reluctant or unable to assert them for financial or other reasons. GAMMAGE ET AL., *supra* note 44, at 24–26.

[91] These could include CEDAW, the Convention on the Rights of the Child and other human rights treaties; ILO conventions related to discrimination and equal pay, child labor, freedom of association and the right to organize, part-time and home work, and occupational health and safety; environmental treaties such as the Convention on Biological Diversity; regional human rights conventions; and international undertakings such as the Beijing Declaration and Platform for Action.

(2) The country's constitution;[92]
(3) National and subnational laws and regulations that benefit women and other disadvantaged groups, in particular:
  (a) non-discrimination and equal treatment laws;[93]
  (b) affirmative action and other laws providing special treatment;[94] and
  (c) gender-neutral laws such as those pertaining to fair wages, food labeling, and health and safety;[95]
(4) Gaps or biases in the application or enforcement of laws that benefit women and other vulnerable groups, such as labor laws;[96] and
(5) Religious, traditional or customary laws and practices, especially those relating to land and other assets.[97]

This approach to gender-aware legal analysis is used in the following Part to analyze selected WTO agreements and processes from a gender perspective.

III. Gender Analysis of Selected Trade Agreements and WTO Processes

This section is intended to provide an overview of gender issues in trade and investment agreements related to key economic sectors and trade-related areas, as well as gender issues in trade-related processes such as trade negotiations, dispute settlement, trade policy review and trade-related capacity building. The main focus of discussion is on the Uruguay Round agreements, although some reference is made to regional and bilateral agreements. The approach is multidisciplinary, and draws on social, economic and legal/regulatory research and analysis. The approach also considers a range of gender-related impacts, including direct and indirect effects of changes in cross-border trade and investment, government spending and other activities influenced by trade and investment agreements; direct or indirect effects of specific provisions in trade or investment agreements; and gender biases in trade-related processes. This discussion is selective and reflects current limitations in data-gathering and gaps in research and analysis. The

[92] Many countries' constitutions include broad protections of civil, political, economic, social and cultural rights, and may include specific commitments to gender equality. *See* CHINKIN, *supra* note 90, at 48–49.

[93] These include laws that prohibit discrimination against women or other social groups in education, employment, ownership of assets and other activities, or that mandate equal payment and equal treatment.

[94] These include laws and programs that address serious gender disparities by setting targets or quotas for women's or girls' participation (including small business assistance and government procurement set-asides), or by providing subsidies or other benefits (such as reduced fees, lower borrowing rates or training) to encourage their participation. Such "special measures aimed at accelerating de facto equality between men and women" are expressly authorized under CEDAW. *See* CEDAW, *supra* note 10, art. 4.1. Also included in this category are laws that directly address women's reproductive role, such as maternity leave legislation.

[95] These could also include gender-neutral laws granting parental leave, or mandating or subsidizing childcare in the workplace.

[96] For example, the labor laws and regulations in most countries extend primarily to formal sector workers in defined "workplaces", and therefore generally do not protect domestic, home-based or agricultural workers. Gaps in legal protections can also be created when national or local governments grant exemptions—e.g., from applicable labor or workplace safety regulations—to firms operating in duty-free zones. Facially neutral laws can also be applied in a discriminatory manner (e.g., land titling, tax and social security laws that assign all rights to the "head of household", usually presumed to be a male household member). Facially neutral laws can also disadvantage women because of their more limited access to assets and employment opportunities (e.g., banking regulations that require loans to be secured by land or other traditional forms of collateral). Laws can also be overtly discriminatory (e.g., laws requiring a spouse or male guardian to countersign contracts and other loan documents). *See generally* CHINKIN, *supra* note 90, at 14–19, 34–36 and 50–60; WORLD BANK, *supra* note 5, at 107–146.

[97] GAMMAGE ET AL., *supra* note 44, at 26.

treatment of particular agreements and issue areas is not exhaustive, but is intended to complement the fuller discussion of these topics in other chapters.

A. Manufacturing and Trade in Goods

1. General Agreement on Tariffs and Trade 1994

A growing body of research indicates that liberalization of trade in goods has had a number of gender-differentiated effects within trading countries, including effects on employment. In particular, the growth of export industries in many newly industrializing countries has increased wage employment opportunities for women, although women's employment has been concentrated in labor-intensive industries characterized by low wages and poor working conditions compared to more capital-intensive industries.[98] Most of the research to date has focused on positive employment effects (i.e. "job gains") in export sectors. Less data are available on displacement effects (i.e. "job losses") in import-competing sectors, although there is some evidence of gender-differentiated effects, for example, in labor-intensive industries in African countries that have been hurt by increased imports of lower-cost products from Asia.[99] Trade theory suggests that trade liberalization would also have an effect on consumption of traded goods (and domestically-produced substitutes), through changes in relative prices, and principles of gender analysis suggest that these consumption effects are likely to be "gendered," for example, because of women's and men's different household responsibilities and access to cash income. However, relatively little research has been done in this area.

Another recognized impact of liberalized trade in goods is the reduction of government revenue resulting from progressively lower tariffs. This impact is felt most strongly by developing countries, which historically have relied on tariffs to provide a substantial portion of their revenues.[100] Indeed, recent research has found that developing countries since 1970 have suffered declining tax revenues due to tariff reductions, which have not been adequately offset by increases in income and other taxes.[101] Recent work on gender analysis of government budgets suggests that the "government revenue" effects of tariff reductions also are likely to have a gender dimension.[102] For example, if tariff

[98] Mehra and Gammage, *supra* note 16, at 540–41; UN, *supra* note 9, at 9–20.

[99] UN, *supra* note 9, at 9–13.

[100] Developing countries' dependence on tariff revenues is acknowledged in the General Agreement on Tariffs and Trade, as amended ("GATT"). *See* GATT, Art. XXVIII bis. 3(b). One recent study found that tariff revenue represents 35 percent of low-income countries' total revenue, compared to one percent for high-income countries. Barsha Khattry and J. Mohan Rao, *Fiscal Faux Pas?: An Analysis of the Revenue Implications of Trade Liberalization*, 30 WORLD DEV. 1431, 1437 (2002).

[101] Kattry and Rao, *supra* note 100. The authors note that tariffs are considerably easier to assess and collect than other taxes, particularly for countries with limited capacity to administer taxes and where corruption and tax evasion are common. Other commentators have noted that the economic models used to project impacts of trade liberalization typically make the unrealistic assumption that tariff revenues will be replaced by non-distortionary lump sum taxes; in fact, any domestic tax introduced to offset lost tariff revenue would lead to some economic distortion. *See* Mark Weisbrot and Dean Baker, *The Relative Impact of Trade Liberalization on Developing Countries* (2002), *available at* http://www.cepr.net/relative_impact_of_trade_liberal.htm.

[102] *See, e.g.*, UNIFEM, GENDER BUDGET INITIATIVES: STRATEGIES, CONCEPTS AND EXPERIENCES (2002); Debbie Budlender, *The Political Economy of Women's Budgets in the South*, 28 WORLD DEV. 1365 (2000); Helena Hofbauer Balmori, *Gender and Budgets: Overview Report*, BRIDGE Publication (2003), *available at* http://www.ids.ac.uk/bridge. Although most work to date has focused on public expenditures, new tools are being developed to analyze the gender dimensions of revenue collection and other economic policies. Kathleen Barnett and Caren Grown, *Gender Impacts of Government Revenue Collection: The Case of Taxation*, Commonwealth Secretariat Publication (2004); *See also* MALHOTRA ET AL., *supra* note 29, at 164, Box 7.4 (trade taxes and spending policies can have significant impact on human development and poverty reduction efforts).

reductions are not offset by increases in government revenue from other sources, government expenditures are likely to be cut. Research on the impact of reduced social spending under structural adjustment programs in many developing countries, for example, has found a disproportionate negative impact on poor women. There could also be a gender-differentiated impact depending on the taxes or other charges that are introduced to make up for lost tariff revenue. For example, consumption-based taxes such as sales taxes, and user charges on basic services, are regressive and would disproportionately affect lower-income households, and particularly women who are responsible for basic household expenditures.

There is also increasing recognition that the General Agreement on Tariffs and Trade ("GATT") and other trade agreements entail substantial implementation costs, particularly for developing countries. For example, a widely-circulated study by World Bank economists estimated that implementation of only three of the Uruguay Round agreements had cost more advanced developing countries on average about $150 million, and that the costs for least-developed countries could be greater.[103] Notification procedures alone can impose a financial and administrative burden, particularly on least-developed countries. One commentator, for example, estimates that the Uruguay Round agreements impose a total of 215 different notification requirements on WTO members.[104] These implementation costs can have gender implications for developing country governments, if they absorb a substantial portion of the national budget and reduce the amounts available for social and other developmental expenditures.

The text of the GATT also includes provisions that reflect a "gender-blind" approach to development and other domestic policy goals on the part of the original GATT contracting parties. For example, Article XVIII addresses the issue of government assistance for development in terms of "programmes and policies of economic development designed to raise the *general* standard of living," and therefore permits flexibility "to grant tariff protection required for the establishment of a particular *industry*."[105] Similarly, Part IV on trade and development emphasizes developing countries' need to expand export earnings as a means to achieve economic development. These provisions reflect an understanding of development as essentially an economic process to be pursued through promotion of particular industries, especially export industries. This concept of development is far narrower than the approaches more recently followed by international and bilateral development agencies and reflected in many countries' national development plans, which also emphasize the importance of human development, poverty reduction, gender equality and other social goals.[106]

[103] J. Michael Finger and Philip Schuler, *Implementation of Uruguay Round Commitments: The Development Challenge*, 23 WORLD ECON. 511 (2000) (study examined implementation costs of the Agreements on Implementation of Article VII of the GATT 1994 [Customs Valuation], the Application of Sanitary and Phytosanitary Measures, and Trade-Related Aspects of Intellectual Property Rights).

[104] Yash Tandon, *Evaluation of WTO and Other Forms of Technical Assistance to Developing Countries in the Context of the Uruguay Round of Agreements* (2002), at 2, *available at* http://www.ileapinitiative.com/pages/events.htm.

[105] GATT, Art. XVIII.2 (emphasis added).

[106] *See, e.g.*, UNDP, Development Policy, *at* http://www.undp.org/policy (UNDP supports countries' development agendas in the areas of democratic governance, poverty reduction, crisis prevention and recovery, energy and environment, information and communications technology and HIV/AIDS, and promotes gender equality in all activities); World Bank, About Us: What Is the World Bank?: At a Glance, *at* http://www.worldbank.org (World Bank supports investment in basic health and education; social development, inclusion, governance and institution building for poverty reduction; strengthening governments' ability to deliver quality services; protection of environment; private business development; and reforms for a stable macroeconomic environment). .

Article XX of the GATT, which sets out the non-trade policy areas that may provide a basis for exceptions from GATT disciplines, is also "gender-blind." The article recognizes the legitimacy of certain measures taken to protect "public morals", "human, animal or plant life or health," "protection of national treasures," "conservation of exhaustible natural resources," and laws and regulations in a variety of areas such as customs enforcement, intellectual property protection and prevention of deceptive practices.[107] However, Article XX does not refer to government measures taken to ensure equal treatment and non-discrimination, to promote gender equality or to redress historical disadvantages suffered by women and other social groups.[108] While one commentator has argued that the "public morals" exception in Article XX might be construed to cover measures to promote women's rights, she acknowledges that this argument is novel and untested.[109] The exception for "human, animal or plant life or health" could arguably apply to a variety of laws and regulations that are beneficial to women, including health regulations. However, as discussed extensively elsewhere, GATT and WTO dispute panels and the WTO Appellate Body have interpreted this and other Article XX exceptions quite narrowly.[110]

2. Agreement on Textiles and Clothing

Textile and clothing manufacturers in many countries employ predominantly women, at least in the more labor-intensive processes,[111] and therefore trade arrangements relating to textiles and clothing ("T&C") have a strong gender dimension. While the discussion here relates primarily to the Uruguay Round Agreement on Textiles and Clothing ("ATC"), similar issues can arise in the context of regional and bilateral agreements on T&C trade.

As discussed elsewhere in this book, the ATC provides for the staged phase-out of bilateral quotas on T&C imports and exports that had been in place since 1974 under the Multi-Fibre Agreement.[112] Over a five-year period, T&C that were previously subject to import quotas were to be "integrated" into the GATT in four phases. While the ATC was expected to result in a significant increase in T&C exports from developing countries, where T&C manufacturing operations are increasingly located, these benefits

[107] GATT, Art. XX(a)–(g).

[108] The absence of such provisions in the original text of Article XX is not surprising, since gender equality and women's rights became prominent international and national policy goals only in the 1970s (although the principles of equality and non-discrimination were already embedded in the United Nations Charter signed in 1945 and the Universal Declaration of Human Rights adopted in late 1948). Moreover, even general principles of human rights and labor rights were not included in the original Article XX text, although the ILO predated the GATT by several decades and the Universal Declaration of Human Rights was drafted concurrently with the GATT.

[109] *See* Jarvis, *supra* note 78. This proposal is limited to "outwardly-directed" trade measures, such as measures to restrict imports from countries where discriminatory or abusive practices against women are sanctioned. The proposal does not consider measures that a government might take to promote gender equality domestically, such as assistance programs for businesses owned by women, which might have effects on trade. *See infra* text accompanying notes 213–18. A number of other commentators have debated the possible use of the "public morals" exception as a basis for imposing trading sanctions on countries that violate fundamental human rights, for example, by permitting or promoting the use of slave labor. *See, e.g.*, Salman Bal, *International Free Trade Agreements and Human Rights: Reinterpreting Article XX of the GATT*, 10 MINN. J. GLOBAL TRADE 62 (2001); Adelle Blackett, *Whither Social Clause? Human Rights, Trade Theory and Treaty Interpretation*, 31 COLUM. HUM. RTS. L. REV. 1 (1999); Steve Charnovitz, *The Moral Exception in Trade Policy*, 38 VA. J. INT'L L. 689 (1998); Frank J. Garcia, *The Global Market and Human Rights: Trading Away the Human Rights Principles*, 25 BROOK. J. INT'L L. 1 (1999).

[110] *See, e.g.*, Bal, *supra* note 109; Blackett, *supra* note 109 (finds evidence of more flexible interpretation in recent Appellate Body decisions); Garcia, *supra* note 109.

[111] Mehra and Gammage, *supra* note 16, at 540.

[112] *See* Chapters 9 and 53 of this book.

have generally not been realized for several reasons. Observers have noted two major loopholes in the ATC text itself. First, since the phase-out schedule for import quotas is "back-loaded," a large proportion of the expected increases in market access may not be realized until the end of the implementation period.[113] Second, the phase-out schedule is structured in terms of percentages of total T&C imports, and therefore importing countries have had considerable leeway in selecting goods to be freed from quotas. As a result, many key categories of T&C exports from developing countries have not yet been released from quotas by the major importing countries.[114] Importing countries have also made heavy use of the transitional safeguard provision of the ATC, as well as antidumping procedures, to restrict T&C imports.[115]

Trends in global T&C trade have had several gender-specific effects. First, the relocation of T&C manufacturing operations from industrialized to developing countries effectively moved a large number of manufacturing jobs employing women from industrialized to developing countries.[116] Second, the slow implementation of the ATC, together with the recent global economic slowdown, have resulted in the creation of fewer new T&C manufacturing jobs—most of which would likely have been filled by women—in developing countries than would have been expected. Third, the lifting of country-specific import quotas is leading to greater competition among developing countries in the T&C sector, with gains and losses for women workers in different developing countries. Full implementation of the ATC, for example, is expected to benefit larger exporting countries such as China at the expense of smaller countries such as Bangladesh, where the garment industry employs about 1.4 million, mostly female, workers. Finally, the expansion of the T&C sector in developing countries will not necessarily narrow existing gender wage gaps if women are hired primarily for low-skilled factory work with little opportunity for training or advancement.[117]

3. Agreement on Subsidies and Countervailing Measures

The Uruguay Round Agreement on Subsidies and Countervailing Measures ("SCM Agreement"), which strengthened the disciplines on subsidies contained in the Tokyo Round Subsidies Code, has been critiqued from a variety of perspectives. While disciplines on subsidies have been justified as necessary to minimize "distortions" in trade flows, the treatment of subsidies in the SCM Agreement has been criticized by one prominent economist as "utterly devoid of any economic rationale beyond the mercantilist interests of a narrow set of powerful groups in the advanced industrial countries."[118]

[113] *See* WORLD BANK, GLOBAL ECONOMIC PROSPECTS IN THE DEVELOPING COUNTRIES 2002 (2001), at 51; WTO, ANNUAL REPORT 2002 (2002), at 31 ("notification of products to be integrated under the third stage of the [ATC] suggests that a significant number of quantitative restrictions . . . may not be removed until the end of 2004").

[114] WORLD BANK, *supra* note 113, at 52.

[115] Kenneth A. Reinert, *Give Us Virtue, But Not Yet: Safeguard Actions Under the Agreement on Textiles and Clothing*, 23 WORLD ECON. 25 (2000); WTO, *supra* note 113, at 31.

[116] However, the evidence is mixed as to whether this trend led to an overall decline in the female share of manufacturing jobs in industrialized countries. *See* UN, *supra* note 9, at 12.

[117] GAMMAGE ET AL., *supra* note 44, at 41; *see also* MALHOTRA ET AL., *supra* note 29, at 169–82; G & T Task Force, *supra* note 16, at 141–74; C.A.F. Dowlah, *The Future of the Readymade Clothing Industry of Bangladesh in the Post-Uruguay Round World*, 22 WORLD ECON. 933, 934 (1999); Razzaz, *supra* note 37 (analysis of Madagascar's expanding T&C sector estimated that male workers would benefit substantially more than female workers because of gender discrimination in the sector).

[118] DANI RODRIK, THE GLOBAL GOVERNANCE OF TRADE: AS IF DEVELOPMENT MATTERED, UNDP Background Paper (2001), at 27.

Another prominent economist has noted that, notwithstanding the "disciplines" of the SCM Agreement, "developed countries make use of a whole variety of other, hidden subsidies under the rubric of 'defence'."[119] In a similar vein, some commentators have found a strong bias toward industrialized countries in the hierarchy of subsidies outlined in the SCM Agreement: while the agreement treats subsidies that are more likely to be used by industrialized countries (such as those for research and development, and environmental upgrades of facilities) as "non-actionable," it categorizes export subsidies that developing countries are more likely to use as "prohibited."[120]

Commentators have also critiqued the general concept of "subsidy" reflected in the SCM Agreement. While the SCM Agreement is intended to restrict forms of government assistance that "have the effect of distorting world trade and depriving other countries of legitimate trade opportunities,"[121] one commentator notes that "[e]ven economically speaking, [some] subsidies can be rationalized not only as socially imperative deviations from principles of economic efficiency but also as correctives for distortions from other sources." She concludes that "the absence of international consensus on the use of subsidies is nothing less than a reflection of the varying views on the proper role of government in economic affairs."[122] Critical commentators have also noted various types of assistance that are *not* recognized as "subsidies" in the SCM Agreement. For example, the deregulation of labor markets could be viewed as providing a benefit to exporting firms akin to a negative subsidy.[123] Other unrecognized "subsidies" include the financial benefits provided to households by unpaid workers in family businesses and unpaid caregivers, who are usually women.[124]

A gender-aware reading of the SCM Agreement suggests a more specific way in which the agreement is "gender-blind." The "non-actionable" subsidies listed in Article 8—which lapsed in January 2000—included, among others, "assistance to disadvantaged regions . . . given pursuant to a general framework of regional development."[125] However, Article 8 did not provide similar treatment for "assistance to disadvantaged groups," such as women and ethnic minorities. Thus, a government program to assist women or minority entrepreneurs in a particular manufacturing industry—for example, through low-interest loans, tax credits or training—could conceivably be challenged under the SCM Agreement. More specifically, it might be characterized as a "prohibited" subsidy if the program were tied to export goals or domestic content requirements, or as an "actionable" subsidy if the scheme could be shown to injure a domestic industry in another

[119] Joseph E. Stiglitz, *Two Principles for the Next Round or, How to Bring Developing Countries in from the Cold*, 23 World Econ. 437, 451 (2000).

[120] *See, e.g.*, Third World Network, The Multilateral Trading System: A Development Perspective, UNDP Background Paper (2001), at 41–42; Michael H. Davis and Dana Neacsu, *Legitimacy, Globally: The Incoherence of Free Trade Practice, Global Economics and Their Governing Principles of Political Economy*, 69 U. Mo. K.C. L. Rev. 733, 767–771 (2001). However, Article 8 of the SCM Agreement, relating to non-actionable subsidies, lapsed on January 1, 2000 because of a lack of consensus in the Committee on SCM to extend these provisions, as provided in Article 31. WTO, *supra* note 113, at 67 n.10. In addition, Article 27 of the SCM Agreement provides special and differential treatment for least-developed and developing countries, including a complete exemption from the prohibition on export subsidies for least-developed countries.

WTO member country, or to otherwise cause "nullification or impairment of benefits" or "serious prejudice" to that country.[126] It would be more difficult to challenge such a program if it were sponsored by a least-developed or developing country government, in light of the special and differential treatment accorded to them under Article 27 of the agreement. Nonetheless, the failure to acknowledge this type of government assistance program in Article 8 suggests a lack of awareness on the part of trade negotiators about the existence of these programs (which are not limited to developing countries), or perhaps a conclusion that since these programs generally apply to small and medium-sized businesses, they are unlikely to cause sufficient harm to competing businesses in other countries so as to trigger provisions of the SCM Agreement.

At the Fourth Ministerial Conference in Doha, developing countries proposed to treat a number of development-related measures as non-actionable subsidies under the SCM Agreement. The Ministerial Conference agreed that this proposal would be considered further within the WTO.[127] In this regard, the Committee on SCM could also consider an exemption for government assistance to enterprises owned by women and other historically disadvantaged groups. This would complement CEDAW's provision on "special measures aimed at accelerating de facto equality between men and women."[128] It would also further the recommendations of UNCTAD's Commission on Enterprise, Business Facilitation and Development and of the Commonwealth Secretariat to governments to address the needs of women entrepreneurs, for example, through special credit lines.[129]

The disciplines on subsidies contained in the SCM Agreement are closely related to the treatment of countervailing measures in the same agreement and anti-dumping rules contained in the Uruguay Round Agreement on Implementation of Article VI of GATT 1994 (Antidumping). The use of subsidies, as well as the imposition of countervailing duties and the institution of antidumping proceedings, can have indirect, gender-differentiated effects on workers in the affected industries. For example, in the T&C sector, government assistance to manufacturers in small exporting countries to upgrade their facilities could stem the layoffs of predominantly female workers that have already taken place—for example, in Bangladesh[130]—due to increased competition from other countries and other factors. The use of countervailing duties and antidumping proceedings, while intended to protect domestic firms and their workers from the competition of cheaper imports, restricts imports and therefore could lead to hiring freezes, wage cuts and layoffs in the T&C sectors of exporting countries, with a disproportionate impact on women workers. Similar effects could also be expected as a result of "safeguard" actions taken by importing countries in compliance with the Uruguay Round Agreement on Safeguards. However, the gender dimensions of subsidies, countervailing duties, antidumping and safeguard actions have not been systematically studied, due in part to the lack of sex-disaggregated data on employment in the relevant industries.

4. Agreement on Trade-Related Investment Measures

The gender-differentiated effects of foreign direct investment ("FDI") have not been extensively studied to date. However, some economists have used theoretical and computable general equilibrium models to examine the possible gendered effects of increases in foreign capital inflows on a country's manufacturing sector.[131] While global FDI flows expanded rapidly beginning the 1970s, they have been heavily concentrated in a small number of industrialized and developing countries. In addition, research on duty-free zones, where foreign-owned firms predominate, shows strong gender segregation in employment, with concentrations of male workers in capital-intensive processes and female workers in more labor-intensive processes.[132] Therefore, the gendered effects of FDI could be expected to vary widely across countries, industries and even stages of production.

The gender-differentiated impacts of the Uruguay Round Agreement on Trade-Related Investment Measures ("TRIMs Agreement"), and investment agreements at the regional and bilateral levels, are also not well understood. The TRIMs Agreement and other investment agreements could lead to increased foreign investment and the creation of new jobs for women. On the other hand, the elimination of domestic-content requirements as mandated under the TRIMs Agreement[133] could negatively affect particular groups of women, for example, if they own or work for local input suppliers. As workers, women can also be directly affected by investment incentives that a host government may offer to foreign investors, such as exemptions from local labor laws, health and safety standards, and environmental regulations.[134]

In addition, where an investment agreement permits the arbitration of disputes between foreign investors and the host country, as under the North American Free Trade Agreement ("NAFTA") and a large number of bilateral investment treaties, claims brought by foreign investors against the host state can raise gender issues. In one NAFTA investor-state dispute, for example, a U.S. corporation, Crompton Corp., challenged a decision of the Canadian government to phase out the use of lindane, a pesticide manufactured by Crompton, which has been linked to breast cancer.[135]

B. Agriculture Trade and the Agreement on Agriculture

A majority of the female labor force in developing countries is engaged in agriculture—62 percent in 1990.[136] As in manufacturing, researchers have identified gender divisions of

[131] *See, e.g.*, Elissa Braunstein, *Engendering Foreign Direct Investment: Family Structure, Labor Markets and International Capital Mobility*, 28 WORLD DEV. 1157 (2000); Fontana and Wood, *supra* note 59.

[136] Mehra and Gammage, *supra* note 16, at 538.

labor in agriculture, with men and women assuming responsibility for growing different crops, or carrying out different cropping tasks.[137] Although women are involved in production of both cash and subsistence crops, research indicates that they are primarily responsible for household food production in several regions—70 to 80 percent in Sub-Saharan Africa and 65 percent in Asia.[138] However, extensive literature documents the constraints that women farmers face due to limited access to and rights over land, limited access to credit and other inputs, and neglect by agricultural extension services.[139]

Market liberalization and promotion of export crops have had ambiguous employment effects on women farmers. For example, in some regions, women's representation in the agricultural labor force has increased as more men migrate to jobs in manufacturing or other off-farm work.[140] However, expansion of export crops has also displaced women farmers from land they had used for subsistence farming, and many of these displaced women have taken seasonal jobs as a agricultural workers. In Africa and Latin America, women make up the large majority of the workforce in non-traditional agricultural exports, such as flowers and specialty vegetables. While these jobs provide cash income, they are also characterized by low wages, health hazards and seasonality.[141] Market liberalization has also created new opportunities for women involved in food processing and trading, although they tend to be concentrated in small-scale operations. In general, the liberalization of agriculture markets has benefited mainly medium and large-scale commercial producers and traders. Women farmers and traders, who generally operate on a smaller scale, have been found less likely to benefit. It is especially difficult for small farmers, including women, to compete with heavily subsidized agricultural imports.[142]

Gender-aware economists are examining ways in which gender roles and disparities in access to resources can affect household and sector-wide responses to changes in agriculture policy.[143] For example, James Warner and D.A. Campbell have constructed a model to explain the weak "supply response" to liberalization of agriculture markets that has been observed in several countries, particularly in Africa. This analysis notes that, where women are primarily responsible for household food production but also help with cash crop production as unpaid family laborers, they are likely to realize little or no direct benefit from programs to increase production of cash crops for export. In many cases, they may be required by male family members to give up part of their subsistence farmland for cash crop production, which further weakens their property rights and may also threaten their family's food security if they are no longer able to grow subsistence

[137] *See, e.g.*, Cheryl R. Doss, *Designing Agricultural Technology for African Women Farmers: Lessons from 25 Years of Experience*, 29 WORLD DEV. 2075, 2077–78 (2001). Doss emphasizes, however, that gender roles in agriculture are dynamic and context-specific.

[143] *See, e.g.*, Arndt and Tarp, *supra* note 61; Baden, *supra* note 142; William Darity, Jr., *The Formal Structure of a Gender-Segregated Low-Income Economy*, 23 WORLD DEV. 1963 (1995); James M. Warner and D.A. Campbell, *Supply Response in an Agrarian Economy with Non-Symmetric Gender Relations*, 28 WORLD DEV. 1327 (2000).

crops. Women farmers may therefore resist or undermine male family members' efforts to expand production of export crops.[144]

On its face, the Uruguay Round Agreement on Agriculture does not display overt gender bias. The agreement extends "special and differential treatment" to developing countries in several respects. Moreover, a number of its "green box" exemptions from aggregate limits on domestic supports—for example, for extension services, food security stocks, domestic food aid and disaster relief—would seem likely to benefit women farmers in developing countries.[145] However, the underlying objective of the agreement is to facilitate agricultural exports. As noted above, women farmers in many developing countries are primarily responsible for household food production, and therefore household food security and sufficiency are high priorities.[146] The Agreement on Agriculture does include a domestic support exemption for "food security" stocks. However, the agreement treats food security in terms of government (or international) support rather than household self-sufficiency.[147]

At the Fourth Ministerial Conference in Doha, one of the proposals put forward by developing countries, with the support of civil society groups, was for the creation of a "development box." Among other things, this proposal would allow developing countries to exclude certain staple crops from their tariff reduction commitments and also allow governments to provide greater support to poor farmers. Similar proposals were floated at the Fifth Ministerial Conference in Cancún for a "special products" category and a "special safeguard mechanism" to address the food security and rural development needs of developing countries.[148] These proposals address the general bias of the Agreement

[144] *See* Warner and Campbell, *supra* note 143; *see also* Baden, *supra* note 142. A recent assessment of Uganda's Strategic Export Initiative also concluded that insufficient attention had been paid to the gender aspects of micro-level supply constraints in the coffee and fish sectors. Based on Ugandan case studies, the researchers warned that "women may withhold their labour or sabotage cash crops in several subtle ways because they know they will not benefit from the income earned." David Booth et al., *The Strategic Exports Initiative in Uganda: Poverty and Social Impact Analysis* (2003), at 25–26, *available at* http://lnweb18.worldbank.org/ESSD/sdvext.nsf/81ByDocName/CountryExperienceUgandaexportpromotionprogram. The researchers also observed that, because of men's spending priorities, "improvements in incomes controlled by men . . . might not significantly enhance welfare for other household members, especially women and children." *Id*. at 26. For example, in the export fishing sector, increased cash income to many fishermen appeared to be "fuelling greater recreational expenditure by men, with reported increases in alcoholism and prostitution, rather than income sharing that might moderate the negative impacts on women and children." *Id*. at 27. *See also* Robb, *supra* note 36.

[145] *Agreement on Agriculture*, Annex 2 (bases for exemptions from commitments to reduce domestic supports).

[146] Food security is not only a fundamental public policy concern, but a fundamental human right, reflected in Article 25 of the Universal Declaration of Human Rights, Article 11 of the International Covenant on Economic, Social and Cultural Rights, and Article 14 of CEDAW (which addresses the situation of rural women). UNHCHR recently analyzed the liberalization of agriculture trade and the Agreement on Agriculture from a human rights perspective, taking into account the right to food and the right to development. *See* UNHCHR, *Globalization and Its Impact on the Full Enjoyment of Human Rights*, Report of the High Commissioner for Human Rights submitted in accordance with Commission on Human Rights resolution 2001/32, U.N. Doc. E/CN.4/2002/54 (2002).

[147] *See Agreement on Agriculture*, Annex 2, para. 3 (exemption from domestic support commitments for accumulation of public food stocks).

on Agriculture toward agricultural exports. They would need to be complemented by gender-sensitive agricultural policies and targeted resources in order to benefit women farmers, who have historically been excluded from agricultural extension services, credit programs and other support.[149]

C. Services Trade and the General Agreement on Trade in Services

Over the past decade, services were the fastest growing sector in the global economy,[150] and significant proportions of services jobs are now occupied by women in both industrialized and developing countries. However, patterns of gender segregation are found here as in manufacturing. In developing countries, for example, women tend to be concentrated in lower-paying jobs in trade, restaurants and hotels and community, social and personal services, with only a small percentage employed in higher-paying subsectors such as finance, insurance and business services. Women are well-represented in professional and technical jobs, but are heavily concentrated in teaching, nursing and other traditional "women's" occupations.[151] While the public service sector historically provided more skill-intensive, waged jobs for women in many countries, public sector downsizing in connection with structural adjustment programs in many developing and transitional countries has eliminated or outsourced many of these jobs.[152]

It is difficult to generalize about the gender-differentiated impacts of services trade agreements, given the wide range of subsectors covered and the potential application of services trade agreements to public/private service providers as well as "pure" private providers. Moreover, women as well as men participate in services not only as consumers, but also as employees and owners of service providers. However, a number of gender-related concerns have been raised about the Uruguay Round General Agreement on Trade in Services ("GATS"). Some of these concerns relate to the potential impact on women of liberalizing particular services subsectors. For example, in connection with tourism, evidence indicates that the vast majority of jobs filled by women are in less stable and lower-paying areas such as housekeeping, food preparation, reception and petty trading, as well as sex work.[153] In connection with financial sector liberalization, it is not clear that liberalization has had direct, positive effects on small-scale borrowers and savers, including particularly women.[154] Moreover, financial sector liberalization frequently accompanies capital account liberalization; as demonstrated in the Asian

financial crisis, these combined liberalizations can increase an economy's vulnerability to external shocks, which in turn can disproportionately affect women.[155]

Since WTO members' commitments under the GATS can extend to basic services such as education, health care and water supply, the GATS touches on a number of human rights and related development priorities, which also have gender dimensions.[156] For example, in a recent report, the UN High Commissioner for Human Rights noted the possibility that liberalization of basic services such as health could lead to a two-tiered supply of health services, with private providers (including foreign providers) catering to the "healthy and wealthy" and underfinanced public health care providers treating the "poor and sick."[157] Poor women who depend on public health services for reproductive care and medical care of children would be particularly affected under this scenario.

Even within the same services subsector, different gender issues may arise depending on the "mode" of services involved. In the health sector, for example, potential gender-related impacts have been identified under each of the four modes of supply specified in the GATS: cross-border supply, consumption abroad, commercial presence and movement of natural persons.[158] In each of these cases, impacts may vary depending on the country's level of development, health care policies, health insurance schemes and other factors. The issues related to Mode 3 (commercial presence), for example, are similar to those raised with regard to the TRIMs Agreement.[159] In the case of Mode 3 supply of basic services such as health care, there are also the concerns noted above about the implications of a two-tier system for health service delivery to poor and vulnerable groups, including women.[160]

The issues related to Mode 4 (movement of natural persons) are complex, especially in relation to critical services such as health care. On the one hand, liberalization of this mode (much of which predates the GATS) has opened up opportunities for many nurses and other health care providers, particularly from developing countries, to take better paying jobs in other countries. On the other hand, there is the risk of a "brain drain" of health care professionals from developing countries, leaving fewer qualified health care providers in the "services-exporting" country. Nevertheless, developing countries have called for further liberalization of Mode 4, particularly by industrialized countries, to expand opportunities for workers to migrate legally to those countries.[161] This could have beneficial gender impacts if Mode 4 liberalization takes place in subsectors were women are active. Increased opportunities for regular migration would also help to stem some of

[161] *See, e.g., ACP Declaration, supra* note 148, para. 21.

the flow of irregular migrants from developing countries. Since undocumented female workers are particularly subject to abuse by agents and employers, increased opportunities to migrate legally—even under temporary work visas—would be beneficial.[162]

There are a number of uncertainties relating to the GATS that also have gender implications. These include the prospect of new, stringent disciplines on subsidies, domestic regulations and government procurement. Regarding subsidies, for example, WTO members already must disclose the subsidies they provide on services in their commitment schedules for the relevant services subsectors.[163] This imposes a burden on countries, especially developing countries, to make sure they list every conceivable subsidy or other "preference." It may also discourage countries from introducing new programs—such as small business assistance to women and minority entrepreneurs in a particular subsector, such as travel services—which might be characterized as new subsidies under the GATS. Article XV, which provides for negotiations to develop "disciplines" on subsidies in the services sector, poses a risk of further restricting governments' latitude to introduce assistance programs to domestic service providers that are owned by women or other historically disadvantaged groups.[164]

Another concern relates to the possibility of stricter disciplines on domestic regulation of services, based on Article VI of the GATS, which calls for the development of rules to ensure that qualification and licensing requirements, and technical standards, are "not more burdensome than necessary to ensure the quality of the services."[165] In particular, questions have been raised about the potential application of this "necessity" test. For example, would consumer protection, worker safety or environmental regulations qualify as "necessary to ensure the quality of services"?[166] Responding to these concerns, the Fourth Ministerial Conference in Doha reaffirmed the right of WTO members under GATS to "regulate, and introduce new regulations on, the supply of services."[167] However, a country could still be required to make a "compensatory adjustment" under Article XXI of the agreement if a new regulation of services effectively modified the country's market access commitments under the GATS. This compensation requirement could impose a serious financial burden on developing countries, and therefore would effectively discourage developing countries from making certain regulatory changes in sectors that they have committed to liberalize under the GATS.

Article XIII of the GATS, which provides for future multilateral negotiations on government procurement of services, has also raised concerns from a gender perspective. Specifically, there is a worry that the application of most-favored-nation and national treatment principles to government procurement could conflict with governments' pursuit of social and environmental goals through their procurement policies, such as "green procurement" requirements and programs designed to help women, ethnic minorities, and other groups to obtain an equitable share of government contracts. This concern is based

[162] At the same time, it should be noted that even workers with visas may be subject to abuse. *See, e.g.*, Human Rights Watch, *Hidden in the Home: Abuse of Domestic Workers with Special Visas in the United States* (2001).

[163] *See General Agreement on Trade in Services* ("GATS"), Art. XVII (WTO members must accord national treatment to services and service providers of any other member in the sectors for which specific commitments have been made, subject only to the conditions and qualifications set out in the specific commitment schedule).

[166] *Cf. infra* text accompanying notes 185–96 (gender analysis of Agreements on the Application of Sanitary and Phytosanitary Measures and Technical Barriers to Trade, applicable to food safety and health regulations on traded goods); *see* GAMMAGE ET AL., *supra* note 44, at 61.

[167] WTO, *supra* note 149, ¶ 7.

on a critical reading of the plurilateral Agreement on Government Procurement ("AGP") and comparable provisions in other trade agreements such as NAFTA. Article XXIII of the AGP, for example, includes a blanket exception for products and services of handicapped persons and philanthropic institutions. However, procurement preferences for businesses owned by women, ethnic minorities and other marginalized groups are not generally protected under the AGP. Parties to the AGP have claimed exemptions for such programs in their annexes to the agreement.[168] However this "bottom-up" approach of claiming exemptions for preferential procurement schemes in countries' commitment schedules rather than including general exemptions in the text of the trade agreement can inhibit countries from introducing new programs to assist women and minority business owners in the future (unless the scheduled exemptions are sufficiently broad), for fear of inviting claims from other countries for compensatory adjustment, on the basis that the procurement preferences discriminate against foreign bidders or create unnecessary obstacles to international trade.[169]

D. Trade-Related Areas

1. Investment

The gender dimensions of international agreements related to FDI are discussed elsewhere in this chapter, in relation to the TRIMs Agreement for FDI in manufacturing,[170] and in relation to the GATS for FDI in commercial services.[171]

2. Intellectual Property

Perhaps the most controversial trade-related area in which international trade rules have been introduced is intellectual property protection ("IPP"). Much of the current debate revolves around the Uruguay Round Agreement on Trade-Related Aspects of Intellectual Property Rights ("TRIPs Agreement"),[172] although similar concerns have also been raised with regard to regional and bilateral agreements on IPP. As discussed extensively elsewhere, the TRIPs Agreement has been roundly criticized on economic,[173] human rights[174] and development[175] grounds. These critical perspectives—in particular,

[168] For example, in the "General Notes" included in its annex, the United States asserts that its commitments do not apply to "set asides on behalf of small and minority businesses." Women-owned businesses are not specifically mentioned in these notes, but they are expressly excluded from the commitments of state governments listed elsewhere in the annex.

those raising human rights and development concerns—have both explicit and implicit gender dimensions. The objective of this section is to highlight some of the more specific gender issues raised by the TRIPs Agreement and similar regional and bilateral agreements.

A gender-aware analysis of the TRIPs Agreement recognizes that women, as well as men, are both producers and users of intellectual property. For example, female subsistence farmers both use seeds and contribute to the development of new plant varieties. Women are the primary consumers of reproductive health services and related medicines, and in most societies, women are primarily responsible for the health care of children and other dependents within households. In many societies, including indigenous communities, women also serve as traditional health care providers and are primary sources of knowledge on the use of medicinal plants. These multiple roles point to the gender dimensions of the TRIPs Agreement's provisions on patents (particularly relating to pharmaceutical drugs and plant varieties), and its relation to other international instruments such as the Convention on Biological Diversity, the International Convention for the Protection of New Varieties of Plants ("UPOV Convention"), and the International Treaty on Plant Genetic Resources for Food and Agriculture.

Some general observations can be made about the gender-differentiated effects of the TRIPs Agreement. First, IPP generally results in income transfers from consumers of protected goods to the owners of the intellectual property content in those goods (usually through licensing fees or royalty payments from the manufacturer to the intellectual property owner). Because women are predominantly consumers rather than licensed producers, they are likely to be net "losers" in economic terms under the TRIPs Agreement, which requires WTO members to significantly expand and strengthen their IPP regimes. As producers of intellectual property—including artists, craftspeople, scientists, farmers and indigenous experts on plant varieties—women in theory have an equal opportunity to seek protection of their creations, inventions and specialized knowledge under the IPP regimes required under the TRIPs Agreement. However, for various reasons, many women are unlikely to benefit from conventional IPP regimes.

First, women often have limited access to resources, and therefore may not have the financial means to apply for and defend a copyright, trademark or patent. Second, in societies where women have limited property rights, they may be unable to assert their rights over an innovation or artistic work, which might instead be claimed by other family members or community leaders. Third, much of the technical knowledge and artistic or cultural work developed by women, particularly as small farmers and members of indigenous communities, is collectively owned and accumulated over time. This sort of knowledge therefore does not lend itself easily to protection under conventional intellectual property rules. Therefore, the standards for IPP set out in the TRIPs Agreement provide few benefits to these innovators.[176]

As noted earlier, women represent half of the total number of people worldwide who are infected with the HIV virus, and the percentage is much higher in Sub-Saharan Africa, particularly among young women.[177] These statistics have caused the UN Secretary

[177] *See supra* text accompanying note 19.

General to observe that "in Africa, AIDS has a woman's face."[178] Therefore, the *Declaration on the TRIPs Agreement and Public Health* adopted at the Fourth Ministerial Conference in Doha—specifically its directives on the use of compulsory licenses by developing countries and extension of least-developed countries' exemption from the requirement to provide patent protection for pharmaceutical drugs—and subsequent decision of the WTO General Council on compulsory licenses, are directly relevant to women, particularly women in Sub-Saharan Africa and other regions with increasing HIV/AIDS infections.[179] However, it has been pointed out that the emphasis placed on increasing governments' flexibility to issue compulsory licenses in cases of "national emergency," including "public health crises . . . related to HIV/AIDS, tuberculosis, malaria and other epidemics,"[180] excludes consideration of life-threatening, gender-specific medical conditions and life-threatening illnesses prevalent in specific ethnic groups. Thus, if patented drugs were available to treat any of these conditions, but were prohibitively expensive for a developing country subject to the TRIPs Agreement, it could be more difficult for the country to use the full flexibility of Article 31 of the agreement on compulsory licenses because these conditions are not a health risk to the entire population and therefore would not be considered "epidemics" or "national emergencies".[181]

The UN Food and Agriculture Organization has observed that

> In many areas, the majority of smallholder farmers are women. They are largely responsible for the selection, improvement and adaptation of plant varieties. In many regions, women are also responsible for the management of small livestock, including their reproduction, and they often have a more highly specialized knowledge of wild plants used for food, fodder and medicine than men.[182]

Women in many countries therefore play critical roles not only in ensuring food security for their households and communities, but in preserving biological diversity. However, the TRIPs Agreement does not include any provisions on the protection of traditional knowledge. Moreover, to the extent that WTO members choose to protect plant varieties—as required by Article 27 of the TRIPs Agreement—by extending patent protection or adopting the most recent version of the UPOV Convention, and patented or UPOV-protected varieties of staple crops are introduced in developing countries, small farmers' traditional practice of saving seeds may be challenged. This would have a disproportionate impact on women farmers in these countries, since they have relatively less access to credit to purchase seeds and other inputs.

At the Fourth Ministerial Conference in Doha, WTO members directed the Council for TRIPs "to examine, inter alia, the relationship between the TRIPs Agreement and the Convention on Biological Diversity, the protection of traditional knowledge and folklore, and other relevant new developments raised by the Members . . . "[183] In reviewing

these areas, the TRIPs Council was further instructed to "take fully into account the development dimension."[184] The gender issues noted above, which are especially relevant to developing countries, could be taken into account in the TRIPs Council's ongoing work program.

3. Domestic Regulation

With the increasing focus on "behind-the-border" issues affecting international trade, there is a general trend in WTO and other trade agreements to "discipline" domestic regulations that affect trade. As noted earlier, the GATS provides for the negotiation of rules on qualification and licensing requirements and technical standards in the services sector.[185] The trend is reflected most prominently in the Uruguay Round Agreements on the Application of Sanitary and Phytosanitary Measures ("SPS Agreement") and Technical Barriers to Trade ("TBT Agreement"), both of which apply to regulations on traded goods.

Several concerns have been raised by developing country governments, civil society groups and academic commentators about the growing impact of trade rules on the regulatory function of governments. Some commentators have argued, for example, that the standard for review of technical regulations in the TBT Agreement—"not more trade-restrictive than necessary to fulfill a legitimate objective"[186]—tips the balance of factors to be considered by government regulators too heavily in favor of trade, and away from other legitimate goals such as public health, consumer protection, and protection of the environment.[187] The requirement in the SPS Agreement that SPS measures be "based on scientific principles and . . . not maintained without sufficient scientific evidence"[188] has also been critiqued as inherently biased against regulation, since data on the health risks of a particular substance may not become available for a considerable period of time and, in any case, scientific research sets a higher standard to prove that a particular substance has harmful effects than that it does not.[189]

On the other hand, many developing countries have become extremely concerned about the cost of complying with the SPS Agreement, since they view SPS measures imposed by importing countries as a major impediment to their agricultural and food exports.[190] Both developing countries and civil society groups have also been critical of the presumptions created in both the SPS and TBT Agreements in favor of standards set by international bodies such as the Codex Alimentarius Commission ("Codex"), in which they argue that their interests are not adequately represented. In response to these concerns, the Fourth Ministerial Conference in Doha urged WTO members to provide

[188] *Agreement on the Application of Sanitary and Phytosanitary Measures,* Art. 2.

[189] Some commentators have noted that "[s]cientific research begins with the premise that there is no effect, referred to as the 'null hypothesis.' The task of statistical analysis is to examine, based on available data, whether the null hypothesis can be rejected with a certain level of confidence. However, because of small sample size, measurement problems and model specification issues, the scientific research may not be able to reject the null hypothesis, even where a true relationship exists between variables." GAMMAGE ET AL., *supra* note 44, at 89.

[190] S. Henson and R. Louder, *Barriers to Agricultural Exports from Developing Countries: The Role of Sanitary and Phytosanitary Requirements*, 29 WORLD DEV. 85 (2001) (results of survey conducted by researchers at University of Leeds).

technical assistance to help least-developed countries respond to new SPS and TBT measures imposed by importing countries, and called on the WTO Director General to facilitate greater participation of developing countries in international standard-setting organizations.[191]

These concerns also have gender dimensions. For example, as noted above, some international standard-setting bodies referred to in the SPS and TBT Agreements, such as Codex, have longstanding ties to industry members and associations, and have not historically been open to consumer and other citizens' groups.[192] It is therefore possible that the standards set by these bodies may not reflect the concerns of women, particularly from developing countries. In addition, until recently, less medical research was devoted to women's health issues, and therefore less data may be available on the long-term effects on women of exposure to certain pollutants or other harmful substances.[193] Thus, should a country choose to regulate a particular substance more stringently than the applicable international standard in order to address health risks to women, it could be more difficult to establish a sufficient scientific basis for the regulation under the SPS Agreement.

Finally, concerns have also been raised about the sensitivity of GATT/WTO panels and the WTO Appellate Body to women's health issues in their reviews of particular health-based regulations. Both the WTO Appellate Body and the roster of panelists available to consider disputes under WTO agreements include primarily international law experts, and more specifically, experts in international trade law. WTO dispute panels also have considerable flexibility to engage experts to advise on scientific and other technical matters.[194] There is no assurance that these experts will be aware of the gender-differentiated health effects of particular substances as they review regulations intended to restrict their use. Commentators have noted, for example, that arguments regarding gender-specific health hazards were not received favorably by the GATT panel in the *Thailand-Cigarettes* case brought by the United States in the late 1980s to challenge the Thai government's import ban on cigarettes,[195] or in the WTO Appellate Body's more recent review of the panel report in the *European Community-Hormones* case challenging the European Union's ban on the sale of beef from cattle treated with artificial growth hormones.[196]

4. Labor Standards

As discussed elsewhere,[197] the only express reference to labor issues in the GATT is the exception included for goods and services made with prison labor.[198] The Fourth Ministerial Conference in Doha confirmed that a majority of WTO members continue to believe the ILO rather than the WTO is the appropriate international forum in which to address labor issues related to the trade in goods and services.[199] However, labor issues in the global economy are being addressed in a number of other settings, including regional and bilateral trade agreements, the ILO and the World Commission on the Social Dimensions of Globalization for which it acts as secretariat, various UN bodies, and private sector initiatives to develop corporate codes of conduct. This section is intended to identify some of the gender issues that can arise in the application of labor standards to the trade in goods and services.

Much of the current debate about the impact of trade liberalization on conditions of work has focused on industries in which women are widely employed, typically in low-skilled, low-wage jobs or under subcontracting arrangements, such as textile and clothing manufacturing and menial work in hotels and other "hospitality" businesses. Historically, international labor standards and national labor laws have been framed to protect full-time workers in formal business establishments. Therefore, they have provided little benefit to the women in many countries who work in agriculture or are involved in part-time work, home-based work and small-scale trading. Over time, however, the ILO and some national governments have begun to address the needs of part-time and informal sector workers, as reflected in new labor standards and laws developed to protect these workers. The ILO, for example, has adopted the Part-Time Work Convention, 1994; the Home Work Convention, 1996; and the Safety and Health in Agriculture Convention, 2001, which includes provisions on women workers and temporary and seasonal agricultural workers.

Another gender issue arises from the definition of "core" or "fundamental" labor standards. Among the core standards included in the ILO's Declaration on Fundamental Principles and Rights at Work are the elimination of discrimination in employment and equal pay for equivalent work, which are particularly important for women workers.[200] These standards are reflected in two fundamental ILO conventions: the Discrimination (Employment and Occupation) Convention, 1958, and the Equal Remuneration Convention, 1951. However, the core principles of non-discrimination and equal pay have secondary status, or are excluded altogether, from the labor provisions in some trade agreements. For example, under the North American Free Trade Agreement ("NAFTA"), these principles are included in the North American Agreement on Labor Cooperation ("NAALC"). However, they are "second-tier" rights that can be the subject of country consultations and study by an expert committee, but cannot be the basis for convening an arbitration panel or withdrawing trade benefits.[201] These labor principles are also excluded from the

[201] *See North American Agreement on Labor Cooperation,* signed on Sept. 13, 1993 and entered into force on Jan. 1, 1994, *available at* http://www.naalc.org/english/infocentre/NAALC.htm; HUMAN RIGHTS WATCH, TRADING AWAY RIGHTS: THE UNFULFILLED PROMISE OF NAFTA'S LABOR SIDE AGREEMENT (2001).

definition of "internationally recognized labor rights" in the labor provisions of recent US trade agreements with Chile, Jordan and Singapore, as well as from the definition of "international worker rights" that forms a basis for granting preferential trade status to developing countries under the U.S. Generalized System of Preferences ("GSP") and other preferential trade arrangements between the United States and developing countries.[202] In contrast, the ILO conventions on non-discrimination and equal pay are specifically included in the special incentive arrangements for the protection of labor rights under the European Community's current GSP scheme.[203]

Although non-discrimination and equal pay principles have "second-tier" status under NAFTA, the NAALC has provided a vehicle for addressing some gender issues in employment. For example, the Secretariat of the Commission for Labor Cooperation produced a comprehensive report on women's employment in the NAFTA countries between 1984 and 1996, including a comparative study of the legal rights of women workers in the three countries.[204] As contemplated in the NAALC, the national administrative offices ("NAOs") of the three countries have also processed a number of submissions from labor and civil society groups relating to alleged violations of labor laws and regulations in workplaces that employ large numbers of women.

These submissions include one filed in 1996 by Human Rights Watch and two Mexican nongovernmental organizations, alleging that *maquiladora* employers in Mexico regularly discriminated against pregnant job applicants and employees. Following a review that included consultation with a Mexican labor law expert and a public hearing, the U.S. NAO reported that the submission raised serious issues regarding the treatment of women workers in Mexico's *maquiladora* sector, and recommended consultations between the U.S. and Mexican Secretaries of Labor.[205] The consultations resulted in the holding of workshops and conferences, and some companies with assembly factories in Mexico have since changed their policies on pregnancy-testing of job applicants. However, much of the academic commentary on the case has been critical of the outcome as not going far enough to address the practice.[206]

[202] *Agreement between the United States of America and the Hashemite Kingdom of Jordan on the Establishment of a Free Trade Area*, signed on Oct. 24, 2000, Art. 6.6; *United States—Chile Free Trade Agreement*, signed on June 6, 2003, Art. 18.8; *United States—Singapore Free Trade Agreement*, signed on May 6, 2003, Art. 17.7; Office of the United States Trade Representative, *U.S. Generalized System of Preferences Guidebook* (1999), at 24, *available at* http://www.ustr.gov. The labor cooperation mechanisms established under the US trade agreements with Chile and Singapore do mention the possibility of cooperative activities to eliminate employment discrimination, but the dispute settlement procedures of the agreements apply only to allegations that a state party has failed to effectively enforce its labor laws directly related to "internationally recognized labor rights," which are defined in the agreements to exclude non-discrimination and equal pay. *See also* Travis, *supra* note 82; *see generally* Blackett, *supra* note 109, at 22.

[205] United States National Administrative Office, North American Agreement on Labor Cooperation ("NAALC"), *Public Report of Review of NAO Submission No. 9701*, Jan. 12, 1998, *available at* http://www.dol.gov/dol/ilab/public/media/reports/nao/public-reports-of-review.html. The report concluded that, while pregnancy discrimination against *existing* employees clearly violates Mexican law, there were differing views within the Mexican government on the legality of pregnancy screening of *prospective* employees. (Mexico's Human Rights Commission took the view that pregnancy testing violates the Mexican Constitution, but the Mexican NAO under the NAALC took a different view.)

[206] *See, e.g.*, Andrias, *supra* note 79; Bremer, *supra* note 79; Briones, *supra* note 79; Grimm, *supra* note 79; Plumtree, *supra* note 79; Scherlen and Strickland, *supra* note 79; Smith, *supra* note 79; Vega, *supra* note 79; *see also* Human Rights Watch, *supra* note 201.

Finally, it should be noted that women's organizations have advocated strongly for adherence by governments and private sector firms to the ILO's core labor standards, and for attention to the particular needs of women workers, including maternity leave and childcare arrangements. However, they have mixed views about the appropriateness of using trade sanctions to address violations of labor standards in particular countries. The IGTN and its members, for example, share the concerns of other civil society groups in developing countries and developing country governments about the potential abuse of a "labor" or "social clause" by importing countries. They are also concerned about further expansion of the mandate of the WTO or other trade bodies into areas beyond their expertise.[207]

5. Human Rights

Since the conclusion of the Uruguay Round, there has been increasing concern about the implications of liberalized trade and investment and specific trade agreements for the promotion and protection of human rights.[208] This is reflected, for example, in reports of the UN High Commissioner for Human Rights regarding the Agreement on Agriculture, the GATS, the TRIPs Agreement, trade and investment, and non-discrimination principles in human rights and trade law,[209] and in statements of UN human rights treaty bodies.[210] As noted in previous sections, these human rights concerns have strong gender dimensions.[211] In addition, the expert CEDAW committee has raised specific human rights concerns related to women working in export-processing zones and in tourism in its concluding comments to country reports submitted by state parties to CEDAW.[212]

The human rights concerns raised within the UN system and by many civil society groups have related mainly to the potential impact of liberalized trade and compliance with particular trade agreements on the ability of countries to fulfill their commitments under human rights treaties, such as the International Covenant on Economic, Social and Cultural Rights and CEDAW, through legislation and other domestic measures. Much of the general academic debate surrounding trade and human rights, however, has concerned the potential use of trade rules as sanctions to protest violations of the human rights of people in other trading countries. In this respect, the discussion dovetails closely with the trade-labor debate, since the human rights that are typically at issue are labor rights. One focus has been on the feasibility and desirability of interpreting Article

[207] *See IGTN at Doha*, *supra* note 48; *see also* WILLIAMS, *supra* note 32, at 35–36 and 171–72. Mariama Williams notes that the problem often is not so much the lack of labor standards as the lack of effective enforcement, and that the areas most in need of improvement in a particular country may not be export manufacturing industries.

[212] *See supra* note 25 and accompanying text.

XX(a) of the GATT—the "public morals" exception—to sanction trading countries that violate fundamental human rights.[213] Another approach has been to restrict government procurement of goods and services from companies doing business in countries where there are widespread human rights violations.[214] At another level, there is vigorous ongoing debate about the appropriate role of the WTO in taking into account the human rights concerns and treaty commitments of member countries.[215]

As noted earlier in the chapter, there has been some discussion of the possibility of interpreting Article XX(a) of the GATT to justify trade sanctions against countries where discriminatory or abusive practices against women are permitted.[216] However, most of the academic commentary on gender, trade and human rights has focused on the impacts of liberalized trade, specific trade agreements and international economic institutions such as the IMF, World Bank and WTO on women's human rights, particularly in developing countries.[217] In general, many of the commentators view international trade rules, not as tools for promoting women's rights, but as potential obstacles to their realization. Another theme in much of their writing is the inadequacy of state-centered human rights law to address the conduct of non-state actors, including both international economic institutions and multinational companies.[218] These concerns are also shared by many women's organizations. As in the case of labor standards, however, there is concern about the use of trade sanctions to protest human rights violations—including violations of women's rights—in other countries, because of the fear of protectionist motivations in the sanctioning country and the potential negative impact of trade sanctions on women and other vulnerable groups in the targeted country.

6. Environment

Although often underestimated, women play a critical role in the sustainable use of natural resources, particularly in rural societies, where they are generally responsible for providing water, food, fuel, clothing and health care for their households. As noted earlier, women contribute substantially to the preservation of biodiversity as subsistence farmers and users of medicinal plants and other forest products.[219] The degradation and depletion of environmental resources therefore can disproportionately affect women in many countries. Moreover, research indicates that exposure to pesticides and other pollutants can have a variety of negative impacts on reproductive health.[220] Women and women's

organizations therefore have been active in national movements on environmental issues,[221] as well as at international environmental conferences such as the UN Conference on Environment and Development held in Rio de Janiero in 1992, and the recent World Summit on Sustainable Development held in Johannesburg in 2002.[222]

Some of the gender dimensions of environmental issues related to the Agreement on Agriculture, and the TRIPs, SPS and TBT Agreements have been discussed in previous sections.[223] Consideration of gender roles in natural resource management and biodiversity conservation, and the gender-differentiated impacts of environmental degradation and pollution, are also relevant to the ongoing work of the WTO Committee on Trade and Environment. This includes, in particular, the directive from the Ministerial Conference in Doha to examine the relationship between WTO rules and trade-related provisions of multilateral environmental agreements such as the Convention on Biological Diversity, as well as environmental labeling.[224]

E. WTO Processes

The governance structure of the WTO, although in place for less than ten years, has been scrutinized extensively by academic commentators, policy analysts and civil society groups.[225] In particular, commentators have noted that, despite the WTO's one-country, one-vote system, the GATT legacy of informal, "green room" negotiations and decision-making works to the disadvantage of smaller, developing country members, many of which do not have the resources to maintain permanent WTO missions in Geneva. Parliamentarians and civil society groups have also sought to participate more directly in trade negotiations, dispute settlement, trade policy review and trade-related capacity building. This section highlights some of the gender issues related to these key WTO processes.

1. Trade Negotiations

The gender composition of professional staff in the WTO secretariat is more balanced in the aggregate than that of the IMF, World Bank or United Nations.[226] However, as in those other international organizations, the representation of women at senior levels is quite low.[227] Moreover, unlike the World Bank, regional development banks and the United Nations system, the WTO secretariat staff does not include gender specialists. The WTO secretariat therefore has little capacity to identify and analyze the gender dimensions of current WTO rules and proposals for new negotiations.

Issues of gender balance and gender awareness are also relevant to the work of country delegations to the WTO in Geneva and trade ministries and negotiating teams more generally. While information is not readily available on the gender composition of country

[226] WEDO, *The Numbers Speak for Themselves*, Fact Sheet No. 1 (2002), *available at* http://www.wedo.org (women represent over fifty percent of all professional WTO staff, compared with less than forty percent at the IMF and World Bank, and 31 percent at UNCTAD).

[227] *Id.*

missions to the WTO, it has been reported that less than ten percent of the country representatives at the Fourth Ministerial Conference in Doha were women.[228] Only three of twenty-one chairpersons of WTO bodies in 2004 are women.[229]

Serious gender imbalances also exist in many national trade ministries and offices, where clerical and administrative employees are usually women, and senior trade officials are predominantly men. Moreover, there is little evidence of training in gender awareness or gender mainstreaming within trade ministries and offices. While business associations often play an important role in shaping national trade policy, most of the participants in these associations are men, and gender issues are not central to their trade agendas.[230] In many countries, labor unions and civil society organizations are increasingly active in national debates about trade policy, but women are not always well represented in these organizations, and gender concerns are not raised consistently in these debates. It is not surprising, then, that the gender dimensions of trade and trade policy are rarely reflected in the negotiating positions of national trade representatives.

As noted earlier, UNCTAD and other UN bodies, the Commonwealth Secretariat, and several regional bodies have taken steps to integrate gender awareness and gender analysis in their trade-related activities.[231] Similar steps that could be taken by the WTO and WTO members are discussed further in Part IV.

2. Dispute Settlement

There are also significant gender imbalances within the WTO dispute settlement mechanism. In November 2003, the first woman was appointed to the WTO Appellate Body.[232] Of the individuals appointed to the indicative list of panelists to hear WTO trade disputes in the first instance, there has been some improvement in the gender composition, from about seven percent women in the original list approved in 1995, and about 8.5 percent women in the updated list approved in 2000, to around eleven percent women in the cumulative list approved in early 2003.[233]

The qualifications for both Appellate Body and dispute panel members emphasize expertise in trade law and trade policy,[234] and therefore there is no assurance that these

individuals will be aware of, or sensitive to, gender issues related to WTO rules and the subject matter of trade disputes. As noted earlier, GATT and WTO panels have not responded favorably to gender-related concerns that have been raised in some specific trade disputes.[235] However, some individuals appointed to the Appellate Body and indicative list of panelists have broad backgrounds in international law and international development, which would suggest greater awareness of the social dimensions of trade and trade rules, including gender concerns.[236] More formal steps to ensure that gender issues are considered in WTO dispute settlement processes are discussed in Part IV of this chapter.

3. Trade Policy Review

The Trade Policy Review Mechanism ("TPRM"), which was established provisionally in 1989 and was made permanent in the Uruguay Round, is intended to "examine the impact of a Member's trade policies and practices on the multilateral trading system" through periodic assessments carried out jointly by the relevant WTO member and the WTO secretariat.[237] Notably, the TPRM exercise focuses on the impact of a WTO member's trade policies and practices on the multilateral trading system, but not the impact of multilateral trade rules, and the policies and practices of other WTO members, on that country. However, the TPRM does authorize consideration "to the extent relevant, . . . of the wider economic and development needs, policies and objectives of the Member concerned, as well as of its external environment."[238]

There is growing recognition of the need to expand the scope of trade policy assessments, particularly in the case of least-developed countries, for example, to give greater consideration to their needs for trade-related technical assistance.[239] Recently, Germany has provided trust funds to better adapt the TPRM to the situation of developing countries.[240] The WTO Secretariat's report to the Trade Policy Review Body ("TPRB") on Zambia, for example, which was prepared with German trust fund support, includes discussion of Zambia's Poverty Reduction Strategy, government programs to support micro and small enterprises, the application of labor laws to export processing zones, and various implementation concerns.[241] However, the report does not include any sex-disaggregated data—for example, on employment in export industries—or gender analysis. Nonetheless, gender issues have been raised in some country reports to

predecessor agreement, or in the [WTO] Secretariat, taught or published on international trade law or policy, or served as a senior trade policy official of a Member").

[235] *See supra* text accompanying notes 194–96.

[236] For example, on the Appellate Body, Georges Michel Abi-Saab, a professor of international law, has consulted for the United Nations on human rights issues in armed conflict, and served in the Appeals Chamber of the International Criminal Tribunals for the former Yugoslavia and Rwanda; John Lockhart, another Appellate Body member, served previously as an executive director of the Asian Development Bank. *See* WTO, Press Release No. 179 (May 25, 2000); WTO, Press Release No. 246 (Sept. 25, 2001), *available at* http://www.wto.org.

the TPRB,[242] and in comments of TPRB members on the trade policy reviews of other members.[243]

Civil society groups, commentators and UN bodies have called for gender assessments to be included systematically in the TPRM.[244] Specific recommendations have been made to expand the scope of both the WTO Secretariat reports and country reports to include sex-disaggregated data and findings from gender-aware case studies and other research, with assistance from international institutions, national women's ministries, researchers and women's organizations.[245] National governments could also advance the "domestic transparency" goals of the TPRM by initiating "domestically oriented" trade policy reviews, which could focus on the impacts of WTO rules on women, poor households, and other constituencies.[246]

4. Trade-Related Capacity Building

Since the 1970s, international, regional and bilateral agencies have provided various types of trade-related support to developing countries, in the areas of export marketing, trade liberalization, trade facilitation and "trade capacity development," which the OECD defines as "building capacity by facilitating a country-driven participatory trade policy process as part of a comprehensive approach to overall development goals and poverty reduction strategies."[247] Trade-related capacity building took on heightened importance at the Fourth Ministerial Conference in Doha, where WTO members confirmed that "technical cooperation and capacity building are core elements of the development dimension of the multilateral trading system" and they called for "effective coordinated delivery of technical assistance" to developing countries, involving international and

[242] *See, e.g.*, WTO, Trade Policy Review Body ("TPRB") Press Release No. 89 (Nov. 13, 1998) (Burkina Faso's report to the TPRB notes that one of the government's principal policy objectives for 1998–2000 is to strengthen the role of women in development); WTO, TPRB Press Release No. 170 (July 20, 2001) (Cameroon's report to the TPRB states that the government's Strategic Framework for Poverty Reduction aims to "create conditions for strong, sustainable growth with the potential to curb the poverty currently affecting over 50 percent of the population, predominantly women").

[243] *See, e.g.*, WTO, TPRB Press Release No. 4 (Feb. 17, 1995) (in review of Pakistan's trade policies and practices, TPRB members drew attention to the low participation rate of women in the economy; Pakistan's representative acknowledged that women had historically lagged behind men in the country's development, and reported that current government policies and programs aimed to remove discrimination against women in education and employment); WTO, TPRB Press Release No. 16 (Oct. 23, 1995) (during review of Mauritius' trade policies and practices, in response to questions from TPRB members regarding women's rights, the representative of Mauritius noted that new legislation had been introduced to ensure equal treatment and employment opportunities for women); WTO TPRB Press Release No. 54 (April 10, 1997) (in reviewing Fiji's trade policies and practices, TPRB members raised issues concerning the gender and ethnic composition of employment).

regional institutions and bilateral donors.[248] This mandate resulted in the creation of a new technical assistance fund, the Doha Development Agenda Global Trust Fund, and expanded use of two existing funds, the Joint Integrated Technical Assistance Programme and the Integrated Framework for Trade-Related Technical Assistance to Least Developed Countries, as well as increased commitments by international and bilateral development agencies to support trade-related capacity building through their own assistance programs.[249]

A survey of the Doha Development Agenda Trade Capacity Building Database maintained by the OECD and WTO shows that some trade-related capacity building activities already address gender issues, particularly the needs of women entrepreneurs in developing countries.[250] Other gender-related activities include analysis and advice to government planners on gender and social issues posed by accession to the WTO, and pilot-testing of training and social protection measures to deal with potential layoffs of female garment workers in smaller developing countries resulting from the lifting of country-specific quotas under the ATC.[251]

The new UN inter-agency task force on gender and trade, the OECD and bilateral donors have recognized the benefits of incorporating a gender perspective more broadly and systematically in trade-related capacity building programs, particularly in light of concerns about the social and poverty impacts of trade liberalization.[252] The OECD has outlined several areas for support:

- Expanding assessments of proposed trade programs to include their impact on social development indicators;
- Removing gender-biased barriers to growth, including absence of property rights and disparities in education;
- Strengthening capacity to collect gender-related data at national and regional levels; and
- Including gender impacts in monitoring and evaluating the effects of trade policies.[253]

Training in gender analysis would also be useful in programs to strengthen the capacities of government agencies and civil society groups to undertake poverty and social impact assessments of trade and other macroeconomic policy changes.[254]

IV. Conclusions and Recommendations

There is increasing recognition that liberalized trade and trade agreements can affect women and men differently, and that gender differences in access to resources and employment, household responsibilities and other factors in turn can influence the outcome of trade policies. The gender-differentiated effects of increased trade and cross-border investment vary between countries, and within countries based on other social factors such as age, race or ethnicity, citizenship, class, religion, marital status and geographic location. However, gender-aware research is still needed in a number of areas, including the impact of liberalized trade in non-traditional agricultural exports and services, the impact of trade on the informal and reproductive sectors, and the gender implications of international rules governing trade-related areas such as intellectual property protection and investment.

A growing number of international and regional bodies are taking steps to address gender issues more systematically in their trade-related activities, and these efforts will be reinforced by the new UN inter-agency task force on gender and trade. Similarly, the WTO and its members could take steps to integrate gender considerations in the negotiation, implementation and review of multilateral trade rules. These include:

- Systematic collection and analysis of sex-disaggregated data, and monitoring of gender-related indicators, relevant to trade (which could include use of data and analysis generated by other international and regional organizations);
- Provision of staff training in gender analysis, establishment of a gender unit, and designation of gender focal points in each department of the WTO secretariat and national trade ministries;
- Affirmative steps to increase the number of women in senior positions in the WTO secretariat and national trade ministries;
- Inclusion of women in national trade negotiating teams and trade advisory panels, and inclusion of women's organizations in national consultations on trade policy;
- Gender analysis of proposed trade commitments, periodic gender impact assessments of existing trade obligations, and inclusion of gender assessments in WTO trade policy reviews;
- Affirmative steps to include women and men with expertise in gender and human development on the WTO Appellate Body and the indicative list of experts for WTO dispute settlement panels;
- Establishment of an expert panel on gender, human development and trade, which could serve as a resource for the WTO secretariat, WTO bodies (including the Appellate Body and the TPRB), and individual dispute settlement panels; and
- Inclusion of training in gender analysis and gender impact assessments in trade-related capacity building programs for developing and least-developed countries.

As discussed earlier, gender considerations could also be integrated in the current work programs of WTO bodies, in particular the mandates from the Doha Ministerial Conference relating to food security concerns under the Agreement on Agriculture; development-related measures under the SCM Agreement; health, environmental and traditional knowledge issues under the TRIPs Agreement; and further services liberalization and consideration of disciplines on regulations, subsidies and government procurement under the GATS. Consideration could also be given to establishing an expert group, with links to both the WTO Committee on Trade and Development and the UN inter-agency task force on gender and trade, to examine the coherence between

WTO rules and international commitments to gender equality, such as CEDAW, the Beijing Platform for Action and the Millennium Declaration and Millennium Development Goals.[255]

Increased gender awareness within the WTO, particularly relating to the gender dimensions of trade and investment in developing countries, would enhance the credibility of the Doha Development Agenda. Measures to increase the representation of women in WTO processes would also further the collective goal of WTO members to see that "all our peoples . . . benefit from the increased opportunities and welfare gains that the multilateral trading system generates."[256]

I. Introduction: A Brief History of the Trade and Culture Debate

Although the relationship between trade and culture has been described as one of those new issues that pose "serious practical and theoretical challenges . . . to present understanding of the trade regime,"[1] trade conflicts concerning cultural goods and services are not in fact a new phenomenon. Such conflicts go back to the 1920's when European countries, following the First World War, began resorting to screen quotas in order to protect their film industry from a sudden influx of American films that was perceived as a threat to their cultural expression.[2] The American motion picture industry responded by developing closer relations with the U.S. government. After the Second World War, through governmental arrangements such as the Blum-Byrnes agreement of 1946 which granted generous import quotas to American films as part of the settlement of the French war debt, or arrangements negotiated directly between the Motion Picture Export Association of America and various governments, it succeeded in reversing the tide.[3] In 1947, a compromise solution appeared to have been reached with the inclusion of Article IV in the *General Agreement on Tariffs and Trade* (GATT) which recognized the specificity of cultural products, at least in the case of films, without removing them from the disciplines of the agreement.[4] However, in the early 1960s, the dispute resumed when the United States asked the GATT to investigate the restrictions imposed on its television programs by a number of countries, including Canada. A special group was constituted to look at the matter but was unable to reach an agreement.[5]

Again in the early 1970s, the United States complained in the Tokyo Round catalogue of non-tariff barriers about the subsidies employed by not less than twenty countries in order to protect their cinema and television industries.[6] A new conflict arose between the United States and Europe towards the end of the 1980s concerning the EC directive "Television Without Frontiers," which stipulates in its Article 4 that "Members States shall ensure, where practicable and by appropriate means, that broadcasters reserve for European works . . . a majority proportion of their transmission time".[7] The United States requested GATT consultations with the European Community. After a lively exchange of views in the consultations, the matter was later dropped to

become part of a wider debate in the context of the Uruguay Round negotiations on services.[8]

In 1990, a working group was set up in the context of the negotiations on services to consider the feasibility of having a specific annex on audiovisual services.[9] Two conflicting views characterized the discussions, that of the United States and some other countries completely opposed to any kind of exception for audiovisual services, and that of the EEC, willing to make a commitment itself in that area only if a cultural exemption clause, more or less along the lines of what Canada had obtained in the FTA, was included.[10] After a few sessions, the group discontinued its activities for lack of agreement on the content of the proposed annex.

The question of audiovisual services was then largely ignored until 1993, when it took a new turn, with a much greater degree of visibility, with the involvement of artists from all over Europe which culminated in the simultaneous publication, on September 29, of a declaration in favour of a cultural exception in five of Europe's most prominent newspapers.[11] In the early autumn, the issue had reached such proportions that the then Director- General of the GATT, Peter Sutherland, felt obliged to respond publicly, arguing in essence that even if a general cultural exception had been considered in the negotiations and rejected, nothing in the services agreement required the deregulation of any services sector and nothing prevented governments from funding audio-visual projects.[12] The question remained unresolved until the very end of the Uruguay Round negotiations when the EC, after unsuccessfully proposing a cultural specificity clause that would have (a) accommodated exemptions from the most-favoured-nation treatment beyond the ten-year limit established in the GATS Annex on Article II Exemptions, (b) permitted the continuance and extension of public aid and operational subsidies, (c) allowed screen time to be reserved for indigenous production of films and TV programmes, and (d) permitted the regulation of existing and future broadcasting technologies and transmission techniques, finally announced that it would make no specific commitments with regard to the audiovisual sector.[13] The question having been put on the back burner, the debate remained completely open.

Unexpectedly, the debate, far from subsiding following the entry into force of the World Trade Organization in 1995, rapidly reached a new level of intensity. One only has

to consider the number of conflicts about cultural industries that have arisen since 1995, the growing number of articles published on the subject, and the numerous conferences organized around that theme, to realize that we are now faced with what a 1998 book described as a "culture/trade quandary"[14]. At the end of that same year, former Under Secretary for Commerce and Dean of the Yale School of Management Jeffrey Garten, in an Article entitled "Cultural Imperialism is no Joke" went as far as to suggest that the United States should be "more sensitive to fears abroad that U.S. exports of movies, music, software, and broadcasting are harmful".[15] By then, however, the debate had taken a new direction: from a discussion strictly about the treatment of cultural goods and services in trade agreements, it had become one about the impact of trade liberalization on cultural identity and cultural diversity.

The importance of this new development did not escape the attention of the Director-General of the new WTO, Mr. Renato Ruggiero. In June 1997, in a speech that may be considered as the first public expression of concern within the new World Trade Organization regarding the cultural impact of trade liberalization, he declared before the Common Market Council of the MERCOSUR that "[m]anaging a world of converging economies, peoples and civilizations, each one preserving its own identity and culture, represents the great challenge and the great promise of our age".[16] Less than a year later, in May 1998, he warned the Member States that they "should not underestimate the growing pressure on the multilateral system to give answers to issues which are very real public concerns, but whose solution cannot rely on the trading system alone"; among such issues, he expressly mentioned that of cultural diversity.[17] As if to confirm his warning, 1998 witnessed the failure of the OECD to conclude a multilateral agreement on investment for reasons not unrelated to the question of cultural diversity.[18] In April 1999, in his last public speech as WTO Director-General, Renato Ruggiero came back to the subject, declaring:

> More and more, we are facing issues and concerns which go beyond the parameters of trade. More and more, globalization is raising a whole new set of questions about how to manage interdependence. Can we have an open world economy without a stable financial system? How to protect endangered species and promote sustainable development? Should trade be linked to labour standards and human rights? Can we preserve cultural identities in an age of borderless communications?[19]

Subsequent events have confirmed the validity of his analysis regarding the issue of cultural identity. Although the failure of the 1999 WTO ministerial meeting in Seattle cannot be related in any way to the issue of culture as such, the noisy protests that disrupted

[18] France, in the context of the MAI negotiations, had proposed a clause preserving the competence of the state to intervene in favour of cultural and linguistic diversity. Canada has even been accused of having sabotaged the MAI negotiations with its cultural network by creating "a cultural exchange blockade, a front for trade barriers that constitute a form of trade protectionism". *See Cultural Protectionism and the Multilateral Trade Agreement on Investment*, INTERNATIONAL ECONOMIC REVIEW, June-July 1998, Pub. 3128 1 (Office of Economics, United States International Trade Commission).

the meeting have been interpreted by a number of commentators as the expression of a cultural reaction to globalization, the explanations given in that respect ranging from growing insecurity about a loss of cultural references[20] to alarm about a more standardized culture[21]. In a speech given before the Trilateral Commission in Tokyo on May 9, 2000, Fred Bergsten, former U.S. Assistant Secretary of the Treasury for International Affairs, referring to the demonstrations in Seattle, Davos, Bangkok and Washington which he considered as the superficial signs of a very real issue, remarked: "The world economy today faces a more fundamental set of challenges because the backlash against globalization is much more than economics. . . . [T]here is also a huge cultural dimension which raises a mass of contentious and difficult issues of its own".[22]

More recently, Jeremy Rifkin, in a commentary published in the Los Angeles Times in anticipation of the G-8 Summit of July 2001 in Genoa, Italy, wrote:

> Protests are becoming a familiar part of world political and economic forums. But, although the attention often goes to the relatively few violent protesters, there is a bigger message worth listening to. The fact is we are witnessing the first stirrings of a cultural backlash against globalization whose effects are likely to be significant and far-reaching.[23]

The G-8 Tokyo Summit of July 2000 itself acknowledged, in its final communiqué, the importance of preserving cultural diversity "as a source of social and economic dynamism which has the potential to enrich human life in the 21st century, as it inspires creativity and stimulates innovation."[24]

The concern regarding the impact of globalization on culture has also attracted the attention of international cultural organizations such as UNESCO, the Council of Europe, and the Organisation Internationale de la Francophonie, which have all adopted declarations on cultural diversity[25]. The texts in question share the same perception regarding the need to adopt measures to respond to global market influences on culture and cultural exchange. For example, the preamble of the Council of Europe Declaration on Cultural Diversity, adopted by the Committee of Ministers on 7 December 2000, recognizes "that the development of new information technologies, globalisation and evolving multilateral trade policies have an impact on cultural diversity".[26]

Within the WTO itself, cultural identity and cultural diversity concerns are now being voiced and discussed more and more in the context of the present GATS negotiations, in effect resuming the cultural exception debate from the Uruguay Round. Although these negotiations are far from over, at least four distinct positions have been expressed on the subject so far.

The Organisation Internationale de la Francophonie also adopted a declaration on cultural diversity (Déclaration de Cotonou) in June 2001 ; for the text, see http://www.francophonie.org/oif/publications/evenements/declaration_Cotonou.doc

[26] Council of Europe, DECLARATION ON CULTURAL DIVERSITY, 2000: http://culture.coe.fr/Infocentre/txt/eng/edecldiv.htm

- Canada has stated in its initial negotiating proposals that it would not make any commitment that restricts its ability to achieve its cultural policy objectives "until a new international instrument, designed specifically to safeguard the right of countries to promote and preserve their cultural diversity, can be established".[27]
- Switzerland considers that the audio-visual sector represents both an important field of commercial activity and a vector of cultural identity, and therefore identifies the challenge for trade policy as being to reconcile these two views within a balanced solution that satisfies both sensibilities. Such a solution, in the Swiss view, could take the form of an Annex to the GATS or of any other suitable instrument, but the work to be undertaken would have to take into account any relevant development outside the WTO framework on the issue of audio-visual regulation, in particular developments relating to cultural diversity.[28]
- Brazil, whose position is close to that of Switzerland, first rejects the radically conflicting views that characterized the discussions in the audiovisual sector during the Uruguay Round; on the one hand the view that the sector should be completely excluded from trade rules because of the role of audiovisual services in the promotion and preservation of cultural identity and cultural diversity, and on the other the view that rejects any special treatment of the sector because of the entertainment and commercial nature of audiovisual products and services. Instead, Brazil affirms, the question that should be considered is "how to promote the progressive liberalization of the sector in a way that creates opportunities of effective market access for the exports of developing countries in this sector without affecting the margin of flexibility of governments to achieve their cultural policy objectives as they find appropriate".[29]
- The United States argues that existing trade rules are sufficient to take into account the special cultural qualities of the sector and goes on to say that "[t]he choices are not, nor have they ever been, a choice between promoting and preserving a nation's cultural identity and liberalizing trade in audiovisual services. Especially in light of the quantum increase in exhibition possibilities available in today's digital environment, it is quite possible to enhance one's cultural identity and to make trade in audiovisual service more transparent, predictable, and open".[30]

As can be seen from this brief historical review of the policy debate about trade and culture, the issue has taken a new dimension in recent years. From an issue that until 1995 revolved almost exclusively around the treatment of cultural goods and services in international trade agreements, it has now become one that is more generally concerned with the preservation of cultural identity and cultural diversity. This last development, however, raises problems whose solution, to borrow again the words of Renato Ruggiero, "cannot rely on the trading system alone". The fact is that the WTO is poorly equipped to assess what is required to insure the preservation of cultural identity and cultural diversity: culture is simply not one of its fields of competence. As a trade organization, on the other hand, it remains competent to determine the treatment to be granted to

cultural goods and services from a trade perspective. It is precisely at the intersection of these two concerns that the new issue of trade and culture arises. A prerequisite for its solution, therefore, is that both concerns be clearly articulated. Only then does it become possible to understand the exact nature of the issue and to envisage possible solutions.

The first part of this paper attempts to provide a global picture of the way in which cultural goods and services are presently dealt with under the WTO and of the types of problems that they raise or might raise. To do so, the paper looks successively at the treatment of cultural goods under the multilateral agreements on trade in goods, cultural services under the *General Agreement on Trade in Services* (GATS), and finally cultural goods and services under the *Agreement on Trade-Related Aspects of Intellectual Property Rights* (TRIPS). The second part of the paper will focus on the basic elements of the trade and culture issue and on the solutions that have been proposed to resolve that issue.

II. Cultural Goods and Services in the WTO

A. Trade in Cultural Goods

In examining the treatment of cultural goods under the WTO multilateral agreements on trade in goods, we will proceed under the assumption that such goods are covered except as otherwise provided. For each of the agreements to be examined, therefore, we shall first consider whether there are indications that cultural goods warrant specific treatment, then look at the basic rights and obligations of the parties under the agreement, and finally, with respect to such rights and obligations, consider the problems that may have arisen in relation to cultural goods. The question of whether one is dealing with a good or a service and the significance of that distinction for the choice of the applicable instrument will be examined as a separate issue in the second part of this paper.

Not all the agreements included in Annex I A (Multilateral Agreements on Trade in Goods) of the WTO Agreement apply in practice to trade in cultural goods. Some deal with specific sectors of economic activity that have nothing to do with culture, such as textiles and clothing, agriculture, and sanitary and phytosanitary measures; others deal with problems that are not normally associated with culture, such as technical barriers to trade, licensing procedures and pre-shipment inspection. The agreements that are of interest, either because they clearly apply or could apply to cultural goods, or because they have been invoked in relation to cultural goods, are first and foremost the *GATT 1994*, followed by the *Agreement on Subsidies and Countervailing Measures*, the *Agreement on the Implementation of Article VI of GATT 1994* (Anti-dumping Agreement), and the *Agreement on Safeguards.*

1. GATT 1994

(a) Article IV—Cinematographic Films. Two Articles in the *GATT 1994* specifically refer to cultural goods. The first one is Article IV which is made an exception to the requirement of national treatment through Article III:10. It provides that a member may maintain or establish screen quotas requiring the exhibition of films of national origin during a specified minimum portion of the total screen time in the commercial exhibition of all films of whatever origin; such screen quotas, however, are subject to negotiations for their limitation, liberalization or elimination.[31]

[31] In the Torquay Round of negotiations of 1951, Germany did include in its list of concessions a commitment regarding screen quotas which provided among other things that if it decided to establish a screen quota for the exhibition of films of foreign origin, this would not exceed 27 percent ; but this concession was later withdrawn pursuant to negotiations under Article XXVII in 1956. *See* GATT, GUIDE TO GATT LAW AND PRACTICE (1994) 192.

Article IV reproduces in essence Article 19 of the Havana Charter which was inserted, according to Clair Wilcox,

> upon a recognition of the fact that motion picture production is as much entitled to protection against foreign competition as any other industry and that such protection, in this case, cannot be provided effectively by imposing duties on imported rolls of films. The screen quota, therefore, has been accepted as the counterpart of a tariff and every other method of protection (except tariff duties) has been banned.[32]

In the summary analysis of the Havana Charter provided by the U.S. Department of State in 1950, however, the explanation given by the U.S government differs substantially; it says that movies are distinguishable because "their value is not in the film itself, but in its earning power".[33]

During the negotiation of the General Agreement on Tariffs and Trade itself, yet another explanation for the insertion of what was to become Article IV was put forward by the United Kingdom, Norway and Czechoslovakia, which particularly advocated the film exception; in their view, in the case of films, important cultural considerations entered into consideration, which was not the case for other goods.[34] This explanation was adopted by John Jackson who wrote, in his seminal 1969 work entitled *World Trade and the Law of GATT*, that the cinema exception was accepted because it was "more related to domestic cultural policies than to economics and trade".[35] It is also the interpretation that prevails in the historical review of Article IV prepared by the GATT Secretariat in 1990 for the Uruguay Round Working Group on Audiovisual Services.[36]

Recently, the United States has come up again with a new explanation for Article IV of GATT. In its communication on Audiovisual and Related Services of December 18, 2000, to the WTO Council for Trade in Services, it stated:

> GATT Article IV provides a special, and unique, exception for cinematographic films to GATT national treatment rules. In 1947, in recognition of the difficulty that domestic film producers faced in finding adequate screen time to exhibit their films in the immediate post-World War II period, GATT founders authorized continuation of existing screen-time quotas.[37]

There is no further evidence of such negotiations taking place in the context of multilateral trade negotiations. However, pressures to have screen quotas eliminated in the context of bilateral negotiations are not unheard of. In 1998–1999, a vigorous debate emerged in Korea following the decision of the government to gradually phase out the local screen quota which the U.S. government, in the context of ongoing Seoul-Washington investment negotiations, had described as a protectionist policy. See "Korean Film industry's plea for screen quota turns emotional", *Korea Herald*, June 18, 1999. The debate was still going on in early 2002 as evidenced by an article published in the *Korea Herald* entitled "Film industry leaders protest gov't bid to ease screen quota regulations" on January 29, 2002. It is interesting to contrast the attitude of the U.S. government in this instance with the position taken in its communication of December 2000 to the Council on Trade on Services regarding audiovisual and related services, where it presents Article IV of GATT as an example of the flexibility of the WTO regime in cultural matters: see supra, note 30.

[36] GATT, Doc. MTN.GNS/AUD/W/1 October 4, 1990.

[37] *See supra*, note 30.

It is interesting to note how from the outset and right up to today Europe has insisted that Article IV was based on cultural grounds, whereas the United States claims that it was founded on economic principles.

An important question that arises in connection with Article IV is whether its language, which refers exclusively to cinematographic films, can be extended to cover television programs recorded in video format. This is the specific issue that was raised by the United States before the GATT in 1961.[38] It stated then that "restrictions against the showing of television programs were technically a violation of the principles of Article III: 4, but that some of the principles of Article IV might apply to them."[39] Canada for its part took the position that Article IV covered the issue, even though the article did not mention television programs as such, because this was a development that could not have been foreseen in 1947. Unfortunately, the working group set up to examine the question was unable to reach a consensus on the subject.[40] In 1991, during consultations concerning restrictions on the showing of non-European films on television, the United States, while recognizing the existence of the Article IV exception, pointed out that it applied exclusively to cinematographic films.[41] Certain authors, such as Chi Carmody, have suggested that the restricted nature of the exception "should not imply that the exclusion of cinematographic film necessarily meant GATT coverage for other media" because "the form of Article IV was shaped by the awareness of its time".[42] For the moment, however, the most that can be said is that the scope of Article IV has not yet been settled.

To conclude on Article IV, it is interesting to note that one of the most common restrictions appearing in the schedules of the WTO members that have undertaken commitments in the audiovisual sector during the Uruguay Round GATS negotiations concerned restrictions on the share of screening time allotted to foreign film and television productions.[43] The preoccupation that justified the insertion of Article IV seems to still be very much present.

(b) Article XX(f)—Exception for National Treasures. The other provision of GATT 1994 that specifically refers to cultural products is Article XX(f), which includes among the general exceptions measures which are imposed for the protection of national treasures of artistic, historic or archeological value, provided they are not applied in a manner which would constitute a means of arbitrary or unjustifiable discrimination between countries or a disguised restriction on international trade, as specified in the first paragraph (or chapeau) of Article XX. Article XX (f) is interesting in that it clearly recognizes the relationship between culture and national identity. It no doubt facilitated the conclusion of the 1970 *UNESCO Convention on the Means of Prohibiting and Preventing the Illicit Import, Export and Transfer of Ownership of Cultural Property,*[44] many signatories of

[44] *See* for the text of the convention: http://www.unesco.org/culture/laws/1970/html_eng/page1.shtml

which have effectively adopted legislation authorizing controls on the import and export of heritage products.

Leaving aside Article IV and Article XX(f), cultural goods are subject to all the usual GATT disciplines, the most important of which are the MFN treatment required by Article I, the national treatment requirement of Article III, the anti-dumping and countervailing duties provisions of Article VI, the prohibition against quantitative restrictions of Article XI, and the safeguards provisions of Article XIX. We will consider the Article I, III, and XI provisions in this section. The anti-dumping and countervailing duties provisions of Article VI will be examined in the context of the Anti-dumping Agreement and the Subsidies and Countervailing Duties Agreement, and the safeguards provisions of Article XIX will be examined in the context of the Agreement on Safeguards.

(c) Article I.1—Most Favored Nation. Under Article I:1 of the GATT 1994 "... any advantage, favour, privilege or immunity granted by any contracting party [now Member] to any product originating in or destined for any other country shall be accorded immediately and unconditionally to the like product originating in or destined for the territories of all other contracting parties". Cultural goods, although subject to this most favoured nation clause like any other goods, do raise a particular problem with respect to the like product requirement: they are difficult to compare because they are characterized less by their material components than by their intellectual content.[45] This issue, which has never been examined by a panel in the context of Article I, will be discussed more fully in the context of GATT Article III where the question was explicitly raised in the case of *Canada—Certain Measures Concerning Periodicals.*[46] The fact that it has never been raised in the context of Article I, however, does not mean that the problem is purely theoretical. An example of a situation where it could be raised is that of measures that provide an advantage to cultural goods that are produced in a given language, such as a subsidy program for the acquisition of books and magazines in French by public libraries. To the extent that they provide a *de facto* advantage to those States that share the same language, they could be seen as a violation of Article I. In such a situation, far from uncommon, the question of whether cultural goods produced in a given language are "like" cultural goods produced in a different language would undoubtedly be raised. The answer to that question, as will be seen now in the context of Article III, is far from obvious.

(d) Article III—National Treatment. The most relevant provisions of Article III of GATT 1994 are Paragraph 2, which deals with discriminatory taxes, Paragraph 4, which concerns laws, regulations and requirements affecting the internal sale, offering for sale, purchase, transportation, distribution or use of goods, and Paragraph 8 (b) which exempts from the application of Article III "the payment to subsidies exclusively to domestic producers". To the extent that most States intervene in the cultural sector and do this through a variety of means such as tax measures, domestic content requirements and regulatory requirements, the opportunities for conflict with the provision of Article III are numerous. The WTO decision in *Canada—Certain Measures Concerning Periodicals*, referred to

[45] In an article entitled *Mamas, Don't Let Your Babies Grow to Be Cowboys: Reconciling Trade and Cultural Independence*, Robin Van Harpen writes: "For the purpose of this Note, it is assumed that cultural products of the same type, such as movies, but which are from different countries are 'like' products", but then immediately adds "the accuracy of this assumption is debatable". *See* 4 MINNESOTA JOURNAL OF GLOBAL TRADE 165 n. 130 (1995).

[46] *See* the discussion in Subsection (d) below concerning "like products" in the case of *Canada—Certain Measures Concerning Periodicals*.

above, is particularly instructive with regard to the application of these provisions to cultural goods.[47]

The facts of the case are as follows. In 1965, Canada adopted Tariff Code 9958 which prohibited the importation into Canada of split-run magazines (defined as Canadian editions of foreign magazines that contain advertising directed at the Canadian market and include little or no Canadian editorial content), the objective of the measure being to reserve to Canadian periodicals the Canadian advertising market considered essential to their survival. Nearly thirty years later, in 1993, *Sports Illustrated*, owned by Time Warner, found a way to circumvent Tariff Code 9958 by electronically transmitting the content of its magazine to a printer in Canada. Canada reacted by imposing an eighty percent excise tax on the value of all advertisements in split-run magazines. As a result, *Sports Illustrated* withdrew its split-run edition and the U.S. government launched a challenge before the WTO regarding not only the new tax but also Tariff Code 9958 and two other measures affecting periodicals, one concerning the imposition of higher postal rates on imported magazines, the other concerning a postal subsidy programme for Canadian magazines.

In response to the US argument that the new provision of the *Excise Tax Act* introduced by Canada in support of its periodical industry was a discriminatory tax applying to "like" products contrary to Article III: 2, first sentence, Canada had submitted that this provision could not apply because imported split-run periodicals containing foreign content and Canadian magazines developed specifically for a Canadian readership were not "like" products:

> Content for the Canadian market will include Canadian events, topics, people and perspectives. The content may not be exclusively Canadian, but the balance will be recognizably and even dramatically different from that which is found in foreign publications which merely reproduce editorial content developed for and aimed at a non-Canadian market.[48]

Unfortunately, the Panel completely skirted the issue by using a hypothetical example where it compared two editions of the same magazine, both imported products, which could not have been on the Canadian market at the same time. On the basis of that mistaken example, it considered it most likely that periodicals would have been designed for the same readership with the same tastes and habits and concluded therefore that split-run periodicals and domestic non-split run periodicals could be like products. Although the Panel recognized that a determination of "like product" for the purposes of Article III:2, first sentence, had to be construed narrowly, on a case-by-case basis, by examining relevant factors including the product's end-uses in a given market, consumers' tastes and habits and the product's properties, nature and quality,[49] it failed to analyse these criteria in relation to imported split-run periodicals and domestic non-split-run periodicals. Having found a violation under the first sentence, it abstained from considering the matter under the second sentence.

[47] For the Panel decision, *see* WT/DS/31/R, March 14, 1997; for the Appellate Body decision, see WT/DS31/AB/R, June 30, 1997.

[48] WT/DS31/AB/R, June 30, 1997, Sec. II.A.2.

[49] As explained in *Japan—Alcoholic Beverages*, WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R (1996), Sec. H. Article III:2 of the GATT reads as follows: "The products of the territory of any contracting party imported into the territory of any other contracting party shall not be subject, directly or indirectly, to internal taxes or other internal charges of any kind in excess of those applied, directly or indirectly, to like domestic products. Moreover, no contracting party shall otherwise apply internal taxes or other internal charges to imported or domestic products to imported or domestic products in a manner contrary to the principles set forth in paragraph 1."

The Appellate Body did not accept the Panel's finding that imported split-run magazines and Canadian magazines were "like products". It found that "as a result of the lack of proper legal reasoning based on inadequate factual analysis . . . the Panel could not logically arrive at the conclusion that imported split-run periodicals and domestic non-split-run periodicals can be 'like"'.[50] Lacking an adequate factual analysis to review the decision on the basis of Article III: 2, first sentence, it decided to proceed on its own to examine whether these two products could be considered as "directly competitive or substitutable products" under the second sentence of Article III:2. As a result, the "like product" issue was never resolved. This is particularly unfortunate because the factors to be taken into consideration under the first sentence of paragraph 2 (end uses, consumers' tastes and habits and product's properties, nature and quality) arguably provided the basis for Canada's best arguments.[51]

Essentially on the basis of an admission by Canada that English-language consumer magazines faced significant competition from U.S. magazines in Canada, the Appellate Body found that imported split-run periodicals and domestic non-split-run periodicals were directly competitive or substitutable products in so far as they were part of the same segment of the Canadian market for periodicals.[52] Having established that, it went on to answer the question of whether periodicals could be distinguished on the basis of their intellectual content, as argued by Canada. The answer was as follows:

> Our conclusion that imported split-run periodicals and domestic non-split-run periodicals are 'directly competitive or substitutable' does not mean that all periodicals belong to the same relevant market. A periodical containing mainly current news is not directly competitive or substitutable with a periodical dedicated to gardening, chess, sports, music or cuisine. But newsmagazines, like *Time, Time Canada* and *Maclean's*, are directly competitive or substitutable in spite of the 'Canadian' content of *Maclean's*.[53]

However, the Appellate Body did not explain why domestic as opposed to foreign content in the particular case was not a distinguishing factor. Was this because it considered that domestic content in general was not a significant factor in the choice of a newsmagazine, so that Canadian consumers, or for that matter Italian or Japanese consumers would not mind substituting an American or a German newsmagazine for one of their own country? Would the Appellate Body have similarly found that American newspapers and Canadian newspapers are "directly competitive or substitutable products"? Was it because of the admission by Canada that American and Canadian news magazines were in competition on the Canadian market? Using the same type of reasoning, one would be justified in concluding that foreign films and American films are not "directly competitive or substitutable products" on the American market, because it is widely recognized that there is no real competition between the two on that market, but are "directly competitive or substitutable" on the French market, on the German market etc., because they are in competition on those markets. The truth of the matter is that the Appellate Body, instead of addressing squarely the issue of the specificity of cultural products as vehicles of information, has simply applied to news periodicals the same type of reasoning as was applied in the Japanese Alcohols case to foreign vodka and Japanese vodka.[54]

[53] *Id.*

[54] *Japan—Taxes on Alcoholic Beverages*, WT/DS8R, WT/DS10/R, WT/DS11/R, 11 July 1996 (Panel), WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R, 4 October 1996 (Appellate Body).

The second question of particular interest with regard to the interpretation of Article III had to do with the use of funded postal rates to support domestic periodicals. The Appellate Body, reversing the decision of the Panel in favour of Canada, held that the "funded postal rates" maintained by Canada could not be justified by Article III: 8(b) of GATT 1994, which provides that the provisions of Article III "shall not prevent the payment of subsidies exclusively to domestic producers". Relying on a textual as well as a contextual interpretation of that provision, and taking into account its object and purpose as confirmed by its drafting history, the Appellate Body found that Article III:8(b) was "intended to exempt from the obligations of Article III only the payment of subsidies which involves the expenditure of revenue by a government".[55] And it went on to extract with approval the following comments of the Panel in *United States—Measures Affecting Alcoholic and Malt Beverages*:

> Article III:8(b) limits, therefore, the permissible producers subsidies to "payments" after taxes have been collected or payments otherwise consistent with Article III. This separation of tax rules, e.g. on tax exemptions or reductions, and subsidy rules makes sense economically and politically. Even if the proceeds from non-discriminatory product taxes may be used for subsequent subsidies, the domestic producer, like his foreign competitors, must pay the taxes due. The separation of tax and subsidy rules contributes to greater transparency.[56]

Seeing no reason to distinguish a reduction of tax on a product from a reduction in transportation or postal rates, the Appellate Body finally concluded that the postal subsidy was incompatible with Canada's obligations under Article III of GATT 1994.

It is difficult to quarrel with this decision from a purely legal point of view.[57] However, the interpretation of Article III does mark the triumph of form over substance.[58] The view that virtually any form of subsidy that is not granted directly in the form of payments to domestic producers is not compatible with GATT Article III: 8 (b) means that a serious look will have to be taken at the way financial help is granted to producers of cultural goods. Tax remittance and similar programs are frequently used as a means of subsidizing cultural producers not only in Canada[59] but elsewhere. According to a OECD publication made public in 1998, "OECD governments are increasingly relying upon policies aimed at indirectly stimulating domestic content creation through tax breaks or increased contributions from the private sector or non-profit organizations, rather than direct funding measures"[60]. No matter how the program operates, if it entails some form of discrimination against foreign cultural goods and it is not paid directly in the form of payments to domestic producers, it runs the risk of being challenged on the basis of Article III of GATT 1994.

Article III of GATT 1994 was at the root of another complaint in the cultural sector brought before the WTO by the United States in June 1996. The complaint concerned Turkey's imposition of a tax on the showing of foreign films that was not imposed on the showing of domestic films.[61] Following unsuccessful consultations, a panel was constituted in February 1997 to hear the case. Canada reserved its third-party rights to the dispute. However, on July 14, 1997, both parties notified the DSB of a mutually agreed solution,[62] the United States having decided to drop the matter after Turkey agreed to equalize any box office tax on the showing of domestic and foreign films. On December 16, 1997, the Turkish Council of Ministers published a regulation which lowered the tax on foreign films from twenty-five per cent to ten per cent, while raising the tax on domestic films from zero to ten per cent.[63] This mutually agreed solution is not without interest. It gives support to closely-related schemes used by a number of European countries whereby a non-discriminatory tax is raised at the point of exhibition and is paid into the budget of a national public funding agency for the development of cinema production.[64] The French version of that type of policy was the subject of discussion until the very end of the Uruguay Round negotiations.[65]

(e) Article XI—Quotas. With regard to Article XI of GATT 1994, the Split-Run Periodicals Panel found that a prohibition on the importation of special edition periodicals, including split-run or regional editions, that contain advertisements primarily directed to a Canadian market was a clear violation of Article XI:1 that could not be justified under any of the general exceptions of Article XX. Canada had argued that the import prohibition under Tariff Code 9958 could be justified under Article XX (d) of the GATT, which concerns measures "necessary to secure compliance with laws or regulations which are not inconsistent with the provisions of this Agreement", as a measure intended to secure the attainment of the objectives of Section 19 of the Income Tax Act, which allows for the deduction of expenses for advertising directed to the Canadian market on condition that the advertisements appear in Canadian editions of Canadian periodicals. But the Panel found that the measure was not necessary to secure compliance with the Act in question because the two pursued different objectives.[66] This finding was not appealed by Canada.

2. The Agreement on Subsidies and Countervailing Measures

Even if a subsidy is compatible with Article III of GATT 1994, it remains subject to the provisions of the *Agreement on Subsidies and Countervailing Duties* ("SCM Agreement") which supplements Articles VI and XVI of GATT 1994 by providing more

[66] WT/DS31/R, ¶¶ 5.4 to 5.11.

detailed rules and procedures. Article 1.1 of the Agreement contains a detailed definition of the term "subsidy" that leaves very few financial contributions by a government or public body outside of the scope of the Agreement, provided that they are, in law or in fact, specific.[67] Subsidies subject to the Agreement fall into one of three categories, that is prohibited subsidies (export subsidies and subsidies contingent upon the use of domestic over imported goods), non-actionable subsidies (subsidies that are not specific or relate to research, regional development and environmental requirements and meet certain criterion specified in the Agreement),[68] and actionable subsidies, which are not prohibited but can be challenged in the WTO dispute settlement system if they have an adverse effect on the interests of another Member (basically all other subsidies).

Three types of adverse effect are envisaged in the category of actionable subsidies. First, injury to a domestic industry caused by subsidized imports in the territory of the complaining Member. Second, serious prejudice, which usually arises as a result of adverse effects (e.g., export displacement) in the market of the subsidizing Member or in a third country market. Finally, nullification or impairment of benefits accruing under the GATT 1994, which arises most typically where the improved market access presumed to flow from a bound tariff reduction is undercut by subsidization.

Part V of the SCM Agreement deals with countervailing measures. It sets forth substantive requirements that must be fulfilled in order to impose a countervailing measure, as well as detailed procedural requirements regarding the conduct of a countervailing investigation and the imposition and maintenance in place of countervailing measures.

It is quite possible that subsidies on cultural goods could be challenged under this Agreement. The fact is that in many countries cultural goods in general benefit from a wide variety of subsidy programs. In many instances, however, the programs in question would be considered as non-specific or, if specific, not important enough to create serious prejudice to the domestic industry, which minimizes the risk of a challenge. But this might not be true in the case of the book industry, and above all in the case of the film industry where the amounts given are often quite large and benefit a limited number of producers.[69] It will be remembered in that respect that the United States complained in the 1970 GATT Catalogue of Non-Tariff Barriers about the subsidies granted by various States to their national film industries.[70] More recently, in December 2001, the Film and Television Action Committee, the Screen Actors Guild and a number of other American film and television unions filed a petition with the U.S. Department of Commerce and the International Trade Commission asking that they investigate whether Canada was subsidizing U.S. film production in Canada through tax credit and other incentives and, in the affirmative, asking that they consider imposing countervailing tariffs on such U.S.

[67] The term "specificity" is defined in Article 2 of the SCM Agreement, and essentially means that the subsidy is restricted, in law or in fact, to a limited number of enterprises or to a particular region of the country. For more detail, *see* Chapter 16 of this book.

[68] The category of non-actionable subsidies no longer exists, since the relevant provision in the Agreement had a five-year term and was not renewed. *See id.*

[69] It would not be true also in the case of export subsidies since they are presumed specific and are totally prohibited without regard for their importance: *see* Articles 2.3 and 3 of the SCM Agreement. There is disagreement regarding the extent to which trade in films should be treated as trade in goods as opposed to trade in services. This makes it all the more important to determine whether the subsidy program in question concerns goods or services since, as we shall see, there are no constraints yet on subsidies in the General Agreement on Trade in Services, save if a national treatment commitment has been given in the cultural sector, in which case subsidies will have to respect the national treatment obligation: *see* the discussion of GATS in Part B.1 below.

[70] *See supra*, note 6.

films produced in Canada [71]. Despite the opposition of the major producers, of independent producers, and of the Motion Picture Association of America to the initiative[72], the petitioners went ahead claiming to represent the majority of the approximately 270 000 people employed in the television and film production industry in the United States and asked the U.S. Department of Commerce and the U.S. International Trade Commission to investigate whether Canadian federal and provincial governments were subsidizing film production in Canada through tax credits and other incentives. However, establishing that a sufficient proportion of the industry supports a countervailing duty enquiry proved more difficult than expected and on January 11, 2002, the petition was temporarily withdrawn in order to strengthen it[73]. In June 2002, the Film and Television Action Committee released a legal memo prepared by a leading law firm which outlined the various international trade remedy actions that members of the U.S. industry could take in response to film and television subsidies provided by the Canadian federal and provincial governments and announced by the same occasion its intention to launch a Section 301 petition with the U.S. Trade Representative in the very near future.[74] Whether the petition on countervailing duties will be filed again in light of that development remains to be seen. But if countervailing duties were to be imposed on American films produced in Canada, it could have considerable implications in view of the fact that many States (Australia, South Africa, Ireland, Great Britain among others) offer similar incentives and that a large number of State governments within the United States equally offer a broad range of incentives to the film production industry[75]. More importantly, it would tend to support the view that trade in cinematographic films comes under trade in goods, a view that a number of countries are not ready to accept.

A challenge to a cultural subsidy program could be mounted in the WTO under Part III (actionable subsidies) of the SCM Agreement, or under a domestic countervailing law (which must comply with Part V (countervailing measures) of the SCM Agreement). In both instances, it would be necessary to demonstrate that the subsidized products and the affected products are "like products", which is not particularly obvious in the case of cultural products.[76] According to Article 15.1, footnote 46, the expression "like

[71] The petition was filed on December 4, 2001. *See Petition on 'Runaway' Productions Filed*, Los Angeles Times, December 5, 2001; for the text of the petition, see the site of the International Trade Commission: http://www.usitc.gov/, Dockets, no 701-TA-427 (prelim)

[72] The Motion Picture Association, through its President and CEO Jack Valenti, even claimed that the petition on countervailing duties was a "direct incentive to a trade war": see Jack Valenti Press Releases, December 4, 2001, http://www.mpaa.org/jack/

[73] *Runaway Productions Petition to be Withdrawn*, Los Angeles Times, January 11, 2002.

[74] For the content of that memo, see the site of the FTAC: < http://www.ftac.net/html/2-ftacstewart.html>. In essence, the memo describes the three basic remedies available to the FTAC which are a Section 301(a) investigation by filing a petition with the Office of the United States Trade Representative ("USTR"), a Section 301(b) investigation by filing a similar petition with the Office of the USTR and finally a petition with the U.S. Department of Commerce and the U.S. International Trade Commission under U.S. domestic law, requesting the initiation of an investigation that could lead to the imposition of offsetting tariffs on imports of Canadian film and television productions. Regarding this last remedy, the memo recognized that that the difficulties encountered in defining the industry for "standing" purposes were not trivial but could be overcome. As for the petitions with the USTR, it expressed a preference for a Section 301 (a) investigation rather that a Section 301 (b) investigation.

[76] *See* Article 6.3 and 15.1 of the SCM Agreement.

product" is to be interpreted throughout the Agreement to mean "a product that is identical, i.e. alike in all respects to the product under consideration, or in the absence of such a product, another product which, although not alike in all respects, has characteristics closely resembling those of the product under consideration". The notion of "like product" in the context of the SCM Agreement was examined in the report of the panel in *Indonesia—Certain Measures Affecting the Automobile Industry* where it was found to be quite narrow: "It is not enough that the products have characteristics which resemble the [domestic product]; rather they must have characteristics which "closely" resemble [it]".[77] The Panel added:

> Although we are required in this dispute to interpret the term "like product" in conformity with the specific definition provided in the SCM Agreement, we believe that useful guidance can nevertheless be derived from prior analysis of "like product" issues under other provisions of the WTO Agreement. Thus, we note the statement of the Appellate Body in Alcoholic Beverages (1996)731 that, in this context as in any other, the issue of "like product" must be considered on a case-by-case basis, that in applying relevant criteria panels can only use their best judgement regarding whether in fact products are like, and that this will always involve an unavoidable element of individual, discretionary judgement.[78]

The Panel relied on the physical characteristics of the different types of cars, on the industry-recognized system of market segmentation and on its own analysis of the facts to conclude that certain cars were like products and others were not. Although the Panel made only passing references to substitutability as a test, Edmond McGovern considers that de facto it placed most emphasis on the competitiveness and substitutability of products in its analysis.[79]

In the case of cultural goods, an analysis such as that made by the Panel would raise particular difficulties. Because they are characterized not so much by their physical characteristics than by their artistic and intellectual content, they cannot easily be compared one to another. In *Canada—Certain Measures Relating to Periodicals*, the Appellate Body found that "a periodical containing mainly current news is not directly competitive or substitutable with a periodical dedicated to gardening, chess, sports, music or cuisine".[80] A similar process of distinguishing between categories of cultural goods appears even more warranted in a situation where a "like products" test applies, considering that "like products" should be viewed as a subset of "directly competitive or substitutable" products and interpreted as a consequence more narrowl*y*.[81] Thus, in the case of books, using the industry-recognized system of market segmentation, distinctions might have to be made according to the form of expression (poetry, theatre, essays, novels, criticism), according to the subject matter (history, biographies, arts, architecture and photography, children, home and garden, cooking, mystery and thrillers, reference, religion, romance, science and nature, science fiction, fantasy and horror, self improvement and inspiration, sports and adventure, travels, etc.). Even within a given category, further distinctions might have to be made according to the language of the book (French, Swedish, Japanese, Spanish, Arab, etc.)[82] or to the nationally defined content of the book

[82] In *Canada- Certain Measures Concerning Periodicals*, the Appellate Body decided that imported American split-run periodicals and Canadian periodicals were 'directly competitive or substitutable' essentially on the basis of a Canadian admission that English-language consumer magazines faced significant

(American history books, Canadian history books, etc.). Sorting out which categories of books could be considered as like products, as can be seen, might well entail some delicate decision-making on the part of the Panel.

3. The Anti-Dumping Agreement

Paradoxically, whereas most types of goods can be the object of an anti-dumping proceeding, it appears to be difficult to challenge cultural goods on this basis. The fact is that accusations of dumping in the cultural sector have been made on a number of occasions in the past but none have lead to an inquiry. Thus, one of the arguments put forward by the Canadian Magazine Publishers Association in support of the Canadian prohibition on the importation of split-run editions of foreign magazines was precisely that American publishers could engage in editorial "dumping" of content whose costs had already been recovered in the United States, providing them with an unfair advantage over Canadian magazines competing in the same market.[83] The same argument has also been made regarding American film producers who are often accused of dumping their films in foreign markets.[84]

Whether such situations can really be described as dumping has been questioned by many commentators. Hoskins, Finn, and McFadyen, for instance, argue from an economic point of view that in matters of dumping, "the relevant reference cost is not the production cost of the original but the incremental cost of supplying the additional market, but having said that, they immediately add: "For most traded products, this is not an important distinction, but for audiovisual products, it is crucial. The production cost extractd is always for the first copy, but the relevant cost is the low replication cost . . . plus the distribution cost"[85] Another author, W. Ming Shao, equally questions to what extent, "if at all, conventional notions of dumping apply to goods like films and television programs that possess strong public good characteristics."[86] Whatever the explanation given for the peculiar nature of audiovisual products (and of cultural goods in general), be it their public good characteristics or what has been called the "cultural discount"[87] that characterizes trade in such products, the fact remains that cultural goods appear to be different from other goods in this context.

competition for sales from imported U.S. consumer magazine: *supra,* note 52. But it did not examine the question whether French language periodicals in Canada where "directly competitive or substitutable" with American split-run periodicals.

[83] *See* Canadian Magazine Publishers Association, *Split-Run Editions: The Danger to the Canadian Magazine Industry and the Implications of Tariff Item 99* 58, September 19, 1992, p. 3. *See also* Val Ross, *Sports Illustrated Tackles Canada: Time Warner Plan Assailed as 'Dumping',* THE GLOBE AND MAIL, January 13, 1993, pp. C1–C2.

[84] *See* W. Ming Shao, "*Is There No Business Like Show Business? Free Trade and Cultural Protectionism*", 20 Yale Journal of International Law, 105, 121–122 (1995).

[85] Colin Hoskins, Adam Finn, and Stuart McFadyen, *Television and Film in a Freer International Trade Environment: US Dominance and Canadian Responses*, in MASS MEDIA AND FREE TRADE—NAFTA AND THE CULTURAL INDUSTRIES 63, 70 (eds. Emile G. McAnany and Kenton T. Wilkinson 1996). But it must be pointed out that under U.S. law, dumping analysis is based on fully-allocated costs and that Article 2.2.1 of the Anti-dumping Agreement itself refers to "all costs".

[86] W. Ming Shao, *supra* note 84, 123, (1995).

[87] The notion of cultural discount "captures the notion that a particular program (or feature film) rooted in one culture and thus attractive in that environment, will have diminished appeal elsewhere as viewers find it difficult to identify with the styles, values, beliefs, institutions and behaviour patterns being portrayed": Colin Hoskins and Stuart McFadyen, *Guest Editors' Introduction*, 16 CANADIAN JOURNAL OF COMMUNICATION 186 (1991).The notion was originally developed in Colin Hoskins and Rolf Mirus, *Reasons for the US Dominance of the International Trade in Television Programmes*, 10 MEDIA, CULTURE AND SOCIETY 499–515 (1988).

If an antidumping investigation involving cultural goods was nevertheless launched, it would be necessary to establish first that dumping is effectively taking place and second to what extent dumped products are causing injury to domestic products. The basic definition of dumping in the WTO Anti-Dumping Agreement is the sale for export at a price lower than the comparable price, in the ordinary course of trade, of the like product when destined for consumption in the exporting country.[88] In the case of films, it would not be difficult to establish that they are often sold abroad at a price substantially lower than the comparable price in the exporting country since this is a common practice. What significance must be attributed to such differences in prices, however, needs to be considered in light of the previous remarks of Ming Shao. Once dumping is established, it must be shown that the dumped imports are, through the effects of dumping, causing injury to the domestic production of like products.[89] As in the SCM Agreement, the notion of "like products" is defined to mean "a product which is identical, i.e. alike in all respects to the product under consideration, or in the absence of such a product another product which, although not alike in all respects, has characteristics closely resembling of those of the product under consideration."[90] It would not be surprising therefore to see the same type of difficulties as discussed in connection with the application of the SCM Agreement to cultural goods arise in the case of the AD Agreement.

4. The Agreement on Safeguards

The notion of adapting the safeguards clause of Article XIX of GATT 1947 to fit the particular case of cultural goods is not new. In a protocol annexed to the UNESCO's *Convention on the Importation of Educational, Scientific and Cultural Goods* (Florence Agreement), the United States, as a condition of its signature, effectively obtained for itself a safeguard clause that was in essence a reproduction of article XIX of GATT, but without any explicit reference to compensation.[91]

The *Agreement on Safeguards* does not treat cultural goods differently from other goods, and should not be overlooked as a means of helping cultural industries seriously

[88] *Agreement on the Implementation of Article VI of the General Agreement on Tariffs and Trade*, Article 2.1

[89] *Id*., Article 3.5 and 3.6.

[90] *Id., Article 2.6*

[91] UNESCO, *Protocol annexed to the Convention on the Importation of Educational, Scientific and Cultural Goods,* 1950. The first paragraphs read as follows: "The contracting States, in the interest of facilitating the participation of the United States of America in the Agreement on the Importation of Educational, Scientific and Cultural Materials, have agreed to the following: 1. The United States of America shall have the option of ratifying this Agreement, under Article IX, or of accepting it, under Article X, with the inclusion of the reservation hereunder. 2. In the event of the United States of America becoming Party to this Agreement with the reservation provided for in the preceding paragraph 1, the provisions of that reservation may be invoked by the Government of the United States of America with regard to any of the contracting States to this Agreement, or by any contracting State with regard to the United States of America, provided that any measure imposed pursuant to such reservation shall be applied on a non-discriminatory basis". The reservation itself reads in part as follows:

"(a) If, as a result of the obligations incurred by a contracting State under this Agreement, any product covered by this Agreement is being imported into the territory of a contracting State in such relatively increased quantities and under such conditions as to cause or threaten serious injury to the domestic industry in that territory producing like or directly competitive products, the contracting State, under the conditions provided for by paragraph 2 above, shall be free, in respect of such product and to the extent and for such time as may be necessary to prevent or remedy such injury to suspend, in whole or in part, any obligation under this Agreement with respect to such product".

injured by the importation of like or directly competitive products.[92] It is the new vehicle through which measures may be applied pursuant to Article XIX of GATT 1994 and the basic conditions for its applications are essentially those of that Article (an increase of imports of any product which is causing, or which is likely to cause, serious injury to the industry), except for requirements that the injury should occur "as a result of unforeseen developments and of the effect of the obligation incurred . . . under this agreement" which has not been repeated in Article 2.1 of the Safeguards Agreement. But the Appellate Body, in *Korea—Definitive Safeguard Measure on Imports of Certain Dairy Products*, ruled that Article XIX had to be read together with the Agreement so that the requirements in question remain effective.

To see how the Safeguards Agreement would apply in the case of cultural goods, let us assume that as a result of the WTO decision in *Canada—Certain Measures Concerning Periodicals*, serious injury, understood in the sense of Article 4.1 (a) of the Agreement as "a significant impairment in the position of the domestic industry", is caused to the Canadian periodical industry. Canada, arguably, could consider that such injury occurs as a result of an unforeseen development and of the effect of an obligation incurred under the Agreement and consider that it is justified under the Safeguards Agreement in suspending a GATT obligation in whole or in part for such time as may be necessary to prevent or remedy such injury. Before doing so, however, Canada would have to demonstrate that the injury is the result of an increase in quantities of imports, absolute or relative to domestic production, as prescribed in Article 2.1. Unfortunately, it is sometimes impossible to prove such increase in view of the fact that the intellectual content of magazines (and of most cultural goods for that matter) can easily be separated from their material support for the purpose of import. In the actual facts at the origin of the Periodicals case, the intellectual content of *Sports Illustrated* was imported electronically into Canada and printed there with the result that there was no imports of goods actually taking place. As we shall see later in discussing the distinct treatment of cultural goods and services, this particular problem has taken a new dimension with the transmission of "digitized products such as music, films, software or 'books' on the internet.

Even if it was possible to have recourse to the Agreement because evidence of an actual increase of imported split-run periodicals exists, Canada would still have to offer adequate trade compensation to the United States in the form of reduced tariffs on other products, as it would have a duty to maintain a substantially equivalent level of concessions and other obligations; in the absence of an agreement, the United States could suspend substantially equivalent restrictions.[93] But if the safeguard measure conforms to the Agreement and results from an absolute increase in imports, the compensation requirement does not apply for the first three years.[94] Whether Canada would be interested in following such a course of action remains to be seen in view of the limited protection offered by the Safeguards Agreement and of the relative complexity of the procedure regarding compensation; but the possibility is there.

[92] Stacie I. Strong makes this suggestion in *Banning the Cultural Exclusion: Free Trade and Copyrighted Goods*, 4 DUKE JOURNAL OF COMPARATIVE AND INTERNATIONAL *Law* 93, 105 (1993). Laurence G.C. Kaplan, discussing the possible use of Article XIX by the European Community to justify the *Television Without Frontiers* directive, mentions that this possibility was examined by Hollywood lobbyists at the end of the 1980s. *See The European Community's 'Television Without Frontiers' Directive: Stimulating Europe to Regulate Culture*, 8 EMORY INTERNATIONAL LAW REVIEW 255, 314 (1994).

[94] *Id,* Article 8.3.

B. Trade in Cultural Services

Apart from the European Union with its rules regarding the free movement of services dating back to the Treaty of Rome of 1958, trade in services has only recently become the object of compulsory agreements. The OECD does have a *Code on Current Invisible Transactions*, but it is not compulsory.[95] The *Canada–US Free Trade Agreement*, concluded in 1988, was in effect the first international trade agreement to include specific, fairly detailed and compulsory provisions concerning trade in services. The two governments agreed in essence to extend the principle of national treatment to the providers of a list of commercial services established in an annex to the Chapter on services ; this obligation was prospective in this sense that it did not required either government to change anything to existing laws and practices.[96] These were further developed in the *North American Free Trade Agreement* of 1992, which draws, for its Chapter 12 on services, on the experience of the Uruguay Round negotiations on services. Chapter 12 of NAFTA establishes a set of basic rules and obligations (national treatment, most-favoured-nation treatment, prohibition to impose a local residency requirement) aimed at facilitating trade in services between the Parties. It applies to all measures affecting cross-border trade in services not otherwise excluded from coverage; furthermore, each Party can lodge reservations aimed at maintaining non-conforming measures or preserving the ability to enact new non-conforming measures in specific sectors.

1. The General Agreement on Trade in Services ("GATS")

Contrary to what was suggested in Europe and even in Canada immediately after the conclusion of the Uruguay Round negotiations, GATS does not contain a cultural exception clause.[97] Early in the negotiations, Canada argued in favour of the inclusion of such a general clause that would have covered all cultural services, but dropped the idea for lack of support. The proposal made by the EC in the last days of the negotiations concerned only audiovisual services and did not fare better. The proposal in question, described during the negotiations as a "cultural specificity clause" instead of a "cultural exception clause," envisaged three different modifications or additions to the text of the agreement. The first would have specified that in future negotiations on services, the specific needs of the member States concerning the preservation of their national culture would be fully recognized. The second would have amended GATS Article XV to provide explicitly that the negotiations to be undertaken on subsidies following the entry into force of the Agreement would take into consideration the flexibility necessary for the member States to pursue their national goals with respect to culture. Finally, an interpretative note added to the Annex to Article II of the GATS would have specified that co-production agreements could be maintained beyond the maximum period of ten years envisaged in the Annex. None of these suggestions was discussed in detail, and the proposal was quickly dropped.[98] In the end, the EC simply decided not to include audiovisual services in its list

[95] For the text of the Code, *see*: http://www1.oecd.org/daf/investment/legal-instruments/invisibe.pdf. The OECD codes are implemented through policy reviews and country examinations, relying on "peer pressure" to encourage liberalisation.

[96] *Canada—U.S. Free Trade Agreement*, Chapter 14.

[97] *See* R. Conlogue, *Taking a Stand for the Cinematic National Soul,* THE GLOBE AND MAIL (Toronto), 21 December 1993, p. A-12, where the author writes: "There is a general rejoicing among European and Canadian Film Makers about the French triumph at the GATT negotiations last week".

[98] *See* Ivan Bernier, *Commerce international et cultures nationales: le débat sur la clause d'exception culturelle dans les négociations de l'Uruguay Round*, in Mario Beaulac and Francois Colbert, INDUSTRIES CULTURELLES NATIONALES ET MONDIALISATION DES MARCHES, 45, 60–61 (1994).

of specific commitments, and Canada did the same for cultural services in general. At first sight, therefore, no distinction is made between cultural services and other services in the GATS. However, looking at the fundamental obligations contained in the Agreement, one immediately realizes that enough room was left for those members willing to limit their undertakings in the cultural sector to allow them to do so; and in the end, a good many did exactly that.

The first basic obligation of Members of the GATS is that of Article II, paragraph 1, which provides for the granting of most-favoured-nation treatment to all services and service suppliers of all Members, whether specific commitments have been made or not. The pertinence of this provision in the field of culture is well illustrated by the 1998 EU complaint against Canada concerning film distribution services which was based to a large extent on GATS Article II:1.[99] However, under paragraph 2 of that same Article, a "Member may maintain a measure inconsistent with paragraph 1 provided that such measure is listed in, and meets the conditions of, the Annex on Article II Exemptions." The conditions in question provide that all exemptions granted for a period of more than five years should be reviewed and that in principle exemptions should not exceed a period of ten years. A large number of MFN exemptions have been taken in regard to audiovisual services. Counting the European Community as a single entity, a total of 33 MFN exemptions[100] specifically applying to the audiovisual sector are in place, most of which concern cinema and television co-production agreements and regional funding arrangements inscribed in the Annex on Article II, for reasons having to do essentially with national and regional cultural identity.[101]

An interesting question that arises with regard to co-production agreements exemptions is whether they cover only the agreements in force before January 1, 1995, or whether they cover all co-productions agreements including those concluded after January 1, 1995. According to Article 2 of the Annex on Article II Exemptions, " [a]ny new exemption applied for after the date of entry into force of the WTO Agreement shall be dealt with under paragraph 3 of Article IX of that Agreement". Depending on the interpretation given to the term "exemption", one might be justified in considering, in light of that provision, that post-January 1, 1995, co-production agreements constitute new exemptions. But in practice, quite a number of such agreements have been concluded since January 1, 1995. In some instances, the exemptions covering those agreements are described in a language which explicitly indicates that they apply to existing as well as to future co-production agreements ; in other instances, the language of the exemption

[99] *Canada—Measures Affecting Film Distribution Services*, WT/DS117/1 (1998). The complaint was dropped a few months later when the company at the origin of the case, Polygram, was bought by a Canadian company.

[100] The 33 exemptions covering audiovisual services are by: Australia, Austria, Bolivia, Brazil, Brunei Darussalam, Bulgaria, Canada, Chile, Columbia, Cuba, Cyprus, Czech Republic, Ecuador, Egypt, European Community, Finland, Hungary, Iceland, India, Israel, Liechtenstein, New Zealand, Norway, Panama, Poland, Singapore, the Slovak Republic, Slovenia, Sweden, Switzerland, Tunisia, United States and Venezuela. The eight general MFN exemptions potentially impacting audiovisual services are by: El Salvador, Malaysia, Peru, Philippines, Sierra Leone, Thailand, Turkey and the United Arab Emirates. WTO, Council on Services, Audiovisual Services, *supra*, note 43, ¶ 31.

[101] For examples of specific exemptions see GATS/EL/82 and GATS/EL/33 for Sweden and Finland, and GATS/EL/92 for Venezuela. The member states of the EC are also covered by the broader exemptions taken by the EC which include not only co-production agreements and financial support programs (such as the Media and Eurimages programmes and the Nordic Film and TV fund) but also the EC Television Broadcasting directive (Television Without Frontiers) and which specify that the exemptions in question cover existing and future measures of that type. *See* GATS/EL/31.

is less clear and only a mention that the exemption applies to all countries suggests that it covers new agreements.[102]

But the most important provisions of GATS are to be found in Part III of the Agreement which deals with the specific commitments of members. Following the pattern originally developed in the GATT for trade in goods, GATS provides that its members, beyond the general commitment of Part II (MFN treatment, transparency, etc.) should negotiate with other members specific commitments in sectors of their choice concerning national treatment and market access. In practice, few states have made such commitments in the cultural sector. A WTO document mentions in this respect that only nineteen members (thirteen at the conclusion of the Uruguay Round negotiations, six more as a result of accession) have made market-opening commitments in the audiovisual sector, including four developed countries (the United States, Japan, New Zealand and Israel) and fifteen developing countries, and that many of these commitments include various types of limitations.[103] India, for instance, included motion picture and video tape distribution services, but only one hundred titles could be imported per year, and the designated authority had to certify that the motion pictures in question had either won an award in an international film festival, participated in any of the official sections of the specified film festivals, or received favourable reviews in prestigious film journals.[104] Canada, as mentioned above, made no market-access or national-treatment commitments on any cultural services. It even went to the extent of excluding musical scores, audio and video recordings, books, magazines, newspapers, journals, and periodicals from its commitments in the sector of wholesale trade services.[105] Clearly there is some reluctance on the part of GATS members to undertake obligations in this area.[106] The fact is that once a Member has made a commitment with regard to a particular category of services, it cannot easily withdraw the commitment.[107] New Zealand, which had committed in 1993 not to have recourse to quantitative restrictions in the audiovisual sector, was reminded of this fact in no uncertain terms following its Government's pledge in 2001 to introduce format-specific quotas for local content for radio and broadcast television.[108] The Office

[102] The EC (GATS/EL/31), Chile (GATS/EL/18) and the Czech Republic (GATS/EL/26) are examples of Members whose exemption explicitly refers to existing and future agreements. Canada, who has signed no less than 21 co-production agreements since January 1, 1995, provides an example of a Member whose exemption does not refer to future agreements but is described as being applicable to all countries (GATS/EL/16). For the text of those agreements, *see* http://www.telefilm.gc.ca/04/43.asp. A situation less than clear is that of those nineteen states that have signed and ratified the European Convention on Cinematographic Co-production (under the auspices of the Council of Europe) after January 1, 1995 (see Convention 147: http://conventions.coe.int/Treaty/EN/cadreprincipal.htm). The Convention provides in its Article 4 that: "European cinematographic works made as multilateral co-productions and falling within the scope of this Convention shall be entitled to the benefits granted to national films by the legislative and regulatory provisions in force in each of the Parties to this Convention participating in the co-production concerned".

[103] *See supra*, note 43, ¶¶ 24–26 and Table 9.

[104] GATS/SC/42, p. 8. Most of these limitations, however, have subsequently been dropped by India.

[105] GATS/SC/16, p. 47

[106] Christopher Arup, in *The New World Trade Organization Agreements: Globalizing Law Through Services and Intellectual Property*, 2000, writes in this regard: "The GATS has added to the pressure on those national measures which were designed to ensure that less powerful and mainstream voices, particularly local ones, enjoyed access to distribution channels. Nevertheless, for the time being, many countries have availed themselves of the opportunities inherent in the GATS itself to maintain limitations on their exposure to the open-trade and free-market norms of the WTO" (p. 301).

[107] Article XXI admittedly provides for modification or withdrawal of any commitment in a member's schedule but subject to compensation.

[108] New Zealand, Ministry for Culture and Heritage, Department Forecast Report 2001, p. 9: http://www.mch.govt.nz/publications/dfr2001/MCH 2001 DFR.pdf. A study conducted in New Zealand

of the United States Trade Representative, in its *National Trade Estimate Report on Foreign Trade Barriers 2001*, pointed out that such an action would violate New Zealand's commitments under the GATS.[109]

With respect to subsidies, Article XV of the GATS simply recognises that, in certain circumstances, subsidies may have distortive effects on trade in services, and asks that members enter into negotiations with a view to developing the necessary multilateral disciplines to avoid such distortive effects. According to Dr. Mario Kakabadse of the WTO Secretariat, "[t]here is no presupposition as to what [the disciplines] will contain or how different they will be from rules on subsidies in the goods area. Like all GATT/WTO negotiations, they will take place on the basis of consensus and it would seem unlikely that governments would abandon their explicit right to support film production."[110] In view of the substantial financial support given by many governments to their cultural industries, these negotiations should obviously be followed with care.[111] However, because of the inherent complexity of developing guidelines in this area, the negotiations in question have progressed very slowly since their beginning, in 1995, in the context of the Working Party on GATS Rules.[112] it remains unclear for the moment to what extent there is a real consensus on the need for such guidelines.

Even though there are currently no multilateral disciplines on subsidies as such in the GATS, subsidies are not totally beyond the reach of the Agreement. The Agreement does apply, for instance, in a situation where access to domestic subsidies is granted to certain States and not to others. A concrete example of this in the cultural sector is that of cinema and television co-production agreements and regional support arrangements which provide preferential access to funding: but for the exemption regime of Article II, paragraph 2, of GATS, as we have seen, those agreements would clearly have been in violation of the MFN obligation of Article II, paragraph 1. The Agreement also applies to subsidies when members list a sector in their Schedule of commitments without any limitation concerning national treatment. National treatment then requires governments providing subsidies to domestic services suppliers to make equivalent subsidies available to foreign services providers operating in the country. This explains why the United States,

had shown in that respect that the proportion of local content relative to total schedule time had diminished since 1995 and that when compared with ten other countries, New Zealand stood at the bottom end of the spectrum with only 24 percent. New Zealand On Air, *Broadcasting And Cultural Issues At The Start Of The New Millennium*: http://www.nzonair.govt.nz/media/policyandresearch/otherpublications/issues.pdf

[109] Office of the United States Trade Representative, NATIONAL TRADE ESTIMATE REPORT ON FOREIGN TRADE BARRIERS 2001, under New Zealand. Had New Zealand abstained from taking market access commitments in the audiovisual sector during the Uruguay Round negotiations and put in place quotas, as envisaged in 2001, they could have benefited from the position adopted by the United States in its July 1, 2002, Proposals for Liberalizing Trade in Services, where it simply "requests countries to schedule commitments that reflect current levels of market access in areas such as motion picture and home video entertainment production and distribution services, radio and television production services, and sound recording services". *See* United States Mission—Geneva, Press-2002: http://www.us-mission.ch/press2002/0702liberalizingtrade.html.

[111] In a 1998 background note prepared by the Secretariat for the Working Party on GATS Rules which analyzes, on the basis of information provided in the Trade Policy Reviews, subsidies for services sectors, aids to the audiovisual industries are the most frequently mentioned type of subsidies: see doc. S/WPGR/W/25 (26/01/98).

[112] *See* the note on conceptual issues relating to subsidies prepared by the Secretariat: Doc. S/WPGR/W9. For the most recent report of the Working Party on GATS Rules, dated October 4, 2001, *see* doc. S/WPGR/6. *See also* Gilles Gauthier, with Erin O'Brien and Susan Spencer, *Déjà Vu or New Beginning for Safeguards and Subsidies Rules in Services Trade*, in *GATS 2000* : NEW DIRECTIONS IN SERVICES TRADE LIBERALIZATION, 165, 176–181(eds. Pierre Sauvé and Robert M. Stern 2000).

in one of its few limitations on specific commitments in audiovisual services, explicitly mentioned grants from the National Endowment for the Arts that are only available for individuals with US citizenship or permanent resident alien status, a clear indication that in its view such grants, in the absence of a limitation, would be incompatible with national treatment.[113] New Zealand has similarly indicated in its list that assistance to the film industry through the New Zealand Film Commission is limited to New Zealand films as defined in Section 18 of the *New Zealand Film Commission Act 1978*.[114] In practice, the majority of members have included limitations to their national treatment commitments that apply to all subsidy practices.[115]

With regard to emergency safeguard measures, Article X of the GATS calls for negotiations on the subject based on the principle of non-discrimination. It is more explicit than Article XV as to the time frame for such negotiations, declaring that the results "shall enter into effect on a date not later from three years from the date of entry into force of the WTO Agreement," i.e. January 1, 1998. However, negotiations on safeguards proved more complex than expected, and on December 1, 2000, the Council for Trade in Services adopted a decision stipulating that such negotiations were to be completed by March 12, 2002.[116] This deadline unfortunately could not be met and on July 25, 2002, the Working Party on GATS Rules decided to postpone to March 15, 2004, the finalization of the negotiations under Article X of the GATS.[117] The problems encountered includes such questions as the significance of the concept of imports in a context where services can be delivered in four different modes (cross-border trade, commercial presence, consumption abroad, and presence of natural persons), and the question of what constitutes the domestic industry providing like or directly competitive services, necessary to establish a causal link between the imported service and the injury suffered by the domestic industry.[118] This last question is particularly important for cultural services, which, as we have seen in the case of cultural goods, are inherently difficult to compare. It remains to be seen therefore whether the new emergency safeguard measures that are envisaged for services will truly be helpful in answering the problems of cultural industries in difficulty as a result of the obligations assumed under the Agreement.

2. Basic Telecommunications

This survey of the cultural impact of the GATS would not be complete without a word about the GATS Annex on Telecommunications, the Ministerial Decision on Basic Telecommunications, and the Fourth Protocol to the GATS with its commitments in basic telecommunications. Under the GATS Annex on Telecommunications, host governments undertake to provide foreign companies with access to, and the use of, public telecommunications networks and services on reasonable and non-discriminatory terms for the provision of scheduled services such as banking services, computer services, and enhanced telecommunications. Most telecommunications commitments contained in the 1994 Schedule covered "value-added" services rather than "basic" services, as

[113] GATS/SC/90, p. 46.

In the Report dated October 4, 2001, differing views continued to be expressed regarding the desirability and feasibility of an emergency safeguard mechanism (ESM) in services; see Doc. S/WPGR/6.

[117] GATS, Doc. S/WPGR/7, 25/07/2002

[118] For a detailed discussion of these problems, *see* Gauthier *et al., supra* note 112, at 166–176.

negotiations on the latter, according to the *Decision on Negotiations on Basic Telecommunications* of December 15, 1993, were to continue up to April 1996.[119] Interestingly, measures affecting the cable or broadcast distribution of radio or television programming were excluded under Paragraph 2(b) of the Annex.

The negotiations on basic telecommunications, after an extension of the deadline of April 1996 in the hope of reaching a "critical mass" of sufficient offers from the key telecom markets, eventually led to the tabling, in February 1997, of 55 offers covering 69 governments, with enough substance in the eyes of the U.S. Government to constitute an agreement. These commitments are annexed to a one-page Protocol to the General Agreement on Trade in Services, the Fourth Protocol on basic telecommunications. The formal entry into force of the commitments was scheduled for January 1, 1998,[120] but where a participant's commitments for particular services are to be phased in, the actual implementation would take place on the date specified in the schedule. Generally speaking, participant governments have made commitments to allow competitive supply (defined as permitting two or more suppliers) on voice telephone service, on data transmission services, in leased circuit services, have granted access for cellular/mobile telephone markets, and included various other commitments in areas such as satellite-related communications or regulatory disciplines.

What kind of impact could the Annex on Telecommunications and the Fourth Protocol on basic telecommunications have on trade in cultural goods and services? Two consequences are immediately apparent, one concerning content requirements, the other investment controls. Though the question of content requirements was not on the agenda of the negotiations that led to the Annex on Telecommunications and the Fourth Protocol, it is clear that in the U.S. view, the next step in the gradual opening of national markets to foreign telecom service suppliers will touch directly upon that question. The *US–Mexico DBS Protocol* of November 1996, annexed to the *US–Mexico Satellite Agreement*[121] signed earlier in April 1996, as well as the *U.S.–Argentina Framework Agreement and Protocol for Direct-to-Home Satellite Services and Fixed-Satellite Services*[122] of June 5, 1998, can be seen from that point of view as a prototype of things to come. Significantly, the two Protocols limit domestic content restrictions either side can place on satellite programming to only a "modicum" of total programming, "thereby increasing opportunities for U.S. program content producers".[123] More importantly, the new U.S. approach regarding the treatment of electronic commerce in bilateral and multilateral trade negotiations, as it emerges concretely from its free trade agreements with Chile and Singapore, establishes a clear link between a pro-competitive and fully liberalized telecommunications sector and the development of electronic commerce. It asserts, as one of its basic

[119] *Decision on Negotiations on Basic Telecommunications*, December 15, 1993, Article 5. For the text of the decision, *see*: http://www.wto.org/english/docs_e/legal_e/50-dstel.pdf

[123] *Id.*

principles, that trade barriers to the free flow of content in digital products do not exist today and should not be created in the future. These two agreements are the first ones to be signed by the United States to include chapters on electronic commerce, which is described as "a breakthrough in achieving certainty and predictability in ensuring access for products such as computer programs, video images, sound recordings and other products that are digitally encoded".[124] Similarly, with regards to investment controls, the pressure exerted by the United States during the basic telecommunications negotiations for the elimination of investment controls in the telecommunications sector, although it did not lead to a result that was entirely to the its satisfaction, has nevertheless forced a country such as Canada to increase substantially the level of foreign investment allowed into Canada in that sector. That in turn will make it definitely more difficult to maintain the existing controls over foreign investment in the communications sector, particularly in a situation where a domestic telecommunication concern is itself involved in the area of communications. It is noteworthy from that point of view that in its July 1, 2001 proposals for liberalizing trade in services, the United States, in addition to the sectoral requests, has made selective requests that countries remove unclear, discriminatory, or market-restricting procedures and investment barriers.[125]

The pressure to eliminate content restrictions and investment control restrictions is not however tied exclusively to actions undertaken by the United States and various other countries at the international level. Technological development, convergence, and the globalization of the economy, more than anything else, are at the root of this movement towards the opening of national telecommunication and communication markets and, as shown by the incredible development of the Internet, it will be difficult to stop that movement. This has led certain Canadian observers to declare, perhaps a little prematurely, that the notion of "Canadian content" is something of the past.[126] In the US–Mexico DBS Protocol and the U.S.–Argentina DBS Protocol, there is still room left for domestic program content requirement; and in Europe, the quotas of the "Television Without Frontiers" directive, notwithstanding some acrimonious debates on the subject, are still in place. Even the recently concluded *Chile–U.S. Free Trade Agreement* (2002) and the *U.S.–Singapore Free Trade Agreement* (2003) include reservations that make room for content requirements in broadcasting services.[127] What could happen, however, is a gradual switch, over a period of time and taking into account the particular situation of each State, from the content requirement approach to an approach making use of a variety of

[124] United States Trade Representative, Summary of U.S.-Chile FTA Electronic Commerce Chapter: [http://www.ustr.gov/new/fta/Chile/summaries/Chile%20Ecommerce%20Summary.PDF]. For the text of the *Chile–U.S. Free Trade Agreement*, see [http://www.chileusafta.com/] or [http://www.ustr.gov/new/fta/Chile/text/index.htm] and for the text of the *U.S.–Singapore Free Trade Agreement*, see [http://www.ustr.gov/new/fta/Singapore/consolidated_texts.htm] or [http://www.mti.gov.sg/public/FTA/frm_FTA_Default.asp?sid=36]. In their chapters on electronic commerce, these two agreements provide in essence (1) that the supply of a service using electronic means (defined as means using computer processing) benefit from the obligations in the service chapter (MFN treatment, national treatment and market access) subject to reservations; (2) that the Parties do not apply customs duties on digital products transmitted electronically (digital products being defined as "computer programs, text, videos, sound recordings and other products that are digitally encoded and transmitted electronically, regardless of whether a Party treats such products as a good or a service under its domestic law"); (3) and that trade in such digital products benefit from MFN treatment and national treatment.

[127] *See supra,* note 124

financial and regulatory incentives in order to preserve a national presence in the cultural field.

C. Investment

The Uruguay Round did not yield a genuine agreement on investment. There is, to be sure, the *Agreement on Trade-Related Investment Measures ("TRIMs"),* but it is limited strictly to a narrow range of trade-related investment measures affecting goods only, in effect clarifying Articles III and XI of the GATT. Furthermore, in the context of GATS, a number of countries have undertaken commitments that affect foreign investment in services.

A number of important States, including the United States, maintain various forms of controls over investment in the cultural sector (mostly in relation to ownership of radio and television stations). One only has to look at the compendium of bilateral investment treaties concluded by Western Hemisphere countries that was prepared by the Organization of American States (OAS) Trade Unit,[128] or at the similar instrument prepared for the members of APEC,[129] to realize the extent of the practice. But there is growing pressure, particularly on the part of the United States, to have such controls abolished. For example, the *Investment Canada Act* and the *Canadian Broadcasting Act* have been identified by the United States as barriers to U.S. exports.[130]

Following the failure of the OECD negotiations on a multilateral agreement on investments ("MAI"), a number of States suggested that the negotiations in question should be transferred to the WTO for inclusion in the Millenium Round agenda. Whether it would have become part of the Seattle agenda considering the lack of consensus on the subject and the outright opposition of the United States is a moot question. The Doha Ministerial Conference, as we know, has decided that it could become part of the agenda of the new round of negotiations after the Fifth Session of the Ministerial Conference on the basis of a decision to be taken, by explicit consensus, at that Session on modalities of negotiations.[131] Meanwhile, however, the possibility that new commitments regarding investment will be made in the context of the GATS negotiations is not to be discarded, which, if it happens, could interfere with the negotiations of the new instrument on investment.[132]

1. The WTO Agreement on Trade-Related Investment Measures (TRIMS)

Notwithstanding its limited scope, the WTO *Agreement on Trade-Related Investment Measures* could be used to challenge investment measures related to trade in cultural goods that are inconsistent with the national treatment obligation of Article III:4 of GATT 1994, or with the Article XI:1 requirement to eliminate quantitative restrictions. An illustrative list of such measures, annexed to the TRIMS Agreement, includes

[128] Organization of American States, Trade Unit, *Bilateral Investment Treaties in the Western Hemisphere*, A Compendium prepared for the Free Trade Area of the Americas Working Group on Investment (1996).

[131] WT/MIN(01)/DEC/W/1, 14 November 2001: http://www-chil.wto-ministerial.org/english/thewto_e/minist_e/min01_e/mindecl_e.pdf

[132] This possibility is discussed by Pierre Sauve in an article entitled *Scaling Back Ambitions on Investment Rule-Making at the WTO*, 2 JOURNAL OF WORLD INVESTMENT 529 (2001).

1 [. . .] those which are mandatory or enforceable under domestic law or under administrative rulings, or compliance with which is necessary to obtain an advantage, and which require:
   (a) the purchase or use by an enterprise of products of domestic origin or from any other domestic source, whether specified in terms of particular products, in terms of volume or value of products or in terms of a proportion of volume or value of its local production [. . .]
2 [. . .] those which are mandatory or enforceable under domestic law or under administrative rulings, or compliance with which is necessary to obtain an advantage, and which restrict:
   (a) the importation by an enterprise of products used in or related to its local production, generally or to an amount related to the volume or value of local production that it exports [. . .]

An investment measure concerning cultural goods that incorporated performance requirements would be particularly vulnerable to an attack under the TRIMS agreement. Such requirements are to be found, for instance, in the *Investment Canada Act* and the *Investment Canada Regulations*. An investment subject to review under the *Investment Canada Act* may not be implemented unless the Minister responsible advises the applicant that the investment is likely to be of net benefit to Canada. Among the factors to be taken into consideration for that purpose are "the effect of the investment on the level and nature of economic activity in Canada, including the effect on employment, on the utilization of parts, components and services in Canada and exports from Canada."[133] Requirements of this type that affect trade in cultural goods could potentially be challenged under TRIMS.

2. Investment Liberalization Through GATS

A large number of WTO members have made commitments with regard to investment in the context of the GATS. This has been done through the liberalization commitments of members under mode 3 of the supply of services, that is, the supply of a service through commercial presence. The majority of the 29 States that have made commitments concerning market access in the audiovisual sector indicated that they had no restrictions with regard to the supply of services through commercial presence; however, for those which had made their commitments subject to restrictions, one of the most common restrictions appearing in their schedules of commitments, other than those concerning natural persons, concerned limits on foreign shareholdings.[134]

The process of investment liberalization through the GATS was successful enough to suggest to Pierre Sauvé and Christopher Wilkie that for the time being, "GATS may well offer the only serious vehicle to strengthen the WTO's existing investment-related rules and achieve a greater number of bound liberalization commitments."[135] Through a pragmatic and incremental approach, they suggest, "there are useful things to be done within the multilateral system to improve and sustain investment as a force of integration among nations."[136] Among other possibilities, they mention clarifying the definition of

[133] *Revised Statutes of Canada*, Chap. 28 (1st Supp.), Art.20
[134] WTO, Doc. S/C/W/40, ¶ 29.
[135] Pierre Sauve and Christopher Wilkie, *Investment Liberalization* in SAUVE and STERN, *supra* note 86, at 346
[136] *Id.*

commercial presence so as to expand the scope of covered investments, strengthening the investment protection features of GATS, and promoting greater transparency on investment incentives. But can such an approach be applied in the case of cultural services? Interestingly, Pierre Sauvé and Karsten Steinfatt, in a recent paper, suggest in that regard that

> [. . .] the time may be near when members of the international community have to contemplate more seriously the scope for, and the content of, a WTO-anchored set of disciplines aimed at striking a balance between the potentially competing logics of trade and investment liberalisation on the one hand, and of cultural diversity on the other.[137]

The lessons from the MAI negotiations from that point of view are interesting. Views diverged on how to address cultural matters in the MAI. Two distinct approaches had been proposed, the first one through a general exception for cultural measures, and the second through country-specific reservations. France had proposed a text arguing in favour of an exception clause and provided a draft that read as follows:

> Nothing in this agreement shall be construed to prevent any Contracting Party to take any measure to regulate investment of foreign companies and the conditions of activities of these companies, in the framework of policies designed to preserve and promote cultural and linguistic diversity.[138]

A number of other countries, including Australia, Belgium, Canada, Ireland, Italy, Portugal and Spain, indicated some degree of support for the idea of a cultural exception clause. However, in view of the strong opposition of the United States and some other countries to any form of cultural exception, the chances of success of the French proposal would have been slim had the MAI negotiations continued.

Another way of dealing with cultural products would have been to permit existing non-conforming measures to be maintained, or certain types of activities to be excluded, provided that they were covered by country-specific reservations. This approach, used in the GATS and NAFTA, appeared to have a greater chance of success, although it remained to be seen whether the United States would have accepted country-specific reservations that excluded cultural services altogether. All delegations involved in the OECD negotiations had already submitted a preliminary list of specific reservations. Although a majority had not submitted reservations which directly affected culture, most of them, including the United States, Italy, Turkey, the United Kingdom and the Netherlands, did reserve the right to maintain foreign investment restrictions in the media and broadcasting sectors, and four countries had submitted substantial lists of culture-related reservations. Canada, as well as Australia and Korea, stated that they had prepared their list on the assumption that there would be a general exemption for culture.

What this suggests is that further investment liberalization through GATS could prove a difficult task in the cultural sector to the extent that Members who were not ready to make concessions in that regard in the MAI negotiations retain in the GATS negotiations both the possibility of excluding the sector in question altogether, or, if they make commitments, make them subject to reservations.

[137] *See* Pierre Sauve and Karsten Steinfatt, *Towards Multilateral Rules on Trade and Culture: Protective Regulation or Efficient Protection?,* in PRODUCTIVITY COMMISSION AND AUSTRALIAN NATIONAL UNIVERSITY 2000, ACHIEVING BETTER REGULATION OF SERVICES, AusInfo, Canberra, 2000.

[138] OECD, Doc. DAFFE/MAI/NM(98) 126

D. Intellectual Property Rights

Intellectual property rights and cultural products are closely associated, so much so that cultural products have sometimes been described as essentially copyrighted goods.[139] The fact is that the remuneration of cultural creators and producers depends largely on the recognition of intellectual property rights and that a lack of implementation of those rights will immediately affect them. Both the Universal Declaration of Human Rights and the International Covenant on Economic, Social and Cultural Rights explicitly recognize the close relationship between the protection of copyright and culture. Article 27 of the Universal Declaration of Human Rights reads for example as follows:

1) Everyone has the right freely to participate in the cultural life of the community, to enjoy the arts and to share in scientific advancement and its benefits.
2) Everyone has the right to the protection of the moral and material interests resulting from any scientific, literary or artistic production of which he is the author

It does not come entirely as a surprise therefore to find that national copyright protection measures are covered by an express mention in GATT Article XX (d). Notwithstanding the fact that such measures act as a restraint on trade, they are specifically included within the reference to measures "necessary to secure compliance with laws or regulations which are not inconsistent with the provision of this Agreement".

Until recently, most of the attention in the intellectual property rights field was devoted to the search for common approaches and to the adaptation of basic principles to new situations. Such concerns were mostly addressed in the context of organizations such as the World Intellectual Property Organization (WIPO) and UNESCO. But a growing concern over an apparently uncontrollable flood of illegal copies has prompted the intervention of other international organizations in the field of intellectual property rights, a concern centred on the implementation of property rights. The Uruguay Round *Agreement on Trade-Related Aspects of Intellectual Property Rights* addresses in particular this concern.

The *Agreement on Trade-Related Aspects of Intellectual Property Rights* ("TRIPs") consolidates the disciplines of the *Berne Convention* (literary and artistic works), the *Geneva Convention* (phonograms) and the *Rome Convention* (neighbouring or related rights), the Paris Convention (industrial property) into a single undertaking, backed up by enforceable dispute settlement measures. Members are free to determine the appropriate method of implementing the TRIPs agreement within their own legal system, but they must give to the nationals of other members the national treatment required in the Paris, Berne and Rome conventions, subject to the national treatment exceptions contained in these same treaties. Article 9 of the TRIPS agreement is of particular interest because while it requires compliance with the substantive obligations of the Berne Convention, it makes an exception for moral rights, which are not recognized by the United States.

As far as concerns neighbouring or related rights, they are subject to the conditions, exceptions and limitations authorized by the Rome Convention.[140] If this raises no particular problems for most States in so far as concerns the rights that are explicitly recognized, it does seem to raise a difficulty, at least in the eyes of the United States, in the case of

[139] *See* Stacie I. Strong, *supra* note 92. For a recent study of the place of copyright industries in the U.S. economy prepared for the International Intellectual Property Alliance, *see* STEPHEN E. SIWEK, COPYRIGHT INDUSTRIES IN THE U.S. ECONOMY—THE 2002 REPORT (2002)

[140] Article 14 of the Convention.

copying. The U.S. Government has repeatedly asserted its right under the national treatment obligation to share in the benefits of programs (usually taking the form of a levy on blank audio cassettes) put in place by various governments to compensate for private copying, even though nothing similar is offered in the United States.[141] Whether such programs could effectively be challenged under TRIPS remains to be seen, as the Rome Convention explicitly authorizes reciprocity,[142] and as Article 4 (b) of TRIPS authorizes reciprocity in the case of privileges or immunities granted by a Member in accordance with the provisions of the Bern or Rome conventions.

The importance of TRIPS as an instrument to protect intellectual property rights in the cultural sector is evidenced by the number of complaints brought before the WTO in that regard. As of September 2002, no fewer than nine complaints had been formally notified to the Dispute Settlement Body, seven of them by the United States,[143] and two by the EC.[144] Most of them have been settled at the consultation level, the only exception being the complaint of the EC against the United States. In most cases, the basis for the complaint was failure to grant the required copyright and neighbouring rights protection under domestic law.[145]

III. The Trade and Culture Debate: Basic Issues and Solutions

A. The Basic Issues

1. The Dual Nature of Cultural Products: Entertainment Products or Vectors of Cultural Identity?

Two radically opposed views regarding cultural products underpin the culture and trade debate.[146] One approach sees cultural products as entertainment products that are similar, in commercial terms, to any other product and therefore completely subject to the rules of international trade. The other view is that cultural products are essential instruments of social communication which convey values, ideas, and meaning, and thus contribute to fashioning the cultural identity of a given community. As such, they should be excluded from the reach of international trade agreements. Neither extreme is satisfactory.

When considered as commercial goods, cultural products are difficult to exclude from the scope of trade agreements, although this is probably more true in the case of multilateral agreements than in the case of bilateral agreements.[147] To the extent that cultural products are exchanged with financial gain in mind, they bring into question

[141] *See* Office of the United States Trade Representative, NATIONAL TRADE ESTIMATE REPORT ON FOREIGN TRADE BARRIERS, 2001, http://www.ustr.gov/html/2001_eu.pdf

[142] Article 15(1) of the Convention.

[143] The complaints in question concerned Japan (WT/DS28/1), Ireland (WT/DS82/1), the EC (WT/DS124/1, WT/DS115/1) Denmark (WT/DS83/1), Sweden (WT/DS86/1) and Greece (WT/DS/125/1).

[144] One complaint was against the United States (WT/DS160/1) and one against Japan (WT/DS42/1)

[145] The exception being the complaint of the EC against the United States which concerned the interpretation of the TRIP's Agreement.

[146] *See,* e.g., Judith Beth Prowda, *U.S. Dominance in the 'Market Place of Culture' and the French Cultural Exception*, 29 JOURNAL OF INTERNATIONAL LAW AND POLITICS (1996–1997) 193,198; Knight, *supra* note 58, at 167–169; Glen M. Secor, "*Cultural Industries in United States-Canada Free Trade: The Canadian Book Publishing Industry as a Case Study"*, 11 BOSTON UNIVERSITY INTERNATIONAL LAW JOURNAL 299, 302 (1993)

[147] The free trade agreements between Canada and Chile, between Canada and Israel and between Canada and Costa Rica for example, are not applicable to measures adopted or maintained with respect to cultural industries. The Free Trade Agreement between the European Union and Mexico and between the European Union and Chile totally exclude for their part audiovisual services from the Services Chapter: see below notes 176 and 177.

various and competing interests which can only be reconciled within an appropriate legal framework. Not only would leading exporters of cultural products be opposed to any exclusion of the latter from the legal framework of international trade (among the countries that have made commitments in the audiovisual sector in GATS, one predictably finds the United States, India, Japan, Mexico and Hong Kong), but also countries that are beginning to develop or want to develop a presence on that market could be concerned at such a trend. Totally excluded from the multilateral trade regime, cultural products would be left without protection in the face of discriminatory or retaliatory measures from foreign countries.[148]

If, however, exclusion of cultural products from multilateral trade agreements does not constitute a realistic solution, it does not necessarily mean that they should be considered like any other product. To the contrary, it seems that refusal to recognize the particular nature of cultural products and their special role in adapting cultures to change will only lead to increased tension within the trade regime itself and give rise to a growing number of disputes in the cultural sector. As we have seen before, the lack of success of the European Community with its proposal for a cultural specificity clause at the end of the Uruguay Round did not put an end to the trade and culture debate. Quite the contrary: cultural conflicts increased in the following years, and the trade and culture debate itself took a new dimension.[149]

Not surprisingly, there is a growing tendency now to consider that this debate on the nature of cultural products needs to be concluded. As Switzerland stated in its communication to the Council for Trade in Services in the context of the present GATS negotiations:

> In fact, none of these two positions reflects the whole reality. For Switzerland, the audiovisual sector represents both an important field of commercial activity as well as a vector of cultural identity. The challenge for the trade policy consists therefore in reconciling these two views within a balanced solution that satisfies both sensibilities.[150]

Brazil, as we have seen previously, has expressed a similar view.[151] Even the United States accepts that the "all-or-nothing" approach to the audiovisual sector in the WTO should be rejected, but in its view the trade rules are flexible enough to take into account the special cultural qualities of the sector.[152] Within the European Union, the new Article 151, paragraph 4, of the consolidated text of the *Treaty Instituting the European Community*, which provides that "[t]he Community shall take cultural aspects into account in its action under other provisions of this Treaty, in particular in order to respect and to promote the diversity of its cultures", has opened the door to the recognition of the dual nature of cultural products. Not only has it become part of the official discourse but it has also been applied to the solution of concrete problems. Thus, in its *Resolution of 12 February 2001* on the application of national fixed book-price systems, the Council, after "recognizing the dual character of books as the bearers of cultural values and as merchandise and the need for a balanced assessment of the cultural and economics aspects of books", invites the Commission

[150] *See supra*, note 28

[151] *See supra*, note 29

[152] *See supra,* note 30

> . . . when applying competition rules and rules on the free movement of goods, to take account of the specific value of the book as a cultural object and the importance of books in promoting cultural diversity, and of the cross-border dimension of the book market.[153]

International organisations with an explicit cultural mandate such as UNESCO and the Francophonie have also acknowledged in recent years the dual nature of cultural products.[154]

The apparent consensus on the subject seems to justify at first sight the conclusion that recognition of the dual nature of cultural goods is no longer an issue. The problem is that there is no agreement on the concrete implications of such a recognition. Between the "do nothing" approach and the cultural exemption approach, as we shall see below, the full range of options remains open. This is where a better understanding of the exact nature of the WTO's concern with regard to culture becomes important.

2. The Nature of the Concern: From the Treatment of Cultural Goods and Services to the Preservation of Cultural Diversity

As pointed out previously,[155] in the last five years there has been a significant change of perception within the WTO concerning the trade and culture debate. From an issue that revolved almost exclusively around the treatment of cultural goods and services in international trade agreements, it has now become one that is more broadly framed in terms of the preservation of cultural identities and cultural diversity. This development in a sense was predictable. Trade liberalization effectively fosters new forms of social organization that call into question existing values, lifestyles, and ways of doing things or, to put it differently, cultural identity. When these changes upset people, trade liberalization itself comes under pressure.[156] In this sense, it was inevitable that the further development of trade liberalization would raise the question of the impact of such a process on cultural identity and cultural diversity. What is less clear is whether this new concern displaces the previous concern with the treatment of cultural goods and services in trade agreements.

The fact that trade liberalisation has an impact on national cultures does not mean that any trade initiative that might influence these cultures in one way or another should be rejected. To assert the contrary would be to attempt to freeze culture and national identity and lend them a meaning that would only benefit those people who hope to turn them into instruments of political control. Any national culture that is to remain vibrant and alive must adapt over time to a variety of changes, both internal and external. The real issue that trade liberalization poses for national cultures is whether the changes that it brings about in values, lifestyles, and ways of doing things detract from the opportunity to "promote and maintain a pluralistic public space where citizens can access and participate in cultural life, which is itself necessary for public life".[157] In other words, it is not so much a question of whether the liberalization of trade, with its underlying commercial concerns, affects values and traditional lifestyles, but whether this liberalization is understood and accepted and whether it leaves enough space beyond the simple producer-consumer

[153] *Official Journal* no C 073 of 06/03/2001, p. 0005–0005

[154] *See supra*, note 25.

[155] *See* Part I, *supra*.

[156] *See* Mary E. Footer and Christoph Beat Graber, *Trade Liberalization and Cultural Policy*, 3 JOURNAL OF INTERNATIONAL ECONOMIC LAW 115, 134–135 (2000).

[157] *See* Marc Raboy, Ivan Bernier, Floran Savageau, and Dave Atkinson, DEVELOPPEMENT CULTUREL ET MONDIALISATION DE L'ECONOMIE 77(1994).

relationship for the cultural expression of citizens, itself an essential element of the democratic process.[158]

Unfortunately, it is not clear whether trade liberalization is having on balance a positive effect on the maintenance of a public space for the cultural expression of citizens when the issue is considered from the standpoint of the national production of cultural goods and services. There are at least three reasons for concern. The first, somewhat older but still very present concern is related to the influx of foreign cultural products (films, television programs, compact discs, books etc.), which in certain circumstances may stifle domestic cultural production, thereby depriving the affected communities of the symbolic discourse essential for their own development. The second concern has to do with the concentration of production and the marketing of cultural products by large industrial groups, and the consequent standardization of cultural expression under the influence of basically commercial imperatives. Independent production is often put at risk in such a context. The third, more recent concern, is with exclusion from the international cultural space as it is currently being constructed with the new information technologies (the Internet, etc.). Despite all the opportunities that these new technologies provide to express the diversity of cultures, there is a very real danger of a deep digital divide between those countries that have access to these technologies and those that do not. In all three cases, it is the basic right to cultural expression that is at stake. This is all the more alarming in that the creators of culture and cultural intermediaries play a key role in adapting cultures to change since they create a space where national values and foreign values can confront one another, as can the values and behaviours of the past and those of the future.

So in the end, the new concern of the WTO with the preservation of cultural diversity does not displace the previous concern with the treatment of cultural goods and services. On the contrary, it places it in a broader context where the issue of the treatment of cultural goods and services is considered in its relationship to the goal of preserving cultural identities and cultural diversity. What has changed is the perspective from which the issue is considered. Whereas the former perspective was essentially negative in the sense that its main concern was to find ways of excluding cultural goods and services from trade agreements, the new perspective puts the emphasis on a positive goal which is that of preserving cultural diversity, with the understanding that cultural diversity entails, on the one hand, the preservation of existing cultures and, on the other, the greatest possible openness to other cultures. This new perspective excludes *a priori* any solution to the trade and culture debate that is based either on the total exclusion of cultural goods and services from the scope of trade agreements or their total assimilation to other goods and services.

3. The Diversity of Treatment: the Cultural Goods and Cultural Services Dilemma

Another issue that has considerably gained in importance in recent years is that of the distinct treatment of cultural goods and services in the WTO. To say that certain agreements are applicable to cultural goods as opposed to cultural services implies that there is a clear distinction between cultural goods and cultural services. Unfortunately, that

[158] Footer and Graber, *supra*, note 156, write in this respect : "In our view, certain forms of media like art films and public service television programs have a key role to play in the fight against political fragmentation, as identified by Habermas, or in developing adequate responses to nondivisible conflicts, as identified by Hirschman" *See also* Jeffrey L. Dunoff, *The Death of the Trade Regime*, 10 EUROPEAN JOURNAL OF INTERNATIONAL LAW 733 (1998).

is not always the case. Thus, although films are specifically mentioned in Articles III and IV of GATT 1994 and duty concessions have been made in relation to films, the fact is that cinema has been considered as a service in the General Agreement in Trade in Services ("GATS"), in the OECD *Code on Invisible Current Transactions* and in *the United Nations Central Products Classification.*[159] The same ambivalence is reflected in dispute settlement procedures. In *Turkey—Taxation of Foreign Film Revenues,*[160] the U.S. complaint against Turkey was based on Article III of the GATT, but in *Canada—Measures Affecting Film Distribution Services,*[161] the EC complaint against Canada was based on Article II and III of GATS.

The possibility of conflict in the application of GATT and GATS raises a fundamental problem that was first examined in the WTO decision of June 1997 in *Canada—Certain Measures Relating to Periodicals*. The finding of the Panel that "[t]he ordinary meaning of the texts of GATT 1994 and GATS as well as Article II:2 of the WTO Agreement, taken together, indicates that the obligations under GATT 1994 and GATS can co-exist and that one does not override the other" was supported by the Appellate Body.[162] Specifically with respect to periodicals, the Appellate Body went as far as to say that "a periodical is a good comprised of two components: editorial content and advertising content. Both components can be viewed as having services attributes, but they combine to form a physical product—the periodical itself."[163]

Barely two months later, in *European Communities—Regime for the Importation, Sale and Distribution of Bananas*, the Appellate Body attempted to explain more fully its view on the subject of potential conflicts between trade agreements. It wrote:

> Given the respective scope of the two agreements, they may or may not overlap, depending on the measure at issue. Certain measures could be found to fall exclusively within the scope of GATT 1994, when they affect trade in goods as goods. Certain measures could be found to fall exclusively within the scope of GATS, when they affect the supply of services as services. There is yet a third category of measures that could be found to fall within the scope of both the GATT 1994 and the GATS. These are measures that involve a service relating to a particular good or service supplied in conjunction with a particular good. In all such cases in this third category, the measure in question could be scrutinized under both the GATT 1994 and the GATS. However, while the same measure could be scrutinized under both agreements, the specific aspects of that measure examined under each agreement could be different. Under the GATT 1994, the focus is on how the measure affects the goods involved. Under the GATS, the focus is on how the measure affects the supply of the service or of the service suppliers involved. Whether a certain measure affecting the supply of a service related to a particular good is scrutinized under the GATT 1994 or the GATS, or both, is a matter that can only be determined on a case-by-case basis.[164]

[159] *United Nations Central Products Classification Version 1.0, Code 96* (Doc. ST/ESA/STAT/Ser.M/77/Ver. 1.0)

[160] Doc. WT/DS43 (1996)

[161] *See supra*, note 99.

[162] Doc. WT/DS31/AB/R, June 30, 1997 Sec. 4. Canada was arguing in that case that the provision of the *Excise Tax Act* challenged by the United States was not a measure regulating trade in goods but rather a measure regulating trade in services (access to the advertising market).

[163] *Id.*

[164] Report of the Appellate Body, *European Communities—Regime for the Importation, Distribution and Sale of Bananas*, AB-1997–3, WT/DS27/AB/R (1997), ¶¶ 221–222. In 1998, by the Panel in *Indonesia—Certain Measures Affecting the Automobile Industry*, the same reasoning was extended by the panel to a situation which involved an apparent conflict between the Agreement on Subsidies and Countervailing Measures and the Agreement on Trade-Related Investment Measures. WT/DS54/R, WT/DS55/R, WTDS59/R, WT/DS64/r, 2July 1998, ¶¶ 14.52–14.53.

But this still leaves open the possibility that the exercise of a right under one agreement becomes the negation of a right under the other. This is what would have happened, for example, if India's limitations on film distribution in its specific commitments under GATS, although in full conformity with the agreement and accepted by all the parties to it, had been successfully challenged under GATT as a restriction on the import of a good.[165] Unless a line is traced somewhere between what pertains to trade in services and what pertains to trade in goods, conflicts of this nature appear inevitable.

The possibility that measures which involve a service supplied in conjunction with a particular good (or conversely a good supplied through a service[166]) might be scrutinized under both the GATS and the GATT 1994 is still questioned by many Members in view of the difference of obligations between the two agreements. In a 1999 document entitled "Digital Products: the Case for Services," which was prepared in anticipation of the GATS negotiations of 2000, the European Commission explained its position on digital products as follows:

> The legal nature of 'digitised products' (music, films, software or 'books' on the internet) is still under discussion in the WTO. We argue that all electronic deliveries—including digitised products'—are services and therefore the GATS applies. This is also the view of most other WTO Members and the WTO Secretariat. On the contrary, the US and to a certain extent Japan argue that while the transmission of those 'products' is a service, the 'products' themselves are analogue to goods and therefore fall under the GATT.[167]

The document replies to the U.S. argument that "there may be an advantage to a GATT versus GATS approach, since the former may provide for a more trade-liberalising outcome for electronic commerce," with the assertion that this remains a matter for discussion and that it is simply too early to decide whether members prefer GATT or GATS.[168] This document of the European Commission illustrates perfectly well the difficulty of using a criteria such as the good or service nature of a product in order to resolve a difference of views regarding the legal treatment of the product in question. In the field of culture, where many products have both goods and services components, the temptation to rely on the difference in the treatment of goods and services to solve immediate problems could be great. If such a development was to happen, it could, as we shall see now, complicate singularly the search for a long term solution to the trade and culture debate.

B. Possible Solutions

The possible solutions can be grouped in three distinct categories that can be described as the "Do Nothing" approach, the "Cultural Exception" approach, and the "New International Instrument" approach.

1. The "Do Nothing" Approach

This is the solution traditionally defended by the United States but it also has the support of some other WTO Members including Japan. It is based on the view that cultural goods and services are essentially entertainment products and as such should be treated just like any other products. It has been reiterated most recently in the communication of the United States concerning Audiovisual and Related Services in the context of the GATS

[165] Concerning the Indian exceptions in the film distribution sector, *see supra*, note 104.

[168] *Id*., at 3.

2000 negotiations.[169] In the section of that document which deals with "Trade Rules and the Audiovisual Sector", the U.S. Government observes first that the debate over the audiovisual sector in the WTO

> has sometimes been framed as an "all-or-nothing" game. Some argue as if the only available options were to exclude culture from the WTO or to liberalize completely all aspects of audiovisual and related services. Presenting such stark options obscures a number of relevant facts.[170]

It goes on to assert that "[t]he all-or-nothing approach to the audiovisual sector in the WTO implies that trade rules are somehow too rigid to take into account the special cultural qualities of the sector. This is not the case."[171] To illustrate the flexibility of the system, reference is made to Article IV of GATT 1994, to the possibility of making full or partial commitments in the context of GATS, to the general exceptions of Article XIV of GATS and Article XX of GATT 1994 concerning measures necessary to protect public morals, and finally to the fact that GATS does not presently prevent governments from funding audiovisual services[172]. The obvious message behind these remarks is that the special cultural qualities of the audiovisual sector are adequately taken care of in the existing WTO regime. But interestingly, the U.S. Government for the first time also opens the door to some form of recognition of the need of each nation to foster its cultural identity:

> In conjunction with negotiated commitments for audiovisual services, Members may also want to consider developing an understanding on subsidies that will respect each nation's need to foster its cultural identity by creating an environment to nurture local culture. To this end, many Members subsidize theatrical film production. There is a precedent in the WTO for devising rules which recognize the use of carefully circumscribed subsidies for specifically defined purposes, all the while ensuring that the potential for trade distortive effects is effectively contained or significantly neutralized.[173]

Whether one can speak of a change of mind on the part of the United States on the sole basis of this proposal appears doubtful considering the well-entrenched position of the U.S. Government on the subject and the very restrictive terms used to describe the proposal itself. What it seems to indicate, however, is that the U.S. Government now recognises the existence of a problem.

A variant of this "do nothing" approach is the strategy that was adopted by a surprising number of countries during the GATS negotiations of not making any commitments in the audiovisual sector. This kind of passive resistance to the opening up of national audiovisual markets beyond the general disciplines and obligations of the GATS may at first glance appear to offer a simple solution. Indeed, it can be claimed that it is the only solution that remains realistically available in the context of the WTO for those States which consider that cultural services should not be treated as other services. To this day it remains the basic strategy of the European Union as well as of a number of other Members in the audiovisual sector[174]. But it is essentially a passive strategy that can be

COM(1999) 657 final.

rapidly overtaken by events as the number of members willing to make liberalization commitments in the field of culture increases and with the development of horizontally-applicable disciplines in areas such as those of domestic regulation and subsidies.[175] Pressure along these lines will only mount with each passing negotiation. Already in the service negotiations currently underway, Switzerland has suggested that "possible solutions to the audio-visual issue could take the form of an Annex to the GATS on audio-visual services, or of any other suitable instrument, depending of the nature of the solutions to be elaborated."[176]

The "do nothing" approach does not really offer a long term solution to the trade and culture issue. In both variants, the refusal to take specific actions amounts in practice to a denial of the dual nature of cultural goods and services. In the first variant, it is their cultural nature that is denied, whereas in the second variant, it is their commercial nature.

2. The Cultural Exception Approach

The second type of approach raises at the outset a conceptual problem that needs to be clarified. In the trade and culture debate, reference is often made to cultural exceptions as a generic expression encompassing not only cultural exceptions as such but also cultural exemptions, cultural reservations and cultural waivers, as if these expressions were more or less synonymous. In fact, while they each convey the same basic idea that cultural goods and services should receive distinct treatment, they differ in the way in which they operate. Exemption clauses exclude purely and simply the goods and services covered from the scope of the agreement; exception clauses provide that certain goods and services will be exempted from the obligations and disciplines of the agreement provided they meet certain conditions; reservation clauses allow a member to maintain in existence clearly identified measures in force at the date of entry into force of an agreement notwithstanding the fact that that they do not conform to the obligations and disciplines of that agreement; waivers are granted in exceptional circumstances and usually for a limited period of time in order to except certain activities from an obligation imposed on a member.

(a) Cultural Exceptions. The only examples of cultural exceptions that are operational in the WTO context are Article IV and XX (f) of GATT 1994, both of which have been discussed previously. During the Uruguay Round, the European Commission did consider the possibility of having a cultural exception included in the general exceptions of Article XIV of GATS, which would have automatically made it subject to the requirements of paragraph (1) "that such measures are not applied in a manner which would constitute a means of arbitrary or unjustifiable discrimination between countries where like conditions prevail, or a disguised restriction on trade in services". But the idea was abandoned for lack of sufficient support within the European Community itself. At the end of the negotiations, the refusal of the European Community to make commitments in the audiovisual sector was erroneously described as a cultural exception by a number of

Within the framework of the preparations for the WTO Millennium Round, the principle of cultural diversity was consecrated in the Council of Ministers Conclusion of 26 October 1999, stating that "the European Union will ensure, that as in the Uruguay Round, that the Community and its Member States maintain the possibility to preserve and develop their capacity to define and implement their cultural audiovisual polices for the purpose of preserving their cultural diversity."

[175] For the last report of the Working Party on Domestic Regulation and the minutes of the last meeting, see WTO, Doc. S/WPDR/3 (2001-10-04) and S/WPDR/M8 (2001-10–02).

[176] *See supra*, note 28.

commentators in Europe, but the truth of the matter is that there is no cultural exception in the GATS.[177] There are also very few examples of cultural exceptions in regional trade agreements. It is definitely not a formula that has met with success.

(b) Cultural Exemptions. The best-known example of a cultural exemption is the one contained in the North American Free Trade Agreement ("NAFTA").[178] This clause stipulates that cultural industries are exempt from the provisions of the Agreement, except for certain limited exceptions. However, this exemption is only a partial one in that resorting to it opens the doors to retaliatory measures of equivalent commercial effect. As drafted, in fact, it does not constitute a true cultural exemption clause: all it says is that a party can, if it is willing to pay the price, maintain provisions on cultural industries that are inconsistent with its commitments. Examples of true cultural exemption clauses can be found in Canada's free trade agreements with Israel, Chile and Costa Rica, as well as in the bilateral investment agreements Canada has signed since 1995.[179] These clauses simply stipulate that the provisions of these agreements do not apply to either party's measures respecting cultural industries. Other examples are the *EU-Mexico Free Trade Agreement*, entered into force on July 1, 2000 (according to a decision of the EC/Mexico Joint Council dated February 27, 2001, the provisions of the agreement dealing with services do not cover audiovisual services) and Article 95 of the *Agreement establishing an association between the European Community and its Member States, of the one part, and the Republic of Chile, of the other part* (which explicitly excludes audiovisual services from the scope of the Chapter dealing with services).[180] The concrete impact of these examples remains limited, however, in the sense that these clauses have been negotiated within an exclusively bilateral context. There is nothing to indicate that they could easily be transposed, as is, into a multilateral context like the WTO. To the contrary, there is every reason to consider that a complete exemption of cultural products within such a context would be virtually impossible to achieve in view of the clearly expressed opposition of the United States.[181]

(c) Cultural Reservations. Cultural reservations, strictly defined, are not frequent in trade agreements.[182] A rare example is Canada's reservation concerning films in the OECD *Code of Liberalisation of Current Invisible Transactions*: as explained under item

[177] Dehousse and Havelange, *supra*, note 148 at 125.

[178] Article 2106 and Annex 2106 of the *North American Free Trade Agreement.*

[179] *Free Trade Agreement Between Canada and Chile* (entered into force July 5, 1997), Article O-06 and Annex O–06; *Free Trade Agreement between Canada and Israel* (entered into force January 1, 1997) Article 10.5; *Canada-Costa Rica Free Trade Agreement* (entered into force November 1, 2002), Article XIV.6. For the texts of those agreements and the list and the main elements of the bilateral investment agreements, see: http://www.dfait-maeci.gc.ca/tna-nac/reg-e.asp

[180] *See* for the agreement with Mexico: http://europa.eu.int/comm/trade/bilateral/mexico/fta.htm, and for the agreement with Chile: http://europa.eu.int/comm/external_relations/chile/assoc_agr/agrment.pdf

[181] In a study released in January 2001 by the International Trade Administration under the title *Impact of the Migration of U.S. Film and Television Production,* one can read the following assertion which clearly reveals the U.S. viewpoint on the subject: "At the same time, at UNESCO headquarters in Paris, efforts by France and Canada to create support for a proposal to remove cultural issues from the WTO and place them in a 'new instrument,' possibly UNESCO, found little support. The United States, although not a UNESCO member, made an intervention strongly opposing this idea".

[182] Under Article 21 of the Vienna Convention on the Law of Treaties, a reservation that is established with regard to another party "(a) modifies for the reserving State in its relations with that other party the provisions of the treaty to which the reservation relates to the extent of the reservation; and (b) modifies those provisions to the same extent for that other party in its relations with the reserving State".

H of Annex A of the Code, which mentions films among the covered transactions, "the provisions of this item do not apply to Canada, which, accordingly, has neither obligations nor rights thereunder".[183] But cultural reservations, understood in the sense of specific exceptions, are more frequent. In the *North American Free Trade Agreement*, for instance, Mexico has listed 3 cultural reservations in Annex I and II of the Agreement and Canada has lodged 1. In the *Chile–U.S. Free Trade Agreement* concluded on December 11, 2002, Chile lists five cultural reservations in Annex I and II of the Agreement and in the *U.S.–Singapore Free Trade Agreement* concluded in substance on January 16, 2003, Singapore lists two cultural reservations in Annex II of the Agreement.[184] In the OECD *Code of Liberalisation of Capital Movements*, not less than 15 members have lodged reservations concerning direct foreign investment in the cultural sector (audiovisual sector in particular) and in the *Code of Liberalisation of Current Invisible Transactions*, 7 members have lodged reservations concerning films.

(d) Cultural Waiver. Notwithstanding the possibility offered by Article XXV: 5 of the *GATT 1947*, and since 1995 by Article IX, paragraphs 3 and 4, of the *World Trade Organization Agreement*, no waiver for cultural products has ever been asked for to this day. However, in an article published in 1999, the suggestion has been made that recourse to the waiver provisions of Article IX, paragraphs 3 and 4, of the World Trade Organization Agreement, supplemented by the Understanding in Respect of Waivers of Obligations under the General Agreement on Tariffs and Trade 1994, could prove a more workable proposition than a cultural exception to resolve the trade and culture issue.[185] According to the author, Chi Carmody, "[e]xceptions, being difficult to implement and interpreted restrictively, appear to be inadequate tools to safeguard culture in a living, expansive manner."[186] In the scheme that she proposes, the waiver would be of a general application, somewhat along the lines of the Enabling Clause for developing countries. Members would be entitled to invoke the waiver to derogate from certain key WTO Agreement obligations (national treatment and general elimination of quantitative restrictions) with respect to cultural industries, with the proviso that the measures be taken only after a risk assessment conducted by an objective and impartial body and notification[187]. Whether such a scheme is realistic, however, remains to be seen. A serious obstacle as the author itself recognizes, is obviously the formal voting requirement of three-quarters of the entire WTO membership for a waiver, higher than the two-thirds majority now needed to add an exception to the WTO. Furthermore, the waiver in question, if adopted, would be for a fixed period of time and subject to revision not later than one year after it is granted and then reviewed annually until the waiver terminates.

3. The New International Instrument Approach

A last approach that is gaining support internationally is that of a new international instrument on cultural diversity. This solution was initially proposed by an advisory group set up by Canada's Department of Foreign Affairs and International Trade and composed of representatives of Canada's cultural industries. This group publicly released a report in February 1999, which recommended that Canada should pursue a New International

Instrument on Cultural Diversity (NIICD).[188] The recommendation was based in part on an assessment that a set of clear rules on measures that could and could not be used to promote cultural diversity was preferable to a policy of exempting culture from trade rules, because technological change and the "convergence" of industries in the cultural sector were creating uncertainty. The proposal has since then become the object of extensive discussion in various forums including non-governmental and governmental organizations. The hypothesis of an international instrument on cultural diversity is now mentioned as a legitimate objective and as a solution to be further explored in the Declaration on Cultural Diversity adopted by the Third Ministerial Conference on Culture held under the auspices of the Organisation Internationale de la Francophonie in Cotonou on June 15, 2001[189] and in the Action Plan attached to the Universal Declaration on Cultural Diversity adopted by the General Conference of UNESCO on November 2, 2001.[190]

At the close of its 166th session on April 11, 2003, the UNESCO Executive Board unanimously decided, at the request of some of its members[191], to add the question of "a preliminary study on the technical and legal aspects relating to the desirability of a standard-setting instrument on cultural diversity" to the agenda of the 32nd session of UNESCO's General Conference, set to begin on September 29, 2003.[192] On October 16, 2003, the General Conference unanimously requested that UNESCO prepare an international standard-setting instrument on cultural diversity. At the end of a long debate on the subject, delegates agreed that "cultural diversity, as regards the protection of the diversity of cultural contents and artistic expressions shall be the subject of an international convention." They asked the Director-General to undertake consultations on the subject with the World Trade Organization, the United Nations Conference on Trade and Development and the World Intellectual Property Organization. The resolution invites the Director-General to submit a first draft convention on the protection of the diversity of cultural content and artistic expression to the next session of the General Conference.[193]

The exact nature and content of the proposed convention are still a matter of discussion. However, on the basis of the work already done by the International Network on cultural Policy, some basic characteristics of that convention are beginning to emerge. Thus,

[188] NEW STRATEGIES FOR CULTURE AND TRADE, Canada, Department of Foreign Affairs and International Trade, Cultural Industries Sectoral Advisory Group on International Trade—Cultural Industries, Ottawa, February 1999, p. 33.

[189] International Organisation of the Francophonie, Declaration of Cotonou, III Ministerial Conference on Culture, Cotonou, June 15, 2001: http://www.france.diplomatie.fr/francophonie/actualite/decla_cotonou.pdf. The pertinent text reads as follows (author's translation): "We also agree that the Francophonie must support the principle of an international regulatory framework of a universal character for the promotion of cultural diversity. This international instrument would establish the legitimacy of governmental intervention in favour of the maintenance, establishment and development of cultural diversity."

[190] UNESCO, Press Release no 2001–120–6, *General Conference Adopts Universal Declaration on Cultural Diversity*, November 2, 2001. Article 1 of the Action Plan attached to the Declaration mentions among other objectives to be pursued by the Members: "Deepening the international debate on questions relating to cultural diversity, particularly in respect of its links with development and its impact on policy-making, at both national and international level; taking forward notably consideration of the opportunity of an international legal instrument on cultural diversity".

[192] UNESCO—Executive Board, 166th session, Paris, April 4–16, 2003. Decisions Adopted by the Executive Board, item 3.4.3: "Preliminary study on the technical and legal aspects relating to the desirability of a standard-setting instrument on cultural diversity," doc. 166 EX/SR.10 (May 14, 2003).

[193] UNESCO, General Conference, 32nd Session, Press Release No. 2003–83, Paris, October 17.

although the possibility that it could take the form of an annex to the GATS on audiovisual services has been invoked[194], the prevailing view seems to be that the new international instrument should be negotiated outside of the WTO so as to provide a much-needed cultural viewpoint on the trade and culture issue. There also appears to be a consensus that the new instrument should be legally binding. It is symptomatic from that point of view that both the Cotonou Declaration on Cultural Diversity and the Action Plan annexed to the UNESCO Universal Declaration on Cultural Diversity, which do not constitute themselves legally binding instruments, refer to the opportunity of "an international legal instrument on cultural diversity". Regarding the normative content of the instrument, there is a widely held view that it should establish as a fundamental principle the right of States and governments to promote and preserve cultural diversity while maintaining an access as large as possible to other cultures[195]. This principle would itself be made explicit in rules dealing with various aspects of governmental intervention in the cultural sector. The instrument from that point of view, would provide a framework of reference for all those States that are concerned about the preservation of cultural identities and cultural diversity.

It is obviously difficult to evaluate at this stage the chances of success of the new international instrument approach as an answer to the trade and culture issue: too much remains uncertain about it. One thing that is unclear is how the new instrument might relate to the WTO legal regime. Nevertheless, the very idea of having an instrument on cultural diversity negotiated outside of the WTO could contribute to alleviating the concerns of former Director General Renato Ruggiero that the WTO might be called upon "to give answers to issues which are very real public concerns, but whose solution cannot rely on the trading system alone"[196] The fact is that in the absence of a clearly articulated cultural perspective on the subject, it is hard to see how the WTO could by itself come up with an adequate answer to the trade and culture issue.

IV. Conclusion

This survey of the treatment of cultural goods and services in international trade law has shown that there is still a good deal of ambivalence concerning the way they should be treated. The texts themselves, except for Article IV and Article XX (f) of GATT 1994, have little to say on the subject: cultural goods and services, apparently, are to be treated exactly like any other goods and services. But the actual practice within the WTO tells a different story. Upon closer examination, it appears that cultural goods do not always benefit from the same treatment as other goods. For instance, it is not easy to apply Agreements such as the Subsidies and Countervailing Measures Agreement, the Antidumping Agreement and the Safeguards Agreement to cultural goods because the value of such goods lies in their intellectual content rather than in their material content. More importantly, the WTO practice, as we have seen, provides ample evidence

[194] *See* for instance the Swiss communication to the Council on Trade in Services, supra, note 28, at ¶ 19. The Swiss suggestion, it should be pointed out, does not exclude the possibility of a distinct instrument that would be negotiated outside of the WTO.

[195] As was made explicit in the Cape Town meeting of the International Network on Cultural Policy. *See* Canadian Heritage, News Release, *Sheila Copps Participates in the Fifth Meeting of the International Network on Cultural Policy in South Africa,* Capetown, October 15, 2002: (http://www.canadianheritage.gc.ca/newsroom/news_e.cfm). [196] *Supra*, note 17.

of a resistance to the assimilation of cultural goods and services to other goods and services.

Behind this ambivalence lies a fundamental question which is that of the specificity of cultural products. For some countries, cultural products do not differ from other products and therefore should receive exactly the same treatment. But other countries consider that they are fundamentally distinct and therefore should not be treated as other products. Recent developments, particularly in the context of the GATS negotiations on audiovisual services, suggest that this "all-or-nothing" approach to the problem is no longer acceptable. What is needed is a more balanced approach that would take into consideration the double nature of cultural products and contribute thereby to the preservation of distinct cultural expressions and identities

The search for an answer to the trade and culture issue has taken a new dimension in recent years with the realization that the development of new information technologies, globalization and evolving multilateral trade policies could have a damaging impact on cultural identities. As pointed out by Faouzia Zouari, "[translation] the precedence that economic imperatives take over social and political values, backed by the prodigious expansion of the information highway, is challenging national identities, sometimes driving them into retreat and even into aggressively asserting counter-models."[197] Since Seattle, it has become obvious that the cultural and social dimension of trade liberalization had to taken into account. Creators of culture and cultural intermediaries, from that point of view, play a key role in adapting cultures to change. That is why preserving diverse cultural expressions and cultural diversity more generally can be seen as an essential component of further trade liberalization.

Unfortunately, up until now the search for a balanced solution to the trade and culture quandary has centred for the most part around various forms of cultural exceptions designed to accommodate particular cultural concerns. This approach, to the extent that it gives priority to trade over culture, cannot be considered as a satisfactory solution. To address the question of the relationship between culture and trade exclusively from the standpoint of trade is to subject culture to commercial imperatives and thereby prevent it from playing its role. A satisfactory solution requires recognition of the fact that the multilateral trade regime cannot on its own provide answers to non-trade concerns. There is a growing literature nowadays that criticizes the tendency of the multilateral trade regime to get involved in non-trade matters and various ways of approaching that problem have been proposed, using concepts such as those of "subsidiarity" and "coherence", that suggest in general greater deference to outside expertise, whether national or international[198].

[197] Agence intergouvernementale de la Francophonie, Conférence des ministres de la culture de Cotonou, Travaux préparatoires, *Synthèse des travaux et des contributions*, by Fawzia Zouari, 2001, 7: http://confculture.francophonie.org/TrvxPrep/pdf/Synthese.pdf.

Zampetti, "*Subsidiarity Perspectives on the New Trade Agenda*", 3JOURNAL OF INTERNATIONAL ECONOMIC LAW 83 (2000); AMERICAN JOURNAL OF INTERNATIONAL LAW, *Symposium: The Boundaries of the WTO*, Volume 96 (1), 2002

If the solution to the cultural diversity issue cannot come from the trading system alone, then obviously a contribution coming from outside that system is essential. The declarations on cultural diversity that have been adopted in the last few years may be considered as a first step in the right direction but they are not sufficient. What is needed is an international legal instrument that would articulate from a cultural perspective the basic requirements for the preservation and promotion of cultural identities and cultural diversity. As Howse and Nicolaïdis put it, "instead of looking primarily within the WTO for the relevant structural principles", consideration could then be given to the "importance of non-WTO institutions and norms in treaty interpretation that represent values other than free or freer trade."[199] But until the principles and norms in question are clearly expressed in a multilateral cultural agreement, the risk remains that cultural considerations will continue to be addressed within the WTO from a strictly trade perspective and on a piecemeal basis, which will amplify the existing problems rather than help to solve them.

Author Biographies

Ratnakar Adhikari is the Executive Director of South Asia Watch on Trade, Economics and Environment (SAWTEE), Kathmandu, an organization he co-founded in 1994. Prior to joining this organization full time in 1999, he was working with Nepal Indosuez Bank Ltd. (a Member of the Credit Agricole Group) as Credit Manager. He served as a lecturer of Marketing Management and Managerial Economics at Tribhuvan University, Kathmandu. He is also the Vice-president of Forum for Protection of Public Interest (Pro Public), a public interest research and advocacy organization based in Kathmandu, which was co-founded by him in 1991. He served on the Program Advisory Board of the International Center for Trade and Sustainable Development (ICTSD), Geneva between 1997 and 2000. Mr. Adhikai has written extensively on trade policy, food security, consumer protection, competition policy, environment and sustainable development and livelihood issues. He has edited and written numerous trade-related publications and is currently co-editing a volume on the protection of farmers' rights in the Himalayas. He has represented his organization and presented papers at various national, regional and International seminars and conferences. Mr. Adhikari holds a Master of Commerce (M.Com) degree from Delhi School of Economics, and a Master in International Law and Economics (MILE) from the World Trade Institute, Bern.

Kym Anderson is Professor of Economics and Associate Dean (Research) in the School of Economics and foundation Executive Director of the Centre for International Economic Studies at the University of Adelaide, where he has been affiliated since 1984. From mid-2004 he has been an extended leave at the Development Research Group of the World Bank in Washington DC, as Lead Economist (Trade Policy). Previously he was a Research Fellow in Economics at ANU's Research School of Pacific and Asian Studies (1977–83), following undergraduate studies at the University of New England in Armidale (1967–70), part-time Masters studies at the University of Adelaide (1971–74) and doctoral studies at the University of Chicago and Stanford University (1974–77). During periods of leave he has spent time in Korea (1980–81), Stockholm (1988) and at the GATT (now WTO) Secretariat in Geneva (1990–92). His research interests and publications are in the areas of international trade and development, agricultural economics, and environmental and resource economics in addition to the economics of wine. He has published twenty books and about two hundred articles in journals and other books. He has been a Research Fellow of Europe's London-based Centre for Economic Policy Research since 1992, a Fellow of the Academy of Social Sciences in Australia since 1994, a Fellow of the American Agricultural Economics Association since 2004, and a Distinguished Fellow of the Australian Agricultural and Resource Economics Society since 2002. He was the first economist to serve on a series of dispute settlement panels at the World Trade Organization (concerning the EU's banana import regime), 1996–2000. In 1996–97 he served on a panel advising the Ministers for Foreign Affairs and Trade in their preparation of Australia's first White Paper on Foreign and Trade Policy. Since the late 1970s he has been a consultant with all the major international economic agencies including the World Bank, OECD, UN and ADB.

Stewart A. Baker is a partner with the Washington, D.C., law firm of Steptoe & Johnson. His practice includes issues relating to privacy, national security, computer security, electronic surveillance, encryption, digital commerce, and export controls. He has advised hardware and software companies on U.S. export controls and on foreign import controls on encryption. He also represents major telecommunications equipment manufacturers and carriers in connection with the Communications Assistance for Law Enforcement Act (CALEA) and law enforcement intercept requirements. Mr. Baker is the former

General Counsel of the National Security Agency (1992–1994) and the author of a book and several publications and articles on electronic commerce and international trade. Mr. Baker has been named to numerous US government and international bodies dealing with electronic commerce and related topics, including: Defense Science Board's Task Force on Information Warfare (1995–1996; and 1999–2001); Federal Trade Commission's Advisory Committee on Online Access and Security (2000); President's Export Council Subcommittee on Encryption (1998–2001); Free Trade of the Americas Experts Committee on Electronic Commerce (1998-present); UNCITRAL Group of Experts on Digital Signatures (1997–2001); OECD Group of Experts on Cryptography Policy (1995–1997); International Telecommunication Union Experts Group on Authentication (1999); American Bar Association Task Force on International Notarial Issues (1996–1998); International Chamber of Commerce Working Party on Digital Authentication.

Ivan Bernier is a Professor at the Faculty of Law, Laval University, Quebec City. Ph.D. in Law, London School of Economics, 1969. Dean of the Law Faculty, Laval University, 1981–1985. Director, Quebec Centre for International Relations, 1986–1993. Since 1998, he is a member of a Sectoral advisory group on cultural industries which reports to the Canadian Department of Foreign Affairs and International Trade. He has taught and done research on GATT/WTO, NAFTA and international cultural relations. On the roster of panelists for dispute settlement under NAFTA and the WTO, he has sat on two FTA cases. He is the author and co-author of a number of books and articles dealing with the topic of trade and culture. More recently, he has acted as consultant for the Working Group on Cultural Diversity of the International Network on Cultural Policy, the Department of Canadian Heritage and the Quebec Department of Culture and Communications.

Jan Bohanes holds a Master of Laws and a Doctor of Laws degree from the Law Faculty of the University of Vienna, as well as a Master's degree in International Relations from the Fletcher School of Law and Diplomacy. He is currently Legal Affairs Officer in the Appellate Body Secretariat of the World Trade Organization in Geneva. Formerly, he has held positions of researcher with the Trade Law Center for Southern Africa (TRALAC) in Stellenbosch, South Africa and legal clerk in the Austrian judiciary. His areas of interest include WTO dispute settlement, trade and environment as well as the concerns of developing countries in the global trading system.

Chad P. Bown is an Assistant Professor in the Department of Economics and International Business School at Brandeis University. Professor Bown received his PhD in economics from the University of Wisconsin-Madison, and he has been a Visiting Fellow at the Center for European Integration Studies (ZEI) in Bonn (Germany). Dr. Bown has had his research funded by grants from the Mellon and Schulhof Foundations, and has published extensively on trade-related issues.

Drusilla K. Brown is an Associate Professor of Economics at Tufts University. She was first appointed as a lecturer in 1983, was promoted to Assistant Professor in 1985 and Associate Professor in 1991. She received her Ph.D. in Economics from the University of Michigan in 1984, under the direction of Alan V. Deardorff and Robert M. Stern. Her research focuses primarily on the use of Applied General Equilibrium Models to evaluate preferential trade agreements. In addition, Professor Brown has worked on the theoretical issues concerning international labor standards and child labor. Recent publications include, "International Labor Standards: Where do they belong on the International Trade Agenda?" JOURNAL OF ECONOMIC PERSPECTIVES," Summer 2001, "Child Labor In Latin America: Policy And Evidence," 24(6) WORLD ECONOMY (2001), and "Measurement and

Modeling of the Economic Effects of Trade and Investment Barriers in Services," with R. Stern, 9(2) REVIEW OF INTERNATIONAL ECONOMICS (2001).

Carlos M. Correa is a Professor and the Director of the Center for Interdisciplinary Studies of Industrial Property Law and Economics, University of Buenos Aires as well as of the Post-graduate Courses on Intellectual Property and of the Masters Program on Science and Technology Policy and Management of the same University. He has been a visiting professor in post-graduate courses of the Universidad Carlos III (Madrid, Spain), Tulane University (New Orleans, U.S.A.), Universidad del Externado (Colombia), UNAM (Mexico), Universidad Nacional de Ingeniería (Peru), among others. He has also taught international trade law at the University of Toronto. He has been a consultant to UNCTAD, UNIDO, WHO, FAO, Inter American Development Bank, INTAL, World Bank, SELA, ECLA, UNDP and other regional and international organizations in different areas of law and economics, including investment, science and technology and intellectual property. He has advised several governments on those issues and has been a consultant to the Rockefeller Foundation. He was a member of the UK International Commission on Intellectual Property, established in 2001. He is the author of several books and numerous articles on law and economics, particularly on investment, technology and intellectual property. His recent publications include works on intellectual property and international trade; integrating public health concerns into patent legislation; policy options for intellectual property legislation on genetic resources; international investment regimes; and competition law and development policies.

Meredith Crowley is an economist in the research department at the Federal Reserve Bank of Chicago. Ms. Crowley provides research and analysis on the international economy. Her research interests include theoretical and empirical models of international trade, political economy, special forms of import protection, and technology adoption. Ms. Crowley received a bachelor's degrees in Asian Studies and chemistry from Bowdoin College (Brunswick, ME), a master of public policy degree in international trade and finance from Harvard University, and a master's and doctorate degrees in economics from the University of Wisconsin-Madison.

Alan V. Deardorff is John W. Sweetland Professor of International Economics and Professor of Economics and Public Policy at the University of Michigan. He received his Ph.D. in economics from Cornell University in 1971 and, since 1970, has been on the faculty at the University of Michigan where he served as Chair of the Economics Department from 1991 to 1995. He is co-author, with Robert M. Stern, of *The Michigan Model of World Production and Trade* and *Computational Analysis of Global Trading Arrangements* and has published numerous articles on aspects of international trade theory and policy. His work on international trade theory has dealt primarily with theories of the patterns and effects of trade. With Professor Stern and with Professor Drusilla K. Brown he has developed a series of computable general equilibrium models of world production, trade, and employment that have been used to analyze the effects of both multilateral and regional initiatives for trade liberalization. Professor Deardorff's current research interests include: the role of trade costs in determining patterns of international trade, the causes and effects of fragmentation, and the appropriate use of trade policies for issues of economic inequality, including labor standards and child labor.

Janelle M. Diller is Policy Adviser in the Employment Sector of the International Labour Office, with a focus on integrating international labor standards into technical and advisory activities. Ms. Diller has worked with the ILO since 1998, as director of the ILO Multinationals Enterprises Programme, legal officer in the Office of the Legal Adviser,

and adviser to the Secretariat for the World Commission on the Social Dimension of Globalization. On leave in 2002–03, she was Associate Professor of international law at the University of St. Thomas School of Law (Minneapolis). Prior to ILO, she taught as adjunct professor at Georgetown University Law Center and the University of Virginia School of Law. From 1990–1995, Ms. Diller was Legal Director/Advisor with the International Human Rights Law Group in Washington, D.C. Her previous work included U.S. federal appellate law practice and a judicial clerkship in the US District Court for the District of Puerto Rico. She completed the Bachelor of Arts in Religious Studies (magna cum laude) at Wheaton College, an M.A. (Journalism) at Syracuse University, and the J.D. degree (cum laude) at Georgetown University.

Esperanza Durán is the founding Director of the Agency for International Trade Information and Cooperation (Geneva, Switzerland). She has wide experience in the field of international trade and development and has numerous publications on international economics, particularly on trade and development. In addition to her research and teaching in institutions on both sides of the Atlantic (in particular at the Colegio de México, the Royal Institute of International Affairs (Chatham House) in London and the London School of Economics; at the Johns Hopkins School of Advanced International Studies (SAIS), in Washington, D.C) she has held posts of responsibility in intergovernmental organizations, such as Senior Economist at the International Monetary Fund and the World Gold Council and economist, and country officer at the World Bank. She holds an M.A. from Stanford University and a D. Phil. from St. Antony's College, Oxford.

Christopher Findlay is a Professor of Economics in the Asia Pacific School of Economics and Government at the Australian National University. Prior to that he was Associate Professor of Economics at the University of Adelaide. Professor Findlay is a principal researcher in a major research program on impediments to services trade and investment. Professor Findlay is the Chair (from April 1998) of the Pacific Economic Cooperation Council's Coordinating Group (CG). From September 1998 to December 2003, Professor Findlay was responsible for the Secretariat services provided to the Australian members of the APEC Business Advisory Council (ABAC). Professor Findlay has a Ph.D. and M.Ec. from the ANU and an Honors degree in economics from the University of Adelaide.

Michael Gestrin is currently a Senior Economist at the Investment Division of the OECD in Paris where the focus of his work is on international investment in developing countries. He is currently responsible for a project to develop a Policy Framework for Investment, a voluntary guide to help countries attract more investment and a key element of the OECD Initiative on Investment for Development. Previously he worked as an economist for the Trade Directorate of the OECD, as a research associate at Templeton College, University of Oxford, and as an economist at UNCTAD in Geneva. He has a DPhil from the University of Oxford, the focus of which was the profitability of FDI, and an MA in economics from the University of Toronto.

Robert Herzstein was lead counsel to Mexico in negotiating and implementing the NAFTA, and previously served as counsel to Israel and to Canada as they negotiated free trade agreements with the U.S. He was the first Under Secretary for International Trade, U.S. Department of Commerce and head of the International Trade Administration. He has taught at Harvard Law School on "NAFTA and Lawmaking in the Global Economy." He has practiced law in Washington regarding international trade, investment, and regulatory issues for over 30 years, and is currently with Miller & Chevalier.

William E. James is presently Senior International Economist, International Trade Group, Nathan Associates, Inc. and is serving as an advisor to the government of Indonesia, under the USAID-funded Growth through Investment, Agriculture and Trade (GIAT) Project. He has also served as advisor to the Ministry of Industry and Trade, and the central bank, Bank Indonesia, government of Indonesia. Dr. James has held positions as a member of the graduate faculty of the University of Hawaii and Kyushu University in Fukuoka, Japan. He has been Chief, Research Division of the International Centre for the Study of East Asian Development in Kitakyushu, Japan. He has also been a Senior Fellow and Assistant Director of the Institute for Economic Development and Policy at the East-West Center, Honolulu, Hawaii. Dr. James has published numerous books, book chapters and scientific papers on Asian Economic problems. His published works include: Indonesia: Deregulation and Development (2002); Public Policies in East Asian Development (1999) and Asian Development (1989).

Merit E. Janow is Professor in the Practice of International Trade at Columbia University's School of International and Public Affairs (SIPA). Professor Janow is also Director of the International Economic Policy concentration at SIPA and Co-Director of Columbia's APEC Study Center. Professor Janow teaches graduate courses in international economic and trade policy at SIPA and international trade law and comparative/international antitrust at Columbia Law School. For two years, ending in March 2000, Professor Janow served as Executive Director of a new International Competition Policy Advisory Committee to the Attorney General and Assistant Attorney General for Antitrust at the Department of Justice, Washington D.C. Before joining Columbia University from 1990–1993, Professor Janow served as a Deputy Assistant U.S. Trade Representative for Japan and China at the Office of the U.S. Trade Representative, Executive Office of the President in Washington D.C. At USTR, she negotiated over a dozen trade agreements with Japan and several with the PRC. Prior to her tenure in government, she was an Associate at Skadden, Arps, Slate, Meagher & Flom, specializing in international corporate mergers and acquisitions. She is the author of numerous articles and several books on international economic law and policy matters and on US-Japan/China trade and economic issues. Professor Janow has served as a panelist in a dispute before the WTO and serves on the board of directors of several global mutual funds. She received a B.A. in Asian Studies from the University of Michigan and a J.D. from Columbia Law School.

Mordechai Kreinin is a University Distinguished Professor of Economics at Michigan State University and past President of the International Trade and Finance Association. He is the author of about two hundred articles and nine books in economics, including the widely used text, INTERNATIONAL ECONOMICS, now in its ninth edition. Professor Kreinin has been a consultant to numerous international and national (U.S.) organizations in both the public and private sectors. He is the recipient of numerous awards. Professor Kreinin has been visiting professor at ten universities in the United States, Canada, Europe and Australia, and has also lectured to both professional economists and lay audiences (business, government and other groups) in the United States and many foreign countries, including fifteen around-the-world or regional lecture tours. He works extensively with both the print and electronic media. He has also been very active in University governance, and in the 1980s developed University-wide plans to deal with financial exigencies that were adopted at Michigan State and several other universities throughout the U.S.

Sheldon Leader is a graduate of Yale and Oxford Universities, and is a member of the UK Bar. He is Professor, Department of Law and Centre for Human Rights, University

of Essex. He works on developing practical links between trade, investment and human rights as a legal advisor to Amnesty International's Business and Human Rights section, and has recently helped formulate a legally binding human rights undertaking for the Baku-Ceyhan pipeline. Leader teaches a course on international trade and human rights; as well as jurisprudence; corporate law; and labor/employment law. His current research is into the extension of fundamental rights as constraints on, and guarantees to, non-state actors. Some relevant publications are; *Human Rights on the Line: the Baku-Ceyhan Pipeline*, Amnesty International UK, 2003 (with A. Shemberg); "*The Reach of Democracy and Global Enterprise*" in *Constellations*, Vol. 8, No. 4 (2001) pp. 538–553; "*Three Faces of Justice and the Management of Change*": 63 *Modern Law Review* (2000) *p.* 55–83; "*Integration, Federation, and the Ethics of Rights*" in *Morale et politique des Droits de l'homme* ed. Monique Costillo (Georg Olms Verlag: 2003).

Peter John Lloyd is an Emeritus Professor of Economics at the University of Melbourne. His main areas of specialization are international economics and microeconomics. He is an author or an editor of ten books and has written nine monographs and over one hundred articles in refereed journals or chapters in books. He has been a consultant to the OECD, the GATT, WTO, UNCTAD, the World Bank and a number of government departments and authorities in Australia and New Zealand. He was the joint editor of the Journal of the Economic Society of Australia, *The Economic Record*, for five years and has served on numerous committees for the Economic Society, the International Economic Association, the Academy of the Social Sciences of Australia and other bodies. He is a Life member of the Victorian Branch of the Economic society. He was Dean of the Faculty of Economics and Commerce at the University of Melbourne from 1988 to 1993.

Rachel McCulloch is the Rosen Family Professor of International Finance at Brandeis University. Prior to joining the Brandeis faculty in 1987, she taught at the University of Chicago, Harvard University, and the University of Wisconsin-Madison. Dr. McCulloch serves on the Academic Advisory Council of the Federal Reserve Bank of Boston and the Advisory Committee of the Institute for International Economics, Washington, D.C. She was also a member of the Technology Assessment Advisory Council of the U.S. Congressional Office of Technology Assessment (1979–87), the President's Commission on Industrial Competitiveness (1984–85), and the Committee on International Relations Studies with the Peoples Republic of China (1984–92). Dr. McCulloch has published extensively on economic issues.

Eugenia McGill is an international lawyer and gender specialist, and consults with international and nongovernmental organizations on law and human development issues. In the area of international trade and investment, she recently collaborated with two economists on a framework for assessing trade and investment agreements from a gender perspective, commissioned by the Coalition for Women's Economic Development and Global Equality (Women's EDGE) with support from the Rockefeller Foundation. She worked previously as counsel and senior administrative/policy officer for the Asian Development Bank, based in Manila, and as an international finance lawyer with Cleary, Gottlieb, Steen and Hamilton in New York City and Hong Kong. She has a law degree from the University of Pennsylvania (1984), a masters in international affairs from Columbia University (2000) and an undergraduate degree from Williams College.

Charles Pearson is Professor and Director of the International Economics Program at the School of International Studies at the Johns Hopkins University. His areas of expertise

include international economics, economic development, energy and environment, and multinational corporations. He served as a senior staff economist for the Commission on International Trade and Investment Policy and as a consultant to the World Bank, the U.S. Department of Commerce and other organizations; and has been an adjunct senior associate at the World Resources Institute and at the East-West Center. He received his Ph.D. in economics from Cornell University. Publications include: ECONOMICS AND THE GLOBAL ENVIRONMENT (2000); FREE TRADE, FAIR TRADE? THE REAGAN RECORD (1989); DOWN TO BUSINESS: MULTINATIONAL CORPORATIONS, THE ENVIRONMENT AND DEVELOPMENT (1985); and ENVIRONMENT: NORTH AND SOUTH (1978).

Ernst-Ulrich Petersmann is Professor of International and European Law at the European University Institute (EUI) at Florence and Academic Director of the EUI's Transatlantic Program at the Robert Schuman Centre for Advanced Studies. He previously taught at the Universities of Geneva, Lausanne, Fribourg, St. Gallen (Switzerland), Saarland, Heidelberg and Hamburg (Germany), as well as visiting professor in the Americas, Africa and Asia. He worked as legal adviser in the World Trade Organization, GATT and the German Ministry of Economic Affairs, as German representative in numerous international organizations, and as secretary, member or chairman of numerous GATT and WTO dispute settlement panels. His publications include twenty books and more than two hundred articles and book contributions.

Michael G. Plummer is Professor of International Economics, Johns Hopkins University SAIS-Bologna. He was previously Associate Professor of Economics with tenure (1998–2001) and Assistant Professor of Economics (1993–1998), Brandeis University; and Reseach Fellow, East-West Center (1988–1993). His main fields of interest are international economic integration and Asian economic development. He received his Ph.D. and M.A. in Economics from Michigan State University and holds a BA in Economics and French from the University of Michigan. Academic honors and positions include: Fulbright Chair in Economics, Viterbo (2000); Pew Fellow in International Affairs, Harvard University (1994–95); research professor, Kobe University (1996–97); Editorial Board, *World Development* and *Journal of Asian Economics*; visiting scholar, International Center for Study of South East Asian Development (2002), University of Auckland (1999), and Institute of Southeast Asian Studies (1997); and faculty member, Summer Macroeconomic Policy Program, Harvard Institute of International Development (1995–1997). He is consultant to numerous international and official organizations, and has published extensively in the general areas of international economics and Asian economic development. He is a Co-editor of this book.

Richard Pomfret is Professor of Economics at Adelaide University. Before coming to Adelaide in 1992, he was Professor of Economics at the Johns Hopkins University School of Advanced International Studies in Washington DC, Bologna (Italy) and Nanjing (China). In 1993 he was seconded to the United Nations for a year, acting as adviser on macroeconomic policy to the Asian republics of the former Soviet Union, and he has since then been a consultant to the World Bank, UNDP and Asian Development bank on Central Asian issues. He has written seventeen books, including books on China, Central Asia, Regional Trading Arrangements, as well as textbooks on Canadian economic development, international trade theory and policy, and development economics.

Francisco Javier Prieto is former chair of the Free Trade Area of the Americas (FTAA) Working Group on Services and a consultant on services to the Ministry of Foreign Affairs, Chile. Previous positions include work with the UNCTAD Secretariat in Geneva,

Switzerland and with the ECLAC Secretariat in Santiago de Chile. He was responsible for negotiating services for the Chilean Government in the US-Chile Free Trade Agreement, concluded in 2002.

Alan M. Rugman has published widely, appearing in leading refereed journals that deal with economic, managerial and strategic aspects of multinational enterprises, and with trade and investment policy. His recent books include: *Multinationals as Flagship Firms* (co-author) (Oxford University Press 2000); *International Business* (FT/Prentice Hall 2003); *The End of Globalization* (Random House 2000; 2001); (co-ed) *The Oxford Handbook of International Business* (Oxford University Press 2001) and, forthcoming, *The Regional Multinationals* (Cambridge University Press 2005).

Professor Rugman is one of the world's leading researchers in multinational business. An International expert on free trade among nations, he has served as a consultant to major private sector companies, research institutes, government agencies, and served as an outside advisor on free trade, foreign investment, and international competitiveness to two Canadian Prime Ministers.

Professor Rugman was Thames Water Fellow in Strategic Management at Templeton College, University of Oxford, where he remains an Associate Fellow. Dr. Rugman previously served as Vice-President of the Academy of International Business is now President-Elect, and beginning August 2004 will serve as President until 2006.

Maurice Schiff is a Lead Economist in the International Trade Unit, Development Research Group, World Bank. He obtained a B.A. and M.A. from the Hebrew University and a Ph.D. from the University of Chicago in 1983. Before joining the World Bank, he was Research Director in the Faculty of Economics and Management at the University of Concepcion, Chile. He is currently doing research on regional integration and on trade and technology transfers. He has published some ten books and a large number of articles in the areas of agriculture and the macroeconomy, regionalism, trade and migration, social capital, international knowledge diffusion, nutrition, and commodity trade policy. His work has included policy analysis and advice in Sub-Saharan Africa, Latin America, the Middle East, North Africa and Central Asia.

Magda Shahin, who holds a Ph.D. in Economics from Cairo University, is Ambassador of Egypt to Greece (2001). She served previously as Assistant Minister of Foreign Affairs for International Economic Relations. Parallel to her diplomatic function, Dr. Shahin was Professor of Economics at the American University in Cairo (AUC) teaching on selected topics, notably the Multilateral Trading System (GATT/WTO) and the Developing countries (1997–2001). She was a Counselor at the Egyptian Mission to the United Nations in New York (1984–1989), as well as Deputy Chief of Mission at the Egyptian Mission to the United Nations – Geneva (1992–1997). She has served as a member of the WTO Textiles Monitoring Body during her tenure in Geneva and is on the WTO's Indicative List of Panelists. Mrs. Shahin has also served as a Consultant and an expert in various seminars, symposiums and workshops organized by UNCTAD/UNDP, ESCWA, and the Islamic Development Bank (IDB). She has written and published numerous articles in Arabic and English.

Maury Shenk is managing partner of the London office of Steptoe & Johnson. His practice focuses on the international aspects of electronic commerce and telecommunications. Mr. Shenk advises frequently on the WTO issues facing e-commerce and telecommunications companies, and was actively involved as a representative of US industry in the negotiations of the WTO Basic Telecommunications Agreement.

Sherry M. Stephenson is Deputy Director of the Trade Unit of the Organization of American States. Her responsibility includes overseeing the role of the OAS in providing analytical support to the majority of the negotiating groups in the Free Trade Area of the Americas (FTAA) negotiations as well as providing direct support to the FTAA Negotiating Group on Services and technical assistance to the countries participating in the FTAA process. She received a Ph.D. in International Economics from the Graduate Institute of International Studies, University of Geneva, Switzerland in 1986, and an M.A. in Economics from New York University. Prior to her position with the OAS, Dr. Stephenson was an Advisor to the Ministry of Trade, Government of Indonesia, Jakarta, for three years. Previous positions have been with the GATT and UNCTAD Secretariats in Geneva and with the Trade Directorate of the OECD in Paris. She has also done consulting work. Dr. Stephenson has taught within the Masters of Arts Program in International Commerce and Policy at George Mason University, Virginia. She is a member of the International Trade Policy Forum of the Pacific Economic Cooperation Council (PECC) and of the Inter-American Dialogue. Dr. Stephenson has written extensively on trade policy issues, particularly in the area of services and standards.

Robert M. Stern is Professor of Economics and Public Policy (Emeritus) in the Department of Economics and the Gerald R. Ford School of Public Policy at the University of Michigan and is also a Faculty Associate of the William Davidson Institute at the University of Michigan Business School. He received his PhD in Economics from Columbia University. He has published numerous papers and books on a variety of topics including international commodity issues, the determinants of comparative advantage, price behavior in international trade, balance-of-payments policies, the computer modeling of international trade and trade policies, trade and labor standards, and services liberalization. His current research interests include applications of the Michigan Model of World Production and Trade for the computational modeling and analysis of multilateral trade negotiations and regional trading blocs (jointly with Professor Deardorff and Professor Drusilla Brown of Tufts University), issues in U.S.-Japan international economic relations, international labor standards, and the political economy of U.S. trade policy.

Matthew Stilwell serves as a Senior Attorney at the Center for International Environmental Law's (CIEL) European Office and as Managing Director of the Program on Governance for Sustainable Development at the Bren School of Environmental Science and Management, University of California, Santa Barbara. Based in Geneva, he supports a range of governments, intergovernmental and non-governmental organizations on issues of international economic and environmental law. He teaches a Summer Program entitled *Institutions for Sustainable Development Governance* in Geneva and Paris on behalf of the American University and CIEL, and serves on UNEP's Working Group on Economic Instruments, and Working Group on Integrated Assessment. He holds a Masters Degree in Law from Columbia University's School of Law, and a Bachelor of Economics and Bachelor of Laws with Honors from the University of Tasmania.

Alan Sykes is the Frank & Bernice Greenberg Professor of Law at the University of Chicago. He received his J.D. from Yale in 1982 and a Ph.D., in economics from Yale in 1987. From 1982–1986, he was in private practice in Washington, D.C. at the firm of Arnold & Porter, specializing in international trade cases. He joined the Chicago faculty in 1986, and has served as Visiting Professor at New York University and Harvard Law Schools. He was editor of the Journal of Law and Economics from 1990–2000, and

currently serves as editor of the Journal of Legal Studies, as an associate editor of the Journal of International Economic Law, and as a reporter for the American Law Institute project on Principles of Trade Law.

Friedl Weiss studied law at the Universities of Vienna, Brussels and Cambridge and is Professor for International Economic Law and International Organizations at the University of Amsterdam and Visiting Professor at the University of Louvain-la-Neuve. Friedl Weiss is member and rapporteur for trade and investment of the International Trade Law Committee and of the Committee on the Law of Foreign Investment of the International Law Association, as well as a member of the American, Austrian, German, Dutch and French Societies of International Law. He has worked as legal adviser in the EFTA Secretariat and as a legal consultant in the GATT. His research interests encompass public international law, especially international economic law, international organizations, including those of international economic governance (trade and monetary relations) and European Community law. His Recent Publications include: INTERNATIONAL LAW OF SUSTAINABLE DEVELOPMENT: PRINCIPLE AND PRACTICE (ed. with N. Schrijver) (2004); Free Movement of Persons Within the European Community, 30 EUROPEAN MONOGRAPHS (with Frank Wooldridge, 2001); IMPROVING WTO DISPUTE SETTLEMENT PROCEDURES. ISSUES AND LESSONS FROM THE PRACTICE OF OTHER INTERNATIONAL COURTS AND TRIBUNALS (ed.), (2000); and INTERNATIONAL ECONOMIC LAW WITH A HUMAN FACE, (with Paul de Waart and Eric Denters, eds., 1998).

Joseph P. Whitlock is an associate attorney at Miller & Chevalier Chartered. He focuses his practice on trade policy, Customs and intellectual property issues. In the trade policy area, he advises foreign Governments and private parties on trade negotiations, WTO and NAFTA disputes, and the interrelationship of national and multilateral trading rules. He also advises clients on a wide range of Customs issues, including classification and valuation matters, ruling requests, administrative settlements and Customs security programs. Finally, he helps clients enforce their intellectual property rights at the border through the U.S. Customs Service and advises clients on the TRIPs Agreement and Section 337 of the Tariff Act of 1930. Mr. Whitlock is a frequent contributor to U.S. and foreign trade-related publications.

L. Alan Winters is Professor of Economics at the University of Sussex. He is a Research Fellow of the Centre for Economic Policy Research (CEPR, London), and a Senior Visiting Fellow of the Centre for Economic Performance, at the London School of Economics. He was formerly Research Manager for International Trade in the World Bank and has worked at the Universities of Cambridge, Bristol, Wales and Birmingham. In addition he has advised, *inter alia*, the World Bank, OECD, the European Commission, the European Parliament, UNCTAD, the WTO, DfID and the Inter-American Development Bank. L. Alan Winters specializes on empirical and policy analysis of international trade. His one hundred and seventy published books and articles cover areas such as regional trading arrangements, non-tariff barriers, European Integration, East-West trade, global warming, agricultural protection, trade and poverty, and the world trading system.

TABLE OF CASES

WTO Decisions

Argentina—Definitive Anti-Dumping Duties on Poultry from Brazil:
Report of the Panel, WT/DS241/R (2003): I:507, I:511, I:512, I:513, I:517, I:523

Argentina—Definitive Anti-Dumping Measures on Imports of Ceramic Floor Tiles from Italy:
Report of the WTO Panel (not appealed), WT/DS189/R (2001): I:506, I:513, I:514, I:515, I:516, I:517, I:1351

Argentina—Definitive Safeguard Measure on Imports of Preserved Peaches:
Report of the WTO Panel (not appealed), WT/DS238/R (2003): I:755, I:766, I:768, I:772, I:786

Argentina—Measures Affecting Imports of Footwear, Textiles, Apparel and Other Items:
Report of the WTO Panel, WT/DS56/R (1997): I:143, I:1224
Report of the Appellate Body, WT/DS56/AB/R (1998): I:109, I:111, I:1259, I:1260, I:1273, I:1336, I:1416

Argentina—Measures Affecting the Export of Bovine Hides and the Import of Finished Leather:
Arbitration Under Article 21.3(c), WT/DS155/10 (2001): I:1352, I:1356

Argentina—Safeguard Measure on the Imports of Footwear:
Report of the WTO Panel, WT/DS121/R (1999): I:737, I:739, I:740, I:744, I:745, I:755, I:766, I:772, I:773, I:786, I:789, I:795, II:238, II:239, II:240
Report of the Appellate Body, WT/DS121/AB/R (1999): I:147, I:153, I:740, I:745, I:755, I:765, I:768, I:772, I:773, I:786, I:795, I:796, I:1303, I:1307, I:1332, I:1336, II:235, II:238, II:240, II:429

Australia—Measures Affecting the Importation of Salmon:
Report of the WTO Panel, WT/DS18/R (1998): I:246, I:253, I:263, I:266, I:271, I:281, I:284, I:287, I:288, I:289, I:290, I:296, I:307, I:309, I:313, I:314, I:316, I:317, I:320, I:321, I:323, I:324, I:354, I:1273
Report of the Appellate Body, WT/DS18/AB/R (1998): I:264, I:266, I:280, I:281, I:282, I:283, I:284, I:289, I:290, I:309, I:311, I:312, I:314, I:316, I:317, I:318, I:320, I:321, I:322, I:324, I:328, I:353, I:354, I:1216, I:1254, I:1265, I:1270, I:1273, I:1303, I:1336, I:1597, II:523, II:525, II:526, II:545
Arbitration Under Article 21.3(c), WT/DS18/9 (1999): I:1351, I:1356, I:1357, I:1358
Recourse to Article 21.5 by Canada, WT/DS18/RW (2000) I:248, I:265, I:282, I:285, I:297, I:321, I:323, I:324, I:1442, I:1443

Australia—Subsidies Provided to Producers and Exporters of Automotive Leather:
Report of the WTO Panel (not appealed), WT/DS126/R (1999): I:697, I:698, I:699, I:700, I:1175
Recourse to Article 21.5 of the DSU by the United States, WT/DS126/RW (2000): I:1345

Brazil—Export Financing Programme for Aircraft:
Report of the WTO Panel, WT/DS46/R (1999): I:1167, I:1187, I:1205, I:1218, I:1220
Report of the Appellate Body, WT/DS46/AB/R (1999): I:699, I:1184, I:1188, I:1205, I:1218, I:1243, I:1256, I:1273, I:1309, I:1310, I:1311, I:1317, I:1325, I:1336
Arbitration under Article 22.6 of DSU, WT/DS46/ARB (2000): I:1354, I:1363
Recourse by Canada to Article 21.5 of the DSU, WT/DS46/RW (2000), I:1189
Recourse by Canada to Article 21.5 of the DSU, Report of the Appellate Body, WT/DS46/AB/RW (2000): I:1336, I:1350, I:1354
Second Recourse to Article 21.5 by Canada, WT/DS46/RW/2 (2001): I:698, I:1187, I:1189, I:1190, III:201
Recourse to Article 22.2 of the DSU, WT/DS46/16 (2000): I:1363

Brazil—Measures Affecting Desiccated Coconut:
Report of the WTO Panel, WT/DS22/R (1996): I:1206, I:1207
Report of the Appellate Body, WT/DS22/AB/R (1997): I:686, I:1066, I:1216, I:1244, I:1273, I:1336, II:548

Canada—Certain Measures Affecting the Automotive Industry:
Report of the WTO Panel, WT/DS139/R, WT/DS142/R (2000): I:458, I:462, I:463, I:467, I:468, I:469, I:483, I:886, I:888, I:890, II:234, II:237, II:238, II:657
Report of the Appellate Body, WT/DS/139/AB/R, WT/DS/142/AB/R (2000): I:463, I:483, I:690, I:697, I:699, I:875, I:884, I:885, I:886, I:888, I:889, I:1270, I:1273, I:1336, III:33, III:201
Arbitration Under Article 21.3(c), WT/DS139/12, WT/DS142/12 (2000): I:1352, I:1357, I:1358, I:1359

Canada—Certain Measures Concerning Periodicals:
Report of the WTO Panel, WT/DS/31/R (1997): I:103, I:875, I:876, I:879, I:881, I:1391, II:538, II:756, II:757, II:759, II:760, II:782
Report of the Appellate Body, WT/DS31/AB/R (1997): I:103, I:119, I:121, I:122, I:875, I:877, I:878, I:879, I:881, I:887, I:1066, I:1301, I:1332, I:1336, I:1391, II:474, II:475, II:539, II:756, II:757, II:758, II:759, II:763, II:764, II:766

Canada—Export Credits and Loan Guarantees for Regional Aircraft:
Report of the WTO Panel (not appealed), WT/DS222/R (2002): I:698, I:701, I:1187, I:1193

Canada—Measures Affecting the Export of Civilian Aircraft:
Report of the WTO Panel, WT/DS70/R (1999): I:1167, I:1175, I:1176, I:1186, I:1218, I:1219, I:1220, I:1397
Report of the Appellate Body, WT/DS70/AB/R (1999): I:689, I:692, I:697, I:699, I:717, I:1184, I:1185, I:1186, I:1256, I:1258, I:1261, I:1262, I:1263, I:1273, I:1301, I:1309, I:1310, I:1311, I:1317, I:1329, I:1336, I:1397
Recourse to Article 21.5 of the DSU, WT/DS70/RW (2000): I:1186, I:1193
Recourse to Article 21.5 of the DSU, Report of the Appellate Body, WT/DS70/AB/RW (2000): I:1186, I:1336, I:1354, II:548

Canada—Measures Affecting the Importation of Milk and the Exportation of Dairy Products:
Report of the WTO Panel, WT/DS103/R, WT/DS113/R (1999): I:212, I:595, I:1356, III:274

Report of the Appellate Body, WT/DS103/AB/R, WT/DS113/AB/R (1999): I:212, I:699, I:1317, I:1336, I:1351, I:1360, III:274
Recourse to Article 21.5 of the DSU, Report of the Panel, WT/DS103/RW, WT/DS113/RW (2001): I:212, I:213
Recourse to Article 21.5 of the DSU, Report of the Appellate Body, WT/DS103/AB/RW, WT/DS113/AB/RW (2001): I:1336
Second Recourse to Article 21.5, Report of the Appellate Body, WT/DS103/AB/RW2, WT/DS113/AB/RW2 (2003): I:1258, I:1273, I:1336

Canada—Measures Relating to Exports of Wheat and Treatment of Imported Grain:
Report of the WTO Panel, WT/DS276/R (2004): I:149, I:150, I:458, I:459

Canada—Patent Protection for Pharmaceutical Products:
Report of the WTO Panel, (not appealed) WT/DS114/R (2000): I:1065, I:1066, I:1079, I:1094, I:1095, II:424, II:425, II:428, II:430, II:431, II:432, II:435, II:436, II:442, II:445, II:446, II:648
Arbitration Under Article 21.3(c), WT/DS114/13 (2000): I:1066, I:1351, I:1356, I:1357, I:1358, I:1359

Canada—Term of Patent Protection:
Report of the WTO Panel, WT/DS170/R (2000): I:1066, I:1097
Report of the Appellate Body, WT/DS170/AB/R (2000): I:1097, I:1320, I:1336, II:424, II:425
Arbitration Under Article 21.3(c), WT/DS170/10 (2001): I:1352, I:1359

Chile—Price Band System and Safeguard Measures Relating to Certain Agricultural Products:
Report of the WTO Panel, WT/DS207/R (2002): I:203, I:206, I:755, I:766, I:775
Report of the Appellate Body, WT/DS207/AB/R (2002): I:1247, I:1257, I:1264, I:1273, I:1298, I:1307, I:1337

Chile—Taxes on Alcoholic Beverages:
Report of the WTO Panel, WT/DS87/R, WT/DS110/R (2000): I:103, I:1012
Report of the Appellate Body, WT/DS87/AB/R, WT/DS110/AB/R (2000): I:104, I:121, I:612, I:1269, I:1271, I:1273, I:1303, I:1336,
Arbitration Under Article 21.3(c), WT/DS87/15, WT/DS110/14 (2000): I:1351, I:1356, I:1357, I:1359, I:1360

Egypt—Definitive Anti-Dumping Measures on Steel Rebar From Turkey:
Report of the WTO Panel (not appealed), WT/DS211/R (2002): I:513, I:514, I:516, III:100

European Communities—Anti-Dumping Duties on Imports of Cotton-Type Bed Linen from India:
Report of the WTO Panel, WT/DS141/R (2000): I:505, I:511, I:525, I:709, I:743, I:1220, I:1227, I:1239, I:1274, I:1444, I:1551, II:415, III:100
Report of the Appellate Body, WT/DS141/AB/R (2001): I:434, I:505, I:523, I:1260, I:1274, I:1294, I:1313, I:1337, I:1351, II:413, II:415, III:100
Recourse to Article 21.5, WT/DS/141/RW (2002): III:201
Recourse to Article 21.5, Report of the Appellate Body, WT/DS141/AB/RW (2003): I:1274, I:1303, I:1331, I:1337
Agreement under Art. 21.3 (b) of the DSU, WT/DS141/10 (2001): I:1358

European Communities—Anti-Dumping Duties on Malleable Cast Iron Tube or Pipe Fittings From Brazil:
Report of the Appellate Body, WT/DS219/AB/R (1998): I:504, I:1300, I:1337

European Communities—Conditions for the Granting of Tariff Preferences to developing Countries:
Report of the Appellate Body, WT/DS246/AB/R (2004): I:1544

European Communities—Customs Classification of Certain Computer Equipment:
Report of the WTO Panel, WT/DS62, WT/DS67, WT/DS68 (1998): I:1224, I:1375, I:1479, I:1480, I:1584, I:1595
Report of the Appellate Body, WT/DS62/AB/R, WT/DS67/AB/R, WT/DS68/AB/R (1998): I:112, I:1245, I:1246, I:1274, I:300, I:301, I:1302, I:1337, I:1411, I:1412, I:1480, I:1584, I:1585, I:1586, I:1589, I:1591, I:1592, I:1594, I:1595, I:1596, I:1597, II:478, III:130, III:201

European Communities—Measures Affecting Asbestos and Asbestos-Containing Products:
Report of the WTO Panel, WT/DS135/R (2000): I:406, I:844, I:1224, , I:1239, I:1375, I:1377, I:1379, I:1380, I:1394, II:653
Communication from the Appellate Body (Additional Procedures), WT/DS135/9 (November 8, 2000): I:1400, I:1444, II:564, II:644, II:645
Report of the Appellate Body, WT/DS135/AB/R (2001): I:83, I:119, I:120, I:171, I:245, I:256, I:377, I:378, I:383, I:389, I:390, I:393, I:395, I:405, I:406, I:409, I:844, I:845, I:1066, I:1237, I:1273, I:1301, I:1302, I:1307, I:1320, I:1323, I:1324, I:1326, I:1328, I:1332, I:1337, I:1380, I:1381, I:1382, I:1394, I:1400, I:1401, I:1437, I:1438, I:1445, I:1450, I:1452, I:1458, I:1586, I:1588, II:440, II:527, II:528, II:539, II:589, II:613, II:614, II:615, II:631, II:644, II:652, II:654, II:687, II:688, III:130

European Communities—Measures Affecting the Importation of Certain Poultry Products:
Report of the WTO Panel, WT/DS69/R (1998): I:134, I:206, I:207, I:592, I:595, I:596, I:597, I:598
Report of the Appellate Body, WT/DS69/AB/R (1998): I:136, I:206, I:207, I:592, I:596, I:598, I:1265, I:1270, I:1274, I:1302, I:1303, I:1320, I:1337, I:1351

European Communities—Measures Concerning Meat and Meat Products:
Report of the WTO Panel, WT/DS26/R, WT/DS48/R (1998): I:244, I:245, I:246, I:248, I:249, I:250, I:252, I:253, I:256, I:263, I:270, I:271, I:272, I:273, I:274, I:278, I:280, I:281, I:286, I:291, I:292, I:293, I:294, I:295, I:296, I:310, I:311, I:312, I:313, I:314, I:318, I:348, I:354, I:1066, I:1256, I:1274, I:1392, I:1402, I:1492, II:150, II:151, II:163, II:655, II:733, III:130
Report of the Appellate Body, WT/DS26/AB/R, WT/DS48/AB/R (1998): I:160, I:250, I:256, I:257, I:260, I:261, I:262, I:264, I:265, I:266, I:267, I:268, I:272, I:273, I:274, I:276, I:277, I:278, I:280, I:281, I:282, I:283, I:284, I:286, I:287, I:288, I:290, I:291, I:292, I:293, I:294, I:295, I:296, I:298, I:299, I:301, I:304, I:305, I:307, I:308, I:309, I:310, I:311, I:314, I:315, I:316, I:318, I:319, I:346, I:349, I:351, I:352, I:353, I:354, I:384, I:394, I:399, I:788, I:1066, I:1248, I:1253, I:1254, I:1256, I:1258, I:1261, I:1262, I:1264, I:1265, I:1266, I:1274, I:1300, I:1302, I:1303, I:1317, I:1318, I:1328, I:1337, I:1343, I:1353, I:1392, I:1402, I:1412, I:1492, I:1495, II:142, II:150, II:151, II:163, II:439, II:440, II:523, II:524, II:525, II:529, II:544, II:545, II:546, II:648, II:649, II:655, II:733, III:129, III:130

Arbitration Under Article 21.3(c), WT/DS26/15, WT/DS48/13 (1998): I:1351, I:1356, I:1357, I:1358, I:1361, I:1366
Arbitration Under Article 22.6, WT/DS26/ARB, WT/DS48/ARB (1999): III:130

European Communities—Regime for the Importation, Sale and Distribution of Bananas:
Report of the WTO Panel, WT/DS27/R (1997): I:68, I:69, I:105, I:133, I:204, I:406, I:458, I:460, I:466, I:467, I:468, I:469, I:482, I:875, I:878, I:879, I:880, I:881, I:885, I:886, I:1230, I:1237, I:1239, I:1248, I:1256, I:1273, I:1274, I:1420, I:1486, I:1492, I:1493, I:1494, II:657, III:129, III:132
Report of the Appellate Body, WT/DS27/AB/R (1997): I:133, I:136, I:204, I:460, I:467, I:482, I:592, I:595, I:596, I:875, I:878, I:879, I:880, I:881, I:882, I:883, I:884, I:885, I:886, I:887, I:888, I:1066, I:1213, I:1214, I:1216, I:1230, I:1237, I:1239, I:1241, I:1245, I:1246, I:1248, I:1273, I:1274, I:1298, I:1300, I:1311, I:1313, I:1315, I:1316, I:1317, I:1318, I:1319, I:1320, I:1332, I:1337, I:1343, I:1350, I:1410, I:1492, I:1493, II:424, II:475, II:782, III:65, III:129, III:132
Arbitration Under Article 21.3(c) of the DSU, WT/DS27/15 (1998) I:1351, I:1356
Arbitration under Article 22.6 of the DSU, WT/DS27/ARB (2000): I:134, I:1111, I:1353, I:1354, I:1362, I:1363, I:1376, II:51 (has listed as 1999), II:424, III:129
Recourse to Article 21.5, Report of the Panel, WT/DS27/RW/ECU (2001), I:133, I:1353, I:1354, I:1497, I:1501

European Communities—Trade Description of Sardines:
Report of the Panel, WT/DS231/R (2002): I:377, I:398, I:399, I:406, I:407
Report of the Appellate Body, WT/DS231/AB/R (2002): I:377, I:378, I:384, I:385, I:396, I:397, I:398, I:399, I:400, I:405, I:1240, I:1260, I:1266, I:1268, I:1274, I:1299, I:1300, I:1307, I:1312, I:1320, I:1321, I:1322, I:1323, I:1325, I:1326, I:1327, I:1328, I:1332, I:1333, I:1337, I:1438, I:1439, I:1440, I:1447, I:1453

Guatemala—Anti-Dumping Investigation Regarding Portland Cement from Mexico:
Report of the WTO Panel, WT/DS60/R (1998): I:512
Report of the Appellate Body, WT/DS60/AB/R (1998): I:300, I:430, I:512, I526, I:1236, I:1245, I:1246, I:1274, I:1282, I:1313, I:1337, I:1420

Guatemala—Definitive Anti-Dumping Measures on Grey Portland Cement from Mexico:
Report of the WTO Panel (not appealed), WT/DS156/R (2000): I:511, I:513, I:514, I:515, I:516, I:523, I:524, I:709, I:710, I:712, I:713, I:724, I:1207

India—Measures Affecting the Automotive Sector:
Report of the WTO Panel, WT/DS146/R, WT/DS175/R (2002): I:123, I:128 I:458, I:464, I:465, I:468, I:469, I:483, II:657
Report of the Appellate Body, WT/DS146/AB/R, WT/DS175/AB/R (2002): I:123, I:128, I466, I:483, I:1307, I:1327, I:1328, I:1337, III:201

India—Patent Protection for Pharmaceutical and Agricultural Chemical Products:
Report of the WTO Panel, WT/DS50/R (1997): I:1064, I:1216, I:1224, II:424, II:428, II:429, II:430, II:433, II:434, II:441
Report of the Appellate Body, WT/DS50/AB/R (1997): I:1064, I:1065, I:1205, I:1216, I:1217, I:1218, I:1225, I:1242, I:1245, I:1255, I:1264, I:1274, I:1302, I:1332, I:1337, I:1356, I:1422, II:424, II:433, II:434, II:441

India—Quantitative Restrictions on Imports of Agricultural, Textile and Industrial Products:
Report of the WTO Panel, WT/DS90/R (1999): I:65, I:84, I:595, I:1178
Report of the Appellate Body, WT/DS90/AB/R (1999): I:65, I:1236, I:1259, I:1262, I:1275, I:1303, I:1337, I:1351, I:1534

Indonesia—Certain Measures Affecting the Automobile Industry:
Report of the WTO Panel (not appealed), WT/DS54/R, WT/DS55/R, WT/DS59/R, WT/DS64/R (1998): I:103, I:126, I:300, I:440, I:458, I:459, I:461, I:462, I:466, I:467, I:469, I:470, I:471, I:472, I:482, I:702, I:703, I:734, I:1066, I:1178, I:1239, II:424, II:539, II:657, II:763, II:782, III:201
Arbitration Under Article 21.3(c), WT/DS54/15, WT/DS55/14, WT/DS59/13, WT/DS64/12 (1998): I:1351, I:1356, I:1357, I:1360

Japan—Measures Affecting Agricultural Products:
Report of the WTO Panel, WT/DS76/R (1998): I:246, I:302, I:306, I:321, I:323, I:324, I:346, I:350, I:351, I:354, I:1219
Report of the Appellate Body, WT/DS76/AB/R (1999): I:257, I:258, I:260, I:261, I:262, I:263, I:264, I:278, I:280, I:282, I:302, I:304, I:305, I:306, I:307, I:308, I:320, I:337, I:339, I:340, I:346, I:347, I:350, I:353, I:354, I:1263, I:1265, I:1275, I:1303, I:1337, I:1351, I:1453, I:1454, II:523, II:526, II:527, II:545, II:546

Japan—Measures Affecting Consumer Photographic Film and Paper:
Report of the WTO Panel (not appealed), W/DS44/R (1998), I:123, I:136, I:171, I:172, I:781, I:875, I:890, I:891, I:1237, I:1238, I:1241, I:1275, I:1375, I:1377, I:1382, I:1510, II:99, II:492, II:495, II:496, II:563

Japan—Measures Affecting the Importation of Apples:
Report of the WTO Panel, WT/DS245/AB/R (2003): I:246, I:257, I:258, I:259, I:285, I:286, I:287, I:289, I:290, I:302, I:303, I:338, I:347
Report of the Appellate Body, WT/DS245/AB/R (2003): I:262, I:280, I:285, I:287, I:303, I:304, I:348, I:351, I:353, I:354, I:1298, I:1303, I:1338,

Japan—Taxes on Alcoholic Beverages:
Report of the WTO Panel, WT/DS8R, WT/DS10/R, WT/DS11/R (1996): I:103, I:121, I:736, I:1588, II:758, II:763
Report of the Appellate Body, WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R (1996): I:80, I:103, I:105, I:116, I:117, I:118, I:120, I:121, I:122, I:300, I:301, I:315, I:389, I:390, I:877, I:878, I:883, I:1066, I:1178, I:1302, I:1319, I:1329, I:1338, I:1376, I:1422, I:1588, II:240, II:429, II:484, II:757, II:758, II:763
Arbitration Under Article 21.3(c), WT/DS8/15, WT/DS10/15, WT/DS11/13 (1997): I:1351, I:1356, I:1365, I:1366

Korea—Definitive Safeguard Measure on the Imports of Certain Dairy Products:
Report of the WTO Panel, WT/DS98/R (1999): I:755, I:767, I:769, I:770, I:771, I:772, I:774, I:775, I:776, I:781, I:782, I:783, I:784, I:785, I:788, I:789, I:790, I:791, I:795
Report of the Appellate Body, WT/DS98/AB/R (1999): I:153, I:206, I:542, I:755, I:758, I:768, I:774, I:782, I:786, I:787, I:790, I:1245, I:1246, I:1259, I:1265, I:1275, I:1303, I:1318, I:1338, I:1351, II:766, III:203

Korea—Measures Affecting Government Procurement:
Report of the WTO Panel (not appealed), WT/DS163/R (2000): I:1123, I:1130, I:1138, I:1139, I:1157, I:1224, I:1375, I:1377, I:1378, I:1407, I:1408, III:203

Korea—Measures Affecting Imported of Fresh, Chilled and Frozen Beef:
Report of the WTO Panel, WT/DS161/R, WT/DS169/R (2000): I:206, I:209, I:595, I:1275
Report of the Appellate Body, WT/DS161/AB/R, WT/DS169/AB/R (2000): I:124, I:206, I:209, I:210, I:256, I:393, I:845, I:1275, I:1338, I:1351, II:528, II:638, II:652, III:203
Agreement under Art. 21.3(b), WT/DS161/12, WT/DS169/12 (2001): I:1358

Korea—Taxes on Alcoholic Beverages:
Report of the WTO Panel, W/DS75/R, W/DS84/R (1998): I:103, I:1012, I:1205, I:1223, I:1224, I:1227, I:1228, II:500
Report of the Appellate Body, W/DS75/AB/R, W/DS84/AB/R (1999): I:103, I:121, I:1265, I:1269, I:1275, I:1300, I:1301, I:1303, I:1338, III:203, II:500
Arbitration Under Article 21.3(c), WT/DS75/16, WT/DS84/14 (1999): I:1351, I:1356, I:1357, I:1358

Mexico—Antidumping Investigation of High Fructose Corn Syrup (HFCS) from the United States:
Report of the WTO Panel (not appealed), WT/DS132/R (2000): I:511, I:521, I524, I:709, I:711, I:719, I:724, I:746, I:747, I:1351,
Recourse to Article 21.5, Report of the Appellate Body, WT/DS132/AB/RW (2001): I:1204, I:1221, I:1222, I:1241, I:1243, I:1245, I:1253, I:1269, I:1270, I:1271, I:1275, I:1303, I:1318, I:1331, I:1338,

Mexico—Measures Affecting Telecommunications Services:
Report of the Panel (not appealed), WT/DS204/R (2004): I:874, I:891, I:892, I:893, I:997, I:999, I:1001, I:1002, I:1003, I:1004, I:1005, I:1006, I:1007, I:1013, I:1020, I:1032, I:1033, I:1036, I:1218

Thailand—Antidumping Duties on Angles, Shapes, and Sections of Iron or Non-Alloy Steel and H-Beams from Poland:
Report of the WTO Panel, WT/DS122/R (2001): I:504, I:505, I:511, I:526, I:527, I:709, I:738, I:739, I:743
Report of the Appellate Body, WT/DS122/AB/R (2001): I:737, I:740, I:743, I:1246, I:1259, I:1262, I:1275, I:1309, I:1310, I:1311, I:1312, I:1320, I:1322, I:1328, I:1338, I:1351, I:1446, I:1447, I:1452

Turkey—Restrictions on Imports of Textile and Clothing Products:
Report of the WTO Panel, WT/DS34/R (1999): I:419, I:429, I:430, I:1224, I:1248, I:1275, II:227, II:235
Report of the Appellate Body, WT/DS34/AB/R (1999): I:1275, I:1338, I:1351, II:227, II:235, II:236, II:240

United States—Anti-Dumping Act of 1916:
Report of the Appellate Body, WT/DS136/AB/R, WT/DS162/AB/R (2000): I:141, I:500, I:510, I:512, I:1242, I:1256, I:1275, I:1317, I:1318, I:1338, I:1410
Arbitration Under Article 21.3(c), WT/DS136/11, WT/DS162/14 (2001): I:1351, I:1356, I:1357, I:1359

United States—Anti-Dumping and Countervailing Duty Measures on Steel Plate from India:
Report of the WTO Panel (not appealed), WT/DS206 (2002): I:516, I:525

United States—Antidumping Duty on Dynamic Random Access Memory Semiconductors (DRAMS) of One Megabit or Above From Korea:
Report of the WTO Panel (not appealed), WT/DS99/R (1999): I:512, I:522, I:723, I:742, III:202

United States—Antidumping Measures on Certain Hot-Rolled Steel Products from Japan:
Report of the WTO Panel, WT/DS184/R (2001): I:521, I:526, I:714, I:715, I:745
Report of the Appellate Body, WT/DS184/AB/R (2001), I:501, I:513, I:516, I:520, I:527, I:714, I:737, I:738, I:739, I:745, I:746, I:1265, I:1276, I:1302, I:1325, I:1339, I:1412, III:201
Arbitration under Article 21.3(c) of the DSU, WT/DS184/9 (2001): I:1352

United States—Anti-Dumping Measures on Stainless Steel Plate in Coils and Stainless Steel and Strip from Korea:
Report of the WTO Panel (not appealed), WT/DS/179/R (2001): I:506, I:507, I:508, I:1351, III:202
Agreement under Art. 21.3 (b) of the DSU, WT/DS179/5 (2001): I:1358

United States—Continued Dumping and Subsidy Offset Act of 2000:
Report of the WTO Panel, WT/DS/ 217/R, WT/DS/234/R (2003): I:510, I:712, I:732, I:1230, III:202
Report of the Appellate Body, WT/DS217/AB/R, WT/DS/234/AB/R (2003): I:510, I:527, I:528, I:712, I:732, I:1247, I:1248, I:1276, I:1299, I:1300, I:1302, I:1304, I:1310, I:1311, I:1312, I:1317, I:1318, I:1320, I:1339, II:63, III:201, III:202

United States—Countervailing Duties on Certain Corrosion Resistant Carbon Steel Flat Products From Germany:
Report of the WTO Panel, WT/DS213/R (2002): I:742
Report of the Appellate Body, WT/DS213/AB/R (2002): I:512, I:742, I:1260, I:1266, I:1275, I:1298, I:1302, I:1303, I:1329, I:1338

United States—Countervailing Measures Concerning Certain Products from the European Communities:
Report of the WTO Panel, WT/DS212/R (2002): I:693, I:694
AB report: I:693, I:694, I:722, I:723, I:1297, I:1298, I:1299, I:1320, I:1323, I:1329, I:1338

United States—Definitive Safeguard Measures on Imports of Certain Steel Products:
Report of the WTO Panel, WT/DS248∼DS259/R (2003): I:755, I:766, I:767, I:768, I:769, I:770, I:773, I:786, I:787, I:791, I:794, III:202, III:274
Report of the Appellate Body, WT/DS248∼DS259/AB/R (2003): I:153, I:755, I:766, I:769, I:791, I:792, I:794, I:1303, I:1317, I:1318, I:1323, I:1325, I:1339, III:202

United States—Definitive Safeguard Measures on Imports of Circular Welded Carbon Quality Line Pipe from Korea:
Report of the WTO Panel, WT/DS/202/R (2001): I:755, I:766, I:768, III:202
Report of the Appellate Body, WT/DS/202/AB/R (2002): I:736, I:755, I:774, I:775, I:783, I:789, I:795, I:1224, I:1327, I:1328, I:1339, II:234, II:235, II:238, III:202

United States—Definitive Safeguard Measures on Imports of Wheat Gluten from the European Communities:

Report of the WTO Panel, WT/DS166/R (2000): I:737, I:744, I:745, I:755, I:766, I:768, I:769, I:770, I:772, I:773, I:774, I:781, I:783, I:789, I:791, I:794

Report of the Appellate Body, WT/DS166/AB/R (2000): I:206, I:755, I:772, I:774, I:783, I:791, I:794, I:1263, I:1264, I:1265, I:1276, I:1303, I:1339, I:1351, II:234, II:235, II:238

United States—Final Countervailing Duty Determination with Respect to Certain Softwood Lumber from Canada*:*

Report of the Appellate Body, WT/DS257/AB/R (2004): I:690, I:694, I:716, I:1301, I:1304, I:1314, I:1323, I:1327, I:1328, I:1339

United States—Final Dumping Determination on Softwood Lumber from Canada:

Report of the Appellate Body, WT/DS264/AB/R (2004): I:504 I:507

United States—Import Measures on Certain Products from the European Communities:

Report of the WTO Panel, WT/DS165/R (2000): I:565, I:1354, I:1355, I:1361, I:1362

Report of the Appellate Body, WT/DS165/AB/R (2000): I:1271, I:1275, I:1338, I:1355 I:1361, I:1362

United States—Import Prohibition of Certain Shrimp and Shrimp Products:

Report of the WTO Panel, WT/DS58/R (1998): I:844, I:1239, I:1393, I:1399, I:1431, II:147, II:149, II:150, II:151, II:163, II:165, II:166, II:637

Report of the Appellate Body, WT/DS58/AB/R (1998): I:80, I:83, I:154, I:163, I:164, I:165, I:300, I:374, I:383, I:844, I:886, I:1069, I:1075, I:1226, I:1238, I:1239, I:1240, I:1261, I:1276, I:1297, I:1298, I:1307, I:1316, I:1317, I:1320, I:1321, I:1322, I:1332, I:1339, I:1356, I:1379, I:1386, I:1393, I:1399, I:1412, I:1429, I:1430, I:1431, I:1432, I:1433, I:1434, I:1435, I:1436, I:1441, I:1442, I:1443, I:1447, I:1457, II:147, II:149, II:150, II:151, II:163, II:165, II:166, II:414, II:436, II:514, II:521, II:522, II:537, II:540, II:560, II:564, II:587, II:588, II:589, II:610, II:611, II:613, II:614, II:616, II:637, II:643, II:652, II:653, II:678, II:691

Recourse to Article 21.5, WT/DS58/RW (2001): I:165, I:1225, I:1226, I:1330, I:1331, I:1416, I:1421, II:560

Recourse to Article 21.5 of the DSU, Appellate Body Report, WT/DS58/AB/RW (2001): I:165, I:383, I:392, I:1226, I:1307, I:1322, I:1330, I:1331, I:1339, II:523, II:540, II:587, II:615, II:637, II:653, II:678, II:680, II:691

United States—Imposition of Countervailing Duties on Certain Hot-Rolled Lead and Bismuth Carbon Steel Products Originating in the United Kingdom:

Report of the WTO Panel, WT/DS138/R (2000): I:693, I:1276, I:1395, I:1443

Report of the Appellate Body, WT/DS138/AB/R (2001): I:83, I:352, I:692, I:693, I:717, I:722, I:723, I:731, I:737, I:738, I:1276, I:1299, I:1300, I:1304, I:1321, I:1328, I:1332, I:1339, I:1395, I:1399, I:1436, I:1437, I:1439, I1440, I:1441, I:1449, I:1451, I:1452, I:1455, I:1457, II:101, II:564, II:644

United States—Investigation of the International Trade Commission in Softwood Lumber from Canada:

Report of the WTO Panel, WT/DS277/R (2004): I:741, I:746, I:747, I:748

United States—Measures Affecting the Cross-Border Supply of Gambling and Betting Services

Report of the WTO Panel, WT/DS285/R (2004): I:874

United States—Measures Affecting Imports of Woven Wool Shirts and Blouses from India:
Report of the WTO Panel, WT/DS33/R (1997): I:422, I:424, I:425, I:427, I:428, I:429, II:408, II:413, II:414
Report of the Appellate Body, WT/DS33/AB/R (1997): I:346, I:348, I:422, I:428, I:467, I:864, I:1258, I:1259, I:1270, I:1271, I:1276, I:1302, I:1313, I:1339, I:1410, I:1413, II:408, II:413, II:414

United States—Measures Treating Export Restraints as Subsidies:
Report of the WTO Panel (not appealed), WT/DS194/R (2001): I:688, I:691, I:1190

United States—Preliminary Determinations with Respect to Certain Softwood Lumber from Canada:
Report of the WTO Panel (not appealed), WT/DS236/R (2002): I:690, I:694, I:719, I:721, I:722

United States—Restrictions on Imports of Cotton and Man-Made Fibre Underwear:
Report of the WTO Panel, WT/DS24/R (1996): I:422, I:424, I:425, I:426, I:427, I:428, I:429, I:1224, I:1228, II:408, II:413, II:415
Report of the Appellate Body, WT/DS24/AB/R (1997): I:135, I:422, I:423, I:1319, I:1339, I:1361, II:408, II:413, II:415

United States—Rules of Origin for Textiles and Apparel Products:
Report of the WTO Panel (not appealed), WT/DS243/R (2003): I:433, I:603, I:612, I:613, I:614

United States—Safeguard Measures on Imports of Fresh, Chilled or Frozen Lamb Meat from New Zealand and Australia:
Report of the WTO Panel, WT/DS177/R, WT/DS178/R (2000): I:755, I:767, I:768, I:771, I:772, I:774, I:786, I:789, III:274
Report of the Appellate Body, WT/DS177/AB/R, WT/DS178/AB/R (2001): I:153, I:206, I:428, I:738, I:740, I:743, I:745, I:746, I:755, I:771, I:772, I:774, I:789, I:790, I:791, I:1267, I:1276, I:1307, I:1317, I:1325, I:1339, I:1351, III:274

United States—Section 110(5) of U.S. Copyright Act:
Report of the WTO Panel (not appealed), WT/DS160/R (2000): I:1079, I:1083, I:1084, I:1085, I:1239, I:1276, I:1351, I:1441, I:1443, I:1444, II:425, II:426, II:428, II:430, II:431, II:436, II:442, II:656
Recourse to Arbitration under Article 25 of the DSU,WT/DS160/ARB25/1 (2001): I:1112, I:1342, I:1366, II:214, II:656
Arbitration Under Article 21.3(c), WT/DS160/12 (2001): I:1352, I:1357, I:1358

United States—Section 211 Omnibus Appropriations Act of 1998:
Report of the WTO Panel, WT/DS176/R (2001): I:1063, I:1226, II:430
Report of the Appellate Body, WT/DS176/AB/R (2002): I:1057, I:1063, I:1111, I:1265, I:1276, I:1301, I:1320, I:1339, II:425, II:426, II:431

United States—Section 301–310 of the Trade Act of 1974:
Report of the WTO Panel (not appealed), WT/DS152/R (1999): I:81, I:1224, I:1430, II:422, II:437, II:626, III:201

United States—Standards for Reformulated and Conventional Gasoline:
Report of the WTO Panel, WT/DS2/R (1996): I:103, I:118, I:256, I:394, I:409, I:844, I:1391, II:438, II:587, II:588
Report of the Appellate Body, WT/DS2/AB/R (1996): I:103, I:154, I:155, I:156, I:157, I:162, I:163, I:300, I:315, I:844, I:877, I:886, I:1258, I:1276, I:1302, I:1305, I:1319, I:1330, I:1339, I:1361, I:1393, I:1406, I:1422, II:438, II:439, II:514, II:519, II:520, II:538, II:540, II:563, II:588, II:589, II:613, II:652

United States—Sunset Review of Anti-Dumping Duties on Corrosion-Resistant Carbon Steel Flat Products from Japan
Report of the Appellate Body, WT/DA244/AB/R (2004): I:522, I:1301, I:1338

United States—Sunset Reviews of Anti-Dumping Measures on Oil Country Tubular Goods from Argentina:
Report of the WTO Panel, WT/DS268/R (2004): I:523

United States—Transitional Safeguard Measure on Combed Cotton Yarn from Pakistan:
Report of the WTO Panel, WT/DS192/R (2001): I:422, I:424, I:425, I:426, I:429
Report of the Appellate Body, WT/DS192/AB/R (2001): I:422, I:426, I:429, I:1259, I:1266, I:1275, I:1302, I:1338, I:1408, I:1412, II:413, II:416

United States—Tax Treatment for Foreign Sales Corporations:
Report of the Appellate Body, WT/DS108/AB/R (2000): I:213, I:689, I:690, I:698, I:699, I:1225, I:1253, I:1275, I:1301, I:1318, I:1325, I:1326, I:1327, I:1328, I:1338, I:1385, I:1412, II:95, III:129, III:130
Arbitration under Article 22.6, WT/DS108/ARB (2002): I:1366, III:129, III:131
Recourse to Article 21.5, Report of the Panel, WT/DS108/RW (2001): III:131
Recourse to Article 21.5, Report of the Appellate Body, WT/DS108/AB/RW (2002): I:698, I:1257, I:1276, I:1279, I:1313, I:1314, I:1320, I:1325, I:1338, III:131

GATT Panel and Working Party Reports

Australian Subsidy on Ammonium Sulphate, BISD, 2nd Supp. 188 (Adopted April 3, 1950): I:103, I:104, I:171, I:1374, I:1375, I:1376

Border Tax Adjustments, Report of the Working Party, BISD, 18th Supp. 97 (Adopted December 2, 1970): I:103, I:104, I:118

Canada—Import Quotas on Eggs, BISD 23rd Supp. 91 (Adopted February 17, 1976): I:197

Canada—Measures Affecting Exports of Unprocessed Herring and Salmon, BISD, 35th Supp. 98 (Adopted March 22, 1988): I:129, I:155, I:162, I:163, I:375, II:586

Canada—Measures Affecting the Sale of Gold Coins, L/5863 (September 17, 1985) (unadopted): I:103, I:126

Canada—Withdrawal of Tariff Concessions, BISD, 25th Supp. 42 (Adopted May 17, 1978): I:109, I:110

Canada/Japan: Tariff on Imports of Spruce, Pine, Fir (SPF) Dimension Lumber, 36th Supp. BISD 167 (Adopted July 19,1989): I:103, I:105, I:1584, I:1587, I:1588, I:1592, I:1593, I:1594, I:1598, I:1599

Canadian Countervailing Duties on Grain Corn from the United States, SCM/140 (Adopted by the SCM Committee, March 26, 1992): I:739, I:740, I:744, I:745

Ceylon—Article XVIII Applications, BISD, 6th Supp. 112 (1957): I:1532

Ceylon—Notifications Under Article XVIII:C, BISD, 6th Supp. 75 (1958): I:1535

DISC—United States Tax Legislation, Report of the Working Party, BISD 23rd Supp. 98 (presented to the Council of Representatives on November 12, 1976): II:95

European Communities—Refunds on Exports of Sugar, complaint by Australia, BISD 26th Supp. 290 (Adopted November 6, 1979): I:198

European Communities—Refunds on Exports of Sugar, complaint by Brazil, BISD 27th Supp. 69 (Adopted November 10, 1980): I:198, I:1536

European Community—Anti-Dumping Duties on Audio Tapes in Cassettes Originating from Japan ADP/136(April 28, 1995) (unadopted): I:498, I:507

European Community—Imposition of Anti-Dumping Duties on Imports of Cotton Yarn from Brazil, BISD 42nd Supp. 17 (Adopted by the ADP Committee, October 30, 1995): I:498, I:525

European Community—Tariff Treatment on Imports of Citrus Products from Certain Countries in the Mediterranean Region, L/5776 (February 7, 1985) (unadopted): I:171, I:1374, I:1375

European Economic Community—Follow-Up on the Panel Report "Payments and Subsidies Paid to Processors and Producers of Oilseeds and Related Animal-Feed Proteins", BISD 39th Supp. 91 (March 31, 1992) (unadopted): I:202, I:1375, I:1376, III:416

European Economic Community—Measures On Animal Feed Proteins, L/4599—25S/49 (Adopted March 14, 1978): I:103, I:104, I:122, I:1588

European Economic Community—Member States' Import Regimes for Bananas (Bananas I), DS/32/R (June 3, 1993) (unadopted): III:129

European Economic Community—Member States' Import Regimes for Bananas (Bananas II), DS38/R (February 11,1994) (unadopted): I:460, III:129

European Economic Community—Payments and Subsidies Paid to Processors and Producers of Oilseeds and Related Animal-Feed Proteins, BISD, 37th Supp. 86 (Adopted January 25, 1990): I:126, I:128, I:171, I:201, I:206, I:686, I:1237, I:1273, I:1374, I:1377, II:95

European Economic Community—Production Aids Granted on Canned Peaches, Canned Pears, Canned Fruit Cocktail and Dried Grapes, L/5778 (February 20, 1985) (unadopted): I:171, I:1374, I:1375

European Economic Community—Programme on Minimum Import Prices, Licences and Surety Deposits for Certain Processed Fruits and Vegetables, BISD, 25th Supp. 68 (Adopted October 18, 1978): I:128, I:197, I:593

European Economic Community—Quantitative Restrictions Against Imports of Certain Products from Hong Kong, BISD, 30th Supp. 129, (Adopted July 12, 1983): II:585

European Economic Community—Regulation on Imports of Parts and Components, BISD, 37th Supp. 132, (Adopted May 16, 1990): I:116, I:497, I:499

European Economic Community—Restrictions on Apples from Chile, BISD, 27th Supp. 98 (adopted November 10, 1980): I:197

European Economic Community—Restrictions on Imports of Dessert Apples, complaints by Chile, BISD 36th Supp. 93 (Adopted June 22, 1989): I:130, I:134, I:136, I:197, I:593, I:1536, I:1537, I:1591

European Economic Community—Restrictions on Imports of Apples, complaints by the United States, BISD, 36th Supp. 135 (Adopted June 22, 1989): I:133, I:593

European Economic Community—Subsidies on Exports of Pasta Products, SCM/43 (May 19, 1983) (unadopted): I:199

European Economic Community, Subsidies on Export of Wheat Flour, SCM/42 (March, 21, 1983) (unadopted): I:198, I:199

Exports of Potatoes to Canada, BISD, 11th Supp., at 88 (Adopted November 16, 1962): I:540

France—Assistance to Exports of Wheat and Wheat Flour, Complaint by Australia, BISD, 7th Supp. 46 (Adopted November 21, 1958): I:197

Greece—Special Import Taxes, BISD, 1st Supp. 48 (Adopted November 3, 1952): I:117

Italian Discrimination Against Imported Agricultural Machinery, BISD, 7th Supp. 60 (Adopted October 23, 1958): I:123, I:126, I:880, II:500, II:585

Italian Restrictions Affecting Imports from Israel, BISD, 10 Supp. 130 (Adopted December 9, 1961): II:584

Japan—Customs Duties, Taxes and Labelling Practices on Imported Wines and Alcoholic Beverages, BISD, 34th Supp. 83 (Adopted November 10/11, 1987): I:103, I:117, I:118, I:120, I:145

Japan—Measures on Imports of Leather, BISD, 31st Supp. 94, (Adopted May 15/16, 1984): I:170, I:593, II:585

Japan—Restrictions on Imports of Certain Agricultural Products, BISD, 35th Supp. 163 (Adopted February 2, 1988): I:130, I:135, I:161, I:196, I:197

Japan-Trade in Semi-conductors, BISD, 35th Supp. 116 (Adopted May 4, 1988): I:128, I:171, I:761, I:1374, I:1375, I:1386, II:495

Korea—Antidumping Duties on Imports of Polyacetal Resins from the United States, BISD, 40th Supp. 205 (Adopted by the ADP Committee, April 27, 1993): I:497, I:736, I:746, III:201

New Zealand—Imports of Electrical Transformers from Finland, BISD, 32nd Supp. 55 (Adopted July 18, 1985): I:497

Norway—Restrictions on Imports of Certain Textile Products, BISD, 27th Supp. 119 (Adopted June 18, 1980): I:132, I:758

Norway—Restrictions on Imports of Apples and Pears, BISD, 36th Supp. 306 (Adopted June 21/22, 1989): I:54

Republic of Korea—Restrictions on Imports of Beef, BISD, 36th Supp. 268 (Adopted November 7, 1989): I:150, I:162, I:1534, III:191, III:201

Spain—Measures Concerning Domestic Sale of Soyabean Oil, L/5142 (June 17, 1981) (unadopted): I:103

Spain—Tariff Treatment of Unroasted Coffee, L/5135—28S/102 (Adopted June 11, 1981): I:103, I:103, I:105, I:1589, I:1592, I:1593, I:1594

Swedish Antidumping Duties, BISD, 3rd Supp. 81 (Adopted February 26, 1955): I:141, I:497

Thailand—Restrictions on Importation of and National Taxes on Cigarettes, BISD, 37th Supp. 200 (Adopted November 7, 1990): I:149, I:155, I:158, I:159, I:256, I:391, I:393, I:595, II:439, II:528, II:540, II:615, II:652, II:687, II:688

Treatment by Germany of Imports of Sardines, BISD, 1st Supp. 53 (Adopted October 31, 1952): I:103, I:171, I:1374, I:1375, I:1376, I:1592, I:1597, I:1598

United States—Anti-Dumping Duties on Gray Portland Cement and Cement Clinker from Mexico, ADP/82, (September 7, 1992) (unadopted): I:497, I:509, I:510, I:711, I:718, III:233

United States—Countervailing Duties on Fresh, Chilled and Frozen Pork from Canada, BISD, 38th Supp. 45 (Adopted July 11, 1991): I:142, I:686, II:95

United States—Customs User Fee, BISD, 35th Supp. 245 (Adopted February 2, 1988): I:102, I:111, I:143

United States—Definition of Industry Concerning Wine and Grape Products, BISD, 39th Supp. 436 (Adopted by the SCM Committee, 28 April 1992): I:103

United States—Denial of Most-favoured-nation Treatment as to Non-Rubber Footwear from Brazil, BISD, 39th Supp. 128 (Adopted June 19, 1992): I:95, I:102, I:103, I:103, I:124, I:683, I:1542

United States—Imports of Certain Automotive Spring Assemblies, BISD, 30th Supp. 107 (Adopted May 26, 1983): I:156

United States—Imports of Sugar from Nicaragua, BISD, 31st Supp. 67 (Adopted March 13, 1984): I:133, I:1575, I:1576

United States—Imposition of Anti-Dumping Duties on Imports of Fresh and Chilled Atlantic Salmon from Norway, BISD 41st Supp. 229 (Adopted by the ADP Committee, April 28, 1994): I:498, I:507, I:510

United States—Imposition of Anti-dumping Duties on Imports of Seamless Stainless Steel Hollow Products from Sweden, ADP/47 (August 20, 1990) (unadopted): I:497, I:510, I:710, I:711

United States—Imposition of Countervailing Duty on Imports of Fresh and Chilled Atlantic Salmon from Norway, BISD, 41st Supp. 2 (Adopted by the SCM Committee, April 27, 1994): I:497, I:711, I:739

* Consultant and Professor, School of Government, Universidad Di Tella, Buenos Aires, Argentina. I appreciate financial support from the World Bank as well as the suggestions made by Mr. Patrick Macrory on a preliminary version of this paper. This paper was drafted before the devaluation of the peso implemented in early 2002 and in the final version I have added some clarifications and references to the current crisis. Nevertheless the essential messages of the paper, such as the fact that weak negotiating countries can end up paying a very high price, are not affected by recent events.

I. Introduction

After decades of being marginal players in the multilateral trade negotiations, developing countries, including Argentina, decided to participate actively in the Uruguay Round. The main purpose of this chapter is to measure the imbalance between the concessions given and those received by Argentina in these negotiations. I conclude that the value of the concessions given has been far greater than the value of the concessions that Argentina received. Other subjects discussed in this chapter include an analysis of the economic consequences of this imbalance and the prospects for Argentina in a new multilateral round.

The first message I want to convey is that although there are several factors explaining the unbalanced outcome, Argentina's weak negotiating strategy was an important element. The evidence from Doha indicates that the leadership has not yet understood this point, and the economic analysis presented in this chapter indicates that the costs of a weak negotiating strategy are very high.

The second lesson is that protectionism increases the degree of incoherence between the multilateral trading system and the international financial system in ways that have so far not been studied in depth. The analysis presented here indicates that by reducing the exports of efficient producers, agricultural protectionism worsens their solvency indicators. This in turn, increases the level of country risk and the structure of domestic interest rates, therefore slowing growth and the capacity to service debt.

The chapter is organized as follows. Part II presents a brief description of Argentina's long-run trade performance as well as its role in the multilateral system prior to the Uruguay Round. Part III provides a quantitative measurement of the value of the concessions given and concessions received in the Uruguay Round negotiations, while Part IV analyses the economic effects of this imbalance. Part V offers a preliminary discussion of the interests of Argentina in ongoing regional trade negotiations, particularly between MERCOSUR and the EU. Part VI includes a discussion of the prospects for Argentina in a new round. Finally, I present brief concluding remarks.

II. The Role of Argentina in International Trade and in the GATT

At the start of the twentieth century Argentina was an active participant in the globalization process that was taking place at the time. The economic crisis of the 1930s put an end to this process. The crisis was deepened by the infamous U.S. Smoot-Hawley Tariff Act of 1930, and world trade is estimated to have fallen by around sixty percent between 1929 and 1933.[1]

Argentina suffered the consequences of this crisis, and like other countries, erected high barriers to imports. Unlike many other countries, however, it continued to remain inward-oriented for many decades after the Second World War.[2] Domestically, this ideology and its associated policies were fueled by economic theory and by rent-seeking groups, including the expanding military-industrial complex. With respect to economics, the trade policies of Argentina and most Latin American economies were influenced for decades by Raul Prebisch's famous theories of import-substitution and the secular decline of the terms of trade of primary commodity exporting countries. After World War II, their own domestic policies, coupled with the increasing agricultural protectionism of

[2] *See* for example the excellent work by CARLOS DIAZ ALEJANDRO, ESSAYS ON THE ECONOMIC HISTORY OF THE ARGENTINE REPUBLIC (1970).

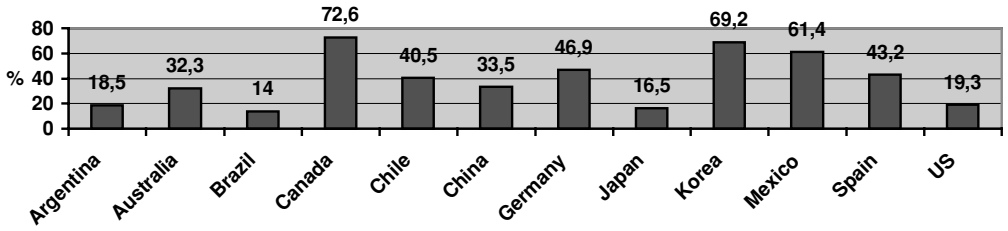

Figure 1: Trade Output Ratios in a Sample of Countries, 1999
Source: Author's elaboration based on World Bank data.

the richer countries, meant that Latin American countries remained quite marginalized from international trade flows. This is one of the most important factors explaining the relatively poor growth performance of the region during the last thirty years.

Argentina's trade-output ratio (ratio of exports plus imports of goods to GDP) declined dramatically as a result of the drastic shift in its trade policies. Thus, while the ratio fluctuated between 35 percent and 45 percent during the 1920s, by the late 1940s it had declined to fifteen percent. From then until the end of the 1980s (in which decade the Government implemented the most protectionist policies for years), the trade-output ratio fluctuated around ten percent.

Inward-looking policies isolated Argentina from the growth of international trade that began in the late 1940s when the GATT was created.[3] Argentina was admitted to the GATT in 1967, but it was not an active participant in the Tokyo Round of multilateral trade negotiations that took place in the 1970s. For example, Argentina had bound only seventeen percent of its tariff lines prior to the Uruguay Round.[4]

As a consequence of its inward-looking policies and accompanying trade-distorting measures, such as the nationalization of public service companies and increasing fiscal deficits, Argentina lost competitiveness and its long-run potential growth rate declined. For example, while the per capita income gap between Argentina and the the richest country at that time (the United Kingdom) in 1900 was forty percent, the difference, this time with the United States, had widened to seventy percent by 1999.

Argentina remains a marginal player in international trade despite the fact that several years ago it completed an important reduction of trade barriers initiated in the late 1980s. Figure 1 shows that the trade-output ratios of Argentina and Brazil are the lowest in a sample of countries. This occurred in spite of the fact that Argentina's reform policies led to a doubling of the value of its exports during the 1990s.[5]

III. The Uruguay Round Negotiations

Both the preamble to the GATT and Article XXVIII bis of the Agreement state that multilateral trade negotiations should be conducted "... on a reciprocal and mutually advantageous basis ...". I show in this part that the results of the Uruguay Round ("UR")

[3] For a discussion of the early years of the GATT and the trade liberalization it led to, *see* Bhagwati, *supra*, note 1.

[4] Michael J. Finger, Merlinda Ingco and Ulrich Reincke, The Uruguay Round: Statistics on Tariff Concessions Given and Received 24 (1996).

[5] It should be said that after the 2002 devaluation, Argentina's dollar-based GDP has fallen, which in turn implies an increase of the trade-output ratio. Eight months after the devaluation, the country is still adjusting to the crisis; in this period exports have declined by eight percent and imports by a staggering sixty percent. Therefore it is still risky to say where the new equilibrium will lie after the adjustment has been completed.

for Argentina are clearly unbalanced in that the concessions it gave to its trading partners, particularly OECD countries, far outweigh those it received from them. I do this by quantifying the economic value of concessions in intellectual property, in services, and in trade in goods.

Argentina is not alone. For many developing countries the UR did not result in a balanced exchange of concessions.[6] Why did this occur and what are the consequences? I believe that one of the underlying reasons for this outcome in the case of Argentina and other countries was that their political leaders used the UR not as an instrument to open foreign markets, but mainly as a means to lock in unilateral economic liberalization policies. There were other factors, including, as I will argue, powerful rent-seeking groups from industrial countries that have undermined the multilateral trading system and forced developing countries to bind concessions against their will. These forces also explain part of the unbalanced outcome.

In quantifying the balance, I start by looking at the concessions given by developing countries with respect to intellectual property rights and trade in services, and then discuss the concessions given and received with respect to trade in goods.

A. Intellectual Property Rights: The Case of Patents for Pharmaceutical Drugs

Despite the resistance of some developing countries, the industrialized countries had sufficient negotiating power to include intellectual property rights in the UR, a new subject which resulted in the Agreement on Trade-Related Intellectual Property Rights ("TRIPS"). As a result, there is now under way a policy reform process that is increasing the strength of intellectual property rights ("IPRs") in many developing countries to a level that is closer to the standards of the industrialized countries. This has occurred despite the lack of any theoretical or empirical analysis to show that policy reforms induced by the TRIPS will increase world welfare, or the welfare of developing countries.[7] Why did this occur? What will be the impact on Argentina?

1. Rent-Seeking by Pharmaceutical Drug Companies

One of the main reasons why the patent section of the TRIPS takes the form that it does can be traced to the power of rent-seeking groups associated with certain forms of innovation and their intellectual protection, including pharmaceutical drugs.[8] Given the size of the pharmaceutical market and the economic interests at stake, I concentrate my remarks on the impact of TRIPS on this sector.[9] Also, for other forms of IPRs such as trademarks and copyrights, the differences in views between industrialized and developing countries on what should be the length and strength of protection are not as significant as they are in the case of pharmaceutical drugs. What was the strategy of the international pharmaceutical drug companies that enabled them to impose their patent policies on developing countries?

[6] Michael J. Finger and Julio J. Nogués, *The Unbalanced Uruguay Outcome: The New Areas in Future WTO Negotiations*, 25(3) THE WORLD ECONOMY 321 (2002).

[7] *See,* in this respect, Chapter 54 of this book.

[8] As I show below, pharmaceutical drug markets in several developing countries generate significant rents.

[9] The pharmaceutical industry is one of the few industries for which patent protection is critical as an incentive for investing in R&D. Pharmaceutical drug companies have one of the highest ratios of R&D to sales and most drug products can be easily copied. Patents are less significant in many other industries in which the incentives to innovate are essentially market-based, such as being the first to market. Richard Levin, Richard, Alvin Klevorick, Richard Nelson and Sidney Winter, *Appropriating the Returns from Industrial Research and Development*, Brookings Papers on Economic Activity**,** No. 3 (1987).

In March 1987, only a few months after the UR had been launched, Gerald Mossinghoff, then President of the U.S. Pharmaceutical Manufacturers Association ("PMA"), declared that the Association was working with the U.S. Congress to get it to enact "... the intellectual property revisions of the Omnibus Trade Bill that would strengthen the hand of the U.S. Government in urging all our trading partners to respect our rights in inventions and trademarks...."[10] Soon afterwards, the U.S. Congress enacted the Omnibus Trade Act of 1988, which among other things amended Section 301 of the 1974 Trade Act so as to make it easier to impose retaliatory trade measures with respect to practices of foreign governments that are "unjustifiable ... unreasonable or discriminatory" and which burden or restrict U.S. commerce.[11]

The law provides that failure to provide fair and equitable IPR protection is a form of "unreasonable" practice.[12] At the request of the PMA, supported now by the newly strengthened hand of the U.S. Government, the U.S. Trade Representative ("USTR") initiated a series of actions against developing countries that did not provide patent protection for pharmaceutical drugs, including Argentina, Brazil, Korea, and India. At the time, according to the World Intellectual Property Organization, 48 countries, most of them developing, did not provide patent protection for pharmaceutical drugs.[13] The PMA and the USTR therefore had fertile ground on which to deploy the strengthened Section 301, and they worked enthusiastically to force developing countries to enact patent protection for pharmaceutical drugs.[14]

Even in the United States, the degree of support for the patent system has fluctuated over time.[15] During the 1980s the U.S. Government favored strong IPR protection. The pharmaceutical industry took advantage of this, first by obtaining reform of domestic patent law, and then by moving aggressively towards forcing developing countries to introduce patent legislation or to reform their existing laws.[16] Clearly, the industry would not had been able to push as successfully at other points in time as it did in the 1980s, and

[14] For a discussion of these policies and their consequences, *see* AGGRESSIVE UNILATERALISM: AMERICA'S 301 TRADE POLICY AND THE WORLD TRADING SYSTEM (Jagdish Bhagwati and Hugh Patrick eds. 1990).

[15] Professor Fritz Machlup, who undertook an evaluation of the patent system for the U.S. Congress in 1958, concluded:

> ... if one does not know whether a system as a whole (in contrast to certain features of it) is good or bad, the safest policy conclusion is to muddle through either with it, if one has long lived with it, or without it, if one has lived without it. If we did not have a patent system, it would be irresponsible on the basis of our present knowledge of its economic consequences, to recommend instituting one. But since we have had a patent system for a long time, it would be irresponsible on the basis of our present knowledge, to recommend abolishing it ...

Fritz Machlup, *An Economic Review of the Patent System,* U.S. Congress, Senate Subcommittee on Patents, Trademarks and Copyright, Study No. 15, at 80 (1958). Patent protection for pharmaceuticals has been a controversial subject from time to time in the United States, but those that have confronted the PMA, such as the American Association of Retired Persons, have had limited success in protecting their interests.

[16] Note that the introduction of patents in developing countries provides rents immediately after the policy comes into effect, while extending the patent life in industrial countries, as was done in the U.S. Drug Price Competition and Patent Term Restoration Act of 1984, only provides a higher level of income many years down the road and is therefore, more uncertain.

today some voices are beginning to argue that patent protection may now be too strong, as witnessed by the Doha Declaration on Public Health.[17]

The TRIPS Agreement was drafted at about the same time as these developments, and the patent section (Section 5) was influenced by the PMA. The proposed reforms had the support of the EC and Japan. They were opposed by a number of developing countries, including Brazil and India, but Argentina did not take a position. In the event, all contracting parties to the GATT/WTO signed the WTO Agreement as a single undertaking. It of course included the TRIPS Agreement which stipulated that patents should be available for inventions in all fields of technology, and should last at least twenty years from the date of filing.[18] Previously, the coverage and duration of patents in developing countries varied, and was usually less than twenty years. Countries structured their IPR policies in ways that they determined to be in their national interest. Now the policy is one of stronger and more uniform patent protection; a policy for whose welfare consequences there is no theoretical or empirical evidence.

I want to end these brief comments on rent-seeking with one reflection from history. In the area of pharmaceutical drugs, the available evidence suggests that retaliatory threats and retaliatory actions gained prominence in the late 1980s with the passage of the amendments to Section 301. It is of interest to recall that before then, several industrial countries still did not provide patent protection for pharmaceuticals. For example, France only introduced patent protection for pharmaceutical drugs in 1960, Germany in 1968, Japan in 1976, Switzerland in 1977, and Sweden and Italy in 1978. It would appear that patents were introduced in these countries when the size of their pharmaceutical industry was such as to make the likelihood of drug innovation from investments in R&D high. In other words, patents were introduced somewhere along the path of a market-based growth process. Pharmaceutical companies in developing countries will not have the same opportunity for innovation simply because they have not reached a size where it becomes profitable to invest in R&D in new drugs. The term applied to them is "pirates". Clearly, the development process of this industry in many developing countries has been dramatically changed by the obligation to introduce levels of intellectual property that are not adequate to their stage of development.

2. Estimating the Value of Concessions in Patents

In order to provide a rough estimate of the value of concessions in patents, the following discussion will address the issues of rents, foreign direct investment and trade.

(a) Transfer of Rents. As already discussed, the issue of patent protection for pharmaceutical drugs has to do more with the question of appropriation of the rents generated in developing countries than with concerns regarding innovation and growth potential in these countries. Table 1 shows some economic characteristics of the pharmaceutical drug market in several developing countries in 1988. I used these aggregate sales figures in a 1993 paper to estimate the income gains and rents that would accrue to multinational drug companies upon introduction of patent protection.[19] The estimated income gains

Table 1: Sales of Patented Pharmaceutical Products in Some Developing Countries, 1988[69]

	(U.S.$ million)				
Variables	Argentina	Brazil	India	Mexico	Korea
1. Pharmaceutical Market Size	1,200.0	2,000.0	4,200.0	1,000.0	1,000.0
2. Patented Pharmaceutical Market	771.6	1,750.4	2,546.0	852.5	308.0
2.1 Sales by domestic firms	231.0	93.8	920.0	136.5	188.0
2.2 Sales by patent holders	540.0	1,656.6	1,626.0	716.0	120.0
3. Ratio of (2)/(1) × 100	64.3	87.3	60.6	85.3	30.8

[69] *Source:* Julio J. Nogués, *Social Costs and Benefits of Introducing Patent Protection for Pharmaceutical Drugs in Developing Countries*, THE DEVELOPING ECONOMIES, at XXXI-1 (March 1993).

come from two sources. The first is the assumed transfer to multinational companies of all sales of patented drugs by domestic firms (Line 2.1 in Table 1). The second source of income is derived from greater exploitation of the monopolistic power protected by patents. Since there is no strong evidence on the extent to which firms in the pre-patent situation are behaving competitively, the estimates had to rely on different assumptions of price increases upon introduction of patents.

Additional assumptions on price-cost margins are necessary in order to go from estimated income gains to an estimate of pure rents. For example, it has been reported that for many years Pfizer sold the antibiotic Tetracycline at $30.60 per bottle of 100 capsules.[20] When Pfizer's patent was challenged, competing firms sold the generic product at $2.50 per bottle of 100 units. Scherer also asserts that "... many similar cases of price-cost margins in the order of 90 percent or more for patented drugs have been identified .... "

The market for pharmaceutical products in Argentina has grown since 1988, and sales reached $3.4 billion dollars in 1999. Assuming that: (i) the breakdown between patented products and the participation of foreign and domestic firms is similar to that presented in Table 1; (ii) patents will allow greater exploitation of monopoly power resulting in a thirty percent increase in gross sales; and (iii) the average price-cost margin of patented drugs is fifty percent, then the estimate of rents transferred from domestic to international pharmaceutical companies would be equivalent to $425 million per year.[21]

These are sizable rents, though they will not all be transferred at once. One reason is that there will be a phase-in period during which the number of patented drugs will increase until reaching international levels. Another potential cushioning factor will be the issuance of compulsory licenses in instances where a patent goes unworked for a number of years or where there is abuse of market position. On the other hand, the "strengthened arm" of the U.S. Government will be used to extract the maximum monopoly profits. For example in its 2000 *Special 301 Report,* the USTR states that ensuring "... that developing countries are in full compliance with the [TRIPS] agreement now that the

[20] FREDERICK M. SCHERER, INDUSTRIAL MARKET STRUCTURE AND ECONOMIC PERFORMANCE (1980).

[21] For details, *see* J. Michael Finger and Julio J. Nogués, *supra* note 6.

transition period has come to an end is one of the Administration's highest priorities . . . ."[22] The Report stated that there are " . . . 59 trading partners that deny adequate and effective protection of intellectual property or deny fair and equitable market access to United States artists and industries that rely upon intellectual property protection", and sixteen of them, including Argentina, were included in the Priority Watch List.[23]

(b) Impact on Foreign Direct Investment and Trade. After patent legislation has been implemented in the developing countries, international drug companies can choose to source from plants in those countries or from their major production sites. In the latter case, domestic production would cease, imports would increase, and employment in the industry would decline. Evidence that reverse foreign direct investment ("FDI") is likely to occur comes from developing countries that have recently introduced and/or strengthened patent protection for pharmaceutical drugs. One example is Chile, which implemented new patent legislation in 1991. Since then most foreign subsidiaries have opted to leave the country and source from abroad.[24] This is a sensitive subject on which more research is needed.[25]

This evidence is in line with the view that FDI inflows to this industry in developing countries were not inhibited by the lack of patent protection.[26] It contradicts the opinions of those who argue that strengthening patent protection in developing countries would attract FDI, particularly in the chemical and pharmaceutical industries.[27]

To sum up, unlike the negotiations on trade in goods, the UR negotiations on patents, particularly patents for pharmaceutical drugs, were conducted with practically no empirical and theoretical analysis to support the different proposals. In this situation, it is not surprising that many of the justifications for promoting a worldwide uniform patent system are either non-existent, or tend to work in the opposite direction to that argued by its supporters. In the case of pharmaceutical drugs, this includes the arguments that patents in this industry in developing countries will: (i) induce a faster transfer of technology, (ii) increase inflows of FDI and, (iii) induce local innovation. It seems clear that the worldwide extension of patent protection to pharmaceutical drugs will result in a

[22] U.S. Trade Representative, *2000 Special 301 Report*, available at http://www.ustr.gov/html/special.html.

[23] *Id.* The Priority Watch List includes those countries that are being closely monitored for eventual retaliation. The 2001 Special 301 Report, available at http://www.ustr.gov/enforcement/special.pdf, identifies 51 countries that deny adequate and effective protection of intellectual property or deny fair and equitable market access to United States artists and industries that rely upon intellectual property protection. Sixteen countries, including Argentina, were again on the Priority Watch List.

[24] According to a personal communication to the author from the Asociación Industrial de Laboratorios Farmaceúticos Chilenos, many foreign companies stopped production in Chile after passage of the patent law.

[25] In conjunction with the World Health Organization ("WHO") and other multilateral organizations including the United Nations Industrial Development Organization, the WTO could monitor carefully the effects of patents for pharmaceutical drugs as they are introduced in developing countries. The introduction of patents on pharmaceuticals has potentially important public health and industrial effects. Countries might need to apply competition policies to soften potential abuses from patent monopolies but have little or no experience in doing so.

massive transfer of rents from pharmaceutical drug companies in developing countries to international companies.[28]

B. Services

1. Privatization of Argentina's Service Industries

During the 1990s, Argentina significantly liberalized its service industries. The purpose of this liberalization was to modernize the country after years during which inefficient government-owned companies held a monopoly on public services. As the quality of the services they provided deteriorated at an alarming rate, these companies were subject to increasing public criticism. When a new Government took over in mid-1989, the efficiency of these enterprises had reached such low levels that the proposal to privatize them faced no significant opposition.

A sweeping privatization program was implemented over the next few years. Today, ten years after this program was launched, the National Government has practically no stake apart from minority shares in the numerous and economically significant enterprises producing goods and services that used to be publicly owned.[29] Power generation and distribution, communications and telecommunications, gas production and distribution, wholesale and retail trade, banking and insurance, and numerous companies producing tradable goods, such as petroleum, chemicals, and iron and steel, have been privatized. Long-term private concessions have even been granted with respect to water companies, port facilities, railroads, and roads.[30]

While a complete assessment of this privatization program is not available, it has had positive and negative aspects. The performance of the privatized companies has generally been very good in terms of growth and quality of services. During the period 1993 to 1998, the increase in GDP of the services producing sectors was 24 percent against 18 percent in the goods-producing industries. But in the communications industry, where FDI is significant, the increase in value added during the same period was 46 percent. There is no doubt that the liberalization of services explains the growing inflows of FDI which, as a proportion of GDP, have fluctuated between 1.2 percent in 1993 to 3.0 percent in 1997.

Most of the misgivings with the privatization process have to do with the prices at which some of the privatized services are being offered. Some of these excessive prices come from flawed privatizations, including in some instances, the granting of monopoly positions and in others, inadequate formulas for rate adjustments. Basic telecommunications is an example of an initial grant of monopoly rights,[31] while in many other

[28] More recently the outcry from many developing countries led WTO Members to issue the Doha Declaration on Public Health. Furthermore, a number of studies are questioning whether the TRIPS should not be made more flexible. One of these studies, entitled *Integrating Intellectual Property Rights and Development Policy,* was published in 2002 by the Commission on Intellectual Property Rights established by Clare Short, U.K. Minister of Development. This study is available at www.iprcommission.org.

[29] The major exception is Banco Nación which remains the largest single bank in terms of deposits.

[30] The Provinces implemented important privatization programs, but some still own important companies. FDI inflows have also been attracted by the sale of privately-owned enterprises. While this form of investment has been prominent in the manufacturing sector, in some services where private ownership by nationals used to be important, such as banking, FDI inflows have generally not been associated with the privatization process.

[31] The telecommunications industry has been opened to competition only recently, and new companies have already started to contest the monopoly rights that were granted during the initial years to the privatized basic telecommunications enterprises.

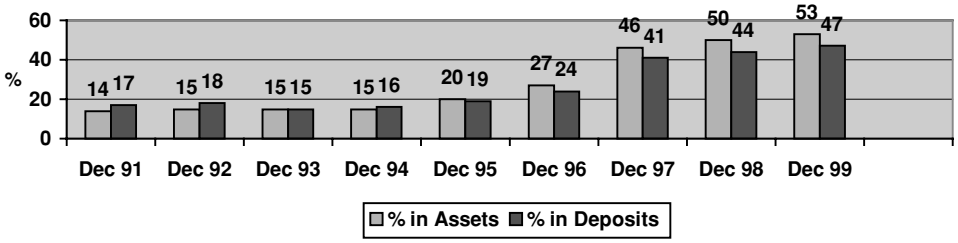

Figure 2: Participation of Foreign Banks in Argentina's Financial System
Source: Based on information provided to the author by the Central Bank.

service sectors the discontent arises from indexation formulas that have resulted in service prices that in some cases are well above international standards. Finally, criticism has also been raised against weak regulators. These regulatory deficiencies can also be attributed to the Government's lack of experience in exercising its new regulatory functions and in managing new competition legislation. Certainly more research has to be undertaken before definite conclusions can be drawn on these sensitive topics, but for the last two or three years as social problems have grown in intensity (high unemployment and increasing income inequality), public support for the privatized companies weakened and, following the devaluation in early 2002, they are suffering massive losses.

2. Estimating the Value of Concessions in Services

Argentina's UR concessions in services were quite significant and the discussion that follows intends to provide an estimate of its economic importance. I first note that for the sectors and subsectors where concessions were bound, there are no limitations on commercial presence or exceptions to the national treatment principle. This is the case with respect to: (a) business services; (b) communication services; (c) construction services; (d) distribution services; and, (e) tourism and travel services. Furthermore, in banking and related services, while trans-border trade was not bound, commercial presence was bound. As shown in Figure 2, foreign banks came to hold almost half of total deposits.[32]

Argentina's concessions with respect to telecommunications have also been important. For example, in the 1997 WTO agreement, Argentina bound commercial presence for the most important forms of telecommunications services and its concessions have been assessed as significant.[33] More recently, in June 2000, a Presidential Decree introduced further deregulation measures. Argentina did not participate in the post-UR financial services negotiations, the reason being that its earlier concessions had been significant.[34]

In sum, Argentina made significant concessions in services sectors in the UR as well as in more recent multilateral negotiations. As a consequence, after decades of inward-looking policies, during the 1990s trade in services and services-related FDI inflows

[32] Following the devaluation of the peso in early 2002, this picture has changed.

[33] Peter Cowhey and Mikhail Klimenko, *The WTO Agreement and Telecommunications Policy Reforms*, Policy Research Working Paper 2601, World Bank (2001).

[34] Several studies show that in the banking industry, Argentina was one of the few developing countries that bound significant concessions in the Uruguay Round. For example, it has been shown that the liberalization index of Argentina for this industry is of a similar order of magnitude to those of the most liberal industrial countries. *See* Aaditya Mattoo, *Financial Services and the World Trade Organization: Liberalization Commitments of the Developing and Transition Economies*, Policy Research Working Paper 2184, The World Bank (1999).

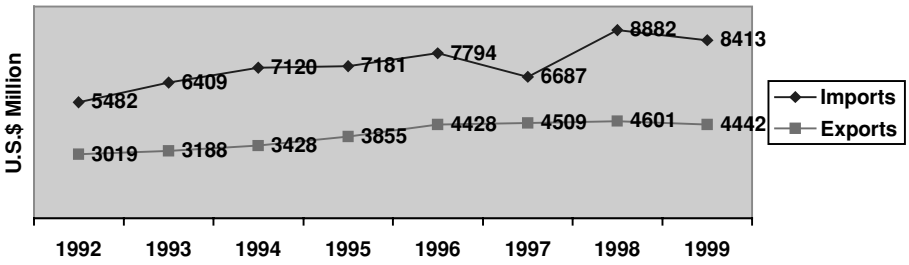

Figure 3: Trade in Services
Source: Ministry of Economy of Argentina.

blossomed. In what follows, we discuss trade effects and inward FDI flows into the services sector that were subject to the liberalization and privatization programs initiated in the early 1990s.

3. Trade in Services

In its successive Balance of Payments Manuals, of which the latest is the Fifth Edition ("BPM5"). the International Monetary Fund ("IMF") has recommended disaggregation of statistics on trade in services. In 1999, the Government of Argentina, which may be one of the few developing countries with complete and revised statistics on services trade,[35] published revised balance of payments accounts following the methodological guidelines indicated in BMP5. The new series start in 1992 and therefore provide valuable information on some of the trade effects following the liberalization of the services industries. What do these figures show?

Figure 3 shows exports, imports and trade balances for the services categories listed in BMP5. The figure shows a trade deficit increasing from $2.5 billion in 1992 to $4.3 billion in 1998.[36] This is in line with other Latin American countries, and contrasts with some Asian economies where trade in services, and exports in particular, is growing faster than trade in goods.

A second aspect worth noting is that this growing deficit is not the result of one or two services showing some unusual trade behavior, but the outcome of a number of categories that deteriorated during the 1990s. The sharpest declines occurred in the following accounts: (i) insurance and reinsurance (where the deficit increased by ten times), (ii) entrepreneurial services, (iii) financial services, and (iv) royalties. These statistics appear to show quite clearly that at the level of aggregation of the accounts indicated in BMP5, Argentina does not have a comparative advantage in services. As we shall see, the picture is even worse if we add commercial presence as a mode of supply, as FDI inflows have grown rapidly.

One final comment. The work program leading to the publication of revised balance of payments accounts in 1999 also uncovered serious errors of measurement. There is no single services account that was being measured with reasonable accuracy and the largest errors appeared on the import side. For example, the previous figures underestimated services imports by $893 million in 1992 and by $2.3 billion in 1998. Clearly Argentina's participation in the UR services negotiations was based on rather poor statistics, and it

[35] Few developing countries, but most industrial countries, show entries on exports and imports for all the service categories listed in BMP5. *See* Obie Whichard, *Measurement, Classification, and Reporting of Services Activities: An International Perspective*, World Bank (1999).

[36] Because of the recession that started in 1999, the deficit in services trade also declined somewhat in that year.

is likely that the accuracy of official statistics is also a serious problem for many other developing countries.

4. Services-Related Inflows of FDI

Trade statistics say nothing about delivery of services under Mode Three (commercial presence) but in Argentina and other developing countries this appears to be the most significant source of supply. At most, balance of payments statistics represent a rough proxy of some of the trade flows under Mode One (cross-border). Again, the work leading to the publication of Argentina's revised balance of payments accounts in 1999 included a major effort to collect data on FDI. These statistics show the growth of inward FDI by economic sector and by country of origin for both stocks and profits/dividends.[37] What do these statistics show?

Following the liberalization of Argentina's trade and capital accounts in the early 1990s, inflows of FDI grew rapidly. In addition to the concessions given in the UR, the incentives for FDI were enhanced by Argentina's very open capital system and the very liberal treatment given to foreign capital. Most FDI inflows come under the umbrella of bilateral investment treaties that generally impose no restrictions in terms of sectors, percentage ownership, capital and profit remittances, or employment conditions.[38]

Between 1992 and 1998, the stock of FDI increased from $15.8 billion to $46.9 billions.[39] Table 2 provides a breakdown of this stock and the associated profits and dividends by economic sector. We see here that profits accruing to FDI enterprises in the services sectors jumped from $243 million in 1992, to $1.6 billion in 1998.

Over this period, the service category that has generated the most important flow of FDI profits has been electricity, gas and water, followed by distribution services. Figure 4 shows the accumulated flows of FDI for the period 1992 to 1998 by country of origin. As expected, Europe (mainly the Netherlands, Spain, France, and the United Kingdom), and the United States are the main sources of FDI inflows. Investors from these regions accounted for 72 percent of the accumulated FDI at the end of this period.

How much of this inflow of FDI can be explained by Argentina's concessions in the UR services negotiations is a difficult question to answer. Let us assume, for the sake of offering a rough estimate of the significance of these concessions, that commercial presence was a significant factor attracting FDI. In the UR Argentina bound commercial presence in all of the subcategories of the following services headings of the UR list where concessions were given: (i) business services, (ii) communication and telecommunications services, (iii) construction and engineering services, (iv) distribution services, (iv) financial services except insurance and reinsurance and, (v) tourism and travel.[40] Table 3 shows the inflows of FDI and associated profits classified according to Argentina's list

[37] Ministry of Economy of Argentina, La Inversión Extranjera Directa en Argentina: 1992–1998. Dirección de Nacional de Cuentas Internacionales, Ministry of Economy of Argentina: 1999.

[38] These treaties generally provide that investment-related disputes would be submitted to the International Center for the Settlement of Investment Disputes.

[39] Because of the sale of the remaining government shares in YPF (Yacimientos Petroliferos Fiscales), the largest petroleum company in Argentina, FDI inflows in 1999 reached the record level of $23.2 billion dollars. This raised the accumulated stock of FDI at the end of that year to $70.1 billion, more than twelve times higher than in 1992. Because of the unusual size of the YPF transaction, the comments in this part are focused on FDI inflows during the period 1992 to 1998.

[40] I am grateful to the Dirección Nacional de Cuentas Internacionales of the Ministry of Economy for providing the data for Table 3.

C. Trade in Goods

1. Manufacturing

In the area of trade in goods, probably the most significant concession given by Argentina in the UR was the binding of the maximum tariff rate at 35 percent for all goods. Previously, only seventeen percent of Argentina's tariff lines were bound.[42] In 1985/86, imports were controlled by very high tariffs and surcharges that put the simple average *ad valorem* rate at 39 percent. In contrast, the average MERCOSUR common external tariff ("CET") now stands at around thirteen percent.[43] Likewise, while in 1986, Argentina required advance import licenses for 47 percent of its tariff lines, this requirement no longer existed, at least until 2002.[44] However, other important non-tariff barriers still exist, such as those protecting the automobile sector as well as several antidumping measures.[45]

As a consequence of this trade liberalization program and other structural reforms, Argentina's trade grew quite significantly during the 1990s. In particular, the value of imports, that had stood at $4.3 billion in 1989, increased to $25.5 billion in 1999. Most

[42] Finger, Ingco, and Reincke, *supra* note 4, at 24.

[44] Following the devaluation of early 2002, foreign exchange controls have been reinstituted.
[45] During 2001 increasing macroeconomic divergence from Argentina's attempt to sustain convertibility in the presence of a rapidly depreciating Brazilian "real" led to the implementation of an important number of departures from the CET, particularly by Argentina, Paraguay and Uruguay.

of these imports come from industrialized countries. Of particular interest is the fact that imports of capital goods from OECD countries increased from $745 million in 1989 to $4.2 billion in 1999.

2. Agriculture

Although one of the original objectives of the Uruguay Round was the "... reduction of import barriers..." to agricultural trade,[46] this goal was not met. The inefficient agricultural producers did not bind concessions of significant economic value in any of the major negotiating areas.

It is true that one of the advances achieved in the UR agricultural negotiations was the tariffication of non-tariff barriers, but even this process has been criticized as "dirty" in the sense that the base tariffs declared to the WTO were much higher than they were supposed to be. For example, the following *ad valorem* tariffs were notified by the EU as its UR base rates: rice 361 percent, wheat 156 percent, sugar 297 percent, meat 125 percent and dairy products 288 percent.[47] The sheer magnitude of these numbers is a clear indication of how strong some anti-globalization forces are in industrial countries. Even after reduction of many of these tariffs by 36 percent, which was the obligation undertaken by developed countries in the UR, many agricultural products were protected at a higher level than before the UR.[48]

Three policies were supposed to reduce agricultural protection by the OECD countries: (i) the reduction of tariffs, (ii) the binding of tariffs at the end of the implementation period, and (iii) minimum access commitments. In spite of these important opportunities for liberalization, the conclusion of the assessment of the UR results is that there is "... markedly little liberalization for most products in most countries...."[49] The Agreement on Agriculture appears to be somewhat stronger with respect to the reduction of export subsidies, but overall there has been little progress and in some instances, the results have been retrogressive.[50]

Since the completion of the UR, OECD governmental assistance to agriculture has continued to rise. This assistance reached $336 billion in 1997 and $362 billion in 1998. This increase is partially explained by the reduction of international commodity prices, many of which continued to decline in 1999.[51]

The disappointing results of the agricultural negotiations helps to explain some trade developments. Traditionally, Argentina maintained an overall trade surplus with countries in the EU but during the 1990s this surplus shifted to systematic deficits. The size of these deficits has been influenced by Argentina's liberalization steps as well as by the continued resistance by the EU to liberalize its agricultural policies.

D. Summing-up

For Argentina, the UR resulted in an important imbalance between the concessions that it made and those that it received from OECD countries. First, at the end of the transition

[51] OECD, AGRICULTURAL POLICIES IN OECD COUNTRIES: MONITORING AND EVALUATION (This is a yearly report and the reader should consult the volumes for 2001 and 2002).

period, rents of $425 million per year may have been transferred from domestic to international pharmaceutical companies in developed countries. Second, liberalization of trans-border flows was accompanied by a doubling of the services trade deficit as imports, mostly from industrial countries, increased by 62 percent between 1992 and 1998. Third, in the service sectors where Argentina bound commercial presence in the UR, the profits of FDI firms, the majority of which are of OECD origin, reached $917 million in 1998. During these years, the stock of FDI in these sectors tripled. Fourth, Argentina's trade liberalization also resulted in a more than tenfold increase in the annual import bill of capital goods from OECD countries. In short, the concessions given by Argentina in the UR have provided important benefits to foreign companies from the industrialized countries.

On the receiving side, Argentina benefited from tariff reductions in manufactured goods, but as we have seen, it also gave important concessions in these products. As to the negotiations in agriculture, the outcome is certainly not "liberalization".

Summing up, according to the mercantilist equation by which the results of multilateral trade negotiations are assessed, Argentina was a big loser in the UR. This as I argue in the next part, particularly the results of the agricultural negotiations, has had serious negative economic consequences for the country.

IV. Costs of Agricultural Protectionism for Argentina

Argentina's agricultural and agro-industrial exports represent around fifty percent of its total exports of goods. It is not surprising, therefore, that the damage that agricultural protectionism inflicts on Argentina is in the billions of dollars. The social impact is also significant because, while some OECD agricultural producers receive as much as $35,000 dollars of subsidy per year,[52] poverty levels in the countryside of Argentina, as well as migration from rural to urban areas, have continued to rise. In a significant way, rural poverty in Argentina is the mirror image of the riches in the OECD countries.

A. Agricultural Protectionism and Financial Costs

The macroeconomic impact of agricultural protection is also significant. Had the UR Agreement on Agriculture resulted in an increase in Argentina's agriculture exports of say $5 billion, the country's debt service ratio would be lower. This, as I argue below, would reduce the level of country risk and the structure of domestic interest rates.

For example, between 1990 and 1998 Argentina's total exports to the EU increased by only 21 percent. This contrasts with the country's performance of total exports and exports of primary products plus foodstuffs that during the same period increased by 112 percent and 92 percent respectively.[53] As discussed earlier, with this performance, the traditional trade surplus that Argentina used to have with these countries shifted to a systematic deficit.

The imbalance is important; and is likely to have negative macroeconomic effects that go well beyond the direct trade and production effects. To understand this, recall that Argentina is a country with an open capital account and with free capital movements up to the end of 2001. Therefore, since the early 1990s its structure of interest rates has been determined by international risk-free rates plus a domestic risk factor. Since

[52] *Id.*, 2001.

[53] Nogués, *supra* note 41, at 185.

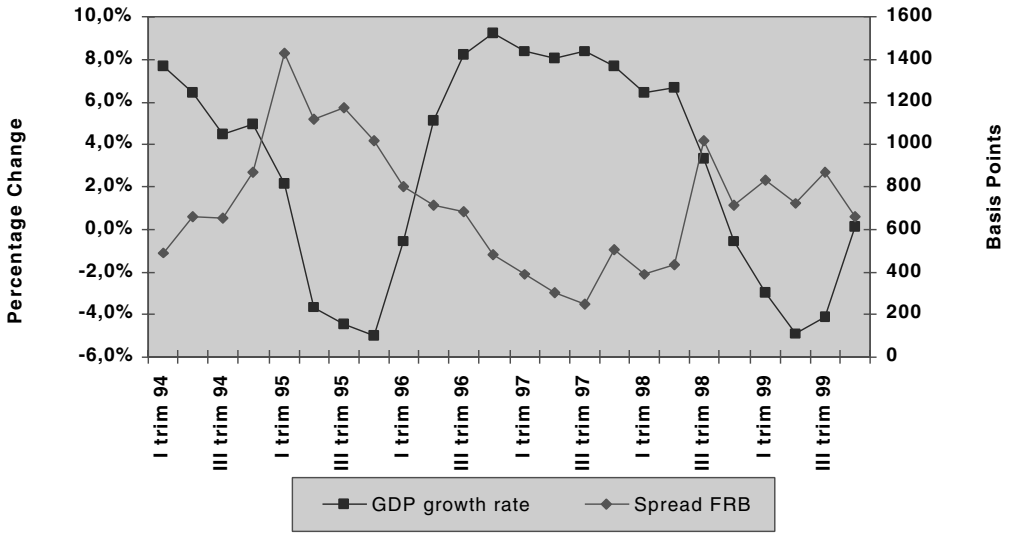

Figure 5: Country Risk and Interannual GDP growth rate
Source: Julio J. Nogués and Martin Grandes, *Country Risk: Contagion, Deficits or Political Noise,* IV(1) JOURNAL OF APPLIED ECONOMICS 125 (2001).

the national Government is by far the major borrower in international markets, the risk implicit in its bonds is a major determinant of domestic interest rates. When foreign investors conclude that the economic outlook of the country is likely to improve, they bring capital into the country, for example by increasing their demand for Government bonds. When this happens, the increase in bond prices result in a reduction in the level of country risk as measured by the interest spreads between domestic and risk-free bonds. In fact, as Figure 5 shows, the level of country risk is inversely correlated with short term economic cycles.

This figure shows year-on-year variation in quarterly GDP and the spread between the returns of Argentina's sovereign bonds and the comparable U.S. Treasury bonds. What determines this spread, usually known as the country risk factor? In recent empirical research, this risk has been found to be a function of a number of economic and political variables, including contagion effects from Mexico's financial markets, growth expectations, fiscal deficits, political noise effects, and solvency indicators such as debt service to exports.[54] This last variable helps to understand how the level of exports may have macroeconomic effects through financial variables. Our findings show that a one percent permanent increase in this variable increases country risk by 0.63 percent. With these results we can simulate what would be the level of country risk for different levels of additional exports.

This exercise is based on recent findings based on a computable general equilibrium model which suggests that the dismantling of OECD agricultural protectionism could have increased Argentina's exports by between 25 percent and 100 percent.[55] Based on these simulations and on the elasticity of country risk with respect to debt service to export ratio, we can conclude that had the level of exports in 2000 been 25 percent higher, the country risk would had been ten percent lower. If lower agricultural protectionism

[54] Julio J. Nogués and Martin Grandes, *Country Risk: Contagion, Deficits or Political Noise,* IV(1) JOURNAL OF APPLIED ECONOMICS 125 (2001).
[55] CARLOS SÁNCHEZ AND GABRIEL CASABURI, LAS DISTORSIONES DE LOS MERCADOS MUNDIALES DE ALIMENTOS Y SU IMPACTO EN LA ARGENTINA (2001).

had enabled Argentina to increase its total exports by fifty percent, the level of country risk would have been 33 percent lower.

Summing-up, in addition to the traditional static welfare losses from agricultural protectionism, the analysis of this part indicates that because agricultural protectionism also increases interest rates in efficient producer countries like Argentina, the cost of this protectionism is higher than what has been traditionally assumed. For example for 2000, the average country risk faced by Argentina' domestic residents was 672 basis points.[56] Had Argentina faced open international agricultural markets, its country risk would have been much lower, saving domestic debtors billions of dollars in interest costs.

B. Other Costs of Agricultural Protectionism

I have argued elsewhere that the higher structure of interest rates caused by higher country risk implies lower growth.[57] In addition, not only the level but also the policies used to implement this protectionism create additional costs for a country like Argentina. This occurs because international price fluctuations are accentuated by the policies of industrialized countries that shelter their domestic farmers from these fluctuations. By increasing the instability of Argentina's terms of trade, the slower growth resulting from higher country risk occurs along a path of widened business cycles.

On a related matter, I hope that this discussion has illustrated the importance of the Marrakesh mandate for the achievement of greater coherence between international financial organizations like the IMF and the World Bank, on the one hand, and the WTO on the other.[58] As long as agricultural protectionism in industrialized countries continues to remain at the very high level of the last decade, there will remain clear opportunities for increasing the "coherence" between international financial markets and the multilateral trading system. A significant decline of agricultural protectionism would facilitate repayment of foreign debt and strengthen the international financial system.

C. Summing-up with a Proposal

This discussion has shown that the increased financial costs faced by countries that are efficient producers as a consequence of protectionism on the part of industrial countries is higher and sometimes much higher than usually thought. Additional dynamic costs of these policies are caused by slower growth rates and magnified business cycles. Both the static and dynamic economic costs faced by Argentina and other efficient developing country producers that can be attributed to agricultural protectionism by industrialized countries are shamefully high.

Unfortunately, there is every indication that this protectionism is becoming more entrenched.[59] My proposal is for the existing Working Group on Trade, Debt and Finance in the WTO to be transformed into a negotiating Body. It is quite incredible that issues

[56] Data provided by Dirección de Cuentas Internacionales of the Ministry of Economy.

[57] Nogués and Grandes, *supra* note 54.

[58] *Declaration on the Contribution of the World Trade Organization to Achieving Greater Coherence in Global Economic Policy making*, in THE LEGAL TEXTS: THE RESULTS OF THE URUGUAY ROUND OF MULTILATERAL TRADE NEGOTIATIONS (1999) at 386.

[59] The passage of the US Farm Bill of 2002 and the 2002 proposal by the EC to reform the Common Agricultural Policy support this view. A preliminary analysis of these proposals appears in the recent report issued by the World Bank and the International Monetary Fund entitled *Market Access and Developing Country Exports-Selected Issues*, available at www.worldbank.org.

like trade and environment have become negotiating topics and yet the strong link between trade and debt still remains on the sidelines of the multilateral trade negotiations. Including trade and debt as a negotiating topic would change the structure of incentives as it would make more visible the costs of agricultural protectionism and would trigger a debate on who should pay for it.

V. Regional Trade Negotiations between MERCOSUR and the EU

As a member of MERCOSUR, Argentina is participating in several regional trade negotiations, including those with the Andean Group, with the United States (in the Free Trade Agreement of the Americas ("FTAA"), and with the EU. At the time of drafting this chapter (the end of 2001), only the negotiations with the EU had advanced to a stage where some relevant comments on trade negotiating strategies can be offered. The negotiations with the United States had not yet started, and the agenda of the FTAA indicated that these would start in late 2002. Only a preliminary exchange of documents had taken place with the Andean Group, where the goal is a free trade agreement in goods.

A. Background

In December, 1995, MERCOSUR and the EU signed an interregional cooperation agreement that seeks to create a free trade zone. Since then, both regions have held a number of meetings, and in 1999 the Bi-Regional Negotiating EU/MERCOSUR Committee ("BNC") initiated the negotiations. By the end of 2001 the BNC had already met six times, most recently in early July 2001 in Montevideo and in Brussels in late October 2001.

The first three meetings dealt essentially with the exchange of information. The fourth meeting of the BNC ("BNC IV") held in Brussels, was more substantive in character. Here MERCOSUR indicated that it was seeking a free trade agreement. Essentially, MERCOSUR was expressing its aim that the Common Agricultural Policy ("CAP") should not be an obstacle to the establishment of a free trade agreement. In turn, the EU expressed that it was planning to present to MERCOSUR a concrete offer and demand for market access in the next BNC meeting. This proposal would later prove to be far from a free trade agreement.

B. Differing Negotiating Goals and Strategies

The MERCOSUR document, entitled "Modalities for the Tariff Negotiations", demanded, in line with its goal of establishing a free trade area, that " . . . it is necessary to establish a reference tariff on the basis of which liberalization would be negotiated . . . ". It further stated that " . . . specific tariffs, mixed tariffs and any other type of tariffs should be transformed into an *ad valorem* equivalent that for negotiation purposes would be the maximum reference tariff . . . . " MERCOSUR offered to reduce its common external tariff ("CET"), which is defined on an *ad valorem* basis, plus any modifications introduced after its establishment in 1994 to zero over a ten year period, the same period proposed by the EU. Of course, there would be a list of exceptions for sensitive products.

Obviously, the goal of MERCOSUR's demand for *ad valorem* tariffication was to ensure that the many trade measures protecting EU agricultural and agro-industrial products should not be an impediment to the negotiations. In essence, by proposing to base market access negotiations on transparent equivalent *ad valorem* tariffs and to negotiate their

elimination over a ten year period, MERCOSUR was offering full reciprocity. In fact as we shall see, it was in effect offering more as it was not refusing to negotiate other issues put on the table by the EU, some of which appear to be of doubtful economic interest to the region.

In contrast, the EU never agreed to negotiate on the basis of equivalent *ad valorem* tariffs. It argued that this would undercut the CAP, with respect to which it is only prepared to negotiate in a multilateral round (which, as I argue below when discussing the Doha Declaration, is unlikely to occur in a significant way). In response, MERCOSUR argued that its goal was to put the regional negotiations on an equal footing for both sides, and not to challenge the CAP. In fact, so far the EU strategy appears to have been to negotiate specific elements of the CAP on a product-by-product basis. The differences between the MERCOSUR proposal and that of the EU are significant.

C. The EU Proposal

The EU presented its proposal at the July 2001 BNC meeting. In contrast to MERCOSUR's offer for a free trade agreement, it is difficult to see how the EU offer could have been more mercantilist. While the EU proposed that both sides should eliminate *ad valorem* tariffs over a period of ten years, this proposal hides an important imbalance in market access concessions, as now explained:

- The EU proposal would ensure free access to the MERCOSUR market for EU manufactured products, the most protected sector of the economies of the region, in exchange for access to what is already a very open market in the EU.
- The picture is very different with respect to agricultural and agro-industrial products. Except for a few countervailing measures, agricultural protection in MERCOSUR is also based on *ad valorem* tariffs. The EU proposal to dismantle *ad valorem* tariffs would also provide a high degree of access to the MERCOSUR market for EU agricultural products. It would not however provide much access for MERCOSUR agricultural and agro-industrial products to the EU. In addition to *ad valorem* tariffs, the EU imposes seasonal tariffs, specific-rate tariffs, and mixed tariffs, and it also employs export subsidies, budget support, tariff escalation, special agricultural safeguards and quotas.[60] The EU has offered to dismantle only the *ad valorem* tariffs, which would leave a very high degree of protection in place, particularly for products where MERCOSUR has a comparative advantage.
- To compound the problem, the EU agricultural and agro-industry policies provide a high degree of protection administered in a very non-transparent way. It could take the MERCOSUR negotiators several months to gain detailed knowledge of this protection and then they will be faced with the difficulty of deciding how much MERCOSUR should "pay" the EU to eliminate the *ad valorem* tariff or other components of its agricultural protection. The complexity of this problem increases when approached on a product-by-product basis. Different products are protected by different measures in the EU, but in general *ad valorem* tariffs do not provide the bulk of protection to agricultural products.[61]

[60] Some products of significant export value for MERCOSUR, such as beef, also face sanitary and phytosanitary barriers, some of which appear to be supported by weak scientific evidence.

[61] The nature of the complexity of EU agricultural protectionism can be illustrated by two examples. The first is fruits such as pears, apples, and oranges. For specific periods of the year classified by month or

- Furthermore, in contrast to the initial MERCOSUR proposal that covered all products, the EU proposal excludes around one thousand tariff lines of which 781 are products of great export interest for Argentina. Estimates of the *ad valorem* equivalent by the Secretariat of Trade with respect to a sample of the excluded products show a high average level of protection of these products of 36 percent, with a maximum of 463 percent. Exclusion of these products significantly reduces the MERCOSUR export potential of a trade agreement with the EU.
- In addition to full access to the MERCOSUR markets for goods, the EU is demanding: (i) full reciprocity in textiles and footwear, (ii) standstill and rollback, (iii) for fisheries products, liberalization would take into account "access to water resources", (iv) duties on wine would be abolished in the framework of a separate agreement including "protection of geographical indications and traditional expressions." In Argentina textiles and footwear are two "sensitive" labor-intensive sectors. Standstill (no new measures to be introduced) and rollback (of import measures to some specified date) have not been discussed in detail but given the nature of the CAP, there is no way that a realistic rollback by the EU could offer gains in market access that would match a similar reform by MERCOSUR. Details of the proposal on access to water resources and geographical indications have not been specified, but Argentina's national fishing fleet is not significant and, although Argentina has good wines, it has not developed significant geographical indications, so that in these areas too, it may be the loser. In sum, reciprocal concessions in these areas of the expanded negotiating agenda appear to have greater commercial value for the EU.
- The EU has also demanded negotiations on government procurement and services. In both areas, the EU seeks a high degree of access to the MERCOSUR markets. In services, for example, it seeks access to all markets except audiovisual services, national maritime cabotage and air transport services. The proposal clarifies that the "right of commercial presence" does "... not extend to seeking or taking employment in the labor market or confer a right of access to the labor market of another party." [62] Regarding government procurement, the presumption is that EU multinationals are better positioned to sell to MERCOSUR governments than vice versa.

D. Summary

With the available information it is risky to forecast where the regional negotiations between MERCOSUR and the EU will end. One general comment is that the outcome will not be the broad free trade agreement that MERCOSUR countries initially sought. A second general comment is that in agriculture, the outcome will most likely be one of very limited liberalization by the EU. If so, the economic results of these negotiations

consecutive months, fruits are protected by *ad valorem* and specific tariffs. Given the objective of protecting farm incomes, the EU specific tariffs vary inversely with the level of import prices. The result of this is that for pears for example, there are ten rates varying between zero and ten percent. In addition, specific tariffs also vary by time of the year so that the number of possible combinations protecting pears is very high. In simulations performed by Argentina's Secretariat of Trade, the EU *ad valorem* tariff equivalent, including the effects of specific tariffs, protecting pears varies between zero and 77 percent.

[62] *European Union Working Text: Trade in Services,* EU draft, July 2, 2001.

will be of limited value for Argentina. Further discussions will have to take place before a comprehensive assessment can be made of the net benefits that Argentina might derive from a MERCOSUR-EU trade agreement.

VI. Argentina's Prospects in a New Multilateral Trade Round

Argentina failed to defend its interests effectively at the WTO Ministerial Meeting held in Doha in November, 2001. Having been taken in by the UR Agreement on Agriculture, including the dirty tariffication practiced by industrial countries, Argentina should have gone to Doha prepared to say no to a new multilateral round. The prospect of still another negotiation where little agricultural trade liberalization is expected to take place worsens the development prospects of the country. In contrast to the weakness shown by Argentina, the EU hinted at Doha that unless specific language on agriculture was included in the Ministerial Declaration, it was ready to say no to a new round. In particular, the EU went to Doha prepared to stand firm on its objective not to allow specific quantitative targets for agricultural liberalization. For example, the EU strongly objected to the language that suggested an agreement to dismantle export subsidies, and in the end its threats prevailed.

There is little in the Doha Ministerial Declaration to suggest that significant liberalization of the agricultural protectionism practiced by industrial countries will be achieved. The statement in the Declaration that the negotiations should aim to achieve "... substantial improvements in market access; reductions of, with the view to phasing out, all forms of export subsidies; and substantial reductions in trade distorting domestic support..."[63] is not substantially different from the language of the UR Ministerial Declaration that promised significant reductions in import protection. As noted above, OECD agricultural protectionism today is about the same if not higher than what it was before the conclusion of the UR.

The outcome of the new WTO negotiations will depend on the ability of different countries to obtain their goals. Unfortunately, the available evidence suggests that the EU and Japan will most likely prevail. These countries not only convinced other Members to exclude quantitative targets for agricultural trade liberalization from the Ministerial Declaration, but also succeeded in including the statement that "... non-trade concerns will be taken into account in the negotiations...."[64] Another statement included at the behest of the developed countries was that "... under WTO rules, no country should be prevented from taking measures for the protection of human, animal or plant life or health, or of the environment at the levels it considers appropriate..."[65] This statement refer to sanitary and phytosanitary standards. Emerging evidence suggests that these standards are being used with protectionist intent.[66]

Argentina went to Doha without having prepared a negotiating strategy. Neither the Minister of Foreign Affairs, the country's chief negotiator, nor any other minister attended the meeting. Its deputy chief negotiator arrived late. In contrast to the lack of political

importance given to this meeting by Argentina, other developing countries like Brazil and India attended with clear objectives and a strategy that apparently included saying no to a new round if they did not achieve minimum goals. Thus, for example, Brazil played a key role in the Declaration on the TRIPS Agreement and Public Health. Likewise, in his opening statements, India's Minister of Commerce and Industry, its chief trade negotiator, stated that the "... draft Ministerial Declaration is neither fair nor just to the viewpoint of many developing countries ... It is a negation of all that was said by a significant number of developing countries and least developing countries ...."[67] It is therefore not surprising that India played a key role with respect to the Doha Ministerial Declaration on Implementation-Related Issues and Concerns.[68]

In my view, Argentina should had prepared a negotiating strategy that at a minimum included the threat of not supporting a new round if specific agricultural commitments were not included in the Ministerial Declaration. If it had done so, the WTO Members would have witnessed a confrontation between rich protectionist countries and poor but efficient developing countries. I believe this would have benefited Argentina in much the same way as standing firm proved to be a successful strategy for other industrialized and developing countries. As things stand, Argentina is headed towards another multilateral negotiation that will most likely result in an unbalanced outcome and additional net costs to the country. Obviously this can still be corrected during the negotiations but for this to happen, Argentina must develop an aggressive strategy.

VII. Concluding Remarks

At the time of the UR, Argentina and many other developing countries that implemented inward-looking policies for decades, had to show to the globalizing world that they were doing their homework. For many reforming countries, the UR was an instrument to lock-in unilateral liberalization policies while for industrial countries, it was an agreement to sell and export increased quantities. In part because of this but also to a significant extent because Argentina lacked a negotiating strategy, it came out of the round with a clear imbalance between the concessions it gave and those that it received.

The imbalance for Argentina is significant and probably one of the most important of the UR, and I have shown that this outcome entailed very high costs to the country. In spite of this, Argentina has apparently not learned the lesson that in order to increase the likelihood of success in international trade negotiations, it is crucial to draft a strategy and to have the capacity and strength to implement it. My argument in support of this statement comes from Doha. I have presented evidence supporting the argument that in contrast to other industrial and developing countries, Argentina participated in the Doha Ministerial Meeting ready to agree to any language for the agricultural negotiations or, for that matter, on any other topic. Its general stance has been and continues to be that any negotiation, irrespective of its outcome, is better than no negotiation. As long as the Government fails to develop a strategy, the country will continue to sign unbalanced negotiating outcomes and as a consequence, will sacrifice development opportunities.

Finally, the fact that agricultural protectionism in OECD countries remains irresponsibly high is a clear sign of the lack of coherence between the international trading system

[67] World Trade Organization, *Statement by India*, WT/MIN(01)/ST/10, (2001).
[68] WT/MIN(01)/17. (*See* Appendix.)

and the international financial markets. This link has to be studied more carefully with the expectation that more precise and complete awareness of the financial costs of agricultural protectionism will add to the pressures for liberalizing OECD markets during the Doha Development Round. My concrete suggestion is to transform the Working Group on Trade, Finance and Debt into a negotiating group before the conclusion of this round.

"Canadians have multilateralism in their DNA. Canada's contribution to the multilateral principle, whether in economic or political affairs, has been a substantial one."
Renato Ruggiero, the WTO's first elected Director-General

I. Introduction

Canada is a charter member of the World Trade Organization as it was an original contracting party to the General Agreement on Tariffs and Trade. Indeed, it can fairly be said that Canadian officials played pivotal roles at the founding of both, and continued to play significant roles in their operation. Canada's Dana Wilgress chaired the critically important Commercial Policy Committee of the 1947–48 UN Conference on Trade and Employment out of whose deliberations the GATT emerged. Wilgress carried on his leadership role as chair of the first five sessions of the GATT. Three other senior Canadian officials in subsequent years chaired GATT's Contracting Parties.[1] The idea of establishing a multilateral trade body to manage the various agreements emerging from the Uruguay Round of GATT negotiations found its origin in Canadian proposals and suggestions advanced in the FOGS Group,[2] chaired by Canada's John Weekes. Weekes later also served as chair of the WTO's General Council during the WTO's celebration of fifty years of multilateral trade cooperation in 1997.

On each of these occasions, Canadian officials were practicing one of the hallmarks of Canadian tradecraft: using leadership positions and innovative ideas to advance Canadian interests by levering the combined efforts of partners and allies to achieve common objectives. This Canadian way was borne in large measure of necessity: trade officials were often ahead of ministers and their fellow citizens in devising creative ways to realize Canadian trade and economic objectives.

The immediate impact of GATT and WTO negotiations and decisions on Canadian trade interests was often quite marginal, despite claims to the contrary by both proponents and opponents. Their cumulative impact over the past fifty years, however, has been anything but marginal. In the words of Frank Stone, who served as Canada's representative to the GATT in both the 1950s and 1970s, "the multilateral trade system has served well the interests of Canada, as a middle-sized country which has large and diverse trade interests, but whose main trade partners are larger countries; and the GATT system, in particular, has offered a wide range of opportunities to advance and defend Canada's trade-policy interests."[3] When coupled with GATT-consistent bilateral deals with the United States—the 1965 Auto Pact[4] and the 1988 Canada/United States Free-Trade Agreement ("FTA")—the impact has been substantial, particularly over the past decade. Over that period, trade has become ever more important to the daily concerns of Canadians. Exports of goods and services as a share of Canadian economic activity grew from 25 to over 40 percent, and trade issues occupied a growing share of the time and energy of government and business leaders.

[1] A more detailed appreciation of Canada's role in the founding of the GATT and in its subsequent evolution can be found in MICHAEL HART, ALSO PRESENT AT THE CREATION: DANA WILGRESS AND THE UN CONFERENCE ON TRADE AND EMPLOYMENT (1995), and FIFTY YEARS OF CANADIAN TRADECRAFT: CANADA AT THE GATT 1947–1997 (1998).

[2] The "Functioning of the GATT System" or FOGS Group was set up early in the Uruguay Round Negotiations to address issues related to GATT's institutional character. The Group's work was instrumental in the establishment of the WTO as an institution and in designing the Dispute Settlement Understanding.

[3] W. FRANK STONE, CANADA, THE GATT AND THE INTERNATIONAL TRADE SYSTEM 212 (1984).

[4] As explained in footnote 8 below, Canada—unlike the United States—did not seek a GATT waiver with respect to the Auto Pact.

Canada has always been a trading nation, but Canadians have not always been enthusiastic traders. From their earliest colonial days, Canadians have had to struggle with the reality of too much geography and too little demography. They found the answer in trade. Canadians enthusiastically accepted that they would need to export their surplus resources, but they were less sanguine about importing a wide array of manufactures and other goods. Not surprisingly, the trade policy measures adopted by successive governments often suffered from a high level of internal conflict. Until well into the twentieth century, trade policy choices were further complicated by their need to serve both fiscal and economic development objectives.

Over the eight decades from Canada's establishment in 1867 as a self-governing Dominion within the British Empire to the founding of the GATT in 1948, Canadian trade policy was essentially mercantilist in orientation. The government promoted the export of raw materials by negotiating access and supply contracts where it could, subsidized exports through infrastructure and other programs where necessary, and cosseted the import substitution sectors of Eastern Canada with high tariffs and related policies where possible. It proved a politically popular mix. As a result, governments of various political persuasions maintained the pragmatic components of what became known as the National Policy, ensuring that any manufacturer who wanted protection could get it.

In making sure that manufacturers received sufficient protection, Canadian officials became very adept at manipulating their tariff system and related customs administration. Some of the provisions in the GATT were put there to discipline such Canadian innovations and practices as antidumping duties,[5] valuation manipulations, classification fiddles, subsidies, and more. Even after the GATT came into effect in 1947, Canadian officials retained their reputation for inventiveness. They may have been committed to progressive liberalization, but they continued to appreciate that political and business support for a rules-based trading regime required an ability to solve short-term political problems, even if that sometimes required detours that stretched the letter and the spirit of the rules.

These realities conditioned Canadian participation in the planning and negotiations that led to the General Agreement on Tariffs and Trade. Nevertheless, at the initial GATT negotiations in Geneva in 1947, Canada opened its market substantially. Indeed, Canadian Prime Minister Mackenzie King enthusiastically told Canadians in announcing the completion of the GATT negotiations that:

> The General Agreement on Tariffs and Trade . . . is the widest measure of agreement for the freeing of world trade that the nations have ever achieved. Canada has joined with other nations . . . in this great effort to promote peace by prosperity and economic co-operation. The Agreement clearly charts our long-run course. It confirms, on a world scale, the objectives towards which our country's trade policies have been steadily directed . . . The new Agreement contains a firm promise of real reciprocity in tariff reductions. It paves the way for full international co-operation in maintaining high levels of employment and expanding economic activity. It . . . will permit us . . . to concentrate our efforts on the production of those things that we can best produce or manufacture, and so secure the highest level of real national prosperity.[6]

[5] Canada first introduced antidumping duties in 1904; the United States followed suit, first with the Antidumping Act of 1916, and then with a revised system more closely modeled on the Canadian approach in 1921. Canadians have had reason to regret their invention as U.S. zeal for administrative protectionism reached new heights in the 1980s, and US politicians became more and more attached to this politically attractive but economically irrational remedy.

[6] Radio address, *The Geneva Trade Agreements*, London, November 17, 1947. Department of External Affairs, Statements and Speeches 47/20.

In the next four rounds of GATT negotiations, however, Canadian officials were among the sharpest negotiators, seeking much and giving little. They were quick to claim that others were not doing enough to justify better concessions from Canada. This habit of mind was so deeply ingrained by the time of the Kennedy Round negotiations (1964–67) that it could not be reversed. In 1948 Canadian tariffs were on average lower than those of the United States and many European countries. By the end of the Kennedy Round, they were among the highest in the industrialized world. The Canadian economy remained more sheltered than those of the United States and Europe. This strategy may have been good short-term politics, but proved to be poor long-term economics.

Thus, while the Canadian economy grew, it did not become more outwardly oriented and Canada's protected manufacturing sector did not become competitive. For the first three post-war decades, the Canadian economy remained at roughly the same level of international integration. Foreign direct investment in Canada, largely by American firms, helped to ensure that most of the goods Canadians consumed were produced at home, often at inflated prices compared to their American neighbors. Canadian exports continued to be heavily concentrated in the resource sector, although some progress was made in adding value to some of these resources in Canada before exporting them to world markets. Canadians' main source of manufactured goods remained the United States, either as imports or as the products of American miniature replica branch-plants, and Americans became Canada's best customers. The UK's economic decline made it an increasingly unreliable trading partner, while the rest of Europe never developed into the market Canadians had optimistically expected. Similarly, Asian and Latin American markets turned out to be disappointing.

In these circumstances, it is not surprising that Canadian trade policy during the GATT's formative years involved a deft mix of rhetorical adherence to GATT theology and a hard-nosed determination to do what was politically necessary. Canadians did not look to their government to pursue a more open, more internationally competitive economy. Nevertheless, over the years, GATT theology had a continuing impact on Canadian attitudes, values, and even practices. Other countries similarly maintained the faith, even if they did not always practice it. As a result, by the end of the Uruguay Round (1986–94) and with the establishment of the World Trade Organization, the basic faith had not only survived, but had been reinforced by a much stronger, more detailed, and more extensive catechism.

For most of its life, however, the GATT's pragmatic, rules-based system proved ideally suited to the requirements of a medium-sized country like Canada, heavily dependent on trade with larger countries. Canadians may have been prepared for a more demanding regime, but only if it were clear that others, particularly the Americans and Europeans, were similarly prepared to accept such demands. That was not the case. As Canadian historians Robert Bothwell and John English noted, "Canadian policy of necessity was reactive, not creative, and common prudence dictated a policy for each possible circumstance."[7] Canadian officials learned to be wary of the degree of U.S. commitment to the rules. The agricultural sector, for example, a critical component of Canada's export economy, was virtually taken out of the GATT at U.S. insistence. Congressional ambivalence about the GATT further eroded confidence, as did U.S. willingness to resort to power politics through voluntary export restraint agreements and other devices. The U.S. rediscovery of trade remedies in the 1970s and their consolidation into the GATT

[7] Robert Bothwell and John English,*Canadian Trade Policy, 1943–47*, VIII Canadian Review of American Studies 1 (Spring 1977).

codes in the Tokyo Round (1973–79) deepened the conviction that trade relations with the United States could not be managed solely on the basis of the GATT. Canada's most successful trade agreement with the United States to that point, the 1965 Auto Pact, had been negotiated outside the GATT and enjoyed at best an uneasy status under the GATT rules.[8]

Canadian anxiety about the depth of commitment of its principal trading partners to the multilateral system of rules was further complicated by the emergence of the European Economic Community and the subsequent decision by the United Kingdom to cast its lot with Europe rather than remain an independent player. Like the United States, the EC soon exhibited the ambivalence of a large player and was not averse to twisting the rules or helping to shape them to its purpose. Japan, once its economy fully recovered from wartime devastation, found even more ingenious ways to shelter its more vulnerable sectors from GATT-mandated international competition. Many developing countries practiced a form of economic determinism that presaged a wait of many years before their economies might develop into reliable markets.

Nevertheless, by 1980, despite a reluctance to take full advantage of the GATT's opportunities, the value of Canada's merchandise exports had reached more than a quarter of Canada's GDP, including automobiles, trucks, and original equipment parts traded under the terms of the 1965 Canada-U.S. Autopact. An increasing number of firms and sectors were prepared to compete internationally by exporting to foreign markets. Even more firms, however, were finding that they had to compete at home, as tariff and other barriers were reduced to levels that could no longer guarantee them the home market. The trade dependence of the Canadian economy was widening, and the need to adjust was more pressing. Trade policy needed to adapt to these new circumstances.

In response, the government took steps that significantly narrowed the gap between Canadian faith and practice. By accepting that there needed to be serious adjustments in the Canadian economy, government and business cooperated in making the economy more open and more competitive. The government anchored this new orientation in a Canada-U.S. free-trade agreement that provided both the goad of greater competition at home and the reward of more open and secure access to a large market. The foundations laid over the previous decades made this step both politically and economically less risky. The sure knowledge that a structure of rules and procedures guaranteed that there would be profitable returns in other markets if Canada opened its own market generated the assurance that was lacking in earlier years. It made Canadian trade practitioners less cautious and more willing to put their faith into practice. The rewards were also evident. Canada became better placed to compete in a global economy even if it continued to depend more and more on trade with its giant neighbor to the south.

The results exceeded all expectations. Over the course of the 1990s, Canada experienced one of the strongest periods of trade-led growth in its history. Merchandise exports to all sources more than doubled at market prices. Total trade—exports and imports, goods and services—hit C$900 billion, rising from less than fifty to nearly ninety percent as a proportion of GNP. The United States accounted for the preponderance of

[8] U.S. implementation of the Auto Pact was made GATT-consistent by a waiver; Canada took the view that its approach—allowing qualified manufacturers to import cars and parts from any supplier in the world free of duty—did not require a waiver. Implementation of the Canada-US Free Trade Agreement weakened Canada's case and led to a successful WTO challenge of Canada's treatment of imports by non-Autopact importers. *See* Report of the Appellate Body, *Canada-Certain Measures Affecting the Automobile Industry*, WT/DS139/AB/R and WT/DS142/AB/R (2000).

this trade, as it had for most of the postwar years. In 2000, in nominal terms, two-way trade between Canada and the United States reached nearly C$700 billion, the equivalent of almost seventy percent of Canadian GNP. Various factors contributed to this spurt in growth in the external sector, including the pull of the red-hot U.S. economy, and a favorable exchange rate, but the adjustments induced by freer trade in both production and consumption patterns played a significant role.

Behind these aggregate statistics lies the story of an economy becoming more outwardly oriented and diversified. Over the 1990s, Canada became steadily less dependent on exports of resources as knowledge-based sectors grew and penetrated markets in the United States and beyond. By the end of the decade, trade in automotive products accounted for less than a quarter of the total; resource-based products accounted for less than half. Industrial and agricultural machinery, aircraft and other transportation products, and consumer products accounted for nearly thirty percent of Canadian merchandise export sales. Additionally, sales of business services, software, and other knowledge-intensive products added billions to Canada's current account. As a further indication of Canada's growing integration into the North American economy and through that economy into the world economy, Canada was increasing its foreign direct investment abroad, valued in 2000 at over $779.3 billion, with foreign direct investment in Canada reaching a book value of $1,023 billion in 2000.[9]

Over the 1990s, Canadian participation in the global trade regime thus reached a new level of maturity. Canadians became more prepared to pursue opportunities and less reluctant to accept some of the risks of a more open economy. Canadian officials also successfully convinced the global community to adopt a stronger institutional basis for multilateral trade cooperation, and they were at the forefront in ensuring that the WTO evolved into a forum for the governance of a global economy. Nevertheless, for Canada, the trade relationship with the United States is and will remain the most important by a wide margin. A critical factor in any Canadian trade policy decision remains its impact on relations with the United States. Throughout the postwar years, multilateralism provided an efficient means for pursuing Canada's trade policy objectives, but its impact on relations with the United States remained decisive. The importance of that relationship usually determined Canada's strategic choices: any policy course or instrument that advanced Canadian interests in the U.S. market and that strengthened Canada's capacity for managing the U.S. relationship was worthy of pursuit, whether effected bilaterally, regionally, or multilaterally.

For Canadians, the need to be active in the further developments of the multilateral trading system remains clear. Canada depends on and benefits from an effectively functioning trade and payments system. Its ability to play a constructive role is equally clear. But the capacity to ensure that Canadian values and priorities are reflected in the evolving regime requires that Canadians analyze the issues and make their contributions early in the process. As a relatively small player, that is where they are most likely to influence the content and course of a negotiation. In short, Canadians need to be quick, early, and creative. Canada's performance at the WTO suggests that this lesson has not been lost on those charged with this responsibility.

As noted by Canada's first ambassador to the WTO, the WTO remains the "bedrock" of Canadian trade policy, in the sense that it provides the basic framework of rules for the

[9] These figures are extracted from Department of Foreign Affairs and International Trade, TRADE UPDATE 2001: SECOND ANNUAL REPORT ON CANADA'S STATE OF TRADE, available at www.dfait-maeci.gc.ca.

preponderance of Canada's trade relationships, including those governed by complementary regional or bilateral arrangements.[10] Canadian representation at the WTO reflects this reality. As late as the mid-1970s, the government appeared content to be represented at the GATT by an ambassador who had strong credentials in the political dimensions of diplomacy and who devoted most of his energy to the affairs of other multilateral institutions in Geneva, such as the Disarmament Conference or the International Labor Organization. GATT affairs were handled by three other officers in the mission, only one of whom was assigned full-time responsibility for GATT issues. The other two officers divided their energies among the GATT and several other international economic bodies, including the UNCTAD and the UN Economic Commission for Europe.

By the mid-1990s, on the other hand, the Canadian mission in Geneva boasted not only two ambassadors, with the senior ambassador concentrating on economic institutions and the second on political institutions, but also up to eight other officers conversant in trade policy matters and equipped to handle various WTO issues. In addition, Canada had succeeded in placing more Canadians into influential Secretariat positions.

Canada gets good mileage out of this enhanced representation in Geneva in the day-to-day affairs of councils and committees, in the inevitable informal diplomacy that is key to resolving delicate negotiating issues, and in the building of coalitions and alliances so essential in multilateral negotiations. With the support of a much enlarged headquarters staff, Canada gets consistently good marks for the quality of its representation and the ideas it brings to the table, giving it a voice and influence that are often out of proportion to Canada's weight in world trade matters. Canada's share of world trade—about four percent—is not the only basis for Canadian participation in the Quadrilateral Trade Ministers' meetings; the quality of Canadian representation counts as well.[11]

Canada is also actively engaged in the settlement of disputes, both as plaintiff and as respondent.[12] While the media may focus on politically difficult issues such as the U.S. complaint about Canadian measures restricting access for a split-run edition of *Sports Illustrated* or Canadian complaints about U.S. restrictions on imports of softwood lumber, there are many more cases active at any one time. Over the course of the 1990s, for example, Canada also succeeded, either alone or in company with other parties, in removing French restrictions affecting imports of scallops, Australia restrictions on imports of salmon, and Japanese restrictions affecting the sale of alcoholic beverages. Canada is actively pursuing cases involving EU restrictions affecting meat imports and Brazilian export financing programs for aircraft, and has pursued consultations with Hungary regarding export subsidies on agricultural products, with the EU regarding restrictions on imports of grains, and with Korea regarding the treatment of imported bottled water. The long-standing Canada-U.S. soap opera over Canadian exports of "subsidized" softwood lumber exports to the United States has disposed Canada to bring a series of cases challenging U.S. countervailing duty procedures. Only the United States and the

[11] The Quadrilateral meetings of trade ministers bring together the trade ministers of the United States, the EU, Japan, and Canada, who together account for more than sixty percent of world trade. Established in 1982, this informal gathering affords the ministers and their senior officials the opportunity to review the state of play on both bilateral and multilateral trade files and coordinate positions to the extent considered desirable and feasible.

[12] An overview of ongoing dispute settlement cases is maintained by the WTO on its website under *Dispute Settlement.*

EU have been more active users of the system, consistent with the larger volume and more diversified nature of their trade.[13]

On the other side of the ledger, Canada has also been a respondent in a growing number of complaints brought by the United States, the EU, Japan, Brazil, New Zealand, and others involving issues related to Canadian cultural policies, patent protection, dairy policies, aircraft subsidy programs, and more. As has become the general pattern, WTO panels have upheld most of the complaints brought before it, demonstrating that much of the value of dispute settlement lies in giving governments incentives to dismantle programs and policies that may have strong industry support but that run counter to broader interests.

As with all international commitments, WTO dispute settlement can bring both comfort and discomfort to the contracting parties, at least at the political or immediate level. As U.S. analyst Duncan Snidal explains, "Institutions matter. . . . Sometimes they alter state behavior by driving a wedge between what is of immediate interest and what is of interest in some broader sense."[14] WTO dispute settlement provides clear proof of this insight. Governments are prone to defending their short-term policy preferences and do not like to lose. The purpose of dispute settlement, however, is to ensure accountability for those choices and ensure that longer term interests trump short-term political calculations. Outside of the heat of daily politics, Canadian ministers would agree and have thus been among the strongest supporters of binding dispute settlement at the international level.

While Canada has been a strong proponent of the WTO's dispute settlement process, Canadian officials have also been actively engaged in addressing ways and means to make the system more effective. As the trade dispute settlement process has moved further and further away from its diplomatic roots toward a rules-based system of adjudication, Canada has been among those insisting that two further developments are required to make the system fair and effective: developing countries need assistance to ensure they can take full advantage of the system, and appropriate procedural and other safeguards need to be devised to make the system both more transparent and fair to all interested parties. As the new Doha round of negotiations unfold, Canadian voices are likely to figure prominently in efforts to strengthen dispute settlement procedures.

Canada has been an equally active proponent of the deepening of the WTO's rules and of their extension into new areas, particularly into those areas related to the full contestability of markets. Canadian officials have made substantial contributions to the discussion of the interaction of trade and competition policies at the OECD and have been at the forefront of this discussion in Geneva. Traditionally one of the more reluctant participants in the elaboration of multilateral investment disciplines, Canada is now more prepared than other OECD countries to bring this issue to Geneva, preferring the global forum of the WTO to the more specialized arena of the OECD, where negotiations on a Multilateral Agreement on Investment foundered in 1998.[15] The establishment of

[13] The WTO, in its 2001 report on dispute settlement, indicates that through the end of August 2001, Canada had been the respondent in nine requests for consultations, leading to seven requests to establish panels, had been the requesting party in nineteen requests for consultations leading to seven panels, and had joined a further twenty consultations as an interested party. By way of contrast, during the GATT years from 1948 to 1994, Canada was involved in some eleven cases as a respondent and fifteen cases as a complaining party.

WTO working groups on investment and competition policy issues at the Singapore Ministerial Conference was in part the fruit of Canadian tradecraft. The subsequent commitment at Doha in 2001 to proceed to possible negotiations within two years reflects Canadian conviction that the governance of the global economy requires a more expansive understanding of international trade and investment disciplines.

In addition to its active participation in the implementation, application, and further negotiation of the WTO's rules, Canada has vigorously advocated the extension of WTO membership. The accession of most applying countries is relatively straightforward, but the extension of membership to the People's Republic of China ("PRC") and to Russia poses major policy challenges. The PRC application was debated for more than a decade, as China was subjected to a barrage of more than 3,500 questions by members skeptical of its ability and willingness to abide by the WTO rules. The absence of China seriously undermined the WTO's credibility as the main forum for the pursuit of global trade issues, as does the continuing absence of Russia and other Soviet successor states, particularly now that they are pursuing market-based policies. China's accession at the end of 2001 fills one large gap; the remaining gaps may now prove easier to fill.

Canada has injected its interests into the accession process at two levels. In Geneva, Canada works with other major players to ensure that the process is both fair and credible. Canada has gone on record as welcoming all those who have applied, including China and Russia, but at the same time has insisted that the accession negotiations lead to commitments that make their accession economically and commercially credible. To that end, Canada has, through the Canadian International Development Agency, organized and funded training programs for officials in acceding countries, funded research projects related to WTO accession, and otherwise extended technical assistance to the governments of those countries, including China, Russia, the Baltic States, Ukraine, Vietnam, and others.

Canada's painfully learned but increasingly effective tradecraft has taught Canadians well and prepared ministers and officials alike for the challenges of a much more integrated and more competitive global economy and for even deeper integration with the United States. The history of the past century and a half suggests that Canada-U.S. trade and investment relations provide the dominant theme in Canada's economic development. It also suggests that Canadians—and Americans—have benefited from joint efforts to find mutually acceptable ways to address how best to share the continent. That is likely to remain a theme and a lesson for the future as well.

II. Choices and Opportunities for Canada

Canadians have a large stake in the success of efforts to further define and elaborate the regime for governing inter-state trade and investment relations. Indeed, as a result of both economic and policy developments in the 1980s and 1990s, their stake has become significantly greater. Trade and related matters now loom larger than ever as determinants of Canadian prosperity. Canadian capacity to contribute to the further evolution of rules and institutions to govern international trade has similarly grown. The lessons learned from more than a century and a half of trying to make the most of their geographic and demographic circumstances should serve Canadians well in the future.

In the opening years of the twenty-first century, even though little substantive progress was being made, governments were experimenting with a wide range of processes to test the scope of and demand for further rules and disciplines and new opportunities to liberalize trade and investment. Canadian participation in the elaboration of a Free

Trade Area of the Americas ("FTAA"), the agenda of Asia-Pacific Economic Cooperation ("APEC"), a new round of WTO negotiations, further Canada-U.S. bilateral or NAFTA trilateral discussions, and bilateral free-trade discussions with newer trading partners may each provide a basis for developing new ideas and proposals faithful to the achievements of the past but attuned to the demands of the future. Some of these initiatives, however, also illustrate well the emergence of trade policy as high policy: political factors frequently outweigh economic and commercial considerations.

For Canada, most of these experiments will prove of limited economic or commercial value. The FTAA discussions, for example, are symbolically important to the nations of the Americas, but they are unlikely to achieve the kind of agreement that early public discussions suggested. Successfully concluding and implementing an FTAA will require that all participants accept obligations that go well beyond their existing WTO obligations. That is a larger step than most of the countries of the region appear ready to take at this time. The absence of U.S. fast-track negotiating authority has invested the discussions with a surreal quality, and the rivalry between competing U.S. and Brazilian visions further underlined their geopolitical nature. Nevertheless, the discussions have been of considerable value in developing and deepening trade and political relations among the nations of the Americas, in providing the Caribbean, Central, and South American participants with a process to deepen their understanding of rules-based trade, and in enhancing their capacity to participate in such a system.

APEC similarly contributes to the intellectual capital and political momentum needed to move the international trade and investment agenda along. Like the FTAA process, discussions in APEC are in many ways the equivalent of discussions among Commonwealth members in earlier decades. They are characterized by a deep spirit of cooperation and a commitment to common objectives. To date, the results have been more modest than some of its more enthusiastic participants had hoped, but they have clearly been positive. Some of APEC's most important work has been to validate and complement the work of other forums. Over time, APEC's contribution is likely to continue to be constructive, adding to the forces leading to a more liberal, rules-based, and better functioning global economy.

For Canada, APEC and the FTAA are not likely to lead to significant new breakthroughs in access to the markets of Asia and Latin America or in negotiating new trade and investment rules. Rather, they will contribute to ensuring that Canadian-based firms can take advantage of the access that exists, to identifying problems in access, and to proposing remedies, most of which will be addressed elsewhere. More importantly, both forums provide unique opportunities to strengthen ties with future trading partners that could contribute to future trade and investment opportunities and growth.

Developing and transitional economy countries may eventually become more important trading partners for Canada. Some will offer very large markets and a capacity to absorb more Canadian goods and services; others will provide Canadians with a range of attractive and competitive products. To reach this stage, however, there need to be many more changes than have been evident to date. Most of these countries are now headed in the right direction; at the same time, many do not have the wherewithal to complete the journey. Canada needs a robust and well-functioning global trade and investment regime. To remain viable, such a regime will require the active and constructive participation of developing and transitional countries. To that end, Canada can usefully place itself at the forefront in helping them gain the capacity to meet this challenge.

Bilateral free-trade discussions with some of the emerging markets, including Chile, Costa Rica, the rest of Central America, Singapore, the remaining members of the European Free Trade Association (Norway, Switzerland, Liechtenstein, and Iceland), and

others serve similar modest, long-term objectives. They expand the reach of freer, rules-based trade on the basis of, by-now, well-established patterns. They foster relationships with countries that offer interesting, if modest, new trade and investment opportunities. They strengthen geopolitical ties that might otherwise remain largely dormant. But they are largely peripheral to the mainstream of Canadian trade and investment interests. These are to be found, as they have been for many years, in relations with the United States and in further elaboration of the multilateral trade and investment regime.

Members of the World Trade Organization at their fourth Ministerial Meeting in Doha, Qatar in November 2001 launched a new round of trade negotiations as well as an ambitious work program. Since the ill-fated Seattle meeting at the end of 1999, governments and their officials had worked diligently to find the basis for renewed commitment and expanded horizons. Preliminary negotiations on agriculture and services, as required by the 1994 Marrakech agreements, helped to clear the way. The final shape and full scope of these negotiations, however, remain obscure, suggesting that they will take many years to define and complete. As during the Uruguay Round, governments need to tackle some of the most difficult issues left over from previous rounds, particularly agriculture, and to find ways and means to address some of the newer issues, from competition policy to environmental protection and labor regulation. In between, there is a full range of other thorny issues.

For Canada, the new round of WTO negotiations will serve a dual purpose. First and foremost, the round should strengthen the systemic base for all of Canada's trade relations, including with the United States. Additionally, it should provide the best basis for pursuing stronger rules and better access commitments for trade with Europe, Japan, and the rest of the world. Canadians have sometimes been tempted to look to bilateral negotiations with the EU and Japan to effect change in these relationships, but experience has demonstrated that the degree of mutual interest in solving bilateral problems is not sufficient to overcome a host of complicating factors, including asymmetry in size and interest, sectoral sensitivities, concern about setting precedents for other relationships, and more. Multilateral negotiations are well suited to building coalitions and finding common cause to overcome some of these problems. Europe and Japan remain large and potentially important markets. They are now marginal trading partners, for reasons of both omission and commission, on Canada's part and theirs. There may be room for some modest initiatives to explore the scope for doing more, but the most important breakthroughs are likely to come through multilateral bargaining.

Canada's first priority remains the United States. That market now represents more than eighty percent of Canada's trade and economic relations. Canada's exports of goods and services to the United States adds up to about a third of its total economic activity while its imports from the United States constitute about a third of Canadians' total consumption. Canadians increasingly accept that living next door to the largest, most dynamic economy in the world is an asset to be nurtured and protected. This means that trade irritants, trade relations, trade promotion, and trade negotiations with the United States will remain at the top of Canada's agenda.

Together with the Mexicans, Canadians have a free-trade agreement with the United States. The reality, however, is that the three countries have reached a level of integration closer to that of a customs union, but without the institutions and rules to make sure that they are getting the full benefits of this level of integration. Given developments in the global economy, the intensification of private-sector led integration in North America, and the stresses created by diverging Canada-U.S. economic performance, a growing number of analysts believe the time has come for Canada and the United States to

consider jointly whether they can take steps to remove or constrain remaining barriers to cross-border trade and investment. The combined success of the FTA, NAFTA, and WTO negotiations has exposed policies and practices that do or might impede further growth in trade and investment. These policies and practices go beyond what can be resolved on a piecemeal, issue-by-issue basis and are of a type and nature unlikely to receive the attention they require in future WTO multilateral negotiations or ongoing regional FTAA or APEC discussions. They are most likely to be resolved on the basis of a comprehensive initiative that can capture the imagination of political leaders on both sides of the border and generate the level of support necessary to overcome narrowly focused opposition.

The tragic events of September 11th fundamentally altered the equation. An issue that needed to be weighed and debated became an issue for early and decisive action. Disruptions at the border rapidly convinced a growing number of Canadians and Americans that their two governments needed to take determined steps to keep the border open as a conduit for trade, tourism, and investment and make it less vulnerable to disruption by terrorist and other threats. On the security side, the crisis of September 11th pointed to the need for an aggressive and cooperative effort by police, intelligence, immigration, and allied enforcement bodies to coordinate their activities, share information, and cooperate along the full spectrum of their common interests. From an economic perspective, it indicated the need for some bold thinking and new arrangements.

Such a comprehensive initiative is most likely to be considered initially on a bilateral Canada-U.S. basis, without prejudice to the advisability or necessity of including Mexico or of incorporating the results of any discussions into the NAFTA framework. The two governments are likely to conclude that it is more important to define the issues and the feasibility of their resolution than to focus on their form or the institutional basis for administering the results of any new commitments. Similarly, they are likely to conclude that it is not necessary in the early stages to determine Mexico's role. That issue is more likely to be addressed later on the basis of the results of preliminary discussions and in light of Mexican interests and capacity.

Over the next decade, therefore, it would not be surprising to find Canada and the United States engaged in efforts to complete the work they started in the early 1980s to achieve a seamless market governed by a single set of rules, implemented and administered by the two governments to achieve their common interest in a well-functioning North American economy. Canadians will be asked to agree that such an initiative represents a prudent way for Canada to manage its deepening economic relations with its giant neighbor to the south. Americans will need to decide whether this is a good way for the United States to demonstrate to its other trading partners that it remains committed to rules-based internationalism and that it is prepared to adapt that system to the challenges and demands of deeper integration. For both, reducing the impact of the border may prove the best way to preserve Canada's status as an independent, reliable, and vibrant partner of the United States in the pursuit of common trade, economic, and security interests.

III. Trade Policy Making in Canada

Canadian ministers have begun to respond to the demands of the new, more complex political economy of trade[16] by committing the government to consultations with all

[16] For discussions of the new political economy of international trade negotiations, see Michael Hart, *The WTO and the Political Economy of Globalization*, 31 JOURNAL OF WORLD TRADE 5 (October 1997), and

sectors of society. Following the federal government's positive experience in the Tokyo Round of GATT negotiations (1973–79) of consulting closely with the provinces and business interests, ministers developed a disposition to consult ever more widely before enunciating Canadian policies and priorities. They also became comfortable with a more transparent process of decision making, prepared to share a wide range of previously restricted information and analysis. The advent of the Internet further allowed governments to shape and share information and analysis on the broadest possible basis. By the turn of the century, virtually every level of government routinely made material available that less than a generation earlier would have been considered sensitive and privileged.

The contours of Canada's trade policy-making process are derived from the parliamentary system of government and the federal-provincial distribution of power. The Canadian parliamentary system provides for a top-down exercise of political authority, which is generally closed to outside influences except to the extent permitted by formal and informal consultative mechanisms. Executive authority for the conduct of international trade policy is vested in the cabinet. When the cabinet holds a majority in parliament, it holds, for all practical purposes, legislative power as well. Canadian ministers and officials conduct trade relations and trade negotiations under explicit or implicit grants of political authority from the cabinet and may conclude *ad referendum* agreements consistent with that political authority. When implementation of such agreements does not require new legislation, reference to parliament is not required, although most agreements are normally tabled in parliament. If new legislation is required, the government majority in parliament virtually ensures that such legislation will be enacted.

Within the cabinet, the Minister of Foreign Affairs is responsible for the conduct of all foreign policy, while international trade policy is the responsibility of the Minister of International Trade.[17] To ensure an integrated approach to Canadian trade and foreign policy, the two ministers are served by a single department. To obtain and maintain cabinet support for international trade policy and negotiations, the Minister of International Trade must necessarily work closely with other ministers and their departments, such as the Ministers of Finance, Industry, Agriculture, and other ministers who have important international trade issues within their portfolios. The Minister of Finance, for example, retains authority over the tariff and trade remedy legislation. Over the years, as trade negotiations have delved ever deeper into domestic policy, the number of ministers—and their officials—with a direct interest in trade negotiations has grown commensurately.[18]

Although the constitution assigns exclusive responsibility for international trade to the federal government, the provinces play an increasingly important role in the formulation and implementation of trade policy. In light of the importance of international trade to Canadian economic performance and the political accountability of provincial governments to their electorates, provincial governments have, over the years, sought and acquired an enhanced role in the formulation of trade policy. Further, modern trade policy issues are beginning to reach into public policy areas under shared federal-provincial jurisdiction or exclusive provincial jurisdiction. Thus, while the federal government

William A. Dymond and Michael Hart, *Post-Modern Trade Policy: Reflections on the Challenges to Multilateral Trade Negotiations After Seattle*, 34 JOURNAL OF WORLD TRADE 3 (June 2000).

[17] An exception is the *Export and Import Permits Act*, which authorizes the Minister of Foreign Affairs to apply import or export controls under certain circumstances, for example, to protect national security.

[18] For example, some 24 federal government departments and agencies were members of the inter-ministerial group which provided advice to ministers on Canadian interests at the Seattle meeting of the WTO.

retains full authority to conclude and sign international trade agreements on any subject, it relies on the provinces to ensure full implementation in areas of provincial jurisdiction.

Similar to the exercise of federal power, political power within the provinces consists of a top-down discharge of authority under the control of the provincial cabinet. The assignment of trade responsibilities varies across the provinces from explicit ministers of trade to ministers of economic development. However, as in the federal arrangement, ministers holding other portfolios such as agriculture, industry, finance, and energy necessarily become involved in the formulation of provincial government positions.

Prior to 1985, a permanent mechanism for consulting with Canadian business and other interests on trade policy matters did not exist in Canada. GATT negotiations in the early years focused on cutting tariffs and, as proposed tariff changes were budgetary secrets, they were not subject to public discussions before being enacted. Trade officials routinely held informal discussions with business representatives but they were not included in the policy process in any formalized way. By the time of the Kennedy Round of GATT negotiations (1964–67), however, the federal government found it useful to establish a more formal mechanism, the Canadian Trade and Tariffs Committee, to receive briefs and hold hearings in preparation for negotiations.

By the time of the Tokyo Round, once most significant tariff barriers had been stripped away and the trade agenda had begun to shift to non-tariff barriers and trade issues with a broader social dimension, the need for regular consultations had also become more pressing. A variety of mechanisms were used, including a Canadian Trade and Tariffs Committee in the early stages to receive briefs and hold hearings, regular consultations with provincial officials, and periodic consultations with business leaders through such vehicles as the C.D. Howe Institute—a think tank—and its various committees, the Canadian Exporters Association, the Canadian Manufacturers Association, and the Chamber of Commerce. As well, the government set up an office of the Canadian Coordinator for Trade Negotiations to facilitate opportunities for business and other interests to inform the government of their views.

By the 1980s, the list of subjects covered by trade agreements had become increasingly complex and the range of interested parties more varied. Trade negotiators required technical input on energy, telecommunications, transportation, food safety, and other issues for which the in-house capacity of the government was not always sufficient. A more interested business community, as well as provincial officials, sought more frequent opportunities to advise the government. To that end, senior officials met periodically with a newly constituted Canadian Business and Industry Advisory Committee (a Canadian offshoot of the OECD Business and Industry Advisory Committee) and with provincial officials. Efforts to include labor leaders in such consultations proved less successful.

The decision to negotiate the Canada-U.S. Free Trade Agreement marked a watershed in the development of formal consultative mechanisms to further the Canadian trade agenda. Public consultation for this agreement was essential, both because of the broad range of subjects under discussion and because broadly-based consultations would enhance support from the various regional and sectoral constituencies required to hold the deal together. The FTA and subsequent North American Free Trade Agreement thus helped to institutionalize mechanisms for consultation with the provinces, business, and other stakeholders. Following the events at the WTO ministerial in Seattle, the Canadian government put its full weight behind its commitment to consultation and transparency, making Canada a world leader in consultative trade policy, both in form and substance.

A. Formal Consultative Mechanisms

The trade policy-making consultative process in Canada today involves a mix of formal and informal mechanisms. The formal mechanism consists of 1) a Continuing Committee on Trade Negotiations, providing for regular consultations between federal and provincial officials; and 2) a consultative framework of business, labor, non-governmental organizations, and academics set up to provide advice to the Minister of International Trade and senior government officials on the conduct of trade negotiations and the management of trade relations. The informal mechanisms include *ad hoc* consultations between interest groups, companies, and organizations and ministers and their officials from a broad range of government departments. Additionally, parliamentary committees regularly hold hearings and report to the government on trade policy developments, trade negotiations, and trade relations.

The International Trade Advisory Committee ("ITAC") and the Sectoral Advisory Committees on International Trade ("SAGITs") were originally formed in order to assist the government in preparing for the bilateral Canada-U.S. Free Trade Agreement ("FTA") negotiations. The Trade Minister appointed all members of the ITAC and SAGITS. Some overlap existed between SAGIT and ITAC membership as the SAGIT chairs usually sat on the ITAC. The original ITAC had about forty members, including business executives, trade union leaders, consumer representatives, and academics. Its mandate was to focus on the larger trade-related economic issues of the nation and its members were expected to serve the broader national interest rather than act strictly as representatives from specific industries and interest groups. The ITAC served as an important vehicle for developing consensus and support for Canada's general approach to trade negotiations.

Differing in scope and approach, the SAGITs were established to provide more narrowly-based input. At the time of the FTA, fifteen SAGITS were formed to cover a range of industrial sectors and interest areas. They provided valuable technical advice to the federal negotiating team on how quickly tariff levels should be reduced to zero in each sector, as well as advice on other issues under negotiation. In effect, the SAGITs provided the government with an important vehicle for two-way information flows. The value of the ITAC and SAGIT advisory role is well illustrated by the fact that the government decided to maintain the framework well after the conclusion of the FTA negotiations.

The SAGIT consultative mechanism is now made up of twelve advisory groups[19] and continues to provide an important source of advice for the government, as well as a means of keeping industry and other interests informed of trade policy and trade negotiation developments. Each SAGIT is comprised of senior business executives and representation from industry associations, labor unions, environmental groups, and academia. Members are selected on the basis of their personal capacity and not as formal representatives of specific entities or interest groups. Members are appointed for a two-year, renewable term and report to the Minister of Trade. Officials from the Trade Consultations and Liaison Planning Division of the Department of Foreign Affairs and International Trade support the SAGIT structure. Efforts are made to ensure regional balance and gender participation. Each SAGIT meets three to four times annually and members serve without remuneration.[20]

[19] Agriculture, Food and Beverage; Apparel and Footwear; Cultural Industries; Energy, Chemicals and Plastics; Environmental; Fish and Sea Products; Forest Products SAGIT; Information Technologies; Medical and Health Care Products and Services; Mining, Metals and Minerals; Services; and Textiles, Fur and Leather.

[20] SAGIT members are reimbursed for economy class travel and meal expenses incurred when travelling to meetings.

The International Trade Advisory Committee has now been replaced by the Team Canada Inc. Advisory Board. It provides the federal government with advice on trade policy and market access questions as well as issues related to trade and investment promotion. Its role and scope has remained largely unchanged over the past fifteen years, but its organization may be overhauled once again to deal with the changing focus and dynamics of WTO and other negotiations.

In addition, other ministers on occasion participate in meetings of SAGITs and the Team Canada Advisory Board and have also set up advisory bodies of their own. Both the Minister of Agriculture and Agri-Food and the Minister of Industry have developed their own advisory structures. Given the importance of international trade to these portfolios, trade policy and trade negotiations form important parts of the agendas of these consultative bodies.

Finally, in 1998 the Deputy Minister of International Trade established an Academic Advisory Committee to the Deputy Minister, made up of fifteen senior academics drawn from a variety of disciplines (e.g., law, economics, political science, commerce, and environmental science) to provide senior officials with a twice yearly opportunity to discuss the full range of trade policy issues with a group of knowledgeable individuals without a direct stake in any of the issues.

B. Informal Consultative Mechanisms

A number of factors set the stage for the consultative turn in Canadian trade policy. The Canada-U.S. negotiations FTA helped to stimulate interest in a more formalized and institutional framework for communicating with stakeholders, mostly from the business community, although organized labor was also invited to participate. At the political level, as part of its 1997 election campaign, the government promised greater transparency and the further democratization of foreign policy based on an even more open process for policy making. In the area of trade policy, this commitment was reinforced by the desire to avoid the public relations difficulties that the government had encountered with the failure of the negotiations at the OECD for a Multilateral Agreement on Investment ("MAI"). Although the claim made by civil society groups that public opposition was responsible for the demise of the negotiations is both misleading and self-serving, the trade minister at that time, Sergio Marchi, responded to the unexpectedly vigorous opposition to the agreement by renewing the government's commitment to consultation in order to avoid being similarly blindsided in the future.

The informal consultative process reaches out to a broad range of Canadian groups and is held together by an eclectic, multifaceted structure that allows for a number of points of contact. Institutional mechanisms such as the Parliamentary Standing Committee on Foreign Affairs and International Trade ("SCFAIT"), the Parliamentary Centre, and the Centre for Foreign Policy Development facilitate the discussion and evaluation of relevant trade policy issues within the broader context of Canadian foreign and domestic policy. Much broader outreach is achieved through the government's commitment to Internet communications, which has significantly opened up the process of information dissemination and dialogue with Canadians. A regularly updated website entitled *Consulting with Canadians* solicits the views of all interested Canadians on a range of trade policy issues and provides access to a wide range of unclassified documents, briefings, and discussion papers.[21]

[21] *See* www.dfait-maeci.gc.ca/tna-nac/consult-e.asp.

In settings that require more structure, such as hearings before the SCFAIT, input from individuals with particular expertise may be solicited, including from representatives of various industries and industry associations, universities and research organizations, and interest groups representing environment, labor, and a broad range of other social concerns. At the other end of the spectrum, participants in the broader-based consultations, for example, those making direct submissions to the trade ministry, are more likely to be self-selecting.

Ironically, as consultations have expanded, they have also became less effective. To re-capture their earlier effectiveness, the government may need to reconsider both the intent and process of consultations. As Denis Stairs has indicated, there are two kinds of consultations: political and bureaucratic.[22] The priority for ministers and parliamentarians is to determine whether Canada *should* negotiate and to what purpose. These are political questions on which only politicians can be fully engaged. Both before and after the government has determined its answer to these questions, a second level of consultations can come into play, focused on how, when, where, and what to negotiate. These are technical questions well suited to the skills and expertise of officials. Confusing the role of politicians and officials can lead to frustration on the part of both those consulted and those doing the consulting. Complexity requires expertise; democratic accountability requires political oversight. Effective consultations in an era of broad public participation and interest, therefore, require a partnership between politicians and experts, each group with important roles to fulfil.

Global economic exchange of goods, services, information, and capital has fuelled the need for multilateral economic regulation. This phenomenon is challenging the ability of governments to regulate in non-economic areas that were formerly and adequately dealt with at the state level such as environmental integrity, core labor standards, and cultural protection. While trade policy for such traditional trade matters as tariff rates could be informed by purely economic calculations of value, trade issues with significant social content must take into account non-economic values as well. The question that emerges is: who is qualified to represent these non-economic values in a public policy forum? Within the old trade policy paradigm, it was much easier to identify key stakeholders (one need not look much beyond the roster of principal business interests). Within the ambit of new trade issues, a much broader constituency is affected. Issues of environmental safety affect all those who live on the planet but who can claim to act as a legitimate representative of environmental integrity? Criteria such as technical expertise, scientific credibility or the appearance of public support have been offered as starting points but much work remains to be done to situate the legitimacy of non-governmental actors within the broader functions of democracies, even democracies such as Canada which place a premium on consultative policy-making.

IV. Concluding Observations

As in the past, Canada remains a firmly committed multilateralist, enthusiastically participating and advancing its interests through WTO negotiations, dispute settlement procedures, and other venues. At the same time, the dictates of geography and consumer and corporate preferences have clearly established the United States as far and away Canada's main trade and economic partner. In the years to come, these twin foundations

[22] *See* Denis Stairs, *Foreign Policy Consultations in a Globalizing World: The Case of Canada, the WTO, and the Shenanigans in Seattle*, 1 IRPP POLICY MATTERS, No. 8 (December 2000).

of Canadian trade policy will continue to mutually reinforce each other as well as create occasional opportunities for conflict and tension. In the WTO, Canada has found a firm framework within which to anchor its global trade and investment ambitions, including the framework within which to pursue its ever-deepening bilateral relationship with the United States.

This chapter was largely written and completed in 2002 and reflects circumstances at that time. My assessment of the issues, and Canada's approach to them, has not changed, but some of the details require updating. The arrival of a new Prime Minister, Paul Martin, in December 2003 resulted in some reorganization of government departments and the appointment of new ministers and deputy ministers. Among the changes was a division of the former Department of Foreign Affairs and International Trade into separate Departments of Foreign Affairs and International Trade. As is not uncommon in such circumstances, the full implications of this change will take some time to work its way through the bureaucracy, including its impact on the various consultative mechanisms. To date, it remains unclear whether the new minister and deputy minister will maintain the formal consultative structures put in place by their predecessors, although it is clear that they remain committed to the objectives served by these mechanisms. Readers who are interested in the latest iterations are invited to visit the website of the Department of International Trade at www.itcancican.gc.ca/menu-en.asp.

VII. Conclusion 70

I. Introduction

On September 17, 2001, the WTO announced the conclusion of negotiations on "China's terms of membership, paving the way for the text of the agreement to be adopted formally at the WTO Ministerial Conference in Doha, Qatar, in November".[1] Thus the fifteen-year negotiation, originally on China's resumption of GATT status and later on its membership in the WTO, came to an end. Mike Moore, the former Director-General of the WTO, stated: "With China's membership, the WTO will take a major step towards becoming a truly world organization".[2] On September 19, 2001, the then Chinese Premier Zhu Rongji said at the Sixth World Chinese Entrepreneurs Convention in Nanjing, China, that he could not give a detailed account of the challenges that China would face after joining the WTO. He did however say that "the Chinese government is taking measures to reform the electric power, railway, civil aviation and telecommunications sectors which are under monopoly. After assuming its seat in the WTO, China will be more active in implementing the open policy at full scale and at all levels; the sectors that will be opened up include finance, insurance, telecommunications, trade, tourism, etc."[3]

What, then, are the challenges that China must face and what effects will WTO membership have on the country? This chapter will discuss China's participation in the GATT in the early years of the organization, the reform measures, economic and legal, that China took in its bid, first to resume its membership of the GATT and then to join the WTO, as well as the potential challenges and opportunities arising from WTO membership.

II. China's Participation in the GATT and the WTO

China participated in the Havana Charter negotiations designed to establish the International Trade Organization ("ITO"). It also took part, along with twenty-two other countries, in the Geneva Conference that led to the adoption of the General Agreement on Tariffs and Trade ("GATT"). It became a contracting party to the GATT by signing the Protocol of Provisional Application on April 21, 1948.

On March 6, 1950, the Nationalist Government, which had retreated to Taiwan, informed the General Secretary of the United Nations that China was withdrawing from the GATT. The validity of this withdrawal was an issue in China's bid to resume its contracting party status.[4] The issue was directly related to UN Resolution 2758 (XXVI), which was adopted by the General Assembly in 1971 to recognize all rights of China in the UN as belonging to the People's Republic of China and to recognize its representatives as the only legitimate representatives of China to the UN. That Resolution also applied to China's representation in the specialized agencies of the UN. The GATT follows UN decisions in respect of policy and political issues, and thus, after the adoption of General Assembly Resolution 2758 (XXVI), the GATT terminated Taiwan's observer status,

[2] *Id.*

[3] *The Speech of Zhu Rongi at the Sixth World Chinese Entrepreneurs Convention* (full transcript), www.peopledaily.com.cn, September 19, 2001.

[4] The question was whether the Taiwanese government had the right to represent China in 1950, as the People's Republic had effective control over the entire mainland by then. The Chinese government has argued that the withdrawal by the Taiwanese government was null and void because it did not originate from the government that was then in control of China. *See* JOHN H. JACKSON, THE WORLD TRADING SYSTEM: LAW AND POLICY OF INTERNATIONAL ECONOMIC RELATIONS 288 (1991). The legal implications of this issue, however, are beyond the scope of this chapter.

which it had obtained in January 1965. However, for many reasons, the PRC Government chose not to re-enter the GATT in 1971.[5]

In the late 1970s, China shifted from a policy that emphasized political struggles to one which put economic development at the forefront. It introduced a policy of domestic economic reform and opened itself to the outside world. China realized that in order to accomplish the goals dictated by this new policy, it would be necessary to absorb foreign capital and advanced technology, and to participate in multilateral organizations which serve as forums for international co-operation. China's interest in resuming its participation in the GATT was therefore inevitable. In 1980, China's representative on the Executive Committee of the Interim Commission for the ITO took part in the election of the Director-General of the GATT. The following year, China became first an observer and then a participant in the negotiations on renewal of the Multi-Fibre Agreement ("MFA").[6] On January 18, 1984, it became a signatory to the MFA.[7]

With its opening to the outside world and the implementation of domestic reforms, China obtained observer status in the GATT in 1984,[8] and then made an official application for the resumption of GATT contracting party status on July 10, 1986. A GATT Working Group subsequently met many times to discuss the way in which China could once again be treated as an original contracting party of the GATT. In the first seven years the efforts in this regard were focussed on examining China's foreign trade regime. The representatives of the GATT and China concentrated their efforts on the Protocol of Accession and the reduction of tariffs.[9] After the Uruguay Round negotiations began in 1986, the negotiations on China's resumption of GATT contracting party status continued in parallel with the multilateral discussions. China participated in the Uruguay Round talks and stated that once its GATT contracting party status was confirmed, it would accept the obligations formulated during this Round, including the General Agreement on Trade in Services ("GATS") and the Agreement on Agriculture.[10] On April 16, 1994, China signed, as an observer, the Final Act Embodying the Results of the Uruguay Round of Multilateral Trade Negotiations ("Final Act") and the Marrakesh Agreement

[5] First, China was in the middle of the notorious "Great Cultural Revolution" which had diverted the government's priorities away from economic development. At the international level, China treated multilateral organizations such as the UN as a forum for the class struggle, an extension of its domestic policy. The obvious economic characteristics of the GATT dissuaded the Chinese government from participating in the work of the organization. Second, China was quite isolated from the rest of the world. It recognized neither the importance of international economic co-operation nor the economic interdependence of nations with divergent economic and political systems. Third, the Chinese government adopted a strict planned economic system, under which foreign trade was totally controlled by the government. Such a system was contrary to the principles of the GATT. Fourth, China's lack of knowledge about the operation of the GATT added to its reluctance to partake in its activities.

[6] As a developing country, China expected to be entitled to treatment equivalent to that accorded to other participating developing countries with a similar level of economic development, as stipulated in Article 6 and other provisions of the MFA.

[7] Yaotian Wang and Hanmin Zhou, A General Introduction to the WTO 138 (1995).

[8] The representative of the Chinese delegation stated that the observer status was a temporary arrangement, without prejudice to the Chinese government's position with regard to its legal status in the GATT.

[9] It was reported that New Zealand, Japan, Canada, Australia, Sweden, Uruguay, Finland, Czechoslovakia and Turkey had either started or were prepared to negotiate tariff reductions with China. *See* Yongjiang Gu, *A Review and Preview of Negotiations on China's Return to GATT,* in Challenges and Opportunities: China's Return to GATT and its Impact on the Hong Kong Economy: Conference Speeches Organized by Kwangtung Provincial Bank, Hong Kong (1993) ("Challenges and Opportunities").

Establishing the World Trade Organization ("WTO Agreement").[11] Despite these efforts, however, China failed to become an original Member of the WTO, and it was a further six years before it was able to join the organization. This of course does not mean that the GATT and the WTO had no impact on China prior to its joining the WTO. To the contrary, as we now discuss, tremendous changes took place in the country during its efforts first to resume GATT contracting party status and later to join the WTO.

III. Chinese Economic and Legal Reforms During its Bid for Membership

When China formally submitted its application to rejoin the GATT in 1986, China had what was essentially a planned economy. China's trade policy at that time was based on high tariff and non-tariff barrier protection. China's main trading partners at the time were socialist counties such as the Soviet Union, Yugoslavia and Romania. In addition to border protection, import and export rights were largely monopolized by State-Owned Enterprises ("SOEs"), which meant that only a very limited number of companies could engage in import and export business.

The most important task for the Chinese negotiators was to explain the nature of China's economic and trade systems to the GATT. However, as a Chinese negotiator has stated, for six years after China submitted its application for GATT membership, the Chinese government could not explain to the GATT contracting parties how the Chinese economic system was going to develop, nor could it say whether or not the country was going to adopt a market economy. The official position then was that the Chinese economic system was a combination of market and planned economy.[12] That situation continued until early 1992 when China declared its determination to establish a "socialist market economy".[13] As a result, the GATT contracting parties decided that China would be able to fulfil the fundamental obligations of the GATT.

A. Particular Problem Areas

As the Uruguay Round negotiations progressed, it became clear that China would face major difficulties in a number of areas. For example, the extension of the multilateral trading rules to trade in services would impose a great strain on the country. In the 1980s there were no laws governing banking, insurance and securities. Yet China was aware that once it became a member of the new organization, it would have to open its service sectors to foreign competition. It would also have to adopt measures relating to intellectual property protection and foreign investment. At that time, foreign service providers were not encouraged, and those that were operating in China were not treated

[11] *Statement of Mr. Long Yongtu, Assistant Minister of MOFTEC, at the First Meeting of the Working Party on China's Accession to the WTO*, www.china-un.ch/eng/13760.html, March 22, 1996.

[12] Yongtu Long, *Negotiations on Resumption of GATT Contracting Party Status and the Reforms of the Chinese Economic System and Opening Up*, in CHALLENGES AND OPPORTUNITIES *, supra* note 9, at 18.

[13] In early 1992, Deng Xiao Ping visited Southern China to promote further economic reforms and to advocate the establishment of a market economy in China. Soon after, the Chinese Communist Party Central Committee and the National People's Congress formally endorsed the move to build a socialist market economy in China. A socialist market economy is defined as a market economy with public ownership as its main force. This means that except for the fact that State ownership of economic institutions will be maintained, other aspects of the economy are the same as those of other market economies. China's recent securitization of many State-owned companies, however, demonstrates the Chinese government's realization that in order to create an environment for equal competition, it is important to adopt a more flexible attitude in respect of ownership of enterprises.

on the same footing as Chinese service providers. Foreign banks at that time were permitted to establish representative offices throughout China, but foreign bank branches and Chinese/foreign joint banks could only be set up in Special Economic Zones and in Technological Development Zones.[14] Foreign banks were not allowed to conduct Renminbi ("RMB") business,[15] and their operations were restricted to the areas where they were registered.

The securities and insurance industry faced a similar situation. Although the Chinese government allowed the issuance of "B" shares and "H" shares,[16] the access of foreign investors to the Chinese securities market was still limited. The insurance market was even more restricted.

China would also have to consider the implications of the Uruguay Round Agreement on agriculture. Imports of agricultural products were strictly controlled. With the conclusion of the Agreement, China, as an importer of agricultural goods, might face potential dangers, for when a country's food consumption depends (wholly or partly) on foreign supply, the security of the country can be adversely affected. At the same time, the liberalization of agricultural trade would lower the price of farm products and consequently benefit consumers.

While Chinese policy has always been to encourage foreign investment by giving foreign investors preferential treatment in terms of taxation, import and export opportunities, and independent management, Chinese law required foreign investors to give priority to local parts and products in procurement, and linked preferential treatment with export performance. Neither of these policies were consistent with the Uruguay Round Agreement on Trade-Related Investment Measures ("TRIMS"). In addition, only Chinese nationals could serve as chairmen of the board of Chinese-foreign equity joint ventures.

B. Steps Towards Reform

Deng Xiaoping's trip to Southern China in 1992 motivated China to open its door wider. He pointed out that socialist ideology was not necessarily incompatible with a market economy, thereby signaling China's change to market principles.[17] Following this momentous development, China took numerous economic and legal measures designed to comply with the requirements of GATT membership.

1. Reduction of Import Barriers

China substantially reduced its tariffs in 1992 as payment of its "ticket of admission".[18] It also abolished the system of export subsidies and the adjustment tax on imports, and

[14] As of March 1993, there were one hundred and ninety-two representative offices of foreign banks and eighty-nine business establishments in China, of which seventy were foreign bank branches, five were wholly foreign-owned banks, ten were Chinese/foreign joint banks, three were Chinese/foreign joint financial companies and one was a foreign-owned company. *See* Changyao Wang, *The Effect of China's Resumption of GATT Contracting Party Status on the Financial Industry in Hong Kong*, in CHALLENGES AND OPPORTUNITIES, *supra* note 9, at 74.

[15] China operated a dual foreign exchange system prior to 1994. There was an official exchange rate which was applicable to transactions sanctioned by the government and a market rate applicable to transactions conducted by foreign businesses.

[16] "B" shares are shares designated for foreign investors, denominated in RMB, payable in foreign currency, and listed in China. "H" shares are shares floated and listed on the Hong Kong Stock Exchange.

[17] *See* note 13 *supra. See also generally* RICHARD BAUM, BURYING MAO: CHINESE POLITICS IN THE AGE OF DENG XIAOPING (1996). (1994).

[18] Yongjiang Gu, *supra* note 9, at 6.

reduced the categories of license and quota requirements. Additionally, in 1993, China ceased to issue directive plans for imports and exports, and tariffs were reduced by an average of 7.3 percent.[19]

2. Equal Treatment of Foreign and Domestically-Owned Enterprises

A salient feature of the Chinese economic system between the late 1970s and the early 1990s was the differential treatment between nationals and foreigners. During this period, there were generally two sets of laws and regulations: one applicable to enterprises with foreign ownership, the other to domestic concerns. Examples were the 1979 China-Foreign Joint Venture Law, the 1988 China-Foreign Contractual Joint Venture Law, the 1986 Wholly Foreign-owned Enterprise Law, the 1985 Foreign Economic Contract Law, and the laws, regulations and rules relating to taxation and commercial dispute resolution. As in the case of other developing countries, the purpose of this differential treatment was to give preferential treatment to foreign investors.[20] The result was to put local enterprises and individuals in a disadvantageous position, lessening the initiative of the enterprises and individuals. It also provided an excuse for SOEs to continue incurring losses.

For example, before 1990, SOEs were required to pay an income tax that was higher than that applicable to foreign companies and enterprises with foreign investment. They were also required to give part of their profits to the government. In fact, even domestic enterprises were taxed at different rates according to the nature of their ownership – State-owned, collectively-owned or privately-owned. Chinese-foreign equity joint ventures, Chinese-foreign contractual joint ventures, wholly foreign-owned enterprises and foreign companies doing business within but established outside China, were all subject to different income tax laws.

Because of the difficulties in managing such a complicated tax system and in pursuance of its bid to resume GATT contracting party status, the Chinese government decided to unify the tax system. In 1991, the Income Tax Law on Enterprises with Foreign Investment and Foreign Enterprises was adopted to replace the Income Tax Law on Chinese-Foreign Equity Joint Ventures and the Income Tax Law on Wholly Foreign-Owned Enterprises. Thereafter, Chinese-foreign equity joint ventures, Chinese-foreign contractual ventures and wholly foreign-owned enterprises were taxed at the same rate under the same law.[21] At the end of 1993, similar measures were taken to unify the tax laws relating to domestic companies. The tax rate that was applicable to state-owned companies, collectively owned enterprises and privately owned enterprises, as well as other entities, were brought into line with that applicable to enterprises with foreign investment.

The Chinese government also reformed its tax turnover system, an equally important initiative,[22] by abolishing the old Regulations on Industrial and Commercial Tax which were applicable exclusively to foreign enterprises and enterprises with foreign investment. At the same time it introduced a value-added tax, a consumption tax and a business tax. These new regulations placed domestic enterprises, foreign enterprises

[19] *See* YANG SHENGMING (ed.) CHINA'S TARIFF REGIME REFORM, (China Social Science Publishing House 1997).

[20] Generally speaking, in the 1980s and prior to China's entry into the WTO, China, like other developing countries, was very reluctant to open its banking and securities sectors to foreign investors. Thus, preferential treatment of foreign investors was confined to sectors which were open to foreigners.

[21] Foreign enterprises, which are defined as enterprises established outside China and generating income from China, are taxed at a different rate depending on the nature of the income.

[22] The Provisional Regulations of the People's Republic of China on Value-Added Tax, the Provisional Regulations of the People's Republic of China on Consumption Tax and the Provisional Regulations of the People's Republic of China on Business Tax all came into effect on January 1, 1994.

and enterprises with foreign investment on the same footing. The unification of the tax system was an important step towards establishing a market economy and an effort to comply with the non-discrimination principles underlying the GATT/WTO.

The 1993 Company Law, the 1994 Arbitration Law, the 1995 Commercial Banking Law, and the 1999 Contract Law also recognize no distinction between nationals and foreigners. Abolition of the differential legal and regulatory treatment between local Chinese and foreigners has encouraged competitiveness among enterprises and is conducive to the establishment of a market economy. It was an important step towards China becoming a Member of the WTO.

3. Increased Market Access

Because all foreign trade companies had been State-owned, the Chinese government essentially regulated foreign trade through administrative orders rather than by issuing laws. This made it difficult for foreign trading partners to become aware of changes in China's trade policies and laws. In order to meet the GATT/WTO transparency requirements, the Chinese government started promulgating legislation in the early 1990s. It amended the Patent Law[23] and the Trademark Law,[24] and enacted the Copyright Law,[25] the Regulations on the Origin of Imported Goods, and the Regulations for the Protection of Computer Software. In March 1993, the State Council decided that one foreign trade company could operate in each of the coastal districts and counties, border counties and cities, and High Technology Development Zones. Specialized foreign trade companies and industrial companies were permitted to establish subsidiary companies. Foreign investors were allowed to set up offices and branches in areas which had formerly been the exclusive domain of domestic investors. The effect of these changes was to give foreign investors and traders easier access to the Chinese market.

4. Price Reforms

China also took measures to reform its price system during the 1980s and 1990s. As a result, only a small proportion of goods which the Chinese government considered crucial to the life of the people or the development of the national economy were subject to government-set pricing. It was reported that by March 1993, market-determined prices accounted for more than eighty percent of the categories of goods in China.[26]

5. Other New Laws

In order to fill the gaps in its developing legal system, China adopted the Commercial Banking Law, the Central Bank Law, and the Foreign Trade Law and Securities Law. It consolidated its former contract laws into a new Contract Law. The Chinese-Foreign Equity Joint Venture Law, the Foreign Capital Enterprises Law, the Chinese-Foreign Contractual Joint Venture Law, the Patent Law, the Trademark Law and the Copyright Law

[23] China's Patent Law underwent substantial revision in 1992. The amendments enlarged the scope of patent protection to cover pharmaceuticals, chemicals, food, beverages and condiments, and extended the protection terms. They also provide protection to imported patented products. These amendments became effective on January 1, 1993. The Chinese Patent Law is in line with international standards.

[24] The amendments of the Trademark Law took effect on July 1, 1993. These amendments have elevated the Chinese standards to the international level by providing for the protection of service marks and well-known marks.

[25] The Copyright Law of China was adopted on September 7, 1990 and took effect on June 1, 1991. A year later, China became a party to the Berne Convention and the Universal Copyright Convention.

[26] *See* Xinkui Wang, *Preparation in Respect of the Chinese Economic System for Returning to GATT, in* CHALLENGES AND OPPORTUNITIES, *supra* note 9.

were amended. Major improvements to the former joint ventures law were the removal of the provisions on "priority of Chinese sources" in purchasing production equipment and raw material, and the "foreign exchange balance" requirement for foreign-invested enterprises. The salient features of the amendments to the intellectual property law of China were the broadening of the scope of protection and the remedies available.

C. Changes in the Chinese Legal System

The Chinese legal system changed and in fact improved greatly as a result of China's efforts to resume GATT contracting party status and later to join the WTO. This was not only because hundreds of laws were introduced, but also because of the quality of the laws as well as their policy and spirit. However, the early efforts to reform the legal system were not entirely successful because of a lack of overall planning and because the laws themselves were skeletal and left too much discretion to administrative officials.

1. The Initial Attempts at Reform

When China began to implement its domestic economic reform policy in the late 1970s and to open its economy to the outside world,[27] the biggest obstacle was the absence of a comprehensive legal system. An effective set of laws was crucial for reforming the economic system and attracting foreign capital and advanced technology. Nevertheless, ideological and technical factors made it impossible to draft detailed laws immediately. The result was that short laws containing skeletal provisions were drafted to meet the changing needs. These laws were difficult to implement without the help of detailed rules and regulations promulgated by the administrative organs. Thus, from the 1970s to the early 1990s, most of China's laws were composed of laws passed by the National People's Congress and its Standing Committee, backed up by administrative regulations passed by the State Council and ministries and commissions. This inevitably had the effect of expanding administrative discretion. The much-criticized corruption in the country is directly related to this practice.

Another feature of the laws passed during this period was the over-emphasis on Chinese characteristics[28] and the lack of overall planning. Many of the laws and regulations of this period were passed hastily to meet immediate needs without systematic organization or advanced planning.[29] For instance, in response to outside criticism of China's investment environment, the State Council passed regulations in 1986 designed to encourage foreign investment, and the ministries and commissions under the State Council enacted detailed rules to implement the State Council regulations. The emphasis on Chinese characteristics in legislation was to some extent affected by those scholars who favored a socialist legal system for China, as well as by the national debate on the differences between socialism and the road China should follow.[30]

[27] E. Elgar, *Economic Reform in China, 1978–1994*, *in* Asian Economies in Transition: Reforming Centrally Planned Economies 12–28 (Richard Pomfret ed. 1996).

[28] In 1992, China declared that it would practise market economy with Chinese characteristics. In essence, this means that unlike in the west, the State will continue to play an important role in the economy.

[29] For a discussion of the characteristics of the Chinese law in that period, see Guiguo Wang, *The Future Trend of Economic Law of the Mainland of China*, paper delivered at the Conference on Opportunities and Challenges under the New Economic Environment in the Mainland of China held on May 5, 1999, in Taibei City, Taiwan.

[30] For a discussion of this topic, see Carlos Wing-hung Lo, China's Legal Awakening: Legal Theory and Criminal Justice in Deng's Era (1995).

2. The Post-1992 Reforms

The resolution adopted by the Chinese Party Central Committee in 1992 to establish a market economy with Chinese characteristics provided a political guarantee for legal reform. Thereafter, the laws of China underwent tremendous changes. The main trend has been to adopt large amounts of foreign legislation, as well as foreign legal concepts and legal values. These laws bore a strong common law influence, perhaps as a result of the large influx of Chinese scholars into countries and regions like the United States, Canada, Australasia and Hong Kong. This does not mean, however, that China abandoned its Chinese legal tradition entirely. To the contrary, another feature of the Chinese legal system has been to study and copy the laws of the continental or civil law countries and regions, including Taiwan. The enactment of the Company Law in 1993, the Securities Law at the end of 1998, and the Contract Law in March 1999, illustrates these two influences. Most of the terms of the Company Law resemble terms used in Common Law jurisdictions like the United States and Hong Kong. However, the provisions for supervisors and a supervisory board was drawn from civil law countries like Germany. The Securities Law was directly influenced by Hong Kong Law but included protective measures to close the legal loopholes and ineffectiveness revealed by the Asian financial crisis. The Contract Law was primarily drafted by scholars and experts who are familiar with the civil law systems, with the result that the first draft had a strong civil law flavor. After several drafts, however, it embodied more common law characteristics. Nevertheless, to a certain extent, the Contract Law has had the effect of revitalizing the Chinese legal tradition. The provisions on offer and acceptance, and on escrow are the same as their counterparts in Taiwan.

Another trend of Chinese legislation in recent years is that the laws are more detailed, specific and, to some extent, forward-looking. The above-mentioned Company Law, Securities Law, Commercial Banking Law, and Contract Law are quite detailed, and reflect the approach of the mainstream international community, especially the developed countries. This is helpful in promoting economic transactions and exchanges between China and other countries. Detailed legislation directly restricts the exercise of administrative discretion and indirectly helps to combat corruption.

It is clear that as a result of China's efforts to become part of the GATT/WTO, the Chinese economic and legal systems have undergone tremendous changes. In the past, it was often said that there was no law in China. Now it is said that there are too many laws in China. One may wonder whether the economic and legal reforms would have been the same without China's efforts to resume its contracting party status in the GATT and to join the WTO. In our judgment the answer is "no".

IV. Economic Challenges and Opportunities

Gaining entry into the WTO has been a major milestone for China towards fulfilling the policy of domestic economic reforms and opening its economy to the outside world that was initiated more than twenty years ago by Deng Xiaoping. However, despite the warm welcome given to this development by the majority of scholars and researchers in China, there was an intensive debate on the issue. Some doubted whether China's transitional economy could withstand the impact of WTO membership.

China's admission to the WTO presents both opportunities and challenges. In our view, the pros outweigh the cons, and some of the cons may become pros. This conclusion is based on the strategies that the Chinese government might adopt and the possible responses from business circles, while taking into account the experience of other countries and the general world trend of economic globalization.

A. Japan's Example

When Japan tried to join the GATT, it was opposed by fifteen contracting parties, including the United States, Britain, Australia, France, Holland, Belgium, Austria, India and New Zealand. Japan therefore joined the GATT on the basis that these contracting parties would apply the "non-application" clause of GATT, Article XXXV.[31] However, these countries eventually dropped their invocation of Article XXXV, and Japan achieved its economic take-off between the mid-1950s and the early 1970s. Analysis of Japan's economic policy during that period shows that after joining the GATT, Japan expanded its exports to the GATT contracting parties and resolved many trade disputes with its trade partners through the GATT system. At about the time of its accession to the GATT, Japan adopted a series of new trade and industrial policies such as enhancing the management of enterprises, promoting large-scale technological renovations, and adjusting industrial structures. These measures not only alleviated the initial impact of trade liberalization after joining the GATT, but also enabled Japanese products to attain international competitiveness. For example, Japan's industrial policy at first emphasized the development of the textile industry. Starting in the 1950s, however, Japan shifted its attention to developing the petrochemical and steel industries, and later the automotive industry. Generally speaking, Japan continually improved its trading conditions after joining the GATT. Korea is another country that owes much of its economic development to its membership of the GATT.

Japan's experience in connection with joining the GATT is important for China, as China also confronted tremendous difficulties in its attempts to resume contracting party status in the GATT and later to join the WTO. The barriers came mainly from the developed countries such as the United States and the EU. Meanwhile, China is at the start of a new stage of economic development and industrial re-structuring.

B. Opportunities Arising from WTO Membership

In our view, there are five major advantages for China in joining the WTO.

1. Achieving Optimal Reallocation of Resources and Promoting a Market Economy

According to Ricardo's theory of comparative advantage, the most important driving force for trade among nations is their relative economic strengths, which reflect their relative economic resources. For instance, the comparative advantages of a country like China include its labor, natural resources, and land, while the comparative advantages of the United States lie in areas such as advanced technology, capital, and farming productivity. Through international trade and cross-border investment, the comparative advantages enjoyed by different countries become exchangeable, and thus the economic resources of different countries can be employed more efficiently on a global basis.[32] Therefore, globalization of trade and investment not only promotes the efficiency of the world economy, but also benefits countries engaged in economic integration.

Having joined the WTO, China will now have to implement its obligations to cut tariffs further. It must also ensure that non-tariff measures are not used to protect domestic industries. China's economy may suffer initially from these tariff concessions, as well as the elimination of non-tariff measures, since Chinese enterprises may be unable to

[31] *See* WANG YAOTIAN & ZHOU HANMIN, SURVEY OF THE GATT 86–87 (1991). *See also,* Chapter 5 of this book.

[32] For a discussion of the Theory of Comparative Advantage, *see* WANG YAOTIAN & ZHANG YURONG: INTERNATIONAL TRADE 414–420, (1993). *See also* Chapter 37 of this book.

compete with foreign companies in the international market or in the domestic Chinese market.[33] However, while China reduces its tariffs and non-tariff barriers, other WTO Members will also be opening up their markets to Chinese goods and services based on the non-discriminatory trade principles exemplified by the requirements of most-favored-nation and national treatment. Therefore, within five to six years, China will be fully engaged in the world market, and there will be far fewer barriers to China's foreign trade and overseas investment.

According to the Economic Research Institute of China, within approximately five years after China's entry into the WTO, WTO membership will help China increase its annual GDP by three to five percentage points, triple the country's foreign trade volume from US$200 billion in 1998 to US$600 billion in 2005, and create millions of new jobs.[34] According to a study by the State Council Development and Research Center, if China had joined the WTO in 2000, the country's GDP would be about US$25 billion (based on 1995 price levels) higher than if China had remained outside the WTO. This would represent 1.5 percent of the country's estimated GDP in 2005.[35] The projected macroeconomic gain was primarily based on the higher economic efficiency that could be assumed to result from the reallocation of resources that should result from China's greater integration into the global economy.

2. Improving the Inflow of Foreign Direct Investment as a Result of the Improved Investment Environment

China's investment environment will be significantly improved after its admission into the world trading system. China is now one of the world's leading "hot spots" for foreign investment. In fact, at present only the United States attracts more direct investment than does China.[36]

In its bilateral agreements and multilateral protocols in connection with its accession to the WTO, China committed itself to open many sectors of its economy that had been closed to foreign investors. These include telecommunications, financial services, and distribution services, as well as a variety of technical and professional services. All of these are areas with enormous potential in China. WTO membership will help to break down restrictive barriers in these areas and open the way for foreign direct investment and technology transfer from the rest of the world.

China is currently launching a legislative campaign with respect to foreign investment. According Mr. Zhang Yuqing, Director General of the Treaties and Law Department of the Ministry of Foreign Trade and Economic Cooperation ("MOFTEC"), China plans to abolish 573 laws and regulations (including 114 administrative regulations and 459 ministerial rules), and to amend 120 laws and regulations (including 5 laws, 25 administrative regulations and 90 ministerial rules). By the end of June 2001, China had amended the Law of the People's Republic of China on Sino-Foreign Equity Joint Ventures, the Law of the People's Republic of China on Sino-Foreign Contractual Joint Ventures and the Law

[33] Before the implementation of its open policy, China had a long history of high tariff rates, especially with regard to industrial products. Over the last two decades the Chinese government reduced its tariffs several times. This has caused concern among Chinese enterprises, especially those in the automobile, chemical and pharmaceutical industries, about their ability to compete with foreign enterprises.

[34] Li Shantong, *et al*, *Impacts to China's Economy After Accession into the WTO* (The State Council Development and Research Center Internal Research Report, 2000).

[35] *Id.*

[36] *FDI Inflows, by Host Country and Economy, 1989–2000*, World Investment Report 2001, United Nations, at 291–295.

of the People's Republic of China on Wholly-Foreign-Owned Enterprises. Meanwhile, MOFTEC has promulgated revised implementation rules relating to these investment laws.[37] These are part of the major efforts China has made in connection with its accession to the WTO. Therefore, accession to the WTO presents a great opportunity for China to establish a more unified, fair and transparent legal framework, and foreign direct investment is bound to expand significantly within such a framework.

3. Eliminating Discriminatory Treatment by Other Countries

Before China became a WTO Member, many countries applied discriminatory trade measures to China. Accession into the WTO will enable China to operate in a fair and stable international trade environment, mainly as a result of the non-discrimination principles required by the WTO rules. For example, under the WTO Agreement on Textiles and Clothing ("ATC"), WTO Members must reduce their import quotas and finally eliminate them before 2005.[38] Up until now China's textile exports have been subject to the most serious quota restrictions in the world, but these will gradually be removed under the terms of China's accession.[39]

Another example is anti-dumping. Many of China's most successful export products have been subject to anti-dumping investigations, and as a result China has lost a large volume of exports. Indeed, many more anti-dumping investigations are carried out against China than against any other country.[40] Before China became a Member of the WTO, a country conducting an anti-dumping investigation against Chinese imports did not need to follow the rules set forth in Article VI of the GATT and in the WTO Anti-dumping Agreement. For example, in 1993, the Mexican government imposed anti-dumping duties on all Chinese products and increased its tariffs by between three hundred and one thousand percent.[41] This was done without any consultation with China. Had China been a GATT contracting party at the time, Mexico would have had to consult with China, and would not have been allowed to discriminate against Chinese goods to such a great extent. Having joined the WTO, anti-dumping investigations against Chinese products will now have to be dealt with in accordance with the WTO rules.

However, the situation is not ideal. Under the terms of China's accession to the WTO, other Members can continue to apply the current non-market economy methodology in anti-dumping cases involving imports from China for fifteen years from the date China became a Member of the WTO,[42] although Chinese respondents have the right to request that specific market-oriented sectors be treated under the normal rules.

Another benefit for China as a result of its accession to the WTO will be the elimination of the annual review by the U.S. Congress of China's Most-Favored-Nation ("MFN")

[37] *See* Zhang Yuqing: *Enhancing the Clearance, Amendment and Formulation of Laws and Regulations to Face the Challenges from the WTO*, China International Business Daily, July 15, 2001, at 1.

[38] *See* Article 2 of the ATC.

[39] *See* Cao Jianming and He Xiaoyong: World Trade Organization 414 (1999), and Protocol on the Accession of the People's Republic of China, Annex 7 (WT/ACC/CHN/49).

[40] Between 1995 and June, 2002, 278 anti-dumping investigations were initiated against China, resulting in 196 measures. During the same period Korea, the second most frequently targeted country, was the target of 145 investigations and 74 measures. *See* WTO website, www.wto.org.

[41] *See* Tak Hay Chau, *The Effect of China's Return to GATT on the Economic Development Strategy of Hong Kong, in* Challenges and Opportunities, *supra*, note 9, at 43.

[42] *See* China's Protocol of Accession to the WTO (WT/L/432), Section 15. Under the non-market economy rules, normal value is not based on domestic prices or costs as in the usual case. Instead, the "factors of production" used in producing the goods are valued on the basis of the cost of similar factors in a market economy at a similar stage of development. *See* Chapter 11 of this book. This practice results in unpredictable and often extremely high dumping margins.

status.[43] Although China and the United States signed a bilateral agreement granting each other MFN status as soon as the two governments recognized one another, the U.S. Congress only granted such status to China one year at a time, and each year it reviewed China's human rights and immigration policies before deciding whether to renew it. This created great uncertainty for exporters and importers of Chinese goods, since if MFN had been denied to China, the high non-MFN tariffs would have halted the majority of Chinese exports to the United States. Perhaps as much as ninety percent of total Sino-U.S. trade would have been affected.[44]

No such annual review will take place in the future, since MFN treatment is a fundamental built-in principle for WTO Members. As a result, China's foreign trade and investment environment will be more stable and predictable.

4. Access to WTO Dispute Settlement System

The WTO dispute settlement mechanism is widely viewed as one of the most successful aspects of the new organization. The Dispute Settlement Body ("DSB") of the WTO, established in accordance with the Understanding on Rules and Procedures Governing the Settlement of Disputes ("DSU"), is the central body responsible for administering the dispute settlement rules and procedures. It has authority to establish panels, adopt panel and Appellate Body reports, maintain surveillance of implementation of rulings and recommendations, and authorize suspension of concessions or other obligations. The WTO dispute settlement system ensures the primacy of WTO rules over domestic laws in all forms of dispute settlement. Even mutually-agreed solutions and arbitration awards must be notified to the DSB and must be consistent with WTO rules.

After China's accession to the WTO, the country is likely to become a frequent user of the dispute resolution mechanism. In May 2002 China took its first step under the system by requesting a panel in connection with its challenge of the recent U.S. steel safeguard measures.[45] Treatment of China's goods and services that is inconsistent with the WTO rules can be dealt with in the DSB, and the multilateral dispute resolution process is fairer, more transparent and more acceptable than bilateral and unilateral solutions. It is true that China may frequently be the target of complaints by other trading partners. However, the fact that WTO accession exposes China to the dangers of being challenged in the DSB will be an incentive for China to abide by internationally-accepted rules and standards, and will encourage China to become more integrated in the world economy.

5. Participation in Multilateral Economic Policymaking and Development of International Trade Rules

As one of the five Permanent Standing Members of the Security Council of the United Nations which holds veto power, China has considerable influence in the organization. Today, the World Trade Organization is seen as the economic United Nations in this more and more integrated world. By joining the WTO, China's position in the international community will be greatly enhanced. Through its accession to the WTO and participation in the development of multilateral economic and trade rules, China will be able to present its trade philosophy to the international trade forum and to play an important role in

[43] MFN has been renamed "Normal Trade Relations" ("NTR") in the United States. In 2000, the United States Congress passed an act to grant Permanent Normal Trade Relations ("PNTR") status to China after it became a WTO Member. See CHINA: WTO ACCESSION AND PERMANENT NORMAL TRADE RELATIONS(PNTR), Fact sheet released by the Bureau of Public Affairs, U.S. Department of State, May 24, 2000, (http://www.state.gov/www/regions/eap/fs-china_pntr-wto_000524.html).

[44] U.S.-China Business Council, The Implication of Denying China MFN Status (1996).

[45] *See* Inside U.S. Trade, May 31, 2002.

protecting the interests of developing countries. If China's return to the United Nations was a political victory for the developing countries, then China's accession to the WTO should be deemed as a victory for them from the economic perspective.

6. Benefits to Domestic Enterprises

The above discussion deals mainly with the advantages for China of its accession to the WTO from a macro perspective. However, China's domestic enterprises may benefit as well. The advantages lie mainly in the following:

- Exports by domestic enterprises will be encouraged and enhanced.
- The reduction of China's tariffs will facilitate the importation of advanced technology and equipment for domestic enterprises.
- Market access commitments made by other WTO Members, especially developed countries, will make it easier for many large-scale enterprises in China to extend their operations overseas, and will enhance the globalization of Chinese enterprises.
- The competitiveness of China's domestic enterprises will be enhanced as a result of the advanced management skills and knowledge they gain from foreign investors, as well as by the country's fairer and more transparent business environment which will result from its WTO membership.

C. Challenges after China's Accession to the WTO

Despite the advantages that China may enjoy after accession to the WTO, China will also face a number of challenges. From the economic perspective, some of China's industries and services that have been protected by high tariffs and special treatment from the government will suffer losses when facing international competition after China's accession into the WTO.

The losers will undoubtedly include many SOEs. China's SOEs have long enjoyed government protection, and many of them have already been bankrupted as a result of the recent economic structural reforms. As a World Bank report in 1999 stated, "much remains to be done to create profit-oriented corporate governance systems that are independent of government influence [in China]".[46]

More SOEs are likely to go bankrupt after China's accession into the WTO due to lack of capital, human resources, management, technology, etc. Also, many of China's SOEs may come under the control of foreign investors through merger and acquisition. A considerable number of workers in the SOEs will have to be laid off in order to make the enterprises more efficient. China's social security system will come under much pressure in this regard, particularly since it is still in the formation stage, and the social security fund is far from adequate.[47]

Some of the key industries and service sectors that may be adversely affected by China's WTO membership are discussed in the following sections.

1. Agriculture

Various trade barriers, including tariffs, quotas, license requirements, and state trading rights, have been applied by the Chinese government to imports of agricultural products. The WTO Agreement on Agriculture obliges WTO Members to convert all non-tariff

[46] World Bank, China: Weathering the Storm and Learning the Lessons 29–30 (1999).

[47] *See* Donald C. Clarke: *China and the World Trade Organization*, in Doing Business in China 1–11 (Freshfields Asia Group 2000).

barriers into tariffs. China's tariffs will then be reduced gradually, on average from 31.5 percent to 14.5 percent by 2005. Today, however, prices of China's domestic wheat, soybeans, corn and edible oil are twenty to fifty percent above the international market prices. The production cost of grain has risen by ten percent annually for the past ten years. Imports of cheaper wheat, soybeans and edible oil are therefore expected to increase substantially as a result of China's membership in the WTO.[48] In regions where these products are grown (mainly North and Northwest China), farmers will not be able to shift from grain production to more profitable products such as fruits or vegetables because of the cold and dry climate. Consequently, China's agriculture will be seriously affected by China's WTO membership, unless farming technology can be improved and agricultural production can be reformed.

2. Automotive

The automotive sector will be one of the industries most profoundly changed by China's accession to the WTO. Tariffs and non-tariff barriers on imported cars will be drastically reduced. Tariff rates, currently one hundred percent for luxury cars and eighty percent for smaller cars, will be reduced to twenty-five percent by the year 2006. The initial tariff cuts will however have little impact on the volume of car imports because the starting levels are so high. Meanwhile, in order to open the market for imported cars, import quotas will be increased considerably at the beginning and then gradually removed until the system is fully abandoned by the year 2005.

In addition, automotive leasing will be allowed. Even though a lot of practical obstacles remain to be solved, experience in other markets shows that automotive leasing tends to increase competition in a country's automobile market. The increased competition will eliminate many of China's domestic automobile manufactures as a result of their lack of technological innovation and inability to improve their production. Finally, control over the production of automobiles will be further loosened, making it easier for foreign enterprises to obtain licenses to produce locally without local content requirements.

As a result of these changes, importers of automobiles will face a more open market and will be able to expand their sales significantly, and local manufacturers will face fierce competition from their foreign counterparts.

3. Pharmaceuticals

China's pharmaceuticals market is the fourth largest in the world. The age structure of the population, with its growing share of senior citizens, will bring about an increased need for medical care. The potential of the pharmaceutical industry in China is therefore enormous.

China's current average tariff rate on pharmaceuticals is 9.6 percent. Under the bilateral agreement between China and the United States, the tariffs on drugs and medical equipment will be greatly reduced.[49] Moreover, China's commitments with respect to the distribution sector will make it easier for foreign pharmaceutical manufacturers to distribute their products in the country and to gain market share in China. Since the quality of pharmaceutical products manufactured in China (with the exception of those made

[48] *See* EUGENE KELLER, NICOLE MONTER, AND HUBERTUS DRINKUTH, CHINA'S ACCESSION INTO THE WTO—STRATEGIC IMPLICATIONS FOR FOREIGN INVESTORS 16 (2000).

[49] By January 1, 2003, China will have reduced its average tariff on pharmaceuticals by about sixty percent from its current average level of 9.6 percent to 4.2 percent. *See The Impact of Permanent Normal Trade Relations (PNTR) with China and China's WTO Membership on Various Sectors of the U.S. Economy*, www.wcit.org., April 26, 2002.

by foreign-owned drug manufacturers) is still relatively low, foreign pharmaceutical investors and exporters in China will have great opportunities even if their products are more expensive than local products. On the domestic side, the large SOEs manufacturing pharmaceuticals and medical equipment are already under competitive pressure from other domestic manufacturers, and many have already suffered from a sharp decrease of profits and low capacity utilization.

4. Petrochemicals

In 1998, China was the fourth largest producer of petrochemical products. However, little of the technology used in this industry originated in China. The petrochemical enterprises (most of which are SOEs) have virtually no comparative advantage compared with multinational petrochemical corporations. Currently, most of China's fine chemical products are copied from developed countries.[50] Moreover, the share of Chinese enterprises in the domestic petrochemical product market has shrunk significantly in recent years. Foreign crude oil has taken 20 percent of the Chinese market, liquid petroleum gas 50 percent, synthetic rubber 44 percent, and synthetic fiber 53 percent.[51]

In its bid to join the WTO, China undertook to remove non-tariff, barriers, such as quantitative restrictions, on petrochemicals and to significantly reduce tariffs. Most importantly, China has undertaken to grant importers trading rights and distribution rights in this industry.[52] Although China's two biggest players in the petrochemical industry, Sinopec[53] and Petrochina,[54] control almost all of the distribution network in China, their market predominance will be challenged by their foreign competitors as a result of the latter's advanced marketing skills, technology and talents.

5. Telecommunications

China's telecom regime is still a long way from compliance with the WTO agreements, as it is strictly regulated and monopolized by SOEs, with the exception of value-added services and telephone equipment manufacturing. The WTO Basic Telecommunications Agreement, reached in Geneva in February 1997 by 69 Members, and which is aimed at the liberalization of telecom services will place increased pressure on China. The WTO telecom agreement sets a new benchmark against which to evaluate new WTO membership applications.

The pressure on China's telecommunications sector specifically derives from the requirement that it open its domestic and international telecom services markets. China's telecom regulator, the Ministry of Information Industry ("MII"), believes that the market liberalization required by China's WTO accession will bring more disadvantages and risks than benefits to the country's fledging telecommunication and information services sector, even though it may provide more incentives for growth in this sector.

MII and China's domestic IT industry predict that WTO membership may bring two important advantages to Chinese telecommunications equipment manufacturers. First, the current tariff of twelve percent on imported components and parts, on which the Chinese firms depend for production, will be lowered to three percent or less, thus resulting in significantly lower input costs and sales prices. Second, WTO accession will

[50] ZHOU HANMIN, CHINA'S ENTRY INTO THE WTO 95 (2000).

[51] *Id.* at 96.

[53] The China Petrochemical (Group) Corporation.

[54] The China National Petroleum Co.

remove some of the foreign market barriers that have prevented Chinese enterprises from marketing their products outside China. However, these predicted advantages may disappear if China implements its commitment to reduce tariffs on telecom and IT equipment to zero by the year 2005, and if China ensures that telecommunications equipment purchases are based on technology-neutral and non-discriminatory terms. China's telecom equipment manufacturers will face a difficult situation, as their price advantages and policy support will be undercut, and network service carriers will select equipment vendors based on economic and technological factors that may favor foreign competitors.[55]

6. Financial Services

Compared with China's telecommunications sector, the financial services market, including banking, securities and insurance, is more open to foreign competition, even though China's financial system is more vulnerable to disruption. However, there are limits to this competition. Currently, foreign banks are not permitted to undertake local currency business with Chinese clients, but a few with special licenses are allowed to engage in local currency business with their foreign clients. Furthermore, China imposes severe geographical restrictions on the establishment of foreign banks. The liberalization of China's securities and insurance market for foreign participation has been also very limited.

China did however make drastic accession commitments with respect to financial services, under which China will eliminate both geographical and customer restrictions imposed on foreign-invested banks and insurance companies within five to six years of its accession, and minority foreign-owned joint ventures will be permitted to engage in fund management, and to underwrite domestic securities issues and trade foreign currency denominated securities. These commitments will bring huge changes to China's financial service sectors, because these sectors were almost entirely State-owned until about eight years ago, and were considered as adjustment tools for China's old planned economy.[56] Also, the industry is weak compared to its competitors from the developed countries because of its limited modernization.

V. Effects of WTO Accession on the Legal System

Unlike the GATT, which covers only trade in goods, other WTO Agreements, such as the General Agreement on Trade in Services ("GATS") and the Agreement on Trade-Related Aspects of Intellectual Property ("TRIPS") have an important impact on investment and other aspects of the domestic economy. They also impose much more substantive obligations on the Members. For example, the TRIPS agreement contains detailed requirements regarding the standards of acquisition, scope and use of intellectual property rights, which must be enforced by every Member. Any Member that does not enforce these requirements risks contravention of Article 1. The TRIPS agreement also contains detailed provisions regarding the system of domestic legal remedies and the principles of law enforcement that must be adopted by WTO Members. For instance, it requires all Members

[55] *See China's WTO Accession and its Telecom Liberalization, International Communications Studies Program* http://www.csiss.org/iccs/chinawtoaccession.html.

[56] Under China's old planned economy, banks were considered more as tools to implement the government's fiscal policy and to support a large number of inefficient SOEs, than as commercial enterprises. "Commercial" banking in China has existed for less than ten years.

to establish a system to provide effective administrative, quasi-judicial and judicial remedies and to adopt the principles of objectivity, fairness and justice in enforcing their laws.

The WTO agreements not only impose international obligations upon Members with respect to matters within the competence of the WTO, but also affect Members' obligations towards other Members and non-members under other treaties. In other words, by accepting the obligations imposed by the WTO, Members may not be able to perform other international obligations. A case in point is the dispute between the European Union and the United States over banana imports to the European Union which involved an apparent conflict between the EU's obligations under the Lomé Convention and those under Article XIII of GATT 1994.[57] In a similar vein, China's obligations under its bilateral or multilateral agreements with WTO or non-WTO Members will be affected by China's WTO membership.

China's national treatment commitments under the GATS present some challenging issues. For example, the Commercial Banking Law of China sets forth capital adequacy and liquidity requirements in accordance with the Basle Committee standards. In practice, banks in China, especially the State-owned banks, have not yet been able to fulfill such obligations. In the long run, China must solve this problem. China's entry into the WTO will lead to an influx of banks, financial institutions, and insurance companies from other Members, especially those from the developed countries. The home countries of these enterprises usually monitor their banks in accordance with the standards set by the Basle Committee. This influx will pose a problem of how to give no less favorable treatment to foreign enterprises. If Chinese financial institutions continue to be permitted to operate without conforming to international standards, foreign enterprises could also disobey the law. An alternative is to amend the law by reducing the standards to reflect reality. But this might send a message to other Members that Chinese monitoring standards are too low, and other Members may then not permit Chinese banks and financial institutions to operate in their jurisdictions. Thus, WTO membership should encourage China to improve enforcement of the standards, and thus help promote Chinese legal reform and law enforcement.

The transparency requirements of the WTO agreements will have a profound effect on China's legal system. For example, the GATS requires Members to publicize all measures, laws, administrative rules, decisions, administrative decrees, international treaties, international agreements, etc., related to the implementation of GATS obligations.[58] In addition, all Members must report to the GATS Council annually all new laws as well as amendments and annulments of existing laws, administrative rules, and administrative decrees. In order to ensure that service providers, especially those from foreign Members, can legally exercise their rights, all Members must establish a mechanism for answering queries of the service providers. In enforcing the related laws, administrative rules, administrative decrees and other related measures, all Members must strictly observe the principles of reasonableness, objectiveness and fairness. They must also establish judicial procedures, arbitration procedures and administrative remedies so as to handle the complaints of service providers.[59]

After joining the WTO, China will, as a result of its commitments, need to take more active steps to transplant laws, legal concepts and legal values from other Members,

[57] *See* Report of the Appellate Body, *European Communities—Regime for the Importation, Sale and Distribution of Bananas*, WT/DS27/AB (1997).

[58] GATS Article III.

[59] GATS Article VI:2(a).

especially the developed Members. For example, in its bilateral agreement with the United States, China agreed that the award of licenses for insurance companies will be solely on the basis of prudential criteria, with no economic needs test or quantitative limits on the number of licenses issued. What is the effect of this provision on Chinese law? In the first place, in the absence of the restraints imposed by the international agreements, China's legislative and judicial organs could interpret the term "prudential criteria" in accordance with their own understanding and Chinese culture. With the stipulations of the international agreements, however, the interpretation of the term in Chinese law must take into account the possible reactions of other countries. If the United States considered that the Chinese government had failed to comply with the prudential criteria in its enforcement of the insurance laws, it could invoke the WTO dispute resolution mechanism. If a WTO panel or the Appellate Body were to rule in favor of the United States, China would have no choice but to obey the ruling, i.e., to amend its laws and rectify the defects of its law enforcement mechanisms.

Revision of Chinese legal system to bring it in line with WTO requirements will be a watershed in the country's legal reform. According to a spokesman for the National People's Congress (NPC), 140 domestic laws were scheduled for review, and another 570 slated for abolition.[60] Such measures are only the beginning. After joining the WTO, deeper legal reform is unavoidable. For instance, under WTO rules, a Member's legislative process must meet the transparency standard. This means that all laws and regulations promulgated by all levels of China's government agencies must be made known to the public before they are applied or enforced. Although this standard will be difficult for China's various levels of government to satisfy, China must change its opaque legislative process to avoid criticism from other WTO Members and the WTO Trade Policy Review Body. Immediately after China joined the WTO, MOFTEC established a department to accept complaints from foreign investors and civil communities with respect to China's implementation of WTO commitments. In addition, experts are more and more involved in the process of legislation by China's National People's Congress, and many national laws are drafted or are being drafted by experts instead of government officials.

VI. Strategies After Joining the "Club"

In summary, China will benefit greatly from joining the WTO. The organization provides a multilateral forum for China to discuss economic issues and resolve trade and investment disputes with other WTO Members. By participating in this economic union, China can solidify its international image as a world power. In addition, China can handle trade issues with Taiwan through the WTO. With closer economic and trade relationships, it will be easier to resolve political problems across the Taiwan Strait. On the other side of the coin, China shares some of the fundamental concerns of other developing countries. Many developing countries are still being harmed by trade protectionism on the part of developing countries. Besides, despite the apparent success of the WTO dispute settlement mechanism as compared to the former system under the GATT, enforcement of its decisions against Members, such as the United States and the European Union, remains a major concern of China.

As discussed above, China has undertaken and will continue to undertake drastic reforms of its economic and political systems in order to minimize the harm and to maximize the benefits from its accession into the WTO. Some scholars in China believe

[60] *Legal Reform Must be Led from the Centre*, BUSINESS CHINA, July 30, 2001, at 6.

that accession into the WTO will lead to a new round of reform and opening-up in China. Unlike previous reforms, however, the driving force for these changes will be imposed by international agreements. As a consequence, opening-up will be the dominant factor in China's economic and political reform.[61] We believe that China should carry out the following strategies to make the most of its entry into the WTO.

A. Economic Restructuring

China has traditionally been a labor-intensive exporting country. The country's comparative advantages lie in its huge population and low labor costs. Therefore, in the past two decades, China enjoyed a considerable export surplus with respect to textile and light industrial products. On the other hand, China has been importing technology and seeking foreign direct investment because it has been lacking in its own technology and capital resources. In order to achieve long-term and sustainable development, China must upgrade its economic structure to meet the needs of the "knowledge-based economy" and economic globalization. Japan and Korea are good models for China in this respect. As a result of twenty to thirty years of an export-led economic policy, the economies of Japan and Korea developed rapidly. While China's economic and social characteristics differ from those of Japan and Korea, their strategy of importing knowledge and exporting goods is worth following by China now that it has acceded to the WTO.

B. China Should Take Full Advantage of Special Treatment for Developing Countries

While pursuing its application to join the WTO, China insisted on being treated as a developing country.[62] Developing country status is critical to China.[63] As a developing Member of the WTO, China should be accorded preferential treatment in many respects, such as a grace period for granting market access, technical and financial assistance, and preferential tariff treatment under the Generalized System of Preferences. However, since China's membership status in the WTO is not entirely that of a developing country, much of the preferential treatment available under the WTO rules can only be achieved through negotiation with other WTO Members.

C. Encourage Globalization of Chinese Enterprises

China's "Open-Door" policy has been in place for more than twenty years. Despite the fact that China has achieved great successes in utilizing foreign direct investment and advanced technology, the globalization of Chinese enterprises still has a long way to go. As a result, although China is one of the world's leading exporting countries, very few people outside China recognize Chinese brand names. China's accession into the WTO is a great opportunity for Chinese enterprises to take full advantage of the global market through the MFN treatment and National Treatment offered by other WTO Members. Therefore, China must move to the next stage of international commerce and be more aggressive in globalizing its production and distribution. In this regard, the government will have to give greater freedom to Chinese enterprises to operate in other countries.

D. Additional Research and Training on the WTO

Chinese government officials and entrepreneurs must be familiar with the WTO rules, which are complicated and comprehensive, in order to be able to take full advantage of the system and to avoid making mistakes. China must make special efforts to train personnel in this area. A country's ability to train personnel effectively with respect to the WTO appears to be directly related to its WTO research capabilities. China must therefore invest in WTO research so that it can play an active role in the organization and ensure domestic compliance with WTO norms.

E. Position in Next MTN Round

In the immediate future, China must consider what position it should take in future Multilateral Trade Negotiations ("MTN"). At the Fourth WTO Ministerial Conference held in Doha, Qatar from November 9 to 12, 2001, one of the most important tasks was the launching of a new round of negotiations, which for various reasons failed to occur at the Seattle Ministerial. China's admission into the WTO at the Doha Ministerial Conference means that China will be an important participant in the next round of negotiations.

Mr. Long Yongtu, Head of the Chinese Delegation responsible for accession to the WTO, pointed out at a meeting of the China Working Party that China was determined to play a positive and constructive role in the WTO after its accession.[64] While analyzing China's possible interests and positions in the next round of MTN, one must always bear in mind that China has joined the WTO as a developing country Member, at least in part. Therefore, China will be a key member representing the interests of the developing countries in the organization. As Mr. Long stated, China supports the launching of a new round of multilateral trade negotiations in order to establish an open and fair world trading system and an equitable world economic order. China will maintain that position in the new round of negotiations.

China's possible positions on some specific issues in the new round of trade talks are discussed in the following below.

1. Electronic Commerce

Electronic commerce is becoming a new method of business and shows every sign of continuing to expand at a rapid rate. Although electronic commerce may substitute for some traditional international trade activities, it is also a very important tool for the development of traditional trade in general. The emergence of the Internet has facilitated international trade on a large scale, and provides an opportunity for developing countries to develop their international business as well as their trade facilities. E-commerce in China is still at the development stage; most of the country's international trade is still conducted through traditional methods. However, China is actively developing and promoting e-commerce despite the fact that the infrastructure of the country's information technology is still weak. China is therefore likely to take an active part in the forum on international e-commerce organized by the WTO since it will need enhanced international cooperation in order to advance in this field. While promoting this new

[64] *Meeting of the Working Party on the Accession of China—Statement by H.E. Vice Minister Long Yongtu, Head of the Chinese Delegation,* at the sixteenth session of the Working Party on China. WTO 2001 News (July 4, 2001), www.wto.org.

mode of international trade, China also favors government supervision of e-commerce. Although it appears that there is no effective way to control all international trade activities conducted on-line, China is likely to take the view that development of e-commerce and international trade through the Internet should not become a loophole for illegal activities such as tax evasion.

2. Trade and Competition

Chinese competition law is still quite undeveloped. The only nation-wide legislation in this area is the *Anti-Unfair Competition Law*, promulgated in 1993. China does not have an antitrust law nor does it have a workable system, administrative or judicial, for preventing restraints on competition like that which exists in other countries, especially the developed countries. A priority for China after its accession into the WTO will be to promulgate domestic competition laws and regulations. The aim of China's ongoing economic reform is to create a market-oriented socialist economy. A fair, transparent and unified national market is important for China's economic development. Thus, China will be active in respect of trade and competition issues in the new round. Hundreds of multinationals have established a presence in the Chinese market; with their capital strength, many of them will tend to create monopolies in China. This is another reason why China will, together with other developing countries, call for international cooperation within the framework of the WTO to regulate monopolies and other restrictive business practices in the new round of trade talks.

3. Trade and the Environment

In recent years, more and more countries have recognized the importance of the connection between international trade and the environment. As a developing country still in the stage of industrialization, China has encountered significant environmental problems which are beginning to create a bottleneck to the country's economic growth and social development. While initiating legislation and policies to protect China's fragile environment, the Chinese government is also seeking international cooperation on environmental protection. Hence, the new round will provide a useful forum for China to participate in international environmental cooperation. Meanwhile, China is likely to oppose the trade policies of some developed countries that seek to use environmental protection as a subterfuge to bar imports from developing countries. China is likely to maintain that: (1) negotiations on trade and the environment should not include all environmental issues, since the WTO should not be an international environmental forum; (2) there should be coordination between environmental protection and economic growth, and the developing countries should not be forced to accept unreasonably high environmental standards; and (3) there should be some preferential treatment for developing countries on the issue of trade and the environment, and the developed countries should provide technical and capital assistance to the developing countries in this area.[65]

4. Trade and Labor Standards

The linking of trade with labor standards is a sensitive issue for China as well as for many other developing countries. No substantive agreement was reached on this issue at the Singapore or Seattle Ministerial Conferences. Whether it is appropriate to include trade and labor standards as a topic in the MTN has been fiercely debated. Many developing

[65] *See* Cui Shufeng: *The Analysis of Developing Countries' Negotiation Tactics on the Subject of Trade and Environment in the WTO New Round* (World Trade Organization Focus, April 2001), at 24.

countries hold that the issue should not be discussed in the WTO and should not be brought under the legal framework of the organization. However, the United States and some other developed countries insist on including the issue in the multilateral negotiations. They hold that the improvement of labor standards should be included in the goals of the WTO, as it will improve global welfare as well as the employment conditions of WTO Members. Some developed countries also assert that trade sanctions should be used as a means to press for the improvement of core labor standards.[66]

China is a labor-intensive product exporting country, and a large proportion of China's exports are based on China's low labor costs. Although China has promulgated numerous laws and regulations to protect the rights and interests of workers, China's actual labor practices are not satisfactory and are not in compliance with its laws and legislation. The problem is particularly serious in rural areas among China's privately-owned enterprises as well as its enterprises with foreign investors, despite the fact that government authorities at various levels are making great efforts to supervise such enterprises. Nevertheless, China made it clear in the United Nations that it was against the practice of using human rights as a tool to interfere with other countries' internal affairs. It is therefore quite certain that China will also be firmly against bringing trade and labor standards into the MTN. China, together with other developing countries, is likely to take an active role in opposing the developed countries' proposals to discuss and draft agreements on this issue within the framework of the WTO.

VII. Conclusion

In signing the Protocol of Accession to the WTO, China made many concessions so as to integrate the Chinese economy into that of the world. First and foremost, the protocol reiterated the three main underlying principles of the WTO, namely, most-favoured-nation treatment, national treatment and transparency. For instance, China agreed to accord MFN and national treatment to foreign merchants and investors.[67] It committed itself to publish those laws, administrative regulations, and other measures as well as judicial and administrative decisions that are related to China's obligations under the WTO. It also committed itself to enforce such laws and measures.[68] Needless to say, like other Members, China must notify the WTO of adoption and modification of the above laws, regulations and other measures.[69] Under the Protocol, China is obliged to liberalize gradually its trading environment so that foreigners can enjoy the right to trade in all goods within three years of accession. Moreover, China must eliminate and may not reintroduce any non-tariff measures.

With regard to the service sector, China will open the following markets to foreign investors: telecommunications, insurance, banking and securities.[70] Many of the restrictions that were imposed on foreign businesses will be gradually eliminated. Besides, the role of the state in managing the economy will be minimized. State trading companies traditionally played an important role in China's international commerce. Under the

Protocol, China agreed that state trading will be confined to specified goods.[71] In the areas subject to state trading, China agreed to ensure the transparency of import purchasing procedures and to provide full information on the pricing mechanisms of state trading enterprises for exported goods.[72]

It is important to note that despite China's insistence on being treated as a developing country, in practice it has not been accorded developing member status in all respects. For instance, China agreed, upon accession, to eliminate all subsidies falling within Article 3 of the Agreement on Subsidies and Countervailing Measures, while developing country members enjoyed an exemption for a maximum of five years.[73] China also underook not to maintain any export subsidies on agricultural products upon accession,[74] and to comply with the Agreement on Trade-Related Investment Measures upon accession.[75] It should be noted that developing country members are entitled to special treatment in both Agreements. A detailed analysis will show that almost on no occasion was China given developing country member status under the Protocol.

China has made great economic, legal and political progress during its WTO accession campaign. It is certain that the country will continue to advance in these areas now that it has acceded to the WTO. Although difficulties will arise from WTO membership, short-term dislocation costs can be offset through economic development. We also believe that after joining the organization, China will become fully involved in economic globalization, which will in turn contribute to its establishment of a market economy and the rule of law. WTO membership will also enable China to play a more important role in the world economic community. From the point of view of the WTO, as its Director-General stated, China's membership is also a major step towards fully developing the organization into a truly global trading regime. Prior to China's entry into the WTO, the WTO represented slightly more than two-thirds of the world's population. With China's participation, the WTO represents the interests of nearly ninety percent of the world's population.[76]

With China's entry in to the WTO, the figure is now 87 percent.

* Felipe Jaramillo was Colombia's Ambassador to the GATT between 1974 and 1992. He was Chairman of the GATT Council of Representatives during 1984, and Chairman of the Contracting Parties of the GATT in 1985.

I. Participation of Colombia in the GATT

A. Historical Background

Colombia was one of the countries that participated in the establishment of the Bretton Woods institutions after World War II. It subsequently participated actively in the Conference on Trade and Employment, which led to the adoption of the Havana Charter in 1948. Colombia also took part in the second GATT tariff-negotiating round held in Annecy in 1948, with a view to negotiating membership in the GATT. However, the Colombian government decided not to join the organization at that time, so as to be free to protect its developing industrial sector by means of tariffs and other import controls.

B. Observer Status

The Colombian government took a renewed interest in the GATT in the late 1960s and decided to establish more formal relations with the organization by requesting observer status, which it obtained in 1968. Colombia's interest in the GATT stemmed from its belief in the important relationship between trade and development, which had given rise to the creation of UNCTAD in 1964. From the beginning, Colombia played a very active role in all UNCTAD work. At the same time there was domestic support for a strong exchange regime, as well as reform of Colombia's international trade system aimed at promoting and diversifying Colombian exports, in an effort to escape the country's heavy reliance on coffee exports. GATT Membership was seen as a way to diversify Colombia's exports and to obtain better access to foreign markets.

C. UNCTAD III

When the United States, the European Community and Japan suggested a multilateral round of trade negotiations in 1972, the Colombian government followed the initiative closely. It therefore played a very active role in the Third UNCTAD Conference, held in Santiago in early 1973, regarding the participation of developing countries in the proposed trade negotiations. The Conference unanimously approved Resolution 82 (III) which dealt with the Multilateral Trade Negotiations. Part A of the Resolution summarized the principles proposed by developing countries, the most important of which was that all developing countries, whether or not members of the GATT, would have the right to participate in every phase of the negotiations, thus ensuring that their interests would be taken into account.[1]

D. The Tokyo Round

As a result of the UNCTAD Declaration, all developing countries, even those that were not members of the GATT, were invited to participate in the November 1973 GATT Ministerial Conference in Tokyo that initiated the Tokyo Round of Multilateral Trade Negotiations. The Ministerial Declaration in turn invited non-GATT developing countries

[1] Another resolution adopted by the Conference resulted in the "Enabling Clause" (*The Decision on Differential and More Favourable Treatment, Reciprocity and Fuller Participation of Developing Countries*, BISD, 26th Supp. 203 (1979)), approved at the end of the Tokyo Round. This gave permanent approval to the Generalised System of Preferences, under which developed countries could give preferential tariff treatment to imports from developing countries.

to participate in the Tokyo Round negotiations. The Colombian government took part in the Tokyo Round on this basis.

There were several reasons why Colombia played an active role in the trade negotiations:

- It had considerable experience with regional trade agreements, particularly with the Latin American Free Trade Association ("LAFTA") and the Andean Pact.[2]
- It wished to enhance the political skills of its negotiators, which were based on their active role in negotiating regional trade agreements and in developing trade policy.
- It wished to improve Colombia's bargaining power in bilateral commercial conflicts with other countries, especially those in the developed world.
- It was interested in becoming part of a multilateral agreement that aimed at restricting protectionist trade measures, especially matters related to technical standards, and to maintain the right to continue providing subsidies, as well as to ensure that the United States applied the injury test before applying countervailing duties to imports from Colombia.[3]

As mentioned above, Colombia's main objective in participating in the Tokyo Round was to open new markets for non-traditional Colombian exports—products other than coffee, bananas, petroleum and emeralds—which were mainly tropical products. The third prong of the Ministerial Declaration—that tropical products should be treated as "as a special and priority sector"—was therefore particularly important to Colombia.

Colombia took part in the negotiations just like any other GATT contracting party. The process offered Colombia a unique opportunity, by increasing its exposure to the multilateral trading system (with which few people in the country were familiar), and by helping the government formulate the arguments necessary to recommend eventually joining the Agreement. That is why the government decided in 1974 to begin the formal application process. However, the process had to be slow in order to prevent conflicts with other Andean Pact members, since Peru was the only GATT member in the Pact at the time. Consequently, Colombia decided in 1975 only to request membership on the basis of "Provisional Accession". Under this approach, the country would receive the benefits of the tariff cuts and other advantages that had been previously negotiated by the other contracting parties, as well as the ones that would emerge from the Tokyo Round, without itself having to make any tariff concessions. However, Colombia would not have the right to use the dispute settlement system, nor could it participate in the decision-making process.

The Provisional Accession approach was chosen partly because it was thought prudent to acquire greater knowledge of the GATT system before applying for full membership. Also, domestic interests were demanding the continued use of tariffs as a protectionist measure, as well as a licensing regime to deal with other trade policy issues, such as price instability of imported goods as a result of dumping, especially of manufactured goods such as textiles and clothing and footwear. The licensing regime would protect domestic industries from foreign competition, as well as allocating scarce foreign exchange to pay

[2] The Andean Group, also known as the Andean Pact, was transformed in the late 1990s into the Andean Community. The Andean regional institutions, such as the Andean Court of Justice and the Corporación Andina de Fomento ("CAF"), together with the Andean Community constitute the Andean Integration System. *See* Part VI.A of this Chapter.

[3] *See infra* note 6.

for essential imports. In general, the manufacturing sector regarded the GATT as a form of unilateral commercial liberalization that would dismantle the industrial protection that had resulted from the policy of import substitution, which had played a major role in the country's economic development over the previous decades. In spite of the negative effect of import substitution policies on the healthy growth of the economy, Colombian industry preferred to maintain its small, protected market rather than face international competition.

The results of the Tokyo Round fell far short of expectations, especially the failure to further liberalize trade in tropical products, even though this had been considered as a priority sector, Nevertheless, at the end of the Tokyo Round the Colombian Government decided to seek full membership of the GATT. One of the reasons was that the GATT had broadened its reach with the plurilateral non-tariff barrier codes adopted in the Tokyo Round. The GATT had also advanced its position with regard to the special and differential treatment of developing countries (anticipated with the incorporation of Part IV of the Agreement on Trade and Development in 1965). This included the approval of the Enabling Clause authorizing developed countries to grant favorable tariff treatment to imports from developing countries under the Generalized System of Preferences ("GSP")[4] and ensuring non-reciprocity in tariff negotiations. In the belief that only full GATT membership would allow it to achieve predictable treatment of its exports to the world market, Colombia decided to apply for full membership in late 1979. The process lasted until September 1981, when the ratification instruments were deposited.

GATT membership did not require major changes in the country's trade policy, partly because Colombia's domestic legislation was compatible with the General Agreement. Also, in practice Colombia made tariff concessions only in thirty-five tariff items, three of which were from the agricultural sector, the rest being from the petro-chemical, metal and machinery, and automobile sectors. Colombia was able to made concessions only in those sectors, because they were the three sectors included in the "Industrial Development Programs" within the Andean Pact and hence had an agreed common external tariff. Colombia bound the tariff level of the Common External Tariff. The remaining tariffs were being negotiated within the framework of the Andean "Common External Tariff" or the "Minimum External Tariff", and the Colombian authorities were not able to take any commitment to reduce or to bind them.[5] Colombia negotiated mainly with the United States, the European Community and Switzerland.

E. The Post Tokyo Round Period

Colombia did not sign any of the plurilateral Tokyo Round Codes at the conclusion of the Round. However, in order to be able to benefit from the "injury test" in U.S. countervailing duty investigations, Colombia signed the Code on Subsidies and Countervailing Duties[6] in 1990, and it signed the Antidumping and Bovine Meat Codes in 1991.

[4] When the the GSP program was first introduced after UNCTAD II in 1968, it was necessary to obtain a time-limited waiver from the MFN obligation of GATT Article I. The Enabling Clause made the exemption from Article I permanent.

[5] The Andean Common External Tariff was finally approved in 1994.

[6] At the time the United States joined the GATT its countervailing duty law did not require an injury test. The Protocol of Provisional Application under which the United States and most other countries accepted the GATT allowed countries to maintain existing laws that were inconsistent with GATT provisions, so that the United States was not required to introduce an injury test. However, under the Tokyo Round Code on Subsidies and Countervailing Duties the United States was required to provide an injury test to all other

The GATT Work Program for the 1980s, approved by the Ministers in November 1982, was undoubtedly one of the most important GATT activities developed in its later years. Indeed, the Work Program can be seen as the preparatory phase for the Uruguay Round. Colombia was very active in the 1982 negotiation of the Ministerial Declaration, as a result of its role as Chair of the Informal Group of Developing Countries.

The Informal Group of Developing Countries was the group through which these countries coordinated their positions in all GATT matters.[7] All developing country contracting parties of the GATT, including LDCs, were members of the Informal Group, and at certain times, before their accession to the EEC, countries such as Greece, Spain and Portugal, were also members, as were Turkey and Israel.[8] During the Tokyo Round, both the Informal Group and the Group of 77 were active in the negotiations, in order to permit developing countries that were not GATT contracting parties and therefore not participants in the Informal Group, to be more closely involved in the negotiations. At that time, Yugoslavia chaired the Informal Group and Colombia chaired the Group of 77 for GATT matters.

The Work Program went well, improving on the experiences of the Tokyo Round. Colombia played an active and important role during the development of the Working Program in assuring that access for tropical products was made a priority issue. Another subject that received a great deal of attention was the discriminatory treatment given by developed countries to textile imports from developing countries, mainly through the Multifibre Arrangement.[9] Colombia, acting as President of the Informal Group of Developing Countries from 1979 to 1984, coordinated the action of textile-exporting developing countries, and obtained inclusion of the subject as a priority in the Working Program. The Colombian delegation also succeeded in achieving very close multilateral cooperation in the field, leading to the creation of the International Textiles and Clothing Bureau ("ITCB"), of which Colombia was president for several years.[10] The textiles and clothing sector was, and continues to be, a very important sector for Colombia, since it represents the largest volume of exports of manufactured goods.

Beginning in 1984, Colombia began to comment that the GATT was unbalanced with respect to the scrutiny of the trade policies of the contracting parties. Many developing countries were forced by balance-of-payments crises to impose import measures under GATT Article XVIII, and were therefore subject to very detailed analysis of their trade policies by the GATT. However, there was no mechanism calling for a similar analysis of the trade policies of developed countries, even where they also applied trade restrictions, such as under the MFA or through voluntary export restraints[11] (except of course where they imposed balance-of-payments measures under GATT Article XII). There was a need to agree upon greater transparency to achieve more symmetry.

signatories of the Code. Colombia's delay in signing the Subsidies Code was due to the initial refusal of the authorities to enter into a bilateral agreement with the United States agreeing to eliminate export subsidies. The United States refused to apply the Code to any signatory that had not signed such an agreement with it.

[7] The Group continues to do so in the WTO, but its influence is now less important.

[8] The Informal Group differs from the Group of 77, which does not include the countries named above but does include developing counties that were not GATT contracting parties.

[9] *See* Chapter 9 of this book.

[10] The ICTB became an important voice for the textile-exporti ng developing countries.

[11] So-called "voluntary" export restraints, usually forced on exporting countries by major importing countries such as the United States and the EC, and which violated the spirit if not the letter of the GATT, became a major trade issue in the 1980's. Article 11.1(b) of the WTO Agreement on Safeguards now prohibits them. *See* Chapter 18 of this book.

II. Colombia's Participation in the Uruguay Round

A. Preparatory Steps

Two aspects of the process that led up to the Uruguay Round negotiations are worth discussing: the introduction of the subject of services within the GATT framework, and the genesis of the Punta del Este Ministerial Declaration.

1. Services

This subject was formally introduced by the United States into the GATT agenda at the 1982 Ministerial meeting, after some discussion in the restricted circle of the "Consultative Group of 18".[12] The first reaction from many countries—including many developed ones—was negative, because of the lack of clarity about the subject and its consequences. The strongest opposition came from developing countries, because they believed that the norms included in the General Agreement, aimed at regulating and liberalizing trade in goods, could not be applied automatically to trade in services. Developing countries believed that to achieve a multilateral agreement on trade in services, it would be necessary to convene a specialized Conference, for example in the United Nations.

Trade in services was finally included in the Ministerial Declaration, which also approved the GATT's Working Plan for the 1980s, with three important elements. First, the development of national studies on services; second, the exchange of information through international organizations, such as the GATT; and finally an analysis of the possibility and desirability of multilateral action in the service area, to be decided during the 1984 meeting of the GATT CONTRACTING PARTIES.[13] However, the exchange of information was not effective during 1983, because of the insufficient number of national studies presented and the refusal of the developing countries to participate in meetings to discuss the studies organized by the GATT Secretariat. Colombia's Representative, as Chairman of the Informal Group of Developing Countries, expressed the Group's dissatisfaction with the use of the GATT Secretariat to discuss themes—such as trade in services—that had nothing to do with the General Agreement. In 1984, when the author of this Chapter, then Colombia's representative to the GATT, was elected Chairman of the GATT Council, he took the initiative to normalize the exchange of information, thus reactivating a process that had achieved little to date. Acting on a personal basis, rather than as Chairman of the Council, he was asked to chair and lead an Informal Group on Exchange of Information on Services in order to comply with the Ministerial mandate.

At their 1984 meeting, the CONTRACTING PARTIES considered that there was insufficient information to take a final decision on the appropriate policy regarding multilateral treatment of trade in services, and the decision was postponed for another year. A new round of negotiations was already a matter of discussion in the 1985 meeting of the CONTRACTING PARTIES. It was agreed, not without difficulty, to hold a new Ministerial Meeting in Punta del Este, Uruguay, in September 1986, and to establish a Committee for Trade Negotiations to prepare the Ministerial Declaration. The subject of services was included in the agenda. In addition, the process of exchange of information continued under the Chairmanship of the author, still acting in his personal capacity.

[12] The Consultative Group of 18 was an informal group of eighteen GATT Contracting Parties, with high-level representatives coming usually from capitals. Its composition changed every year, but almost all developed countries were always members of the Group.

[13] The Contracting Parties met once a year, usually in November.

2. Preliminary Negotiations for the Punta del Este Declaration

The Preparatory Committee could not arrive at a consensus regarding the new round because of the opposition of a small group of developing countries. Those countries were opposed to the new round in general, and in particular to the inclusion of the so-called new items, such as services, investment and intellectual property. Nevertheless, many developing countries—Colombia among them—had already accepted the idea of a new round. Since the Preparatory Committee had not reached any agreement on a draft Declaration to present at the Ministerial Meeting in Punta del Este, a group of countries—both developed and developing—informally came together under Swiss and Colombian co-chairmanship, and drafted a document in the summer of 1986 which became the basis of the Punta del Este Declaration, approved in September of that year.

B. The Negotiations

1. Objectives

Colombia's interests in participating in the Uruguay Round were very similar to those that led it to join the GATT, as well as to its interests in the Tokyo Round. The country's goals included the liberalization of trade in agricultural and tropical products, the further restriction of non-tariff measures—particularly subsidies—and the liberalization of tariff barriers on products excluded from the GSP. Colombia was also interested in the elimination of restrictions on exports of textiles and clothing, the elimination of agricultural subsidies and trade barriers to agricultural products, and improved special and differential treatment for developing countries.

Although the "Work Plan for the Eighties" was still in effect, the multilateral trading system remained challenged by protectionist tendencies and the adoption of individual restrictive trade measures by developed countries. The Colombian government was convinced that the system would have to be completely reshaped in order to combat the threats of protectionism and to eliminate unilateral trade restrictions. It believed that active participation in the process could help maintain the stability of the GATT.

It was especially important to have a stable trade environment in which to consolidate Colombian export diversification. In this regard, the GATT was not granting developing countries the security they needed. An example of this was the way described above in which the U.S. Administration applied the Subsidies and Countervailing Duties Code to developing countries, forcing them to sign bilateral commitments to elimination export subsidies in order to be able to benefit from the injury test included in the Code.[14]

The Colombian Government also felt that only through a new negotiating round could the problem of voluntary participation in the Tokyo Round Codes be solved. The voluntary nature of these Codes meant that the GATT no longer provided equal rights and obligations for all its members, but instead had become an agreement offering various different levels of rights and obligations.

The issue of tropical products had yet to be solved, since no progress had been made in the Tokyo Round. It again received priority attention in the Punta del Este Declaration, including the possibility of early application of the results of the negotiations. Tropical products were closely related to the negotiations on agriculture, and Colombia had a very keen interest in achieving concrete results in both sectors. Hence Colombia was especially active in the Cairns Group work on agriculture. Trade on textiles and clothing was another important subject for the Colombian agenda in this new round of negotiations.

[14] *See supra* note 6.

As already noted, textiles and clothing represented the largest proportion of Colombian manufactured exports, and Colombia was seriously affected by the restrictions applied under the Multifibre Arrangement ("MFA"), which was also unresolved in the Work Plan. Colombia viewed dismantling of the MFA as imperative during the new round of negotiations.

Despite the approval of the Enabling Clause in the Tokyo Round, the issue of special and differential treatment of developing countries had remained a marginal subject in the work of the GATT. Colombia, as Chair of the Informal Group of Developing Countries, attempted to improve this situation. As a result, the Group of Developing Countries succeeded in obtaining the inclusion—both in the Objectives as well as in the General Principles of the Punta del Este Declaration—of paragraphs encouraging the participation of developing countries in the negotiations.

The inclusion of a Chapter on Standstill and Rollback was another important item. The Standstill provision stated that each Contracting Party undertook "(i) not to take any trade restrictive or distorting measure inconsistent with the provisions of the General Agreement or the Instruments negotiated within the framework of the GATT or under its auspices"; "(ii) not to take any trade restrictive or distorting measure in the legitimate exercise of its GATT rights, that would go beyond that which is necessary to remedy specific situations, as provided for in the General Agreement and the instruments referred in (i) above"; and "(iii) not to take any trade measures in such a manner as to improve its negotiating positions."[15] The Rollback provision required all GATT-inconsistent trade restrictive or distorting measures to be phased out or brought into conformity.

2. The Result of the Negotiations From Colombia's Perspective

Colombia, like every other GATT Contracting Party, benefited from the creation of the WTO, because it provided the multilateral trade system with a permanent framework and stable, uniform rules, in contrast to the flimsy structure of the GATT with different rules applying to different countries—the result of the optional nature of the Tokyo Round Codes. The multilateral nature of the WTO agreements and their approval by consensus as a "single undertaking" benefited every member.[16]

Colombia had not undertaken any major obligations regarding trade policy prior to its participation in the GATT. Hence, the broadened reach of the WTO to sectors such as services and intellectual property, in addition to the regular Trade Policy Reviews required under the WTO, forced the Colombian authorities to manage policy-making in a more rigorous manner, providing a more secure environment for traders, foreign firms and investors.

Nevertheless, the Uruguay Round did not fulfill all of Colombia's expectations, especially in light of the very active role Colombia had played in creating an appropriate setting for the launching of the Round, as well as in the negotiating process, which led to the approval of the Ministerial Declaration of Punta del Este. Some of the shortcomings, from Colombia's perspective, were the following:

- *Tropical Products.* The first results of the Negotiations—the "package" offered by developed countries that was approved in the Montreal Ministerial Meeting

[15] *Ministerial Declaration on the Uruguay Round*, September 20, 1986.

[16] The only exceptions to the Single Undertaking were the plurilateral agreements on Government Procurement, Civil Aircraft, Bovine Meat, and Dairy.

before the conclusion of the Uruguay Round—failed to include Colombia's major export products. There were no tariff reductions for products such as coffee, flowers or bananas in the list of concessions that were "generously" offered for other tropical products in which Colombia had little interest. Nonetheless, the agreement on trade in bananas reached by the end of the Round with the European Community was an important achievement for Colombian exports. As is known, through Regulation 404 of 1992, the European Community (EC) established a tariff quota and a license procedure that affected Latin American banana prices and supply in that market. Within the agricultural access negotiations in the Uruguay Round, the EC agreed to adjust the quota and to apply a bilateral quota system that recognized the historical participation of bananas coming from Colombia, Costa Rica, Nicaragua and Venezuela in Community imports. In this way, these four countries considered that they had solved the dispute they had with the European Community with respect to the Banana Regime.

- *Textiles and clothing.* In Colombia's view the ten-year period for dismantling the MFA was too long, and contrasted sharply with the shorter periods given to developing countries to eliminate their practices regarding some types of subsidies, trade-related investment measures, and minimum prices for customs valuation.
- *Agriculture.* On the positive side, this was the first time that multilateral disciplines had been agreed in this field, and developing countries obtained better treatment than developed countries with regard to the reduction of tariffs, export subsidies, and domestic support.[17] On the other hand, implementation of the Agreement on Agriculture did not change the existing imbalances in agricultural trade, because the amount of export subsidies and internal support that developed countries continued to apply remained as high as before the Uruguay Round, due in part to extensive use of the so-called "Green Box" exemption set forth in Annex II of the Agreement and the "Blue Box" exemptions under Article 6.5 of the Agreement. Also, import restrictions on agricultural products remained as high as before the Uruguay Round, as a result of "dirty" tariffication.[18]

  Implementation Periods. Although the developing countries were given several years to implement a number of the agreements, experience has showed that the deadlines were too short and that the temporary exceptions should have been permanent.

In brief, despite the benefits explained above, the WTO Agreements do not provide the basis for sustained economic development for developing countries like Colombia. On the contrary, practices used in the past by the developed nations to achieve their current levels of industrialization and to acquire their present degree of competitive advantage are either prohibited for developing countries or are only permitted for a limited time. With the conclusion of the transition periods, the full application of the disciplines on subsidies, TRIMS and customs valuation, the high tariffs imposed on textiles and clothing, and the tariff quotas and high tariffs applied to agricultural products, as well as the maintenance by the developed countries of export subsidies and internal support for agriculture, developing countries have been placed in a worse situation than that existing prior to the implementation of the WTO Agreement.

[17] *See* Chapter 6 of this book.
[18] *Id.*

C. Effects of Colombia's Participation in the GATT/WTO

1. Economic

The WTO multilateral agreements create a wide set of trade policy disciplines whose application has required the modification of many previous policies. Furthermore, they have required the adoption of new domestic and sub-regional disciplines within the Andean Community.

Important issues regarding the application of the WTO Agreements include the following:

- *Subsidies.* The most significant aspect of the Subsidies Agreement, from a Colombian perspective, was the ability to keep export subsidies (generally prohibited under the SCM Agreement) in place for a period of time under Article 27.3 of the Agreement, with the possibility of a further extension. In fact the limited export subsidies that Colombia maintains have little economic effect, because they do not distort prices and they have not caused an increase in Colombia's world market share of the products in question. But they are important to the country's export promotion policy because they are designed to promote export diversification. However, given the tight fiscal situation faced by most developing nations—of which Colombia is no exception—it is very difficult to apply a subsidy policy either on a regional or production basis, as opposed to on exports only. This is why some countries argue that the issue of export promotion by developing countries should be an important element of special and differential treatment.

  Trade-Related Investment Measures. The Andean Automobile Agreement (in which Ecuador and Venezuela also participate) was completely revised to make it consistent with the TRIMs Agreement. Colombia was able to maintain its "Absorption Policy" in the field of agriculture, as a result of the five-year period given to developing countries to phase out TRIMs measures. This period was extended for a further two years with the possibility of an additional two years. The Absorption Policy allows the importation of products only as long as national production is being fully consumed, and it has been a very effective agricultural policy instrument for domestic producers, while at the same time maintaining a supply of imported goods.
- *Agriculture.* The Colombian agricultural crisis is closely related to the existence of the enormous support policies provided by developed countries for their own agricultural industries, through export subsidies and domestic support. The agricultural crisis has also been fueled by the social crisis faced by Colombia –which has hit rural areas especially hard—and by the scarcity of fiscal resources dedicated to production and exports. As a consequence, elimination of the Absorption Policy in a world of unfair competition, such as the use of export subsidies by developed countries, could cause the Colombian agricultural situation to deteriorate.
- *Services.* The GATS commitments given by Colombia in the Uruguay Round framework emphasized trade liberalization. This is consistent with the liberalization process for foreign investment applied by Colombia since 1991. In addition, the Colombian government participated in the financial and telecommunication services agreements adopted in 1997. Colombia was also willing to pursue new negotiations and to accept new commitments in the failed negotiations on maritime services. Colombia has also developed integration negotiations in the field of services, under the provisions of Article V of the GATS. Colombia is currently

engaged in liberalization programs in services under the auspices of the Andean Community in which, in addition of previous Decisions in the services field, such as in transportation, tourism, and telecommunications, a Decision for liberalization of all trade in services was adopted in 1998. In 2001 another Decision incorporating the inventory of restrictive measures, to be liberalized before 2005, was agreed.[19] The Free Trade Agreement of the Group of the Three (Colombia, Mexico and Venezuela), also contains a chapter for liberalization of services trade, and a standstill provision was agreed. Services are included in the Free Trade Area of the Americas ("FTAA") negotiations.

- *Dispute Settlement.* Knowledge of the WTO dispute settlement procedures is considered to be very important, especially after the experience with the restrictions applied by the EC in 1992 on Latin American banana exports. Colombia was the main promoter of the Advisory Center for WTO Law, which was created at the 1999 Seattle Ministerial Conference to provide low-cost legal support for developing countries for WTO dispute settlement proceedings.[20]

2. Social

The requirements of the WTO Agreements, as well as the institutional changes they have generated, are recognized and taken into account both by domestic protectionist lobbies and by Colombian development policy makers. It is clear that for Colombia to improve its situation in the international arena it must increase its exports, rather than apply trade restrictions (whether or not justified). In other words, the country's productive sector will develop more effectively by competing in larger markets through export promotion than by limiting itself to producing essentially for a protected local market. Regional agreements entered into by Colombia have proved to be effective in creating an export culture, as well as in offsetting local market downturns. Likewise, the existence of stable rules through the application of multilateral disciplines with respect to trade with the rest of the world (especially the larger countries) permits the development of long-term business strategies. Regardless of a country's economic situation, protectionist pressures develop against its products when they start to have a significant presence in the international market. Consequently, clear "rules of the game" and an institutional system such as that of the World Trade Organization help to create predictability for businesses and trade relationships.

3. Legal

Colombian laws related to trade policy have been aligned with the international agreements, both multilateral and regional. Colombia has thus proved to be serious and committed to its international obligations. Colombian trade policy development is based on the multilateral trade system as represented by the GATT and more recently the WTO. On this particular aspect, it is important to note that Colombia has never been involved as a complainant or a respondent in a WTO dispute settlement process, although it was involved as a Third Party in the Bananas case. Colombia's direct experience with the dispute-settlement system is therefore very limited. Nevertheless, it is useful to note that the system has shown that it works effectively, and that the consultations stage is a very important means of enabling interested members to resolve their differences. In practice, the weak negotiating power of developing countries has been strengthened by the

[19] Decisions 439 and 511.

[20] The Centre's website address is www.acwl.ch.

dispute settlement system of the WTO, since when they are subject to discriminatory or WTO-illegal trade practices it limits the possibility of pressure from the more powerful countries.

III. Attitude of Citizens, Businessmen, and Political Leaders Towards the WTO

Some important groups of Colombian society, such as professionals, workers, and entrepreneurs, are still highly sceptical about the benefits arising from participation in the WTO. The discrimination existing within the trade globalisation and liberalization process for some of Colombia's important exports such as banana, sugar, rice, meat, tuna fish, textiles and clothing, and footwear, is evident. Colombia's manufacturers and exporters feel greatly disadvantaged by the multimillion-dollar subsidies that larger countries grant, especially those to agriculture, which are supported by a multilateral legal framework.[21] At the same time, these countries vehemently demand that Colombia open its national economy and limit its already modest support programs. However, it is clear that the best way to deal with any activity of the kind regulated by the WTO is to be part of the system. This gives the Colombian government the opportunity to be heard and results in recognition of the country's rights, as well as the acknowledgment of particular characteristics of its trade and development.

IV. Strengths and Weaknesses of the WTO From Colombia's Perspective

A. Strengths

The principal strengths of the WTO system from Colombia's viewpoint are: the growing normative framework relating to trade policies and the needs of the world economy; a dispute settlement mechanism which guarantees the effectiveness of the system; the fact that the multilateral trade system covers almost every country in the world; the more dynamic participation of developing countries in the agenda; and the tendency of regional trade blocks to converge towards the multilateral openness based on WTO principles and disciplines.

B. Weaknesses

There are two main weaknesses. First, permanent Special and Differential Treatment is very limited and is basically limited to slightly larger *de minimis* exceptions, which as a practical matter are inapplicable or insufficient, as in the case of the Subsidies, Antidumping and Safeguard Agreements. Second, long-term discriminatory treatment exists because of the conditions under which subsidies to production and to exports for the agriculture sector are still permitted, which add to the advantage that the developed countries already have, and at the same time constrain the negotiating room for developing countries. The latter not only affects the already important commercial interests of developing countries but also restricts their possibilities for development.

It could be argued that it is the *developed* countries that have received special treatment under the most important WTO disciplines, because it has been impossible to force them to abandon their agricultural subsidies. Furthermore, the developed countries obtained

[21] Similarly, only "substantial suppliers" are entitled to compensation or to retaliate in response to a safeguard action. *See Agreement on Safeguards*, Articles 8.1 and 12.3.

longer periods for dismantling the Multi-fibre Agreement and the exceptions to MFN treatment on trade in services than the implementation periods given to developing countries with respect to the other Uruguay Round agreements. Also, the treatment of merchant marine services foreseen in paragraph 3 of GATT 1994 constitutes a very special, indefinite-term treatment in favor of the most powerful economic and commercial nation in the world.

Developing countries will in fact not be in a better situation once all transition periods provided for in the Uruguay Agreement have passed. To the contrary, the decrease of distortions caused by the elimination of subsidies and greater access to the markets of the larger countries for the exports that interest developing countries have not proved effective in improving their opportunities to participate more fully in trade. The possibility of giving developing countries the permanent right to use such devices as export subsidies and performance requirements, and even to use GATT Article XVIII for the development of their incipient industries, should therefore be considered.

The dispute settlement system does not take into account the small providers who do not have a "substantial interest" in the matter, as required by Article 10.2 of the DSU. These suppliers are not able to participate in disputes as third parties if their average annual participation within the group of exporters to the market under question is lower than ten percent during a three-year period.[22]

The ability to participate as a third party is also lost if the parties to the dispute agree to go directly to Article XXIII of the GATT, without consulting under Article XXII. This occurred in 2001 with regard to a claim that Brazil made against the EU concerning preferential treatment of coffee, and a safeguard applied by Chile to sugar, contested by Argentina.

The dispute settlement system does not help small suppliers who do not have the ability to take advantage of it, because of lack of experience and high cost. At the same time, it has been recognized that the WTO dispute settlement mechanism gives developing countries the opportunity to bring cases against larger and more powerful Members. It is the main guarantee of the effective operation of the multilateral trade system.

Another concern is that further tariff cuts will erode the benefits of the Generalized System of Preferences. There has been no development of alternative mechanisms for providing special and differential treatment for access to the markets of developed economies. Similarly, effective implementation of Article IV of GATS, calling for increased participation of developing countries, is necessary.

V. The Next Negotiating Round

The WTO's Fourth Ministerial Conference held at Doha, Qatar, between November 9 and 14, 2001, ended with a global agenda that tried to take into account, in a balanced fashion, the interests of all countries, both developed and developing. The main issues of the Conference were: Application of the Uruguay Round Agreements; Agriculture; Intellectual Property and Access to Medicines and Public Health; Environment; Issues related to WTO Norms; and issues from the Singapore Ministerial.[23]

The Ministerial Declaration defines the WTO negotiating agenda up to January 1, 2005: a global work program in different areas that had already been under discussion

[22] Similarly, only "substantial suppliers" are entitled to compensation or to retaliate in response to a safeguard action. *See Agreement on Safeguards*, Articles 8.1 and 12.3.

[23] I.e., Investment, Competition Policy, Trade Facilitation, and Transparency in Government Procurement.

since the Singapore Ministerial Conference, and new analytical work on small economies; trade, debt and finance; and trade and technology transfer. The Conference also produced a Political Declaration on the relationship of the TRIPS Agreement and public health.

Another important result was the Decision that adopts concrete measures to respond to the concerns of developing countries with respect to the application of the WTO Agreements and the procedure proposed for the granting of additional time to developing countries for the phasing out of export and import substitution policies foreseen in Article 27.4 of the SCM Agreement. The latter is essential to Colombia's interest in preserving export-supporting instruments.

Doha's Ministerial Declaration[24] establishes or reiterates negotiating objectives in several areas of interest for Colombia. These include:

- The Decision on **Implementation,** in particular the possibility of granting extensions for the phasing out of export and import substitution subsidies under Article 27.4. This would allow the maintenance of incentives for the development of productive activities inside free trade zones and through the importation of capital goods to produce goods for exports for seven more years. Failure to obtain such an extension would be fatal for the development of non-traditional Colombian exports. At the same time, foreign investment flows from and to Colombia would be affected because of possible displacement in favor other Central American and Caribbean countries that enjoy automatic extensions.
- The mandate achieved in **Agriculture** is more ambitious than that provided in Article 20 of the Uruguay Round Agreement on Agriculture and could benefit a developing country like Colombia, which now has to compete in markets that are highly distorted by protection and assistance granted to agriculture, especially by developed countries.
- With respect to **Market Access**, the mandate calls for tariff reductions and the enlargement or elimination of tariff-rate quotas. Colombia now faces tariff-rate quota restrictions on its exports of sugar to the United States. Reduction of high tariffs, tariff peaks, and tariff escalation are also important to improve access for agricultural products with greater value-added. They are also important to preserve the special safeguard, to provide for differentiated commitments on tariff reductions, and to provide for greater access for tropical products and for products that are substitutes for illicit crops.
- The mandate on **Export Subsidies** refers to all forms of subsidies, which would include such instruments as export credits. However, the reference to the progressive removal of subsidies is very weak, particularly in comparison with the objective of Colombia and the Cairns Group of pursuing the elimination of export subsidies in the shortest possible time. Otherwise, the liberalization of market access would lack any sense. Colombia's interest in this respect is in at least preserving the Article 9.4 exemption beyond the implementation period for developing countries with respect to subsidies devoted to reducing export marketing costs and for those associated with favorable rates of internal transportation and freight charges for export shipments.
- The mandate with regard to **Domestic Support** seeks the substantial reduction, but not the elimination; of assistance that causes trade distortion. It excludes domestic support that distorts production such as the Blue Box subsidies, as

[24] Reproduced in the Appendix to this book.

well as several Amber Box measures. In the light of this mandate, the parties that will benefit the most are the United States and the European Union, to the detriment of the developing countries. Colombia is interested in obtaining Amber Box exceptions for the maintenance of assistance programs devoted to the substitution of illicit crops and for rural development and eradication of poverty.

- If the mandate and the guidelines for the negotiations in **Services** are reaffirmed, it is not expected to result in indiscriminate sectoral liberalization in developing counties, which still need to develop their service sectors. At the same time larger countries should make substantial commitments on Mode 4, the presence of natural persons of one member in the territory of any other member, to facilitate trade opportunities, including the temporary entry of natural persons from developing countries. Flexible norms and requirements with respect to professional recognition are needed.
- **Market Access for Non-Agricultural Products**. More than seventy percent of Colombian trade is with countries in the North and South American Continents, which are negotiating the Free Trade Area of the Americas ("FTAA"). Access to these markets will therefore occur regardless of developments in the WTO, assuming that the FTAA goes into effect. The EU, another of Colombia's major trading partners, provides Colombia with extensive trade preferences. However, Colombia is interested in obtaining improved market access for sensitive products such as textiles and clothing and leather products.
- The most significant outcome for developing countries on **Intellectual Property** was the issue related to the relationship between the TRIPS Agreement and Public Health, and the greater flexibility granted for interpretation of the Agreement in face of the need to fight pandemics such as HIV/AIDS, malaria, and tuberculosis. In this respect, the TRIPS Agreement may not be construed as an impediment to measures allowing WTO member countries to protect public health and access to medicines for all in the event of a national emergency.
- **WTO Norms**. Negotiations with respect to the Antidumping Agreement and the Agreement on Subsidies and Countervailing Measures are very meaningful. One of the outcomes with respect to the latter should be that clear and concise norms should avoid and control the indiscriminate use by developed countries of the remedies provided by the Agreement against exports from developing countries.
  - In the case of the Antidumping Agreement, Colombia would like to see the establishment of an appropriate comparison with respect to the dumping margin, particularly for perishable products; an increase in the *de minimis* dumping margin for developing countries from two percent to five percent; and an increase in the exemption for imports from developing countries, from three percent to seven percent.
  - In the case of the Subsidies Agreement, Colombia is interested in: an increase of the *de minimis* level for developing countries from two percent to three percent; an increase in the exemption for imports from developing countries from four percent to seven percent [coming from developing countries]; and the extension of the definition of "input consumed in the production process", to include all inputs, not only those consumed in the production of the exported product.
- Negotiations in **Trade and Environment** might result in onerous burdens being placed on developing countries, not only with respect to the capacity to assume

new obligations, but also the possibility of increases in tariff and non-tariff barriers. Attention is given in this context to issues such as the precautionary principle and the concept of multi-functionality in agriculture. The first, openly defended by the European Union, pursues environmental protection through the application of sanitary and phytosanitary measures and technical regulations without scientific bases or risk analyses. The second, also supported by Europeans and other developed countries as Japan, Korea, Switzerland, Norway and a group of developing countries, seeks to increase protection and support given to agriculture, which may damage the environment in rural areas.

VI. Participation of Colombia in Regional Trade Arrangements

A. Andean Community

The Andean Group was created by the Cartagena Agreement in 1986, and consists of Bolivia, Colombia, Ecuador, Peru and Venezuela. This group has evolved into what is known today as the Andean Integration System, which aims at creating a common market. It is a complex system that, in addition to the Cartagena Agreement, contains a system for the settlement of regional disputes in the Andean Court of Justice (Tribunal Andino de Justicia), a financial support mechanism in the Andean Promotion Corporation (Corporación Andina de Fomento, "CAF"), a Labor Council (Consejo Laboral Andino), and a Business Council (Consejo Empresarial Andino).

The Andean Community is without doubt the most important integration agreement in which Colombia participates. In the trade area, it has managed to create a customs union—of which only Peru is not yet a full member. It has also established mechanisms for liberalization of trade in services.

B. Agreements Under ALADI

The Colombian economic and commercial integration system operates within the legal framework established in the 1980 Montevideo Treaty. It establishes the Latin American Integration Association (Asociación Latinoamericana de Integración ("ALADI")). ALADI is a legal framework that permits individual member countries[25] to enter trade agreements with one or more members without the benefits of such agreements being extended to other ALADI members, except for those considered to be less developed.[26] In this context, a network of preferential agreements has developed in parallel to the growth of regional trade. Colombia, like the other ALADI members, has bilateral trade agreements with most Latin American countries. The capacity to enter such agreements is not restricted to ALADI member countries. Negotiations can be held with other Latin American or developing countries outside Latin America.

There are two types of agreements within the ALADI context—Partial Agreements, which are focused on tariff reductions for a small number of products, and Complementary Economic Agreements—which contain more general trade commitments and can include matters such as investment or services, as opposed to agreements limited to trade in goods.

[25] The members of ALADI are Argentina, Bolivia, Brazil, Chile, Colombia, Cuba, Ecuador, Mexico, Paraguay, Peru, Uruguay and Venezuela.

[26] Bolivia, Ecuador and Paraguay.

Most of those agreements are currently being renegotiated by the Andean Community as a group, in order to harmonize trade preferences of its member countries, taking into account the commitments of the Common External Tariff of the Andean Community. This is the case for the agreements with Brazil and Argentina, and the Agreement with the members of the Central American Northern Triangle.[27] Also, a new agreement is being negotiated regarding the formation of a free trade area between the Andean Community and Mercosur.

C. Group of Three

The Group of Three ("G3") was formed in January 1995 and consists of Colombia, Mexico and Venezuela. The G3 seeks to establish a free trade area among its members during the first ten years of its existence. It includes—besides the chapters pertaining to liberalization of trade in goods—chapters setting forth norms related to liberalization of services, treatment of foreign investment, intellectual property, technical standards, and dispute settlement.

The trade liberalization in non-agricultural goods[28] is under way. Tariffs are being reduced by ten percent per year over a ten-year period beginning in July 1995. There has been no liberalization of trade in services since the entering into force of the Agreement in 1995.

D. Free Trade Area of the Americas

The Free Trade Area of the Americas ("FTAA") negotiations started in September 1998 and are supposed to be completed by the end of 2004. Implementation should begin before the end of 2005. The 34 democratically elected governments of the American Hemisphere are participating in negotiations, which aim to create a free trade area between these countries. Besides liberalization of trade in goods, the negotiations cover free trade in services, competition and investment policies, and intellectual property and dispute settlement, among other issues. An important feature of the FTAA is that all existing regional integration agreements like the Andean Community, Mercosur, Caricom or the Central American Market, will remain in effect to the extent that they contain deeper commitments than those agreed to under the FTAA.

VII. Trade Policy Development in Colombia

From 1991, when the Ministry of Foreign Trade was created, Colombian trade policy has been established by the Foreign Trade Supreme Council, led by the President of the Republic. The Foreign Trade Minister, and other ministers whose functions are related to foreign trade and trade policy are also members of the Council. The Mixed Commission on Foreign Trade—which includes the members of the Foreign Trade Supreme Council, as well as the most important producer associations from the manufacturing and agricultural sectors—provide advice to the Supreme Council.

The Foreign Trade Ministry is in charge of implementation of trade policy and has five technical divisions: Bilateral and Multilateral Affairs, Economic Integration, Investment, Competitiveness, Exporting Culture and the General Direction of Foreign Trade. It also

[27] Guatemala, El Salvador and Honduras.

[28] Most agricultural goods are excluded from the liberalization program.

has several related institutions such as PROEXPORT-Colombia, which has as its main responsibility the export promotion of goods and services, and the Foreign Trade Bank, BANCOLDEX, which finances exports.

It was necessary to ensure the participation of the entire Colombian society, both public and private, in the negotiations with respect to the Andean Community and MERCOSUR. This will also be necessary in the FTAA negotiations, as well as negotiations in the WTO and with other countries and regions such as the EU, Canada and Central America. It will therefore be important to publicize these processes, to provide opportunities for discussion, and to prepare the task forces that will need to be created.

VIII. Conclusion

During the development of the multilateral trade system, the economies of developing countries have been significantly transformed; some of these countries, such as Mexico and Brazil have become important industrial and trading centers. Other countries, like Colombia, after the slow process of forming an incipient industrial base and a dynamic internal economy, still suffer from technological lag and weak participation in the world economy. They must overcome many constraints to be competitive on an international basis.

The positive contribution that the existence of multilateral trade rules, such as those of the WTO, makes to the stability of commercial relations is evident. Nevertheless, temporary exceptions to the rules and technical cooperation constitute basic mechanisms for the promotion of development and the greater participation of developing countries in world trade, as stated in the Preamble to the WTO Agreement. The challenge will be to implement mechanisms that will extend export capacity, especially of intermediate and less developed economies among developing countries, based upon, *inter alia*, Article XVIII of GATT 1994, the Enabling Clause, Article IV of the GATS and the adoption of measures that should allow the permanent maintenance of export promotion policies and trade-related investment measures.

At the same time, the adoption of concrete measures regarding the elimination of subsidies in developed countries, as well as the elimination of unilateral measures, the elimination of barriers for textiles and clothing and leather manufactures, and the ability of developing countries to effectively protect their export interests within the dispute settlement system, are urgently needed. Among the new issues, the adoption of disciplines in matters such as competition and investment could favor the liberalization of world trade.

I. Introduction

Egypt joined the GATT on May 9, 1970, then participated in the Uruguay Round negotiations (1986–1993). On April 15, 1994, Egypt signed the Marrakesh Agreement Establishing the World Trade Organization, and became a full Member of the WTO on June 30, 1995.

Egyptian officials, businessmen, and academics are in agreement that the WTO provides a rule-based and transparent trading system. The WTO also provides a forum for permanent negotiations as well as for settlement of disputes. Developing country interests are preserved through the special and differential treatment accorded to those countries and embodied in the WTO Agreement. However, there is a general feeling in Egypt that WTO rules are complicated. Certain agreements, like those on Agriculture and Textiles and Clothing, stop short from achieving the goal of trade liberalization and adversely affect the interests of developing countries. Also, benefiting from the WTO dispute settlement system requires costly specialized legal expertise.

This chapter describes Egyptian activities and positions with respect to various WTO subjects, including demands of developing countries concerning the effective implementation of existing WTO agreements, views regarding the mandated negotiations on Agriculture and Services, as well as Singapore issues, and the subjects of the new round of trade negotiations ("the Doha Round").

II. Egypt's Accession to the GATT

Egypt joined the GATT on May 9, 1970, after eight years of negotiations. Its principal goal was to benefit from the reduction or elimination of tariffs and non-tariff barriers, to secure liberalization of trade, and to enjoy most-favored-nation ("MFN") treatment from other GATT contracting parties. Egypt participated actively in both the Tokyo Round and Uruguay Round ("UR") negotiations.

III. Egypt's Participation in the Uruguay Round

Egypt's primary goals during the UR were the liberalization of world trade in general without hindering the interests of developing countries, as well as assuring that the negotiations took full consideration of the condition of developing countries. Egypt sought to gain improved market access for its textile and agricultural exports and to increase awareness of the difficulties faced by net food importing developing countries like itself. Both Egyptian officials and businessmen feel that the liberalization of the agricultural and textile sectors did not go far enough, and that the rights of developing countries were not sufficiently safeguarded by the two relevant Agreements, since both agreements maintained high tariffs, quotas, subsidies and many other measures limiting freedom of trade in those items.

In order to prepare itself for the comprehensive and lengthy Uruguay round negotiations, which lasted from 1986 to 1994, in 1988 Egypt established a National Committee presided over by its Minister of Economy and Foreign Trade. Members of that committee were representatives from all concerned ministries and organizations, including those representing the private sector such as the Businessmen's' Association, the Federation

of Chambers of Commerce, and the Federation of Industries. The Committee formed sub-committees to analyze and follow the different subjects of the negotiations and to prepare Egypt's official negotiating positions for guiding the Egyptian negotiating team in Geneva.

On April 15, 1994, Egypt signed the Marrakesh Agreement establishing the World Trade Organization. Despite opposition from certain business groups who believed that membership in WTO would harm local industry, the Egyptian Parliament ratified the Agreement on April 16, 1995. A Presidential Decree[1] was issued in this regard. Egypt officially became a member of the WTO on June 30, 1995.

A. Work After the Establishment of the WTO

When the WTO was established as a permanent forum for negotiations, dispute settlement, and trade policy review, Egypt transformed the National Committee for the Preparation for Uruguay Round Negotiations into a committee to follow up the application of the Uruguay Round agreements under the chairmanship of the Minister of Economy and Foreign Trade. Nine sub-committees were established: Market Access, Services, Trade-Related Investment Measures ("TRIMS"), Agriculture, Textiles and Clothing, Trade and Environment, Protection of Local Production, Technical Specifications, and Trade-Related Aspects of Intellectual property Rights ("TRIPS").

The Committee's mandates and responsibilities included:

- Taking into account the national as well as the sectoral point of view when considering different subjects relating to the WTO;
- Taking measures to maximize the positive aspects of the Agreements and taking full advantage of the special and differential treatment provided by the Agreements for developing countries, such as flexibility measures, transitional periods, as well as technical and financial assistance;
- Suggesting amendments to local laws and decrees to conform to the Uruguay Round Agreement;
- Making sure that the bilateral agreements signed between Egypt and other countries are in conformity with the Uruguay Round Agreement;
- Educating Egyptian Ministries and Organizations concerning various aspects of the Uruguay Round Agreement, including how to benefit fully from its rules, and how to handle its obligations;
- Preparing official Egyptian positions concerning subjects under negotiation in the WTO to guide the Egyptian negotiating team in Geneva.

Not all committees were equally successful. Some Ministries kept changing their representatives in the sub-committees. Many of the representatives were not able to contribute useful information regarding the opinions, needs, plans, and policies of their respective Ministries and Organizations, thus leaving the official representative to the World Trade Organization in a position where he had to suggest Egypt's position concerning many WTO negotiating items then seek the Committee's approval of his suggestions.

[1] No. 72 for the year 1995.

B. Participation in WTO Ministerial Conferences

Egypt participated actively in the four post-Uruguay Round WTO Ministerial Conferences which were held in Singapore (1996), Geneva (1998), Seattle (1999), and Doha (2001). The Egyptian Delegations to the four Conferences contributed both to the preparatory work and during the conferences.

The Egyptian Delegation to the Singapore Ministerial Meeting played an important role in helping to reach an acceptable solution, from the point of view of the developing countries, concerning the paragraph on core labor standards in the Singapore Declaration. The developing countries opposed linking trade to labor standards, and insisted that labor standards should only be discussed in the International Labor Organization ("ILO") which is the competent body to tackle this issue. The Egyptian Delegation also played an important role in formulating many other paragraphs in that Declaration concerning subjects of importance to the developing countries such as: marginalization, regional agreements, accession, implementation, treatment of developing countries, least developed countries ("LDCs"), textiles and clothing, trade and environment, investment and competition, transparency in government procurement, and trade facilitation. The consensus reached on those paragraphs allowed for the issuance of the Singapore Declaration.

In the Geneva Conference, the decision by Egypt to accept the Declaration on Global Electronic Commerce paved the way for its acceptance by many other developing countries.

During the preparatory work for the Seattle Ministerial Meeting, Egypt, together with ten other developing countries in Africa, Asia and Latin America formed a group called the Like-Minded Group ("LMG").[2] This group played a very important role in formulating the position of developing countries with respect to many of the topics under discussion in the preparatory process for the Conference. The role of Egypt was not confined to working through the LMG; it also participated in the African Countries Group and the Committee on Trade and Development in the World Trade Organization.

In Seattle, the Egyptian Delegation was one of the few delegations to attend the "Green Room" meetings where approximately twenty key WTO Members (developing and developed) were invited to discuss and try to reach an acceptable text for the Ministerial Declaration to be issued by the Conference. Egypt tried during those meetings to convey the views of the developing countries to the limited number of delegations attending the Green Room meetings. Though it had been a common practice in the GATT/WTO to try to reach important decisions in small informal groups, the Seattle Ministerial was somehow different as a result of the general view of developing countries that the situation required that the Members hear individual points of view concerning the implementation problems of the existing agreements, as well as the unaffordable burden of adding new areas to the negotiations in a new and comprehensive round of trade negotiations.

The Egyptian Delegation to the Seattle Ministerial Meeting believed that reasons for the failure of the Meeting included: the failure in the preparatory process to agree on an acceptable text that left only a few points of difference of a political nature for

[2] This group consisted of: Cuba, Dominican Republic, Egypt, Honduras, India, Indonesia, Malaysia, Pakistan, Tanzania, Uganda and Zimbabwe.

the Ministers to settle; the insistence of the developed countries on opening many new subjects for discussion without allowing for the proper implementation of the existing agreements; the short time allowed for meetings of trade ministers as a result of the demonstrations that delayed the start of the meetings; and the fact that very few general meetings were held as a result of the focus on the Green Room meetings, thus excluding the majority of delegations from taking part in the decision-making process when many important issues had been left open for discussion in Seattle.

IV. Effects of GATT/WTO Membership and the Uruguay Round Agreements on Egypt

A. Economic Effects

1. Trade in Goods

Egyptian industry has enjoyed considerable protection since Egypt began to adopt socialist policies in 1961. Most private sector companies were nationalized during that period. Even when Egypt started applying an open-door policy in the mid-seventies and encouraged the private sector to assume a role in the economy, the government chose to provide a good deal of protection to the private sector, including high tariff rates on competitive imported goods, as well as a ban on the importation of certain articles. This structure was progressively reformed when Egypt joined the GATT and later the WTO. Egypt's reform program has and still gives rise to objections from some local industries, in particular producers of textiles, clothing and some agricultural products. The reduction or removal of many tariff and non-tariff barriers in importing countries has helped Egypt little due to its limited capacity to export as a result of high production costs, the low quality of some products, high prices of components and inputs in the Egyptian market resulting from protectionism, the lack of external marketing experience, and strong competition from other WTO Members, in particular Asian countries. The government, in cooperation with business associations, is working hard to improve this situation through programs for restructuring, rehabilitation, training and privatization of industries, as well as reducing tariffs on inputs and improving exporting capacities for producers through market research and regional agreements, especially with Arab, African, and EU/Mediterranean countries', as well as seeking to sign a Free Trade Agreement with the United States.

Other concerns with the impact of the Uruguay Round Agreements include:

- Egypt is a net food importing developing country. The reduction of domestic subsidies pursuant to the WTO Agreement on Agriculture has raised fears that Egypt will have to pay higher prices for many food items that it needs to import, especially wheat, flour, and edible oils. In fact the general reduction in international market prices of those items during the first years of the implementation of the Agreement together with the successful policy of the government to increase production of those crops, has helped Egypt to avoid a difficult situation in this respect.
- Egypt cannot take advantage of Article 27.2(b) of the Agreement on Subsidies and Countervailing Measures that allows some developing country members to continue to provide export subsidies, since its per-capita GNP exceeded US$1,000 in 1998 and it has thus lost the preferential treatment accorded by Annex VII(b) of the Agreement.

- Egypt is not eligible to apply import restraints under GATT Article XVIII and the Understanding on Balance-of-Payments Provisions of GATT 1994, since its balance of payments has been in surplus since 1995, even though the Egyptian balance of trade in goods has and still suffers from a huge deficit. The surplus in the Egyptian balance of payments results mainly from transfers from Egyptians working abroad, tourism receipts and Suez Canal dues.
- The rules of the Agreement on Textiles and Clothing have allowed developed importing countries to continue imposing quotas on clothing and textile imports from developing countries until 2005, thus permitting a continuation of restrictions on clothing and textile imports from developing countries. This quota system, together with the misuse by certain developed countries (especially the EU) of anti-dumping laws, has harmed Egyptian exports of textiles and clothing.

2. Trade in Services

Egypt participated actively in the negotiations on trade in financial services that resumed after the conclusion of the Uruguay Round. Egypt accepted a high level of liberalization for banking, insurance and capital market services. This liberalization was welcomed by the developed country Members, especially the United States and the EU countries.

Egypt will benefit from its decision to encourage foreign investment in its services sector, in particular through access to new technology, since new technology usually accompanies investments in sectors such as financial services, telecommunications and data processing centers. Although Egypt has not signed the Basic Telecommunications Agreement, the government has also taken important steps to liberalize this sector.

Egyptian service providers will also benefit from the increase in foreign market access opportunities in sectors such as construction and engineering, health, education and professional services that will be negotiated in the new round.

3. Intellectual Property Rights

The Agreement on Trade-Related Intellectual Property Rights ("TRIPS"), has provided Egypt with an important means to protect patents, copyrights and neighboring rights, especially in Arab and African markets. Strictly-applied enforcement measures in Member countries have helped Egyptian industries to protect rights in areas like printing, entertainment (audio, video and motion pictures) and broadcasting. However, Egypt has faced great pressure, especially from the United States, to abandon its right to apply a ten-year rather than a five-year transitional period for implementation of the TRIPS agreement with respect to pharmaceuticals. Local industry, government officials and the public oppose abandoning this right because of the expected effect on both local industry and the price of medicine.

B. Political Effects

Views in Egypt differ among political parties and business associations concerning the WTO. Some (the majority party and the Federation of Chambers of Commerce and many economists) believe that Egypt cannot turn its back on the WTO, which is in the best interests of the Egyptian economy. Others (the opposition leftist party and the Federation of Industries) view the WTO as a danger that will ruin the local economy by opening the door to imports of all kinds of goods at a time when most local industries are still unable to compete.

C. Social Effects

Views in Egypt differ concerning the effect of WTO membership on local industry. Some believe that opening the door to imports of foreign goods will harm local industries and deprive many workers of their jobs and benefits. Others believe that the restructuring of the local economy is bound to happen as a result of the government's Economic Reform Program, which included privatizing many important industries. These same people also believe that well-managed privatized industries would be more capable of competing locally and abroad, thus creating the long-term possibility of more employment. The actual effects on the traditional industries of textiles and clothing are not yet clear since Egypt maintained a prohibition on the importation of fabrics until January 1, 1998, and on apparel and made-ups until January 1, 2002. However other new industries like carpets, ceramics, iron and steel and aluminum products have flourished and are witnessing a high export rate.

D. Legal Effects

In order to comply with the WTO Agreement, Egypt changed or promulgated laws in areas such as customs, market access, anti-dumping, services, technical barriers to trade and intellectual property rights. These laws are strictly monitored by the competent authorities. Egypt has also established a new department within the Ministry of Economy and Foreign Trade to handle dumping, subsidies and safeguard matters.

V. Egypt's Attitude Toward the WTO

Some Egyptian citizens, economic writers and industrialists believe that globalization, facilitated by the WTO, is a new form of economic colonialism, and that the economic superpowers are using it to control the economies of developing countries, so that they serve only as markets for developed country products. Other Egyptians (mainly academics and businessmen) believe that Egypt is part of the world economy and should not stay isolated from international developments. According to the latter view, Egypt should maximize benefits from the WTO Agreement, and minimize losses by negotiating better conditions, utilizing the available special and differential treatment for developing countries, as well as modernizing its economy to cope better with developments.

Most Egyptian political leaders were in favor of joining the WTO since this complemented the on-going economic reform program proposed by the International Monetary Fund and the World Bank which was aimed at modernizing local industries and increasing exports.

VI. An Egyptian Perspective on the Strengths and Weaknesses of the WTO

A. Strengths

The WTO provides a rule-based trading system that offers predictability and transparency. This is good for exporters and policy-makers in Egypt. The WTO also provides a forum for settling trade disputes on equal terms for all countries, large or small. The WTO offers a permanent forum for trade negotiations. This forum offers the possibility that better rules can be negotiated and market access conditions improved if Members so agree. Another strength is that WTO decisions are usually taken by consensus. This means that the vote of every Member is, in principle, equally important and the agreement of all

members is essential to adopt a decision. Lastly, Egyptian policy-makers welcome the special rules throughout the WTO Agreement that provide more favorable treatment for developing countries.

B. Weaknesses

WTO rules are not easy to understand for most businessmen and traders, and government needs to make greater efforts to explain trade rules to the public. The Egyptian government does this occasionally in connection with certain measures to be taken, such as lifting the prohibition on importation of ready-made clothes, but not as a permanent educational process for businessmen and the public. Benefiting from the WTO dispute settlement system requires costly specialized legal expertise that is beyond the means of many developing countries. That is why Egypt joined the Advisory Centre on WTO Law, which provides legal services to developing countries at reduced rates.[3]

The need to take decisions by consensus can place smaller WTO Members under great pressure from economically or politically stronger countries to reach a decision. However this system is better than a system that gives the larger countries more voting power.

Rules in favor of developing countries do not always benefit these countries, due either to a lack of expertise or a lack of financial assistance to improve capacity. Egypt was able to benefit from some technical assistance provided by WTO experts, particularly in areas such as customs valuation, competition law, TRIPS, the lifting of the prohibition on textile imports, and notifications under the Agreement on Agriculture.

With regard to agricultural issues, the Agreement on Agriculture does not go far enough to open agricultural markets, especially to developing country products. The Agreement on the Application of Sanitary and Phytosanitary Measures has not caused problems with respect to Egypt's agricultural trade. Even when the EU took measures against the import of Egyptian potatoes, this dispute was settled without having to bring the case to the WTO.

The Agreement on Textiles and Clothing maintains many forms of protection in favor of developed countries until 2005, such as non-tariff barriers, including quotas and restrictions on imports, administrative arrangements, and transitional safeguard measures, thus limiting the market for exports from developing countries.

The WTO Agreement applies to many new areas such as services and intellectual property rights. Many developing countries are not capable of applying all the rules adopted due to lack of experience, the need to revise or promulgate local laws, and the lack of knowledgeable administrative bodies to handle these new subjects.

VII. Egypt's Participation in the WTO Dispute Settlement Process

Since the establishment of the WTO, two Egyptians have served as members of the WTO Appellate Body, Dr. Said Al-Naggar (1995–2000) and Dr. Georges-Michel Abi-Saab (2000-present). This reflects the importance of the WTO to Egypt and its active participation in WTO activities.

The WTO Dispute Settlement Understanding is considered by many Egyptian officials, diplomats and some economic writers as one of the most important achievements of the

[3] *See infra* note 4.

Uruguay Round. Egypt and other developing countries welcome the following special provisions for developing countries:

- Developing countries have a right to at least one developing country panelist;
- Time limits for certain stages of the dispute settlement can be extended if a developing country is the defendant;
- Panel reports involving developing country Member must indicate how special and differential treatment has been taken into account;
- The special situation of the least developing countries is to be taken into account at all stages of a dispute involving these countries.

Egypt's practical experience with the WTO dispute settlement system is limited, having been confined to two cases (discussed below). Among the difficulties faced by developing countries, including Egypt, are:

- A lack of legal expertise required to participate effectively in such a complicated system;
- The high costs involved in pursuing a dispute;
- The length of time taken for the implementation of decisions; and
- The limited effects of the special and differential treatment provided to developing countries by the DSU in view of the lack of resources needed by them to finance comprehensive legal assistance. The establishment of the Advisory Centre on WTO law,[4] of which Egypt is a member, may help to solve some of these problems.

Between 1995 and 2002 Egypt was involved as a party in only two WTO dispute settlement proceedings. In the first, Egypt participated as a third party in the dispute against the European Communities concerning *Anti-Dumping Duties on Imports of Cotton-Type Bed-Linen from India*.[5] Egypt supported India in this case, filed briefs, participated in oral arguments, and benefited from the panel and appellate body's rulings in this case in favor of India.

The second case was brought by Turkey against Egypt and concerned *Definitive Anti-Dumping Measures on Steel Rebar from Turkey*.[6] This request concerned an anti-dumping investigation by the Egyptian Ministry of Trade and Supply with respect to imports of steel rebar from Turkey, which resulted in the imposition of anti-dumping duties ranging from 22.63–61.00 percent. Turkey challenged the dumping and injury determinations. The Panel Report was adopted by the DSB on October 1, 2002.[7] The Panel found for Egypt on the vast majority of issues, but with respect to the investigation of two of the five firms involved, it found a violation of Article 6.8 of the Anti-dumping Agreement and Annex II(6) concern the Egyptian authority's use of facts available.[8] It also found that the investigative authority had acted inconsistently with Article 3.4 of the Anti-dumping Agreement by failing to evaluate certain factors, including factors related to productivity and cash-flow, in its injury determination.[9]

[4] The Advisory Centre was established in Geneva in 2000, and provides legal services to developing countries that join the Centre at fees that vary with the volume of the trade of the country and that are considerably lower than those charged by private law firms. The Centre's website address is www.acwl.ch.

VIII. Principal Issues for Egypt in the Forthcoming Negotiations[10]

A. Egypt's View Toward a New Round of Negotiations

During the preparatory process for the Third WTO Ministerial Meeting (Seattle), developing countries, including Egypt, considered that improved implementation of the existing Uruguay Round Agreements was a prerequisite before becoming involved in any further negotiations on new agreements or new obligations.[11]

The Egyptian position was that it is committed to beginning the mandated negotiations on agriculture and services, and to addressing the other elements of the built-in agenda in accordance with the review provisions of various agreements. Egypt is also committed to continuing the exploratory work on the issues raised in Singapore.[12] The Egyptian Delegation made it clear that Egypt would not accept any commitments to negotiate new issues without considering implementation difficulties in a satisfactory manner and discussing the impact of these new subjects on developing countries.

However, some slight changes in Egypt's position began to emerge before the Doha Ministerial meeting. The press release issued at the end of the consultative meeting attended by Ministers of Economy, Trade and Finance from fourteen Arab Countries[13] held in Cairo on July 17–18, 2001, stated that Arab nations are ready to discuss the possibility of initiating a balanced round of trade negotiations on the condition that all WTO Members agree to establish a mechanism to guarantee that developed countries implement their obligations set forth in the Uruguay Round Agreement, and that a clear vision of the subjects to be included in the new round is established in a way that fulfils the interests and aims of developing countries, and helps to provide wider market access for the products of those countries, as well as maximizing the participation of developing countries in the WTO decision-making process.

During the preparatory process for the Fourth Ministerial Meeting (Doha) developing countries reiterated their position and succeeded in having the Conference issue a separate Decision on Implementation-Related Issues and Concerns.[14] The main Doha Ministerial Declaration[15] refers to this Decision in paragraph12.

B. Egypt's Position on Particular Issues in the Doha Round

1. Implementation of the Uruguay Round Agreements

During the preparatory process of the Third and Fourth WTO Ministerial Meetings many developing countries, Egypt included, demanded that a review of the implementation of the existing Uruguay Round commitments be a prerequisite before commencing negotiations on new agreements or new obligations. These countries made it clear that the implementation review should take into consideration: (1) the overall implementation

[10] This section is drawn from statements and position papers prepared either by the writer of this chapter, who was the Egyptian Representative to the WTO from 1996 to 2000, or by his assistants under his supervision, either separately or in co-operation with other developing countries delegations such as Cuba, Dominican Republic, Honduras, India, Indonesia, Malaysia, Pakistan, Tanzania, Uganda and Zimbabwe.

[12] Trade and Competition Policy, Trade and Investment, Transparency in Government Procurement, and Trade Facilitation.

[13] Egypt, Jordan, Bahrain, Tunisia, Algiers, Saudi Arabia, Sudan, Oman, Qatar, Kuwait, Libya, Morocco, Mauritania and Yemen.

[14] WT/MIN(01)/W/10, November 14, 2001.

[15] WT/MIN(01)/DEC/W/1, November 14, 2001.

difficulties facing the developing countries; (2) imbalances in some agreements;[16] (3) implementation of some agreements in letter but not in spirit, such as the Agreement on Agriculture and Agreement on Textiles and Clothing,[17] (4) the misuse by developed countries of certain rules in the agreements in a way that limited market access for developing country products, i.e., abuse of the rules on anti-dumping,[18] and (5) a review of the Agreements on *Technical Barriers to Trade* ("TBT")[19] and *Sanitary and Phytosanitary Measures* ("SPS").[20]

As a result of the discussions during the course of preparation for the Third Ministerial Conference, two lists of implementation issues, one for immediate decision and the other for action within one year, were included in paragraphs 21 and 22 of the revised Draft Ministerial Text[21] that was supposed to be agreed upon at the Seattle Ministerial Meeting. The failure of the Ministerial did not stop developing countries from insisting on the discussion of implementation issues during the meetings of the WTO General Council that followed the Ministerial Meeting.

During these meetings, the Council recognized that the implementation of some WTO agreements and decisions had given rise to serious concerns among many developing country Members. The Council also recognized that progress in addressing these implementation concerns would enhance confidence in the multilateral trading system.

Members agreed on December 15, 2000 that the General Council, meeting in special sessions, would address outstanding implementation issues and concerns, particularly those raised during the preparations for the Third Ministerial Conference, and that the process should be completed not later than the Fourth Session of the Ministerial Conference. The Fourth Ministerial reached a decision in this regard[22] that was accepted by Egypt.

2. The Mandated Negotiations

(a) Agriculture. Egypt's general goals with respect to the new negotiations on agriculture can be summed up as follows:[23]

[16] For example, the Agreement on Subsidies and Countervailing Measures, in which subsidies commonly used by developing countries for their industrialization and development have been included in the actionable or banned (prohibited) category, while some of those commonly used by developed countries (certain types of research and development, regional, and environmental subsidy) are in the non-actionable category. *See* Chapter 16 of this book.

[17] For example, the "dirty tariffication" of non-tariff barriers to agricultural imports practised by some developed countries that often resulted in higher effective barriers to trade being in place after the *Agreement on Agriculture* than before, and the "back-loading" with respect to the *Agreement on Textiles and Clothing* that meant that most quotas imposed by the United States and the EU under the *Multifiber Arrangement* were to remain in place until the very end of the ten-year implementation period. *See* Chapters 6 and 9 of this book.

[18] For example, initiating repeated investigations against the same product from the same country within a short period of time.

[19] For example, setting some international standards without the presence of countries at different levels of development and from all geographical regions in a standard-setting organization.

[20] For example, applying rules in favor of developing countries in Article 10.2 concerning period for compliance with a new SPS measure, and paragraph 2 of Annex B concerning intervals between the publication of an SPS regulation and its entry into force.

[21] WT/ 99/5868/Rev. 1, October 19, 1999.

[22] WT/MIN(01)/W/10, November 14, 2001.

[23] This is the official position of the Egyptian Ministry of Agriculture, and the Committee established in the Ministry of Economy and Foreign Trade to follow up the application of the UR Agreements, as conveyed to the Egyptian Delegation to the WTO.

- Achieving a higher level of liberalization in international trade in agricultural goods, and the removal of price-distorting practices and measures facing this trade.
- Enhancing market access opportunities by achieving a real reduction of customs tariffs (especially in light of the reduced tariff rates applied by Egypt), as well as eliminating the impediments facing the exports of developing countries, in particular by reducing tariff peaks and tariff escalation.
- Achieving a significant reduction in the field of domestic support accorded by various countries, especially developed ones, thus allowing developing country exports to achieve a higher degree of competitiveness in developed country markets.
- Eliminating or significantly reducing the export subsidies granted by various countries, mainly developed countries, with the aim of increasing competitiveness of other countries' exports to third country markets.
- According effective and practicable special and differential treatment to developing countries.
- Eliminating non-tariff barriers and formulating a set of rules to eliminate disguised arbitrary or unjustified measures taken by some Member countries, especially developed ones, including in the field of sanitary and phytosanitary procedures, as well as requesting Members applying tariff quota systems for agricultural products to liberalize them and to operate them transparently and fairly.
- Developing a practicable mechanism to implement and render effective the Marrakesh Decision on Measures Concerning the Possible Negative Effects of the Reform Program on Least-Developed and Net-Food Importing Developing Countries.

Although Egypt cannot deny the importance of non-trade concerns in the field of agriculture (often referred to as "multi-functionality"), including the desire to guarantee food security, rural development, and certain environmental considerations, Egypt stresses the need to achieve consensus on a definition of such concepts, designed to ensure that they will not be used as disguised protectionism.

In his speech to the Fourth Ministerial,[24] the Egyptian Minister of Economy and Foreign Trade summarized the Egyptian position concerning negotiations on Agriculture, stating that WTO Members should aim for its full integration into the WTO framework.

(b) Services. During the preparatory meetings for the mandated negotiations on services, Egypt emphasized that the negotiating guidelines should include the following elements: progressive liberalization, fewer sectors of liberalization for developing country Members, and consideration of national policy objectives and the level of development of individual country Members. Furthermore, negotiations should be conducted under the current principles and existing structure of the GATS, and take into account the unilateral liberalization measures undertaken since the conclusion of the Uruguay Round. In addition, market access negotiations should be conducted on a request-offer basis, and should be supplemented, if necessary, by other approaches on a voluntary basis, to avoid using a rigid framework for negotiations for all countries despite their different levels of development and the different pace of liberalization. Flexibility should be provided

[24] WT/MIN(01)/ST/36, November 10, 2001.

for developing countries in terms of the time limits to submit proposals and requests or offers. The creation of new bodies for services negotiations should be avoided in order not to increase the burden on developing country delegations, usually limited in numbers, when they follow the negotiation process. The importance of increasing participation of developing countries in trade in services, as provided for in Article IV of the GATS, should be emphasized.

In addition, the report of the Trade Ministers of Eastern and Southern Africa following the joint preparatory meeting held in Cairo by the members of the Common Market for Eastern and Southern Africa ("COMESA")[25] and the Southern African Development Community ("SADC") on July 30, 2001 to prepare for the fourth WTO Ministerial Conference (Doha)[26] provides that:

- The existing architecture of GATS, in particular the positive list approach must be maintained (¶29);
- The effective implementation of GATS Article IV and XIX(2) concerning the liberalization of market access for developing countries and LDCs in sectors and modes of supply of export interest to them, are called for (¶30); and
- The liberalization of the movement of natural persons (mode 4) must be undertaken by eliminating barriers to market access (¶31).

In his speech to the Fourth Ministerial,[27] the Egyptian Minister of Economy and Foreign Trade reiterated the Egyptian position concerning negotiations on services stating that WTO Members should aim for the creation of opportunity in a wider spectrum of sectors; with special emphasis on sectors and modes of interest to the less-advantaged Members.

(c) Singapore Issues. Egypt had formulated clear positions regarding the Singapore issues. They are summarized in the following sub-sections.

(i) *Trade and Competition Policies.* In Egypt's view it is important that the Working Group on Trade and Competition Policies pursue its mandate as stipulated in the Singapore declaration, by: (1) Pursuing the analytical and educational work regarding the synergies between trade and competition policies; (2) Studying the effect of the various proposals submitted by developing countries, especially those dealing with the non–competitive practices of the concerned institutions, as well as detecting and reviewing the integration process taking place amongst these institutions, and its effect on international competition; and (3) extending the study to explore the means of coordination between the WTO, and the other relevant intergovernmental organizations, such as UNCTAD and the World Bank, especially with respect to the resources available for technical assistance and capacity-building in the developing and least developed countries.

(ii) *Trade and Investment.* Egypt believes in the importance of pursuing the analytical and exploratory work tackled by the Working Group on Trade and Investment, in particular the need to study the synergies and interaction between trade and investment. The Working Group should, while fulfilling its task, shed light upon issues of importance to developing countries, especially those related to the positive or negative

[25] Egypt is a member of COMESA.
[26] The Report is available at http://www.comesa.int/news/newsdoha.htm.
[27] WT/MIN(01)/ST/36, November 10, 2001.

effects of foreign direct investment upon the developmental goals or objectives of the host countries; the extent of flexibility accorded to the host countries in setting policies to fulfill such objectives; and investors' obligations towards the host countries and vice versa.

In this respect, the Report of the Trade Ministers of Eastern and Southern Africa following the COMESA/SADC meeting held in Cairo, on July 30, 2001 to prepare for the Doha Ministerial mentioned in paragraph 48 that ". . . in any future work in this area, it would be necessary to ensure that the outcome will contribute to facilitating investment flows to their countries while preserving their policy space and flexibility to pursue their national development objectives."[28]

The press release issued at the end of the consultative meeting attended by the Arab Ministers of Economy, Trade and Finance held in Cairo July 17–18, 2001, stated that the participants could look at the possibility of participating in the negotiations on trade and investments if the following considerations are taken into account: (1) any agreement on trade and investment should have a structural framework similar to the GATS agreement; (2) the negotiations should take into account national economic policies and developmental needs; and (3) technical and financial assistance should be provided to developing countries for capacity building; and investments should include transfer of technology, and to increase work opportunities.

In his speech at the Doha Ministerial,[29] the Egyptian Minister of Economy and Foreign Trade summed-up the Egyptian position with regard to Investment and Competition as follows: "[the] study should focus on modalities and processes that improve FDI flows, at the same time maintaining flexibilities for developing and least-developed countries to pursue their national development objectives". The Minister added: "In this regard, before we agree to negotiate, we should agree on what it is we want to negotiate". This position of Egypt, stems from what was agreed upon by the Trade Ministers of Eastern and Southern Africa referred to above.

(iii) *Trade Facilitation.* With respect to trade facilitation, Egypt supports pursuing the analytical and exploratory work tackled within the framework of the Council of Trade in Goods, and utilizing the experience of the relevant international organizations, such as the World Customs Organization ("WCO") and others in the field. While tackling the analytical and exploratory work, problems that confront developing countries in the area of implementation should be explored further and addressed, especially in the field of activating and studying the provisions dealing with special and differential treatment and the technical assistance to be accorded to countries within the framework of the relevant agreements, such as the Agreement on Customs Valuation, Rules of Origin, Technical Barriers to Trade, and Sanitary and Phytosanitary Measures.

It should however be noted that the press releases issued at the end of two separate meetings, the first for the Arab Ministers of Economy, Trade and Finance held in Cairo on July 17–18, 2001, and the second for Trade Ministers of Eastern and Southern Africa held also in Cairo on July 30, 2001, stated that the participants expressed a lack of conviction that, at this stage, WTO rules should be negotiated with respect to trade facilitation.

In his speech at the Doha Ministerial,[30] the Egyptian Minister of Economy and Foreign Trade asked, on the trade facilitation issue, for the following: "a negotiated framework of

[28] *Supra* note 26.
[29] WT/MIN(01)/ST/36, November 10, 2001.
[30] WT/MIN(01)/ST/36, November 10, 2001.

general non-binding guidelines, coupled with a comprehensive and integrated effort in technical cooperation, financial support and human and institutional capacity-building".

(iv) *Transparency in Government Procurement.* With respect to government procurement Egypt seeks to avoid the discussion of matters that go beyond transparency, such as market access or dispute settlement.[31] The scope of any new Agreement on Government Procurement should not cover services. It should be limited to the area of goods and applied only to procurement and tenders allowing for the participation of foreign suppliers. The transparency provisions should take into consideration the level of development in developing countries. Transparency in government procurement should not limit the right of a government to use any kind of tenders including limited tenders. The Government Procurement Agreement should not include any reference to issues falling beyond the WTO mandate, such as corruption or bribery. Lastly, the Agreement should include provisions for technical assistance, special and differential treatment for developing countries, including transitional periods, and higher minimum thresholds for tenders on which the provisions are to be applied.

C. New Issues

1. Electronic Commerce

Egypt would like to see the analytical work mandated to the four relevant WTO bodies[32] pursuant to the *Electronic Commerce* W*ork Program* adopted by the General Council,[33] pursued further, and the educative process accelerated. Egypt believes that the commitment of the Members to continue the current practice of not imposing customs duties on electronic transmissions should be continued until the studies are finalized.

2. Trade and Environment

Before the Seattle and Doha Ministerial, Egypt did not object to discussing trade and environment in the WTO, as long as the discussions did not go beyond the analytical work undertaken by the Committee on Trade and Environment. Egypt also believes that the Committee on Trade and Environment should: (1) take account of the developmental dimension while studying environmental issues, in order to achieve the objective of sustainable development, as well as to guarantee that no unnecessary environmental barriers impede developing country exports; (2) urge developed countries to supply more technical assistance to developing countries as stipulated in the Rio Declaration, before asking those countries to adopt and implement certain standards; and (3) deal cautiously with the concept of "processes and production methods ("PPMs") and eco-labeling programs since they could create unnecessary obstacles to developing country exports, including food items.

In two separate meetings, referred to above, the Ministers of Economy, Trade and Finance from Arab and African countries, meeting in Cairo in July 2001, noted that the issue of trade and environment was not yet ripe for negotiations, that the WTO Committee on Trade and Environment should continue its work program, and that Members should

[31] Egypt is not a signatory to the plurilateral Agreement on Government Procurement.

[33] WT/L/274, September 25, 1998.

insure that environmental concerns would not be used as barriers to impede the flow of exports from developing countries.

In his statement to the Doha Ministerial,[34] the Egyptian Minister of Economy and Foreign Trade noted that "Environment must not be a tool for protectionism. Any discussions or clarification of existing environmental rules within the WTO must take special care not to provide the opportunity for any member for a return to trade protection".

In Doha the Members agreed[35] to start negotiations on the relationship between existing WTO rules and specific trade obligations set out in multilateral environmental agreements ("MEAs"). They agreed that the negotiations shall be limited in scope to the applicability of such existing WTO rules as among parties to the MEA in question, and that the negotiations shall not prejudice the WTO rights of any Member that is not a party to the MEA in question. Members also agreed that the Committee on Trade and Environment, in pursuing work on its agenda should give particular attention to certain matters, among them the effect of environmental measures on market access, especially in relation to developing countries, in particular the least-developed among them.

In the Doha Declaration the Members also recognized the importance to developing countries, in particular the least-developed among them, of technical assistance and capacity building in the field of trade and environment.

3. Labor Standards

Egypt opposes any linkage between trade and labor and is presently against discussing this issue in the WTO. The reason is that labor standards could be used for protectionist purposes to the particular disadvantage of developing countries. Egypt supports the conclusion presented in the Singapore Declaration which states that the International Labor Organization ("ILO") is the competent body to tackle this issue.[36]

In his statement to the Doha Ministerial,[37] the Egyptian Minister of Economy and Foreign Trade reiterated Egypt's position in this regard, noting that "on Labor Standards, we must reject, the use of labor standards for protectionist purposes. Hence, we reiterate the views expressed at the Singapore Conference that the ILO should remain the only organization in charge of this issue".

The Doha Declaration[38] provided as follows with regard to core labor standards: "We reaffirm our declaration made at the Singapore Ministerial Conference regarding internationally recognized core labor standards. We take note of work under way in the International Labor Organization (ILO) on the social dimension of globalisation." Egypt believes that this text maintains the ILO as the only organization in charge of labor standards, and thus this matter will stay outside the Doha Round of trade talks.

4. Domestic Industrial Tariffs

The Egyptian government is aware that the reduction and elimination of tariffs on industrial goods could affect income from customs revenues, while not immediately increasing exports. Economists in Egypt are in agreement that increasing exports requires, in

[34] WT/MIN(01)/ST/36, November 10, 2001.

[35] *Doha Ministerial Declaration*, WT/MIN(01)/DEC/W/1, November 20, 2001, reproduced in the Appendix to this book.

[36] WT/MIN(96)/DEC, December 18, 1996.

[38] WT/MIN(01)/DEC/W/1, November 20, 2001.

addition to the liberalization of trade, improving the quality of local production, reducing its costs, increasing worker productivity, and improving marketing capabilities—thereby enabling Egyptian products to compete abroad. The economists agree that this will require considerable internal effort coupled with sufficient assistance from abroad.

The Egyptian government accepts the fact that the ultimate objective of the WTO is to liberalize international trade. Hence, the government agreed to the initiation of a new round of negotiations on industrial tariffs, provided that any agreement reached should include flexibility provisions for developing countries, such as exemptions of some industrial sectors, longer implementation periods, transitional periods, and lower tariff reductions for developing countries.

The statement of the Egyptian Minister of Economy and Foreign Trade to the Doha Ministerial[39] sums up Egypt's position concerning the subjects of the negotiations. He stated that: "In Non-Agricultural Market Access, tariff peaks, escalation, and non-tariff barriers should take precedence; while maintaining a fair and differentiated treatment for developing and least-developed members".

Egypt accepted the consensus reached and reflected in the text of the Doha Declaration in this regard. Members agreed to negotiations that shall aim to reduce, or as appropriate, eliminate tariffs, including the reduction or elimination of tariff peaks, high tariffs, and tariff escalation, as well as non-tariff barriers, in particular on products of export interest to developing countries. The Declaration went on to say that product coverage shall be comprehensive and without *a priori* exclusions. The Declaration also provided that the negotiations shall take fully into accounts the special needs and interests of developing and least-developed country participants, including through less than full reciprocity in reduction commitments.

D. Egypt's Strategy to Accomplish Its Objectives

Egypt is trying to accomplish its objectives relating to the "new issues" by working in cooperation with other Members that hold the same views, especially other developing country delegations and groups, including the Arab countries, African countries, the G-15, the G-77. In fact, the position of Egypt and other developing country members at Doha was more flexible than their positions at Seattle with respect to negotiations on the "new issues". This happened as a result of other efforts to make this Conference successful, including the adoption of the Decision on "Implementation Issues", and the acceptance by developed countries to enhance support for technical assistance and capacity-building wherever needed to insure the full participation of developing and least-developed countries in the negotiations on these new issues.

IX. Effects of Regional Trading Arrangements on Egypt

Egypt welcomes regional trade arrangements to the extent that they help to achieve more trade liberalization. Egypt has trade agreements with Arab countries (the Greater Arab Free-Trade Area or "GAFTA") and some African countries (the Common Market for Eastern and Southern Africa or "COMESA"). It is also a party to the Euro-Mediterranean Agreement with the European Union. It is currently negotiating free trade agreements with the EFTA countries and is seeking a free trade agreement with the United States.

[39] WT/MIN(01)/ST/36, November 10, 2001.

Egypt has also signed a number of bilateral trade agreements to accelerate regional trade liberalization.

Despite the fact that Egyptian–Arab cooperation is the oldest of these agreements, the steps taken are rather limited and implementation of the agreements is slow. Intra-Arab trade in the year 2000 represented only 8.4 percent of total Arab foreign trade in that year. Egyptian membership in COMESA and its agreement with the EU are rather recent and evaluating the results at this early stage is premature.

Egypt is signatory to the Global System of Trade Preferences ("GSTP"), and Egypt exchanges tariff concessions with other signatories on a range of specified products. The members of this system are developing country Members of the G-77. This system has a limited effect on Egypt's trade due to the fact that it involves a limited number of goods enjoying a rather small reduction in tariffs.

Egypt believes that there is a need to adopt better rules and mechanisms to alleviate the adverse effects of regional trade arrangements, mainly potential trade diversion, especially with respect to the exports from non-member developing countries; and to ensure that non-member developing countries benefit to a certain extent from the liberalization of trade resulting from those arrangements.

Paragraph 7(b) of the Report of the Preparatory Meeting of the Trade Ministers of Eastern and Southern Africa (COMESA/SADC), held in Cairo on July 30, 2001 to prepare for the fourth WTO Ministerial Conference, states that the Ministers "agree that regional integration initiatives are compatible with the multilateral trade system. In particular, it is imperative they ensure that there is coherence between commitments in the framework of regional integration and under the multi-lateral trade system".[40]

X. How Trade Policy is Developed in Egypt

Responsibility for trade policy formulation in Egypt rests with the Ministerial Economic Committee, chaired by the Prime Minister, which drafts legislation to be introduced in the People's Assembly (the parliament) for approval. The Ministry of Foreign Trade implements trade policy, and coordinates implementation by other ministries and agencies. Inter-ministerial consultations are also carried out to assess the impact of major policy changes on various sectors of the economy.

The Cabinet Policy Committee, which is headed by the President, establishes and monitors broad economic and social policy issues and sets guidelines for trade policy. The Economic Group of Ministers, which is usually chaired by the Prime Minister, is responsible for the coordination of rules and regulations governing trade and other economic activities.

Informal advice is sought from academia and organized interest groups, including: the General Federation of Chambers of Commerce, the Federation of Egyptian Industries, the Egyptian Businessmen's Association, and trade associations. Other civil society groups in Egypt, which are rather new and have limited membership, are not influential and have a very limited role in formulating Egypt's formal trade policy. However their role in Egypt is increasing slowly.

Political parties, such as the National Democratic Party, which enjoys a large majority in the People's Assembly, and many small opposition parties with limited support, play their role inside the Assembly, discussing and adopting legislation.

[40] *Supra* note 26.

Newspapers, radio stations and T.V. stations, mainly owned and manned by the State although there are a few exceptions in recent years, enjoy a wide range of freedom of expression and are the main vehicles for promoting the views of individuals and groups, including civil society, so that their opinions are known by the public and policy makers.

XI. Conclusion

The multilateral trading system, as given effect by the WTO Agreement, brings many advantages, but also poses some challenges. It provides a predictable, transparent, rule-based trading system where decisions are taken by consensus, and small countries enjoy the same rights as larger ones. However, the scope of coverage of the WTO Agreement is wide and increasing. Complying with the terms of the WTO Agreement requires laborious efforts on the side of developing countries that often exceeds their limited financial, administrative and technical capacities.

Trade is a two-way street. Countries cannot concentrate only on efforts to increase their exports while doing their best to impede imports. Efforts to assist developing countries to improve their production and marketing capacities will result in improving standards of living in those countries and therefore the ability of their people to consume more goods, local and imported.

It will require an honest and serious effort on the part of the Members if an agreement is going to be reached in conformity with the Doha Ministerial Declaration and the Decision on Implementation. It will be necessary to make concessions in favor of all Members, developed and developing, and to rectify the imbalances in the existing agreements in order to achieve success.

I. Introduction

As one of the largest trading entities in the world, the European Community ("EC", now evolved into the European Union, of which it remains the central component)[1] has actively participated in multilateral trade negotiations from the first years of its existence.

When the Rome Treaty, which established the EC, entered into force in 1959, the EC inherited authority for the conduct of trade policy and trade negotiations from its Member States. History shows that over time there has been a fair degree of parallelism between the Community's internal development and its successive enlargements on the one hand, and the worldwide opening of the European market through international negotiations on the other.

This parallelism goes back to the provisions on the Common Commercial Policy laid down in the very first draft of the Treaty of Rome. "By establishing a customs union between themselves, Member States aim to contribute, in the common interest, to the harmonious development of world trade, the progressive abolition of restrictions on international trade and the lowering of customs barriers."[2]

The first international trade negotiations under the auspices of the GATT in which the EC participated was the Dillon Round in 1961–62.[3] The establishment of a customs union between the Member States of the European Economic Community was actually a major motivation for the convening of that Round. The Treaty of Rome had set the level of the Common External Tariff for most products as an arithmetical average of duties in force in the existing customs territories on January 1, 1957. Under Article XXIV:6 of the GATT, the EC was obliged to negotiate the release of the bindings on those products for which the duties would increase following the introduction of the new common external tariff. The second purpose was to negotiate a reduction in the new Common External Tariff, in order to alleviate the adverse effect on imports from third countries of the gradual establishment of free trade between the Member States of the Community.

The European Community offered to reduce the common external tariff on industrial products in general by twenty percent if others did likewise. According to one of the main U.S. actors, "... the Dillon Round, where a reduction in the level of the new tariff of the European Economic Community was the most important prize to be achieved, came close to a breakdown because of the inability of the U.S. negotiators to respond favorably to the twenty percent linear offer of the EEC".[4] The same witness said about the outcome of that part of the negotiations: "... there is irrefutable evidence that limits on the President's authority restricted achievement, at least in the negotiation between the United States and the EEC".[5]

To defend its economic interests or because of external pressure, the EC thus seemingly felt obliged to play an active role in multilateral trade negotiations from its very beginning.

[1] The post-Uruguay Round period happened to coincide with the increasing appearance on the world scene of the European Community under the name of the European Union. The more comprehensive "Union" reflects the entity's growing activity in other than the traditional matters of "Community" competence. The appellation "European Union" has also entered "WTO-speak". However, the European Community is still the only European institution with legal personality that can enter into legally binding commitments. It is represented as such in the WTO. In order to avoid confusion using the two names I will exclusively use the term "European Union" for matters of Community as well as of Member States competence when discussing the post-Uruguay Round period.

[2] *Treaty of Rome*, Art. 131, formerly Art. 110.

[3] The Dillon Round, named after its initiator, Douglas Dillon, Secretary of the Treasury in the Kennedy Administration, was the fifth round of multilateral trade negotiations held under the auspices of the GATT.

[4] John W. Evans, The Kennedy Round in American Trade Policy 19 (1971).

[5] *Id*. at 16.

Given its increasing weight, following successive enlargements, it was also bound to become one of the crucial actors on that scene. This also implied that, for the coming years, the international trade negotiations would largely be determined by the U.S.-EC relationship (often referred to as the love-making of two elephants, crushing the minor assistants in the process). The Dillon Round in the meantime only led to a meager 2.4 percent weighted average tariff reduction for dutiable U.S. imports taken as a whole. In order to prevent further argument over its new external tariff in the context of the GATT Art. XXIV:6 consultations, the EC unilaterally reduced its industrial tariffs by twenty percent as initially proposed.

The EC also participated as an entity, in the name of its Member States, in the successive Kennedy, Tokyo, and Uruguay Rounds. Its participation in the Kennedy Round (1964–7) has generally been considered to be its first major successful action on the international scene. In the Uruguay Round the EU was a strong promoter of the creation of a Multilateral Trade Organization and it took an active part in the establishment of the new set of rules for international trade in different sectors.

Foreign trade accounts for around ten percent of the GDP of the EC, which is comparable to the situation in the United States. This degree of dependence on trade with the rest of the world has remained the same despite the ever-growing volume of intra-Community trade. Lacking political clout commensurate with its economic strength, the European interest has been perceived to be on the side of a well-functioning international trading system with transparent rules, especially in light of its own complex internal decision-making process. It would therefore have been disingenuous, and contrary to its fundamental interests, for the EC not to have supported, in the middle of the 1980s, the growing world consensus in favor of a new round of multilateral trade negotiations.

The participation of the EC in the Uruguay Round negotiations, however, was only possible after difficult internal discussions on the definition of a common European negotiating position. These discussions reflected widely divergent economic interests in certain sectors of the economy. But they have also been a stimulus for internal reform in different areas. The EC was often obliged to introduce or to accelerate internal market provisions and regulations, as well as structural adjustments, which otherwise would not have taken place or would have happened much more slowly. The successive phases of the Common Agricultural Policy ("CAP") reform are the most striking example of this interaction between the EC's internal and its external economic development. Politically, the growing performance of the EC as a full-fledged negotiator on the international scene increased its status and credibility as a major trading partner.

As an increasingly active participant in an increasingly interdependent world economy, the EC has, like most of its trading partners, been obliged to constantly consolidate its domestic constituency in favor of trade liberalization and structural reform. Some of the international trading issues raised very serious political concerns among interest groups and citizens, as they were gradually becoming aware of the stakes that were involved in increasingly worldwide discussions (e.g., in the audiovisual, agriculture, services, food, and health sectors).

II. Trade Policy Decision-Making in the EU

From its very beginning the European Community has had a common commercial policy. The relevant articles in the present text of the Treaty of Rome are Articles 131 to 134 (formerly Articles 110–115). The Member States are not competent to act on their own in the fields covered by the common commercial policy. There is however no clear

definition in the Treaty of the common commercial policy. It has developed over the years largely as the external side of the Customs Union and the accompanying Internal Market policy.

Constitutionally, the European Commission is the initiator as well as the negotiator of the common commercial policy. It conducts the negotiations in consultation with a special committee of senior officials from the Member States and reports to the Council of Ministers (where the governments of the Member States are represented at ministerial level). The Council decides on its recommendations by qualified majority voting. Member State governments are represented in the Council by their ministers who have particular responsibility for the subjects under discussion. Ministers of Agriculture meet regularly, as do the ministers responsible for financial and economic affairs, transportation, etc. Ministers of Foreign Affairs traditionally have a coordinating role. They also have, as a group, the sometimes arduous task of arbitrating between conflicting positions taken by meetings of sectoral ministers. This is usually the case in matters with an international dimension like international trade negotiations.

Before the start of the Uruguay Round in 1986, the Member States had left open the decision-making procedures in relation to those sectors of the negotiation that had not traditionally been considered as being covered by the common commercial policy (in particular, services and intellectual property protection). At the end of the Council meeting on September 20, 1986, which approved the Punta del Este Declaration, the Ministers stated: "This decision does not prejudge the question of competence of the Community or the Member States on particular issues".[6]

This ambiguity did not play a role during the negotiations, but led to a very difficult debate at their conclusion, when the results had to be approved at the political level. The European Commission's effort to obtain overall Community competence for the package of results was undercut by an opinion of the European Court of Justice, solicited by the Commission,[7] which largely excluded the decisions on services and intellectual property protection from the common commercial policy competence.[8]

This institutional setback for the Commission was later corrected, at least partially, by an amendment to Article 133, adopted by the Council of Ministers in December 2000. The new text reintroduces, with some reservations, the "implied external powers" doctrine, which the European Court had supported in previous years. The common commercial policy provisions (with majority voting) now apply to the negotiation and conclusion of agreements in the fields of trade in services and the commercial aspects of intellectual property. Unanimity however is required if a provision of an agreement requires unanimity in the adoption of corresponding internal decisions (for example, a trade agreement with a chapter on taxation). Article 133 explicitly excludes education, human health, and culture from Community competence.

In addition to mandatory consultations with representatives of the Member States before negotiating positions are established, the Commission also consults with representatives of the business community, the trade unions, trade organizations and, more recently, other interested non-governmental organizations. There are no legal requirements to do so, but the non-governmental interest groups have considerably increased their activities in Brussels over the years.

[6] Minutes of the 1104th meeting of the Council, September 20, 1986.

[7] Opinion 1/94 of the European Court of Justice of November 15, 1994.

[8] Jacques H.J. Bourgeois, *The EC in the WTO and Advisory Opinion I/94: An Echternach Procession*, 32 Common Market Law Review 763 (1995).

These contacts complement similar consultations that take place in the Member States before national positions are decided by the governments. There is no general division of labor in that respect and the way in which such contacts are made differ from one subject or Member State to another. Some major companies or trade associations will be active at both levels. These activities are tending to increase and have become a significant feature of the preparation of the negotiations by the Commission services.

Much to the frustration of the Members of the European Parliament, the Treaty of Rome does not foresee a role for them in the development of trade policy. Member States have resisted initiatives aimed at modifying this "anomaly" when amendments of the Treaty are considered. The European Commission, however, has volunteered to hold regular hearings with the interested Parliamentary commissions on all aspects of its activities in the area of international trade. Representatives of the European Parliament are regular attendants, as observers, of major trade negotiation meetings.

III. The Uruguay Round

A. Origin of the Round

The first efforts to launch a new Round of Multilateral Trade Negotiations only three years after the signing of the Tokyo Round agreements were initiated by the United States. They were, to a large extent, motivated by the profound frustration of that country with the meager results of the previous round with respect to agriculture.[9] American exports of agricultural products (wheat in particular) were going down substantially, stocks were increasing, and budgetary expenses growing to staggering heights. The United States had the full support, based on similar considerations, from the Cairns Group, which had been set up by countries that were major exporters of farm products[10] to defend their interests in the GATT. It would however take five more years and two ministerial meetings in the GATT before the green light for the negotiations could be given at the Punta del Este Ministerial in September, 1986.

The main reasons for this delay were concerns, on the part of the EC, that this time it would be difficult to avoid making concessions on agriculture, and, on the part of the developing countries, the desire to safeguard, again contrary to what happened in the Tokyo Round, their claim for "special and differential treatment" in matters of international trade, and not to be prematurely drawn into negotiations on services.[11]

An additional element was that on January 1, 1986 the European Community would be further enlarged through the accession of Spain and Portugal (Greece had joined on January 1, 1981). Both countries were in the midst of a difficult process of adjustment and added to the number of Member States still harboring misgivings about a new GATT round.

However, the weakening economies of the EC Members, marked by slower growth and rising unemployment, made the European leaders revisit the potential remedial effect of a new effort to open additional markets. The Council of the European Community, under

[9] GILBERT R. WINHAM, INTERNATIONAL TRADE AND THE TOKYO ROUND NEGOTIATION 362 (1986); Clayton Yeutter, *Bringing Agriculture into the Multilateral Trading System*, in THE URUGUAY ROUND AND BEYOND: ESSAYS IN HONOR OF ARTHUR DUNKEL 64 (Jagdish Bhagwati and Mathias Hirsch eds. 1999).

[10] Leading members of the Group included Australia, New Zealand, and Argentina. Canada generally supported the aims of the Group.

[11] HUGO PAEMEN AND ALEXANDRA BENSCH, FROM THE GATT TO THE WTO, THE EUROPEAN COMMUNITY IN THE URUGUAY ROUND 32–39 (1995).

growing pressure from the United States and other developed countries, finally accepted the principle of a new round of multilateral trade negotiations at its meeting of March 19, 1985.[12] The ministers explained their motivation in a rather defensive and political text, in which the initial themes of the European approach to the round were referred to along the following lines:

> The ministers considered that a new round would not of itself be sufficient to strengthen the open multilateral trading system and to expand international trade. Other elements had to be taken into consideration: the need to halt protectionist pressures ("standstill"), the need to reduce existing trade restrictions as economic recovery proceeds ("roll-back"). Moreover, monetary and financial imbalances required appropriate and parallel action. Japan in particular should match its exports with increasing imports ("balance of benefits"). A new round would help to promote world economic recovery and growth and would reinforce the multilateral structures and disciplines of the GATT. The Community was ready to work in order to achieve the broad consensus on objectives, participation and timing required prior to the launching of a round. It was however too early to fix the date for the formal opening. Negotiations on agriculture could lead towards improvements within the existing framework of the rules and disciplines of GATT, while safeguarding the fundamental objectives and mechanisms of the CAP. Trade in services, problems of counterfeit goods and the protection of intellectual property rights were possible new topics for negotiation. Parallel negotiations in the different areas should lead to a better balance of rights and obligations ("globality—single undertaking").

B. The European "Overall Approach"

Following the March 1985 meeting, internal discussions took place between the Commission and the Member States on negotiating directives in accordance with the procedures applicable to the common trade policy. These discussions—following a procedure which had been applied at the beginning of the Tokyo Round—led to the establishment of a document, entitled the "Overall Approach", which was finalized on June 18, 1986.[13] The document set forth the European Community's view on the situation in the area of multilateral trade in a more systematic way than had been done in the March 1985 document, and contained a list of general objectives rather than negotiating guidelines.

By its nature, the document was bound to reflect the differing views and objectives of the Member States. Even so the Council of Ministers could not muster a qualified majority in favor of the text. It referred in a statement to the Declaration of March 19, 1985, "which remains, in every particular, the basis of the Community's position on the New Round of Multilateral trade negotiations".[14] Even though the "Overall Approach" was not formally adopted, the Council welcomed it as providing the Commission "with the necessary orientations". During the entire Uruguay Round, with the exception of the last phase of protracted U.S.-EU negotiations on agriculture, when an explicit mandate was drafted, the "Overall Approach" served as a convenient informal mandate for the Commission negotiators.

In the "Overall Approach" the European Commission characteristically warned against "over-ambitious programs accompanied by unrealistic expectations". It referred to the recent unfavorable developments in the world economy "such as sudden and massive

[12] Council Document 5660/85, dated March 21, 1985.

[13] Council Document 7800/86, dated June 18, 1986. The document was regularly referred to in internal EC discussions during the Uruguay Round, despite the fact that it had never been formally adopted by the Council.

[14] *Id*. at 1.

changes in energy prices, imbalance in economic and monetary policy between major trade partners, leading, *inter alia*, to excessive fluctuations in exchange rates, inflation, unemployment and high levels of indebtedness (particularly in the developing world)". It also stated that "the GATT must be modernized".

The major general objectives referred to in the "Overall Approach" were:

— to strengthen the multilateral structure and disciplines of the GATT and to adapt its functioning to new areas relevant to international trade;
— to provide the conditions for further liberalization of trade in goods and to "begin a similar process in the field of services . . . ";
— to conduct the negotiations as one overall operation; and
— to increase access for LDC exports to developed country markets.

The rest of the document was a survey of possible objectives in specific areas without clear guidelines.

"Globality" played a predominant role in the European position on the new round. While the initial approach to a possible trade-off in the negotiations could be summarized as basically two-pronged, concentrated on the topics of agriculture (defensive) and services (offensive), it was strongly backed up by a negotiating doctrine based on the principle of globality. In the March paper the principle was described in the following terms:

> The Council considers that too selective an approach to individual negotiating points should be avoided. A balanced package of topics for negotiation should be agreed upon, in which all participants will find advantages for themselves. In principle items should be negotiated and the results implemented in parallel and not in succession.[15]

At the Ministerial meeting in Punta del Este (September 15–20, 1986), the European Community was largely on the defensive vis-à-vis the exporters of agricultural products (led by the United States and the Cairns group of agricultural exporting countries), and vis-à-vis the developing countries because of their request for liberalization of trade in textiles. However, the EC took the offensive vis-à-vis Japan—which was running a large trade surplus—by claiming that the "balance of advantage" in the international trade situation should be corrected.

The Ministerial Declaration that emerged from the Punta del Este meeting did not reflect many of the Community concerns. Some balance between the diverse interests of the participants had however been achieved. The Council of Ministers therefore approved the Declaration and authorized the Commission to open the negotiations "within the framework of the directives which the Council will issue to it". Because of the wide range of new areas covered by the Declaration, the Council did not want "to prejudge the internal question of the competence of the Community or the (individual) Member States on particular issues".[16]

On the procedural side, however, the European Community was successful in getting the globality approach to the negotiations accepted by the other participants at Punta del Este. It was formulated as follows: "The launching, the conduct and the implementation of the outcome of the negotiations shall be treated as parts of a single undertaking".[17] For the European Community this "philosophy" had a tactical, a structural and a legal

[15] Council Document 5660/85, March 21, 1985, at 3.

dimension: nothing would be agreed until everything was agreed. The challenge would be to keep the principle alive later in the negotiations, when the outcome of the entire Uruguay Round seemed to depend on the result of a bilateral dispute between the two major participants on a single issue, agriculture.

C. The "European" Issues

1. Strengthening the Multilateral Disciplines

In March 1985, the Community had accepted the principle of a new multilateral negotiation as a way to prevent protectionist policies in a world economy marked by slow growth. The strengthening of the multilateral structures and disciplines of the GATT was considered to be one of the main general objectives of future negotiations. These negotiations had to demonstrate the continuing vitality and relevance of the General Agreement as compared with bilateral or plurilateral deals between interested parties to the exclusion of others. The major trading nations would have to give firm undertakings to refrain from taking measures inconsistent with the GATT and to resist protectionist pressures.

Discarding a purely defensive stand, the Community insisted on the need for real contributions by its major trading partners. This would require a "fundamental increase in Japan's propensity to import manufactured and processed agricultural products"[18] in order to correct the present imbalance in trade between that country and its partners. For the attention of the United States and other nations, the European Commission stated that "The rights and responsibilities of contracting parties should also be reviewed as regards certain special advantages, particularly those deriving from the use of waivers, recourse to the 'Grandfather' provision in the Protocol of Provisional Application and advantages accruing to federal states".[19]

Initial ambitions with respect to the Dispute Settlement system were not very high. The Community stated its readiness "to participate in the search for more effective procedural formulae . . . based on consensus, it being understood that, in the final analysis, procedural mechanisms on their own cannot ensure the resolution of problems arising out of substantive differences".[20] In the course of the negotiations the Community would become a strong proponent of the new Dispute Settlement system.

At the outset the European Community did not put forward ideas that would lead to the institutional reform of the GATT. While at a later stage of the round it would become one of the main protagonists of the creation of a full-fledged multilateral trade organization, the European Community limited its aims at the start to the modernization of the GATT, the strengthening of the multilateral structures and disciplines, and their adaptation to the new areas relevant to international trade.

2. Agriculture

Agriculture had been the European stumbling block to the launch of a new round of negotiations since the beginning of the 1980s. The European approach to negotiations had to take into account the existence of the CAP, which was, for countries like France, an inherent element of the European integration process. On the other hand, agricultural interests in the European Community were very diversified as far as the different sectors were concerned, as well as their relative importance.

[18] Council Document 7800/85, July 18, 1986, at 8.
[19] *Id.*
[20] *Id*. at 16.

The main instrument of the CAP was the dual-price mechanism, according to which guaranteed prices were fixed for goods sold on the EC market each year while export prices were adjusted downwards to the prevailing world market prices. The price policy involved a system of variable levies and export subsidies to make up the difference between world market prices and EC prices. When market prices fell, the intervention system purchased the excess production at the guaranteed prices. As a result of this policy the EC soon became self-sufficient and even an important exporter of a number of products, such as cereals, dairy products, and sugar. The unlimited intervention mechanism led to surpluses that had to be stored. The costs of the support policy got out of control, and international trade was distorted by the sales of the surpluses and competition with traditional suppliers.

Mainly because of the enormous burden of the CAP on the Community budget, some reform measures were introduced from 1984 on. These were aimed at breaking the automatic link between subsidy and production, especially for those products for which the surpluses were highest (cereals and milk). The basic mechanisms of the system, however, remained untouched. Inevitably, in agriculture during the whole Uruguay Round, the positions taken by the EC in the negotiations—often under external pressure—and the steps taken in the process of its domestic reform would be mutually influential and reflective.

The United Kingdom (more accustomed to direct support to the farmers through a system of deficiency payments) had insisted upon reform of the CAP right from its accession to the EC. The Federal Republic of Germany, with the Netherlands another traditional free-marketer, and a net contributor to the budget despite the fact that it had a large number of small farmers, for a long time took a much more ambiguous position between the canons of free trade and the imperatives of domestic politics. Internal conflicts between the Ministries of Finance and Agriculture were not unusual, as was the case in many other Member States. The reform ideas, and the resulting flexibility in the multilateral negotiations, often encountered more resistance in the Southern countries of the EC. Agricultural lobby groups carried heavy weight in countries like Germany and France as well as at the Community level.[21]

In 1985 the European Commission published a Green Paper in which it pleaded for more responsiveness to market signals, early retirement for farmers, direct income aid and land set-aside schemes.[22] These were elements of a reform movement which, in successive steps and somewhat reluctantly, would steer the CAP more into the direction of what the rest of the world wanted the EC to do: to decouple income support from production volumes.

In a first submission on agriculture in the Uruguay Round, the EC focused on short-term as opposed to long-term reform, which reflected the cautious approach of its internal reform aimed in the first instance at reducing surplus production. It suggested that participants try to deal with the fundamental distortions in supply and demand in the key agricultural sectors.

The initial objectives of the EC were threefold:

- to take credit, at the international level, for the reduction of domestic support, which had been decided in 1988 for the ten years starting in 1986. Other

[21] They were—significantly—best known under their French acronyms COPA (Comité des organisations professionnelles agricoles de l'Union européenne) and COGECA (Comité general de la coopération agricole de l'Union européenne).

[22] Green Europe, 1/88, *Restoring Equilibrium on the Agricultural Markets* (Brussels, EC Commission, 1988).

participants, including the United States, were invited to make a similar effort, which would result in the reduction of export subsidies because the surpluses would be reduced;
- to measure support on a global basis in order to avoid commitments on specific reduction measures (especially on the export side); and
- to re-balance the level of protection between different agricultural sectors (some products, like cereals, were protected by variable levies at the border, while others, like oilseeds and cereal substitutes were unprotected).

The price the EC was prepared to pay as its contribution to this approach was the tariffication of its variable levies. This proposal was soon rejected by the United States and the Cairns group, who wanted to eliminate all border measures and all domestic support over a period of ten years and all export subsidies over a period of five years.

In 1991, after the failure of what was supposed to be the closing session of the Uruguay Round in Brussels (Heysel) in December 1990, the European Community, under great pressure from developed and developing countries, changed its basic approach in various respects. It agreed to discuss specific concessions relating to border measures, domestic support and export subsidies. In addition, it indicated its intention—also for reasons of domestic agricultural policy—to move away from price support policies in favor of direct support of farmers, which it requested be exempted from reduction commitments. This would also make the request for re-balancing the external protection less relevant.

The reasons for this change were essentially:

- increasing external pressure on the European Community and on the CAP (which was also being criticized by some Member States), which were blamed by the non-agricultural constituencies of the Round for blocking the entire negotiation, and
- increasing awareness that the preceding stages of the CAP reform had failed to steer European agricultural policy in the right direction.

It is interesting to note that Commissioner McSharry presented the first draft of the proposals that would lead to the more basic reform of 1992, to his fellow Commissioners on December 6, 1990, while the failing Conference was still going on in Brussels.

3. Market Access for Goods

As a result of tariff reductions in previous GATT Rounds, the role of tariffs in trade policy had diminished considerably before the start of the Uruguay Round. Therefore the EC wanted to focus on the following more specific objectives:

- Reduction of those tariffs that were significantly in excess of the average level of tariffs maintained by most of the developed countries.
- Reduction of tariff escalation (the practice of maintaining higher tariffs on finished goods than on raw materials and components) which particularly affected trade in natural resource products, as well as the trade interests of the developing countries.
- Reduction of tariff bindings that exceeded the currently applied tariff levels.

Within this framework the European Community could start from a fairly aggressive stand with the one important exception of the textiles sector. As an important producer of textiles and of clothing products, it was under enormous pressure to take a defensive attitude, especially from some new Member States like Portugal.

In the eyes of the European trade authorities, the issue of the safeguard provision in GATT Article XIX was closely linked to the discussion on further market opening. It had been on the agenda in Geneva since the end of the Tokyo Round. Many contracting parties were opposed to any change of the existing provisions based on the MFN principle that was assumed to be enshrined in Article XIX. The EC and a minority of other contracting parties thought that more selective application of the safeguard clause would be the best remedy against the conclusion of informal, mostly bilateral, voluntary restraint arrangements outside, and in contradiction with the GATT rules. The EC therefore favored the inclusion in the GATT rules of the possibility of selective action "whilst ensuring an appropriate degree of transparency and international consultation to avoid adverse effects on third parties".[23]

The idea of examining the text of the General Agreement itself came to the fore relatively late in the course of the preparatory phase. It was not mentioned at all in the 1982 work program and made its first official appearance in the Punta del Este Declaration. There the Ministers indicated that the "participants shall review existing GATT Articles, provisions and disciplines as requested by interested contracting parties, and, as appropriate, undertake negotiations".[24] The EC's "Overall Approach" stated that "the GATT must be modernized",[25] with the general objective of "strengthen[ing] the multilateral structure and disciplines of the GATT",[26] but without specifying any particular GATT articles.

With respect to the nine plurilateral Agreements that had been concluded in 1979 at the end of the Tokyo Round,[27] the Community considered that:

> [T]aken as a whole, the MTN Agreements have had a positive influence on the development of international trade. It is clear, however, that their effectiveness has fallen short of expectations in some cases. Therefore, where necessary, ambiguities which have given rise to disputes in the past should be reviewed and clarified. Further development of these Agreements, in such areas as technical barriers to trade, the definition of subsidies, the application of countervailing duties or government procurement is in the Community's trading interest. However, any progress in these fields should adequately reflect policy aims pursued within the Community. Progress should not discourage a greater level of participation in such agreements.[28]

4. Services

It was in the services sector that the Europeans were to play the most pro-active role in the negotiations. At the beginning of the Uruguay Round one of the sharpest divisions between developing and developed countries concerned the desirability of expanding the activities of the GATT beyond the traditional issues relating to international trade in goods. The European Community, an important trader in international services, was of the opinion that "GATT must deal with a changing trade environment to meet the need of the future".[29] This did not mean, however, that new topics should be given precedence at the expense of the traditional ones.

[23] OVERALL APPROACH, *supra* note 13, at 9.

[27] The most important Agreements (also called "Codes") dealt with: Government Procurement, Anti-Dumping, Subsidies and Countervailing Duties, Technical Barriers to Trade, Customs Valuation, Import Licenses Procedures, and Civil Aircraft.
[28] OVERALL APPROACH, *supra* note 13, at 13.
[29] *Id*. at 4.

The long-term aim of a multilateral agreement negotiated within the GATT would be the liberalization of world markets for the widest possible range of internationally tradable services. In the forthcoming negotiations, the Community would strive for a comparable degree of effective access to the markets of its trading partners, independently of the legal or political structure or regulatory system of the country concerned. This would be achieved through a combination of the following elements:

- Increased transparency in the existing domestic regulations affecting trade in services.
- A framework of principles and rules to be applied to trade in services generally, and specific disciplines for individual service sectors where appropriate.
- The progressive broadening of the application of the framework.

Foreshadowing future discussions in critical sectors like audio-visual, the following general warning appeared in the "Overall Approach": "In extending this process to regulatory practices in individual service sectors, due account should be taken of measures which are the legitimate expression of acceptable policy goals".[30] The Commission also indicated that the Community would also be prepared to consider the specific problems of developing countries in this area, without, however, indicating precisely how this would be done.

5. TRIPS, TRIMS and Restrictive Business Practices

The problem of trade in counterfeit goods had been brought up in the Tokyo Round, but no conclusion was reached. Since then a GATT group of experts had underlined the significant economic and social problems caused by counterfeit trading but had reached no consensus. The Community expressed its interest in an effective agreement on broadly acceptable rules dealing with the international trade aspects of commercial counterfeiting. On the subject of the protection of intellectual property rights the Community was at first not much more ambitious. It asked that the new round "contribute to the definition of a better balance"[31] between the need for an adequate return on investment devoted to developing new goods and services and the need to avoid unreasonable barriers to trade.

However, when the United States managed to widen the debate on this issue in Punta del Este to the "trade-related aspects of intellectual property rights, including trade in counterfeit goods", stating that the aim of the negotiations would be to "clarify GATT provisions and elaborate as appropriate new rules and disciplines",[32] it received the strong support of the EC.

The initial European ambition was even more modest on what came to be called Trade-Related Investment Measures ("TRIMs"). The cause of the EC reticence was a difference of opinion between the Member States, some of whom utilized TRIMs. In an internal work document the Commission stated:

> At the Community level, there is no common policy with regard to investments .... It is clearly in the interests of the European Community to ensure that investments on its territory are not limited to mere assembly plants but contribute actively to the development of industrial structures .... It would not be in the interests of the EC to have more specific criteria with regard to the principle of national treatment in the area of investment.[33]

[30] *Id*. at 14.
[31] *Id*. at 17.
[32] *Punta del Este Declaration*, at 7.
[33] Working Document Art. 113 Committee 24/86, January 23, 1986 (unofficial translation).

By June 1986, in the "Overall Approach", the EC was able to adopt an encouraging but cautious tone:

> National investment policies have as their objectives the realization of a number of economic, social and political goals. The pursuit of some of these goals have harmful effects on international trade, due to the adoption of rules restricting imports or which artificially increase exports. Some of these rules can already be addressed, at least in part, under existing GATT rules, but there may be scope for further clarification. Others, including in particular export requirements, are not directly covered by the General Agreement, and could therefore be addressed.[34]

While the Havana Charter (1948) had devoted a whole chapter to restrictive business practices, the contracting parties of the GATT had not treated the problem as a trade policy matter. The European Commission mentioned only the practice of dual pricing in the field of primary products as a possible area of concern for the Uruguay Round negotiators.

6. Developing Countries

In 1986 more than half of the ninety GATT Contracting Parties were developing countries. Nations like India, Brazil and others had gradually become active participants in the GATT debates. The Community wanted to fully recognize the stake developing countries had in the multilateral trade negotiations, as well as stressing their potential as future markets for exports. It was fully committed to the principle of special and differential treatment.

The special relationship of the European Union with nearly seventy developing countries through the Lomé Association Agreement, which included a generous free trade component, reinforced its special interest in the position of the developing countries. As most of them belonged to the group of least developed nations, their interest and role in the trade talks was however rather limited. Nor would they play any role as strategic partners in the negotiations.

At the same time the Community assumed that the more developed of the developing countries would take on responsibilities and accept obligations of the General Agreement commensurate with the progress they had achieved in terms of their economic, financial and trade conditions.

D. European Results in the Uruguay Round

Overall, the results of the Uruguay Round are considered to have had a positive impact on the European economy. The creation of a strong international trade organization, a reliable dispute settlement system, and clear and predictable rules were major objectives of the EU negotiators. The increased market access offered the European Union, a major exporter, new opportunities for growth and employment. The Agreements on Services and on Intellectual Property protection responded—even if not fully—to its basic interests.

Above all, most Europeans felt that they had emerged fairly unscathed from a negotiation the launching of which they had resisted for a long time but the main elements of which they had been able to keep relatively well under control. The relief was particularly marked as far as agriculture was concerned. Agriculture had been the main obstacle to a pro-active European approach at the beginning of the Round. However, other than being

[34] OVERALL APPROACH, *supra* note 13, at 17.

the principal reason for the Round lasting for nearly three more years than originally scheduled, what sometimes appeared as an agricultural nightmare had in the end failed to inhibit productive negotiations in the other sectors.

The negotiations in the agricultural sector precipitated another "agonizing reappraisal" of the CAP by the European agricultural community. This had led to the so-called McSharry reform. Such a development had been considered inevitable, if not desirable, by most experts for quite some time. The fact that this "next step" had been made—not without some traumatic shocks and political upheaval—in the context of consistency between the internal and external aspects of the policy, while safeguarding the fundamental principles of the CAP, was an unexpected source of satisfaction for most. At the same time it had been recognized that the reforms had not reached their limit. The Agreement on Agriculture provided that one year before the end of the implementation period of the Uruguay Round results—i.e., in 2000—negotiations would be undertaken to continue the reforms.[35]

The domestic part of the new agricultural policy was adopted by the Council of Ministers in May 1992. It was based upon the acceptance of lower domestic prices (closer to the world prices), balanced by a system of agricultural support that would compensate farmers for the loss of revenue through direct payments. It was opposed by an important part of the European agricultural constituency. Without this basic re-orientation of the CAP, however, the agreement concluded during the so-called Blair House discussions between the United States and the EC in 1992, which formed the basis of the ultimate agricultural deal in the Uruguay Round, would not have been possible

The United States was generally pleased with the results. Carol Brookings, a well-known agricultural expert who played an active behind-the–scenes role in the negotiations on behalf of the United States, called them "a remarkable achievement, bringing agricultural trade under the rules and disciplines of the GATT for the first time. No one should underestimate the value of full tariffication, nor the initial steps made towards eliminating export subsidies".[36] Clayton Yeutter, U.S. Trade Representative and later Secretary of Agriculture during the first years of the Uruguay Round, wrote: "The Agreement on Agriculture was a fine achievement."[37]

While representatives of the developing countries had an overall positive view of the results of the Round in agriculture, it was not without reservations. Rubens Ricupero was negotiator for Brazil and, in that capacity, one of the main spokesman for the LDCs. He wrote:

> As a consequence of the Uruguay Round, new export opportunities will arise for all countries, including developing countries . . . The main achievement has been to address those areas and sectors where the absence of international consensus and workable rules had resulted in mounting trade tensions undermining confidence in the system (agreements on safeguards, subsidies, anti-dumping duties, agriculture, and textiles and clothing) . . . . This positive assessment, however, is tempered by a number of caveats . . . . [38]

These countries probably suffered from the bilateralization between the United States and the EC of the agricultural negotiations, which did not allow them to actively plead their interests, as well as from the fact that the Cairns Group (the coalition of agricultural

[35] *See* Article 20 of the Agreement on Agriculture.

[36] Address to the International Agribusiness Management Association, Jakarta, Indonesia, June 1997.

[37] Yeutter, *supra* note 9, at 73.

[38] Ricupero, Rubens, *Integration of Developing Countries into the Multilateral Trading System*, in THE URUGUAY ROUND AND BEYOND: ESSAYS IN HONOR OF ARTHUR DUNKEL, *supra* note 9, at 24–5.

exporting countries) was led by developed countries like Australia and New Zealand, predominantly interested in their own product categories.

In terms of market opening for industrial products, the European Community reduced its tariffs on average by 37 percent. The other developed countries made similar or more important efforts. Tariffs were eliminated in important industrial markets, such as civilian aircraft and computers. Improved access for the EC's exports of textiles and clothing to third countries was a necessary counterpart to the global textiles agreement, which calls for the elimination of the Multifiber Agreement quotas over a ten-year transition period. The developing countries, for the first time, took part in this collective step toward liberalization by stabilizing their tariffs at levels compatible with their level of economic development.

The establishment of a multilateral framework of rules and disciplines facilitating the liberalization of trade in services had been one of the major European goals throughout the Round. All service sectors had to be covered and the largest possible number of countries had to be involved. This ambitious goal seemed to have been achieved by the adoption of the GATS.

E. Decisive European Factors in the Uruguay Round

In addition to the basic economic interests and the political objectives a country seeks to pursue in a major negotiation like the Uruguay Round, more specific, circumstantial, and less controllable elements tend to exercise a decisive influence on the way in which the dynamics of the discussions eventually work out. The following were four such elements that applied to the European Community in the Uruguay Round.

1. The Pre-Eminence of Agriculture

The dominant impact of the agricultural discussions on the rest of the negotiations was the direct consequence of the major motivation for the Round on the part of some important trading partners (especially the United States and the Cairns Group). This was reinforced by the European Community's initial, somewhat obsessively defensive attitude towards agriculture. The agricultural negotiations stalled the overall negotiations for many months. It gave the negotiations a political and somewhat passionate dimension. The result was the impression formed by some observers, as well as by participants who were less interested in agriculture, that agriculture was being negotiated against everything else and that the Round had to be saved through concessions in other sectors like industrial products or the rule-making provisions. The notion of a single undertaking, which was one of the organizing principles of the negotiations, could have encouraged this view. However, the separate way in which the negotiations were in fact conducted, would substantiate this notion only in a general political sense.

On the other hand, the case could be made that excessive concentration on the agricultural sector made it possible for the negotiators on other issues to work quietly, undisturbed by media attention, which allowed them to achieve results that otherwise would have been difficult to obtain. Moreover, one should not exclude the possibility that a certain degree of battle fatigue on the agricultural front may have facilitated compromises in other sectors.

2. The "Bilateralization" of the Negotiations

What was supposed to be a multilateral negotiation with nearly one hundred participants was often perceived by many outsiders as a fight between two big elephants. The focus on

agriculture between the United States and the EC certainly enhanced this vision. Together representing about forty percent of world trade, the two quite naturally acted as the main stakeholders in the functioning of the international system. Both had large delegations in Geneva and large support teams at home. With experts at their disposal on each and every subject they often took a natural lead when innovative solutions had to be worked out.

In addition, it was not unusual for third countries with less specific concerns on a given matter to define their position in the light of the discussions between the larger partners. Their motivation could be based as much on trust as on tactical calculus. This positioning did not necessarily lead to the establishment of two camps in other matters than in agriculture (and not even on all agricultural issues). On many problems the developing countries formed a coherent group under competent leadership in defense of their specific interests.

Another formula, which often prevented excessive antagonism between the major partners, consisted of occasional informal meetings of a limited number of delegations, some of them convened by the Director-General of the GATT. They usually took place outside the GATT building in Geneva (at the Director-General's or an Ambassador's residence, unlike the more institutionalized, but still informal, and also restricted "Green Room" meetings). Such regular informal contacts took place, among other groups, between the members of the so-called "Quad" (the United States, Canada, Japan, and the European Community). This happened not only at the level of experts whenever common interests might be transformed into harmonized positions (which was rather infrequent) but, more importantly, at the level of heads of delegations, when matters concerning the general management of the negotiations were at stake.

3. The Importance of "Time"

Quotations referring to the healing power of time could fill a book. One of them might well be: "Time is the best negotiator". In Punta del Este the ministers agreed to organize the next round of multilateral trade negotiations in such a way that it could be concluded within four years. In doing so, they seriously underestimated the adjustment difficulties that the achievement of their goals would entail. They equally underestimated the dynamic forces that the same set of objectives would unleash for the re-ordering of the international trading system. However, it is far from certain that the same results would have been reached if a seven-year timetable had been established at the outset.

In October 1990, forty days before what had been planned to be the concluding session of the Uruguay Round in Brussels, the Director-General of the GATT assessed the state of play for the Trade Negotiations Committee in Geneva. After having identified the sectors in which progress had been made and those where the problems had been narrowed down, he stated that the key subjects of the negotiation (Textiles, Agriculture, TRIPS, Services, Safeguards) could not even be addressed at that stage.

The talks eventually took seventy-five percent more time than originally planned. The Uruguay Round became an element of irritation, frustration and even blackmail at international and European meetings. Negotiators had to be replaced in many delegations. Changes took place in the European Commission and the U.S. Administration. But time also played a decisive role in the inevitable adjustment the European agricultural constituency and its political establishment had to go through in terms of the appropriate domestic reforms to be made before international commitments could be entered into. Similarly, it would have been impossible to have condensed the learning curve of negotiators, interest groups and legislators concerning the arrangements in new sectors like services and intellectual property protection into a shorter time-frame.

4. The Leadership of the Director-General

The nature and history of the GATT have made the role of the Director-General of crucial importance for the achievements of its members. This was particularly true in the Uruguay Round. Arthur Dunkel occupied that position during most of the negotiations. As Ambassador Rubens Ricupero has written: "... there is no denying that Arthur Dunkel's contribution was more crucial and decisive by far than that of any other individual".[39]

Dunkel also knew well the weaknesses and the strengths of the European Community. He had always been a strong supporter of European integration, both for its own sake and because he believed that it benefited the interests of his own country, Switzerland. He was convinced that the CAP could not survive in its present form, and he opposed the Community where he thought it was out of step (e.g., on the selective application of the safeguard clause). He also showed understanding and patience, without giving any preferential treatment on the substantive issues, when the inherent weaknesses of the European institutional arrangements—which required endless internal discussions between the Member States before a Community position could be agreed upon, followed by a rigid negotiating position of the Commission negotiators once they had joined their fellow negotiators in the GATT—were the source of the difficulties.

As Indian Ambassador B.K. Zutshi expressed it: Arthur Dunkel was able to convey "a feeling of singular value to each contracting party and each participant in the Round".[40] Most delegations owed their feeling of satisfaction at the end of the negotiations largely to the leadership of the Director-General of GATT, who was the real manager and animator of the Round. So did the European Community as well as the international trading community.

F. Lessons from the Uruguay Round

From a reluctant participant at the beginning of the Uruguay Round, somewhat obsessed with the potential disasters new talks might bring to its agricultural sector, the European Union managed to gradually develop into a more pro-active and constructive negotiator. This was possible thanks to a number of elements:

- The awareness that a strong multilateral system with predictable rules would favor all trading partners, but particularly the EU because of its wide variety of interests and relatively weak decision-making system.
- The acceptance in the course of the negotiations by the European farming community of the fact that external pressure on the CAP was increasing, and that domestic reform was inevitable and probably easier to obtain in the context of a wide-ranging international negotiation with an overall balanced result.
- The "duration" factor, which, apart from the frustrating effect it inevitably created for negotiators and observers, had a positive influence on the psychological and educational adjustment that policymakers, negotiators and members of the constituencies concerned inevitably had to go through. This was particularly true given the fundamental nature of some of the novel concepts being considered during the negotiations, especially in the "new" sectors. It was quite revolutionary for areas like the protection of intellectual property rights or the establishment of

[39] Ricupero, *supra* note 38, at 9.

[40] In THE URUGUAY ROUND AND BEYOND: ESSAYS IN HONOR OF ARTHUR DUNKEL, *supra* note 9, at ix.

rules for basic services or foreign investment to be reviewed in the light of their role in international trade.

- The competent and agile leadership exercised by GATT Director-General Arthur Dunkel, as well as the existence of informal networks of participants who felt a shared responsibility for a positive outcome of the negotiations. The same can be said of the commitment towards European interests but also towards the interests of the global trading system shown by the responsible members of the European Commission.
- The remarkably well-functioning cooperation between the Member States and the European Commission with respect to the common commercial policy during the larger part of the negotiations (which had not always worked as smoothly in other circumstances), and which was the more noticeable as the talks took place without a formal mandate from the political authority of the European Community.

It can be considered as one of the ironies of history that one of the most reluctant participants in the Uruguay Round (the European Union, in the meantime enlarged to fifteen Member States) became the first advocate of a new round of negotiations so soon after the conclusion of the Uruguay Round. Japan came on board at an early stage, but this time the United States and many developing countries took over the role of those who had to be seduced.

IV. The European Union in the WTO[41]

A. WTO Dispute Settlement

The Dispute Settlement System inaugurated by the WTO has generally been heralded as one of the most innovative and positive results of the Uruguay Round. The European Union had been one of the promoters of the new procedures. It was not surprising that the Union, as one of the main trading partners, would also be one of the main participants in the new system, both as defendant and complainant. After having been involved with the Dispute Settlement Understanding for more than seven years, most practitioners in Europe, as elsewhere, seem to have a positive view of the system. Many more cases are being "brought to court" multilaterally than was the case under the previous system, and many more are being resolved. Between 1995 and mid 2002, a total of 262 requests for consultation were introduced. Many of them did not go further than this initial stage. Over the same period, about 65 cases went to completion with adoption of either a panel or Appellate Body report.

Aside from proposals put forward by the EU and other trading partners designed to correct certain procedural shortcomings, the system has sometimes been criticized for having become too prominent in the overall activities of the WTO, to the detriment of the traditional consultation and negotiating practices, which had been the hallmark of the GATT system. This was particularly the case during the period leading to and immediately after the failed Ministerial Meeting in Seattle in December 1999. Fresh hopes were created for a rebalancing between the activities of the institution after the Ministerial Meeting at Doha in 2001 and the decision to open new multilateral negotiations. The launching of

[41] *See supra* note 1 for an explanation of the relationship between the "European Community" and the "European Union".

a new round of negotiations would offer the opportunity to correct the perception of a "rush to litigation".

Dispute settlement cases against the United States represented the vast majority of the overall dispute settlement activity of the European Union. Almost half of the offensive cases related to the steel sector, but, because of their political impact, the media paid particular attention to the early *Banana* dispute,[42] and the *Beef Hormone* dispute,[43] which were decided against the EU. Later on, the *Foreign Sales Corporation* case,[44] which was decided against the United States, received a great deal of attention, because of the huge amount ($4 billion) of retaliatory measures authorised.[45]

The *Bananas* and *Hormones-fed Beef* cases, in both of which the EU was on the respondent side, belonged to the first generation of WTO Dispute Settlement cases. Both originated from EU legislation initiated before the establishment of the WTO. Both reflected specific economic and policy concerns, and both had been approved by the highest EU decision-making bodies (the banana regulation had been upheld in several EU court judgments). This made EU leaders (over?)-confident as far as the international legal merits of the two cases were concerned.

On the complainant's side, i.e. the United States (in the *Bananas* case joined in 1996 by Ecuador, Guatemala, Honduras and Mexico), similarly specific economic interests were at stake, which were important enough to stir the highest domestic policy levels.

Neither the United States nor the EU were significant banana producers. The EU was the largest importer and about eighty percent of these imports already came from American-related producers. However, the European import system, as part of its overall development policy, was based on preferential zero tariff treatment of bananas imported from so-called ACP countries (developing countries in Africa, the Caribbean and Pacific regions, signatories of the Lome Convention). Other importers had to pay a tariff of twenty percent and were subjected to a discriminatory licensing system. Two GATT reports (in 1993 and 1994)[46], four WTO reports (in 1997)[47] and an Appellate Body report (1997)[48] established that the EU banana market regulation violated GATT law. A WTO arbitral decision (in 1999) authorized the United States to suspend tariff and other concessions granted to the EU covering up to US$191.4 million per year of trade.[49] A US-EU compromise was agreed upon on April 11, 2001.[50]

Also in 1999 the Dispute Settlement Body of the WTO authorized the United States to suspend tariff and other concessions up to an amount of US$116.8 million following

the EU's failure to bring its import regime on hormone-fed beef into conformity with WTO obligations.[51] Two panel reports[52] and an Appellate Body report[53] had established inconsistencies of the import restrictions with the EU's GATT obligations. Here the EU confidence in the solidity of its case was based on the non-discriminatory nature of its Directive, which prohibited the sale of hormone-treated beef throughout the EU. Added to this was the general mood of health risk suspicion against any artificial interference in the meat production line provoked by the mad-cow disease syndrome in the UK and other European countries. So confident was the EU that it did not even invoke the possible application of the precautionary principle (recognized in the WTO Agreement on the Application of Sanitary and Phytosanitary Measures). Mainly because of the lack of satisfactory scientific evidence (risk assessment) to back up its measures, however, the panels and the Appellate Body found the EU practices contrary to the EU obligations under the WTO.

On both cases the European political establishment could not easily accept a quasi-judicial decision on the compatibility with WTO rules as a solution to what they perceived as wider socio-political issues. The bilateral US-EU settlement on bananas came after protracted discussions in a conscious effort by both sides to restore a somewhat shaken relationship. Three years after the WTO decisions on the hormone-fed beef case, the WTO retaliation measures are still in place.

While *Bananas* and *Hormones* are illustrative of the first generation of Dispute Settlement cases, in most of which the EU was the defendant, as well as being politically on the defensive, the situation changed later on. The EU became a more pro-active and also a more successful user of the Dispute Settlement System. By the end of 2001 the EU had been involved in 25 cases, nineteen as plaintiff and six as defendant. This compared with the United States, which at the time had been involved in 36 cases, eighteen as plaintiff and eighteen as defendant. Nearly all of the EU plaintiff cases resulted in findings of a violation (seventeen out of nineteen). In two of the six defensive ones the case was rejected.[54] Fifteen out of eighteen American complaints led to findings of violation, as did fifteen out of the eighteen defensive cases.

The most important case in economic terms ever brought before the Dispute Settlement System was undoubtedly the EU complaint (in 1999) against the U.S. tax treatment of Foreign Sales Corporations. The FSC system was condemned by a panel report in 1999, which was upheld by the Appellate Body in 2000.[55] The U.S. Congress moved with remarkable speed to modify the legislation. The new law, called *The FSC Repeal and Extraterritorial Income Exclusion Act of 2000*, remained focused on achieving or maintaining a level playing field in terms of the tax advantages that U.S. exporters should be able to obtain compared with those enjoyed by exporters of other countries and of the EU in particular. The dispute was in fact about what constitutes an export subsidy within the terms of the WTO Agreement on Subsidies and Countervailing Measures

and whether payments to (or relief from tax liability granted to) exporting companies contingent upon their export performance could be made consistently with WTO rules. The new panel report and the Appellate Body report supported the general EU position that the United States was responsible for having chosen a tax system that could leave its exporters at a disadvantage and ruled that the new legislation still constituted an export subsidy.[56] The original panel, acting as Arbitrator, concluded on August 30, 2002 that the amount of $4,043 million could be considered to be a reasonable approximation of the actual value of the subsidy for the year 2000.[57]

One of the decisions taken at Doha called for negotiations on improving and clarifying the DSU to be concluded no later than May 2003. The European Union, like other participants, had already made some suggestions in that respect.[58] It recommended that, in the light of the increasing number and complexity of cases, permanent, full-time WTO panelists be appointed to adjudicate disputes instead of their *ad hoc* selection for each case from a roster of trade law experts nominated by member governments. Other ideas concern the right "sequencing" of the procedural steps when retaliation measures have to be decided. On the implementation side, the EU has proposed that trade compensation rather than trade retaliation be given greater emphasis in dealing with non-compliance cases. Among other measures, greater room for WTO guidance has been suggested, notably on decisions relating to the level of trade sanctions a complaining party may impose on a non-complying member before a request for authorization to retaliate is submitted.

B. EU Associations and Enlargements in the WTO

From the very beginning of European integration, the European Community/European Union has developed relationships with other European and non-European countries. These relationships took the forms and names of trade and cooperation agreements or different types of association agreements. Most new Member States were linked to the European institutions through an association agreement before joining. The association agreements always had a substantial trade component that started the process of the gradual establishment of a free trade zone or customs union. More than 95 percent of the countries of the world have some kind of agreement with the EU today.[59] These countries account for about half the total amount of European imports. The largest Association agreement exists with seventy developing countries of Africa, the Caribbean, and the Pacific, most of them having had dependent links with European countries in the past, and for which the Treaty of Rome had provided largely duty-free access to the European market. The provisions of the GATT/WTO do not prevent the formation, between individual Member States, of a customs union or a free trade zone, on condition that they facilitate trade and do not raise new barriers to the trade with Member States that are not part of these initiatives.[60]

The vagueness of the provisions of Article XXIV and the consensus rule in the GATT meant that each initiative to create a customs union or a free trade zone led to endless

[60] *See* Art. XXIV of GATT 1947, discussed in Chapter 5 of this book.

discussions in special *ad hoc* GATT working parties, which never produced decisions. Of the sixty preferential trade agreements referred to GATT working parties between 1947 and 1994, none has been ruled in violation of GATT, nor were any approved, notwithstanding fierce opposition from countries like the United States against every step toward wider integration by the European Community. Each time the discussions were blocked by contradictory assessments of the so-called "credits" and "debits" for third countries resulting from the integration initiative.

The Uruguay Round succeeded in clarifying certain texts and in strengthening the procedures,[61] Under the new procedures the review of new regional initiatives by the WTO should have enhanced the transparency and efficiency of the system. But on one key provision, which was the requirement that such regional pacts must cover "substantially all trade", the negotiators failed to reach a consensus.

The new enlargement of the EU to the countries of Central and Eastern Europe will have to be notified to the WTO. However, the WTO has not delivered what the negotiators of the Uruguay Round had hoped for: since the beginning not one single regional integration initiative has been fully reviewed as provided for in Article XXIV. NAFTA (1994) is still under review eight years after its notification in 1993. In the meantime, most of the notified free trade zones or customs unions have been fully implemented.

The Ministerial meeting in Doha decided to grant a waiver from the MFN obligations under Paragraph 1 of Article I of the GATT to the Members of the ACP-EC Partnership Agreement (Cotonou, 2000), which is the successor agreement of the previous association agreement (Lomé) with the ACP countries. The *Bananas* case was settled in the context of this agreement. Both agreements cover the period until December 31, 2007. By the end of that period the Partnership countries will conclude new trading arrangements, while the Union will install a new EC tariff-only regime for bananas on January 1, 2006.

C. One More Round

The WTO enjoys general support from the European economic constituency. Its basic principles in favor of worldwide, non-discriminatory liberalization of international trade are designed to create an environment in which the European business community sees its future interest. Politically, the European nations have always been strong supporters of the multilateral institutions of the United Nations as the appropriate forums for the defense of the basic principles of democracy, human rights and the peaceful settlement of international disputes. The creation of the WTO had therefore been generally welcomed as the natural complement to the existing multilateral economic institutions, the World Bank and the IMF.

But, as in other countries, the wide-ranging and rapid development of international economic activity, promoted by increasingly powerful multinational groups, without corresponding adjustments in the regulatory and political environment, has created anxieties, uneasiness and even strong opposition in certain parts of the European population against the real and presumed drawbacks of the "globalization" of the economy. The same array of peaceful demonstrations, and the more anarchist acts of violence that took place at the WTO ministerial meeting in Seattle in December 1999, have become part and parcel of the public programs of European Union summit meetings. Unfortunately, the more constructive activities of NGOs relating to concerns about the environment, health and

[61] *See Understanding on the Interpretation of Article XXIV of the General Agreement on Tariffs and Trade 1994*, adopted as part of the Uruguay Round Agreements.

safety, and other societal developments cannot always be distinguished from the more rebellious and irrational disruptions created by smaller groups of agitators.

Special sensitivity for these developments, combined with the desire to better integrate the developing world into the international economic community, explains, at least partially, the early support by the European Union for a new round of multilateral negotiations some years after the end of the Uruguay Round. Another reason for this support was undoubtedly the feeling that the so-called "built-in agenda", part of the Marrakesh accord, in which agriculture again took an important position, would be easier to handle in a broader context. This was a traditional position taken by the Europeans in previous rounds. It was based on the great diversity of their economic interests in such negotiations as well as on the (mostly illusory) hope of avoiding too prominent a role for the agricultural sector.

For some time the initiative for a new round was met with suspicion by many developing as well as developed countries. The developing countries had come to the conclusion that the Uruguay Round had not treated them well and that the implementation of some of its agreements had created real difficulties, while developed countries like the United States were far from enthusiastic about the prospect of another protracted global negotiation. The latter countries seemed to prefer more clearly targeted discussions starting from the Marrakesh built-in agenda (mainly agriculture and services) along the model of the agreements on financial and telecommunications services, which had been completed in the wake of the Uruguay Round.

The relentless European pleading in favor of a new round gradually seemed to bear fruit with the support of the new Director-General of the WTO and the new U.S. Administration. The worsening of the world economic outlook, starting in mid-2000, probably also played a role. The European proposal for a new round would lead, it was hoped, to a positive decision at the WTO ministerial meeting at Doha, Qatar in November 2001.

Once again, the European concept of a future multilateral trade round is based on a global agenda that would include new trade problems, most of them by-products of the globalization of the world economy, such as protection of the environment, food safety, social conditions, and competition. The EU is also in favor of a comprehensive round because it continues to correspond with its widely diversified interests. In addition, a comprehensive round offers the best way to take into account the diverse trade interests of the broader WTO membership and thus increases the likelihood that a larger number of WTO members would actively participate in the negotiations.

The European Union has made a particular effort in the direction of the developing world in characterizing the next round as a developing country round. More market access for goods and services on an MFN basis remains a primary objective, but it should be associated with special and differential treatment in areas of interest to developing countries, including in areas that are sensitive such as agriculture and textiles. Other developed nations should imitate the European unilateral dismantling of all trade barriers with respect to imports coming from the least developed countries.[62]

On agriculture the European Commission states that it is committed to "more access, less domestic support, less export support". However, in this sector "non-trade concerns will have to be taken into account". The EU now stresses increasingly the concept of "multifunctionality" in agriculture, by which they mean that non-economic

[62] In the so-called "Everything But Arms" initiative the European Commission proposed duty-free and quota-free access to the European market for all products except armaments from the 49 poorest countries. The Council accepted the proposal on February 26, 2001, 2331 Council 6506/01 and 2332 Council 6511/01.

considerations and objectives must play a role in decisions on future agricultural policy. This tendency has to be understood in the context of the wider concept of sustainable development in industrial societies. These discussions should take place as spelled out in Article 20 of the WTO Agreement on Agriculture. This implies:

> "that the long-term objective of substantial progressive reductions in support and protection resulting in fundamental reforms is an ongoing process. Moreover, this process is conditioned by other concerns which must also be taken into account, notably: the experience and effects of implementing reduction commitments agreed in 1994, special and differential treatment of developing countries, the objective to establish a fair and market oriented agricultural trading system, and non-trade concerns".[63]

Multilaterally agreed rules, adjusted to the realities and needs of the current economic community, should make it possible to show the way to types of sustainable development based on sound domestic policies. This is, according to the European Commission, the challenge for governments and the WTO: "to develop the multilateral trading system in a way that secures the maximum benefits of globalisation for sustainable development". However, "it is primarily governments who must themselves ensure, through appropriate domestic policies, that the benefits of liberalization are equitably shared, that rapid economic change is successfully managed, and the impact of globalisation, properly addressed".[64] This would make it possible to meet at least some of the valid concerns voiced by NGOs and other representatives of an increasingly vociferous "civil society". The search for a solution to the problem of affordable access to medicines by developing countries is an example of the need to adjust some regulatory agreements.

D. Doha

Until the last day (which had to be added to the initial calendar) of the Fourth Ministerial Meeting of the WTO at Doha, Qatar (November 9–14, 2001), the launching of a new Round of multilateral trade negotiations, and with that a positive outcome of the Meeting was uncertain. The European delegation, which had strenuously campaigned in favor of a new round during the preceding months, was confronted with the traditional requests from the exporters of agricultural products in favor of full liberalization, particularly the elimination of all agricultural subsidies. But the countries most reluctant to launch a new round were some of the developing countries under Indian leadership, which insisted on a preliminary "correction" of the way in which they had been affected by the Uruguay Round results. The European Union had promoted the new round as a "development round", and had already promised a great degree of flexibility and openness to the concerns of the developing countries in order to obtain their support for the idea of a new round. Its room for maneuver was thus substantially reduced in comparison with that of later converts like the United States. On some of the delicate subjects such as the availability of patented medicines in developing countries, it had prepared a conciliatory position. However, its desire to introduce into the negotiations the so-called "new" issues—competition, environment, investment—was greeted with rather passive sympathy from some developing and developed trading partners and open hostility from others.

[63] Conclusions of the 2202nd Council Meeting, AGRICULTURE, Brussels, September 27, 1999, 2209 Council 12121/99.

[64] Communication from the Commission to the Council and to the European Parliament, THE EU APPROACH TO THE MILLENNIUM ROUND, Working Document, European Commission, Brussels, July 1999.

The strong will on the part of most participants to avoid "another Seattle", as well as the constructive cooperation between the United States and the EU, finally produced a Ministerial Declaration in support of a "broad and balanced Work Programme" (¶11), which will go into history as the opening of a new "round" without saying so. The Declaration was generally greeted as a fair compromise between the different aspirations of the participants and a good basis for future negotiations, which were to be concluded within three years. The multiple references to the interests of the developing countries justified the commonly used expression of a "development round".

In his report to the European Parliament, the Commissioner for Trade, Pascal Lamy, stated that the Doha Conference was a success in regard to the objectives of the European Union and the interests of the developing countries, as well as the needs of the world economy and the multilateral trading system.[65] He also stressed that the WTO had become stronger and better balanced in Doha, which he considered to be the central part of the mandate which the European Council and the European Parliament had given to their negotiators.

The European Union also saw "its calls for increased action in the WTO in favour of sustainable development and for the protection of the environment . . . strongly reflected in the Doha Declaration". Satisfaction resulted also from the fact that "The Doha Declaration sets, for the first time ever, the objective of establishing a multilateral framework" on competition policies as well as for improving the conditions for Foreign Direct Investment world-wide.[66]

The agricultural part of the Declaration was one of the most difficult for the European Union. Finally, as Commissioner for Agriculture Fischler sees it, the Europeans "were willing to agree on the direction of the negotiation but not on the results".[67] The direction was: substantial improvements in market access; reductions of, with a view to phasing out, all forms of export subsidies; and substantial reductions in trade-distorting domestic support. The caveat as far as the results are concerned became the expression "without prejudging the outcome of the negotiations", the result of an all-night negotiating session.

A disappointment for the European delegation was the opposition of the developing countries to any mention of a strengthened cooperation between the ILO (International Labor Organization) and the WTO on social matters in international trade. Pascal Lamy promised the European Parliament, however, that he would use all available multilateral, bilateral and unilateral trade policy instruments to further promote the objectives of the Union in that area.

I. Introduction

This chapter examines the role and the significance of the WTO in the context of Indonesia's trade policy. In so doing, it traces the interface between Indonesia's trade structure and the multilateral trading system. It also traces the evolving multilateral system and its substantive coverage as well as the implications of this expansion on the system and on domestic policy. Although the writer examines the subject from the perspective of a developing country, the intention is to look at the multilateral system in its own right. From this perspective, the fragile multilateral system is examined as a system which is potentially endangered by actions that could be inflicted *both* by the developed countries *and* by the developing countries as they pursue their respective interests to the detriment of the system as a whole.

At the time of the writing of this chapter (Fall, 2002), Indonesia is facing what is arguably the most serious multidimensional crisis in its history since independence. There have been many serious crises in the country before. However, at no time has the country been in such a serious state as it is at present. At stake is not only the economy, which is in more serious disarray arising from a financial meltdown than that of any other East- and Southeast Asian countries facing similar problems. At the same time, there is also a broader and multidimensional crisis in Indonesia in governance of the state as well as corporate sectors, major flaws in the legal system, and a threat of national disintegration arising from dissatisfaction and disorder in several regions of the country.

Given this background, it must therefore be stressed that for the time being trade issues and the WTO are relegated into the background in Indonesia. This is unfortunate but it is a reality. Nevertheless, despite the current lack of public and official interest in these issues, it is important to stress to the Indonesian public as well as to officialdom the long-term importance of trade issues and of the WTO for the country, unless of course the country collectively and consciously decides to withdraw from the global system. It is precisely for this reason that a cool assessment of the medium and long-term policy implications of the WTO and the world trading system on Indonesia is greatly needed.

For the professionals in the field of trade policy as well as the economic actors in trade, it is important that efforts continue to be made to stress the need for steps to be taken to ensure that attention is paid and that public discussion is undertaken on these issues. Views may differ on many of the controversial issues in the WTO. Honest differences of opinion need to be aired on the merit or demerits of certain issues, both those that are politically sensitive as well as the more technical issues. It is in this spirit that this chapter has been written.

Looking at the external setting we can note that the international community is now engaging in a new round of WTO multilateral trade negotiations. The WTO Ministerial Conference in Doha, Qatar, in November 2001, the first meeting of trade ministers since the failed Seattle Ministerial Meeting in December 1999, finally led to an agreement to launch the first multilateral trade negotiations after the Uruguay Round. The Conference issued a series of declarations describing the mandate for the new round.

As a member of the WTO, it is in Indonesia's interest to make careful preparations for the new round notwithstanding the current national crisis. To do so, Indonesia needs to look at the exercise in the longer-term perspective. Indonesia needs to look at the next few years of trade negotiations in a post-crisis context and prepare for trade policy that is appropriate for the new century. A more complete assessment of what Indonesia could expect of an open world trading system and what its development goals needs to be undertaken.

It is also important to stress that notwithstanding the difficult situation arising from the crisis, an open world trading system will be an important factor for future growth, both for Indonesia and the regions of East and Southeast Asia as a whole. Higher growth can be expected if the global trading system remains open than if it becomes more closed or fragmented. But to benefit from the open global trading system Indonesia needs to make sure that it takes the appropriate steps to prepare for the new round and to ensure that the rules of the system do not work to its disadvantage.

This chapter attempts to make Indonesia's situation more comprehensible for international readers. It is also a modest attempt to contribute to the process of reassessing how to deal with WTO issues as Indonesia enters the 21st century. In making this assessment it must be remembered that the mood in Indonesia, as well as in many other countries in East and Southeast Asia, is less forthcoming than it was during the Uruguay Round. The crisis has brought about a different perspective.

II. Indonesia in the Multilateral Trading System: A Brief Historical Perspective

Indonesia was an early member of the GATT. However, it was not officially present during the Havana Conference that established the aborted International Trade Organization in 1948, whose failure subsequently led to the creation of the more humble institution, the GATT, as an interim substitute. While Indonesia declared its independence from the Netherlands in August 17, 1945, full transfer of sovereignty did not take place until December 1949. By the time the Havana Conference ended and efforts in Geneva were launched to establish the General Agreement on Tariffs and Trade in 1947, Indonesia was still engaged in the final years of the struggle for independence. Thus, unlike some developing countries that had already achieved independence, and therefore became "founding members" of the GATT system, Indonesia did not.

Nevertheless, members of the Indonesian delegation to the United Nations who attended the UN Security Council debate on Indonesia in the late 1940s were instructed to follow developments in trade issues in Havana and Geneva. And Indonesia participated in the GATT negotiating rounds held in Annecy and Torquay in 1949 and 1951 respectively.

Indonesia joined the GATT through sponsorship by the Netherlands in 1951.[1] In the following years, Indonesia participated in the GATT in the way that many developing countries did, i.e., not too actively. As a country whose export profile was dominated principally by primary products, it was logical that Indonesia's main concern was to ensure the export stability of primary products. Attention had therefore been devoted to efforts to develop commodity stabilization measures. Although as we shall see below, the GATT contains provisions relating to international commodity agreements they are not as extensive as the provisions in the ITO Havana Charter. International commodity agreements, although implicitly tolerated by the GATT system, were operating outside the GATT.[2]

[1] GATT Article XXVI: 5(c) permits a contracting party to the GATT which has accepted the GATT on its behalf as well as other customs territories under its formal possession to sponsor each of those territories when it "... acquires full autonomy in the conduct of its external commercial relations and of the other matters provided for in the Agreement". *See* JOHN H. JACKSON, WORLD TRADE AND THE LAW OF GATT 96–7 (1969).

[2] There was an early debate in the GATT because, unlike the Havana Charter, the GATT did not mention *in specific detail* how international trade in commodities and the international agreements on commodities were to be managed within the system. The conclusion of the debate was that the GATT did have authority to deal with international commodity agreements and that in the absence of objections from the Contracting Parties an international commodity agreement could come into existence. *See* JOHN H. JACKSON, LEGAL PROBLEMS OF INTERNATIONAL ECONOMIC RELATIONS: MATERIALS AND TEXT ON THE NATIONAL AND INTERNATIONAL

Article XX of the GATT states that " . . . nothing in this Agreement shall be construed to prevent the adoption or enforcement by any contracting party of measures: . . . (h) undertaken in pursuance of obligations under any intergovernmental commodity agreement which conform to criteria submitted to the CONTRACTING PARTIES and not disapproved by them or which is itself so submitted and not so disapproved . . . ." *Note Ad Article XX* (GATT Annex I) explains that "The exception provided for in this sub-paragraph extends to any commodity agreement which conforms to the principles approved by the Economic and Social Council [of the UN] in its resolution 30(IV) of 28 March 1947". One feature of commodity agreements is that they impose quantitative restrictions that are not consistent with Article XI of the GATT.

In the 1970s, with high oil and commodity prices and the desire to use "commodity power" to change the trading relations between industrialized consuming countries and developing country producers of primary commodities, the relationship between developed and developing countries became more difficult, leading to the need to engage in a "North-South" dialogue if a costly clash was to be avoided. Perceptions differed between the developed North and the developing South on how global economic relations were to be conducted.[3]

Because the GATT was viewed by developing countries as a developed country "club", the forum for trade dialogue and negotiations between North and South shifted from the GATT to UNCTAD in the 1970s.[4] The focus in UNCTAD was on expanding the system of international commodity agreements and the creation of an Integrated Program for Commodities with an integrated buffer stock for commodities, along with a Common Fund to support the financing of the buffer stock.[5] A number of commodity agreements were concluded under the auspices of UNCTAD.[6] Moreover, there was a symbolic concession made to developing countries in the form of the creation of the Common Fund. However, the actual institution, located in the Netherlands, was a pale shadow of what its proponents wanted. In fact it played an insignificant role in commodity stabilization. Neither the political commitments nor the funding were there to even try to make it work as originally intended.

High prices on primary commodities strengthened the negotiating leverage of developing commodity-exporting countries during much of the 1970s. However, this advantage

REGULATION OF TRANSNATIONAL ECONOMIC RELATIONS 1174 (1995), and 1 ANALYTICAL INDEX: GUIDE TO GATT LAW AND PRACTICE 587–91 (1995).

[3] One of the first signs of a shift in the thinking on the part of some developing countries was an initiative launched first in the Special Session of the UN General Assembly in April 1974. Algeria led the more assertive wing of developing countries in the North-South dialogue. A position paper was developed by Algeria which became a reference for the position of many developing countries during the North-South dialogue. *See Petroleum, Raw Materials Development: Memorandum Submitted by the Government of the Democratic Republic of Algeria* (1974).

[4] The Tokyo Round (1973–79) was virtually ignored by developing countries and the results of that GATT Round were generally of limited immediate interest to them. Developing countries gave little and received little at the end of that round. For an account of the negotiating history of the Tokyo Round, *see* GILBERT R. WINHAM, INTERNATIONAL TRADE AND THE TOKYO ROUND NEGOTIATIONS (1986).

[5] For a summary of the issues during the UNCTAD North-South commodity negotiations from the perspective of developing countries, see *An Integrated Programme for Commodities: Report by the Secretary General of UNCTAD*, Doc. TD/B/C/166 (1974). For a critical view of the Integrated Programme for Commodities see W.M. CORDEN, THE NEIO PROPOSALS: A COOL LOOK (1979).

[6] *See, e.g.*, INTERNATIONAL RUBBER AGREEMENT 1979, UN Doc. TD/RUBBER /15/Rev.1 (1980), and *UNCTAD: International Natural Rubber Agreement 1979*, 14 JOURNAL OF WORLD TRADE LAW 246 (May-June, 1980). *See also* Thomas L. Galloway, *The International Coffee Agreement* 7 JOURNAL OF WORLD TRADE LAW 357 (May–June 1973).

was relatively short-lived. By the end of the decade prices of oil and other primary commodities had plummeted. As a consequence the position of developing countries in the dialogue became significantly weakened. The dialogue fell into disarray.[7] In the process, the GATT which had been sidelined during the 1970s, was slowly but surely regaining its prominence, and by the second half of the 1980s it had fully regained its former place as the pre-eminent forum for international trade negotiations. In September 1986, during a GATT ministerial meeting at Punta del Este, Uruguay, the Uruguay Round of Multilateral Trade Negotiations was launched. It was to be the most important multilateral trade negotiation since the Havana Conference in 1948 in terms of substantive coverage, and it was the largest multilateral trade negotiation ever conducted in terms of the number of participating countries.[8]

Although Indonesia had been a contracting party to the GATT since 1951, and briefly active during the phase towards accession to the GATT, the Uruguay Round was the first time that developing countries had become active participants in GATT negotiations, and it was also the first time that Indonesia had been an active participant in all issues of a GATT round. Indonesia's changing economic and trade structure lay behind its decision to play an active role. As explained in the next Part, the country had unwittingly experienced a transformation of its domestic economy into a more export-oriented and manufacture-based country, albeit still at a modest level.

III. Changing Trade Pattern and Structure

The logic of a country's approach to trade policy can be conveniently examined by tracing the evolution of its trade structure. As already explained, for much of her modern history, and until relatively recently, Indonesia was principally an exporter of primary commodities. Indeed, in the years before World War II, Indonesia was one of the major exporters of primary commodities. The dependence of Indonesia on primary commodities in the earlier period of Indonesia's commercial history can be seen in Table 1, which shows the pattern of exports in selected years before World War II.

A. Commodity Power: Oil and Primary Commodities

In the post-war years, as has been noted previously, Indonesia's concern in trade policy had been focused on international commodity arrangements. To the extent that GATT permitted the emergence of commodity agreements, Indonesia could continue with its preoccupation with primary commodities. In the 1970s, when activities involving commodity agreements escalated, Indonesia was still almost exclusively an exporter of primary commodities. Oil, which dominated the economy as a whole throughout the decade, was pre-eminent among these primary commodity exports. Table 2 shows the export pattern of Indonesia during that period. Oil took the lion's share of exports. Between 1972 and 1978, it contributed an average of almost seventy percent of total exports. It was also the largest contributor to government revenue. The state oil company PERTAMINA was the dominant corporate entity in the country.

[7] For a description of the sad ending of the entire North-South dialogue as seen by a prominent delegate from a developing country, see Jahangir Amuzegar, *A Requiem for the North-South Dialogue*, 56 FOREIGN AFFAIRS 140 (October 1977).

[8] For a good description of the complex negotiating history leading to the launching of the Uruguay Round up to the completion of that Round, *see generally* JOHN CROOME, RESHAPING THE WORLD TRADING SYSTEM: A HISTORY OF THE URUGUAY ROUND 5–36 (1995).

B. Post-oil Boom

The sharp drop in oil prices led to a dramatic change in the Government's domestic policy as well as its trade policy. During the period of oil dominance Indonesia pursued an import-substitution policy and the import regime was rather protective. Domestic industry was protected by high tariffs as well as by non-tariff barriers. With the decline of oil prices Indonesia faced severe balance of payments pressure. The Government accordingly took steps to devalue the currency, tightened budgetary expenditures, and imposed a tight monetary policy.[9]

More fundamentally, measures were taken to reduce the excessive dependence on oil earnings and to encourage non-oil exports. It was recognized that to do so a series of steps had to be taken to enable the non-oil sector to be more competitive. The lack of competitiveness of the non-oil sector was caused in part by the excessive regulation and bureaucratic rules that inhibited the non-oil sector from taking advantage of market opportunities.

The first step to make the shift to non-oil exports was therefore to make the economic environment more market-responsive and competitive in the world market. In this connection, the Government undertook a whole series of deregulation and de-bureaucratization measures. It is interesting to note that the first sector to be deregulated and liberalized extensively was the financial sector. Indeed the extent of liberalization in the financial sector went much further than in the "real", i.e. non-monetary sector.

The early liberalization in the banking sector led to a more "benign" view on the part of Indonesian authorities with respect to financial services in the Uruguay Round. In order to dampen inflationary pressure as well as to force the banking sector to be more competitive, easy central bank lending was no longer available to banks, which were instead required to seek their own funds from the public through deposits. Interest rates

[9] For a description of an early attempt to examine the various options in Indonesian trade policy during the transition to a "post-oil" economy in the 1980s, *see* H. S. Kartadjoemena, *Indonesia's Trade Policy: Problems and Options*, in SELECTED KEY POLICY ISSUES IN THE INDONESIAN ECONOMY 171–91 (H.S. Kartadjoemena ed. 1986).

were freed from central bank guidelines and banks were free to set their own interest rates for lending and borrowing.[10]

In hindsight, the excessively rapid liberalization of Indonesia's banking and financial sectors, which was not accompanied by appropriate preparation of the regulatory institutions to enable them to supervise the expanded banking and financial institutions, led to poor governance in the banking system. In 1997, the banking system collapsed. It did so not because of foreign competition, but because of inadequate preparation. Unfortunately, whatever its root causes, it led to skepticism toward liberalization in general.[11]

What this experience has shown is that it is important to undertake liberalization with a clear strategy and with appropriate sequencing. It has also shown that liberalization in one sector has an impact on other sectors. Therefore, a clear decision must be made on how to proceed with liberalization if it is to be sustainable. The crisis also tells us about the increasing importance of the WTO secretariat in dealing with financial services, an area that had not been covered by the GATT. For the first time the WTO Secretariat had to deal with ministries of finance and central banks.

Skillful explanations about the WTO commitments and the GATS by the WTO Secretariat to Indonesian Treasury and central bank officials, who had only recently become familiar with the WTO, averted hasty backtracking of WTO commitments in the financial crisis. Worries that government policy might be hampered by the GATS was alleviated because of the provisions in the GATS sectoral agreement on financial services that recognizes the governmental function in the financial sector, as well as the right of financial authorities to undertake any measure for prudential purposes "notwithstanding any provisions of the Agreement".[12]

This situation also highlights the fact that developments in international finance have increasingly become a domain of attention to be shared by three international institutions. The IMF keeps track of developments in so far as they affect the international monetary system. The Bank of International Settlement ("BIS") keeps track of issues dealing with prudential regulation and the stability of banking institutions. The WTO in turn deals with financial issues in connection with trade and trade liberalization in financial services.[13]

Through the reforms of the banking sector, the important message was given that the Indonesian economy will be increasingly forced to respond to market signals and that competition is to become increasingly the order of the day. The message was considered necessary to show that the policy of encouraging the growth of non-oil exports will be the avenue for economic growth, which had up to that time been excessively dependent on oil. In the process new sectors of exports emerged, in particular in manufacturing and processing. It became clear that Indonesia had experienced a gradual and unmistakable shift in its export composition.

[10] For a summary of the extensive reform of the banking sector, *see* the paper prepared by a team from the Economics and Statistics Department of Bank Indonesia, *Interest Rate after the Financial Deregulation in Indonesia: Some Key Policy Issues*, in SELECTED KEY POLICY ISSUES IN THE INDONESIAN ECONOMY, *supra* note 9, at 120–31.

[11] For a helpful discussion on sequencing liberalization of the financial sector *see* SEQUENCING? FINANCIAL STRATEGIES FOR DEVELOPING COUNTRIES 47–51 (Alison Hardwood and Bruce L. R. Smith, eds. 1997). Failure to understand the importance of sequencing led to the type of liberalization that created problems, which in turn impeded the prospects of continuing the process of reforms.

[12] *See* Paragraph 2(a) of the GATS Annex on Financial Services.

[13] The Services Division of the WTO Secretariat has reflected this awareness through its various papers. *See, e.g.*, OPENING MARKETS IN FINANCIAL SERVICES AND THE ROLE OF THE GATS (1997). Another institutional issue that needs to be resolved by the WTO Secretariat is how to maintain active relations with the monetary authorities, ministries of finance, and central banks, which are not accustomed to dealing with the WTO.

These events also tell us that if liberalization and deregulation are to take place on a sustained basis, it is important to carefully set the right pace and the right process. In the long run, continuity is more important than the one-stroke "big bang" approach, which may not be sustainable. Developing countries are right to resist being intimidated by pressures from important and powerful interest groups in major developed countries to undertake thoughtless market opening, without carefully ensuring continuity. Moreover, at each stage, a process of constituency building is needed in order to gain support for continuing reform.

C. A More Diversified Export Base

The reform undertaken in the 1980s to make the economy more competitive, export-oriented and less dependent on oil had succeeded. The dramatic shift in the pattern of export composition after the oil boom can be seen in Table 3. From the 1980s on Indonesia's export composition shifted from heavy dependence on primary commodities to manufacturing. From 1984 to 1999, the share of manufactured products in total exports dramatically increased from a mere ten percent in 1984 to 42 percent in 1999. By contrast, during the same period the share of primary commodities in Indonesia's total exports declined from 84 percent in 1984 to 43 percent in 1999.

Excluding fuels, the share of non-fuel primary commodities in total exports remained around twenty percent. Meanwhile, the share of fuels in total exports declined from a high of 72 percent in 1984 to twenty percent in 1999. The objective of reducing the dependence on fuels in exports and increasing the share of manufactured products has succeeded. Indonesia's exports have become more diversified.

This shift led to increasing attention being paid by the Indonesian authorities to GATT rules, because for the first time market access for manufactured and processed goods became a matter of concern. Tariff levels in the countries of destination became an important factor determining whether or not markets were accessible. Non-tariff measures applied to manufactured and processed goods (but not to primary commodities) became a serious concern. Anti-dumping proceedings against Indonesian exports became a new reality that had to be faced. It was therefore no surprise that Indonesia (and other ASEAN countries which also experienced similar transitions) became more active in the GATT, as demonstrated during the Uruguay Round negotiations.

IV. Evolving Indonesian Interface With GATT/WTO and the Decision-Making Mechanism

The evolution of Indonesia's trade structure led to different phases in the interface between Indonesia and the GATT/WTO system. This evolution was also reflected in the institutional structures in the Indonesian Government. The decision-making process in Indonesian trade policy has also evolved over time. The substantive coverage of the WTO, which has expanded the GATT rules to cover not only trade in goods, but also trade in services and intellectual property, also presents a challenge of coordination.

In the early years of Indonesia's membership in the GATT, the national institution that had been directly involved on a technical level with the GATT was the Ministry of Finance, more specifically the Agency for Customs and Excise, which in the 1950s was a part of the Directorate-General for Revenues. In the GATT Torquay Round (September 1950 to April 1951), which finalized the process of the entry of Indonesia to the GATT, the Indonesian Delegation was led by the Director-General for Revenues of the Ministry

of Finance.[14] In those early years, the main focus had been tariff negotiations. The agency that had been assigned by statute to deal with tariff issues was and still is the Ministry of Finance. Hence it was the Ministry of Finance that played the leading role in the GATT in those years. Moreover, the representative of the Customs Directorate-General held the position of the Ambassador to the GATT from 1974–78.[15]

In the 1970s, in the light of the negotiations in the Conference of International Economic Cooperation in Paris in 1976 and the negotiations under UNCTAD IV, trade policy and diplomacy were conducted under the direction of the Coordinating Minister for Economics, Finance and Industry who was also the Chairman of the National Planning Agency. Inter-agency coordination was made possible because of the high-level attention being paid to the trade negotiations in UNCTAD.

The task of coordination in dealing with commodity arrangements, both for negotiations and implementation, had been assigned to the Ministry of Trade. In practice, as the coordinating agency, it acted as the principal agency dealing with negotiations for some commodities, notably natural rubber, while specific negotiations in tin had been assigned to the Ministry of Mines. Theoretically, overall trade policy was to be the function of the Ministry of Trade, in UNCTAD, GATT and other fora. The task was simpler then, because in the pre-Uruguay Round days, only trade in goods had been covered by the GATT. Therefore, up to the end of the Uruguay Round in 1994, the Ministry of Trade functioned as the coordinating agency.

The Uruguay Round required the Government to deal with issues that went far beyond what had been traditionally the realm of trade, and extended to trade in services as well as trade-related intellectual property rights. Moreover, the negotiations were expected to take many years. The original timetable specified in the Punta del Este Declaration, which was the official mandate and guideline for the conduct and substantive coverage of the Uruguay Round, was that it would take four years, ending in 1990. In fact the Round lasted until December 1993, and ministers officially finalized the negotiations in April 1994.

The expectation that the negotiations would take a long time led to the need to organize the conduct of negotiations on behalf of the Indonesian Government in Geneva, as well as the mechanism for decision-making in the capital. A special Ambassador was appointed to the GATT to lead the Indonesian delegation for the round. When the Uruguay Round took longer to complete than the scheduled date of 1990, more elaborate machinery was put in place. Presidential Decree No. 47 of 1990 was issued to reorganize the conduct of the negotiations in a more systematic way while at the same time a system was devised to ensure better domestic coordination.[16]

The Minister of Trade chaired the Delegation to Geneva, with two cabinet rank junior ministers (an awkward but formal official title), the Junior Minister of Agriculture and Junior Minister of Industry as Vice-Chairmen. The Ambassador to the GATT was appointed as the Chief Negotiator, with the task of coordinating the country's position at the negotiating table. Members of the Delegation include several directors-general and

[15] Directorate-General for Customs and Excise, Ministry of Finance of the Republic of Indonesia, Pertumbuhan Dan Perkembangan Bea Dan Cukai Dari Masa Ke Masa 88 (1995).

[16] *See* Presidential Decree No. 47 of 1990, Keputusan Presiden Republik Indonesia Nomor 47 Tahun 1990 Tentang Pembentukan Delegasi Republik Indonesia Untuk Tahap Akhir Perudiningan-Perundingan Perdagangan Multilateral Putaran Uruguay (1990).

other senior officials of key ministries. Country positions were developed in the capital with participation of the Ambassador.

In the current round, this mechanism needs to be revised into a more institutionalized mode, although it is not yet clear how this will be done in practice. Moreover, the coordination is more complex, not only because trade in services and intellectual property rights are now a part of the WTO, civil society also needs to be informed by the government of its intentions in a proactive manner. The new mechanism is more centered in the capital with a National Team designated by Presidential Decree, to be led by the Minister of Industry and Trade, and co-chaired by the Director General for Multilateral Trade Relations of the Ministry of Industry and Trade. The Presidential Decree also designated five Advisers to the National Team.[17]

V. Issues of Concern to Indonesia During the Uruguay Round

For the reasons mentioned above, the Uruguay Round negotiations became an important part of Indonesian public policy because the approach of encouraging the development of non-oil exports became an inherent part of the broader growth plan. Access to developed country markets became an area of increasing importance to Indonesia as the export structure gradually shifted to processing and manufacturing.

The Uruguay Round however, covered more than just trade in goods. The two new areas, trade in services and intellectual property rights, were not merely new in the context of the GATT system, but were completely new to developing countries. Indeed, they were even new to many developed country delegations from which the request for negotiations on these subjects originated.

The Punta del Este Declaration, which was the negotiating mandate for the Uruguay Round, called for the entire process of negotiations to be treated as a *single undertaking, i.e.* a complete package whose entire substance must be agreed upon. In dealing with the new issues of services and intellectual property rights, the decisive question for Indonesia as well as for many other developing countries, was how to find a balance between the "concessions" that developing countries were willing to make on those issues with the expected gains to be made in areas of interest to the developing countries.

A. Market Access in Goods

Liberalization and deregulation had begun to free the Indonesian economy of some (but by no means all) of its existing constraints and distortions. The first wave of liberalization and deregulation had led to the emergence of new processing and manufacturing sectors. A notable example was the emergence of textiles, plywood, and processed timber as important new export items. The development of these new sectors and other non-oil manufacturing sectors led to the awareness of the need to safeguard access to the main export markets in the developed world.

Despite the fact that tariff issues were the main focus of attention when Indonesia entered the GATT in the 1950s, Indonesia had not been actively engaged in tariff

[17] For the text of Presidential Decree No. 16 of 2002, *see* KEPUTUSAN PRESIDEN REPUBLIK INDONESIA NOMOR 16 TAHUN 2002 TENTANG PEMBENTUKAN TIM NASIONAL UNTUK PERUNDINGAN PERDAGANGAN MULTILATERAL DALAM KERANGKA *WORLD TRADE ORGANIZATION*, SEBAGAIMANA TELAH DIUBAH DENGAN KEPUTUSAN PRESIDEN NOMOR 18 TAHUN 2001 (2002).

negotiations since then. Market access was not principally a tariff issue as long as the country was an exporter of primary products. However, as the transition to manufacturing progressed, tariffs became important. In the process, significant progress in tariff binding and in lowering of tariffs occurred in the Uruguay Round.

When the Uruguay Round began, only a small percentage of Indonesia's tariff lines were bound. Moreover, there were many surcharges in addition to tariffs. The customs authority was also in the process of shifting to the Harmonized Tariff Nomenclature. When the Round was completed Indonesia complied with the agreed consensus that increased tariff binding was part of the commitment. By the end of the Round 95 percent of all of Indonesia's tariff-lines, representing 92 percent of total imports, were bound at forty percent. In accordance with the Agreement on Agriculture, all restrictions on agricultural imports have been converted to tariffs, with a commitment to reduce the average level by 24 percent within ten years, and a minimum reduction of ten percent on each specific item. Non-tariff barriers have been removed from these tariff lines. This has made Indonesia's tariff structure quite open.[18]

B. Services

It is worth noting that negotiations on services were conducted without a complete understanding of how the services economy worked. Even the data on trade in services was incomplete. Moreover, there were some conceptual problems in the economics of services that had to be clarified in greater detail. Independently, discussions among academics were conducted on these issues. Curiously, this effort had taken place as delegates negotiated the framework agreement that subsequently became the General Agreement on Trade in Services ("GATS"), which meant that for purposes of expediency, governments had decided to proceed with the negotiations even when the economics profession was still groping with how to deal with services intellectually. Countries were willing to proceed with the formulation of the general rules on trade in services before a full academic study on the economics and the statistics were completed. It would have been less curious if governments decided to proceed only after a full study.[19]

The fact that much progress was achieved in the formulation of the conceptual architecture of the framework agreement was due in no small measure to the willingness of developing countries to deal with the subject with an open mind. This was in contrast to the difficult process of negotiating the Textiles Agreement to phase out the Multi-Fibre Arrangement ("MFA"). Although the MFA was clearly inconsistent with GATT rules, its phase-out faced resistance from the developed countries. In textiles the developed countries proved to be less than flexible, to say the least. This inconsistency did not escape the notice of the developing countries. Indeed, part of the problem with implementation of the Uruguay Round Agreements has been the distrust on the part of the developing countries as to whether developed countries would honor their commitment to subject textiles fully to the GATT/WTO regime.[20]

[18] For a brief but complete summary of Indonesia's Uruguay Round Commitments, *see* USAID Trade Implementation and Policy Project Report, THE URUGUAY ROUND AND ITS BENEFITS TO INDONESIA (October 1994).

[19] *See* the symposium papers in SERVICES IN WORLD ECONOMIC GROWTH—SYMPOSIUM 1988 (Herbert Giersch ed. 1988).

[20] For an account of the negotiating history on textiles as seen from the viewpoint of the textile-exporting developing countries, *see* MARCELO RAFFAELI AND TRIPTI JENKINS, THE DRAFTING HISTORY OF THE AGREEMENT ON TEXTILES AND CLOTHING (1995), issued by the International Textiles and Clothing Bureau in Geneva.

After considerable reflection, developing countries felt comfortable enough to deal with trade in services when it was further spelled out how progressive liberalization was to be undertaken. Moreover, there are certain sectors where liberalization could help the development of developing countries, provided that the procedures are sufficiently amenable to "modulation". Foreign investment in telecommunications and financial services can help the modernization of the infrastructure of developing countries so long as the process is made gradual and developing countries undertake domestic arrangements that are suitable for their own needs.[21]

The two sectors in which Indonesia made considerable commitments were indeed in financial services and telecommunications. The authorities recognized the importance of more open and competitive financial and telecommunication services for the modernization of the economy. The central bank governors of Southeast Asian countries had coordinated their position on financial services in the Uruguay Round through the SEACEN (Southeast Asian Central Bank Association, headquartered in Malaysia) and had been fully briefed on the Indonesian position as a contribution to arriving at a coordinated position. The problem of bank supervision, which should have been more actively developed to accompany the liberalization, however, received less attention.[22]

C. Intellectual Property Rights

The problem with regard to intellectual property rights ("IPRs") was more complex. There is no fundamental reason why rules on IPRs should have been included in the WTO system. Some would argue that it has no place in the system. However, developing countries had agreed to negotiate IPRs in the Uruguay Round, knowing that developed countries felt strongly about the subject. This was primarily a political concession to developed counties, although developing countries had a certain amount of self-interest in accepting the agreement, since they recognized that strong national legislation on intellectual property might encourage foreign investors to come in with the kind of technology transfers that they would not be willing to make if effective intellectual property protection did not exist.

Nevertheless, developing countries had to face the problem of enforcement. Enforcing intellectual property rights is an expensive and complex endeavor, requiring new capabilities. Indonesia foresaw how difficult the problem of enforcement would be. Accordingly, during the negotiations, the Indonesian delegation repeatedly stressed the importance of technical assistance in developing the legal infrastructure as well as expertise in the relevant agencies including the courts. Indonesia also emphasized that difficulties faced by developing countries in implementing the TRIPS agreement should

[21] In the case of Indonesia, discussions with trading partners on financial services and telecommunications were more even-handed. Although it was recognized that there are wide differences of views in many aspects of the negotiations with the developed countries, there was a willingness to examine where mutual interests lay. In both sectors, the Indonesian government was less averse to liberalization and the presence of foreign service-providers. It was recognized that their presence were needed for the efficiency of the sectors.

[22] For a discussion on the Indonesian position on financial services, *see* H.S. KARTADJOEMENA, SERVICES AGREEMENT IN THE URUGUAY ROUND: A PRELIMINARY ASSESSMENT OF WHAT COULD BE EXPECTED BY SEACEN COUNTRIES, Keynote Speech by Ambassador H.S. Kartadjoemena on the Occasion of the SEACEN Central Bank Governors Conference, Jakarta, January 30, 1991 (on file with the author). Indonesia's negotiations in telecommunications was ably led by the Secretary-General of the Ministry of Tourism, Post and Telecommunications, Jonathan Parapak.

be considered as a situation requiring technical assistance rather than the basis for a trade dispute.[23]

D. Strengthening GATT Rules

There are some converging as well as diverging interests between developing countries and developed countries with respect to the improving and strengthening of GATT rules. For most countries except for the very large and powerful, loose rules are susceptible to abuse. These countries have a common interest in strengthening the rules.

In the case of anti-dumping, those developing countries that are exporters of manufactured goods are often targeted for anti-dumping measures by developed countries. Significant lowering of tariffs in manufactured products led to the increasing use of other means to restrain imports, most commonly anti-dumping measures. Unlike safeguard measures, as provided for in GATT Article XIX and the Uruguay Round Agreement on Safeguards, which require MFN treatment, anti-dumping proceedings can be targeted at specific countries and specific exporters. In view of the increasing share of manufactures in Indonesia's exports, Indonesia became more interested in dealing with anti-dumping issues.

Developing countries have argued for the tightening of the rules on anti-dumping procedures, while developed countries would like to have a freer hand in instituting anti-dumping measures. However, following the Uruguay Round, developing countries have developed their own anti-dumping legislation, procedures and administrative machinery, and have begun to impose anti-dumping measures.[24] Ironically, officials in charge of this new machinery have come to understand the utility of anti-dumping measures, and have learnt a great deal about their effective use from their counterparts in developed countries. This is also the case with Indonesia.

Many developing countries also feel strongly about the rules on measures to safeguard balance of payments. It has become axiomatic among policy makers in some developing countries that developing countries are prone to face perennial balance of payments difficulties and that shortage of foreign exchange is a cause for concern. Accordingly, there has been a strong desire to retain the right of developing countries to resort to import restrictions when they face balance of payments problems. Given the perennial nature of balance of payments problems in developing countries, they would normally like to have flexibility in the application of emergency trade measures to face balance of payments problems. The developing countries therefore consider the existing rules (GATT Article XVIII) to be appropriate, while the developed countries insist on more discipline. The outcome of the Uruguay Round negotiations is that resort to Article XVIII has been tightened through the Understanding on the Balance-of-Payments Provisions of the General Agreement on Tariffs and Trade 1994.

[23] In this connection, it should be noted that two governments, Australia and Japan, have extended technical assistance for capacity building in intellectual property rights to Indonesia. Moreover, the Directorate- General for Intellection Property Rights of the Ministry of Justice and Human Rights, especially the Directorate for Patents, has been considerably strengthened since the Uruguay Round.

[24] Indonesia has developed its own anti-dumping rules and machinery. Government Regulation No. 34 of 1996 has been issued to establish the regulatory framework for the imposition of anti-dumping and countervailing duties. *See* Government Decree No. 34 of 1996, PERATURAN PEMERINTAH REPUBLIK INDONESIA NOMOR 34 TAHUN 1996 TENTANG BEA MASUK ANTI DUMPING DAN BEA MASUK IMBALAN (1996). The institutional machinery has been established through a decree by the Minister of Industry and Trade No. 136/MPP/Kep/6/1996. *See* KEPUTUSAN MENTERI PERINDUSTRIAN DAN PERDAGANGAN REPUBLIK INDONESIA NOMOR 136/MPP/Kep/6/1996 TENTANG KOMITE ANTI DUMPING INDONESIA (1996).

By contrast, many developing countries found it easier to accept the tightening of the rules on subsidies because budgetary constraints would in any case make it difficult for them to resort extensively to such measures. This issue was more critical for countries that could afford to be engaged in a subsidies war. However, developing countries have a keen interest in tightening the rules on subsidies in the developed countries, especially with respect to agriculture, which hamper the ability of developing countries to export agricultural products to the developed countries. Sometimes export subsidies even make it difficult for them to compete in other developing countries and even in their own markets.

E. Institutional Issues

The Uruguay Round also made a significant breakthrough in the institutional sense. For the first time a full-fledged international organization has been created in the field of trade. Unlike its predecessor the GATT, the WTO is an international organization with full international personality and not merely an interim institution. With its new status as an international organization, it stands on a par with the IMF and the World Bank, although it is nowhere near the two Bretton Woods institutions in terms of financial resources.

Some of the consequences connected with these institutional developments are obvious while others are more subtle but not less important. The more obvious consequence is that the WTO itself is a larger organization than GATT with a much wider range of substantive coverage. The first consequence of this organizational expansion is the need for expansion of the Secretariat staff. The GATT Contracting Parties were quite parsimonious about staff expansion.

The broader coverage of the WTO has also a direct implication on the conduct of and the machinery for trade policy in developing countries. The WTO agreements have increasingly affected domestic policy far beyond the cross-border transactions that were the focus of the GATT. Certain domestic policies are covered by the agreements and notifications are required in a number of areas. Interactions with the WTO will therefore expand. The number of national institutions that interact with the WTO has also expanded. In Indonesia, GATT-related issues had been handled almost exclusively by the Ministry of Trade, with the Ministry of Finance dealing with tariffs. During and after the Uruguay Round, the Ministries of Agriculture, Tourism, Communications, Justice, the Central Bank and others agencies suddenly had to be actively involved as well.

This requires adjustments in the conduct of domestic policy-making as well as an increase in the personnel expert on WTO-related issues. Agencies that previously had nothing much to do with the WTO suddenly had to interact more actively in areas of their concern because of the expanded substantive coverage of the WTO. In Indonesia, the process of review under the WTO Trade Policy Review Mechanism ("TPRM"), for example, had forced government agencies to coordinate in the formulating and writing of national reports on overall trade policy and to explain the policy to other WTO Members. Because the TPRM report must also cover the broader aspects of macro-economic policy, inevitably the Ministry of Finance, the Central Bank and the National Planning Agency had to be actively engaged in the process.

F. Special and Differential Treatment

Developing countries have stressed the importance of special and differential treatment ("S&DT") for themselves. Indonesia generally shares this concern and has participated

in initiatives in this area. In the Uruguay Round, developing countries wanted to ensure that special provisions for developing countries were not confined to the type of best-endeavor clauses contained in Part IV of the GATT, which imposed no specific operational obligations, and the infant industry clause in GATT Article XVIII, which has limited application. Instead the developing countries sought more explicit S&DT obligations throughout the Uruguay Round agreements.[25]

This objective was formally achieved to the extent that all the Uruguay Round agreements contain specific provisions calling for special treatment for developing countries. These fall into two categories: (a) the level of the reduction of barriers to market access is less for developing than for developed countries; (b) developing countries are given more time for implementation of specific measures. Moreover, in various Uruguay Round agreements, there are also provisions on technical assistance to developing countries. Indonesia has been particularly eager to obtain technical assistance.

Developing countries may regard many of the explicit provisions to be inadequate. But the objective of creating differential treatment between developed and developing countries had been formally achieved even if the results are not satisfactory to developing countries. In the new round, Indonesia and other developing countries need to take a second look at how to proceed with the idea of S&DT. Some long-term thinking is needed. We shall turn to this subject further below.

VI. Issues of Concern for Indonesia in the Multilateral Round

The new WTO round of multilateral trade negotiations launched in Doha is the first round in the 21st century and the first round to be organized by GATT's successor organization, the WTO. This time around, the developing East Asian and Southeast Asian countries, including Indonesia, are unlikely to be as enthusiastic about engaging in extensive negotiations on trade liberalization and rule-making as they were during the Uruguay Round. The current economic crisis and its political and social consequences have preoccupied most governments in those regions.

However, notwithstanding Indonesia's current preoccupation with the crisis, sooner or later a round of multilateral negotiations must be undertaken because the system inherently requires periodic negotiating rounds. More specifically, there are explicit provisions in various Uruguay Round agreements which require that Members of the WTO revisit certain issues for further negotiations. Some agreements are explicit about when such negotiations must be undertaken, such as agriculture and services. The bottom line is that unless WTO Members collectively choose to renounce their WTO obligations, the system requires negotiations to be conducted sooner or later.

On the whole one can say that the Doha round will be conducted under more complex circumstances and with a far greater divergence of views than was the case during the Uruguay Round. The Doha Ministerial Conference on November 2001 produced three separate but interlinking documents that are intended to provide the mandate for a new round of multilateral trade negotiations. The documents are the *Ministerial Declaration*, the *Declaration on the TRIPS Agreement and Public Health*, and *Implementation-Related Issues and Concerns.*[26] Together they provide the necessary political balance that made

[25] For a discussion on the GATT jurisprudence of special and differential treatment, *see* JOHN H. JACKSON, LEGAL PROBLEMS OF INTERNATIONAL ECONOMIC RELATIONS: CASES, MATERIALS AND TEXT ON THE NATIONAL AND INTERNATIONAL REGULATION OF TRANSNATIONAL ECONOMIC RELATIONS 1108 (1995).

[26] *See* the Doha Ministerial documents, *Ministerial Declaration* (November 14, 2001), Doc. WT/MIN/

it possible for governments of developing countries to agree to negotiate in a new round. The negotiations cover a wide range of substantive issues.

Indeed, while there are reasons for narrowing the scope of substantive coverage for negotiations in the next round, there are also strong arguments not to narrow it to such an extent as to make it unattractive to many WTO Members. The size of membership of the WTO has expanded compared with the early days of GATT. With expanded membership the interests of Members also vary considerably. If the agenda for negotiations does not cover a wide enough range of subjects, there will be less support for the round. On the other hand if the agenda is too wide there is a risk that negotiations might not be concluded.

Most developing countries have difficulties with the obligations on trade-related intellectual property rights, the TRIPS agreement, whose obligations are onerous. The TRIPs agreement raises concerns among developing countries with regard to public health. The TRIPS and Public Health Declaration reaffirms the right of developing countries to take measures necessary to ensure public health. The Doha *Declaration on the TRIPS Agreement and Public Health*, while containing no operational provisions with respect to the negotiations, has alleviated some of the sense of imbalance in the TRIPS agreement and allowed greater flexibility for health authorities to deal with intellectual property issues when confronted with major health-related problems.

A. A New Dimension: The Emergence of NGOs

The ongoing WTO round of negotiations will be a round in which civil society will demand the right to participate. The NGO demonstrations during the December 1999 Seattle Ministerial Meeting had shown that public scrutiny is to be expected and that therefore better dialogue and transparency is needed. The violence however was somewhat unexpected. This complexity requires that officialdom take a different approach and become more open to public discussion of policy issues. This may be difficult to do because of the propensity of many bureaucracies to be unnecessarily secretive in the conduct of their business.

Most NGOs active in WTO issues originate in developed countries. They are the most mobile and well-financed. Their focus varies enormously. So do their motives and methods, and, therefore, the way they choose to operate. It is therefore not always easy to accommodate one group in a way that will satisfy the others. What appears clear is that the most vocal of the NGOs have been those who are opposed to the process of globalization at all cost.

There are however also NGOs that do not oppose the multilateral system. However, they wish to stress some aspects of trade that need to be accommodated. The fact that these NGOs have not been much helped in dealing with their concerns may signal that proponents of the multilateral system and their governments have not done their work well enough in ensuring adequate and balanced public participation. In Indonesia, the consumer groups need to be given more attention by the officials. In defending the interest of consumers they must be vigilant to prevent excessive protection designed merely to protect inefficient producers.

(OI)DEC/W/1; *Declaration on the Trips Agreement and Public Health* (November 14, 2001), Doc. WT/MIN/(01)/DEC/W2; and *Implementation-Related Issues and Concerns* (November 14, 2001), Doc. WT/MIN/(01)/W/10, all reproduced in the Appendix to this book.

For those in developing countries, both their governments and NGOs, special attention is needed to ensure that other people do not arrogate their right to speak on their behalf without their consent. Unfortunately, there is a risk that developing countries will find their NGOs mimicking the arguments of NGOs from developed countries. It is important to ensure that what is being argued serves the interests of developing countries. A case in point is in the threat of applying trade sanctions against countries that do not have the same labor standards as developed countries. Although this might suit the interest of established and powerful labor unions in developed countries, it is likely to be disastrous to employment prospects in developing countries. In the new round Indonesia needs to develop a dialogue with civil society to better explain the issues in the WTO.

B. Existing Obligations: Implementation Issues

Given the complexity of the political as well as the technical process to prepare for the current round of negotiations, it is important that governments and the interested public endeavor to group the issues into manageable parts. There is a genuine feeling among many developing countries that they are in reality not quite ready to go through yet another complex round when implementation of the Uruguay Round Agreements is still in progress. Although this may not be sufficient reason to refrain from proceeding with the negotiations, the problem must not be dismissed as irrelevant because it is real.

Addressing the issue directly would help to build confidence where it is now lacking. For many developing countries, including Indonesia, part of the answer lies in developing a credible answer to the question of capacity building to deal with the WTO. While Members of the WTO discuss how to proceed with the ongoing round, efforts to deal with capacity building must also continue independently of the negotiating round. The Doha ministerial document *Implementation-Related Issues and Concerns* attempts to address the concern of developing countries about implementation of the Uruguay Round as they proceed with the new round. The numerous references to capacity building and technical assistance attempt to deal with implementation issues faced by developing countries.

C. New Issues

Two sets of "new" issues are being advanced by developed countries namely: (a) new *economic issues*, i.e., investment and competition policy; and (b) new *non-economic issues*, namely trade- related environmental and labor standards. In the eyes of developing countries, these are highly controversial issues. Tying these issues to trade would, in the eyes of developing countries, become highly disadvantageous to them. Let us examine the issues further.

Developing countries are uneasy about the *new economic issues* of investment and competition policy because of the complex nature of those subjects and the fear that new international rules would be utilized against the interests of developing countries in their pursuit of broader development objectives. This fear is not groundless. Politically, no government of a developing country would be comforted by the existence of international agreements in new areas that could constrain them in pursuing policies which they regard as vital for their development goals.

Developing countries cannot be sure that the specific content of international agreements in those two areas would be compatible with their development goals and domestic

realities as they see them. Faced by the uncertainty on what position to take on those issues and unsure of how to strike a balance, it seems logical not to engage in any official discussion that could lead to negotiations before they are ready.

1. Investment

For Indonesia, which in the past has been a beneficiary of foreign investment, there are difficult choices to be made. On the one hand, it cannot be said that Indonesia is hostile to foreign investment. In fact it has been searching for a way to continue to attract FDI. The question is even more urgent because foreign investment is needed to recover from the current crisis. However, there are two aspects of developing an international agreement on investment that appear worrisome. At the broader level, concepts such as the right of establishment, are alien to a country sensitive about the notion of sovereignty. Establishment, from the national perspective, is a privilege, which, though contractually bound once granted, remains a privilege granted by government. To reverse the concept by making it a right would be viewed as an infringement of the notion of sovereignty, not politically easy to accept.[27]

Secondly, international obligations on investment, to be administered by an international organization in charge of trade, would be perceived as a "threat" because governments do not make policy decisions on investment on the basis of trade considerations alone. In fact, trade considerations may be only a secondary aspect in many investment policy decisions. Therefore, an international agreement administered by a trade organization would threaten to subject investment decisions overwhelmingly to trade considerations. Given these two factors alone, it would appear to be difficult for Indonesia to subscribe to the idea of an agreement on investment.

2. Competition Policy

The area of competition policy is even more uncertain conceptually for many developing countries including Indonesia. The subject is quite new. On the one hand, Indonesia has taken steps to establish its own anti-monopoly legislation modeled after the various agencies in developed countries.[28] However, this is a recent development, and there is as yet insufficient experience in dealing with the subject domestically.

Moreover, conceptually, establishing an anti-trust type of legislation and agency is only one aspect of competition policy, and arguably a limited one. Competition policy can be summarized as the search to ensure that market distortions that lead to inefficiency are eliminated. Anti-competitive behavior by corporate entities is not the only source of distortion. Government actions can also lead to market distortions. Thus competition policy in a full sense would be a policy that is established to limit the distortions to the economy emanating both from the corporate side and the government.[29] The kind of agency that would be able to address such problems is the Australian Productivity

[27] An attempt to deal with Indonesian investment issues related to the WTO was initiated with prominent lawyers in 1995 to develop a coherent approach for dealing with foreign investment and the broader policy implications for Indonesia. *See* the volume of publication of discussion papers by Bank Indonesia, REZIM INVESTASI DI INDONESIA DALAM KAITANNYA DENGAN PERJANJIAN HASIL URUGUAY ROUND 1–234 (H.S. Kartadjoemena ed. 1995).

[28] *See* Law No. 3 of 1999. *See* UNDANG-UNDANG REPUBLIK INDONESIA NO. 5 TAHUN 1999.

[29] For an attempt to approach competition policy within a broader framework beyond the establishment of anti-trust legislation in order to develop a competition-driven public policy has been proposed by an APEC-PECC study group, *see* KERRIN VAUTIER, PECC PRINCIPLES FOR GUIDING THE DEVELOPMENT OF A COMPETITION-DRIVEN FRAMEWORK FOR APEC ECONOMIES (1999).

Commission.[30] Such an agency would evaluate the impact of a measure and an action on the economy and the cost to society. Which aspect is Indonesia's main concern? The answer is not yet clear. It is difficult to deal with the issue internationally, if it is not yet clear domestically.

3. Linkage between Trade, Investment and Competition Policy

The fact that developing countries do not wish to deal with investment and competition policy issues in the WTO at present, specifically in the form of new international agreements to be administered by the WTO, does not mean that those issues are not important to developing countries on their own merits. Calm analysis of the issues is needed for a more complete domestic policy evaluation, even if there is no intention to negotiate the issue internationally in the WTO. At present, the issues have been pitched at such an emotional level that a serious discussion, with all the facts on the table, needs to be undertaken at the national level before proceeding to an international negotiation.[31]

Developing countries may wish to consider an approach that would allow them to deal more systematically with the interface between trade, investment and competition policy. On the one hand, there are intellectually strong arguments to show that there are increasing links between trade, investment and competition policy. The denial of these links by developing countries as a basis for rejecting negotiations on an international agreement for investment and competition policy is weak. More politically valid and therefore legitimate reasons should be offered for rejection. The developing countries should state clearly that they are not politically ready to internationalize their investment and competition policy rules.

The inter-linkages can be summarized through a simple syllogism. First, internationalization of production has led to many companies producing components in different locations. When the components are assembled into a final product for marketing, the companies are engaged in intra-corporate purchases crossing many national frontiers. These activities are trade activities. But they are also investment activities. Therefore, trade and investment activities are linked. Second, when corporate entities engage in investment activities, and attain a certain size, they affect the structure and competitive situation in markets. This is a question of competition policy. Therefore investment and competition policy are linked. By conclusion, if trade and investment are closely connected, and investment and competition policy are also connected, then there are close links between trade, investment and competition policy. Therefore, intellectually it is difficult to deny the existence of a close link between these three issues.[32]

The fact that trade, investment, and competition policy are interlinked does not necessarily lead to the conclusion that international agreements on investment and competition policy, as proposed by some developed countries, are needed. For the time being the developing countries may wish to remain agnostic on the point. Moreover, even if, after

[30] For a description of the function of the Australian Productivity Commission, *see* its website, http://www.pc.gov.au.

[31] The policy implications on Indonesia of these issues are discussed in a monograph published by the Indonesia Forum in Jakarta. *See* H.S. KARTADJOEMENA, ASPEK INTERNASIONAL DARI MASALAH COMPETITION POLICY: MENGHADAPI PERUNDINGAN WTO TAHUN 2000 1–47 (1999).

[32] The use of syllogism as a simplifying argument to illustrate the interconnection between trade, investment and competition policy is borrowed from Mark A. A. Warner, *Private and Public Restraint on Trade: Effects on Investment Decision and Policy Approaches to Them*, in MARKET ACCESS AFTER THE URUGUAY ROUND: INVESTMENT, COMPETITION AND TECHNOLOGY PERSPECTIVE 123 (OECD 1996).

further consideration, developing countries conclude that international agreements are needed, it does not necessarily mean that the WTO is the appropriate forum for those agreements. Developing countries need to be agnostic on that issue as well.

4. Non-economic Issues

On the question of the two non-economic issues of environment and labor standards, there are different approaches to be considered. There are common interests between developing and developed countries with respect to environmental issues. Developing countries do however need to beware of protectionist free riders that would use environmental rules as a pretext for protectionism. Some NGOs are easy and sometimes willing collaborators for this type of activity. A different set of coalitions needs to be constructed between free traders and environmentalists and between developing countries and developed countries. Moreover, Indonesia and other developing countries should be vigilant to prevent the WTO from being used as an enforcement agency for environmental policy.

Developing countries need to reject outright any discussion of labor standards in the WTO. At the same time more active participation in the ILO is needed to ensure that the debate in that forum is meaningful from the point of view of developing countries. The attempt to include labor standards in the WTO is a pretext by labor unions in developed countries to limit trade with developing countries on the basis that wages are lower in developing countries. That is the argument that was used to restrict exports from Japan in the 1930s that contributed to the climate of hostility. This does not mean that developing countries can afford to be relaxed about dealing with major improvements in labor standards. Nevertheless, the WTO is not the place to deal with them.

D. Technical and Trade Facilitation Rules

In the area of trade facilitation rules—which we shall define broadly to be those technical rules which are needed to ensure that trade flows unhampered—there has been increased interest and greater readiness to negotiate on the part of developing countries. However, these rules, when inappropriately applied, could become disguised measures for protection. On the other hand these rules reflect the increasing technical nature of international trade, especially in manufactured products. In many of its aspects, this is associated with the process of modernization of manufacturing.

In this area there are convergences of interest between developed and developing countries. There is however, a divergence in views on the speed of implementation. A much more intensified technical assistance program is needed. Indonesia's attention to this aspect of the GATT rules was not extensive in the Uruguay Round. But the Round provided the opportunity to deal with the subject because these rules become more important for Indonesia as it continues to expand its exports of processed and manufactured goods.

A new set of technical rules had been agreed upon in the Uruguay Round. A companion set of rules on sanitary and phytosanitary measures was formulated in the context of the negotiations on agriculture. An agreement was reached to ensure that sanitary and phytosanitary measures that are needed for the health and safety of the public do not unduly impede the flow of trade. This new set of rules has administrative and budgetary implications both with respect to equipment and for the development of expertise.

These trade facilitation rules are part and parcel of a modern economy. Developing countries have so far largely ignored the technical and trade facilitation rules in their

Table 4: Factors Leading to Increasing Developing Countries' Attention to WTO Technical Facilitation Rules

Domestic	Regional	WTO
—Greater export diversification. More processed and manufactured products. Exports must meet international standards. More attention to, technical, health, customs requirements. —Greater import diversification. More sophisticated imports. Customs verifications, technical standards, valuations, rules of origin, must be applied in conformity to WTO rules. —More sophisticated domestic public. Greater concern for health and safety rules for imports. —Modernization of economic activities requires better rules and better administration. —Pressure for good state and corporate governance to meet international standards on many practices, including technical matters non-trade areas, e.g. accountancy, surveillance, banking and financial prudential regulation. —Technical trade rules upgrading becomes part of modernization as well as good governance reform.	— Increase cooperation among governments in the context of regional trade arrangements. —More trade liberalization leading to free trade area and customs union. Require a whole new aspect in technical rules to implement FTA related to customs, technical and health standards. —In East and Southeast Asia, there are more private-sector driven interdependence and pressure for liberalization. Transparent technical rules are needed. —Pressure for harmonization of practices and greater standardization of technical rules. —Greater incentive to take steps to be in full conformity with WTO rules. —Private-sector-driven liberalization would also emphasize liberalization and harmonization in investment rules.	—Acceptance by developing countries that WTO rules are needed. —Immediate compliance difficult. *Transition* is needed. —Sequence of full-compliance depends on pressure of urgency. Pressure comes from *domestic modernization* and *good governance* as well as regional integration. —Serious *technical assistance* is needed for full implementation of the WTO technical rules. —Technical assistance from programmed and staged implementation must be a part of an overall *capacity-building* exercise to assist developing countries in the implementation of all WTO commitments. —This should be made a part of a *confidence-building* measure for the work towards a balanced agenda of a new round.

dealing with the WTO. In the current round efforts need to be made in this area simply because it is part of the process of modernization, and indeed, part of improving state governance. Accordingly international funding agencies such as the World Bank and the Asian Development Bank should be more involved in providing technical assistance, since the WTO's resources are so limited in this respect. Table 4 summarizes the issues to be dealt with. This area needs to be stressed during the current round of multilateral negotiations.

E. Revisiting Special and Differential Treatment

Developing countries have reason to be concerned about Special and Differential Treatment ("S&DT") for developing countries. It would be inappropriate and unbalanced to belittle the subject simply because it is only of concern to developing countries. On the other hand it may be sterile to remain fixed within the context of simply seeking exceptions. Although the prospects of taking the subject out of the current straight-jacket are limited, some thinking needs to be devoted to the longer-term modification of the approach to it.

Efforts had been devoted in the Uruguay Round to deal with the question in a manner that would not be limited to the non-enforceable "best endeavors" approach of Part IV of the GATT 1994 and the similarly inoperative infant industry provisions of Article XVIII. To some extent, the negotiations in the Uruguay Round have dealt with the problem. Many of the agreements contain operating clauses that accord differential and more favorable treatment to developing countries. Whether or not they are satisfactory depends on the purpose of the S&DT clauses.

In this new round Indonesia and other developing countries are likely to pay more attention to this issue. Although major changes in the approach to S&DT are unlikely in the current round, it is nevertheless important to take a closer look at the premises of S&DT, its relationship to the development process, and whether or not current arrangements would in fact assist developing countries to develop. There is a need to reassess what the S&DT provision should accomplish in the system in the long run. To do so there must be greater clarity about the need for S&DT and what is expected of the trading system concerning broader development goals.

If the S&DT provisions are needed to lessen the full burden of GATT/WTO obligations, then they are merely a transitional arrangement. But to focus on lengthening the transition period is to deal with the peripheral rather than the core issue of development. Moreover, developing countries are unlikely to gain significant impetus for their development simply by the existence of S&DT provisions. It is not argued that developing countries should abandon existing acquired rights under the S&DT provisions. After all, developing countries are not the only beneficiaries of S&DT arrangements. The Multi-Fibre Agreement was a form of S&DT treatment for developed countries. It has taken decades to even begin to dismantle such an anomaly. But one needs to go beyond this level of debate.

What is needed is an approach that is both closer to the core of development issues and acknowledges the limits beyond which S&DT alone cannot go to resolve development problems. Put simplistically, development problems relate to change. And change is fundamentally a question of structural adjustment. And structural adjustments have costs. In a national economy, adjustment costs are shared by society. In the current multilateral system, only those making the adjustments pay for the cost while the beneficiaries are the rest of the world. Hence there is often an incentive to delay.

Which side of the argument Indonesia will take depends on whether its focus is on structural adjustment and enhancing competitiveness, in which case it will opt for a more dynamic S&DT, or on defending existing industries, in which case it will ask for expansion of the current system. Nevertheless, given the impact of the current crisis, it is probably more likely that domestic pressures would lead to a tilt towards the expansion of the current system. It should therefore be of no surprise if Indonesia continues to support many initiatives in the area of enlarging the S&DT provisions, pending a solution to the problem.

To make S&DT provisions more responsive to the needs of developing countries, they must somehow be linked to incentives for structural adjustment. For reason of fairness, these costs must be seen to be shared by the beneficiaries of change, as well as by the losers. The choice is between more international assistance and incentives to structural adjustment or the adamant insistence to delay structural change through S&DT. If there is less incentive to take on the burden of structural adjustment, then there will be more reliance on S&DT.

This raises the fundamental issues of institutional reform of international agencies. The Uruguay Round did in part try to address some of these issues. It did so under a cryptically-described item of "functioning of the GATT system" ("FOGS") and increasing cooperation among international institutions to achieve "greater international policy coherence". It is argued that greater coordination is needed between the WTO, the IMF and the World Bank, to achieve better management of the world economy. This has operational relevance to S&DT. The agencies with the resources to assist structural adjustment are the Bretton Woods institutions, while S&DT is a WTO issue.

At the moment there is a reluctance to allow the WTO, the IMF and the World Bank to coordinate their policies too closely. Developing countries, including Indonesia, worry about the exercise of *cross-conditionality*, under which domestic reform would be imposed by the full weight of pressure from the IMF, the World Bank and the WTO, as well as from major developed countries. But to evade the question of structural adjustment assistance in relation to S&DT is to evade the powerful logic that developing countries fundamentally need some S&DT that addresses the question of adjustment. At a certain point this issue must be faced.

VII. Multilateralism versus Regionalism

Regional trading arrangements, regional free trade areas ("FTAs"), and even trans-regional free trade areas (e.g. the U.S./Israel Free Trade Area) are burgeoning. Whether or not FTAs are detrimental to the multilateral system is an extremely controversial issue. The conventional answer is to refer to Article XXIV of GATT 1994 and Article V of the General Agreement on Trade in Services ("GATS"), which allow free trade areas and customs unions among members in derogation of the MFN principle so long as certain conditions are met.[33]

Indonesia is currently engaged in various groupings which have different objectives. In Southeast Asia, Indonesia is currently proceeding with the creation of a free trade area among the countries of ASEAN (Association of Southeast Asian Nations),with extensive binding commitments. This is a "classical" form of regional economic grouping, loosely modeled after the European Economic Community (before it became the more extensive EU) and the Benelux countries.

Within the broader context of the Pacific region, Indonesia is also a member of APEC (Asia Pacific Economic Cooperation), which professes to practice "open regionalism" but whose scope has yet to be defined. What is clear, however, is that undertakings under APEC are voluntary. However, this does not mean that initiatives in APEC could not subsequently become binding commitments after negotiations in another forum. For

[33] *See* Chapters 5, 19 and 46 of this book. For the GATT jurisprudence on regional free trade area see the section on *Article XXIV: Territorial Application—Frontier Traffic—Customs Union and Free Trade Areas* in 2 Analytical Index: Guide to GATT Law and Practice 789–847 (1995).

example, discussion on the liberalization of trade in information technology in APEC led to the Information Technology Agreement concluded under the auspices of the WTO.

Regional economic cooperation in ASEAN has led to the proposed creation of an ASEAN Free Trade Area ("AFTA"), which is supposed to be operational by 2003. AFTA would cover both trade in goods and trade in services. Given the trade patterns of most of the members of ASEAN, whose volume of trade with the rest of the world is greater than their intra-ASEAN trade, it is legitimate to ask whether the countries see the free trade area as a substitute for or a supplement to multilateral trade. The answer is clearly that intra-regional trade is a supplement to international trade.

In this connection, it is therefore relevant to go one step further and examine how Indonesia might approach the process of regional economic integration of ASEAN within the context of its own set of interests. Assuming that Indonesia would wish to continue to be a part of the multilateral system, from which it has profited, membership in the WTO and expanding trade through the multilateral trading system would be a principal objective. How does the policy of creating a regional trade area square with this global policy? A combination of political and economic considerations is needed to offer a coherent answer.[34]

Unlike the EEC, an entity which eventually became a more powerful and extensive system of European integration in the fullest sense, the European Union, whose *economic* goals were a prelude to a *political* objective (because political peace among Europeans in a post-war world was only possible by creating economic interdependence), ASEAN was a successful regional *political* institution which needed to be strengthened by adding an *economic* element to the successful political process. The fact that AFTA was needed politically to send a strong message that the region intends to proceed with all possible means of strengthening regional interdependence is a good political argument for an FTA. But it needed to be supplemented by a stronger economic argument as well.[35]

The quasi-economic argument for AFTA is that closer interdependence among ASEAN countries could be expected as a result of the behavior of enterprises in the region. As the structure of the national economies evolves towards a greater amount of processing and manufacturing, and as countries reduce tariff levels and liberalize their investment regimes, corporate entities would begin to see the region as a single market for their products. The mechanism that would trigger the move towards greater integration would be the increase in inter-corporate and intra-corporate purchases of affiliated companies operating in the region and pursuing a regional approach in their production and marketing strategies. The finger that pulls the trigger is the implementation of a free trade agreement.[36]

In the meantime, the regional free trade area could act as an insurance policy at three levels. To the extent that Indonesia's trading partners are dispersed globally, the first level of security is to ensure that the world trading system remains open, with fair and predictable rules. For that purpose the WTO remains the primary focus. Should the multilateral trading system begin to falter, APEC would be the second level of insurance.

[34] The author has tried to analyze the argument of multilateralism vs. regionalism in the context of ASEAN. *See* H.S. Kartadjoemena, *ASEAN and the International Trading System: Regional Trade Arrangement vs. the WTO*, in ASEAN BEYOND THE REGIONAL CRISIS: CHALLENGES AND INITIATIVES (Mya Than ed. 2000).

[35] *See* Kartadjoemena, *supra* note 34, at 226–7.

[36] *Id*. at 222–6.

With the presence of major trading countries in APEC, including three of the four Quad countries (the United States, Japan and Canada) and China, initiatives could be taken to reverse backsliding in the multilateral system. Should APEC fail, then ASEAN could be the last insurance policy to enable Indonesia to be engaged in *some* trade, even if the rest of the world becomes closed.[37]

The obstacle to starting the process of negotiating AFTA is the seriousness of the current crisis, which has made governments reluctant to take the bold step of subjecting important sectors to the more open competition that a free trade area implies. But to shy away again from the efforts to establish an ASEAN FTA would send a pessimistic signal about the prospects of growth in the region, especially seen from the perspective of much-needed foreign investment.

VIII. The Quest for Balance and Systemic Coherence: Future Prospects

Indonesia has profited from the open world trading system. The record of export performance in the non-oil sectors from the mid-1980s to the mid-1990s shows that provided that concrete steps are taken domestically to make the economy more responsive to market signals and more competitive internationally, the open world trading environment can provide Indonesia with the markets that are necessary for a trade-based development strategy. It would be inconsistent for Indonesia not to have a view about systemic issues from its own national perspective.

There were many things wrong with the domestic policy environment that made Indonesia unable to deal effectively with the recent financial crisis. However, it is clear that it was not the open global system that caused the crisis. Indeed, international assistance is vital for a speedy recovery from the crisis. But it is the political resolve to implement appropriate domestic policies that will be the most decisive factor in extricating the country from the crisis. However, once the crisis is overcome, growth prospects will be brighter *only* if the global trading system remains open. Cast against this background Indonesia needs to deal with both the broader systemic aspects as well as the details of the system so as not to rely on an *ad hoc* approach to systemic issues.

A. Proactive Participation in the Multilateral System

In the meantime, preparation needs to be made for the country to deal with the challenges of the new century. In the process, Indonesia needs to remain active in multilateral fora to ensure that when recovery takes place, the international system will remain open and able to provide again the opportunity for Indonesia to gain from the openness of the global system. It must also have a clear view on how to deal with the multilateral system. This is not to say that Indonesia might not reverse its attitude towards the multilateral system and turn inward, as indeed it might, if the domestic mood since the crisis has changed the political landscape. But if that doomsday scenario occurs, it is important to demonstrate how much it would cost society in terms of low growth and poverty.

However, if we take the more hopeful argument above as a starting point in dealing with the multilateral system, then Indonesia needs to formulate more clearly its approach to the system. There are a series of systemic issues that need to be addressed in the multilateral system. Systems maintenance is crucial for its functioning. The WTO system has been

[37] *Id.* at 229–30.

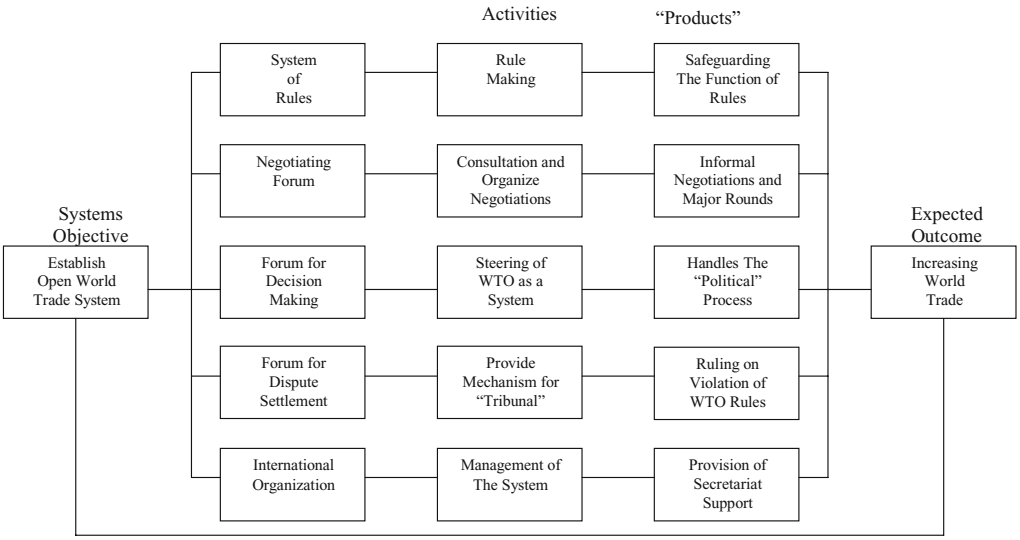

Chart 1: Simple Schematics of WTO as System.
Source: H. S. KARTADJOEMENA, GATT DAN WTO: SISTEM, FORUM DAN LEMBAGA INTERNATIONAL DI BIDANG PERDAGANGAN 80 (1996).

misguidedly criticized and reviled for its alleged power. In reality, it is a fragile system. Balance is needed to safeguard the integrity. The maintenance of this balance should be the concern of all members of the system. However, as each government pursues its national interest within that system, they often act in a manner that inflicts systemic disturbance and disruption.[38]

The system itself needs defending and nurturing if it is to serve its members well. Coherence is necessary for the systems maintenance. Over time, despite its pragmatic beginnings, it has emerged as an elegant architecture, despite its many imperfections. Professor Jackson's notion of the WTO system as a "constitutional system" helps in viewing the subject in a systemic way.[39] The transition from the GATT as an "interim" institution to the WTO helped to focus on what is needed for further systemic consistency. In this broader issue Indonesia has the choice of being actively concerned about the overall system or remaining on the margin. Indonesia would be missing an opportunity if it remains passive.

B. Systemic Issues: Helping the Integrity of the Multilateral System

From the point of view of systems maintenance, there are a number of potential threats to the system originating from different sources that need to be kept in mind. For purposes of abstraction and simplification, Chart 1 depicts in a primitive way the WTO and its sub-components as a system. The chart is intended to demonstrate simplistically that a severe malfunction in any of the sub-systems for any length of time can disrupt the entire system. Accordingly, systems maintenance is a serious business, but may be neglected by Members as they pursue their own specific national interests and respond to their domestic constituencies.

[38] For an analysis of the fragility of the system, *see* JAGDISH BHAGWATI, THE WORLD TRADING SYSTEM AT RISK 3–9 (1991).
[39] JOHN H. JACKSON, RESTRUCTURING THE GATT SYSTEM 18–35 (1990).

Thus the onus is on the owners of the system, i.e. the Members of the WTO, to behave in a manner that safeguards the integrity of the system. The owners are free to behave in a manner that disrupts the system. But if they cause a breakdown, the responsibility is on the Members and not the system. In pursuing its national interest Indonesia needs to be mindful of what it does and what others do to the system. The illustration of the type of threat to damage that could be inflicted on the system can be seen from Table 5.

Looking at the system, we can note that adherence to it calls for balance. If a significant number of Members increasingly feel that the commitments are unbalanced and that there is no politically acceptable solution to rectify the perceived imbalance, then commitment to the system would diminish. Accordingly, a continuous effort to restore perceived imbalances becomes an important aspect of systems maintenance. Periodic rounds of negotiations have functioned to make the necessary adjustments to the system. Indonesia shares the view of many developing countries that there is an imbalance between progress in areas such as textiles and agriculture, which is slower than in services and intellectual property. Indonesia needs to be proactive in rectifying such an imbalance in the current round.[40]

Disruption to the system could also occur because of a systems overload as well as a systems under-load. A systems overload could occur if the institution is assigned to deal with broad economic areas, far beyond the capacity of the organization to deal with them, even if the subjects are relevant to the system. Dealing with competition policy and investment policy in the broader sense would stretch the capacity of the organization, even if one were to agree that the two subjects belong in the WTO, which is still a contested idea. Proponents of those issues implicitly argue for organizational enlargement of the WTO and increase of its power. Given the domestic situation and its experience with the IMF, Indonesia can be expected to be reluctant to support such proposals. So can many developed and developing countries.

A systems under-load could occur, when certain areas which rightfully belong in the WTO, are not properly dealt with for political or internal reasons. A systems under-load would lead to abandonment and desertion by Members who seek recourse elsewhere for those areas that could have been dealt with in the WTO but were not. There were certain periods when countries abandoned the GATT system and resorted to other fora. Indonesia needs to be careful in sponsoring initiatives that would lead to systems under-load. For example, although compliance with technical rules such as technical barriers to trade and sanitary and phytosanitary rules, is expensive, thus requiring technical assistance, opposition to any strengthening of those rules may lead to a systemic under-load, leading others to use other fora to take measures which may be WTO-inconsistent.

Disruption could also occur because of systems dissonance, which can occur when the system tolerates for a long period rules and practices that are clearly in violation of its basic tenets and principles, and does so within the formal setting of an agreement. This is damaging to the system over the long run. Different rules concerning the same issue appearing in different agreements under the auspices of the GATT, e.g. textiles and agriculture, would lead to forum shopping by countries wishing to resolve problems in a manner most favorable for them. Though this is less the case after the Uruguay Round,

[40] The ideas about various systems disruption in the WTO have been first explored in a previous paper by the author on which this section is based. *See* H.S. KARTADJOEMENA, THE WTO SERVICES AGREEMENT AND THE NEW ROUND: POLICY ASSESSMENTS FOR DEVELOPING COUNTRIES. Discussion and lecture paper for Joint CUTS—London School of Economic Regional Training Seminar on Understanding the WTO System, September 4–6, 2000, Jaipur, India. (On file with the author.)

Table 5: Types of Systems Disruptions in the WTO as System

Situation	characteristics	Example
"systems imbalance"	*Systems imbalance* can occur when only part of the substance is fully handled and accommodated while other issues are neglected. This results in some countries having their interest more fully accommodated while the interest of others are almost wholly neglected.	*Systems imbalance* takes place when for example developed countries succeed in getting all they wanted in a round of negotiations while developing countries obtain very little. A situation of systems *imbalance* would lead some Members which are not accommodated to seek satisfaction outside the system. This leads to systems abandonment because of dissatisfaction arising from a sense of *unfairness*.
"systems overload"	*Systems overload* occurs when the WTO is forced to deal with issues which are outside trade, in which the WTO is equipped to deal. If the WTO is forced to deal with additional economic areas not directly related to trade, then sooner or later it would face the danger of being forced to administer all economic issues because they can always be argued to be trade-related.	*Overload* could occur when the GATT/WTO system is forced to deal with economic issues such as investment, competition policy as well as other issues currently under the portfolio of the IMF and the World Bank. While some Members may be politically happy with it the overload can strain the system leading to systemic malfunction arising from an overload.
"system underload"	*Systems underload* can occur when the WTO would systematically deal only with part of the areas under its portfolio while remaining passive on many issues.	*Underload* takes place when the GATT/WTO does not deal with substance which according to the agreement is part of the formal function of the organization. In a situation of *underload* what can occur is that the system would be abandoned by its constituency on grounds of its *inadequacy*.
"systems dissonance" and	*Systems dissonance* occurs surreptitiously when the WTO increasingly accommodates elements outside trade issues leading to decisions not fully compatible with WTO principles and objectives.	Textiles agreement is an example of *systems dissonance. Systems incoherence* occurs when a lobby group in developed countries succeeds in putting non-economic provisions in the WTO leading to decisions incompatible with trade principles. In such a situation the WTO is forced to deal with issues which have nothing to do with trade including boycotts and blockades. Also when developing countries succeed in placing wide exceptions for S & DT on a permanent basis, leading to a violation of MFN because of its permanence. Incoherence could lead to *systems dysfunction.*
"systems-incoherence"	*"Systems-incoherence"* can occur when the WTO whose purpose is to deal with trade issues is forced to deal with issues which are better dealt with by other organizations which have been created to deal with those issues. It leads to *incoherence* between what WTO does and what it has been intended to do.	

textiles rules and agriculture subsidies nevertheless represent a dissonance. Indonesia needs to be clear whether it intends to sponsor or reduce systemic dissonance.

A more serious systemic threat is the threat of systemic incoherence. This can occur when the multilateral trading system is expected to perform functions that are clearly not connected with trade, functions that are better done by other institutions more suitable to those functions. Members of the WTO have the choice of exercising their sovereign rights as owners of the WTO to assign to the organization any task they choose. In so doing, however, if they assign to it tasks that are not systemically coherent with its intended purpose then the risk of systemic failure is great. If that occurs, Members should accept the responsibility of a possible failure of the system and not to blame the system itself for the failure.

For developed countries, it is important to caution against politically expedient compliance with demands of domestic constituencies to assign more tasks to the WTO to deal with non-economic and non-trade issues which deviate from the purpose of creating the WTO. For its part Indonesia (as well as other developing countries) also needs to realize, for example, that in sponsoring initiatives on special and differential treatment, it needs to be sure that such initiatives would not permanently divide the system into two and convert the WTO into a development agency rather than a trade agency. Its developmental role is performed by providing the healthy trade environment that makes it possible for developing countries to develop through trade. It is not in the business of resource transfer, which is the domain of the World Bank.

C. Nurturing the System in the 21st Century

As we enter the 21st Century, the multilateral trading system that has developed since 1947 has evolved successfully, meeting the challenge of the time, despite early skepticism regarding its future prospects. As a system of rules it has evolved over the years from a highly informal but effective arrangement, into an increasingly effective formal system. The strength of the system was the flexibility of the informal approach and its pragmatism.[41] Later critiques of the early system derided the informality of the system, a criticism that contains some strong justification. However, a justifiable criticism of its informality should not be construed as a justified criticism of its other source of strength, namely its pragmatism.[42]

This pragmatism made it possible to make progress where progress was feasible, while waiting for the opportunity to proceed on more controversial issues. It is important to leave the window open to "constructive ambiguity" as we move with greater technicality and precision in reforming and updating the multilateral system.[43] Political factors operating in different countries will enable the system to move only so far, before there is a backlash from domestic constituencies. In some instances this will require self-restraint in initiating

[41] For the pragmatism of the early years of the multilateral system, *see* Olivier Long, Law and its Limitations in the GATT Multilateral Trade System 35–6 (1987).

[42] For a critique of the "power", and hence negotiated, approach to multilateral governance, *see* Ernst-Ulrich Petersmann, the GATT/WTO Dispute Settlement System: International Law, International Organization and Dispute Settlement 66–70 (1997).

[43] I have borrowed this term *constructive ambiguity*, attributed to Ambassador Alan Oxley of Australia, which seems appropriate to describe the flexibility of the system in accommodating difficult situation, provided that the sense of pragmatism continues to be present. Excessive legalism in every instance would hamper solutions while constructive ambiguity might provide an interim solution. *See* John Croome, *supra* note 8, at 147.

litigation in the WTO. In a period ahead that is expected to be increasingly more litigious, a wise degree of balance is needed, although self-restraint will be difficult to practice.

IX. Conclusion

This chapter has attempted to discuss the WTO from the specific perspective of a particular developing country, Indonesia. At present the country is confronted with a serious crisis, perhaps the most serious crisis in its half-century history as an independent nation. Politically, the very existence of the nation-state is at stake. Economically, the crisis that started as a meltdown in its financial system has made the engine of economic activity grind to a halt. Socially, the economic downturn has created hardship that has led to a large number of people falling below the poverty line.

Incorrectly but understandably, the reaction from some quarters to the crisis has been directed against the open trading system. It is equally understandable that reluctance has been shown towards greater engagement in the open trading system. However, there is too much at stake not to continue to pay attention to the international system. Despite the current difficulties, Indonesia needs to continue its engagement in the international system. There is a bleak prospect of achieving growth and development through the road of autarchy.

However, to engage effectively in the international system, there are specific areas of interest to Indonesia that deserve serious attention. This chapter has attempted to outline what they are. These issues, which deserve attention, need to be tackled, not only to face the current round, but also to prepare the country for the challenges and opportunities of an open world trading system in this new century.

* Ambassador of Japan to the International Organizations in Geneva (1993–96) and Chairman of the WTO Council of Trade in Goods (1995).

I. Japan's Accession to the GATT

After several years of negotiations Japan acceded to the GATT in 1955, prior to its entry into the United Nations in the following year. This was an event of vital importance to Japan, which was strenuously pursuing the road to economic reconstruction and re-entry into the international economy in the post-war period. Japan desperately needed to increase its exports to enable it to buy food and materials, and it needed to put trade relations with other countries on a stable, Most-Favored-Nation basis.

The United States, which had already accorded MFN treatment to Japan in the Treaty of Friendship, Commerce and Navigation signed in 1953 between the two countries was sympathetic towards Japan's membership. Most European countries, however, were concerned that Japanese products would make inroads into their markets as they had in pre-war days. Even after Japan became a contracting party to GATT, many of them invoked the non-application provision of the GATT, Article XXXV, as a basis for denying MFN treatment to Japan. It was not until 1976 that Article XXXV was disinvoked by all the European countries with respect to Japan.

II. Japan's Participation in The Dillon, Kennedy, and Tokyo Rounds

A. The Dillon Round

Although Japan participated in the tariff negotiations on industrial and agricultural products in the Dillon Round held in 1961–62 following the formation of the European Common Market, it only played a minor role.

B. The Kennedy Round

Japan played a much more active role in the Kennedy Round, which was the first full-scale multilateral negotiation in which a fifty percent across-the-board tariff cut was proposed (the final result was 35 percent). Japan formed a part of the so-called Bridge Club (composed of the United States, the EEC, Japan and the United Kingdom) which virtually led the negotiations. Japan's rapid economic growth was in full swing at the time, although the trade deficit was chronic, and many industrial sectors including heavy and chemical industries, not to mention the agricultural sector, were still considered vulnerable. The auto industry strongly opposed a demand to reduce the existing 35 percent tariff rate on passenger cars by half to 17.5 percent, although this was accepted finally. Paradoxically, the Japanese auto industry began to expand rapidly after the Kennedy Round and grew into one of the country's most powerful export industries with the tariff rate on cars reduced to zero. In criticizing the mercantilist approach to tariff negotiations, I often cite this example, saying "to lose in tariff negotiations is to win the competition". Of course, this is not always true. Duty-free imports of aluminum and soybeans virtually wiped out domestic production in these industries.

C. The Tokyo Round

The world economy in the 1970s was marked by a series of major crises, beginning with the dollar crisis, passing through the first oil crisis and ending with the second oil crisis. At the beginning of the 1970s, an economic recession was already evident and protectionist clouds were developing. In order to head off this ominous trend, the GATT ministerial conference held in Tokyo in 1973 launched a new round of multilateral

negotiations which became known as the Tokyo Round. Progress of the negotiations was delayed by the deepening world economic recession and a series of political crises, and it took six years to reach final agreement amid the second oil crisis.

A host of codes on non-tariff measures were agreed in the Tokyo Round, in addition to the customary tariff reductions. Quantitative restrictions on agricultural products were alleviated only by an enlargement of the quotas, as to which Japan had to make some difficult decisions with respect to sensitive items such as beef and citrus. But the fundamental problems of export subsidies on agricultural products and the Common Agricultural Policy of the EEC were not dealt with.

The most difficult issues for Japan were safeguards (GATT Article XIX) and government procurement. Japan and the EEC disagreed over whether safeguards could be applied on a selective (discriminatory) basis, and no agreement was reached. With respect to government procurement, Japan and the United States were engaged in a hard fight over the procurement of telecommunication equipment by Nippon Telephone and Telegraph ("NTT). Finally NTT started opening its door to foreign suppliers. Another serious problem with government procurement was the question whether the procuring entity should be required to publish a notice of intended procurement in one of the official languages of the GATT. Japan opposed such a requirement up until the last moment, on the ground that it would discriminate against countries whose language happened not to be a GATT official language, but finally acquiesced.

III. The Uruguay Round

Despite the successful conclusion of the Tokyo Round, there was concern in the early 1980s that the results of the Round might become unraveled as a result of the prolonged recession and increased agricultural surpluses in the world. Trade frictions spread worldwide, and the number of so-called "voluntary" export restraints ("VERs") increased. Japan agreed to VERs on automobiles with the United States and the EC. The number of anti-dumping cases soared. Sometimes anti-dumping was used as pressure to enter a VER. And a new type of managed trade emerged, "voluntary" import expansion, an example being the Japan-U.S. semi-conductor agreement which set a Japanese target of a twenty percent market share for imports.

Japan began working with its trading partners to prepare for a new round of negotiations. After a long preparatory process, the Uruguay Round was launched in 1986. The Uruguay Round agenda was comprehensive, and encompassed both traditional items, some of which, such as agriculture and textiles, had been treated as exceptions to the normal GATT principles, and new items such as trade in services and intellectual property. The negotiating process was complex and was interrupted by political upheavals and other distracting events such as the collapse of the Soviet Union, the Gulf War, and the NAFTA negotiations. It took seven years to reach a conclusion.

Japan participated actively in all areas of negotiations. The following is a brief description of Japan's objectives and of the contentious issues with which it was involved.

A. Overall Objective

Japan's most important overall objective was the strengthening of the rules-based multilateral open trading system in a way designed to restrict protectionism of any kind, whether in the form of unilateralism, bilateralism or regionalism. A priority objective was therefore the definition of clear and fair rules governing trade in goods and services.

B. Market Access

Japan was in a strong position to be aggressive with respect to market access for industrial goods, partly because its tariffs on industrial products were already minimal after a series of autonomous tariff reductions. As a result of the Uruguay Round tariff negotiation, Japan's trade-weighted average industrial tariff (bound rate) was reduced in 1999 to as low as 1.7 percent, compared with 3.5 percent for the United States and 3.6 percent for the EC.

C. Agriculture

The focus of the negotiations on agriculture was on export subsidies, domestic support, and market access. Japan provided no export subsidies and considered that they were the roots of all problems in agricultural trade. But Japan was defensive with respect to market access of farm products, its main argument being "food security". Japan's food self-sufficiency ratio was only forty percent, unusually low for any developed country, and Japan was the largest net importer of agricultural products. Rice is the staple food of the Japanese and the only main food product with respect to which Japan is self-sufficient. It was therefore considered a sanctuary and the last bastion of food security. Enormous attention was focused on rice by politicians and in the media, as if it had been the only subject of the Uruguay Round.

The negotiations on rice had begun with the statement of the Japanese minister who said, " Rice is a religion". After a long and difficult negotiation, Japan made the wrenching political decision during the final days of the Uruguay Round to accept a minimum access commitment. Japan did however succeed in avoiding the requirement to "tariffy" its import restrictions on rice by converting them into ordinary tariffs. Many experts, business people, academics and media representatives in Japan would have preferred tariffication, which would have produced a better result so long as the tariff levels were set high enough to check the free flow of imports, and would have helped to accelerate reform of rice farming. Unfortunately, the initial proposal by the Cairns group countries and the United States on the tariffication of agricultural products had been so far-reaching (including the eventual phase-out of tariff protection), that Japanese opposition at any cost to tariffication on rice had been firmly consolidated, and there was no way even to seriously consider that option.

In 1999, after four years of implementation of the minimum access commitment on rice, Japan decided to change its policy and to tariffy its import restrictions, because rice stockpiles were ever increasing due to the minimum import requirement. As a result of this change, the minimum import commitment remains at 7.2 percent of domestic consumption instead of eight percent. If, however, Japan had accepted tariffication in the Uruguay Round the commitment would have remained at five percent of domestic consumption.

D. Rules

By far the most important of Japan's specific objectives in the area of rules was to prevent unilateral action by the United States under Section 301 of the U.S. Trade Act. This objective was achieved to a considerable extent in the Dispute Settlement Understanding. Before taking action concerning matters under the covered agreements, a Member must now first go through the WTO dispute settlement procedures, and its actions are constrained by the specific recommendations of the panel report.

E. Contingent Protection (Anti-Dumping and Safeguards)

Anti-dumping measures were originally conceived of as a means of defense against predatory dumping practices. They have now turned into a tool to protect the interests of particular industries, and have very frequently been abused or misused. In the Uruguay Round Japan sought to tighten disciplines on the use of anti-dumping measures. On balance, however, the results were not satisfactory, since even more room has been left for the arbitrary calculation of dumping margins. Anti-dumping actions taken by WTO Members, developed and developing alike, have proliferated since the Uruguay Round.

The positive aspect of the Uruguay Round agreement with respect to safeguard measures is the prohibition of "gray area" measures, such as VERs. The negative aspect is that the agreement now allows for deviation from the non-discriminatory application of safeguard quotas under limited circumstances (*Agreement on Safeguards*, Article 5.2(b).

It may be noted that until the Uruguay Round negotiations, Japan had rarely imposed anti-dumping measures and had never invoked safeguard measures. Following the Uruguay Round implementing procedures have been put in place, and antidumping and safeguard measures have actually been invoked on a few occasions. These actions were completely in conformity with WTO rules. Yet it is to be hoped that the maximum restraint will be exercised with respect to the use of these measures by a country that has suffered so much pain from their abuse in the past.

F. Services

The Japanese negotiating team made a valuable contribution to the development of the framework of the General Agreement on Trade in Services ("GATS"). Japan offered specific commitments on a wide range of sectors, including financial services. The offers on financial services reflect the outcome of reforms undertaken in Japan in consultation with the United States. But the financial services negotiation was not concluded at the end of the Uruguay Round because of U.S. insistence on a two-tier approach, treating countries with open financial markets differently from those with closed markets. It took several more years to reach agreement in this sector. Negotiations with respect to the maritime transport sector, in which Japan has a strong interest, were left unfinished. It should be noted that Japan did not apply for any exemption from the MFN obligations in the GATS.

G. Intellectual Property

Japan views the TRIPs agreement as on the whole a satisfactory outcome to the negotiations. However, one missed objective was adoption of the "first-to-file" principle for patent applications.[1]

IV. Effects on Japan of GATT/WTO Membership and the Results of the Uruguay Round

A. Economic and Political Aspects

Membership in the GATT/WTO system has enabled Japan to enjoy the benefits of the open multilateral trading regime. Participation in the GATT/WTO negotiation rounds,

[1] The United States still applies the first-to-invent principle.

in particular the Uruguay Round, has given momentum to efforts to promote reform and to enhance the competitiveness of the Japanese economy. It is true that Japan's economy has not been in good shape since before the conclusion of the UR. This was due to mismanagement of macro-economic policies amid drastic realignment of exchange rates in the wake of the Plaza Agreement in 1985, and due to delay in the structural reform of certain sectors (particularly banking). But so far as manufacturing sectors are concerned, the Uruguay Round was instrumental in further streamlining these industries.

One of Japan's hopes was that membership of the GATT would minimize outside political pressures on trade issues. The record is mixed in this respect. The separation of economics from politics worked fairly well in the early days of Japan's GATT membership. As trade frictions intensified in the 1980s and there was a drift towards managed trade, such as the establishment of numerical targets for imports, the GATT was no longer able to provide shelter from overtly political actions. The Uruguay Round, by establishing an effective dispute settlement process, should reverse this trend.

B. Social Aspects

Except for a short period after the oil crisis, Japan's economy continued to grow until the end of the 1980s. The unemployment rate had been extremely low. There was some opposition among farmers when imports of various agricultural products were liberalized, but labor unions were mostly in favor of free trade and the GATT system.

In the wake of the collapse of the bubble economy in the 1990s, the economic recession in Japan has been a very drawn-out affair with unemployment figures above five percent, which is very high by Japanese standards. Deflation is worsening. There are questions about food security. Massive imports from neighboring countries are threatening family farming and small textile mills. However, this has little to do with the WTO or with globalization, of which the WTO has become a symbol. At present, the backlash against globalization is not yet significant in Japan except among environmental activists and some critics of contemporary civilization. If however, economic and environmental degradation continues in Japan, the free trade system may become a target of the anti-globalization movement.

V. Attitude of the Japanese Towards the WTO

Ordinary citizens in Japan have little knowledge of what the WTO is about, and yet the standing of the organization remains high, based on the vague idea that the WTO promotes and safeguards free trade that is the driving force behind prosperity. However, the WTO and the Uruguay Round remains a target of resentment for people engaged in sectors affected by liberalization, such as rice farmers. Apart from a handful of knowledgeable businessmen and political leaders, people show little interest in he WTO as such, partly because the WTO agreements are too complicated for many to understand their implications on daily life. They tend to react to more visible events, such as trade conflicts between Japan and the United States, whether or not they are dealt with under the framework of the WTO.

Trade relations with China have moved to a new dimension. At the time China joined the WTO, imports to Japan from China were rapidly increasing, while Japanese investment in China soared in both number and value of projects. Before China's entry into the WTO in December 2001, Japan invoked provisional safeguard measures in April of the same year for the first time in its history against imports of certain vegetables from

China, and China retaliated by imposing prohibitive tariffs on various Japanese products including automobiles. The difficulty was solved, and now there is great interest in seeing how Japan-China trade relations develop under the WTO umbrella.

VI. Japan's View of the Strengths and Weaknesses of the WTO System

As compared with the GATT, the WTO is an institution with considerably enhanced functions. But the main source of its strength lies in the trust that was built up since the days when the GATT was the custodian of multilateral free trade. The WTO, as a last resort for dispute resolution, is much more powerful than the GATT. The source of its power is the will of its members to sustain the system. Ironically, the very image that the WTO is a power-house has made itself a target of protest by anti-globalization activists on matters that lie outside the purview or responsibility of the WTO.

The weakness of the WTO lies in the fact that, in the absence of global coherence of economic policies, the role and limitations of the trade regime represented by the WTO are not clearly recognized. The problems of developing countries, even trade problems, cannot be solved by the WTO alone. The interface between trade and the environment has not been properly adjusted.

Another weakness is that certain political situations can sometimes erode the credibility of the system. The proliferation of regional arrangements which may not be consistent with GATT Article XXIV has not been adequately curbed. There is also a problem with the laxity of some key disciplines. The trade rules were on the whole strengthened in the Uruguay Round agreements, but in some cases—notably anti-dumping—disciplines are on balance looser with new opportunities for arbitrariness.

People often complain of the slowness and procrastination in the process of decision-making and negotiations in the WTO. To reach consensus on a wide range of complex issues is not an easy task. In terms of efficiency, this is a weakness of WTO, but it is a source of strength if the process can produce an outcome that all Members can live with.

VII. Japan and the Dispute Settlement Procedure

The Japanese are naturally loath to become involved in litigation. Amicable solutions through discussion are preferred to adjudication by the courts. The adversary approach is not part of the national character.

During its forty-year membership of the GATT, Japan brought only three cases to panels as the complaining party. Since the new dispute settlement procedure was instituted in the WTO, Japan has initiated a few cases on a few matters, such as the national car scheme in Indonesia and the antidumping action taken by the United States on hot-rolled steel. Yet Japan is still not a frequent user of the WTO dispute settlement system. It has tended to participate more as a third party in disputes brought by others, rather than initiating cases itself.

Japan recognizes that the dispute settlement procedure in the WTO will constrain the use of unilateral actions. The elements of automaticity incorporated in the proceedings, in terms of the timetable and the adoption and implementation of panel/Appellate Body recommendations, represent fundamental improvements over the old GATT procedures. The GATT/WTO dispute settlement system is a combination of diplomacy and litigation, but under the WTO it has tilted heavily towards litigation. Several points should be noted in this context.

First, there are inevitably ambiguities, lacunas or contradictions in the key rules, which were negotiated and often agreed upon as compromise solutions. Although the panels and the Appellate Body have been trying to establish a jurisprudence, it is obvious that they cannot legislate or change the rules. But they should at least be able to propose or suggest to the General Council, through the Dispute Settlement Body, modification of provisions strictly for purposes of clarification.

Second, the implementation procedures should be more refined and reinforced, particularly with respect to extension of deadlines for implementation, and disputes as to how implementation is to be conducted. There is also a problem with the modality of remedies. In most cases panels simply recommend that the offending Member bring its measures into conformity with the relevant provisions of the agreements. A remedy of damages for the value of lost trade would cause political and administrative difficulties, but improperly collected duties, for example, should be reimbursed.

Finally, a practical problem for Japan is how to develop the legal and financial resources needed to go through the process either as complainant or as respondent. Specialized lawyers and consultants charge large fees. Few government officials and lawyers in Japan are versed in the dispute settlement procedures, which are largely patterned after American legal procedures. Japan urgently needs to train officials and lawyers who are capable of handling cases in the WTO dispute settlement system

VIII. The Doha (Development) Round

The new round was launched in Doha in 2001 to complete the Uruguay Round objective of building a trading system for the Twenty-First Century. Its work program consists of:

- Continued negotiations on the built-in agenda items (agriculture and services)
- Review of some of the trade rules (anti-dumping, subsidies and regional arrangements)
- Focus on the implementation problems of developing countries and cross-cutting issues of special and differential treatment for developing countries
- Limited mandates on environmental issues and dispute settlement procedures.

The new issues (investment, competition policy and two others) are on the waiting list pending the outcome of the 2003 Ministerial Conference in Cancun. At first glance, the agenda appears less ambitious than that of the Uruguay Round. But it became clear from the preparatory work for the Doha Ministerial that, apart from the new areas, the central and most difficult issues will be agriculture and issues related to developing countries.

A. Agriculture

Japan attaches great importance to the concept of the "multi-functionality" of agriculture, which attaches importance to the functions of conservation of the environment, the preservation and revitalization of rural areas, and food security. It is to be hoped that a clear formula is developed to enable this concept to be incorporated into the modalities of negotiation.

Japan is also interested in redressing the imbalance between the obligations of importing countries and exporting countries with respect to agricultural products. It needs to be remembered that after soybean production had been wiped out in Japan, the United States imposed an embargo on the export of soybeans, causing panic in Japan. The supply obligation of exporters should be spelled out more clearly. Article 12(a) of the Agreement

on Agriculture provides that Members instituting export *prohibitions* or restrictions shall give due consideration to the effects of such *prohibitions* or restrictions on importing Members' food security. What does "due consideration" mean when an export prohibition is instituted?

B. Developing Countries

Implementation is not an issue for negotiation (except in the case of alleviation of obligations for developing countries), and should be primarily solved through capacity building to which Japan is ready to contribute. Capacity building includes not only training officials but in many instances helping to set up administrative and economic infrastructure.

The least developed countries not only have difficulties implementing their obligations in the Uruguay Round agreements, but they find some requirements to be contrary to their essential interests. One of the most controversial areas in this respect is the TRIPS agreement. Some advanced developing countries are also concerned about the lack of benefits so far from the Agreements on Agriculture and Textiles, covering products with respect to which they have comparative advantage. But each country or each group of countries has different needs and interests. Therefore Special and Differential Treatment should be negotiated and provided according to the level of development and needs of individual countries or groups of countries.

C. Other Issues

The Anti-dumping Agreement should be clarified and modified so as to prevent abuse or misuse, to eliminate the opportunities for arbitrary determinations of dumping and dumping margin calculations, and to tighten the sunset rules.

Investment is an important element in the promotion of trade and development. In the absence of a multilateral agreement on investment (except for some aspects of trade-related investment measures, covered by the TRIMS Agreement, and the GATS coverage of commercial presence in the case of trade in services), many bilateral agreements for the protection and liberalization of investment with different levels and scope have been concluded, at the risk of distorting the flow of investment and trade.

Together with other countries, Japan has proposed modification of the Dispute Resolution Understanding, *inter alia*, to facilitate implementation of recommendations by panels and the Appellate Body.

The Doha agenda negotiation is revolving on two axes, i.e. Trans-Atlantic conflict and cooperation on the one hand, and the North-South divide on the other. The Trans-Atlantic powers are dominant in the WTO, but they cannot impose their will on other Members. Although the Doha Round has been named the "Development Round", this does not mean that issues can be solved through a simple assumption of a dichotomy between the North and the South, because the interests of every country either in the North or the South are quite different. The problem will be how to find common ground.

IX. Regional Trade Arrangements

Regional trade arrangements of many types have mushroomed in recent years. Japan welcomed the formation of the EEC in 1957, partly for geo-political reasons, since it was hoped that it would create a strong Western Europe opposing the Soviet Union.

On the other hand, there was concern about an ever-expanding economic entity with deepening integration developing into a powerful trading bloc. A series of GATT Rounds were proposed by the United States in order to lower the trade barriers surrounding the EEC.

In the Uruguay Round, Japan attempted to tighten the disciplines on the formation of regional arrangements, by clarifying the meaning of GATT Art. XXIV, and by proposing that multilateral reviews be conducted and its approval required before the entry into force of such arrangements. The attempt was not very successful. When the formation of NAFTA was contemplated, the U.S. stance towards regional trading arrangements, which had favored stronger discipline, apparently softened.

As bilateral and regional free trade agreements proliferated after the conclusion of the Uruguay Round, the Article XXIV exception to the MFN appeared to have become the rule. Japan and Korea, which were not party to any preferential trading arrangement, seemed to become part of an endangered species. Japan and Korea have joined APEC (Asia Pacific Economic Conference), whose objectives include liberalization and facilitation of trade. APEC represents open regionalism and not a preferential regime among members. In the meantime, some Japanese-owned factories based in NAFTA countries (Mexico in particular) have been obliged to abandon production after the lapse of the transition period, as a result of the full application of NAFTA rules of origin.

A long-established trade policy of the Government was to give great priority to multilateralism over bilateralism or regionalism. Given the developments described above, the Government and business leaders have started to seriously consider the possibility of entering free trade agreements. Many debates and studies have been conducted, not only in Japan but also jointly with some countries that are candidates as FTA partners. Japan decided to enter into negotiation of an FTA with Singapore. The Agreement for New Age Economic Partnership between the two countries, which includes preferential trading arrangements, was signed in January 2002. Now several joint study groups, both official and private, are examining the possibility of FTAs with Mexico, Korea, ASEAN, China and others. It is evident therefore that there has been an important shift of policy toward FTAs on the part of Japan. The Government has made it clear, however, that FTAs would remain complementary to the multilateral system.

X. Trade Policy Formulation
