[157] *See* Horlick and Shea, *supra* note 66, at 20. The EC approach means that the importer must raise its prices by double the amount of the dumping margin to avoid paying anti-dumping duties. *Id.* at 26–27.

[158] Individual margins or normal values are to be applied to exporters or producers who submitted voluntary responses in accordance with Article 6.10.2. ADA, Art. 9.4.

[159] *United States—Hot-Rolled Steel from Japan AB, supra* note 72, ¶ 123 (emphasis in original).

[160] Article 9.5 does not specify how quickly such reviews must be carried out, but simply states that they must be accelerated in comparison to the normal review process.

determination of present (as opposed to threatened) material injury, anti-dumping duties may be assessed retroactively on all imports that took place during the period in which provisional measures were in effect. However, under Article 10.3, if the definitive anti-dumping duty is higher than the provisional duty, the difference is not to be collected, while if it is lower the difference is to be reimbursed. Thus, the provisional duty during the period before the issuance of a definitive measure acts as a cap on the amount of definitive duties that may be collected.

Second, where the injury determination is of threat of material injury or material retardation of an industry, rather than present material injury, duties may only be assessed from the date of that determination unless the effect of the dumped imports would have led to a current material injury determination in the absence of provisional measures.[161]

Third, under the so-called "critical circumstances" provision, anti-dumping duties may be levied on imports entering up to ninety days before the date of application of provisional measures (but not before the date of initiation of the investigation) if:

(i) There is a history or injurious dumping or the importer was or should have been aware that the exporter practiced injurious dumping, and
(ii) The injury is caused by massive dumped imports in a relatively short time which in light of the timing and volume of imports and other circumstances (such as a rapid build-up of inventory) is likely to seriously undermine the remedial effect of the definitive anti-dumping duty.

The purpose of this provision is to deter importers from stockpiling imports after initiation of the investigation but before the application of provisional measures. Article 10.7 provides that the authorities may take such measures as withholding of appraisement or assessment as may be necessary to collect anti-dumping duties retroactively under the critical circumstances provision. In the words of a WTO panel, "Article 10.7 measures serve the same purposes as an order at the beginning of a lawsuit to preserve the *status quo*—they ensure that at the end of the process, effective measures can be put in place should the circumstances warrant."[162]

ARTICLE 11—DURATION AND REVIEW OF ANTI-DUMPING DUTIES AND PRICE UNDERTAKINGS

One of the major topics during the Uruguay Round negotiations was the duration of anti-dumping measures. Most countries that were active anti-dumping enforcers had so-called "sunset" provisions, under which anti-dumping measures were automatically reviewed at specified intervals[163] to determine whether there was still a need for them to stay in effect. However, in the United States, there was no automatic review. Instead, anti-dumping measures would only be lifted if the export interests could show that there had been no dumping for at least three years or that circumstances had changed in a

[161] Although a "determination" that the effect of the dumped imports would have led to an injury determination in the absence of the provisional measures is not necessary, the final determination by the investigating authority must contain a specific statement indicating that the issue was properly considered and decided. *Mexico—HFCS*, *supra* note 114, ¶ 7.191.

[162] Report of the Panel, *United States—Anti-dumping Measures on Certain Hot-Rolled Steel from Japan,* WT/DS184/R(2000) ("*US—Hot-Rolled Steel Panel*"), ¶ 7.163.

[163] For example, the EC and Canada conducted sunset reviews every five years, Australia every two. Krishna, *supra* note 11, at 28, n.125.

way that the order was no longer necessary.[164] These were difficult burdens to meet, and orders often stayed in effect for many years.[165] Article 11 requires all members to conduct five-year sunset reviews, and it also codifies the right to a changed circumstance review. Both types of review are applicable to price undertakings as well as to definitive anti-dumping measures.

A. Changed Circumstance Reviews

Article 11.1 makes the general statement that an anti-dumping duty is to remain in force only as long as and the extent necessary to counteract injurious dumping. Article 11.2 specifies that the authorities are to review the need for the continued imposition of the duty—i.e., "whether the injury would be likely to continue or recur if the duty were to be removed or varied"—on their own initiative where warranted, or, if a reasonable time has elapsed since the imposition of the definitive anti-dumping duty, upon request of any interested party that submits positive information substantiating the need for a review. In *United States—DRAMS,* a WTO Panel held that the U.S. regulation governing termination of orders was inconsistent with this provision in that it only permitted termination of an order on a finding that dumping or injury would be "not likely" to recur in the absence of the order. According to the Panel:

> A finding that an event is "likely" implies a greater degree of certainty that the event will occur than a finding that the event is not "not likely." For example, in common parlance, a statement that it is "likely" to rain implies a greater likelihood of rain than a statement that rain is not unlikely, or not "not likely."[166]

However, the Panel held that the mere fact that an exporter had not dumped for three and a half years did not require the authority to self-initiate a review under this provision.[167]

The anti-dumping duty is to be terminated immediately if the authorities determine that it is no longer warranted. However, the fact that the most recent assessment review found no dumping does not require termination.[168]

B. Sunset Reviews

Under Article 11.3 any definitive anti-dumping duty is to be terminated no later than five years after it went into effect unless the authorities determine in a review conducted on their own initiative or at the request of the domestic industry that expiry of the duty would be likely to lead to continuation or recurrence of dumping and injury. In *United States—Sunset Review of Anti-Dumping Duties on Corrosion-Resistant Carbon Steel Flat Products From Japan,* WT/DS244/AB/R (2004), the Appellate Body held that while the ADA did not *require* authorities to rely on dumping margins determined in administrative reviews in deciding whether dumping was likely to continue or recur if the order was lifted, if they did so those margins must have been calculated in

[164] Changed circumstances could involve a change in the domestic industry or the market, or an indication from the domestic industry that it was no longer interested in enforcement of the anti-dumping measure.

[165] A study by the U.S. Congressional Budget Office estimated that the median length of anti-dumping measures in the Unided States was 10.6 years, far longer than in other countries that were active users of anti-dumping laws. Congressional Budget Office, *Antidumping Action in the United States and Around the World: An Analysis of International Data* (1998), Section 5, available at www.cbo.gov.

[166] *United States—DRAMS, supra* note 126, ¶ 6.46.

[167] *Id.,* ¶ 6.59.

[168] *See* ADA, n. 22; *United States—DRAMS, supra* note 126, ¶ 6.32.

accordance with the requirements of Article 2.4 of the Agreement. However, although it appeared that the margins relied upon by the U.S. Department of Commerce in that case had been calculated based on some type of zeroing methodology, in the absence of factual findings by the Panel on this issue the Appellate Body was unable to decide whether or not that methodology violated Article 2.4.[169] In that case the Appellate Body upheld the decision by the Department of Commerce to base its likelihood determination on an order-wide basis, holding that the Article 6.10 requirement that separate margins should normally be calculated for each producer was not applicable to sunset reviews.

In *United States—Sunset Reviews of Anti-Dumping Measures on Oil Country Tubular Goods From Argentina,* WT/DS268/R (2004), *appeal pending*, a WTO panel held that provisions of the U.S. anti-dumping law that created a presumption of continued dumping where an exporter had explicitly waived the right to participate in the sunset review or was deemed to have waived the right because it failed to provide a complete response to the notice of initiation of the review, were inconsistent with Article 11.3. According to the panel, such a presumption could not be the basis for a "determination supported by reasoned and adequate conclusions based on the facts", as required by Article 11.3 (¶ 7.93). The panel also held that a regulation that did not allow the U.S. Department of Commerce ("DOC") to take into account evidence submitted by an exporter in an incomplete response to the notice of initiation, or evidence submitted after failure to respond to the notice, was inconsistent with Articles 6.1 and 6.2 of the Agreement (¶ 7.128). In addition, the panel found that a provision in the DOC's Sunset Policy Bulletin that the likelihood of continuation or recurrence of dumping would "normally" be determined to exist where any one of three factual scenarios existed was inconsistent with Article 11.3. The complaining Member, Argentina, had shown that the DOC had relied on one of these scenarios in every case in which it had found likelihood, indicating to the panel that it regarded the provision as "conclusive" (¶ 7.165).

Article 11.4 provides that changed circumstance and sunset reviews must normally be completed within twelve months.

ARTICLE 12—PUBLIC NOTICE AND EXPLANATION OF DETERMINATIONS

Transparency is an important aspect of the Anti-dumping Agreement, as with the other Uruguay Round Agreements. Article 12.1 requires that when the authorities are satisfied that there is enough evidence to justify initiation, they are to notify the exporting Member(s) concerned and any interested parties.[170] They must also provide a public notice, which must include information on the following: (i) name of exporting country(ies) and product involved; (ii) date of initiation of the investigation; (iii) basis on which dumping is alleged in the application; (iv) summary of the factors on which the injury allegation is based; (v) the address to which representations by interested parties must be sent; and (iv) the time limits for interested parties to make their views known. If the specified information is contained in a separate report, the public notice must refer to that report.[171] However, WTO panels have held that the notice is not required to contain an explanation

[169] In *EC—Bed Linen, supra* note 89, the Appellate Body had held that the "zeroing" methodology used by the EC in their case was inconsistent with ADA Article 2.4.2. *See* text accompanying note 101, *supra*.

[170] The authorities must make reasonable efforts to obtain the necessary contact information for the foreign producers and exporters. *Argentina—Poultry, supra* note 98, ¶ 7.132.

[171] *Guatemala—Cement II*, supra note 117, ¶ 8.95.

of the authority's conclusion that there is sufficient evidence to justify initiation.[172] Nor is it required to contain an explanation of the factors underlying the definition of the relevant domestic industry.[173]

Under Article 12.2, public notice is to be given of preliminary and final determinations, decisions to accept undertakings, and terminations of undertakings or definitive anti-dumping duties. The notices must contain, or be accompanied by a report, which contains, "in sufficient detail," the findings and conclusions of fact and law that the authorities consider material. The notices must be sent to the exporting Member(s) and to other interested parties.

Articles 12.2.1 and 12.2.2 specify additional information that must be included in notices of imposition of provisional measures and of final determinations imposing a definitive duty or accepting a price undertaking. A provisional measures notice must include: (i) the names of the suppliers, or, if impracticable, the supplying countries; (ii) a description of the product that is sufficient for customs purposes; (iii) the margins of dumping and a full explanation of the reasons for the methodology used in establishing and comparing export price and normal value; (iv) considerations relevant to the injury determination; and the main reasons leading to the determination. A final determination must contain the same information, as well as the reasons for accepting or rejecting relevant arguments or claims made by the exporters and importers (but not, interestingly, those by the domestic industry).

The same rules apply as appropriate to the initiation and completion of reviews under Article 11, and to decisions under Article 10 to apply duties retroactively.

ARTICLE 13—JUDICIAL REVIEW

Article 13 requires each Member that has an anti-dumping law to maintain judicial, arbitral or administrative tribunals for the prompt review of final determinations and Article 11 reviews of determinations. The tribunals must be independent of the authorities responsible for the determinations and reviews.

ARTICLE 14—ANTI-DUMPING ACTION ON BEHALF OF A THIRD COUNTRY

Under Article 14.1, the authorities of a third country may request another member to bring an anti-dumping action. This would be the situation where Country A claims that imports from Country B are being dumped in Country C, causing injury to an industry in Country A, and asks Country C to bring an action. The decision whether to proceed with such a case rests entirely with the importing country, which in considering the application must consider the effects of the dumping on the relevant industry in the third country as a whole, not only on the third country exports to the importing country or even the third country exports as a whole. It is difficult to see why an importing country would ever initiate a third-country anti-dumping investigation. If its own domestic industry is not complaining, or it has no domestic industry, why should it subject customers for the product to the higher prices that would result if the determination is affirmative? Moreover, Article 14.4 requires approval of the WTO Council on Goods before a third-country anti-dumping duty may be imposed, and it is highly unlikely that consensus (including the exporting country) for such approval could be obtained.

[172] *Mexico—HFCS*, supra note 114, ¶ 7.88. *See also, Guatemala—Cement II*, *supra* note 117, ¶ 8.89.
[173] *Mexico—HFCS*, *supra* note 114, ¶¶ 7.86–87.

ARTICLE 15—DEVELOPING COUNTRIES

Most of the Uruguay Round agreements provide special and differential treatment for developing countries in the form of different substantive requirements, more time for implementation, and an obligation on the part of developed countries to provide technical assistance. Perhaps reflecting the extreme sensitivity of the subject, the ADA contains no provisions of this kind. Article 15 merely recognizes that "special regard must be given by developed country Members to the special situation of developing country Members when considering the application of anti-dumping measures", and requires that "[p]ossibilities of constructive remedies" provided for in the Agreement be explored before applying anti-dumping duties that would affect the essential interests of developing country Members. This provision is of little value to developing countries, since although the WTO Panel in *EC—Bed Linen* held that it imposes an obligation on the investigating authority to actively *consider* the possibility of a constructive remedy—either a price undertaking or imposition of a duty lower than the dumping margin but sufficient to remedy the injury[174]—another panel held that failure to *apply* such a remedy was not a violation.[175] As we have seen, Article 8 gives investigating authorities discretion to refuse to accept price undertakings.

ARTICLE 16—COMMITTEE ON ANTI-DUMPING PRACTICES

Article 16.1 establishes a Committee on Anti-Dumping Practices, "composed of representatives of each of the Members." It is to meet not less than twice a year and is to provide Members the opportunity to consult on any matters relating to the Agreement. Members are to report "without delay" all preliminary and final anti-dumping actions taken by them, and are to submit semi-annual reports of any anti-dumping actions taken by them in the previous six months. These reports are available on the WTO website.[176] Members are also to notify the Committee as to which of its authorities are competent to initiate and conduct anti-dumping investigations, and of its procedures governing the initiation and conduct of investigations.

ARTICLE 17—CONSULTATION AND DISPUTE SETTLEMENT

Article 17 provides that a Members may request consultations with another Member whenever it considers that benefits under the Agreement are being nullified or impaired, or "the achievement of any objective is being impeded," and that the other Member must "afford sympathetic consideration" to such a request. Under Article 17.4, where consultations do not produce a mutually agreed solution, and the importing Member has taken a provisional measure having a significant impact or final action to levy definitive anti-dumping duties or to accept price undertakings, the requesting Member may take the matter to the Dispute Settlement Body ("DSB"). Although this language could be read as requiring that one of the three specified actions—provisional measures having

[174] *EC—Bed Line Panel*, *supra* note 90, ¶ 6.238 (this issue was not appealed).

[175] *United States—Steel Plate from India*, *supra* note 145, ¶¶ 7.114–115. A GATT Panel construing the identically-worded provision in the 1979 Anti-dumping Code (Article 13) had reached the same conclusion. *EC—Imposition of Anti-Dumping Duties on Imports of Cotton Yarn From Brazil*, *supra* note 57, ¶ 589. That panel also held that the "essential interests" of a developing country that could be affected by the impocition of anti-dumping duties could include a strategic industry dependent on export trade. *Id.* ¶ 583.

[176] www.wto.org.

a significant impact, definitive anti-dumping duties, or price undertakings—have been taken before a matter can be referred to the DSB under the ADA, the Appellate Body has held that it does not preclude a Member from challenging anti-dumping legislation "as such", rather than only bringing challenges in the context of particular anti-dumping decisions.[177] Instead, according to the Appellate Body, Article 17.4 simply serves to limit the type of action in an anti-dumping proceeding that can be challenged, to ensure that each step, however small, is not the subject of dispute settlement proceedings. There is no such limitation in the SCM Agreement, which means that initiation of a CVD investigation can be challenged immediately, whereas initiation of an anti-dumping investigation cannot be challenged until, at the earliest, the imposition of provisional measures.[178]

Under Article 17.5, the DSB is, upon request, to establish a panel to examine the matter based upon (i) a written statement of the Member explaining its claim of nullification or impairment or impeding the achieving of the objectives of the Agreement, and (ii) the facts made available to the investigating authorities.[179] However, a panel may not consider evidence that was not before the investigating authority.[180]

The ADA is unique among the Uruguay Round Agreements in that it contains its own standard of review.[181] The other Agreements are subject to the general standard of review set forth in Article 11 of the Understanding on Rules and Procedures Governing the Settlement of Disputes, which directs each panel to "make an objective assessment of the matter before it, including an objective assessment of the facts of the case and the applicability of and conformity with the relevant covered agreements. . . ." Reflecting the concern of the United States that panels might try to second-guess the decisions of national authorities in anti-dumping decisions, Article 17.6 attempts to prevent panels from substituting their own judgment for that of the authorities.[182] Thus, with respect to the facts of a case, Article 17.6(i) directs the panel simply to determine whether "the authorities' establishment of the facts was proper and whether their evaluation of those facts was unbiased and objective."[183] If so, the evaluation may not be overturned "even though the panel might have reached a different conclusion." The Appellate Body has held that a panel is not required under Article 17.6 to confine its review of the "analysis and reasoning" of the authority to the documents that were available to the interested

[177] *Guatemala—Cement I*, *supra* note 122, ¶ 75.

[178] The EC has proposed in the Doha Round discussions that the ADA be amended to allow immediate challenges to "flawed initiations" that fail to meet the minimum standing, evidentiary, and procedural requirements of the Agreement. *See EU Proposal for Challenging AD, CVD Initiations Gets Mixed Reviews,* INSIDE US TRADE, March 28, 2003.

[179] *Thailand—Steel*, *supra* note 88, ¶¶ 115, 118.

[180] *United States—Hot-Rolled Steel Panel, supra* note 162, ¶¶ 7.6–7.

[181] The Uruguay Round *Decision on Review of Article 17.6 of the Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994* (LEGAL TEXTS, *supra* note 62, at 397) stated that the special standard of review established by Article 17.6 of the ADA would be reviewed after three years to consider whether it was capable of general application. There has been no decision to apply the Section 17.6 standard to other agreements.

[182] It has been reported that the U.S. negotiators regarded this provision, which was agreed to on the last night of the negotiations, as a deal breaker for the entire round. Ernst-Ulrich Petersmann, *The Dispute Settlement System of the World Trade Organization and the Evolution of the GATT Dispute Settlement System Since 1948,* 31 COMM. MARKET L.R. 1157, 1204 (1994).

[183] It has been suggested that this standard essentially codified the existing practice of GATT panels. Gary Horlick and Peggy Clarke, *Standards for Panels Reviewing Anti-Dumping Determinations Under the GATT and the WTO,* in INTERNATIONAL TRADE LAW AND THE GATT/WTO DISPUTE SETTLEMENT SYSTEM (Ernst-Ulrich Petersmann, ed., 1997) at 6, 11, 13.

parties and/or their legal counsel at the time of the final determination, but may also consider confidential facts that were not available to the parties.[184]

With respect to the law, the panel is to interpret the relevant provisions of the Agreement "in accordance with customary rules of interpretation of public international law."[185] If the panel finds that more than one interpretation of the Agreement is permissible, the panel is to find the authority's measure to be consistent with the Agreement "if it rests upon one of those permissible interpretations." It has been observed that this provision is self-contradictory, because the customary rules of interpretation—i.e., primarily Sections 31 and 32 of the Vienna Convention on the Interpretation of Treaties—are designed to produce a *single* interpretation, not more than one.[186]

In practice, the supposedly narrower standard of review does not seem to have inhibited panels and the Appellate Body, which have been quite ready to find the practices of particular countries to be inconsistent with the ADA and with GATT Article VI. The vast majority of the cases involving substantive aspects of the ADA that have reached the panel or Appellate Body stage resulted in findings of violations of the ADA. In many of these cases, the panel and/or Appellate Body examined the facts relating to dumping and injury in considerable detail, and did not appear reluctant to invalidate the findings of the investigating authorities. In addition, the Appellate Body has held that Article 17.6 supplements rather than replaces Article 11 of the DSE.[187] Thus, although Article 17.6(i) does not expressly require panels to conduct an "objective assessment of the facts" as does DSU Article 11, "it is inconceivable that Article 17.6(i) should require anything other than that panels make an 'objective assessment of the facts of the matter.'"[188]

ARTICLE 18—FINAL PROVISIONS

Article 18.1 provides that no specific action may be taken against dumping of exports from another Member except in accordance with GATT 1994, "as interpreted by this Agreement." The Appellate Body in *United States—1916 Act* ruled that the U.S. Anti-Dumping Act of 1916, which provides civil damage remedies and criminal penalties for intentional dumping,[189] violates Article 18.1 as well as Article 1. In *United States—Byrd Amendment,* the Appellate Body upheld a panel ruling that a U.S. statute that authorizes payment of anti-dumping (and countervailing) duties to the petitioning companies violated Article 18.1 (as well as Article 32.1 of the SCM Agreement), because it was a "specific action against dumping" but not one of the three types of permitted action identified by the Appellate Body in *United States—1916 Act*,[190] namely definitive anti-dumping measures, provisional measures, and price undertakings.[191] The Appellate Body found that the Byrd Amendment was a specific action against dumping because it would result in the financing of United States competitors through the transfer to the latter of the duties collected on those exports, thus giving foreign producers and exporters "an

incentive not to engage in the practice of exporting dumped or subsidized products or to terminate such practices".[192]

V. The Doha Development Agenda

Prior to the Doha Ministerial, the United States took the position that anti-dumping should be kept off the negotiating table, as it had before the Seattle Ministerial. The furthest it was prepared to go was a two-stage approach—a two-year study period with a decision whether or not to begin negotiations to be made at the 2003 Ministerial.[193] However, at the insistence of other members the Doha Ministerial Declaration included an agreement "to negotiations aimed at clarifying and improving disciplines under the Agreements on Implementation of Article VI of the GATT 1994 and on Subsidies and Countervailing Measures. . . . "[194] But of vital importance to the United States negotiators, who as usual faced strong opposition to any possible weakening of U.S. anti-dumping and countervailing law from members of the U.S. Congress and various powerful domestic industries, the proviso "while preserving the basic concepts, principles and effectiveness of these Agreements," was included in the Declaration. The Declaration also calls for the needs of developing and least-developed countries to be taken into account, and, in a gesture towards the original U.S. proposal for a two-year study period, states that "[i]n the initial phase of the negotiations, participants will indicate the provisions, including disciplines on trade distorting practices [another sop to the United States], that they seek to clarify and improve in the subsequent phase."

Following the cues in the Ministerial Declaration, the United States is focusing on the need to preserve the effectiveness of the trade remedy laws, and to "address more effectively underlying trade-distorting practices". In a submission to the Negotiating Group on Rules, it stated:

> A government's industrial policies or key aspects of the economic system supported by government inaction can enable injurious dumping to take place. Although these policies take on many forms, they can provide similar artificial advantages to producers. For instance, these policies may allow producers to earn high profits in a home "sanctuary market", which may in turn allow them to sell abroad at an artificially low price. Such practices can result in injury in the importing country since domestic firms may not be able to match the artificially low prices from producers in the sanctuary market.[195]

The United States has also raised the question of the dispute settlement process, in particular whether panels and the Appellate Body are following the appropriate standard of review and are avoiding imposing obligations on national authorities that are not contained in the Agreement. This of course is a reaction to the string of losses by the United States in cases involving its enforcement of its anti-dumping laws. Finally, the United

[192] *Id.* at ¶ 256.

[193] *See, e.g., U.S. Refuses WTO Trade Law Negotiations Under Mounting Pressure,* INSIDE U.S. TRADE, October 26, 2001. Prior to the Seattle Ministerial a senior official in the Office of the U.S. Trade Representative reportedly accused Japan of trying to undermine the new round merely by insisting that anti-dumping rules should be included in the round. *U.S. Official Contrasts U.S. Approach to New WTO Talks with EU, Japan,* INSIDE U.S. TRADE, October 22, 1999. *See also, [Secretary of Commerce] Daley Lays out U.S. Case Against Reopening WTO Antidumping Agreement,* INSIDE U.S. TRADE,October 1, 1999; *Deputy USTR Says Textiles, AD Rules off the Table in New WTO Negotiations,* INSIDE U.S. TRADE, August 13, 1999.

[194] *Ministerial Declaration,* November 14, 2001, WT/MIN(01)/DEC/1, reproduced in the Appendix to this book.

[195] *Basic Concepts and Principles of the Trade Remedy Rules,* Communication from the United States to the Negotiating Group on Rules, October 17, 2002, TN/RL/W/27.

States is also calling for increased transparency and procedural fairness in anti-dumping and countervailing duty proceedings, recognizing that with the greatly expanded use of anti-dumping laws by WTO members, U.S. exporters are being increasingly subjected to investigations.[196]

Other countries, on the other hand, are seeking to tighten the ADA disciplines, which they believe at present allow too much room for overreaching by zealous anti-dumping enforcers. A group of members known informally as the "Friends of Anti-Dumping Negotiations" expressed their viewpoint as follows;

> Anti-dumping measures have proliferated as a mechanism to provide often unduly excessive protection for domestic industries from international competition rather than to counteract injurious dumping, notwithstanding the efforts during the Uruguay Round to improve disciplines on the imposition of such measures. It is our concern that anti-dumping measures, when abused and misused, significantly undermine sincere and serious efforts that Members have been making and will make in various WTO agreements for trade liberalization, including tariff concessions.[197]

The "Friends" group has raised many areas where they believe that disciplines over anti-dumping enforcement should be strengthened, including:

- Clearer definitions of some of the terms in the ADA, such as "ordinary course of trade"
- The problem of cyclical industries, where "dumping" is unavoidable at certain times
- Higher *de minimis* levels
- Mandatory use of the "lesser duty" rule, under which the duty imposed is less than the dumping margin if that is enough to correct the injurious effect
- The public interest to be taken into greater account[198]

Given the diametrically-opposed position of these countries from that of the United States, anti-dumping is likely to be as contentious a subject in the Doha negotiations as it was in the Uruguay Round.

[196] Issues the United States has raised as possible points for negotiation in this area include:

- Access to non-confidential information for all parties to an investigation
- Maintenance of a public record
- Greater disclosure of decisions and calculations underlying findings
- Greater clarity with respect to verifications, including requirement that verification reports be issued and made available to parties.
- Access to confidential information for representatives of parties
- Additional details of procedures and policies to be made public

Investigatory Procedures Under the Anti-Dumping and Subsidies Agreements, Submission by the United States, December 2, 2002, TN/RL/G/35.

These are all areas in which the United States has a good record, and would not have to change its practices if these requirements were built into the ADA. The United States has also expressed an interest in identifying ways in which costs can be reduced for developing and least-developed members, including the possibility of creating a regional trade authority that would conduct trade remedy cases on behalf of its members.

[197] *General Contribution to the Discussion of the Negotiating Group on Rules on Rules on Anti-Dumping Measures,* Paper from Brazil; Chile; Colombia; Costa Rica; Hong Kong; China; Israel; Mexico; Japan; Korea; Norway; Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu; Singapore; Switzerland; Thailand; and Turkey, November 14, 2002, TN/RL/W/28.

[198] More recently the "Friends" group has proposed tighter standards for the "fair comparison" required by Article 2.4 of the ADA. *See, Friends Group Pushes to Refine Fair Comparison in Antidumping,* INSIDE U.S. TRADE, June 18, 2004.

I. Introduction

Customs officials assess the amount of duties to be levied on imported products in light of the economic *origin* of the products, their nature or *classification* and, normally, their *value*.[1] Origin for preferential purposes is governed by fairly stringent criteria.[2] Classification offers some limited opportunity for the exercise of discretion.[3] Valuation is the most plastic of the three determinations and the one most prone to fraud, administrative arbitrariness and prolonged error.

In a perfect world, the goods being imported would be sold by their manufacturer to the buyer who had ordered the goods and accepted the price proposed by the manufacturer in its price list. The manufacturer would include in the price freight to the buyer's port. No brokers, agents, intermediaries or other persons would complicate the sale. The diligent customs officer would be able to verify the order, the acceptance of the order, the shipping documents, the invoice and the payment documents. If enquiry were made, it would emerge that the manufacturer sold identical goods in identical quantities to other buyers in the same country at identical prices.

The customs officer in such ideal circumstances could be confident that the price paid was a reliable, undistorted price which could serve as a valid basis for determining the duty to pay. The elements to be included in the price had been included; there was an abundance of confirmation that the price was a normal price, identical to the price for identical merchandise; and there was no ground for concern that the price had been distorted by the relationship between the parties. In actual practice, life is more complicated, less transparent, and more prone to variations. A high percentage of import transactions are between buyers and sellers who are related. Thus the price payable may reflect special arrangements which are legitimate (the buyer, being a very large and regular customer, gets an exceptionally low price), or doubtful (the seller wishes to give a subsidy to the buyer by supplying goods at a low price, there are tax advantages to taking the bulk of the profit in the importing country, or the seller and the buyer have privately agreed to declare only a portion of the true price, the balance to be handed over in cash when next they meet), or entangled (the goods are made in a factory in country A which assembles components it does not own, then delivers the goods for painting and testing to another factory in country B which takes title to the goods from the owner of the components and then transfers title to another affiliated company in country C which sells them to yet another company in country D which is the owner at the moment of customs clearance into country E).

In such circumstances, the importing customs officer may consider using the price declared at the port of entry, but adjusting it to remedy any distortions (usually increasing it), or may reject the price as unreliable and then select some alternative means of valuation. Great debate has swirled around the question of whether the importer could insist on the price actually paid or whether the customs officer could systematically apply an "uplift" to that price, or whether a completely different means of valuing could be insisted upon by either the importer or the customs officer. As we will see, over the past 55 years, the level of discretion conferred upon the customs officer has gradually

[1] Duty is normally calculated on an *ad valorem* basis, as a percentage of the dutiable value. For a minority of products, duty is based on quantity or weight (e.g., two cents per pound), rather than value, when it is known as a specific rate duty.

[2] *See* Chapter 15 of this book.

[3] *See* Chapter 36 of this book.

diminished, while the level of precision called for in the import declaration documents has gradually increased.

The principal functions of customs duties are revenue-raising and protection. Agreement on customs duty rates would be pointless without consensus on how these rates, usually *ad valorem* percentage duties, will be levied and on what. Although customs duties have gradually been declining as between the world's wealthiest nations, they remain a significant consideration in absolute and relative terms. They may have a large impact on domestic industry; they may make imports effectively impossible; and they may represent an important source of revenue, especially in the less developed countries where it is more difficult to raise taxes. The establishment of an internationally applied uniform and stable customs valuation system has many advantages. An ideal system would permit a degree of certainty and forward planning for trading parties; customs administration would be facilitated; fewer disputes would arise; transparency would prevail; and the imports from each country would be treated approximately equally.

Article VII of General Agreement on Tariffs and Trade of 1994 ("GATT 1994") and the Agreement on Implementation of Article VII of the GATT 1994 ("Customs Valuation Agreement" or "CVA") constitute the current multilateral legal framework for customs valuation and may fairly be called uniform and stable. The CVA, in particular, sets forth the methodologies and rules that WTO Members must use to value imports for customs purposes. The objective of this chapter is to discuss in detail those methodologies and rules and to provide an overview of problems relating to the implementation of the Agreement by developing country Members.

II. Historical Background

A. From the GATT 1947 to the Tokyo Round

The 1947 General Agreement on Tariffs and Trade ("GATT 1947") was the starting point for today's considerably harmonised process of customs valuation. Article VII of GATT 1947, which is still in force, set out some general principles of valuation; however, it allowed GATT's Contracting Parties substantial flexibility in defining the value of imported goods. Moreover, some countries' valuation methods pre-dating the GATT were "grandfathered," meaning that those countries were permitted, by the Protocol of Provisional Application of GATT 1947, to continue applying inconsistent valuation methods.

Thereafter, two major customs valuation systems coexisted until the Tokyo Round: i) the notional concept of the Brussels Definition of Value, and ii) the positive concept of value followed by Australia, Canada, New Zealand and the United States.

In 1950, the Convention on the Valuation of Goods for Customs Purposes adopted the so-called "Brussels Definition of Value" ("BDV"), in an effort to achieve greater harmonization of valuation practices.[4] By the beginning of the Tokyo Round (1973), more than one hundred countries, including the European Economic Community ("EC")[5] were applying the BDV, but Australia, Canada, New Zealand and the United States refused to join in.

The BDV was based on the notional concept of "normal price," i.e. the price that the goods would fetch under open market conditions, between unrelated buyer and seller,

[4] Brussels, December 15, 1950; in force since July 28, 1953.

[5] For convenience the term "EC" is used to describe the European Economic Community, the European Community and the European Union.

under specified conditions of time and place.[6] Based on the assumption that most imports are subject to a *bona fide* sale consistent with the terms of the BDV, the transaction price could be taken as a valid basis for valuation of the majority of imports. In cases where it could not be used, the BDV provided that customs authorities could use another suitable basis to determine the normal price, using information available to them, and taking into account the actual conditions relating to the transaction being valued. While the BDV principles used the transaction or invoice price as the normal point of departure and ideal basis for valuation, they provided customs administrations with a safeguard against evasion: distorted invoice prices could be rejected and the value determined by other appropriate methods. In the days when most transactions involved unrelated parties, the BDV could work quite predictably; but the BDV became a source of arbitrariness once a high percentage of transactions involved related parties. Customs administrations could reject the price paid or payable as unreliable, but often simply increased it by five percent or ten percent without having any special grounds favouring an uplift in this amount or indeed any other figure. This meant rapid customs clearance if a possibly excessive level of duty were paid. The BDV gave customs authorities substantial discretion in the choice of "other appropriate methods". The BDV valuation system was not always applied uniformly, and importers complained about discretionary and unjustified rejection of the invoice price by customs authorities who routinely raised the declared value not because they affirmatively believed it was too low, but because the buyer and seller were related.[7] If prices fell, reflecting a competitive advantage, the downstream price remained high until the notional price was adjusted by the customs administration. New and rare products were often not captured in the lists, which made determination of the "normal price" difficult.

Australia, Canada, New Zealand and the United States instead used their own systems based on the invoice price. These systems, which followed a "positive" concept of value, reflected a desire to restrict the discretion of customs authorities in determining value. They also laid down standards that were based on the prices actually agreed on in sales either for export or for domestic consumption.[8]

In addition, some countries, like the United States and Canada continued to use certain methodologies that were later completely outlawed.[9] The United States used for certain products, such as benzenoid chemicals and footwear, the controversial American Selling Price ("ASP"), which based valuation on the price of domestically-produced products which were the competitors of the imported products. U.S. trading partners bitterly criticized this method as a protectionist measure, since the domestic producer indirectly controlled the customs duty payable for foreign competing goods. The ASP also contravened the GATT 1947 Article VII:2 (a) prohibition against basing customs value "on the value of merchandise of national origin;" however, the United States could still make use of it thanks to its grandfather rights under the Protocol of Provisional Application.[10]

[10] *See* Chapter 4 of this book.

The Canadian system was also criticized because it often based valuation on prices for home consumption in the country of export.[11]

B. From the Tokyo Round to the World Trade Organization

Partly as a result of the skirmishes caused by the ASP and partly as a result of the widespread dissatisfaction with the less predictable methods of valuation (which encouraged corruption as a result of granting economically important arbitrary powers to comparatively low-ranking and low-wage officials), it was decided that a common customs valuation scheme should be crafted. Such a scheme was intended to be applicable to different transactions, goods and countries. It was proposed that the scheme should eliminate the administrative effort, the charges of discrimination and protectionism, and the potential for arbitrary application that had dogged its predecessors. The uniform method should be based on the principles of fairness, uniformity and neutrality, and take into account commercial practices in the real world.

The Tokyo Round of Multilateral Trade Negotiations took place from 1973 to 1979. Ninety-nine countries participated. One objective of the Tokyo Round was to reduce or control non-tariff distortions to international trade. As a potential non-tariff barrier, customs valuation was put on the priority list of those negotiations.

Initial negotiations resulted in a tentative agreement proposed by the EC, mainly based on the BDV and its explanatory notes. Although developing countries participating in these negotiations fully supported the EC proposal, Australia, Canada, New Zealand and the United States completely rejected it. The situation changed at a November 1977 meeting when the EC, following a secret understanding with the United States, changed its position and opted for a positive approach, instead of the notional approach of the BDV. The EC argued that the new proposal was based on what it "believed" to be the good features of the U.S. valuation system.[12] Developing countries strongly opposed the new proposal. In particular, they noted that requiring customs authorities to accept the transaction value reflected in invoices submitted by importers would impede detection of cases in which imported goods were undervalued to reduce the incidence of duties. This would lead in turn to a significant loss of revenue. They contended that the draft agreement would not enable them to take action against under-invoicing, which was more prevalent in their countries due to their much higher tariff levels as compared to those applied by developed countries. In the end, developing countries' objections were partly met by way of special and differential treatment provisions (notably permission to delay the application of the agreement for some time so as to build up their capacity to implement it). However, their major concern—the lack of authority to reject transaction prices substantially out of line in the face of prevalent under-valuation, and fears of revenue loss—did not make progress against a broad consensus of industrialised countries which wished to reduce the opportunities for arbitrary exactions.[13]

The Tokyo Round ended with the adoption in 1979 of the Agreement on Implementation of Article VII of the GATT (or the "Customs Valuation Code"). The agreement drew from both the BDV and the U.S. system, adding much that was new and not based on either previous system. The basic concern was to design a new system that would be uniformly applied, despite former differences in customs valuation practices.[14] However,

not all GATT Contracting Parties joined the Customs Valuation Code.[15] During the pre-WTO period, GATT Contracting Parties could decide whether or not to join agreements that were negotiated to supplement or clarify the original GATT 1947.[16]

The Customs Valuation Code was not subject to negotiation during the Uruguay Round.[17] It was included in the package of the Uruguay Round agreements for reasons of completeness and because of its relationship with two decisions on customs valuation that were adopted by the Marrakesh Ministerial in 1994.[18] The Uruguay Round Agreement on Implementation of Article VII of the GATT 1994 ("CVA") is virtually identical to the 1979 Tokyo Round Code. As an integral part of the Marrakesh Agreement Establishing the WTO ("WTO Agreement"), the CVA became binding on all Members.[19]

The Uruguay Round also introduced one major innovation: WTO Members, under strong pressure from some developing countries, issued a "Decision Regarding Cases Where Customs Have Reasons to Doubt Truth or Accuracy of the Declared Value." While this decision seeks to strengthen the ability of customs authorities to deal with cases of under- and over-invoicing, it does not leave them any margin of discretion as regards the use of alternative customs valuation methods.[20]

III. Overview of the Current Legal Instruments

Article VII of GATT 1994[21] and the CVA constitute the current multilateral legal framework for customs valuation.

A. Article VII of GATT 1994

Article VII lays down a set of general principles of valuation to which Members undertake to give effect in respect of all products subject to import duties. These principles are as follows:

- Customs value should not be arbitrary, fictitious or based on the value of merchandise of national origin.[22]
- *Actual Value* should be the basic rule of customs valuation. Article VII:2(a) states that the value for customs purposes of imported merchandise should be assessed on the "actual value" of imported merchandise, or of like merchandise.

[15] As of December 31, 1993, the Customs Valuation Code had been signed by 34 countries.

[16] The Tokyo Round Agreements or "Codes" were open to all GATT contracting parties, but a GATT contracting party was not required to become a signatory to any of these agreements as a condition of continued GATT membership. At the same time, unless a contracting party became a Code signatory, it could not benefit from any of the Code provisions. The Tokyo Round Codes were not core GATT obligations applicable to all GATT contracting parties, but rather were stand-alone legal instruments negotiated under GATT auspices and existing side by side, but not fully integrated into GATT. *See* RAJ BHALA AND KEVIN KENNEDY, WORLD TRADE LAW 3–4 (1998).

[17] The Uruguay Round begun in 1986 and was formally concluded in Marrakesh on April 15, 1994.

[19] Article II:2 of the WTO Agreement.

[20] Luc DeWulf, *supra* note 7, at 4.

[21] The General Agreement on Tariffs and Trade 1994 ("GATT 1994") consists of the GATT 1947 (as amended and modified), six Uruguay Round Understandings, waivers granted under GATT 1947 and still in force on the date of entry of the WTO Agreement, and the Marrakesh Protocol, to which the WTO Members' schedules of market access commitments are appended.

[22] Article VII:2 (a).

Article VII:2 (b): defines "actual value" as the price at which, "at a time and place determined by the legislation of the country of importation, such or like merchandise is sold or offered for sale in the *ordinary course of trade under fully competitive conditions*" (emphasis supplied). The Interpretative Note *Ad Article VII* explains that "actual value" may be represented by the invoice price of imported merchandise, plus any non-included charges for legitimate costs and abnormal discounts or other reductions from ordinary competitive price.[23] The Interpretative Note also provides that a transaction is not in the "ordinary course of trade under fully competitive conditions" where the buyer and seller are not independent of each other and price is not the sole consideration.[24] In addition, prices involving special discounts limited to exclusive agents would not be under "fully competitive conditions."[25] A point worth noting in view of the contrast it provides with the CVA is that countries are free under this definition to determine value either on the basis of the price of the particular merchandise or on that of the general price level of like merchandise.[26] However, the "actual value" definition is not always easy to translate into practice in a uniform way and its terms create ambiguity and room for manipulation.[27]

- *The nearest ascertainable equivalent of such value* as a substitute rule. Article VII:2 (c) states that when it is not possible to determine the actual value, the value for customs purposes should be based on the "the nearest ascertainable equivalent of such value." Some critics claim that this provision is flawed since it is impossible to approximate a value that is undiscoverable; defenders would say that it is better to establish some mechanism to address difficult cases.[28]
- *Exclusion of certain internal taxes*. Article VII:3 provides that the value must not include an internal tax from which imported merchandise is exempted or has been or will be relieved by means of refund.
- *Transparency*. Article VII:5 sets forth the principle of transparency in the following terms: "the bases and methods for determining the value of products subject to duties or other charges or restrictions based upon or regulated in any manner by value should be stable and should be given sufficient publicity to enable traders to estimate, with a reasonable degree of certainty, the value for customs purposes."

In addition, Article VII:4 gives some guidance regarding currency conversion when, for the purpose of determining the actual value, the Member needs to convert into its own currency a price expressed in the currency of another country.

Given the many variables which influence the setting of price and valuation for import purposes, all the above principles and guidelines fall well short of constituting a stringent legal framework that would prevent customs officials from making an arbitrary use of valuation procedures, or Members from using customs valuation for protectionist purposes.

B. The Agreement on Implementation of Article VII of the GATT 1994

The CVA aims to elaborate further rules for the application of Article VII of GATT 1994, in order to provide greater uniformity and certainty in its implementation.[29] The CVA,

[23] Paragraph 2:1 of *Ad Article VII.*
[24] Paragraph 2:2 of *Ad Article VII.*
[25] Paragraph 2:3 *Ad Article VII.*
[26] Paragraph 2:4 *Ad Article VII.*
[27] Bhala and Kennedy, *supra* note 16, at 317.
[28] *Id.*
[29] *Preamble to the CVA.*

adopted during the Uruguay Round, consists of: i) a general introductory commentary; ii) a preamble; iii) four parts; and iv) three annexes. We provide below a brief overview of the basic features of the Agreement, as an introduction to more detailed discussion of certain provisions.

1. General Introductory Commentary

The General Introductory Commentary constitutes an authoritative text which may be used as an aid to interpreting and understanding the Agreement.[30] The commentary introduces the rationale of the substantive provisions contained in Part I of the Agreement. In particular, it explains the hierarchical relationship between the different rules on customs valuation, highlighting the primacy of Transaction Value.

2. The Preamble and the Guiding Principles of Customs Valuation

The Preamble, which fulfills a similar role to the General Introductory Commentary, states the underlying principles and objectives of the agreement. The Preamble recalls "the need for a fair, uniform and neutral system for the valuation of the goods for customs purposes that precludes the use of arbitrary or fictitious customs value." Fairness, uniformity and neutrality are therefore the guiding principles of the worldwide system of customs valuation the CVA intends to establish.

- *Fairness.* The concept of "fairness" implies respect for the principle of non-discrimination, one of the pillars of the WTO legal system. Customs valuation should not be used as a non-tariff means to protect domestic industry by treating imported goods unfairly.[31] In addition, valuation procedures should be of general application without distinction between sources of supply, in compliance with the Most Favored Nation Principle. The agreement contains several provisions aimed to avoid discretion and arbitrary procedures, and establishes a careful set of valuation rules, including basic rights and obligations for both customs and importers.
- *Uniformity.* The principle of uniformity is ensured by requiring all WTO Members to harmonize their national laws on the basis of the rules of the Agreement, and to apply them in a consistent and coherent manner.[32] If the valuation system is consistent around the world, life will be easier and more predictable for traders. A uniform system also facilitates cooperation between customs authorities of different countries, who can better consult. Of course, a uniform system of valuation does not establish uniform values for goods or uniform duties. Adopting the invoice price as the basis for customs valuation means the value of the same goods will very often differ even from one shipment to another at the same time and place. Likewise, although all WTO Members will share the same valuation system, this will not mean that there will be a uniform interpretation and application of the system everywhere.[33]
- *Neutrality.* The Preamble calls for a "neutral" system of valuation to prevent arbitrary and fictitious customs values. The CVA provides for transaction value as the main basis of customs value, and for a series of four alternative methods of valuation to be applied in a hierarchical order, plus a residual method of last resort when the transaction value is incapable of being used. Such valuation practices

[30] Sherman and Glasshoff, *supra* note 6 at 59.
[31] Sherman and Glasshoff, *supra* note 6, at 61.
[32] CVA Article 22:1.
[33] Sherman and Glasshoff, *supra* note 6, at 52, 61.

ought not to enhance protection or restrict trade. The adoption of a "positive" value instead of a notional value (i.e. BDV) was a major step towards an objective basis for valuation.[34]

3. Scope of the Agreement

The CVA provisions apply only to the valuation of imported goods for the purpose of levying *ad valorem* duties on such goods. The CVA therefore does not contain obligations concerning valuation for the purposes of determining export duties or quota administration based on the value of goods, nor does it lay down conditions for the valuation of goods for internal taxation or foreign exchange control. Moreover, the Preamble states that "valuation procedures should not be used to combat dumping," and the same could be said for subsidized imports. Anti-dumping or countervailing duties are the proper remedies in those cases.[35]

4. The Substantive Provisions

Part I of the Agreement, which consists of seventeen articles, sets out the substantive rules on customs valuation. Annex I to the Agreement provides interpretative notes on most of those provisions. These notes form an integral part of the Agreement and its articles are to be read and applied in conjunction with their respective notes.[36] Articles 1 to 8 define how the customs value of imported goods is to be established under the provisions of the Agreement. Article 15 defines some key terms, and the remaining provisions establish a set of valuation disciplines, some of which refer to the rights and obligations of customs and importers. Finally, Article 20 (Part III) and Annex III to the Agreement grant special and differential treatment to developing countries.

5. Administration and Dispute Settlement

From an institutional point of view, Article 18 establishes two committees, a Committee on Customs Valuation and a Technical Committee on Customs Valuation.[37] The Committee on Customs Valuation comprises representatives of each WTO Member and meets annually in Geneva to consult on matters relating to the administration of the customs valuation system. The Technical Committee on Customs Valuation ("TCCV") is created under the auspices of both the WTO and the World Customs Organization.[38] Annex II to the Agreement sets out its responsibilities, organization and decision-making procedures. In principle, every Member has the right to be represented in the TCCV. The Chairman can also admit observers not representing WTO Members. The TCCV meets

[34] Carmen Luz Guarda, *The Pivotal Role of Customs Valuation in Trade Facilitation*, WCO Seminar on Capacity Building and the WTO Valuation Agreement, Brussels, October 17–18, 2002.

[35] In a 1962 case against Canada, the United States argued that Canada's "value for duty" on imported potatoes was "arbitrary or fictitious" in contravention of Article VII:2 (a). In effect, Canada applied an anti-dumping duty to the amount by which the actual export price fell below a notional "value for duty", the average value of potatoes imported into-Canada during the previous 36 months. The Canadian regime almost guaranteed the levying of anti-dumping duty whenever prices went below their notional average price. The GATT panel's report found that "value for duty" was a concept different from valuation for customs purposes. Canada's anti-dumping technique did not meet GATT anti-dumping standards. Report of the GATT Panel (adopted), *Exports of Potatoes to Canada*, BISD, 11th Supp., at 88 (1963). *See* Bhala and Kennedy, *supra* note 16, at 317–318.

[36] CVA Article 14.

[37] CVA Article 18.

[38] The CVA refers to the Customs Co-operation Council ("CCC"), which became later the World Customs Organization. *See* Chapter 36 of this book for a description of the WCO.

periodically in Brussels and seeks to ensure, at a technical level, uniformity in interpretation and application of the Agreement. The responsibilities of the Technical Committee include advising on specific technical matters as requested by Members or by a panel in a dispute. The TCCV renders advisory opinions, commentaries, explanatory notes, carries out studies and prepares reports on the customs valuation laws of WTO members.[39] Although these instruments prepared by the TCCV are not binding, they are normally followed by WTO Members.

From a dispute settlement point of view, the CVA refers to the Understanding on Rules and Procedures Governing the Settlement of Disputes (DSU).[40] The CVA also contains special dispute settlement rules and procedures that apply when the provisions of the CVA are the issue of a dispute. These special provisions, which prevail in case of conflict with the DSU provisions,[41] refer to the role of the TCCV and to the protection of confidential information in a dispute settlement procedure. The TCCV, as an expert group, is responsible for carrying out an examination of any question requiring technical consideration at the request of a panel. The terms of reference for the TCCV are set by the panel, and the panel in turn is required to take the Committee's report into consideration in its own deliberations. If the Committee is unable to reach consensus on the matter in question, the panel will afford the parties an opportunity to present their views on the matter.[42] In addition, and unlike any other expert group under the other WTO agreements, the TCCV is also directed to provide, upon request, advice and assistance to Members engaged in consultations.[43]

So far as the authors are aware, save for the early GATT case described in note 35, *supra*, and a short reference in one WTO panel report discussed in Part V-C(3) below, there is no GATT/WTO case law on customs valuation. Few conflicts have been brought before the WTO, and none has progressed beyond the consultations stage.[44] This low level of contention on customs valuation could be explained by the fact that most of the disagreements have been solved in discussions within the TCCV; it may also suggest that Members are approaching the text in a proper spirit and are refraining from systemic abuses.

C. Relationship between Article VII of the GATT 1994 and the CVA

Because of the lack of contentious cases, neither the Appellate Body nor any panel has had the opportunity to discuss the inter-relationship between Article VII of GATT 1994 and the CVA. However, when analyzing the inter-relationship between the different Multilateral Trade Agreements that govern the world trading system under the WTO, the Appellate Body stated:

> 74. . . . It is now well established that the WTO Agreement is a "Single Undertaking" and therefore all WTO obligations are generally cumulative and Members must comply with all of them simultaneously [. . .] In this context, we note that Article II:2 of the *WTO Agreement* provides that:

[39] All TCCV instruments are contained in a compendium published by the WORLD CUSTOMS ORGANIZATION, CUSTOMS VALUATION—WTO AGREEMENT AND TEXTS OF THE TECHNICAL COMMITTEE ON CUSTOMS VALUATION, 2ND EDITION, (1997) (LOOSE-LEAF PUBLICATION AMENDING SUPPLEMENTS. LAST SUPPLEMENT WAS PUBLISHED ON SEPTEMBER 2000).

> "The agreements and associated legal instruments included in Annexes 1, 2 and 3 (hereinafter referred to as "Multilateral Trade Agreements") are *integral parts* of this Agreement, *binding on all Members*."
>
> 75. We note, furthermore, that the GATT 1994 was incorporated into the *WTO Agreement* as one of the Multilateral Agreements on Trade in Goods contained in Annex 1A to the *WTO Agreement*. The GATT 1994 consists of:
>
> (a) the provisions of the GATT 1947, as rectified, amended or modified before the entry into force of the *WTO Agreement*;
> (b) provisions of certain other legal instruments which entered into force under the GATT 1947 and before the date of entry into force of the *WTO Agreement*;
> (c) a number of Uruguay Round Understandings on the interpretation of certain GATT articles; and
> (d) the Marrakesh Protocol to GATT 1994. The *Agreement on Safeguards* is one of the thirteen Multilateral Agreements on Trade in Goods contained in Annex 1A of the *WTO Agreement*.
>
> It is important to understand that the *WTO Agreement* is *one* treaty. The GATT 1994 and the *Agreement on Safeguards* are both Multilateral Agreements on Trade in Goods contained in Annex 1A, which are integral parts of that treaty and are equally binding on all Members pursuant to Article II:2 of the *WTO Agreement*.[45]

The rationale explained above may also be applied by analogy to establish the relationship between GATT 1994 (i.e. Article VII) and the CVA, two of the Multilateral Agreements on Trade in Goods contained in Annex 1A of the WTO Agreement. Thus, as both Article VII of GATT 1994 and the CVA are binding on Members as *one* treaty, the question is not *whether* they apply, but *how* they apply.

The Appellate Body has interpreted the WTO agreements according to the principles set forth by the Vienna Convention on the Laws of the Treaties ("the Vienna Convention"). The Appellate Body has also on several occasions recognized the principle of effectiveness in the interpretation of treaties for determining the inter-relation between these agreements:

> 80. . . . . The principle of effectiveness . . . requires that a treaty interpreter: [. . .]
> must give meaning and effect to all the terms of the treaty. An interpreter is not free to adopt a reading that would result in reducing whole clauses or paragraphs of a treaty to redundancy or inutility.
>
> 81. In light of the interpretive principle of effectiveness, it is the *duty* of any treaty interpreter to *"read all applicable provisions of a treaty in a way that gives meaning to all of them, harmoniously."* An important corollary of this principle is that a treaty should be interpreted as a whole, and, in particular, its sections and parts should be read as a whole. Article II:2 of the *WTO Agreement* expressly manifests the intention of the Uruguay Round negotiators that the provisions of the *WTO Agreement* and the Multilateral Trade Agreements included in its Annexes 1, 2 and 3 must be read as a whole.[46]

Accordingly, all the provisions of the CVA and the Article VII of GATT 1994 need to coexist harmoniously, and the parts and sections of each text need to be read as a whole. Considering that a treaty is to be interpreted based upon the ordinary meaning to be given

[45] Report of the Appellate Body, *Korea—Definitive Safeguard Measure on Imports of Certain Dairy Products*, WT/DS98/AB/R, ¶¶ 74–75 (1999) (emphasis in original).
[46] *Id.*, ¶¶ 80–81 (emphasis in original).

to the terms of the treaty in their context, and in the light of its objective and purpose,[47] one could argue that while the CVA is *lex specialis* to the subject-matter, since it deals exclusively with customs valuation issues, Article VII is *lex generalis* since it is part of the GATT 1994, which has customs valuation as one of its many topics. In short, the two texts should be read together, the CVA being more likely to offer specific answers to detailed questions.

IV. Methods of Customs Valuation

The Agreement establishes in Part I (Articles 1–7) a system that consists of a set of alternative valuation methods which customs officers should consider, one after another, applying to any particular import, until a method is found that can be applied. This was the major feature of the new valuation regime which emerged in the Tokyo Round. Paragraphs 1–4 of the General Interpretative Note in Annex I to the Agreement elaborate on their order of use.

Customs authorities must determine the customs value of goods by applying the primary method of valuation, the "transaction value" (*Method 1*). If that is not possible, they must resort to the secondary methods of valuation, in the following order: a) the transaction value of identical goods (*Method 2*); b) the transaction value of similar goods (*Method 3*); c) the "deductive value" (*Method 4*); d) the "computed value" (*Method 5*); finally, if none of these methods is valid they must apply any reasonable means of valuation, as a fallback valuation method (*Method 6*). At the request of the importer, the application of Methods 4 and 5 may be reversed, Method 5 (computed value) being considered first. Even if the importer does so request, should computed value turn out to be impossible to determine, the deductive method prescribed in Method 4 is to be used.[48]

As there is no GATT/WTO case law, our detailed analysis will be largely based on the technical interpretations issued by the TCCV.

A. The Primary Method of Customs Valuation: Transaction Value of the Goods (Method 1)

The primary method for customs valuation is defined in Article 1 of the CVA, which provides that the customs value of imported goods shall be the Transaction Value ("TV") of the goods themselves. The TV aims to put into practice the general rule under Article VII:2 (a) of GATT that the customs valuation of imported goods should be based on their "actual value." The Preamble stresses that this method should be used "to the greatest extent possible," so that situations which allow departure from it should be interpreted restrictively.

As noted at the start of this chapter, TV was a corrective reaction to the practice widespread around the world of arbitrarily-asserted "uplifts", informally negotiated between customs officer and importer or customs agent, a sort of parallel fiscal universe, whereby dutiable value was based not on the invoice price but the invoice price increased by a negotiated percentage. The need to negotiate a figure was predicated on the presumptive unreliability of the price payable. TV means that customs value must be calculated on the basis of the terms of each individual transaction, even if they can be said to be

[47] Article 31 of the Vienna Convention.
[48] CVA Annex I, General Note, ¶ 3.

unusual for the type of contract in question. The CVA therefore prefers the price agreed between the parties rather than a notional price. This implies in turn that two shipments of the same product from the same place and going to the same place at the same time might not have the same dutiable value.

In applying the TV, customs and traders must necessarily consider:

- The evidence of a sale for export to the country of importation. The importer must supply a declaration relating to customs value and any documents produced to support those particulars (e.g. commercial invoices, contracts, purchase orders). The declaration will reflect the "invoice price."
- The possible need for adjustment of the invoice price by making certain additions or deductions in order to arrive at the TV ("Adjustments") (to ensure that extraneous elements are not included and that essential elements are not forgotten).
- Some special situations that may justify a departure from the basic rule of customs valuation.

We provide below a detailed explanation of the definition of TV, the adjustments to be undertaken and the possible grounds for departure from TV.

1. The Definition of Transaction Value

Article 1:1 of the CVA defines TV as the price actually paid or payable for the goods when sold for export to the country of importation, adjusted in accordance with the provisions of Article 8, provided that none of the grounds for rejecting the TV applies. The following clarification should be made with regard to this definition:

- The *price actually paid or payable* is the total payment made or to be made by the buyer, to or for the benefit of, the seller for the imported goods.[49]
- The *agreed price.* The price may be expressed in cash or in kind (goods or the rights to services) or partly in cash and partly in kind. The only requirement is that the goods must have an agreed price. The payment need not necessarily take the form of a transfer of money. Payment may be made by way of letters of credit or negotiable instruments. It may be made directly or indirectly. An example of indirect payment would be the settlement by the buyer of a debt owed by the seller.[50]
- *The price for the goods.* The CVA makes it clear that TV is to be based on the particular shipment of goods being valued.[51] The major previous valuation

[49] Annex I, Note to CVA Article 1, paragraph 1.

[50] *Id.*

[51] A special situation may arise with regard to computer software, which may be of immense value not because of the physical characteristics of the imported goods, but because of what is electronically recorded thereon. Such electronic material could be transmitted by telephone, cable or satellite and recorded on the medium. How to value such items was decided by the decision on the valuation of carrier media bearing software for data processing equipment (VAL/8) adopted by the GATT Committee on Customs Valuation on September 24, 1984. It recommends that [. . .] "in determining the customs value of imported carrier media bearing data or instructions (software), only the cost or value of the carrier medium itself shall be taken into account. The customs value shall not, therefore, include the cost or value of the data or instructions, provided that this is distinguished from the cost or the value of the carrier medium. For the purpose of this Decision, the expression "carrier medium" shall not be taken to include integrated circuits, semiconductors and similar devices or articles incorporating such circuits or devices; the expression 'data or instructions' shall not be taken to include sound, cinematic or video recordings." The rationale for this decision is that it is essentially the carrier media itself (i.e. the magnetic disk), which is liable for duty under the customs tariff. *See* Sherman and Glasshoff, *supra* note 6, at 86.

system (the BDV) looked not at the price of the particular shipment being valued, but at some typical, hypothetical or ideal transaction involving the same kind of goods. Under the CVA, only the price of the goods in their condition at the time of importation or valuation is relevant.[52] Thus the flow of dividends or other payments from the buyer to the seller which do not relate to the imported goods is not as such part of the customs value.[53]

- *The price in this transaction.* In ascertaining the TV, the CVA looks at the price in the current transaction, not at a pattern or pricing structure, not at a market, and not at how the parties arrived at the price. The invoice price is simply accepted, and adjusted as provided in Article 8 or rejected on one of the recognized grounds for rejecting TV.[54] The mere fact that a price is lower than prevailing market prices for identical goods does not necessarily lead to rejection under TV, subject of course to the right of customs authorities to satisfy themselves as to the truth or accuracy of any statement, document or declaration.[55] In other words, subject to only few exceptions, whatever is accepted by the business world is to be accepted by customs in duty valuation.[56] The same reasoning applies to subsidized or dumped products, whose prices should not be rejected during the valuation process as such. The WTO legal system provides for other instruments to combat them: antidumping and countervailing duties.[57]
- The phrase *actually paid or payable* expresses the intention that the customs value should include the entire price, whether or not it has already been fully or partly paid. The entire agreed contract price remains the basis for TV and the assessment of customs duty, even if the buyer defaults and fails to pay.[58]
- *Changes in the agreed price.* The word "actually" preceding "paid or payable" suggests yet another series of problems which may arise when the agreed price changes. In commercial practice, some contracts may include a price review clause whereby the price payable is only provisionally fixed, its final determination being subject to certain factors specified in the provisions of the contract itself (such as a discount for late delivery or formula pricing, which recognizes increases or decreases of elements such as labor and raw materials).[59] If the parties revise the price before the goods reach the country of importation, the contract has simply been amended. In this case, the TV is to be based on the new price, whether higher or lower than the old one.[60] The situation is different where price review clauses are linked to variables that come into play some time after the goods have been imported. The TCCV states that price review clauses should not of themselves preclude valuation under Article 1 of the CVA. Customs may

[59] TCCV Commentary 4.1 on *Price Review Clauses.*
[60] Sherman and Glasshoff, *supra* note 6, at 83.

have to proceed on the basis of its own best evidence as to the appropriate adjustment. In addition, any necessary steps must be taken to keep the duty assessment procedure open.[61] However, if in the end there is no acceptable price because the original price no longer applies and the new one is not properly established, there may be no TV, and one of the alternative bases of valuation must then be applied.[62]

- *No time requirement.* The meaning of the phrase " *when sold for export to the country of importation*" requires clarification. It should not be regarded as giving an indication of the time to be taken into consideration when deciding whether a price is valid for the purposes of Article 1; it merely indicates the type of transaction involved, namely one in which the goods were sold for export to the country of importation. Thus lapse of time alone does not justify rejecting the TV. It should be accepted irrespective of the time at which the sale contract was concluded, and hence irrespective of any market fluctuations after the date when the contract was concluded.[63]
- *Identification of the targeted transaction.* Finally, the phrase "when sold for export to the country of importation" also refers to the requirement for identification of the transaction to be considered for valuation purposes. The TCCV states that the fact that the goods are presented for valuation in itself establishes their importation, which in turn establishes the fact of their exportation. It follows that only transactions involving an actual international transfer of goods may be used for valuing merchandise under the TV method.[64] In this respect, there is no need for the sale to take place in a specific country of exportation. In addition, the immediate or last sale will normally be the one that took place with a view to exporting the goods to the country of importation (i.e. the "targeted transaction"), unless the importer proves otherwise in the context of successive sales.[65]

2. Adjustments to the Price Paid or Payable

The price actually paid or payable for the goods when sold for export to the country of importation may require to be adjusted by making certain additions or deductions, in order to arrive at the TV. A TV without certain elements would be incomplete and with other included elements would be excessive. The following table shows the possible adjustments to be made when applicable to the price paid or actually paid.

[61] TCCV Commentary 4.1 notes that Article 13 of the CVA provides the possibility of delaying the final determination of the customs value. Articles 13 states: "If , in the course of determining the customs value of imported goods, it becomes necessary to delay the final determination of such customs value, the importer of the goods shall nevertheless be able to withdraw them from customs if, where so required, the importer provides sufficient guarantee in the form of a surety, a deposit or some other appropriate instrument, covering the ultimate payment of customs duties for which the goods may be liable. The legislation of each Member shall make provisions for such circumstances."

[62] Sherman and Glasshoff, *supra* note 6, at 84.

[63] TCCV, Explanatory Note 1.1, ¶¶ 3–4.

[64] TCCV, Advisory Opinion 14.1, ¶ 2. The TCCV illustrates its Advisory Opinion with several examples.

[65] For example, Article 147 of the implementing EC Customs Code Regulation (Regulation 2454/93, as amended) provides that when the customs declarant wants to rely on an earlier sale to establish the TV, it must demonstrate to the satisfaction of the customs authorities that the sale in question took place contemplating export into the EU. *See* Hans-Joachim Priess and André Fiebig, *Determining the Customs Value of Goods Subject to Successive Sales: Recent Developments in EU Customs Law*, [1995] 4 International Trade Regulation, at 137.

POSSIBLE ADDITIONS TO THE PRICE	POSSIBLE DEDUCTIONS FROM THE PRICE
1) Selling commissions and brokerage incurred by the buyer 2) Packing costs 3) The value of any assist 4) Any royalties or license fee paid by the buyer as a condition of the sale 5) Proceeds of any subsequent resale, disposal, or use of the merchandise that accrues to the seller	1) Construction/maintenance work undertaken after importation on imported goods 2) Cost of transportation after importation 3) Duties and taxes of the country of importation 4) Charges for interest under a financing arrangement relating to the purchase of imported goods.
Cost of international transportation and related insurance and handling charges: depending on whether the importing country Member value values goods on a CIF or FOB basis, these charges will be added to the actual price (if not already included in the price) or deducted from it (if included) to reach TV.	
Cost of storage: on a case-by-case basis additions may be applicable.	

(a) Additions. Article 8:1 provides an exhaustive list of costs that must be added to the price paid or payable for the imported goods if the relevant cost has been actually assumed by the buyer and is not already included in the price. No other hypothetical (normal or usual) costs are to be included in the TV.[66] These additions are designed to prevent the under-valuation of goods and so to protect the customs duty revenues of the importing country.

(i) *Selling commissions and brokerage paid by the buyer.* The TV must include any selling commission or brokerage paid by the buyer to the seller or the seller's agent.[67] A "selling commission" is paid to an agent commissioned by the seller to locate a buyer or negotiate a sale. "Brokerage" is the broker's remuneration, usually a percentage of the business concluded as a result of its activities. Brokers are middlemen working to promote a transaction and often not clearly defined as representing either party. To avoid doubt, Article 8 of the CVA also provides that brokerage fees paid by the buyer must be included in the price. The rationale for this adjustment is that typically a selling commission would be paid by the seller, who would include these fees as a cost in calculating its selling price.[68] If the buyer pays the selling commission or the brokerage separately and apart from the agreed price, it will be relieving the seller from an obligation, and the payment will be an indirect payment to the seller and thus a part of the price.[69] The payment in either case may be made directly or indirectly by the buyer to the agent. The key issue is not the payment route, but rather whether the payment benefits the seller.[70]

However, "buying commissions" must not be considered as part of the TV. The Note to Article 8 explains that the term "buying commissions" means

[66] CVA Article 8:4.

[67] CVA Article 8:1 (a) (i).

[68] The TCCV in its Explanatory Note 2.1 states: "it is clear from the provisions of Article 8 that commissions or brokerage payable by the seller but which are not charged to the buyer could not be added to the price actually paid or payable."

[69] Sherman and Glasshoff, *supra* note at 109.

[70] Bhala and Kennedy, *supra* note at 327.

fees paid by an importer to the importer's agent for the service of representing the importer abroad in the purchase of the goods being valued.[71] Normally the buying agent's remuneration is paid by the importer, separately from payment for the goods.[72]

The CVA does not provide guidance on whether payments made to intermediaries by the buyer and not included in the price should be added to that price. Since the existence and the nature of services rendered by intermediaries in connection with a sale are not apparent from the commercial documents, customs administrations will need to take all reasonable measures to ensure the proper application of Article 8.[73]

Finally, the term "commission" as used in Article 8.1 (a) (i) does not cover different costs of financing such as confirming commissions,[74] which are not paid for the goods but for securing payment or credit.

(ii) *Packing costs*. Packing costs incurred by the buyer must be included in the TV. The CVA provides for the addition of: i) the cost of containers which are treated as being one with the goods in question for customs purposes (e.g. perfume bottles and packaging which go to the consumer);[75] and ii) the cost of packing (e.g. packing of the imported merchandise in a condition ready for overseas shipment to the point of importation or delivery).[76] These provisions are intended to cover only items which have no economic purpose of their own and are generally classified under the tariff code of the goods packed in them. The word "containers" does not refer to containers used for long-distance transport and then re-used for other shipments.[77]

(iii) *The value of any assist.* The value of any "assist" must be included in the TV. An "assist" refers to the value of goods or services which the buyer provides directly or indirectly, free of charge or at a reduced cost, to the seller for use in the production or sale of the imported goods being valued.[78] The term "assist" is not used in the CVA, but is a term of art in customs parlance. Thus where the buyer supplies roughly-hewn wood, woodworking equipment, jigs, varnish and a design template for the seller's use in making an exported table, these elements should be captured to increase the otherwise low price to be charged for the table.

Article 8:1 (b) provides an exhaustive list of four categories of dutiable assists:

— materials, components, parts and similar items incorporated in the imported goods;

[71] Note to CVA Article 8, Paragraph 1(a)(i).

[72] TCCV, Explanatory Note 2.1.

[73] TCCV, Explanatory Note 2.1. The TCCV in its Commentary 17.1 provides several guidelines on the evidence needed to establish under what circumstances fees paid by the buyer to an intermediary may be considered as a buying commission.

[74] A confirming commission is a fee charged by a bank acting for or on behalf of the seller in a transaction, in return for its guaranteeing payment of a letter of credit in the event the buyer's bank is unable to fulfill the commitment. *See* Sherman and Glasshoff, *supra* note 6, at 110. *See also* TCCV Explanatory Note 5.1 on "Confirming Commissions."

[75] CVA Article 8:1 (a) (ii).

[76] CVA Article 8:1 (a) (iii).

[77] Commercial containers are modes of transport which may be taken into account as an element in transportation costs in CIF countries. *See* Sherman and Glasshoff, *supra*, note 6, at 111.

[78] CVA Article 8:1 (b).

— tools, dyes, moulds and similar items used in the production of the imported goods;
— materials consumed in their production; and
— engineering, development, artwork, design work, and plans and sketches undertaken (in the sense of carried out)[79] elsewhere than in the country of importation and necessary for the production of the goods.

The Interpretative Note to Article 8 gives some guidance as to how to value certain types of assists (e.g. tools, dyes, moulds and similar items used in the production of imported goods). The value of an assist is measured by the cost of acquiring the assist from an unrelated seller, or of making the assist by the importer or a party related to the importer. This value may be adjusted downward to reflect the fact that the importer previously used the assist. No profit to the importer (or a related supplier) is to be included in the value of the assist. It is not clear from the Note whether the costs of shipping the assist to the foreign supplier should be included in the value of the assist. A case could be made that it should not, on the grounds that such considerations are relevant to the valuation of the assist when it enters the seller's country, but are not relevant to determining the neutral value of the assist.

Finally, once the value for the assist has been determined, it is necessary to apportion that value to the imported goods in a reasonable manner, appropriate to the circumstances and in accordance with generally accepted accounting principles. Apportionment could take various forms, including an allocation over the number of units produced up to the time of the first shipment, or over the entire anticipated production. The method of apportionment used will depend on the documentation provided by the importer.[80] However, when the proceeds are dutiable but cannot be valued, the TV is to be rejected.[81]

(iv) *Royalties or license fee paid as a condition of the sale.* Article 8:1 (c) provides that the TV must include any royalty or license fee the buyer pays directly or indirectly to the seller of imported goods, or to a third party holding a relevant intellectual property right (patents, trademarks and copyright), as a condition of the sale. In addition, the CVA requires that the royalty or license fee must relate to the goods being valued. Thus if the buyer must pay a sum per bottle of imported whisky in order to have the right to use its trademark when selling the whisky in the country of importation, that sum is to be included in the TV.

The payment of a royalty or license fee is always a "condition of sale" when the goods would not have been sold at the agreed price or terms without such payment of royalty or license fee. Correspondingly, the payment of a royalty or license fee to a third party will only be a condition of the sale if the seller was obliged to pay the royalty or license fee to the third party and if the importing purchaser makes the payment for the benefit of and in agreement with the seller.[82]

In any event, whether a royalty or license fee is dutiable will be determined on a case-by-case basis, the key factors being whether the buyer had to pay

[79] *Decision on the Meaning of the Word "Undertaken" in Article 8:1 (b) (iv) of the English text of the Agreement*, adopted by the Tokyo Round Committee on March 3 1983 (VAL/M/6, paragraph 18). *See* WTO document G/VAL/W/1, April 28, 1995.
[80] Interpretative Note to CVA Article 8, ¶ 1 (b)(ii).
[81] CVA Article 1 (c).
[82] Sherman and Glasshoff, *supra* note 6, at 125.

it as a condition of sale, and to whom and under what circumstances it was paid.[83] It is thus not the case that TV is to be increased whenever the buyer makes payments to the seller in addition to those paid ostensibly as the invoice price.

However, charges for the right to reproduce the imported goods in the country of importation will not be added to the price actually paid or payable for the imported goods in determining the customs value.[84] The rationale for this exclusion is that a right to reproduce imported goods is not related to the goods being valued but to other not yet existing goods to be produced in the country of importation.[85]

(v) *The proceeds of any subsequent resale, disposal, or use of the merchandise that accrue to the seller.* Article 8:1 (d) requires that any proceeds accruing directly or indirectly to the seller of any subsequent resale, disposal, or use of the imported merchandise by the buyer must be included in the TV. Failing valuation of any dutiable proceeds, the TV is to be rejected.

The CVA does not provide much guidance as to what constitute dutiable proceeds. However, it is possible to define some implied requirements of this type of indirect payment for imported goods from the general context of the provision. First, an obligation on the buyer to share the proceeds with the seller requires an agreement in the contract of sale (i.e. a condition of sale). Second, payments from the buyer to the seller must relate to the imported goods (CVA Articles 1 and 8, and the relevant Interpretative Notes thereto). Accordingly, the proceeds of any subsequent resale, disposal or use of the imported goods should not be confused with the flow of dividends or other payments from the buyer to the seller that do not relate to the imported goods.[86]

An example will help clarify the kind of situation that falls within the scope of Article 8:1 (d). Suppose that at the end of the year, the importer must pay the manufacturer five percent of the revenues derived from reselling the imported merchandise. In this case, the sums remitted are the proceeds of a subsequent resale of the imported goods which accrue directly to the seller, and the amount is to be added to the price paid or payable as an adjustment under the provisions of Article 8:1 (d).[87]

(b) Deductions

(i) *Costs accruing after importation.* The Interpretative Note to Article 1 provides that TV must not include three categories of charges or costs if they are already included in the actual price. However, these items may be deducted only if they can be "distinguished from the price actually paid or payable for the imported goods." The rationale for this provision is that these charges or costs which accrue after importation of the goods are normally the responsibility of the buyer, and should not be dutiable. The three categories are:

[83] Bhala and Kennedy, *supra* note 16, at 329. The TCCV illustrates the applicability or not of CVA Article 8:1 (c) with different examples in Advisory Opinions 4.1 to 4.13.

[84] Note to CVA Article 8, Paragraph 1 (c).

[85] The TCCV in its Commentary 19.1 provides some examples and further guidance as to the meaning of the expression "right to reproduce the imported goods" within the meaning of the Interpretative Note to CVA Article 8:1 (c).

[86] TCCV Case Study 2.2; Sherman and Glasshoff, *supra* note 6, at 156–157.

[87] TCCV provides different examples in Case Study 2.2.

- Charges for construction, erection, assembly, maintenance or technical assistance undertaken after importation on imported goods such as industrial plant, machinery or equipment. These charges include both services (labour) and materials. The list of examples is purely illustrative. This provision mainly refers to "turnkey arrangements," where the equipment, facility or machinery is to be delivered to the purchaser in operating condition, so that the importer need only turn the key to start up the plant or facility. The provision would ordinarily not apply to less complex imports such as food or clothing.[88]
- The cost of transport after importation (inland freight), i.e. freight charges incurred from the point of importation to an interior point where the goods are to be delivered to the buyer. This may be an issue when the country of importation has adopted the CIF system for customs valuation, because the cost of transportation up to the point of importation must be added to the price actually paid or payable to arrive to the TV. In some cases, the two parts of the freight costs are already distinguished in the bill of lading received from the carrier. In other cases, when there is a single "through rate" covering both portions of the transportation, a breakdown will be necessary. The CVA leaves each Member free to adopt an appropriate method of allocation. In countries that base their customs valuation on the FOB system, the cost of transportation in general, including the cost of transport to the point of importation, must be deducted from the price actually paid or payable, to the extent that it is included in the price.
- Import duties and taxes in the country of importation. The importer normally bears the burden of paying import duties and any other taxes payable in the country of importation or sale of the goods. If the importer actually pays them, they will not be included in the price to be valued and there will be no need to deduct them. However, it may be necessary to apply a deduction if the seller pays the duties or taxes (e.g. as part of a delivered duty-paid price at the buyer's plant) and they are included in the actual price.[89]

(ii) *The treatment of interest charges under a financing arrangement.* The decision of the Tokyo Round Committee of April 26, 1984,[90] on the treatment of interest charges in the customs value of imported goods provides that charges for interest under a financing arrangement entered into by the buyer and related to the purchase of imported goods will not be regarded as part of the customs value, provided that:

- the charges are distinguished from the price actually paid or payable for the goods;
- the financing arrangement was made in writing; and
- the buyer can demonstrate that i) such goods were actually sold at the price declared as the price actually paid or payable, and ii) the rate of interest claimed does not exceed the level for such transactions prevailing in the country where, and at the time when, the finance was provided.

The Decision further provides that it should apply regardless of whether the finance is provided by the seller, a bank or another natural or legal person. It will apply,

[88] Sherman and Glasshoff, *supra* note 6, at 172.

[89] *Id.* at 173.

[90] VAL/M/9, ¶ 38. *See also* WTO Doc. G/VAL/W/1.

if appropriate, where goods are valued under a method other than the transaction value.

(c) The Cost of International Transportation and Related Charges. The GATT Contracting Parties could not reconcile two opposing systems during the Tokyo and Uruguay Rounds. Australia, Canada, New Zealand, the United States and a few other countries value imported goods on a FOB basis, excluding from customs value the cost of transportation to the country of importation. The EC and most of the rest of the world, which previously applied the BDV, value imported goods on a CIF basis (i.e. including transportation and related costs to the point of importation in customs value).

The CVA accordingly leaves Members wide discretion on whether to base their customs valuation system on a FOB (Free on board) or CIF (cost, insurance and freight) basis. Article 8:2 provides that Members shall provide for the *inclusion in* or *exclusion from* the customs value, *in whole* or *in part*, of the following items: i) the cost of transport of the imported goods to the port or place of importation; ii) loading, unloading and handling charges associated with the transport of the imported goods to the port or place of importation; and iii) the cost of insurance.

In implementing Article 8:2, Members are free to establish the CIF system that best suits their interests. They can include the items listed in that provision "in whole or in part". In general, Members will include in the CIF value all costs which are directly related to the physical movement of the goods, from the place of first loading in the country of exportation to entry into the customs territory of the country of importation. These costs should therefore end with the arrival of the goods at the first port or place in the country of importation. In any event, this provision does not cover the costs of transportation after importation, which the CVA excludes from the TV.[91]

Opinion as to the relative merits of each system is sharply divided. Under the CIF system, the State's revenue is higher given that duty is levied not only on the price of the goods themselves but also on the cost of their transport to the importing country. Conversely, under the FOB system, the State's revenue is lower.[92] While the alternatives have financial consequences, another explanation is probably the attractiveness of that which is familiar.

Finally, it is worth noting that the additions for freight costs required in a CIF country and the deductions from freight required in a FOB country are made regardless of the terms of the transaction agreed upon between the parties. As a result, the CVA places uniform treatment of importation into a country above respect for the terms agreed upon by the parties to the transaction.

(d) The Treatment of Storage and Related Expenses. It is worth noting that storage costs are not mentioned under Articles 1 and 8. The TCCV in its Commentary 7.1 gives a non-exhaustive list of possible situations regarding storage, and proposes the following solutions:

- The goods are in storage abroad at the time of the sale for export to the country of importation. In this case, the warehousing expenses should be added to the price, since they are normally borne by the seller which will try to recover them in the price.

[91] Interpretative Note to CVA Article1, ¶ 3 (b).

[92] For a complete account of the relative advantages and disadvantages of the CIF and FOB basis for customs valuation, *see* comparative table in LUX, GUIDE TO COMMUNITY CUSTOMS LEGISLATION 200–202 (2002).

- The goods are put into storage abroad subsequent to their purchase but prior to their export to the country of importation. In this case, the warehousing expenses should not be added to the price, since they are normally borne by the buyer after purchase.
- The goods are put into storage in the country of importation prior to their clearance for home use. In this case, the answer will depend on who placed the goods in the warehouse: the seller (the cost should be added to the customs value) or the buyer (the cost should not be added to the customs value).
- The goods are temporarily stored as an incident of their transport. In a CIF system this cost should be considered as charges associated with transport, and thus included in customs value.

The purpose of this discussion has been to note the situations where elements should be added in or taken away from an otherwise acceptable invoice price in order to reach TV. The next section describes what to do when the invoice price is not an acceptable basis for TV.

3. Departures from TV

There are six grounds for not applying the TV method. It will be necessary in those cases to have recourse to the other valuation methods, in the sequence given in the CVA. The six cases are as follows:

(a) Absence of "Sale" or "Price of the Goods" for Export to the Country of Importation. TV is based on the "price . . . for the goods when sold for export to the country of importation"; therefore, there can be no TV if there is no such sale and thus no such price. The term 'sale' has not been defined in the CVA. The TCCV expressed the opinion that ". . . in conformity with the basic intention of the Agreement that the TV of imported goods should be used to the greatest extent possible for customs valuation purposes, uniformity of interpretation and application can be achieved by taking the term 'sale' in the widest sense, to be determined only under the provisions of Articles 1 and 8 of the CVA read together.[93] In those cases where the existence of a "sale" is disputed, local law should be sufficient to clarify the situation, amplified if necessary by the UN Convention on the Uniform Law on the International Sale of Goods.

The TCCV provides a non-exhaustive list of situations in which imported goods would be deemed not to have been the subject of a sale.[94] The list includes: i) free items (gifts, samples, promotional objects); ii) goods imported under consignment; iii) goods imported by intermediaries who do not purchase the goods and sell them after importation; iv) goods imported under a leasing contract; v) goods supplied on loan which remain the property of the sender; vi) goods (waste or scrap) imported for destruction in the country of importation, with the sender paying the importer for its services.

(b) Restrictions as to the Disposal or Use of the Goods by the Buyer, Which Substantially Affect the Value of the Goods. TV does not apply when the goods sold for export to the country of importation are subject to restrictions on their disposal or use, as set forth in Article 1:1(a). The key test here is whether a specific restriction substantially affects the value of the imported goods being valued, and does not correspond with restrictions usual

[93] TCCV, Advisory Opinion 1.1.
[94] TCCV, Advisory Opinion 1.1.

in the trade. The rationale is that restrictions on the seller's freedom to dispose of the property adversely affect the value of the merchandise, hence making a TV unreliable.[95]

The CVA refers to restrictions other than those which (i) are imposed or required by law or by the public authorities in the country of importation; (ii) limit the geographical area in which the goods may be resold; or (iii) do not substantially affect the value of the goods. These restrictions do not affect TV.

The TCCV has provided some guidance to enable authorities to determine when to disregard the restriction in the contract of sale.[96] The Committee lists certain factors to be taken into consideration, including the nature of the restriction, the nature of the imported goods, the nature of the industry and its commercial practices and whether the effect on the value is commercially significant. These factors may vary from case to case since a small effect on the value in a case involving one type of goods may be treated as substantial, while a much greater change in the value of goods of another type may not be treated as substantial. An example of a restriction that could have substantial effect on the value of the imported goods is a machine sold at a nominal price on condition that the buyer uses it only for charitable purposes.[97] A trivial one would be a requirement that imported laptop computers not be used in connection with nuclear engineering.

(c) Sale or Price Subject to Conditions or Considerations for Which Value Cannot be Determined. Article 1:1(b) of the CVA provides that the TV value is not applicable when the sale of the goods is subject to some condition between the buyer and the seller for which a value cannot be determined. Here the TV is incomplete, and cannot be defined more accurately because of the indeterminate value of the condition.[98] The Interpretative Note to this provision gives the following examples:[99] the buyer must also buy other goods; the buyer must sell other goods to the seller; the buyer buys semi-finished goods and pays by delivering to the seller a specified quantity of the finished product. Cases of barter, reciprocal transactions, compensatory deals, package deals, and the like will frequently offer no obvious TV. However, as the Note points out, conditions or considerations relating to the production or marketing of the imported goods need not result in the rejection of the TV: the buyer may furnish the seller with engineering and plans undertaken in the country of importation, or the buyer may undertake on its own account, by agreement with the seller, activities relating to the marketing of the imported goods.[100] In these cases importers should disclose the conditions to customs and furnish evidence that the prices in these transactions are not affected by each other or, if they are, try to distinguish the price elements which have to be added to or deducted from the nominal price of the imported goods being valued (minutes or memoranda on the negotiations reflecting the structuring of the prices might be helpful).[101]

[95] Bhala and Kemedy, *supra* note 16, at 333.

[96] TCCV, Commentary 12.1.

[97] The Interpretative Note provides the following example of a restriction that would not render the TV unacceptable: where a seller requires a buyer of automobiles not to sell or exhibit them prior to a fixed date which represents the beginning of a model year. Commentary 12.1 also provides the following example of an acceptable restriction: where a firm of cosmetics imposes a requirement on all importers that its product be sold to consumers exclusively through individual sales representatives undertaking house-to-house sales, since its whole distribution system and advertising approach are based on this kind of sales effort.

[98] Bhala and Kennedy, *supra* note 16, at 333.

[99] Note to CVA Article 1, ¶ 1(b).

[100] *Id.*

[101] Sherman and Glasshoff *supra* note 6, at 183.

(d) Proceeds of Subsequent Resale Accrue to the Seller. Article 1:1 (c) provides that the TV is not applicable when part of the proceeds of any subsequent resale, disposal, or use of the goods by the buyer will accrue directly or indirectly to the seller, unless an appropriate adjustment can be made, for example where the seller takes a percentage to be negotiated of the downstream price paid to the buyer (see Section 2(a)(v) above). If possible, an addition of the proceeds is to be made under Article 8, and TV is to be rejected only if it is impossible to make the addition. Article 1.1 (c) must be understood to refer only to situations where the proceeds are dutiable under Article 8.1 (d) but cannot be valued.[102]

(e) Related Parties, When the Relationship May Influence the TV. The significance of links between buyer and seller has been referred to frequently above. However, the fact that buyer and seller are related is not in itself sufficient for regarding the TV as unacceptable.[103] The Agreement defines the concept of "related persons" in Article 15:4, listing eight situations in which persons must be deemed to be related. The list includes situations of legal partnership, control,[104] employment and family relationships. However, Article 15:5 provides that the relationship of sole agent, sole distributor or sole concessionaire should not in itself make the parties related for the purposes of Article 1.1(d) unless the other criteria of relationship set forth in Article 15:4 are met.[105] Thus a license agreement does not in itself establish a relationship within the meaning of the Agreement.[106]

Article 1:2(a) provides that the TV in a situation of related parties shall be accepted if the circumstances surrounding the sale did not influence the price. If, in the light of the information provided by the importer or from other sources, the customs authorities have no doubts about the acceptability of the price, the TV should be accepted without requesting further information from the importer.[107] However, if customs authorities are unable to accept the TV without further inquiry, they should communicate the grounds to the importer and give it "reasonable" opportunity to supply such further detailed information as may be necessary to enable them to examine the circumstances surrounding the sale. The importer has a right to be heard, but is also free not to disclose the additional information and take the consequences of letting customs authorities depart from the TV method.

If the importer chooses to cooperate, it must demonstrate that the TV of imported goods closely approximates to one of the "test values" of Article 1:2(b), i.e., one of the other principal valuation methods. These test values are not a substitute for the TV but merely a comparison.[108] If one of the test values is met, the TV is to be accepted as a base for customs valuation. When this happens, it is not necessary to examine the question of

[102] *Id.* at 184.

[103] CVA Article 1.2 (a)

[104] Note to CVA Article 15, ¶ (e) aims to clarify the notion of control: "one person shall be deemed to control another when the former is legally or operationally in a position to exercise restraint or direction over the latter."

[105] The TCCV in its Explanatory Note 4.1 clarifies the relationship under CVA Article 15:5, read in conjunction with Article 15.4. The Explanatory Note states that the wording of Article 15:5 of the Agreement has two objectives: 1) to provide a clear departure from the concept held in certain valuation systems that sole agents are by their nature related to their suppliers; 2) to direct consideration of the relationship of parties solely within the provisions of Article 15:4. The questions which must be considered is whether the terms or conditions of the contract are such as to meet one of the provisions of Article 15:4.

[106] Sherman and Glasshoff, *supra* note 6, at 189.

[107] Note to CVA Article 1 (¶ 2), ¶ 4.

[108] McGovern, *supra* note 6, at 155.

influence under Article 1:2(a).[109] In making such comparisons, allowances must be made for differences in commercial levels and quantities, for adjustments under Article 8, and for the extra sale costs which an independent seller would incur.[110]

(f) Data Unavailable to Make the Appropriate Adjustments Under Article 8. The CVA requires that certain adjustments be made to the price actually paid or payable in order to arrive at the TV. However, the additions to that price listed in Article 8 must be made "only on the basis of objective and quantifiable data."[111] The Interpretative Note to Article 8 states that where such data do not exist, the TV cannot be determined under the provisions of Article 1. As a consequence, the customs valuation of the imported goods must be undertaken by applying one of the other valuation methods. The provision reflects broader policy goals, of encouraging the use of TV whenever possible, but of accepting that it cannot always be achieved if data are simply unavailable.

This requirement is to be linked to Article 13 (discussed in Part V.C below), which allows customs authorities to delay the final determination of the customs value of imported goods for a reasonable period of time, when the relevant information is not available at the time of importation. However, the primary method of valuation should be abandoned when it is definitely impossible to put a value on any of the items listed in Article 8.

B. Transaction Value of Identical (Method 2) or Similar Goods (Method 3)

TV should relate to the imported goods being appraised. If it is not possible to ascertain that value, the CVA provides that the customs value must be the TV of identical goods (Method 2), or failing that valuation, the TV of similar goods (Method 3). These two methods seek to base valuation on another transaction which previously qualified under TV and whose essential features are more or less the same.

Whether the good is identical or similar to the imported good whose value is being appraised depends on a variety of factors, such as the export date of the shipments, the quantity of the goods and the commercial level at which the sale is made. In addition, there may also be room for argument as to what goods are identical or similar to the imported goods.[112]

Articles 2 and 3 of the CVA provide in similar terms for the valuation methods of the TV of identical and similar goods respectively.

1. The Definitions of "Identical" and "Similar" Goods

"Identical goods" are goods which are the same in all respects, including physical characteristics, quality and reputation. Minor differences in appearance would not preclude goods otherwise conforming to the definition from being regarded as identical.[113] "Similar goods" are goods which, although not alike in all respects, have like characteristics and like component materials which enable them to perform the same functions and be commercially interchangeable. Various factors can be taken into consideration in determining whether goods are similar, such as the quality of the goods, their reputation and the existence of a trademark are among the factors.[114]

[109] Note to CVA Article 1 (¶ 2), ¶ 4.
[110] CVA Article 1:2(b) and Note.
[111] CVA Article 8:3.
[112] Bhala and Kennedy, *supra* note 16, at 325.
[113] CVA Article 15:2 (a).
[114] CVA Article 15:2 (b). Goods bearing a trademark known to purchasers will ordinarily not be similar to goods bearing no trademark.

Where all the criteria to consider the goods "identical" or "similar" are met, the fact that the person who produced them is different from the person who produced the goods being appraised is irrelevant when there are no identical or similar goods produced by the same person.[115]

2. Requirements for Qualifying as "Identical" or "Similar" Goods

To be eligible for the application of methods 2 and 3, identical or similar goods must have been:

- *Sold for export to the same country of importation*.
- *Exported at, or about, the same time*. The TCCV states that the words "or about" should be regarded as intended simply to make the term "at the same time" somewhat less rigid. In addition, it should be noted that "at or about the same time" should be taken to cover a period, as close to the date of exportation as possible, within which commercial practices and market conditions which affect price remain the same. In the final analysis, the question must be decided on a case-by-case basis within the overall context of the application of Articles 2 and 3.[116]
- *Produced in the same country*.[117] Although presented in Article 15 as a feature of identity and similarity, this is an additional requirement to those set forth in Articles 2 and 3.

3. Different Alternatives for the Determination of the Customs Value Under Methods 2 and 3

The following sequence must be respected for determination of the customs value of the goods being appraised based on the TV of identical or similar goods:[118]

First: use of the TV of identical/similar goods in a sale at the "same commercial level" and in "substantially the same quantities" as the goods being valued. If this is not possible, then:

Second: use of the TV of identical/similar goods in a sale at "different commercial level and/or in different quantities", adjusted as appropriate to take into account differences attributable to commercial level or quantity. The Agreement requires that the adjustments be made on the basis of demonstrated evidence that clearly establishes the reasonableness and accuracy of the adjustment, such as valid price lists containing prices referring to different levels or quantities. If no objective criteria exist for making such adjustments, methods 2 and 3 should not be used. The agreement does not provide any guidance as to what should be understood as "different commercial level", so this should be determined on a case-by-case basis. These provisions thus contemplate a recognition of the price consequences of level of trade, whereas GATT Article VII permits determination of value on the basis of the general price level of similar merchandise.[119]

Finally, some further points are to be noted:

- When more than one TV of identical or similar goods is found, the lowest is to be used.[120] This provision will of course give a lower figure and lower duty.

[115] CVA Article 15:2 (e).
[116] TCCV, Explanatory Note 1.1, *Time Element in Relation to Articles 1, 2, and 3 of the Agreement.*
[117] CVA Article 15:2 (d). The determination of the country of production is subject to rules of origin of the country of importation. *See* Sherman and Glasshoff, *supra* note 6, at 203.
[118] *See* CVA Article 2:1 (b) and 3:1 (b) and the respective Interpretative Notes.
[119] McGovern, *supra* note 6 at 158.
[120] CVA Article 2:3 and 3:3.

- Article 2 must be exhausted before Article 3 can be invoked. Thus, the fact that the time of exportation of similar goods (as opposed to identical goods) is closer to that of the goods to be valued cannot reverse the order of application of Articles 2 and 3.[121]
- The adjustment required in case of use of TV of identical/similar goods in a sale at different commercial level or in different quantities must not be confused with the adjustments called for in Article 8:1. There is no need to make adjustments under this provision, since the TV of identical or similar goods already includes them.
- When transportation costs have been included in the TV of identical/similar goods (the CIF system), an adjustment must be made to take account of significant differences in such costs between the imported goods and the identical/similar goods in question arising from differences in distances and modes of transport.[122]

C. Deductive Value (Method 4)

Where it is not possible to calculate the TV of imported goods using identical or similar goods, the value of imported goods must be appraised according to the deductive value (DV) method. However, the importer may elect to use computed value instead of DV.[123]

DV is the resale price in the country of importation, adjusted as appropriate, of the goods actually imported, or identical or similar imported goods, to persons not related to the seller. The basic goal in calculating DV is to determine a notional FOB contract price as of the port of shipment, or a notional CIF contract price as of the port of importation, for the goods being appraised, by working backwards from the resale price and deducting the appropriate costs. DV may be calculated by reference to the resale price of the good being appraised, or identical goods or similar goods. We will use the term "goods concerned" to refer to each of these possibilities.

1. The Basis for the DV Calculation

The starting point in applying the DV method is to identify a "unit price" for the product concerned. That starting price depends on the time it is re-sold in the country of importation and the condition in which it is re-sold.[124] The "unit price," in turn, is based on the "greatest aggregate quantity" at which the good is sold. The greatest aggregate quantity refers to a sale to an unrelated buyer in the country of importation at the first commercial level after importation, or after further processing, in a volume that is both greater than the total volume sold at any other price and sufficient to establish a unit price. In other words, the common-sense idea behind that phrase is to ensure that a non-representative price resulting from a small or unusual transaction is not used as the starting point of the calculation.[125]

The CVA identifies three alternatives for determining the unit price, which should be applied in the following order:

[121] TCCV, Explanatory Note 1.1. A comparable situation may arise if similar goods (as opposed to identical goods) were produced by the same person. In this case, the same rule applies.

[122] CVA Article 2:3 and 3:3.

[123] CVA Article 4. Developing country Members may make a reservation permitting them to refuse the request to reverse the order of the fourth and fifth valuation methods (CVA Article 4). *See* Part VI *infra*.

[124] Bhala and Kennedy, *supra* note 16, at 334.

[125] *Id.* at 335. *See also* Interpretative Note to CVA Article 5 for examples of unit price at which goods are sold in the greatest aggregate quantity.

- when the goods concerned are re-sold in the same condition as imported, at or about the date of importation of the goods being valued.[126]
- when the goods concerned are re-sold in the same condition as imported, but not at or about the date of importation of the goods being valued. In this case the DV must be based on the unit price at which the goods concerned are resold, no later than ninety days after the date of importation of the goods being valued.[127]
- when the goods concerned are re-sold in the country of importation in a condition different from the condition in which they were imported (usually after further processing). However, DV may be calculated in this manner only if the importer so requests.[128] The Interpretative Note states that this scenario will normally not be applicable when, as a result of the further processing, the imported goods have lost their identity and it is not possible to determine the value added by the processing accurately without unreasonable difficulty.[129]

The TCCV stresses that the CVA does not specify whether the DV method should only be based on the sales of the imported goods or identical or similar imported goods made by the importer of the imported goods, or whether it could also be based on the sales of identical or similar goods imported by other importers. The TCCV suggests that in this case, the customs authorities would have to decide, having regard to the circumstances of each individual case.[130]

2. Adjustments to the Unit Price

Once the unit price has been identified, it is necessary to make certain adjustments to reduce that price to the relevant customs value. In all scenarios, the following deductions are to be made:

- The commissions usually paid or payable, or the additions usually made for profit and general expenses, in connection with sales in that country of imported goods of the same class or kind;
- The usual costs of transport and insurance and associated costs incurred within the country of importation;
- Where appropriate, the costs and charges referred to in paragraph 2 of Article 8 (CIF charges);
- The customs duties and other national taxes payable in the country of importation by reason of the importation or sale of the goods; and
- The value added after importation by further processing on the goods being appraised, when applicable.

D. Computed Value (Method 5)

Recourse to the Computed Value ("CV") method may take place either because the earlier methods in the hierarchy are unavailable or because the importer has opted to use the CV before the DV method.[131] CV determines the customs value on the basis of the cost

[126] CVA Article 5:1 (a)
[127] CVA Article 5:1 (b)
[128] CVA Article 5:2. Developing country Members may reserve the right to apply the DV method whether or not the importer so requests (Annex III:4 to the Agreement). *See* Part VI, *infra*.
[129] *Interpretative Note to CVA Article 5*, ¶ 12.
[130] TCCV, Commentary 15.1.
[131] CVA Article 4.

of production of the goods being valued, plus an amount for profit and general expenses usually reflected in sales from the country of exportation to the country of importation of goods of the same class or kind.[132] Although of course all manufactured goods are equally eligible to use this method, the production of electrical goods which have a large number of components whose costs must be precisely monitored lends itself particularly to this method what uplift would be appropriate. CV essentially requires a "ground-up" calculation involving the elements of cost of production. In contrast, TV and DV are "top-down" calculations in that adjustments are made to a marketplace price.[133]

1. Calculation of the CV

Article 6:1 of the CVA provides that CV shall consist of the sum of the value of the following items:

- *The cost or value of materials and fabrication or other processing employed in producing the imported goods*. The Interpretative Note to Article 6 provides that this cost is to be determined on the basis of information relating to the production of the goods being valued, supplied by or on behalf of the producer, which may be in a country other than the country of exportation. Modern cost accounting techniques can deliver such costs with great precision. The aim is to find the "actual" production cost of the item being valued, not the costs applicable to similar items produced at the time of exportation or importation.
- *The cost of packaging, containers and assists.* The Interpretative Note also provides that the cost or value of materials and fabrication will include, as in the TV calculation: packing and container costs provided for in Article 8:1 (a)(ii) (iii) and any assists provided for in Article 8:1 to the extent they are paid for by the producer.
- *Amount for profit and general expenses*.[134] This is to be determined on the basis of information supplied by or on behalf of the producer, and this information must be comparable ("equal") to the figures usually reflected in the sales of goods 'of the same class or kind'[135] as the goods being valued, which are made by other producers in the country of exportation for export to the country of importation. In other words, profit and general expenses for the producer in question should be in line with profit and general expenses for that producer's competitors in its home country. The implication may be that CV cannot be used unless there are goods of the same class or kind from the same country as the goods being appraised.[136] Where the producer's own figures for profit and general expenses are not consistent with those of its competitors in its home country, the amount for profit and general expenses may be based on relevant information other than that supplied by or on behalf of the producer of the goods.[137]

[132] Developing country Members may delay the application of the CV method for three additional years, following the implementation of all other provisions of the Agreement (Article 20:2). *See infra* Section 6.

[133] Bhala and Kennedy, *supra* note 16 at 339.

[134] According to the Interpretative Note to CVA Article 6, the term "general expenses" covers direct and indirect costs of producing and selling the goods for export which are not included under Article 6:1(a). However, this definition does not in fact clarify the real extent of that term. In addition, there may be some borderline cases between production costs and general expenses.

[135] CVA Article 15:3 defines "goods of the same class or range" as goods which fall within a group or range of goods produced by a particular industry or industry sector, and including identical or similar goods.

[136] Bhala and Kennedy, *supra* note 16, at 339.

[137] Interpretative Note to CVA Article 6.

The Interpretative Note states that the amount for profit and general expenses has to be taken as a whole. It follows that if in any particular case the producer's profit figure is low, while its general expenses are high, its profit and expenses taken together may nevertheless be consistent with that usually reflected in sales of goods of the same class or kind. Furthermore, a producer must show that valid commercial reasons justify its low profits and that its pricing policy reflects the usual pricing policies of the industry sector in question.

- *The cost or value of all other expenses necessary to reflect the valuation option chosen by the Member under Article 8:2.* This requirement, relating to the cost of transportation and insurance of imported goods to their place of introduction in the importing country, will be applicable only to countries which have chosen the CIF system for valuation purposes.

Current fashion holds that CV is unlikely to be acceptable in many cases, because importing customs authorities will rarely be able to satisfy themselves that the alleged costs of production are comparable to those of other producers in the country of production. In actual practice, customs officials often accepted the detailed cost accounting records of the manufacturer without giving much attention to whether competitors' costs were similar. However, it is to be noted that in past years, CV was quite popular with well-regulated producers and customs authorities, notably in the United States; one may assume that the supposed difficulties of CV are not in practice insuperable.

2. Access to the Necessary Information

The access to the necessary information to apply this valuation method is a key issue for its successful application. As a general rule, customs value is determined under the CVA on the basis of information readily available in the country of importation. However, CV calls for the cost of production of the goods being imported, the general expenses incurred by the producer and its profits from selling such goods. Accordingly, the CVA requires that this information be based upon the producer's commercial accounts, provided those accounts are consistent with generally accepted accounting principles applied in the country of production. This information is very sensitive. If the producer is not related to the importer, the producer/seller will normally be unwilling to reveal such sensitive details to the importer/buyer; if they are members of the same group, there will probably be no difficulty. The Interpretative Note to Article 6 acknowledges that use of the CV will generally be limited to cases where buyer and seller are related and the producer is prepared to provide the necessary information and allow verification.

In addition, Article 6:2 provides that no Member may require or compel any person not resident in its own territory to produce for examination, or to allow access to, any accounts or other records for the purposes of determining a computed value. However, information supplied by the producer of the goods for the purposes of determining the customs value under the provisions of this Article may be verified in another country by the authorities of the country of importation, with the agreement of the producer, provided they give sufficient advance notice to the government of the country in question and the latter does not object to the investigation.

E. Fall Back Method of Valuation (Method 6)

In extremely rare cases, where the value of imported goods cannot be determined using the TV, deductive, or computed value formulas, the CVA allows Members to

use a "fallback" or "default" method relying on information available in the country of importation.[138]

Article 7 provides guidance for applying this default method.[139] It also contains a list of prohibited methods, thus limiting the margin of discretion of customs authorities.[140] The Agreement seeks to prevent Members from reverting to one of the old methods not adopted in the Agreement, or from putting particular imports at a disadvantage.[141]

1. Requirements For Applying the Fallback Method

When applying Article 7, the following guidelines must be respected:

- *Consistency with the Principles and general provisions of the CVA and Article VII of GATT 1994.* This requirement stresses that although Members have a certain margin of discretion to apply the default method, they are not free to do so arbitrarily.
- *Flexible application of the Agreement valuation methods*. Article 7 allows the use of any "reasonable means" to determine the customs value. Paragraph 2 of the Interpretative Note to Article 7 specifies that the preferred fallback valuation methods are those laid down in Articles 1 through 6, applied with reasonable flexibility. Thus it is appropriate to review every step taken by the authorities in the process of attempting (unsuccessfully) to apply Articles 1 to 6 to the goods being valued, to see whether there were some 'near misses,' which could, by slightly stretching the CVA provisions, furnish a basis for valuation. This review should re-examine each limitation set down in the specified methods of valuation which could not be met, and each set of figures that was rejected.[142] In addition, where several methods can be used to determine customs value under Article 7, the sequence of Articles 1 to 6 should be followed.[143] The Interpretative Note gives an example of "reasonable flexibility" related to "identical goods" and "similar goods": the values of identical or similar goods may be accepted even if exported earlier or later than the goods being valued, even if they come from a different country, or even if they were valued using deductive or computed methods.

  Thus only if customs value cannot be determined by using these methods flexibly should it be determined, as a last resort, on the basis of other reasonable methods not precluded by Article 7:2 and consistent with the general principles and provisions of the CVA and Article VII.[144]
- *Use of available data in the country of importation.* The source of information is not relevant, since it may originate outside the country of importation and may even be provided by the importer. What matters is that customs are satisfied as to its truth and accuracy.[145]

2. Prohibited Methods

A number of methods are expressly excluded from the default method. The elimination of some of those methods was a major objective in the negotiation of the CVA.

[138] Vinod Rege, *supra* note 6, at 130.
[139] CVA Article 7:1.
[140] CVA Article 7:2.
[141] Sherman and Glasshoff, *supra* note 6, at 235.
[142] *Id.* at 236–237.
[143] TCCV, Advisory Opinion 12.2.
[144] TCCV, Advisory Opinion 12.1, *Flexible Application of Article 7 of the Agreement.*
[145] TCCV Advisory Opinion 12.3 on the use of data from foreign sources in applying Article 7.

They are in general contrary to the general principles contained in the Preamble that guide the interpretation of the different provision of the Agreement. The prohibited methods are:

- the selling price in the country of importation of domestically produced goods[146]
- any system which adopts the higher of two alternative values
- the exporting country's domestic price[147]
- the cost of production other than computed values which have been determined for identical or similar goods in accordance with the provisions of Article 6
- the price of the goods for export to a third country
- minimum customs values[148]
- arbitrary or fictitious values.

V. Basic Customs Valuation Disciplines

The CVA provides for a set of customs valuation disciplines, including a number of basic rights and obligations for customs authorities and traders.

A. Currency Conversion

The CVA sets basic guidelines for currency conversion which are necessary for the determination of the customs value where the parties to the transaction set the invoice price in a currency different from that of the country of importation, or computed value, requiring production costs in the country of production, is used. Article 9 echoes the GATT Article VII:4 fall-back rule: the conversion rate must effectively reflect the current value of the currency in commercial transactions. However, Article 9 does not maintain the main GATT Article VII:4 rule that currency conversions should be made on the basis of the International Monetary Fund par values. The reason for this change was the collapse of the par value system.[149]

The applicable guidelines for currency conversions are therefore:[150]

- the exchange rate to be used must be published by the country of importation
- the published rate must reflect as effectively as possible the "current value" of that currency in commercial transactions in terms of the currency of the country of importation
- the conversion rate to be used must be that in effect at the time of exportation or importation,[151] as specified by the country of importation. The "current value" will therefore mean the rate at or about the time of either importation or exportation, as the Member may decide.

[146] This provision is directed at the so-called American Selling Price ("ASP") method formerly used in the United States for certain products.

[147] This provision is directed at the former Canadian approach to valuation, which used valuation as a weapon against supposedly dumped imports.

[148] Developing country Members may make a reservation to retain the system of officially established minimum values on a limited and transitional basis (Annex III:2 to the Agreement). *See* Part VI *infra*.

[149] McGovern, *supra* note 6, at 150.

[150] TCCV Advisory Opinion 20.1 provides guidance on currency conversion where the contract provides for a fixed rate of exchange.

[151] The Interpretative Note to this provision states that "time of importation" may include the time of entry for customs purposes.

The CVA leaves Members room to implement this provision and to provide further guidance for the conversion of foreign currencies. There will doubtless be problems in those countries where official and unofficial exchange rates vary significantly.

B. Powers of the Customs Authorities

Customs valuation based on the transaction value method is largely dependent on documentary input from the importer. For this reason, under the CVA, importers are required to provide an accurate and complete declaration of value to accompany the customs entry. Customs authorities should rely on that declaration to determine the value of imported goods unless there are grounds to reject it.

Article 17, in conjunction with Annex III:6 to the Agreement, stresses that nothing in the CVA should be construed so as to restrict or call into question the rights of customs administrations to satisfy themselves as to the truth or accuracy of any statement, document or declaration presented for customs valuation purposes. Customs administrations may need to make enquiries aiming to verify that the elements of value declared or presented to customs in connection with a determination of customs value are complete and correct. Annex III:6 adds that Members, subject to their national laws and procedure, have the right to expect full cooperation by importers in these enquiries.

In response to the concerns of some developing countries, and as an attempt to strengthen the ability of customs authorities to deal with cases of under and over-invoicing, a Ministerial "Decision Regarding Cases Where Customs Administrations Have Reasons to Doubt the Truth or Accuracy of the Declared Value" was adopted at Marrakesh.[152] This Decision allows customs authorities in such cases to ask importers to provide further explanations, documents or other evidence to establish that the declared value represents the total amount actually paid or payable for the imported goods, adjusted in accordance with the provisions of Article 8. If a reasonable doubt still exists after receipt of further information (or in the absence of a response), the authorities may decide that the value cannot be determined according to the TV method and turn to the other available methods. Before a final decision is taken, the authorities must communicate to the importer, in writing if requested, grounds for doubting the truth or accuracy of the particulars or documents produced, and the importer must in turn be given a reasonable time to respond. When a final decision is made, the customs administration must notify the importer in writing of its decision and the grounds therefor.

This Ministerial Decision confirms that customs authorities may reject application of the TV when "reasonable doubts" persist as to the truth or accuracy of the declared value, something that is not clearly stated in the CVA. At the same time the Decision places a heavier burden on the importer, who is expected to provide further evidence in support of its statements when the authorities so request. Finally, the Decision also specifies that it is entirely acceptable under the Agreement for Members to seek the cooperation of other Members when verifying the truth or accuracy of the declared value. It is too soon to say whether the Decision is helpful in the delicate balance between speed and thoroughness, scepticism and trust, efficiency and meticulousness.

C. Importers' Rights

The CVA also recognizes several basic rights of importers.

[152] *See* THE LEGAL TEXTS: THE RESULTS OF THE URUGUAY ROUND OF MULTILATERAL TRADE NEGOTIATIONS 398 (1999).

1. Right to Request Written Explanations

The importer should play an important role in cooperating with customs authorities by providing the information needed to assess the customs value of the imported goods. In return Article 16 of the CVA grants the importer a general right to written explanations as to how the customs value of the importer's goods was determined. Customs authorities must provide those explanations upon written request by the importer. CVA Article 7:3 grants a similar right, but specifically related to the so-called "fall-back method": the importer has the right to be informed of the method used to determine the value of the imported goods, when none of the five other methods are applicable.

2. Right to Appeal

The CVA grants the importer or any other person liable for the payment of the duty a right to both administrative and judicial appeals against the customs valuation determination. Article 11 states that each Member's legislation must provide for specific appeal procedures. The first appeal may be to an authority within the customs administration or to an independent body, but in either case there must be an ultimate right of appeal to a judicial authority. The appellant must be informed of any right of further appeal, which it should be able to exercise without being subject to a fine or threat of fine merely because it has chosen to make use of that right. The appeal decision must be communicated in writing to the appellant and it must be reasoned.

3. Right to Have the Goods Released

With regard to the release of goods, Article 13 provides that where the final determination of customs value is delayed, the importer has the right to withdraw the goods immediately, although the authorities may require a surety or deposit to ensure payment of the duties ultimately found to be due. Thus, Article 13 allows customs to make a careful study to determine customs value without delaying trade. In many countries, physical clearance occurs before there is close scrutiny of the reliability of the documents offered by the importer.

In a case related to the WTO consistency of increased bonding requirements imposed by the US on certain products imported from the EU, the panel held that "Article 13 of the Customs Valuation Agreement allows for a guarantee system when there is uncertainty regarding the customs value of the imported products, but is not concerned with the level of tariff obligations as such. Article 13 of the Customs Valuation Agreement does not authorise changes in the applicable tariff levels between the moment imports arrive at a US port of entry and a later date once imports have entered the US market. As we discuss further below, the applicable tariff [. . .], must be the one in force on the day of importation, the day the tariff is applied."[153]

D. Confidential Information

The CVA deals with the protection of confidential information in two instances: i) during the administrative process of customs valuation (Article 10); and ii) in the context of

[153] Panel Report, *US—Import Measures on Certain Products from the European Communities*, WTO/DS165/R, ¶¶ 6.77 (2000). It is worth noting that there was no disagreement in that dispute between the parties on the customs value of the EC listed imports. However, the panel discussed CVA Article 13 in response to a defense raised by the US. The panel finally concluded that CVA Article 13 was of no relevance to the present dispute.

a dispute settlement procedure in the WTO (Article 19:5). Disclosure of confidential commercial information is crucial for the smooth functioning of the system. Much of the information required for the determination of the value of imported goods may be sensitive, in particular when customs undertake special inquiries regarding, *inter alia*, royalty arrangements, arrangements between related companies or costs and profits or commissions of importers and exporters.

Article 10 gives a broad definition of what is to be considered confidential: "all information which is by nature confidential or which is provided on a confidential basis for the purposes of customs valuation." It also requires that such information be treated as strictly confidential "by the authorities concerned." This means that customs authorities must give assurance—and respect such assurance—that the confidential information will be used only for the purposes for which it is furnished by the parties to the transaction. This should prevent the customs authorities from sharing such information with another government department in the same country (e.g. tax authorities) or even the customs authorities of another country. Article 10 also provides that disclosure may only take place with the specific permission of the person or government providing the information, except insofar as required in the context of judicial proceedings. Ultimately, the efficacy of this provision will largely depend on how Members implement it in their respective laws.

Article 19:5 also prohibits disclosure of confidential information provided to a WTO panel without the formal authorization of the submitter, in such cases a non-confidential summary should be provided.

E. Transparency

The general principle of transparency, one of the pillars of the multilateral trading system, also applies in relation to customs valuation. This principle is basically reflected in the CVA through two provisions. Article 12 states that laws, regulations, judicial decisions and administrative rulings of general application giving effect to this Agreement must be published in conformity with Article X of GATT 1994—the fundamental rule governing transparency in the WTO system—by the country of importation concerned. Publicizing the relevant legal framework is necessary not only to enable traders to estimate with a reasonable degree of certainty the value for customs purposes, as stated by Article VII:5 of GATT 1994, but also to limit the discretion allowed to customs officials and avoid any protectionist use of customs valuation by the importing country.

In addition, Article 22 imposes on Members the obligation to notify the Committee on Customs Valuation of any changes in their laws and regulations relevant to the Agreement or the administration of those laws and regulations. This Article should be read in conjunction with the Decisions on Notification and Circulation of National Legislation and on the Checklist of Issues adopted by the Committee.[154] Essentially the first Decision states that, "Members will submit the complete texts of their national legislations (laws, regulations, etc.) on customs valuation in one of the three official WTO languages as soon as possible to the Secretariat which will circulate them as Committee documents

[154] The Decision and Checklist are contained in *Decisions Concerning the Interpretation and Administration of the Agreement on Implementation of Article VII of the GATT 1994 (Customs Valuation),* WTO Doc. G/VAL/5 (1995), a compendium issued by the WTO Committee on Customs Valuation of decisions originally made by the Tokyo Round Committee on Customs Valuation and adopted by the WTO Committee.

to the other Members in the language submitted." The second Decision, designed to facilitate understanding of each Member's legislation, requires Members to respond to fifteen questions in the checklist regarding their the legislation.[155]

VI. Special and Differential Treatment

The CVA, like the other WTO agreements, contains provisions on "special and differential treatment" for developing country Members.[156] These provisions aim to offer these Members some flexibility in the implementation and application of the Agreement. In addition, developed-country Members are committed to provide developing countries with technical assistance in meeting their new obligations.

A. Transitional Periods

The CVA grants two kinds of transitional periods for implementing the Agreement to developing country Members who were not party to the Tokyo Round Code.

- There was a general five year transitional period (i.e. until January 1, 2000) to delay implementation of the Agreement as a whole. Beneficiaries could request an extension of this grace period before the end of the five-year term. The requesting Member had to show "good cause" for its request to which the other Members should give "sympathetic consideration."[157] This delay might seem quite generous, but it must be remembered that import duties are still a primary source of government revenue for many developing countries, and they inevitably were reluctant to forego opportunities to keep that income stream intact.[158]
- A specific transitional period to delay the application of the computed value method (Method 5) for another three years, following the implementation of all other provisions of the Agreement.[159] This was no doubt established to address the anticipated unfamiliarity of the CV technique.

In addition, developing country Members may make a reservation to retain the system of officially established minimum values on a limited and transitional basis under such terms and conditions as may be agreed by the Members.[160] This provision delays the implementation of Article 7:2 (f) of the CVA, which expressly prohibits determination of the customs value on the basis of a system of minimum customs values. A justified request for permission to deviate from the standard TV methodology and use the prohibited system is made to the Customs Valuation Committee.

[155] These questions are contained in *Decisions, supra* note 153.

[156] *See* PETER GALLAGHER, GUIDE TO THE WTO AND DEVELOPING COUNTRIES 160–162 (2000).

[157] Annex III:1. According to the Report (2002) of the Committee on Customs Valuation to the Council for Trade in Goods, during the period under review (i.e. 2002), one Member (Sri Lanka) maintained an extension of the delay in accordance with the provisions of Annex III:1. At the time of writing three requests for extensions were still pending approval by Members. *See* Doc. G/L/590, November 12, 2002.

[158] Bhala and Kennedy, *supra* note 16 at 322.

[159] CVA Article 20:2.

[160] Annex III:2. According to the Report (2002) of the Committee on Customs Valuation to the Council for Trade in Goods (WTO Doc. G/L/590, November 12, 2002) , during the period under review (i.e. 2002), six Members maintained reservations granted under Annex III:2 for minimum values (Colombia, Gabon, Guatemala, Honduras, Nicaragua and Jamaica).

B. Reservations Regarding the Deductive and Computed Value Methods

Developing country Members may also make the following reservations regarding application of the deductive (Method 4) and computed value (Method 5) methods:

- Developing country Members which consider that the reversal of the sequential order of the fourth and fifth methods of valuation (i.e. the deductive and computed value methods) at the request of the importer[161] may give rise to real difficulties for them, may make a reservation permitting them to refuse such requests.[162]
- When applying the deductive value method, if neither the imported goods nor identical nor similar goods are sold in the country of importation in the condition of importation, then, if the importer so requests, the customs value will be based on the unit price at which the imported goods are sold in the country of importation after further processing.[163] However, developing country Members may reserve the right to apply the deductive valuation method in this situation, whether or not the importer so requests.[164]

C. Technical Assistance

Developing country Members have the right to request and obtain technical assistance from developed country Members. This may include training of personnel, assistance in preparing implementation measures, access to sources of information regarding customs valuation methodology, or advice on the application of the provisions of the agreement.[165]

Finally, when applying Method 1, developing country Members which face problems regarding the non-inclusion in the customs value of special discounts and commissions obtained by sole agents, sole distributors and sole concessionaires[166] may ask the Customs Valuation Committee to undertake a study of this question with a view to finding appropriate solutions.[167]

VII. Issues Related to the Implementation of the Agreement

The CVA has been in force in most developed country Members for about a quarter of a century, since the end of the Tokyo Round. The Uruguay Round made implementation of the agreement mandatory for all WTO members, subject to the application of Special and Differential Treatment provisions in favor of developing country members. By late 2002, after the expiry of the initial five-year transitional period, many developing countries had started to implement the agreement. However, a large number of developing or least-developed countries ("LDC") had not yet reported their implementation status (in particular LDCs).[168] In any event, it is widely recognized that developing countries are still confronted with difficulties in implementing the CVA.

[161] CVA Article 4.
[162] Annex III:3 sets forth the terms in which this reservation is to be requested.
[163] CVA Article 5:2.
[164] Annex III:4, gives the formula for making this reservation.
[165] CVA Article 20:3.
[166] CVA Articles 1 and 8.
[167] Annex III:5.
[168] Fifty-six Members (of which one has an Article IX waiver from its obligations under the Agreement and three have requested extensions of the Article 20.1 delays) have not yet made any notification. *Report (2002) of the Committee on Customs Valuation to the Council for Trade in Goods*, Doc. G/L/590, November 12, 2002.

Two sets of implementation-related problems are described below. The first are issues which developing country Members identified as part of the preparatory works for the Doha Ministerial meeting that took place in November 2001. The list includes concerns related to specific provisions of the CVA which in certain cases may still entail the amendment of the agreement. The second set are problems relating to systemic and structural matters which developing countries encounter in the implementation of the agreement.

A. The Doha Implementation-Related Issues

The commitment to address the concerns of developing country Members on implementation-related issues of WTO Agreements, including the CVA, was essential for reaching the consensus needed to launch a new round of multilateral negotiations (the "Doha Development Round").

Members adopted a Ministerial Decision on "Implementation-Related Issues and Concerns,"[169] in which they confirmed some of the special and differential treatment provisions of the CVA. In particular, Members agreed to give positive consideration to requests by least developed countries to delay the implementation of the CVA or the elimination of the system of officially established minimum values.[170] In addition, the Ministerial Decision directed the Committee on Customs Valuation to identify and assess practical means of ensuring cooperation and assistance on the exporting Member to the importing country customs authorities, in the context of the 1994 *Ministerial Decision Regarding Cases Where Customs Administrations Have Reasons to Doubt the Truth or Accuracy of the Declared Value*.[171] The mandate suggests that such cooperation could take the form of an exchange of information, which may include information on export values. This mandate could raise some concern because of the reference to "export value," which is indeed not consistent with the CVA's rejection of export value as a basis for customs valuation.[172]

As part of the "Work Program" of the Doha Development Round, Members also agreed to launch negotiations on a list of outstanding implementation issues raised by some developing countries, including:[173]

- The residual method of determining customs value under Article 7 should cover every last resort process, thus allowing valuation based on domestic market price or export price to a third country, with appropriate adjustments.[174] The proposal seeks to allow the use of two currently prohibited methods (the price of goods on the domestic market of the country of exportation, and the price of goods for export to a country other than the country of importation),[175] subject

[169] WT/MIN(01)/17, November 14, 2001.
[170] WT/MIN(01)/17, ¶¶ 8.1 and 8.2.
[171] WT/MIN(01)/17, ¶ 8.3.
[172] CVA Articles 7:2 (c) and (e).
[173] The Doha Ministerial Declaration contains the "work program" for the Doha Development Round. WT/MIN/(01)/DEC/1, November 14, 2001. Paragraph 12 of the Declaration contains the mandate to the relevant WTO councils and committees to negotiate a list of outstanding implementation issues as a "matter of priority," and to report on their progress to the Trade Negotiations Committee by the end of 2002 for "appropriate action." The WTO document, *Compilation of Outstanding Implementation Issues Raised by Members*, JOB (01)/152/Rev.1, October 27, 2001, identifies these implementation-related issues.
[174] JOB (01)/152/Rev.1, Tiret 58.
[175] CVA Articles 7:2 (c) and (e).

to the appropriate adjustments, as a means of determining customs value under Article 7. However, many Members have opposed this proposal, arguing that allowing the inclusion of these prohibited methods would compromise the fundamental principle of the Agreement that valuation procedures should not be used to combat dumping.[176] Other objections to this proposal included how the prices in the exporting country would be obtained, which country would be used for third-market comparisons and so forth,[177] each of these being controversial in the context of dumping.

- The Agreement should be amended to provide for the highest value when more than one transaction value of identical or similar goods is found.[178] Articles 2:3 and 3:3 of the CVA state that if in applying these Articles more than one transaction value is found, the lowest such value should be used to determine the customs value. Furthermore, the list of prohibited methods in Article 7 of the CVA includes "a system which provides for the acceptance for customs purposes of the higher of two alternative values." Proponents have explained that providing for the highest value would prevent misuse of Articles 2:3 and 3:3 by unscrupulous traders. For example, some traders clear first small pilot consignments through customs at low values. These are then followed by larger consignments for which the TV cannot be used so that the lower values previously assessed have to be used under the provisions of Articles 2:3 and 3:3. In response, other Members have suggested that this is a problem of enforcement, not really a valuation problem. Critics also say that the proposal is motivated by a desire for higher valuation and increased revenue rather than to address fraud or problems with implementation.[179]
- Buying commissions should be taken into account in the determination of customs value of imported goods, as this forms a legitimate component of the landed cost of imported goods.[180] Article 8:1 (a) (i) provides that commissions and brokerage, except buying commissions, should be added to the invoice price insofar as they are incurred by the buyer but not already included in the price. The proponent claims that customs administrations of developing countries have difficulty in distinguishing buying commissions from other sources of commission; sometimes brokers act for both parties and the limits of buying and selling commissions are difficult to discern. However, most Members oppose this proposal on the ground that buying agents are acting on behalf of the buyer and the benefits of their activities do not accrue to the seller. Including these commissions would therefore penalize those importers which rely on buying agents and would create a disincentive to trade in general. Some Members even consider that the proposal is punitive in nature and would represent an extreme solution to a domestic enforcement problem.[181]

[176] To determine whether or not imports are dumped, their price is usually compared with the price of a similar product sold in the home market or exported to a third country. *See* Chapter 11 of this book.

B. Developing Countries' Systemic and Structural Problems in Implementing the Agreement

Developing countries are reluctant to implement the CVA, or have difficulty in doing so, for the following reasons:[182]

- *Lack of "ownership"*. Developing countries were not very active in the negotiation of the agreement. The CVA was the result of an agreement between developed countries (principally the EU and the United States) during the Tokyo Round, which did not take into account the fiscal dependence of developing countries on customs revenue, or their different trading environment and infrastructure constraints. In addition, the CVA was not opened to re-negotiation during the Uruguay Round. For this reason, many developing countries may not feel any urgency about changing their customs valuation systems.
- *Fear of losing revenue*. Customs revenue still accounts for a relatively high proportion of the total revenue of many developing countries, as compared to OECD countries. This is the result of a combination of high import tariffs and low domestic tax collection, which in turn is due to high levels of internal tax evasion and the predominance of the "informal economy". In this context, many developing countries are very sensitive to a possible loss of revenue resulting from the implementation of the CVA agreement. These countries suspect that most imports are under-invoiced and believe that the CVA does not provide them with enough means to act against such cases. The concern over under-invoicing could be the result of a trading environment that fosters fraud: high import tariffs, predominance of informal trade that uses unreliable invoices, trade in second hand goods etc. In addition, the political authorities are not fully committed to implementation of the CVA and put pressure on customs officials to achieve a certain budget revenue target. In this climate, the establishment of a fair, neutral and transparent valuation system is therefore not a priority.
- *Infrastructure limitations.* Customs valuation in many developing countries is hampered by i) lack of data, poor means of information and communication; ii) heavy administrative constraints, i.e., lack of qualified personnel, poor or non-existent training facilities, and low public service salaries; iii) limited information technology equipment (e.g. computers); iv) inadequate organization and poor management. All these infrastructure constraints make implementation of the CVA difficult, in particular, when customs have "reasonable doubts" about the validity of the invoice value and have to verify the additional information requested to the importer, or they must have recourse to the alternative valuation methods and information is scarce or not available. As a result, developing countries have to resort to the fall-back method for a substantial part of their imports, which is a far from ideal situation.

Analysts suggest various initiatives to help developing countries overcome the problems they encounter in implementing the CVA. First, Members should address the ownership issue by encouraging developing country Members to air their concerns on the CVA at the WTO. Second, Members and international organizations (e.g. WCO) must make effective and improve technical assistance in order to better explain the details of the CVA to customs officers and the business community in developing countries.

[182] *See* Luc De Wulf, *supra* note 6, at 5; Vinod Rege, *supra* note 7, at 131.

Third, Members must act to fight customs fraud, for example by i) simplifying the import tariff regime; ii) using pre-shipment inspection services (although this solution could be controversial); iii) making exchange of information between customs agencies on issues related to customs valuation effective; and iv) helping customs in developing countries to develop their own computerized commercial databases and price lists and keep them updated, which should enable customs officials to detect cases of under or over-valuation and other customs frauds. However, analysts recognize that these are just partial solutions to problems whose roots go beyond customs valuation and raise more general structural issues.

VIII. Conclusion

Customs valuation is an integral part of the process of trade. It can play a major role in facilitating or hindering trade. The last fifty years have seen exceptional progress towards the elaboration of a worldwide system. The fact that the CVA was not opened to re-negotiation during the Uruguay Round, and that Members only included few implementation-related issues specific to customs valuation as part of the Doha Round of negotiations, show that the CVA is not an intrinsically controversial agreement. WTO Members seem to agree that the CVA is a good agreement which establishes a single worldwide customs valuation system that is fair, uniform and neutral. Its methods and disciplines should therefore contribute to create predictability and facilitate international trade of goods.

Nevertheless, the plain truth is that the CVA's valuation system does not correspond in most cases with the reality of developing country Members, and is too theoretical to address their practical concerns of revenue-raising. The problems developing country Members face in implementing the CVA is a reflection of the kinds of problems these Members encounter to integrate into the world trading system. Acceptance of the CVA may succeed if it is remembered that while the CVA has not been designed as a mean of increasing revenue collection, neither was it designed to decrease revenue. Customs valuation does not operate in isolation, since it is part of the overall customs operational and management system. For this reason, the implementation of the CVA should be part of an integral plan to modernize customs administration in developing countries, with the full support of political authorities, the engagement of the business community and the technical and financial assistance of bilateral or multilateral donors through adequate capacity-building programs.

APPENDIX Selected Provisions of International Federation Inspection Agencies Code of Practice 589

* Executive Vice President, Trade Assurance Services, SGS Société Générale de Surveillance S.A., Geneva
** Vice President, SGS, Geneva

I. Introduction

A number of developing and transition economy countries require imported goods to be inspected for customs and/or foreign exchange purposes in the country of exportation prior to shipment. This Preshipment Inspection ("PSI") is carried out by private companies under contract with, or mandate[1] from, the government of the importing country. The Agreement on Preshipment Inspection ("API"), which is designed to ensure that PSI is carried out in a fair and non-discriminatory way, is one of the shortest and least controversial of the Uruguay Round Agreements. Negotiation of the Agreement was not particularly contentious, and the Agreement has not been the subject of any dispute resolution proceedings under the WTO.

The PSI programs were originally designed for foreign exchange purposes. The first program was introduced in the Democratic Republic of Congo (Zaire) in 1965, and was aimed at preventing capital flight caused either by exporters swindling importers with inferior or overpriced goods or by importers colluding with exporters to overprice the goods and pay the balance into a foreign bank account on behalf of the importers. The Zaire program required the PSI company to inspect the goods prior to shipment in the country of supply by verifying the quality, quantity and the price of the goods. If satisfactory, the PSI company would issue a Clean Report of Findings ("CRF") which was one of the documents needed by the exporter to receive payment for the goods. If discrepancies were detected and were not rectified by the exporter, the PSI company would issue a Non-Negotiable Report of Findings which prevented the exporter from receiving payment. Similar foreign exchange programs were introduced in other developing countries in the 1970s and 1980s.

In 1985, the first PSI program for Customs purposes was introduced in Indonesia. It was designed to facilitate trade by improving the speed and efficiency of customs clearance procedures, ensuring uniform application of import regulations and customs valuation and classification, encouraging foreign investment by guaranteeing transparency and predictability of import procedures, and facilitating the collection of import duties and taxes.

Originally, only one company provided government-mandated PSI services, the Geneva-based SGS Société Générale de Surveillance S.A. , but in 1984 other companies followed suit.

In the 1980s the expansion of foreign exchange PSI programs provoked concern from some exporters who were unhappy about their contract prices being reviewed and claimed that PSI acted as a trade barrier. In Germany the Government issued a regulation requiring PSI companies to obtain a licence from the Government. In the USA, some Florida trade associations petitioned the U.S. Government demanding that action be taken against several Latin American and Caribbean Governments which had introduced PSI to prevent capital flight. A compromise was reached whereby the U.S. Government undertook to pursue bilateral discussions with the countries concerned, raise the question of PSI within GATT, and to request the United States International Trade Commission ("USITC") to undertake an investigation[2]. The International Chamber of Commerce ("ICC"), based on the concerns of their members, held discussions with the International Federation

[1] The term "mandate" is usually used for those programs where there is no contract *per se*, and the PSI entity is authorized or accredited to perform PSI by a decree promulgated by the government.

[2] *Preshipment Inspection Programs and Their Effects on U.S. Commerce*. Report to the President of the Investigation No. TA-332-242. USITC Publication 2003, Washington D.C. (1987).

of Inspection Agencies ("IFIA") concerning principles which should be followed in the conduct of PSI.

All these developments set the scene for the inclusion of PSI in the Uruguay Round.

II. Uruguay Round Negotiations

Although it was the developed countries which placed PSI on the GATT Agenda, the proposal to include it in the Uruguay Round was supported by some PSI user countries. The end result, in the form of the Agreement on PSI, was a compromise that recognized the need for developing countries to have recourse to PSI for as long as necessary, while laying down some good practice rules and disciplines requiring the user governments to ensure that the PSI entities operate in a non-discriminatory fashion, and that they protect confidential business information.

III. The Agreement

Preamble

The Preamble to the API recognizes the need for developing countries to have recourse to PSI "for as long and in so far as it is necessary to verify the quality, quantity, or price of imported goods". Nevertheless, PSI is essentially an interim measure which may be used until such time as the user Government has modernized its customs service through capacity building and implementation of new systems. Ideally, PSI should form an integral part of a customs modernization program under which PSI is to be progressively phased out.

Article 1: Coverage—Definitions

Article 1.1 specifies that the Agreement applies to preshipment inspection activities that are (a) carried out on the territory of WTO Members, and (b) contracted or mandated by a WTO Member government or government body. Thus, the API is not applicable to preshipment inspection activities which are (i) contracted exclusively by non-government parties, such as importers and exporters;[3] (ii) contracted or mandated by governments of countries that are not Members of the WTO; or (iii) carried out on the territories of countries that are not Members of the WTO. In practice, however, when the government of a non-member country contracts for PSI activities, the contract between the government and the PSI entity frequently contains a clause to the effect that, to the extent applicable, the PSI will be conducted in conformance with the provisions of the API. In other words, the API is often used as a "code of good practice" even in situations where it is not legally applicable. Similarly, the API is used for PSI activities which are contracted for by a WTO Member but are to be carried out on the territory of a non-WTO Member country.

Article 1.2 defines "user Members" as those Members that have contracted or mandated PSI activities, and it is of course only those Members that are bound by the terms

[3] Since the API is only applicable to activities contracted or mandated by governments, the term "Preshipment Inspection" is frequently, but incorrectly, regarded as being synonymous with such government contracts or mandates. In fact, however, any inspection carried out prior to the shipment of the goods is a "Preshipment Inspection" and most preshipment inspections are voluntarily requested by the private sector to verify that the goods ordered are in conformance with contractual requirements.

of the API.[4] Since in practice it is the PSI entities that are responsible for implementing and complying with many of the obligations under the Agreement, user Members must ensure that their contract with, or mandate to, the PSI entity requires the entity to conduct PSI activities in conformance with the applicable provisions of the Agreement.

Article 1.3 defines PSI as "all activities relating to the verification of the quality, the quantity, the price, including currency exchange rate and financial terms, and/or the customs classification of goods to be exported to the territory of the user Member." A preshipment inspection program may include one, some, or all of these activities. The price verification may be designed to provide an opinion on the export price for foreign exchange purposes or government information purposes and/or to provide technical advice for customs purposes.[5]

Article 1.4 defines the term "preshipment inspection entity" as "any entity contracted or mandated by a Member to carry out preshipment inspection activities." PSI entities are generally private sector companies most of which are members of the International Federation of Inspection Agencies, the organization nominated by the WTO to represent PSI entities in connection with the independent review procedures provided for in API Article 4.

Article 2: Obligations of User Members

Article 2.1: Non-Discrimination

Article 2.1 requires user Members to ensure that "preshipment inspection activities are carried out in a non-discriminatory manner, and that the procedures and criteria employed in the conduct of these activities are objective and applied on an equal basis to all exporters affected by such activities." User Members must also ensure "uniform performance of inspection by all inspectors of the preshipment inspection entities contracted or mandated by them."

This does not mean that the procedures and criteria will be identical for every shipment, but that the rules for determining the circumstances under which particular procedures and criteria are applicable must be applied in a uniform and non-discriminatory manner to all exporters. The transparency requirements under which the details of the PSI procedures must be made publicly available,[6] are a key aspect in assisting exporters to verify that the procedures are being correctly applied.

Differences in procedures and criteria may arise depending upon the level of risk which takes into account such factors as the type, location and circumstances of the shipment. For example, physical inspection of bulk cargoes must normally be performed at the time of loading of a vessel, whereas most other goods can be inspected prior to loading, frequently at the supplier's premises. Similarly, a shipment of frozen chickens is more likely to be subject to sampling for laboratory analysis than a consignment of ashtrays.

Differences in procedures and criteria may also arise depending upon the requirements and scope of the PSI program of the user government. For example, the import regulations of user governments may vary with regard to import licensing, prohibited goods, procedures for importation of second-hand goods, and labeling requirements, among other factors.

[4] For a list of WTO Members currently requiring preshipment inspection, *see www.ifia-federation.org*.

[5] Although not included in the API definition of PSI activities, verification of compliance with import regulations such as those concerned with health and safety, is often included in PSI programs. *See* API Article 2.2 (Governmental Requirements).

[6] *See* API Article 2:5-8.

Article 2.2: Governmental Requirements

Most governments using PSI require the PSI entity to assist in verifying that the goods to be imported comply with their import regulations with regard to health requirements, agricultural requirements, prohibited imports, second-hand goods, and the like. Article 2.2 requires user Members to ensure that in the course of preshipment inspection activities relating to their laws, regulations and requirements, the national treatment requirements of Article III:4 of GATT 1994[7] are respected to the extent that they are relevant.

Article 2.3: Site of Inspection

In order to assure predictability for exporters, Article 2.3 provides that all PSI activities, including issuance or non-issuance of a Clean Report of Findings, are to be conducted in the customs territory of exportation of the goods,[8] or, if this is not possible owing to the complex nature of the goods, or if the exporter and PSI entity agree, in the customs territory of manufacture of the goods.

Inspection in the customs territory in which the goods are manufactured is typically necessary when:

- Tests that must be performed or witnessed by the PSI entity can only be done on the manufacturer's premises. It is common in "turnkey" projects for individual items of equipment to be manufactured in several different customs territories and assembled in the customs territory of exportation. Tests that must be performed on the individual items of equipment prior to assembly, such as pressure vessel testing and non-destructive testing of welds, must frequently be done at the manufacturer's premises.
- Access to the goods is not possible in the customs territory of exportation, such as when the goods are in bond.
- It is not practicable to unpack the goods in the customs territory of exportation.

Article 2.4: Standards

Article 2.4 requires user Members to "ensure that quantity and quality inspections are performed in accordance with the standards defined by the seller and the buyer in the purchase agreement and that, in the absence of such standards relevant international standards apply". The international standards referred to are published by organizations such as the International Standards Organization (ISO) and the International Electrochemical Commission (IEC). However, some importing countries may have local import regulations which stipulate particular requirements and which would prevail over the requirements of the contract or international standards. If the user government has instructed the PSI entity to verify compliance of the goods with such import regulations,[9] the PSI entity would inform the seller and buyer if there are discrepancies between the standards prescribed in the contract and the import regulations.

[7] GATT Art. III:4 provides in relevant part that "The products of the territory of any contracting party imported into the territory of any other contracting party shall be accorded treatment no less favourable than that accorded to like products of national origin in respect of all laws, regulations and requirements affecting their internal sale, offering for sale, purchase, transportation, distribution or use. " *See* Chapter 5 of this book.

[8] The term "customs territory from which the goods are exported" has been interpreted flexibly. Thus, part of a consignment may be inspected in one customs territory and part in another or several other customs territories if it is composed of goods of different origin that need to be inspected prior to packing in the countries of origin or prior to consolidation in a third country

[9] *See* API Article 2.2.

Articles 2.5 to 2.8: Transparency

Articles 2.5–2.8 are designed to assure transparency with respect to preshipment inspection activities. Article 2.6 requires user Members to ensure that PSI entities, when initially contacted by exporters, "provide to the exporters a list of all the information which is necessary for the exporters to comply with the inspection requirements." Typically, when a PSI entity receives notification of an inspection order from the country of importation, or from the exporter, it gives the exporter a Request for Information Form that asks for further details of the consignment, the address of the location of the goods, and the date of availability for inspection. Included with this Form is the list of the information needed by the exporter to comply with the inspection requirements.

Article 2.6 also provides that the information to be made available to the exporter is to include a reference to the PSI laws and regulations of the importing country, as well as the procedures and criteria used for inspection and for price and currency exchange rate verification purposes, the exporters' rights vis-à-vis the inspection entities, and the appeals procedures set up under Article 2.21.

The documents made available to the exporter typically include at least the following:

- The PSI entity's Guidelines for Exporters, which outlines the procedures and criteria used for physical inspection; price verification for export price and customs valuation purposes; currency exchange rate verification; customs classification; and internal appeals procedures in accordance with Article 2.21 of the API.
- The PSI entity's country data sheets for exporters, which provide country-specific information, including the applicable valuation methodology and a reference to the laws and regulations of the user government relating to PSI activities. This includes details of the minimum order value subject to PSI and a list of goods exempt from PSI.
- Independent Entity Guidelines on Independent Review Procedures, which provide further information for those exporters who are dissatisfied with the outcome of the internal appeal procedures and wish to refer the matter to an independent review in accordance with Article 4 of the Agreement.

The provision of information about an importing country's regulations and requirements is intended to facilitate trade and helps to avoid the shipment of non-compliant goods. Article 2.6 specifies, however, that (a) exporters are not relieved from responsibility for ensuring that their shipment complies with the import regulations of the importing country and (b) the PSI entity should not introduce any changes to its procedures after the inspection date unless required by new regulations issued by the user government, or in emergency situations covered by Articles XX or XXI of the GATT.[10]

Article 2.7 requires user Members to ensure that the information referred to in Article 2.6 is made available to exporters in a convenient fashion and that the PSI offices maintained by PSI entities serve as information points where this information is available.

Finally, Article 2.8 requires user Members to "publish promptly all applicable laws and regulations relating to preshipment inspection activities in such a manner as to enable other governments and traders to become acquainted with them."

[10] Article XX of the GATT covers "General Exceptions", including those necessary to protect public morals; to protect human, animal or plant life or health; and to secure compliance with laws or regulations including those relating to customs enforcement. *See* Chapter 5 of this book. Article XXI covers "Security Exceptions" including protection of national security; and the pursuance of obligations under the UN Charter for the maintenance of international peace and security. *See* Chapter 35 of this book.

Articles 2.9 to 2.13: Protection of Confidential Business Information

Much of the information required by governments for customs purposes, such as actual prices and names of customers, is of a confidential nature. Most governments have procedures designed to ensure that such information is not disclosed publicly. Articles 2.9 to 2.13 of the API seek to impose similar procedures on PSI entities as those imposed on customs authorities by Article 10 of the WTO Agreement on Implementation of Article VII of the General Agreement on Tariffs and Trade 1994 ("Agreement on Customs Valuation" or "ACV"). Thus, Article 2.9 provides generally that user Members ensure that PSI entities treat all information received in the course of preshipment inspection as business confidential to the extent that such information is not public.[11]

In order to ensure a common approach towards the maintenance of internal confidentiality procedures by PSI entities, the International Federation of Inspection Agencies ("IFIA"), has included provisions relating to the protection of confidential business information in its Code of Practice, set forth in the Appendix to this chapter.

Article 2.10 states that user Members are to provide information upon request about the way in which they are ensuring compliance with Article 2.9. The extent to which WTO Members have utilized this paragraph, if at all, is not known. Article 2.11 requires user Members to ensure that PSI entities do not divulge confidential business information to any third party, and that any confidential business information which they receive from PSI entities contracted or mandated by them is adequately safeguarded. It further provides that preshipment inspection entities may share confidential business information with the governments contracting or mandating them only to the extent that such information is customarily required for letters of credit or other forms of payment or for customs, import licensing, or exchange control purposes.

Under Article 2.12, user Members are to ensure that preshipment inspection entities do not request exporters to provide information regarding:

- manufacturing data related to patented, licensed or undisclosed processes, or to processes for which a patent is pending
- unpublished technical data other than data necessary to demonstrate compliance with technical regulations or standards
- internal pricing, including manufacturing costs
- profit levels
- the terms of contracts between exporters and their suppliers unless it is not otherwise possible for the entity to conduct the inspection in question.[12]

Information of this type is generally of no relevance to the PSI entity's task of carrying out price verification, which is either for the purpose of forming an opinion on the validity of the export price (for foreign exchange purposes), or to provide technical advice to

[11] Information generally available to third parties or public sources is not regarded as business confidential, even if received in the course of PSI. Examples of such generally available information may include general price lists, quotations, specification sheets, press articles and reports, and advertisements.

[12] This exception typically applies when the exporter is acting not as a principal but as the agent of another party, such as a commission agent for the supplier of the goods or a buying agent acting for the purchaser. In this situation (and depending on the requirements of the user government), the terms of the contract between the agent and supplier may be needed in order to verify the exact source and origin of the goods and/or to verify certain terms of the transaction such as the amount of commission and the price exclusive of commission. This is particularly relevant where the user government has import regulations relating to the charging of buying or confirming commissions.

the customs authorities in the importing country to facilitate their determination of the customs value of the goods in question.

Verification of the export price is based on the normal price at which identical or similar goods are available in the export market and has nothing to do with the exporter's internal manufacturing processes, internal price structures, or profits. Similarly, provision of technical advice for customs valuation is generally in conformance with either (i) the ACV, under which the customs value is, in the majority of cases, based on the price actually paid or payable, or (ii) the Brussels Definition of Value, under which it is based on the normal export price.[13]

In certain circumstances exporters may wish to provide information of the type listed in Article 2.12, and Article 2.13 specifies that they are free to do so if they wish. For example, although the ACV normally requires that customs value be based on the transaction value, i.e., the price actually paid or payable, this is subject to compliance with certain conditions, including that either (a) the buyer and seller not be related,[14] or (b) if the buyer and seller are related, the relationship must not influence the price charged by the seller. Sometimes sellers, especially multinational companies which are exporting to their subsidiaries, voluntarily provide the PSI entity with relevant supporting information, such as a transfer pricing agreement, in order to support the use of the transaction value. Similarly, if the user Member required the PSI entity to assist its customs authority with the verification of information related to "Computed Value" under ACV Article 6, such verification would only be undertaken based on information voluntarily provided by the producer of the goods.

Article 2.14: Conflicts of Interest

Article 2.14 requires user Members to ensure that PSI entities maintain procedures designed to avoid conflicts of interest, especially to avoid situations where they would be carrying out PSI with respect to goods being exported by a related party.

Article 2.15: Time for Inspection

Article 2.15 requires user Members to ensure that preshipment inspection entities avoid unreasonable delays in inspection of shipments. PSI companies normally specify a minimum advance notice period (typically three working days) that exporters should give when requesting physical inspection of the goods to be exported.

Exporters sometimes complain that this advance notice period creates a delay in the shipment of the goods. This is usually an unreasonable objection since the exporter has to book space on the ocean vessel or aircraft ahead of time, and notice can be given to the PSI company at the same time. The inspection itself does not normally take more than a few hours. The PSI company will usually endeavor to arrange an urgent inspection where necessary, while for frequent routine shipments (such as daily or weekly), a regular inspection schedule can be established.

Article 2.16: Issuance of Report

Under Article 2.16, user Members are to ensure that PSI entities issue a Clean Report of Findings ("CRF"), or a detailed written explanation of non-issuance of the CRF, within five working days of receipt of final documents and completion of the inspection.

[13] Generally, only those countries that have obtained an extension of the five-year implementation period of the ACV are still using the Brussels Definition. These are few in number.

[14] *See* ACV Art.15.4 for a definition of "related".

Some user government regulations stipulate issuance within a shorter time period, and in practice, most PSI companies issue the CRF or an explanation of non-issuance within two or three working days.[15] The written explanation specifying the reasons for non-issuance normally takes the form of either a Discrepancy Report or a Non-Negotiable Report of Findings (NNRF).[16]

When the CRF is required for payment purposes, the PSI Entity should send the CRF, or equivalent report (e.g., a security label attached to the seller's invoice) to the seller but in any case as soon as possible after receipt of the final documents, within the time limit published by the PSI entity in its Guidelines for Exporters. Additionally, if the CRF is not required for payment purposes, the PSI entity may send a copy or advice of issuance of CRF to the seller for information.[17] For customs purposes, the CRF data is normally transmitted electronically to the PSI entity's office in the country of importation so that the CRF may be distributed to the importer and the customs authorities.

Article 2.17: Preliminary Price Verification

Article 2.17 requires user Members to ensure that whenever so requested by the exporters, preshipment inspection entities undertake, prior to the date of physical inspection, a preliminary verification of the price and, where applicable, of the currency exchange rate, on the basis of the contract between exporter and importer, the pro-forma invoice and, where applicable, the application for import authorization. User Members are required to ensure that "a price or currency exchange rate that has been accepted by a preshipment inspection entity on the basis of such preliminary verification is not withdrawn, providing the goods conform to the import documentation and/or import license", and that, after a preliminary verification has taken place, "preshipment inspection entities immediately inform exporters in writing either of their acceptance or of their detailed reasons for non-acceptance of the price and/or currency exchange rate."

Article 2.17 is of greater relevance in PSI programs for foreign exchange purposes where the PSI entity is required to form an opinion on the normal export price, in the country of supply, of the goods to be exported. The PSI entity opinion of the export market price is based on a range of prices of identical and/or similar goods sold under similar terms and conditions in the same country of exportation. In the event that the export price declared by the exporter in the commercial invoice to the importer is higher than the PSI entity's opinion of the export market price, the PSI entity will request the exporter to provide additional information to support the invoice price.[18]

If the exporter is unable to provide satisfactory information to support a higher invoice price, this could lead to the exporter being required to amend the invoice price in order to obtain a Clean Report of Findings. Consequently, exporters may wish to take advantage of this preliminary price verification facility so that any questions may be resolved before the goods are made ready for shipment.

[15] Article 2.18 requires PSI entities to send the CRF to exporters or their designated representatives as expeditiously as possible. Article 2.19 requires user Members to ensure that, in the event of a clerical error in the Clean Report of Findings, preshipment inspection entities correct the error and forward the corrected information to the appropriate parties as expeditiously as possible.

[16] An NNRF is normally only issued in connection with an inspection for foreign exchange purposes.

[17] *See* WTO Working Party on PSI, Recommendation (B)(a)(3), which provides that "In addition to providing hard copies, PSI entities should be encouraged to communicate Clean Reports of Findings (CRFs) to importers and exporters through electronic means". WTO Working Party on PSI Report, G/L/214, December 2, 1997.

[18] A finding that the invoice price is lower than the export market price would not prevent the issuance of a CRF, but might result in an uplift in the PSI entity's valuation opinion for customs purposes.

Article 2.20: Price Verification

Article 2.20 covers price verification conducted "to prevent over- or under-pricing and fraud".

Such price verifications conducted by PSI entities fall into two main categories :-

(i) price verification for determining an opinion of the export price, for foreign exchange or government information purposes, which are carried out in conformance with the guidelines of Article 2.20 (a) to (e); or

(ii) price verification for determining a valuation opinion for customs purposes, which under footnote 4 to the API, are carried out based on the obligations accepted by the user Member under the WTO Agreements, more specifically the Agreement on Customs Valuation.[19]

Concerning price verification category (i) when determining an opinion of the export price, Article 2.20(a) specifies that a PSI entity may only reject a contract price agreed to between an exporter and an importer if it can demonstrate that its finding of an unsatisfactory price is based on a verification process that conforms with the following rules:

- The PSI entity is to base its price comparison "on the price(s) of identical or similar goods offered for export from the same country of exportation at or about the same time, under competitive and comparable conditions of sale, in conformity with customary commercial practices and net of any applicable standard discounts."
- Only prices providing a valid basis for comparison may be used, taking into account the relevant economic factors pertaining to the country of importation and a country or countries used for price comparison.
- The PSI entity may not rely upon the price of goods offered for export to different countries of importation to arbitrarily impose the lowest price upon the shipment.
- The preshipment inspection entity must provide the exporter with an opportunity to explain the price at any stage in the process (Article 2.20(b)(iv)), i.e. if, in the opinion of the PSI entity, the contract price appears to be higher than that commonly charged for identical or similar goods, under comparable circumstances of sale, the PSI entity must invite the seller to provide additional information to support the contract price. In the event that the seller is unable to provide adequate information, the PSI entity will normally request that the seller's invoice be revised to reflect the price commonly charged in the open market before it will issue a Clean Report of Findings. If the seller disagrees, a Non-Negotiable Report of Findings will be issued and the matter is referred to the authorities in the importing country.
- Appropriate allowances are to be made for the terms of the sales contract and other factors relating to the transaction, including the commercial level and quantity of the sale, delivery periods and conditions, price escalation clauses, quality specifications, special design features, special shipping or packing specifications, order

[19] This would not apply to those developing countries that have obtained WTO approval for a further extension of the five year deferment specified in Article 20.1 of the Agreement on Customs Valuation. Most user governments that have not yet implemented the Agreement on Customs Valuation use the Brussels Definition of Value (BDV) or a variation thereof including export market price. As noted above, these are few in number. The BDV is based on the normal notional open market price concept, i.e. the price which the goods would fetch on a sale in the open market between a buyer and seller independent of each other. *See* CUSTOMS VALUATION: CONVENTION, RECOMMENDATIONS, OPINIONS, NOTES AND STUDIES (World Customs Organisation) and CUSTOMS VALUATION: EXPLANATORY NOTES TO THE BRUSSELS DEFINITION OF VALUE (World Customs Organisation).

size, spot sales, seasonal influences, license or other intellectual property fees, services rendered as part of the contract if they are not customarily invoiced separately, and the contractual relationship between exporter and importer (Article 2.20 (c)).
- The verification of transportation charges must relate only to the agreed price of the mode of transport in the country of exportation as indicated in the sales contract (Article 2.20 (d)).
- Article 2.20 (e) specifies that the following may not be used for price verification purposes:
  — the selling price in the country of importation of goods produced in such country
  — the price of goods for export from a country other than the country of exportation
  — the cost of production
  — arbitrary or fictitious prices or values

Although most PSI programs were originally for foreign exchange purposes alone, the liberalization of foreign exchange controls over the years has meant that almost all programs today are either solely for customs purposes or, in some cases, a combination of foreign exchange and customs purposes.

Concerning price verification category (ii), for customs purposes, the objective is to facilitate, through provision of technical advice, the determination of customs value by the customs authorities in the importing country for the calculation of the import duties payable by the importer. This type of price verification has no influence on the contract price agreed between seller and importer. Even if the price verification does not validate the seller's commercial invoice value, this is not grounds for withholding a Clean Report of Findings, which will, regardless of the value declared by the seller, state the PSI entity's opinion for the guidance of Customs in their assessment of the customs value.

Article 2.21: Appeals Procedures

User Members are required by Article 2.21 to ensure that PSI entities establish procedures to handle grievances raised by exporters. User Members must assure that the procedures conform with guidelines which require that: (a) PSI entities designate officials who are to be available during normal business hours in each city or port in which they maintain a PSI administrative office to consider exporters' appeals or grievances; (b) exporters provide in writing to the designated official the facts concerning the specific transaction in question, the nature of the grievance, and a suggested solution; and (c) the designated official afford sympathetic consideration to exporters' grievances and render a decision as soon as possible.

In order to ensure a uniform approach amongst PSI entities, the International Federation of Inspection Agencies has included provisions relating to appeal procedures in its Code of Practice.[20] As discussed below, Article 4 of the API also requires that review by an independent body be available to exporters in the event that they are not satisfied with the results of the internal appeal.

Article 2.22: Derogation

Article 2.22 provides that user Members are to specify a minimum value below which shipments are not to be inspected, except in exceptional circumstances. The PSI entities'

[20] *See* the Appendix to this chapter.

country data sheets for exporters provide information about the floor value beneath which shipments are exempted from PSI. This varies from country to country, but is typically in the region of US$ 2,000 to 5,000.

Article 3: Obligations of Exporter Members

Article 3 of the API imposes relatively minimal requirements on exporter Members. Their laws and regulations relating to preshipment inspection activities must be applied in a non-discriminatory manner, and they must be published. Few exporter Members have promulgated laws or regulations relating to PSI. The most important examples of exporter Member regulations are those of the EU[21] and Switzerland.[22] They each require that PSI entities performing work in their territories submit notifications of their mandates/contracts and amendments thereto to the specified agencies.

In addition, Article 3 also requires that exporter Members provide user Members, upon request, technical assistance with respect to PSI. Up until now WTO technical assistance has tended to be limited to providing training courses/seminars on various aspects of the WTO Agreement including the ACV, though more intensive assistance may be provided as a result of the Doha Work Programme and the General Council decision of August 1, 2004.

Article 4: Independent Review Procedures

As noted above, in addition to the internal appeal mechanism required by Article 2.21, the API also mandates an independent review procedure to be used if the internal appeal does not resolve the problem. Article 4(a) calls for the establishment of an Independent Entity ("IE") to administer this process. In December 1995, the WTO General Council decided to create the IE as a subsidiary body of the Council for Trade in Goods in order to provide panelists who are appointed to hear cases with the privileges and immunities accorded to WTO officials and Member representatives under Article VIII:3 of the WTO Agreement.[23]

Under Article 4, an exporter or a PSI entity may refer a matter to independent review within two working days after submission of a grievance to internal appeal in accordance with Article 2.21. The IE then establishes a three-member panel. One member is selected from a list of experts nominated by an organization representing PSI entities, one from a list nominated by an organization representing exporters, and the third from a list of independent experts nominated by the IE.[24] In its December 1995 decision,[25] the WTO General Council named the International Federation of Inspection Agencies as the PSI entities' organization, and the International Chamber of Commerce as the exporters' organization. The independent expert acts as the chair of the panel and makes the necessary administrative decisions, e.g., whether a panel meeting is required and if so, where. The parties are to be given the opportunity to present their views in person or in writing. The panel is to take its decision by majority vote within eight working days of the request for

[21] EC Regulation No.3287/94 of December 22, 1994.

[22] Swiss Ordinance No. RS946.202.8; RO1995 2100 of May 17, 1995.

[23] API Article 4 was implemented in a Decision of the General Council dated December 13, 1995 and published as *Operation of the Independent Entity Established under Article 4 of the Agreement on Preshipment Inspection*, WT/L/125/Rev.1, February 9, 1996.

[24] Alternatively, the parties can choose to have the review conducted solely by an independent trade expert on the IE list. Article 4(e).

[25] *See supra* note 23.

independent review unless the time limit is extended by agreement of the parties. Costs are to be apportioned by the panel, and the panel decision is binding on the parties.

As of the date of writing, no exporters have resorted to the independent review procedures. Possible reasons for this are discussed in Part V below.

Article 5: Notification

Article 5 requires Members to provide the WTO Secretariat with copies of laws and regulations relating to PSI, as well any changes to these laws. Changes in laws and regulations relating to PSI may not be put into effect until they have been officially published.

Article 6: Review

Article 6 calls for a review by the Ministerial Conference of the operation of the API at the end of the second year after the entry into force of the WTO Agreement and every three years thereafter. Rather than conduct the review itself, the 1996 Singapore Ministerial Conference established a WTO Working Party which issued its first report in December 1997 and a final report in March 1999 (after issuing an interim report in November 1998). Copies of the 1997 and 1999 reports are available on the WTO's Website. The conclusions of these Reports are summarized in Part IV of this chapter.

Articles 7 and 8: Consultation and Dispute Settlement

These articles provide that consultations and dispute settlement are to be governed by Articles XXII and XXIII of GATT 1994, as applied by the WTO Dispute Settlement Understanding. As noted above, no case has been taken to dispute settlement under the API, and no Article XXII consultations have been held under the Agreement.

IV. Recommendations of the WTO Working Party on Preshipment Inspection

As noted above, a WTO Working Party on Preshipment Inspection was established by the Singapore Ministerial Conference in December 1996 and carried out a review of the API between January 1997 and March 1999. The Working Party published two main Reports, in December 1997 and March 1999.[26] The principal recommendations of the reports were as follows:

A. December 1997 Report

- Clarification that PSI verification for customs purposes is not designed to determine the customs value, but simply to provide technical advice to the customs authorities to assist them in determining the customs value.
  Comment: By contrast, a PSI entity providing price verification for foreign exchange purposes does provide an opinion as to whether the export price is reasonable.
- A PSI entity should respond to a dispute on price verification within ten days.
- PSI entities should establish local contact points in countries where they do not have a physical presence and should establish websites.
  Comment: All major PSI entities have established websites.

[26] Documents G/L/214 and G/L/300, available at www.wto.org

- In addition to providing hard copies, PSI entities should communicate Clean Reports of Findings to exporters and importers by electronic means.
  Comment: The reference to importers, who are not referred to at all in the API, reflects the fact that today most PSI is conducted for customs purposes, and importers need the CRF for customs clearance.
- PSI entity fee structures should not create the potential for conflicts of interest.
  Comment: This recommendation responded to a concern that some PSI entities charged an *ad valorem* fee based on the entity's opinion of the value of the goods, which obviously created an incentive to inflate the value. *Ad valorem* fees are now based on the value declared by the exporter or importer, and are therefore unaffected by the PSI entity's opinion.

B. March 1999 Report

- User Members should consider using the model contract with PSI entities provided in Annex B to the Report.
  Comment: The model contract incorporates a number of provisions of the API. In practice, however, most governments use a form of contract that incorporates the relevant provisions of the API by reference, thus avoiding repetition. Most PSI entities are members of the PSI Committee of the International Federation of Inspection Agencies ("IFIA"), which has published a Code of Practice that is modeled on the API.[27]
- Governments should consider using the principles of selectivity and risk assessment in contracting for PSI activities.
  Comment: This recommendation responded to a concern that most PSI programs required inspection of every shipment, even where identical goods were shipped on a regular basis. It was felt that PSI should follow the modern-day customs approach, as reflected in the General Annex (Chapter 6) of the 1999 revised International Convention on the Simplification and Harmonization of Customs Procedures (known as the Revised Kyoto Convention), of using sampling techniques based on risk assessment. Because the risk of misdeclaration and fraud is higher in most developing countries than in developed countries, there has been a tendency for the customs authorities in developing countries to continue with the traditional one hundred percent inspection or at least to require a systematic PSI in lieu of a customs inspection on arrival. Nevertheless, with the gradual introduction of new computerized systems, which facilitate risk profiling, there has been gradual acceptance of a selective approach to both customs examination and PSI.
- Governments that consider having their PSI programs audited should be guided by the principles found in the Annex to the Report,[28] or, if alternative criteria are used, by the API principles such as non-discrimination and national treatment.
  Comment: This recommendation responded to a relatively new development—the appointment by some user governments of private auditors to audit the work of the PSI entities. Since the API does not envision auditing of PSI entities,

[27] *See* the Appendix to this chapter. IFIA Members performing PSI activities are required to comply with the Code.

[28] Under these principles the auditing process: (1) should not lead to duplication of PSI work (2) should always be applied consistently with GATT and WTO principles and Agreements (3) should be undertaken by entities that satisfied reliable auditing credentials; and (4) should be undertaken under conditions of independence, confidentiality and integrity.

there was concern that the private auditors do not duplicate the work of the PSI entities (for example, by contacting exporters to request information) and that they comply with the provisions of the API.

- Future monitoring of the API should be carried out by the WTO Committee on Customs Valuation, since most PSI programs are now for customs purposes.

There has been no formal follow-up to these recommendations, but this could change after the next triennial review.[29]

V. Assessment of the API

PSI has generally proved to be a highly effective interim measure to assist developing countries and countries in transition in dealing with capital flight and the evasion of import duties, while at the same time benefiting exporters and importers by speeding up the clearance of goods through customs and reducing the cost of such clearance. PSI has received support from most importers and local manufacturers, since it has helped to create a more level playing field and has provided protection from unfair (undervalued or misclassified) imports. As one might expect, however, PSI has received strong opposition from those parties that wish to evade the rules.

The API was designed largely to address the concerns of exporters who had been complaining about PSI activities. The fact that more than nine years after the API came into force, the WTO Independent Entity still has not received any disputes from exporters suggests that the API has been effective in improving the PSI process and addressing many of the concerns of exporters.[30] The common set of transparent rules and the availability of an internal review process have undoubtedly helped in this regard.

Another reason for the apparent lack of disagreement concerning the operation of the API is the fact that with the liberalization of foreign exchange regulations in recent years, there are now only a few PSI programs requiring price verification for foreign exchange purposes. As has been explained, most PSI programs were originally for foreign exchange reasons. The fact that the PSI entity could question the exporter's contract price was a major cause of friction between exporters and PSI entities, since it sometimes resulted in the exporter having to reduce the contract price in the event that it could not provide sufficient information to support the original price. Today, most PSI programs are for customs purposes and the PSI entity does not interfere with the contract price. Instead it simply provides an opinion to the customs authorities which serves as technical advice to facilitate the determination of the customs value on the basis of which the importer pays import duties. The final responsibility for the determination of the customs value rests with the authorities. *WTO Ministerial Decision Regarding Cases where Customs Administrations Have Reasons to Doubt the Truth or Accuracy of the Declared Value*, in THE LEGAL TEXTS: THE RESULTS OF THE URUGUAY ROUND OF MULTILATERAL TRADE NEGOTIATIONS 398 (1999). Since it is the importer rather than the exporter that may be affected by the price verification of the PSI entity, friction between exporters and PSI entities has been reduced.

[29] As of August, 2004, the second triennial review had not taken place.

[30] However, it is possible that exporters have been reluctant to utilize the Independent Review process because of its cost. Both the exporter and the PSI entity are required to submit to the Independent Entity an advance deposit of 17,500 Swiss francs, although as explained above, ultimate liability for costs is usually based on the merits. In addition, exporters may be reluctant to challenge PSI entities with which they will have to conduct business in the future.

PSI is regarded as an interim measure which will be phased out when the user government's objectives have been achieved.[31] Perhaps what was not foreseen was the difficulties currently being encountered by some developing and transition economy countries in implementing the WTO Agreement on Customs Valuation. Originally, the view had been expressed, in some quarters, that once countries adopted the WTO Agreement on Customs Valuation there would be no role for PSI to play in respect of price verification because, in general, customs authorities should accept the price paid or payable (the "transaction value") based on the importer's declaration. Although this is generally true for developed countries where, in most cases, Customs can rely on the truthfulness of the importers' Customs Declarations, this is frequently not the case in many developing and transition economy countries where import duties and taxes tend to be much higher and often provide an incentive for importers to misdeclare and submit fraudulent documents. This has important financial implications in those countries where a significant part of government revenues are derived from import duties and taxes. It is often difficult for a Customs administration in the country of importation to obtain information which provides a basis for them to question the importer's Customs Declaration. PSI has proven to be a very useful tool by verifying, in the countries of supply, the information declared by importers and thereby identifying those transactions where the authorities may have reason to doubt the truth and accuracy of the declaration in line with the WTO Ministerial Decision[32]. In essence, PSI, through risk profiling, is able to assist customs authorities to quickly identify the compliant transactions (which can receive green channel treatment) and to focus on the minority of transactions where there may be reasons to doubt the importer's declaration and are worthy of further examination. Hence PSI can assist Customs to enhance revenue collections whilst at the same time facilitating trade for compliant importers.

Finally, it will be recalled that the term "PSI" is used to cover any one or all of the activities relating to verification of quality, quantity, price, and customs classification. It is not necessary for all these activities to be performed in a PSI service—they can be selective based on risk profiling and can be limited to sensitive or problematic imports only. The current trend is for PSI companies to provide modular services which address a client government's specific requirements and facilitate trade.

[31] UN/CEFACT *Trade Facilitation Recommendation No. 27 on Preshipment Inspection* (www.uncefact.org).

[32] The importer may appeal against the customs decision of customs value based on local appeal procedures as foreseen in ACV Art. 11.

APPENDIX

SELECTED PROVISIONS OF INTERNATIONAL FEDERATION OF INSPECTION AGENCIES CODE OF PRACTICE

Provisions Dealing with Protection of Confidential Business Information

Staff Non-Disclosure Agreement (Section_2.10.1)

All staff employed by IFIA PSI Members shall be required, as a condition of employment, to sign a Non-Disclosure Agreement prohibiting the disclosure of any confidential business information, obtained during the course of employment, to other parties. Potential employees shall be notified of this requirement in the job offer and shall be required to sign the Agreement by the first day of employment.

Office Security: (2.10.2)

IFIA PSI Members shall implement adequate security measures in their offices containing confidential business information to ensure that (i) access is restricted to authorized personnel only (ii) documents/data are stored in designated secure areas and disposed of by shredding, disintegration or incineration under supervision of authorized personnel.

Specific Assurances: (2.10.3)

IFIA PSI Members shall be committed to providing, upon request, specific assurances to the trade concerning the protection of their confidential business information and to enter into specific security agreements where required.

Provisions Relating to Appeal Procedures

Complaints: (2.21.1)

(i) In the first instance, exporters with any complaints concerning preshipment inspection activities shall be requested to contact the appropriate Department Manager of the IFIA PSI Member giving details of the case.
(ii) the IFIA PSI Member shall undertake to investigate the complaint expeditiously.
(iii) if the exporter is not satisfied with the response from the IFIA PSI Member, the exporter may proceed to an Appeal in accordance with the procedures of 2.21.2 below.

Appeals: (2.21.2)

(i) Exporters who have grievances concerning preshipment inspection activities, which have not been resolved by discussion with the appropriate department manager of the IFIA PSI Member, under the complaints procedure of

Article 2.21.1 above, may appeal to the IFIA PSI Member's senior management by completing and submitting a "Preshipment Inspection Internal Appeal Form" giving details of the case. This form shall be issued by the IFIA PSI Member based on Annex A, attached hereto, which also takes into consideration the requirements of the WTO Agreement on Preshipment Inspection. The exporter shall send the completed form to the IFIA PSI Member's Senior Manager(s) whose name(s) shall be available upon request from the IFIA PSI Member.

(ii) The IFIA PSI Members designated Senior Manager shall undertake to investigate the dispute and respond to the exporter in writing, normally within two working days of receipt of a fully completed "Preshipment Inspection Appeal Form", by either (a) giving the result of the Appeal, with detailed explanations, or (b) advising that further investigation is required and that the result will follow as soon as possible but not later than within 10 days of receipt of the Appeal. For disputes on price verification the Result of the Appeal should set forth the basis of the IFIA PSI Member's opinion by reference to the specific applicable elements of the price verification criteria.

CHAPTER 14

THE AGREEMENT ON IMPORT LICENSING PROCEDURES

I. Introduction

With only eight articles and occupying a mere six pages of text, the Agreement on Import Licensing Procedures ("AILP" or "Agreement") is one of the shortest and least controversial of the Uruguay Round Agreements.[1] Only one WTO panel decision has interpreted the Agreement, and even there the AILP was not the central focus of the dispute.[2] The AILP differs little from the identically-named Tokyo Round agreement (often referred to as the Import Licensing Code), although there were a few changes designed to tighten up the procedures to be followed by Members in operating import licensing programs. Most significantly, of course, the Code only applied to those GATT contracting parties who chose to sign it. The AILP, as one of the multilateral Uruguay Round agreements, is binding on all members of the WTO.

There are two basic types of import licensing. *Automatic licensing* is usually aimed at collecting statistical data or enforcing regulations, such as those relating to the importation of dangerous items (e.g., explosives or firearms). Provided that the importer is appropriately qualified (for example, in the case of imports of firearms is registered with the relevant authorities in the importing country), issuance of the license is automatic. *Non-automatic licensing*, by contrast, is normally used as a means of allocating import quotas among importers. Today non-automatic licenses are mostly used in connection with the tariff-rate quotas ("TRQs") that have replaced straight numerical quotas on imports of many agricultural products.[3] While this type of licensing system is obviously necessary to effectively enforce import restrictions, it can clearly lend itself to abuse and can create significant obstacles to trade. Some of the concerns were described as follows by John Jackson:

> One of the serious problems of a quota system is the method of granting licenses. Should they be granted on a first-come, first-served basis? Suppose the line at the door of the licensing agency on opening day is too long to accommodate all within the quota? Should equitable allocations between exporting countries be made? Should licenses be auctioned off?. . . . Can licensing policy contribute to national plans when such plans exist? Is there danger of license officials accepting bribes or extending licenses for political considerations?[4]

Part II of this chapter discusses the treatment of import licensing under the GATT 1947. Part III describes the Tokyo Round Import Licensing Code. The brief negotiating history of the Uruguay Round Agreement is described in Part IV, and Part V provides a section-by-section analysis of the Agreement. Finally, Part VI discusses some of the suggestions for reform that have been made in the Doha Development Agenda discussions.

[1] It is important to note that, as explained in Part V of this chapter, the Agreement only applies to the *procedures* governing import licensing, and not to the underlying rules governing license allocation.

[2] Report of the WTO Panel, *European Communities—Measures Affecting the Importation of Certain Poultry Products*, WT/DS69/R (1998) ("*EC—Poultry*"), *upheld* in Report of the Appellate Body, *European Communities—Measures Affecting the Importation of Certain Poultry Products,* WT/DS69/AB/R (1998) ("*EC—Poultry (AB)*"). However, nearly fifty requests for consultations have included allegations of violations of the AILP. *See* WTO Website, www.wto.org.

[3] *See* Chapter 6 of this book. The Appellate Body has ruled that import licensing procedures for TRQs are within the scope of the AILP. II. GATT Article XIII

Automatic licensing systems were held by a GATT panel not to constitute quantitative restrictions on imports within the meaning of Article XI of the GATT 1947.[5] Non-automatic licensing systems, by contrast, do constitute such restrictions,[6] and are therefore governed by Article XIII of the GATT, which sets forth rules for the allocation of quantitative restrictions designed to ensure that such restrictions are applied on a non-discriminatory basis. Most of these rules are substantive rather than procedural, for example the requirement in Article XIII: 2 that the distribution of trade subject to import restrictions should approach as closely as possible the shares which the contracting parties might have been expected to obtain in the absence of restrictions. However, Article XIII:3 does impose certain transparency requirements applicable to the quantitative restrictions and the import licensing systems used to enforce them. Thus:

- Upon request of any contracting party having an interest in trade in the product concerned, the contracting party applying the restrictions must provide all relevant information concerning the administration of the restrictions, the import licenses granted over a recent period, and the distribution of the licenses among supplying countries
- In the case of quotas, the contracting party is to give public notice of the total quantity or value of the product that may be imported during a specified future period and of any change in such quantity or value[7]
- In the case of quotas allocated among supplying countries, the contracting party applying the restriction is to promptly inform all other contracting parties having an interest in supplying the product in question of the shares in the quota currently allocated, by quantity or value, to the various supplying countries, and to give public notice of that information.

The AILP contains similar, though more detailed, requirements.

In 1950 at the Torquay Round of multilateral negotiations the Contracting Parties adopted a Working Party Report on a proposed Code of Standard Practices for the Administration of Import and Export Restrictions and Exchange Controls, that was designed to bring greater discipline to import licensing systems.[8] Among the recommendations of the Report—which were to be "regarded as a code for the guidance of the

[5] *See* Report of the GATT Panel (adopted), *European Community Programme of Minimum Import Prices, Licences and Surety Deposits for Certain Processed Fruits and Vegetables*, BISD 25th Supp. 68 (1978), ¶ 4.1.

[6] *See, e.g.,* Report of the GATT Panel (adopted), *European Economic Community—Restrictions on Imports of Apples—Complaint by the United States*, BISD 36th Supp. 135, ¶ 5.2 (1989). In that case the EC made no attempt to argue that the licensing system at issue was not an import restriction within the meaning of Article XI, but instead claimed that it fell within one of the Article XI exceptions. *See also,* Report of the GATT Panel (adopted), *Thailand—Restrictions on Importation of and Internal Taxes on Cigarettes*, BISD 37th Supp. 200, ¶ 67 (1990); Report of the GATT Panel (adopted), *Japanese Measures on Imports of Leather*, BISD 31st Supp. 94 , at ¶ 44 (1984).

[7] A GATT panel held that the allocation of back-dated quotas, i.e., "quotas declared to have been already filled at the time of their announcement", violated this requirement. Report of the GATT Panel (adopted), *EEC—Restrictions on Imports of Dessert Apples*, BISD 36th Supp. 93, ¶ 12.26 (1989).

[8] GATT CP5/30 Rev. 1, adopted November 30, 1950, ¶¶ 94–95 ; cited at WTO, ANALYTICAL INDEX: GUIDE TO GATT LAW AND PRACTICE 405-06 (1995).

Contracting Parties and not as additional obligations imposed upon them"—were the following:

- The grant of an import license should imply that the necessary foreign exchange would be available
- Applications for import and export licenses and exchange permits should be acted upon within a reasonably short period
- A license or permit should be valid for a sufficient period to allow for the production or delivery of the goods
- The period set for applications for quotas should be sufficiently long to allow for exchange of communications with likely foreign suppliers and the conclusion of purchase contracts
- Customs authorities should be given discretion to grant reasonable tolerance for variations in quantity or value of individual shipments.

These concepts are also reflected in the AILP.

III. The Tokyo Round Code

One of the optional agreements, or Codes, negotiated during the Tokyo Round was the Agreement on Import Licensing Procedures ("Code"). Originally there were nineteen signatories—mostly developed countries—and by 1994, 27 countries had accepted the Code.[9] The purpose of the Agreement was:

> to ensure that the administrative procedures used to implement import licensing regimes are in conformity with the relevant provisions of the GATT including its annexes and protocols, as interpreted by this Agreement, with a view to preventing trade distortions that may arise from an inappropriate operation of those procedures, taking into account the economic development purposes and financial and trade needs of developing countries.[10]

Most of the provisions in the Code were repeated in the AILP, and are discussed in Part V of this Chapter.

IV. The Uruguay Round Negotiations

The United States, which was concerned about the proliferation of import licensing systems around the world, and the obstacles to trade that they were creating, took the lead in calling for reform of the Code during the Uruguay Round negotiations. In September 1989 it and Hong Kong submitted a major proposal calling for substantial revision of the AILP.[11] The principal aims were to improve predictability and transparency, to impose firm deadlines on the publication of information on new or revised licensing requirements and the time for processing license applications, and to limit the number of agencies to whom applications had to be made. By and large these proposals were adopted.

[9] ANALYTIC INDEX OF THE GATT (WTO 1995), vol. 2, App. VI.

[10] Code, Art. 1.2

[11] *Proposal by the United States and Hong Kong with Respect to the Improvement of the Agreement on Import Licensing Procedures,* GATT Doc. No. MTN.GNG/NG8/W/53 (Sept. 27, 1989).

V. The Agreement on Import Licensing Procedures

As already explained, the AILP is based largely on the Tokyo Round Code, with a number of changes designed to impose tighter restrictions on the use of import licensing systems. In particular, the AILP imposes firm deadlines on the time for publication of new or revised licensing regulations and for processing license applications. It also places a limit on the number of government agencies that a license applicant can be required to approach.

It is important to understand that, as explained by the Appellate Body in *EC—Bananas,*[12] the Agreement only applies to import licensing procedures and their administration, and not to the underlying rules governing licensing allocation. Thus, if the rules themselves are discriminatory or impose restrictions on imports that are inconsistent with GATT Article XI, they cannot be attacked under the AILP, but must instead be challenged under the appropriate provision(s) of the GATT 1994. As the Appellate Body observed in *EC—Bananas*, the AILP does not preclude "the imposition of different import licensing systems on like products when imported from different Members."[13] In that case the Appellate Body upheld the Panel's ruling that the import licensing system in question was inconsistent with GATT Article 1. Following this ruling, a WTO panel held that a challenge to the fact that license entitlement was based on export performance was a challenge to the rules themselves, rather than to the procedures, and therefore could not be considered under the AILP.[14]

The AILP begins by setting forth general principles applicable to all import licensing systems. It then specifies in turn rules that apply to automatic licensing systems and to non-automatic systems. The remainder of the Agreement consists of administrative provisions dealing with such matters as the establishment of a Committee on Import Licensing, notification requirements and consultation and dispute settlement.

A. General Principles

Article 1.1 of the AILP defines import licensing as

> administrative procedures[15] used for the operation of import licensing regimes requiring the submission of an application or other documentation (other than that required for customs purposes) to the relevant administrative body as a prior condition for importation. . . .

Article 1.2 and 1.3 lay out two key general principles that must be followed in all import licensing systems, automatic or non-automatic. *First,* the administrative procedures must conform to the relevant provisions of GATT 1994 "with a view to preventing trade distortions that may arose from an inappropriate operation of those procedures".[16] *Second,*

[12] *EC—Bananas, supra* note 3, at ¶ 197.

[13] *Id.,* at ¶ 198.

[14] *EC—Poultry, supra* note 2, at ¶ 254. *See also, e.g.*, Report of the WTO Panel, *India—Quantitative Restrictions on Imports of Agricultural, Textile and Industrial Products*, WT/DS90/R (1999) at ¶ 5.131 (import licensing system violates GATT Article XI:1); Report of the WTO Panel, *Korea—Measures Affecting Imports of Fresh, Chilled, and Frozen Beef*, WT/DS161/R, WT/DS169/R (2000) at ¶ 784. In *Canada—Measures Affecting the Importation of Milk and the Exportation of Dairy Products*, WT/DS 103/R and WT/DS/113/R, the Panel having decided that restrictions imposed by Canada on access to TRQs on milk were inconsistent with GATT Article II, stated that there was no need to decide whether they also violated Article 3 of the AILP. *Id*., at ¶ 7.157. The Appellate Body did not discuss the point. WT/DS103/AB/R (1999).

[15] Those procedures referred to as 'licensing' as well as other similar administrative procedures [footnote in original].

[16] Article 1.2 specifies that the economic development purposes and financial needs of developing country Members are to be taken into account in this connection.

the rules for import licensing procedures "shall be neutral in application and administered in a fair and equitable manner." In *EC—Poultry* Brazil had challenged the EC licensing system by which the EC regulated its poultry TRQs, *inter alia* on the ground that contrary to its expectations, its percentage share of the EC poultry market had been falling since the introduction of the TRQs, which it claimed was evidence that they had caused trade distortion. The Panel rejected the claim, noting that Brazil's reference to its percentage share referred to its total exports to the EC, including over-quota shipments, which constituted the majority of its exports to the EC. Since the TRQ licenses issued to imports from Brazil had been fully utilized, and the total volume of poultry exports from Brazil to the EC had generally been increasing, the Panel said that it failed to understand the relevance of the decline in overall percentage share to a possible violation of the AILP, and rejected the claim.[17] This finding was upheld by the Appellate Body.[18]

The remainder of Article 1 sets forth various administrative procedures that must be followed with respect to all import licensing systems, automatic or non-automatic. These are designed to to make the process transparent, as well as to simplify it as much as possible, to ensure that imports are not bound up in unnecessary red tape. Under Article 1.4(a), the applicable rules, as well as information concerning procedures, are to be published in such a manner as to enable governments and traders to become acquainted with them,[19] and are to be notified to the WTO.[20] Wherever practicable, publication is to take place at least 21 days before the effective date of the requirement, but in no case later than the effective date. Application and renewal forms and procedures are to be as simple as possible (Article 1.5), and applicants are to be given at least 21 days for the submission of license applications (Article 1.6). Applicants should normally only have to apply to one administrative body, and in no case more than three (*id.*).

Article 1.7 provides that importers must not be unduly penalized for inadvertent mistakes. Applications are not to be refused for minor documentation errors, and any mistakes that are obviously not based on fraud or gross negligence may not receive greater punishment than necessary to serve as a warning (Article 1.7). Licensed imports may not be refused for minor variations in value, quantity, or weight from the amount on the license (Article 1.8).

Article 1.9 provides that foreign exchange to pay for licensed imports is to be made available to license holders on the same basis as to importers of goods not requiring licenses. Finally, Article 1.10 specifies that the security exceptions of GATT Article XXI apply, and Article 1.11 provides that Members are not required to disclose confidential information that would impede law enforcement, be contrary to the public interest, or prejudice the commercial interests of public and private enterprises.

[17] *EC—Poultry, supra* note 2, at ¶ 249.

[18] *EC—Poultry (AB)*, *supra* note 2, at ¶ 126.

[19] The publishing Member must give consideration to written comments from other Members, as well as an opportunity to discuss the comments. Article 1.4(b).

[20] Many Members have failed to make the necessary notifications. As of October 2003, 27 Members had made no notifications whatever to the WTO Committee on Import Licensing, and only 94 including the EC as one Member had notified their laws and regulations pursuant to Article 1.4(a). Committee on Import Licensing, *Report (2003) of the Committee on Import Licensing to the Council for Trade in Goods, G/L/652* (October 28, 2003), ¶¶ 5, 10. In *EC—Poultry* the Panel refused to accept the EC's explanation for non-notification that it was unclear until the Appellate Body's decision in *EC—Bananas* that the AILP applied to TRQs. *EC—Poultry, supra* note 2, ¶ 244.

B. Automatic Import Licensing

Article 2 of the AILP lays down certain rules applicable to automatic import licensing, defined as import licensing "where approval is granted in all cases" (Article 2.1). The procedures must not be administered in a way that would restrict the imports subject to automatic licensing. More specifically:

- Anyone who fulfils the legal obligations of the importing Member for importing the product in question must be equally eligible to apply for and to obtain import licenses (Article 2.2(a)(i))
- Applications for licenses must be allowed to be submitted on any working day prior to the customs clearance of the goods (Article 2.2(a)(ii))
- Applications must be approved immediately upon receipt to the extent feasible, but in no case more than ten days (Article 2.2(a)(iii))

Under Article 2.2(b), automatic import licensing may be maintained as long as the circumstances that gave rise to its introduction prevail and its underlying purpose cannot be achieved in a more appropriate way.

C. Non-Automatic Import Licensing

The rules governing non-automatic import licensing, which are set forth in Article 3 of the AILP, are a good deal more detailed that those applying to automatic licensing, because of the greater opportunities for discrimination. Non-automatic import licenses are defined as import licenses that are not automatic, as defined in Article 2.1. Anyone who fulfils the applicable legal and administrative requirements is to be equally eligible to apply for and to be considered for a license (Article 3.5(e)). Except for circumstances beyond the control of the Member, the period for processing is to be no more than thirty days when the applications are considered as they are received, and no more than sixty days where they are all considered together (Article 3.5(f)). The period of license validity must be reasonable, and not too short to preclude imports (Article 3.5(g)). Members may not prevent importation in accordance with the issued licenses, and they may not discourage the full use of quotas (Article 3.5 h)). Members are to "take account" of the desirability of issuing licenses for products in commercial quantities (Article 3.5(i)).[21]

The transparency rules set forth in Article 3 are considerably more elaborate than the general rules in Article 1. Thus, Article 3.4 requires that the following information be published:

- where the purpose of the licensing system is the administration of quotas, the overall amount of the quotas by quantity and/or value, the shares allocated to the various supplying countries, and the opening and closing dates of quotas
- The basis for granting and/or allocating licenses, where the purpose of the system is not the administration of quotas
- Information on how to make a request for exceptions or derogations from a licensing requirement, if this is permitted

[21] In *EC—Poultry* the Panel rejected Brazil's claim that the EC system infringed this provision, noting that the fact that the licenses had been filled meant that they must have been issued in "economic" quantities. *EC—Poultry, supra* note 2, at ¶ 262. The fact that the licenses had been filled also led the Panel to reject Brazil's claim that speculation in licenses had discouraged full utilization of the TRQ, in violation of Articles 3.5(h) and (j). *Id.* at ¶ 259.

In addition, under Article 3.5(a) Members must provide upon request[22] to any other Member having an interest in trade in the product in question, all relevant information concerning:

- The administration of the restrictions
- The import licenses granted over a recent period
- The distribution of licenses among supplying countries
- Where possible, import statistics with respect to the product in question.[23]

Also, any applicant who fulfilled the relevant legal requirements for a license but did not receive one must upon request be informed of the reason, and must be given the right to appeal the decision. Article 3.5(e).

When allocating licenses, Members should consider the past performance of license applicants, in particular their failure to fully utilize licenses during a recent representative period. Members must also give consideration to ensuring reasonable distribution of licenses to new importers, and in this regard special consideration is to be given to importers who are importing from developing countries, especially from least-developed countries. Article 3.5(j).

Brazil challenged the EC import licensing system in *EC—Poultry* on a number of grounds. Several of these have already been mentioned. Another was that the frequent changes in the rules and procedures made it difficult for governments and traders to become familiar with the rules, in violation of Articles 1.4, 3.3, 3.5(b), 3.5(c) and 3.5(d). The Panel said that while it sympathized with Brazil, changes in the rules *per se* did not violate the Agreement.[24] Another basis for challenge was that the EC had based the allocation of licenses on *export* performance, which Brazil claimed was in violation of Articles 1.3 and 3.5(j). The Panel said that although the export performance requirement was unusual, the issue was clearly one of the rules themselves, not the administration or application of import licensing procedures, so that Article 1.3 did not apply.[25] Also, Article 3(j) was hortatory, and did not necessarily prohibit consideration of factors other than import performance.[26]

Brazil also claimed that speculation in licenses discouraged the full utilization of the TRQ, and that this violated Articles 3.5 (h) and (j). The Panel dismissed this claim also, noting that any speculation in licenses had not prevented full utilization of quotas.[27] The Appellate Body upheld all of the Panel's findings with respect to the AILP.[28]

D. Other Provisions

Article 4 of the AILP establishes a Committee on Import Licensing, consisting of representatives from each Member. The Committee meets periodically and issues annual

[22] In *EC—Poultry* Brazil claimed that the EC had violated this requirement by failing to provide the specified information. The Panel rejected the claim, observing that Brazil had not demonstrated that the EC had ever failed to provide information on request, and that this provision did not require Members to provide the information voluntarily, but only on request. *EC—Poultry, supra* note 2, at ¶ 265.

[23] Article 3.5(a)(iv) states that developing country Members are not expected to take additional administrative or financial burdens in this respect.

[24] *EC—Poultry, supra* note 2, at ¶ 246.

reports, which can be viewed on the WTO website, www.wto.org. Under Article 5 the Committee is to be notified of the institution of, and changes in, import licensing procedures. Article 5.2 spells out the detailed information that is required. The Committee is required by Article 7 of the AILP to review the implementation and operation of the Agreement at least every two years.

Under Article 6 consultations and settlement of disputes arising under the Agreement are to be governed by GATT Articles XXII and XXIII and the Dispute Settlement Understanding.

VI. Recommendations for Change

Reform of the AILP is not a major item on the Doha Development Agenda. However, as already explained, non-automatic import licenses are frequently used to administer agricultural TRQs, and concern has been raised in the WTO Committee on Agriculture about the issue of unfilled quotas.[29] Some Members have suggested that this problem is caused by the systems used to administer the licenses, and have recommended various solutions, such as carrying over unused portions to subsequent periods or preventing imports at out-of-quota rates until the quotas have been filled. Others believe that unfilled quotas result from supply and demand conditions, and should not be viewed as a problem. The United States has recommended that licensees be required to surrender unused licenses if they cannot arrange shipments within specified time periods so as to allow commercially viable opportunities for other importers.[30] The United States has also proposed greater transparency, for example requiring Members to publish quota allocation dates, license validity periods, standard communication mediums, and procedures for changes in the quota system.

The EC has proposed that import licensing systems be streamlined and simplified through progressive automation and application of modern customs controls.[31] The EC recommends that the data requirements be the minimum necessary, and that license applicants should be required to apply to only one agency, which would be responsible for any necessary coordination with other agencies.

[29] *See* note by the Secretariat, *Summary of Meeting held on 14 November 2000*, G/AG/R/25, at 14–17.

[30] *Proposal for Tariff Rate Quota Reform, Submission from the United States,* G/AG/NG/W/58 (November 14, 2000). The proposal also recommends substantive changes with respect to TRQs that would not involve changes to the AILP, since, as explained above, the Agreement has been held to apply only to the administration of import licensing systems, and not to the rules themselves. These recommendations include:

- Ensuring that imports are not limited to unprocessed bulk commodities to the disadvantage of processed products
- Preventing end-use specifications that limit imports
- Preventing mixing requirements or other domestic purchase criteria
- Preventing restrictive re-export requirements

I. Introduction

In this chapter we will analyze the WTO Agreement on Rules of Origin ("Origin Agreement" or "ARO") and the ongoing negotiations towards harmonization of non-preferential origin rules.[1] The fact that the negotiations are still dragging on more than nine years from the date of entry of the WTO and more than six years after the negotiations were supposed to have been concluded, testifies to the complexity of this technical area of international trade law.

However, there have not been many WTO disputes invoking the Agreement since the inception of the WTO.[2] Thus, one may wonder whether harmonization is in fact considered a priority by the main players.

In the first section of this chapter, we will discuss the basic concepts underlying the use of origin rules. In the second section, we will analyze the Agreement itself. In the third section, we will describe the harmonization process and its likely outcome. The last section sets out some concluding remarks.

A. Rationale for Rules of Origin

Rules of origin exist because of discriminatory restrictions on international trade. In a completely open world economy, there would be little need for rules of origin because for most purposes it would be immaterial where goods and services originate. Even in a less than open world economy, the importance of rules of origin would be limited as long as trade-restrictive measures were applied across-the-board, *i.e.* on a non-discriminatory basis.

Despite the globalization process, rules of origin remain relevant for a number of reasons:

(i) the increase in the use of contingent trade measures (i.e., antidumping and countervailing duties and safeguards);[3]
(ii) quotas on imports of textiles and clothing as well as tariff-rate quotas on agricultural imports.
(iii) preferential tariff arrangements under various forms of free trade agreements and customs unions;
(iv) the Generalized System of Preferences ("GSP") and other positive discrimination regimes extended by developed to developing countries; and
(v) ancillary reasons, such as government procurement, country-of-origin marking, and compilation of trade statistics.

Few will contest that origin rules are an indispensable device to support the effectiveness of discriminatory trade régimes.[4] However, during the 1990s, rules of origin sometimes

[1] As explained below, the ARO does not call for harmonization of preferential rules of origin, although it does lay down some general rules for their use.

[2] An Indian challenge to U.S. rules of origin for textiles and apparel products was rejected by a panel. Report of the WTO Panel (not appealed), *United States—Rules of Origin for Textiles and Apparel Products*, WT/DS243/R(2003) (discussed in Part II.B *infra*). A complaint by the EC about the U.S. rules of origin concerning certain textile products was bilaterally resolved.

[3] *See* Chapters 11 and 16 of this book. *See also, e.g., Impact of Anti-Dumping and Countervailing Duty Actions*, Background Note by the UNCTAD Secretariat (TD/B/COM.1/EM.14/2 24 October 2000); *Compare* Jorge Miranda, Raul Torres, and Miguel Ruiz, *The International Use of Anti-Dumping—1987–1997*, 32(5) J. World Trade 5 (1998).

[4] Although opinions might differ as to the necessity and/or desirability of discriminatory trade régimes.

took on a life of their own and developed into trade-restrictive measures in themselves where such restrictions did not necessarily, let alone automatically, follow from the application of other trade law instruments. Thus, for example, jurisdictions such as the United States and the EC used rules of origin as the legal justification for imposing anti-dumping duties on third country exports produced with components from the country with respect to which anti-dumping duties had been imposed following findings that the third country products had not acquired third country origin. Since no investigation had been conducted to determine whether the third country exports had been dumped and thereby caused injury, rules of origin were effectively used as a shortcut for imposing anti-dumping duties on exports from a third country, although the international legal basis for doing so was ambiguous, to say the least.[5]

One of these authors has argued previously[6] that rules of origin not only have the potential of developing into trade policy instruments, but will in fact by definition impact on international trade flows. This seems to be seldom accepted by importing country administrators who tend to claim that the formulation of rules of origin and the application of such rules to concrete cases are technical exercises in which policy considerations play no role. This makes the administrators an easy target for domestic special interests.[7]

Most countries distinguish between *preferential* and *non-preferential* rules of origin. *Preferential* rules of origin are used to determine whether certain products originate in a preference-receiving country—either a fellow member of a free trade area, or a developing country entitled to benefits under the Generalized System of Preferences or some other preferential program—and hence can qualify for preferential treatment. *Non-preferential* rules of origin are used for all other purposes, including MFN treatment, anti-dumping and countervailing duties, safeguard measures (including those under the Agreement on Textiles and Clothing), origin markings, discriminatory quantitative restrictions or tariff-rate quotas, trade statistics and government procurement. Because the Agreement of Rules of Origin deals almost exclusively with non-preferential rules of origin, with merely an annexed declaration on preferential rules, this chapter focuses mostly on non-preferential rules.

In fact, a variety of jurisdictions, including the European Communities, the United States, Canada and Australia do not merely have one set of preferential and one set of non-preferential origin rules, but have *different* sets of preferential origin rules.[8] Clearly, this proliferation of different rules of origin is a major reason for the widely perceived complexity of the subject.

B. Basic Concepts

In order to determine the origin of a product, the first question is whether the product is *wholly obtained or produced* in one country or whether two or more countries have been

[5] Edwin Vermulst and Paul Waer, *Anti-Diversion Rules in Anti-dumping Proceedings: Interface or Short-Circuit for the Management of Interdependence?,* 11 MICH. J. INT. LAW 201 (1990).

[6] Edwin Vermulst and Paul Waer, *European Community Rules of Origin as Commercial Policy Instruments?,* 24(3) J. WORLD TRADE 55 (1990).

[7] *See* RULES OF ORIGIN IN INTERNATIONAL TRADE: A COMPARATIVE STUDY (. Edwin Vermulst, Paul Waer, and Jacques Bourgeois eds. 1993).

[8] Thus, for example, the U.S. GSP program and the U.S./Israel Free Trade Agreement use a simple value-added test. The U.S./Jordan Free Trade Agreement also uses a value-added test, but with special rules for textiles. The North American Free Trade Agreement ("NAFTA"), on the other hand has separate rules of origin for virtually every tariff classification. It has been estimated that NAFTA has more than eleven thousand individual rules of origin, using seven different basic approaches, and occupying 148 pages of text. *See* RAJ BHALA AND KEVIN KENNEDY, WORLD TRADE LAW 364, 368 (1999).

involved in the manufacture of the product. If a product is wholly obtained or produced in one country, it clearly has the origin of that country, and origin in this context has not proven controversial.

Frequent problems, however, arise if the origin must be determined of a product in the manufacture of which two or more countries have been involved. In such cases, the general concept is that the product will have the origin of the country where the *last substantial transformation* took place. There are three main methods that are utilized to ascertain whether substantial transformation occurred:

- an *ad valorem* percentage rule, often called the percentage criterion test;
- a change in tariff heading ("CTH") test; and
- a technical test.

The term *process criterion* is sometimes used to describe the latter two methods.[9]

1. The Percentage Criterion Test

This test occurs in three forms. In its first form, as the *import content* method, it imposes a ceiling on the use of imported parts and materials through a maximum allowable percentage of such parts and materials. In its second form, as the *domestic content* test, it requires a minimum percentage of local value-added in the last country in which the product was processed. The third form, the *value-of-parts* test, examines whether the originating parts reach a certain percentage of the total value of parts. This test appears rather unfair as it focuses only on parts values and does not take into account assembly and overhead costs in the local production operation. The value-of-parts test is used in the EC in the product-specific origin regulations for radio and television receivers and tape recorders as a subsidiary test where the primary test of 45 percent value-added is not met.

The percentage criterion test directly[10] or indirectly[11] specifies that a certain percentage of value-added in the last production process is necessary to confer originating status; if such a percentage cannot be reached, the last production process will not give origin and origin will be given to another country in the case of non-preferential rules or to no country at all where preferential agreements are concerned.[12]

The percentage criterion, in particular the domestic content variant, requires an analysis of production costs. Production costs can be broken down in cost of manufacture and overhead costs. The cost of manufacture, in turn, can be divided into costs of materials, direct labor costs and manufacturing overhead.

(a) Cost of Materials

This is the purchase price of parts, components, and the like. As explained above, the percentage criterion calculates either the maximum allowable import content or the minimum required domestic content. In either case, the question arises at what level imported, non-originating parts ought to be valued, i.e. in ascending order: ex works, FOB, CIF or into-factory (delivered). The answer to this question is important because each subsequent level leads to a higher price and thereby makes satisfaction of the import/domestic content

[9] *See Digest of Rules of Origin*, UNCTAD/TAP/133/Rev.6, at 6 (1990).

[10] Under the 'pure' domestic content test.

[11] Under the import content test.

[12] If, for example, the last production process is performed in a GSP beneficiary country, but not enough value is added, preferential treatment will be denied without a positive determination about the 'real' origin of the merchandise.

test more difficult. It may be noted that Recommended Practice 5 of the Kyoto Convention's Annex D.1[13] endorses use of an *ex works* price.[14]

Countries generally value non-originating materials at their FOB[15] or CIF[16] value. A CIF valuation base means that all costs incurred in sending the parts from the factory to the importing country border would be treated as non-originating costs and that all post-border costs, such as inland freight in the importing country, customs duties, indirect taxes, etc. would be treated as originating costs. A FOB valuation base would also treat the cost of ocean freight and insurance as originating cost items. Originating materials are normally valued on an into-factory basis.

(b) Direct Labor Costs

These comprise all the costs of the direct labor which can be identified or associated with production of the merchandise, such as basic pay, overtime pay, incentive pay, bonuses, shift differentials, employee benefits, such as housing, holiday pay, retirement, social security programs, and any other employee-related expenses.

(c) Manufacturing Overhead

This includes all indirect expenses incident to and necessary for the production of the product, such as indirect labor, supervision, depreciation, production royalties, rent, power, maintenance and repairs, and product-related R&D.[17] Manufacturing overheads would normally also include financing costs related to the production process (as opposed to financing costs related to the sales process)[18] which typically covers the financing costs of such items as raw materials, work in progress, the factory and the production line.

(d) General Overhead Expenses

These are often called selling, general and administrative expenses or SGA. Such SGA expenses cover all other expenses incurred (typically those related to the management and sales functions) for example, salaries of executives and salesmen, telecommunication expenses, outward freight and insurance, and legal and accounting fees. SGA also cover non-operating expenses (income) such as financing costs related to the sales process and exchange loss (gain).

Addition of all these cost items gives the fully allocated cost; the fully allocated cost plus the profit gives the sales price. The import content can easily be calculated by totaling the FOB or CIF cost of all non-originating materials. The domestic content can be calculated either by deducting the cost of non-originating materials from the sales

[13] The International Convention on the Simplification and Harmonization of Customs Procedures (the Kyoto Convention) entered into force in 1974. Annex D.1 (rules of origin), Annex D.2. (documentary evidence of origin) and Annex D.3. (control of documentary evidence of origin) provide for standard provisions, recommended practices and commentary. See footnote 57 for the revised Kyoto Convention.

[14] Recommended Practice 5 provides that for calculation of domestic content percentages, imported materials shall be valued at the dutiable value at importation (normally the CIF price) and produced goods shall be valued at the ex works price or the price at exportation. Although Annex D.1 does not express a preference for the ex works price over the price at exportation, there would appear to be a certain consensus that the ex works price is more appropriate, see, *e.g.*, Customs Cooperation Council, Permanent Technical Committee, *Rules of Origin of Goods*, Secretariat Note, 29.215E T7-3231, at 20 (2 November 1982).

[15] For example, the United States.

[16] For example, the EC, Australia and Canada.

[17] Non-product-related R&D will generally be included in SGA as general expenses.

[18] Financing costs related to the sales process would normally be reported as an SGA expense.

price[19] or by adding up all items of local value-added.[20] These two calculation methods would in theory lead to the same result. In practice, however, this is not always the case.

The sales price as such is seldom used as the denominator in percentage criterion tests. Most jurisdictions rather rely on other denominators, such as an ex-works price or an FOB price, which require certain adjustments to be made to the sales price.

It will be clear from this discussion that there are many variations between jurisdictions with respect to both the constituent elements—numerator and denominator—of the percentage criterion. Also, the allowable import/required domestic percentages are often different, even within the same jurisdiction where they appear to depend on the objective of the law that they are designed to support. The various preferential and non-preferential rules of origin with respect to color televisions in the EC are a good example of this.

Apart from this lack of uniformity in applying the percentage criterion among jurisdictions, a disadvantage of the percentage criterion is that it penalizes low cost and/or efficient production operations where labor and/or assembly costs will be lower than in high cost/inefficient facilities. Also, domestic content and import content calculations may change as a result of fluctuations in world market prices for raw materials[21] and in exchange rates, creating uncertainty as to whether particular products meet the rules. Finally, domestic content calculations provide a certain amount of discretion to administrators and technically would require detailed on-the-spot visits to check the accuracy of data provided. In general, the import content test seems preferable over the domestic content test because it is easier to apply and leaves the importing country administrators with less discretion. This is because it is simply based on the prices paid by the producer, which can easily be checked through invoices, thereby obviating the need for complete cost of production calculations and allocations.

2. The Change in Tariff Heading Test

The CTH test confers origin if the manufacture results in a product which falls under a Harmonized System ("HS")[22] number that differs at a specified level—usually the four digit level—from the numbers under which the non-originating parts/materials fall. The CTH test is the primary test for the EC's preferential origin rules and for NAFTA. Japanese non-preferential rules of origin by and large also use the CTH test.

The advantages of the CTH test are its conceptual simplicity, its ease of application and its lack of discretion. Furthermore, the adoption by almost all countries[23] of the HS system means that a similarly-applied CTH test[24] will normally lead to uniform determinations of origin in such countries. It is therefore convenient that it was decided early on in the Uruguay Round negotiations, at U.S. insistence,[25] that any harmonization of

[19] This is done, for example, under the EC and Canadian GSP rules and also under other EC preferential arrangements.

[20] This is done, for example, under the U.S. and Australian GSP rules.

[21] This is especially the case with respect to primary commodities whose prices tend to fluctuate widely almost as a matter of course.

[22] For a description of the Harmonized System, *see* Chapter 36 of this book. *See also* Part III.B.5(a) *infra.*

[23] As of May 2004, the HS Code had 116 signatories. At least 73 other countries use the HS on a *de facto* basis.

[24] This is presently not the case. For example, under the NAFTA, the change in tariff heading required for a change in origin may vary from a two-digit chapter level change to an eight-digit statistical level change.

[25] This is perhaps surprising as the United States 'discovered' the existence of the CTH test fairly late and first adopted it only in the 1989 U.S.-Canada Free Trade Agreement.

non-preferential rules of origin delegated to the Customs Cooperation Council ("CCC")[26] will be principally based on the HS CTH test.

However, the HS system is primarily designed as a dual-purpose commodity classification and statistics system and may therefore not always be an appropriate basis for conferring originating status. This has been realized by importing country administrators early on and has led to two lists of exceptions: (i) a list of products with respect to which a change in tariff heading is *not* sufficient to confer origin, which additionally requires a domestic content or import content requirement and/or a requirement that specific manufacturing operations are carried out or materials sourced in the country in which the last production process takes place and (ii) a list of exceptions with processing operations sufficient to confer origin even if they do *not* lead to a change in tariff heading. Such lists can be found, for example, in the EC GSP.

Another drawback of the CTH test is that it requires in-depth knowledge of the HS, with respect to both the finished products and the raw materials, not only on the part of exporting country administrators (who are not necessarily customs experts) but also on the part of producers/exporters. This point is often made in UNCTAD discussions about the functioning of the GSP.

3. The Technical Test

This test prescribes certain production or sourcing processes that may (*positive* test) or may not (*negative* test) confer originating status. The technical test is used in the United States for certain rules in the non-preferential and preferential area, in the latter case generally in combination with a domestic content test, and by the EC in the majority of non-preferential product specific origin regulations.

The advantage of the technical test is that of the three tests, it is best equipped to deal with the specifics of the situation at hand. However, it is also most easily abused by domestic interests as the U.S. Department of Commerce and EC determinations that the origin of integrated circuits depends on the place of diffusion show. Prior to these trade policy-fueled decisions, customs authorities had generally conferred origin on the country of assembly of integrated circuits on the ground that this was the last substantial process or transformation. As many Japanese IC producers were assembling the ICs in the United States and the EC, this traditional approach, however, would have precluded the U.S. and EC anti-dumping authorities from imposing anti-dumping duties on the imported components of such ICs. Also, it is extremely laborious to devise technical tests for an enormous array of products and to keep them updated. Finally, it may be difficult to verify the information on specific production processes performed in third countries.

An additional drawback of the *negative* technical test is that it only delineates those production or sourcing processes that do *not* confer origin and therefore leaves it unclear whether other production or sourcing processes *do*. This causes obvious uncertainty. The EC product specific origin regulation with respect to photocopiers (the "Ricoh" rule) is a good example of a negative technical test. Although couched in general terms, the rule was really a producer-specific origin rule as it held that certain production processes performed by the Japanese producer Ricoh in an American plant were *not* sufficient to confer origin, thereby leaving it open which production processes would be considered sufficient.

[26] The CCC adopted the working name "World Customs Organization" ("WCO") on October 3, 1994. The ARO refers to the CCC.

The Agreement on Rules of Origin in principle prohibits the use of negative technical tests, but provides two exceptions which still allow negative technical tests during the transitional period (i) as part of a clarification of a positive test or (ii) in individual cases where a positive determination of origin is not necessary. The wording of the second exception seems to leave importing country authorities substantial discretion to resort to negative technical tests during the transitional period.

It may be seen from the above discussion that none of the available tests are perfect. There is, in other words, no 'one size fits all' rule that works well for the origin determination of thousands of products. This may also explain why rules of origin tend to be so complicated.

C. Why the Need for a WTO Agreement on Rules of Origin?

Until the 1990s, rules of origin were an obscure field in which legal processes were by and large absent and government officials agreed in *in camera* sessions upon both policy formulation and policy implementation. Discussions about rules of origin were felt to be a government affair in which private companies, let alone foreign companies, had no standing. The lack of interest was fuelled by the widespread perception of rules of origin as technical rules applied by technicians on the basis of technical considerations. This may explain why the GATT draftsmen did not consider it necessary to include provisions on rules of origin, instead leaving it "within the province of each importing member country to determine, in accordance with the provisions of its law, for the purpose of applying the most-favored-nation provision, whether goods do in fact originate in a particular country."[27]

While some lackadaisical efforts were made in a variety of fora[28] to agree upon certain common principles in the period from 1947 to 1989, none of these was particularly successful. For a variety of reasons,[29] not least the realization that certain formulations/interpretations of origin rules in the early 1990s by the EC[30] and the United States were politically motivated and had trade-restrictive or -distortive ramifications, a number of countries agreed fairly late in the Uruguay Round that an 'Agreement' on rules of origin would be worthwhile. Consensus on a concept Agreement was reached surprisingly fast.

II. Agreement on Rules of Origin

A. The Agreement

The Agreement on Rules of Origin consists of a preamble, four parts and two annexes. Part I provides definitions and coverage. Part II provides the disciplines. Part III covers various procedural arrangements, while Part IV is devoted to the harmonization process. Annex I concerned the Technical Committee on Rules of Origin ("Technical Committee" or "TCRO") set up under the auspices of the World Customs Organization ("WCO"),[31] while Annex II contains a common declaration on preferential origin rules.

[27] JOHN H. JACKSON, WORLD TRADE AND THE LAW OF GATT 468 (1969).

[28] Such as UNCTAD, the OECD, the CCC and GATT. For more detail, *see The Impact of Rules of Origin on U.S. Imports and Exports*, Report to the President on Investigation No. 332-192 Under Section 332 of the Tariff Act of 1930, USITC, at 70–72 (1985).

[30] *See* BRIAN HINDLEY, FOREIGN DIRECT INVESTMENT: THE EFFECTS OF RULES OF ORIGIN (1990), at 4.

[31] For a description of the WCO, *see* Chapter 36 of this book.

Article 1.1 establishes that Parts I to IV apply only to non-preferential origin rules, while Article 1.2 makes clear that the Agreement covers all rules of origin used in non-preferential commercial policy instruments, such as MFN, anti-dumping and countervailing duties under Article VI of GATT 1994, safeguard measures under Article XIX of GATT 1994, origin marking requirements under Article IX of GATT 1994, and any discriminatory quantitative restrictions or tariff quotas. They also include rules of origin used for government procurement and trade statistics. The deceptively simple footnote 1, however, provides that Article 1.2 is without prejudice to those determinations made for purposes of defining 'domestic industry' or 'like products of domestic industry' or similar terms (typically used in the context of commercial defense legislation). In reality, however, this opens an enormous loophole by declaring rules of origin not applicable to the definition of the domestic industry in trade defense instruments. Thus, there is no requirement that the like product manufactured by domestic producers actually has domestic origin. At least in theory, this allows, for example, simple assemblers of a product to complain about dumping of foreign like products even though they themselves only assemble.

Part II then distinguishes between disciplines applicable during the transitional period pending completion of the harmonization process (Article 2), and disciplines applicable afterwards (Article 3). Understandably, the latter are more stringent. The transitional period was supposed to last for only three years, until July 1998, but, as we have seen, and as will be explained in detail in the next section, the harmonization process still has not been completed. As a result, at the time of writing (August 2004), the transitional disciplines still apply.

At this stage, it may be useful for the reader to compare the two sets of disciplines with each other:

Table 1: Comparative Table of Two Sets of Disciplines

Transitional disciplines	Ultimate disciplines
a. Requirements to comply with administrative determinations of general application must be clearly defined	a. Rules of origin shall be applied equally for all purposes
b. Rules should not be used to pursue trade objectives directly or indirectly	b. Origin rules to be based on wholly obtained or last substantial transformation
c. Rules shall not create restrictive, distorting or disruptive effects on international trade	Presumably taken care of by a and b above
d. Rules must observe national treatment and MFN requirements	c. Rules must observe national treatment and MFN requirements
e. Rules must be administered in consistent, uniform, impartial and reasonable manner	d. Rules must be administered in consistent, uniform, impartial and reasonable manner
f. Rules must be based on positive standard	Presumably moot because of b above
g. Laws, regulations, judicial decisions and administrative rulings of general application must be published	e. Laws, regulations, judicial decisions and administrative rulings of general application must be published
h. Establishment advance ruling procedure	f. Establishment advance ruling procedure
i. Prospective nature of changes or new rules	g. Prospective nature of changes or new rules
j. Independent review of administrative actions	h. Independent review of administrative actions
k. Confidentiality of information	i. Confidentiality of information

One of the more interesting innovations of the Agreement is the advance ruling procedure, which is required for both non-preferential rules[32] and preferential rules.[33] The fairly detailed requirements of the Agreement, including a 150 day time limit for the administering authorities and a publication requirement,[34] have led to the establishment of a ruling procedure in most jurisdictions with respect to both non-preferential *and* preferential rules of origin.

Article 4.1 establishes the Committee on Rules of Origin ("CRO") while Article 4.2 creates the Technical Committee on Rules of Origin ("TCRO") under the auspices of the WCO. The Technical Committee is in charge of carrying out the technical work of Part IV. Annex I sets forth the Committee's responsibilities, as well as dealing with some procedural issues.

Article 5 requires WTO Members to publish any new rules of origin, or modifications of existing ones, at least sixty days before their entry into force.

Article 6 contain rules on review of the Agreement and the harmonization process. Articles 7 and 8 provide that disputes under the Agreement are to be subject to the consultations and dispute settlement procedures of GATT Articles XXII and XXIII and the WTO Dispute Settlement Understanding.

Article 9 deals with the harmonization process. Article 9.1 sets out the principles and objectives which are to guide the Harmonization Work Programme ("HWP") (these largely mirror the disciplines in the table above). Article 9.2 instructs the Technical Committee to draw up harmonized definitions of wholly obtained goods on the one hand and of minimal operations or processes that do not by themselves confer origin on the other hand. As regards substantial transformation, Article 9.2(c)(ii) establishes the key principle that the main criterion shall be a change in tariff classification (subheading or heading). Percentage or technical tests may be used as 'supplementary criteria' only where the exclusive use of the HS nomenclature does not allow for the expression of substantial transformation.

It is important to reiterate that the whole harmonization process only covers non-preferential origin rules. Preferential origin rules, whether autonomous or negotiated, are therefore not covered. Many consider this the major shortcoming of the ARO. However, Annex II does extend many of the disciplines imposed upon non-preferential origin rules also to preferential rules, as the following table shows:

Table 2: Disciplines for Preferential Rules of Origin

a. Requirements for compliance with administrative determinations of general application must be clearly defined
b. Rules of origin to be based on positive standard
c. Laws, regulations, judicial decisions and administrative rulings of general application must be published
d. Advance ruling procedure
e. New rules or changes to existing rules not to be applied retroactively
f. Independent review of administrative actions
g. Confidentiality of information

[32] ARO, Articles 2(h) and 3(f).

[33] ARO, Annex II, ¶ 3(a).

[34] Technically, the draft Agreement would only require the authorities to make rulings publicly available. However, effective implementation of this requirement would appear to necessitate publication in the official gazettes of the jurisdiction.

These disciplines are similar to many of those pertaining to non-preferential rules during and after the transitional period. However, several of the key disciplines have been omitted, in particular the specification of the wholly obtained and substantial transformation rules, thereby clearly reflecting the desire of key negotiators to reserve significant discretion in the use of preferential origin rules.[35]

When the HWP is completed, its results will constitute Annex III (Harmonized Non-Preferential Rules of Origin) as an integral part of the ARO.

B. Dispute Settlement

Thus far, there has been only one WTO dispute settlement decision involving the Agreement on Rules of Origin, United *States—Rules of Origin for Textiles and Apparel Products*, WT/DS243/R (2003) (not appealed), a case brought by India.

India claimed that new U.S. rules of origin, along with the relevant customs regulations, violated Article 2 (b), (c) and (d) of the ARO. The rules concern fabrics and certain made-up non-apparel articles assembled in a single country from single country fabric. India's exports of "flat goods" (e.g. bed linen and home furnishing articles) were affected by the modifications.

The new U.S. rules of origin included:

1. *Section 334 of the Uruguay Round Agreements Act (1996)* providing that flat goods from sixteen HS headings originate in the country where the fabric is woven, knitted or otherwise formed, regardless of any further finishing operations which may have been performed (the "fabric formation" rule).
2. *Section 405 of the Trade and Development Act (2000*) (enacted following requests for consultations by the EC (DS85 and DS151)) contains two exceptions:
   a. *Fabric* classified as silk, cotton, man-made or vegetable fibre originates in the country in which the fabric is both dyed and printed (the "DP2" rule) when accompanied by two or more designated "finishing operations" (the "DP2 operations"), except wool fabric.
   b. Certain *made-up non-apparel articles,* namely seven out of the sixteen HS headings, are also subject to the DP2 rule, except where such articles are classified under the relevant headings as of cotton or of wool, or consisting of fibre blends containing sixteen percent or more, by weight, of cotton.

The Panel first noted that Article 2 of the ARO sets out what rules of origin should not do, but they do not prescribe what a Member must do, and thus leave for Members themselves discretion to decide what, within those bounds, they can do (¶ 6.24). The parties agreed that Article 2 does not prevent Members from determining the criteria which confer origin, changing those criteria over time, or applying different criteria to different goods.

With respect to Article 2(b), the Panel noted that the design, architecture and structure of the measure in question are pertinent for this analysis (referring to *Chile—Taxes on Alcoholic Beverages*, DS/87/AB/R and DS/110/AB/R), and that protecting the domestic

[35] Other disciplines imposed on non-preferential rules during the transitional period that are not applicable to preferential rules include that rules of origin are not to be used to pursue trade objectives, and that rules are not to create restrictive, distorting or disruptive effects on international trade. Similarly, the requirement that non-preferential rules must be administered in a consistent, uniform, impartial and reasonable manner during and after the transitional period is not imposed on preferential rules.

industry against import competition and favoring imports from one Member over imports from another may constitute "trade objectives" (¶ 6.36). However, as to Section 334 the Panel rejected India's arguments that the United States was the only country using such a rule of origin (¶ 6.73), and that it was irrational, ruling that there is no requirement in Article 2 for use of any particular type of rule, and that the rule is not on its face unreasonable (¶ 6.74). Moreover, the fact that the origin-conferring operation does not add the most value does not necessarily indicate that the United States pursues trade objectives (¶ 6.75). Furthermore, India had not provided evidence on the effects on the textile quota allocation (¶ 6.83). Finally, the Panel makes a distinction between the use of rules of origin to implement and support a quota regime (which is permitted) and the use of rules of origin to supplement the protective effect of the quota regime (which is prohibited). Using rules of origin which render a quota regime more restrictive (for example, to more accurately reflect where the most significant production activity occurs or prevent quota circumvention) may be consistent with using rules of origin to implement and support such a regime (¶ 6.86). The claim that Section 405 is an instrument to favor imports from the EU was rejected, on the grounds that it applies equally to goods from all Members, and furthermore, that settling a bilateral trade dispute (with the EC) does not imply an intention to disfavor Members which are not parties to the settlement agreement (¶ 6.117).

With respect to Article 2(c), first sentence, providing that rules of origin shall not create restrictive, distorting or disruptive effects, the Panel interpreted the various terms used ("themselves", "create", etc.) With regard to the term "effects on international trade", the Panel did not resolve the question whether this covers effects on trade in intermediate stages of production or just trade in finished goods. However, the Panel found that it did not apply to different, even "closely similar" goods (¶ 6.147). It also found that measure must affect the trade of more than just the complaining Member (¶ 6.148). The Panel rejected India's argument that the measures have restrictive effects by reducing the level of exports from countries such as India which export greige fabric to third countries to be further processed into made-up articles before export to the United States. India had not provided the evidence required, namely: (1) which countries are under quota in the United States with respect to relevant downstream goods (e.g, cotton bed linen); (2) which countries are important suppliers of the relevant upstream goods (e.g., cotton fabric); and, (3) the price and quality of the upstream goods made by those countries and their production capacity (¶ 6.159). The Panel rejected India's claim that the U.S. rules of origin have distorting effects by favoring exports of product of interest to the EU, because according to the Panel, Article 2(c) did not cover effects on trade in different types of goods, and India had failed to prove either the existence of a competitive relationship between the goods, or that the measures favored the EU. India claimed that the measures have disruptive effects because of: (1) the sheer complexity of the rules; (2) the arbitrary nature of the criteria used, and (3) the imposition of certain administrative burdens (¶ 6.172). The Panel rejected these arguments, noting that: (1) rules of origin are by their nature complex and India has not shown that the measures are more complex than necessary (¶ 6.179), (2) the criteria used are specifically identified in Article 2(a)(iii) (¶ 6.180), and (3) it was not clear how the requirements referred to by India were linked to the measures at issue (¶ 6.181).

Concerning Article 2(c), second sentence, providing that rules of origin shall not pose unduly strict requirements or the fulfillment of a certain condition, the Panel explained that "'strict' requirements are [. . .] those requirements which make the conferral of origin conditional on conformity with an exacting or rigorous (technical) standard", and

that an origin requirement can be considered to be "unduly" strict if it is "excessively strict". The Panel rejected India's interpretation that rules of origin are "unduly strict" if they are "burdensome and need not be imposed to determine the country with which the good in question has a significant economic link," and that the measure at issue did not assist the United States in determining the country with which the products has the most significant economic link. India's argument that the measures made a distinction between three types of goods, and that these product distinctions constituted "conditions" in the meaning of Article 2(c), second sentence was rejected "as a matter of logic" (¶ 6.218).

Lastly, regarding the Article 2(d) requirement that rules of origin shall not discriminate between other Members, India had claimed that section 405 discriminates in favor of the EU because it results "in unjustifiably differential treatment of closely related (Indian and European) products", because the type of goods covered by the exemption are mainly those which undergo value-added or substantial transformation operations in the EU, while developing countries mainly export cotton fabric. The Panel observed that India's claim is based on three cumulative assumptions (¶ 6.244), namely that:

1. First, Members have an obligation to apply the same rule of origin, or at least equally advantageous rules, to "closely related" products (e.g., silk scarves and cotton scarves) imported from different Members.
2. Second, not only de *jure*, but also *de facto* discrimination between Members is prohibited; and,
3. Third, that an assessment of whether rules of origin discriminate, de facto, between Members calls for an examination of whether those rules impose differentially disadvantageous consequences on certain Members which are justifiable.

The Panel rejected the first assumption, thus deciding that Article 2(d) only applies to products which are "the same" (¶ 6.249). The Panel accepted the other two assumptions on an *arguendo* basis (¶ 6.250).

The Panel then analyzed the consistency of Section 405, and accepted *arguendo* India's assertion that Section 405 results, de facto, in differential treatment between goods of interest to the EU and goods of interest to developing countries (¶ 6.259). The Panel also accepted *arguendo* that India had identified only one set of products which are "the same" (namely goods made of fabric containing sixteen percent or more cotton and goods made of fabric containing less than sixteen percent) (¶ 6.265). However, on the point whether the discrimination is unjustifiable the Panel concluded that it was justifiable, among others because it appears to be consistent with the structure of the HS, and India had not shown that the sixteen percent threshold operates in such a way that producers cannot adjust their production, or can only do so at an excessive cost (¶ 6.270).

III. Harmonization Work Programme and Technical Analyses

This Part discusses the Harmonization Work Programme during the interim period: (i) the technical examination undertaken by the Technical Committee on Rules of Origin between the *de facto* launching of the HWP in 1994 and the end of May 1999; and (ii) the continuing negotiations by the Committee on Rules of Origin from June 1999 to its most recent session (as of the time of writing) in May 2004.[36] By May 1999 the TCRO had prepared a provisional text consisting of General Rules, Appendix 1 (definitions

[36] This meeting was devoted to the election of officers only. The CRO has continued to hold informal meetings on an every other month basis.

of wholly-obtained goods) and Appendix 2 (product-specific rules of origin). Product-specific rules had been agreed upon by consensus within the TCRO for nearly half of the 1,241 Harmonized System tariff headings (1996 edition). The product-specific rules for the other half remained undecided; about five hundred issues[37] were then referred to the CRO for decision. In June 2002, the CRO decided to submit about one hundred core policy issues, including twelve crucial issues, to the WTO General Council.[38] For the remaining technical issues, the CRO will select the options that are most suitable from the trade policy standpoint from among the technically possible alternatives elaborated and sent to it by the TCRO.

Section A of this Part provides a chronological overview of the negotiations. Section B explains the general provisions and the architecture of the Harmonized Non-Preferential Rules of Origin ("HRO"). As of the time of writing (August 2004), the latest text compiled by the WTO Secretariat is that of June 25, 2002 (G/RO/45/Rev.2). This has not yet been completely agreed, but provides an indication of what the HRO will look like, as well as the implications of applying the HRO to particular cases, such as anti-dumping measures or quantitative restrictions.[39] Next, Section C explains the definitions of wholly-obtained goods. A new concept has been introduced into the structure of definitions of wholly-obtained goods, i.e., two different sets of definitions applicable to: (i) goods obtained in the country; and (ii) goods obtained outside a country. The former is almost identical to the Kyoto Convention definitions, and the latter appears to be a logical development from the Kyoto text. Section D is devoted to selected product-specific rules of origin, namely, those for the agricultural, textiles and machinery sectors. Section E discusses the implications of the implementation of the HRO for other WTO Agreements.

Almost all of the information on the results of the technical examination by the TCRO (1995–1999) and the continued negotiations in the CRO (1999–June 2002) has been made available to the public.[40] It should be noted, however, that any opinion expressed in this chapter does not represent the official position of the WCO and WTO Secretariats.

A. Harmonization Work Programme—Overview

1. Technical examination in the Technical Committee (July 1995–May 1999)

(a) The Technical Committee on Rules of Origin and the WCO Origin Project. Since the World Customs Organization had made a commitment to the GATT Secretariat to contribute to the harmonization of non-preferential rules of origin, the WCO started preparatory work on the Harmonization Work Programme even before the Marrakesh Agreement Establishing the World Trade Organization entered into force. The Technical Committee on Rules of Origin was still to be established. The WCO Council, the

[37] The scope of an issue varies from one split (sub)heading to several HS Chapters. Therefore, the fact that there were five hundred issues does not mean that there are unresolved product-specific rules for five hundred headings.

[38] WTO Doc. G/RO/52, ¶ 5.1.

[39] There have been arguments in the CRO on the applicability of the HRO to other WTO instruments. This issue is referred to as "the implications issue" and has been forwarded from the CRO to the WTO General Council. For further details, *see* Section III.E *infra.*

[40] The WTO has published almost all official documents related to the Harmonization Work Programme on its website (www.wto.org). In this respect, WCO documents submitted to the WTO are accessible as part of WTO documents. Readers can trace the negotiations by referring to WTO document series G/RO/45 (as of August 2004, Add.1-16/Rev.1–3 version is the latest). The WCO has decided to make its historical documents available to the public (with a few exceptions). These documents can be accessed on the WCO website (www.wcoomd.org).

Organization's highest decision-making body, decided to assign top priority to the completion of the HWP. Accordingly, a project team was set up within the WCO Secretariat in September 1994 to serve as the secretariat to the Technical Committee when it came into being.

Members of the WTO are automatically Members of the TCRO.[41] The HWP was itself officially initiated by a letter sent by the Chairman of the CRO to the Chairman of the TCRO on July 20, 1995, requesting the commencement of the three-year work programme. Within three years the TCRO was supposed to prepare and consider definitions of wholly-obtained goods; definitions of minimal operations or processes that do not by themselves confer origin on a good; criteria for substantial transformation based on change in tariff heading; and, where the exclusive use of CTH does not allow for the expression of substantial transformation, supplementary criteria.

Despite its tremendous efforts, the TCRO was unable to finish its task within the initial three-year period. This was mainly due to the huge volume of work involved and the technical complexity and political sensitivity of the issues. In July 1998, the CRO agreed to extend the deadline for another year to November 1999.[42] In order to complete the HWP by the new deadline, in July 1998 the WTO General Council endorsed the CRO's plan and extended the deadline for completing the technical examination by the TCRO to May 1999 and the policy examination by the CRO to November 1999. In May 1999 the TCRO forwarded to the CRO the provisional text of the Harmonized Non-Preferential Rules of Origin as the final result of the technical review, together with a series of referral documents setting out the unresolved issues and the possible options for resolving them.[43]

(b) Working method. Based on Art. 9.2 of the ARO, it was initially planned that Phase I *(definitions of wholly-obtained goods and minimal operations or processes)* of the HWP should be completed by October 1995; Phase II *(substantial transformation—change in tariff classification)* by October 1996; and Phase III *(substantial transformation—supplementary criteria)* by October 1997. The TCRO also committed itself to undertaking any work requested by the CRO during the remaining nine months' life span of the HWP (*coherence exercise*).

For the work of Phase I, the WCO Secretariat (Origin Project) prepared working documents on definitions of wholly-obtained goods and minimal operations or processes. After extensive discussions at the First and Second Sessions, the TCRO was able to produce a single draft of definitions of wholly-obtained goods by October 1995. However, the TCRO decided to defer the elaboration of definitions of minimal operations or processes until the end of Phase III with a view to carefully examining the relationship of these definitions to substantial transformation criteria.

For the Phase II work, the TCRO requested Members to submit written proposals to the Secretariat in accordance with an agreed tabular format, so that the Secretariat could produce a comparative table of proposals on an HS heading basis. The TCRO also decided to examine product sectors according to the following order of HS Chapters: 25–27, 41–49, 64–71, 91–97, 72–81, 1–24, 28–40, 50–63, and 82–90. The aim was to complete the easier sectors before tackling the more contentious ones, such as textiles and machinery.

[41] *See* ARO Annex I, ¶ 4.

[42] WTO Doc. G/RO/M/18, ¶ 1.1.

[43] The WCO Secretariat has compiled the provisional text in three volumes of A4-size files entitled "*Consolidated Text of the Technical Committee on Rules of Origin*".

A unique management method was devised by the then Chairman of the TCRO, categorizing the decisions of the TCRO into the following three types[44]:

Basket 1: The rule indicated was approved and should apply as specified. The Basket 1 rules were to be transmitted to the CRO for endorsement.

Basket 2: The TCRO needed to conduct further research and analysis, and the rule would be examined later in Phase II. Basket 2 decisions could be converted to Basket 1 or Basket 3, as appropriate, as a result of subsequent examination.

Basket 3: Examination of rules for the particular product should be undertaken in Phase III.

This approach made it clear that the TCRO intended to send results to the CRO once a consensus was reached at the TCRO on the rule for a particular product. However, this working 'principle' was not maintained for long. Divergent opinions were often found to stem from countries' trade and industrial policies, and it was therefore extremely difficult to convince delegations that a particular proposal was the most technically suitable. The TCRO then came up against policy issues which were intrinsic to the technical questions. Consequently, in many product sectors, several technically possible options were sent to the CRO for its consideration, rather than a single (Basket 1) draft for the CRO's endorsement.

As already explained in Part I of this chapter, a "change-in-classification criterion" was synonymous with the "change of heading" rule. Article 9.2(c)(ii) of the ARO permits the use of a change-in-subheading rule ("CTSH") as well as a CTH rule. Furthermore, the TCRO did not interpret the meaning of "the use of change in tariff subheading or heading" and "the exclusive use of the HS nomenclature" (Art. 9.2(c)(ii) and (iii) of the ARO) in a rigid manner. Instead the TCRO created, for the purposes of rules of origin, subdivisions of headings or subheadings entitled "split headings" or "split subheadings" to confer origin on a good with respect to which substantial transformation could occur within the scope of a particular heading or subheading in the 1996 version of the Harmonized System. These subdivisions of headings or subheadings (HS 1996) are expressed with the prefix "ex", together with a precise description of the goods, as shown in Table 3 below.

Table 3: Example of Split Subheadings

HS Code Number	Description of Goods	Origin Criteria
71.06	**Silver (including silver plated with gold or platinum), unwrought or in semi-manufactured forms, or in powder form.**	*See subheadings*
7106.10	-Powder	*See split subheading*
ex7106.10(a)	Flakes classified with powder[1]	CTSHS
ex7106.10(b)	Powder	CTSH

(*Sources:* Consolidated Text of the TCRO)

[1]The HS classifies flakes with powder of subheading 7106.10 when 90 percent or more by weight passes through a sieve having a mesh aperture of 0.5 mm (see HS Subheading Note 1 to Chapter 71).

[44] *See* Annex C/1 to WCO Doc. 39.870 and *Consolidated Text*, *supra*, note 43.

The TCRO considered that, in this way, a change of tariff classification could be optimized. For instance, the expression "CTSHS" (a change of split subheading rule) in the above table means that a substantial transformation takes place when flakes classified with powder of split subheading ex7106.10(a) are produced from powder classified in the same subheading 7106.10 (see Table 3), even though a change of subheading does not occur (both are 7106.10). On the other hand, powder of split subheading ex7106.10(b) must meet a CTSH for substantial transformation to occur. This means that production of powder from unwrought silver classifiable in subheading 7106.91 or any other goods classified outside subheading 7106.10 does constitute substantial transformation. However, producing powder from flakes classified with powder of split subheading ex7106.10(a) is not considered to be substantial transformation.

(c) Second examination. The TCRO finished the 'first reading' of proposals for substantial transformation (Phases II and III together) by the Eighth Session in June/July 1997. A second examination of Basket 2 issues then started at the same session, and a new and standard reporting format to the CRO was introduced. This format was called a "referral document" or "template document" which pinpointed the unresolved issues and suggested technically possible options for decision by the CRO.

The second examination was completed in May 1999 at the Seventeenth Session of the TCRO. By that time, the TCRO's provisional text of the HRO consisted of General Rules, Appendix 1 (definitions of wholly-obtained goods) and Appendix 2 (product-specific rules of origin) (see Annex 1 to this chapter). The product-specific rules of origin for 511 HS headings (or 41 percent) out of 1,241 were agreed upon by consensus.[45] There were 66 referral documents covering 486 product-specific unresolved issues, involving 730 headings transmitted to the CRO for decision. Definitions of minimal operations or processes were presented as General Rule 5 and ¶ 2 of Appendix 1 of the TCRO's final text.

2. Negotiations in the Committee on Rules of Origin (after June 1999)

Having passed the agreed deadline of November 1999, the CRO made its management plan for completing the HWP (the Notional Work Programme for 2000).[46] On December 15, 2000, the WTO General Council adopted a decision to complete the HWP by the time of the Fourth Ministerial Conference[47], or by the end of 2001 at the latest. In December 2001, the General Council agreed that the CRO should report the core policy issues to it for discussion and decision and that the overall deadline would be further extended to the end of 2002.[48]

The CRO made tremendous progress in 2001. In addition to thirty issues that had already been resolved from 1997 to 2000, it resolved 300 of the 486 issues that had been referred to it.[49] However, progress slowed down in 2002, and only ten issues were

[45] The majority of the agreed rules were the tariff-shift rules. This figure covers headings that were fully agreed only. When a rule proposed for one subheading of a heading has not yet been agreed despite the fact that other rules for the remaining subheadings have all been agreed, that heading is not counted in this figure as agreed. Chapter notes which are applicable to all or specified headings of the Chapter are not taken into account for the purposes of the above calculation.

[46] *See* WTO Doc. G/RO/M/27.

[47] Under the Doha Ministerial Declaration (November 2001), the HWP was dealt with as part of the implementation-related issues and concerns (WTO Doc. WT/MIN(01)/DEC/W/1). The Ministerial Conference took note of the report of the CRO (G/RO/48) and urged the CRO to complete its work by the end of 2001 (WTO Doc. WT/MIN(01)/W/10).

[48] *See* WTO Doc. G/RO/52.

[49] *Id*.

resolved in April, eight in June and one in November.[50] In July 2002, the Chairman of the CRO submitted to the General Council 94 core policy issues, of which twelve were considered crucial, more particularly the contentious implications issue.[51] The General Council agreed to discuss first the twelve crucial issues. Consensus was not achieved despite the best efforts to break the impasse by way of informal/formal consultations made by the General Council itself and the Chairman of the CRO in its capacity representing the Chairman of the General Council. The CRO's Chair presented a packaged proposal as a common ground to wrestle with the overarching implications issue and the 93 product-specific issues. Some Members strongly rejected any understanding that fundamentally altered or undermined the basic objectives of the Agreement on Rules of Origin. Others cited the need for more flexibility and political will. There was, however, broad understanding that the package of the CRO's Chair provided a working tool to press for the completion of the Harmonization Work Programme. The deadline for completion of negotiations on the core policy issues has now been extended for the sixth time to July 2005. The CRO has to complete the remaining technical issues by December 2005. Resolving issues however does not always mean agreeing to the articulation of rules of origin for a particular good or product sector. Finalization of the Integrated Negotiation Text ("INT") and the review for overall coherence of the HRO will follow afterwards. As of August 2004, the CRO had resolved 349 issues (71.8 percent) out of 486 (*see* Table 4).

Amendments to the 1996 edition of the Harmonized System came into effect on January 1, 2002. The TCRO has already informally started the technical rectification exercise, adjusting the rules agreed based on HS 1996. The next amendments to the HS are scheduled to come into effect in 2007. The HRO will then have to be rectified accordingly. Detailed implementation measures may be needed, together with capacity-building activities for developing countries, to ensure smooth implementation of the HRO. The tasks before the CRO, and to an even greater extent the TCRO, remain far from simple and they are contentious.

B. General Provisions and the Architecture of the Harmonized Non-Preferential Rules of Origin

1. Architecture of the HRO

(a) Background. The ARO was silent with regard to several aspects of rules of origin. For example, the details of implementation were left completely untouched and the preparation of "general rules", including "residual rules", was not explicitly required by the Agreement. However, it was obvious that the definitions of wholly-obtained goods and the criteria for substantial transformation needed to be guided by some *general* provisions which would govern the entire set of rules.

In order to apply definitions of wholly-obtained goods and the substantial transformation criteria *per se*, delegations needed to have a clear idea based on their own experience with existing preferential and non-preferential rules of origin. However, when the applicable substantial transformation criteria were not satisfied, it was not clear how to treat a good that has been transformed (but not *substantially* transformed or regarded as

[50] *Id*., ¶ 2.2.

[51] The twelve crucial issues relate to: (1) implications of the implementation of the HRO for other WTO Agreements; (2) dyeing and printing of textile products; (3) coating of steel products; (4) assembly of machinery; (5) assembly of vehicles; (6) refining of sugars; (7) roasting of coffee; (8) slaughtering of live animals; (9) refining of oils; (10) fish taken from the sea of the exclusive economic zone; (11) footwear; and (12) dairy products (*Id*., ¶ 5.1). *See also* WTO Doc. G/RO/W/92.

Table 4: Progress made by the TCRO and the CRO (As of August 2004)

Product groups	Number of HS headings agreed[52] by the TCRO	Number of issues referred to the CRO	TCRO referral document number	WTO document number[53]
1–24 (Agricultural products)	92/201 (46 percent)	125	42,146, 42,146/Cor., 42,536, 42,574, 42,574/Cor., OC0028/2	G/RO/45/Add.8/Rev.3
25–27 (Mineral products)	39/66 (59 percent)	10	41,611, 42,535, 42,695	G/RO/45/Add.3/Rev.2
28–40 (Chemicals)	166/220 (75 percent)	38	42,626, 42,627, 42,695, OC0014/1, OC0016/1, OC0023/2, OC0032/1	G/RO/45/Add.9/Rev.2
41–43 (Leather)	7/21 (33 percent)	8	41,612, 41,737, 41,737/Cor., 42,268, OC0023/2, OC0031/1	G/RO/45/Add.4/Rev.1
44–49 (Wood & paper)	48/68 (71 percent)	11	42,633, OC0023/2, OC0031/1	G/RO/45/Add.6/Rev.2
50–63 (Textiles)	14/149 (9 percent)	83	42,271, 42,271/Cor., 42,357, OC0023/2	G/RO/45/Add.1/Rev.2
64–67 (Footwear)	6/20 (30 percent)	14	41,823, 42,269, 42,533, OC0023/2	G/RO/45/Add.2/Rev.2
68–70 (Ceramics)	40/49 (82 percent)	12	41,824, 42,269, 42,583, 42,695, OC0012/2	G/RO/45/Add.10/Rev.2
71 (Precious stones & metals)	9/18 (50 percent)	5	42,383, 42,695, OC009/2	G/RO/45/Add.11/Rev.1
72–73 (Steel)	34/55 (62 percent)	12	42,621, 42,695	G/RO/45/Add.12/Rev.2
74–81 (Other base metals)	31/76 (41 percent)	24	42,672	G/RO/45/Add.13/Rev.2
82–83 (Articles of metal)	12/26 (46 percent)	17	42,511, 42,576, OC0025/2, OC0026/2	G/RO/45/Add.14/Rev.2
84–90 (Machinery)	1/204 (0 percent)	86	42,147, 42,269, OC0023/2, OC0031/1	G/RO/45/Add.15/Rev.1
91 (Clocks & watches)	0/14 (0 percent)	6	41,610, OC0023/2, OC0035/1	G/RO/45/Add.16/Rev.2
92 (Musical instruments)	1/9 (11 percent)	2	41,841, OC0035/1	G/RO/45/Add.5
93–97 (Miscellaneous articles)	11/45 (24 percent)	33	42,269, OC0023/2, OC0033/1, OC0035/1	G/RO/45/Add.7/Rev.2
TOTAL	**511/1,241 (41%)**	**486**	9/1997–9/2000: 22 issues, 5 percent of the total resolved; 11/2000: 8 (30) issues, 2 percent (6 percent) of the total resolved; 2001: Mar., 24 (54) issues, 5 percent (11 percent); May, 42 (96) issues, 9 percent (20 percent); July, 67 (163) issues, 14 percent (34 percent); Sep.–Oct., 115 (278) issues, 24 percent (57 percent); Nov./Dec., 52 (330) issues, 11 percent (68 percent); 2002: Apr., 10 (340) issues, 2 percent (70 percent); June, 8 (348) issues, 2 percent (72 percent); Nov., 1 (349) issues, 0 percent (72 percent) of total resolved. **349** issues (**71.8 percent**) resolved (137 outstanding issues left)

[52] This column does not cover headings which have been agreed in part. Chapter notes/rules are disregarded for this calculation.

[53] Latest version of the Integrated Negotiating Text of the WTO as of August 2004 (Documents available on the WTO public Web site).

having undergone a minimal operation or process) from non-originating materials. The idea of "residual rules", which had been proposed by the Secretariat as the "secondary rules" at the inaugural session, was to remind the TCRO that, under the future HRO, there should not be a single good in the world for which the country of origin could not be determined.[54] This argument was compelling in the light of the broad coverage that the HRO were to have under Art. 1.2 of the ARO (even rules of origin used for trade statistics were to be covered). The TCRO therefore decided to draft "residual rules" as part of the general rules; the CRO endorsed this idea.

In the case of preferential rules of origin, the rules lead to either a "yes" (qualified) or "no" (not qualified) answer. Therefore, the concept of "residual rules" does not exist. Moreover, even in the context of current non-preferential trade it appears that a clear distinction between the country of origin and the exporting country has not always been made, except in the case of some sensitive product sectors. In fact, 41 Members did not have non-preferential rules of origin as of October 2003.[55] Consequently, the drafting of the "residual rules" was a lengthy process which involved a great deal of work.

The ARO also did not deal with the day-to-day implementation of the HRO, in particular the certification and verification of origin. The TCRO requested the WCO Secretariat to undertake an exhaustive study on this issue at the Eighteenth Session in February 2000.[56] At its Twentieth Session, the TCRO examined the same issue and felt that it was not necessary, in the context of the TCRO, to harmonize the procedural aspects of implementing the HRO. After completion of the HWP, this issue would be reviewed by the WCO in the context of Annex K (Origin) to the revised Kyoto Convention.[57]

(b) Elaboration of the architecture of the Harmonized Non-Preferential Rules of Origin. While the TCRO adopted an item-by-item approach[58] to the "general rules", the CRO suggested that the TCRO devise an overall structure for the HRO, i.e., look at how to

[54] The "residual rules" should be applicable to a good when a change of heading ("CTH") rule as a "primary rule", for instance, is not satisfied in the country in question.

[55] These Members include: Bolivia; Brazil; Brunei Darussalam; Burundi; Chad; Chile; Costa Rica; Cyprus; Dominica; Dominican Rep.; El Salvador; Fiji; Guatemala; Haiti; Honduras; Iceland; India; Indonesia; Jamaica; Kenya; Macao, China; Malaysia; Maldives; Malta; Mauritius; Mongolia; Namibia; Nicaragua; Oman; Pakistan; Panama; Papua New Guinea; Paraguay; Philippines; Singapore; Suriname; Thailand; Trinidad & Tobago; Uganda; United Arab Emirates and Uruguay (WTO Doc. G/RO/57: Ninth Annual Review of the Implementation and Operation of the Agreement on Rules of Origin).

[56] Based on 85 Members' replies to the questionnaire, a study paper entitled "*Comparative Study on Systems of Certification and Verification as well as Documentation for Customs Clearance With Respect to Non-preferential Rules of Origin*" was prepared by the WCO Secretariat for the 20th Session (WCO Doc. OC0067).

[57] The revised International Convention on the Simplification and Harmonization of Customs Procedures (the revised Kyoto Convention) was adopted by the WCO Council in June 1999, and the Protocol of Amendment to bring the revised Kyoto Convention into force was then opened for signature. The Protocol requires the accession of forty current Contracting Parties to the Kyoto Convention. As of August 2004, the revised Kyoto Convention had not entered into force. Annexes D.1 to D.3 to the Kyoto Convention (1974) have been maintained with minor amendments and are now located as Annex K (Chapter 1— *Rules of Origin;* Chapter 2— *Documentary Evidence of Origin*; and Chapter 3— *Control of Documentary Evidence of Origin*). The full text is available on the WCO website (www.wcoomd.org).

[58] Although a number of Members had *general* provisions in their preferential or non-preferential rules of origin, no specific existing rules of origin were used as a basis for the TCRO's consideration. At the time, there appeared to be a strong feeling among delegations that the TCRO should create a new set of non-preferential rules of origin, instead of harmonizing a number of existing non-preferential rules of origin. In other words, Members preferred not to be influenced by a couple of major trading economies that had been using certain established phrases or terms enshrined in their legal system. Consequently, several draft texts for the "general rules" were proposed by delegations, item by item.

place, format and present the *general* provisions and the product-specific rules. The CRO referred to the structural framework of the HRO as the "overall architecture" or "architecture", with its decision in November 1995 to request the TCRO to "forward . . . a general format establishing the overall architectural design within which the results of the different phases of the Harmonization Work Programme will be finalized as provided for in Article 9.4".[59]

Responding to the request of the CRO, the TCRO drafted the "provisional text of the Technical Committee on Rules of Origin at its Third Session"[60]. The basic structure consisting of General Rules, Appendix 1 (*wholly-obtained goods*), Appendix 2 (*product-specific rules of origin*) and Appendix 3 (*minimal operations or processes*) was proposed and agreed. The sequential application principle between Appendices 1 and 2 was also agreed.

Two meetings in Canada provided a good opportunity to overcome an impasse in respect of the architecture. The first informal meeting (in Ottawa) in September 1996 paved the way, *inter alia*, for the Appendix 2 rules for goods (e.g., coal) that had been wholly-obtained (e.g., undergone a mining operation) in Country A, were subsequently imported into Country B but did not undergo substantial transformation there (e.g., they were merely put in sacks), and were exported further to Country C. In this scenario, there was a clear agreement that the country of origin should be determined by application of Appendix 1 (wholly-obtained goods) when goods were traded between Countries A and B, and by Appendix 2 (product-specific rules of origin) when traded between Countries B and C (the case where "more than one country (*Countries A and B*) is concerned in the production of the good"[61]). This scenario also confirmed a general acceptance as to the sequence of when to invoke the Appendix 1 definitions and Appendix 2 rules to settle the country of origin.

(c) "Ottawa language". In seeking to draft the Appendix 2 rules to cover the above-mentioned scenario, one delegation proposed to refer directly to "wholly-obtained", whereas others opposed that idea because wholly-obtained goods had to be dealt with under Appendix 1 only, based on the sequential application principle. Thus, to achieve consensus, the text should not include the term "wholly-obtained". Wording the rule therefore required technical skills.

The delegations attending the Ottawa informal session devoted some time to this issue and arrived at an agreed principle. Based on this agreement, at its subsequent session the TCRO endorsed three types of standard text, known as the "Ottawa text" or "Ottawa language":

(i) For scrap and waste, the rule was to be based upon the country where the scrap or waste was derived;
(ii) For goods having antecedents, the rule was to be based on change of tariff classification with exclusions; and
(iii) For goods having no antecedents, the rule was to be based on the country where the good or material was obtained in its natural or unprocessed state.[62]

[59] *See* WTO Doc.G/RO/M/3, ¶ 4.3(a). The content of the General Rules and the architecture were at first discussed separately. However, in the later stages of the technical examination, all questions other than the product-specific rules of origin were deemed to fall under the architecture issues, including the substance of the General Rules.
[60] Annex G/2 to WCO Doc. 39.870.
[61] Art. 9.1(b) of the ARO.
[62] Annex C/2 to WCO Doc. 40.510.

The second category (goods having antecedents) may need some explanation. For example, the rule "CTH, except from heading 18.01 or 18.02" is proposed for heading 18.03 (cocoa paste, whether or not defatted). This rule means that to obtain origin, cocoa paste may not be produced either from non-originating cocoa beans (heading 18.01) or from non-originating cocoa shells, husks, skins and other cocoa waste (heading 18.02). The only way to produce originating cocoa paste is to use originating materials[63], i.e., the cocoa paste would have to be produced as a wholly-obtained good in that country. It should be noted that, in the case of this particular good (cocoa paste), a straight CTH rule (without exception) has also been proposed.[64]

(d) Evolution of "Ottawa language". In the later stages of the HWP, the "Ottawa language" has evolved to ensure greater clarity of the rule. One example is the rule for goods with antecedents. Yoghurt, for example, has an antecedent, milk. Consequently, for those who do not recognize a change from milk to yoghurt as substantial transformation, a Change of Chapter ("CC") or CTH except from headings of milk should have been the ideal rule. However, this rule required a "residual rule" which determines the origin of yoghurt produced from non-originating milk. If a "primary rule" is able to determine the origin of goods in all cases, that would be an ideal situation. Thus, the expression "the country of origin of the goods of this subheading shall be the country in which *the milk* is obtained in its natural or unprocessed state" replaced the initial presentation of the "Ottawa language"[65].

The rule for live animals provides another good example. The following rule was proposed to the TCRO:

> The country of origin of the goods of this heading shall be the country in which the animal was born (and raised).

Instead of using the initial expression "the material (or the good) of this heading is obtained in its natural or unprocessed state", the proponents made it clear that the "material" in the "Ottawa text" should mean the animal. Consequently, the appropriate verb which is equivalent to the term used in definitions of wholly-obtained goods, is employed.[66] It was also pointed out that the initial "Ottawa text" could be interpreted in different ways. In the case of vegetable saps and extracts of split heading ex 13.02(a), the initial "Ottawa text" could be understood to mean that the country of origin of the vegetable saps and extracts is:

> The country in which the vegetable saps and extracts (good) were extracted (obtained) from a plant (material wholly-obtained in a country, not further processed), regardless of the origin of the plant; or The country in which the plant (wholly-obtained material), from which the vegetable saps and extracts were extracted, grew (obtained in its natural state in that country).[67]

[63] Non-originating seasonings or any other materials which are not excepted in the rule can be added. Therefore, this rule does not require the good to be wholly-obtained in the strict sense of the term. *See* further explanation for the term "solely" of Definition 1(i) of Appendix 1.

[64] If the straight CTH rule is finally agreed, a change from cocoa beans to cocoa paste will be considered to be substantial transformation.

[65] Annex C/1 to WCO Doc. 41.755, ¶ 58. However, a number of rules based on the initial "Ottawa" text were sent to the CRO once they were agreed, and the CRO subsequently endorsed them. It is therefore anticipated that the consistency of the text will need to be completely examined during the coherence review.

[66] For example, the verbs used in the rules for goods of Chapters 1 to 24 include: hatched, gathered, captured, raised, born, born and raised, farmed, extracted, grew, grown and harvested, or derived (*Id*., ¶¶ 59–60).

[67] *Id*., ¶ 61. As of the time of writing, a CC rule has been widely supported for split heading 13.02(a).

(e) "Ottawa" type rules. Since the evolved "Ottawa language" was able to designate certain processes or operations to be considered as substantial transformation, a number of supplementary criteria for Chapters 1 to 24 were proposed based on the evolved "Ottawa language". The criteria proposed were, for example, weight or fattening period, or even both, to indicate the growth of animals as follows:

> The country of origin of the goods of this heading shall be the country in which the animal was fattened for at least 6 months.

At this stage, a clear distinction can be made between the initial "Ottawa text" and its evolved version on the one hand, and the text designating a particular process or operation on the other hand. The first category targeted a good that was wholly-obtained in another country or a good the material of which was wholly-obtained in another country. The latter category did not target a wholly-obtained good or material; an animal can be imported and origin conferred in that country if the required condition is met. These supplementary criteria were often informally referred to as "Ottawa" type rules.[68] It should be noted, however, that this technical jargon was not included in the legally binding text and has never been formally defined by the TCRO.

(f) Meech Lake recommendations. During the second informal meeting (in Meech Lake, Canada) in September 1998, the participating delegations reached broad agreement on the shape of the architecture of the HRO which was to be submitted to the CRO as the final result of the technical examination. The recommendations[69] were that:

(i) definitions and the content of Appendix 3 (*Minimal Operations or Processes*)[70] can be placed in the appropriate places in the architecture;
(ii) rules in Appendix 2 (*Product-Specific Rules of Origin*) are applicable to a good when a definition under Appendix 1 (*Wholly-Obtained Goods*) does not confer origin on the good (sequential application between Appendices 1 and 2);
(iii) two types of origin rules, i.e., "primary rules" and "residual rules", may be set forth in Appendix 2[71];
(iv) in Appendix 2, "primary rules" can be placed at the beginning of the Chapter or in the matrix[72] when they are applicable to a particular heading, subheading, split heading or split subheading;
(v) the "primary rules" that confer origin ("positive primary rules") are co-equal and there is no hierarchy;
(vi) the "primary rules" may preclude certain operations or processes from conferring origin ("negative primary rules");

[68] In several reports of the Technical Committee, the expression "Ottawa type rules" has been used. However, there is no clear understanding whether the evolved "Ottawa text" is categorized in the "Ottawa" type rule. Some delegations use the expression "Ottawa language" for all rules that have a similar narrative presentation to the initial "Ottawa text" in the matrices in Appendix 2, whereas other delegations distinguish the original "Ottawa text" from the "Ottawa" type rules.

[69] The numbering and the sequence of the outline do not correspond to the original recommendations.

[70] Appendix 3 was deleted accordingly.

[71] The naming of the "primary rules" and "residual rules" was accepted as a preliminary term. At the Fourteenth and Fifteenth Sessions, the TCRO agreed that the expressions "primary rules" and "residual rules" be formally used in the provisional text of the architecture.

[72] A tabular format attached to Appendix 2 on a Chapter basis has been informally called the "matrix". Thus, product-specific rules of origin set out in the matrix are often called "matrix rules".

(vii) the "residual rules" are applicable to a good only when the "primary rules" do not confer origin on the good;
(viii) the "residual rules" can be placed at the beginning of Appendix 2 or at the level of the Chapter; and
(ix) within the "primary rules" and within the "residual rules" the selection of the rule applied is governed by the time sequence, i.e., the rule that is last satisfied confers origin on a good.[73]

(g) Basic framework of the architecture. Although item (ix) was contested, the TCRO endorsed the Meech Lake recommendations in most cases and reconstructed the architecture of the draft HRO. The provisional text of the TCRO, as revised at the Fourteenth Session (October 1998), had the following structure:

Preamble[74]
General Rules (*general provisions to govern the HRO*)
- General Rule[75] 1 to General Rule [6]
Appendix 1 (*definitions of wholly-obtained goods*)
- Scope of application
- Definitions and Notes
Appendix 2 (*product-specific rules of origin*)
- Paragraph[76] 1 to paragraph 6 (*general provisions to govern Appendix 2*)
- "Matrix" rules (*HS Chapters 1 to 97*)
  - Chapter rules, Chapter notes[77], definitions (*placed at the beginning of the Chapter similar to HS Notes to Section, Chapter or subheading*)
  - Product-specific rules at a heading or subheading level (*such as CTH placed inside the "matrix", Chapter by Chapter*)

(h) Co-equal primary rules and elaboration of residual rules. At the early stage of the technical examination, several delegations proposed more than one rule to express substantial transformation for one (split) heading or (split) subheading, e.g., for the chemical products' sector, the rule proposed was meeting either a chemical reaction rule or CTSH. The TCRO decided that: (i) the chemical reaction rule should confer origin on chemicals even without a change of classification, as long as the change meets the required definition of a chemical reaction;[78] and (ii) the chemical reaction rule and its definition should be placed at the beginning of the Chapter, instead of reproducing a cumbersome text for each subheading. This does not mean that the chemical reaction rule has priority over the CTSH rule; it is simply a means of saving space.

[73] WCO Doc. 42,703.
[74] At the Fifteenth Session, the TCRO decided that the preamble was not necessary.
[75] At the Fourteenth Session, the TCRO decided to replace "Articles" with "General Rules" (General Rules 1 to [6]).
[76] Paragraphs were renamed as Rules (Rule 1 to Rule 6) at the Sixteenth Session of the TCRO. *See* also the explanation in B.2(b), *The criterion of the "essential character" for the general residual rules*.
[77] HS Notes to Section, Chapter or subheading are not reproduced in the "matrices". The HS Notes were not included in order to save space. However, there is no doubt that such Notes are applicable when the goods are classified under the HS. Although this is purely a matter of terminology, future users of the HRO should not confuse "Chapter Notes" for the purposes of rules of origin with "HS Notes to Section, Chapter or subheading".
[78] Thousands of chemicals can be transformed into other chemicals while remaining within the same HS subheading. It is obviously not appropriate to split a subheading into thousands of split subheadings in order to utilise a CTSHS (change of split subheading) rule.

As of the Fourteenth Session, the TCRO confirmed that there should be general (or final) residual rules at the Appendix level to determine the origin of a good when none of the other residual rules determines the origin of the good, that the primary rules, such as the chemical reaction rule or the CTSH rule, are co-equal, and that more specific residual rules must be applied prior to the general residual rules. Therefore, the order of application of rules should be:

(i) primary rules;
(ii) product-specific residual rules;
(iii) general residual rules.

This means that there is no sequential application among primary rules with the exception of the "Ottawa language", which will be further explained later.

(i) The issue of "the country where the last substantial transformation has been carried out". Art. 9.1(b) of the ARO could be understood to mean that the country of origin determined by application of Appendix 2 rules (including residual rules) or at least the primary rules should be "the country where the last substantial transformation has been carried out". Item (ix) of the Meech Lake recommendations, (i.e., within the "primary rules" or within the "residual rules", the rule that is last satisfied confers origin on a good) was governed by this interpretation. At the same time, this was the starting point of the most contentious issue of the architecture, i.e., the adoption of the "tracing-back" approach.

Two questions were raised.[79] Firstly, given that all primary rules express substantial transformation, and given that more than one primary rule may be applicable to a good, how will the architecture identify the rule which determines the country of "last substantial transformation"? Secondly, when should the search for a primary rule to determine origin be exhausted, such that a residual rule is then applied? Although the agreed governing principle is the time sequence (the rule that is last satisfied determines origin), the TCRO had not decided how this principle was to be applied. At the Fourteenth Session, the Chairman's formulation was accepted as follows: (i) classify within the Harmonized System the good whose origin is to be determined; (ii) find the primary rule or rules for that good; and (iii) apply those rules to determine whether any of them were satisfied in the country of exportation.[80] Therefore, if a primary rule is satisfied in the country of exportation (assuming also that no negative primary rule negates the determination), the country of origin has been established and the inquiry is at an end. However, there was debate on how to deal with the scenario when no primary rule applicable to a good is satisfied in the country of exportation (i.e. the good does not undergo substantial transformation in that country). Two divergent opinions were expressed: (i) if the possibility of applying primary rules is exhausted, the origin of the good should be determined by reference to an applicable residual rule; and (ii) if a good does not meet a primary rule by undergoing a substantial transformation in the country of exportation, the next level of analysis should be whether a primary rule was satisfied in any preceding country which was involved in the production of the good (the "tracing-back approach").[81]

The EC, Norway and Switzerland were against the "tracing-back" approach. A good which had undergone some processing in the country of exportation but had not undergone substantial transformation was not the same good as the good before processing. If

[79] For details *see* Annex C/1 to WCO Doc. 42.711.
[80] *Id*.
[81] *Id*. Under the second option, the residual rule could be invoked only if there was no country in which a primary rule of origin was met.

the origin of the processed good was to be determined by applying the rule to the good before processing, the rules in their application would not be taking account of economically justified processing operations performed on the processed (but not substantially transformed) good in the country of exportation.[82] Furthermore, the "tracing-back" approach would impose a considerable administrative burden on traders and administrations.

Argentina, Australia, Canada, Egypt, Hong Kong, Japan, New Zealand, Senegal, Singapore and the United States supported the "tracing-back" approach.[83] In their view, it was implicit in and required by the Agreement, because under Art. 9, ¶ 1(b) the HRO should provide for the country of origin of a good to be "the country where the last substantial transformation has been carried out." To stop the inquiry at the country of exportation, and not to try to find a substantial transformation in preceding countries under the primary rules would amount to ignoring the primary rules and placing excessive reliance upon the residual rules. The extensive use of residual rules would have the effect of reducing the predictability of the rules of origin and thereby frustrate trade facilitation.[84]

The TCRO devoted a considerable amount of time at two sessions (Fourteenth and Fifteenth) in 1998 to this issue alone. The "tracing-back" approach was also discussed as part of the concept of "origin-retaining", which focused on the result of processing in the chain of manufacture of goods, i.e., once origin is conferred on a good or a material in a country, the origin is retained even in the subsequent countries as long as no substantial transformation takes place there. At the last stage of the technical examination, the term "tracing-back" was scarcely used by its proponents, primarily due to the implications of the 'heavy administrative burden'. A consensus was not reached and the issue was therefore referred to the CRO after the Fifteenth Session. While lengthy formal debates continued at the CRO meetings, several bilateral consultations among the active key players brought about a solution before the concluding TCRO session in May 1999, which was not to adopt the "tracing-back" approach or to narrow the scope of the "origin-retaining" principle.

The "tracing-back" approach might have served better for enforcement of anti-dumping measures or quantitative restrictions. However, since the HRO will be used for multiple purposes as provided in Art. 1.2 of the ARO, ease of administration seemed to be the determining policy consideration in this case. One of the key players conducted thorough research into the administrability of the "tracing" procedures and came to the conclusion that "tracing-back" would not be possible in most industrial sectors unless present commercial practices were drastically changed. The Member did not publish details of the study, but its essence was widely shared with Members.[85]

Since the time sequence was no longer a decisive principle for applying the primary rules, it was decided during the TCRO's sessions that if two or more primary rules were applicable to a good, there was no need to prove which primary rule was last satisfied in a country. If origin had been conferred in a country by the application of a primary rule, it did not matter whether other primary rules are also satisfied in the same country.

(j) Multiple countries of origin. Based on a provision of the ARO stating that "rules of origin should provide for the country to be determined as the origin of a particular good" (Art. 9, ¶ 1(b)), it appeared that there was a common understanding that one

[82] Annex C/1 to WCO Doc. 42.711, ¶ 31.

[83] Colombia and Thailand joined this group at the Fifteenth Session.

[84] Annex C/1 to WCO Doc. 42.711, ¶¶ 29–30.

[85] Consequently, by May 1999, the supporters of the "tracing-back" approach dwindled to five Members (Brazil; Hong Kong, China; India; Malaysia and the Philippines). These Members finally joined the other group at a later meeting of the CRO.

good can have only one country of origin. In most cases, this understanding was well reflected in the text of the draft HRO. While a good for which rules of origin are applied is to be identified under the Harmonized System as specified in columns A and B of the "matrix", that understanding could be taken to express a principle of one good, one classification and one country of origin. However, there were some proposals which: (i) did not recognize goods classified together in one (sub)heading under the HS as one good; or (ii) did recognize a good classified in one (sub)heading as one good, but where origin is conferred on the components instead of the good itself.

Case (i) covers a collection of parts that are presented as unassembled or disassembled. Although classified in a (sub)heading by virtue of General Rules 2(a) for the Interpretation of the Harmonized System ("General Interpretative Rules" or "GIR")[86], the individual parts retain their origin prior to such collection (for details, see Section III B.5(e)(iii) below). Putting up in sets [or kits] (Rule 6) is another example.There is a proposal suggesting that goods put up in sets, which are to be classified in a heading, should retain the origin of the individual articles in the set (for details, see Section III B.5(h) below. Case (ii) is that, as the last applicable residual rule proposed by India, "[in the event of two or more countries equally contributing major portions of those materials, the good shall be assigned a multi-country origin]".

* * * *

Several core elements of the architecture have been described above. The "Ottawa language" was also explained as a prerequisite to understanding the draft HRO. A rough yet determinant shape of the final architecture was established at the Meech Lake informal session and its recommendations are still valid in many aspects; the co-equality of the primary rules and the limit to the application of the primary rules have also been mentioned. In the history of the harmonization of non-preferential rules of origin, it should be remembered that the Meech Lake recommendations and a series of elaborations by the TCRO provided the guiding principles for drafting the residual rules. The sequential application between Appendices 1 and 2, and of Appendix 2 Rules (determination of origin) were agreed by the TCRO. The order of provisions for the residual rules has become one of the most crucial issues tackled by the TCRO and the CRO and this is dealt with in the next subsection.

2. Primary rules and residual rules

(a) In-depth discussions on the residual rules. Extensive discussions on the residual rules finally started at the Fifteenth Session of the TCRO in December 1998. Reflecting the aforementioned positions on the issue of the "last" substantial transformation, each proponent suggested modifications to the architectural structure of the residual rules. The first group[87], supported by the EC and Norway, now proposed that a few generic residual rules should be presented at the level of Appendix 2.[88] A newly identified proposal[89] by Switzerland preferred to indicate the nature and the application of the principle of the

[86] "2(a) Any reference in a heading to an article shall be taken to include a reference to that article incomplete or unfinished, provided that, as presented, the incomplete or unfinished article has the essential character of the complete or finished article. It shall also be taken to include a reference to that article complete or finished (or falling to be classified as complete or finished by virtue of this Rule), presented unassembled or disassembled."

[87] This position was referred to as "Option B" in the referral document (WCO Doc. 42.774).

[88] Annex C/1 to WCO Doc.42.820 (Report of the Fifteenth Session), ¶ 15.

[89] Referred to as "Option C" (WCO Doc. 42.774).

residual rules in Appendix 2, while providing a cross-reference to the specific residual rule which would apply for each Chapter. The last group[90] proposed that generic ultimate residual rules be presented in Appendix 2, with other residual rules being specified at Chapter or even heading or subheading level; this was in contrast to the first group which did not require product-specific residual rules.[91]

The first and the second groups were heavily criticized by the third group on the point that relinquishing the application of the primary rules at an early stage could lead to a situation where origin was assigned *administratively* instead of pursuing the country where the last *substantial* transformation was carried out. It appeared that the third group's argument was based on the assumption that the primary rules are the criteria to determine substantial transformation; thus, the country of origin determined by application of the residual rules does not reflect substantial transformation.

The EC refuted this argument.[92] When more than one country is involved in the production of goods, the origin is determined by the concept of "last substantial transformation". Therefore, the residual rules should indicate which operation is considered to be the last substantial transformation for the goods which do not meet the primary rules. If the transformation which the goods *last* underwent cannot be considered as substantial, the origin should be determined on the basis of the *penultimate* transformation (which is then considered to be the last *substantial* transformation). When two or more materials of different origins are used, the last substantial transformation should be the production of the materials that impart the essential character[93] to the final goods.

The second group's position was almost identical to that of the first. The main difference is in the use of a value-added criterion for the general residual rule. The third group maintained the hierarchical structure as agreed at the Fourteenth Session, i.e., (i) the primary rules, (ii) the product-specific residual rules, and (iii) the general residual rules.[94]

(b) The criterion of "essential character" for the general residual rules. The expression "essential character" is used in the HS General Interpretative Rules. The question arose as to whether the meaning of *essential character* in terms of origin should be the same as in the HS. The HS Explanatory Note to GIR 3(b)[95] indicates that the factor which determines essential character will vary, and may, for example, be determined by the nature of the material or component, its bulk, quantity, weight or value, or by the role of a constituent material in relation to the use of the goods. For some Members, GIR 3(b) was itself a sufficient standard. Origin could be determined under a residual rule which specifies that origin follows from the origin of the material or component giving the

[90] Referred to as "Option A" supported by Argentina, Australia, Canada, Colombia, Egypt, Hong Kong China, Japan, New Zealand, Senegal, Singapore, Thailand and the United States (WCO Doc. 42.774).

[91] The EC did not completely abandon the idea of establishing product-specific residual rules (WCO Doc. 42.771).

[92] *EC Position Paper*, WCO Doc. 42.771, ¶ 3.

[93] The EC proposed that the essential character could be determined, in general terms, by the non-originating material or materials that predominate by weight, volume or value. The applicable criterion would be chosen based on the function of the good and be listed at the appropriate place in the relevant Chapter (WCO Doc. 42.771, ¶ 4).

[94] This group did not put forward a single text for the general residual rules. Several alternative rules were proposed.

[95] "(b) Mixtures, composite goods consisting of different materials or made up of different components, and goods put up in sets for retail sale, . . . , shall be classified as if they consisted of the material or component which gives them their essential character, insofar as this criterion is applicable."

good its essential character which determines the classification of the good. Under this view, "essential character" would have the same meaning as under the Harmonized System. Other Members questioned the applicability of GIR 3(b). They wondered whether a classification rule designed for mixtures, composite goods and sets should be applied in respect of the origin of any kind of good which has not undergone substantial transformation under a primary rule. In the TCRO, the factors of volume, weight and value of materials have been considered generally appropriate, although Members differ on particulars (Annex C/1 to WCO Doc. 42.820, ¶¶ 21–23).

Elaboration of the general residual rules continued at the Sixteenth Session of the TCRO. Faced with a deadline only a few months away, the Chairman instructed the Secretariat to draft a compromise text for the general residual rules. After lengthy discussions based on the Secretariat text, the TCRO was finally able to agree to a single draft text (with several square brackets) for the general residual rules. From this text onwards, paragraphs in Appendix 2 were replaced with "Rules"; these were often referred to as "Appendix 2 Rules".[96] A broad notion of essential character seemed to be universally applied, but with differing criteria for identifying essential character. It was also unanimously accepted that the initial origin of goods was to be "carried forward" when the goods underwent minimal operations or processes.

In the compromise text, the following aspects regarding the formulation of residual rules still needed to be settled: (i) whether to take into account both originating and non-originating materials or only non-originating materials; (ii) whether to take into account the materials which do not satisfy the conditions set out in the primary rules or all of the materials; (iii) whether to include a provision to confer origin if at least fifty percent of the materials by value, volume or weight are originating; (iv) whether a criterion based on value is needed in the residual rules; and (v) whether to take account not only of materials but also of related processing and assembly.[97]

(c) The TCRO's final text of Appendix 2, Rule 2 (May 1999). In the TCRO's final text of Rule 2[98] to Appendix 2 (*Product-Specific Rules of Origin*) agreed at the Seventeenth Session (see Annex 1 to this chapter), the expression "essential character" has disappeared. It was finally agreed that the last residual rule (Rule 2(g)) to determine the country of origin of the good is: "the country in which the major portion of those materials originated, as determined on the basis specified in each Chapter". Thus, such criteria as value, weight and volume proposed for the general residual rules at the Sixteenth Session now appear at the Chapter level. It can be opined that this conclusion was intended to refrain from using the conceptual expression "essential character" but still utilize the practical part of GIR 3(b).[99]

Rule 2(c)(ii) has three alternative texts seeking to convey the same message. For instance, when a wooden kitchen table (subheading 9403.40) is imported and painted with non-originating paints of Chapter 32, the painted wooden kitchen table is still classified in

[96] *See* Annex O/2 to WCO Doc. OC0010E3 for the agreed single text of Rule 2 developed from the Secretariat's compromise text.

[97] Annex O/1 to WCO Doc. OC0010E3, ¶ 5.

[98] As explained below (B.2.(d)), in September 2000 the CRO renumbered Rule 2 as Rule 3.

[99] It should be noted, however, that when the specified criterion does not determine the major portion of the materials, e.g., assuming that the materials originating in Country A and the ones in Country B have the same weight, in this case, under the text formulated in May 1999 there is no way to determine the country of origin of the good in question.

subheading 9403.40. In this case, the table does not change its classification[100] (remaining in subheading 9403.40), but other materials (paints) undergo a change of classification from Chapter 32 to subheading 9403.40. By application of Rule 2(c), the origin of the painted wooden kitchen table should be the country where the wooden (unpainted) kitchen table originated.

Rule 2(g) would lead to several different countries of origin depending on the following square-bracketed texts: (i) "(whether or not originating)"; and (ii) "that did not undergo the change of classification or otherwise satisfy the primary rule applicable to the good". The following hypothetical example[101] highlights the difference.

> *Country A exports manioc pellets (heading 07.14; 100 kg) produced from originating fresh manioc (cassava) (heading 07.14; 200 kg, $50), together with flour of manioc originating in Country B (heading 11.06; 50 kg, $150) and binder (molasses) originating in Country C (heading 17.03; 3 kg, $20). The product-specific (primary) rule for heading 07.14 is CTH, except from heading 11.06. Assuming that the criterion for applying Rule 2(g) is by weight, which country (A, B or C) is the origin of the manioc pellets?*

In this example, the primary rule is not an "Ottawa"-type rule which has the fixed narrative text starting with "The country of origin of the goods of this (sub)heading is the country where . . . "; Rule 2(a) is not applicable. The primary rule is not satisfied due to the use of non-originating flour of manioc (heading 11.06); Rule 2(b) is not applicable. A non-origin-conferring operation (i.e., "negative rules") is not set out for this heading; Rule 2(c)(i) is not applicable. The non-originating material or article that has the same classification as the resulting good (i.e., manioc of heading 07.14) is not used; Rule 2(c)(ii) is not applicable. Assuming that no Chapter residual rule is applied, Rule 2(d) is not applicable. The materials come from more than one country; thus, Rules 2(e) and 2(f) are not applicable. Finally, it falls to Rule 2(g) to determine the country of origin of the manioc pellets.

The qualifying text "(whether or not originating)" makes clear the coverage of Rule 2(g). The proponents of Rule 2(g) with this qualifying text considered that the last applicable residual rule should cover not only non-originating materials, but also the originating materials. Several delegations supported the inclusion of this text, because there was no rational reason why the originating materials should be discriminated against and excluded from the calculation formula.[102] Therefore, the answer to the hypothetical question is Country A where the originating fresh manioc (the major portion 200 kg) was supplied.

However, the proponents of Rule 2(g) without this qualifying text argued that Rule 2(g) should target non-originating materials only. The residual rules are intended to determine the country of origin from among those countries which supplied materials, rather than giving a "second chance" to the country in which the manufacturer failed to meet the primary rule.[103] In this context, another delegate was of the view that the primary rule and the residual rule should not contradict each other[104]; if the same origin results from both the primary and the residual rules, the primary rule would seem pointless (even

[100] The rule for heading 94.03 has been agreed as "CTH; or change from subheading 9403.90".

[101] This example was developed by the Secretariat during the elaboration of the residual rules. Since then it has been used for the WCO technical assistance activities.

[102] *See* Annex H/2 to WCO Doc. OC0030E/2.

[103] WCO Doc. 42.771, ¶ 5.

[104] Only a few delegations supported this view, already pointed out at the Meech Lake meeting.

replaceable with the residual rule).[105] Consequently, the answer to the question should be Country B from which 50 kg of flour of manioc (the supplier of the major portion between Countries B and C).

The qualifying text "that did not undergo the change of classification or otherwise satisfy the primary rule applicable to the good" was proposed to maintain the close link between the primary rule and the residual rule. If the applicable primary rule is change of heading "except from a specified heading", then obviously the intent of the primary rule is that the specified change does not result in substantial transformation. It is thus logical and appropriate to focus on the origin of the materials which do not undergo the required change.[106] The answer to the question then becomes Country B from which the precluded content, i.e., flour of manioc (heading 11.06), was imported. The opponents to the inclusion of that text pointed out, however, that in the residual rules, origin should be based upon the origin of all the materials used, without distinction.[107]

(d) The CRO's latest text of Rules 2 and 3 (as of June 2002). Elaboration of the architecture by the CRO progressed steadily, item by item. In September 2000, the plurilateral meeting agreed to "place the provision [on rules of application] between Rule 1 (scope of application) and Rule 2 (determination of origin), as it was more logical to have rules of application preceding the determination of origin".[108] Consequently, Rule 2 (TCRO's final text) was renumbered as Rule 3 (hereinafter referred to as Rule 3); Rule 3 (TCRO's final text) was subsequently numbered as Rule 2 (hereinafter referred to as Rule 2) with its new title "Application of Rules". In September 2000, the plurilateral meeting also agreed that Rule 2 should contain: (i) a link between the classification of the good in the HS and the corresponding product description in the HRO; (ii) a provision stipulating that primary rules should apply only to non-originating materials; (iii) the concept that all primary rules are co-equal, and that in their application account should be taken of Chapter Notes; and (iv) reconfirmation of the sequence of application of Rules 3(c) through (f).[109]

Rule 3(a) was queried as to whether its coverage "should be expanded in order to deal with the situation in which origin was to be conferred on the basis of a designated stage of manufacture".[110] At the February 2002 meeting of the CRO, a footnote to Rule 3(b) was added to clarify its coverage. Some delegations even questioned the appropriateness of Rule 3(a). As of June 2002 (the latest text at the time of writing), one Member made a new proposal for Rule 3(a). Another Member suggested reversing the order of Rules 3(a) and 3(b) (see commentaries on Rule 3 in Annex 2 to this chapter).

In December 2000, the proponent of the first alternative of Rule 3(c) offered to drop its proposed text "on condition that this resulted in consensus on the first alternative of Rule 3(f), and with the clear understanding that Rule 3(c) applied to goods that were almost finished, i.e., maintaining the same Harmonized System description as the processed good".[111] In May 2001, the participants of the informal meeting deemed that any further technical discussion with regard to Rules 3(c) and (f) would be fruitless. The group therefore was "increasingly interested in the package offered by the proponent of the

[105] *See* Annex H/2 to WCO Doc. OC0030E/2.
[106] *Id*.
[107] *Id*.
[108] WTO Doc. G/RO/M/32, ¶ 1.1.
[109] *Id*.
[110] WTO Doc. G/RO/M/28, ¶ 1.1.
[111] WTO Doc. G/RO/M/34, ¶ 1.1.

first alternative or Rule 3(c)".[112] As of June 2002, there was consensus on the text of Rules 3(b), (d) and (e). As the commentaries on Rule 3 indicated (see Annex 2 to this chapter), there was also a general agreement among Members on the basic approach to Rule 3, namely, the application of primary rules in the last country of production as the first test, the application of the origin-retaining concept as the second test, and the application of major portion concept as a final test. The proposals for Rules 3(f) and (g) still retain the crucial difference as to whether the major portion should be determined by considering: (i) both originating and non-originating materials expressed by "(whether or not originating)" (proposed by India); (ii) both originating and non-originating materials, which do not satisfy a primary rule applicable to the goods[113] (proposed by the United States); or (iii) non-originating materials only (proposed by the EC). It was also noted that Rule 3(e) might not be necessary, since the application of Rules 3(f) and (g) would result in the same origin outcome.

As described above, the CRO has simplified and refined the text. Although 94 core-policy issues have been forwarded to the WTO General Council, drafting issues relating to the architecture were retained in the CRO as part of the remaining technical issues. However, these issues will only be dealt with by the CRO when all the core policy issues have been resolved. It is therefore premature to conclude how the provisions of Rule 3 affect the determination of the country of origin of goods. The CRO has not yet specified the criteria for Rule 3(f) or 3(g) to be applied to each HS Chapter. The criteria for the agricultural sector would differ from those for the textile sector or the machinery sector. The CRO may also further develop Chapter-specific residual rules for certain Chapters.

(e) Substantial transformation and the residual rules. To date, no conclusion has been reached as to whether the country of origin attained by application of the residual rules is the reflection of substantial transformation. The CRO appears to be reluctant to touch upon this grey area. It is clear from the views of the proponents of the "tracing-back" approach that, for several Members, assigning origin by application of the residual rules is determined by administrative needs.[114] Although all proponents have already withdrawn their position concerning the "tracing-back" approach, that fundamental notion of how the residual rules should be defined is deemed to be valid. This was one of the reasons why the title of the Appendix 2 rules could not use the term "substantial transformation". Similar arguments took place when the TCRO discussed the provision of interchangeable goods and materials (Rule 5); the assignment of origin on a rather arbitrary basis to goods which have not undergone processing seemed contrary to the concept of last substantial transformation.[115] It was then clarified that a rule on interchangeable goods and materials was not intended itself as a rule of origin to determine whether or not goods are substantially transformed, but as a practical way of assigning origin regardless of whether goods are substantially transformed.[116]

[112] WTO Doc. G/RO/M/35, ¶ 1.1.

[113] The U.S. subdivided its proposal into Rule 2(f)—the single country providing the materials which did not satisfy a primary rule and Rule 2(g)—the country, among several countries, providing the major portion of the materials which did not satisfy a primary rule.

[114] The implication of adopting this position might be that, in its application, it is possible to differentiate the status of the origin conferred by the primary rules as truly substantially transformed and by the residual rules as administratively assigned. Consequently, only goods that have satisfied the primary rules could be treated as originating goods for the purposes of quota allocation, etc.

[115] Annex C/1 to WCO Doc. 42.820, ¶ 80.

[116] *Id*.

In this discussion, a strong argument was put forward by the Republic of Korea.[117] First of all, the ARO does not provide a mandate to the CRO and TCRO to establish criteria other than those for expressing substantial transformation. Setting out residual rules may be acceptable, but this must be undertaken within the framework of the ARO, i.e., the residual rules must be prepared as part of the criteria for substantial transformation. When a new category of rules (other than the criteria for substantial transformation) is created, the ARO should be amended accordingly.

3. Minimal operations or processes

(a) Initial discussions at the First and Second Sessions of the TCRO. Definitions of minimal operations or processes were briefly discussed at the First Session of the TCRO; fuller discussions were held at the Second Session. With regard to the definitions, Members agreed that: (i) minimal operations or processes should neither take away origin nor confer it; (ii) minimal operations or processes should be re-examined together with the general rules at a later stage; (iii) packaging sometimes went beyond a minimal operation as it could require the use of complex processes and could add more than negligible value to the goods (several countries opposed this point); and (iv) packaging for transport should be separated from the other types of packaging to be discussed later.[118] Reflecting such discussions, the texts of Definitions 1 and 2 and the Explanatory Notes to the definitions were adopted at the Second Session, subject to further consideration throughout Phases II and III of the HWP.[119]

Definition 2 stated that minimal operations or processes should not be taken into account in determining whether a good had been wholly-obtained in one country. Therefore, even if there is an operation to facilitate transportation of the wholly-obtained goods, that operation does not negate the status of wholly-obtained goods. The last paragraph of the Explanatory Notes provided that a minimal operation or process or a combination thereof shall not preclude conferring origin on a good if a substantial transformation occurred as a result of other operations or processes. Similar to Definition 2 above, when one of the origin criteria such as a CTH rule is met, an operation to facilitate transportation should not negate the originating status of the goods.

(b) Placement of minimal operations or processes. After the Third Session, these definitions and Explanatory Notes were placed in Appendix 3. However, in view of the "one-page-only" layout of the Appendix, it was agreed to merge its content into the General Rules at the Fourteenth Session. Further details were discussed at the Fifteenth Session. In this process, the principle of minimal operations or processes was presented in Appendices 1 and 2 in differing formulations. Appendix 1 specified that minimal operations or processes were not to be taken into account while Appendix 2 specified that operations were not origin-conferring.[120] This modification was thought to offer a more precise description of how the principle of minimal operations or processes would be applied in the respective Appendices.[121]

The text of the Explanatory Notes prepared at the Second Session was deleted with the exception of the last paragraph and an illustrative list of minimal operations or processes.

[117] The Korean position was consistent from the very early stages through to the end of the technical examination.

[118] Annex E/1 to WCO Doc. 39.488.

[119] For details, *see* Annex E/2 to WCO Doc. 39.488.

[120] Annex C/1 to WCO Doc. 42.820, ¶ 65.

[121] *Id*.

At the request of several Members, the list which had been fully deleted at the Fourteenth Session was reinstated at the Fifteenth Session[122] as part of General Rule 5 as a non-binding, non-exhaustive list of examples.[123] Thus, in the TCRO's final text of General Rule 5, there were no longer Explanatory Notes to the definitions of minimal operations or processes.

(c) Relationship with origin-conferring rules. There were two divergent opinions as to whether the scope of minimal operations or processes should, or should not, cover Appendix 2. India, the Philippines and Switzerland argued that: (i) there was no need to set forth a general provision in General Rules because a primary rule has already taken into account whether that rule may confer origin on a good by a minimal operation or process; (ii) otherwise origin conferred by such a primary rule will be overruled by the general provision. Thus, in Appendix 2 the issue of minimal operations or processes should be addressed by a Chapter Note (negative standards) or an individual primary rule, where appropriate.[124]

Canada, the EC, Morocco and the United States, on the other hand, stressed that minimal operations or processes should cover both Appendices 1 and 2; they argued that: (i) Art. 9.2(c)(i) of the ARO requires the TCRO to develop the definitions in a horizontal manner; (ii) those definitions must apply to the entire HRO. The General Rules must have a safety valve to prevent minimal operations or processes from conferring origin on a good.[125] The EC further argued that General Rule 5 (TCRO's final text) should be applicable to the change of classification rule only because the process rules were articulated to confer origin on the particular good in any condition, if the specified process requirements are satisfied.[126]

(d) Negotiations in the CRO after June 1999. In December 2000, consensus was reached to apply General Rule 5 (TCRO's final text) only to Appendix 1.[127] It was also decided to delete the list of examples, even though one delegation pointed out that an indicative list might be useful.[128] Consequently the provision was moved to its appropriate place under Appendix 1 as Rule 2.[129] The agreed text limits the scope of operations or processes to those for the following purposes: (i) ensuring preservation of goods in good condition for the purposes of transport or storage; (ii) facilitating shipment or transportation; and (iii) packaging or presenting goods for sale (see the full text in Annex 2 to this chapter). The commentary on Appendix 1, Rule 2 of the latest CRO text indicated that consensus

[122] These Members considered that the list was a highly important aid to interpretation and application of the provision of minimal operations or processes. However, other Members did not favour inclusion of the list being cognizant of the fact that no list could be comprehensive; the items now listed might contradict certain primary rules; and not all the operations listed (e.g., testing and calibration) corresponded to the operations enumerated in the legal definition (Annex C/1 to WCO Doc. 42.820, ¶ 66).

[123] Examples of minimal operations or processes include: ventilation; spreading out; drying; chilling; removal of damaged parts; application of grease, anti-rust paint or protective coating; removal of dust; cleaning; washing; sifting or screening; sorting; classifying or grading; testing or calibration; breaking bulk; packing, unpacking or repacking; grouping of packages; affixing of marks, labels or distinguishing signs on goods or their packages; dilution with water or any other aqueous solution; ionizing; salting; husking; shelling (unshelling); stoning; and crushing (Annex C/2 to WCO Doc. 42.820).

[124] Annex H/2 to WCO Doc. OC0030/2.

[129] *Id*.

on Rule 2 was confirmed, and that the possibility of application of Rule 2 of Appendix 1 to Appendix 2 should be reconsidered at a later stage when the work was virtually completed. Under the current text, the origin of a good which has merely undergone minimal operations or processes in a country will be determined, in many cases, by application of Rule 3(c) (a residual rule providing the origin-retaining concept) from the standpoint of whether the good has changed its HS classification, although Rule 3(c) would also cover the 'gray area' (cases falling in between the substantial transformation and the minimal operation or process).

4. Other provisions of General Rules and Appendix 2 Rules

In the TCRO's final text, several provisions were placed in square brackets. In addition, the order of the rules and the placement of the rules were of a preliminary nature. The CRO has refined the text and endeavoured to remove the square brackets. Among the General Rules and Appendix 2 Rules, the following may need further explanation.

(a) Determination of Origin—General Rule 3. This General Rule confirmed the agreed principles: (i) General Rules are the governing rules for the application of both Appendices 1 and 2; (ii) the sequential application between Appendix 1 and Appendix 2.[130]

(b) Neutral Elements—General Rule 4. "Neutral elements" refers to such factors of production as plant and equipment, fuel, machinery and other elements whose origin is not to be taken into account in determining the origin of a good. The TCRO discussed this matter at the Fourteenth and Fifteenth Sessions. An exhaustive list seemed impossible, while an indicative list might introduce ambiguity or uncertainty. One view was that such a provision would provide clarification and certainty. Another view was that a provision was not needed because the exclusion of neutral elements from origin determination was too obvious to need mentioning. It was also argued whether there was a possible contradiction between the exclusion of neutral elements from origin determination and the use of added value criteria. The calculation of value of materials would necessarily include the cost or price of plant, machinery, etc. On this basis, it was suggested that the provision on neutral elements should include the proviso "unless otherwise provided . . . ". Others saw no such contradiction and hence did not favour including any proviso. At its Fifteenth Session, the TCRO reached broad agreement that the origin of neutral elements should not, in general terms, be a factor in the determination of origin. Materials were normally incorporated in a good and their origin was essential to origin determination under most origin criteria.[131]

During the discussions in the CRO, the only delegation having reservations regarding the text lifted them. Thus, the text has been unbracketed since April 2001, except for the phrase "unless otherwise provided in this Annex" which remained in brackets (see the full text in Annex 2 to this chapter).[132]

[130] The plurilateral meeting of the CRO agreed to delete General Rule 3 (definitions—TCRO's final text) at the June 2000 meeting; renumbered General Rule 3 (determination of origin) appeared in the WTO document as from December 2000 (WTO Doc. G/RO/M/34, ¶ 1.1).

[131] Annex C/1 to WCO Doc. 42.820.

[132] WTO Doc. G/RO/M/35, ¶ 1.1. The latest text of the CRO confirmed consensus on the unbracketed text of General Rule 4. However, one delegation requested that the bracketed text be included in the provision until a complete picture was obtained.

(c) Intermediate materials—Appendix 2, Rule 4. At its Fourteenth and Fifteenth Sessions, the TCRO held lengthy discussions on this issue and concluded that: (i) once origin is conferred on a good (or material) in a country, the good (or material) will not lose its originating status by subsequent processing undertaken in the same country; (ii) a good produced [solely[133]] from originating materials has the same country of origin as the materials; and (iii) the concept was relevant to the primary origin-conferring rules of Appendix 2, and probably not to any other part of the Harmonized Rules of Origin.[134]

Under several existing preferential and non-preferential rules of origin, this concept is known as the "roll-up" method or "absorption" concept for calculating the value of originating and non-originating materials.[135] It might be anticipated that if and when the value-added rules proposed for some Chapters are finally accepted by the CRO, the "roll-up" approach might be needed for the calculation method. However, there was no substantive discussion during the sessions concerning how to deal with the intermediate materials provision in connection with the value-added rules.[136] For a tariff shift rule, which is the dominant rule in the draft HRO, the required changes must always be made from non-originating materials; therefore, once a component of a machine meets the origin rule (for components), that component is no longer subjected to the tariff shift rule for the machine even though non-originating parts were used for the production of the component.

Specific issues were also discussed, for example whether non-originating steel spoons (subheading 8215.99, for which a CTH rule has been agreed) underwent substantial transformation when the spoons were melted and cast into ingots in one factory and reprocessed to new spoons in another factory (subheading 8215.99). In this example, there was no change in classification between the source materials and the final products. The common understanding of the delegations was that the non-originating steel spoons underwent substantial transformation when the spoons changed into the steel ingots (heading 72.06, for which a CTH rule has been agreed). The new spoons produced solely from originating steel ingots had to be regarded as originating in the same country. However, when intermediate materials are produced in the course of successive plant operations leading to the final goods yet the same intermediate materials *per se* do not appear on the market, there may be some difficulty in administering Rule 4. The TCRO discussed a hypothetical case where used steel rails (heading 73.02) are recast into new steel rails (heading 73.02) without being interrupted at any intermediate process. The used steel rails were first placed for melting at a steel mill, then further processed automatically by the plant, and finally changed to the shape of the new steel rails. In this hypothetical case, an intermediate material (e.g., ingots or bars) was not offered on the market and, consequently, there was no independent transaction for these materials. The state of an intermediate material might have existed for a moment, but it kept changing shape

[133] Added by the author for clarification.

[134] Annex C/1 to WCO Doc. 42.820, ¶ 75.

[135] *See* N. ZAIMIS, EC RULES OF ORIGIN 154–155 (1992); N. KOMURO, SAISHIN GENSANCHI-KISOKU (Rules of Origin Updates) 258–260 (1995).

[136] The calculation method for the value-added rules should be further elaborated in the future in order to deal with cases where intermediate materials do not satisfy the product-specific rules of origin: either (a) such intermediate materials being considered to be 100 percent non-originating materials (the "roll-down method"); or (b) non-originating material used for the intermediate materials being counted as non-originating materials (the tracing method). For further details, *see* Vermulst, Waer and Bourgeois, *supra* note 7, at 167–172; Komuro, *supra* note 136.

and moving towards the final product (steel rails). Several delegations shared the view that the steel rails produced from the used steel rails should be considered substantially transformed.

During the negotiations in the CRO, it was confirmed that all Members accepted the principle of this provision (see also the full text in Annex 2 to this chapter). However, it should be noted that there is no explicit text in the current architecture to confer origin on a good which is produced solely from intermediate materials, except for Rule 3(e) (*a single country provided all the materials to produce a good*).

(d) [De minimis—Appendix 2, Rule 7]. Although the idea of a *de minimis* rule had been presented at its Third Session, the TCRO only started the examination of *de minimis* rules at the Fourteenth Session. Proponents were of the opinion that *de minimis* rules were useful and trade-facilitating and would help reduce over-dependence on residual rules in determining the origin of goods.[137] On the other hand, several delegations felt that the concept of *de minimis* could serve no practical purpose because the existing primary rules coupled with residual rules would be sufficient to determine the origin of goods; thus, the *de minimis* rules would involve extra work and resources on documentation which would only add to the burden of traders.[138]

Discussions continued at the Fifteenth Session. Several negative points were made, namely that: (i) it did not seem possible to apply a *de minimis* threshold to a process-based primary rule; (ii) it seemed difficult to set thresholds on a rational basis; and (iii) the administration of thresholds would be difficult and costly for developing countries. Those in favour of this rule gave broad support to the idea of making the application of *de minimis* rules mandatory. It was also generally understood that a *de minimis* rule should be applied positively to permit a primary rule to give a result, and never negatively to prevent a result under a primary rule. Only if the primary rule(s) did not give an outcome should *de minimis* rules be applied to exclude from the calculus any non-originating materials which might have prevented a result under primary rules. If it is determined that no result is possible under primary rules, even with the benefit of *de minimis*, then residual rules are applied.[139]

The TCRO could not reach a consensus decision on this matter and proposed several alternative approaches at its Seventeenth Session. India, Malaysia, New Zealand, Philippines and Senegal opposed the inclusion of *de minimis* rules in the HRO. Morocco proposed that the *de minimis* rules should cover both Appendices 1 and 2, with the fixed threshold of twenty percent of the ex-works price. The EC proposed that the *de minimis* rules cover only Appendix 2, but the rules should be placed under the General Rules and their thresholds be indicated at Appendix 2 level. Canada and Switzerland proposed that the *de minimis* rules with a horizontally applicable threshold (twenty percent of the ex-works price—Switzerland; seven percent of the total weight for textiles, seven percent of the transactional value for non-agricultural goods or ten percent of the volume of the total alcoholic strength—Canada) be placed at Appendix 2 level only (see General Rule [5], [8] or [Rule 6] of the TCRO's final text for further details in WCO Doc. OC0029). Colombia, Egypt, Japan and Korea proposed that the *de minimis* rules be set out on a Chapter or product-sector basis. Although participants were still divided on the actual need for the rule, the plurilateral meeting (June 2000) confirmed growing consensus on its

[137] Annex C/1 to WCO Doc. 42.711, ¶ 19.
[138] *Id*.
[139] Annex C/1 to WCO Doc. 42.820.

application being limited to Appendix 2[140]; consequently the *de minimis* rule was moved from the General Rules ([5] (proposed) and [8]—TCRO's final text) to Appendix 2. In December 2000, it was confirmed that there was growing consensus on the mandatory character of this provision.[141] Since that meeting the facilitator's proposed text with the square-bracketed 10 percent threshold has been maintained as a single draft.[142] The commentary on [Rule 7 (*de minimis*)] of the latest text of the CRO states: "There was general support for this Rule. Some Members stated that the nature of this Rule should be optional for producers (although this Rule itself should be mandatory for all Members)" (see also the full text in Annex 2 to this chapter).

5. Issues related to the Harmonized System

(a) Harmonized System in brief. As a multipurpose nomenclature, the Harmonized System is used by 189 countries and Customs or economic unions (including 116 Contracting Parties to the HS Convention), representing about 98 percent of world trade (as of May 2004).[143] In the HRO, the HS is basically to be used for the following two purposes: (i) to identify (classify) goods in order to apply the relevant product-specific rules of origin set forth for the goods classified in that (split) heading or (split) subheading;[144] (ii) to serve as a basis for the change in tariff classification criterion to express substantial transformation.

Since the International Convention on the Harmonized Commodity Description and Coding System ("HS Convention") came into force on January 1, 1988, there have been three sets of amendments to the HS. The first involved minor (mainly editorial) changes to the initial edition and came into effect in 1992; the second set of amendments entered into force in 1996 as the second edition of the HS. The third edition of the HS came into force on January 1, 2002.[145] The next set of amendments is scheduled to take effect on January 1, 2007.

(b) General Rule 2: Harmonized System. In view of the amendments to the HS every five years, there must be a provision to determine which edition of the HS should be used for the HRO. Moreover, the TCRO has created a number of subdivisions in headings and subheadings and there must be some governing rules to apply to these subdivisions. General Rule 2, ¶ 1 (TCRO's final text) provided that the latest HS edition (as amended and in force) should be used, and that the subdivisions must be governed by the General Interpretative Rules and any relative Section, Chapter and Subheading Notes to the HS.

[140] WTO Doc. G/RO/M/30, ¶ 1.1.
[141] WTO Doc. G/RO/M/34, ¶ 1.1.
[142] WTO Doc. G/RO/45.
[143] The Harmonized System is used as the basis for: Customs tariffs; collection of international trade statistics; rules of origin; collection of internal taxes; trade negotiations (e.g., the WTO schedules of tariff concessions); transport tariffs and statistics; monitoring of controlled goods (e.g., wastes, narcotics, chemical weapons, ozone layer depleting substances, endangered species); and certain aspects of Customs controls and procedures, including risk assessment, information technology and compliance (*The Harmonized System—The Language of International Trade* (WCO, June 2002)).
[144] In Appendix 1 (definitions of wholly-obtained goods) the use of the HS is not referred to. Although there is no direct reference to the HS, the expression "waste" is used in both Definition 1(f) and the HS. It should also be noted that, in a few cases, a split heading corresponds exactly to the existing subheading. Consequently, when the HRO are implemented, references to the HS code may vary in practice depending on the purpose: for Customs declarations and statistics—headings and subheadings only; for origin purposes—split headings/subheadings.
[145] *See Amendments to the Harmonized System Nomenclature effective from 1 January 2002 Introduction*, WCO website, www.wcoomd.org.

Consequently, when the HS is amended, the "matrix" rules should be rectified accordingly. Columns A (HS code number) and B (Description of goods) can automatically be replaced with the new edition of the HS. However, the adjustment of column C (origin criteria) is not automatic.

The final TCRO text proposed that the TCRO could work on the technical rectification of the rules in time for when the amended edition of the HS enters into force (bracketed ¶ 2). The technical rectification does not entail the renegotiation of the agreed rules; it means that the application of the rectified rule should result in the same country of origin as the initial rule. The CRO agreed that it was necessary to adjust the presentation of rules of origin according to the HS nomenclature, but that doubts remained on whether ¶ 2 was the appropriate provision for any such statement.[146] One delegation suggested that Art. 6 of the ARO should be amended to insert such a provision.[147] In December 2000, the plurilateral meeting of the CRO noted that the majority of the group was in favour of its deletion as it was a rule of procedure falling under the scope of amendments to the HRO.

In subsequent plurilateral meetings, some delegations pointed out the need for a kind of mechanism regulating amendments to the HRO. The facilitator of the plurilateral meeting offered a new text in the box (commentary).[148] However, several delegations questioned the adequacy of the facilitator's proposal with reference to changes resulting from amendments to the HRO and some felt that it should also contain specific reference to the timely implementation of amended harmonized rules, and give them time for further consideration.[149] The latest text of the CRO indicates the Chairman's proposed text for a possible ¶ 2 of General Rule 2, together with the alternative text (see Annex 2 to this chapter).

(c) Review mechanism under Art. 6.3 of the Origin Agreement. At the request of the TCRO (Nineteenth Session), the issue of a mechanism for the submission of the views of the TCRO to the CRO with respect to amendments pursuant to Art. 6.3 of the ARO was carefully studied by the WCO Secretariat.[150] At the Twentieth Session (February 2002), this issue was discussed and the Secretariat's proposals were generally accepted by the TCRO. The latter's proposal was then submitted to the CRO for consideration in April 2002.[151] In his letter to the Chairman of the CRO, the Chairman of the TCRO observed that the TCRO was competent to carry out the technical tasks, in particular, technical rectifications to the harmonized non-preferential rules of origin, which would require (i) labor-intensive work by the Secretariat and (ii) extensive knowledge of both origin and the Harmonized System, and that the five-year review cycle adopted by the HS Committee should also be used for reviewing the HRO in order to make the rules more operational or to reflect technological changes.[152]

[146] WTO Doc. G/RO/M/30, ¶ 1.1.
[147] *Id*.
[148] WTO Doc. G/RO/M/35, ¶ 1.1.
[149] *Id*.
[150] The suggestions of the WCO Secretariat were provided in WCO Doc. OC0068.
[151] *See* Annex E/2 to WCO Doc. OC0071E2 or WTO Doc. G/RO/51.
[152] It was also observed that, since product cycles are becoming shorter, the pressure to keep the rules up to date will be great. On the other hand, more rapid amendment of the harmonized rules would appear problematic in view of the identified needs for stability and the inevitable legislative process to adopt these amendments. Therefore, a five-year review cycle would be most suitable in this respect (*id*.).

(d) Disassembly of goods into parts/components.

(i) A negative rule for disassembly

For the purposes of rules of origin, a change in tariff classification is the predominant criterion for expressing substantial transformation.[153] However, that does not mean that the HS always fully satisfies the requirement to be an "origin" nomenclature because the HS was not designed specifically with that purpose in mind. For instance, an assembly of numerous parts into an article entails a change of tariff classification in most cases; thus, such an assembly may be considered to constitute substantial transformation.[154] However, after some time the used and depreciated good may be disassembled into parts or components. Some of the parts or components may still be usable and exportable as second-hand parts, while others are discarded. In the case of computer processors, it is common practice to replace old processors with more rapid ones in order to upgrade PCs, though the PCs *per se* are still used. In those cases, a change of tariff classification of the old processor takes place from the PC falling under heading 84.71 to a cartridge contained microprocessor under heading 84.73; hence, a CTH or CTSH rule, if so agreed, will confer origin on the parts or components in the country where the disassembly takes place. This situation becomes an origin issue when these parts are exported.

There could be a way to prevent disassembly from conferring origin on the parts or components, i.e., by excluding a change from those particular headings or subheadings of the articles from which the parts or components could possibly be removed.[155] However, the TCRO recognized that it was almost impossible to articulate the same rule for parts that could be incorporated into any single "high-tech" good, e.g., semiconductors. Therefore, the TCRO decided to set out a negative rule at the Chapter level to deal with this question.[156]

(ii) Origin of disassembled (used) parts/components

When a negative rule is laid down, there must be an origin-conferring rule to determine the origin of the goods which were denied their originating status. Several proposals were tabled for Chapters 84 to 90, but not for other Chapters. It was understood that once the rule was decided for Chapters 84 to 90, the same principle would apply to other Chapters. The proposed rules are: (i) when the good from which the parts or components were removed *can* still perform its original function (e.g., *an almost brand-new properly-functioning China-made PC, whose US-made processor is changed to a faster one in India*), "The parts recovered from the good shall retain the country of origin of the

[153] *See also* Hironori Asakura, THE HARMONIZED SYSTEM AND RULES OF ORIGIN, 27(4) JOURNAL OF WORLD TRADE 5 (1993).

[154] There was very strong opposition to having an assembly of parts into a good of Chapters 84 to 90 (machine, motor vehicle, etc.) recognized as substantial transformation. The opponents proposed a value-added rule for those Chapters. For further details, *see* WCO Doc. OC0031.

[155] For example, one of the proposed rules for radiators (8708.91) was "CTSH, except from headings 87.01 to 87.06" (tractors, motor vehicles or chassis fitted with engines).

[156] For Chapters 42 to 46, 48, 49, 64, 66, 73 to 76, 78 to 81, 92 to 96, the following Chapter Note/Rule for disassembly was proposed and agreed as Basket 1 by the TCRO: "For the purposes of this Chapter, those rules which refer to a change of heading or subheading shall not apply to changes which result from disassembly". However, this text has not been endorsed as the final single text for all of the relevant Chapter Note/Rule.

good prior to disassembly" (One proposal only—*the origin of the processor is China*); and (ii) when the good from which the parts or components were removed *cannot* perform its original purpose without being restored or repaired (e.g., *a malfunctioning China-made PC whose complete hardware must be replaced; the monitor and keyboard still function. When the hardware is replaced in India, the PC is usable. When examining the malfunctioned hardware, the Malaysia-made modem is found still to be usable.*), four proposals were made.

The *first* proposal was "[the country where the parts are recovered]"; thus, the origin of the modem is India. This approach is easy to administer; however, the disassembly operation confers origin on the good. The *second* one was "[the country of origin of the good from which the parts are recovered]"; consequently, the origin of the modem is China. If all parts or components change their initial origin to the origin of the newly produced good, and if the disassembly operations do not confer origin on the parts or components, this approach seems to be convincing. The *third* suggestion was "[the initial country of origin of the parts]". The origin of the modem is Malaysia. This approach may not cause confusion when the parts or components bear the marking of the initial country of origin. Lastly, the *fourth* proposal was "[the general residual rules determine the origin of the parts]". It appears that there is no directly relevant rule to apply to this case in Appendix 2, Rule 3.

However, when the good from which the parts or components were removed *cannot* perform its original purpose *or* is not capable of being restored or repaired (e.g., *a China-made PC completely destroyed when the user's residence in India is flooded. However, locally made insulated cables are found still to be usable.*), Definition 1(h) of wholly-obtained goods determines the origin. In accordance with the definition "parts recovered in that country", the origin of the insulated cables is India (see sub-section C (wholly-obtained goods) for further information).

The TCRO questioned the consistency of rules for parts recovered from used goods and waste or scrap. The CRO examined these questions and observed that: (i) the TCRO's recommendation that disassembly should not be origin conferring had not yet been confirmed by the CRO; (ii) it would be beneficial for the origin result in this case to be the same as that provided in Appendix 1 with respect to the recovery of parts and raw materials; (iii) a rule basing origin on the country of recovery would be the easiest to administer among the options available, and would avoid the "tracing-back" problem; and (iv) in some circumstances the original origin of the recovered part may be readily known, by reason of the marking or otherwise.[157]

Finally, the CRO appeared to agree that the country of origin of the parts recovered from the goods is the country where the parts are recovered, unless the importer, exporter or any person with a justifiable cause to determine the origin of parts demonstrates another country of origin on the basis of verifiable evidence, such as origin marks on the part itself or documents.[158]

[157] WTO Doc. G/RO/M/29, ¶ 2.2.
[158] WTO Doc. G/RO/M/37, ¶ 1.1. The Minute described this proposal as gaining "growing consensus".

(e) Issues Relating to General Interpretative Rule 2(a)[159] *of the Harmonized System.*

(i) The "simple" assembly issue

GIR 2(a) seems to be one of the most difficult parts of the HS to apply in respect of rules of origin. There are positive and negative aspects. The positive ones include "a built-in mechanism to refrain simple processes or operations from conferring origin"[160] on a finished article or part manufactured from components or parts which have the essential character of the complete or finished ones. When a car without tyres is imported, that car is classified as a complete car, not as parts. Therefore, even if tyres are fitted to the car in the importing country, there is no change in classification. In this case, the classification process prior to applying proper rules of origin does deal successfully with one of the most difficult tasks of rules of origin, namely preventing simple assembly operations from conferring origin.

However, as described above under Section 2(b) 'the criterion of the "essential character" for the general residual rules', the classification principle might not always be appropriate for origin purposes. Thus, several delegations proposed that, in specified conditions, origin should be conferred on a good (e.g., finished steel spanners) manufactured from a material that has the essential character of the finished good (e.g., blanks of a steel spanner)[161], even though there is no change in classification.

(ii) Items Presented Unassembled or Disassembled

For the purposes of classification, the second part of GIR 2(a) is intended primarily to address situations where goods are divided into separate consignments purely for reasons of transport. For instance, a machine over fifty meters long may be transportable only if the machine is disassembled into several components. Those components are to be reassembled at the destination after completion of the Customs procedures. For the purposes of rules of origin, the expression "presented unassembled or disassembled" calls for particular attention. It should be noted that GIR 2(a) is not applicable to a set of materials which are to be further worked or processed before or during assembly, even if those materials are presented together to Customs. This means that only assembly operations of the components, whether or not complex, should take place in the importing country (for further details, see the Explanatory Note to GIR 2(a)).

(iii) Collections of parts

A few negative aspects were noted by the Technical Committee. When components or parts of goods are imported (either together or separately) for temporary storing and are finally exported as "kits" to another country in which these components or parts are to be physically assembled, a change of classification (from parts to articles) occurs by application of GIR 2(a) despite the fact that there is no substantial working or processing undergone in that country.

[159] GIR 2(a) "Any reference in a heading to an article shall be taken to include a reference to that article incomplete or unfinished, provided that, as presented, the incomplete or unfinished article has the essential character of the complete or finished article. It shall also be taken to include a reference to that article complete or finished (or falling to be classified as complete or finished by virtue of this Rule), presented unassembled or disassembled."

[160] WCO Doc. OC0031, ¶ 50.

[161] The term "blank" is defined in Explanatory Note (II) to GIR 2(a).

However, if those components or parts are not exported together, i.e., they are presented to Customs piecemeal as separate export consignments, there is no change in classification; those components or parts remain to be classified as parts. Therefore, Australia and the United States proposed that a collection of parts should not be considered an origin-conferring event.[162]

India and Senegal shared a different opinion on this matter. These delegations argued that, in principle, once the HS was used for classifying goods as well as the basis for a substantial transformation criterion, any modifications applied for the purposes of rules of origin that differed from these applicable for classification purposes would cause difficulties for both Customs and traders. Therefore, the legally binding texts, such as the GIRs, should be applied in a strict manner. Consequently, a kit of parts or components which has the essential character of the complete or finished article should be considered substantially transformed from individual parts or components, when those parts or components as collected take the form of a kit with manuals or instructional documentation for assembly and a guarantee by the supplier. Under this proposal, the origin of "do-it-yourself furniture" is the country where each part or component is collected and arranged as a kit, regardless of the place of final assembly by the consumer.

The CRO finally agreed that where a change in classification results from the application of HS GIR 2(a) with respect to collections of parts that are presented as unassembled articles of another heading or subheading, the individual parts should retain their origin prior to such collection.[163]

(iv) *Assembly of collection of parts*

The origin of the goods that are assembled from the collected parts or components has to be addressed. When "unassembled or disassembled articles", i.e., components or parts which are classified as goods by application of GIR 2(a), are imported and finally assembled in a country, is a change-of-classification rule considered to be satisfied in that country? Two different positions were noted. One was that the origin of the goods assembled from "unassembled or disassembled articles" is the country where the goods were physically assembled from the parts or components. The other was that the origin is retained in the country where a kit of the components or parts was classified as an article by application of GIR 2(a).

The CRO agreed that goods assembled from a collection of parts classified as the assembled good by application of GIR 2 should have origin in the country of assembly, provided the assembly would have satisfied the primary rule for the good had each of the parts been presented separately and not as a collection.[164]

(f) Packing and packaging materials and containers—General Rule 5. The first draft text relating to the origin of packing and packaging materials and containers presented with the goods appeared in the architecture as early as at the Third Session. Since then the principle has been generally supported. The CRO finally agreed that, unless the provisions of Appendix 1 or Appendix 2 otherwise require, the origin of packing and packaging

[162] *See* proposed Chapter note in WCO Doc. OC0031.
[163] WTO Doc. G/RO/M/37, ¶ 1.1.; G/RO/45/Add.15/Rev.1, p.188.
[164] *Id*.

materials and containers presented with the goods therein should be disregarded in determining the origin of the goods under General Rule 3, provided that such packing and packaging materials and containers are classified with the goods under the HS. The packing and packaging materials and containers which are not classified with their contents are separate goods, and hence their origin shall be determined in accordance with the appropriate rules set forth in Appendices 1 and 2.[165]

Apart from the issue of packing and packaging materials and containers, there was a similar question addressed by the TCRO, namely, goods "put up for retail sale". Although there was no consensus reached on this issue, a number of delegations supported the idea that merely putting up for retail sale alone does not express a substantial transformation. That issue was, however, addressed on a product-specific basis at the heading or subheading level, since the qualifying text "put up for retail sale" is used in headings or subheadings of various HS Chapters. For example, heading 52.07 covers cotton yarn (other than sewing thread) put up for retail sale. When cotton yarn of heading 52.06 is properly cut and reeled (weighing 125 grams or less) for retail sale[166], a change of heading takes place. The approach taken was to disallow a change from the heading(s) and/or subheading(s) of the possible content of the package to the classification of the package itself that was put up for retail sale.[167]

(g) Accessories and spare parts and tools—General Rule 6. When this issue was first discussed at the Third Session concern was expressed by several delegations as to whether accessories, spare parts and tools should be assigned the same origin as the good with which they are associated, even if they are not presented with the good.[168] However, these points were no longer pressed by the end of the technical examination. Therefore, the scope of this provision was limited to accessories, spare parts, tools, etc. which are classified and presented with a good. The TCRO's final text was generally accepted by the CRO. In June 2000, this text was moved from Rule 5(a) (TCRO's final text) to General Rule 9 (currently General Rule 6) as it applies to both Appendices.[169] The CRO agreed that accessories, spare parts, tools and instructional or other informational material classified and presented with a good should be disregarded in determining the origin of that good under General Rule 3, provided that they are normally sold therewith and correspond, in kind and number, to the normal equipment thereof.[170]

[165] One delegation still proposes an alternative text for General Rule 5. According to the proponent, "the current text of General Rule 5 does not take into account the situation where a container gives the whole its essential character and the container with its contents are classified under the provision for the container. Attention is called to the last sentence of HS General Interpretative Rule 5(a)".

[166] *See* Note 4 to HS Section XI and the Explanatory Note I. B(3) to HS Section XI.

[167] For example, a proposed rule for split heading 52.07(c) (cotton yarn (other than sewing thread) put up for retail sale: other) was "CTH, except from headings 52.04 through 52.06" (cotton sewing thread and cotton yarn).

[168] It was observed that often they are invoiced together with the good, but are not imported at the same time. Several delegates reported that, as a policy matter, their Customs administrations treat spare parts and accessories delivered separately and invoiced separately as having the same origin as the goods with which they are associated. They advised the TCRO that this practice had been widely accepted and satisfactorily administered. Other delegates reported that their Customs administrations make a separate origin determination, and that they would not favour automatically giving the same origin status to spare parts as to the machines for which they are delivered (Annex G/1 to WCO Doc. 39.870).

[170] WTO Doc. G/RO/M/30, ¶ 1.1.

(h) Putting up in sets [or kits]—Appendix 2, Rule 6. At the Third Session this issue was tabled and two proposals were considered by the TCRO. One was made jointly by New Zealand, Norway and Singapore, while the other was put forward by Japan. The first proposal offered two options: either (i) putting articles together into a set being origin-conferring subject to supplementary criteria; or (ii) setting out a general rule for sets based on a value-added rule. The latter proposal suggested that the country of origin of the set should be the country where the component that gave the set its essential character originated. At the Third Session, no particular preference was shown by delegations. The EC also proposed that the issue of sets should be addressed by residual rules to be presented at a later session. The TCRO then agreed to discuss this issue again when the residual rules were tabled. For that reason, none of the proposed texts was incorporated in General Rules at that time.

Two proposals for sets were presented by Canada and the United States at the Meech Lake informal meeting, together with a whole group of residual rules. At its Fourteenth Session, the TCRO thus resumed discussions with the addition of the EC proposal. All of these proposals suggested that merely putting articles into sets should not be substantial transformation. Canada took an essential character approach; the EC suggested the highest value of the articles; and the United States considered sets, with some exceptions, to be multiple goods, each of which should retain the individual country of origin. Subsequently, at the Fifteenth Session, a Working Group discussed this issue and arrived at a draft text containing each proponent's view as options, and identified the following three types of "sets"[171]: (i) goods explicitly mentioned as a set in an HS heading; (ii) goods classified as a set by virtue of HS GIR 3(b)[172]; and (iii) goods simply grouped together and not fulfilling the conditions laid down in GIR 3(b). It should be noted that "goods put up in sets for retail sale" mean goods which: (i) consist of at least two different articles which are, *prima facie*, classifiable in different headings; (ii) consist of products or articles put up together to meet a particular need or carry out a specific activity; and (iii) are put up in a manner suitable for sale directly to users without repacking (HS Explanatory Note to GIR 3(b)).[173]

At its Sixteenth Session, the TCRO continued discussions and generally agreed on two propositions: that merely putting up goods in sets is not origin conferring; and that if a set is comprised entirely of articles originating in a single country, the set has origin in that country.[174] However, the concept of sets under the HS is limited in scope and there were varying views as to whether the grouping of goods without meeting GIR 3(b) (e.g., six fondue forks or bottles of wine and whisky) should be recognized as "sets" for the purposes of rules of origin. Agreement was not reached on this point. Finally, two alternative texts for "putting up in sets [or kits]" (one almost identical to the draft of the Working Group and another prepared by the United States) appeared in the architecture.

[171] Annex C/1 to Doc. 42.820, ¶ 29.

[172] GIR 3(b): "Mixtures, composite goods consisting of different materials or made up of different components, and goods put up in sets for retail sale, which cannot be classified by reference to 3 (a), shall be classified as if they consisted of the material or component which gives them their essential character, insofar as this criterion is applicable."

[173] The Explanatory Notes (X) provide some examples of selections of products put up together which are thus not considered to be "goods put up in sets for retail sale": a can of shrimps (heading 16.05), a can of *pâté de foie* (heading 16.02), a can of cheese (heading 04.06), a can of sliced bacon (heading 16.02), and a can of cocktail sausages (heading 16.01); or a bottle of spirits of heading 22.08 and a bottle of wine of heading 22.04.

[174] Annex O/1 to WCO Doc. OC0010E3, ¶ 11.

These positions were maintained at the Seventeenth Session, and sent to the CRO for decision.

The CRO has not yet agreed on this Rule. Current Rule 6 has been renumbered several times. The latest text of the CRO maintains three possible options as the Chairman's proposal: A. goods put up in sets should retain the origin of the individual articles in the set (United States); B. the same as A except when such goods are explicitly mentioned as sets or kits or are classified as sets or kits by application of HS GIR 3(b), in which case the origin of the set or kit should be the country where it is put up (India); and C. merely putting articles into sets is not origin conferring (there is no need for a specific provision for sets) (Mexico).[175]

(i) Rules for mixtures. For the purposes of classification, mixtures are classified "as if they consisted of the material or component which gives them their essential character" (HS GIR 3(b)).[176] Rules for mixtures did not appear in the final text of the TCRO, though various aspects of the rules for mixtures had been discussed at an early stage of the negotiations. At the Third Session, a discussion started from the issue of a "mixture of fungible goods or materials"[177] and concluded that this issue should be addressed separately as the mixture on the one hand and fungible goods and materials on the other.[178] During the examination of agricultural products (mixtures of natural honey) at the Fourth Session, two approaches were proposed: (i) product-specific mixtures rules on a case-by-case or sector-by-sector basis; or (ii) a general rule for mixtures covering all products. The former approach was fully implemented by setting out a Chapter rule/note for mixtures during elaboration of product-specific rules of origin, in particular in the agricultural and chemical products sectors, while a draft text for the mixtures rule was proposed at a later session.

At the Thirteenth Session, the mixture issue was discussed as part of a residual rule which had to determine the origin of goods that failed to satisfy a change-of-classification rule, i.e., goods produced from materials with the same classification, by mixing them in many cases. The TCRO opted to deal with the mixtures issue by drafting residual rules, instead of introducing a General Rule for mixtures. At the Fourteenth Session, a draft text appeared in the architecture as Appendix 2, ¶ 4 (Special Provisions), subpara. (e)[179] stating the same message. At the Fifteenth Session, a Working Group prepared three alternative texts[180] to address the mixtures' issue as part of residual rules.

At the Sixteenth Session, some Members considered that the ultimate or final residual rules were sufficient to determine the origin of mixtures which did not satisfy primary rules; thus, there was no need for a specific mixtures provision in the Appendix 2 residual

[175] There is growing consensus on Option C. There was also growing consensus that putting up in sets was not origin-conferring, and that there was no need for a specific rule as well as for reference in Rule 2(d) of Appendix 2 (WTO Doc. G/RO/M/Rev.2.).

[176] Similar to goods put up in sets for retail sale, there are certain headings and subheadings which explicitly refer to mixtures, e.g., subheading 0710.90 (mixtures of vegetables).

[177] WCO Doc. 39.864, ¶¶ 39–42.

[178] At that stage of the technical examination, the elaboration of the rules did not make a clear-cut distinction between sets, unassembled goods under GIR 2(a), accessories and spare parts and mixtures (Annex A to WCO Doc. 39.865. Add.1., ¶ 1).

[179] Annex C/2 to WCO Doc. 42.711.

[180] These texts intended that the origin of mixture should be assigned to: (i) the country which contributed the greatest proportion of materials; (ii) the country which contributed the greatest proportion of a specific material; or (iii) the country where goods/materials are mixed, provided certain criteria are met. For further details, *see* Annex C/1 to WCO Doc. 42.820, ¶¶ 33–35.

rules. For other Members, it was important to preserve the option to employ residual rules designed for mixtures either at the Chapter or Appendix 2 level.[181] The three draft texts were maintained at the Sixteenth Session with the addition of a new paragraph. However, at the Seventeenth Session in May 1999 those texts were finally deleted. Thus, the general residual rules (Rule 3) will determine the issue of mixtures, unless the CRO provides specific mixture rules in the primary rules.[182]

C. Wholly-obtained Goods (Appendix 1)

An overview of the brief history of the Harmonization Work Programme and details of the architecture of the HRO have been described above. The next stage is to examine how rules at the Appendix level have been discussed and subsequently agreed or retained as issues. Firstly, an outline of the development of definitions of wholly-obtained goods by the TCRO is provided below. The treatment of the expressions "country", "vessel" and "scrap and waste" is then explained. Finally, a newly introduced concept of "outside a country" and related definitions will be considered.

1. Preparatory Discussion at the First Session

In the context of the first items mandated by the ARO (Art. 9.2(c)(i)), the WCO Secretariat prepared a working document on definitions of wholly-obtained goods for discussion by the TCRO at its inaugural session. The Secretariat's proposals, based on the text of Annex D.1 to the Kyoto Convention, contained several new suggestions.[183] For example, a definition of the term "country" was provided and several new concepts were inserted, such as "product of activities in territories not subject to the jurisdiction of a single country".

One of the contentious issues was the treatment of the term "country". The Secretariat draft referred to the first paragraph of the Explanatory Notes[184] to the Marrakesh Agreement Establishing the World Trade Organization ("WTO Agreement") and provided a "geo-physical" definitions of the term "country".[185] Another issue raised concerned the treatment of Customs unions; the working document supported the idea that: "for origin purposes the definition of 'country' would also include customs union".[186]

Members welcomed the working document since it provided the TCRO with a good "starting point" for discussion. Although most of the conventional Kyoto-type definitions were supported by the delegations, none of the new suggestions was accepted. Members did not agree to use certain politically sensitive terms, such as "sovereignty", or refer

[181] Annex O/1 to WCO Doc. OC0010E3, ¶ 14.

[182] With regard to specific mixture rules for the agricultural sector, *See* D.1 below, *Agricultural Products (HS Chapters 1 to 24).*

[183] WCO Doc. 39.166.

[184] The first paragraph of the Explanatory Notes states that: "The terms 'country' or 'countries' as used in this Agreement and the Multilateral Trade Agreements are to be understood to include any separate customs territory Member of the WTO".

[185] "For the purposes of the Agreement on Rules of Origin the term 'country' shall be taken to mean the land, including the airspace above and the soil and subsoil beneath the land, and the territorial sea appurtenant to the land, including the airspace above and the seabed and subsoil beneath the territorial sea, over which a country exercises sovereignty. The term 'country' shall also be taken to include free ports, free zones and in bond operations. The term 'territorial sea' shall be interpreted in accordance with international law as defined in the 1982 Convention on the Law of the Sea" (WCO Doc. 39.166, pp. 2 and 6.) These definitions were placed in the column entitled "Explanatory Notes" that were intended to be legally binding.

[186] WCO Doc. 39.166, ¶ 3. *See also* Annex D.1. to the Kyoto Convention, Commentary (2) to Definitions.

directly to the UN Convention on the Law of the Sea[187] to define "territorial sea". Several delegations explicitly expressed their opposition to including a Customs union as part of the definition of "country".[188] The treatment of the exclusive economic zone ("EEZ") was also controversial as to whether "country" should include the EEZ. It appears that these issues were too substantial for discussion at the one-week inaugural session, even though three months were allotted for the work of Phase I. Finally, the TCRO decided to refer to the CRO the issue of whether the definition of the term "country" was a matter clearly within the competence of the TCRO.[189]

2. TCRO's First Text of Definitions of Wholly-Obtained Goods

At its Second Session, the TCRO had to agree to the text and submit it to the CRO in time for the deadline of Phase I (October 1995). Many of the proposed definitions were readily agreed by the TCRO, with a slight modification or addition of terms. With regard to the definition of "scrap and waste", several delegations proposed to delete the expression "fit only for disposal or for the recovery of raw materials", while some Members opposed the idea on the ground that the expression was not an "end-use" provision but merely stated the current condition of the goods.[190] The distinction between "used goods" and "waste and scrap" was proposed by a delegation, taking into account the fact that the HS does not adequately define many types of scrap and waste.[191] On the other hand, several delegations were of the view that the "used articles" in question were implicitly covered by the term "scrap and waste". With regard to the addition of "articles collected" and "recovery of parts" to the text of the definition, one group emphasized the commercial reality of the international collecting and recycling trade, while another preferred to consider this issue during Phases II and III.[192] The TCRO decided to send the CRO two alternative texts, both in square brackets. The first text was the original Secretariat proposal from WCO Doc. 39.481, and the second one was a delegation's proposal, which consisted of two parts.

A number of delegations supported the view that the term "solely" (Definition 1(i)) should be applied in its literal sense, whereas several other Members preferred a flexible interpretation to be achieved by a General Rule, such as a *de minimis* rule or by means of an explanatory note.[193] The TCRO agreed to interpret the term "solely" in its strict sense.

Part 2 of the definitions dealt with goods obtained outside a "country". Consequently, the scope of this part could be clarified only once the term "country" was defined. In

[187] The UN Convention on the Law of the Sea entered into force on November 16, 1994; when the WTO Agreement came into force in January 1995, most of the major trading partners were not yet Contracting Parties to the Law of the Sea Convention. As of July 16, 2004, 145 countries have ratified, acceded to or succeeded to the UN Convention on the Law of the Sea. However, there were only 82 Contracting Parties in January 1995. (UN public Web site: www.un.org/Depts/los/reference_files/status2003.pdf) At a later stage of the negotiation, the CRO used the Law of the Sea Convention as a basis for discussion (WTO Doc. G/RO/M/32, ¶ 1.1.).

[188] WCO Doc. 39.310, ¶ 192.

[189] WCO Doc. 39.310, ¶ 201.

[190] Annex D/1 to WCO Doc. 39.488, ¶¶ 16 and 18.

[191] According to this delegation, "used articles" should be qualified with words to the effect that they can no longer perform their original purpose and cannot be repaired or restored. The WCO Director of Nomenclature and Classification commented that used articles that could not be re-used would normally be classified as scrap and waste. The HS Nomenclature contained headings for scrap and waste that could be classified according to the main material used. There was a problem, however, as to how to classify scrap and waste consisting of different materials (*Id*., ¶ 23.).

[192] Annex D/1 to WCO Doc. 39.488, pp. 4–12.

[193] *Id*., ¶ 40.

response to the TCRO's request, the CRO agreed to set up a drafting group to elaborate a definition of the term "country" for the sole purpose of the ARO.[194] The TCRO decided that it would review this matter when the CRO had finished its work on the definition of the term "country".

Several delegations opposed the proposed definition for the term "vessel" which linked only the country of origin to registration of a vessel. A number of countries suggested that chartering and leasing also be included. The TCRO decided to refer to the CRO the issue of whether Definitions 2(i) and (ii) should include the possibility that goods obtained on or by means of a chartered vessel or factory ship or on a leased structure or installation or spacecraft should be considered as being wholly obtained.[195]

3. The TCRO's Further Elaboration of Definitions of Wholly-Obtained Goods

The CRO supported most of the TCRO's first text with regard to definitions of wholly-obtained goods, but requested the TCRO to: (i) refine Definition 1(c) (products obtained from live animals); (ii) refine Definition 1(d) (plants and plant products harvested) with respect to the interpretation of "plant products" and "products obtained from a plant"; (iii) refine Definition 1(g) (goods obtained solely from other wholly-obtained goods) in terms of consistency between the interpretation of the term "solely" and Definition 2[196] in minimal operations or processes; (iv) address the issue of the origin of recovered parts with respect to renumbered Definition 1(g) (renumbered Definition 1(f)(i) as 1(g) and 1(g) as 1(h)); (v) revisit the Explanatory Notes on the basis that they are to be legally binding.[197] The CRO formulated an alternative text for Definition 2 and agreed that this issue required further deliberation and consultations. Several countries reserved their position on this issue. The CRO concluded that a general and abstract definition of the term "country" was not required at this time, and requested the TCRO to proceed with the Harmonization Work Programme in the absence of an abstractly constructed definition of the term "country"; and that the CRO should delay its consideration of this issue until the TCRO had forwarded all of the unresolved issues.

At the request of the CRO, the TCRO (Third Session) re-examined its first text of the definitions of wholly-obtained goods. The TCRO explained that Definition 1(c) was intended to cover, for example, "wool" as illustrated in the Explanatory Note, whereas renumbered 1(h) covers products made from "wool". The TCRO decided to retain the text of the definition, but to insert the expression "without further processing" into the legally binding Note to Definition 1(c).[198] Concerning Definition 1(d), the expression "plant products" was taken to cover, for instance, fruits that were not in themselves the whole plant and had not been obtained by processing the plant, but which were obtained from the plant, in a similar sense to milk obtained from a cow under Definition 1(c).[199]

With regard to interpretation of the term "solely" in renumbered Definition 1(h) (renumbered again as 1(i)—a new Definition 1(h) was inserted to cover parts or raw materials recovered) and the relationship of this definition to Definition 2 of minimal operations or processes, the CRO's question was related to its work on the overall

[194] WTO Doc. G/RO/M/2, ¶¶ 12–13.
[195] Annex D/1 to WCO Doc. 39.488, ¶ 69.
[196] Definition 2: "The minimal operations or processes defined above shall not be taken into account in determining whether a good has been wholly-obtained in one country." (TCRO's text at its Second Session)
[197] WTO Docs.: G/RO/M/3, ¶¶ 4.11–4.20 and 4.24–4.25; G/RO/M/5, ¶¶ 2.4–2.7, 2.9 and 2.12–2.14.
[198] Annex F/1 to WCO Doc. 39.870, ¶¶ 4–8.
[199] *Id*., ¶¶ 9–10.

architecture of the HRO.[200] To help clarify the interpretation of the term "solely", a draft legally binding note required that: the goods must have been obtained or produced from the wholly-obtained products of that country mentioned in Definitions 1(a) to (h); and the products of Definitions 1(a) to (h) must not have undergone processing in another country.[201] The TCRO decided that it would defer a decision on this draft note, and that a final decision on a legal note for renumbered Definition 1(i) should await a decision on the renumbered Definitions 1(g) (articles collected) and 1(h) (parts and raw materials recovered).[202]

The TCRO agreed that parts recovered in the same country from articles collected in that country were to be considered as wholly obtained in that country. However, it did not reach a consensus concerning the origin of parts recovered in a country from articles collected in another country. The following five possibilities for conferring origin were analysed: (i) country of origin of the parts; (ii) country of origin of the articles collected; (iii) country of consumption of the articles collected; (iv) country where the articles were collected; and (v) country where the parts were recovered.[203] A number of delegations were of the opinion that the wholly-obtained status should be conferred on the basis of where the parts were recovered, and they proposed the text for a new Definition 1(h).[204] One delegation made an alternative proposal and expressed a different technical opinion, namely that articles collected in a country deserved the origin of that country under the assumption that these articles were consumed in the country of collection. Consequently, the original origin was lost. For the same reason, the parts recovered from those articles deserved the origin of the articles collected, reflecting thereby the country where the parts had been consumed.[205] However, this proposal was criticized on the grounds that: (i) recovery of parts was no less demanding than collecting; (ii) finding out "true" origin of recovered parts was not possible; (iii) parts might be recovered from articles collected in several countries; and (iv) consumption and collection normally could not always take place in the same country.[206]

4. The CRO's Elaboration of Definitions of Wholly-Obtained Goods

The Informal Working Group, established by the CRO at its meeting on November 16, 1995, considered the parts issue and proposed a text[207] to be added to alternative 1 to draft Definition 1(h), which could resolve some policy concerns that were raised.[208] The CRO agreed to place the footnote, in square brackets, to alternative 1 to draft Definition 1(f).[209]

[200] *Id*. ¶ 11.
[201] *Id*. ¶ 12.
[202] *Id*. ¶ 13.
[203] *Id*. ¶¶ 16–18. The TCRO commented that due to the administrative burden and other technical problems (including lack of adequate proof of origin) in connection with the first three possibilities, the Technical Committee focused its work on the last two.
[204] "Parts or raw materials recovered in that country from articles which can no longer perform their original purpose nor are capable of being restored or repaired." (Annex F/2 to WCO Doc. 39.870)
[205] Annex F/1 to WCO Doc. 39.870, ¶¶ 21–22. "Parts or raw materials obtained in that country from articles collected in that country which are not fit for their original purpose nor are capable of being restored or repaired and are fit only for disposal or for the recovery of raw materials." (Annex F/2 to WCO Doc. 39.870)
[206] Annex F/1 to WCO Doc. 39.870, ¶¶ 23–27.
[207] "In the recovery of parts or raw materials, environmental considerations may arise, particularly for radioactive, hazardous and toxic waste that may result from the recovery of parts or raw materials from articles. In this connection, this rule is without prejudice to Members' rights to take WTO-consistent measures to protect the environment" (WTO Doc. G/RO/M/6, ¶ 2.4).
[208] *Id*.
[209] *Id*. ¶¶ 2.12–2.13.

With regard to Definitions 1(c), (d) and (i), the CRO approved the new text of the Notes to Definitions 1(c) and (d), and took note of the report by the TCRO concerning Definition 1(i).[210] Except for minor modifications, Definitions 1(a) to (g), 1(i) and the Notes to Definitions 1(a) to (f) are retained in the latest text of the CRO. At a later stage of the negotiations, the CRO agreed to adopt the text of alternative 1 for Definition 1(h) without the footnote, and to delete the Note to Definition 1(i) (See the full text in Annex 2 to this chapter).[211]

5. Elaboration of Definition 2—Goods Obtained Outside the Country

Since the TCRO sent its draft to the CRO as the First Report, Definition 2 has never been referred back to Brussels. At its meeting in February 1996, the CRO formulated the single alternative draft text.[212] The CRO was of the opinion that the alternative text presented a possible basis for an agreed definition.[213] At the meeting in May 1996, when the Informal Working Group considered this issue with the intention of presenting a proposal for a solution to the CRO for formal adoption, it was concluded that "regrettably, discussions in the Informal Working Group in the past few days had resulted in branching out that single alternative draft text into four options".[214]

At the October 1996 meeting, the WTO Secretariat circulated a succinct comparative analysis of the four options[215]; the CRO agreed to adopt the bracketed one-option draft for Definition 2 recommended by the Informal Working Group.[216] The Group further reviewed the text and reached consensus on the main body of the text of Definitions 2(i), 2(ii) and 2(iii). There was also agreement on the text of the note. At its meeting in February 1997, the CRO agreed with the single text.[217]

Argentina proposed an alternative text regarding the scope of the term "country".[218] In response to the Argentine proposal, most delegations strongly expressed the view that the definition of the term "country" should continue to focus on practical issues having

[210] *Id*. ¶¶ 3.2–3.8.
[211] WTO Docs. G/RO/M/32, ¶ 1.1., G/RO/M/34, ¶ 1.1.
[212] WTO Doc. G/RO/M/5, ¶ 2.12.
[213] *Id*.
[214] WTO Doc. G/RO/M/6, ¶ 2.14.
[215] As key legal issues, the four options are identical, except for (a) the geographical extent of a country's territory, and (b) the nationality of vessels. Concerning geographical extent of a country's territory: (i) Option I does not specify the geographical extent of a country's territory; (ii) Option II uses the term "maritime zones under national jurisdiction"; (iii) Option III uses the term "customs territory of a Member"; and (iv) Option IV uses the term "territorial sea". With regard to nationality of vessels: (i) Options I, II and III rely on registration of a vessel to determine its nationality; and (ii) Option IV requires a genuine link between the vessel and the user's country.
[216] WTO Doc. G/RO/M/8, ¶ 3.3. However, Japan and Korea reserved their position. Japan's comment was that the use of the term "country" without definition would cause legal problems as well as general confusion, and that the relationship between subparagraphs 2(i) and 2 (iii) needed further clarification (¶ 3.4.).
[217] Definition 2 : (i) Products of sea-fishing and other products taken from the sea outside a country are considered to be wholly-obtained in the country of registration of the vessel that carries out those operations. (ii) Goods obtained or produced on board factory ships are considered to be wholly-obtained in the country of registration of the factory ships, provided that those goods are manufactured from the products referred to in subparagraph (i) originating in the same country. (iii) Products taken from the seabed or subsoil beneath the seabed outside a country are considered to be wholly-obtained in the country that has the rights to exploit that seabed or subsoil (WTO Doc. G/RO/M/9, ¶ 3.2.).
[218] For Definition 2(i), the scope extends to the sea outside the territorial sea and maritime zones over which the coastal State has jurisdiction; while in Definition (iii), the scope extends to the area of the seabed and ocean floor and subsoil thereof outside national jurisdiction, as defined in the UN Convention on the Law of the Sea (*Id*.).

Table 5: Summary of positions with regard to definition 2

1. Products of sea-fishing and other products taken from the sea, and	
2. Goods obtained on board a factory ship	
(1) Within the territorial sea [including the Contiguous Zone (Argentina)]	Definitions 1(a), (b), (c), (d), (i)
(2) Within the Exclusive Economic Zone (EEZ)	Option A. Flag of the vessel or factory ship Option B. Registration of the vessel or factory ship Option C. The coastal State
(3) On the high seas	Option A. Flag of the vessel or factory ship Option B. Registration of the vessel or factory ship
3. Products taken from the seabed or subsoil beneath the seabed	
(1) Within the territorial sea [including the Contiguous Zone (Argentina)]	Definition 1(e)
(2) Within the continental shelf (EEZ)	Option A. The country that has the rights to exploit Option B. The coastal State
(3) Beyond the limit of national jurisdiction ("the Area")	The country that has the rights to exploit

(*Source:* WCO training material)

a bearing on the assignment of origin on products produced or obtained either within a country or outside a country. In this regard, it was agreed that the Argentine proposal required further consultations.[219] New Zealand also commented on the Note.[220] Japan, supported by Venezuela, recalled its proposal made during the informal consultations.[221]

The CRO deferred the issue until the June 2000 meeting. At that meeting, in the light of the new proposals made by two delegations, it was decided that any future discussion should focus on the following substantive issues: (i) the concepts of "territorial sea" and "exclusive economic zone"; and (ii) "nationality" of the vessel: flag as a single criterion to determine origin of fishery products outside the territorial sea.[222] In December 2000, one delegation submitted a new alternative text.[223] At the time of writing, six alternative texts are being tabled (see Annex 2 to this chapter). The above table illustrates the positions of delegations and the related key issues as at the time of writing.[224]

Definitions 1(a) to 1(i) have already been agreed by the CRO. However, the CRO may require more time to resolve Definition 2 issues. The definition of a "country" might not be provided for by the CRO; the treatment of the EEZ would implicitly provide an answer to this question. The treatment of a "Customs union" was discussed by the TCRO at an early stage in the negotiations; that question has not been examined. Furthermore, several early draft texts referred to products obtained in a spacecraft. It appears that these kinds of provision will be discussed again when the actual need arises.

[219] *Id*.

[220] The goods are considered to be wholly-obtained in a country that granted registration to chartered vessels or factory ships, provided that this registration was in accordance with the requirements of that country (*Id*.).

[221] A footnote to Definition 2(i) to read: "Further consideration should be given to the scope of the term "country" if necessary, in the course of the harmonization work programme".

[222] WTO Doc. G/RO/M/30, ¶ 1.1. The proponent of the "alternative" text for Definition 2 withdrew its proposal.

[223] G/RO/M/34, ¶ 1.1.

[224] This table does not reflect the full details of the proposals.

As explained in Sub-section B, definitions of wholly-obtained goods are placed in Appendix 1. Two governing Rules are provided before the texts of the definition. Rule 1 provides for scope of application, and Rule 2 covers minimal operations and processes. As already mentioned, "definitions of minimal operations or processes that do not by themselves confer origin to a good" (Art. 9.2(c)(i)) began as an independent Appendix and now finds its place as an Appendix 1 Rule).

D. Product-Specific Rules of Origin (Appendix 2)

As a brief history of Phases II and III of the negotiations indicates, the TCRO spent a considerable time elaborating product-specific rules of origin. A total of 486 product-specific issues were sent to the CRO for decision[225]; the TCRO's referral documents alone included some 650 pages of narrative explanation, and amounted in total to over 2,000 pages, including "matrices".[226] On the other hand, it is also a fact that 511 out of 1,241 headings or 41 percent of all the headings have been agreed by the TCRO (see Table 4).

As has been described earlier, the product-specific rules of origin are designed to determine the origin of goods the production of which involves more than two countries (Art.9.1(b)). Given that the sequential approach was agreed, Appendix 2 rules (product-specific rules of origin) are applicable only when a definition of Appendix 1 (definitions of wholly-obtained goods) does not determine the country of origin of a good. Two types of origin-conferring rules, i.e., the primary rules and the residual rules, must also be subject to that principle. When two or more primary rules are provided, these primary rules must be co-equal. However, this principle does not preclude the possibility of providing a set of primary and residual rules which have a hierarchical structure, i.e., the "cascading" approach proposed by the United States for Chapter Rules/Notes for Chapters 84 to 90.[227] By way of illustration, a summary of the discussions for three product sectors—agriculture, textiles and machinery—is set out below.[228]

1. Agricultural Products (HS Chapters 1 to 24)

The origin of agricultural goods is determined, in many cases, by application of a definition of wholly-obtained goods. In fact, Definitions 1(a) to (d) in Appendix 1 are applicable, exclusively or in most cases, to the agricultural sector. However, a major issue discussed—and still being argued in the CRO—relates to the origin of processed agricultural goods, for which two fundamental positions have been presented.

One argument is that the origin of agricultural products should always be carried forward from the original product (having been wholly obtained in that country) and cannot be changed by subsequent processing. Under this scenario there exists no substantial transformation for agricultural goods. To articulate this position, the initial or the evolved "Ottawa language" has been used. For those countries/semi-governmental organizations

[225] Some issues were treated as "horizontal" and were dealt with under the architecture.

[226] By August 2004 the CRO had resolved 349 issues out of 486, i.e. 71.8 percent (*see* Table 4 above).

[227] Under this approach a tariff-shift rule is applied first and a subsidiary rule, proposed for specific products only, is in the second row in the "matrix". When origin is not determined by the application of the primary rules in the "matrix", Chapter Rules/Notes are applied also as primary rules. If, despite the latter, the origin of the good cannot be determined, the product-specific residual rules set out as Chapter Rules/Notes are then applied in the order stipulated.

[228] *See also* Philippe Nell, *WTO Negotiations on the Harmonization of Rules of Origin : a First Critical Appraisal*, 33 JOURNAL OF WORLD TRADE 3 (1999).

having made a considerable investment in promoting the image of a particular commodity linked with the country of origin as a "brand name", retaining the origin of the source material was an uncompromisable option. Although these proponents recognize the economic reality of blending or mixing source materials originating in more than one country, their products must carry the name of the place where they were originally produced. It was at a very late stage in the negotiations that several delegations proposed to separate the issue of labeling for retail sale from the origin of goods for Customs purposes, in order to achieve a possible compromise. This proposal has been considered by delegations with interest.

Another argument is that the processing of agricultural raw materials is basically a substantial transformation, and origin should be conferred on the processed goods in the country where these processes are carried out. This would imply use of "Ottawa" type rules or tariff-shift rules with extensive use of split (sub)headings. This position was championed by countries which import source materials and then process them. However, it was not easy to draw a line between "simple" processes and substantial processes. For instance, chilling, freezing or shelling of fish could be agreed as a non-origin-conferring process because such operations are intended to keep the fish in good condition; on the other hand, drying, smoking or salting of fish has been subject to discussion as these processes change the original condition of the fish.

With regard to mixtures and blending, three divergent views were presented: (i) mixing or blending is origin conferring (the country where the goods are mixed or blended); (ii) mixing or blending is origin conferring, provided a specified criterion is met (either the country that supplies more than a specified level (by weight or volume)[229] of the source material or the country where the goods are mixed/blended); or (iii) mixing or blending is not origin conferring, and thus origin should be determined by application of the residual rules (origin is the country that provided the major portion of the source material).[230] Option (i) above was proposed for the primary rule. Option (ii) is a combination of the primary and the Chapter residual rules.[231] This seems to be securing growing support.

2. Textiles and Textile Articles (HS Chapters 50 to 63)

The textile sector was one of the most difficult areas of negotiation, since major importing countries have maintained their own well-established rules of origin under the Multifibre Arrangement ("MFA") or bilateral arrangements. From the outset, it was clear that an easy compromise was unlikely in view of the strong opposition by various textile lobbies in different Members. The negotiations naturally started with proposals identical to importing countries' current rules. Consequently, printing or dyeing of yarn and fabrics remains one of the most contentious issues in this sector. On the other hand, developing countries have tried to confer originating status on the goods they are actually producing. Lenient rules were thus favoured by those countries.

Under the circumstances, an important agreement was reached by the TCRO and the CRO. The production of: (i) yarn from fibre, (ii) fabric from yarn, and (iii) apparel, parts or accessories of garments knitted or crocheted to shape are, by themselves,

[229] The proposed criteria (primary rules) are: 50 percent in general, 85 percent and 75 percent in volume for wine; 85 percent in volume for spirits; 85 percent in weight for coffee; 75 percent in weight for olive oil.

[230] The term "mixing" is defined as the deliberate and proportionally controlled operations involving two or more identical or different interchangeable materials.

[231] When the primary rules for the mixture are not met, the Chapter residual rules determine the origin of the mixed goods to be the country where the mixing was carried out. Thus, the general residual rules (the country contributing the major portion) are not to be used.

origin conferring. The principle of a "two-stage/double jump" (e.g., fabrics from fibres, or garments from yarn), found in many preferential rules of origin, was not adopted. Furthermore, a number of processes have been recognized as substantial transformation by a majority of Members. Such processes include the production of: garments by assembly from parts that are cut to shape from fabric; and accessories (ties, gloves, etc.) by assembly from parts that are cut to shape.

3. Machinery, Transport Equipment and Photocopying Apparatus (HS Chapters 84 to 90)

Regardless of the size or value of the goods—e.g., from semiconductors or portable radios to gas turbines, oil tankers or spacecraft—the predominant production process for goods of Chapters 84 to 90 is an assembly operation. Thus, from the beginning of the negotiations, the single major issue has been clearly identified and argued, i.e., whether assembly operations alone should be recognized as origin conferring. For this generic issue, two divergent views were first presented. One position was to recognize a change from parts (suitable for use solely or principally with a particular kind of machine) to articles expressed by a change-of-classification rule to be origin conferring. The proponents of this view were confident that the inherent HS structure was suitable for purposes of origin determination; thus, a tariff-shift rule alone should be used. As the HS forms the basic foundation, the term "parts" is subject to the definition under the HS. Another position put forward was not to recognize a change from parts (suitable for use solely or principally with a particular kind of machine) to articles as origin conferring. This view begins with the premise that the HS is not created for purposes of origin determination; consequently, even the so-called screwdriver assembly meets a change-of-tariff-classification criterion. Paradoxically, when the quality of a good is improved significantly, the classification remains unchanged. The proponents argued that such assembly operations could be considered as substantial transformation when a specified *ad valorem* percentage of added value prescribed for a particular good was achieved.

Assembly operations are, of course, not limited to the transformation from parts to articles. The origin of parts became a new focus known as a "parts-to-parts" issue. Members realized that as more parts become progressively incorporated into other parts (subassemblies or components) in the production processes, the less likely they are to have been manufactured directly from raw materials. Under the current "e-commerce" practice or the "just-in-time" system of assembly, enterprises do not always produce those parts by themselves despite their capability to do so; they prefer to remain competitive in the market and procure parts from somewhere else at a lower cost and under more acceptable conditions.

The initial proposal for parts by the tariff-shift rule approach was, in most cases, CTH—requiring a change from outside the category of "parts suitable for use solely or principally for a particular machine". If this were the rule, certain production processes of parts, such as "a subassembly incorporating individual parts" or "a component consisting of numerous subassemblies", do not result in a change of classification. This situation led to the proponents of the tariff-shift rules splitting into two groups. One group (Canada, Japan, etc.) tried to resolve these issues by splitting the "parts" headings or subheadings. The intention was to confer origin on particular "parts" assembled from other parts of the same heading or subheading by meeting a simple "CTHS" or "CTSHS" rule. These proponents, however, argue that exhaustive splitting is not necessary and that there is an alternative, i.e., the general residual rules which are themselves sufficient. Another group (India, Singapore, Morocco and the United States) proposed the establishment of

definitions or requirements for assembly to be considered substantial, as well as to use the tariff-shift rules. These proponents wanted to avoid a situation where thousands or tens of thousands of parts are aggregated, based on the country of origin of the source parts, in order to apply the general residual rules. As already mentioned, under current commercial practice, parts are not always supplied from the same country. It appears that, in this case, the administrative cost of determination of origin may diminish the benefit of the harmonization of non-preferential rules of origin. The United States suggested the "cascading" approach mentioned earlier. The U.S. approach has been criticized for its complexity, but is recognized as a well-elaborated method to deal with issues of assembly of parts into other parts, emphasizing that the approach can determine the country of origin of any single good without using a value-added rule as well as the general residual rules.

The proponents (for all Chapters 84 to 90—the EC; for certain Chapters/headings—Brazil, Egypt and Turkey) of the value-added rules did not alter their position. They believed that value-added rules were undoubtedly able to address this "parts-to-parts" issue better, and could be administered much more easily than the complex "cascading" approach or the use of conceptual definitions. At the same time, they were of the view that further splitting of the "parts" headings or subheadings was definitely not the solution to the problem, primarily because a simple "CTHS" or "CTSHS" rule should not confer origin on the parts in question, given that their position did not recognize assembly of articles from components, or components from parts, as origin conferring.

E. Implications of the Implementation of the HRO for Other WTO Agreements

Although Arts. 3(a) and 9.1(a) of the ARO state explicitly that the HRO should be applied equally for all purposes as set out in Art. 1, two questions have been raised as to whether: (i) the HRO should not be applied to other WTO instruments (even though explicitly referred to in Art. 1.2 of the ARO) which might be governed by another set of disciplines; and (ii) the HRO should automatically be applied to all the WTO instruments (including those enumerated in Art. 1.2 of the ARO) where the country of origin needs to be determined in the course of trade in goods.

1. Initiation of a Study on the Implications of the Implementation of the HRO for Other WTO Agreements

The issue of the implications of the implementation of the HRO for other WTO Agreements was first taken up as an agenda item by the CRO in July 1998; it had never been discussed by the TCRO. India initiated this issue and suggested that the WTO Secretariat analyse the implications of how different proposals for the textiles sector would impact on the flow of trade and/or the rights and obligations under various WTO Agreements and instruments referred to in the ARO.[232] In response to this request, the WTO Secretariat prepared a working document which compiled the provisions relating to the rules of origin in various WTO Agreements.[233] In addition, several countries submitted proposals on this matter.[234]

[232] WTO Docs. G/RO/W/28/Rev.1 and 30.

[233] WTO Doc. G/RO/W/31. *See also* a general study paper prepared by UNCTAD, *Globalization and the International Trading System—Issues Relating to Rules of Origin*, UNCTAD/ITCD/TSB/2 (1998).

[234] Dominican Republic and Honduras (WTO Doc. G/RO/W/33); El Salvador (G/RO/W/34); Korea (G/RO/W/38); and United States (G/RO/W/32).

At the beginning of the discussions, India's concern was the implications of the proposed restrictive rules of origin to be applied to the existing textile trade. It felt that suppliers of raw textile materials should not be affected by the quantitative restrictions on textile articles by means of application of the substantial transformation criteria proposed by several countries.[235] Consequently, origin rules should be devised to have each processing stage of the textile production chain regarded as origin conferring. Otherwise, rules of origin are likely to have adverse implications for the implementation of a number of provisions in the Agreement on Textiles and Clothing.[236] The United States replied that the last substantial transformation was not always carried out in the country of export; the proposals themselves did not give rise to adverse effects. However, when the HWP was completed, every Member would use the same rules of origin, which would ameliorate the problems described by India.[237] The European Community was of the opinion that the establishment of the HRO should not be influenced by other WTO Agreements or by the desired outcome of various non-preferential commercial policies. Therefore, the EC did not agree with India's view that the last country of production should always be recognized as the country of origin. If one proposal did not recognize the cutting of fabric as a substantial transformation, for example, that did not mean that the proponent of the proposal intended to distort trade.[238]

2. Restraints on the Application of the HRO to Certain WTO Instruments Enumerated in Art. 1.2 of the Origin Agreement

The United States considered that there was no common understanding on the implications of the HRO for other WTO Agreements, and that more communication with other WTO bodies was needed.[239] The United States argued, from the very early stages of the negotiations, that the *use or application* of rules of origin for a particular administrative purpose may be a separate matter from the *development and implementation* of particular trade measures or commercial policy instruments (such as application of anti-dumping measures) that fall under the jurisdiction of other Agreements. Consequently, the issue is most certainly not a sector or product-specific matter, but broadly extends to all sectors of industry, from agriculture to a wide range of consumer products.[240] Considering the fact that many of the then 38 (currently 41) Members that had notified that they do not have non-preferential rules of origin were known to utilize anti-dumping measures, rules of origin were not being used for such measures. Consequently, the United States raised a question as to whether the existence of the HRO would require changes in those practices by those Members.[241]

A number of Members, however, have questioned the U.S. interpretation of the implications issue. The European Community made it clear that the HRO should be applied equally for all purposes as set out in Article 1 of the Agreement (Art. 3(a) of the ARO) and suggested an explicit common understanding: "If other WTO Agreements require that origin be determined for specific purposes of those Agreements, HRO would then have to be used."[242] Sharing the above view, Brazil understood that it was far beyond

[242] *Id*., ¶ 4.18.

the mandate of the CRO to specify each and every circumstance as the United States proposed, and also doubted the ability of other Committees definitively to foresee every possibility under the respective Agreements in which a determination of origin might be warranted. Subsequently, Brazil criticized the U.S. argument that "what was required by these delegations would be an explicit decision to overturn the applicability of the HRO to specific Agreements mentioned in Article 3 of the Agreement itself", and that it was "as if these delegations were seeking to withdraw their signature from portions of the Agreement".[243]

As far as the applicability of the ARO to other WTO Agreements was concerned, Canada opined that it was the other WTO Agreements that had to determine whether or not rules of origin would be applied to them and that, if Members had to use rules of origin, they then had to apply the HRO.[244] On the contrary, Argentina understood that since the provisions of the ARO were more specific than those of other WTO Agreements, the ARO had precedence over other WTO Agreements.[245]

Korea was of the view that the Agreement on Anti-Dumping had no direct relationship with rules of origin, because investigations were based on the market conditions prevailing in the exporting country, and not on the origin of a good. Where there were no sales of like products in the ordinary course of trade in the domestic market of the exporting country, or where an intermediate country was involved (Arts. 2.2 and 2.5 of that Agreement), the HRO should be applied to determine the country of origin and, by implication, the country subject to the investigation. As concerns circumvention of anti-dumping measures, although there was yet to be an agreement on this issue, the HRO could be useful.[246] Hong Kong, China considered that, in the case of anti-dumping, rules of origin were clearly relevant irrespective of whether anti-dumping was based on the concept of "exporting country" or "country of origin". The HRO should also be relevant since conscious decisions were needed in such cases to determine whether the products in question had originated in that exporting economy or originated from somewhere else for the purpose of determining the normal value for individual companies concerned.[247] India was of the opinion that, if for purposes of anti-dumping the term "like products [of domestic industry]" (Footnote 1 to Art. 1.2 of the ARO) may be defined differently than for the HRO, then it would be contrary to the principle of applying the HRO to all trade policy instruments.[248]

3. Applicability of the HRO to WTO Instruments not Enumerated in Art. 1.2 of the Origin Agreement

A proposal was tabled by Japan stating that the HRO should not be applied automatically to the domestic labelling requirements on foods, and that sanitary and phytosanitary ("SPS") measures should be placed outside the scope of the HRO.[249] Although the United States did not favour this idea, describing it as "a multilateral pick-and-choose approach"[250], the proposal appeared to gain support from Members at the April 2002 meeting of the CRO. Brazil echoed Japan's view that there would be no apparent inconsistency

between measures taken under SPS requirements or labelling requirements (origin labelling of all ingredients of a good, in addition to marking of the origin of the good) and rules of origin for Customs purposes.[251] New Zealand and Australia also supported that approach on the grounds that the objective of the SPS Agreement was to protect human, animal or plant life or health, and concerned the nature of the goods in and of themselves, irrespective of their origin, while the principle objective of the HRO, as applied by the Customs authorities at the border, was to attribute a single origin for each product imported in a country.[252] The purpose of domestic food labelling was to meet other trade objectives, such as consumer demand for product information or the prevention of deceptive practices; thus, Members should retain the right to determine their domestic labelling requirements for products sold in their domestic markets.[253] India added that the origin determination at the border was not an alternative to, but supplemental to, the requirements for SPS or labelling purposes, and that there was no hierarchy implicit or explicit in these two purposes and provisions of various WTO Agreements, since there was no conflict among them.[254] It was thus expected that a common understanding on the need for flexible treatment of domestic labelling and SPS requirements, if so agreed, would provide the HWP negotiations with a practical clue, particularly to assist with the impasse encountered in the agricultural sector.

4. Report by the Chairman of the CRO to the WTO General Council and the Current State of Play

The main stumbling block to progress in the CRO's work that had been identified by many delegations was the implications issue which was first raised in 1998. This was seen being closely related to the problem of circumvention of anti-dumping procedures and the application of SPS measures and quota regulations.[255] Informal consultations held with Members and robust discussion on the implication issue during the CRO meetings held in 2001–2002 could neither lead to agreement on it nor on concrete actions affecting product-specific issues. Thus, the Chairman of the CRO decided to submit this implications issue to the General Council demanding that it and the other eleven crucial issues among the 94 product-specific core policy issues brought before the Council be given priority attention.[256] The Chairman's proposal constitutes ¶ 4.2 of the Report by the Chairman of the CRO to the General Council (G/RO/52) and reads as follows:

1. Pursuant to Article 3(a) of the Agreement on Rules of Origin ("the Agreement"), Members should ensure, upon the implementation of the results of the HWP, that they apply the harmonized rules of origin (HRO) equally for all non-preferential commercial policy instruments as set out in Article 1 of the Agreement, in which rules of origin are used; and
2. Each Member, in accordance with its rights and obligations under the provisions of the WTO Agreements [other than this Agreement], is to decide whether rules of origin are used in its non-preferential commercial policy instruments.

In the Report, Australia and New Zealand raised the issue of "overall impact of the HWP" with a view to ensuring that the product-specific rules developed under the HWP, and

[251] *Id*., ¶ 4.3.
[252] *Id*., ¶¶ 4.7 and 4.9.

the HWP as a whole, be consistent with the trade-facilitating objectives and principles of the Agreement. They stated that the General Council should consider all elements of the HWP as a package, which required the General Council to satisfy itself that the HRO made sense in terms of economic benefit, transparency and certainty, and a reduction in compliance and transaction costs (¶ 4.3).

In July 2003, the Chairman of the CRO reported to the General Council on the progress of the consultations on the 94 core policy issues, which he and the Vice-Chair had held with delegations in 2003. In order to bridge the existing gaps among Members, extensive, one-to-one small groups and open-ended consultations were held. The Chair circulated a proposal intended as a "balanced package", which was contained in informal document JOB(03)/132. Unfortunately, it was not possible to reach consensus on this. The Chair summarised the state of play as follows:

> There had been a discussion about the understanding among Members on three notions: (1) that the harmonized rules of origin should be applied only for goods, not for services or intellectual property; (2) that the harmonized rules of origin should be applied equally for non-preferential commercial policy instruments, whenever a Member was required—or in the absence of such requirement, voluntarily decided—to determine the country of origin; and (3) that there were some non-preferential commercial policy instruments where an origin determination was not necessary.[257]

There was almost agreement on the first two notions despite that some Members had raised a question as to whether any WTO agreement required a Member to apply rules of origin. The third notion yielded differing views. Some Members argued that the text proposed by the Chair should designate explicitly the specific commercial policy instruments for which an origin determination was irrelevant, such as marking and labelling requirements or SPS measures. Others disagreed to any carve-out of specific commercial policy instruments and rejected this view arguing that Article 3(a) of the Agreement did not create any new rights or obligations under the WTO Agreement. Thus, the disparity among Members remains wide and the implications issue "remains unresolved but resolvable".[258]

Completing the state of play with regard to the other 93 product-specific rules, the CRO Chairman admitted that there were several genuinely political issues, the resolution of which appeared impossible at the present stage, such as the issue of fish taken from the Exclusive Economic Zone, or the sugar issue. There were also other issues that were closely linked with other trade policy issues, such as circumvention of anti-dumping duties, export subsidy policies in agriculture, and textile quotas, the resolution of which appeared to be difficult unless the related issues were resolved in other bodies or sub-bodies of the WTO. While some Members cited the lack of political will rather than technical difficulties for the lack of progress, others indicated flexibility on several issues and constructive and pragmatic attitude mindful that a satisfying solution for each and every issue might not be possible. Nevertheless, many Members had considered the CRO Chair's proposal as a good basis for further work. There was a discussion on the need for a possible new working methodology in order to facilitate the negotiations.[259]

IV. Conclusion

Nine years have passed since the work on the Harmonization of Non-Preferential Rules of Origin was formally launched in July 1995. The General Council and the CRO in Geneva continues its examination of the draft texts submitted by the TCRO. In this respect, progress has been steady albeit at times rather patchy. This reflects to a great extent the wide disparity among delegates on a host of crucial product-specific and other issues, and also highlights the difficulties inherent in the consensus approach. The negotiations have typically involved all the relevant governmental and industrial sectors. Consequently, a number of countries have often championed rules for a particular industrial sector which were totally inconsistent with those for another sector. The question then arises as to how the substantive part of the HRO should be evaluated.

Obviously, it is premature to undertake such an analysis before the final shape of the rules is known. Acknowledging the constraints, it should be pointed out that absolute consistency between product-specific rules of origin cannot be pursued as long as the results of the HWP are the fruit of compromise by Members. Reflecting such reality, speculation arises that the draft HRO may no longer deliver what some delegations had anticipated. Even where a delegation rallied to a particular option in order to help build consensus, it did not necessarily mean that the rule it had agreed would perfectly match its intentions. With regard to surrounding environments, it is a fact that over forty countries do not at present have non-preferential rules of origin in their Customs and trading systems. However, the absence of such legislation appears not to have posed particular problems or have adversely affected the trade of those countries. It is also a fact that under the terms of the Agreement on Textiles and Clothing the MFA will soon terminate. Furthermore, China and Chinese Taipei have joined the WTO, and the MFN rate of duty is now applicable to most of the major trading economies. If there is no need to differentiate between countries for tariff purposes, the HRO would not be used in practice for MFN purposes. Since free trade agreements on a bilateral or regional basis have proliferated, rules of origin are now more focused on and debated in the preferential field. These could be the underlying factors for some Members not to be particularly enthusiastic about the harmonization, although such feelings are also fairly common in the context of any lengthy negotiations.

It may also be worth considering whether the lack of enthusiasm derives from intrinsic "shortcomings" in the draft HRO. As a set of non-preferential rules of origin, the draft HRO so far agreed are formulated, to the extent possible, in a systematic and logical manner, but they are extremely voluminous, stretching to hundreds of pages. Applying a set of sophisticated residual rules will also be a new and difficult day-to-day exercise for both Customs and traders. As Australia and New Zealand have pointed out, there are certain concerns regarding the overall impact of the HRO in terms of trade-facilitating objectives and principles of the ARO. The WTO General Council is expected to "satisfy itself that the HRO make sense in terms of economic benefit, transparency and certainty, with a reduction in compliance and transaction costs".

Several Members consider it important to clarify the scope of the HRO and where they stand in relation to other WTO Agreements and their provisions. More specifically, one of the key players proposed that the CRO consider the interpretation of Article 1 of the ARO—"to apply rules of origin equally for all such purposes"—as not being synonymous with a future obligation to use rules of origin for all trade policy instruments. As several Members pointed out, there are some WTO instruments which do not require the country of origin to be determined. If not required, obviously there is no need to have recourse

to the HRO. However, it would appear to be a little presumptuous to conclude that the HRO are not to be used for the purposes of anti-dumping duties, knowing that one of the main factors which motivated the GATT/WTO to harmonize non-preferential rules of origin in the first place was the self-serving use of non-preferential rules of origin by a few countries with regard to anti-dumping procedures. From that standpoint, the "shortcoming" might have been rooted in the ambitious attempt of harmonization itself. If a particular WTO instrument needs its own set of rules of origin, another uniform set of rules of origin should be negotiated and used to meet those specific purposes, although a number of Members may consider that the HRO will be able adequately to meet the purposes concerned.

There have been differing ideas as to how the HRO would be presented. One option was to minimize the volume of Appendix 2 matrices. This could be achieved by setting out first the principal primary rule (e.g., CTH) at the Chapter Note level and enumerating a heading/subheading text only for exceptional cases (CTSH, etc.). Another option was the current presentation showing the entire HS headings and, where necessary, subheadings. According to the proponents of the latter option, this manner of presentation is the most user-friendly. It is anticipated that, when the HRO are finally agreed by the Ministerial Conference, the form of presentation in national legislation in their own languages will be left to the discretion of the Members. Where suitable, some countries may even wish to computerize and present the HRO together with the requirements of preferential rules of origin, e.g., a series of FTA rules of origin, heading by heading.

Lastly, it is important to note that transparency and consistency cannot be ensured without a clear standard. It could be said that the existence of a "far from perfect" standard is better than the absence of any standard whatsoever. When the HS was introduced in 1988, Customs officials and traders benefited from this "common language" for purposes of classification. It is anticipated that the implementation of the HRO will bring about the desired results. The key advantage of having the harmonized rules is that the rules in force in one country are also the rules applied in other countries. The fact that the draft HRO appears complex has prompted the WCO and WTO to take steps, even at an early stage, to provide technical assistance—especially to developing countries—to counter any perceived difficulties in the future implementation of the rules.[260]

Thus, it is desirable that the Harmonization Work Programme be completed as soon as possible so that the building stands.

[260] Inama analyses the situation that "applying a harmonized set of rules is a sophisticated and technical affair requiring a highly trained administration and an informed private sector"; consequently, the implementation burden falls on the developing countries. Stefano Inama, *Nonpreferential Rules of Origin and the WTO Harmonization Program*, Chapter 14, DEVELOPMENT, TRADE, AND THE WTO: A HANDBOOK (WORLD BANK 2002).

PROVISIONAL TEXT (APPENDIX 2, RULE 2) OF THE TCRO AS REVISED AT ITS 17TH SESSION

Rule 2 Determination of origin

[Principles of Approach]

[Origin Determination under Primary Rules

The country of origin shall be determined in accordance with the following provisions, applied in sequence;

(a) when a primary rule specifies that the origin of a good is the country in which the good was obtained in its natural or unprocessed state, the country of origin of the good shall be the country in which that good was obtained in that condition;

N.B. Reference to other Ottawa-type rules (where born, where raised, where grew) to be added when final decisions are made on product-specific rules;

(b) the country of origin of a good is the last country of production [provided] [where (IND)(PHI)(HK)(MAL)(BRA)] a primary rule applicable to the good was satisfied in that country;

[(c) (i) [when a good undergoes a non-origin-conferring operation, the origin of the good is the country from which the good originated immediately prior to such an operation.]

[(c) (ii)

alternative 1

[when no applicable primary rule was satisfied [in the last country of manufacture or processing— *deletion proposed by (PHI)*][and no applicable chapter residual rule was satisfied] but the good has been produced in that country by further processing of [a material or article] [an article] classified in the same provision as that of the good, the country of origin of the good is the country in which that [material or article] [article] originated, provided that any materials subsequently added to the [material or article][article] have undergone the change of classification or have otherwise satisfied any other requirement specified in the primary rule applicable to the good;]

alternative 2

[when the further processing of a good does not change the classification of the good, and any materials used in the further processing satisfy the primary rule for the good, the country of origin of the good is the country of origin prior to the further processing;]

alternative 3

[when no applicable primary rule was satisfied in the last country of manufacture or production [and no applicable chapter residual rule was satisfied] and the good was produced as a result of further processing which did not change its classification, the country of origin of the good is the country of origin prior to such further processing;]

[*Origin Determination under Residual Rules*

[(d) when no applicable primary rule has been satisfied [in the last country of production— *deletion proposed by (IND)*], the country of origin shall be determined as indicated in the applicable residual rule specified at the chapter level;]

(e) when no applicable primary rule was satisfied in the last country of manufacture or processing of the good [and no applicable chapter residual rule was satisfied— *deletion proposed by (PHI)*], and the good is produced from materials originating in a single country, the country of origin of the good is the country in which those materials originated;

[(f) when no applicable primary rule was satisfied [in the last country of manufacture or processing of the good—*deletion proposed by (PHI)*] [and no applicable chapter residual rule was satisfied], and the good is produced from materials originating in a single country that did not undergo the change of classification or otherwise satisfy the primary rule applicable to the good, the country of origin of the good is the country in which that material originated;]

Additional provision proposed for application before provision (g): [when the good is produced from originating or non-originating materials of more than one country and a primary rule has not been satisfied for the good, the country of origin of the good shall be the country of origin of the material that fulfills the major role with regard to the use of the good; (CAN)]

(g) when no applicable primary rule was satisfied [in the last country of manufacture or processing of the good—*deletion proposed by (PHI)*][and no applicable chapter residual rule was satisfied], and the good is produced from materials [(whether or not originating)] of more than one country [that did not undergo the change of classification or otherwise satisfy the primary rule applicable to the good—*deletion proposed by (IND*) *(CAN)*], the country of origin of the good shall be the country in which the major portion of those materials originated, as determined on the basis specified in each chapter.

[(h) the country of origin of the good shall be the last country of production. *(CAN)*]

INTEGRATED NEGOTIATION TEXT FOR THE HARMONIZATION WORK PROGRAMME

OVERALL ARCHITECTURE

Note by the Secretariat

This document has been prepared under the Secretariat's own responsibility and without prejudice to the positions of Members and to their rights and obligations under the WTO

Revision

1. At its meeting on 10 May 1996, the Committee on Rules of Origin (CRO) decided to establish an Integrated Negotiating Text (INT) for the Harmonization Work Programme. The first INT was circulated in document G/RO/W/13 (24 May 1996), and had been periodically updated (G/RO/W/13/Rev.1–3, G/RO/W/13/Rev.3/Add.1 and 2). A further consolidated INT was circulated in document G/RO/41(3 September 1999), and has also been periodically updated (JOB(99)/5869, JOB (99)/7617, JOB(00)/1573, JOB(00)/3230, JOB(00)/5207 and JOB(00)/7194).
2. The attached document is the latest update of the negotiating text of the overall architecture and reflects the progress made by the CRO in April 2002.

HARMONIZED NON-PREFERENTIAL RULES OF ORIGIN

— Where no square bracket is placed in the text, it is understood that a general consensus has been reached on the text, subject to the overall coherence examination.

DEFINITIONS

References to "manufacturing", "producing" or "processing" goods include any kind of working, assembly or processing operation.

Methods of obtaining goods include manufacturing, producing, processing, raising, growing, breeding, mining, extracting, harvesting, fishing, trapping, gathering, collecting, hunting and capturing.

"Material" includes ingredients, parts, components, subassemblies and goods that were physically incorporated into another good or were subject to a process in the production of another good.

"Originating material" means a material whose country of origin, as determined under these rules, is the same country as the country in which the material is used in production.

"Non-originating material" means a material whose country of origin, as determined under these rules, is not the same country as the country in which that material is used in production.

"Customs Valuation Agreement" means the Agreement on Implementation of Article VII of the General Agreement on Tariffs and Trade 1994.

GENERAL RULES

General Rule 1: SCOPE OF APPLICATION

Rules of Origin provided in this Annex shall be as defined in Article 1, paragraph 1 of the Agreement on Rules of Origin annexed to the Agreement Establishing the World Trade

Organization (WTO), and shall be applied for the purposes set out in Article 1, paragraph 2 of the Agreement on Rules of Origin.

General Rule 2: HARMONIZED SYSTEM

References to headings and subheadings are references as they appear in the Harmonized Commodity Description and Coding System (hereinafter referred to as "Harmonized System" or "HS") as amended and in force. Classification of goods within headings and subheadings of the Harmonized System is governed by the General Interpretative Rules and any relative Section, Chapter and Subheading Notes to that System. Classification of goods within any additional subdivisions created for purposes of the rules of origin shall also be governed by the General Interpretative Rules and any relative Section, Chapter and Subheading Notes to the Harmonized System, unless the rules of this Annex otherwise require.

Chairman's proposed text for a possible paragraph 2:

The possible effects of amendments to the HS on harmonized non-preferential rules of origin shall be examined according to the review mechanism referred to in Article 6(3) of the ARO.

Alternative text:

When amendments to the Harmonized System are recommended by the CCC, their possible effect on [the results of origin determinations under— *brackets requested by IND and PHI*] the harmonized non-preferential rules of origin shall be examined by the CRO. Any amendments of the rules of origin resulting from such an examination shall take effect on the date approved by the Ministerial Conference.

General Rule 3: DETERMINATION OF ORIGIN

The country of origin of a good shall be determined in accordance with these General Rules and in accordance with the provisions of Appendix 1 and Appendix 2, applied in sequence.

General Rule 4: NEUTRAL ELEMENTS

[Unless otherwise provided in this Annex, *(MOR) (TUN)*] in order to determine whether a good originates in a country, the origin of the power and fuel, plant and equipment, including safety equipment, or machines and tools used to obtain a good or the materials used in its manufacture which do not remain in the good or form part of the good shall not be taken into account.

Consensus on the unbracketed text was confirmed. However, one delegation requested that the bracketed text be included in the provision until a complete picture was obtained.

General Rule 5: PACKING AND PACKAGING MATERIALS AND CONTAINERS

Unless the provisions of Appendix 1 or Appendix 2 otherwise require, the origin of packing and packaging materials and containers presented with the goods therein shall be disregarded in determining the origin of the goods under General Rule 3, provided such packing and packaging materials and containers are classified with the goods under the Harmonized System. The packing and packaging materials and containers which are not classified with their contents are separate goods, thus their origin shall be determined in accordance with the appropriate rules set forth in Appendix 1 and Appendix 2.

Consensus had already been reached at the previous session. However, one delegation requested that the alternative text be contained in the box until a complete picture was obtained.

Alternative text:

A. The origin of packing and packaging materials and containers presented with the goods therein shall be disregarded in determining the origin of the goods under General Rule 3, provided such packing and packaging materials and containers are classified with the goods under the Harmonized System,

B. When a container is presented with its contents and the container gives the whole its essential character so that the contents are classified with the container, the origin of the whole shall be determined on the basis of the origin of the container, as set forth in Appendix 1 and Appendix 2, and

C. When packing, packaging materials or containers and their contents are classified separately under the Harmonized System, their origin shall be separately determined in accordance with the appropriate rules set forth in Appendix 1 and Appendix 2.

Reason: The current text of General Rule 5 does not take into account the situation where a container gives the whole its essential character and the container with its contents are classified under the provision for the container. Attention is called to the last sentence of HS General Interpretative Rule 5(a). Draft General Rule 5(b), above, is intended to remedy that situation.

General Rule 6: ACCESSORIES AND SPARE PARTS AND TOOLS

Accessories, spare parts, tools and instructional or other informational material classified and presented with a good shall be disregarded in determining the origin of that good under General Rule 3, provided they are normally sold therewith and correspond, in kind and number, to the normal equipment thereof.

° ° °

APPENDIX 1—Wholly-obtained Goods

1. Rule 1: Scope of Application

This Appendix sets forth the definitions of the goods that are to be considered as being wholly-obtained in one country.

2. Rule 2: Minimal Operations and Processes

Operations or processes undertaken, by themselves or in combination with each other for the purposes listed below, are considered to be minimal and shall not be taken into account in determining whether a good has been wholly-obtained in one country:

(i) ensuring preservation of goods in good condition for the purposes of transport or storage;
(ii) facilitating shipment or transportation;
(iii) packaging or presenting goods for sale.

Consensus on this rule was confirmed. It was agreed that the possibility of application of this rule to Appendix 2 should be reconsidered at a later stage when the work was virtually completed.

Definitions	Notes
1. The following goods are to be considered as being wholly-obtained in one country:	
(a) Live animals born and raised in that country;	In Definitions 1 (a), (b), and (c) the term "animals" covers all animal life, including mammals, birds, fish, crustaceans, molluscs, reptiles, bacteria and viruses.
(b) Animals obtained by hunting, trapping, fishing, gathering or capturing in that country;	Definition 1 (b) covers animals obtained in the wild, whether live or dead, whether or not born and raised in that country.
(c) Products obtained from live animals in that country;	Definition 1 (c) covers products obtained from live animals without further processing, including milk, eggs, natural honey, hair, wool, semen and dung.
(d) Plants and plant products harvested, picked or gathered in that country;	Definition 1 (d) covers all plant life, including fruit, flowers, vegetables, trees, seaweed, fungi and live plants grown in that country.
(e) Minerals and other naturally occurring substances, not included in Definitions (a)–(d), extracted or taken in that country;	Definition 1 (e) covers crude minerals and other naturally occurring substances, including rock or solar salt, crude mineral sulphur occurring in free state, natural sands, clays, stones, metallic ores, crude oil, natural gas, bituminous minerals, natural earths, ordinary natural waters, natural mineral waters, natural snow and ice.
(f) Scrap and waste derived from manufacturing or processing operations or from consumption in that country and fit only for disposal or for the recovery of raw materials;	Definition 1(f) covers all scrap and waste, including scrap and waste resulting from manufacturing or processing operations or consumption in the same country, scrap machinery, discarded packaging and household rubbish and all products that can no longer perform the purpose for which they were produced, and are fit only for discarding or for the recovery of raw materials. Such manufacturing or processing operations include all types of processing, not only industrial or chemical but also mining, agricultural, construction, refining, incineration and sewage treatment operations.
(g) Articles collected in that country which can no longer perform their original purpose there nor are capable of being restored or repaired and which are fit only for disposal or for the recovery of parts or raw materials;	
(h) Parts or raw materials recovered in that country from articles which can no longer perform their original purpose nor are capable of being restored or repaired;	
(i) Goods obtained or produced in that country solely from products referred to in (a) through (h) above;	

	Definitions	Notes
	Alternative Text 1 (EC)	
[(2)]	[(i) Products of sea-fishing and other products taken from the sea, outside the territorial sea of a country, are considered to be wholly-obtained in the country whose flag the vessel that carries out those operations is entitled to fly. (ii) Goods obtained or produced on board a factory ship outside the territorial sea of a country are considered to be wholly-obtained in the country whose flag the ship that carries out those operations is entitled to fly, provided that these goods are manufactured from products referred to in subparagraph (i) originating in the same country. (iii) Products taken from the seabed or subsoil beneath the seabed, outside the territorial sea of a country, are considered to be wholly-obtained in the country that has the rights to exploit that seabed or subsoil in accordance with the provisions of the UN Convention on the Law of the Sea.] ([JPN], [MOR], [NOR], [US], [CAN], [KOR])	[For the purposes of point (2), the term "territorial sea of a country" is that as referred to in the United Nations Convention on the Law of the Sea.]
	Japan's alternative text for (iii) [(iii) Products taken from the continental shelf of a country are considered to be wholly-obtained in the coastal state, and the products taken from the seabed or subsoil beneath the seabed beyond the limits of the jurisdiction of a country are considered to be wholly-obtained in the country that has the right to exploit that seabed or subsoil in accordance with the provisions of the UN Convention on the Law of the Sea.]	
	Alternative Text 2 (Argentina)	
[(2)]	[(i) Products of sea-fishing and other products taken from waters beyond the sovereignty and jurisdiction of a State are considered to be wholly-obtained in the country whose flag the vessel that carries out those operations is entitled to fly. (ii) Goods obtained or produced on board a factory ship in the high seas are considered to be wholly-obtained in the country whose flag the ship is entitled to fly, provided that those goods are manufactured from the products referred to in subparagraph (i) above and according to that same subparagraph originating in the same country.	[In conformity with the 1982 UN Convention on the Law of the Sea (UNCLOS), the coastal State has customs jurisdiction in the Contiguous Zone. Thus any operation therein performed should be considered as carried out in that State.

	Definitions	Notes
	(iii) Mineral products obtained from the seabed and subsoil beyond the limits of national jurisdiction (the Zone) are considered: (a) obtained wholly in the State that has exploitation rights, granted by the International Seabed Authority, (b) obtained wholly in the sponsoring State of natural or juridical persona which has exploitation rights, granted by the Seabed Authority.]	No provision of this paragraph/part shall be interpreted in contradiction of the provisions of the 1982 Convention on the Law of the Sea.]
	Alternative Text 3	
[(2)]	[(i) Products of sea-fishing and other products taken from the sea outside a country are considered to be wholly-obtained in the country of registration of the vessel that carries out those operations. (iii) Products taken from the seabed or subsoil beneath the seabed outside a country are considered to be wholly-obtained in the country that has the rights to exploit that seabed or subsoil.] [COL]	[The term "registration" in Definition 2(i) and (ii) includes registration that a country grants to chartered vessels or factory ships, provided this registration is in accordance with the requirements of that country.]
	Alternative Text 4 (Brazil)	
[(2)]	[(i) Products of sea-fishing and other products taken from the sea outside the exclusive economic zones, over which the coastal State has jurisdiction, are considered to be wholly-obtained in the country whose flag the vessel that carries out those operations is entitled to fly. (ii) Goods obtained or produced on board factory ships in the high seas are considered to be wholly-obtained in the country whose flag the ship is entitled to fly, provided that those goods are manufactured from the products referred to in subparagraph (i) originating in the same country. (iii) Products taken from the seabed or subsoil beneath the limits of the continental shelf of a coastal State are considered to be wholly-obtained in the country that has the rights to exploit that seabed or subsoil.]	[1. The term "flag" in Definition (i) and (ii) includes the registration that a country grants to chartered vessels or factory ships, provided this registration is in accordance with the requirements of that country. 2. Use of terms and scope for the purposes of this point (2) as defined in accordance with the provisions of the United Nations Convention on the Law of the Sea.]
	Alternative Text 5 (Philippines)	
[(2)]	[(i) Products of sea-fishing and other products taken from waters beyond the sovereignty and jurisdiction of a State are considered to be wholly-obtained in the country of registration of the vessel that carries out those operations.	

Definitions	Notes
(ii) Goods obtained or produced on board a factory ship from waters beyond the sovereignty and jurisdiction of a State are considered to be wholly-obtained in the country of registration of the factory ship that carries out those operations, provided that these goods are manufactured from products referred to in subparagraph (i) originating in the same country. (iii) Products taken from the seabed or subsoil beneath the seabed in waters beyond the sovereignty and jurisdiction of a State, are considered to be wholly-obtained in the country that has the rights to exploit that seabed or subsoil in accordance with the provisions of the UN Convention on the Law of the Sea.]	
Alternative Text 6 (India)	
[(2)] [(i) Products of sea-fishing and other products taken from the sea outside the territorial sea of a country but within its exclusive economic zone, are considered to be wholly-obtained in that country. (ii) Goods obtained or produced on board a factory ship, outside the territorial sea of a country but within its exclusive economic zone, are considered to be wholly-obtained in the country, provided that these goods are manufactured from products referred to in subparagraph (i) originating in the same country. (iii) Products of sea-fishing and other products taken from waters in the high seas are considered to be wholly-obtained in the country whose flag the vessel that obtains such products is entitled to fly. (iv) Goods obtained or produced on board a factory ship in the high seas are considered to be wholly-obtained in the country whose flag the ship is entitled to fly, provided that those goods are manufactured from the products referred to in subparagraph (iii) originating in the same country. (v) Products taken from the seabed, ocean floor or subsoil thereof, outside the territorial sea but within the continental shelf of a country, are considered to be wholly-obtained in that country. (vi) Products taken from the seabed, ocean floor or subsoil thereof beyond the limits of national jurisdiction, are considered to be wholly-obtained in the country that has the rights to exploit that seabed, ocean floor or subsoil thereof.]	The terms “territorial sea of a country”, “exclusive economic zone”, “continental shelf” and “high seas” have the same meaning as in the United Nations Convention on the Law of the Sea.

° ° °

APPENDIX 2—Product-Specific Rules of Origin

Rule 1: Scope of Application

This Appendix sets forth rules for determining the country of origin of a good when the origin of the good is not determined under Appendix 1.

Rule 2: Application of Rules

(a) The rules provided in this Appendix are to be applied to goods based upon their classification in the HS and any additional subdivisions created thereunder, as referred to in General Rule 2 of this Annex.
(b) All primary rules contained in this Appendix are co-equal.
(c) [Unless otherwise specified], primary rules shall apply only to non-originating materials.
(d) [Where the primary rules require a change in classification, the following changes in classification shall not be considered in determining the origin of the good :
- changes which result from disassembly;
- changes which result from packaging or repackaging;
- changes which result solely from application of General Rule of Interpretation 2 (a) of the HS with respect to collections of parts that are presented as unassembled or disassembled articles.
- changes which result from merely putting up in sets.

However, such changes shall not preclude conferring origin on a good if origin is conferred as a result of other operations.]
(e) Where none of the primary rules are satisfied, origin shall be determined according to Rule 3 (c) through (f)[(g)] of this Appendix.

Consensus was confirmed on Rule 2(a).
As regards Rule 2(b), the concept of the co-equality of primary rules was acceptable to all Members. Further fine-tuning of the text would be needed at a later stage when the work was virtually completed.
As regards Rule 2(c), consensus was achieved (subject to HK): The bracketed text would be reconsidered when a complete picture was obtained.
As regards Rule 2(d), it was agreed that this rule be reconsidered at a later stage when the work was virtually completed.
As regards Rule 2(e), no objection was raised.

Rule 3: Determination of origin

The country of origin shall be determined in accordance with the following provisions, applied in sequence:

Primary Rules

(a) [The country of origin of a good is the country designated as such in the applicable primary rule.](EC) [NOR](JPN)
[When a primary rule specifies that the origin of a good is the country in which the good was obtained in its natural or unprocessed state, the country of origin of the good shall be the [single (IND)] country in which the good was obtained in that condition;] (IND)
[When a primary rule requires that the country of origin of a good is the country in which:
(i) the good was obtained in its natural or unprocessed state, the country of origin of the good shall be the single country in which the good was obtained in that condition; or
(ii) a specifically designated stage of production was attained, the country of origin of the good shall be the single country in which such stage of production was attained;] (US)

[The country of origin is the country determined as such by the application of the primary rule] (CAN)[NOR]

(b) The country of origin of a good is the last country of production, provided that a primary rule applicable to the good was satisfied in that country[258];

Residual Rules:

(c) [When a good is produced by further processing of an article which is classified in the same subdivision[259] as the good, the country of origin of the good shall be the single country in which that article originated;]

[When a good undergoes one or more operations that do not result in a change in its classification, the origin of the resulting good is the single country from which the good originated immediately prior to such operations, provided that any material that might have been added satisfies any change of tariff classification rule applicable to the good;]

(d) The country of origin of the good shall be determined as indicated in the applicable residual rule specified at the chapter level;

(e) When the good is produced from materials all of which originated in a single country, the country of origin of the good shall be the country in which those materials originated;

(f) [When the good is produced from materials (whether or not originating) of more than one country, the country of origin of the good shall be the country in which the major portion of those materials originated, as determined on the basis specified in each chapter, [and in the event of two or more countries equally contributing major portions of those materials, the good shall be assigned a multi-country origin;]] (IND)

[When the good is produced from materials (whether or not originating) of more than one country, the country of origin is the single country of origin of the materials that did not satisfy a primary rule applicable to the goods;] (US)

[When the good is produced from materials of more than one country, the country of origin of the good shall be the country in which the major portion of the non-originating materials originated, as determined on the basis specified in each chapter. However, when the originating materials represent at least 50 percent of all the materials used, the country of origin of the good shall be the country of origin of those materials;] (EC)

(g) [When the good is produced from materials (whether or not originating) of more than one country that did not satisfy the primary rule applicable to the good, the country of origin of the good shall be the country in which the major portion of those materials originated, as determined on the basis specified in each chapter]. (US)

As regards Rule 3(a), one Member made a new proposal. Members stated that they needed more time to study this proposal. Another Member suggested reversing the order of Rules 3(a) and 3(b).

As regards Rules 3(b), (c) and (f), there was a general agreement among Members on the basic approach to Rule 3, namely, the application of primary rules in the last country of production as the first test, the application of the origin-retaining concept as the second test, and the application of major portion concept as a final test. The gap among the various approaches would become more bridgeable at a later stage when a complete picture was obtained.

Consensus was confirmed on Rules 3(d) and (e). However, it was noted that Rule 3(e) might not be necessary, since the application of Rules 3(f) and (g) would result in the same origin outcome.

[258] This applies also to primary rules requiring that the country of origin of a good is the country in which the good was obtained in its natural or unprocessed state. (PHI)

[259] The term "subdivision" relates to the [lowest] level of classification of the good, i.e. heading, subheading or split (sub)heading, as specified in Appendix 2.

Rule 4: Intermediate materials

[Except as otherwise provided in the Appendix, (US)] materials which have acquired originating status in a country are considered to be originating materials of that country for the purpose of determining the origin of a good incorporating such materials, or of a good made from such materials by further working or processing in that country.

The principle of this provision was acceptable to all Members. However, one delegation confirmed its request for the initial bracketed text to be included in the provision until a complete picture was obtained. Another delegation requested that the box should contain an indication whereby the originating status was acquired by fulfilling a primary rule or chapter residual rule.

Rule 5: [Interchangeable goods and materials]

[Where it is not commercially practical to keep separate stocks of interchangeable materials or goods originating in different countries, the country of origin of each of the commingled materials or goods may be allocated on the basis of an inventory management method recognized in the country in which the materials or goods were commingled. The use of this system shall not give rise to more products originating in a specific country than would have been the case had the commingled materials or goods been physically segregated.]

Some Members questioned the meaning of the interchangeable goods and what type of goods or materials were covered by this Rule. Accordingly, proponents of the Rule were requested to improve the text.

Rule 6: Putting up in sets [or kits (CAN)(NZ)(CH)(IND)]

Chairman's proposal

A distinction must be made between the following types of sets:

1. Sets which are explicitly mentioned in the HS (e.g. 82.14—manicure sets; 3006.50—first aid boxes and kits; 96.05—travel sets for personal toilet);
2. Goods which are classified as sets by application of GIR 3(b) or (c);
3. Goods merely put together that are not classified as sets by either GIR 3(b) or (c) or within the HS.

There are three possible options:

A. [US] Unless otherwise provided in this Appendix, goods put up in sets shall retain the origin of the individual articles in the set.

B. [IND] Goods put up in sets or kits shall retain the origin of the individual articles except when such goods are explicitly mentioned as sets or kits in a heading or subheading of the HS or are classified as sets or kits by application of GIR 3(b) of the HS, in which case the origin of the set or kit shall be the country where it is put up.

C. Merely putting articles into sets is not origin-conferring: with this option there is no need for a specific provision for sets, although it might be advisable to have this element included in the new rule 2(b)/old rule 3 (Application of Rules): the rule in this case might read "a CTH resulting from merely putting up in sets is not considered as origin-conferring". (MEX)

There is growing consensus on option C. As option C implies some further quest in the rules, following are the various possibilities:

[JPN][EC](CAN)(CH) There is no need to have a specific rule for sets. The country of origin of a set put up from articles that originate in more than one country shall be determined according to Residual Rule 3(f).

There was growing consensus that putting up in sets was not origin-conferring, and that there was no need for a specific rule as well as for reference in Rule 2(d) of Appendix 2. Three delegations reserved their positions.

[Rule 7: De minimis]

For the application of the primary rule, non-originating materials that do not satisfy the rule shall be disregarded, provided that the totality of such materials does not exceed [10 percent] in value, weight or volume, as specified in each chapter, of the good.

There was general support for this Rule. Some Members stated that the nature of this Rule should be optional for producers (although this Rule itself should be mandatory for all Members).

CHAPTER 16

THE AGREEMENT ON SUBSIDIES AND COUNTERVAILING MEASURES

Article 32: Other Final Provisions 731
IV. Conclusion 734

I. Introduction

The Agreement on Subsidies and Countervailing Measures ("ASCM" or "Agreement") interprets and expands on the subsidies and countervailing duty portions of Article VI and Article XVI of the General Agreement on Tariffs and Trade 1994 ("GATT 1994"). It provides disciplines both over the use of subsidies that may distort trade and over the application of countervailing duties by individual Members of the WTO designed to offset the effect of subsidies. This chapter provides a detailed overview of the rights and obligations established by the ASCM and its interaction with other portions of the WTO Agreement. It will briefly discuss the history of subsidies and countervailing measures since the initiation of the GATT in 1947 and will then discuss each provision of the ASCM in detail. A separate chapter in this book (Chapter 17) discusses injury determinations in anti-dumping and countervailing duty investigations, as governed by the ASCM and the Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994, also known as the Anti-dumping Agreement or ADA.

II. Historical Perspective

A. GATT Subsidy Discipline

In 1947 when the General Agreement on Tariffs and Trade ("GATT 1947") was signed, the Contracting Parties recognized that countervailing duties could constitute non-tariff barriers to trade. Accordingly, Article VI of the GATT 1947 set out rules on the use of countervailing duties, as well as anti-dumping duties, to prevent such measures from becoming non-tariff barriers on their own. These rules included the following:

- The duty could not be in excess of the estimated bounty or subsidy determined to have been granted (Article VI:3);
- No countervailing duties could be imposed by reason of exemption from, or refund of, taxes paid when destined for consumption in the home market (Article VI:4);
- No product should be subject to both anti-dumping and countervailing duties for the same situation of dumping or export subsidization (Article VI:5);
- No duty could be imposed unless it was found that the effect of the subsidization is to cause or threaten to cause material injury to an established industry, or to materially retard the establishment of such industry, in the country of importation (Article VI:6).[1]

The GATT Contracting Parties also recognized that subsidies or dumping could cause distortions to trade and could nullify or impair benefits negotiated in the GATT 1947.[2] However, the GATT 1947 addressed only subsidies that operate "directly or indirectly to increase exports,"[3] and merely required contracting parties to notify the GATT of any such subsidies, and to discuss with other Contracting Parties the possibility of limiting them where they caused or threatened serious prejudice to the interests of those contracting

[1] This requirement was weakened by the fact that the Protocol of Provisional Application to the GATT 1947 allowed the grandfathering of pre-existing laws. Because the United States already had a countervailing duty law that did not require an injury finding, the United States took the position that Article VI:6 of the GATT 1947 did not require it to conduct an injury investigation before imposing countervailing duties.

[2] The very first GATT subsidies case so held. *See* Report of the GATT Working Party, *The Australian Subsidy on Ammonium Sulphate*, CP.4/39, BISD, Vol. II 188 (1950).

[3] *See* GATT 1947, Art. XVI:1.

parties (Article XVI:1). There was some effort to discipline the use of *export* subsidies (although unlike "dumping" the term, "export subsidy" is not defined).[4] Article XVI:4 of the GATT 1947 provided for a standstill, noting that no Contracting Party shall extend the scope of subsidization of any non-primary product beyond that existing as of January 1, 1955. Article XVI:4 also anticipated that an agreement to abolish all remaining subsidies by January 1, 1958 would be reached by the end of 1957, or if not, that the standstill should be extended until such time as an agreement was reached.[5] However, no such agreement was reached and the Contracting Parties adopted an annual standstill agreement only until 1962.[6]

Despite the goal of reaching agreement on the elimination of export subsidies by the end of 1957, subsidies and countervailing duties were not the subject of further extensive negotiation until the Tokyo Round, which concluded in 1979.[7]

B. The 1979 GATT Subsidies Code[8]

By the time of the Tokyo Round of tariff negotiations, the use of subsidies and countervailing duties had become a more contentious issue. In part as a result of the lowering of tariffs, the use of non-tariff barriers and the impact of subsidies raised the level of interest in developing discipline over the use of both subsidies and countervailing duty procedures.[9]

While countries such as the United States sought greater discipline on the use of subsidies, there was significant counter-pressure to apply greater discipline to the imposition of countervailing duties, in particular to require the application of an injury test to all imports.

[4] *Compare* GATT 1947, Art. VI:1 *with* GATT 1947 Art. XVI:1.

[5] GATT 1947, Ad Art. XVI:4. The standstill was periodically extended. *See, e.g.*, GATT Declaration, *Extension of the Standstill Provisions of Article XVI:4*, BISD, 9th Supp. 33 (1960).

[6] In 1962, a declaration applying the obligations of Article XVI:4 was opened for signatures. However, for numerous reasons, many Contracting Parties were unwilling to sign the declaration. Thus, until the WTO Agreement, Article XVI:4 commitments were only binding on the few Contracting Parties that had signed onto the 1962 declaration.

[7] An Experts Group was formed in 1959 to consider the use of anti-dumping and countervailing duties; however, due to time constraints, the Group limited itself to anti-dumping duties. *See* Report of the GATT Working Group, *Anti-Dumping and Countervailing Duties*, L/978, BISD, 8th Supp. 145 (1959). In 1960, a GATT Working Party established an illustrative (non-exhaustive) list of export subsidies. *See* Report of the GATT Working Party, Provision of Article XVI:4, BISD, 9th Supp. 185 (1960). In contrast, dumping and anti-dumping duties had been the subject of serious negotiations, and an agreement in the Kennedy Round. *See* KENNETH W. DAM, THE GATT: LAW AND THE INTERNATIONAL ECONOMIC ORGANIZATION, pp. 174–177 (1970), and Chapter 11 of this book. After the Kennedy Round, the Contracting Parties again tried to address the subsidy issue. In December 1967, a GATT Working Party was formed. However, in large part due to a dispute between the United States and the European Communities, no agreement could be reached on the terms of reference and the Working Party never met. *See The Tokyo Round of Multilateral Trade Negotiations,* Report by the Director-General of the GATT at 55 (1979).

[8] *Agreement on Interpretation and Application of Articles VI, XVI and XXIII of the General Agreement on Tariffs and Trade*, BISD, 26th Supp. 56 (1980) ("*1979 Subsidies Code*").

[9] Additionally, in the early 1970s the United States expanded the coverage of its countervailing duty laws to include goods that entered the U.S. on a duty-free basis. Because these goods previously had not been subject to countervailing duties, the United States could not claim the protection of the Protocol of Provisional Application. In conformity with its GATT obligations, it therefore required an injury finding before duty-free goods could be subject to countervailing duties. As noted above, the United States, the main user of countervailing duty procedures, did not apply the injury test generally because it claimed the grandfathering of its existing laws under the Protocol of Provisional Application.

At the end of the Tokyo Round, the GATT Director General stated:

> The issue of government subsidies, and the countervailing duties that are applied to offset them, has been one of the most difficult, sensitive and important of the Tokyo Round negotiations. Production and export subsidies have had a growing and distorting influence on international trade, often protecting inefficient production at the expense of competitive industries. The use of countervailing duties has grown proportionately, and resort to both measures has been encouraged by increasing protectionist pressures over the past few years.[10]

The outcome was the 1979 Subsidies Code, which contained a "two-track" approach. The first track instituted disciplines for imposing countervailing duties, including detailed requirements for an injury finding,[11] while the second track contained disciplines on the use of subsidies. The discipline on the use of subsidies continued to reflect the considerable disagreement among the Contracting Parties regarding the benefits and costs of subsidies. The Code prohibited the use of export subsidies.[12] However, that prohibition did not apply to export subsidies for primary products (which, therefore, exempted agricultural products from any prohibition on the use of export subsidies) and developing countries were also exempted from the prohibition.[13]

Annex I to the Subsidies Code provided an "Illustrative List" of potential export subsidies. In addition, Article 11 contained the first statements on the use of domestic subsidies. This Article is notorious for its ambiguity, reflecting the division of views among the Contracting Parties. Article 11 noted that on the one hand there are many legitimate policy reasons for granting domestic subsidies, but that on the other hand there is recognition that such subsidies may nullify and impair benefits accruing to Contracting Parties under the GATT.

Article 11.3 contained the language that led to the practice of requiring a finding of specificity with respect to domestic subsidies before such subsidies could be countervailed.[14] It noted that the aims identified in paragraph 1 may be obtained by means of subsidies granted with the aim of giving advantages to "certain" enterprises, either by granting such subsidies regionally or by sector. It also contained an illustrative, but non-exhaustive, list of the forms such subsidies might take. This

[11] The injury requirements were negotiated as part of the negotiations on the Anti-dumping Agreement and the language negotiated there was transferred into the Subsidies Code. The United States ultimately took the position in its national legislation implementing the Tokyo Round Agreements that it need only extend the injury test to products from countries that were signatories to the 1979 Subsidies Agreement, rather than to all Contracting Parties, or to countries that made similar commitments to the United States. This was challenged by India as a denial of Most Favored Nation ("MFN") treatment, but the dispute was settled without a ruling or change in practice. *See* ROBERT HUDEC, ENFORCING INTERNATIONAL TRADE LAW: THE EVOLUTION OF THE MODERN GATT LEGAL SYSTEM, (1993). *See also,* Report of the GATT Panel (adopted), *United States—Denial of Most-Favored-Nation Treatment as to Non-Rubber Footwear from Brazil*, DS18/R, BISD, 39th Supp. 128, 153–154 (1992) (finding no justification for retroactively applying an injury test to duty-free merchandise but not to dutiable merchandise, and, therefore finding a violation of GATT Article I:1 MFN requirements).

[12] 1979 Subsidies Code, Art. 9.

[13] Article 10 did however establish certain limits on the use of export subsidies with respect to primary products. Specifically, parties agreed not to grant export subsidies on primary products in a manner that resulted in that Contracting Party's primary product "having more than an equitable share of world export trade in such product." *Id.*, Art. 10.1. *See also, id.*, Art. 14.2.

[14] The specificity issue is discussed in detail in the commentary on Article 2 of the ASCM, *infra.*

provided substantial latitude to define what constituted a subsidy for countervailing duty purposes.

The 1979 Subsidies Code contained little effective discipline on subsidies. It provided for consultations[15] or resort to conciliation and general dispute settlement. In addition, any panel findings could be blocked by the losing party and frequently were (particularly in the later years prior to the entry into effect of the WTO Agreement).

Because subsidies were an area of considerable controversy, few countries ultimately signed onto the 1979 Subsidies Code, which only applied to those Contracting Parties to the GATT 1947 that specifically agreed to it.[16]

C. The Uruguay Round Negotiations

It soon became clear that the 1979 Subsidies Code had not resolved the problems of subsidies and countervailing measures. In 1985, the GATT Secretariat released a "Report of Eminent Persons on Problems Facing the International Trade System."[17] In this Report, the Eminent Persons stated that the increasing use of subsidies and the abuse of countervailing measures (as well as the growth in "voluntary export restraints") had resulted in the failure of the world economy to benefit from the promises of trade liberalization arising from the Tokyo Round. They also stated that the 1979 Subsidies Code had proven inadequate.[18] One particular need with respect to subsidies noted by the report was the need for a clear definition of what was included within the term "subsidy."[19]

As a result, the Uruguay Round of negotiations was launched with a mandate to improve "GATT disciplines relating to all subsidies and countervailing measures that affect international trade."[20] The main objective was "to restore the equilibrium of rights and obligations in terms of equivalent disciplines regarding subsidies on the one hand and countervailing measures on the other . . . "[21] The main concern was to improve disciplines in order to eliminate distortions to trade caused either by the use of subsidies or the unilateral application of countervailing measures. At the first meeting of the negotiating group, numerous concerns were identified. These were summarized in the minutes of that meeting, as follows:

> Several delegations considered that the international disciplines over the use of subsidies in world trade had faded and that there was little or no consensus over the meaning of vital provisions of the GATT and the Subsidies Code (hereinafter called "the Agreement"). Some rules were so vague as to invite differences of interpretation, some others were so

[15] *Id.*, Art. 12.

[16] The signatories to the 1979 Subsidies Code (both the original signatories and those who signed later) were: Argentina, Australia, Austria, Brazil, Canada, Chile, Colombia, Egypt, the European Economic Community, Finland, Hong Kong, India, Indonesia, Israel, Japan, Korea, New Zealand, Norway, Pakistan, Philippines, Sweden, Switzerland, Turkey, United States, and Uruguay.

[19] *Id.*

[20] *GATT Ministerial Declaration on the Uruguay Round of Multilateral Trade Negotiations*, Doc. No. MIN.DEC. (September 20, 1986) *reprinted in* 25 I.L.M. 1623, 1626 (1986).

[21] *See* Negotiating Group on Subsidies and Countervailing Measures ("NGSCM"): *Checklist of Issues for Negotiations,* Note by the Secretariat, Doc. No. MTN. GNG/NG10/W/9, at ¶ I (September 7, 1987) ("*Checklist*").

> weak as to provide few constraints over subsidy practices that adversely affected the interests of other countries. Furthermore, the dispute settlement provisions had not been able to provide effective recourse against these practices. It was also said that in certain instances, the GATT and the Agreement drew distinctions between permitted and prohibited subsidy practices that appeared to have little basis in sound economic policy. Some delegations thought that the problem was not only one of inadequacies, because even those rules which were clear had not been observed by governments. Several delegations pointed out that a number of problems existed also in the area of countervailing measures where loopholes in the existing rules permitted unilateral practices and interpretations, resulting in considerable arbitrariness, uncertainty and harassment of exporters. These problems were particularly acute for those developing country participants which, despite continuing efforts, could not obtain the Agreement's treatment from one important signatory [*i.e.*, the United States, the most significant user of countervailing measures].[22]

Thus, negotiations occurred on a broad range of issues. Among the most contentious were the balance between subsidy disciplines versus disciplines over the use of countervailing measures, special treatment for and the graduation of developing countries, and the definition of subsidy (including whether some subsidies were acceptable and others not).[23] A series of draft texts were issued through 1990. In December 1990, the overall negotiations were suspended because of an inability to resolve an impasse on agriculture—including subsidies—at the Brussels Ministerial Meeting. Chairman Dunkel tried to revive the negotiations in 1991 and late in the year issued a document entitled "Draft Final Act Embodying the Results of the Uruguay Round of Multilateral Trade Negotiations."[24]

The final text of the Agreement on Subsidies and Countervailing Measures, ultimately agreed to in 1994, contains only a few changes from the language of the *Dunkel Text*.[25]

[22] *See* NGSCM: Meeting of 16–17 March 1987, Note by the Secretariat, MTN.GNG/NG10/1 at ¶ 5 (March 27, 1987).

[23] In 1988, the United States proposed eliminating the distinctions between primary and non-primary export subsidies. NGSCM: Communication from the United States, MTN.GNG/NG10/W/20 (June 15, 1988). Certain negotiators insisted that any discussions involving agricultural subsides could not be addressed until agreement was reached in the Negotiating Group on Agriculture, while other countries sought to limit the discussions concerning government practices regarding natural resources. *See, e.g.*, NGSCM: Meeting of 28–29 June 1988, Note by the Secretariat, MTN.GNG/NG10/8 (July 11, 1988); NGSCM: Meeting of 28–29 June 1989, Note by the Secretariat, MTN.GNG/NG10/12 (July 14, 1989); and Meeting of 30 November—1 December 1989, Note by the Secretariat, MTN.GNG/NG10/15 (January 10, 1990). As a result, there was no mention of primary products in the various draft texts, pending the outcome of the agriculture negotiations. Thus, the distinction between primary and non-primary product subsidies (other than agricultural subsidies) was eliminated in the final text.

[24] *GATT Draft Final Act Embodying the Results of the Uruguay Round of Multilateral Trade Negotiations*, Doc. No. MTN.TNC/W/FA (December 20, 1991) ("*Dunkel Text*").

[25] The purpose of this chapter is not to provide a detailed description of the history of the Agreement or of the negotiations leading to the final agreement. This history is discussed in a number of places. *See, e.g.,* JOHN JACKSON, THE WORLD TRADING SYSTEM (1997); Gary N. Horlick and Peggy A. Clarke, *The 1994 WTO Subsidies Agreement*, 17 J. WORLD COMPETITION 41 (1994); Terry Collins-Williams and Gerry Salembier, *International Discipline on Subsidies: The GATT, the WTO and the Future Agenda,* 30 J. WORLD TRADE 5 (1996); G. Depayre, *The Results of the Uruguay Round Negotiations in the Field of Subsidies and Countervailing Measures*, in THE URUGUAY ROUND RESULTS: A EUROPEAN LAWYERS' PERSPECTIVE, College of Europe, 18/19 (1994); and THE GATT URUGUAY ROUND: A NEGOTIATING HISTORY (1986–1992), (Terence P. Stewart ed. 1994).

III. The Agreement on Subsidies and Countervailing Measures

The Agreement on Subsidies and Countervailing Measures that grew out of the Uruguay Round negotiations greatly expanded international discipline on both subsidies and countervailing measures.

Unlike the 1979 Subsidies Code or the GATT 1947, the ASCM provides an internationally agreed-upon definition of the term subsidy for use both generally identifying subsidies (whether or not actionable) and in determining what specific practices are actionable (*i.e.*, those practices against which either countervailing measures may be imposed or multilateral remedies pursued). Moreover, it provides more specific standards for the conduct of a countervailing duty investigation—requiring transparency, some due process, and specific time limits.[26] In addition, it established special detailed, enforceable rules for disputes involving subsidies in the context of the WTO dispute resolution system.[27]

Finally, in a significant change from the 1979 Subsidies Code, the ASCM is an integral part of the WTO Agreement, which must be interpreted as a whole. Prior to 1995, signatories to the 1979 Subsidies Code had the choice of bringing a subsidy dispute under *either* Articles VI and XVI of the GATT 1947 *or* under the 1979 Subsidies Code, as long as the other party to the dispute was also a signatory to the 1979 Subsidies Code.[28] This enabled parties to "forum shop" for the result they wanted. The Philippines-Brazil dispute put an end to such forum shopping and confirmed the unified nature of the WTO Agreement.

The Philippines resorted to WTO dispute settlement in order to challenge Brazil's 1995 decision to impose countervailing duties on imports of desiccated coconut from the Philippines, based on an investigation initiated prior to entry into force of the WTO Agreement. Article 32.3 of the ASCM states that the ASCM applies only to investigations or reviews initiated pursuant to an application made *after* entry into force of the WTO Agreement. While agreeing that the ASCM did not apply, the Philippines argued that Article VI of the GATT 1994 established rights and obligations applicable to such transitional procedures. Therefore, according to the Philippines, it had the right to invoke Article VI of the GATT 1994.[29]

The Panel, affirmed by the Appellate Body, found that the WTO Agreement was a unified whole to be interpreted together.

> The SCM Agreements do not merely impose *additional* substantive and procedural obligations on a potential user of countervailing measures. Rather the SCM Agreements and Article VI together define, clarify and in some cases modify the whole package of rights and obligations of a potential user of countervailing measures.[30]

[26] These standards are very similar to those imposed by the Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994 on anti-dumping investigations. *See* Chapter 11 of this book.

[27] The problem of enforcement remains an issue. While the adoption of Panel decisions effectively can no longer be blocked, countries have developed many techniques for delaying implementation as long as possible.

[28] *See, e.g.,* Report of the GATT Panel (adopted), *United States-Countervailing Duties on Fresh, Chilled and Frozen Pork, Complaint by Canada*, BISD, 38th Supp. 30 (1991); Report of the GATT Panel (adopted), *European Economic Community-Payments and Subsidies Paid to Processors and Producers of Oilseeds and Related Animal-Feed Proteins, Complaint by the United States*, BISD, 37th Supp. 86 (1990).

[29] *See* Report of the Appellate Body, *Brazil-Measures Affecting Desiccated Coconut*, WT/DS22/AB/R at 5 (1997). Ms. Clarke was counsel to Brazil in this dispute. It should be noted that the United States, as a third party intervener, supported this interpretation of the separability of the rights and obligations of the ASCM and the GATT 1994, Art. VI.

[30] *Id.* at 16 (emphasis in original).

Therefore, because ASCM Article 32.3 precluded the application of the ASCM to the dispute, it also precluded the application of the GATT 1994, since both are integral parts of a single treaty—the WTO Agreement.

Aside from the unified nature there are other substantive differences from the 1979 Subsidies Code. International discipline over the use of subsidies by Members of the WTO is imposed through a two-track approach in the ASCM.[31] One track, known as "Track One", is that of unilateral countervailing duty measures, which may be imposed by any Member experiencing injury to its domestic industry in its domestic market as an effect of the import of another Member's subsidized goods. The ASCM recognizes the right of Members to take unilateral action in this fashion, but regulates the way in which they do so in order to prevent countervailing duties being used in a protectionist manner. "Track Two" refers to the use of multilateral measures through the discipline of the Agreement.[32] The Agreement controls the use of subsidies both through provisions prohibiting certain practices and through provisions setting forth remedies to be pursued by any Member that believes it has been seriously prejudiced by another Member's subsidies, including situations in which a Member's domestic industries are being injured in *any* market by the sale of the subsidized goods of another member.[33]

The 1979 Subsidies Code had very limited disciplinary provisions. A signatory could request a panel,[34] however, either party to the dispute could block adoption of the panel report and, in the 1980s, parties frequently did.[35] In contrast, the ASCM provides specific procedures, definitions of subsidies and "serious prejudice," and binding dispute resolution. As such, it is likely to be used much more frequently than the previous system.[36]

The Agreement is divided into several parts, discussed in detail in the remainder of this Chapter. Part I of the Agreement provides a definition of the term "subsidy. Part II deals with prohibited subsidies, which may be challenged by a Member without any showing of harm to that Member. Part III covers actionable subsidies, which while not prohibited, may be challenged by another Member whose interests are harmed by such subsidies. Part IV defines three types of subsidy that are not actionable, although this part of the Agreement is now in abeyance. Part V sets forth detailed rules covering the imposition of countervailing measures. The remaining parts of the Agreement deal with various procedural issues, as well as providing special and differential treatment for developing countries.

PART I—General Provisions

Part I of the Agreement deems a subsidy to exist if there is a "financial contribution" and a "benefit" is thereby conferred. It also provides that to be actionable under the Agreement

[31] ASCM, Art. 10, n. 35.

[32] The Track One remedy is faster and more effective than Track Two, since it results in the imposition of countervailing duties, whereas Track Two merely produces a recommendation that the Member come into compliance with the ASCM, and implementation is often lengthy. However, Track Two is the only available remedy where subsidies hurt a Member's exports to a third country or to the subsidizing Member, since countervailing measures only address harmful imports into the complaining Member's domestic market.

[33] ASCM, Art. 6.3.

[34] *1979 Subsidies Code*, Art. 12.

[35] Of the fifteen GATT panel disputes brought under GATT Articles VI, XVI, or the 1979 Subsidies Code from 1980 on, adoption of eight was blocked at least temporarily. In 1994 and 1995, three of the decisions that had previously been blocked were adopted with the completion of the Uruguay Round negotiations.

[36] From 1947 through 1994, there are records of resort to dispute resolution proceedings 42 times on subsidy and countervailing measures issues (subsidy disputes under GATT Articles VI, XVI or the 1979 Subsidies Code). Between January 1, 1995 and June 14, 2002, there have been 28 requests for consultations and 15 requests for panels involving subsidy disputes.

or to be subject to countervailing measures, a subsidy must be "specific," as defined in Article 2.

Article 1: Definition of a Subsidy

One of the key concerns expressed as the negotiating countries began the subsidy negotiations in the Uruguay Round was that there was a lack of discipline on the use of subsidies because there was no consensus on the definition of what constituted a subsidy. The resulting agreement contained several definitional provisions.

Article 1 of the ASCM defines the term "subsidy" as applying to either of two situations. The first is a financial contribution by a government or public body within the territory of a Member. The second is any form of income or price support in the sense of Article XVI of the GATT.[37] For the practice to qualify as a subsidy in either situation, it must confer a benefit on the recipient.

The two-step definition: a financial contribution (or price or income support) and a benefit conferred thereby, makes clear that not all government actions constitute subsidies. It is possible for the government to make a financial contribution that does not confer a benefit. An example would be a government loan at market rates. In such case, the contribution would not be a subsidy. Similarly, and perhaps more controversially, it is possible for a government to provide a benefit but not a financial contribution. An example would be a government restraint on exports, which may benefit users of the product by lowering the price in the domestic market, but is not a financial contribution.[38] Again, no subsidy is provided in such a case.

This two-step definition reflected a compromise between two broad schools of thought on the definition of a subsidy. During the negotiations the controversy was summarized by the GATT Secretariat as follows:

> Some delegations proposed a number of criteria to define an actionable subsidy while some others considered that the category of actionable subsidies should rather be a residual category, i.e., comprising those subsidies not fulfilling the criteria for either prohibited or non-actionable subsidies. Criteria proposed under the first approach were that a subsidy (i) had to confer a quantifiable benefit to the recipient, (ii) be limited to actions which imply expenditure of public funds or otherwise cost to a government (including revenue foregone) and (iii) be specific to a firm or an industry (the concept of specificity covering de jure and de facto specificity). Other delegations said that although they were not objecting to those criteria, they did not consider them as covering all cases. In their view, a charge on the public account was not always a necessary criterion for a subsidy to be countervailable or otherwise actionable. Other measures which were dependent for their enforcement on government action should also be included, for example any government action which conferred a benefit to the recipient firm.[39]

The final language reflected a rejection of the second approach. The United States (the chief proponent of the second approach) had sought to include a provision in the definition

[37] ASCM, Art. 1.1(a)(1) and (2). A 1960 Panel report, considered what constituted an "income or price support" within the meaning of Article XVI of the GATT 1947. The panel generally agreed that a system "under which a government, by direct or indirect methods, maintains such a price by purchases and resale at a loss is a subsidy." Report of the Panel, *Review Pursuant to Article XVI:5*, (adopted May 24, 1960) BISD, 9th Supp. 188, 191. The Panel also considered that there could be methods by which a government maintained a fixed price above the world price without resort to a subsidy. *Id.*

[38] Report of the WTO Panel, *United States—Measures Treating Export Restraints as Subsidies*, WT/DS194/R (2001) at ¶ 8.73 ("*U.S. Export Restraints*").

[39] *See NGSCM: Meeting of 30 November—1 December 1989*, Note by the Secretariat, MTN.GNG/NG10/15 at ¶ 6, (January 10, 1990).

that would permit action to be taken against measures that it claimed were trade distorting such as targeting[40] and other industrial policy measures.[41] However, Article 1.1 reflects a balancing of the various definitions proposed for a subsidy, between the U.S. proposal of any government action that conferred a benefit and other proposals that the definition should include only those government actions which resulted in a charge on the public accounts or a cost to the government.[42] It is possible to have a financial contribution that does not involve a cost to the government; for example, if the government were to provide a loan to a company at below market interest rates but above the government's cost of borrowing and administration, such a loan would fall within the definition of a subsidy although there would ultimately be no charge on the public accounts.[43]

1. Financial Contribution. Article 1.1(a)(1) defines the term "financial contribution," which is the first prong of the definition of a subsidy. It requires a financial contribution by a government or any public body, including quasi-governmental entities. Financial contribution is defined more broadly than a charge on the public accounts. Article 1.1(a)(1) identifies four categories of financial contribution, and makes clear that the four categories are an exclusive list of financial contributions, not an illustrative one.

The first category is the least controversial and the least open to debate. It involves a *direct transfer of funds* (*e.g.*, grants, loans, and equity infusions) and any potential direct transfers of funds (*e.g.*, loan guarantees).[44]

The second category indicates that there is a financial contribution if the government or public body *foregoes revenue that is otherwise due*.[45] In the *FSC* case, the Appellate Body clarified that this does not mean entitlement to the funds in the abstract because in theory, the government could claim entitlement to tax all revenues.[46] Thus, to establish whether revenue has been foregone, it is necessary to determine whether the definitions and tax regime applied established an initial government entitlement to the general category of

[40] In an early communication from the United States to the NGSCM, the United States (the chief proponent of addressing targeting through the ASCM) defined "targeting" as "a government plan or scheme of coordinated measures to assist specific export-oriented industries," and noted that not all practices encompassed by this term were clearly covered by subsidy disciplines. NGSCM: Communication from the United States, MTN.GNG/NG10/W/1 at ¶ III.A (March 16, 1987).

[41] *See, e.g., id.* (seeking to "clarify what remedies are available for the trade distortions and economic damage associated with targeting and other industrial policy measures that affect trade"); NGSCM: *Elements of the Framework for Negotiations,* Submission by the United States, MTN.GNG/NG10/W/29 (November 22, 1989) (proposing the following definition of subsidy "A subsidy is any government action or combination of government actions which confers a benefit on the recipient firm(s)").

[42] *See, e.g., NGSCM: Communication from the EEC*, MTN.GNG/NG10/W/7 (June 11, 1987) ("subsidies in international trade exist only when a financial charge has been incurred by a government or administrative authority on behalf of a beneficiary").

[43] The loan would provide a benefit to the recipient (by enabling it to borrow at below-market rates) and would meet the definition of financial contribution found in ASCM, Article 1.1(a)(1)(i) without cost to the government, since the government would receive back more in interest than it cost it to borrow. Article 1.1(b) requires that a benefit be conferred thereby. In *Canadian Civilian Aircraft I* the Appellate Body clarified that this meant a benefit to a recipient. Report of the Appellate Body, *Canada—Measures Affecting the Export of Civilian Aircraft*, AB-1999–2, WT/DS70/AB/R (1999) at ¶ 154 ("*Canadian Civilian Aircraft I*").

[44] ASCM, Art. 1.1(a)(1)(i).

[45] *Id.*, Art. 1.1(a)(1)(ii).

[46] *See* Report of the Appellate Body, *United States—Tax Treatment For "Foreign Sales Corporations"*, AB-1999-9, WT/DS108/AB/R (2000) ("*FSC*") at ¶ 90 ("This cannot, however, be entitlement in the abstract, because governments, in theory, could tax *all* revenues. There must, therefore, be some defined, normative benchmark against which a comparison can be made between the revenue actually raised and the revenue that would have been raised 'otherwise'". (emphasis in original)).

revenue and then exempted the revenue at issue from that entitlement. Applying that reasoning, the Appellate Body found that U.S. law defined taxable income to include the revenue that was subsequently excluded through the Foreign Sales Corporations provisions of the Internal Revenue Code.[47] Similarly in *Canadian Autos*, the Appellate Body found that because the Canadian government had established a 6.1 percent MFN import duty on imports of automobiles and then exempted from payment of that duty automobiles that met the terms of the Motor Vehicles Tariff Order, that exemption constituted revenue foregone that was otherwise due.[48]

The third category addresses the government *provision of goods or services* (other than general infrastructure) or the *purchase of goods*.[49] This category has the potential for controversy regarding the question of what constitutes a good and what constitutes a service. The advent of electronic commerce has raised the question of whether there exists another category of "thing" that is neither a good nor a service (*e.g.*, in which category does intellectual property fall). If so, does the government provision or purchase of this third category ever constitute a financial contribution?

A recent dispute addresses this provision in some detail.[50] Canada argued that the United States' preliminary determination that Canada's stumpage programs provided a good for less than adequate remuneration were not in accordance with the WTO. First it argued that "stumpage" (which Canada stated is the right to harvest standing timber) is not a good. The Panel however, concluded that what Canada was providing was standing timber, the "stumpage" at issue was merely the means of providing the timber.[51] The Panel further found that "timber" was a good within the meaning of the ASCM, noting that the term "goods" in Art. 1.1(a)(1)(iii) referred to "tangible or movable personal property, other than money."[52] The Panel also rejected a Canadian argument that Article 1.1(a)(1)(iii) does not apply to rights to exploit natural resources *in situ*.[53] According to the Panel, the term "goods and services" covers "the full spectrum of in-kind transfers the government may undertake by providing resources to an enterprise," the only exception being the one explicitly mentioned in Article 1.1(a)(1)(iii), the provision of general infrastructure.[54]

The fourth category is perhaps the most controversial and contains several parts. First, it states that a financial contribution exists when a government (but not necessarily a public body) makes *payments to a funding mechanism*. Second, a financial contribution

[48] Report of the Appellate Body, *Canada—Certain Measures Affecting the Automotive Industry*, AB-2002-2, WT/DS139 and 142/AB/R (2000) at ¶¶ 90–94 ("*Canadian Autos*").

[49] ASCM, Art. 1.1(a)(1)(iii).

[50] Report of the WTO Panel (not appealed), *United States—Preliminary Determinations with Respect to Certain Softwood Lumber from Canada*, WT/DS236/R (2002) ("*Softwood Lumber II*"). On May 3, 2002, Canada requested establishment of a Panel under the DSU with respect to the U.S. final determination to impose countervailing duties on imports of softwood lumber from Canada. The United States based its final subsidy analysis on the same basic methodology that it used for the challenged preliminary determination.

[51] *Id.* at ¶ 7.17 ("In our view the only way to supply *standing* timber to harvesting companies is by allowing them to harvest the timber. We consider that this is precisely what the stumpage agreements do. We therefore find that standing timber is provided to the tenure holders through the provincial stumpage programmes." (Emphasis in original)).

[52] *Id.* at ¶ 7.23. The Appellate Body subsequently adopted a somewhat broader definition of the term "goods," noting that the French and Spanish terms used included a wide range of property. *See United States—Final Countervailing Duty Determination with Respect to Certain Softwood Lumber from Canada*, AB-2003-6, WT/DS257/AB/R (2004) at ¶ 59 (*"Softwood Lumber III Appellate Body Report"*).

[53] *Softwood Lumber II*, *supra* note 50, at ¶ 7.26.

[54] *Id.* at ¶ 7.28. This does not mean that the government provision of a good or service necessarily provides a subsidy, it must still be specific and provide a benefit to the recipient.

exists if a government *"entrusts or directs" a private body* to carry out one or more of the type of functions described in the first three categories, "which would normally be vested in the government and the practice, in no real sense, differs from practices normally followed by governments."[55]

Only one panel has addressed this category to date and there are no relevant Appellate Body discussions. In *U.S.—Export Restraints*, Canada claimed that U.S. law and practice established that the United States would find that restraints on exports of input products constituted a subsidy to the downstream product in violation of the ASCM.[56] Article 1.1(a)(1)(iv) provides that, in order for there to be a financial contribution, a government must entrust or direct a private body "to carry out one or more of the type of functions illustrated" in the first three categories; "which would normally be vested in the government," and that "the practice, in no real sense, differs from practices normally followed by governments."[57] The dispute decision hinged on the meaning of the term "entrusts or directs." The Panel found that the term encompassed three elements: (1) "an explicit and affirmative action, be it delegation or command;" (2) "addressed to a particular party;" and (3) "the object of which action is a particular task or duty."[58] In addition, the Panel found that the second two elements were aspects of the first element—an explicit and affirmative action of delegation or command.[59] It held that export restraints did not fall within this definition of financial contribution.[60]

In making this finding, the Panel rejected the argument of the United States that read this provision much more broadly to include actions, the effect of which was functionally equivalent to an affirmative action. According to the Panel,

> [g]overnment entrustment or direction is thus very different from the situation in which the government intervenes in the market in some way, which may or may not have a particular result simply based on the given factual circumstances and the exercise of free choice by the actors in that market.[61]

In making such a finding, the Panel reaffirmed that not all government actions that confer a benefit necessarily constitute a subsidy. Thus, the Panel reaffirmed the negotiated balance of the subsidy definition as discussed above.

[55] ASCM, Art. 1.1(a)(1)(iv). In *U.S. Export Restraints*, the Panel notes with approval the interpretation by the Group of Experts of a 1960's panel on subsidies "reference to 'practice . . . in no real sense different from that normally followed by governments' was a general reference that to the *delegation* to private parties of particular government functions of taxation and expenditure of revenue, and *not* a reference to government market interventions in the general sense." *U.S. Export Restraints*, *supra* note 39, at ¶ 8.72 (emphasis in original).

[56] *U.S. Export Restraints, supra* note 38. Prior to the completion of the Uruguay Round, the United States had countervailed against restraints on leather exports imposed by the Government of Argentina and restraints on exports of logs imposed by the Government of British Colombia. *See*, *Leather From Argentina*, 55 Fed. Reg. 40,212 (Dep't Comm. October 2, 1990) (final determ.); *Certain Softwood Lumber Products From Canada*, 57 Fed. Reg. 22,570 (Dep't Comm. May 28, 1992) (final determ.). In each case the United States reasoned that the export restraints resulted in domestic users of the restrained products obtaining inputs at lower prices than would have prevailed without the restraints. Canada argued that the legislative history of the Uruguay Round implementing legislation and regulations promulgated under that legislation indicated that the United States would continue to countervail export restraints. Canada's challenge was to the U.S. law and practice "as such", rather than to their application in a particular case.

[57] *U.S. Export Restraints*, *supra* note 38, at ¶ 8.25.

[58] *Id.* at ¶ 8.29. This was the position Canada had taken as to the meaning of the phrase.

[59] *Id.* at ¶ 8.29.

[60] However, the Panel also found that U.S. law did not, as Canada had argued, require that export restraints be countervailed, and it therefore made no recommendations.

[61] *U.S. Export Restraints*, *supra* note 38, at ¶ 8.31.

2. A Benefit is Conferred Thereby. As explained above, it is possible to provide a financial contribution without conferring a benefit on the recipient. However, to be considered a subsidy within the meaning of the ASCM, a financial contribution must also confer a benefit on the recipient. Whether it requires a benefit to the recipient or a benefit to the manufacture, production, or export of the good in question has been debated. In *Canadian Civilian Aircraft I*, the Appellate Body stated: "A 'benefit' does not exist in the abstract, but must be received and enjoyed by a beneficiary or a recipient. Logically, a 'benefit' can be said to arise only if a person, natural or legal, or a group of persons, has in fact received something."[62]

That the term "benefit" in Article 1.1(b) refers to a benefit to the recipient of the financial contribution, is supported by the language in the chapeau of ASCM Article 14 which provides guidance in calculating "the benefit to the recipient conferred pursuant to paragraph 1 of Article 1."[63] In finding that the term refers to a "benefit to the recipient" of the financial contribution, the Appellate Body has specifically rejected the notion that the "benefit" in Article 1.1(b) can be calculated in terms of the cost to the government of the financial contribution.[64]

Although the term "benefit" is not explicitly defined in the ASCM, panels have clarified that a benefit occurs when a company is placed in a better position financially than it otherwise would be absent the financial contribution or price support. In *Lead Bar*, the Appellate Body stated: "[t]he question whether a 'financial contribution' confers a 'benefit' depends, therefore, on whether the recipient has received a 'financial contribution' on terms more favourable than those available to the recipient in the market."[65] This is consistent with the previous findings on this issue. In *Canadian Civilian Aircraft I,* the Appellate Body articulated the requirement as follows:

> We also believe that the word 'benefit', as used in Article 1.1(b), implies some kind of comparison. This must be so, for there can be no 'benefit' to the recipient unless the 'financial contribution' makes the recipient 'better off' than it would otherwise have been, absent that contribution. In our view, the marketplace provides an appropriate basis for comparison in determining whether a 'benefit' has been 'conferred', because the trade-distorting potential of a 'financial contribution' can be identified by determining whether the recipient has received a 'financial contribution' on terms more favourable than those available to the recipient in the market.[66]

In addition to this question of what is meant by the term "benefit," the question of identifying the recipient has also proven controversial, with most countries objecting to the U.S. practice with respect to subsidies to privatized companies. Certain types of subsidies are considered to confer a benefit over several years.[67] However, with the waive of privatizations of formerly state-owned firms in the late 1980s and early 1990s, the question arose as to whether the newly private firm continued to benefit from such

[62] *Canadian Civilian Aircraft* I, *supra* note 43, at ¶ 154. This language was reiterated in the subsequent Report of the Appellate Body, *United States—Imposition of Countervailing Duties on Certain Hot-Rolled Lead and Bismuth Carbon Steel Products Originating in the United Kingdom*, AB-2001-1, WT/DS138/AB/R (2000) ("*Lead Bar*").

[63] ASCM, Art. 14.

[64] *See Canadian Civilian Aircraft I*, *supra* note 43, at ¶ 155.

[65] *Lead Bar, supra* note 62, at ¶ 68. This leaves open the question of how to determine if "strings" attached to a financial contribution (*e.g.*, to keep a facility open) mean that the recipient is *not* better off (or by how much) than without the financial contribution.

[66] *Canadian Civilian Aircraft I*, *supra* note 43, at ¶ 157.

[67] *See Report of the Informal Group of Experts to the Committee on Subsidies and Countervailing Measures,* G/SCM/W415/Rev.1 (March 4, 1998) ("*Report of the Informal Group of Experts*").

long-term subsidies bestowed on the state-owned entity. The United States considered that the benefit did pass through the privatization, regardless of whether the sale of the company was at arm's-length, for fair market value.[68] The Appellate Body affirmed the Panel's conclusion that, based on the facts of the case (*i.e.*, an arm's-length sale for fair market value) no benefit existed.[69]

The case law at the WTO has indicated that since a benefit is to a "person," not to the productive assets, there must be an analysis, if raised, of subsequent events to see if the producer exporting the good at the time the duties are imposed is benefiting. The main dispute with the United States, however, has been whether an arms-length transaction for fair market value eliminates any benefit to the subsequent company. In *Lead Bar*, the Panel found that the question was whether or not the company was indirectly benefited from the original subsidy. Specifically, the Panel noted:

> As noted above, we consider that an untied, non-recurring "financial contribution" bestowed on a prior company may constitute a "financial contribution" bestowed indirectly on a successor company. This is because the untied, non-recurring "financial contribution" will be deemed to have been invested in the productive assets etc. of that company. Thus, when those productive assets etc. are acquired by the successor company, the successor company indirectly acquires the "financial contribution" embodied in those productive assets etc. Assuming "financial contributions" bestowed directly on BSC could be deemed to have been bestowed indirectly on UES and BSplc/BSES, this fact alone could not mean that pre-1985/86, untied, non-recurring "financial contributions" bestowed on BSC necessarily confer any "benefit" on UES or BSplc/BSES. *This would only be the case if those "financial contributions" were found to have been bestowed indirectly (i.e., through the relevant change-in-ownership transactions) on UES and BSplc/BSES respectively on terms more favourable that UES and BSplc/BSES respectively could have obtained in the market. We consider that such a finding would only be possible if fair market value were not paid for all productive assets etc. acquired by UES and BSplc/BSES respectively from BSC*.[70]

The United States then changed its methodology, arguing that the *Lead Bar* decision indicated that if it concluded that the new entity was essentially the "same person" as the pre-privatized entity, then there was no need to reconsider whether the benefit incurred to the new entity. This too was addressed by a WTO panel, which found that the United States' distinction between a company and its shareholders (the essence of its "same person" test) was not appropriate in the context of the ASCM. According to the Panel,

[68] Over the years, the United States has employed several methods of determining the measure, the most recent has been the "gamma" methodology, which assumed the benefit passed through but that some portion of the purchase price went towards repaying a portion of the pre-existing subsidies. *See* Report of the WTO Panel, *United States—Imposition of Countervailing Duties on Certain Hot-Rolled Lead and Bismuth Carbon Steel Products Originating in the United Kingdom*, WT/DS138/R at ¶ 6.61–6.62 ("*Lead Bar Panel Report*"), a*ff'd Lead Bar*, *supra* note 62. Subsequently, the United States (claiming it was implementing the *Lead Bar* decision and a decision of the U.S. courts which echoed the findings of *Lead Bar*) considered whether the newly privatized entity was the 'same person" as the entity prior to privatization. If it was then according to the United States, it continued to benefit from the pre-privatization subsidies. The United States virtually always found the entity to be the "same person" and this methodology has been rejected both by a WTO panel and the U.S. court. *See*, *e.g.*, Report of the WTO Panel, *United States—Countervailing Measures Concerning Certain Products from the European Communities*, WT/DS212/R, ("*Privatization Subsidies*"); *aff'd in part*, *rev'd in part*, Report of the Appellate Body, *United States—Countervailing Measures Concerning Certain Products from the European Communities*, AB-2002-5, DS212/AB/R (2002) ("*Privatization Subsidies Appellate Body Report"); Allegheny Ludlum Corp. et al. v. United States*, 182 F. Supp. 2d 1357 (Ct. Int'l Trade 2002); *Acciai Speciali Terni S.p.A v. United States*, No. 99-06-00364, 2002 WL 342659 (CIT), 2002 Ct. Int'l Trade LEXIS 25, 24 ITRD 1108 (Ct. Int'l Trade Feb. 1, 2002).

[69] *Lead Bar*, *supra* note 62, at ¶ 68.

[70] *Lead Bar Panel Report*, *supra* note 68, at ¶ 6.81 (footnotes deleted, emphasis added).

the "concept of benefit is independent of the legal business structure established pursuant to national corporate law."[71] Thus, when confronted with information that a company has changed ownership since receipt of a subsidy, the authorities must examine the evidence to determine whether the company with new ownership still benefits from the prior subsidy—it may not "presume" such continued benefit.[72]

Another dispute on this issue also involved the United States. In *Softwood Lumber II*, the Panel found that the United States had incorrectly assumed that producers of the downstream product, lumber, benefited from subsidies to the upstream product provided by the licensing of the right to harvest timber (the input). The United States had before it evidence that there were producers of the downstream product who were not affiliated with the holder of the harvest rights (the alleged subsidy) and that a sizeable number of producers purchased log and lumber inputs from unrelated suppliers, allegedly at arm's length. Therefore, according to the Panel, the U.S. authorities should have determined whether and to what extent any benefit passed through to the lumber producers.[73]

Even if a practice does constitute a financial contribution and confers a benefit, it is not necessarily actionable, either multilaterally through the WTO dispute settlement mechanism, or unilaterally through the application of countervailing measures. Article 1.2 provides that a subsidy is actionable only if it is also specific[74] as defined in Article 2.

Article 2: Specificity

To be considered actionable or countervailable, a subsidy must be specific, as indicated in Article 1.2. Article 2 of the ASCM defines several situations in which a subsidy is deemed to be specific. The specificity requirement was a standard of U.S. countervailing duty law. The purpose of the requirement is to act as "an initial screening mechanism to winnow out only those foreign subsidies which truly are broadly available and widely used throughout an economy," since "all governments, including the United States, intervene in their economies to one extent or another, and to regard all such interventions as countervailable subsidies would produce absurd results."[75]

1. Subsidies Limited to Certain Enterprises. Article 2.1 provides that a subsidy is specific if it is limited to an enterprise or industry or group of enterprises or industries

[71] *Privatization Subsidies*, *supra* note 68, at ¶ 7.50, *aff'd*, *Privatization Subsidies Appellate Body Report*, *supra*, note 69 at ¶ 146.

[72] *See Privatization Subsidies Appellate Body Report, supra* note 68, at ¶ 147. The Appellate Body further noted that an arm's length privatization for fair market value presumptively extinguishes any benefit from prior subsidies. The effect of such privatization "is to shift to the investigating authority the burden of identifying evidence which establishes that the benefit from the previous financial contribution does indeed continue beyond privatization." *Id*. at ¶ 126.

[73] *See Softwood Lumber II, supra* note 50, at ¶ 7.78. In addition, the Panel noted that, at least in an investigation, the authorities must determine "whether and to what extent a subsidy has been granted to the producer of the subject merchandise." The authorities may not, as the United Sates did, simply assume the existence of a benefit. *Id*. at ¶ 7.75. This reasoning was later affirmed by the Appellate Body in a related case. *See Softwood Lumber Appellate Body Report*, *supra* note 52, at ¶¶ 146 and 158.

[74] ASCM, Art. 1.2.

[75] *See "Statement of Administrative Action"* in H.R. Rep No. 103–36, Vol. 1 at 929 (1995). It has been explained that "the purpose of the CVD law is to counteract government-induced distortions to the relative positions of firms within an economy." A. Holmer, S. Haggerty and W. Hunter, *Identifying and Measuring Subsidies under the Countervailing Duty Law: An Attempt at Synthesis*, in The Department of Commerce Speaks on Import Administration and export administration, 455 PLI/Corp. 301, (1984). Countervailing a subsidy that was generally available throughout the economy would not serve this purpose.

("certain enterprises") within the jurisdiction of the granting authority.[76] The subsidy is specific if the legislation or the granting authority explicitly limits the subsidy to certain enterprises ("*de jure*" specificity).[77] However, if eligibility is limited, based on explicit, verifiable, objective criteria (*i.e.*, criteria or conditions which are neutral, do not favor certain enterprises over others, are economic in nature, and are horizontal in application) the program is not specific, so long as eligibility is automatic and the criteria are strictly adhered to.[78]

Even if the program appears on its face to be non-specific, the program may be found to be *de facto* specific, based on the following factors:[79]

- Use by a limited number of enterprises;
- Predominant use by certain enterprises;
- The grant of disproportionately large amounts of subsidies to certain enterprises; and
- The manner in which discretion is exercised by administering authorities.

While this *de facto* specificity analysis was, again, similar to the test applied by the United States, the ASCM places restrictions on the analysis that were not found in U.S. practice and that reflect many countries' concerns regarding the U.S. practice in this area. In particular, in determining *de facto* specificity, the investigating authorities should take account of the diversification of economic activities in the subsidizing country and the length of time the program has been in operation. This first item would appear to be helpful to many smaller, or developing economies, which may have a limited range of economic activity in the country.

Moreover, the ASCM provides that in considering the discretionary application of a program, the investigating authorities "shall" consider, in particular, information on the frequency with which applications for a subsidy are approved or refused and the reasons for those decisions.[80]

2. Regional Subsidies. Article 2.2 states that a program available only to certain enterprises within a designated geographic region of the granting authority's jurisdiction is specific. This represents a significant decrease in the discipline from that proposed in the *Dunkel Text*,[81] which made all subsidies by sub-national governments, even if available to all enterprises within that sub-national government's jurisdiction, specific.[82]

[76] To a large extent, the language of this article tracks the definition of specificity that was applied by the United States, the largest user of countervailing duty laws at the time. There are, however, some differences from the U.S. approach.

[77] ASCM, Art. 2.1(a).

[78] *Id.*, Art. 2.1(b). This is one of the differences from the U.S. approach, which did not provide exceptions for limitations based on objective criteria.

[79] ASCM, Art. 2.1(c).

[80] This item can be problematic for the government of an exporting country defending a program. The authorities administering the subsidy program often do not maintain statistics of this type, or if they do, confidentiality rules within the country may prevent the disclosure of such information to the investigating authorities of the importing country. Failure to provide the information might then be used to justify a finding of specificity of a discretionary program.

[81] *See Dunkel Text*, *supra* note 24, at Art. 2.2.

[82] *Compare* ASCM, Art. 2.2 *with Dunkel Text*, Art. 2.2. The change from the *Dunkel Text* apparently was the result of a "deal" between the United States and Canada in late 1993 (which both countries will doubtless deny) in which the United States agreed to less discipline on subsidies in return for Canadian support for more trade-restrictive anti-dumping rules.

Export and Import Substitution Subsidies. Article 2.3 states that all prohibited subsidies as defined in Article 3, *i.e.*, export subsidies and import substitution subsidies, are specific.

Article 2.4 requires that any determination of specificity must "be clearly substantiated on the basis of positive evidence."[83] This requirement arguably places the burden of proof on the investigating authorities (or the complaining Member) to demonstrate specificity. Prior to this, at least in the United States, the practice was to presume a program was specific, unless positive evidence to the contrary was provided. Because the defending exporting Member is the entity most likely to have access to the information regarding specificity or the lack thereof, this has the potential for creating a significant hurdle to taking action.

PART II: Prohibited Subsidies

Part II of the Agreement covers prohibited subsidies, which consist of export subsidies and import-substitution subsidies. Members are required to eliminate such subsidies, which may be challenged by another member without a showing of harm to the interests of that member. Article 3 defines prohibited subsidies, while Article 4 provides for an expedited dispute resolution procedure in cases involving prohibited subsidies.

Article 3: Prohibition

In the 1979 Subsidies Code, only export subsidies were prohibited.[84] The ASCM expands that prohibition to include both export subsidies and import substitution subsidies, *i.e.*, subsidies the receipt of which is, at least in part, contingent upon the use of domestic over imported goods. A prohibited subsidy is by definition specific and therefore actionable.

The definition of an export subsidy appears to be more restrictive than the broad definition assumed prior to the ASCM. The 1979 Subsidies Code included a blanket prohibition on the granting of "export subsidies on products other than certain primary products."[85] The ASCM, however, provides a more limited prohibition by stating that only those "subsidies *contingent*, in law or in fact, . . . upon *export performance*" are prohibited.[86] This limitation is further clarified by a footnote which notes that to be contingent in fact, the subsidy must be tied to actual or anticipated exports or export earnings.[87] Finally, that footnote clarifies that the mere fact that the enterprise granted the subsidy is an exporter is not sufficient to make a subsidy contingent in law or in fact upon exportation.[88] Thus, the use of the term "contingent" arguably narrows the definition of what constitutes a prohibited subsidy.

[83] ASCM, Art. 2.4.

[84] *1979 Subsidies Code*, Art. 9.

[85] *Id.*

[86] ASCM, Art. 3.1(a) (emphasis added). It should be noted that until the ASCM, the term "export subsidy" was not defined, leaving it open to a broad range of interpretations. There was considerable discussion concerning how to define subsidies for purposes of prohibition. *E.g.*, *NGSCM, Submission by Japan*, MTV.GNG/NG10/W/27 (October 6, 1989) (suggesting that the Illustrative List of Export Subsidies in the Annex to the 1979 Subsidies Code be converted to an exhaustive, definitive list, with some modifications); NGSCM, Submission by the United States, MTV.GNG/NG10/W/29 (November 22, 1989) (suggesting that the prohibition be expanded to include all subsidies provided to firms predominantly engaged in export trade, as being in effect as trade distortive as a more traditional export subsidy).

[87] *Id.*, Art. 3.1(a) n.4.

[88] *Id.*

There have been several panel and Appellate Body reports addressing what constitutes a subsidy "contingent" upon exportation. The Appellate Body has indicated that in order to determine whether a subsidy is contingent upon export performance in law, one should consider whether the "condition can be demonstrated on the basis of the very words of the relevant legislation, regulation or other legal instrument constituting the measure."[89] A condition to export can exist in law if it is implicitly in the instrument deriving the measure, *i.e.*, that such conditionality can be derived by necessary implication from the words actually used in the measure.[90] In the *Canadian Autos* case, the Appellate body found that the ratio requirements in the law required the company receiving the subsidy to export in order to maintain the ratios. The Appellate Body therefore found that the measure was contingent in law upon export performance.[91]

In *Canadian Civilian Aircraft I*, which involved an issue of whether the measure was contingent in fact upon export performance, the Appellate Body noted that it was not enough that a government granting the subsidy *anticipated* that exports would result. The prohibition requires that the granting of the subsidy be *contingent* upon export performance.[92] Moreover, the Appellate Body noted that the phrase "tied to" in the footnote indicated that this required that the export performance or earnings be a limit or restriction as to conditions.[93] In making such a decision, a panel must consider the structure and design of the measure as well as the specific facts of the case. In that case, the Appellate Body affirmed the Panel decision that the measure was contingent in fact upon export performance, based on the Panel's consideration of numerous factors.[94]

In another case involving the question of whether certain measures were contingent in fact upon export performance, a Panel ruled differently on two measures, in a manner that provides guidance on the meaning of the term "contingent in fact."[95] In *Australian Leather*, the Panel considered two subsidies, a grant and a loan, provided to a single company, Howe. In both cases, the Panel noted that the grant and the loan were part of a package of assistance that would not have been granted but for the removal of leather from eligibility for certain export subsidies. Similarly, it noted that Howe, in fact, exported a significant percentage of its production and that its continued economic viability was dependent on exporting some portion of its production. However, the two subsidies differed in certain respects. The contract providing for the grant established certain specific sales performance targets (overall sales, not export sales explicitly) and obligated Howe to make best efforts to meet those sales performance targets. The loan contract did not address Howe's sales performance at all and was secured by a lien on the assets and undertakings of Howe's parent company, ALH (which had other interests besides Howe).

After reviewing the facts, the Panel found that given the totality of the evidence and because the grant was specifically conditioned upon sales performance targets that could not be met without exporting, the grant constituted a prohibited export subsidy.[96] The Panel found that the loan, however, was not a subsidy that was contingent in fact upon

[96] *Id.* at ¶¶ 9.71–9.72.

export performance because there was nothing in "the terms of the loan contract itself which suggests a specific link to actual or anticipated exportation or export earnings."[97]

Thus, the cases indicate this provision requires that there be some explicit or implicit linkage in order for a subsidy to be considered contingent in law or fact upon export performance.

Annex I of the ASCM provides further guidance in determining whether a subsidy is a prohibited export subsidy by providing an Illustrative List of Export Subsidies. If a measure is defined in Annex I as not constituting an export subsidy (such as the non-excessive remission of import charges on imported inputs consumed in the production of the exported product), it does not fall within the scope of the prohibited subsidies of Article 3.1(a). It may, however, still be an actionable subsidy if it is otherwise specific.[98]

Panels and the Appellate Body have found that portions of the Illustrative List may be raised as an affirmative defense to the charge of maintaining prohibited export subsidies. For example, Item (k) of the Illustrative List identifies the grant of export credits at below market rates as an example of an export subsidy, in so far as they are used to secure a material advantage in the field of export credits. However, the second paragraph indicates that if the credits are granted by a Member that is also a party to an international undertaking on official export credits (this refers to the OECD Export Credit Arrangement)[99] or if the Member acts in conformity with the interest rate provisions of such undertaking (and it in practice applies those provisions) then such export credits are not an export subsidy. Several panel and Appellate Body reports have indicated that this second paragraph may be raised as an affirmative defense, but then the Member raising the defense has the burden of proof, which the panels and Appellate Body have interpreted strictly.[100]

Similarly, in addressing whether the United States tax program implemented to comply with the original ruling on *FSC*,[101] the Appellate Body agreed that the fifth sentence of footnote 59, which permits measures taken by Members to avoid double taxation in certain circumstances, was an affirmative defense. However, the Appellate Body found that the United States had not met its burden of proof that its measure in fact conformed to the requirements of that affirmative defense.[102] It is not clear, however, that all portions of the Illustrative List can be raised as an affirmative defense.[103]

The Illustrative List is not new. There was an Illustrative List in the 1979 Subsidies Code that was quite similar to the one found in the ASCM. One significant change, however, addresses the non-excessive remission or exemption of prior-stage cumulative

[97] *Id.* at ¶ 9.75. It is worth noting that the Panel implicitly rejected the United States' proposed broad reading of Article 3.1(a) when it found that the loan was not a prohibited export subsidy. The United States had argued that "if the totality of the circumstances reveals that the subsidy in question is designed to promote exports, then that subsidy comes within the ambit of Article 3.1(a), and is prohibited." *Id.* at ¶ 9.52.

[98] *See FSC*, *supra* note 46, at ¶ 93.

[99] The OECD Export Credit Arrangement is available from OECD on its website: www.OECD.org.

[100] *See, e.g.,* Report of the WTO Panel, *Canada—Export Credit and Loan Guarantees for Regional Aircraft*, WT/DS222/R (2002) ("*Canadian Regional Aircraft*") at ¶¶ 7.161 and 7.180 (it is an affirmative defense, but to meet its burden of proof, Canada had to demonstrate that as a matter of law its actions fell within the meaning of this provision. The Panel found Canada had failed to meet that burden.)

[101] *FSC*, *supra* note 46.

[102] *See* Report of the Appellate Body, *United States—Tax Treatment for "Foreign Sales Corporations", Recourse to Article 21.5 of the DSU*, AB-2001-8, WT/DS108/AB/RW (2002) at ¶ 186.

[103] *See* Report of the WTO Panel*, Brazil-Export Financing Programme for Aircraft (Second Recourse to DSU, Article 21.5)*, WT/DS246/RW(2), (2001) at ¶¶ 5.274–5.775 (finding that the first paragraph of Annex I, Item (k), does not contain any affirmative statement that a measure is not an export subsidy nor that a measure not satisfying the conditions of the paragraph is not prohibited. Therefore, the Panel found the first paragraph of Item (k) cannot provide an affirmative defense to claims of a violation of ASCM, Article 3.1(a)).

indirect taxes on goods or services used in the production of exported products.[104] This provision is of particular importance to countries that do not have a value-added tax regime. Essentially, the Illustrative List would permit the non-excessive remission of such cumulative taxes if they were levied on inputs that are "consumed in the production of the exported product." In the 1979 Subsidies Code, they were permitted only if they were levied on inputs that were physically incorporated in the exported product.[105]

The reason for this change was that in certain countervailing duty cases the concept of what was physically incorporated in the exported product was heavily debated. There were questions such as whether a catalyst that was consumed in the production of a good was incorporated in that good or whether fertilizer was physically incorporated in the flower that was ultimately harvested. The other area that had generated controversy was the consumption of energy in the production process. Therefore, as a result of the negotiations, this provision was revised to permit the non-excessive remission of taxes as long as the taxes had been levied on products *consumed* in the production of the exported product.[106]

The ASCM's prohibition on the use of export subsidies is narrower than the more general prohibition found in the 1979 Subsidies Code. However, the prohibition covers a broader scope of products than previously. While the 1979 Subsidies Code did not prohibit export subsidies for "certain primary products," the current Agreement extends the prohibition to all products, except as provided in the WTO Agreement on Agriculture. The WTO Agreement on Agriculture places restrictions on the use of export subsidies, and applies to a narrower category of products than did the term "certain primary products."[107]

Article 3.2 provides that Members may not grant or maintain prohibited subsidies.

Article 4: Remedies for Prohibited Subsidies

This Article has been used to challenge various alleged export subsidies.[108] The Article provides that any Member that has reason to believe that another Member is using a prohibited subsidy may request consultations with the other Member. The consultation request must include a statement of the available evidence with regard to the existence and nature of the subsidy in question.[109]

If the consultations do not result in a mutually agreed solution within thirty days of the request for consultations, any Member party to those consultations may refer the matter to the Dispute Settlement Body ("DSB") for the immediate establishment of a panel, unless the DSB decides by consensus not to establish a panel.[110] This differs from requests under the Understanding on Rules and Procedures Governing the Settlement of

[104] ASCM, Annex I, Item (h).

[105] 1979 Subsidies Code, Annex I, Item (h).

[106] ASCM, Annex I, Item (h). Note, the ASCM also includes guidance for determining whether an input is consumed in the production process. *See* ASCM, Annex II. Nonetheless, this continues to be a controversial topic as an implementation issue.

[107] *See* Chapter 6 of this book.

[108] The following cases alleging the use of prohibited export subsidies have been through the dispute settlement process: *Australian Leather*, *supra* note 95; Report of the Appellate Body, *Brazil—Export Financing Programme for Civil Aircraft*, AB-1999-1, WT/DS46/AB/R (1999); *Canadian Civilian Aircraft I*, *supra* note 43; Report of the Appellate Body, *Canada—Measures Affecting the Importation of Milk and the Exportation of Dairy Products*, AB-1999-4, WT/DS103, 113/AB/R (1999); *FSC*, *supra* note 46; and *Canadian Autos*, *supra* note 48. It should be noted that implementation issues linger for at least four of these six cases.

[109] ASCM, Art. 4.1 and 2.

[110] ASCM, Art. 4.4.

Disputes ("DSU").[111] When a Member requests a panel under the DSU, Article 6, the panel will be established at the meeting of the DSB following the meeting at which the panel is originally requested.

Once established, the panel may request the assistance of the Permanent Group of Experts ("PGE") with regard to whether the measure at issue is a prohibited subsidy.[112] None of the panels established through this mechanism to date have requested the assistance of the PGE.

While the panel is established under the auspices of the DSB and the DSU, it is subject to certain special rules that differ from those found in the DSU in several significant respects, as long as the claims are limited to Article 3 subsidies. If other claims are included, then the dispute would be subject to the normal rules of the DSU.

Most importantly, Article 4 disputes are subject to much shorter time limits than normal disputes. A panel may be requested thirty days after making the request for consultations, compared to sixty days under the DSU.[113] Once a panel is formed, the panel is to submit its final report to the parties within ninety days of the establishment of the terms of reference,[114] compared with the normal six months under the DSU.[115]

Similarly, under Article 4, the report of the panel is to be adopted within thirty days of circulation of the report to all the Members, unless appealed[116] (the normal period under the DSU is sixty days).[117] If appealed, the Appellate Body is to issue its decision to the Parties within thirty days of the notice of appeal, extendable to sixty days[118] (the comparable periods under the DSU are sixty and ninety days).[119] It should be noted that the parties to the dispute may agree to a different timetable for any part of the proceeding.

The timing of the dispute settlement procedures is not the only significant difference between an ASCM Article 4 proceeding and a proceeding under the general DSU procedures. Article 4 provides that *if* a panel finds the existence of a prohibited subsidy, the panel shall recommend that the party *withdraw the subsidy* without delay and *shall* specify the time period within which the measure must be withdrawn.[120] In the *Australian—Leather* case, this was interpreted as requiring a complete repayment of the export subsidy, not just the benefit remaining at the time of the Panel ruling.[121] The *Canadian Regional Aircraft* Panel addressing an argument raised by Canada concerning the prospective nature of WTO remedies noted that it was not obvious that the WTO

[120] ASCM, Art. 4.7.
[121] Report of the WTO Panel*, Australia—Subsidies Provided to Producers and Exporters of Automotive Leather, Recourse to Art. 21.5 of the DSU*, WT/DS126/RW (2000) ¶¶ 6.39–6.49. It should be noted that this decision by the Panel generated considerable surprise since it went beyond the remedy requested by either party. Rather, the parties had agreed to implementation in the form of repayment of the balance of the benefit remaining but sought arbitration to resolve the question of what that balance was. The Panel did not require repayment with interest, however—in effect blessing an interest-free loan contingent upon exportation, *i.e.*, a subsidy prohibited by Article 3. The parties settled based on partial repayment and some lowering of Australian duties on other products.

provided only for prospective remedies in the case of prohibited export subsidies; it may be that in certain instances the appropriate remedy is repayment of the subsidy.[122]

In contrast, under the DSU, if a panel finds that the measure in question is inconsistent with the Agreement, it shall recommend that it be *brought into conformity* and *may* suggest ways the Member could do so.[123] Thus, there is no requirement in the general DSU that a panel recommend the withdrawal of an inconsistent measure. Neither does the DSU direct the panel to establish the timetable for implementation.

PART III: Actionable Subsidies

Part III of the Agreement deals with subsidies which, while not prohibited, may be challenged through the multilateral dispute mechanism if they have "adverse effects" on the trade interests of another Member, or be subject to countervailing duty measures if they cause or threaten material injury to a domestic industry.[124] It defines the types of adverse effect that can give rise to an action and the remedies available. It also defines certain types of subsidy as "non-actionable," although this provision has lapsed.

Article 5: Adverse Effects

This Article begins the definition of what constitutes an actionable subsidy and what actions can be taken. The original basis for this provision is Article XVI of GATT 1947, which provided for consultations if the effect of a subsidy was to increase exports, directly or indirectly, such that it caused serious prejudice to another Contracting Party's interests.[125] The ASCM expands upon this, stating that no Member, through the use of a subsidy, shall cause adverse effects to the interests of another Member.[126]

Article 5 defines those adverse effects as taking any of three forms: (1) injury to the domestic industry of another Member in the sense that this term is used in Part V of the Agreement, dealing with countervailing duties; (2) nullification or impairment of benefits accruing directly or indirectly to other Members under GATT 1994;[127] or (3) serious prejudice to the interest of other Members.

It should be noted, however, that this article explicitly excludes from its reach subsidies on agricultural products, in conformity with Article 13 of the WTO Agreement on Agriculture.[128]

Article 6: Serious Prejudice

Article 6 defines the term "serious prejudice," one of the three types of "adverse effect" that form the basis of a challenge to an actionable subsidy. Paragraph 1 provides that serious prejudice will be presumed if any of four situations existed. In other words, if a

[122] *See Canadian Regional Aircraft*, *supra* note 100, at ¶ 7.170.

[123] DSU, Art. 19.1.

[124] ASCM, Art. 10, n.35 provides that while the provisions of Part II or III may be invoked in parallel with the provisions of Part V (countervailing measures), with respect to the effects of the subsidies in the domestic market of the complaining Member, only one form of relief shall be available (*i.e.*, relief through the imposition of countervailing measures *or* relief under the provisions of Parts II or III, not both).

[125] GATT 1947, Art. XVI:1.

[126] ASCM, Art. 5.1.

[127] The concept of "nullification and impairment" of benefits originated in Article XXIII of GATT 1947. *See* Chapter 5, Part V.B, of this book.

[128] Article 13, however, restricts the application of countervailing measures for agricultural subsidies only temporarily. It expired at the end of 2003. *See* Agreement on Agriculture, Articles 1(e) and 13, and Chapter 6 of this book.

complaining Member makes a *prima facie* showing that any of these situations exist, the burden of proof shifts to the responding Member to rebut the claim. The four situations are:

- A total *ad valorem* subsidization of a product exceeding five per cent;[129]
- Subsidies to cover operating losses sustained by an industry;
- Subsidies to cover operating losses sustained by a company other than one time, non-recurring and non-repeatable subsidies;
- Direct forgiveness of debt.

This paragraph had a five-year life before requiring renewal.[130] It lapsed in the aftermath of the Seattle WTO Ministerial Meeting in 1999, so that there is no longer any situation in which serious prejudice will be presumed.

Paragraph 3 indicates what must be demonstrated in order to make a *prima facie* case of serious prejudice in the absence of the paragraph 1 presumption. To make a *prima facie* case, the complaining Member must demonstrate with positive evidence that the effect of the subsidy is adverse to the complaining Member's trade interests through displacing or impeding its exports to the subsidizing Member's markets or to third country markets, price undercutting, price suppression or lost sales, or increasing the subsidizing Member country's share of world trade in a particular subsidized primary product or commodity.[131] This analysis must focus on the effects of the subsidy on the product "like" the subsidized product.[132]

Paragraph 4 provides that in order to demonstrate that the "effect of the subsidy is to displace or impede the exports of a like product of another Member from a third country market,"[133] a complaining Member may show a change in relative market shares over a representative period. This paragraph does not apply when the complaint alleges displacement or impedance of imports in the market of the subsidizing Member.[134]

Paragraph 5 provides that price undercutting may be shown by a comparison of prices of the subsidized product with prices of a non-subsidized like product supplied to the same market, although it does not preclude other means. Where possible, the comparison is to be made at the same level of trade and at comparable times, and account is to be taken of other factors affecting comparability. To make an affirmative finding of serious prejudice through price undercutting, the panel must find that the complaining Member has demonstrated that the price undercutting is significant and is a result of the effect of

[129] ASCM, Art. 6.1(a). It should be noted that in accordance with Annex IV of the ASCM, the percentage of subsidization is calculated in accordance with the cost to the government, unlike in a countervailing duty investigation in which the percentage of subsidization is calculated as the benefit to the recipient. Suggestions on how to measure the degree of subsidization in accordance with Annex IV can be found in the report of an informal group of experts formed to determine just that. *See Report of the Informal Group of Experts*, *supra* note 67. It should be noted that, since most of the "experts" in this group come from the Members' authorities charged with administering countervailing duties, the methods contained in this report provide significant guidance as to the methodology to be used for determining benefits for purposes of countervailing duty actions as well.

[130] ASCM, Art. 31. *See also*, the discussion in Article 27 of the implications for developing countries of the lapsing of this provisions.

[131] The increase must be as compared with the Member's average share during the previous three-year period, and it must follow a consistent trend over a period when subsidies have been granted. This provision does not apply when other multilaterally-agreed rules apply to trade in the product or commodity in question.

[132] *See* Report of the WTO Panel, *Indonesia—Certain Measures Affecting the Automobile Industry*, WT/DS54, 55, 59, 64/R (1999), at ¶ 14.164 ("*Indonesia—Automobile Industry*").

[133] ASCM, Art. 6.3(b).

[134] *See Indonesia—Automobile Industry*, *supra* note 132, at ¶ 14.208.

the subsidy.[135] The displacement or price undercutting, however, must be demonstrated with respect to product originating in the complaining Member's territory.[136]

One issue to be addressed in such cases is how to gather the necessary evidence to prove or rebut a claim of serious prejudice. The ASCM seeks to provide guidance in this regard. First, Paragraph 6 requires that the Member in whose market serious prejudice is alleged to have occurred shall make available to the panel *all relevant* information that can be obtained as to changes in market shares of the parties to the dispute and prices of the products involved. While the information to be provided by parties to a dispute is "all" relevant information, it is more limited if the serious prejudice is alleged to have occurred in a third country market.[137] Annex V to the ASCM prescribes procedures for collecting the necessary evidence. Paragraph 3 of that Annex, while acknowledging the right of the parties to seek information from the government of the third country Member where third country serious prejudice is alleged, places limits on the degree of cooperation required of the third country Member. A third country Member need only supply information that has already been gathered or that is readily available and need not provide information that is normally maintained as confidential by the government.[138] It is notable that there are no such limitations on the information to be provided by the parties to the dispute.

Among the procedures for collecting information is the designation by the DSB of a representative to facilitate the information-gathering process.[139] The information gathering should be completed within sixty days of the date on which the matter was referred to the DSB.

Annex V provides for the possibility of the failure of the subsidiary or a third-country Member to cooperate with the information-gathering process.[140] In such circumstances, the panel is to base its decision on the best information available to it and the complaining member may present its case based on the available information, which would include the fact that the subsidizing or third country Member had failed to cooperate.[141] Finally, the ASCM notes that in deciding to base its decision on the best information available, the panel should consider the advice of the DSB representative.[142] The panel is not obliged to follow that advice, however, only to consider it.

Article 7: Remedies

This Article provides for dispute settlement proceedings (1) in a case of serious prejudice, (2) when a Member has reason to believe that a subsidy as defined in Article 1 provided by another Member is injuring the complaining Member's industry, or (3) when the subsidy

[135] *See id.* at ¶ 14.255 (It should be noted that this is the only serious prejudice case to date to go to a panel and that the Panel found that the European Communities, one of the complaining Members, had demonstrated serious prejudice through significant price undercutting).

[136] *See id.* at ¶ 14.204. It is not sufficient that there be serious prejudice to a company of the complaining Member; the serious prejudice must be to a *product* of the complaining Member. *See id*. at ¶ 14.201 (finding that the United States could not establish serious prejudice on the basis of harm to the Indonesian subsidiaries of U.S. companies).

[137] ASCM, Article 6.6 notes that the requirement to provide all relevant information, when applied to third country Members, is subject to the provisions of Annex V, paragraph 3.

[138] ASCM, Annex V:3.

[139] ASCM, Annex V:4. It should be noted, however, that the *Indonesia—Automobile Industry* case is the only serious prejudice dispute brought to date and serious prejudice was only one of the claims of violation of the WTO Agreement.

[140] ASCM, Annex V:5.

[141] ASCM, Annex V:6.

[142] ASCM, Annex V:7.

results in nullification or impairment of the complaining Member's benefits under the WTO Agreement. Like the Article 4 remedy available in the case of prohibited subsidies, the procedures under Article 7 differ in a number of respects from the procedures in disputes covered by the Dispute Settlement Understanding.

To begin the proceedings, the Member requests consultations with the subsidizing Member. Such consultations should begin as quickly as possible. Under the DSU, a request for consultations must state the reasons for the request, including an "indication of the legal basis for the complaint."[143] Under ASCM, Art. 7.7, a request for consultations must also include a statement of the evidence with regard to the nature and existence of the subsidy in question and either the injury, serious prejudice, or nullification or impairment of benefits caused to the interests of the complaining Member.[144]

If no mutually acceptable solution has been agreed within sixty days of the request, any party to the consultations may refer the matter to the DSB for the establishment of a panel. The composition of the panel and the terms of reference are to be established within fifteen days of the request.[145] The panel is to review the matter and present its final report to the parties. That report is to be circulated to all Members within 120 days of the panel's establishment, in contrast to the six months provided under the DSU.[146] Within thirty days thereafter, the report is to be adopted, unless either appealed by one of the parties, or the DSB decides, by consensus, not to adopt the report. The normal DSU period is sixty days.[147] If appealed, the Appellate Body is to issue its report within sixty days, extendable by an additional thirty days. This is the same period as in regular DSU proceedings.

If a report is adopted in which it has been determined that a subsidy has resulted in an adverse effect to the interests of another party, then the subsidizing Member shall take appropriate steps to remove the adverse effects or to withdraw the subsidy. If such steps are not taken within six months from the date of the adoption of the report, the DSB may authorize countermeasures. Such countermeasures must be commensurate with the degree and nature of the adverse effects determined to exist.

PART IV: Non-Actionable Subsidies

Article 8: Identification of Non-Actionable Subsidies

Article 8 of the ASCM provides that non-specific subsidies are not actionable,[148] and it also defines three categories of "green light" subsidy that are not actionable even if they are specific.[149] For the first five years of the Agreement, green light subsidies could not be subjected to countervailing duties[150] or to discipline under the Agreement. However, Article 8 was a temporary provision subject to renewal.[151] In the aftermath of the 1999 Seattle Ministerial, this is one of the provisions that was allowed to lapse. All such "green

[143] DSU, Art. 4.4.
[144] ASCM, Art. 7.2.
[145] ASCM, Art. 7.4. This is a somewhat faster time frame than under the DSU. The DSU provides that a panel shall be established "at the latest at the DSB meeting following that at which the request first appears," in other words, approximately one month after the initial request for the panel is made. DSU, Art. 6.1. In addition, under the DSU, normally the panel composition and the terms of reference are determined within twenty days of the establishment of the panel. DSU, Art. 7.1.
[146] *Compare* ASCM, Art. 7.5 *with* DSU, Art. 6.8.
[147] DSU, Art. 16.4.
[148] ASCM, Art. 8.1.
[149] ASCM, Art. 8.2.
[150] *See ASCM,* Art. 10, n.35.
[151] ASCM, Art. 31.

light" programs are therefore currently actionable, and will remain so unless this Article is reinstated at some future date.

The first "green light" category consists of subsidies for research and development ("R&D") programs. Assistance for R&D would not be actionable if provided to firms, higher education facilities, or research establishments acting under contract to firms if:

i. The assistance covers not more than 75 percent of the costs of industrial research;[152] or
ii. The assistance covers not more than 50 percent of the cost of pre-competitive development research.[153]

Additionally, the assistance must be limited exclusively to:

i. Personnel costs for staff employed exclusively in the R&D activity;
ii. Costs of buildings and equipment, including instruments, used exclusively and permanently for the R&D activity;
iii. Consultancy or equivalent services used exclusively for the R&D activity (this would include technical knowledge and patents); or
iv. Other overhead and running costs incurred directly as a result of the R&D activity.[154]

Both the numerical limits and the definitions are considerably broader than the R&D green light category in the *Dunkel Text* (which allowed assistance only up to 25 and 50 percent, rather than 50 and 75 percent, and which stopped well short of allowing assistance for the creation of a prototype). This reflects the sudden and complete shift in U.S. position in November/December 1993, from the Bush Administration's attempt to remove green light categories to the Clinton Administration's attempt to expand them.[155]

The second category of green light subsidies concerns aid to disadvantaged regions within the territory of a Member given pursuant to a general framework of regional development.[156] For a subsidy to be non-actionable, each disadvantaged region must be a clearly designated, contiguous geographic area with a definable economic and administrative identity (*e.g.*, a county or district), and must be determined to be disadvantaged based on explicit, verifiable, neutral and objective criteria.[157] It is this requirement for

[152] "Industrial research" is defined as: ". . . planned search or critical investigation aimed at discovery of new knowledge with the objective that such knowledge may be useful in developing new products, processes or services, or in bringing about a significant improvement to existing products, processes or services." ASCM, Art. 8.2(a) n. 28.

[153] "Pre-competitive development activity" is defined as: ". . . the translation of industrial research findings into a plan, blueprint or design for new, modified or improved products, processes or services whether intended for sale or use, including the creation of a first prototype which would not be capable of commercial use." ASCM, Art. 8.2(a) n. 29.

[154] ASCM, Art. 8.2(a).

[155] *See* HUGO PAEMAN and ALEXANDRA BENSCH, FROM THE GATT TO THE WTO: THE EUROPEAN COMMUNITY IN THE URUGUAY ROUND 131 (1995). One of the Clinton Administration's goals was to protect its Partnership for a New Generation of Vehicles, a subsidy to U.S.-owned automobile companies, which expired after the payment of US $1.5 billion in grants.

[156] ASCM, Art. 8.2(b).

[157] The term "neutral and objective" means criteria that do not favor certain regions beyond what is appropriate for the elimination or reduction of regional disparities within the framework of the regional development policy. The criteria must include a measurement of economic development based on either: (i) income per capita, household income, or GDP per capita, which must be at least fifteen percent below the average for the territory concerned; or (ii) unemployment level, which must be at least ten percent above the average for the territory concerned. ASCM, Art. 8.2(b)(ii) and (iii).

explicit, verifiable, neutral and objective criteria that has been the most difficult for a defending country to demonstrate. Often, while regions identified as disadvantaged are, in fact, disadvantaged when examined under these criteria, the original decision to provide the assistance was based more on political considerations than on established explicit economic criteria.

The final category of green light subsidies is assistance to companies to help them adapt to new environmental requirements (as long as the assistance is limited to twenty percent of the cost of the necessary adaptation and is given on a one-time only basis). This was the result of a last-minute Mexican proposal (drawn from a 1989 EC proposal) that the United States was unable to block (because the U.S. credibility in opposing green light status had been compromised by its change in position on R&D subsidies).

Finally, Article 8 requires that, to be considered to be non-actionable, a green light subsidy must be notified in advance to the Committee on Subsidies and Countervailing Measures.[158] Nonetheless, language was added at U.S. (and possibly EC) insistence in late 1993 that subsidies may be found to be green light subsidies, even if not notified to the Committee in advance. If, in the course of a proceeding, it is determined that a subsidy meets the requirements, then that subsidy shall be treated as non-actionable.[159] The Committee, upon request, will review the practice to determine if the requisite conditions have been met.[160]

Article 9: Consultations and Authorized Remedies

Although green light subsidies as defined by Article 8.2 were considered non-actionable, Article 9 provided for some remedy when such a subsidy resulted in serious adverse effects to the domestic industry of another Member. Article 9 permitted the Member whose domestic industry was experiencing serious adverse effects to request consultations with the Member granting or maintaining the subsidy.[161] The purpose of such consultations was to clarify the facts and to arrive at a mutually acceptable solution.[162]

If no mutually acceptable solution had been reached within ninety days of the request for consultations, the requesting Member could refer the matter to the SCM Committee.[163] The Committee would then immediately review the effects and evidence of adverse effects. If the Committee determined that adverse effects existed, it could recommend that the granting Member modify the subsidy so as to eliminate the adverse effects. The Committee was to present its conclusions within 120 days of the matter being referred to it.[164]

If the granting Member had not followed the recommendation within six months, the SCM Committee could authorize the requesting Member to take appropriate countermeasures. Such countermeasures must be commensurate with the degree of adverse effects found to exist.[165] The Article 9 procedure was not used during the five years that Articles 8 and 9 were in effect.

PART V: Countervailing Measures

While the previous sections of the ASCM deal with rules governing the use of subsidies by WTO Members, as well as setting forth the procedures under which subsidies may be challenged within the WTO system, Part V of the Agreement outlines the rules and procedures that Members must follow when they take unilateral action against subsidies through the imposition of countervailing measures. The purpose of the Part V provisions is to limit the use of such measures in order to ensure that they are not used in a protectionist manner.[166]

Article 10: Application of Article VI of GATT 1994

Article 10 of the ASCM provides the foundation for the Agreement's provisions on the conduct of a countervailing duty investigation and requirements that must be met before countervailing duties can be imposed. Members are permitted to impose countervailing duties *only after* they have initiated and conducted an investigation in accordance with the provisions of Part V of the ASCM. A countervailing duty is defined in Article 10 as "a special duty levied for the purpose of offsetting any subsidy bestowed directly or indirectly upon the manufacture, production or export of any merchandise."[167] The remedy provisions of Parts II and III of the ASCM regarding prohibited and actionable subsidies may be invoked in tandem with the procedural provisions of Part V, however, only one form of remedy, a countervailing duty or a form of countermeasure (as outlined in Articles 4 and 7) may be imposed to offset the impact of a particular subsidy.[168]

Illustrating the integrated nature of all of the WTO Agreements, Members are also obliged by Article 10 to take account of Article 13 of the WTO Agreement on Agriculture. Article 13, the Due Restraint clause,[169] outlines exceptions to the provisions of Part V of the ASCM. For example, domestic agricultural support measures for which a Member had claimed an exemption from reduction commitments[170] shall be "non-actionable subsidies for purposes of countervailing duties," exempt from remedy action taken under Article XVI of GATT 1994 and Part III of the ASCM on actionable subsidies, and "exempt from actions based on non-violation nullification or impairment of the benefits of tariff concessions accruing to another Member."[171] Members are also required to use

[166] Countervailing measures are not applied as often or by as many countries as anti-dumping measures. Between 1995 and June 30, 2002, eleven WTO Members had imposed a total of 84 countervailing measures (fourteen Members had initiated a total of 147 investigations), compared with over eleven hundred anti-dumping measures imposed by 29 countries (and over 1900 investigations initiated). *See* statistics on the WTO Website (www.wto.org). The United States was by far the largest user, with 34 measures (and 59 initiations). It was followed by the EC with fifteen measures, and Mexico with seven.

[167] ASCM, Art. 10, n. 36.

[168] *Id.,* Art. 10, n. 35.

[169] Article 13 is also referred to as the Peace Clause. Given the contentious nature of agricultural trade in the multilateral trading system over the past fifty years, this "loophole" provision designed to prevent countervailing duty investigations against certain agricultural subsidies is aptly named. It will be interesting to see how the agriculture liberalization negotiations stemming from the Doha Round of multilateral trade negotiations will deal with countervailing duties on agricultural goods.

[170] *WTO Agreement on Agriculture* at Annex 2:1.

[171] *Id.*, Art. 13(a)(i), (ii), and (iii). In addition, this article provides that domestic agricultural support measures that conform with Article 6 of the WTO Agreement on Agriculture (which contains provisions regarding Member's domestic support commitments) shall be exempt from countervailing duties unless there has been a determination of injury or threat of injury to the domestic industry producing the like product in accordance with Article VI of GATT 1994 and Part V of the ASCM on countervailing measures. *Id.,* Art. 13(b)(i). Similarly Art. 13(c) provides that export subsidies conforming to Part V of the Agreement on Agriculture (*e.g.*, subject to reduction commitments), may only be countervailed upon a determination of injury or

"due restraint" with respect to the initiation of a countervailing duty investigation.[172] It should be noted that Article 13 exceptions applied only during the "implementation" period, which was defined as nine years beginning on January 1, 1995, *i.e.*, through December 31, 2003.[173] Arguments have already begun about the legal consequences of expiry—will all agricultural export subsidies be prohibited under Article 3 of the ASCM?

Article 11: Initiation and Subsequent Investigation

The ASCM requires a transparent investigative process that affords interested parties the opportunity to participate in the investigation prior to the imposition of countervailing duties.[174] The requirements outlined in the Agreement include: (1) standards that need to be met for the initiation of an investigation; (2) the determination of domestic industry support for the application for the imposition of countervailing duties; and (3) rules of evidence for access to, and ability to comment on, information submitted during an investigation.

Article 11.1 and 2: Application for Imposition of Countervailing Measures. Article 11.1 of the ASCM requires that a countervailing duty investigation be initiated after written application by or on behalf of the affected domestic industry that includes the following information: (1) the existence of a subsidy and its alleged amount, if possible; (2) the existence of injury to the domestic industry producing the like product; and (3) the existence of a causal link between the subsidized imports and the alleged injury to the domestic industry.[175] Applicants for the imposition of countervailing duties must go beyond a "[s]imple assertion, unsubstantiated by relevant evidence" in order to meet the requirements set forth for the initiation of a countervailing duty investigation.[176] In special circumstances, the authorities of an importing Member may self-initiate an investigation without receiving an application. In such circumstances, the authorities must meet the same evidentiary requirements as a written application.[177]

The application for the imposition of countervailing duties must contain the following information before it is considered sufficient for the administering authority to initiate an investigation: (1) the identity of the petitioning party and a description of the volume and value of domestic production of the like product by the petitioner;[178] (2) a "complete" description of the allegedly subsidized imported product, the country or countries of origin of that product, and the identity of each known exporter or foreign producer and

threat of injury to the domestic industry. Moreover, such export subsidies are not subject to actions based on ASCM, Art. 3, 5, or 6. However, since the ASCM already provides that no countervailing duty may be levied without a determination of injury or threat of injury to a domestic industry, the Article 13 limitation appears to have little practical effect for countervailing duty purposes, except for measures falling within Article 13(a) of the Agriculture Agreement. It has worked to prevent recourse to the multilateral disciplines of the ASCM.

[172] It is not clear what "due restraint" means in this context, but it may require Members not to self-initiate investigations as opposed to initiating upon receipt of an application. Self-initiation of countervailing duty investigations is extremely rare.

[173] *Id.*, Art. 1(f) and Art. 13.

[174] These procedural rules are quite similar though not identical to the rules found in the ADA. *See* Chapter 11 of this book. Interpretations of ASCM obligations can be derived from panel and Appellate Body decisions of the comparable obligations found in the ADA.

[175] ASCM, Art. 11.1 and 2.

[176] *Id.*, Art. 11.2.

[177] ASCM, Art. 11.6. As noted above, self-initiation by the Importing Member is extremely rare.

[178] *Id.*, Art. 11.2(i).

any known domestic importers;[179] (3) evidence regarding the nature and amount of the alleged subsidy;[180] and (4) evidence that the domestic industry is being injured by the subsidized imports "through the effects of the subsidies."[181]

Article 11.3: Obligation to Review Evidence Prior to Initiation. Each Member's administering authority is charged with reviewing the evidence presented in each application for the imposition of countervailing duties "to determine whether the evidence is sufficient to justify the initiation of an investigation."[182] It should be noted that while an applicant need only provide such evidence that is reasonably available, the administering authorities have a separate obligation to determine that the evidence before them is sufficient to justify initiating an investigation. Thus, if the evidence "reasonably available" to the applicant is not sufficient to justify initiation, the administering authorities have two possible actions they can take. The administering authorities can either reject the application and refuse to initiate an investigation or they can seek "sufficient evidence" from other sources. According to the Panel report in *Guatemalan Cement II*, interpreting similar language in the Anti-dumping Agreement, "investigating authorities need not content themselves with the information provided in the application but may gather information on their own in order to meet the standard of sufficient evidence for initiation."[183]

It should also be noted that, in line with past GATT practice, while the evidence of the various elements (subsidies and injury or threat of injury thereby) must be sufficient, it need not reach the level necessary to sustain an affirmative preliminary or final determination. The *Guatemalan Cement II* Panel noted that the "type of evidence needed to justify initiation is *the same subject–matter or type of evidence* as that needed to make a preliminary or a final determination, although the quality and quantity needed for the initiation of an . . . investigation is less than for a preliminary or final determination."[184]

[179] *Id.*, Art. 11.2(ii).

[180] ASCM, Art. 11.2(iii).

[181] *Id.*, Art. 11.2(iv).

[182] *Id.*, Art. 11.3. In *Thailand Steel*, a WTO panel reviewing an anti-dumping measure imposed by Thailand, citing the Report of the WTO Panel, *Mexico-Anti-dumping Investigation of High Fructose Corn Syrup (HFCS) from the United States*, WT/DS132/R (2000) ("*HFCS")*, noted that the Anti-dumping Agreement (which contains comparable requirements for an application) "does not require an application to contain analysis, but rather to contain information, in the sense of evidence, in support of allegations." The panel went on to conclude that "the fact that the application contains data that is relevant . . . but does not contain explanation or analysis of much of this data does not, in and of itself, lead to a violation." *See* Report of the WTO Panel, *Thailand—Anti-dumping Duties on Angles, Shapes and Sections of Iron or Non-Alloy Steel and H-Beams from Poland*, WT/DS122/R (2001) at ¶¶ 7.75 and 7.76.

Similarly, in *EC Bed Linen*, a WTO panel concluded that the authorities must examine the evidence in the application to determine its sufficiency to warrant initiation, but the ADA (and also similar provisions in the ASCM) "says nothing regarding the nature of the examination to be carried out. Nor does it say anything requiring an explanation of how that examination was carried out." *See* Report of the WTO Panel, *European Communities—Anti-dumping Duties on Imports of Cotton-Type Bed Linen From India*, WT/DS141/R (2001) at ¶ 6.198.

In *Guatemalan Cement II*, the Panel said that an application must contain evidence of all the necessary elements—dumping, injury, and causation—and that the "evidence must be such that an unbiased and objective investigating authority could determine that there was sufficient evidence of dumping within the meaning of Article 2 to justify initiation of an investigation." Report of the WTO Panel, *Guatemala—Definitive Anti-dumping Measures on Grey Portland Cement from Mexico*, WT/DS156/R (2000) at ¶ 8.35 ("*Guatemalan Cement II*").

[183] *Guatemalan Cement II*, *supra* note 182, at ¶ 8.62.

[184] *Id*. at ¶ 6.57 (emphasis in original). *See also, HFCS, supra* note 182, at ¶ 7.74 .

Similarly, in the GATT dispute on *Softwood Lumber*, the panel stated that "in analyzing further what was meant by the term "sufficient evidence," the Panel noted that the quantum and quality of evidence to be

In interpreting similar obligations to be met prior to initiating an anti-dumping investigation, in *Guatemalan Cement II*, a WTO Panel found that the Guatemalan authorities had violated Article 5.3 of the ADA when they initiated an anti-dumping duty investigation of imports of cement from Mexico without sufficient information to justify initiation.[185] Mexico claimed that the original application for anti-dumping duties failed to provide sufficient information for the investigating authority to "have properly determined that there was sufficient evidence of dumping, still less of a threat of material injury, and of a causal link between the imports allegedly dumped and the alleged threat of material injury to the Guatemalan domestic industry, to justify initiation of an anti-dumping investigation."[186] For example, with respect to the existence of dumping, the application contained only two invoices as evidence of normal value in the Mexican market, and those invoices failed to identify the type of cement sold, the amount sold, and the source of the sale. In addition, the Panel concluded that, based on the evidence submitted in the application, normal value and export price sales were at a completely different level of trade. According to the Panel report, "{t}he existence of these stark differences in quantity and in level of trade, . . . should have triggered at a minimum some reflection on the part of the investigating authorities as to the possible non-comparability of the sales in question."[187] *Guatemalan Cement II* highlights the importance of the procedural rules established by the ADA and the ASCM. In order to be sufficient for initiation, an application for the imposition of anti-dumping or countervailing duties must provide positive evidence of dumping or subsidization that causes material injury to the domestic industry producing the like product that is not based merely on "[s]imple assertion."[188]

Article 11.4: Standing. The authorities are also charged with determining the degree of support for, and opposition to, the application for the imposition of duties and to examine whether the countervailing duty application is being made "by or on behalf of the domestic industry." Article 16 of the ASCM defines the domestic industry as the "domestic producers as a whole of the like products or . . . those of them whose collective output of the products constitute a major proportion of the total domestic production of those products."[189] Article 11.4 states that the application will be deemed to have been

required of an investigating authority prior to initiation of an investigation would necessarily have to be less than that required of that authority at the time of making a final determination." Report of the GATT Panel, *United States—Measures Affecting Imports of Softwood Lumber from Canada*, at ¶ 332, SCM/162 (adopted 27 October, 1993) BISD, 40th Supp., 358.

[185] *Guatemalan Cement II*, *supra* note 182, at ¶ 8.39.

[186] *Id*., at ¶ 8.29.

[187] *Id*. at ¶ 8.37.

[188] ASCM, Art. 11.2. *See* Notice of Initiation of Countervailing Duty Investigation*: Certain Cold-Rolled Flat-Rolled Carbon Quality Steel Products from Brazil, Indonesia, Thailand, and Venezuela*, 64 Fed. Reg. 34,204, 34,207 (U.S. Dep't Comm. June 25, 1999) ("While Petitioners have documented the committed investment element of SIDOR's privatization, a simple assertion that the investment was a condition of SIDOR's sale is insufficient to demonstrate the existence of a direct or indirect financial contribution by the GOV to SIDOR. Thus, we are not investigating the investment commitments which were made a part of the privatization of SIDOR").

[189] ASCM, Art. 16.1. The "standing" of the applicants to submit an application was one of the most controversial issues under the 1979 Subsidies and Anti-dumping Codes, giving rise to several dispute proceedings. Article 16.1 and the comparable provision in the ADA reflect the negotiators' efforts to resolve the controversy by establishing clearer rules.

See, e.g. Swedish Steel, where a GATT panel ruled that the U.S. Department of Commerce had not "taken steps which could reasonably be considered to be sufficient to ensure that the initiation of this investigation was based on an application filed on behalf of the domestic industry affected." Report of the GATT Panel,

made on behalf of the domestic industry if it is supported by domestic producers whose collective output is at least 25 percent of the total production of the like product.[190] In addition, the domestic producers expressing support for the petition must account for at least fifty percent of the domestic production expressing an opinion either in favor of or against the petition.[191]

In *HFCS*, a WTO panel, interpreting identical language in the Anti-dumping Agreement, found that Mexico had acted inconsistently with Articles 3.1, 3.2, 3.4, and 3.7 of that agreement when it conducted its standing analysis on only the market segment which sold sugar cane to industrial users, ignoring the segment of the industry that sold to households (which constituted 47 percent of the domestic industry).[192]

Article 11.5–11.11: Initiation and Subsequent Investigation. Article 11 also dictates timelines for the completion of an investigation and standards concerning when an administering authority is required to terminate an investigation. Under Article 11.11, countervailing duty investigations are to be concluded within one year of initiation and in no case shall they last longer than eighteen months. The administering authorities conducting an investigation are required to terminate the investigation "promptly" when they are satisfied that there is not sufficient evidence of subsidization or injury to the domestic industry.[193] For example, if the amount of a subsidy is determined to be

United States—Imposition of Anti-dumping Duties on Imports of Seamless Stainless Steel Hollow Products from Sweden, ADP/47 (1990) (unadopted) at ¶ 5.19 ("*Swedish Steel* ").

In a case involving a regional market, a GATT panel in *Cement from Mexico* ruled that the United States had violated its GATT obligations "because the United States authorities did not satisfy themselves prior to initiation that the petition was *on behalf of producers of all or almost all of the production in the regional market*." Report of the GATT Panel, *United States—Anti-dumping Duties on Gray Portland Cement and Cement Clinker from Mexico*, ADP/82 (1992) (unadopted) at ¶ 5.34 (emphasis added) ("*Cement from Mexico*").

See also, e.g., Salmon CVD, where a GATT panel determined that the U.S. Department of Commerce acted consistently with its obligations when it initiated anti-dumping and countervailing duty investigations against salmon imports from Norway based on a petition filed on behalf of the domestic salmon industry. Norway argued that the Department of Commerce failed to determine if the petitioning party actually represented the affected domestic industry. However, the Panel ruled that the Department of Commerce "could reasonably have relied on statements in the certified petition that these firms accounted for well over a majority of production. . . and that these firms supported" the petition (even though Commerce had received a letter from some of those domestic producers stating that they did not support the petition). Report of the GATT Panel, *United States—Imposition of Countervailing Duty on Imports of Fresh and Chilled Atlantic Salmon from Norway*, BISD, 41st Supp., Vol. II at 576 at ¶ 232 (1994) (adopted).

[190] This means all production, including production by firms that may be excluded for purposes of the fifty percent test, *i.e.*, those that are themselves importers of the subject product or affiliated with the foreign producers of the subject product.

[191] ASCM, Art. 11.4. In the United States, prior to the implementation of the ASCM and the Uruguay Round Agreements Act, the U.S. Department of Commerce practice was to accept at face value the petitioner's claim that it represented the domestic industry. The Department of Commerce would only question the petitioner's standing if another member of the domestic industry specifically expressed their opposition to the Department in writing. Even then, such a letter of opposition was only considered after an investigation had been initiated. In *Swedish Steel,* a GATT Panel rejected Department of Commerce practice concerning petitioner's standing. At the time, the United States blocked adoption of the decision of the Panel. *See Swedish Steel*, *supra* note 189.

During the Uruguay Round negotiations, the *Checklist* of issues specifically noted opposition to the U.S. approach of "assuming standing" unless a majority of the domestic industry actively opposed the petition, and noted that a petition or application should contain positive evidence that it is brought on behalf of the domestic industry. *Checklist*, *supra* note 21, at III.5.1.

[192] *See HFCS*, *supra* note 182.

[193] ASCM, Art. 11.9.

de minimis, *i.e.*, less than one percent *ad valorem*, or the volume of imports or material injury to the domestic industry are negligible, the administering authority must terminate the investigation.[194]

In *United States—CDSOA,* the Appellate Body reversed a panel finding that the U.S. Continued Dumping and Subsidy Offset Act (known as the "Byrd Amendment" after the Senator who introduced it), violated Article 11.4. The statute provides for the distribution of anti-dumping and countervailing duties collected by the U.S. Customs Service to the companies that supported the original petition resulting in the order under which the duties were collected. The Panel stated that the statute created:

> the spectre of an investigation being pursued where only a few domestic producers have been affected by the alleged dumping, but industry support is forthcoming because of the prospect of offset payments being distributed if dumping is found in consequence of the investigation and anti-dumping duties imposed. In consequence the CDSOA may be regarded as having undermined the value of AD Article 5.4/SCM Article 11.4 to the countries with whom the United States trades, and the United States may be regarded as not having acted in good faith in promoting this outcome.[195]

The Appellate Body disagreed. In its view Article 11.4 provided no basis for examining the motives of petitioners; "it is the "quantity", rather than the 'quality', of support that is the issue."[196] However, as noted below, the Appellate Body did uphold the Panel's finding that the statute violated Article 32.1 of the ASCM.

Article 12: Evidence

Article 12 establishes standards for rights of access to, and presentation of, data and information during an investigation. Interested parties[197] are to be given notice of the information that the administering authorities require to conduct the investigation[198] and they are to be given at least thirty days in which to respond to the questionnaires (requests for deadline extensions should be considered and granted where practicable).[199]

[194] *Id.*

[195] Report of the Panel, *United States—Continued Dumping and Subsidy Offset Act of 2000*, WT/DS217/, 234/R (2002), ¶ 7.63.

[196] Report of the Appellate Body, *United States—Continued Dumping and Subsidy Offset Act of 2000*, WT/DS217/, 234/AB/R (2003) (*United States—CDSOA")*, ¶ 283.

[197] *Id.* Art. 12.9 defines the term " interested parties" as including "(i) an exporter or foreign producer or the importer of a product subject to investigation, or a trade or business association a majority of the members of which are producers, exporters or importers of such product; and (ii) a producer of the like product in the importing Member or a trade and business association, a majority of the Members of which produce the like product in the territory of the importing Member." Interested Member governments are also allowed to present evidence during an investigation. In addition, Article 12.10 states that the administering authority shall also accept information from industrial users of the product under investigation, or from consumer groups if the product is commonly sold at the retail level. In practice, however, the effect or impact of user or consumer group input has been limited. For example, in the United States there is no evidence that authorities actually take account of the views of users or consumer groups. *See, e.g.*, Decision Memorandum accompanying the Notice of Final Determination of Sales at Less Than Fair Value: *Certain Softwood Lumber Products from Canada*, 67 Fed. Reg. 15,539 (U.S. Dep't Comm. April 2, 2002) (final determ.) (The Department of Commerce noted that it had received a case brief from a consumer group; however, none of the group's views were discussed in the Department's Decision Memorandum.)

[198] ASCM, Art. 12.1.

[199] *Id.*, Art. 12.1.1. This minimum time period was established by the negotiators to resolve controversies over what constituted a "reasonable opportunity" to respond.

The WTO panel in *Guatemalan Cement II* provided some clarification regarding the presentation of arguments and information. According to the Panel, Article 6.1 of the Anti-dumping Agreement (which corresponds to Article 12.1 of the ASCM) "does not require investigating authorities to set time-limits for the

The administering authority is required to provide a complete, full-text copy of the application for the imposition of countervailing duties to all interested parties as soon as an investigation has been initiated[200] and, in addition, the authorities are to ensure that all information presented by one interested party is made available to all other interested parties.[201] Confidential business information, the release of which could cause a "significantly adverse effect" upon the submitting party, shall be treated as confidential by the administering authorities.[202] Interested parties are required to provide non-confidential summaries that "provide a reasonable understanding of the information submitted in confidence" of any information for which confidential treatment had been requested.[203] Once the information has been submitted to the administering authorities by the interested parties, the authorities have the right under Article 12 to conduct on-site verification of any information submitted by any interested party during the course of the proceeding.[204]

If an interested party refuses access to, or otherwise does not provide the requested information within a reasonable time period, or significantly impedes the investigation (*e.g.*, the accuracy of the information presented is not verifiable), the administering authority may make its preliminary or final determinations on the basis of "facts

presentation of arguments and evidence during the final stage of the investigation." Article 6.1 only requires that investigating authorities provide respondents with "at least 30 days for replying to questionnaires" and that the authorities provide interested parties with 'ample' opportunity to present evidence and 'full' opportunity to defend their interests." *Guatemalan Cement II*, *supra* note 182, at ¶¶ 8.118 and 8.119.

[200] ASCM, Art. 12.1.3. The Panel in *Guatemalan Cement II* clarified the meaning of "as soon as," stating that this phrase "conveys a sense of substantial urgency" and that "'immediately' and 'as soon as' are considered to be interchangeable." Thus, full copies of the application for the imposition of duties must be presented to interested parties immediately upon initiation and not several days later. *Guatemalan Cement II*, *supra* note 182, at ¶ 8.101.

[201] ASCM, Art. 12.1.2. Similar provisions in the Anti-dumping Agreement have been reviewed by the Dispute Settlement Body. For example, in *Guatemalan Cement II,* the panel stated that Article 6.4 of the Anti-dumping Agreement "provides that an interested party shall have 'timely opportunities' to see all information that is relevant to the presentation of its case." However, if the authorities require parties to serve copies of all submissions on all other parties, access to the official file may not be necessary. In the event that the parties are not required to serve submissions, "access to the file may be the only practical means by which evidence presented by one interested party" may be "'made available promptly."' *Guatemalan Cement II*, *supra* note 182, at ¶ 8.133.

[202] ASCM, Art. 12.4. In the United States, confidential business information is submitted under an Administrative Protective Order, which binds the Order's signatories (usually the lawyers for the various parties) to not disclose any information marked as confidential. Mexico permits access to confidential business information only to Mexican lawyers and confidential information can only be reviewed at the offices of the administering authorities (after the parties have posted a large bond to ensure compliance with the protective order). The treatment of confidential information is extremely difficult for administering authorities. While interested parties need access to information in order to present arguments, companies, both applicants and exporters, are concerned that the application of rules such as those used by the United States in other countries, could lead to the inadvertent disclosure of their business and trade secrets.

In *Guatemalan Cement II*, the Panel ruled that an administering authority *cannot delay* making available evidence submitted by an interested party merely because the submitting party had requested confidential treatment for the information submitted. *Guatemalan Cement II*, *supra* note 182, at ¶ 8.143.

[203] ASCM, Art. 12.4.1.

[204] ASCM, Art. 12.5 states that the authorities shall "satisfy themselves as to the accuracy of the information supplied" by interested parties. Article 12.6 provides the authorities with the right to conduct on-site verification of information submitted by parties and governments in the territory of other Members so long as the companies involved agree and the Member's government is "notified and does not object." Further, Annex VI of the ASCM outlines the "Procedures for On-The-Spot Investigations Pursuant to Paragraph 6 of Article 12." Annex VI provides basic guidance with respect to the notification of parties of the need for on-the-spot investigations and the requirement that administering authorities notify interested parties in the exporting country of the nature of the information that they will be required to provide prior to the commencement of the on-the-spot investigation.

available."[205] However, "due account" is to be taken of any problems or difficulties experienced by interested parties, especially small companies, in providing the requested information in a complete and timely manner.[206] What constitutes appropriate "facts available," and when recourse to them is appropriate, is a matter of considerable controversy.

This issue of "facts available" is one area where the ASCM and the ADA rules differ.[207] The ADA contains an Annex providing guidance on the use of facts available. Paragraph 7 of the Annex notes that "if an interested party does not cooperate and thus relevant information is being withheld from the authorities, this situation could lead to a result which is less favourable to the party than if the party did cooperate."[208] This use of information leading to less favorable results is often used to justify the use of "adverse facts available" in the case of a non-cooperating respondent or a respondent that otherwise significantly impedes an investigation. Unlike the ADA, however, the ASCM contains no similar provision. Therefore, it is unclear that investigating authorities can ever justify the use of facts that systematically apply to the disadvantage of the responding party in a countervailing duty investigation or review.

Even if resort to adverse facts is permitted in countervailing duty cases, their use is highly controversial. U.S. practice with respect to the use of facts available, especially adverse facts available determinations, has come under attack in the WTO ADA. While the ADA provides more guidance than the ASCM on the use of facts available, a discussion of a key dispute on this issue may provide some guidance for ASCM purposes. In *Hot-Rolled Steel from Japan*, a WTO Panel ruled, and the Appellate Body affirmed, that the U.S. Department of Commerce had violated the relevant provisions in the ADA by unjustifiably assigning adverse facts available to three Japanese respondents during an anti-dumping duty investigation of hot-rolled steel imports from Japan.[209] Two of the respondent companies, NSC and NKK, received adverse facts available determinations because the Department of Commerce refused to accept requested information (in this case, a theoretical-to-actual weight conversion factor) on the grounds that the information was submitted after the pre-established deadlines outlined in the Department's regulations. The Panel ruled that, since the information was submitted before the start of verification, and was not information such as prices or costs that would impede the Department's ability to complete its investigation in a timely manner, "an objective and unbiased investigating authority could not . . . have reached the conclusion that NKK and NSC failed to provide necessary information within a reasonable period."[210] The inability of respondent companies to meet the often-tight deadlines established by administering authorities is a constant problem in both anti-dumping and countervailing duty proceedings. *Hot-Rolled Steel from Japan* provides guidance to the authorities as to what actually constitutes a "reasonable period" in which to expect respondents to provide requested information.

[205] ASCM, Art. 12.7.
[206] *Id.*, Art. 12.11.
[207] *Compare* ASCM, Art. 12.7 and 11 *with* ADA, Art. 6.8 and Annex II.
[208] ADA, Annex II.7.
[209] Report of the WTO Panel, *United States—Anti-dumping Measures on Certain Hot-Rolled Steel Products from Japan*, WT/DS184/R (2001) ("*Hot-Rolled Steel from Japan*"), *aff'd* Report of the Appellate Body, *United States—Anti-dumping Measures on Certain Hot-Rolled Steel Products from Japan*, AB-2001-2, WT/DS184/AB/R (2001). It should be noted that the rules governing the use of facts available in the ADA are more detailed than those found in the ASCM. While the language in ASCM Art. 12.7 is identical to the first sentence of Article 6.8 of the ADA, the ADA also contains Annex II, which provides detailed guidance on the use of facts available. The ASCM does not contain similar guidance. Some Members have argued for inclusion in the ASCM of provisions similar to Annex II of the ADA.
[210] *Hot-Rolled Steel from Japan*, *supra* note 209, at ¶ 7.60.

The issues surrounding the U.S. Department of Commerce's facts available determination for the third company in *Hot-Rolled Steel from Japan*, KSC, illustrates why the procedural rules established by the WTO Agreement were necessary to regulate the conduct of trade remedy cases among Member states. KSC was requested by the Department of Commerce to provide resale prices and further manufacturing costs for an affiliated purchaser in the United States, California Steel Industries ("CSI"), a normal request in many anti-dumping proceedings. However, while CSI was fifty percent owned by KSC, KSC had no direct control over the company, as evidenced by the fact that CSI was one of the applicants in the case. KSC had requested that the Department of Commerce not require it to provide data on sales to CSI because of the inherent conflict present in the case. KSC had also presented the Department of Commerce with the correspondence demonstrating its efforts to obtain the requisite information from CSI and CSI's refusal to cooperate with KSC. In its determination, the Department of Commerce ruled that KSC had not acted to the best of its ability to obtain the requested reseller data and assigned an adverse facts available product-specific margin to KSC. The Panel ruled that since there was no disputing the fact that KSC had not provided the requested information, the Department of Commerce was justified under Article 6.8 of the ADA in making a determination based on facts available because KSC had not provided the requested information. However, the facts in this case demonstrated that KSC could not have reasonably been expected to provide affiliated reseller data when it did not have direct control over the reseller and the reseller was an applicant in the case and had interests directly opposed to those of the respondent, KSC.[211] Therefore, the application of *adverse* facts available was not appropriate.

Article 13: Consultations

When a countervailing duty application is filed with a Member government, Article 13 of the ASCM requires that Member to provide the opportunity for consultations, prior to initiation, to any Member government whose products may be subject to the countervailing duty investigation.[212] The pre-initiation consultations have the "aim of clarifying" the information submitted in the application, including the nature and amount of the subsidy, injury to the domestic import competing industry, and a causal link between the subsidized imports and the alleged injury.[213] The goal of the consultations is to encourage the parties to arrive at a "mutually agreed solution" to resolve the dispute. In practice, however, while pre-initiation consultations have sometimes resulted in a few subsidy programs not being investigated by the investigating authority (which in practical terms is a worthwhile outcome for the responding Member), they do not appear ever to have led to a complete withdrawal of a case.

Consultations are to be permitted throughout the countervailing duty investigation and are not to be limited to just the pre-initiation stage.[214] Note 44 of Article 13.2 specifies that "no affirmative determination whether preliminary or final be made without reasonable opportunity for consultations having been given." The Member's investigating authority is also required to provide affected Members with access to all non-confidential evidence presented during the investigation.[215] However, Article 13 does not prevent a Member

[211] *Id.* at ¶ 7.73.
[212] ASCM, Art. 13.1

[215] *Id.*, Art. 13.4.

from proceeding "expeditiously" with respect to initiation of an investigation or reaching a preliminary or final determination, as long as the Member has provided affected Member governments the "reasonable" opportunity for consultations.[216]

Article 14: Calculation of the Amount of a Subsidy

Article 14 provides guidelines for the measurement of four types of subsidy in countervailing duty investigations:

- Government provision of *equity capital* is not to be regarded as conferring a benefit unless the investment decision is inconsistent with the usual investment practices of private investors in the Member country.
- The benefit from a *loan* is the difference between what the recipient pays for the government loan and what the recipient would pay for a comparable commercial loan.
- The benefit from a government *loan guarantee* is the difference between the amount the recipient pays for the guaranteed loan (including the guarantee fee) and the amount it would pay for a comparable commercial loan absent the government guarantee.
- The government *provision of a good or service* or *purchase of a good* is only to be treated as a benefit if the provision is made for less than adequate remuneration or the purchase for more than adequate remuneration. Article 14 does not define "adequate remuneration," though it does require that the adequacy of remuneration be determined in relation to prevailing market conditions for the good or service in question in the country of provision or purchase.[217] It does not indicate how this is to be measured if the Government is the sole provider/purchaser of the good or provider of the service in the country in question; however, the language restricting the comparison to the market in the country of provision or purchase could be viewed as prohibiting cross-border comparisons.[218]

[216] *Id.*, Art. 13.3.

[217] ASCM, Art. 14(d).

[218] In *Softwood Lumber III*, however, the Appellate Body left the door open to the possibility of a cross-border comparison, although it stated that "the possibility under Article 14(d) for investigating authorities to consider a benchmark other than private prices in the country of provision is very limited." *Softwood Lumber III Appellate Body Report*, *supra* note 53, ¶ 102. The Appellate Body indicated that if the investigating authorities use an alternative benchmark, they have an "obligation to ensure that the resulting benchmark relates or refers to, or is connected with, prevailing market conditions in the country of provision. . . ." *Id.* at ¶ 106. While noting it might in certain instances be possible to use a benchmark from outside the country of provision, suitably adjusted, doing so would be extremely difficult. *See id.* at ¶¶ 108–109:

> . . . it seems to us that it would be difficult, from a practical point of view, for investigating authorities to replicate reliably market conditions prevailing in one country on the basis of market conditions prevailing in another country. First, there are numerous factors to be taken into account in making adjustments to market conditions prevailing in one country so as to replicate those prevailing in another country; secondly, it would be difficult to ensure that all necessary adjustments are made to prices in one country. . . . In any event, any comparative advantage would be reflected in the market conditions prevailing in the country of provision and, therefore, would have to be taken into account and reflected in the adjustments made to any method used for the determination of adequacy of remuneration, if it is to relate or refer to, or be connected with, prevailing market conditions in the market of provision.

In the view of the authors, it was not the intention of the drafter of the language to permit cross-border comparisions, nor was it of Mexico, the GATT Contracting Party which had pushed the language of Article 14 (d) to preclude the U.S. from substituting cross-border U.S. energy prices for Mexican ones.

Article 14 is the only Article to provide guidance on the measurement of the benefit conferred by actionable subsidies for countervailing duty purposes.[219] It provides for guidelines for measuring the benefit to the recipient for purposes of defining a subsidy under Article 1.1(b) of the ASCM (defining subsidy as a financial contribution or price or income support which confers a benefit on the recipient) for countervailing duty purposes.[220]

While the chapeau to Article 14 states that it provides guidance for countervailing measures purposes, it also indicates that it is to calculate the benefit to the recipient conferred pursuant to Article 1.1(b). Thus, this Article has been used by Panels to inform their determination of whether a subsidy existed under Article 1 for other purposes as well.[221]

Article 14 requires that any calculation methodology employed by an investigating authority be provided for either in the national legislation or in the investigating authority's implementing regulations.

Article 15: Determination of Injury

The provisions of the ASCM and of the Anti-dumping Agreement with regard to injury determinations are discussed in Chapter 17 of this book.

Article 16: Definition of Domestic Industry

Article 16 defines the term "domestic industry" for purposes of the ASCM. For countervailing duty purposes, the domestic industry must be identified both in order to determine if an application was submitted by or on its behalf (Article 11.1) and to assess whether the subsidized imports have caused or threaten to cause it material injury (Article 15). The definition is also important for multilateral action concerning the definition of adverse effects based on injury to a domestic industry (Article 5). Article 16.1 indicates that "domestic industry" can refer either to the producers as a whole *or* to those producers whose collective output constitutes a major proportion of the total domestic production of the like products. However, it explicitly permits the exclusion of those companies that are related to either the exporters or the importers of the allegedly subsidized products[222] or who are themselves importers of the allegedly subsidized products. This exception creates the potential to ignore a significant percentage of the domestic industry if an investigating authority so chooses. For example, the situation could arise in which there

[219] Annex IV to the ASCM provides guidance on the measurement of the benefit for purposes of serious prejudice analysis (Article 6.1(a) only, which has expired), but specifies that this Annex applies only to that situation. For Article 6.1(a) purposes, the Annex provides that the benefit shall be calculated as the cost to the government providing the subsidy. Article 14 provides means of calculating the benefit amount as the measure of the benefit to the recipient. This dichotomy of treatment represents the denouement of the theological battle that the European Communities and the United States waged throughout the 1980's about whether subsidies should be measured by the "cost to the Government" (the European Communities position, although the European Communities relied so frequently on "opportunity cost to the government" as to blur any distinction) and "value to the recipient" (the U.S. position, although the U.S. Department of Commerce refused to recognize that the value to the recipient could well be less than the face value if the subsidy carried with it obligations, either explicitly to keep an uneconomic plant open, or implicitly to maintain a bloated workforce).

[220] ASCM, Art. 14, chapeau. The Appellate Body has found that this textual reference to Article 1 in the chapeau of Article 14 indicates that benefit is used in the same sense in both Articles as referring to a benefit to the recipient. *See Canadian Civilian Aircraft I*, *supra* note 43, at ¶ 155; *Lead Bar*, *supra* note 62, at ¶ 57.

[221] *See, e.g., Canadian Civilian Aircraft I*, *supra* note 43.

[222] ASCM, footnote 48 defines the situations in which a producer will be deemed to be related to an exporter or importer.

were four domestic producers, each accounting for twenty-five percent of the domestic production, however three of those producers fall within the exception. In that circumstance, this paragraph permits the Member to define the "domestic industry" as the single company, which in reality accounts for only twenty-five percent of the domestic production. Thus, if this was the only company of the four suffering injury, whereas the other three producers were unharmed, the investigating authorities could still be entitled to find injury to the "domestic industry," *i.e.*, the one company. Moreover, this company could be considered to file on behalf of the domestic industry, even if the remaining seventy-five percent of production opposed the application. Nevertheless, Members that apply countervailing duty laws desired this exception out of concern that the related companies or importers would be sheltered from the negative effects of the subsidized imports or would place the interests of the exporting companies above their own domestic interests.

Article 16.2 and 16.3 deal with the situation where the producers in a regional market can be treated as a separate industry. This has primary relevance in the context of injury, and is discussed in Chapter 17 of this book. However, it is also relevant in terms of standing to file an application for an investigation. In brief, the producers in a regional market may be treated as a separate industry for both standing and injury purposes if they sell all or almost all of their production in that market, the demand in that market is not supplied to any substantial degree by other domestic producers, and the subsidized imports are concentrated in that market and are causing injury to the producers of all or almost all of the production in that market.[223]

Article 16.4 notes that where two or more countries have entered into a customs union within the meaning of Paragraph 8(a) of GATT 1994, Article XXIV, and have reached such a level of integration that they have the characteristics of a single, unified market, the term "domestic industry" applies to the producers in the entire customs union. This paragraph would require that the European Community treat the entire territory of the European Community as a single market for purposes of defining the domestic industry. Again, this is relevant for both standing and injury purposes.

Article 17: Provisional Measures

This article addresses the use of provisional measures in the course of a countervailing duty investigation. Provisional measures are designed to provide a certain degree of protection to domestic industries from the harmful effects of subsidized imports at a fairly early stage in the investigation. Any imports to which provisional measures are applied will be assessed for countervailing duties if a definitive measure is imposed at the end of the investigation, so that exporters are likely to exercise a little more caution after they have been applied.

Provisional measures may only be imposed if the following criteria are met:

- An investigation must have been initiated in accordance with Article 11 of the ASCM;
- There must have been public notice of that initiation;
- Interested parties must have had an adequate opportunity to submit information and make comments;
- There must have been a preliminary determination that a subsidy exists and that the domestic industry is injured by reason of the subsidized imports; and

[223] *See, e.g., Cement from Mexico*, *supra* note 189, at ¶ 5.22–5.23.

- The authorities must determine that such measures are necessary to prevent injury being caused during the investigation.[224]

Once those criteria are met, provisional measures may be imposed. The ASCM specifies what measures are acceptable. The only provisional measures permitted are the use of provisional countervailing duties guaranteed by cash or bonds equal to the amount of the provisionally calculated subsidization. Moreover, the provisional measures must be refundable. It should be noted that in applying the provisional measures, a Member must also follow the relevant provisions of Article 19, relating to the application of countervailing duties (discussed, *infra.*).

Finally, there are time limits on the application of provisional measures. Such measures should be applied for as short a period as possible, may not be applied sooner than sixty days after the date of initiation of the investigation, and may not exceed four months.[225] The application of these requirements was addressed in *Softwood Lumber II*. Canada had challenged the manner in which the United States had imposed provisional measures under the "critical circumstances" provision of ASCM, Art. 20.6. The Panel found that Article 20 did not permit an exception to the requirements of 17.3 and 4. The U.S. had argued that the period of application of Article 17.4 applied only to the time frame during which the duty deposit or bond was collected, but did not address the date of entry of the imports on which that duty or bond was assessed. The Panel rejected this argument, stating that such an approach would render meaningless the disciplines imposed by Article 17.[226] If the Member country's final determination is issued more than four months after the imposition of provisional measures, the imports during that post-four month gap period are not subject to the provisional measures and must be permitted entry without hindrance.

Article 18: Undertakings

This article deals with undertakings that may be the basis for suspension or termination of an investigation without the imposition of provisional measures or countervailing duties. In order to accept such an undertaking, the following criteria must be met:

- The undertaking must be voluntary;[227] and
- The authorities of the importing Member must have made a preliminary affirmative determination of subsidization and injury to the domestic industry therefrom.[228]

Undertakings may take two different forms: (1) an agreement by the government of the exporting Member to eliminate or limit the subsidy or to take other measures concerning its effects[229] or (2) an agreement by the exporter(s) to revise prices so as to eliminate the injurious effect of the subsidies. There are several restrictions on such exporter-based

[224] ASCM, Art. 17.1.

[225] ASCM, Art. 17.4. *Compare* ADA, Art. 7.4, permitting a two-month extension if requested by any exporters representing a significant percentage of the trade involved. *See HFCS*, *supra* note 182, at ¶ 7.181 (finding ADA, Art. 7.4, which contains a similar limit on the length of time provisional measures could be imposed, was not ambiguous and provisional measures could not be imposed for more than six months).

[226] *Softwood Lumber II*, *supra* note 50, at ¶ 7.102.

[227] *ASCM*, Art. 18.1

[228] *Id.*, Art. 18.2.

[229] Frequently the Government of the exporting Member imposes an export tax, thus receiving the revenue generated by the measures itself rather than allowing the importing Member to collect them in the form of duties.

undertakings. First, the price increases must not be higher than necessary to eliminate the amount of the subsidy and preferably will be less than the amount of the subsidy, if that lesser amount would be sufficient to remove the injury to the domestic industry.[230] In addition, exporter-based undertakings cannot be sought or accepted by the importing Member unless it has obtained the consent of the exporting Member.[231]

The importing Member need not accept an undertaking if it determines that such undertaking is not practical. In such case, the importing Member, to the extent practicable, must provide the exporters with an explanation of the reasons for considering such an undertaking inappropriate and provide the exporter an opportunity to comment on those reasons.[232] Similarly, while the importing Member may suggest an undertaking, it cannot force an exporter to enter into such an undertaking. Moreover, the fact that either party did not offer or accept an undertaking may not prejudice the outcome of the investigation.[233] However, in a regional domestic industry case, the importing Member must offer the exporters an opportunity to enter into an undertaking if the countervailing measures would be imposed nation-wide.[234]

Once an undertaking is accepted, if either the exporting Member requests it or the importing Member so decides, the investigation may be continued and completed. If, as a result, there is a negative finding of either subsidization or injury caused by the subsidized imports, then the undertaking must lapse.[235] The only exception is if the negative determination is due, in large part, to the existence of the undertaking. If that is the case, then the importing Member may require that the undertaking be continued for a reasonable period. It should be noted that "reasonable period" is not defined and there have been no dispute challenges on this issue yet to interpret the meaning of "reasonable period." If an affirmative determination of subsidization and injury is made, then the undertaking may continue, consistent with the requirements of the ASCM.[236]

Finally, this Article permits the authorities of the importing Member to require any government or exporter that has entered into an undertaking to provide information periodically, and permit verification of that information, concerning its fulfillment of the provisions of the undertaking.[237] If there is a violation, the authorities of the importing Member may, in conformity with the ASCM, immediately impose provisional measures based on the best information available.[238] Definitive duties may be levied in accordance with the ASCM on products entered for consumption not more than ninety days prior to the imposition of provisional measures, but in no case may the retroactive assessment apply to entries prior to the date of the violation of the undertaking.[239]

Article 19: Imposition and Collection of Countervailing Duties

This article provides the rules for the imposition and collection of countervailing duties. Specifically, the first paragraph notes that, if after consultations a Member makes a final determination regarding the existence and amount of a subsidy and finds that the

[238] *Id.*
[239] *Id.*

subsidized imports are thereby causing injury, it may impose countervailing duties unless the subsidy or subsidies are withdrawn. One issue that has been raised repeatedly is whether or not a Member should impose duties only to the level necessary to eliminate the injury caused by the effects of the subsidy. This is known as the "lesser duty" rule. The second paragraph of this article makes clear that use of the lesser duty rule is not required and that the decision of whether to impose a duty less than the level of subsidization found is a decision to be made by the importing Member country alone. Nonetheless, the paragraph notes that use of the lesser duty is desirable.[240]

Paragraph 3 provides some procedural safeguards. It requires that the imposition of a countervailing duty be levied on a non-discriminatory basis from all sources found to be subsidized and causing injury. In other words, if a Member country finds that imports from countries A, B, and C are subsidized and causing injury, it cannot impose duties only on imports from countries A and B.[241]

This paragraph also provides that an exporter that was not individually investigated, other than because it failed to cooperate with an investigation, is entitled to an expedited review in order to determine its individual countervailing duty rate.[242]

Finally, paragraph 4 of this article provides that no duty shall be levied on an imported product in excess of the amount of the subsidy found to exist, calculated in terms of subsidization per unit of the exported product. This requires that the amount of subsidy must have been determined in a manner consistent with the Agreement, before a duty can be levied. In other words, even if a Member's authorities calculate a per unit subsidy of 25 percent and impose a duty of 19 percent, that is unacceptable if the subsidy that would have been determined in an ASCM consistent manner was less than 19 percent.

Article 20: Retroactivity

This article prevents the application of retroactive duties. Specifically, paragraph 1 provides that provisional measures and countervailing duties may only be applied to products entered for consumption *after* the date on which the authorities make either a preliminary or final determination of subsidization and injury from subsidized imports through the effects of the subsidies.

Paragraphs 2 and 4 provide that countervailing duties may not be levied retroactively for the period for which provisional measures were applied, if the authorities only found a threat of injury. This is logical since, if injury is only threatened, the duties during the provisional measure period are not necessary to offset or prevent injury—there was none. The only exception is if a final finding of present injury would have been reached but for the effect of the provisional measures.[243]

Paragraph 3 provides that if the definitive duty is higher than that imposed under the provisional measures, the importing Member may not collect the difference. If the

[240] *Id.*, Art. 19.2. The United States does not apply the lesser duty rule. The European Union applies the rule and Canada may apply a lesser duty if it concludes such duty is in the public interest.

[241] If, however, the authorities find all three are subsidized but only A and B are causing injury, then the Member must limit the imposition of duties only to imports from countries A and B.

[242] In *Softwood Lumber II*, Canada raised a claim that U.S. law and regulation with respect to expedited reviews violated this provision in situations in which the United States made its initial subsidy determination on an aggregate basis. The Panel, however, found that U.S. law did not mandate action in violation of the ASCM, and that the expedited review process had not yet arisen in the underlying case (since there was not yet a final determination of subsidies at that point). It therefore rejected Canada's claims in this respect. *See Softwood Lumber II*, *supra* note 50, at ¶¶ 7.142 and 7.159.

[243] ASCM, Art. 20.2.

definitive duty is lower, then the importing Member must reimburse the provisional measure or release the bond expeditiously. Similarly, if the final determination of injury or threat thereof is negative, then the importing Member must refund the provisional measures or release any bond posted.[244]

The language of paragraph 6 creates a very limited exception to the prohibition of retroactive assessment, referred to as "critical circumstances."[245] For critical circumstances to exist there must have been injury from massive imports of a product benefiting from subsidies paid or bestowed inconsistently with the provisions of GATT 1994 and the ASCM, *i.e.*, export and import-substitution subsidies. Thus, the only imports that should be included in the determination of massive imports (and injury therefrom) are those that actually benefited from the prohibited subsidies. In addition, the paragraph specifically provides only for the assessment of definitive countervailing duties on products entered not more than ninety days prior to the date of application of provisional measures. It does not create an exception to permit the application of provisional measures to those same entries prior to the application of definitive duties. Finally, the ninety-day period must be counterbalanced against the provision prohibiting the application of provisional measures not sooner than sixty days after the date of initiation of the investigation.[246]

Article 21: Duration and Review of Countervailing Duties and Undertakings

This article again reflects the Members' concerns about the trade restrictive effects of a countervailing duty. It begins by declaring that "a countervailing duty shall remain in force only as long as and to the extent necessary to counteract subsidization which is causing injury."[247] From there, it notes the procedures for the review of the imposition of duties.

In general, authorities are instructed to review the need for the continued imposition of duties on their own or upon request from any interested party, assuming a reasonable period of time has elapsed since the imposition of the definitive countervailing duty.[248] While the term "reasonable period" has not been interpreted through the dispute resolution process, many countries provide for an annual review of the imposition of definitive duties. The second paragraph provides that interested parties shall have the right to request the authorities to examine whether the continued imposition of definitive duties is necessary to offset subsidization, whether injury would be likely to continue or recur if the duty were changed or eliminated, or both. This, however, is not an absolute right and Members may require the requesting party to submit positive evidence substantiating the need for such a review.[249] If after review, the authorities determine that the imposition of definitive duties is no longer warranted, the duties must be terminated immediately.

In conducting a review under Article 21.2,[250] the investigating authority need not examine all issues anew, but is entitled to make certain presumptions based on its previous

[244] *Id.*, Art. 20.5.

[249] *Id.*
[250] The *Lead Bar* Appellate Body Report indicated that the United States' administrative review procedure, whereby it determines the amount of duties to assess for prior entries, fell within the purview of Article 21. This position was also taken by the Appellate Body in the *Privatization Subsidies* dispute. *See Privatization Subsidies Appellate Body Report*, *supra* note 68, at ¶ 140. *But cf. Softwood Lumber II, supra* note 50, at ¶ 7.151 (stating that Article 21.2 is silent on the question of administrative reviews).

findings. However, any presumptions used must be rebuttable and the investigating authority is required to review those findings on the basis of any evidence before it at the time of review. The Appellate Body in *Lead Bar* found that the United States was not entitled to presume that a benefit continued to flow after a company had been privatized. Specifically, the Appellate Body stated:

> In an administrative review pursuant to Article 21.2, the investigating authority may be presented with "positive information" that the "financial contribution" has been repaid or withdrawn and/or that the "benefit" no longer accrues. On the basis of its assessment of the information presented to it by interested parties, as well as of other evidence before it relating to the period of review, the investigating authority must determine whether there is a continuing need for the application of countervailing duties.[251]

In *Korean DRAMS,*[252] a panel considered an identical provision of the ADA.[253] Korea challenged the U.S. application of the standard of review for continuing an anti-dumping duty in the context of ADA, Article 11.2 (comparable to ASCM, Article 21.2). Specifically, the provision provides:

> Interested parties shall have the right to request the authorities to examine whether the continued imposition of the duty is necessary to offset dumping, whether the injury would be likely to continue or recur if the duty were removed or varied, or both. If, as a result of the review under this paragraph, the authorities determine that the anti-dumping duty is no longer warranted, it shall be terminated immediately.

Korea challenged the U.S. regulations requiring the Department of Commerce to be satisfied that future dumping "is not likely" before it revokes an order.[254] The Panel determined that ADA 11.2 must be interpreted in light of Article 11.1: "an anti-dumping duty shall remain in force only as long as and to the extent necessary to counteract dumping which is causing injury."[255] The Panel found that this "necessity" requirement established that there must be positive evidence demonstrating that objective conditions existed to demonstrate that circumstances "demand" the continued imposition of duties.[256] Thus, to continue a duty, the administering authorities must have positive evidence that continued subsidization or injury is likely if the duty is removed. Similarly, the Panel found that the U.S. standard that it must be demonstrated that dumping or subsidization and injury were "not likely" to continue or recur before an order would be revoked was not equivalent to the requirement established by the ADA, that the continuation or recurrence must be demonstrated to be likely for continuation of an order.[257] Rather, the panel found that determining something is likely to occur carries the same meaning as determining that it is "probable" that something will occur.[258]

Regardless of whether reviews under paragraph 2 occur, paragraph 3 provides that no definitive duties shall last longer than five years unless specific findings are made. The paragraph provides for termination after five years, but permits continuation of the duties in certain circumstances. Such wording creates a presumption that most duties will be

[258] *Id.* at ¶ 6.48, n. 494.

terminated after five years and that the continued imposition of definitive countervailing duties will be the exception rather than the rule.[259] This provision was put in place to end the practice of keeping duties in place long after any economic rationale for the duties had ended. Prior to the establishment of the WTO, the United States was the only significant user of countervailing duty laws that had no such "sunset" provision. Subsequently, the United States put a provision in place, however, disputes have been raised as to the burden established by U.S. law.

Article 21.4 provides that the provisions of Article 12 regarding evidence and procedure apply to any review carried out under this Article and that any such review shall normally be concluded within twelve months of the date of initiation.[260] Finally, the Article provides that the review requirements apply equally to reviews of price undertakings entered into pursuant to Article 18.[261] Certain other provisions of the ASCM, such as Articles 15.3 and 19, also apply to review undertaken pursuant to Article 21.3.

Article 22: Public Notice and Explanation of Determinations

This is another article particularly concerned with procedural due process issues. Article 22 addresses the requirements of public notice and explanation of determinations. Paragraph 1 provides that if the authorities of an importing Member are satisfied that there is sufficient evidence to justify initiating a countervailing duty investigation pursuant to Article 11, they must provide public notice and, in addition, notify both the Member or Members whose products are subject to investigation and any other interested parties known to them.

Paragraph 2 identifies the minimum information required that must be included in the notice or in a separate report that is readily available to the public. To ensure that it is readily available, it is best to reference the existence of the report and whom to contact to obtain a copy in the public notice.[262] A separate report does not eliminate the requirement that there be public notice. Most countries fulfill the public notice requirement by publishing a notice in their official gazette or other legal publication. The minimum information that must be provided is: (1) the name of the exporting country(ies) and product(s) involved; (2) the date of the initiation of the investigation; (3) a description of the subsidy practices to be investigated; (4) a summary of the factors on which the allegation of injury is based;[263] (5) the address to which interested parties should send their information, statements, etc.; and (6) the time limits for interested parties to submit their views.

In addition to the public notice of initiation of a countervailing duty investigation, the importing Member must provide public notice of the following: any preliminary or final determination (whether affirmative or negative); any decision to accept an undertaking; the termination of an undertaking; and the termination of any definitive duty. Paragraph 3

[259] Several WTO Members have shorter time periods for the expiration of duties. For example, Chile provides for duties to last one year.

[260] ASCM, Art. 21.4.

[261] *Id.*, Art. 21.5.

[262] In *Guatemalan Cement II*, interpreting a similar provision in the ADA, the Panel found that failure to reference the separate report in Guatemala's public notice meant that the separate report was not "readily available." *See Guatemalan Cement II*, *supra* note 182, at ¶¶ 8.93 and 8.96.

[263] This requirement is only for a summary of the factors on which the allegation is based. Although it is desirable from a transparency standpoint, there is no obligation to include in a notice of initiation any *conclusions* that have been reached by the investigating authorities, such as which producers constitute the domestic industry. *See HFCS, supra* note 182, at ¶ 7.88.

requires that such public notices must set forth in "sufficient detail" the findings and conclusions reached on all issues of fact and law considered material by the investigating authorities. Finally, the importing Member is required to forward such notices and reports to the exporting Member or Members whose products are subject to the determination and to any other interested parties known to the importing Member. Thus, if the importing Member is aware of the specific exporters affected by the determination, this would require the importing Member to forward notice of the decision to those exporters.

Paragraph 4 sets forth specific notice requirements for the imposition of provisional measures. Specifically, the public notice or a publicly available separate report must contain a sufficiently detailed explanation of the preliminary determinations on the existence of a subsidy and injury and shall identify, or at least refer to, the matters of fact and law that lead to specific arguments being accepted or rejected. While recognizing the need to protect the confidentiality of information, the notice or report must contain: (1) the names of the suppliers—or if impracticable—the supplying countries; (2) a description of the product that is sufficient for customs purposes; (3) the amount of the subsidy established and the basis on which the existence of the subsidy has been determined; (4) considerations relating to injury as identified in Article 15; and (5) the main reasons leading to the determination.

Similar notice requirements exist for the notice of the decision to impose definitive duties, or the conclusion or suspension of an investigation pursuant to an undertaking. In addition to the information described above, the notice or report must address the reasons for acceptance or rejection of relevant arguments or claims by interested Members, the exporters, and the importers.[264] In addition, the public notice of the conclusion or suspension of an investigation pursuant to the acceptance of an undertaking must include or make available the non-confidential portion of the undertaking accepted.[265] These notice requirements also apply to any reviews undertaken pursuant to Article 21 and to any decisions pursuant to Article 20 to apply duties retroactively.[266]

Article 23: Judicial Review

This provides specific rules aimed at ensuring the rights of the various parties affected by a countervailing duty action. Article 23 requires that any Member whose national legislation provides for countervailing duty measures must maintain procedures for the prompt review of administrative actions relating to final determinations and reviews pursuant to Article 21. Those tribunals may be judicial, arbitral, or administrative in nature, but they must be independent of the authorities responsible for the determination in question. In addition, all parties that participated in the administrative proceeding and that are directly and individually affected by the administrative action must have access to such review.

PART VI: Institutions

Article 24: Committee on Subsidies and Countervailing Measures and Subsidiary Bodies

This article establishes the institutional provisions for the Agreement and the Committee on Subsidies and Countervailing Measures ("SCM Committee"). Each Member has a

[264] ASCM, Art. 22.5.
[265] *Id.*, Art. 22.6.
[266] *Id.*, Art. 22.7.

representative on the Committee, which meets at least twice a year. Under the 1979 Subsidies Code, there was a similar Committee only for Code Signatories; however, the current SCM Committee includes all WTO Members.

In a departure from the institutions established under the 1979 Subsidies Code, Article 24 provides for the establishment of a Permanent Group of Experts ("PGE"). These experts are not representatives of the Member governments, rather they are five independent persons, highly qualified in the field of subsidies and trade relations. The experts serve for staggered five-year terms and are elected by the SCM Committee.

One responsibility of the PGE is to assist any panel established under Article 4 (remedies for the use of prohibited subsidies), if requested, by reviewing the evidence with regard to the nature and existence of the measure at issue and reporting its conclusions of whether or not the measure at issue is a prohibited subsidy to the panel, which must accept those conclusions without modification.[267] To date, none of the panels established pursuant to Article 4 have requested the assistance of the PGE. Outside of a panel, any Member may consult the PGE, which may issue advisory opinions as to the nature of any subsidy, proposed or currently maintained by that Member. Such advisory opinions will be confidential and may not be invoked in proceedings under Article 7. In the first five years of the PGE's existence, no such advisory opinions were requested.

The reasons for the lack of referral to the PGE are difficult to determine. The main reason appears to be the reluctance of panels to let the PGE do their work. The lack of requests for advisory opinions is more straightforward—governments do not want to ask for an opinion which may condemn one of their programs.

The SCM Committee is authorized to establish any other subsidiary bodies it deems appropriate.[268] In the course of carrying out their functions, the SCM Committee and any subsidiary bodies established may consult with and seek information from any source they deem appropriate.[269] This enables the SCM Committee and its subsidiary bodies to consult non-governmental organizations if they so choose. However, before the SCM Committee or subsidiary body seeks information from a source within the territory of a Member, it must inform the Member involved.[270] This final requirement respects the sovereignty of the individual Members and reflects the balance of interests between national sovereignty and a common international position.

PART VII: Notification and Surveillance

Article 25: Notifications

This Article reflects the desire of the negotiating countries to install some subsidy discipline through the use of transparency with respect to the granting of subsidies. Specifically, this Article provides that Members must notify any subsidy, within the definition of Article 1.1, granted or maintained within their territory that is specific within the meaning of Article 2.[271] Such notifications are to be submitted no later than June 30th of each year.[272]

Many of the Members do not submit the notifications provided for by this Article. There have been several discussions within the SCM Committee on ways to

[267] ASCM, Art. 4.5.
[268] *Id.*, Art. 24.2.
[269] *Id.*, Art. 24.5.
[270] *Id.*
[271] ASCM, Art. 25.2.
[272] *Id.*, Art. 25.1.

improve conformity. Most of the developed country Members conform to some extent. However, there can be a great degree of difficulty in notifying programs, particularly for programs provided by the sub-national governments. For example, the United States notifies over 200 programs, however, a search of the individual state websites indicates a wide range of state programs that have not been notified. Beyond that, there may also be subsidies provided at the municipal level that have never been notified.

In addition to the notification requirement, this Article permits Members to query other Members about the nature and extent of any subsidy granted or maintained by another Member, or the reasons why the maintaining Member does not consider such measure as subject to the notification requirement. Several Members are quite active in this regard.

In addition to the notification of subsidies, the Members are required to report expeditiously to the SCM Committee all preliminary or final actions taken with respect to countervailing duties.[273] The WTO issues a report every six months of any countervailing measures imposed within the preceding six months. It should be noted that these semi-annual reports are available on the WTO website (although some Members flout the requirement to report the value of subject imports, thus precluding the use of these data for sophisticated analysis).

Finally, Members are required to notify the SCM Committee of the competent authorities within the Members' governments designated to initiate and conduct investigations as well as the Members' domestic procedures governing the initiation and conduct of an investigation.[274] This information is also available on the WTO website.

Article 26: Surveillance

This Article operates in conjunction with Article 25 and provides for oversight by the SCM Committee of the notifications made pursuant to Article 25. Specifically, the SCM Committee is to examine new and full notifications of subsidies submitted at special sessions held every third year. The notifications in the interim period, which merely update the most recent full notification, are reviewed at each regular meeting of the SCM Committee.[275] Similarly, at each regular meeting, the SCM Committee examines the semi-annual reports of countervailing duty actions submitted pursuant to Article 25.11.[276]

PART VIII: Developing Country Members

Article 27: Special and Differential Treatment of Developing Country Members

This Article addresses the thorny issue of the proper role of subsidies in economic development. It begins by recognizing "that subsidies may play an important role in economic development programmes of developing country Members."[277] Nonetheless, while there are provisions for special and differential treatment with respect to the multilateral disciplines, the special and differential treatment to be accorded developing countries in the course of a countervailing duty proceeding is fairly minimal.

[273] *Id.*, Art. 25.11.
[274] *Id.*, Art. 25.12.
[275] ASCM, Art. 26.1.
[276] *Id.*, Art. 26.2.
[277] *Id.*, Art. 27.1.

In particular, Article 27 grants a permanent exemption for the least developed Members from the prohibition on export subsidies,[278] while they are granted eight years to phase out import- substitution subsidies.Other developing country Members are exempted from the prohibition on export subsidies for eight years from the date of entry into force of the WTO Agreement and from the prohibition on import-substitution subsidies for five years. In the wake of the Doha Ministerial Conference in 2001, there is considerable debate about extension of these time periods.

There are however considerable restrictions on the eight-year grace period for the phase-out of export subsidies by developing country Members. The level of the export subsidies may not be increased in that period. Moreover, if the use of such subsidies is inconsistent with the Member's development needs, the Agreement requires them to eliminate such export subsidies in a shorter period.[279] In addition, a developing country Member must phase out its export subsidies for any product within two years of its reaching export competitiveness.[280]

Special rules also apply with respect to the serious prejudice provisions when applied to developing country Members. Specifically, there may be no presumption of serious prejudice under Article 6.1 (as noted above, though, Article 6.1 lapsed at the end of 1999). Serious prejudice must be demonstrated by positive evidence.[281] No action may be taken with respect to actionable subsidies granted or maintained by a developing country, other than those described in Article 6.1, unless nullification or impairment of tariff concessions or other obligations under the GATT 1994 are found to exist as a result of the subsidy and that nullification or impairment occurs in such a way as to displace or impede the imports of a like product of another Member into the market of the subsidizing developing country Member or injury occurs to a domestic industry in the complaining Member's market.[282] In other words, no action can be taken because of harm suffered as a result of such subsidies in third country markets.

The lapsing of Article 6.1 also raises other questions with respect to the application of the serious prejudice provisions with respect to developing country Members. ASCM Article 27.9 provides that developing country Members are not subject to claims that their actionable subsidies have caused serious prejudice *unless* those subsidies fall under the provisions of ASCM Article 6.1. It might, therefore, be possible to argue that, because Article 6.1 has lapsed, there is no longer any situation in which a developing country Member may be subject to a serious prejudice claim. On the other hand, since the presumption of serious prejudice arising in Article 6.1 never applied to developing country

[278] These Members are defined in the ASCM, Annex VII, to include any Member designated as Least Developed by the United Nations, and certain specified countries (Annex VII(b)) as long as their GNP per capita remains below $1,000 per annum.

[279] ASCM, Art. 27.4. This last stricture to eliminate export subsidies in less than eight years if the export subsidies are inconsistent with the country's development needs is a peculiar construct. If they are inconsistent with the development needs of the country, presumably the country would eliminate them in its effort to meet its development needs although there may be instances in which the recipient is sufficiently powerful to block their elimination.

[280] ASCM, Art. 27.5. "Export competitiveness" is reached when that Member's exports of that product account for at least 3.25 percent of the world trade in that product for two consecutive calendar years. For least developed countries that have reached export competitiveness in a particular product, the ASCM provides for phase-out over an eight-year period. There is current discussion in the SCM Committee about what should occur if the developing country later loses that export competitiveness.

[281] *Id.*, Art. 27.8.

[282] *Id.*, Art. 27.9. Note that this paragraph also permits the application of countervailing duties if injury to the domestic industry of the importing Member is found by reason of these actionable subsidies.

Members, it could be argued that the definitional aspect of Article 6.1 still applies, in order to raise a serious prejudice complaint against a developing country Member.

With respect to countervailing duties, the only special and differential rules for developing countries concern the definition of *de minimis* subsidies and "negligible" levels of imports. Specifically, the Article requires that a countervailing duty investigation against a developing country Member be terminated immediately if the investigating authorities determine that the overall level of subsidies is no greater than two percent[283] (the *de minimis* level applicable to developed countries is one percent), or that the volume of subsidized imports represents less than four percent of the total imports of the like product in the importing Member. This was intended as a "safe harbor" such that developing countries would not have to pay the (often large) costs of defense if their exports represent a small part of the market.

This four percent limit is subject to the exception that if imports are cumulated among countries for injury purposes, then the four percent limit does not apply if all the developing countries accounting individually for less than four percent of the total imports of the like product, collectively account for more than nine percent of the total imports—which effectively removes the safe harbor.[284] In other words, if there are countervailing duty investigations of the same like product from three developing countries simultaneously and each country accounts for 3.5 percent of total imports of the like product, then the four percent negligible import limit would not apply. This is the case even though none of the developing countries can control the exports of the others, and if total imports are small, four or nine percent of those imports may be truly negligible in terms of impact on the overall market.

A final provision indicates that the provisions of Part III of the ASCM, covering actionable subsidies, does not apply to certain types of subsidies for developing countries. Those are direct forgiveness of debt, and subsidies to cover social costs—in whatever form—when directly linked to a privatization program of a developing country. Therefore, those specific types of subsidies, in the very limited circumstances of this provision, do not constitute actionable subsidies within the meaning of the ASCM for purposes of the multilateral disciplines of Part III.[285] This would not appear to prevent authorities from imposing countervailing duties on the use of such subsidies, since the provisions regarding countervailing duties are found in Part V of the ASCM.

Part IX: Transitional Arrangements

Article 28: Existing Programmes

Article 28 provides for bringing existing arrangements into conformity with the WTO Agreement after the date of entry into force of the WTO Agreement for that particular Member. Any subsidy programs that were established prior to the date on which the Member signed the WTO Agreement and that are inconsistent with the provisions of the ASCM must be notified to the SCM Committee within ninety days after the date of entry into force of the WTO Agreement for that Member and must be brought into conformity within three years after the date of entry into force of the WTO Agreement.[286] In addition,

[283] Three percent in certain circumstances. *See* ASCM, Art. 27.10(a) and 11.
[284] *Id.*, Art. 27.10(b).
[285] *Id.*, Art. 27.13.
[286] ASCM, Art. 28.1.

a Member may not extend the scope of such a program or renew it upon its expiry, even if that occurs within the three-year transition period.

Article 29: Transformation into a Market Economy

Article 29 establishes special rules for countries in the process of transformation from a centrally-planned economy to a market-based, free enterprise economy. Paragraph 1 provides that such Members may apply programs and measures necessary for such transformation. It should be noted that while this paragraph eliminates any prohibition on the use of specific types of subsidies, it does not restrict the actionability of any subsidies employed.

Paragraph 2 provides more specific rules concerning the actionability of such subsidies. It provides a seven-year phase-out period for otherwise prohibited subsidies (within the meaning of Article 3) and prevents the resort to dispute settlement under Article 4 during that phase-out period. The seven-year phase out applied from the date of entry into force of the WTO Agreement.[287]

This paragraph not only exempts the transition Members from the Article 4 disciplines, it affords them the exemptions from the serious prejudice dispute settlement accorded to developing countries under Article 27.9. In addition, unlike developing countries, that exemption from serious prejudice applies even if the program used involves debt-forgiveness.[288]

Paragraph 3 nevertheless attempts to establish transparency by requiring the transitional Member to notify its subsidy programs on the first practical date after the date of entry into force of the WTO Agreement. Additional notifications may be made up to two years after the entry into force of the WTO Agreement.

Finally, this Article permits such Members to depart from their notified programs and measures and their time frame for phase-out, in exceptional circumstances, if the SCM Committee deems such departures necessary for the process of transformation.[289]

Part X: Dispute Settlement

Article 30: Dispute Settlement

This article provides that the provisions of Articles XXII and XXIII of GATT 1994 (nullification or impairment) as elaborated in the DSU shall apply to disputes concerning the ASCM. It is the general rules that apply, except to the extent specifically provided in the ASCM.

While general dispute settlement is discussed in other chapters of this book, certain aspects specific to the ASCM are discussed here. First, as discussed earlier in this chapter, there are certain additional rules beyond the DSU that are established in the ASCM.[290] These apply to disputes brought under the auspices of Article 4 of the ASCM with

[287] When China acceded to the WTO, it agreed to eliminate all prohibited subsidies upon accession. In addition, China will view subsidies provided to state-owned enterprises as specific if those state-owned enterprises are the "predominant recipients" of such subsidies. *See Accession of the People's Republic of China,* WT/L/432, Article 10 (November 23, 2001).

[288] ASCM, Art. 29.2(a). Debt forgiveness may prove to be the most used type of program for a transition economy as it prepares state-owned companies for privatization.

[289] ASCM, Art. 29.4

[290] For a complete list, *see* Annex 2 to the DSU.

respect to prohibited subsidies, and to disputes brought under the auspices of Article 7 with respect to serious prejudice cases.

The standard of review to be applied to a dispute is the same as that applying in all cases brought under the DSU. Unlike the ADA, there is no special standard of review established for disputes concerning the ASCM.[291] It should be noted that the United States has unsuccessfully argued that the standard of review established in the ADA, Article 17.6, applies to the ASCM.[292] This was rejected by the Appellate Body in *Lead Bar*.[293]

The Ministers issued a "Decision on the Application and Review of Article 17.6 of the Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994" in which they indicated that ADA Article 17.6 was to be reviewed after three years, with a view to considering the question of whether it is capable of general application. However, there has been no subsequent decision of the Members to extend its application beyond the ADA. Therefore, it does not, at this time, apply to the ASCM. In addition, and of great importance, is that countervailing duty proceedings, unlike anti-dumping proceedings,[294] may be challenged as soon as the investigation is initiated.

Part XI: Final Provisions

Article 31: Provisional Application

This article indicates that Articles 6.1, 8, and 9 are to apply for a period of five years beginning with the entry into force of the WTO Agreement (*i.e.*, January 1, 1995). As discussed previously, Article 6.1 establishes a presumption of serious prejudice, and Articles 8 and 9 deal with non-actionable subsidies. Article 31 also provides for a review by the SCM Committee not later than 180 days before the end of this period (*i.e.*, December 31, 2000) to determine whether to continue the application of these provisions. In the aftermath of the 1999 Seattle Ministerial, however, no agreement could be reached on this issue. Therefore, as noted previously, Articles 6.1, 8, and 9 are no longer in effect.

Article 32: Other Final Provisions

Article 32.1 states that no specific action against a subsidy can be taken except in accordance with the provisions of GATT 1994, as interpreted by this Agreement. This is the heart of the dispute brought by several countries against the United States' Continued

[291] The ADA is the only one of the Uruguay Round Agreements to contain its own standard of review.

[292] The United States has cited the *Declaration on Dispute Settlement Pursuant to the Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994 or Part V of the Agreement on Subsidies and Countervailing Measures* in support of its position. The Declaration states that the Ministers:

> *"Recognize*, with respect to dispute settlement pursuant to the Agreement on Implementation of Article VI of GATT 1994 or Part V of the Agreement on Subsidies and Countervailing Measures, the need for the consistent resolution of disputes arising from anti-dumping and countervailing duty measures."

[293] *See Lead Bar*, *supra* note 62, ¶¶ 44–51.

[294] See ADA, Art. 17.4, which provides that only decisions to impose definitive anti-dumping duties or to accept price undertakings, or the imposition of provisional measures having a significant impact, may be the subject of dispute settlement proceedings.

Dumping and Subsidy Offset Act of 2000, described in the discussion of Article 11.4 above. On 21 December 2000, Australia, Brazil, Chile, the European Communities, India, Indonesia, Japan, Korea, and Thailand, requested consultations with the United States concerning this law. The complaining Members alleged, among other things, that the distribution of antidumping and countervailing duties to domestic producers that had supported the petition constituted specific actions against dumping or subsidies not in accordance with the provisions of GATT 1994. Upholding the Panel's finding that the United States was in violation of Article 32.1, the Appellate Body found that:

> the CDSOA has an adverse bearing on the foreign producers/exporters in that the imports into the United States of the dumped or subsidized products (besides being subject to anti-dumping or countervailing duties) result in the financing of United States competitors—producers of like products—through the transfer to the latter of the duties collected on those exports. Thus, foreign producers/exporters have an incentive not to engage in the practice of exporting dumped or subsidized products or to terminate such practices. Because the CDSOA has an adverse bearing on, and, more specifically, is designed and structured so that it dissuades the practice of dumping or the practice of subsidization, and because it creates an incentive to terminate such practices, the CDSOA is undoubtedly an action "against" dumping or a subsidy, within the meaning of Article 18.1 of the *Anti-Dumping Agreement* and of Article 32.1 of the *SCM Agreement*.[295]

Paragraph 2 of Article 32 prevents Members from entering into reservations with respect to the ASCM unless all Members consent. Thus, this would prevent a Member from reserving application of the Agreement to some newly acceding Member unless that acceding Member takes certain actions.[296]

Paragraphs 3 and 4 address transitional issues concerning the application of this Agreement. Specifically, paragraph 3 notes that the provisions of the ASCM do not apply to investigations or reviews initiated before the entry into force of the WTO Agreement for that Member. This was the critical provision that prevented the Philippines from bringing its dispute against Brazil concerning the imposition of countervailing duties on desiccated coconut, discussed *supra*.

Paragraph 4 establishes a starting date for determining when five-year reviews or termination of a measure are required under Article 21.3. Specifically, all measures in effect prior to the date of entry into force of the WTO Agreement for the administering Member, shall be deemed to have entered into force on the date of entry into force of the WTO Agreement for that Member. Thus, for the original Members, all countervailing duty measures in effect prior to January 1, 1995 were to be deemed to have gone into effect on January 1, 1995 for purposes of Article 21.3. This permitted the United States to extend existing countervailing duty measures a full five years, even if they had been in place for years.

Paragraph 5 is also a transitional provision, which states that Members must take all necessary steps to ensure that their laws, regulations, and administrative procedures comply with the provisions of the ASCM no later than the date of entry into force of the WTO Agreement for that Member.

[295] *United States—CDSOA, supra,* note 196, at ¶ 256. However, as explained above, the Appellate Body reversed the panel's finding that the U.S. statute violated Article 11.4 of the ASCM. It is worth noting that the question of whether the Byrd Amendment payments might be specific actionable subsidies to the industries receiving distributions has not be adjudicated.

[296] Under the 1979 Subsidies Code, certain Signatories, notably the United States, would require bilateral agreements with new Code Signatories before applying the 1979 Subsidies Code obligations to that country.

Paragraphs 6 and 7 are transparency provisions. Paragraph 6 requires notification to the SCM Committee of any changes to the laws and regulations or their administration that are relevant to this Agreement. Paragraph 7 provides for annual review of the implementation and operation of the ASCM.

Finally, Paragraph 8 states that the Annexes to the ASCM constitute an integral part of the ASCM.

Annex I contains the Illustrative List of Export Subsidies and is discussed in more detail in the comments on Article 3 of the ASCM, *supra* of this Chapter. Annexes II and III provide guidance on certain issues that have been controversial in the past in determining whether certain practices fall within the Illustrative List of Export Subsidies contained in Annex I. Specifically, Annex II provides guidelines for determining when a product is consumed in the production process.[297] Similarly, Annex III provides guidelines for determining when duty drawbacks or refunds on inputs consumed in the production process are determined to be in excess, and therefore, an export subsidy in accordance with Annex I(i). As discussed previously, Annex IV provides guidance in determining the total ad valorem subsidization for purposes of ASCM, Article 6.1.[298] Annex V provides guidance for procedures for developing information concerning a claim of serious prejudice.[299]

Annex VI provides guidance for verifications of exporting firms' responses in a countervailing duty investigation. During the course of a countervailing duty investigation, the administering authorities of the importing Member, may decide to investigate the responses at the company or government submitting the response in order to verify the accuracy of the information submitted. Annex VI establishes procedures for such "on-the-spot investigations," otherwise known as "verifications." They require that the firm and the government of the exporting Member be notified in advance of the trip. The administering authorities should obtain the explicit agreement of the firms to be visited. There should be "sufficient" advance notice. What constitutes "sufficient advance notice" has not been specified, however. In addition, the authorities should advise the firms concerned of the general nature of the information to be verified, and any further information which needs to be provided.[300]

The final annex, Annex VII, identifies the developing country Members referenced in ASCM, Article 27.2(a). These are the developing country Members to which the prohibition on the provision of certain types of subsidies, found in ASCM, Article 3.1(a), does not apply. These include those countries designated as "least developed" by the United Nations, that are Members of the WTO. In addition, certain countries are included until their GNP per capita reaches $1,000 per annum, after which time they will be subject to the eight-year phase-out of prohibited subsidies found in ASCM, Article 27.2(b).[301]

[297] *See* the discussion of rebate or remission of prior stage indirect taxes in text accompanying notes 104–106 *supra*.

[298] *See* discussion of Article 6.1 *supra.* It should be noted that, because Article 6.1 was of temporary duration and has expired, the reason for this Annex IV has also expired.

[299] *See* the discussion of Article 6, *supra*, for a description of the requirements of Annex V.

[300] ASCM, Annex VI(7). Note that this does not preclude the visiting officials from requesting further details during the visit, in light of the information obtained.

[301] ASCM, Annex VII(b). Those countries are: Bolivia, Cameroon, Congo, Côte d'Ivoire, Dominican Republic, Egypt, Ghana, Guatemala, Guyana, India, Indonesia, Kenya, Morocco, Nicaragua, Nigeria, Pakistan, Philippines, Senegal, Sri Lanka, and Zimbabwe.

IV. Conclusion

The ASCM is a comprehensive document that significantly expands on Articles VI, XIV, and XVI of the GATT, however, it remains a work in progress.

The mandate of the negotiations for the Uruguay Round included the mandate to improve "GATT disciplines relating to all subsidies and countervailing measures that affect international trade."[302] When negotiations began, the parties established that the main objective of the negotiations on subsidies and countervailing measures was to "restore the equilibrium of rights and obligations in terms of equivalent disciplines regarding subsidies on the one hand and countervailing measures on the other. . . . " While it is clear that the overall mandate has been met, in that there has been an improvement in GATT disciplines, there are still issues of concern regarding both the use of subsidies and the use of countervailing measures.

The extent to which the ASCM will be renegotiated in the Doha Round remains unclear. There are implementation issues, such as export competitiveness, that continue to be negotiated. Similarly, there remain issues concerning how parties implement the countervailing measures, including how they define subsidies, the use of adverse facts, the standing of parties to make an application, etc. The most important issue in terms of the success of the negotiations is the issue of incorporating agricultural subsidies into the overall subsidy discipline framework. This will likely drive much of the negotiations on this Agreement in the future. Beyond agriculture, however, looms the fact that, in practice, the current Agreement seems to provide at least some discipline on export subsidies and import substitution ("red light") subsidies, but little effective discipline on other ("amber") subsidies.[303]

[302] Ministerial Declaration on the Uruguay Round, GATT Doc. No. MIN.DEC (September 20, 1986) at 7.

[303] *See* Gary N. Horlick, *Subsidy Discipline Under WTO and US Rules*, in EUROPEAN COMPETITION LAW ANNUAL 1999: SELECTED ISSUES IN THE FIELD OF STATE AID, (Ehlermann and Everson, eds., 2001). The *Indonesia—Automobile Industry* dispute involved an allegation concerning an amber subsidy, among other non-ASCM issues. *See Indonesia—Automobile Industry, supra* note 132. This is the only dispute brought concerning an amber subsidy despite the numerous subsidies notified in accordance with ASCM, Art. 25.4.

CHAPTER 17

INJURY DETERMINATIONS IN ANTIDUMPING AND COUNTERVAILING DUTY INVESTIGATIONS

In addition, Mr. Horlick was the first Chairman of the WTO's Permanent Group of Experts, established under Art. 25 of the ASCM. The authors wish to express their appreciation for the contributions of Kelly Brooke Snyder, Kevin J. Cuddy, Andrea G. Staebler, and Sean McElduff, without whose assistance this chapter would not exist. The opinions expressed herein are solely those of the authors.

I. Introduction

Article 3 of the Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994 ("ADA") and Article 15 of the Agreement on Subsidies and Countervailing Measures ("ASCM") address the injury determination that an importing country must make before imposing antidumping or countervailing duty measures, while Articles 4.1(ii) of the ADA and 16.2 of the ASCM deal with the special situation of injury to regional industries. The language in the two Agreements is virtually identical. It is therefore convenient to consider injury issues under both Agreements in the same chapter, since Panel and Appellate Body decisions interpreting the provisions in one Agreement obviously have direct relevance to the other. In addition, much of the language is similar or identical to the injury provisions in the WTO Agreement on Safeguards.[1] Moreover, some of the language in Article 3 of the ADA and Article 15 of the ASCM reflect, with changes, the language concerning injury found in the 1979 Antidumping and Subsidies Codes. Panel and Appellate Body decisions interpreting the injury requirements in the Safeguards Agreement and the 1979 Codes can therefore provide some guidance in interpreting the ADA and ASCM injury provisions.[2]

II. Determination of Injury and Threat of Injury Generally

Article 3 of the ADA and Article 15 of the ASCM begin with a footnote defining injury as encompassing not only material injury, but also threat of material injury to a domestic industry or material retardation of the establishment of a domestic industry. At this time, it is not clear whether the injury requirement *may* be met by a finding of *any one or more* of the three forms, or if it *must* be based on a finding of *only one* of the three forms. In a decision interpreting a similar injury requirement in the 1979 Antidumping Code, a GATT Panel found that the three types of injury were mutually exclusive and that a finding must be based on a finding of one of the three forms.[3] In a recent decision, interpreting similar, but not identical, language in the WTO Safeguards Agreement, however, the Appellate Body reversed a parallel finding by a Panel, noting that the use of the conjunction, "or," does not exclude the finding of both serious injury and threat of serious injury at the same time.[4] However, unlike the injury requirements in the ADA and the ASCM which define different factors to be considered in making a present injury determination compared to a threat of injury determination, the Safeguards Agreement does not establish different factors.[5] Therefore, it may be that the language of the Safeguards Agreement is too dissimilar to provide guidance on the injury requirement of the ADA and the ASCM.

[1] *Agreement on Safeguards*, Marrakesh Agreement Establishing the World Trade Organization, Annex 1A: Multilateral Agreements on Trade in Goods (1994) ("*Safeguards Agreement*").

[2] WTO panel and Appellate Body practice has looked to prior GATT panel reports, especially adopted GATT panel reports, as providing useful secondary information to assist in the interpretation of the WTO Agreement. *See, e.g.,* Report of the WTO Panel, *Japan—Taxes on Alcoholic Beverages*, WT/DS8, 10, 11/R (1996) at 21–22 ("*Japanese Liquor Taxes*").

[3] Report of the GATT Panel, *Korea—Antidumping Duties on Imports of Polyacetal Resins from the United States,* BISD, 40th Supp. at 205 (1993) (adopted) ("*Polyacetal Resin*"). The Panel faulted Korea for failing to state explicitly the type of harm experienced by the domestic industry and failing to spell out its analysis of the link between the imports and the harm. *Id.* at ¶¶ 222–224. Moreover, the Panel noted that a finding of material injury, which presupposed the existence of an industry, was inconsistent with a finding of material retardation of establishment of an industry. *Id.* at ¶ 222.

[4] Report of the Appellate Body, *United States—Definitive Safeguard Measures on Imports of Circular Welded Carbon Quality Line Pipe From Korea*, WT/DS202/AB/R (2002) at ¶ 177.

[5] *Compare* ADA, Art. 3.2, 4, and 7 and ASCM, Art. 15.2, 4, and 7 with *Safeguards Agreement*, Art. 4.2(a).

A. Objective Examination of Positive Evidence (Articles 3.1 ADA and 15.1 ASCM)

Article 3.1 of the ADA and Article 15.1 of the ASCM provide the overall chapeaux to the injury analysis and requirements. They require that the investigating authority base its decisions on positive evidence and an objective examination of that evidence. What constitutes "positive evidence" is a critical issue in these cases. In the *Hot-Rolled Steel from Japan Appellate Body Report*,[6] the Appellate Body interpreted the term to mean "that the evidence must be of an affirmative, objective and verifiable character, and that it must be credible."[7] Such language prohibits the investigating authority from basing decisions on "assumptions."[8]

While the decision must be based on positive evidence, the investigating authority need not disclose publicly all the information on which it relies. The Appellate Body in *Thailand—Steel Appellate Body Report* found that the language requiring findings to be based on positive evidence and an objective examination allowed the investigating authority to rely on information not disclosed to the parties to the investigation, subject to procedural requirements of a right of defense.[9]

The data are also often an issue when the time period used for the determination is called into question. The Panel in *Wheat Gluten* (Safeguards) concluded that because the language of the injury requirement in the Safeguards Agreement, like that of the ADA and the ASCM, is in the present tense, the data used to support an injury finding must be from the recent past.[10] The injury must be present up to and including the end of the investigation period,[11] although improvements in some of the factors at the end of the period do not necessarily negate a finding of injury.[12] The authority is not required to update its information continuously, but must consider the most recent data available at the start of the investigation as the most relevant picture of the current state of the industry.[13] The Appellate Body, interpreting the Safeguards Agreement, further explained that a finding of threat of material injury, because it involves

[6] Report of the Appellate Body, *United States—Antidumping Measures on Certain Hot-Rolled Steel Products from Japan*, WT/DS184/AB/R, (2001) ("*Hot-Rolled Steel from Japan Appellate Body Report*").

[7] *Id.* at page 65, ¶ 192. It should be noted that although that decision dealt with the Antidumping Agreement, the language of Article 3.1 of the Antidumping Agreement is identical to the language of Article 15.1 of the ASCM, substituting the phrase "subsidized imports" for the phrase "dumped imports" in Article 3.1.

[8] The Appellate Body has rejected the use of assumptions instead of positive evidence in other circumstances as well. *See* Report of the Appellate Body, United States*—Imposition of Countervailing Duties on Certain Hot-Rolled Lead and Bismuth Carbon Steel Products Originating in the United Kingdom*, WT/DS138/AB/R, (2000) *("Lead Bar Appellate Body Report")* at ¶ 61 (finding that once an administering authority finds a "benefit" based on evidence, it may then adopt a presumption in later proceedings in the same matter (*e.g.*, an administrative review) that the benefit continues. However, if the issue of the benefit is raised in a later proceeding, the authority must review the presumption and base its decision on the positive evidence before it).

[9] Report of the Appellate Body, *Thailand—Antidumping Duties on Angles, Shapes, and Sections of Iron or Non-Alloy Steel and H-Beams from Poland*, WT/DS122/AB/R (2001) at ¶ 107 ("*Thailand—Steel Appellate Body Report*"). Challenges to the failure to disclose confidential information should instead be brought under the procedural requirements that mandate publishing notifications and informing interested parties of all "essential facts." These are found elsewhere in the ADA and the ASCM, *i.e.*, Articles 12 and 6.9 of the ADA and Articles 22 and 12.8 of the ASCM, respectively.

[10] Report of the WTO Panel, *United States—Definitive Safeguard Measures on Imports of Wheat Gluten from the European Communities*, WT/DS166/R (2000) at ¶ 8.8 ("*Wheat Gluten*").

[11] *Id.*

[12] *Id.* at ¶¶ 8.85–8.86.

[13] Report of the WTO Panel, *Argentina—Safeguard Measures on Imports of Footwear*, WT/DS121/R (1999). at ¶ 8.213 ("*Footwear*").

a projection of future events, requires even greater reliance on the most recent data.[14] In no case, however, should the investigating authority rely on particularly current data when doing so would distort the results by taking a short time period out of the broader context.[15]

The requirement that the injury determination involve an "objective examination" has also raised issues. In the *Hot-Rolled Steel from Japan Appellate Body Report*, the Appellate Body indicated that this phrase required that the "examination process," that is the way in which the evidence is gathered, inquired into, and evaluated, "must conform to the dictates of the basic principles of good faith and fundamental fairness."[16] Decisions on whether the investigating authority complied with this requirement are typically made in conjunction with the panel's assessment of the authority's evaluation of individual injury factors and its overall conclusions. In other words, the investigation must be conducted in an unbiased manner, without favoring the interests of any interested party.

For example, in the *Hot-Rolled Steel from Japan Appellate Body Report,* the Appellate Body stated that this "objective examination" obligation, in conjunction with the obligation in ADA, Art. 3.4 to examine the relevant factors, required that the investigating authorities not conduct the investigation "in such a way that it becomes more likely that, as a result of the fact-finding or evaluation process, they will determine that the domestic industry is injured." Furthermore, they noted that the investigation must be even-handed.[17]

In the *Thailand—Steel Panel Report*, the Panel interpreted the "objective examination" requirement of ADA Art. 3.1 in light of the unique standard of review established in ADA, Art. 17.6[18] to require that "the reasoning supporting the determination be 'formally or explicitly stated in documents in the record.'"[19] It is unclear, therefore, whether the same requirement would be found in the ASCM, which is not subject to the same standard of review.[20] Nonetheless the obligation to be able to discern the basis of the decision would logically be a requirement in any analysis.

[14] Report of the Appellate Body, *United States—Safeguard Measures on Imports of Fresh, Chilled or Frozen Lamb Meat from New Zealand and Australia*, WT/DS177/AB/R and WT/DS178/AB/R (2001) at ¶ 136 ("*Lamb Meat Appellate Body Report*").

[15] *Id*. at ¶ 132.

[16] *Hot-Rolled Steel from Japan Appellate Body Report*, *supra* note 6, at ¶ 193.

[17] *Id.* at ¶ 154.

[18] Article 17.6 of the ADA requires the panel to determine whether the investigating authority's establishment of the facts was "proper" and whether its evaluation of the facts was "unbiased and objective". If so, the evaluation may not be overturned even though the panel might have reached a different conclusion. *See* G. Horlick and P. Clarke, *Standards for Panels Reviewing Anti-Dumping Determinations Under the GATT and WTO* in INTERNATIONAL TRADE LAW AND THE GATT/WTO DISPUTE SETTLEMENT SYSTEM (Ernst-Ulrich Petersmann ed. 1996) for discussion of the negotiating history of the antidumping standard of review. In *Lead Bar* the Appellate Body rejected the argument by the United States that the same standard of review should be applied in countervailing duty disputes under the ASCM. *See Lead Bar Appellate Body Report*, *supra* note 8, at ¶¶ 51–52. Under Article 11 of the Dispute Settlement Understanding, a panel is to make an objective assessment of the matter before it, "including an objective assessment of the facts of the case and the applicability of and conformity with the relevant covered agreements," which does not mean that the panel should accept the investigating authorities' explanation as reasoned or adequate if there is a plausible alternative reaction and the authorities' explanation appears inadequate in light of the alternative explanation. *See Lamb Meat Appellate Body Report*, *supra* note 14, at ¶ 206.

[19] Report of the WTO Panel, *Thailand—Antidumping Duties on Angles, Shapes, and Sections of Iron or Non-Alloy Steel and H-Beams from Poland*, WT/DS122/R (2001) at ¶ 7.143 ("*Thailand—Steel Panel Report*").

[20] *See Lead Bar Appellate Body Report, supra,* note 8 at ¶¶ 51–52.

B. Volume and Effect of Imports (Articles 3.2 ADA and 15.2 ASCM)

These provisions explain the findings that must be made to assess the volume of dumped or subsidized imports and the effect of those imports on domestic prices. The investigating authority must find a significant increase in dumped/subsidized imports, either absolutely or relative to the importing country's production or consumption. Interpreting identical language in the 1979 Subsidies Code, the GATT Panel in *Salmon CVD* found that a finding of injury required a change in the volume of imports; merely continued high levels of imports are an insufficient basis for a finding of injury.[21] Similarly, the GATT Panel in *Milk Powder*[22] found that Brazil had failed to comply with the 1979 Subsidies Code because Brazil's determination focused on the large share of the domestic market held by the European Communities, rather than any increase in the European Communities' share of the market.[23] The GATT Panel reached this conclusion, despite the fact that it believed the data did, in fact, show an increase in the European Communities' share, because the language of the final determination did not make clear that the basis for Brazil's determination was the *increase* in imports.[24]

The WTO has not imposed such strict interpretations on Members' written explanation of their decisions. The finding of increased imports need not always be explicit. In the *Thailand—Steel Panel Report,* the Panel held that the investigating authority had found a significant increase in dumped imports where the language in the final report at least suggested that this issue was considered, even if it was not explicitly stated.[25]

Nonetheless, a decline in the share of subsidized imports relative to third countries need not prevent a finding of a significant increase in imports.[26] The *Salmon CVD* GATT Panel, however, cautioned that consideration of the relative import shares might be an "other factor," discussed below, that the investigating authority would be required to consider.[27]

To support a finding of present injury, the increase in imports must already have occurred; a projection of future increases will not suffice. Neither will a speculative projection of such future increases support a finding of threat of material injury.[28] The GATT Panel in *Grain Corn*, interpreting the 1979 Subsidies Code, noted that Canadian imports of U.S. grain corn had actually decreased.[29] The investigating authority's finding that an increase in imports was likely if Canada did not lower its prices was too speculative to support countervailing duties.[30]

In calculating an increase, the investigating authority must also be cautious in relying only on a comparison of the starting and ending points.[31] The Panel in *Footwear*

[21] Report of the GATT Panel, *United States - Imposition of Countervailing Duty on Imports of Fresh and Chilled Atlantic Salmon from Norway*, BISD, 41st Supp., Vol. II at ¶ 266–267 (1994) (adopted) ("*Salmon CVD*"). Note that other portions of this Panel's decision regarding the requirements of an injury investigation have subsequently been rejected by the Appellate Body in the *Hot-Rolled Steel from Japan Appellate Body Report*, but the analysis discussed here has not been rejected.

[22] Report of the GATT Panel, *Brazil—Imposition of Provisional and Definitive Countervailing Duties on Milk Powder and Certain Types of Milk from the European Economic Community*, BISD, 41st Supp. 467 SCM/179 (1994) ("*Milk Powder*").

[27] *Id.*

[28] Report of the GATT Panel, *Canadian Countervailing Duties on Grain Corn from the United States*, SCM/140 at ¶¶ 5.2.4–5.2.5 (1992) (unadopted) ("*Grain Corn*").

[29] *Id.* at ¶ 5.2.3.

[30] *Id.* at ¶ 5.2.4.

[31] *Footwear, supra* note 13, at ¶¶ 8.156–8.157.

(Safeguards) explained that where the choice of a different base year would alter the outcome or conflict with overall trends in the data, a comparison of endpoint data might be inadequate to establish an increase in imports.[32] Further, if imports decline during some segments of the investigation period, the authority must determine whether the declines are temporary or reflect part of a longer-term trend.[33]

Next, ASCM, Art.15.2 and ADA, Art. 3.2 require that when the investigating authority examines the impact of the dumped or subsidized imports on prices, it must consider whether the imports are undercutting domestic prices, depressing domestic prices, or preventing price increases that would otherwise have taken place. Any one of these effects can support an injury finding. The investigating authority is not required to show price undercutting in every case. Indeed, the price of the dumped or subsidized imports does not have to be lower than the price of the domestically produced goods. The effects, however, must be linked directly to the dumped or subsidized imports.[34] Again, however, these findings need not be explicit, but the language must make clear that the investigating authority considered whether price undercutting, depression, or suppression was significant.[35]

These articles conclude by noting that none of the factors in the paragraph are, in and of themselves, decisive. In two cases involving the Safeguards Agreement, the Appellate Body has emphasized the importance of looking at all relevant factors before drawing conclusions,[36] but suggested that findings of no injury with regard to certain factors would require compelling explanations by a country that nevertheless imposed measures. For example, while noting the possibility that the investigating authority could find injury even if most firms in the industry did not show declining profitability, the Appellate Body in the *Lamb Meat Appellate Body Report* stressed this possibility was probably a theoretical one.[37]

C. Cumulation (Articles 3.3 ADA and 15.3 ASCM)

The doctrine of cumulation was developed in the United States to deal with the situation where dumped or subsidized imports from a number of countries might collectively be injuring a domestic industry, even though the volume of imports from each individual country was too small to cause harm. Articles 3.3 and 15.3 recognize the right of investigating authorities to cumulate the impact of imports in this situation, but impose conditions on the exercise of that right.[38] The investigating authority may only look at the

[32] *Id.*

[33] *Id.* at ¶ 8.159.

[34] In *Grain Corn*, the GATT Panel faulted Canada for looking at the impact on Canadian prices of the decline in the world price, rather than of imports from the United States, even though the decline in the world price was due to U.S. subsidization. *Grain Corn*, *supra* note 28, at ¶ 5.2.6.

[35] *Thailand—Steel Appellate Body Report*, *supra* note 9, at ¶¶ 7.161–7.162.

[36] Report of the Appellate Body, *Argentina—Safeguard Measures on Imports of Footwear*, WT/DS121/AB/R (2000) at ¶ 139 ("*Footwear Appellate Body Report*"); *Lamb Meat Appellate Body Report*, *supra* note 14, at ¶ 144 n. 99.

[37] *Lamb Meat Appellate Body Report*, *supra* note 14, at ¶ 144 n. 99.

[38] This issue of "cumulation" across countries in countervailing duty investigations, and its extension of cross-cumulation of impact with dumping investigations and across countries has been a contentious issue. As noted in the *Checklist*, subsidies (other than export and import-substitution subsidies) are not condemned and the disciplines are intended to ensure that countries use subsidies in a responsible manner and in a way that avoids harming the interests of other countries. Such subsidies should not be subject to mandatory countermeasures by aggregating the impact of several countries' actions, each of which individually may be non-distortive. It "'impedes countries' efforts to apply subsidies in a responsible manner, and deprives all countries equally of the protection against counter-measures." *See* Negotiating Group on Subsidies and Countervailing Measures*: Checklist of Issues for Negotiations,* Note by the Secretariat, Doc. No. MTN.GNG/NG10/W/9, at III.3.4 (September 7, 1987) ("*Checklist*").

cumulative effects if the products are under simultaneous antidumping or countervailing duty investigation, the level of dumping or subsidies in each exporting country is not *de minimis,* the volume of imports from each country is not negligible, and a cumulative assessment is appropriate given the conditions of competition both among the imported goods and between the imported and domestic goods.

The ADA and the ASCM define when the level of dumping or subsidies is *de minimis.*[39] The ADA specifies that the volume of imports from a particular country is negligible when it accounts for less than three percent of total imports of the like product, unless countries that individually account for less than three percent of total imports collectively account for more than seven percent.[40] The ADA does not distinguish between developed and developing countries in this regard. The ASCM, by contrast, only establishes a negligibility standard for imports from developing countries.[41] This is slightly higher than the ADA standard, the figures being four percent and nine percent respectively.

The cumulation provisions also raise the issue of whether, if imports are subject to simultaneous dumping and countervailing duty investigations, the investigating authorities can conduct a single injury investigation that considers the cumulative effect of the dumping and subsidization. Many countries, including the United States and Canada, do conduct a single investigation. It is, however, unclear how such a practice complies with the obligation in ADA Article 3.5 and ASCM Article 15.5 not to attribute injury caused by other known factors to the dumped or subsidized imports. In other words, ADA Article 3.5 prohibits the attribution of injury caused by other factors (such as subsidization) to the dumped imports. If the injury investigations are cumulated, this non-attribution obligation may be violated. So far, however, countries have avoided this issue in dispute settlement proceedings.[42]

One significant term in these provisions raises the question whether the ability to cumulate applies only to investigations and not to reviews.[43] There are several areas in the ADA and the ASCM in which the language appears to establish rules for investigations, but perhaps not for all types of review, *e.g.*, the *de minimis* standards (ADA, Art. 5.8 and ASCM, Arts. 11.9 and 27.10) and the cumulation provisions (ADA, Art. 3.3 and ASCM, Art. 15.3).[44] While no panels have ruled on this issue for cumulation purposes, the issue of whether the *de minimis* rules apply only to investigations has been examined and may shed some guidance on whether imports from various countries can be considered cumulatively

[39] ADA, Art. 5.8 (two percent *ad valorem* or less); ASCM, Art. 11.9 (one percent *ad valorem* or less for developed countries) and 27.10(a) (two percent *ad valorem* or less for developing countries).

[40] ADA, Art. 5.8. This can cause anomalous results, *e.g.*, if Country A had more than three percent but drops below three percent, it would be considered with Countries B and C. If Countries B and C each had less than three percent and collectively less than seven percent *until* considered with Country A but over seven percent when considered collectively with Country A, a potentially injurious level is reached solely because Country A sold *less*.

[41] ASCM, Art. 27.10 (b).

[42] *See* Report of the WTO Panel, *United States—Investigation of the International Trade Commission in Softwood Lumber from Canada*, WT/DS277/R (2004) at ¶¶ 7.145–7.147 (noting that Canada explicitly did not claim that cross-cumulation of dumped and subsidized imports was *per se* a violation, and that any other claim of violation in this area was unclear, therefore finding that Canada had not made a *prima facie* showing of a violation) ("*Softwood Lumber ITC*").

[43] Specifically, ADA, Art. 3.3 and ASCM, Art. 15.3 permit the cumulation of imports from more than one country in certain circumstances *if* they "are simultaneously subject to [antidumping]/[countervailing] duty *investigations*" (emphasis supplied).

[44] In ADA, Art. 2.4.2, similar language may require the use of average-to-average or individual-to-individual price comparisons only in investigations. *See* the discussion in Chapter 11 of this book.

in a review. In the *Korean DRAMS* case,[45] the Panel found that the two percent *de minimis* standard in Article 5.8 of the ADA applies only to investigations without establishing a *de minimis* standard for administrative reviews.[46] A recent Appellate Body decision applying ASCM, Art. 15.3, also found that the *de minimis* provision did not apply in the case of reviews under ASCM, Art. 21.3 ("Sunset Reviews").[47] According to Article 21.3 the imposition of countervailing measures must be terminated after five years, unless upon review, the administering authorities find that injurious subsidization is likely to continue or resume if the measures are terminated.[48] Because Article 15.3 calls for the immediate termination of an investigation if the subsidies are *de minimis*, in the *Corrosion Resistant Steel* dispute, the EU argued and the Panel found that it would be contrary to the object and purpose of the Agreement if measures were permitted to continue based on a finding of a likelihood of continued or recurring *de minimis* subsidy levels.[49]

The Appellate Body determined, however, that because ASCM, Art. 21.4 established that certain provisions written for investigations (such as ASCM, Art. 12) applied to reviews under Article 21, the lack of reference to Article 11 implied that its provisions probably did not apply to Article 21. Moreover, the Appellate Body disagreed with the Panel's finding of a clear rationale for applying the *de minimis* rule in the case of a sunset review. Therefore, the Appellate Body found that the *de minimis* provision of ASCM, Art. 11.9 did not apply to sunset reviews.[50]

D. Evaluation of Economic Factors (Articles 3.4 ADA and 15.4 ASCM)

These provisions require investigating authorities to evaluate all relevant economic factors that have a bearing on the state of the industry. All of the factors listed in Articles 3.4 and 15.4 are presumptively relevant and must be considered by the investigating

[45] Report of the WTO Panel, *United States—Antidumping Duty on Dynamic Random Access Memory Semiconductors (DRAMS) of One Megabit or Above From Korea*, WT/DS99/R (1999) at ¶¶ 6.87–6.91 ("*Korean DRAMS*").

[46] *Id*. at 150. Interestingly, the United States, which argued for the Panel's determination in the Korean dispute, maintains that the cumulation provision applies to five-year reviews despite the fact that both ADA, Art. 5.8 (*de minimis*) and ADA, Art. 3.3 (cumulation) both refer to investigations. *Compare* ADA Art. 5.8, *with* ADA, Art. 3.3.

[47] *See* Report of the Appellate Body, *United States—Countervailing Duties on Certain Corrosion Resistant Carbon Steel Flat Products From Germany*, WT/DS213/AB/R (2002) ("*Corrosion Resistant Steel Appellate Body Report*"). It should be noted that there are different types of reviews of antidumping or countervailing duty orders. In the United States, for example, which uses a retroactive method of duty assessment (*see* Chapter 11 of this book) the most common is the annual review of the level of dumping or subsidization conducted upon request on entries during the preceding year in order to ensure that the amount of duty collected is not in excess of the level of dumping or subsidization, as required by ADA, Art. 9.3 and ASCM, Art. 19.4 (note that ADA Art. 9.3 provides explicit guidance on reviews in the case of retroactive assessment of duties, whereas ASCM, Art. 19.4 does not). Such reviews do not consider the question of injury. In addition, in certain circumstances the United States will conduct a "changed circumstance" review to determine whether or not there has been a sufficient change in circumstances such that continuation of the order is no longer necessary or appropriate, as provided for in ADA, Art. 11.2 and ASCM, Art. 21.2. Such reviews may be either of injury or of the level of dumping/subsidization. Finally, the United States conducts a review every five years, as required by ADA, Art. 11.3 and ASCM, Art. 21.3, to determine whether injury and dumping or subsidization is likely to continue or recur if the order is revoked. The Korean dispute involved the first type of review, to determine the level of dumping during a specific period of time. The *Corrosion Resistant Steel* dispute involved the last type, a five-year review to determine whether injurious subsidization was likely to continue or review if the order were removed.

[48] ASCM, Art. 21.3.

[49] *See* Report of the WTO Panel, *United States—Countervailing Duties on Certain Corrosion Resistant Carbon Steel Flat Products From Germany*, WT/DS213/R, at ¶ 8.80, *overturned on appeal.*

[50] *Corrosion Resistant Steel Appellate Body Report, supra* note 47, at ¶ 93.

authority, according to panel and Appellate Body reports.[51] In the *Thailand—Steel Panel Report*, the Panel held that, if a particular factor is irrelevant in a given case, the investigating authority must nevertheless do more than merely assert that the factor is relevant or irrelevant; it must provide a "persuasive explanation" of how its consideration of the factors led to a finding of injury.[52]

Panel conclusions on whether the authority has sufficiently considered a particular factor are very fact-sensitive. The *Thailand—Steel* Panel, for example, found a brief statement concerning "economy of scale" to be a proxy for "productivity" and a sufficient analysis of that factor.[53] The *Lamb Meat Appellate Body Report*, on the other hand, faulted the United States under the Safeguards Agreement for its finding that prices were falling, even though it provided the data for this conclusion, because it failed to explain its choice of a particular base year for comparison.[54]

The requirement that the investigating authority consider all of these factors, however, does not mean that each of them must be declining to warrant a finding of injury. Instead, as suggested by the *Lamb Meat Appellate Body Report*, the investigating authority must make its determination in light of the evidence as a whole.[55]

E. Causation (Articles 3.5 ADA and 15.5 ASCM)

Causation is one of the most contentious issues with respect to injury. In order to impose countervailing duty or antidumping measures, three elements must be present: (1) dumping or subsidization; (2) material injury or threat thereof (or the material retardation of the establishment of an industry); and (3) a causal nexus between the effects of the dumping or subsidization and the consequent injury to the domestic industry.

The language in ADA, Art. 3.5 and ASCM, Art. 15.5 reflects a change in wording from the 1979 Subsidies and Antidumping Codes[56] designed to clarify the causation

[55] *Id.* at ¶ 144.

[56] *Compare 1979 Subsidies Code*, Art. 6.4:

> It must be demonstrated that the subsidized imports are, through the effects of the subsidy, causing injury within the meaning of the Agreement. There may be other factors, which at the same time are injuring the domestic industry, and the injuries caused by other factors must not be attributed to the subsidized imports. (footnotes omitted)

with ASCM, Art. 15.5:

> It must be demonstrated that the subsidized imports are, through the effects of the subsidies, causing injury within the meaning of the Agreement. The demonstration of a causal relationship between the subsidized imports and the injury to the domestic industry shall be based on an examination of all relevant evidence before the authorities. The authorities shall also examine any known factors other than the subsidized imports, which at the same time are injuring the domestic industry, and the injuries caused by these other factors must not be attributed to the subsidized imports. Factors which may be relevant in this respect include, *inter alia*, the volumes and prices of non-subsidized imports of the product in question, contraction in demand or changes in the pattern of consumption, trade restrictive practices of and competition between the foreign and domestic producers, developments in technology and the export performance and productivity of the domestic industry. (footnote omitted)

Also, *compare* 1979 *Antidumping Code*, Art. 3.4 *with* ADA, Art. 3.5. The causation requirement has been treated as identical, regardless of whether authorities are examining allegations of dumping or of subsidies.

obligation. The investigating authority must show that the dumped or subsidized imports are causing injury "through" the effects of the dumping or subsidies. In addition, the authorities may not attribute injury caused by other factors to the dumped or subsidized imports. Under the GATT 1947 and the 1979 Anti-Dumping and Subsidies Codes, what was required by this "non-attribution" requirement was the subject of much debate.[57] Neither panels nor Contracting Parties agreed on how the requirement should be met. Of particular debate were questions of whether authorities needed to isolate the injury caused by the dumped or subsidized imports and whether that injury had to be sufficient on its own, whether authorities had to explain why other factors were not the cause of the injury at a material level, or whether it was enough to merely "consider" other factors raised by the parties to the underlying proceeding.[58] The language developed during the Uruguay Round negotiations was an attempt to clarify these questions and to strengthen the obligation to establish the causal link and avoid attributing injury from other factors to the dumped or subsidized imports.[59]

The ADA and ASCM require the investigating authority to base its finding of causation on all relevant evidence. Unlike the list in Articles 3.4 and 15.4, the factors in Articles 3.5 and 15.5 are not mandatory in every case. For example, in interpreting a similar requirement in the Safeguards Agreement, the *Footwear* Panel noted that the Safeguards Agreement does not require a price analysis in every case because often imports and domestic products compete on factors other than price.[60] On the other hand, the exporting country may be able to prove a violation of the Agreement by showing that the investigating authority failed to consider factors that are relevant but are not included in the Article 3.5 or Article 15.5 list. The *Wheat Gluten Appellate Body Report*, also interpreting the Safeguards Agreement's language on causation, found that the investigating authority must consider any factors that it believes are relevant, even if they were not raised independently by interested parties during the investigation.[61]

The ADA and ASCM also mandate that the investigating authority not attribute to dumped or subsidized imports injury caused by other factors. The GATT *Grain Corn* Panel, interpreting similar, but less detailed, language in the 1979 Subsidies Code, for

[57] Article VI of GATT 1947 required that no antidumping (or countervailing) duty may be levied unless the importing country's authorities found that the effect of the dumping or subsidization was such as to cause or threaten material injury to an established domestic industry, or to materially retard the establishment of a domestic industry. In the Kennedy Round, as part of a negotiation on antidumping practices (but not countervailing duty), the resulting *International Agreement on Anti-dumping* ("IAA") increased the causation requirement. The IAA required that dumping must be "demonstrably the principal cause" of injury and required the authorities of the importing country to weigh the effect of dumping against other factors that might be affecting the domestic industry. The United States, among other countries, was concerned by this heightened causation requirement, and the United States Congress passed legislation stating that its domestic law took precedence over any standard established by the IAA and claimed that its existing injury test was protected by the grandfather rights in the Protocol of Provisional Application. *See* the discussion of the IAA in Chapter 11 of this book for more information. The requirement of weighing and the "demonstrably the principal cause" language were not included in the 1979 Codes.

[58] For a brief summary of the debate surrounding this provision of the 1979 Codes, *see* Horlick and Clarke, *supra* note 18 at 322–324.

[59] In describing the results of the Uruguay Round negotiations, the WTO stated: "The Agreement strengthens the requirement for the importing country to establish a clear causal relationship between dumped imports and injury to the domestic industry." WTO, *A Summary of the Final Act of the Uruguay Round: Agreement on Implementation of Article VI (Anti-Dumping)*, available at www.wto.org/english/docs_e/htm#fAgreement.

example, refused to find that U.S. subsidies caused injury to Canadian grain corn because the decline in world price—triggered by the U.S. subsidies—would have had an adverse effect on Canadian producers even if Canada had imported no grain from the United States.[62] The Appellate Body has emphasized this non-attribution requirement; however, it has not yet given clear guidance on how to comply with the causation requirement once the non-attribution rule is fulfilled. In interpreting the similar causation requirement of the Safeguards Agreement, the Appellate Body has specifically rejected a requirement that imports by themselves must be the sole cause of the relevant degree of injury ("serious" for Safeguards Agreement and "material" for the ASCM or ADA).[63] The Appellate Body instead held that the investigating authority must find a "genuine and substantial" cause-and-effect relationship between imports and injury.[64] It suggested, but did not require, a three-step process for analyzing the causation problem. The investigating authority could first distinguish the effects that resulted from different sources, then attribute the injury caused by each to the appropriate source.[65] Finally, the investigating agency could then make a determination on a causal link between the relevant imports and the injury.[66]

In assessing the investigating authority's finding of causation, panels have relied on at least two different general tests. The *Footwear* Panel (Safeguards), whose explanation was upheld on appeal, said the key issue was whether an upward trend in imports coincided with downturns in the factors listed as indicators for injury.[67] A failure to find a coincidence in these trends is not fatal to an investigating authority's decision to impose sanctions, but the authority would have to provide a strong explanation for finding that imports were nevertheless causing the injury.[68] The Panel in *Hot-Rolled Steel from Japan* summarized the question simply as whether other factors break the causal link between increased imports and injury and whether mere coincidence may be eliminated as the explanation for the injury.[69]

The *Hot-Rolled Steel from Japan Appellate Body Report*, expressly rejecting the *Salmon AD* GATT Panel's analysis of the prior language in the 1979 Antidumping Code, found that at a minimum this paragraph required that the injury from the dumped (or subsidized) imports be isolated in order to avoid attributing injury from other factors to the effects of the dumped or subsidized imports.[70]

F. Domestic Industry (Articles 3.6 ADA and 15.6 ASCM)

Rarely addressed directly in panel reports, these provisions require the investigating authority to compare the data for dumped or subsidized imports to those for domestic

production of the "like product" whenever possible. When domestic production of the "like product" cannot be separately identified, the investigator must look at the production of the narrowest group of goods that includes the like product for which separate data are available. Over the course of the investigation, the investigating authority may analyze the effect of imports on particular sectors of the domestic industry,[71] but it may not base its overall determination only on a sub-sector of the industry without providing an explanation of why that sub-sector is representative of the industry as a whole.[72] The Panel in *HFCS*[73] found that this provision allows the investigating authority, where necessary, to base its conclusions on a broader definition of domestic industry, but not on a narrower one.[74] This conclusion was reinforced by the *Hot-Rolled Steel from Japan Appellate Body Report*, which found that the U.S. authority's particular focus on the merchant market portion of the production (*i.e.*, the production facing direct competition from imports) without a similar focus on the captive production portion (*i.e.*, the portion sheltered from import competition) violated the objective examination requirement of Article 3.1 of the ADA.[75] In that case, the Appellate Body stated:

> "an examination of only certain parts of a domestic industry does not ensure a proper evaluation of the state of the domestic industry as a whole . . . "[76]

G. Threat of Injury (Articles 3.7 ADA and 15.7 ASCM)

As noted above, the ADA and the ASCM allow the use of antidumping and countervailing measures in response to the threat of material injury as well as current material injury. Articles 3.7 of the ADA and 15.7 of the ASCM require that the finding of threat must not be speculative and that the event that would cause injury must be clearly foreseen and imminent. The *HFCS* Panel noted that a finding by the investigating authority that it could not "rule out" the possibility of continued imports was not equivalent to a determination of a "likelihood" of substantially increased imports, as required by the Agreements.[77]

The *Lamb Meat Appellate Body Report* (Safeguards), although examining a threat of "serious" rather than "material" injury, said that the words "clearly" and "imminent," also used in the ADA and the ASCM, require finding a high degree of likelihood that an injury is on the verge of occurring.[78] Similarly, the GATT Panel in *Polyacetal Resin* held that a finding of threat under the 1979 Antidumping Code required more than a determination that injury would result if imports continued to adversely affect domestic prices; the investigating authority also had to determine that it was likely that imports would continue to do so.[79] In *Softwood Lumber ITC*, the WTO panel found that these articles required "that some 'change of circumstances' must be clearly foreseen and imminent, and that it is this change of circumstance that would create a situation in which

[79] *Polyacetal Resin, supra* note 3, at ¶ 283.

injury would occur."[80] This change of circumstance, however, need not be identified as a single, or specific, event.[81]

Articles 3.7 and 15.7 list several factors, unique to a threat decision that the investigating authority must take into account in finding a threat of material injury.[82] Unlike the mandatory injury factors in Articles 3.4 and 15.4, however, the factors identified in 3.7 and 15.7 are not mandatory. Therefore, a failure either to adequately consider a particular factor or to consider it at all is not necessarily a violation of the provisions. The articles do require that the totality of the factors considered "lead to the conclusion that further dumped and subsidized exports are imminent and that, unless protective action was taken, material injury would occur."[83] *Softwood Lumber ITC* also provides guidance as to what constitutes adequate consideration of these factors. According to the WTO Panel, it must be apparent from the authority's written determination that "the investigating authorities have given attention to and taken [the factors] into account."[84]

The *HFCS* Panel held that in addition to considering the factors in Articles 3.7 and 15.7, the investigating authority must also look at the mandatory factors in Article 3.4 of the ADA to show what the impact of continued dumped imports would be.[85] This is to establish a background against which the impact of future dumped or subsidized imports could be assessed. As with other factors considered by the investigating authority, none of the factors listed in Articles 3.7 and 15.7 is itself decisive.

Finally, in addition to considering the factors in Article 3.4 and 3.7 of the ADA and Article 15.4 and 15.7 of the ASCM, for purposes of finding a threat of material injury, the investigating authority must also examine causation under Articles 3.5 and/or 15.5 as well. It is not sufficient to consider this, and to assure non-attribution of injury from other factors, in the context of a present material injury analysis if the final determination is of a threat of future material injury.[86]

H. Special Care in Threat Cases (Articles 3.8 ADA and 15.8 ASCM)

These provisions caution that decisions to use antidumping or countervailing measures in the face of threatened, rather than current, material injury must be made with "special care." Only one WTO Panel has addressed this issue and the Appellate Body has not yet addressed it. In *Softwood Lumber ITC*, the Panel noting that Canada, in raising a claim that the U.S. threat analysis violated the provisions of ADA Article 3.8 and ASCM Article 15.8, had not asserted that the need to use "special care" raised any

[80] *Softwood Lumber ITC, supra* note 42.

[81] *Id.,* at ¶ 7.58 ("... the change in circumstances that would give rise to a situation in which injury would occur encompasses a single event, or a series of events, or developments in the industry, and/or concerning the dumped or subsidized imports, which lead to the conclusion that injury which has not yet occurred can be predicted to occur imminently.")

[82] Those factors are: the nature of the subsidy or subsidies (ASCM only); a significant rate of increase in the dumped/subsidized imports indicating the likelihood of substantially increased importation; either freely disposable capacity or an imminent increase in capacity indicated the likely of substantially increased subsidized/dumped imports, taking into account the ability of other markets to absorb the exports; whether imports are entering at prices that will have a significant depressing and suppressing effect on domestic prices, and would likely increase demand for further imports; and inventories of the product being investigated. ADA, Art. 3.7 and ASCM, Art. 15.7.

[83] *Softwood Lumber ITC, supra* note 42, at ¶ 7.69. Note in this case, the WTO Panel found that the totality of the circumstances did not support the authorities finding of threat. *Id.* at ¶ 7.96.

[84] *Id.* at ¶ 7.67.

[85] HFCS*, supra* note 71, at ¶¶ 7.126–7.127.

[86] *Softwood Lumber ITC*, *supra* note 42, at ¶¶ 7.134–7.137.

specific legal requirements. Rather, according to the Panel, Canada's argument was that these provisions imposed a stricter standard for threat cases, without indicating what the parameters of such a standard should be.[87] The Panel also failed to identify what these provisions require, beyond "a degree of attention over and above that required of investigating authorities in all anti-dumping and countervailing duty injury cases.[88]

The Panel merely found that it had no basis to find a violation of Articles 3.8 and 15.8 in the absence of a violation of a more specific provision of the Agreements. It did note in passing that, in theory, a violation of the special care requirement could be demonstrated in the absence of a violation of a more specific provision of the Agreements, but found that Canada had not so demonstrated.[89]

III. Injury in Regional Markets

Article 4.1(ii) of the ADA and Article 16.2 of the ASCM provide an exception to the definition of "domestic industry" as all or a major proportion of the domestic production. This exception permits the division of the importing country into two or more markets, in which case the producers within each market could be considered separate industries. This is also referred to as the "regional market" provision. A separate market may be established if two conditions are met: (1) the producers within the market sell all or almost all of their production of the good in question in that market and (2) the demand in that market is not to any substantial degree supplied by the producers of the subject product located elsewhere in the territory. Where such a regional market exists, injury may be found to exist for antidumping or countervailing duty purposes so long as the dumped or subsidized imports are concentrated into that isolated market and are causing injury to the producers of "all, or almost all" of the production within that market. The situation of the industry in the remainder of the country is irrelevant, even if it constitutes a major portion of the total domestic industry.[90]

IV. Conclusion

The injury analysis in an antidumping or countervailing duty action is complex and fact dependent. The WTO Agreement sought to clarify the most contentious issues arising from this analysis. Nevertheless, there are numerous complaints in cases around the world concerning whether the investigating authorities have favored the domestic industry in making their injury determination. This will likely continue to be an area of dispute in future cases as well because of its complexity and fact-specific nature.

BIBLIOGRAPHY 797

I. Introduction: Political and Economic Aspects of Safeguard Measures[1]

A. Definition of "Safeguard"

The term "safeguard" or "safeguard measure" refers to trade measures that are applied to protect domestic industries from competition with imports causing or threatening to cause serious injury to them. Article XIX of the GATT and the WTO Agreement on Safeguards (hereinafter referred to as "the Safeguards Agreement" or "SA") authorizes Members to impose significant import restrictions designed to remedy or prevent serious injury to domestic industries that is caused by an increase in imports. Such general safeguard measures are to be distinguished from other special safeguard measures, which are either applied only to a specific category of imported product[2] or do not require the existence of injury to a particular domestic industry.[3]

In contrast, the general safeguard measures provided under the Safeguards Agreement and its predecessor, GATT Article XIX, can be applied to any category of imported products. Also, they can only be applied to remedy or prevent serious injury to a specific domestic industry that is caused by an increase in imports. Such safeguard measures are gaining increasing importance in world trade today.

Both general and special safeguards are distinct from other widely-used import restrictions such as antidumping and countervailing duties. While those latter types of measures are designed to offset the advantages gained by the exporters through "unfair" trade practices such as under-pricing and subsidization, safeguard measures are not concerned with the fairness of trade practices on the part of exporters. They are applicable solely on the basis of the condition of the domestic industry that is adversely affected by an increase in imports.

B. Origin of Safeguards

The first safeguard measure appeared in the 1942 United States Reciprocal Trade Agreement with Mexico,[4] where it was known as the "escape clause".[5] A similar provision was included in subsequent international trade agreements, including the General Agreement on Tariffs and Trade ("GATT"). Article XIX of the GATT, discussed in more detail in the next Part, authorizes a contracting party to restrict imports regardless of its bound concessions where an increase in imports attributable to those concessions causes serious injury or threat thereof to the domestic industry.

[1] Further discussion of the political and economic implications of safeguard measures as well as the examination of the current national and international rules on safeguards are provided in the author's treatise on safeguards, SAFEGUARD MEASURES IN WORLD TRADE: THE LEGAL ANALYSIS (Kluwer Law International, 1st ed. 2003, 2nd ed. forthcoming 2005).

[2] For instance, "special safeguard measures" under Article 5 of the WTO Agreement on Agriculture and "transitional safeguards" under Article 6 of the WTO Agreement on Textiles and Clothing are only applicable to agricultural products and textile products, respectively. *See* chapters 6 and 9 of this book.

[3] The application of import restrictions under GATT Articles XII and XVIII:B (balance-of-payments) and the Uruguay Round Understanding on Balance of Payments does not require the existence of injury to a domestic industry.

[4] The relevant clause provides that "If, as a result of unforeseen developments and of the concession granted on any article enumerated and described in the Schedules annexed to this Agreement, such article is being imported in such increased quantities and under such conditions as to cause or threaten serious injury to domestic producers of like or similar articles, the Government of either country shall be free to withdraw the concession, in whole or in part, or to modify it to the extent and for such time as may be necessary to prevent such injury." *Agreement on Reciprocal Trade*, Dec. 23, 1942, US-Mex., Art. XI, 57 Stat., 833, 845–866.

[5] Use of the term "escape clause" as a synonym for safeguard measures seems appropriate, since the provision allows a party to a trade agreement to "escape" from the commitments it made in the agreement.

C. Justification for Safeguards

Under the GATT/WTO system, Members are not allowed to impose tariffs on imports higher than their negotiated tariff concessions or to impose various forms of non-tariff measure, such as quotas. Safeguard provisions allow Members to depart from these commitments provided that increased imports cause or threaten to cause serious injury to a domestic industry. It can be argued that serious injury or the threat thereof to the domestic industry is not a legitimate ground for import restriction even though such injury may have been caused by the increase in imports.

After all, import concessions made in multilateral trade negotiations can be expected to lead to increases in imports, even at a speed or to an extent greater than originally anticipated by the importing country at the time of the concessions. Although the position of the competing domestic industry may deteriorate as the result of the competition from imports, international trade improves the overall economic welfare of the importing country by inducing an optimal re-distribution of resources.[6] This is the economic rationale in favor of international trade and should therefore be the reason for participating in the multilateral trade negotiations in the first place. Then, what is the justification for safeguard measures? Does the existence of safeguard measures contradict what Members try to achieve in economic terms through international trade?

One possible answer to this question is that a sudden increase in imports can cause acute social, political, as well as economic, problems in the importing country. Domestic producers may be driven out of business by import competition. The shut-down of businesses would then cause problems such as unemployment and, possibly, a series of adverse effects on other related industries, thereby magnifying the problem. Such economic difficulties, even if they are of a short-term and transitional nature, often cause serious social problems.

Safeguard measures can help prevent these problems from occurring by maintaining the *status quo* through temporary import restrictions. Safeguard measures under the WTO aim to facilitate economic adjustment by offering temporary protection to the domestic industry.[7] From the economic perspective, trade promotes economic welfare through redistribution of resources from inefficient domestic industries to more efficient ones.[8] However, proponents of safeguard measures point out that the redistribution of resources does not automatically take place. They say that in reality the transfer of resources may take a considerable amount of time. For instance, the labor force employed in the declining domestic industries has to be re-educated and re-trained before it can be employed elsewhere. This argument supports the necessity of safeguard measures in that the temporary protection of domestic industries would facilitate this economic adjustment, by giving the domestic industry and the government of the importing country the time needed to deal with the problems resulting from a sudden increase in imports.

D. Objections to Safeguard Measures

The question remains whether safeguard protection alone induces proper economic adjustment. While protection is being provided, the domestic industry and the government

[6] Ricardo's classical theory of comparative advantage establishes that international trade always promotes economic efficiency by redistribution of domestic resources. DAVID RICARDO, PRINCIPLES OF POLITICAL ECONOMY AND TAXATION (1817).

[7] The Preamble to the SA states in relevant part, "Members . . . Recognizing the importance of structural adjustment and the need to enhance rather than limit competition in international markets . . . Hereby agree as follows:".

[8] *Supra* note 6.

are not under immediate pressure to make any change. The maximum length of safeguard measures under the WTO Agreement on Safeguards is eight years including a one-time extension.[9] Eight years is a considerable amount of time, and after those eight years the situation may well have changed and the domestic products may no longer be threatened by imports.[10] A government may feel that the situation need not be dealt with in its lifetime, and may therefore adopt a wait-and-see attitude during the period of protection rather than force the industry to go through a potentially painful adjustment process.

Under the Agreement on Safeguards, Members are required to progressively liberalize safeguard measures that have a duration of more than one year[11]. Although the Agreement does not specify the speed of liberalization, a well-paced liberalization plan is expected to require economic adjustment because, under the liberalization plan, the protection offered to the domestic industry would be reduced at intervals over the lifetime of the safeguard measure. A responsible government would devise such a liberalization plan in consultation with the industry, in order to facilitate economic adjustment. The absence of an adequate liberalization plan would only delay potential problems until the safeguard measure expires.

Another objection to safeguard measures comes from the notion that safeguards distort trade and protect the welfare of domestic producers at the expense of consumers.[12] It might be economically more efficient to use non-trade measures such as government subsidies to remedy the harm to the domestic industry.[13] The difficulty with this position is that those subsidies may prove to be a significant fiscal burden to the government. For those governments with limited financial resources, particularly those of many developing countries, the option may be impractical.

E. Financial Crisis and Safeguard Measures

The value of safeguard measures can also be considered in conjunction with today's economic environment where trade patterns can be significantly affected, not only by the relative competitiveness of concerned industries, but also by extraneous factors such as foreign exchange rates, which can change significantly over a short period of time. For instance, a sudden and substantial devaluation of an exporting country's currency may lead to a rapid increase in its exports. Such economic changes may present a uniquely fitting situation for the application of safeguards.

For example, in 1997, the currencies of many Asian countries were sharply devalued due to the financial crisis in that region.[14] For instance, the value of the South Korean won fell by more than forty per cent in less than one month after the beginning of the crisis. The sharp devaluation reduced export prices significantly, giving Korean exporters a significant competitive edge. Many domestic industries that had been competing with

[9] *Agreement on Safeguards*, Art. 7.1 and 7.2.

[10] For instance, foreign producers of the products in question may have depended heavily on overseas export markets, and the loss of a major export market due to a safeguard measure may create difficulties for them and ultimately force them out of business.

[11] Article 7.4 of the Agreement on Safeguards provides in the relevant part that "In order to facilitate adjustment in a situation where the expected duration of a safeguard measure . . . is over one year, the Member applying the measure shall progressively liberalize it at regular intervals during the period of application."

[12] For the impacts of import restrictions on economic welfare, *see* DOMINICK SALVATORE, INTERNATIONAL ECONOMICS 220–226, 258–260 (1995)

[13] J.S. Freebain, *Pros and Cons of Temporary Industry Assistance,* 22(3) AUSTRALIAN JOURNAL OF AGRICULTURAL ECONOMICS 194–205 (1978). Domestic subsidies are permitted under Article III:8(b) of the GATT.

[14] For the causes and developments of the financial crisis in certain Asian countries, see Andrew Berg, *The Asia Crisis—Causes, Policy Responses and Outcomes,* International Monetary Fund Working Paper, WP/99/138 (Oct. 1, 1999).

Korean exports, ranging from the U.S. steel industry to the Israeli plywood industry, were affected by the sharp increase in imports from South Korea.

Safeguard measures would have been an appropriate remedy to redress or prevent injury to those industries. The increase in imports from South Korea was due to the temporary devaluation of the South Korean currency. The increase in imports from South Korea was unlikely to be sustained on a permanent basis because the cause for the devaluation was Korea's short-term shortage of foreign currency. The Korean currency was bound to appreciate as capital flowed back into the country, which actually took place in the subsequent months. In the meantime, the Korean products quickly overwhelmed many foreign markets where domestic producers had competed with Korean exports. By applying safeguard measures, affected Members would have been able to protect their domestic industries from the temporary surge of imports from Korea, although they in fact refrained from doing so.

Affected importing countries, as a matter of policy, may choose not to apply safeguard measures in an effort to assist exporting countries to earn foreign currencies needed to recover from the financial crisis, but regardless of their final course of action, safeguards would remain an available option to protect affected domestic industries. The remedy would have been equally applicable had the devaluation been permanent. Safeguard measures would have offered affected domestic industries the time necessary to deal with the consequences on their domestic industries from this changed price factor.

F. Trade Promotion and Safeguard Measures

Finally, safeguard measures also provide the government with a political cushion in efforts to lower import barriers. Notwithstanding the overall benefits from the liberalization of trade, adversely affected domestic industries tend to resist opening up domestic markets to foreign competitors, and such resistance has proven to be a major barrier to liberalization efforts. Safeguards may be a way to lower barriers to imports since the existence of such measures can be perceived as a "safety net" for the survival of those adversely affected-domestic industries, even though it may only be a temporary means of protection. Knowing that safeguard measures will be available in the event of serious injury as a result of tariff reductions, governments would be better able to persuade domestic industries to accept further market opening. As the result, the existence of safeguard provisions make it more likely that nations will offer trade concessions.[15]

It should be noted that the political utility of safeguards might tempt governments to abuse safeguard measures. Trade measures are often considered when governments face problems with their domestic industries and find some possible association between the problems and the imports. Unfortunately, they are perceived as an easier way to deal with political pressure from declining domestic industries than coping with their own structural problems.[16] The improved disciplines of the WTO are designed to inhibit governments from abusing trade measures.

[15] *See* KENNETH W. DAM, THE GATT, LAW AND INTERNATIONAL ECONOMIC ORGANIZATION 106 (1970) for this "safety valve theory."

[16] For example, while the U.S. Government justified its controversial 2002 safeguard measures imposed on a wide variety of steel products on the basis of injury caused by increased imports, many believe that the root cause of the U.S. industry's problems is not imports at all, but the enormous cost of its obligation to provide retirement benefits to its former employees. Some proposed that the Government should bail out the industry by taking on this obligation, but this would have involved a large budget item. The provision of import relief, on the other hand, imposes an "off-budget" cost to the economy, and was therefore politically more palatable.

An adequate understanding of the rules on safeguards is a prerequisite to their proper application. Although the new Agreement on Safeguards provides much more detailed rules on the application of safeguard measures than its predecessor, GATT Article XIX, some of those rules are still ambiguous and even controversial, as revealed in recent WTO panel and Appellate Body decisions.[17] The following Parts discuss the evolution of the rules on safeguards and examine the current rules on safeguards with an analysis of the relevant WTO panel decisions.

II. GATT Article XIX

GATT Article XIX provided the first multilateral rules on safeguards in the international trade system and has remained in force for over fifty years. In 1946 the United States had submitted a working proposal for the Charter of the International Trade Organization (ITO) that included an escape clause.[18] The escape clause was similarly worded to that in a bilateral US-Mexico Agreement.[19] Although the ITO never came into existence, an escape clause was included in the GATT.

The provisions of Article XIX are predicated on the notion that safeguards constitute an emergency action based on serious injury to a domestic industry. Article XIX, following the precedent of the US–Mexico Agreement, lay out conditions for the application of a safeguard measure: an increase in imports resulting from unforeseen developments and the effect of concessions made under the agreement, causing serious injury or threat thereof to domestic producers of like or similar products.

Article XIX is notable for its brevity and lacks detailed substantive and procedural requirements for the application of a safeguard measure. Paragraph 1(a) sets out the general conditions for the application of a safeguard measure. The other paragraphs deal with the following issues: safeguard measures in relation to a preferential trade

[17] As of August 2004, eight panels had been established under Article 6 of the Understanding on Rules and Procedures Governing the Settlement of Disputes ("DSU"), to review disputes concerning the applications of safeguard measures under the Agreement on Safeguards and GATT Article XIX. Those disputes are: *Korea—Definitive Safeguard Measure on the Imports of Certain Dairy Products* ("*Korea—Dairy Products*"), WT/DS98/R (Report of the Panel, dated June 21, 1999), WT/DS98/AB/R (Report of the Appellate Body, dated December 14, 1999); *Argentina—Safeguard Measure on the Imports of Footwear* ("*Argentina—Footwear*"), WT/DS121/R (Report of the Panel, dated June 25, 1999), WT/DS121/AB/R (Report of the Appellate Body, dated 14, 1999); United States*—Definitive Safeguard Measures on Imports of Wheat Gluten From the European Communities* ("*United States—Wheat Gluten*"), WT/DS166/R (Report of the Panel, dated July 31, 2000), WT/DS166/AB/R (Report of the Appellate Body, dated December 22, 2000); *United States—Safeguard Measures on Imports of Fresh, Chilled or Frozen Lamb Meat from New Zealand and Australia* ("*United States—Lamb Meat*"), WT/DS177/R, WT/DS178/R (Report of the Panel, dated December 21, 2000), WT/DS177/AB/R, WT/DS178/AB/R (Report of the Appellate Body, dated May 1, 2001); *United States—Definitive Safeguard Measures on Imports of Steel Wire Rod and Circular Welded Carbon Quality Line Pipe* ("*United States—Line Pipe*"), WT/DS202/R (Report of the Panel, dated October 29, 2001), WT/202/AB/R (Report of the Appellate Body, dated February 15, 2002); *Chile –Price Band System and Safeguard Measures relating to Certain Agricultural Products* ("*Chile—Agricultural Products*"), WT/DS207/R (Report of the Panel, dated May 3, 2002) (the issues in the case relating to safeguards were not appealed); *Argentina—Definitive Safeguard Measure on Imports of Preserved Peaches* (*"Argentina—Preserved Peaches"*), WT/DS238/R (Report of the Panel, dated February 14, 2003) (the panel rulings not appealed);*United States—Definitive Safeguard Measures on Imports of Certain Steel Products* ("*United States—Steel Products*"), WT/DS 248∼DS259/R (Report of the Panel, dated July 11, 2003), WT/DS248∼DS259/AB/R (Report of the Appellate Body, dated November 10, 2003).

[18] *United States Suggested Charter*, Dept. of State Pub. No.2598, Art. 29, at 22 (1946)

[19] *See supra* note 4.

arrangement (paragraph 1(b)), prior notice, consultation, provisional safeguard measures (paragraph 2) and compensation/retaliation (paragraph 3(a) and (b)).

Article XIX provides no guidelines with respect to the essential questions for the application of a safeguard measure such as the assessment of serious injury and the transparency of the investigation process. This deficiency made it difficult to challenge safeguard measures that were applied rather arbitrarily, without clear evidence of serious injury that is caused by an increase in imports. Many contracting members of the GATT considered it necessary to redress this problem by setting more detailed standards for the application of safeguards. Safeguard negotiations in the Tokyo Round were unsuccessful, and it was not until the Uruguay Round negotiations that an agreement on safeguards was finally concluded.

Although Article XIX was far from being a comprehensive set of rules for the application of safeguards, it nevertheless set out fundamental principles which were later adopted in the Safeguards Agreement. The provisions in the SA were built on the principles of Article XIX, with substantial refinements and modifications. The remainder of this Part reviews the provisions in Article XIX, which provide the foundation for the Agreement on Safeguards. Recent Appellate Body decisions[20] confirmed that the provisions of Article XIX are still effective to the extent that they are consistent with the new Agreement.

Paragraph 1(a) of Article XIX sets forth the general conditions for the application of safeguards, providing that

> If, as a result of unforeseen developments and of the effect of the obligations incurred by a contracting party under this Agreement, including tariff concessions, any product is being imported into the territory of that contracting party in such increased quantities and under such conditions as to cause or threaten serious injury to domestic producers in that territory of like or directly competitive products, the contracting party shall be free, in respect of such product, and to extent and for such time as may be necessary to prevent or remedy such injury, to suspend the obligation in whole or in part or to withdraw or modify the concession.

The leading GATT decision on the application of Article XIX, *Report on Withdrawal by the United States of a Tariff Concession under Article XIX of the General Agreement ("Hatters' Fur Case")*[21], provided a summary of the essential elements for the application of a safeguard measure. The Report notes in relevant part that

> "In attempting to appraise whether the requirements of Article XIX had been fulfilled, the Working Party examined separately each of the conditions which qualify the exercise of the right to suspend an obligation or to withdraw or modify a concession under that Article. Three sets of conditions have to be fulfilled:
>
> (a) There should be an abnormal development in the imports of the product in question in the sense that:
> (i) the product in question must be imported in increased quantities:
> (ii) the increased imports must be the result of unforeseen developments and of the effect of the tariff concession; and
> (iii) the imports must enter in such increased quantities and under such conditions as to cause or threaten serious injury to domestic producers of like or directly competitive products.
> (b) The suspension of an obligation or the withdrawal or modification of a concession must be limited to the extent and the time necessary to prevent or remedy the injury caused or threatened.

[20] *Supra* note 7.

[21] GATT/CP.6/SR.19 (adopted by the Contracting Parties on Oct. 22, 1951).

(c) The contracting party taking action under Article XIX must give notice in writing to the CONTRACTING PARTIES before taking action. It must also give an opportunity to contracting parties substantially interested and to the CONTRACTING PARTIES to consult with it. As a rule consultation should take place before the action is taken, but in critical circumstances consultation may take place immediately after the measure is taken provisionally."

Specific issues that have arisen under Article XIX include the following:

A. Increased Imports

The first requirement under paragraph 1(a) is the existence of increased quantities in imports. The question arose whether an increase that is only *relative* to domestic production, as opposed to an *absolute* increase in imports, would qualify as the requisite increase in imports under this provision. Where the absolute quantity of imports has decreased, but domestic production has decreased by a greater amount, should this be a basis for the application of a safeguard measure?

A relative increase could occur during a recession, and the early discussions of safeguards indicated that a relative increase in imports was intended to qualify for relief. The Working Party on "Modifications to the General Agreement," which met shortly after the Havana Conference in 1948, found that "It was also the understanding of the Working Party that the phrase 'being imported . . . in such increased quantities' in paragraph 1(a) of Article XIX was intended to cover cases where imports may have increased relatively . . ."[22] No GATT panel ruled on the issue of "relative increases" in imports.

Views on the inclusion of "relative increases" under Article XIX differed. An eminent scholar warned that the application of safeguard measures in the case of only a "relative increase" in imports would inflict damage to world trade in times of recession by causing a chain of retaliations.[23] Other scholars, on the other hand, have suggested that safeguards can be applied on the basis of a relative increase in imports because in economic conditions of recession or depression, domestic producers would consider more relevant the fact that imports account for a bigger proportion of production or consumption in the domestic market than that imports have decreased in absolute terms.[24] The issue is now moot, because Article 2.1 of the Safeguards Agreement clarifies that the increase can be "absolute or relative."

B. Unforeseen Developments and the Effect of Tariff Concessions

Paragraph 1(a) also requires as a condition for imposing safeguard measures that the increased imports be the result of "unforeseen developments and the effect of . . . tariff concessions". The meaning of "unforeseen developments" was discussed in the

[22] II/39, 43–44, ¶ 30, *cited in* WTO, ANALYTICAL INDEX: GUIDE TO GATT LAW AND PRACTICE 518 (6th ed. 1995).

[23] *See* JOHN H. JACKSON, WORLD TRADE AND THE LAW OF GATT 555 (1969). He notes, "This concept of "relative increase" seems inappropriate in an escape clause that is based on a policy of allocating the burdens of market readjustment . . . Here no actual increase in imports has occurred, so it seems very difficult to justify placing the burden on the foreign products. It appears that the "relative" increase concept is a protective device. It is a device that may have little relevance in a general period of increasing economic wealth, but it is a potentially dangerous device if general world economic conditions tend to decline. In that sense protective sentiments will be much more powerful anyway, and this outlet for that sentiment could accelerate a decline in trade and thus accelerate a general economic decline, as such nation tries to shift the burden of declining markets to foreign goods, evoking retaliation and a spiraling downward trade trend."

[24] RAJ BHALA AND KEVIN KENNEDY, WORLD TRADE LAW 910 (1998).

Hatter's Fur case, in which the members of the Working Party (other than the United States), agreed that

> the term 'unforeseen development' should be interpreted to mean developments occurring after the negotiation of the relevant tariff concession which it would not be reasonable to expect that the negotiators of the country making the concession could and should have foreseen at the time when the concession was negotiated.[25]

In that case, a significant change in fashion was found to constitute an "unforeseen development".

Although the Safeguards Agreement does not refer to "unforeseen developments", and can be read as a self-contained agreement superseding Article XIX, several recent Appellate Body decisions held that Article XIX and the SA must be read together and that a Member applying a safeguard measure must demonstrate the existence of "unforeseen developments" as a matter of fact.[26]

With respect to the phrase, "effect of obligations incurred by a contracting party", the Appellate Body was of the view that the phrase only indicates that the increase in imports should be the result of obligations undertaken by the Member under the GATT 1994, including tariff concessions.[27] As discussed in Part V:*A* of this chapter, the Appellate Body's holdings in this regard rest on a somewhat questionable reading of the Safeguards Agreement. However, since these Appellate Body decisions on unforeseen developments stand unchanged to date, any future safeguards decision that does not include a finding that the increase in imports resulted from unforeseen developments will risk challenge.

C. Most-Favored Nation Treatment

Another issue under Article XIX was whether it required safeguard measures to be applied on a most-favored nation basis, since paragraph 1(a) does not expressly prohibit the selective application of a safeguard measure based on the origin of the product concerned. On the other hand, an explicit MFN provision was included in the Charter of the ITO at the Havana meeting.[28] Although the Charter never had any legal effect, the contracting parties generally recognized that the MFN principle applies to safeguard measures. This principle was confirmed in subsequent panel cases.[29]

D. Preferential Arrangements

Paragraph 1(b) of Article XIX provides that:

> If any product, which is the subject of a concession with respect to a preference, is being imported into the territory of a contracting party in the circumstances set forth in subparagraph (a) of this paragraph, so as to cause or threaten serious injury to domestic producers

[26] *Korea—Dairy Products*, *supra* note 17, Appellate Body Report, ¶ 85.
[27] *Id*. ¶ 84.
[28] WTO, ANALYTICAL INDEX, *supra* note 22, at 519.
[29] *See, e.g.,* Report of the GATT Panel (adopted), *Norway—Restrictions on Imports of Certain Textile Products*, BISD 27th Supp. 119 (1981). The panel decision emphasized that application of a safeguard measure must be non-discriminatory. It stated, "The Panel was of the view that the type of action chosen by Norway, i.e. quantitative restrictions limiting the importation of the nine textile categories in question, as the form of emergency action under Article XIX was subject to the provisions of Article XIII which provides for non-discriminatory administration of quantitative restrictions."

> of like or directly competitive products in the territory of a contracting party which receives or received such preference, the importing contracting party shall be free, if that other contracting party so requests, to suspend the relevant obligation in whole or in part or to withdraw or modify the concession in respect of the product, to the extent and for such time as may be necessary to prevent or remedy such injury.

This provision, although not clearly drafted, was intended to protect benefits under preferential trade arrangements. According to the explanations offered at the London Preparatory Conference, this right of withdrawal or modification extends to cases where a country's trade is injured by reason of the loss in whole or in part of a preference which it previously enjoyed in another market.[30]

For instance, assume that the United States imports widgets from Canada. Under the NAFTA, they are duty-free. Also assume that the U.S. tariff on widgets imported from non-NAFTA countries is ten percent. The United States subsequently reduces the MFN tariff from ten to one percent in multilateral trade negotiations. As the result, Canadian widget manufacturers may sustain serious injury or threat of serious injury because of the reduced preference they now enjoy in the United States. Under Article XIX 1(b), Canada could request the United States to apply a safeguard measure to non-NAFTA imports of widgets. This provision appears never to have been applied, and it is difficult to see why the importing country would wish to impose safeguard measures on behalf of a third country, risking potential challenges. As the SA now applies, it could be argued that paragraph 1(b) is no longer applicable because of the absence of procedural requirements for its application (e.g. who should investigate the condition of the affected domestic industry?).[31]

E. Procedural Requirements

Paragraph 2 of Article XIX sets forth rather minimal procedural requirements for the application of safeguards. It provides that:

> Before any contracting party shall take action pursuant to the provisions of paragraph 1 of Article, it shall give notice in writing to the CONTRACTING PARTIES as far in advance as may be practicable and shall afford the CONTRACTING PARTIES and those contracting parties having a substantial interest as exporters of the product concerned an opportunity to consult with it in respect of the proposed action. When such notice is given in relation to a concession with respect to a preference, the notice shall name the contracting party which has requested the action. In critical circumstances, where delay would cause damage which it would be difficult to repair, action under paragraph 1 of this Article may be taken provisionally without prior consultation, on the condition that consultation shall be effected immediately after taking such action.

The requirement of prior notification is to ensure that the countries affected by the safeguard measure have the opportunity to learn about the proposed action and prepare for its application. Consultations facilitate the exchange of opinions and negotiations between the affected countries and the country proposing to apply the measure. Paragraph 2 also provides for provisional safeguard measures, which can be taken without prior consultations if the circumstances call for immediate action. These concepts of notification,

[30] EPCT/C.II/PV/12.

[31] *See* author's previous work, *Destabilization of the Discipline on Safeguards—Inherent Problems with the Continuing Application of Article XIX after the Settlement of the Agreement on Safeguards*, 25 JOURNAL OF WORLD TRADE 1242–1245 (Dec. 2001).

consultation and provisional safeguard measures are also adopted in the SA, where they have been developed in more detail.[32]

F. Compensation and Retaliation

Paragraph 3(a) of Article XIX provides that

> If agreement among the interested contracting parties with respect to the action is not reached, the contracting party which proposes to take or continue the action shall, nevertheless, be free to do so, and if such action is taken or continued, the affected contracting parties shall then be free, not later than ninety days after such action is taken, to suspend, upon the expiration of thirty days from the day on which written notice of such suspension is received by the CONTRACTING PARTIES, the application to the trade of the contracting party taking such action, or, in the case envisaged in paragraph 1 (b) of this Article, to the trade of the contracting party requesting such action, of such substantially equivalent concessions or other obligations under this Agreement the suspension of which the CONTRACTING PARTY do not disapprove.

Paragraph 3(b) further provides that:

> Notwithstanding the provisions of sub-paragraph (a) of this paragraph, where action is taken under paragraph 2 of this Article without prior consultation and causes and threatens serious injury in the territory of a contracting party to the domestic producers of products affected by the action, that contracting party shall where delay would cause damage difficult to repair, be free to suspend, upon the taking of the action and throughout the period of consultation, such concessions or other obligations as may be necessary to prevent or remedy the injury.

The application of a safeguard measure is likely to upset the balance of concessions that has been maintained between the exporting and importing countries. Since safeguard measures are applied irrespective of any unfair practice on the part of exporters, it seems appropriate to restore the balance of concessions through adequate compensation for the loss of trade. If the parties fail to agree on compensation, paragraph 3(a) allows affected countries to retaliate by suspending concessions or other obligations to compensate for their loss of trade.

The paragraph stipulates that the suspension should be substantially equivalent to the extent of the safeguard measure.[33] However, the selection of products that will be subject to the suspension of concessions is not in any way restricted. Paragraph 3(b) also permits countries affected by provisional safeguard measures to suspend their concessions immediately if the measure causes or threatens to cause serious injury to their domestic producers and if delay would cause irreparable damage. The Agreement on Safeguards has made significant modifications in the area of compensation/retaliation. This subject is discussed further in Part IV below.

III. Negotiations in the Uruguay Round

A 1987 Secretariat Note on "Work Already Undertaken in the GATT on Safeguards" revealed a number of problems with Article XIX: i) lack of transparency in the application of safeguard measures; ii) inadequate notification and consultation process; iii) uncertain time duration for safeguard measures; iv) unclear definition of serious injury; and

[32] The procedural requirements of the Agreement on Safeguards are discussed in Part IV *infra*.

[33] "Substantial equivalence" involves difficult practical problems in implementation. The subject is further discussed in Part IV:G below.

v) violation of the MFN principle in the application of safeguard-type measures (gray-area measures).[34]

Attempts were made to provide more precise and clear disciplines on safeguards. Safeguards became a major issue in the Tokyo Round, which started in 1973, and serious efforts were made to produce a uniform code on safeguards. However, unlike in the areas of dumping and subsidies, the negotiations proved to be unsuccessful because participants could not agree on a number of important issues.[35] Efforts to develop an improved safeguard mechanism continued after the Tokyo Round. The *GATT Work Programme*, agreed upon in 1979, recognized the ongoing negotiations on safeguards as being an essential element in the future work of the GATT.[36] The subsequent Ministerial Declaration adopted in November 1982 also recommended the adoption of a comprehensive safeguard mechanism. It declared that the contracting parties should undertake, individually and jointly, to bring into effect expeditiously a comprehensive understanding on safeguards to be based on the principles of the General Agreement.[37]

The need for a new agreement was also emphasized by the proliferation of "gray-area measures" in the 1980s. The term refers to voluntary restrictions on imports agreed upon between exporting and importing countries. Those measures include orderly marketing arrangements ("OMAs"), voluntary restraint agreements ("VRAs"), voluntary export restraints ("VERs")[38], and other similar bilateral agreements restraining exports. Countries negotiated gray-area measures outside the GATT disciplines, although those measures were deemed inconsistent with GATT Articles XI and XXIII.

Gray-area measures proliferated in the 1980s as a popular means of restricting imports because, unlike safeguards, those measures required neither proof of serious injury to the domestic industry nor provision of compensation.[39] Also, they were much less susceptible to legal contest in the GATT, since neither the party accepting the restrictions nor a third party was likely to challenge them.[40] In early 1991, 284 gray-area measures were known to be in force whereas only twenty-four safeguard measures under Article XIX were in effect.[41]

[34] GATT Document MTN.GNG/NG9/W/1 (April 8, 1987).

[35] GATT, *The Tokyo Round of Multilateral Trade Negotiations: Report by the Director-General of GATT*, April 1979, at 90–95 and the *Supplementary Report of January 1980*, at 14–17. The key areas of disagreement included: selectivity (i.e., application on a non-MFN basis), surveillance, dispute settlement, the definition of "serious injury" and the need for structural adjustment.

[36] GATT Document L/4884/Add.1/Annex VI, adopted on November 28, 1979, 26S/219, 220, ¶ 2.

[37] GATT Document L/5424, Ministerial Declaration adopted on November 29, 1982, 29S/9, 12, ¶ 7(vi)

[38] The terms, "OMA", "VRA" and "VER" tend to be used imprecisely. Under U.S. foreign trade law, an "orderly marketing arrangement" is a formal bilateral trade agreement by the U.S. government restraining trade, concluded under the provisions of sections 201–203 of the Trade Act of 1974. Under a VRA the exporting country applies the restraints, whereas under an OMA the importing country does so.

[39] An example of a gray-area measure was Japan's VRA on its exports of automobiles to the United States in the early 1980s. After the U.S. industry lost a safeguards case (*Certain Motor Vehicles and Certain Chassis and Bodies Therefor,* USITC Inv. No. TA-201-44, 45 Fed. Reg. 85194 (1980)), there was significant pressure in Congress for quota legislation against imports from Japan. Japan gave in to this pressure by voluntarily restricting its exports. *See* Kevin C. Kennedy, *Voluntary Restraint Agreements: A Threat to Representative Democracy*, 11 HASTINGS INT'L & COMP. L. REV. 34–35 (1987).

[40] However, the restraints could be challenged by a third country to which exports had been diverted as a result of the gray-area measures. In the late 1980s, the European Community brought a case challenging the U.S.-Japan semiconductor agreement before the GATT panel. See *Japan—Trade in Semi-Conductors*, BISD 35S/116, (Report of the Panel adopted on May 4 1988). The GATT Panel found that the Japanese export monitoring system, as agreed with the United States was inconsistent with GATT Article XI.

[41] The GATT URUGUAY ROUND: A NEGOTIATING HISTORY (1986–1992), 1728–1729 (Terence P. Stewart ed. 1993).

The proliferation of gray-area measures was inconsistent with the principal objective of the GATT, which was to prevent governments from arbitrarily interfering with exports and imports. The fairness of gray-area measures was also questionable because they could be imposed by an importing country against an exporting country whose economy might depend largely on the market of the one demanding the agreement, and which may have therefore had little option but to agree to the measure. The duration of gray-area measures was often uncertain, allowing their trade-distorting effect to continue without proper check. Those measures therefore also needed to be addressed in the negotiations and brought under the new safeguard disciplines.

Multilateral negotiations on safeguards resumed in the Uruguay Round (1986–1994). The Ministerial Declaration launching the Round set the directions for the negotiations. It stated that an agreement on safeguards i) should be based on the basic principles of the GATT; ii) should contain, *inter alia*, the following elements: transparency, objective criteria for action including the concept of serious injury or threat thereof, temporary nature, degressivity (i.e. the measure should be progressively relaxed during its lifetime) and structural adjustment, compensation and retaliation, notification, consultation, multilateral surveillance and dispute settlement; and iii) should clarify and reinforce the disciplines of the General Agreement and should apply to all contracting parties.[42]

The major negotiating issues were as follows:

A. Selectivity

The developing countries, including India and the Pacific Rim countries (in particular, Australia, Hong Kong, Korea, New Zealand, Japan and Singapore), were concerned that their exports would be the target of selective application of protective measures, and therefore strongly supported the adoption of the MFN principle in the application of safeguard measures.[43] The EC on the other hand, wished to preserve a degree of flexibility in the selective application of safeguard measures.[44] The United States also supported the principle of selectivity.[45] Proponents of the selective application of safeguard measures argued that it would be reasonable to restrain those imports that hurt domestic industries the most and to leave the others unaffected by the safeguard measure.

Resolution of this issue took several years. In the final compromise, the MFN principle was adopted for the application of a safeguard measure, thereby prohibiting the application of safeguards on a selective basis. However, the need for selectivity was also recognized to a limited extent; while quotas are to be allocated to supplying Members based on their share of imports during a "previous representative period", account may be taken of "any special factors which may have affected or may be affecting the trade in the product."[46]

[45] *Id.,* at 1768–1769.

[46] SA, Article 5.2(a). This phrase is designed to ensure that countries which contributed to the problem significantly by increasing their exports rapidly in recent years are not rewarded by receiving a large quota share. *See* Stewart, *supra* note 41, at 1795–1796.

B. Gray-Area Measures

The United States submitted a position paper on safeguards to the negotiating group in 1987 titled, "*US Thoughts on Safeguards*."[47] In the paper, the United States provided five options, ranging from the total elimination of gray-area measures to the legitimization of the measures, subject to more clear and precise discipline. Developing countries generally favored elimination of the measures,[48] and by November 1989, most countries supported having gray-area measures phased out or brought into conformity with the agreement.[49]

C. Compensation and Retaliation

Under Article XIX, compensation and retaliation were designed to protect the interests of countries adversely affected by safeguard measures. The drafters of the GATT believed that the provision for compensation and retaliation would be a strong check against the abuse of safeguard measures. During the Uruguay Round negotiations most countries supported preservation of the right to compensation and retaliation in some form. On the other hand, Countries had resorted to gray-area measures rather than safeguards to avoid the requirement of compensation as well as the possibility of retaliation under Article XIX.

In order to encourage Members to comply with the rules on safeguards rather than apply gray area measures, it was agreed that the right to retaliation would be suspended for the first three years of the application of a safeguard, provided that the measure conforms to the agreement, and that the measure is based on an absolute, rather than relative, increase in imports.[50] This compromise meant that countries would have an incentive to channel their import restrictions into safeguards and to apply measures for a shorter period of time because then they would not be forced to compensate or be subject to retaliation.[51]

D. Structural Adjustment

If safeguard measures are to achieve the goal of remedying or preventing serious injury to a domestic industry, they should facilitate structural adjustment of that domestic industry. Some countries therefore felt that the implementation of a structural adjustment plan by the industry seeking relief should be required as a condition of relief. Others, including the United States and Japan, opposed the inclusion of a structural adjustment requirement in the Agreement.[52]

A compromise was reached under which the text would note that the purpose of safeguard measures was to facilitate adjustment but there would be no specific requirement of structural adjustment for an application of a safeguard measure. On the other hand,

[51] In this connection it is interesting to note that the safeguards imposed by the United States in 2002 against steel imports have a duration of three-year plus one day. Proclamation 7529 of March 5, 2002—*To Facilitate Positive Adjustment to Competition from Imports of Certain Steel Product;* Memorandum of March 5, 2002—*Action Under Section 203 of the Trade Act of 1974 Concerning Certain Steel Products by the President of the United States*, 67 Fed. Reg. 10551, 10593 (Mar. 7, 2002).
[52] Stewart, *supra* note 41, at 1774–1775.

evidence that the structural adjustment was taking place would be required for extension of the measure beyond the initial term of up to four years.[53]

E. Special Rules for Developing Countries

The Uruguay Round participants were generally prepared to accommodate the development needs of the developing countries. Proposals were made in support of granting favorable treatment to developing countries, including a longer period for the application of safeguard measures and a lower injury standard.[54] The developed countries were willing to offer some degree of special treatment, although they were reluctant to relax the general conditions for the application of safeguards (e.g. lowering the injury criteria) for the benefit of developing countries.

The negotiators agreed that safeguard measures for products originating from a developing country should not be applied where both the market share taken by the product from that developing country and the aggregate market share of such product from all developing countries were below specified levels. It was also agreed that developing countries could apply a safeguard measure for a longer period of time, and could also apply a measure to a product that had previously been subject to a safeguard measure after a shorter waiting period than that applicable to developed countries. However, a proposal to exempt the least developed countries from the application of safeguard measures was not adopted.

F. Procedural Issues

The United States emphasized the need for more precise and transparent procedures for the application of safeguards, including prior notification and monitoring of import relief actions. It also stressed that safeguard measures should be transparent, temporary, degressive, and subject to review and termination when no longer necessary.[55]

As discussed above, the lack of precise procedural requirements under Article XIX created ambiguities in the application of safeguard measures and created significant room for abuse. Therefore, other countries generally agreed on the need for transparency and for more precise procedural requirements to achieve such transparency. The result was the adoption of elaborate procedural requirements on the conduct of investigations, including the need for midterm reviews, detailed notification requirements, a consultation process and a monitoring system to ensure that safeguard measures were being properly applied. These procedural requirements are discussed in detail in the next Part.

IV. WTO Agreement on Safeguards

The Agreement on Safeguards, an important achievement of the Uruguay Round,[56] is intended to provide clear and precise substantive and procedural requirements for the

[53] GATT Secretariat, *Draft Final Act Embodying the Results of the Uruguay Round of Multilateral Trade Negotiations,* MTN.TNC/W/FA (Dec. 20, 1991).

[54] Stewart, *supra* note 41, at 1775.

[55] Stewart, *supra* note 41, at 1764–1765.

[56] The Agreement has been described as "a substantial achievement, and indeed a heroic statement of principle." JOHN H. JACKSON, THE WORLD TRADING SYSTEM 210 (1997). *See*, Y.S. Lee and Jai. S. Mah, *Reflections on the Agreement on Safeguards in the WTO*, 21 WORLD COMPETITION 25–31 (1998), for a discussion of the general characteristics of this Agreement

application of safeguards. Although the SA was built on the underlying concept of safeguards in Article XIX, it substantially refines and expands upon the provisions of Article XIX. The refinements include the specification of injury factors to be considered in determining serious injury and the temporary suspension of the right to retaliation under certain conditions. The new text also specifies the maximum period of a safeguard measure, sets forth detailed requirements for the process of investigation, and provides for a midterm review. Gray-area measures are now prohibited under the new Agreement.

Although the Agreement on Safeguards is regarded as one of the major achievements of the Uruguay Round, certain provisions of the Agreement remain ambiguous. The remainder of this Part reviews each provision of the Agreement with an analysis of relevant panel cases. The next Part provides a discussion of outstanding issues in the application of safeguards.

Article 1—General Provision

Article 1 of the Agreement states that the Agreement establishes rules for the application of safeguard measures "which shall be understood to mean those measures provided for in Article XIX of GATT 1994".

Article 2 –Conditions

Article 2 of the Safeguards Agreement provides that:

> a Member may apply a safeguard measure to a product only if that Member has determined that such product is being imported into its territory in such increased quantities, absolute or relative to domestic production, and under such conditions as to cause or threaten to cause serious injury to the domestic industry that produces like or directly competitive products.

The SA has adopted three major conditions contained in paragraph 1(a) of Article XIX: (i) an increase in imports, (ii) causing or threatening to cause (iii) serious injury or threat thereof to the domestic industry that produces a like or directly competitive product. Article 2.1 makes no reference to "unforeseen developments."

1. Increase in Imports

Article 2.1 expressly stipulates that a relative increase in imports compared with domestic production, as well as an absolute increase, is sufficient to meet the increased imports standard. Increased imports are also one of the injury factors enumerated in Article 4.2(a) of the Agreement as discussed below. Under a recent Appellate Body ruling, the increase in imports must have been "recent enough, sudden enough, sharp enough and significant enough" to qualify under the requirements of Article 2.1 and 4.2(a).[57] The Appellate Body based its conclusion on its reading of the relevant phrase in Article 2.1, *"such product is <u>being</u> imported"* (emphasis added), which it interpreted as meaning current and continuing imports in increased quantities. This interpretation was based on the emergency nature of safeguard measures.[58]

This decision has important implications for national authorities seeking to apply a safeguard measure. They will not be able to rely merely on an increase in imports unless the increase is sufficient, radical and recent. It means that a mere comparison of the

[57] *Argentina—Footwear*, *supra* note 17, Appellate Body Report, ¶ 131.
[58] *Id.*, ¶¶ 131 and 132.

beginning and end points of the period of investigation would not be sufficient, because an "increasing trend" identified by simply comparing those points would not necessarily mean the requisite increase in imports, required by the Appellate Body cited above. As explained below, the national authorities would not be able to rely on a sporadic increase in imports without regard to overall import trends in the investigation period. Temporary fluctuations in imports do not necessarily determine the existence of the increase in imports required under Articles 2.1 and 4.2 (a).[59]

The national authorities' obligation to conduct a reasoned analysis of import trends has been emphasized in two cases, *Chile—Agricultural Products* and *Argentina—Preserved Peaches.* The Panel in *Agricultural Products* did not approve of the national authority's finding of an increase in imports where the amount of imports had fallen significantly in the period immediately preceding the investigation.[60] The Panel found that even if a significant import increase is observed between certain time periods, the national authorities are still required to provide a reasoned analysis regarding the significance of the import volumes where they were lower than import volumes in a preceding time period.[61]

The importance of the qualitative evaluation of import trends was again emphasized in *Argentina—Preserved Peaches*. Following the Appellate Body rulings in *Argentina—Footwear*, the Panel found that identification of a mathematical increase in imports is insufficient. In other words, the national investigating authorities must establish an increase in imports through *qualitative* evaluation of overall import trends.[62] The Panel did not believe that consideration of an increase in imports without regard to the entire import trends was sufficient where imports had increased toward the end of the investigation period but had decreased substantially up to an earlier point in the period.[63] According to the Panel, the import increase should have been considered in the context of the previous substantial decline of imports.[64]

The requirement that there be an increase in imports was also an important issue in the panel decision in *United States—Steel Products.* Following the previous Appellate Body decision in *Argentina—Footwear*, the Panel considered that the import increase must indicate "a certain degree of recentness, suddenness, sharpness and significance".[65] Nonetheless, the Panel, also considered that the increase in imports need not continue up to the period immediately preceding the investigating authority's determination, nor up to the very end of the period of investigation, although the increase still had to be "recent".[66] The Panel considered that the question as to whether a decrease in imports at the end of the period of investigation would prevent a finding of increased imports

[59] The *Wheat Gluten* panel held that a decrease in imports early in the period of investigation, followed by a sharp and recent increase in imports, would not be necessarily inconsistent with the threshold requirement of an increase in imports. *United States—Wheat Gluten*, *supra* note 17, Panel Report, ¶ 8.33. In *United States—Line Pipe,* the Panel did not believe that the increase in imports had to continue up to the very end of the period of the investigation. *United States—Line Pipe*, *supra* note 17, Panel Report, ¶ 7.210. This decision has been criticized as the decrease in imports might have been the beginning of a downturn in which case application of a safeguard might not be necessary. *See* Lee, *supra* note 1, at 124–125. The Appellate Body did not rule on this issue as it was not appealed.

[60] *Chile—Agricultural Products*, *supra* note 17, Panel Report, ¶ 7.155.

[66] *United States—Steel Products, supra* note 17, Panel Report, ¶ 10.162.

would depend on the duration and the degree of the decrease at the end of the relevant period of investigation, as well as the nature of the increase that took place beforehand reflected by, for instance, its sharpness and the extent.[67] The Panel also found that the national investigating authority is not obligated to consider data made available *after* its determination of increased imports.[68]

2. Like or Directly Competitive Products

Under Article 2.1 of the Agreement, a safeguard measure may only be applied where an increase in imports causes or threatens to cause serious injury to the domestic industry that produces "like or directly competitive products". The identification of the "like or directly competitive products" is therefore a critical part of the injury assessment. The Agreement itself does not provide a standard for defining "like or directly competitive" products.

The important elements in defining the "like" products are their physical and functional similarities to the imports in question. In *United States—Lamb Meat,* the Panel found that "like" products means "like" end products,[69] and held that the feeders and growers of live lambs were not part of the relevant domestic industry since imported lamb meat and live lambs were not like products. The degree of integration in the production process involving the two products in question was found to be irrelevant.

The concept of a "directly competitive product", based on commercial substitutability, expands the range of products that can be included in the domestic industry.[70] The question whether live lambs could be "directly competitive" with lamb meat was not considered, as the U.S. International Trade Commission ("USITC") had not discussed this issue in its decision recommending safeguard action.

The inclusion of "directly competitive products" allows certain physically and functionally dissimilar products to be included in the category of domestic products, provided that there is sufficient market competition between them. Thus, in the previous application of a safeguard measure against imports of certain skimmed milk powder products ("SMPP"), the national authority included raw milk as a directly competitive domestic product despite physical dissimilarities between raw milk and SMPP. The significant overlap between the end use of raw milk and that of SMPP was the reason for its inclusion, and the decision to include raw milk was not challenged in the subsequent panel proceedings.[71]

It has been suggested that a comparison and contrast of the sizes, designs, inputs, add-on components, direct and derivative uses, wholesale and retail costs, manufacturing methodologies, and a range of other features of the two products, would be permitted in the determination of like or directly competitive products.[72] Since it is the purpose of the application of a safeguard measure to protect a domestic industry, the key is to identify the domestic products that are being displaced by the imports in question. Therefore, the most important factor is the existence of market competition between domestic products and imports. Relevant economic indicators, such as cross-elasticity of demand[73],

[67] *Id.,* ¶ 10.163.
[68] *Id.,* ¶ 10.173.
[69] *United States—Lamb Meat*, *supra* note 17, Panel Report, ¶ 7.109.
[70] *Id.,* ¶ 7.177.
[71] *Korea—Dairy Products*, *supra* note 17, Panel Report.
[72] BHALA AND KENNEDY, *supra* note 24, at 911.
[73] The cross-elasticity of demand is the degree of the change of quantity in one good occurring as a result of a unit change of the price in the other good. If it is positive, substitutability between those two products exists.

would be useful in assessing market competition between domestic products and imports.[74]

3. MFN Application of Safeguards

Article 2.2 requires Members to apply safeguard measures on a non-discriminatory basis. In *United States—Wheat Gluten,* the exclusion of Canadian exports from the application of a U.S. safeguard measure by reason of the North American Free Trade Agreement ("NAFTA") was found inconsistent with this requirement.[75]

4. Unforeseen Developments

As noted above, the Article XIX requirement that the increase in imports result from "unforeseen developments" is not repeated in the Safeguards Agreement, and it would be reasonable to assume that the negotiators of the Agreement had decided to drop this condition.[76] However, a number of decisions of the Appellate Body[77] have held that Article XIX and the Agreement must be read together, and that a Member is therefore still obliged to demonstrate that the increase in imports causing the injury has taken place "as a result of unforeseen developments".

A recent Panel also held that "it must be clear from the published report that the investigating authorities examined the existence of unforeseen developments and came to a reasoned conclusion in this regard."[78] The Panel in *Argentina—Preserved Peaches* considered that Article XIX:1(a) requires, as a minimum, some discussion by the competent authorities as to why they were unforeseen at the time the relevant obligation was negotiated, and why conditions in the second clause of Article XIX:1(a) occurred "as a result" of circumstances in the first clause.[79] The Panel in *United States—Steel Products* also emphasized the importance of the logical connection between the unforeseen

[74] An interesting question is raised where imports not only compete with certain domestic end products but also adversely affect those domestic producers who supply parts to those end products. Should they be also included in the domestic industry? The degree of integration in the production process involving two products was found to be irrelevant in the determination of "like" products in *United States—Lamb Meat*. But, how should it be determined in the consideration of "directly competitive products"? For instance, numerous parts producers are involved in the production of an automobile. They would undoubtedly be adversely affected by a decline in domestic automobile sales caused by increased imports. Should they therefore be included in the ambit of domestic producers? The answer would appear to be "no" because the parts would not be "directly" competitive with the finished automobiles.

[75] *United States—Wheat Gluten*, *supra* note 17, Panel Report, ¶ 8.182. Canadian exports had been excluded from the measure based on a provision in the NAFTA implementing legislation that only permits safeguard measures to be applied to imports from a NAFTA member when there is a finding that those imports account for a substantial share of total imports and contribute importantly to serious injury or threat thereof. The Panel held that the exclusion of Canadian exports from the application of the safeguard measure when the injury determination had been based on imports from all sources, including Canada, was inconsistent with Article 2.1. The Panel did not decide whether or not, as a general principle, a member of a customs union can exclude imports from other members of that particular customs union from the application of a safeguard measure. The national authority's obligation to match the scope of investigation and that of safeguard application is also called the requirement of *parallelism* and also became an issue in *United States—Line Pipe, supra* note 17, and *United States—Steel Products, id*. For more discussion of this issue, *see* Y.S. Lee, SAFEGUARD MEASURES IN WORLD TRADE, *supra* note 1, chapter 9.1.

[76] *See* the relevant discussion in Part IV:A infra.

[77] *Korea—Dairy Products*, *supra* note 17, Appellate Body Report, ¶ 90, *Argentina—Footwear*, *supra* note 17, Appellate Body Report, ¶ 97.

[78] *United States—Line Pipe*, *supra* note 17, Panel Report, ¶¶ 7.296–7.297.

[79] *Argentina—Preserved Peaches*, *supra* note 17, Panel Report, ¶¶ 7.23 –7.28.

developments and the increase in imports.[80] It also considered that the national authorities must support their conclusion with specific data that the unforeseen developments led to the increase in imports causing or threatening to cause serious injury to the domestic industry.[81] In addition, it found that the national authorities are obligated to demonstrate the "unforeseen developments" with respect to each product subject to the safeguard.[82] The Appellate Body affirmed these Panel findings.[83] This issue is discussed further in Part IV:*A* of this chapter.

5. Other Provisions in Article 2

A recent Panel found that the phrase "under such conditions" in Article 2.1 does not require Members to perform a price analysis of the imported products to examine the conditions under which they were imported.[84]

Article 3—Investigations

Article 3 regulates the conduct of investigations, and is designed to ensure that the process is transparent and that the parties receive due process.[85] Article 3.1 requires competent national authorities to issue public notice of the investigation, to hold a public hearing, and to publish a report setting out its "findings and reasoned conclusions reached on all pertinent issues of fact and law". Article 3.1 also stipulates that all interested parties should be given the opportunity to present their views and to respond to the presentations of other parties

1. Inclusion of Reasoning in Reports

Recent Panel decisions have held that that the competent authorities must provide sufficient reasoning for their conclusions, and that those conclusions must be based on sufficient data.[86] Furthermore, all the reasoning and data must be included in the final investigation report upon which the authority bases its decision.[87] In *Korea—Dairy Products* the Panel held that Korea's investigation was inadequate because, *inter alia,* it failed to include all the necessary reasoning for its finding of serious injury in its final investigation report.[88] Korea had argued that its published mid-investigation report included an analysis of an injury factor that was not subsequently repeated in its final report and that provided additional explanations for its conclusion in the course of the panel proceedings. The Panel held that the analysis and explanations were inadequate because they were not included in the final report.[89]

[80] *United States—Steel Products*, *supra* note 17, Panel Report, ¶ 10.104.
[81] *Id.* ¶¶ 10.121–10.123.
[82] *Id.,* ¶¶ 10.124–10.126.
[83] *United States—Steel Products, supra* note 17, ¶¶ 316, 326, 329.
[84] *Korea—Dairy Products*,*supra* note 17, Panel Report, ¶¶ 7.51–7.52, *United States—Wheat Gluten*, *supra* note 17, Panel Report, ¶ 8.108.
[85] As noted above, GATT Article XIX contains no provisions requiring that investigations take place or regulating their conduct.
[86] The Panel in *United States—Wheat Gluten* indicated that it would not examine whether the national authorities should have considered more data where such data were not before the authorities for investigation. *United States—Wheat Gluten, supra* note 17, Panel Report, ¶¶ 8.4–8.6.
[87] *Korea—Dairy Products*, *supra* note 17, Panel Report, ¶ 7.58.
[88] *Id.*, ¶¶ 7.58–7.59.
[89] *Id.*, ¶ 7.69.

The Panel in *United States—Steel Products* considered the acceptability of a supplemental report issued by the national authorities after the original report which addressed the issue of "unforeseen developments". The complainants argued that the supplemental report should be disregarded as it was not part of the original USITC report and was an *ex post* attempt to demonstrate the existence of "unforeseen developments."[90] The Panel considered that the national authority's report may be produced in parts as long as they form a coherent and integrated explanation satisfying the requirements of Article XIX and the Agreement on Safeguards. It took the supplemental report into consideration.[91]

2. Selective Analysis of Domestic Industry

The *Korean Dairy Products* Panel held that Members may analyze distinct segments of the domestic industry rather than the entire industry. However, unless all segments are considered, an explanation must be provided of how the selected segments are representative of the entire industry.[92] Similarly, if all producers are not examined, the authority must explain how the selected producers provide an objective picture of the domestic industry.[93]

3. Confidential Information

Article 3.2 protects information submitted to the national authorities on a confidential basis. An assessment of injury to the domestic industry requires detailed information from the relevant industry, much of which may be sensitive and liable to cause harm to members of the industry if it is disclosed to their competitors.[94] Unless the confidentiality of such information can be guaranteed, relevant parties will be reluctant to make it available to the authorities.

In *United States—Wheat Gluten,* certain information that was used in the USITC's safeguard investigation had been redacted from the public version of the USITC Report. The EC complained that the USITC's findings were thereby rendered unreviewable and unverifiable.[95] The Panel upheld the USITC's decision not to disclose confidential information, finding that the provisions of Article 3.2 gave national authorities broad discretion to protect information that is deemed confidential.[96]

A related problem in *United States—Wheat Gluten* involved the Panel's request of confidential information and the subsequent failure of the United States to provide such information. The Panel noted that the request for the information and the subsequent failure by the United States to submit the information had presented a serious systematic problem "as to the relationship between, on the one hand, the confidentiality obligations under Article 3.2 of a Member's investigating authorities with respect to confidential information obtained in the course of a domestic safeguards investigation and, on the other hand, the duties of Members when faced with a panel request for such confidential information under Article 13 DSU."[97]

[96] *Id.*, ¶ 8.20.
[97] *Id.*, ¶ 8.11.

Article 4—Serious Injury

1. Determination of Serious Injury

Article 4 is one of the key provisions in the SA in that it specifies the conditions for the determination of serious injury, one of the core elements for the application of a safeguard measure. Serious injury, which was not defined in Article XIX, is now defined as "a significant overall impairment in the position of a domestic industry" (Article 4.1).[98] Article 4.1 also defines "threat of serious injury" as being "serious injury that is clearly imminent."[99] Recognizing that a determination of a threat of injury can be somewhat speculative, the Article requires that "[a] determination of the existence of a threat of serious injury shall be based on facts and not merely on allegation, conjecture or remote possibility."[100] Finally, Article 4.1 defines "domestic industry" as:

> "the producers as a whole, of the like or directly competitive products operating within the territory of a Member, or those whose collective output of the like or directly competitive products constitute a major proportion of the total domestic production of those products."

2. Factors to be Considered.

One of the notable features of the Agreement is that it clearly spells out the factors that must be considered in connection with the determination of serious injury or threat. Article 4.2(a) provides that

> "In the investigation to determine whether increased imports have caused or are threatening to cause serious injury to domestic industry, the authorities are now required to evaluate all relevant factors of an objective and quantifiable nature having a bearing on the situation of that industry, in particular, *the rate and amount of the increase in imports of the product concerned in absolute and relative terms, the share and amount of the increase in imports of the product concerned in absolute and relative terms, the share of the domestic market taken by increased imports, changes in the level of sales, production, productivity, capacity utilization, profits and losses*, and *employment*." (Emphasis added.)

By specifying the injury factors that must be considered, the Article attempts to establish objective criteria for the assessment of injury. Recent WTO panels have provided guidance with respect to the interpretation of this important provision. First, the examination of *all* eight factors is mandatory.[101] In *Korea—Dairy Products,* the Panel did

[98] The Appellate Body has held that the threshold for "serious injury" is much higher than that for "material injury", the standard used for antidumping and countervailing duty case (see the Agreement on Application of Article VI (antidumping) and the Agreement on Subsidies and Countervailing Measures). *United States—Lamb Meat*, *supra* note 17, Appellate Body Report, ¶ 124

[99] According to the Appellate Body, the phrase "clearly imminent" indicates that the domestic industry is on the brink of suffering serious injury. *United States—Lamb Meat*, *supra* note 17, Appellate Body Report, ¶ 125.

[100] Article 4.1(b) of the Agreement. A panel decision set forth the guidelines for the determination of a threat of serious injury as follows:

> (i) that a threat determination needs to be based on an analysis which takes objective and verifiable data from the recent past (i.e. the latter part of an investigation period) as a starting-point so as to avoid basing a determination on allegation, conjecture or remote possibility; (ii) that factual determination from the recent past complemented by fact-based projections concerning developments in the industry's condition, and concerning imports, in the imminent future needs to be taken into account in order to ensure an analysis of whether a significant overall impairment of the relevant industry's position is imminent in the near future; (iii) that the analysis needs to determine whether injury of a serious degree will actually occur in the near future unless safeguard action is taken.

See United States—Lamb Meat, *supra* note 17, Panel Report, ¶ 7.129.

[101] *Korea—Dairy Products*, *supra* note 17, Panel Report, ¶ 7.55.

not believe that all eight factors would be important in assessing injury to the domestic industry in every case, but nevertheless required a Member proposing to apply a safeguard measure to consider each and every factor listed under Article 4.2(a) before dismissing some of them as not having a bearing on the situation of that industry.[102] This position was also affirmed in the Panel and Appellate Body decisions in *Argentina—Footwear*.[103]

Every factor need not point to serious injury or its threat, but an overall analysis of all the relevant factors should indicate an actual or threatened significant overall impairment of the domestic industry.[104] According to a recent Panel decision, "it is essential that *current* serious injury be found to exist, up to and including the very end of the period of investigation."[105] Members may assign different weights to each factor depending on the circumstances[106], but they must provide a reasonable explanation of how their analysis has led to their conclusion.[107]

A recent Appellate Body decision held that the national authorities should not limit their examination to the eight specified injury factors. Instead, they must analyze all the factors that they consider relevant, and they have a duty to actively seek out pertinent information rather than simply depend on the evidence presented by the parties.[108]

3. Threat of Injury.

A recent Appellate Body decision held that where a safeguard measure is applied on the basis of a threat of serious injury, the national authorities' examination should focus on the most recent data to determine the imminence of the injury.[109] The Appellate Body, however, also emphasized that the recent data should be considered in the context of a longer trend (for example, a decline in domestic industry performance towards the end of the investigation period may be part of a normal economic cycle).[110]

4. Causation

Article 4 also requires the establishment of a causal link between the increased imports and serious injury or threat thereof. Article 4.2(b) provides that:

> "The determination referred to in subparagraph (a) shall not be made unless this investigation demonstrates, *on the basis of objective evidence*, the existence of the causal link between increased imports of the product concerned and serious injury or threat thereof. When factors other than increased imports are causing injury to the domestic industry at the same time, such injury shall not be attributed to increased imports." (Emphasis added.)

[102] *Id.*

[103] *Argentina—Footwear*, *supra* note 17, Panel Report, ¶ 8.206 and Appellate Body Report, ¶ 136.

[104] *Argentina—Footwear*, *supra* note 17, Appellate Body Report, ¶¶ 138 and 139.

[105] *United States—Wheat Gluten*, *supra* note 17, Panel Report, ¶ 8.81.

[106] *Korea—Dairy Products*, *supra* note 17, Panel Report, ¶ 7.59.

[107] *Id.,* ¶ 7.55.

[108] *United States—Wheat Gluten*, *supra* note 17, Appellate Body Report, ¶ 53.

[109] In *United States—Lamb Meat*, both the Panel and the Appellate Body noted that the Agreement on Safeguards does not provide any methodology to be followed for the determination of the threat of serious injury. *United States—Lamb Meat*, *supra* note 17, Panel Report, ¶ 7.127 and Appellate Body Report, ¶ 137.

[110] *United States—Lamb Meat*, *supra* note 17, Appellate Body Report, ¶ 138. In line with this position, the Panel in *Preserved Peaches* also warned that "if the most recent data is evaluated in isolation, the resulting picture of the domestic industry may be quite misleading." *Argentina—Preserved Peaches*, *supra* note 17, Panel Report, ¶ 7.106.

The Panel in *Argentina—Footwear* prescribed a three-pronged test in the determination of causation.[111] The first prong of the test is whether an upward trend in imports coincides with downward trends in the injury factors, and if not, whether a reasoned explanation is provided as to why the data nevertheless show causation. The second is whether the conditions of competition in the domestic market between imported and domestic products demonstrate, on the basis of objective evidence, a causal link between the imports and any injury. The third prong is whether other relevant factors have been analyzed and whether it is established that any injury caused by factors other than the imports has not been attributed to the imports.[112]

Establishing a causal link is often a complicated task and requires both economic and legal analyses.[113] Under the frame of the three-prong test above, the first prong can be tested by a comparison of relevant import data and data relating to domestic production. In *United States—Wheat Gluten,* the Panel held that a general coincidence of an upward trend in imports and a negative trend in injury factors over the period of investigation would be sufficient to meet the first test, and that precise coincidence in every injury factor was not required.[114]

The mere coincidence of an upward trend in imports and a negative trend in injury factors would not alone be sufficient evidence for a causal link because such coincidence might be only the temporal overlapping of two unrelated events. Competition between the imports and domestic products must exist in the domestic market to establish that the injury is attributable to the increase in imports, as domestic products are being displaced by the imports. To determine the degree of competition existing between the imports and domestic products, the relevant economic measurements such as the cross-elasticity of demand can be employed.

The third prong requires the examination of other possible causes. The question has been raised whether a causal link is established where factors other than the increase in imports simultaneously contribute to the injury to the domestic industry.[115] The relevant provision of Article 4.2(b) states, "When factors other than increased imports are causing serious injury to the domestic industry at the same time, such injury *shall not be attributed to increased imports*" (emphasis added). The Panel in *United States—Wheat Gluten* found

[111] *Argentina—Footwear*, *supra* note 17, Panel Report, ¶ 8.229. The Appellate Body affirmed this test, and it was also followed by the Panel in *United States—Wheat Gluten*, *supra* note 17, Panel Report, ¶ 8.91, and in *United States—Steel Products, supra* note 17, Panel Report, ¶ 10.285.

[112] In applying this three-prong test, the Panel in *United States—Steel Products* concluded that that the causation requirement had not been met with respect to all product categories except one. The Panel found that the USITC had failed to establish the coincidence between the increasing trends in imports and decreasing trends in the injury factors, and that it had also failed to provide any other compelling argument as to why the causal link nevertheless existed. In the view of the Panel, the USITC's analysis of competition between imports and domestic products was inadequate, and it also failed to properly separate and assess the nature and extent of the injurious effects of factors other than increased imports by improperly dismissing a number of factors (i.e., declining domestic demand, domestic capacity increases, intra-industry competition and legacy costs) in its non-attribution analysis, even though although it had acknowledged that those factors were causing injury to the industry. *United States—Steel Products, supra* note 17, Panel Report, ¶¶ 10.278-10.586. For the measure-by-measure analysis, *see id.,* ¶¶ 10.361–10.586.

[113] Econometric tests such as the "Granger causality test" are often employed to determine the economic impact of imports on the domestic industry. *See* Lee and Mah, *supra* note 56, at 29.

[114] *United States—Wheat Gluten*, *supra* note 17, Panel Report, ¶¶ 8.97–8.102.

[115] *See* the author's previous work, *Critical Issues in the Application of the WTO Rules on Safeguards—In the Light of the Recent Panel Reports and the Appellate Body Decisions,* 34 JOURNAL OF WORLD TRADE 140–142 (2000).

that the increase in imports needs not be the sole cause for the injury.[116] The Appellate Body agreed with this finding but disagreed on another aspect of the Panel ruling—that the increase in imports alone ("in and of itself") should have been sufficient to cause serious injury where other factors are also contributing to the injury.[117] The Appellate Body ruled that it is enough to establish a causal link if the increase in imports made a sufficiently clear contribution to the injury although the import increase by itself could have not caused the injury.[118] It should also be noted that according to the Appellate Body ruling in *United States—Lamb Meat*, an examination of the relative weight of different factors would not be sufficient to meet the non-attribution requirement under Article 4.2(b). It found that the injurious effects of the other contributing factors need to be separated from those of increased imports and examined.[119]

Article 5—Application of Safeguard Measures

1. Extent of Measures

Article 5.1 provides that "A Member shall apply safeguard measures only to the extent necessary to prevent or remedy serious injury and to facilitate adjustment." The extent of a safeguard measure is an important issue, since excessive measures would reduce imports by more than the amount necessary to remedy or prevent serious injury to the domestic industry, thereby unnecessarily restricting trade.

The question has been raised whether the provisions in Article 5.1 require Members to prove that the extent of the proposed measure is necessary to prevent or remedy injury and to facilitate adjustment. Although Members should endeavor to avoid excessive measures, such proof may well require a series of extensive and complicated economic analyses that would be both difficult and costly. Many economists also doubt the strength of such proof even if an economic test is somehow devised and conducted.

In *Korea—Dairy Products,* the Panel found that the first sentence of Article 5.1, quoted above, requires a Member to justify the extent of its safeguard measure.[120] However, although the Appellate Body acknowledged that Article 5.1 creates a general obligation on Members to apply a non-excessive measure, it also concluded that Members are not obliged to justify their measure unless the measure is a quantitative restriction and is below the average level of imports over the last three years, as prescribed in Article 5.1.[121] This Appellate Body decision gave significant relief to national authorities—those

[116] *United States—Wheat Gluten*, *supra* note 17, Panel Report, ¶ 8.138. This position was also followed by the Panel in *United States—Lamb Meat*, *supra* note 17, Panel Report, ¶ 7.239.

[117] The Panel in *United States—Lamb Meat* similarly found that the increase in imports should be sufficient to cause serious injury. *United States—Lamb Meat*, *supra* note 17, Panel Report, ¶ 7.241. The Appellate Body, citing its own decision in *United States—Wheat Gluten*, again held that the increase in imports need not have been sufficient alone to have caused the injury. *United States—Lamb Meat*, *supra* note 17, Appellate Body Report, ¶ 171.

[118] *United States—Wheat Gluten*, *supra* note 17, Appellate Body Report, ¶ 67. According to the Appellate Body, the last sentence of Article 4.2(b) (non-attribution requirement) requires national authorities to examine the existence of "a genuine and substantial relationship of cause and effect" between the increase in imports and the injury and distinguish injurious effects caused by the other factors from that by the increase in imports. *United States—Wheat Gluten*, *supra* note 17, Appellate Body Report, ¶ 69.

[119] *United States—Lamb Meat*, *supra* note 17, Appellate Body Report, ¶¶ 184–185.

[120] *Korea—Dairy Products*, *supra* note 17, Panel Report, ¶ 7.101.

[121] *Korea—Dairy Products*, *supra* note 17, Appellate Body Report, ¶ 99. The Appellate Body in a later case stated, "The Member imposing a safeguard measure must, in any event, meet several obligations under the Agreement on Safeguards. And, meeting those obligations should have the effect of clearly explaining and "justifying" the extent of the application of the measure." *United States—Line Pipe*, *supra* note 17, Appellate Body Report, ¶ 236.

of developing countries in particular—whose available expertise and resources would not allow them to conduct extensive economic analyses to prove the adequacy of their measure.

In *United States—Line Pipe,* the Appellate Body confirmed that Article 5.1 of the SA requires Members to apply safeguard measures only to the extent of such injury that is attributed to the increase in imports.[122] It is possible to address that portion of injury attributable to increased imports only after first separating and distinguishing the injurious effects of increased imports from those of the other factors under the requirement of Article 4.2(b). Therefore, the Appellate Body considered that by establishing a violation of Article 4.2(b), the complainant establishes a *prima facie* case that the safeguard measure is not limited to the permissible extent under Article 5.1.[123]

The Panel in *Chile—Agriculture Products* enunciated another test for compliance with the first sentence of Article 5.1. The Panel held that there must be a rational connection between the measure and the objective of preventing or remedying serious injury and facilitating adjustment. It found that there was no such connection in that case where the extent of the safeguard measure was determined by the lower threshold of the Price Band System of Chile, which was calculated on the basis of international prices and had no rational connection to the state of the domestic industry.[124]

2. Form of Measures

The Agreement does not prescribe any particular type of safeguard measure. The commonly used forms are quotas, tariff increases, or a combination of the two methods.

Article 5.1 places a minimum limit on the size of quotas, as follows:

> If a quantitative restriction is used, such a measure shall not reduce the quantity of imports below the level of a recent period which shall be the average of imports in the last three representative years for which statistics are available, unless clear justification is given that a different level is necessary to prevent or remedy serious injury.

The term "last three representative years for which statistics are available" is somewhat ambiguous.[125] Does it mean the last three years ending before the investigation or up to the time the decision to apply a safeguard measure is made? The importers may increase imports after the beginning of the investigation in anticipation of a possible safeguard. The term, "representative" is also imprecise. This ambiguity gives national authorities a fair amount of flexibility to choose a period that will yield the greatest increase in imports and therefore the smallest possible quota level.[126]

[122] *United States—Line Pipe*, *supra* note 17, Appellate Body Report, ¶ 260.

[123] Nonetheless, the Appellate Body did not hold that a violation of Article 4.2(b) implies an automatic violation of the first sentence of Article 5.1 of the SA. It stated, "For even if the USITC failed to separate and distinguish the injurious effects of the increased imports from the injurious effects of the other factors, it is still possible that the safeguard measure may have been applied in such a manner that it addressed only a portion of the identified injurious effects, namely, the portion that is equal to or less than the injurious effects of increased imports. *Id.* ¶ 261. The burden of the proof to rebut the presumption of violation seems to rest on the Member defending its measure.

[124] *Chile—Agricultural Products*, *supra* note 17, Panel Report, ¶¶ 7.183 and 7.184.

[125] In *Korea—Dairy Products*, a question was raised concerning the "three representative years" as a reference period for the determination of the quota amount. The Panel did not consider it necessary to address this issue because it had already found that Korea's measure was inconsistent with Article 5.1.

[126] Compare the greater precision of Article 6.8 of the Agreement on Textiles and Clothing, which provides that the level of a transitional safeguard measure "shall be fixed at a level not lower than the actual level of exports and imports from the Member concerned during the 12-month period terminating two months preceding the month in which the request for consultation was made."

3. Adjustment Plans

The question has also arisen whether Article 5.1 requires national authorities to consider adjustment plans proposed by the domestic industry in deciding whether to impose safeguard measures.[127] As discussed above, safeguards are designed to give temporary protection to domestic industries to enable them to adjust to import competition.[128] It would therefore be prudent to devise a proper adjustment plan to ensure that the safeguard measure would facilitate the adjustment. The Panel in *Korea—Dairy Products* considered this issue and concluded that Article 5.1 does not require the domestic industry to develop an adjustment plan as a condition of obtaining safeguard relief. It noted however that the examination of an adjustment plan would be "strong evidence that the authorities considered whether the measure was commensurate with the objectives of preventing or remedying serious injury and facilitating adjustment."[129]

4. Quota Allocation

Article 5.2 calls for most-favored nation treatment in the allocation of quotas to individual Members. It specifies that unless the Member applying the quotas can reach agreement on allocation with all other Members having a substantial interest in supplying the product in question[130], quotas are to be allocated based on the proportions supplied by those Members during a previous representative period. However, to avoid rewarding countries that may have caused or at least contributed to the problem by rapidly increasing their exports in recent years, Members may depart from this principle where there has been a disproportionate increase in imports from certain Members.[131]

Article 6—Provisional Safeguard Measures

A provisional safeguard measure may be applied following a preliminary determination of the existence of serious injury or threat thereof in critical circumstances where delay would cause damage that would be difficult to repair, for example in the case of perishable products. The concept of a provisional safeguard measure was adopted from Article XIX, but unlike its predecessor, Article 6 limits the form of a provisional safeguard measure to a tariff and also limits its application to a maximum period of two hundred days. Members have applied provisional measures, some of which were converted to definitive measures after the investigation required under Article 3.[132]

Article 7—Duration and Review of Safeguard Measures

Article 7.1 limits the initial period of a safeguard measure to four years. The measure can be extended once only if there is evidence that the industry is adjusting (Article 7.2).

[127] *Korea—Dairy Products*, *supra* note 17, Panel Report, ¶ 4.611.

[128] The Preamble of the Agreement also provides in relevant part, "*Recognizing the importance of structural adjustment* and the need to enhance rather than limit competition in international markets . . . " (Emphasis added.)

[129] *Korea—Dairy Products, supra* note 17, Panel Report, ¶ 7.108.

[130] The term "substantial interest" is not defined in the Safeguards Agreement. A ten per cent market share has been generally viewed as constituting a "substantial interest". *Analytical Index: Guide to GATT Law and Practice*, *supra* note 22, at 941, citing TAR/M/16, p.10.

[131] *See* discussion in Part III *supra.* Some have considered that the provision for this MFN deviation in quota allocation seems to presage a strategy for dealing with potential import surges from China. JEFFREY J. SCHOTT, THE URUGUAY ROUND, AN ASSESSMENT (1994), at 114.

[132] Ten provisional measures were taken between Oct 29, 2002 and Oct 20, 2003, three of which were converted to definitive safeguard measures. *See* Annex 2 of the Report (2003) of the Committee on Safeguards to the Council for Trade in Goods, G/L/651 (Oct. 24, 2003).

Extension of the measure requires a determination, pursuant to the procedures set forth in Articles 2, 3, 4, and 5, that continuation of the measure is necessary to prevent or remedy serious injury. The total period of application of a safeguard measure may not exceed eight years (Article 7.3).[133]

If the duration of a safeguard measure is over one year, the measure must be liberalized at regular intervals (Article 7.4). If the duration of the measure exceeds three years, the Member applying the measure shall review the situation not later than the mid-term of the measure and, if appropriate, withdraw the measure altogether or increase the pace of liberalization (Article 7.4).

A safeguard measure may not be applied to a product that was previously subject to a safeguard until it has been free of safeguards for at least as long as the previous safeguard measure was in effect, subject to a minimum of two years (Article 7.5).[134] However, a shorter period applies if the safeguard measure has been applied for 180 days or less (Article 7.6).

Article 8—Compensation or Retaliation

A Member proposing to apply a safeguard measure or seeking an extension of a safeguard measure must endeavor to maintain a substantially equivalent level of concessions (Article 8.1) by offering compensation to the exporting Members that will be affected by the measure.

The assessment of adequate compensation can be a difficult task. First, the estimated amount of the trade loss, which should be the basis for the compensation, can differ widely depending on the calculation methodology. For instance, as the result of an application of a safeguard measure, affected foreign exporters may find themselves virtually excluded from their major foreign market. They may also find it impossible to re-enter the foreign market subsequently after the expiration of the measure as a result of factors such as loss of sales network or change of business environment. In this case, the exporting country may want to obtain adequate compensation for the injury resulting from the weakened competitive position of their exporters that may continue even after the expiration of the measure, while the importing country would likely limit the extent of the exporters' trade loss only to that which had actually occurred during the application of the measure. Even in cases where parties agree on the duration which compensation should cover, they may well disagree on the actual calculation of trade loss.

The SA does not prescribe the form of compensation. The reference in Article 8 to the aim of maintaining a "substantially equivalent level of concessions" suggests a tariff reduction by the country imposing the safeguard measure on other items of interest to the exporting countries, and this is the usual form that compensation takes. No compensation has been offered since the beginning of the WTO, because of the political opposition that is likely to be generated by the domestic industries that will be affected by the tariff reductions and of the suspension of the retaliatory action under Article 8.3. Payment of a monetary sum, which would avoid these difficulties, cannot be ruled out, although has not occurred to date.[135] The difficulty of assessing economic loss to the exporters is

[133] However, as discussed in the commentary on Article 9 below, developing countries may apply safeguard measures for up to ten years.

[134] The period is shorter for developing countries. *See* commentary on Article 9, below.

[135] Governments might also find it politically difficult to pay out money as compensation. Nevertheless, where an increased tariff is applied as a form of a safeguard measure, some portion of the tariff revenue could perhaps be used for the payment of compensation.

likely to yield a rather crude measure of compensation based on the value of the affected imports.

Article 8 also provides the right of retaliation should there be no agreement on compensation. If an agreement on compensation cannot be reached within thirty days, Article 8.2 permits the affected exporting Members to retaliate within ninety days of the application of the measure by suspending "substantially equivalent concessions" (i.e. raising tariffs and/or applying quotas) with respect to imports from the Member applying the safeguard measure.

Suppose that Member A increases tariffs to automobiles imported from Member B by 30 per cent. To determine an appropriate retaliatory measure, Member B may identify the amount of trade affected by this tariff increase and also find the amount collectable by Member A through increased tariffs. Then it can increase tariffs on exports from Member A so that the amount collectable by increased tariffs would become substantially equivalent to the original safeguard.[136] Where a safeguard measure places quantitative restrictions, the decrease in value of shipments could be used as the reference to the retaliatory measure. Any imported products may be the subject of the retaliation as long as the extent of the retaliation does not exceed that of the safeguard measure already applied.[137]

There is an important limit on the right to retaliate. Article 8.3 provides that if a safeguard measure has been taken as a result of an absolute increase in imports and if it also conforms to the provisions of the SA, the right of retaliation may not be exercised during the first three years during the application of the measure. This restriction is designed to encourage Members to apply safeguard measures for shorter terms and to comply with the SA, rather than adopt gray-area measures.[138]

The timing and the procedure of retaliation require attention where the three-year bar to retaliation is not applied because either a safeguard measure is found inconsistent with the provisions of the Agreement on Safeguards or the measure is based on a relative rather than absolute increase in imports. Initially, consultations on compensation should take place under the provision of Article 12.3 (see below). Retaliation is only permitted if an agreement on compensation is not reached within thirty days of the beginning of the consultations. When Members decide to suspend concessions or other obligations, they must notify the Council for Trade in Goods of the proposed suspension[139], and retaliation may not take place before the expiration of thirty days from the notice.

Difficulties could arise where either the conformity of a safeguard measure with the SA or the existence of an absolute increase in imports is in dispute between parties. The complaining Member may choose to refer the dispute to the DSB and not proceed to suspend its concessions as a retaliatory measure, in order to avoid a chain of retaliations

[136] For instance, the EC adopted this method in calculating its retaliatory tariff increase in response to the US steel safeguard measures in 2002. WTO Doc. G/SG/43 (May 15, 2002).

[137] The EC's proposed retaliation list included products such as various fruits, vegetables, clothes as well as steel products from the United States. *Id.*

[138] *See* the discussions on gray-area measures in Parts III and V.D. of this chapter.

[139] Article 8.2 of the SA also provides that Members are free to suspend the application of substantially equivalent concessions not later than ninety days after the measure is applied. It is not clear whether that ninety-day limit is the time limit for the actual implementation of the retaliatory measure or for the determination and notice of such measure which could be implemented later in time. The EC notified its proposed retaliation against the recent U.S. steel safeguard measures within the ninety-day limit but did not actually apply the measure within the time frame. For the proposed retaliatory measure and the time frame, *see* WTO Doc. G/SG/43 (May 15, 2002).

between the importing country and itself. The DSB may ultimately adopt a decision in favor of the complaining Member. Nevertheless, the complaining Member would not be able to suspend its concessions because the ninety-day time limit would have already expired. This ninety-day limit may be extended where there is an agreement between the Member applying the measure and the affected exporting Members to extend the thirty-day time limit for negotiations on compensation.[140]

There is also a question of whether exporting Members would be entitled to retaliate in the fourth year of a safeguard measure, after having been barred from retaliation for the first three years. Under the provision of Article 8.3, the right to retaliation would be suspended only for the first three years and can be exercised afterwards if the safeguard measure is still in effect. However, the affected Members would not be able to suspend their concessions and other obligations if they had not entered into consultations and subsequently failed to reach an agreement under Article 8.2.

Article 9—Developing Countries

Article 9.1 of the Agreement attempts to balance the desirability for preferential treatment to developing countries and the interest in providing safeguard protection. It provides that safeguard measures shall not be applied against a product originating in a developing country Member as long as its share of imports of the product concerned in the importing Member does not exceed three per cent, provided that developing country Members with less than a three per cent import share collectively account for not more than nine per cent of total imports of the product concerned.

The text of the provision does not specify whether those percentages are in terms of import volume or value, though volume would make the most sense. Article 9.2 also gives developing countries the right to apply safeguard measures for two years more than the normal eight-year maximum, and also shortens the time that must lapse between applications of safeguard measures with respect to the same product (see Article 7.5).[141]

Article 10—Termination of Pre-Existing Safeguard Measures

Under Article 10, all safeguard measures that were in effect when the WTO Agreement became effective (January 1, 1995) were to be terminated within eight years of their application or by January 1, 2000, whichever comes later.

[140] The ninety-day limit was extended by the decisions of the Contracting Parties where two parties agreed to do so. WTO, ANALYTICAL INDEX: GUIDE TO GATT LAW AND PRACTICE, *supra* note 22 at 525–526. This practice of agreement for extension has also continued after the WTO entered into force. For instance, in April 2000, the EC agreed with Argentina to extend the ninety-day limit with respect to Argentina's safeguard measure and made an Article 12.5 notification to the Council for Trade in Goods. WTO Doc. G/SG/N/12/EEC/3 (April 19, 2000). *See also* the subsequent agreements on the extension of the ninety-day period between the United States and various other Members with respect to the U.S. steel safeguard measures applied in March 2002. WTO Docs G/SG/N/12/USA/6 (May 16, 2002), G/SG/N/12/USA/7 (May 16, 2002), G/SG/N/12/USA/8 (May 17, 2002), G/SG/N/12/USA/9 (May 17, 2002), G/SG/N/12/USA/10 (June 14, 2002).

[141] Critics have argued that the three percent ceiling as provided in Article 9 of the Agreement is too low, and that the two year additional extension of a safeguard measure, as well as the shortening of the period before its re-application, is not particularly helpful for developing countries. *See* the relevant discussion in Jai S. Mah, *Injury and Causation in the Agreement on Safeguards*, 4 JOURNAL OF WORLD INTELLECTUAL PROPERTY 380–382 (2001). For proposed changes, *see* Y.S. Lee, RECLAIMING DEVELOPMENT IN THE WORLD TRADING SYSTEM (Cambridge University Press, forthcoming 2005).

Article 11—Elimination of Gray-Area Measures

As discussed above, the prohibition of gray-area measures was considered to be one of the most important objectives of the Agreement on Safeguards. As discussed in Part III of this chapter, gray-area measures, which refer to voluntary measures of export restrictions such as VRAs and OMAs, proliferated in the 1980s. They became a serious impediment to free trade, for at least two reasons.

First, gray-area measures distort trade and significantly diminish the economic gains from international trade. By arbitrarily maintaining a reduced level of imports, domestic production and prices are kept at a higher level than they would be in the absence of import restrictions. As a result, the economic welfare of consumers is sacrificed for the benefit of producers. Since the welfare loss to consumers resulting from import restrictions is generally greater than the welfare gain to producers, there is a net loss to the economy as a whole. On the international plane, the quantity of trade is reduced, causing a net loss to the global economy. Safeguard measures also reduce economic efficiency, but they are applied under strict conditions and only for a fixed period of time.

Second, gray-area measures were often focused on products from a certain group of nations, namely, Japan and newly industrializing countries in Asia. The rapid expansion of exports from these countries was an important reason for the growth of gray-area measures. Gray-area measures usually took the form of an "agreement", but there was often a question whether the agreement was fair and voluntary for both sides. Many developing countries—Asian countries in particular—depended on the markets of the developed countries in North America and Western Europe for their economic development. Often they had no real option to refuse to agree to a gray-area measure demanded by the developed countries. As discussed in Part III of this chapter, in the early 1980s Japan agreed to a voluntary restraint on exports of automobiles to the United States to forestall highly protectionist legislation threatened by the U.S. Congress.

Article 11 of the Agreement on Safeguards flatly prohibits all forms of gray-area measures, making safeguard measures the only authorized form of general emergency import restrictions to remedy or prevent serious injury to domestic industries.[142] Members may not "seek, take or maintain" those measures that include "actions taken by a single Member as well as actions under agreements, arrangements and understandings entered into by two or more Members" (Article 11.1(b)). Examples of prohibited practices are listed in the footnote to Article 11.[143] All existing gray-area measures were to be phased out within four years, although each Member could retain one measure for six years.

An interesting and significant addition to Article 11 appears in its last paragraph, which provides, "Members shall not encourage or support the adoption or maintenance by public or private enterprises of non-government measures equivalent to those referred to in paragraph 1." (Article 11.3) In the rapidly globalizing world today, major producers in a given industry could be few in number worldwide, and any market arrangement among them could have the same effect as gray-area measures agreed between governments. The provisions of Article 11 cannot directly prohibit the conduct of private parties since the

[142] As explained above, special safeguard measures are permitted under the Agreement on Agriculture and the Agreement on Textiles and Clothing. Articles XII and XVIII of the GATT allow Members to take measures to protect their balance-of-payments, but these are not designed to protect particular domestic industries.

[143] Those examples include "export moderation, export-price or import-price monitoring systems, export or import surveillance, compulsory import cartels and discretionary export or import licensing schemes, any of which afford protection". *Agreement on Safeguards,* Art. 11, n. 4.

GATT/WTO rules directly regulate only the conduct of Members, and not the behavior of their private citizens. Nevertheless, Article 11 prohibits any government endorsement and/or support of trade-distorting arrangements by private parties.[144]

Article 12—Notification and Consultation

This Article elaborates on the notification and consultation requirements set forth in GATT Article XIX. Notification and consultation are important procedural requirements. The notification ensures that the affected Members stay informed of the progress of the investigation, and consultation provides affected Members with an opportunity to exchange views with other parties in the hope of reaching a mutually agreeable settlement.

Under the provisions of the SA, Members are required to notify the WTO Committee on Safeguards at various stages of a safeguard proceeding: at the initiation of the investigation (Article 12.1(a)); upon the finding of serious injury or threat thereof (Article 12.1(b)); and finally, upon the decision to apply or extend a safeguard measure (Article 12.1(c)). Article 12.1 specifies that the required notifications must be made *immediately* after the relevant decisions, and the recent Panels have emphasized the importance of timely notification.[145] In particular, the notification under Article 12.1(c) pertaining to the proposed measure must be made *before* the implementation of the measure so that affected Members may have an opportunity to discuss the proposed measure in the subsequent consultations, and the result of such discussions may be incorporated in the final implementation of the measure.[146]

1. Timing of Notifications

The timing of Article 12 notifications has been the subject of disputes. *In Korea—Dairy Products*,[147] the Panel affirmed that the notifications should be made immediately after the relevant actions of the national authorities. It rejected Korea's argument that the timing of their notifications was adequate since they were made as soon as practically possible. The Panel concluded that "as soon as practically possible" was not equivalent to "immediately," and found certain delays in Korea's notifications unacceptable. It, however, did not provide any standard for the determination of the required immediacy of notifications. The problem was that the notifications could not be made overnight due to the inevitable administrative and logistical issues such as translation.

The Panel in *United States—Wheat Gluten* also dealt with this issue. It held that the fifteen days of delay between the initiation by the United States of the investigation and

[144] Since private arrangements of this nature would also violate the anti-monopoly laws of many countries, the question may be asked whether failure by a Member to enforce those laws against such an arrangement would be contrary to Article 11. Given that the WTO does not yet regulate competition policy and restrictive business practices, it is doubtful that the mere lack or insufficient enforcement of the anti-monopoly laws would be considered to be government support/endorsement of trade-restricting private arrangements prohibited by Article 11. In *Japan—Measures Affecting Consumer Photographic Film and Paper*, WT/DS44/R, (1998), the Panel did not find that the alleged "business restrictive practices and measures" of Japan impaired or nullified benefits accruing to the United States within the meaning of GATT Article XXIII:1(b) nor accorded less favourable treatment to imported photographic film and paper within the meaning of GATT Article III:4. *Id.* ¶¶ 10.402–10.404.

[145] *See Korea—Dairy Products* (Panel), *supra* note 17, Panel Report, ¶¶ 7.130–7.145; *United States—Wheat Gluten*, *supra* note 17, Panel Report, ¶¶ 8.189–8.207. *See also* the relevant discussion in Part IV below.

[146] See *United States—Wheat Gluten*, *supr*a note 17, Panel Report, ¶¶ 8.205–8.207.

[147] *Korea—Dairy Products*, *supra* note 17, Panel Report, ¶¶ 7.130–7.145.

its notification, and the twenty-six days between its finding of serious injury and its subsequent notification were not acceptable. On the other hand, the Panel noted that the five days between the U.S. decision to take a safeguard measure and the final notification under Article 12.1(c) satisfied the immediacy requirement of the notification. Nevertheless, the timing of the final notification was still found inconsistent with Article 12.3 (see below) since it was made *after* the application of the safeguard measure and therefore did not provide the other affected Members with sufficient time to prepare and enter into the consultations. The Panel found that the notification pertaining to the proposed measure must be made *before* the implementation of the measure.[148]

2. Contents of Notifications

Article 12.2 lays down specific requirements for the contents of the notifications. It provides in relevant part:

> "... the Member proposing to apply or extend a safeguard measure shall provide the Committee on Safeguards with *all pertinent information*, which shall include evidence of serious injury or threat thereof caused by increased imports, precise description of the product involved and the proposed measure, proposed date of introduction, expected duration and timetable for progressive liberalization. In the case of an extension of a measure, evidence that the industry concerned is adjusting shall be also provided ...." (Emphasis added.)

In *Korea—Dairy Products,* the scope of "all pertinent information" that should be included in the notifications was at issue. The EC contended that all the details of the recommendations and reasoning contained in the report of the competent authorities should be included in the notifications.[149] Both the Panel and the Appellate Body rejected this argument as too broad. The Appellate Body ruled that, at a minimum, notifications should include all the items expressly listed in Article 12.2 above and should also address the injury factors listed in Article 4.2(a).[150] The analysis of the injury factors could be extensive, and it is not still sufficiently clear how much has to be included in the notifications. It would appear to be necessary to include the assessment of injury factors and the reasoning behind the injury determination, so that affected Members may be informed of the basis for the injury determination.

3. Consultations

Article 12.3 provides for prior consultations before the application of a safeguard measure. It provides that:

> A Member proposing to apply or extend a safeguard measure shall provide adequate opportunity for prior consultations with those Members having a substantial interest as exporters of the product concerned, with a view to, inter alia, reviewing the information under paragraph 2, exchanging views on the measure and reaching an understanding on ways to achieve the objective set out in paragraph 1 of Article 8.

Consultations are also an essential part of the procedural requirements. The objectives of the consultation are to exchange views on the proposed measure in order to reach a mutually satisfactory settlement, and to find a way to maintain the balance of concessions that is likely to be upset by the application of a safeguard measure. The timing of

[148] *Id.,* ¶¶ 8.189–8.207.
[149] *Id.*, ¶¶ 4.693–4.697.
[150] *Korea—Dairy Products*, *supra* note 17, Appellate Body Report, ¶ 108.

consultation is therefore important to achieve those ends. Members proposing to apply a safeguard measure should hold those consultations well before the implementation of a safeguard measure so that the results of those consultations can be incorporated in its implementation.[151] Members are not required to either modify or withdraw their measures following the consultations, but their revisions, where necessary, to accommodate the interests and concerns of affected parties would minimize the potential for disputes and retaliations.

The adequacy of consultations was also at issue in *United States—Wheat Gluten* and *United States—Line Pipe*. In *Wheat Gluten,* consultations were held without information as to the specific quota shares for individual countries made available. The Appellate Body considered that the EC was not able to "assess accurately the likely impact of the measure being contemplated, nor to consult adequately on overall equivalent concessions with the United States" without this information.[152] In *Line Pipe*, the Appellate Body also held that the adequate opportunity for consultations was not provided where the measures applied after the consultations were substantially different from those that had been announced in an earlier press release.[153] The period of eighteen days between the announcement of the final U.S. measure and its implementation was held not to be sufficient for entering into new consultations.[154]

Article 13—Surveillance

Article 13 establishes a Committee on Safeguards to monitor implementation of the Agreement. In addition to receiving the notifications required under the SA, the Committee also reviews upon request the equivalency of concessions and other obligations that are to be suspended by the Member. Article 13.2 also requires the publication of annual reports on the implementation of the Agreement.

* * * * * *

To summarize, the Agreement on Safeguards significantly improves the safeguards regime in both substantive and procedural ways. Emergency import restrictions have been channeled into safeguard measures, and the proliferation of costly gray-area measures seem to have been inhibited since the implementation of the SA.[155] This achievement should be attributed largely to the improved effectiveness of the WTO system as well as to the effectiveness of the Agreement itself. Both developed and developing countries seem generally satisfied with the improved safeguards regime although preferential treatment

[151] In *Korea—Dairy Products*, the timing of consultation held between Korea and the EC was at issue. The Panel commented on the importance of the timing and subsequently found that Korea's modification of its original quota level, in consideration of the EC's concern, indicated that the timing of the consultations had in fact allowed for a meaningful exchange of views, which then led to the modification of Korea's measure. *Korea—Dairy Products*, *supra* note 17, Panel Report, ¶ 7.152. The importance of the timing of consultation was reiterated in *United States—Wheat Gluten, supra* note 17, Panel Report, ¶¶ 8.215–8.219. The Panel emphasized the importance of consultation as a means to achieving the important aim of Article 8.1, which is the settlement of compensation to maintain the balance of concessions.

[152] *United States—Wheat Gluten, supra* note 17, Appellate Body Report, ¶ 141.

[153] *United States—Line Pipe, supra* note 17, Appellate Body Report, ¶¶ 102–113.

[154] *Id.,* ¶¶ 107–108. It may be noted that the United States applied its steel safeguard measures only fifteen days after announcing them. This was an obvious violation of Article 12, in light of the *Line Pipe* decision, but it was not raised in the WTO challenge.

[155] *See*, however, Part V.D below, for a discussion of one bilateral agreement entered after implementation of the WTO Agreement that had the hallmarks of a gray-area measure.

for developing countries has been criticized as somewhat insufficient.[156] Certain ambiguities have been also pointed out with respect to some provisions of the Agreement.[157] Some of those ambiguities led to controversies as to the interpretation of the relevant provisions of the SA. Modifications of those provisions would help to clarify the ambiguities and to ensure the proper application of safeguard measures.[158]

V. Outstanding Issues in the Application of Safeguards[159]

A. Relationship between GATT Article XIX and the Agreement on Safeguards

As discussed above, the Agreement on Safeguards provides detailed substantive conditions and procedural rules for the application of safeguard measures, revising and expanding upon the provisions of GATT Article XIX. There has been considerable controversy as to whether the old provisions of Article XIX are still applicable after entry into force of the SA. In *Korea—Dairy Products*, Korea and the United States both argued that the Agreement on Safeguards is the sole articulation of the rules on safeguards[160] while the EC maintained that Article XIX is still effective and provides additional rules that are not expressly included in the SA.[161]

The SA does not contain any provision describing its legal relationship with Article XIX.[162] However, Article II:2 of the Marrakesh Agreement Establishing the World Trade Organization, which provides that "the agreements and associated legal instruments included in Annexes 1,2, and 3 [hereinafter referred to as 'Multilateral Trade Agreements'] are integral parts of this Agreement, binding on all Members," confirms the general applicability of Article XIX, since it is included in Annex 1 of the Marrakesh Agreement as part of GATT 1994.[163] Should there be any conflict between the provisions of Article XIX

[156] *See supra* note 141.

[157] Lee and Mah, *supra* note 56, at 26–30.

[158] *See* Y.S. LEE, SAFEGUARD MEASURES IN WORLD TRADE, *supra* note 1, Appendix 4.

[159] Much of the discussion in this Part is drawn from the author's previous work, *Destabilization of the Discipline on Safeguards?—Inherent Problems with the Continuing Application of Article XIX after the settlement of the Agreement on Safeguards*, 35 JOURNAL OF WORLD TRADE 1235–1246 (Dec. 2001). *Critical Issues in the Application of the WTO Rules on Safeguards—In the Light of the Recent Panel Reports and the Appellate Body Decisions,* 34 JOURNAL OF WORLD TRADE 131–147 (Apr. 2000) and *Review of the First WTO Panel Case on the Agreement on Safeguards: Korea—Definitive Safeguard Measure on Imports of Certain Dairy Products and Its Implications for the Application of the Agreement*, 33 JOURNAL OF WORLD TRADE 27–46 (Dec. 1999).

[160] *Korea—Dairy Products, supra* note 17, Panel Report, ¶¶ 4.418, 4.169–4.195, 5.4–5.8.

[161] *Id*., ¶¶ 4.142–4.146 and 4.149–4.168.

[162] The SA only states that the Agreement establishes rules for the application of safeguard measures "provided for in Article XIX of GATT 1994" (Article 1). In contrast, Article 1 of the Agreement on Implementation of Article VI of the GATT 1994 sets forth the legal relationship between that Agreement and the relevant provisions of the GATT:

> [A]n antidumping measure shall be applied only under the circumstances provided for in Article VI of GATT 1994 and pursuant to investigations initiated and conducted in accordance with this Agreement. The following provisions govern the application of Article VI of GATT 1994 in so far as action is taken under antidumping legislation or regulation.

[163] This position has been affirmed by the Panel in *Korea—Dairy Products,* which stated, "It is now well established that the WTO Agreement is a 'Single Undertaking' and therefore all WTO obligations are generally cumulative and Members must comply with all of them simultaneously unless there is a formal conflict between them." (Footnote omitted.) *Korea—Dairy Products, supra* note 17, Panel Report, ¶ 7.38.

and the provisions of the SA, the latter should prevail according to the General Interpretative Note to Annex 1A of the WTO Agreement.[164]

As noted in Part IV above, a major issue that has arisen with respect to the relationship between GATT Article XIX and the SA is whether the "unforeseen developments" phrase, which is included in the provision of Article XIX:1(a)[165] but does not appear in the SA creates a legal requirement for the application of a safeguard measure.[166]

In *Korea—Dairy Products*, the EC argued that the existence of "unforeseen developments" was a condition under Article XIX:1(a) that had to be proven by the Member applying a safeguard measure, although this particular clause was not included in the Agreement.[167] Korea, on the other hand, argued that there was a conflict between the provisions of Article XIX:1(a) and Article 2.1 of the Agreement, and that the "unforeseen developments" provision was not effective since the new provisions in Article 2.1 does not include this particular phrase. The United States, as a third party, shared Korea's view.[168]

The Panel in *Korea—Dairy Products* found that there is no conflict between paragraph 1(a) GATT Article XIX:1 and the relevant provisions of the Agreement on Safeguards.[169] However, contrary to the EC's argument, the Panel characterized the "unforeseen developments" not as a requirement for an application of a safeguard measure but merely "an explanation of why an Article XIX measure may be needed, taking into account the fact that at the time (1947) the CONTRACTING PARTIES had just agreed (for the first time) on multilateral tariff bindings and on a general prohibition against quotas".[170] Although the Panel also declared that in principle "the Safeguards Agreement does not supersede or replace Article XIX",[171] this ruling affirmed that the SA is in fact the sole articulation of the rules on safeguards.

[164] The Note provides:

> In the event of conflict between a provision of the General Agreement on Tariffs and Trade 1994 and a provision of another agreement in Annex 1A to the Agreement Establishing the World Trade Organization (referred to in the agreement in Annex 1A as the "WTO Agreement"), the provision of the other agreement shall prevail to the extent of the conflict.

[165] Article XIX:1(a) provides:

> *If, as a result of unforeseen developments and of the effect of the obligations incurred by a contracting party under this Agreement, including tariff concessions,* any product is being imported into the territory of that contracting party in such increased quantities and under such conditions as to cause or threaten serious injury to domestic producers in that territory of like or directly competitive products, the contracting party shall be free, in respect of such product, and to extent and for such time as may be necessary to prevent or remedy such injury, to suspend the obligation in whole or in part or to withdraw or modify the concession. (Emphasis added.)

[166] Article 2.1 of the Agreement provides:

> A Member may apply a safeguard measure to a product only if that Member has determined, pursuant to the provisions set out below, that such product is being imported into its territory in such increased quantities, absolute or relative to domestic production, and under such conditions as to cause or threaten to cause serious injury to the domestic industry that produces like or directly competitive products. (Footnotes omitted.)

[167] *Korea—Dairy Products, supra* note 17, Panel Report, ¶¶ 4.142–4.146 and 4.149–4.168.
[168] *Id.,* ¶¶ 4.418, 4.169–4.195, 5.4–5.8.
[169] *Id.*, ¶ 7.39.
[170] *Id.,* ¶ 7.42.
[171] *Id.*, ¶ 8.56.

The Panel in *Argentina—Footwear*[172] arrived at the same conclusion. It stated, "safeguard investigations conducted and safeguard measures imposed after the entry into force of the WTO agreements which meet the requirements of the new Safeguards agreement satisfy the requirement of Article XIX of GATT. Therefore, we see no basis to address the EC's claims under Article XIX of GATT separately and in isolation from those under the Safeguard Agreement."

The Appellate Body reversed the Panel decisions. In *Korea—Dairy Products* it stated, "Although we do not view the first clause in Article XIX:1(a) as establishing independent conditions for the application of a safeguard measure, additional to the condition set forth in the second clause of that paragraph, *we do believe that the first clause describes certain circumstances which must be demonstrated as a matter of fact for a safeguard measure to be applied consistently with the provisions of Article XIX of the GATT 1994,*" (Emphasis added.)[173]

The Appellate Body distinction between "an independent condition" and "circumstances which must be demonstrated as a matter of fact", is rather unclear, and both of those phrases impose legal requirements for the imposition of safeguard measures.[174] The Appellate Body justified its decision that the emergency nature of the measure calls for the presence of "unforeseen developments".[175] However, this decision seems to create certain ambiguities and uncertainties in the application of safeguard measures.[176]

First, according to the Appellate Body decisions, a Member proposing to apply a safeguard measure must demonstrate the existence of "unforeseen developments" as a matter of fact. But it is difficult to set objective standards for proving that a particular development was in fact "unforeseen". The Panel in *United States—Lamb Meat* found that the distinction drawn by the Appellate Body in *Korea—Dairy Products* between the terms, "*unforeseen*" and "*unforeseeable*"[177] is important, and concluded that the former term implies a lesser threshold, "unexpected" than the latter one, which it equated with "unpredictable."[178] Unfortunately, this distinction is rather vague and not very helpful in setting the standard for adequate proof of "unforeseen developments."[179] The Panel in *United States—Steel Products* decided that the standard for unforeseen developments was objective rather than subjective. The Panel was of the view that the appropriate focus is on what *should or could have been* foreseen in light of the circumstances; not "what the specific negotiators had in mind but rather what they could (reasonably) have had in mind."[180] In other words, the test is whether the developments in question

[172] *Argentina—Footwear*, *supra* note 17, Panel Report, ¶ 8.69.

[173] *Korea—Dairy Products*, *supra* note 17, Appellate Body Report, ¶ 85.

[174] According to a recent Panel, although the latter term could be read to imply a lesser threshold than the former, a demonstration of the existence of "unforeseen developments" is a legal requirement. *United States—Lamb Meat*, *supra* note 17, Panel Report, ¶ 7.19.

[175] *Argentina—Footwear*, *supra* note 17, Appellate Body Report, ¶ 93 and *Korea—Dairy Products*, *supra* note 17, Appellate Body Report, ¶ 86.

[176] *See also* Lee (2000), *supra* note 159, at 132–137, for a discussion of this issue.

[177] *Korea—Dairy Products*, *supra* note 17, Appellate Body Report, ¶ 84

[178] *United States—Lamb Meat*, *supra* note 17, Panel Report, ¶¶ 7.19–7.22.

[179] The ambiguity of the requirement has led to a disagreement between the Appellate Body and a subsequent Panel. The Panel in *Argentina—Preserved Peaches* stated that it "did not agree with the statement by the Appellate Body in *Argentina—Footwear (EC)* that "the increased quantities of imports should have been 'unforeseen' or 'unexpected'. The text of Article XIX:1(a), together with the Appellate Body's own discussion of it and earlier conclusion regarding the logical connection between the circumstances in the first clause of Article XIX:1(a)—including unforeseen developments—and the conditions in the second clause—including an increase in imports—show that this is not a requirement for the imposition of a safeguard measure." (Footnote omitted.) *Argentina—Preserved Peaches, supra* note 17, Panel Report, ¶ 7.24.

[180] *United States—Steel Products*, *supra* note 17.

were *unforeseeable* rather than *unforeseen*, which is the approach taken by the GATT *Hatter's Fur* panel as discussed above.[181] However, as noted above, in *Dairy Products* the Appellate Body applied the less stringent test of "unforeseen".[182]

Second, certain provisions in the SA indicate that all the conditions for the application of safeguards are presumed to be included in the Agreement.[183] As explained, the general conditions stated in Article 2.1 of the SA neither include the "unforeseen developments" clause nor make any reference to the provisions of Article XIX. In addition, under Article 8.3, the right to retaliation does not apply where a safeguard measure is based on an absolute increase in imports and *"conforms to the provisions of this Agreement."* (Emphasis added.) If Article XIX was intended to preserve any requirement not included in the SA, the three-year bar to retaliation should have been made inapplicable to a safeguard measure that is inconsistent *either* with the Agreement *or* Article XIX, but Article 8.3 makes no reference to Article XIX. This reference to the SA alone in Article 8.3 suggests that the Agreement was intended to be the sole articulation of the rules on safeguards.

This intent is also found in the negotiating history of the Agreement on Safeguards. The earlier version of the draft agreement on safeguards did contain the "unforeseen developments" clause. By mid-1990, however, the clause disappeared from the draft entirely, while other conditions of Article XIX were repeated almost verbatim.[184] Based on this history, it is only reasonable to consider that this omission was intentional. National safeguards legislation of most countries, including that of the EC and the United States, do not include the "unforeseen developments" clause. The phrase in the Preamble of the Agreement, "Recognizing further that . . . *a comprehensive agreement*, applicable to all Members and based on the basic principles of GATT 1994, is called for" (emphasis added), also affirms that the SA should be understood as a comprehensive agreement, containing all the terms and conditions for the application of a safeguard measure.

In conclusion, it serves no useful purpose to require the existence of "unforeseen developments" as a prerequisite for the application of a safeguard measure. Had a Member foreseen the rapid increase in imports causing or threatening to cause serious injury to its domestic industry at the time of concession, most likely it would not have offered

[181] *See* text accompanying note 25, *supra.* The *Steel* Panel cited this decision, saying that it characterized unforeseen developments as "developments [. . .] which it would not be reasonable to expect that the negotiators of the country making the concession could and should have foreseen at the time when the concession was negotiated". *United States—Steel Products*, *supra* note 17.

[182] *Supra* note 177.

[183] The Appellate Body refers to the provisions of Article 1 and Article 11.1(a) of the Agreement as justification for the cumulative application of both Article XIX and the Agreement. In its opinion, the reference to Article XIX indicates the continuing applicability of Article XIX. *Korea—Dairy Products, supra* note 17, Appellate Body Report, ¶ 77. However, the phrase in Article 1, "This Agreement establishes rules for the application of safeguard measures which shall be understood to mean those measures provided for in Article XIX of GATT 1994" cannot be interpreted to require full legal effect to be given to every clause in Article XIX. In addition, the relevant phrase in Article 11.1(a), "A Member shall not take or seek any emergency action on imports of particular products as set forth in Article XIX of GATT 1994 unless such action conforms with the provisions of that Article *applied in accordance with this Agreement"* (emphasis added) seems to only confirm, contrary to the opinion of the Appellate Body, that the SA prevails in the application of safeguards.

[184] GATT document MTN.GNG/NG9/W/25 (June 27, 1989). A respected academic also states that:

> A 1990 draft of an agreement included ['unforeseen developments'] and amplified it by imposing the obligation to establish an 'unforeseen, sudden and significant increase in imports '. Both the United States and the EU rejected this terminology as being too difficult or restrictive to apply.

PIERRE DIDIER, LES PRINCIPAUX ACCORDS DE L'OMC ET LEUR TRANSPOSITION DANS LAW COMMUNAUTE EUROPEENE (Bruyland, 1997) at 271–272.

the concession to the extent that it did in the first place.[185] The characterization of the clause by the Panel in *Korea—Dairy Products* as being "explanatory" therefore seems more consistent with the language and purpose of the SA. The Appellate Body decision subjects Members to an ambiguous and unnecessary condition.

B. Burden of Proof

Another significant issue has been who has to prove the validity of the safeguard measure should the national authority's injury determination and/or its compliance with other safeguards requirements be challenged in the WTO panel proceedings. Most advanced legal systems require the complainant to prove its claim (i.e., the "burden of proof" is on the complainant).

The Panel in *Korea—Dairy Products* confirmed the above principle, finding that "as a matter of law the burden of proof rests with the European Communities, as complainant, and does not shift during the panel process."[186] On the other hand, the Panel also ruled that once the EC made a *prima facie* case, Korea had to provide an effective refutation of the EC's case.[187] The Panel also said that at the end of the process, it would assess and weigh the evidence and arguments of both parties to determine whether the EC claims were well-founded. The Appellate Body subsequently concurred with the Panel position.

According to this decision, the first hurdle for the complainant is the establishment of a *prima facie* case. If the respondent believes that the complainant has not established a *prima facie* case, it can request that the case be dismissed. The question is what is the appropriate threshold standard for the establishment of a *prima facie* case. The Panel *in Korea—Dairy Products* considered this issue. It followed the definition of a *prima facie* case provided by the Appellate Body on *European Communities—Measures Concerning Meat and Meat Products (* hereinafter, *European Communities—Hormones)*[188]. According to this definition, a *prima facie* case is "one which, in the absence of effective refutation by the defending party, requires a panel, as a matter of law, to rule in favour of the complaining party presenting the *prima facie* case."[189]

Despite this definition by the Appellate Body, it is not altogether clear what level of evidence would be sufficient to establish a *prima facie* case. Many national laws recognize that a *prima facie* case is established as long as the evidence presented *tends* to support the claim made, although it is not conclusive.[190] The recent Appellate Body decision also held that the complainant may establish a *prima facie* case by demonstrating a violation

[185] Even in the unlikely situation where a Member foresaw possible developments that might cause injury to its domestic industry but nevertheless proceeded to grant import concessions, believing that safeguard measures would be available should they be needed , the granting of import concessions in reliance of the availability of a safeguard measure helps to promote free trade; the Member might not have even considered making import concessions without knowing that it would have recourse to safeguard measures if necessary. The requirement of "unforeseen developments" therefore serves no useful purpose and may even adversely affect Members' willingness to make concessions. Y.S. LEE, SAFEGUARD MEASURES IN WORLD TRADE, *supra* note 1, at 106.

[190] *See State v. Harenza,* 213 Kan. 201, 515 P.2d 1217, 1222 (Nov. 3, 1973), *Godesky v. Provo City Corp.,* Utah, 690 P.2d 541, 547 (Sep. 12, 1984), *Mitsui Petrochemicals (America)* v. *United States*, 21 C.I.T. 882, 885, 1997 WL 438840, 3 (Jul.3, 1997).

of the requirement on the part of the defendant, and it does not necessarily have to address and rebut specific information included in the defendant's investigation report which may be inconsistent with the complainant's claim.[191]

The Panel in *Argentina—Preserved Peaches* stated that it "will follow consistent practice in relation to the burden of proof, according to which the party who asserts a fact, or the affirmative of a particular claim or defense, whether the complainant or the respondent, bears the burden of proof of that fact, or the affirmative of that claim or defense. If that party adduces evidence sufficient to raise a presumption that what is asserted is true, the burden then shifts to the other party, who will fail unless it adduces sufficient evidence to rebut the presumption." (Footnote omitted.) This means that Members proposing to apply a safeguard measure or seeking to complain about one should be prepared to defend their case with stronger evidence and arguments as long as the other party presents some evidence to support its own case, although such evidence may not be conclusive.

C. Standard of Review

The Agreement on Safeguards contains no specific provision on the standard of review. The Panel in *Korea—Dairy Products* referred to the Appellate Body's finding in *European Communities—Hormones* that the provisions of Article 11 of the DSU are applicable if the relevant WTO multilateral trade agreement does not provide for a specific standard of review. Article 11 provides that "a Panel should make an objective assessment of the matter before it, including an objective assessment of the facts of the case and the applicability and conformity with the relevant covered agreements."[192]

Panels have emphasized that they will not engage in *de novo* review of investigations by national authorities, but that at the same time they will not give complete deference to the findings of the national authorities.[193] While national authorities have discretion to make substantive safeguards findings and conclusions, the Panel would nevertheless examine (i) whether the national authorities had examined all the facts in their possession, as well as those which they should have obtained, (ii) whether an adequate explanation had been provided of how the facts as a whole supported the determinations, and, consequently, (iii) whether the determination made was consistent with the international obligations of the Member applying a safeguard measure.[194]

The Panels therefore reviewed both adequacy of the reasoning by the national authorities and scope of facts examined by them. These Panel decisions have created certain ambiguities and difficulties for the Member applying a safeguard measure. First, the Panels did not specify how the adequacy of the national authorities' reasoning should be determined. The determination of the adequacy of reasoning is inherently a subjective task. What are the objective criteria? The need for objective standards has become all

[191] *United States—Line Pipe, supra* note 17, Appellate Body Report, ¶¶ 186 and 187.

[192] *Korea—Dairy Products*, *supra* note 17, Panel Report, ¶ 7.26.

[193] *Id.,* ¶ 7.30; *Argentina—Footwear*, *supra* note 17, Panel Report, ¶ 8.124; *United States—Wheat Gluten*, *supra* note 17, Panel Report, ¶ 8.5; *United States—Lamb Meat*, *supra* note 17, Panel Report, ¶ 7.3.

[194] *Korea—Dairy Products, supra* note 17, Panel Report, ¶ 7.30. Concurring with this position, the Appellate Body in *United States—Lamb Meat* stated, "a panel's application of the appropriate standard of review of the competent authorities' determination has two aspects. First, a panel must review whether the competent authorities have, as a *formal* matter, evaluated *all relevant factors* and, second, a panel must review whether those authorities have, as a *substantive* matter, provided a *reasoned and adequate explanation* of how the facts support their determinations." *United States—Lamb Meat*, *supra* note 17, Appellate Body Report, ¶ 141 (emphasis in original).

the more apparent as the Appellate Body recently determined that panels are obliged to examine the adequacy of national authorities' reasoning closely and to consider in their examination any claim that is contrary to their reasoning and conclusions. In *United States—Lamb Meat*, the Appellate Body found that the Panel had failed to apply the appropriate standard of review where it conducted only a cursory examination of the national authority's reasoning.[195]

The adequacy of reasoning is also an issue where two different conclusions can be reasonably drawn from the same set of facts. The Appellate Body in *United States—Lamb Meat* found that "A panel must find, in particular, that an explanation is not reasoned, or is not adequate, if some *alternative explanation* of the facts is plausible, and if the competent authorities' explanation does not seem adequate in the light of that alternative explanation."[196] According to this finding, a national authority's decision would have to be rejected if the alternative reasoning refutes the authority's explanations for its decision. The Panel has also found that the national authority's explanations and reasoning for its conclusion may not be accepted unless they were already included in its original investigation report.[197] The Appellate Body supported the Panel decision.[198]

Those decisions mean that the national authority must consider all the possible reasoning and conclusions that can be drawn from the given facts and then justify its own conclusion in the light of these. Furthermore, all of the reasoning and conclusions must be included in its original investigation report. This seems onerous to the national authority. It is only fair that the authority should be given an opportunity to defend its conclusion with supplementary reasoning, if necessary, before the panel.[199] However, the Panel in *Korea—Dairy Products* did not allow such an opportunity.[200]

The Panel in *Korea—Dairy Products* also ruled that it would consider whether the national authorities had examined all the facts in their possession, as well as those which *they should have obtained.*[201] In conjunction with the requirement of Article 4.2(a), national authorities would have to examine all relevant factors based on available data.[202] Attention should be given to the collection and use of the data. The collection of relevant data is often a difficult task, and discerning the exact data of which scope would be precise for the subject of investigation may be even more difficult.[203] This difficulty is greater in developing countries which may have limited statistical data bases.

[195] *United States—Lamb Meat*, *supra* note 17, Appellate Body Report, ¶ 148.

[196] *Id.*, ¶ 106.

[197] *Korea—Dairy Products*, *supra* note 17, Panel Report, ¶¶ 7.72, 7.76.

[198] *Korea—Dairy Products*, *supra* note 17, Appellate Body Report, ¶¶ 137–138.

[199] The Appellate Body considered that it would be unlikely that the interested parties may withhold arguments from national authorities. *United States—Lamb Meat*, *supra* note 17, Appellate Body Report, ¶ 115. On the contrary, they may well come up with new arguments against the national authorities' reasoning after the publication of the investigation report and present them during the panel process.

[200] In *Korea—Dairy Products*, Korea's justifications for many of its findings were not accepted since they were not included in the final investigation report. *See* Lee (1999), supra note 159, at 39.

[201] In *Korea—Dairy Products*, the Panel stated, "For us, an objective assessment entails an examination whether the KTC [Korea's investigation authority] had examined all facts in its possession or *which it should have obtained* in accordance with Article 4.2 of the Agreement on Safeguards . . . " (Emphasis added.) *Korea—Dairy Products*, *supra* note 17, Panel Report, ¶ 7.30.

[202] *See* the discussion in Part IV *supra* concerning the national authority's duty to examine "all" relevant data.

[203] In *Korea—Dairy Products*, the Panel did not consider Korea's analysis of the domestic industry's profits and losses since, *inter alia*, the data used by the Korean investigating authorities were "too broad," as it included profits and losses from businesses other than those related to the production and sale of domestic products. *Korea—Dairy Products*, *supra* note 17, Panel Report, ¶ 7.71.

To what extent are data discrepancies resulting from the limited availability of statistics acceptable? The Panel in *Korea—Dairy Products* did not seem to permit such discrepancies and required that national authorities make a reasonable estimate where actual data are not available.[204] The Panel's decision seems tantamount to directing national investigating authorities how to conduct their own investigations, which Panels have repeatedly declared that they will not do.

The issue of the collection and examination of data was addressed again recently in *United States—Wheat Gluten.* The Panel stated, "It is not our role to collect new data, nor to consider evidence which could have been presented to the USITC by interested parties in the investigation, but was not," indicating that the Panel review is not a substitute for the investigation conducted by the national authorities.[205] The decision recognized the discretion of the national authorities in the collection and examination of data. However, the Appellate Body reversed this decision and effectively limited their discretion by finding that the national authorities should not only rely on the information submitted by the parties but should also seek out pertinent information necessary to assess the injury to the domestic industry.[206]

The Appellate Body in *United States—Lamb Meat,* provided some guidance on the sufficiency of data. It stated that the data before the competent authorities must be sufficiently representative to give a true picture of the domestic industry.[207] It acknowledged that a requirement for data that includes all domestic producers may not be practical in many instances. It also considered that what is sufficient in any given case would depend on the "particularities" of the domestic industry at issue.[208] The Panel and Appellate Body decisions in *Lamb Meat* indicate that unless the data collected and used for the examination constitute a statistically valid sample, there must be a plausible explanation as to why the partial data are representative of the industry as a whole.

In *United States—Steel Products*, the Panel noted that the USITC Commissioners made divergent findings that were impossible to reconcile given that they were based on differently defined products.[209] (Some Commissioners considered that those products should be included together in a larger category of products and others considered them separate products.) The Panel found that a Member is not permitted to base a safeguard measure "on a determination supported by a set of explanations each of which is different and impossible to reconcile with the other."[210]

The Appellate Body disagreed with the Panel and reversed its decision, concluding that the affirmative findings based on different product groupings are not necessarily mutually exclusive.[211] The Appellate Body was of the view that nothing in the SA prevents the

[204] *Korea—Dairy Products*, *supra* note 17, Panel Report, ¶ 7.82.
[205] *United States—Wheat Gluten*, *supra* note 17, Panel Report, ¶ 8.6.
[206] *United States—Wheat Gluten*, *supra* note 17, Appellate Body Report, ¶ 53–55.
[207] *United States—Lamb Meat*, *supra* note 17, Appellate Body Report, ¶ 132.
[208] *Id.*, ¶ 132.
[209] *United States—Steel Products, supra* note 17, ¶ 10.194. The Panel further explained, "For the purposes of the Agreement on Safeguards, with regard to, for instance, the question of whether imports have increased, it makes a difference whether the product at issue is tin mill or a much broader category called CCFRS and containing tin mill products. The difference is that the import numbers for different product definitions will not be the same." *Id.,* ¶ 10.195. With respect to stainless steel wire, *see id.,* ¶ 10.261.
[210] *Id.,* ¶¶ 10.195,10.262
[211] The Appellate Body stated, "We do not believe that an affirmative finding with respect to a broad product grouping, on the one hand, and an affirmative finding with respect to one of the products contained in that broad product grouping, on the other hand, are, necessarily, mutually exclusive." *United States—Steel Products,* Report of the Appellate Body, *supra* note 17, ¶ 413.

national investigating authority from basing its determination on multiple findings, and that it is the Panel's obligation to consider each of them separately to assess whether any one of them provides a reasoned and adequate explanation of the final determination.[212] This decision raises the question whether a panel should conclude that the investigating authority has provided a reasoned conclusion even if the different explanations offered for the determination are inconsistent with each other.

D. Prohibition of "Gray-Area Measures"[213]

As discussed in Part IV of this chapter, the Safeguards Agreement requires all pre-existing gray-area measures to be terminated within a specified period of time, and prohibits new gray-area measures. The Committee on Safeguards has reported that all notified pre-existing measures, covered by Articles 10 and 11 of the Agreement, were phased out by January 1, 2000, in accordance with Article 11.2.[214]

It is, however, still possible that gray-area measures are taken without being notified to the Committee. The attractions of gray-area measures still exist.[215] The prohibition of gray-area measures under Article 11 of the Agreement on Safeguards may be limited by the fact that there is usually little incentive for anyone to challenge a gray-area measure. The recent adoption of the special safeguard mechanism in the Protocol on China's entry to the WTO also raises a concern about a revival of gray-area measures.[216]

The 1996 United States—Canada Softwood Lumber Agreement ("SLA")[217] was a five-year agreement entered into to head off a threatened countervailing duty investigation of Canadian imports of softwood lumber. The Agreement required the Canadian government to levy fees on exports of softwood lumber to the United States that exceeded specified levels, in return for which the United States undertook not to initiate any trade action against the import of softwood lumber from Canada (Articles I and II). This agreement was a form of a voluntary export restraint and therefore appears to have violated the provisions of Article 11. However, it was not challenged in the WTO, and the measure was not even notified to the Committee on Safeguards.[218]

Although the SLA expired on March 31, 2001, the prevalence of those types of agreements could undermine one of the most important objectives of the Agreement on Safeguards—the prohibition of gray-area measures. Given the clear and unequivocal prohibition of gray-area measures under the Article, Members may find it increasingly difficult to disregard the requirement of Article 11 altogether and enter into such

[212] *Id.* ¶ 414.

[213] *See* the discussions in Parts III and IV of this chapter of the history and economic implications of gray-area measures.

[214] Report (2000) of the Committee on Safeguards, G/L/209 (November 23, 2000), ¶ 23.

[215] As discussed in Part IV, the absence of compensation and retaliation as well as the unlikelihood of legal review made gray-area measures a popular form of trade restriction in the 1980s.

[216] *See* the author's recent work on the issue of the revival of gray-area measures: *Revival of Gray-Area Measures?—The US-Canada Softwood Lumber Agreement: Conflict with the WTO Agreement on Safeguards,* 36 JOURNAL OF WORLD TRADE 155–165 (Feb. 2002), *Specific Safeguard Mechanism in the Protocol on China's accession to the WTO—A Serious Step Backward from the Achievement of the Uruguay Round,* 5 JOURNAL OF WORLD INTELLECTUAL PROPERTY 219–231 (Mar. 2002).

[217] The Department of Foreign Affairs and International Trade of Canada makes the entire text of the agreement accessible on its website: http://www.dfait-maeci.gc.ca/~eicb/softwood/Archive/treaty-e.pdf (Canada Treaty Series 1996/16).

[218] Since it was not notified, the SLA did not qualify under the exception provided by Article 11.2. In any rate, it continued until 2001, long past the deadline of 1999 by which all existing gray-area measures were required to expire.

arrangements. Nevertheless, the surveillance role of the Committee of Safeguards would be vital to preserving the disciplines of Article 11. The Committee should closely monitor the implementation of the Agreement—the requirements of Article 11, in particular—and be vigilant against any violation.

Although not a gray-area measure as such, since it has been adopted by the WTO as a whole, the Transitional Product-Specific Safeguard Mechanism ("SSM") in the Protocol on China's entry to the WTO[219] raises similar concerns. Section 16 of the Protocol requires China to take actions to remedy or prevent "market disruption" to importing countries—in effect to adopt voluntary export restraints—failing which those countries may impose safeguard measures against imports from China alone.[220] Not only is the "market disruption" injury standard substantially lower than the SA requirement of "serious injury", but the measures are imposed on a selective basis rather than the MFN basis required by the SA. Unlike the SA, the Protocol does not provide for compensation and curtail China's right to retaliation.[221] Although the SSM is temporary,[222] this selective and discriminatory treatment against a particular country seems unfair and hardly justifiable.[223]

E. The U.S. Steel Safeguard Case—A Test for Multilateralism in International Trade[224]

On March 20, 2002, the United States applied safeguard measures, consisting of increased tariffs of up to thirty percent and a tariff-rate quota, to imports of several key steel products.[225] These measures were among the most controversial and significant

[219] Section 16 of the Protocol on the Accession of the People's Republic of China, WT/L/432, 8–9 (Nov. 23, 2001).

[220] In contract to the requirement of serious injury or threat thereof under the Agreement on Safeguards, the Protocol permits the application of a safeguard measure against imports from China on the basis of market disruption (Section 16.1). Section 16.4 of the Protocol provides that market disruption shall exist if domestic industry sustains material injury (or its threat) due to the increase in imports from China. The extent of injury required for material injury is considered less than that of serious injury.

[221] Article 16.1 of the Protocol provides in the relevant part:

> If a measure is taken as a result of a relative increase in the level of imports, China has the right to suspend the application of substantially equivalent concessions or obligations under the GATT 1994 to the trade of the WTO Member applying the measure, if such measure remains in effect more than two years. However, if a measure is taken as a result of an absolute increase in imports, China has a right to suspend the application of substantially equivalent concessions or obligations under the GATT 1994 to the trade of the WTO Member applying the measure, if such measure remains in effect more than three years.

[222] The SSM expires twelve years after China's accession to the WTO.

[223] Many Members have felt significant political pressure from their domestic producers to keep inexpensive Chinese imports in check, but such pressure cannot be considered a valid reason for deviating from established trade principles. Creating an exceptional arrangement in response to domestic political pressure creates an undesirable precedent for compromising and undermining the general principles of the multilateral trade regime.

[224] The discussion in this sub-part has been drawn from the author's article, *Safeguard Measures: Why Are They Not Be Applied Consistently With the Rules?—Lessons for Competent National Authorities and Proposal for the Modification of the Rules on Safeguards*, 36 J.W.T 641–673 (2002).

[225] The products subject to the U.S. safeguard measures included slabs, flat steel, hot-rolled bar, cold-finished bar, rebar, certain welded tubular products, carbon and alloy fittings, stainless steel bar, stainless steel rod, tin mill products and stainless steel wire. For the specifics of the measures, refer to Proclamation 7529 of March 5, 2002—*To Facilitate Positive Adjustment to Competition from Imports of Certain Steel Products* and the Memorandum of March 5, 2002—*Action Under Section 203 of the Trade Act of 1974 Concerning Certain Steel Products by the President of the United States of America*, *supra,* note 51.

trade measures in recent times, and resulted in vociferous criticism around the world. It was widely believed that the measures were imposed largely for political reasons, in order to bolster support for the Republican Party in a number of key states and districts in the November 2002 mid-term elections. Another justification advanced by some close to the Administration was that the measures were necessary to secure the votes of representatives from a number of steel-making districts in support of the bill giving the President trade negotiating ("Fast-Track") authority. [226]

Several countries immediately challenged the U.S. measures in the WTO.[227] The surrounding circumstances did not seem to provide a sound legal basis for the U.S. measures: it is widely considered that imports, which have declined in recent years in most categories,[228] are not the major problem facing the U.S. steel industry, but rather the high production costs and the enormous financial cost of the heavy pension obligations faced by the industry.[229]

The WTO Panel and the Appellate Body held that the safeguard measures violated GATT Article XIX and the SA in a number of respects, as discussed earlier in this Chapter. In brief, the United States was found to have failed (1) to show that unforeseen developments had led to the increase in imports; (2) for most products, to show that there was a causal link between the increased imports and any actual or threatened injury to the domestic industry; (3) for certain products, to show that there had been an increase in imports. In addition, the U.S. decision to exempt imports from some countries, including its NAFTA partners, from the measures after having considered the impact of imports from *all* sources in its injury determination, was found to be inconsistent with the requirement of Article 2.2 of the Agreement on Safeguards.[230] The United States withdrew the measures after the Appellate Body had affirmed the Panel decision finding it to be illegal.[231]

The steel safeguard measures appears to have violated the SA in certain other respects, although these were not challenged in the WTO case. For example, the U.S. International Trade Commission failed to provide an analysis of every injury factor listed under Article 4.2(a), such as productivity,[232] even though WTO panels and the

[226] Support for this view is provided by the fact that after the Congressional vote on the trade promotion authority legislation, the Administration granted a large number of exemptions from the measures, as described below. These exemptions were loudly criticized by U.S. steel producers and unions. *Bush Scales Back Tariffs on Steel,* N.Y. TIMES, Aug. 23, 2002, at A1.

[227] *United States—Definitive Safeguard Measures on Imports of Certain Steel Products—Request for the Establishment of a Panel by the European Communities*, WT/DS248/12 (May 8, 2002). Several other countries, including Korea, New Zealand, China, Norway, Switzerland and Brazil, subsequently joined the EC.

[228] According to the U.S. Census Bureau, U.S. imports of steel products decreased substantially from 34,433,707 metric tons in 2000 to 27,350,808 metric tons in 2001. U.S. Census Bureau, *U.S. Imports for Consumption of Steel Products (Census Basis)*, Exhibit 1: All Steel Products (released Feb. 21, 2002).

[229] A state of over-capacity has existed in steel industries worldwide, causing downward pressure on price. This condition has led many less efficient U.S. still mills to close down and even affected larger steel producers, resulting in significant job losses. The U.S. government has been responsive to the call for help from the steel industry, implementing trade measures (for instance, around half of current antidumping actions are on imports of steel products although steel accounts only for two percent of total imports) and offering subsidies. Prior to the U.S. safeguard action, an immediate, comprehensive import relief had been demanded by the steel industry. *Recommended Action to Solve the Steel Import Crisis*, Steel Manufacturers Association, May 9, 2001.

[230] *See* text accompanying note 71, *supra; United States—Wheat Gluten, supra* note 17, Panel Report at ¶ 8.176; Appellate Body Report at ¶ 98–100.

[231] WTO doc. G/SG/N/10/USA/6/Suppl.8 (December 12, 2003).

[232] The analysis of productivity is important particularly where a claim for injury is based on an increase in unemployment as in the steel case. The unemployment is an important motivator of the application of a safeguard measure as it often causes serious social and political problems. However, an increase in unemployment

Appellate Body have held that all of the listed factors must be considered.[233] Also, as noted above, the United States implemented the safeguard measures only fifteen days after it had been announced. This was even less than the eighteen-day period that was found to be insufficient under Article 12.3 of the SA in *United States—Line Pipe.*[234]

Prior to the Appellate Body's Panel decision, the United States had already removed a number of products, around 25 percent in terms of tonnage, from its safeguard list.[235] The action may have been prompted at least in part by proposals for significant retaliation by major U.S. trading partners such as the EU and Japan. The EU and Japan did not implement their retaliatory measures in light of these US concessions, followed by the subsequent withdrawal of the safeguards.[236]

The U.S. measures also triggered trade restrictions in other countries, as the EU and China applied provisional safeguard measures against steel imports to prevent a "diversion" of the imports from the United States to their own markets.[237] The EU justified its decision on the basis that the measures were necessary to prevent a large amount of steel exports from being diverted to the EU market from the U.S. market by the U.S. safeguard. However, this sort of "preventive" safeguard measure raises significant questions under the SA. Article 6 of the Agreement provides that a provisional safeguard measure may be applied "in critical circumstances where delay would cause damage which it would be difficult to repair . . . pursuant to a preliminary determination that there is *clear evidence* that increased imports have caused or are threatening to cause serious injury." (Emphasis added.) It is not clear that such critical circumstances existed for the EU steel industry. As the basis for the EU measure was the *possible* diversion of steel exports to its own market rather than the existence of current serious injury, the question is whether there was any *clear evidence* that increased imports were threatening to cause serious injury under the requirement of Article 6. According to the EC, the Community market constituted the only viable market for steel diverted from the United States, so that diversion would be inevitable.[238] However, at least one country, Korea, one of the major steel exporters, was reported as having increased its own domestic demand in order to absorb its surplus

may not be necessarily indicative of serious injury in the domestic industry where the increase in unemployment is a result of increasing productivity. The adoption of labor saving production and management technology may result in the corresponding increase in unemployment.

[234] *United States—Line Pipe*, *supra* note 17, Appellate Body report at ¶ 107.

[235] United States Department of Commerce, *Department of Commerce and USTR Announce Final Set of Products to Be Excluded From Safeguard on Steel Products*, *Commerce News*, August 22, 2002 <www.ita.doc.gov/media>. The excluded products accounted for 320 million tons out of a total of 1,310 million tons subject to the original safeguards. Although this press release stated that the exclusion was based on U.S. consumer needs and on the determination that the exclusion would not undermine the effectiveness of the safeguard measures, it was widely considered that the purpose of the exclusion was to avoid serious trade conflict with the major trading partners of the United States. *Tariff Exemptions Expanded*, WASHINGTON POST, August 23, 2002, p. E02.

[236] The EC Commission "welcomed" the US exemption of certain steel products from its safeguard measures. Press release, Brussels, August 23, 2002. In the subsequent Report, the Commission stated that it did not propose to implement the first phase of the retaliatory measures (Annex I of Regulation 1031/2002) to be implemented before a decision from the DSB. *See* Commission of the European Communities, *Report to the Council from the Commission on Steel Re-balancing action* (September 24, 2002).

[237] The European Commission adopted a provisional safeguard measure. G/SG/N/7/EEC/1 (Apr. 2, 2002). China also adopted a provisional safeguard measure. G/SG/N/6/CHN/1 (May 23, 2002). The EC and China subsequently decided to apply definitive safeguard measures. G/SG/N/10/EEC/1 (Sep. 11, 2002), G/SG/N/10/CHN/1 (Nov. 5, 2002).

[238] Commission Regulation (EC) No 560/2002 of 27 March 2002, as amended by Commission Regulation (EC) No 950/2002 of 3 June 2002 and Commission Regulation (EC) No 1287/2002 of 15 July 2002.

steel production.[239] The EC also failed to provide an explanation as to why the expected damage would be difficult to repair.[240]

VI. Conclusion

Safeguard measures are gaining increasing importance in world trade. While 150 measures were reported over the GATT era, an average of three a year, as many as 26 definitive measures and 15 provisional measures were notified to the Committee on Safeguards between October 2001 and October 2002 alone.[241] The improved clarity and specificity of the safeguard rules under the new Agreement have contributed to stabilizing the safeguard mechanism, the misuse of which could have led to serious disruption of world trade.

WTO Panels and the Appellate Body have scrutinized disputed safeguard measures based on a close textual reading of the Safeguards Agreement and Article XIX. Strict application of the rules on safeguards is necessary to prevent the possible misuse of the measure that could stir protectionism, as shown in the recent U.S. steel case. On the other hand, excessively strict review of safeguard measures might induce Members to consider alternative trade restrictions that are far less desirable and undisciplined than safeguards, such as gray-area measures.

For this reason, the recent Appellate Body decisions that gave legal effects to the "unforeseen developments" provision in Article XIX raises concern, since it subjects Members to an ambiguous condition that does not seem to serve any useful purpose[242]. As discussed above, the negotiating history of the Safeguards Agreement indicates that Members intended the Agreement to be the sole embodiment of the safeguards discipline.[243] Perhaps the text of the Agreement should be modified to clarify this point.[244]

More broadly, the economic rationale of safeguard measures has been subject to controversy which is unlikely to be resolved in the near future. Nevertheless, a safeguard measure with well-paced liberalization plans can, at a minimum, provide an opportunity for economic adjustment and at the same time enable Members to avoid acute social and political problems that result from the surge of imports.[245] The need for safeguards has increased with the prohibition of gray-area measures. Well-regulated safeguard measures would reduce adverse effects of import restrictions on international trade and therefore prove a much better measure than those undisciplined as gray-area measures.

[239] *Chosun Ilbo* (newspaper), Apr. 23, 2002, <www.chosun.com>.

[240] As discussed above, panels and the Appellate Body have repeatedly found that the national authorities are obliged to provide reasoning for their conclusions. See the relevant discussion of the standard of review above.

[241] *See* Report (2002) of the Committee on Safeguards to the Council for Trade in Goods, G/L/583, dated Nov. 4, 2002.

[242] *See* the relevant discussion on this issue in Part V.*A supra.*

[243] The Appellate Body stated, "if they intended to expressly omit the clause, the Uruguay Round negotiators would have and could have said so in the Agreement on Safeguards. They did not." *Argentina—Footwear, supra* note 17, Appellate Body Report, ¶ 88. This view of the Appellate Body seems difficult to justify since the Agreement does not refer to the other relevant provisions of Article XIX whenever it modifies and repeals them. On the other hand, the express provision in the Agreement may be indeed necessary to avoid confusion and to ensure the stability of the safeguard mechanism.

[244] Modifications should also be considered concerning other ambiguous provisions. Lee (2002), *supra* note 17, Part III. *See also* the author's book, SAFEGUARD MEASURES IN WORLD TRADE, *supra* note 17, Appendix 4.

[245] *See* the discussion on economic adjustment in Part I *supra*.

Discussions on the adoption of a safeguard mechanism for trade in services are also under way.[246] Members have considered the Agreement on Safeguards as a model for the safeguard mechanism for the trade in services. However, the unique characteristics of services trade would require modifications of the safeguards discipline applicable to the trade in goods.[247]

Finally, it needs to be emphasized that the welfare of domestic consumers of society as a whole are inevitably compromised by the application of import restrictions.[248] Competent national authorities should therefore carefully balance the diverse and often-conflicting interests among various parties and should decide to apply a safeguard measure only sparingly as a last resort.[249] The consistent and effective application of the rules on safeguards is essential to preserving the integrity and stability of the international trading system. On the other hand, politically-motivated applications of safeguards lacking clear legal grounds will only invite protectionist responses from other countries and therefore will undermine the trade interests of all countries involved, as shown by the 2002 U.S. steel safeguard case.

I. Introduction

The significance of the General Agreement on Trade in Services ("GATS")[1] cannot be overestimated. For the first time in history, this framework agreement extends multilaterally agreed commitments and rules to the area of international trade that has grown the fastest over the last fifteen years. It is estimated that the annual growth rate of exports of services during the period 1985–1999, measured on a balance-of-payments basis and primarily covering cross-border supply and consumption abroad, amounted to over nine percent per annum, while the growth in exports of goods amounted to 8.2 percent per annum.[2] In fact, based on a conservative estimate, trade in services would appear to have trebled in that fifteen-year period to $ 1.2 trillion in 1999 and now accounts for a quarter of all cross-border trade.

However, the actual extent of trade in services may be far greater due to the large and, often unmeasured, range of services that do not themselves cross national borders because it is instead the "service supplier" (branch or subsidiary of a foreign bank) or the "service consumer" (foreign tourist) that does. Linked to this is a further factor. The invisibility and intangibility of most types of services means that even when they do cross borders customs officials may not necessarily record them.[3]

The GATS raises a number of important issues. First, trade in services, while constituting a large sector of the global economy, may not be susceptible to adequate measurement. Second, a large proportion of trade in services penetrates deeply *inside* national economies, so that the GATS influences national domestic laws and regulations in a way that the GATT goods régime never has, simply because it is largely concerned with border measures. The closest analog in the GATT to the central challenge in the field of services trade is to be found in the Agreement on Technical Barriers to Trade, which is designed to curb the trade-distorting impact of domestic regulations and standards.[4]

A third point is that GATS still has a long way to go in terms of liberalization of international services trade. The Uruguay Round services package was simply a beginning in terms of the number and scope of services commitments that Members have thus far taken to open their markets, comparable to the initial limited tariff-cutting undertaken when the GATT was launched in 1947. At the time of its completion at the end of Uruguay Round in 1994, the GATS was heralded as an important attempt to create a regulatory framework for the liberalization of trade in services,[5] but it is far from complete; significant barriers to services trade still exist. In fact, many of the commitments merely

[3] *See id*. at 90, footnote 3.

[4] *Agreement on Technical Barriers to Trade*, Apr. 15, 1994, *WTO Agreement, Annex 1A*, *Article* 2.2., which requires that domestic standards should neither create unnecessary obstacles to international trade nor be more trade-restrictive than necessary to fulfill a legitimate objective (health, safety, environmental, etc.), taking account of the risks non-fulfillment would create.

[5] John H. Jackson, THE WORLD TRADING SYSTEM: LAW AND POLICY OF INTERNATIONAL ECONOMIC RELATIONS 306 (1997); Geza Feketekuty, *Assessing and Improving the Architecture of GATS* in GATS 2000, NEW DIRECTIONS IN SERVICES TRADE LIBERALIZATION 85 (Pierre Sauvé and Robert M. Stern eds. 2000); and Mary E. Footer, *The International Regulation of Trade in Services following Completion of the Uruguay Round*, 29(2) INTERNATIONAL LAWYER 453, 481 (1995).

bound existing levels of market access rather than extending them and thus further liberalization is still needed. Members are being asked to negotiate on the withdrawal, or phasing out, of domestic regulatory barriers, which are often opaque, and to deal with the attitudes and co-operation of national regulators towards regulatory reform. Unlike tariff negotiations, there are no quick and easily discernible gains to be made in negotiations on trade in services. Instead, the process is a long drawn-out one and gains can only be made incrementally.

The real difficulty that WTO Members face with respect to the GATS is that it requires them to engage in a delicate balancing act. While negotiating further market access and additional commitments on services and service suppliers[6] they must disclose their discriminatory or burdensome domestic regulatory requirements,[7] decide whether to commit to their withdrawal or phase them out, then bind the results in national schedules[8] and apply those commitments as far as possible on an MFN-basis.[9] The GATS is probably best characterized as a broad set of multilateral negotiations on the removal of domestic regulatory barriers to trade in services.

There are also methodological and systemic problems with achieving rapid progress on services liberalization and multilateral regulation. One is a lack of adequate information on services trade, particularly statistical data. Additionally, a lot of work remains to be completed on classification and scheduling, although there have been some noteworthy developments in this area. Another factor is that up until now there have been relatively few services disputes that have gone all the way to panel or Appellate Body rulings. Members are therefore left with few pointers as to how existing GATS disciplines, such as MFN and national treatment, might be interpreted and applied when addressing future complaints.

II. Background

A. History and Development of Trade in Services

1. The GATT

Attempts to bring services under international discipline spanned several decades. In 1954 the GATT Contracting Parties took a decision to consider proposals that would ensure that the principle of non-discrimination applied in the field of transport insurance, since in situations where customs valuation was based on c.i.f. (cost, insurance, freight) prices, transport insurance and freight costs would be covered by Article VII of the GATT. The subsequent review eventually led to a Recommendation on "Freedom of Contract in Transport Insurance" that was adopted by the GATT Contracting Parties in 1959.[10]

However, early GATT attempts to regulate services were isolated events since they were confined to specific services issues (insurance and transport) that were bound up with the movement of goods across borders. It was not until the GATT Tokyo Round of Multilateral Trade Negotiations (1973–1979) that the U.S. Government took the initiative in putting services on the trade agenda. Even so, initial progress was slow and limited to conducting research on trade in services. This was due largely to the fact that available

statistical information on services was either non-existent or, where it was kept, was divorced from statistics relating to trade in goods. For example, governments traditionally recorded their international trade in services in terms of balance of payment statistics, wherein services transactions between resident and non-resident transactions were listed alongside other foreign exchange receivables such as returns from foreign investment, royalties and other non-resident transactions, or so-called "invisibles."[11]

The process of building a consensus on trade in services among GATT contracting parties began slowly and was strongly influenced by the United States, which was instrumental in persuading the Organization for Economic Cooperation and Development ("OECD") Trade Committee to study trade in services.[12] At approximately the same time, the GATT Consultative Group of Eighteen ("CG-18")[13] was considering its future as a small but representative group of Contracting Parties, which met at regular intervals to discuss existing and emerging trade policy issues, on the basis of documentation provided by the Contracting Parties, or studies prepared by the Secretariat, one issue being trade in services.[14] At its meeting in 1980, the CG-18 subsequently issued a report recommending that trade in services might be a "proper concern of the GATT" despite a divergence of views among its members as to the nature, scope and complexity of services and thus the feasibility of extending GATT to encompass trade in services.[15]

Following the lead of the United States in the matter, the Ministerial Declaration adopted at the thirty-eighth session of the GATT Contracting Parties in 1982, recommended that those GATT Contracting Parties with an interest in services trade should undertake national examinations of the services sector in their own countries, in addition to compiling and distributing information among themselves on the most uniform basis possible, prior to the next review that had been scheduled for 1984.[16]

At the 1984 Session of the GATT Ministerial Council, the discussion regarding inclusion of trade in services on the trade agenda became divided over the question of the exchange of information and a U.S. proposal for the establishment of a working party on the matter. The U.S. proposal was supported by Canada, Israel, and Sweden (on behalf of the Nordic countries).[17] Argentina, Egypt, India and Cuba, broadly representing

[11] *See* Part III.B. *infra*, for a discussion of the implications of this statistical record-keeping when it came to assessing trade flows and its impact on the definition of services trade leading up to formal negotiations on trade in services.

[12] Bernard Ascher, *Multilateral Negotiations on Trade in Services: Concepts, Goals, Issues*, 19 GA. J. INT'L & COMP. L. 392, 395 (1989).

[13] The Consultative Group of Eighteen ("CG-18") consisted of eighteen GATT Contracting Parties and was formed by a Decision of the GATT Council in 1975 (*see Decision of the Council*, GATT Doc. L/4204 (July 11, 1975), BISD 22nd Supp. 15–16 (1974–1975). Its mandate was to assist the Contracting Parties of the GATT by following international trade developments, forestalling disturbances that threatened the multilateral trading system and monitoring the international adjustment process and coordination between GATT and the IMF.

[15] *Report of the Consultative Group of Eighteen to the Council of Representatives*, GATT Doc. L/5210, BISD 28th Supp., 71, 74 (1980–1981).

[16] *Ministerial Declaration*, GATT Doc. L/5424 (November 29, 1982), BISD 29th Supp., 9, 21–22 (1983). For a detailed overview of the interpretative "fall-out" from the 1982 *Ministerial Declaration*, the process of the national services studies and the subsequent debate on whether trade in services should be included in the GATT negotiations, *see* Jimmie V. Reyna, *Services*, in II THE GATT URUGUAY ROUND, A NEGOTIATING HISTORY (1986–1992) 2346–2358 (Terence P. Stewart ed. 1993).

[17] Reyna, *id.*, at 2352.

developing GATT contracting parties on the matter, were opposed. They believed the formation of a working party to be premature because the mandate in the 1982 Ministerial Declaration called for informal consultations and the exchange of information process had not yet been completed.[18] The EC representative questioned the GATT Secretariat's limited activity in services issues.[19]

Eventually the process of informal consultations, including review of the results of national services studies, won the day despite a heated debate between the United States and developing countries on the matter. In April 1985 twenty-five OECD members resolved that GATT multilateral negotiations on trade in services should be held as soon as possible. Eventually after some stalling, mostly by developing GATT contracting parties, the Preparatory Committee (set up at the annual GATT meeting in 1985) was instructed to identify 'the subject matter, modalities for, and participation in trade negotiations'.[20]

Following the work of the Preparatory Committee, the U.S. proposal to include services in the next round of GATT talks was endorsed by the EC, Japan, and Canada at the meeting of the Quadrilateral Trade Minister's conference held in Sintra, Portugal on September 5 and 6, 1986.[21] Several weeks later, an agreement to include services in the negotiations was reached by the GATT Contracting Parties and recorded as part of the *Ministerial Declaration of the Uruguay Round*, adopted at Punta del Este,[22] which launched the MTN. The overall objective of negotiations on services was described as follows:

> To establish a multilateral framework of principles and rules for trade in services, including elaboration of possible disciplines for individual sectors, with a view to expansion of such trade under conditions of transparency and progressive liberalization and as a means of promoting economic growth of all trading partners and the development of developing countries. Such framework shall respect the policy objectives of national laws and regulations applying services and shall take into account the work of relevant international organizations.

The *Ministerial Declaration* also established a Group on Negotiating Services that began its work based on a five-point agenda, for the initial phase of the negotiations.[23] The negotiations were to include: (i) definition of services and gathering of statistical data on services; (ii) establishment of the broad concepts on which the principles and rules for trade in services, including possible disciplines for individual sectors, might be based; (iii) a multilateral framework and coverage of services trade; (iv) determination of the relationship of existing disciplines and arrangements to trade in services; and (v) establishment of a regulatory framework for services dealing with measures and practices contributing to, or limiting, the expansion of trade in services to which conditions of transparency and progressive liberalization might be applied.

2. Other International and National Fora

The development of regulation of international trade in services has not been the province of the GATT/WTO system alone. Some of the earliest work, particularly on the economic and trade impact aspects of the sector, was undertaken in other *fora*, most notably as we have already seen at the OECD. Based on an earlier report by a high level group of

experts,[24] the OECD launched a work program on trade in services in the early 1980s,[25] which led to the production of a key study that eventually came to form the basis for including services in multilateral trade negotiations.[26]

The United Nations Conference on Trade and Development ("UNCTAD") also undertook similar groundwork on trade in services prior to the Uruguay Round MTN, focusing mostly on the market for trade in services from a developing country perspective. Just prior to the launch of the Uruguay Round, a study by the UNCTAD Secretariat concentrated on the role of services in the context of growth and development of the domestic economy and issues relating to services in the international context of relevance to the development process, with particular emphasis on public interest consideration and the role of services regulation, services in the international trade context, and the existing framework and proposals for action.[27] This stock-taking exercise sought to cover the landscape of services trade as it existed on the eve of the Uruguay Round, to note (1) the studies, institutional and organizational research on the matter, (2) the relative role of actors such as transnational corporations, international and various international organizations and programs involved in the field of services, and (3) the treaty-based approaches (multilateral and bilateral) that regulated conduct of States in particular services sectors.

The UNCTAD report concluded with a set of recommendations to its Trade and Development Board concerning any comprehensive multilateral co-operation framework for development of trade in services.[28] The recommendations were of the "soft" type and included: setting specific goals in the areas of training and research, external financing, transfer of adequate technology and technical assistance, as well as reaching agreed principles on migration; commissioning studies on the role of services in the development of individual economies; and providing for the improved and harmonized collection of services data at both the national and international level.[29]

Similarly, and not insignificantly, the International Chamber of Commerce ("ICC") played a key role in developing an international consensus among its members in the business community from both developed and developing countries in support of multilateral trade negotiations aimed at liberalization of trade in services.[30] In 1981, a full five years ahead of the launch of the Uruguay Round, the ICC urged governments of its members countries "to enter into reciprocal and mutually advantageous undertakings to reduce impediments to international trade in services" since this was "the best guarantee for the continued growth of international trade in both visibles and invisibles."[31] In its view, free trade in services was "the standard against which the liberalization process should be measured."[32]

Additionally, in some countries service industry groupings helped raise public interest in services generally and the interest of the business community in particular. Alongside promoting the interests of their members, such organizations as the U.S.-based

Coalition of Services Industries, the British Invisible Exports Council, and its Liberalization of Trade in Services Committee, the European Community Services Group, and the Japanese Business Federation (Nippon Keidanren) provided valuable inputs into the formulation of government policies on developing overall concepts, issue and definitions of services, which could be considered in negotiating a multilateral framework for the regulation of services.[33]

3. Regional Approaches to the Regulation of Trade in Services: European Communities and NAFTA

Before discussing the Uruguay Round negotiations on services, it may be helpful to outline the approach taken to services trade in the two most significant regional trade arrangements in the world, the European Communities and the North American Free Trade Agreement ("NAFTA").

(a) European Communities. The EC approach to the regulation of trade in services is somewhat different to that of the GATS and that of the NAFTA.[34] One reason for this is that the EC has pursued different objectives in the field of services, a key one being the completion of the internal market. In the European Communities the market in services is based on principles derived from the basic freedoms that are fundamental to the European internal market.

The fundamental principle of "free movement of services" is principally dealt with in Title III of the Treaty of Rome as amended,[35] alongside "free movement of persons" and "free movement of capital" although the freedom to provide services (Chapter 3 of Title III)[36] is considered subsidiary to the chapter on "right of establishment" (Chapter 2 of Title III).[37] Neither the GATS nor the NAFTA adopt a similar approach with respect to right of establishment.

However, where the EC Treaty system comes close to the GATS and the NAFTA is in singling out those service sectors that are most sensitive, or that provide crucial infrastructures for other services, the key ones being financial services, transport and telecommunications. Thus, under the EC Treaty the all-important transport sector is regulated separately in Title V[38] although it should be noted that no article in the EC Treaty precludes the application of the provisions on freedom of establishment (Chapter 2 of Title III) from applying to transport.[39] Similarly, banking and insurance

[39] *See* Case C-466/98, *Commission* v. *United Kingdom*, judgement of November 5, 2002, *not yet reported*, ¶ 40; similarly in the following cases of even date: Cases C-467/98 *Commission* v. *Denmark*, ¶ 123; C-468/98 *Commission* v. *Sweden*, ¶ 114; C-469/98 *Commission* v. *Finland*, ¶ 119; C-471/98 *Commission* v. *Belgium*, ¶ 132; C-472/98 *Commission* v. *Luxembourg*, ¶ 123; C-475/98 *Commission* v. *Austria*, ¶ 131; and C-476/98 *Commission* v. *Germany*, ¶ 145 *all not yet reported*.

services, in so far as they are connected with the movement of capital, are taken up elsewhere in relation to the free movement of capital and payments (Chapter 4 of Title III).

Additionally, EC Treaty Article 49 prohibits restrictions on the freedom to supply services by nationals of one Member State (State A), who are established in another Member State (State B), other than the one where the service is consumed (State C).[40] This leads to the result that where a service is supplied on an "establishment basis", which requires a commercial presence, the activity is covered by the rules governing the "right of establishment" (EC Treaty Article 43) and not those pertaining to "freedom to provide services" (EC Treaty Articles 49–50). In all other cases, the rules on "freedom to provide services" apply. Indeed, there is even a provision in Article 49 of the EC Treaty that allows for the extension of the provisions of Chapter 3 of Title III to third country nationals on certain conditions. Article 50 of the EC Treaty makes it clear that activities are treated as services where they are not covered by other provisions relating to free movement of goods, free movement of persons and free movement of capital.

"Freedom to provide services" in the EC must not be impeded by rules capable of hindering, directly or indirectly, actually or potentially, intra-Community trade, including such restrictions on the provision of services by virtue of the nationality of the person or the fact that the person does not habitually reside in the national territory or any other measure which may prevent or otherwise obstruct the activities of the person providing the service.[41] Just as in the famous *Cassis de Dijon* case of 1979,[42] where the European Court of Justice extended the scope of free movement of goods to "indistinctly applicable measures" or "equivalent measures" (and also "inaugurated the principle of mutual recognition"[43]), as well as introducing the concept of "mandatory requirements" that may justify such restrictions on certain occasions, the Court has also dealt with the freedom to provide services and equivalent measures in a similar fashion.

In the *Säger* case of 1990[44] the matter concerned a piece of legislation that was equally applicable to domestic and foreign service providers. The Court in that case held that EC Treaty Article 59 (now EC Treaty Article 49) requires not only the elimination of all forms of discrimination against a service provider on grounds of nationality but also the abolition of any restriction, irrespective of whether it applies without distinction to national service providers and those of Member States, when it is likely to impede the activities of a service provider established in another Member State where that service is lawfully carried out. Even so, as in *Cassis de Dijon*, the *Säger* case also determined that there might be permissible restrictions that are justifiable on grounds of "imperative reasons relating to the public interest" (a sort of public policy

[44] Case Cg76/90, *Säger* v. *Dennemeyer* (1991) ECR 1-4221.

exemption) provided that there is no discrimination and the principle of proportionality is applied.[45]

However, such a public policy (including public safety) argument may not always win the day. In the transport sector, with respect to air services, the European Court of Justice has held in a series of cases involving the conclusion of so-called "open skies" agreements with third countries (*in casu* the U.S.), that no restrictions may be placed on "ownership" and "effective control" of Community airlines, as part of the exercise of the freedom of establishment by nationals of Members States on the basis of EC Treaty Article 52 (now EC Treaty Article 43) and companies or firms, which are assimilated to them on the basis of EC Treaty Article 58 (now EC Treaty Article 48).

(b) NAFTA. The North American Free Trade Agreement ("NAFTA")[46] is similar to the GATS when it comes to regulating trade in services. Building on the experience of the earlier Canada-United States Free Trade Agreement ("CUSFTA"),[47] which it largely superseded,[48] it contains general provisions with respect to (cross-border) trade in services,[49] i.e. "measures respecting . . . the production, distribution, marketing, sale and delivery of a service; . . . the purchase, or use of, or payment for a service" and "the presence in its territory of a service provider of another Party."[50]

As in the case of the GATS, Chapter Twelve of the NAFTA sets out the basic principles governing trade in services, together with a number of sector-specific annexes, which contain extensive reservations, including reservations relating to professional services (especially the legal and engineering professions)[51] and transportation (especially land transportation).[52] There are also some service sectors or substantive issues that are excluded entirely from coverage in the NAFTA, namely air services, public procurement (including procurement by federal or state entities) and government subsidies.[53] Just as in the case of the GATS and the EC Treaty, two specific service sectors are treated separately in the NAFTA due to the sensitivity of the sectors and their pivotal role in the economy

[45] *See* Eeckhout, *supra* note 37, at 214.

[47] *Free Trade Agreement, Jan. 2, 1988, Canada-United States*, 27 I.L.M. 281 (1989) ("CUSFTA").

[48] D.A. Ruth, *The US-Canada Services Agreement: Review and Assessment* in THE CANADA-UNITED STATES FREE TRADE AGREEMENT: THE IMPACT ON SERVICE INDUSTRIES at 45 (Earl H. Fry and Lee H. Radebaugh eds., 1988). It should be noted that the NAFTA in turn influenced the course of negotiations on GATS during the Uruguay Round.

[49] The heading to Chapter Twelve entitled "Cross-Border Trade in Services" is somewhat misleading if read in the context of the GATS. The definitions clause of NAFTA at *Article 1213* makes clear that what is intended here is more than just Mode 1 (cross-border supply) under the GATS, when it states that "cross-border provision of a service or cross-border trade in services" means the provision of a service:

(a) from the territory of a Party into the territory of another Party;
(b) in the territory of a Party by a person of that Party to a person of another Party, or
(c) by a national of a Party in the territory of another Party,

but does not include the provision of a service in the territory of a Party by an investment, as defined in Article 1139 (Investment—Definitions), in that territory.' In other words it may not necessarily include Mode 3 (commercial presence), or establishment-based services, as found in the GATS.

[50] NAFTA *Article* 1201 : 1, *supra* note 46; MICHAEL J. TREBILCOCK AND ROBERT HOWSE, THE REGULATION OF INTERNATIONAL TRADE, 2nd edition (1999), chapter 11, Trade in Services, 276–277 and endnote 20.

under sector-specific chapters. One of these is NAFTA Chapter Thirteen, which covers the telecommunications sector,[54] and the other is NAFTA Chapter Fourteen, which deals with financial services.[55]

The NAFTA adopts a "negative list" approach to the listing of obligations under the Agreement, i.e. reservations are noted only in respect of those service sectors, and for those measures within certain sectors, to which one of the parties does not want certain obligations to apply.[56] This is, *prima facie*, the reverse of the "positive listing" approach taken in the GATS, in which Members undertake no obligation to liberalize a particular sector unless it has been specifically itemized in the Schedule. In fact, the GATS approach is a "hybrid" of the two, for once a positive sectoral commitment is made, it is considered to be a full commitment—to permit delivery of services by each of the four modes—unless limitations are further specifically itemized (See Part IV of this chapter, commentary on GATS Article XX below for further details on scheduling of services commitments in the GATS). While one view criticizes the "negative" listing approach for its facilitation of "carve-outs", the NAFTA approach is generally considered most conducive to liberalization because all items that are not specifically identified are automatically liberalized. This approach also corresponds to that used most widely in relation to foreign direct investment, and is thus one with which government officials are familiar.

While the NAFTA rules build upon the earlier CUSFTA, there are two significant differences.[57] First, unlike the CUSFTA the NAFTA contains an explicit MFN obligation that calls upon parties to NAFTA to accord each other's service providers treatment no less favourable that they accord to service providers of any other party or of a non-party (Article 1203).[58] Second, both national treatment (Article 1202)[59] and MFN (Article 1203) in the NAFTA are applied to services generally although the national treatment and MFN treatment provisions are repeated specifically for the financial services sector.[60]

Where the NAFTA differs from the rules under the EC Treaty is on "right of establishment"(Article 43 of the EC Treaty) in not requiring that a service supplier from another NAFTA partner maintain a residence or office in its territory as a condition for supplying a service (Article 1205).[61] However, where the NAFTA approximates the EC rules is in requiring that a party to NAFTA shall endeavor not to use measures such as professional licensing or certification procedures as a barrier to entry in their respective services markets (Article 1210),[62] thereby applying the principle of non-discrimination as in EC law. Even so, parties to the Agreement are entitled to maintain certain existing discriminatory measures, subject to liberalization commitments, as set out in Annex I to

[54] NAFTA, Chapter Thirteen.

[55] NAFTA, Chapter Fourteen.

NAFTA,[63] as well as to adopt and maintain certain other discriminatory measures, which are not subject to future liberalization, in accordance with NAFTA Annex II.[64]

Another aspect of the NAFTA, which is not reflected in either the EC or the GATS, is a "federal clause" in Article 1206. In particular, this allows the United States and Canada, where state and provincial governments respectively may be extensively involved in the regulation of services (for example professional services), to list reservations in an Annex that reflect the regulatory competence of a state or province in the matter.[65] By contrast under GATS, where individual states and/or provinces in the territory of a WTO Member retain a degree of regulatory competence, the Member in question cannot make such a reservation but must list the geographical scope of the measure (and related restrictions for the territory covered) as a limitation on national treatment under one of the modes of supply (often mode 3—commercial establishment). (*See* Part IV of this chapter, commentary on GATS Article I below).

(c) Summary. Trade in services under the EC Treaty is allocated discrete coverage under Articles 49 and 50 but the subject matter has always been considered subsidiary, even residual in character to the free movement of goods, free movement of capital and the right of establishment,[66] in contrast to the NAFTA and the GATS. In the case of both the GATS and NAFTA, measures relating to trade in services are determined in accordance with the means (or mode) by which they are supplied.

However, a similarity between the three regimes is that each recognizes that there may be a need to provide for more specific rules in certain sectors, which have been in existence for some time or are particularly sensitive or constitute key infrastructural sectors. In the case of both GATS and NAFTA telecommunications, transportation, and financial services are accorded separate treatment with more detailed rules in separate chapters or annexes respectively. In the case of the EC Treaty only transport is covered under a separate Title V.

III. The Uruguay Round

A. Goals

The goals of the negotiating parties with respect to the GATS varied enormously in the early stages of the Uruguay Round. In the following subsections, the goals of four major trading partners—the United States, the EC, Japan and Canada (known as the Quad)—and those of the developing countries are reviewed. The United States (and to a lesser degree Canada) argued strongly in favor of the liberalization of trade in services in general, while remaining blatantly protectionist in some services sectors, such as maritime transport and air transportation. The EC's goals largely reflected the experience gained thus far with the freedom to provide services under the Treaty of Rome (discussed in Part II. A 3 above). By contrast Japan's goals were less ambitious and were concentrated mainly in specific sectors such as transport, tourism and financial services.

[63] NAFTA *Article 1206:1* and Annex I.
[64] NAFTA *Article 1206:3* and Annex II; ¶ ABBOTT, *supra*, note 56, 80.
[65] NAFTA *Article 1206:2*.
[66] Eeckhout, *supra* note 37, at 213, ascribes this to the simple fact that when the founding Treaty of Rome was drafted trade in services had not yet been conceptualized, even to the extent that the concept of services *per se* did not exist and services occupied nowhere near as prominent a position in industrialized countries as they do today.

1. The QUAD Members (United States, EC, Japan and Canada)

(a) The United States. As discussed above, the U.S. Government had given priority to trade in services issues even before the launch of the Uruguay Round, encouraging its fellow GATT contracting parties to carry out research in the services sector. During the Reagan administration, under the guidance of United States Trade Representative ("USTR") William Brock, the U.S. Government established a Services Advisory Committee to support collaboration between government and industry in the field of services. The U.S. administration also supported the formation of an international services industries coalition in order to lend some weight to liberalization initiatives which could be offset against other sectors where strong protectionist interests prevailed, such as the agriculture and textiles and clothing sectors.

In April 1981 the Reagan Administration's Trade Policy Committee set in motion a services work program, using existing bilateral arrangements with other governments, in order to resolve trade problems that the private sector had identified. In this way the Administration hoped to develop a domestic and international consensus on services trade in preparation for future multilateral negotiations and to review domestic legislative provisions aimed at achieving reciprocity for U.S. services industries. The actual policy objectives on the eve of the 1982 GATT Ministerial Meeting which established the work program that led to the launch of the Uruguay Round four years later can best be summarized in the statement issued by USTR Brock, in which he identified trade expansion and the reduction of protectionist barriers to trade in services as the two most important goals of the future round.[67] These twin objectives were to be achieved through the development of a sound institutional environment for services and a negotiating process aimed at reducing, or eliminating, barriers to services trade.

More concretely, the USTR envisaged a framework, or umbrella, agreement on services that would cover substantive principles on non-discrimination, as embodied in the national treatment standard and market access provisions, as well as disciplines essential to control state-sanctioned monopolies of services providers, and procedural rules on transparency and dispute settlement.[68] It was envisaged that most-favoured-nation, or MFN, treatment would apply to all signatories of the framework agreement on services. National treatment would also be fundamental to any agreement and would have to be bound as a general obligation.

Trade in services would need to be defined as broadly as possible, including the area of services trade that involved significant aspects of investment, i.e. those services activities that required a commercial presence, or a right of establishment. These aspects were considered crucial by the United States if it were to achieve enhanced levels of market access. The U.S. administration further accepted the existence of national monopolies in services but it proposed that the sale of such services to foreign-based consumers should be on a non-discriminatory basis. The United States also wanted to see a number of specialized, self-contained agreements put in place that would be dedicated to specific service areas, which incorporated and extended the basic rules contained in the GATS

framework agreement and which would better fit the exigencies of their specific sectors, such as civil aviation, telecommunications and shipping.[69]

By the time the GATT Trade Negotiations Committee met at ministerial level in December 1988, during the Montreal Mid-Term Review,[70] the USTR had narrowed the basic principles governing trade in services to just four issues—national treatment, establishment, non-discrimination and transparency. At the same time it was becoming increasingly apparent that prior multilateral agreements on trade in services in certain sectors like civil aviation and maritime transport were going to raise difficulties. In the civil aviation sector this was due to the large number of bilateral air transport agreements that regulated specific air routes, landing rights and, in some cases tariffs, between states on a reciprocal and preferential basis. In the maritime transport sector this was due to the existence of the UNCTAD Liner Conferences that already provided for an extended network of specially negotiated tariffs, applied on a reciprocal and bilateral basis.

Also, the civil aviation and maritime transport sectors both recognized the concept of cabotage, i.e. the reservation to a State of air traffic rights[71] and navigation transit rights within its own territory. Neither the extended system of bilateral agreements nor the application of cabotage in the air and maritime transport sectors is compatible with basic MFN.

As a result of the intransigence of the U.S. Government, and some other GATT contracting parties, the final text of the GATS and its Annexes reflects the unwillingness that some countries felt towards bringing well-defined service sectors like air and maritime transport completely within the bounds of GATS rules. For example, the *Annex on Air Transport Services ("*GATS *Air Transport Annex")*,[72] which is appended to the GATS and forms part of the overall agreement (*See* Part IV of this chapter, commentary on GATS Article XXIX, and Part VI.D.3 of this chapter) currently only covers air transport with respect to "measures affecting: (a) aircraft repair and maintenance services; (b) the selling and marketing of air transport services; and (c) computer reservations system (CRS) services."[73] Traffic rights and ancillary services, i.e. those "services directly related to the exercise of air traffic rights," are completely excluded. Recently WTO Members have sought to redress this imbalance under the periodic review that the Annex itself mandates, further details of which are discussed in Part VI.D.3 of this chapter.

[69] *Annual Report of the President of the United States on the Trade Agreements Program*, 101st –102nd Cong. (1984–1985), (U.S.T.R. Appendix M: US Goals for Trade in Services). *See also* Fred Lazar, *Services and the GATT: U.S. Motives and a Blueprint for Negotiations*, 24 J. WORLD TRADE LAW 135–145 (1990), 136.

[70] General Agreement on Tariffs and Trade: *Decisions Adopted at the Mid-Term Review of the Uruguay Round*, 28 I.L.M. 1023 (1989).

[71] As a rule bilateral air services agreements and other international instruments recognize the so-called "five freedoms," as set out in the Interim Agreement on Civil Aviation of Dec. 7, 1944, ICAO document 7300/6, 6th ed. (1980). Convention on International Civil Aviation, signed at Chicago on Dec. 7, 1944, Doc. 7300/7 (7th ed.–1997); in force on April 4, 1947; 187 parties as at June 30, 2001 ("the Chicago Convention"). These five freedoms are: (1) the privilege to fly across a foreign State's territory without landing (transit); (2) the privilege to land for non-traffic purposes in a foreign State's territory (technical stops); (3) the privilege to put down passengers, mail and cargo taken on in the territory of the State whose nationality the aircraft possesses; (4) the privilege to take on passengers, mail and cargo destined for the territory of the State whose nationality the aircraft possesses; and (5) the privilege to take on passengers, mail and cargo destined for the territory of any other (Contracting) States and the privilege to put down passengers, mail and cargo coming from any such territory.

[72] GATS *Annex on Air Transport Services*, ("GATS *Air Transport Annex"*).

[73] GATS *Air Transport Annex*.

Similarly, the United States succeeded in keeping the regulation of maritime transport out of the GATS, at least temporarily, based on its reluctance to repeal certain provisions in the U.S. Merchant Marine Act,[74] which provided the Administration with the authority to take unilateral action against the practices of other countries that were considered to be harmful to U.S. maritime interests. A brief *Annex on Negotiations on Maritime Transport Services*,[75] adopted at the end of the Uruguay Round, simply reflects the standstill on liberalization of the supply of services in this sector. A Ministerial Decision taken at Marrakesh in April 1994 specified that maritime transport negotiations would continue until June 1996.[76]

The U.S. position on maritime transport services illustrates its somewhat ambiguous negotiating strategy on trade liberalization in services generally. On the one hand the U.S. Administration continued to argue strongly for liberalization of trade in services. On the other hand the United States sought to reserve to itself the right in the name of fair trade[77] to take unilateral measures against its trading partners under Section 301 of the 1974 Trade Act,[78] as amended by the Omnibus Trade and Competitiveness Act of 1988.[79] The U.S. Administration was of the view that such measures would extend to trade in services and intellectual property rights protection while negotiations were ongoing and even after the conclusion of the Uruguay Round.

(b) EC. The EC favored a broad agreement, both in terms of general scope and sectoral coverage, in order to maximize the potential for "effective" market access and to encourage participation as widely as possible among GATT contracting parties. As negotiations progressed, the European Communities expressed its preference for an agreement on trade in services with "soft" requirements rather than binding obligations, even including those related to national treatment. The United States, by contrast, sought a binding general obligation on national treatment and an emphasis on a sectoral approach, in what it termed "sectoral appropriateness." The corollary of this with respect to progressive liberalization was that market access should respect both policy objectives and the appropriateness of (domestic) regulation in each services sector.[80]

In a 1987 report to the European Commission, the European services industries stressed the degree of (domestic) regulation that then existed in many services sectors, and suggested that such regulation be kept at necessary levels, should be non-discriminatory as against foreign services and service suppliers, and should reflect the views of the private sector in addition to those of trade policy makers and negotiators.[81] In fact the private sector brought significant pressure to bear on the course of services negotiations, eventually leading to an EC proposal for a permanent "Regulations Committee," the task of which was to define the "appropriateness" of (domestic) regulations and to ensure that practical procedures were developed to deal with discriminatory aspects thereof.[82]

[81] European Community Services Group, *The European Service Sector's View of the Liberalization of Trade in Services*, paper prepared for the European Commission 7 (April 14, 1987).
[82] Golt, *supra* note 80.

This particular position suited the European Communities because it disguised the lack of homogeneity that existed between various EC Member States, which held differing views on the regulation of services. It was further accentuated by the EC's preoccupation with its policy on completion of the internal market by 1992. As a result, the multilateral services negotiations were seen in the broader context of the overall EC aim of achieving a "services-friendly" policy in the internal market and of developing "an institutional, regulatory and fiscal environment in accordance with those needs."[83]

By the mid-1980's the EC had already attained a dominant position in world service exports and viewed its services sector as "investment-led."[84] This meant that the EC was keen to see adequate consideration given to both services and investment issues, especially where issues involving the right of establishment were concerned (this was to become the third mode of supply, involving commercial presence). This mirrored the EC's own approach to services that has been described more fully in Part II. A.3 above. Nowhere was this more apparent than in the field of financial services where Article 9 Section 4 of the Second Banking Directive[85] operated to restrict foreign bank entry, by limiting or suspending the authorization or acquisition of a new subsidiary in the EC, except in those cases where the same terms of entry were granted to EC banks on a reciprocal basis.

(c) Japan. During the course of the Uruguay Round Japan largely supported the United States on the issue of trade in services, despite the fact it was not perceived as a major services exporter. It supported the liberal U.S. stance because it felt that it had gains to make from services liberalization not only on a commercial level but also in political terms in order to deflect attention away from its trade surplus and closed markets.[86] The Japanese position was also influenced by the fact that it had large deficits in key sectors of interest to it—namely transport and tourism—while at the same time it enjoyed a comparative advantage in financial services, with respect to which Japan's domestic policy was highly protectionist.[87] Not surprisingly Japan came under pressure to open its own domestic services markets while realizing that it had a good deal to gain from the negotiations if it too could achieve similar access to foreign markets.

(d) Canada. Canada initially supported the United States on the issue of services, first in regard to the U.S. proposal for establishment of a working party on trade in services in 1984,[88] and later in the GATT Preparatory Committee over the question of inclusion of trade in services in the new round of multilateral negotiations.[89] It will be recalled that in 1982 a GATT Ministerial Declaration had recommended, on the basis of a U.S. initiative, that the GATT contracting parties should undertake an examination of their respective services sectors and that the results of those examinations should be exchanged among

the parties in order to determine whether negotiations on trade in services were needed (*See* Part II. A.1 above) In response, only fourteen countries, including Canada, initially submitted their studies to the GATT.[90]

However, in the wake of the 1984 session of the GATT Ministerial Conference and before the launch of the Uruguay Round, Canada started to take a different position from the United States and the EC with respect to sectoral coverage. The United States and the EC had favored the "top down" approach, in which all services would be covered except those on a "negative list" that would be specifically excluded. Most of the developing countries supported a "bottom up" or "positive list" approach in which the only sectors covered would be those that were specifically *included*. The United States and the EC rejected the positive list approach, on the ground that it would give parties "veto power" over the application of the GATS, and proposed a "compromise," that would require parties to make concessions at the time of entry into force of the agreement, except with respect to the sectors listed on the "negative list." The compromise failed to gain general support, and although members of the OECD were reported to be "largely" in agreement with it, Canada (and New Zealand), both of which favored a "positive list" approach, opposed it.[91]

On the question of progressive liberalization, viewed by some as linked to coverage, Canada and the Nordic parties proposed[92] that appropriate flexibility should be provided for individual developing countries for opening fewer sectors, or liberalizing fewer types of transactions, and for progressively extending market access in line with their development.[93] The same proposal referred to the question of general exceptions, a matter that had long been a point of friction in the negotiations. The July 1990 text of the GATS[94] included an exception for the protection of "cultural values"—an issue historically of interest to Canada and the EC, among others. The Canadian and Nordic proposal[95] also sought to create an exception to "conserve exhaustible natural resources and to "protect human, animal or plant life, or health." In line with its call for an exception to protect cultural values, Canada, together with the EC, India and Egypt, also advocated a general exception, or special annex, for audio-visual services on the ground that this sector was important for the promotion of indigenous languages, national histories, and cultural heritages. The United States opposed the general exclusion for audio-visual services, arguing that cultural identity was not susceptible to definition, given the widespread use of multinational television and other media.[96]

Canada also opposed the U.S. position in two specific sectors, maritime services and telecommunications. Together with Japan, the EC, New Zealand, Switzerland, Hong Kong and Australia, Canada supported the elimination of all existing restrictive and trade-distorting measures in relation to all maritime services, as proposed by the Nordic

countries.[97] As noted above, the United States was reluctant to see the imposition of multilateral disciplines in this sector. On the other hand, the United States favored liberalization in basic telecommunications, a position reportedly opposed by the EC, Canada and Japan.[98]

2. The Goals of Developing Countries

The initial response of the developing countries towards negotiations on services was one of resistance.[99] The North/South divide on the issue comprised a broad range of concerns that mostly had to do with the desirability, scope and content of certain services in any negotiated agreement. Some developing countries even expressed the view that services should be excluded altogether from the negotiating process.[100]

In many respects the wording of the negotiating mandate on services, contained in the 1986 Ministerial Declaration of Punta del Este,[101] represents a compromise between developed and developing GATT contracting parties in order to take the negotiating process forward. The developing countries adopted a highly pragmatic approach towards services negotiations by allowing them to proceed but pushing for them to proceed along a separate track, outside the main legal framework of the GATT and separate from the régime for trade in goods.[102] In this way, developing countries managed to eliminate the obvious potential for cross-linkages between negotiations on existing GATT issues and negotiations on upcoming services issues.

From the outset, developing countries also insisted on the inclusion of economic development and growth in the objectives of any agreement on trade in services, a position that is now reflected in a general way in the Preamble to the GATS:

> Wishing to establish a multilateral framework of principles and rules for trade in services with a view to the expansion of such trade under conditions of transparency and progressive liberalization and as means of promoting the economic growth of all trading partners and the development of developing countries.

More specifically, the preamble states with respect to WTO developing and least-developed country members:

> Desiring to facilitate the increasing participation of developing countries in trade in services and the expansion of their service exports including, *inter alia*, through the strengthening of their domestic services capacity and its efficiency and competitiveness.
>
> Taking particular account of the serious difficulty of the least-developed countries in view of their special economic situation and their development, trade and financial needs.

Some developing countries, led by Argentina, Brazil and India, still remained skeptical about the whole process, and this skepticism was reflected in particular in the submissions made by Argentina and India. They maintained that economic development and growth could best be met through market-sharing agreements in order to secure a greater share of world services trade for developing countries rather than through a process of negotiation leading to a multilateral framework agreement on trade in services.[103] A few developing

countries also considered that any liberalization of the domestic service sector would be tantamount to surrendering a degree of autonomy and flexibility in macro-economic and development policies. Other developing countries were in favor of retaining export promotion schemes and/or infant industry protection clauses in any multilateral agreement on trade in services. In particular, for those developing countries where infant industry policies continued to play an important role, market access was seen as a valuable instrument for achieving the necessary transfer of certain skills. It was anticipated that this would lead to the creation of particular service markets, for example in the *business services* sector, in particular the sub-sector of *computer and related services*.

There was also serious anxiety among developing countries about the lack of statistical data on services that could assist them in determining how their future services trade could be affected by any multilateral agreement. This was an issue that had originally been used in order to justify excluding services transactions involving foreign service suppliers, because of the close nexus with issues of foreign direct investment. Not surprisingly, throughout the course of negotiations on services liberalization developing countries were keen to emphasize the need for negotiators to address the control of inward foreign direct investment, support for infant industries in the services sector, and restrictive business practices. This emphasis stemmed from a major preoccupation by developing countries with the preponderant role that transnational corporations were known to play in the services sector of many of their economies.[104]

The corollary of this approach was that developing countries remained fairly inflexible when it came to negotiating a national treatment obligation of general applicability in the context of a multilateral agreement on trade in services.[105] They were supported by the EC, which also lobbied hard not to have either a national treatment or market access obligation of general applicability. However, the United States was successful in securing a binding obligation of general applicability for MFN, with opt-outs in the form of MFN exemptions, thereby introducing the notion of conditional MFN into the GATS (for details *see* Part IV of this chapter, commentary on GATS Article II.2, below). The United States had fought hard for this result, and its success meant that it could continue to maintain its MFN exemption position as a lever in encouraging other GATT contracting parties to undertake significant liberalization. The United States felt that without this ability to take an MFN exemption in key services sectors, such as financial services and telecommunications, many countries would be unwilling to make significant market access concessions because they could obtain a "free ride" on concessions made by the United States to other countries.

B. Course of the Negotiations

The negotiations on trade in services ran neither fast nor smoothly. By the time of the Dunkel Draft in 1991,[106] a good deal of work remained to be done in the field of negotiations before it was possible to speak of a framework agreement, sectoral and other annexes, or completed schedules of initial service commitments, which lay at the heart of the liberalization process.[107] At the January 1992 meeting of the Trade Negotiations

Committee ("TNC")[108] a four-track approach was adopted in order to expedite the negotiating process, both on the text for a framework agreement and with respect to the scheduling of initial commitments in services.

The GATS negotiations came to a virtual halt in 1992–93 as a result of difficulties in other areas of negotiation, most notably market access and agricultural subsidies. There was also the unresolved issue of how to deal with the proposed MFN exemption in the GATS, which meant that GATT contracting parties were reluctant to table initial commitments.[109] However, mid-way through 1993 a mini-summit in Tokyo led to a breakthrough and negotiations on services resumed. The Group of Negotiations on Services ("GNS") adopted a new timetable for these negotiations in July 1993, which eventually led to a resumption of full negotiations later that year. In order to assist with the preparation of offers, requests and the scheduling of commitments by GATT contracting parties, the Secretariat issued a report clarifying the sectors and sub-sectors to be used, based on the *Services Sectoral Classification List* W/120,[110] which included "modes of supply" based on the origin of the service, the service supplier or the consumer, and the degree and type of presence that the service supplier had at the point of delivery. Contracting Parties were also instructed to record two different types of commitments, namely (i) horizontal commitments, i.e. applicable to trade in service either in a number of service sectors, or to all sectors, and (ii) sector specific commitments, i.e. applicable to trade in services of a particular sector, across the different modes of supply, with listing of limitations, if any.[111]

Towards the latter part of 1993 negotiations began to draw to a close, with the resolution of textual issues (particularly relating to whether various measures fell within the scope of GATS), the scheduling of commitments, and the submission of lists of MFN exemptions. The GATT Secretariat released a report at the end of November 1993 analyzing the results achieved thus far in the Uruguay Round negotiations generally, and more particularly with respect to developing countries. In the context of trade in services, the report noted the importance of services for developing economies, the status of initial services commitments, and the content of the framework agreement.[112]

In the following month the GATT Trade Negotiating Committee formally adopted the Final Act of the Uruguay Round Multilateral Trade Negotiations.[113] This included the results of the negotiations and text of Ministerial Decisions and Declarations but did not contain the respective commitments taken by GATT contracting parties resulting from the services negotiations that would eventually be inscribed in the Schedules of WTO Members, at Marrakesh in April 1994. Instead a special process of verification and corrections of the final schedules took place between mid-January and the end of March, to ensure that the schedules embodied the results of the negotiations.[114]

A significant amount of work on services remained to be completed, particularly in certain areas like basic telecommunications and maritime transport, while in others such

as financial services the results were disappointing. The TNC decided in its December 1993 meeting to prepare a number of Ministerial Decisions and Declarations that would allow the Members of the WTO, about to come into being, to continue negotiations in certain service sectors after the Round completed in order to arrive at satisfactory levels of commitments, or to improve on those already made.[115]

C. Overview of the Results

The Uruguay Round GATS negotiations, despite its ups and downs, resulted in some 97 Schedules of services commitments being submitted, involving 106 Members, with initial commitments across the board in virtually all sectors and sub-sectors. As noted above, however, a large number of these merely bound existing levels of market access rather than increasing them. A significant number of GATS Article II (or MFN) exemptions were also filed, totaling 350 entries altogether.[116]

The process "broke new ground in broadening the scope of world trade rules to cover an area of trade never before subject to multilateral disciplines."[117] The Uruguay Round MTN produced a framework agreement (with negotiations continuing in some sectors beyond the end of the round in order to achieve further liberalization), which falls under the WTO "umbrella" and is appended as a separate Annex to the WTO's founding instrument. It is important to note that the GATS, which forms Annex 1B to the WTO Agreement, is legally distinct from the GATT (which is included in Annex 1A), while remaining under the general institutional framework of the multilateral trading system created by the WTO.

IV. The Agreement

The successful negotiation of the GATS represents a milestone in multilateral rulemaking.[118] With the post-Uruguay Round structure of disciplines on goods, services (including investment), and intellectual property, all of which are subject to an integrated and improved dispute settlement mechanism, the scope of the multilateral trading system has never been greater or more encompassing.[119] When assessing the Agreement, however, it is important to keep in mind that, in spite of its achievements, the GATS is only a first, imperfect, step toward effective liberalization of trade and investment in services.

Under the GATS, WTO Members are encouraged to progressively negotiate market access and national treatment commitments in relation to a broad range of services and service suppliers,[120] to bind the results of such negotiations in national schedules[121] and to implement those commitments as far as possible on an MFN-basis.[122] In addition,

like the GATT regime, governing trade in goods, the GATS also sets out a framework of basic rules and disciplines to be applied by all WTO Members in order to protect the value of the commitments that they have bound in their individual services schedules.

Although the GATT and the GATS have the same objective, the process of liberalization of services under the GATS differs significantly from that in relation to goods under the GATT. Whereas the GATT process entails the negotiation of binding tariff rates in relation to specified goods, and, in the case of agricultural goods, the conversion of non-tariff barriers into tariffs in order to facilitate reduction, the nature of trade in services renders the negotiation of liberalization a much more complex process. The GATS reflects this by requiring a hybrid of the "bottom up" or "positive list" and the "top-down" or "negative list" approaches to negotiating and scheduling liberalization commitments. Under the GATS, Members may voluntarily define the service sectors or sub-sectors in which they choose to permit market access, as well as the permitted modes of delivery of the services in those sectors. A Member undertakes no commitment to liberalize any sector unless it is listed in its Schedule (the 'positive list' approach). Once it has specified a sectoral classification in its Schedule, however, a Member is obliged to liberalize such sector fully, in each of four modes of delivery, unless it has itemized a limitation on market access or national treatment in the relevant column in the Schedule (the 'negative list' approach). Where no limitations on market access or national treatment are specified with respect to a particular mode of the sectoral classification, an inscription of "NONE" may be entered. Alternatively, the Member may indicate by an inscription of "UNBOUND" that it has made no commitment to grant market access or national treatment in this mode.

Further, the distinction between market access commitments and MFN obligations was unknown to the GATT. Under the GATS, the effect of a market access commitment is to require, at *minimum*, the treatment set out in the Schedule. The MFN obligation, on the other hand, is a general one, applying to the *actual* treatment extended by Members.

The concept of national treatment also differs from what we have been accustomed to in relation to goods liberalization. The application of national treatment to foreign services and service suppliers is not a general obligation but applies only once a commitment is made in relation to market access in a particular sector. Further, even when a specific market access commitment is made, the obligation to provide national treatment in the inscribed service sector may be limited by the Member by setting out conditions or qualifications in the Schedule. The flexibility of the GATS approach enables Members to retain significant control over the extent and rate of liberalization of services, a feature that was critical to securing the support of developing countries during the Uruguay Round Negotiations.[123]

The GATS is built around the framework Agreement, eight Annexes and individual country schedules of specific commitments, as follows:

Part I	Scope and Definition
Part II	General Obligations and Disciplines
Part III	Specific Commitments
Part IV	Progressive Liberalization
Part V	Institutional Provisions
Part VI	Final Provisions

[123] *See* Part III.A.2., of this chapter, *supra*.

Annex on Article II Exemptions
Annex on Movement of Natural Persons Supplying Services under the Agreement
Annex on Air Transport Services
Annex on Financial Services
Second Annex on Financial Services
Annex on Negotiations on Maritime Transport Services
Annex on Telecommunications
Annex on Basic Telecommunications
Country Schedules

In simple terms, the GATS has two main objectives: to provide a mutually agreeable framework of disciplines for the conduct of trade in services; and to foster binding national commitments for the progressive increase in liberalization of services markets. These objectives are manifest in the Agreement by the important division between Part II, which contains the "General Obligations and Disciplines", and Parts III and IV, which facilitate the making of specific commitments through a system of national Schedules, and oblige Member states to enter into rounds of negotiations with a view to achieving a progressively higher level of liberalization. The general obligations in Part II of the Agreement, which include the core principles of MFN and transparency, as well as other topics such as domestic regulation and mutual recognition, are binding on all WTO Members, subject only to specified exceptions. By contrast, specific commitments, which pertain primarily to market access and national treatment, are entered into voluntarily, as a result of a process of negotiation among Member states.

PART I. SCOPE AND DEFINITION

A. Scope and Definition (Article I)

1. Definition

Nowhere in the GATS is "services" expressly defined. "Trade in services" is defined only by reference to four modes of delivery, as discussed below. The GATS does, however, contain definitions of certain operative words and phrases that provide guidance as to the nature of services and trade in services.[124]

2. Scope

The GATS applies to all "measures by Members affecting trade in services,"[125] which include measures imposed by central, regional or local governments and authorities, or non-governmental bodies in the exercise of powers delegated by such governments or authorities.[126]

Measures *affecting* trade in services include those relating to:

- the purchase, payment or use of a service,[127]
- the access to and use of a service, in connection with supply, where such service is required by the Member to be offered to the public generally,[128] or

[124] These include: "measure," "supply of a service," "measures by Members affecting trade in services," "commercial presence," "sector," "service of another Member," "service supplier," "monopoly supplier of a service," "service consumer," "person," "natural person of another Member," "juridical person," "juridical person of another Member" and "direct taxes." *See* GATS *Article* XXVIII.
[125] GATS *Article I.1.*
[126] GATS *Article I.3(a)(i) and (ii).*
[127] GATS *Article XXVIII(c)(i).*
[128] GATS *Article XXVIII(c)(ii).*

- the presence, including commercial presence, of persons of one Member for the supply of a service in the territory of another Member.[129]

The GATS extends to measures affecting *services* trade in *any sector*[130], with the exception of services supplied in the exercise of governmental authority,[131] i.e. services-supplied neither on a commercial basis nor in competition with other service suppliers,"[132] such as central banking.

3. Modes of Supply

For the purposes of the GATS, "trade in services" is defined as the "supply of a service.[133] GATS *Article I:2* describes four possible means, or "modes" by which this supply may occur. An understanding of the four distinct modes is crucial in the process of negotiation, as specific commitments in regard to market access and national treatment are entered into on a mode-by-mode, as well as a sector-by-sector, basis. The four modes are:

- Mode 1: cross-border supply;
- Mode 2: consumption abroad;
- Mode 3: commercial presence; and
- Mode 4: presence of natural persons.

(a) Cross Border Supply. The first GATS mode of supply, commonly referred to as "*cross border supply"*, is defined as "the supply of a service from the territory of one Member into the territory of any other Member." It is reminiscent of the traditional idea of trade in goods, in that both the consumer and supplier remain in their respective territories when the product is delivered. For a service product, this situation arises when the service can be embodied in a transportable medium, such as written documentation or computer disc, or when it can be sent across borders through telecommunication channels. Mode 1 corresponds generally to the structure for balance of payments accounts set out in the *Manual* (and the old *BPM5*).[134]

[129] GATS *Article XXVIII(c)(iii).*

[130] GATS *Article I.3(b);* see however the Annex on Air Transport Services, which expressly excludes from the GATS measures affecting air traffic rights and services directly related to their exercise.

[131] GATS *Article I.3(b)* and GATS *Article XIII.1*. See further Markus Krajewski, *Public Services and Trade Liberalization—Mapping the Legal Framework*, 6(2) JOURNAL OF INTERNATIONAL ECONOMIC LAW 341 (2003).

[132] GATS *Article I.3.(c)*.

[133] GATS *Article I:2.*

[134] During the Uruguay Round negotiations, the relative importance of the different modes of supply was almost unknown, due to a lack of available quantitative information on trade in services. The GATS negotiations were conducted in the absence of a statistical assessment or comparison of sectoral commitments. The lack of statistical clarity was not considered crucial at the time since the objective of the GATS negotiations during the Uruguay Round was to establish a framework of enforceable rules and to bind current regimes, rather than to achieve significant trade liberalization. Quantitative information is already playing a far more important role in the Doha Round services negotiations, with regard to the establishment of negotiating priorities and exchange of concessions. The principal difficulty in the assessment of services trade is that the GATS legal framework diverges from the statistical framework for assessment of trade flows, namely balance of payments statistics. Until recently, the framework for balance of payments was defined by the fifth edition of the IMF's *Balance of Payments Manual* ("*BPM5", supra* note 2), which was based on the concept of residency and which records transactions between resident and nonresident transactors. The GATS concept of supply of services uses a broader framework that incorporates "residency" as well as other concepts such as "nationality," "territorial location" and "ownership" or "control." Moreover, the mode 3 supply of a service through a commercial presence was not considered "trade" at all in *BPM5* and was not therefore recorded in the balance of payments accounts. In order to provide international guidelines for the compilation of statistics related to international trade in services, the Interagency Task Force on Statistics of International Trade in Services, established by the Statistical Commission of the United Nations in 1994 ("*UN Interagency Task*

(b) Consumption Abroad. The second mode of supply, referred to as "*consumption abroad*" or "*movement of consumers*" is defined in the GATS as a supply "in the territory of one Member to the service consumer of any other Member." This mode occurs when the consumer moves to the territory of the supplier to take delivery of the service, for example the consumption of tourism services. Since the consumer remains a resident of his or her home country while abroad, the transaction arises between residents and non-residents; for balance-of-payments purposes, it is an "export" from the territory of the supplier and an "import" to the home territory of the consumer.

Mode 2 transactions under GATS correspond generally to those recorded under the *Manual* (and old *BPM5)* framework[135] as "travel." The use of "travel" as the sole statistical indicator of consumption abroad could however underestimate GATS mode 2, which also includes situations such as ship repair, in which it is only the property of the consumer that moves, or is situated, abroad. It could also result in an overstatement, particularly in relation to electronic transactions, where the line between mode 1 and 2 is somewhat unclear. While bank deposits and property insurance transactions, for example, should

Force," or "*Task Force*") has developed a *Manual on Statistics of International Trade in Services:* MANUAL ON STATISTICS OF INTERNATIONAL TRADE IN SERVICES, UN doc. ST/ESA/SER/M/86 *("Manual").* The Members of the Task Force are the Statistical Office of the European Communities, the IMF, the OECD, the United Nations Statistical Division, the United Nations Conference on Trade and Development, and the WTO, with OECD as chair and secretariat.

The initial major focus of the UN Interagency Task Force was the development of guidelines for definition, classification and coverage of statistics related to international trade in services. Since the publication of the *Manual* at the end of 2001, the Task Force has shifted its focus towards providing guidance and assistance to countries in the implementation of the recommendations contained in the *Manual*, with emphasis on the compilation of statistics on foreign affiliates trade in services. A final draft of the *Manual* was published on September 6, 2001 and is now available on-line at either: http://unstats.un.org/unsd/tradeserv/manual.asp or http://www.wto.org/english/res_e/statis_e/its_manual_e.htm.

The *Manual* was prepared by the Task Force to meet the needs of a variety of producers and users of statistics on international trade in services—statistical compilers, governments and international organizations, businesses and others that wish to assess developments in international services markets. A particular impetus for the preparation of a separate manual on services statistics was the need for statistics to guide the negotiations relating to the GATS and other trade agreements that encompass services as well as goods, and to support the implementation of such agreements.

The *Manual* expands the framework for provision of a range of statistics on international trade in services by building upon, rather than modifying, internationally agreed standards for statistical compilation. Its recommendations are summarized in Chapter 1 and elaborated in the remainder of the *Manual*. Chapter 2 proposes a conceptual framework and describes its links to existing international standards and frameworks, including the four GATS modes through which services may be traded internationally. Chapter 3 focuses on the compilation of statistics relating to conventional resident/non-resident trade in services, building on the balance of payments framework described in the fifth edition of the *Balance of Payments Manual (BPM5*, supra *note 2)*. The Extended Balance of Payments Services classification provides links to the Central Product Classification for clear definition. Chapter 4 recommends standards for compiling statistics on Foreign Affiliate Trade in Services ("*FATS*"), providing guidance on the measurement of services provided through foreign-owned firms. FATS draws to a considerable extent on the concepts and definitions of the *System of National Accounts 1993 ("1993 SNA")*.

The *Manual* proposes a phased approach to implementation so that developments can be implemented gradually and available information structured in line with the new international standard framework. While an implementation sequence is suggested, flexibility ensures that countries can meet the priorities of their own institutions. Full implementation, which is seen as a long-term goal, would represent a considerable increase in the detail of information available on trade in services.

The *Task Force* is now focusing on providing compilation guidance, particularly in the area of foreign affiliates' trade in services. In addition, it plans to undertake further development work, in particular in the areas of financial insurance, telecommunications, internet-related and environment-related services, as well as statistics relating to the movement of natural persons to take up employment on a non-permanent basis.

[135] *See supra*, note 134.

in principle be recorded in the relevant services category in the balance-of-payments account (Mode 1), some countries will allocate everything paid by credit card in foreign currency to "travel," resulting in an inflated perception of mode 2 services transactions. A separate annex to the *Manual* (Annex VII) discusses the relationship between the definitions and coverage of *travel* and *traveler* used in the *Manual* (and in *BPM5*) as well as the coverage of the *tourism satellite account*.[136]

(c) Commercial Presence. In addition to providing services in resident/non-resident transactions measured in balance of payments statistics, enterprises may supply services internationally through the activities of foreign affiliates abroad. The GATS defines this third mode of supply of a service as "the supply of a service by a service supplier of one Member through commercial presence in the territory of any other Member." The definition of "*commercial presence*" in the GATS is a broad one, encompassing "any type of business or professional establishment" within the territory of a Member for the purpose of supplying a service. In addition to the constitution, acquisition or maintenance of juridical persons, the creation or maintenance of a branch or a representative office may establish "presence."

The reference to commercial presence as a means of delivering international services is an innovation of the GATS, which recognizes that the delivery of services often requires proximity between supplier and consumer. Such supply by an entity resident in the consumer's territory, is, for balance of payments purposes, a transaction between residents and is not recorded as a trade transaction.

In order to provide a means by which to measure this important mode of supply, the UN Interagency Task Force has set up a framework for "Foreign Affiliates Trade in Services" ("FATS") statistics as set out in Chapter 4 of the *Manual*.[137] Included are recommendations on the selection of foreign affiliates to be covered,[138] the attribution of FATS statistics[139] and the variables to be compiled. Although this is a less well-developed statistical area than balance of payments, some FATS statistics in the compiling economy may be found in, or derived from, existing statistics on domestic production, including national accounts statistics based on the recommendations of the *1993 SNA*.

The basic FATS variables recommended in the *Manual* are:

- sales (turnover) and/or output;
- employment;
- value added;
- exports and imports of goods and services; and
- number of enterprises.

Other identified variables include assets, compensation of employees, net worth, net operating surplus, gross fixed capital formation, taxes on income, and research and development expenditures.[140]

[136] The Annex to the *Manual* is also available on-line at: http://www.unstats.un.org/unsd/tradeserv/manual.asp

[137] *See supra* note 134.

[138] Selection of foreign affiliates follows the definition of foreign-controlled enterprises used in the *1993 SNA*; *see supra* note 134.

[139] This includes a discussion on attribution by activity and by product.

[140] The definitions of these variables are drawn from the *1993 SNA*, *supra* note 134.

(d) Presence of Natural Persons. The fourth mode of supply under the GATS, or "*presence of natural persons*" is defined as a "supply by a service supplier of one Member, through presence of natural persons of a Member in the territory of any other Member." This mode of supply is also the subject of a separate Annex to the GATS that applies to "measures affecting natural persons of a Member who are service suppliers of a Member and natural persons of a Member who are employed by a service supplier of a Member, in respect of the supply of a service." The *Annex on Movement of Natural Persons Supplying Services under the Agreement*[141] further indicates that the GATS does not apply to "measures affecting individuals seeking access to the employment market of a Member", or to "measures regarding citizenship, residence, or employment on a permanent basis".

The GATS and its relevant *Annex* appear to provide for two distinct categories of natural persons located in the territory of the consumer: self-employed service providers and natural persons employed by service providers. A foreign *self-employed* service provider will simply move to the territory of the consumer to provide his or her service. *Employees* will be foreign natural persons, employed in regard to provision of a service, and the employer/service provider may be located abroad or have a commercial presence in the territory of the consumer.

In terms of balance of payments statistics,[142] the *Manual* again moves beyond existing statistical frameworks where enterprises producing services in one country employ individuals who are residents of another country on a non-permanent basis. While some limited data are available from balance of payments statistics,[143] there is a need for further development of statistics related to employment and income of foreign nationals. This area is, however, still under discussion by the Task Force, so the *Manual* contains relatively little discussion on, or recommendation for, compiling relevant statistics.

PART II. GENERAL OBLIGATIONS

The core principles imposed by Part II of the GATS are MFN[144] and transparency.[145] Other general obligations and disciplines set out in Part II of the GATS include:

- increasing the participation of developing countries;[146]
- regional economic and labor market integration;[147]
- domestic regulation of services;[148]
- international recognition of service suppliers' credentials;[149]

[141] GATS *Annex on Movement of Natural Persons Supplying Services under the Agreement*, *("GATS Annex on Movement of Natural Persons").*

[142] *See supra* note 134.

[143] International transactions involving movement of labor (including service providers) are generally captured in balance of payments statistics under one of three different categories: "labor income," "workers remittances" and "migrants' transfers." In the IMF's *BPM5*, *supra* note 2, workers' remittances are shown under current transfers while migrants' transfers are placed under the capital and financial account; compensation to employees, i.e. "labor income", is listed as current income. *See further* BIMAL GHOSH, GAINS FROM GLOBAL LINKAGES: TRADE IN SERVICES AND MOVEMENTS OF PERSONS 29, 38 (1897).

[148] GATS *Article VI.*

[149] GATS *Article VII.*

- regulation of monopolistic behavior;[150]
- regulation of restrictive business practices;[151]
- restrictions on international transfers and payments;[152] and
- the application of general and special exceptions.[153] In addition, Part II contains provisions relating to emergency safeguard measures (*Article X*), government procurement (*Article XIII*), and subsidies (*Article XV*). As it was not possible, during the Uruguay Round negotiations, to reach agreement on these issues, the provisions, for the most part, simply call for further negotiations.[154]

A. Most-Favored Nation (MFN) Treatment (Article II)

1. The Basic Rule

The MFN norm in relation to services, like MFN under the GATT, is one of the central and most important general obligations of the GATS, articulated in *Article II:1* as follows:

> With respect to any measure covered by this Agreement, each Member shall accord immediately and unconditionally to services and service suppliers of any other Member treatment no less favourable than that it accords to like services and service suppliers of any other country.

The MFN clause of the GATS applies to any measure by Members affecting trade in services in any sector transacted through any of the four modes of supply, with some exceptions, exemptions and limitations specified elsewhere in different GATS Articles. MFN requires that the most favourable treatment *actually accorded* to services and service suppliers must be extended to all other Members, whether or not the service sector has been the subject of a market access or national treatment commitment. MFN treatment is not *per se* a liberalizing condition, demonstrable by the fact that a Member that bans trade with all foreign suppliers does not violate MFN.[155] Rather, MFN is a principle of non-discrimination, which levels the playing field among the trading partners of one particular Member. By contrast, market access or national treatment commitments in a given sector oblige a Member to give to all other Members the stated *minimum* standard of treatment specified in its Schedule. An MFN exemption will permit deviations from the obligations of *Article II* but it does not relieve the Member from its binding market access and national treatment commitments.

The core MFN commitment found in *Article II* is supplemented by a number of other MFN or non-discrimination clauses found elsewhere in the GATS. Specific MFN clauses that apply in various fields include:

- recognition of professional standards shall not be accorded in a manner which would constitute a means of discrimination between countries (*Article VII*);
- each Member shall ensure that any monopoly supplier of a service in its territory does not act in a manner inconsistent with that Member's obligations under Article II and other specific commitments (*Article VIII*);

[150] GATS *Article VIII*.
[151] GATS *Article IX*.
[152] GATS *Article XI* (prohibiting restrictions on transfers and payments for current transactions relating to its specific commitments) and GATS *Article XII* (balance of payments exception).
[153] GATS *Article XIV* and GATS *Article XIV bis*.
[154] These provisions are discussed *infra* in Part VI.C of this chapter.
[155] Sauvé, *supra* note 118, at 128.

- rules for emergency safeguard measures are to be negotiated on the principle of non-discrimination (*Article X*);
- restrictions to safeguard the balance of payments shall not discriminate among Members (*Article XII*);
- measures constituting general exceptions should not be applied in a manner which would constitute a means of arbitrary or unjustifiable discrimination between countries where like conditions prevail (*Article XIV*);
- market access treatment shall be no less favourable than that provided for under the terms agreed and specified in national Schedules (*Article XVI*);
- compensatory adjustments for modification of Schedules shall be made on a MFN basis (*Article XXI*);
- access to and use of public telecommunications transport networks and services, shall be accorded to any service supplier of any other Member on reasonable and non-discriminatory terms and conditions (GATS *Annex on Telecommunications*, *Article 5(a)*);
- specific commitments resulting from negotiations undertaken in an alternative approach under the Understanding on Commitments in Financial Services shall apply on an MFN basis (*GATS Understanding on Commitments in Financial Services, Preamble*).

The rights and obligations of a Member under *Article II* are determined by the following key concepts and terms: "*immediately," "unconditionally," "treatment," "no less favourable than," "any other country," "like services and service suppliers*."

"Immediately" means that the service suppliers of WTO Members are entitled to claim and enjoy MFN treatment as soon as a Member extends favorable treatment to the services or suppliers of any other country. As the intention is to place the beneficiary state on an equal footing with other trading states, *Article II*, like other MFN clauses, probably entitles the beneficiary to the benefit of more favorable treatment enjoyed by a third country, even if such treatment was extended before the entry into force of the treaty containing the clause.[156]

"Unconditionally" means that MFN treatment is extended without the need for equivalent compensation. During the negotiations some developed countries argued that MFN should be conditional, but the majority agreed that this would be detrimental on the ground that Members would be prevented from benefiting from concessions of other Members unless they could provide reciprocal concessions up to a certain level of liberalization. However as discussed below, Members were permitted to take country-specific exceptions to the MFN obligations during the negotiations.

"Treatment" replaces the language used in GATT Article I, which enumerated explicitly "any advantage, favour, privilege, or immunity." Term such as "treatment" avoids any risk of incompleteness of enumeration, it may run the risk of ineffectiveness if, in its application, it is interpreted too broadly.[157]

"No less favourable than" has a dual meaning. It means that the treatment provided to services and suppliers from any other Member must be at least *equal* to that granted in relation to any other country; it also means that the Member is not prevented from providing Members with treatment *more* favorable than that it provides to suppliers

[156] For discussion on this point, *see* Yi Wang, *Most-Favoured-Nation Treatment under the General Agreement on Trade in Services—and its Application in Financial Services*, 30(1) JOURNAL OF WORLD TRADE 91, 96 (1996).
[157] *Id*, 97.

from any non-Member. In the event that the Member provides more favorable treatment, other Members are of course at once entitled to claim the same additional favors and advantages as a new standard of MFN treatment. Thus the use of "no less favourable" is fully compatible with the objective of progressive liberalization under the GATS and is more suitable than terms such as "equal," "identical" or "similar."

"Any other country," as under the GATT, includes both WTO Members and non-Members. Thus, advantages granted to the services or suppliers of a non-Member country must also be extended to those of all WTO Members. The GATS itself, like the GATT, imposes no obligation on WTO Members to extend the benefit of negotiated agreements to non-Members. Unlike the GATT, however, the GATS contains an express provision underscoring that a Member may deny GATS benefits to the supply of a service from or in the territory of a non-Member.[158] A Member will only be obliged to extend GATS benefits to a third country non-Member under the terms of a bilateral arrangement between them that includes an unconditional MFN provision, without exception for multilateral treaties.

"Like services and service suppliers" are even more difficult to identify and define than the notion of "like products" under the GATT. The rule, in essence, is that the beneficiary may claim MFN treatment only in relation to the same category of services or service supplier as those of the most-favored third country. The process is complicated by the fact that the same service may be supplied through different modes of delivery and even by different means, or different categories of service suppliers.

The classification of services for the purpose of market access and national treatment commitments is not reliable as a means of determining "likeness" of foreign and domestic services and service suppliers. The absence of a prescriptive structure for classification of service activities means that Members may diverge from the recommended system of classification as they see fit,[159] resulting in possible variations in the description of the services sectors and subsectors in which commitments are made. While the resulting ambiguity has the advantage of flexibility for purposes of adaptation to commercial developments, it offers little assistance for the determination of "like services *and* like service suppliers."[160]

2. MFN Exemption

Article II.2 of the GATS reads in Part:

> A Member may maintain a measure inconsistent with paragraph 1 provided that such a measure is listed in, and meets the conditions of, the Annex on Article II Exemptions.

When the GATS came into force, a number of countries were party to existing preferential services agreements with trading partners, either bilaterally or in small groups. The Members agreed on the necessity of temporarily maintaining these preferences, and permitted the continuation of the discriminatory treatment in certain service sectors by listing "MFN exemptions" alongside their first sets of commitments. In order to protect the general MFN principle, the exemptions could in general only be taken during the negotiations, in accordance with *Article II.2* and the *Annex on Article II Exemptions*.[161] The *Annex* specifies that a MFN exemption must be applied for and agreed prior to the entry into force of the WTO Agreement. In practice, this was achieved through the

[158] GATS *Article XXVII(a).*

[159] *See* Appendix A to this chapter with respect to classification of services.

[160] *See* also discussion of "likeness" in regard to national treatment, *infra* text accompanying notes 252 to 258.

[161] GATS *Annex on Article II Exemptions.*

submission of lists at the end of the Uruguay Round or during the negotiations in specified sectors, such as telecoms and financial services that continued after the WTO Agreement had entered into force. The exemption lists form an integral part of the GATS. Since the entry into force of the WTO Agreement (on January 1, 1995) no further exemptions can be added to the lists, other than where permitted under extended sectoral negotiations, or, in the case of acceding Members, in accordance with their Protocols of Accession.

In contrast to the Schedules of Commitments under Part III of the Agreement, MFN exemption lists are straightforward in structure and largely self-explanatory. Each exemption is defined by five pieces of information listed as follows:[162]

- description of the sector or sectors in which the exemption applies;
- description of the exemption, indicating why it is inconsistent with *Article II*;
- the country or countries to which the exemption applies;
- the intended duration of the exemption; and
- the conditions creating the need for the exemption.

The effect of an MFN exemption is to relieve the Member from its *Article II* (MFN) obligations, without permitting any deviation from *Article XVI* (market access) and *XVII* (national treatment) commitments. Where it has taken an MFN exemption, therefore, a Member may provide to some Members market access or national treatment that is more favorable than the minimum scheduled in a specific sector, as long as the minimum standard is maintained in relation to *all* other Members. A Member is never permitted (on grounds of reciprocity or lack thereof, for example)[163] to accord to certain Members treatment less favorable than that specified in its Part III Schedule. Where there are commitments, an MFN exemption permits only "upward" discrimination, allowing provision of more favorable treatment. Where, however, there are no scheduled commitments in a sector or mode, an MFN exemption provides full scope for discrimination, permitting the Member, at its discretion, to provide treatment to Members that is either more or less favorable than national treatment. The threat of wholesale invocation of an MFN exemption in any single sector has proved to be a powerful tool, which some WTO Members have used to press other Members to make further commitments in sensitive service sectors, such as financial services and telecoms.[164] Under Paragraph 3 of the Annex on Article III exemptions, every exemption granted for a period of more than five years was made subject to review by the Council for Trade in Services no later than five years from the entry into force of the WTO Agreement.[165] Exemptions were not to exceed a ten year duration "in principle",[166] but would terminate on the date provided in the exemption,[167] and are, "in any event," negotiable during subsequent rounds of negotiations.[168] The words "in principle" and "in any event" appear to allow for the extension of exemptions beyond ten years, but the practical implications of this possibility are still under discussion.

[162] It was not necessary to list measures providing for preferential liberalization of trade in services among Members of economic integration agreements, such as free trade areas, because such preferential treatment is permitted under GATS *Article V* and must meet the criteria laid down in that article. See *infra*, text accompanying notes 179 to 193. For a discussion of economic integration under the GATS.

[166] GATS *Annex on Article II Exemptions*, *supra* note 161, ¶ 2.

[167] *Id*, ¶ 5.

[168] *Id*, ¶ 6.

Only in exceptional circumstances will a new MFN exemption be granted. The GATS requires that the requesting Member apply for a waiver under the procedure provided for in Article IX.3 of the WTO Agreement.[169] The request must first be submitted to the Council for Trade in Services, which reports to the Ministerial Conference within ninety days, before a decision is taken by a 75 percent majority of the WTO membership.[170] In practice, the qualified majority requirement has been replaced by consensus, although the matter may be put to a vote should any Member so wish.[171]

3. Contiguous Frontier Zones

Article II.3 of the GATS provides:

> The provisions of this Agreement shall not be so construed as to prevent any Member from conferring or according advantages to adjacent countries in order to facilitate exchanges limited to contiguous frontier zones of services that are both locally produced and consumed.

The third paragraph of *Article II* carves out an exception to the MFN principle for local trade in services between the "contiguous frontier zones" of adjacent countries. Services must be produced and consumed "locally," so that the exception cannot be used to justify delivery of services to the foreign market beyond the frontier zone. Questions immediately arise as to definition of the extent of the frontier zone, the nature of "locality" in relation to production and consumption, and whether the application of the exception extends equally to all modes of delivery. While there is no indication that a commercial presence should be viewed any differently from a cross-border supply of services, two forms of supply may be distinguishable on the basis of the likelihood of each remaining a local phenomenon. The establishment of a commercial presence in the foreign contiguous zone seems more likely than a cross-border supply, which intrudes beyond the frontier and therefore falls outside the exception, because the foreign frontier zone becomes the location of the center of supply rather than the end point of supply emanating from the supplier's national base. In each case, the application of the exception will turn on the origin of the services and locality of consumption.

B. Transparency (Article III and Article III bis)

GATS *Article III* is the principal provision on transparency in trade in services. *Article III bis*, addresses disclosure of confidential information.

For trade in services to operate effectively, there must be an adequate exchange of information about market access and restrictions upon entry and operation of foreign suppliers in the territories of those countries participating in the Agreement. *Article III:1* requires the publication of all relevant measures of general application pertaining to or affecting trade in services, as well as relevant international agreements to which the Member is a signatory.[172]

Article III.3 contains a duty to notify and "at least annually inform" the Council for Trade in Services of the introduction of new, or any changes to existing, national laws, regulations or administrative guidelines, which "significantly affect trade in services

[172] GATS *Article III:1*.

covered by its specific commitments" under Part III of the Agreement (market access and national treatment). Under *Article III:4* each Member must respond to requests by other Members for specific information on any of its published or notified measures and to establish an "enquiry point" for disseminating such information. *Article III.5* permits any Member to notify the Services Council of another Member's measure that it considers affects the operation of the GATS.[173]

Article III bis creates an exemption from the *Article III* transparency requirement, permitting Members to retain confidential information if its disclosure would:

- impede law enforcement;
- be contrary to public interest; or
- prejudice legitimate commercial interests of particular public or private enterprises.[174]

C. Increasing Participation of Developing Countries (Article IV)

Unlike the GATT, there is no major section of the GATS that contains provisions relating to special and differential treatment of developing countries, nor are there any provisions that confer on developing countries a set of special, preferential concessions. Instead, *Article IV* represents a deliberate attempt "to incorporate development considerations and the needs of countries at different stages of development as constituent elements of the agreement."[175] As noted above, the GATS preamble refers to "the development of developing countries" as one of the explicit objectives of the GATS. Given the asymmetries with respect to development of services regulations, the preamble also recognizes "the particular need of developing countries" to exercise the right "to regulate and to introduce new regulations, on the supply of services within their territories in order to meet national policy objectives."

Article IV builds upon one of the other main objectives in the preamble that refers to the desirability of facilitating "the increasing participation of developing country Members in trade in services and the expansion of their service exports." The means of achieving this are not through preferential arrangements but through the process of liberalization itself, i.e. the negotiation of specific commitments under Part III (Specific Commitments) and Part IV (Progressive Liberalization) of the Agreement, relating to the following specified matters:

- strengthening of domestic services capacity, efficiency and competitiveness through negotiated specific commitments on access to technology on a commercial basis;
- improvement of access to distribution channels and information networks; and
- liberalization of market access in sectors and modes of supply of export interest to them.[176]

In addition, Paragraph 2 of *Article IV* seeks to widen the scope of information available to developing country Members beyond increased transparency in relation to the regulatory aspects of the supply of services. It specifically calls upon developed country Members,

[173] GATS *Article III:5*.
[174] GATS *Article III bis*.
[175] *See* Ghosh, *supra* note 143, at 86.
[176] GATS *Article IV:1*.

"to facilitate the access of developing country Members' services suppliers to information . . . concerning" various issues. These include information about the "commercial and technical aspects of the supply of services," "registration, recognition and obtaining of professional qualifications" (a common barrier to labor mobility under Mode 4 supply) and "the availability of services technology."[177]

While negotiation in regard to sectors of interest to developing countries does not contravene MFN, the "special priority" requirement of *Article IV.3* in respect of least-developed country ("LDC") Members, regarding the implementation of the rest of the Article, almost certainly creates an exception. Particular account is to be taken of the serious difficulty of LDCs in accepting negotiated specific commitments in view of their special economic situation and their development, trade and financial needs.[178]

D. Economic Integration (Article V)

1. The Exemption

Just as GATT Article XXIV carves out a significant exception from MFN for customs unions and free trade agreements, so *Article V* defines the circumstances in which integration agreements between particular WTO Members for intensive liberalization in trade in services constitute a permissible MFN exemption. It should be noted that the absence of a services equivalent to import duties means that in the GATS context there is no distinction comparable to that between customs unions and free trade areas.

Article V permits WTO Members to enter into agreements (loosely referred to as "integration agreements") to liberalize trade in services among themselves, provided that the agreement has substantial sectoral coverage[179] and does not increase the general level of barriers to trade vis-à-vis other Members not party to the agreement. To qualify for the *Article V* exception, an integration agreement must provide for the "absence or elimination of substantially all discrimination" between or among the parties, either by eliminating existing discriminatory measures and/or prohibiting new ones.[180]

Article V:6 recognizes that it is not only Member states but also private entities, where they are legally constituted and doing business within the integration area, that may benefit from the principle of non-discrimination under the terms of the agreement. Thus, a "service supplier of any other Member that is a juridical person constituted under the laws of a party" to an economic integration agreement "shall be entitled to treatment granted under such agreement, provided that it engages in substantive business operations in the territory of the parties to such agreement."[181] This is an important innovation of the GATS because it takes account of private parties operating in the jurisdiction of individual WTO Members and is characteristic of the way in which services trade may impinge on local foreign investment requirements.

2. Substantial Coverage

While GATT Article XXIV requires that a free trade area or customs union provide for the elimination of duties and other restrictive regulations of commerce on "substantially all trade" between the constituent territories, the corresponding GATS provision

[177] GATS *Article IV:2 in extenso*.
[178] GATS *Article IV:3*.
[179] GATS *Article V:1(a)*.
[180] GATS *Article V ;1(b)*.
[181] GATS *Article V:6*.

(*Article V:1(b)*) requires that the economic integration agreement provide for "substantial sectoral coverage," understood in terms of numbers of sectors, volume of trade affected and modes of supply.[182] In meeting this condition, economic integration agreements should not provide for the *a priori* exclusion of any of the four modes of supply. These requirements are designed to prevent the conclusion of narrowly defined economic integration agreements covering only a few sectors or the provision of preferential treatment only in limited areas, such as foreign direct investment, that are linked to a particular mode of supply, such as commercial presence.

3. Elimination of Discriminatory Measures

In the covered sectors, *Article V:1(b)* requires the elimination of "substantially all discrimination," meaning all measures that discriminate in favor of services and service suppliers of domestic origin vis-à-vis those of other parties to the agreement. An exception is made for measures, permitted under certain provisions of the GATS on a contingent basis; these include the allowance for current account transfers (*Article XI*), and restrictions to safeguard balance of payments (*Article XII*), and general exceptions (*Article XIV*) and the security exception (*Article XIV bis*). In other words, parties to integration agreements must extend national treatment to each other's services and service suppliers across a substantial portion of their services economy without raising barriers in relation to trade in services with any Member outside the economic integration agreement.[183]

The language in the remainder of *Article V:1* makes it clear that the requirement to eliminate substantially all discrimination need not be met immediately, but might be achieved over a reasonable period of time, although this term is undefined.

Unlike its counterpart in GATT Article XXIV, *Article V:2* provides that an evaluation as to whether the elimination of substantially all discrimination has been achieved involves a consideration of "the relationship of the agreement to the wider process of economic integration or trade liberalization among the countries concerned" as a whole.

4. Notification and Examination

A WTO Member that is a party to an integration agreement must promptly notify the Council for Trade in Services[184] of the existence of the agreement and supply any relevant information that may be requested by the Council. As of December 5, 2003 some 27 economic integration agreements had been notified under *Article V.*[185]

Article V:7(a) provides that the Council for Trade in Services *may* establish a working party to examine an economic integration agreement, or the enlargement or modification thereof, in order to review its consistency with the provisions of *Article V*. Unlike the comparable procedure for notification and examination of customs areas and free trade agreements under GATT Article XXIV, the examination of integration agreements in the area of services trade remains an optional, rather than mandatory, requirement.[186]

[182] GATS *Article V:1 (a)*, footnote 1.

[183] GATS *Article V:4*.

[184] GATS *Article V:7(a).*

[185] *Interim Report (2003) of the Committee on Regional Arrangements to the General Council* ("*Interim Report (2003) CRTA"*), December 5, 2003, WT/REG/13 (July 7, 2003), para. 4.

[186] Compare the situation under GATT *Article XXIV*. A working party examination of a regional trade arrangement is required on the basis of section 7 of the *Understanding on the Interpretation of Article XXIV of the General Agreement on Tariffs and Trade 1994*, adopted by the Members at Marrakesh, in Annex 1A Multilateral Agreements on Trade in Goods. The analogous provision in GATS *Article V:7(a)* only states that the Council "may" establish a working party to examine an agreement.

Nevertheless, practice thus far, although sparse, shows that the Council for Trade in Services usually does refer the economic integration agreement to the WTO Committee on Regional Trade Arrangements ("CRTA")[187] for an examination and report to the Council. So far, the Council for Trade in Services has referred all 27 economic integration agreements notified under *Article V* to the CRTA.[188] As of December 2003, however, the CRTA had not completed a single examination report for any form of regional arrangement, whether notified under GATT Article XXIV, GATS Article V or the Enabling Clause.

5. Developing Countries

Where developing countries are party to an economic integration agreement, the two conditions of "substantial sectoral coverage" and "absence or elimination of substantially all discrimination" are to be interpreted with flexibility "in accordance with the level of development of the countries concerned, both overall and in individual sectors and subsectors."[189] In the event that *all* the parties to such agreement are developing countries, the GATS permits them to grant more favorable treatment to enterprises that are owned or controlled by natural persons of the parties to the agreement.[190]

6. Trade Creation

An important requirement regarding an economic integration agreement under *Article V* is that it should facilitate or *create* trade between parties to the agreement, while avoiding *diversion* of trade that would otherwise have been conducted with Members outside the agreement. To this end, parties to an economic integration agreement must ensure that the overall level of barriers to trade in the respective services sectors and sub-sectors is not raised beyond the level that applied before the agreement came into operation. This basic principle, set out in *Article V:4*, is similar to that contained in GATT Article XXIV.[191]

If, in conjunction with the "conclusion, enlargement or any significant modification" of an economic integration agreement a Member decides to withdraw or modify a specific commitment contrary to the terms and conditions of its Schedule of Specific Commitments, it must provide at least ninety days advance notice of its intention to do so.[192] In addition, under the procedure set out in paragraphs 2, 3 and 4 of *Article XXI*,[193] at the request of any "affected Member," the party seeking to withdraw or amend its commitment is required to enter negotiations, with a view to reaching agreement on any necessary compensatory adjustment.

E. Labor Markets Integration Agreements (Article V bis)

Article V bis is a special provision in the GATS that permits a specific form of economic integration agreement relating to the movement of persons. Essentially, it allows Members

[187] The Committee on Regional Trade Arrangements was established by Decision of the General Council of February 6, 1996, WT/L/127 (February 7, 1996). The CTRA's mandate is to carry out an examination of all types of regional trade arrangements, to consider how the reporting on the operation of agreements should be carried out and to make recommendations in this regard, to develop procedures to facilitate and improve the examination process and to provide a forum for the consideration of the systemic implications of regional trade arrangements and other regional initiatives for the multilateral trading system and the relationship between them, and to carry out any additional functions assigned to it by the General Council.

[193] *Id*.

to take part in agreements which establish "full integration of labour markets between or among the parties to such an agreement". A footnote to the provision makes clear that a typical labor markets integration agreement will provide citizens of the parties concerned a right of free entry to each other's employment markets. It will also typically include such matters as conditions of pay and other conditions of employment and social benefits.

Such labor market integration agreements are conditional upon two factors. First, such an agreement must "exempt citizens of parties to the agreement from requirements concerning residency and work permits"[194] and would normally only be relevant in those types of regional economic agreement where deeper integration has already taken place such as in the European Communities. Second, the labor market integration agreement must be notified to the Council for Trade in Services[195]; so far this has only been done in respect of a single agreement concerning a common Nordic labor market.[196]

F. Domestic Regulation (Article VI)

The GATS is also intended to provide a means of overcoming unnecessarily burdensome requirements that create barriers to trade in services. However, this is no mean task, given that barriers to trade in services are embedded in domestic regulation, unlike barriers to trade in goods that are usually imposed at the border.

In light of this, it is somewhat unfortunate that *Article VI* is one of the more difficult articles in the Agreement to understand fully, partly because the term "Domestic Regulation" is not clearly defined.[197] In literal terms, all regulations at the national level affecting trade in services are "domestic regulations." In the context of *Article VI*, however, most WTO Member governments agree that only certain types of measures are covered by the mandate in paragraph 4 of *Article VI* to develop any necessary disciplines on domestic regulation.

Specifically, as discussed below, nearly all WTO Members believe that the regulatory disciplines to be developed under paragraph 4 of *Article VI* apply only to non-discriminatory measures that are not already covered under *Article XVI (*market access) and *Article XVII* (national treatment), unlike the measures covered by paragraphs 1 to 3 and 6.

Before turning to a review of the specific developments that have taken place concerning paragraph 4 of *Article VI*, consideration should be given to the remaining paragraphs of that Article, which mandate both unconditional and conditional obligations.

1. Unconditional Obligations

With the apparent exception of *Article VI:4*, discussed below, *Article VI:2* is the only paragraph of *Article VI* that applies to all the services sectors covered by the GATS, regardless whether or not commitments have been entered into a Member's Schedule.

[194] GATS *Article V bis: (a)*.

[195] GATS *Article V bis: (b*.)

[196] Council for Trade in Services, *Notification Pursuant to Article V bis of the General Agreement on Trade in Services*, S/C/N/34 (Denmark notifying) (December 2, 1996), S/C/N/35 (Iceland notifying) (December 2, 1996), S/C/N/36 (Norway notifying) (December 2, 1996) and S/C/N/37 (Sweden notifying) (December 2, 1996) with respect to the *Agreement Concerning a Common Nordic Labour Market* and the protocol annexed to it, dated August 1, 1983.

[197] Generally speaking, the six paragraphs in GATS *Article VI* might be best understood as mandatory "good governance" provisions. Only *Article VI:3* actually mentions the term "regulation," referring to "domestic laws and regulations." Indeed, paragraphs 1 and 4 of *Article VI* refer to "measures," which are broadly defined under GATS *Article XXVII* (definitions) to include laws, regulations, rules, procedures, decision, administrative actions, etc.

Article VI:2(a) mandates the establishment of tribunals or procedures for the objective and impartial review of administrative decisions, to the extent they affect trade in services.[198] This is an extremely important GATS provision, as it helps to prevent arbitrary decision-making in any GATS sector, regardless of the level of liberalization inscribed in a particular Member's Schedule.

2. Conditional Obligations

Paragraphs 1, 3 and 6 of *Article VI* (paragraph 5 is discussed below) impose additional obligations on Members in the particular services sectors, or sub-sectors, where they have scheduled GATS commitments.

Article VI:1 calls for the "reasonable, objective and impartial" administration of all measures of general application. Again, this is primarily intended to prevent arbitrary administrative practices.[199]

Article VI:3, recognizing that authorization procedures, however benign in principle, potentially constitute a serious impediment to the provision of services, mandates that such authorizations be given within a "reasonable" period of time, and mandates the provision of information, upon request, concerning the status of the application for an authorization.[200]

Recognizing the high level of regulation in this area, *Article VI:6* contains the only reference in the Agreement to professional services, mandating the establishment of "adequate procedures" to verify the competency of professionals from any other WTO Member.[201] It must be emphasized, however, that while a Member is obligated to provide market access (and national treatment) in accordance with its GATS commitments, such market access is provided only to appropriately qualified service providers, as determined by the Member concerned.

Although it could be argued that *Article VI:6* is redundant, in light of the existing obligations imposed by *Articles XVI and XVII*, it can also be argued strongly that it serves, if nothing else, to remind Member governments that, if they decide to grant market access in professional services, they are required to facilitate the entry of qualified foreign professionals in a reasonable manner.

3. Mandated Development of Regulatory Disciplines

During the Uruguay Round, WTO Members recognized the potentially restrictive effects of domestic regulatory measures, and agreed to develop specific disciplines to ensure that government regulations are not unduly trade restrictive. The result was *Article VI:4*, which refers to three specific types of domestic regulation (licensing requirements, qualification requirements and procedures, and technical standards), and mandates WTO Members to develop "any necessary disciplines." Progress to date in implementing this mandate is examined in detail in Appendix A to this chapter.

[198] GATS *Article VI:2* (b) exempts a Member from this requirement if it would be "inconsistent with its constitutional structure or the nature of its legal system."

[199] To date, the terms "reasonable, objective, and impartial" have yet to be defined in the GATS or GATT context. See WTO ANALYTICAL INDEX: GUIDE TO WTO LAW AND PRACTICE (WTO Secretariat, Geneva, 2003) and GATT, ANALYTICAL INDEX: GUIDE TO GATT LAW AND PRACTICE, 6th edition (GATT Secretariat, Geneva, 1995).

[200] Paragraph 16 of the *Decision on Accountancy Disciplines*, as well as the current work of the Working Party on Domestic Regulation ("WPDR"), both of which are discussed in Appendix B to this chapter, attempts to give greater specificity to this requirement.

[201] To date, however, no discussion has yet taken place in the WTO services context regarding the meaning of the term "adequate procedures."

It should be remembered that the preamble to the GATS explicitly recognizes "the right of Members to regulate, and to introduce new regulations, on the supply of services within their territories in order to meet national policy objectives."[202] Nonetheless, the GATS does set out specific rules, either in *Article VI* or elsewhere, to prevent regulations from unduly restricting trade. The objective, as Paragraph 4 states, is to help insure that measures "do not constitute *unnecessary* barriers to trade in services" (emphasis added), thereby recognizing the legitimacy of regulatory measures, even when they may be burdensome.

As already noted, Members generally agree that *Article VI:4* applies only to non-discriminatory measures that are not subject to scheduling under the GATS provisions regarding market access and national treatment. Considering that *Article VI:4* gives no direct indication of the types of measures covered, arriving at this conclusion involves a slightly complex process of deduction. An explanation is to be found in *Article XVIII*, which states, "Members may negotiate commitments with respect to measures affecting trade in services not subject to scheduling under *Articles XVI* or *XVII*, including those regarding qualifications, standards or licensing matters."

The strongest argument, however, in regard to the application of *Article VI:4* is that a legal distinction must be made between measures under *Article VI:4*, and those under *Articles XVI* and *XVII*, in order to protect the regulatory rights of governments. Specifically, applying *Article VI:4* to limitations entered under *Article XVI* and *Article XVII* would reduce the right of governments to schedule according to their domestic policy objectives. Equally important, if *Article VI:4* measures (for example regulations for ensuring consumer protection) were required to be scheduled, they would thereby become subject to negotiation and could not easily be modified or strengthened. This could directly contradict the regulatory rights recognized in the Preamble to the GATS.[203]

Although the text of *Article VI:4* does not state that any regulatory disciplines developed under its mandate should be applicable only where specific commitments have been made, most WTO Members are firmly of this view, with the possible exception of certain transparency provisions.[204]

4. Period Pending the Development of Regulatory Disciplines

Since it was anticipated that it would take time before regulatory disciplines could be developed in accordance with *Article VI:4*, provision was made for the intervening period. Thus, until the entry into force of any disciplines to be developed under *Article VI:4* the rather weak requirements of *Article VI:5* are in effect.[205]

Article VI:5 requires that, in sectors where specific commitments have been made, the Members concerned will not apply domestic regulations that nullify or impair those commitments, unless such domestic regulations could have reasonably been expected at the time the specific commitments were made. This weakness of *Article VI.5*, i.e. the

[202] Preamble to the GATS, fourth recital. In this respect, it should also be emphasized that the GATS does not presume to give Member governments the right to regulate; instead, it explicitly recognizes that right. *See also* the paper prepared by the WTO Secretariat, *Article VI:4 of the GATS: Disciplines on Domestic Regulation Applicable to all Services*, S/C/W/96 (March 1, 1999) *("Article VI:4 Disciplines: Background Note")*, 2, ¶¶ 7–9.

[203] In this regard, *see id*, 3–4, ¶¶ 12–14.

[204] *See*, for example, Minutes of the WPDR meeting of October 22, 2002, S/WPDR/M/18 (December 3, 2002), at 3.

[205] Aaditya Mattoo, "*National Treatment in the GATS: Corner Stone or Pandora's Box?*" 31:1 JOURNAL OF WORLD TRADE LAW 118, 129 (1997).

nullification or impairment requirement, the "grandfathering" of existing measures, and the application only where specific commitments have been made, is probably due to the caution of Member governments with respect to the broad scope of *Article VI:4* resulting from the prevalence of domestic regulations in services.

One of the most interesting aspects of *Article VI:5* is the very weak provision on international standards. Section (b) of Paragraph 5 states that only those international standards being applied by a Member can be used to determine whether that Member is in conformity with the obligations under *Article VI:5.* Overall, the weakness of GATS provisions on international standards is in firm contrast to the TBT and SPS requirements for goods, which strongly encourage the use of international standards.[206]

5. Implementing the Domestic Regulation Mandate

Due to the potentially very wide-ranging effects of GATS *Article VI:4*, as well as to the fact that the GATS was a new and untested agreement, WTO Member governments have proceeded very slowly and cautiously in their efforts to implement the mandate to develop any necessary disciplines on domestic regulation. The results of these efforts, most notably the creation of the Accountancy Disciplines by the Working Party on Professional Services ("WPPS"), as well as the current work of the Working Party on Domestic Regulation ("WPDR"), are detailed in Appendix A.

G. Recognition (Article VII)

Corporations or natural persons supplying services generally have to obtain certificates, licenses or other authorizations that entitle them to do business in the jurisdiction of a particular WTO Member. Foreign suppliers often find it difficult to obtain such certificates, licenses or authorizations, because of the differing regulatory requirements that exist relating to education and vocational qualifications and work experience. *Article VII* forms the basis for introducing some discipline into the matter of "recognition," although the term itself is undefined.[207] An important point to note is that *Article VII* does not mandate recognition; instead it authorizes it.[208]

The actual scope of *Article VII* is broad in two respects. First, it covers virtually all domestic regulatory instruments that directly impact on the supply of a service. Second, it anticipates a range of possibilities that would include not only rules of harmonization but also rules of recognition, either on a mutual, plurilateral or autonomous basis. Just as it is unclear what recognition means in *Article VII*, there is no indication as to who is actually competent to negotiate and enter into legally enforceable mutual recognition commitments, despite the delegated authority implicit in the provision itself (one could speak of "imperfect delegation" in this respect), nor who is responsible for actual implementation of mutual recognition instruments.[209]

In order to overcome such difficulties, paragraphs 1 and 2 of *Article VII* urge Members to enter into bilateral and multilateral arrangements for the mutual recognition of the qualifications required for obtaining those necessary certificates, licenses or authorizations,

[206] *See Article VI:4 Disciplines: Background Note*, *supra* note 202, at 9–10, ¶¶ 35–42.

[207] Americo Beviglia Zampetti, *Market Access through Mutual Recognition: the Promise and Limits of GATS Article VII*, in Sauvé and Stern, *supra* note 5, at 294.

[208] Kalypso Nicolaïdes and Joel P. Trachtman, *From Policed Regulation to Managed Recognition in GATS*, in Sauvé and Stern, *supra* note 5, at 241, 261 and 264.

[209] Beviglia Zampetti, *supra* note 207, at 294.

or otherwise to accord such recognition on an autonomous basis.[210] *Article VII:2* further provides that such mutual recognition arrangements should be open for accession by other Members, if they can demonstrate that their domestic standards and requirements are comparable with those of the arrangements concerned. Similarly, if a Member accords recognition on an autonomous basis then any other Member must be afforded adequate opportunity to demonstrate that education, experience, licenses, or certifications obtained or requirements met, are worthy of recognition. *Article VII* thus provides an exception to *Article II* (MFN) but makes it conditional upon applying certain disciplines on recognition arrangements "designed to prevent them being used to dilute entirely the MFN obligation."[211]

Furthermore, there is a transparency requirement in Paragraph 4 of *Article VII*, in that Members wishing to enter into negotiations for a mutual recognition agreement are required to inform the Council for Trade in Services as to their intent so as "to provide adequate opportunity to any other Member to indicate their interest in participating in the negotiations before they enter a substantive phase."[212] So far 117 notifications have been received under *Article VII:4*, of which the majority are from Latin American countries (almost all related to educational and professional qualifications obtained abroad), from the United States (in the fields of accountancy, architectural services and engineering qualifications), from Switzerland and/or Liechtenstein (in the fields of educational and professional qualifications, transport services, mining, health, auditing qualifications, direct insurance services and patent agents), two from the European Communities (in the fields of direct insurance and banking including exemptions for the United States and Japan from German banking laws), from Australia (in the fields of accountancy, architectural services, engineering, surveyors professional qualifications), from Latvia (in the field of educational qualifications), from Norway (related to legal qualifications) and from Macao (in the fields of auditing qualifications and health services).[213]

Finally, there is a recommendation in Paragraph 5 of *Article VII* that Members should "(W)herever appropriate" base recognition on "multilaterally agreed criteria," and to that end should work in "co-operation with relevant intergovernmental and non-governmental organizations towards the establishment and adoption of common international standards and criteria for recognition." However, this provision allows considerable discretion to WTO Members as to whether to follow international standards by prefacing the relevant recommendation with the wording "(W)herever appropriate," in contrast to, for example, the Agreement on Technical Barriers to Trade, Article 2.4 or the Agreement on Sanitary and Phytosanitary Measures, Article 3.1.

[210] The only Member that has thus far indicated that it accords recognition on an autonomous basis is Singapore; *see Notification Pursuant to Article VII:4 of the General Agreement on Trade in Services*, S/C/N/30 (October 30, 1996), in which Singapore states that it "does not maintain recognition measures based on agreements" but "accords recognition autonomously".

[211] Nicolaides and Trachtman, *supra* note 208, at 265.

[212] Beviglia Zampetti, *supra* note 207, at 298–299.

[213] Aaditya Mattoo, *Developing Countries in the New Round of GATS Negotiations: From a Defensive to a Pro-Active Role*, unpublished paper for the WTO/World Bank Conference on Developing Countries in a Millennium Round, Geneva, September 20–21, 1999, at 24, n. 29. Since 1996, the following Members have notified Mutual Recognition Agreements (MRAs) to the Council for Trade in Services under GATS *Article VII:4*: Argentina, Australia, Brazil, Chile, Colombia, Costa Rica, Cuba, EC (and Germany, as EC Member), El Salvador, Guatemala, Latvia, Liechtenstein, Macao, Norway, Switzerland, U.S. and Venezuela. The Council for Trade in Services appears never to have issued a comprehensive list containing all notifications, despite requests to this effect from some of the Members.

H. Monopolies and Exclusive Service Supplies (Article VIII)

Market failure due to the exercise of monopoly or oligopoly powers in any given domestic market may create trade problems because incumbent service suppliers can impede access to the domestic market in the absence of appropriate regulation. It is not unusual to find a high degree of anti-competitive practices within a range of service industries. They are particularly common in infrastructure services like telecommunications, for example the exclusive provision of local service while engaging in competition on long-distance terrestrial and mobile telephone markets, or in some branches of the transport sector, where the presence of "cabotage" may also impede market access.

Anti-competitive behavior can also include the exclusivity of the service provider(s) in a particular market. An example of this could be the presence in the financial sector of certain so-called "club arrangements," which are primarily professional associations and groupings with specific objectives involving matters like payment systems, quotation, dealing and clearing and settlement systems in securities markets.

Even so, the relevant GATS provision, in *Article VIII*, is extremely limited in scope.[214] Paragraph 1 of *Article VIII* requires Members to ensure that monopoly service suppliers do not abuse their monopoly or, through the grant of an exclusive right, act in a manner which is "inconsistent" with their general or with their specific commitments as set out in their Schedule. A further conditional obligation is found in Paragraph 2 of *Article VII* which requires Members to prevent the "abuse" of a monopoly position by a domestic service supplier (either directly or through an affiliated company) where it is competing in the supply of a service over which it does not have monopoly rights but which is subject to that Member's specific commitments.

Furthermore, the Council for Trade in Services can, at the request of a Member affected by such anti-competitive behavior, initiate a request for information from the Member in whose territory the service supplier is established or which maintains or authorizes such supplier, concerning its operations.[215] Similarly, should a Member grant any monopoly or exclusive rights for the supply of a service which is covered by its specific commitments, after the date of entry into force of the WTO Agreement, then it is under a duty to notify the Council for Trade in Services in accordance with Paragraph 4 of *Article VIII. Article VIII:5* applies the provision to *de minimis* exclusive service suppliers where those suppliers substantially prevent competition among other suppliers in the territory.

I. Business Practices (Article IX)

GATS *Article IX* recognizes that service suppliers could adopt practices that "may restrain competition and thereby restrict trade in services", i.e. restrictive business practices pure and simple but potentially broader in scope than *Article VIII.* Whenever a problem of this type occurs, *Article IX* gives the affected Member the right to request the Member where the service supplier is located for mandatory consultations with a view to eliminating such practices.

J. Payments and Transfers (Article XI)

While there is no provision analogous to GATT Article XI, containing a general prohibition on quantitative restrictions, the GATS nevertheless has other provisions with a

[214] *Id*. at 22.
[215] GATS *Article VIII:3.*

similar application. One of these is GATS *Article XI*,[216] which contains a prohibition on the imposition by Member of international payments and transfer restrictions that are connected to market access commitments, which it has undertaken and bound in its respective Schedule of specific commitments.

GATS *Article XI:2* contains a double "savings clause." First, the GATS shall not affect the rights and obligations of Members, which are simultaneously IMF Members (or have entered into exchange agreements with the Fund). Second, this is conditional on a Member not seeking to impose restrictions on capital transactions that are inconsistent with its specific commitments unless covered by the balance of payments exception of GATS *Article XII* (see hereunder) or at the request of the Fund.[217]

K. Restrictions to Safeguard the Balance of Payments (Article XII)

GATS *Article XII* recognizes that the process of economic development or transition may put pressure on the balance of payments of some Members, necessitating the use of restrictions to maintain a level of financial reserves adequate for the implementation of its program of economic development. The provision therefore permits Members in the event of serious balance of payments or external financial difficulties, or the threat thereof, to adopt or maintain restrictions on trade in services on which it has undertaken specific commitments and any payments or transfers for transactions related to such commitments.

Some strict rules apply to the imposition of restrictions under *Article XII*. The restrictions:

- may not discriminate among Members;
- must be consistent with the Articles of the IMF;
- must avoid unnecessary damage to the interests of other Members;
- may not exceed those necessary to deal with the circumstances; and
- must be temporary, and progressively phased out.[218]

In applying restrictions, Members are permitted to give priority to those services essential to their economic or development programs, as long as they do not do so with the *purpose* of protecting a particular service sector.[219] Restrictions adopted, maintained or changed must be notified to the WTO General Council.[220] Members imposing restrictions must also consult promptly with the WTO Committee on Balance-of-Payments Restrictions in order to assess the BOP situation of the Member and the restrictions adopted or maintained.[221] A further provision makes it clear that these consultations must be conducted in accordance with the procedures established by the Ministerial Conference,[222] taking into account the following factors:

[216] A similar prohibition on the maintenance or adoption of restrictive measures, other than where specified in a Member's Schedule, can be found at GATS *Article XVI:2* (Market Access).
[217] GATS *Article XI:2*.
[218] GATS *Article XII:2*.
[219] GATS *Article XII:3*.
[220] GATS *Article XII:4*.
[221] GATS *Article XII:5(a)*.
[222] GATS *Article XII:5(b)* and footnote thereto, where it is stated that these procedures should be same procedures as those set out in the *Understanding on the Balance-of-Payments Provisions of the General Agreement on Tariffs and Trade 1994*.

- the nature and extent of the balance-of-payments and external financial difficulties;
- the external economic and trading environment; and
- alternative corrective measures available.[223]

L. General Exceptions (Article XIV)

Like GATT Article XX, the general exceptions provision found in GATS *Article XIV* sets out the bases on which a Member may deviate from application of the basic GATS rules on certain public policy grounds, including the adoption of enforcement measures to protect public morals, to maintain public order, or to protect human, animal or plant life, or health. While these grounds are similar to those contained in GATT Article XX, *Article XIV* provides additional general exceptions relating to the prevention of deceptive practices, and the protection of privacy. It also contains specific exceptions to the *Article II* MFN requirement and the national treatment requirement of *Article XVII.*

While permitting adoption of such measures where exceptional circumstances prevail, the Agreement also imposes limitations on their use. The *chapeau* to GATS *Article XIV*, like that of GATT Article XX, requires that the measures not be applied in a manner that would constitute a means of "arbitrary" or "unjustifiable" discrimination between countries where like conditions prevail, or constitute "a disguised restriction on trade in services." In effect, as Arup points out: "(T)he GATS disciplines carry over tests of acceptability from the GATT which appear to represent a mixture of concerns . . . to ascertain the genuineness of the motives behind . . . the measures . . . (and) . . . to limit the effect of the genuine measures on trade."[224]

Subject to that requirement, Members may adopt or enforce measures that are inconsistent with the GATS that are:

a. necessary to protect public morals or to maintain public order (*Article XIV(a)*);
b. necessary to protect human, animal or plant life or health (*Article XIV(b)*);
c. necessary to secure compliance with laws or regulations that are not inconsistent with the GATS, including those relating to:
   - the prevention of deceptive and fraudulent practices to deal with the effects of a default on services contracts;
   - the protection of the privacy of individuals in relation to the processing and dissemination of personal data and the protection of confidentiality of individual records and accounts; and
   - safety (*Article XIV (c)*).

Members may also adopt measures that are inconsistent with *Article XVII* (national treatment), if the difference in treatment is aimed at imposing and collecting direct taxes in regard to services or service suppliers of other Members (*Article XIV(d)*); and measures that are inconsistent with *Article II* (MFN), if the difference in treatment is the result of an agreement for the avoidance of double taxation (*Article XIV(e)*).

Although the general exceptions to the GATS parallel those found in GATT Article XX, they of course omit those measures that apply specifically to goods.[225] GATS

[223] GATS *Article XII:5(c)*.
[224] ARUP, *supra* note 116, at 130.
[225] GATS *Article XIV* makes no reference to the specific subjects areas contained in GATT *Article XX* under (*c*) imports and exports of gold and silver, (*e*) products of prison labour, (*f*) national treasures, (*g*) exhaustible

Article XIV does, however, include those provisions corresponding to XX(a), (b) and (d), as they apply equally to services industries. Paragraphs (a) and (b) of GATT Article XX and GATS *Article XIV* are almost identical, and GATS *Article XIV(c)* is similar to GATT Article XX(d) in that it permits measures "necessary to secure compliance with existing laws or regulations" not inconsistent with the provisions of the respective Agreement. While GATT examples of this include enforcement of customs laws and monopolies, intellectual property and prevention of deceptive practices, the non-exhaustive list set out in the GATS focuses on the prevention of deception, fraud and even default in relation to services contracts, as well as the protection of individual privacy and safety.

GATS *Article XIV(d)* permits measures that would otherwise contravene the *Article XVII* national treatment principle, provided that the differential treatment is "aimed at ensuring the equitable or effective imposition or collection of direct taxes." Thus, the issue as to how the GATS might deal with pre-existing tax measures was resolved by adopting a "common ground approach"[226] whereby tax measures affecting service suppliers required no justification under *Article XIV* unless they violated an obligation or commitment under the Agreement.[227] Additionally, a note to *Article XIV(d)* contains an understanding by the Members that direct taxation applies only to the collection of taxes that are imposed on the services themselves or on their suppliers. The fiscal "carve-out" even goes so far as to recognize the discretion of individual WTO Members, in that the relevant tax definitions and concepts under *Article XIV(d)* are determined in accordance with equivalent provisions in the domestic law of the Member taking the measure. The exception fails however to "acknowledge the broader role service suppliers such as professionals play in constructing tax avoidance schemes and the need to regulate services supply on this basis."[228]

GATS *Article XIV(e)* permits measures inconsistent with GATS *Article II* (MFN), provided that the differential treatment results from an international agreement for the avoidance of double taxation. This provision may, however, be of little utility. While double taxation agreements were, at one time, concluded in order to prevent the imposition of conflicting requirements on those operating in more than one country, globalization has led to their increasing obsolescence as firms increasingly operate in several jurisdictions, underscoring the need for greater international regulatory cooperation in the field of taxation rather than the bilateral approach.[229]

Although the GATS general exception provision remains untested in the WTO dispute settlement system, a panel or the Appellate Body might, if called upon, be expected to follow the same approach as that formulated in respect of the general exceptions under GATT. In accordance with WTO case law,[230] the application of the GATT test calls for a

natural resources, (*h*) governmental commodity agreements, (*i*) export restrictions on domestic materials and (*j*) acquisition or distribution of products in short supply.

[229] *Id*.

[230] WTO Panel Report and Report of the Appellate Body, *United States—Standards for Reformulated and Conventional Gasoline ("US—Gasoline")*, WT/DS2/R (1996), and WT/DS2/AB/R (1996); WTO Panel Report and Report of the Appellate Body, *United States—Import Prohibition of Certain Shrimp and Shrimp Products ("US—Shrimp")*, WT/DS58/R (1998), and WT/DS58/AB/R (1998); WTO Panel Report and Report of the Appellate Body, *European Communities—Measures Affecting Asbestos and Asbestos-Containing Products ("EC—Asbestos")*, WT/DS/135 (2000) and WT/DS 135/AB/R (2000).

two-step analysis. First, the domestic measure must be provisionally characterized under one of the subparagraphs (a) to (j) of GATT Article XX (in a GATS situation, paragraphs (a) to (e) of GATS *Article XIV*). The second step requires an appraisal of the measures to ensure that they satisfy the criteria of the *chapeau*, which are almost identical to those contained in the *chapeau* to GATT Article XX.[231]

The sequence of these steps has proved to be important, at least in the WTO jurisprudential interpretation of GATT Article XX(d) (regarding measures necessary for securing compliance with existing laws or regulations), and may be equally so in the interpretation of GATS *Article XIV(c)*. In order to characterize a measure as one that falls within GATT XX(d), the Appellate Body has required demonstration of two elements: that the measure is designed to "secure compliance" with laws or regulations that are not themselves inconsistent with some provision of the GATT, and that it is "necessary" to secure such compliance.[232] Similarly, the burden of showing that this requirement has been met falls to the Member seeking to justify a measure by invoking the GATS *Article XIV(c)* exception.

The Appellate Body has already, in the context of GATT Article XX, provided an interpretation of the word "necessary." In *Korea—Beef* the Appellate Body considered that those "measures which are indispensable or of absolute necessity or inevitable to secure compliance certainly fulfil the requirements of Article XX(d)" but others "may fall within the ambit of this exception." The term "necessity" referred to a range of degrees of necessity that called for a weighing and balancing of a series of factors in each case.[233] In *EC—Asbestos*[234] the Appellate Body took the opportunity to elaborate upon *Korea—Beef* in finding that "necessity" could also be determined on the basis of the extent to which a WTO-consistent alternative measure contributes to the realization of the end pursued, as well as the more vital or important common interests of the value pursued.

This interpretation of the necessity requirement in GATT Article XX may be relevant with respect to paragraphs (a), (b) and (c) of *GATS Article XIV*. It appears to move away from a "least trade-restrictive" test, in which a measure is "necessary" only if it is the *least* restrictive alternative, toward a broader basis for justification (which could be called a "*less* trade-restrictive" approach), supplemented by a process similar to a proportionality test for "weighing and balancing a series of factors." Indeed, the development of such a proportionality test could occur in the services sector not only in relation to the general exceptions clause of GATS *Article XIV* but also (and more likely) in developing disciplines on domestic regulation under GATS Article VI:4 (*See* commentary on GATS Part II. F.3, 4 and 5 above).

M. Security Exceptions (Article XIV bis)

The GATS security exceptions are almost identical to those contained in GATT Article XXI. They include the disclosure of information that a Member considers contrary to its national security interests, as well as action that a Member considers necessary for the

[231] The only difference being that the *chapeau* in GATS *Article XIV* speaks of "where like conditions prevail," as compared to "where the same conditions prevail" in the preambular language of GATT *Article XX*.

protection of its essential security interest:

- relating to the supply of services for the provisioning of a military establishment;
- relating to fissionable or fusionable material; and
- taken in time of war or other emergency in international relations.[235]

Further, WTO Members shall not be prevented from undertaking "action in pursuance of . . . obligations under the United Nations Charter for the maintenance of international peace and security", i.e. in compliance with their obligations under Chapter VII of the Charter should the need arise.[236]

The GATS also contains a transparency provision that is absent from the GATT security exception. Under paragraph 2 of GATS *Article XIV bis*, the Services Council is not simply to be notified, but "shall be *informed to the fullest extent possible* . . ." of measures taken under paragraphs 1(b) and (c).[237] That language mirrors a Decision taken by the GATT Contracting Parties in 1982, which stated that "subject to the exception in Article XXI(a), Contracting Parties should be informed to the fullest extent possible of trade measures taken under Article XXI."[238]

PART III. SPECIFIC COMMITMENTS

Part III of the Agreement departs from the simplicity of the GATT-regime with respect to market access and national treatment. It encourages Members to make specific commitments in each of these two areas in order to liberalize their trade in services and to guarantee the type of treatment to be accorded in respect of all measures "affecting" the supply of services[239] in the sectors inscribed in their Schedules and subject to any conditions or qualifications set out therein. As barriers to trade in services arise largely from internal measures, rather than those applied at the "border," it can be expected that they will receive different treatment under the GATS. In essence, although no neat parallels can be drawn, such barriers can be divided roughly into two groups. The first comprises broadly quantitative restrictions under GATS *Article XVI*,[240] while the second includes discriminatory measures subject to national treatment disciplines under GATS *Article XVII*.

A. Market Access (Article XVI)

1. Overview

In accordance with Paragraph 1 of GATS *Article XVI*, Members, in respect of market access through the four modes of supply, are under an obligation to accord services and service suppliers of other Members treatment "no less favourable than that provided for under the terms, limitations and conditions agreed and specified in its Schedule." Although the Article contains no express definition of "market access," it in effect offers a description by providing an exhaustive list of the measures which are in principle prohibited by a market access commitment. Unless otherwise indicated by a reservation

[235] GATS *Article XIV bis:1(b)*.
[236] GATS *Article XIV bis:1(c)*.
[237] GATS *Article XIVbis:2*.
[238] See *Decision Concerning Article XXI of the General Agreement of November 30, 1982*, L/5426, BISD 29th Supp. 23–24 (1983), ¶ 1.
[239] The definitional clause in GATS *Article XXVIII* (definitions) is broadly framed so as to define "supply of a service" to include "production, distribution, marketing, sale and delivery of a service."
[240] With the exception of GATS *Article XVI:2(e)*.

in its Schedule, Article XVI:2 requires Members to refrain from maintaining or adopting measures falling into any of the following six categories of restrictions in the inscribed sectors:

(a) limitations on number of suppliers
(b) limitations on total value of service transactions (including any form of "economic needs test") or assets
(c) limitations on operations or total quantity of service output
(d) limitations on value of transaction
(e) measures which restrict the type of legal entity through which services may be supplied, and
(f) limitations on the participation of foreign capital or investment.

With the exception of *Article XVI:2(e)* (type of legal entity), the types of measures that are covered by *Article XVI* are approximately equivalent to quantitative restrictions in the GATT.

The following are important points with respect to *Article XVI.* First, not all potential barriers to services are, in principle, prohibited by Paragraph 2 of *Article XVI.* For example, there is no requirement that tax measures be scheduled as long as such measures are not discriminatory with respect to other Members' suppliers or domestic suppliers. Thus, a Member may maintain a high tax on services, potentially impairing market access, without contravening the GATS. Second, the "types" of restrictions prohibited by *Article XVI* (unless reserved by a specific limitation) encompass both discriminatory measures, applying only to foreign services or entities, and non-discriminatory measures, which would apply equally to foreign and domestic entities. Third, scheduled limitations on market access are to be read as guarantees of minimum treatment; there is nothing to prevent a Member from providing more favorable treatment if it so chooses. For example, if a Member states that it will limit entry to three service providers in the sector, there is no reason why it cannot permit entry to five providers if it chooses to do so.

2. The Relationship Between Market Access and National Treatment

GATS *Article XVI* raises a number of difficult issues, particularly in regard to its relationship with the national treatment obligation in *Article XVII*. Uncertainty about the meaning of specific commitments arises because the precise domains of market access and national treatment have not been clearly delineated; further ambiguities are created by the act of scheduling that makes "the degree of intended discrimination in a market access commitment unclear."[241] This is due to the fact that the restrictions that are in principle prohibited by *Article XVI* encompass both discriminatory and nondiscriminatory measures, which creates a potentially confusing overlap between the domains of market access and national treatment.

Thus, measures that are inconsistent with both *Article XVI* and *Article XVII* give rise to potential divergence between market access and national treatment commitments and ambiguity of interpretation of those commitments. What is the status of commitments in regard to a measure that falls in the domain of both market access and national treatment, where the Members' commitments with respect to the two are not the same? *Article*

[241] Patrick Low, *Comment* on Rudolf Adlung; *Services Trade Liberalization from Developed and Developing Country Perspectives* in Sauvé and Stern, *supra* note 5, at 136, 137. *See also* Patrick Low and Aaditya Mattoo, *Is There a Better Way? Alternative Approaches to Liberalization under GATS* in Sauvé and Stern, *id*, at 449, 450–451.

XX:2 partially answers this question by providing that if a measure that is inconsistent with both Articles XVI and XVII is inscribed as a limitation in the *Article XVI* (market access) column, it will be considered to provide a condition or qualification to national treatment, under *Article XVII*, as well.[242]

Article XX:2 does not, however, address the situation in which a Member enters a full commitment to provide national treatment, but makes no commitment to market access. An example of this is found in the Schedule of Commitments of Australia.[243] In regard to 'real estate services involving own or leased property (821)', Australia indicates in the market access column:

1) commercial presence required
2) commercial presence required
3) None
4) Unbound except as indicated in the horizontal section.

Under national treatment, the entries are as follows:

1) None
2) None
3) None
4) Unbound except as indicated in the horizontal section.

The entry 'commercial presence required' under market access modes 1 and 2 only reiterates that there are no limitations on mode 3 delivery of services, and indicates that Australia remains 'UNBOUND' as to access by cross-border supply and consumption abroad. Whereas no market access commitment is made in relation to those two modes, services under the same modes are guaranteed full national treatment ('NONE'). In such a situation, it is not clear whether the Member (in this case Australia) is free in future to introduce a discriminatory quantitative restriction that will affect entry by foreign suppliers.

One theory is that the Member is obliged to respect the national treatment obligation with regard to all measures covered by *Article XVII*, including those (discriminatory) measures that are also covered by *Article XVI*. Under this proposition, the scope of the national treatment obligation might be over-expansive and not reflect the true intention of the respective Member.

Another reading of Paragraph 2 of *Article XX:2* is that an entry of "UNBOUND" in relation to market access is in fact a limitation and applies to all measures inconsistent not only with *Article XVI* but also with those that contravene both *Articles XVI* and *XVII*.[244] By this interpretation, meaningful commitments in relation to all quantitative restrictions, including those that are discriminatory, can be made only under market access. In the absence of a market access commitment, a full national treatment commitment ("NONE") would guarantee non-discrimination only in relation to measures falling solely within the scope of Article XVII. It would thus preclude discriminatory quantitative restrictions that come under Article XVI. If this line of argument were accepted then the need to

[242] The *Scheduling Guidelines*, *infra* note 248, interpret this to mean that any *discriminatory* measure scheduled in the market access column is also to be regarded as scheduled under, and subject to the provisions of, GATS *Article XVII*. In other words, commitments on market access can be subordinated to national treatment. The *Scheduling Guidelines* further recommend that Members state in the market access column that the inscription 'also limits national treatment'.

[243] *See* sample Schedule set forth in the commentary on GATS Article XX, *infra*.

[244] *See* Mattoo, *supra* note 205.

define the boundary between the market access and national treatment obligations would largely disappear.

B. National Treatment (Article XVII)

1. Overview

GATS *Article XVII* requires that each Member accord foreign services and service suppliers treatment that is "no less favourable" than that accorded its own "like services" and "like service suppliers". This obligation applies with respect to any measures affecting the supply of services in the sectors inscribed in its Schedule, subject to any limitations expressly set out therein.

The national treatment obligation in the GATS is wider in scope but more limited in application than that in the GATT. While GATT is concerned with measures affecting products *per se*, the GATS addresses not only services, but also service suppliers. While the GATT applies to internal taxes and other charges and "all laws, regulations and requirements" affecting internal commercial transactions in relation to products, treatment of services applies simply "in respect of all measures affecting the supply of services." The GATS obligation applies, however, only selectively, to specified sectors and activities, as determined by each Member in its Schedule of specific commitments[245] whereas national treatment in the GATT applies to all imported goods, whether or not they are the subject of a scheduled tariff concession.

Article XVII:2 elaborates on the standard of treatment to be provided, expressly recognizing that "national" treatment does not require "identical" treatment of national and foreign services and suppliers. However, under Article XVII:3, formally identical or formally different treatment is considered to be "less favourable" if it modifies the conditions of competition in such a way that domestic services or suppliers are favored over like services or suppliers of any other Member. The treatment may be either formally identical or formally different, so long as the competitive conditions remain equally favorable to foreign and domestic services and their suppliers.

There are several problems in the interpretation of the GATS national treatment obligation that have an important effect on the operation of the Agreement. The first is the ambiguity as to the precise extent of *Article XVII*, particularly as it relates to *Article XVI* (market access). This was discussion at some length in the previous discussion of market access. The second issue is whether a national treatment commitment extends to all modes of supply, or whether Members retain the right to discriminate between identical services supplied in their territory through different modes. The third issue, which has also already been touched upon in relation to MFN treatment under GATS, is the definition of "likeness" of services and service suppliers.

2. National Treatment and Modes of Supply

Unlike *Article XVI*, which describes treatment "with respect to market access *through the modes of supply* . . ." there is nothing in the text of *Article XVII* to suggest that the national treatment obligation should be fragmented by reference to different modes of delivery. It says that national treatment is to be applied "in the *sectors* inscribed in its Schedule, and subject to any conditions and qualifications set out therein . . ." (emphasis supplied). *Article XX* requires that the specific commitments undertaken by each Member be set out in a Schedule and obliges Members to specify, "with respect to *sectors* where such

[245] *See* Sauvé, *supra* note 118, at 133.

commitments are undertaken" under paragraph (b), the "conditions and qualifications on national treatment"[246] (emphasis supplied).

These provisions raise two questions about the national treatment obligation. The first is whether a national treatment commitment (with qualifications and limitations) is modal, permitting discrimination between modes of delivery, or whether it extends equally to all modes of delivery in the services sector in which a market access commitment has been made. The second question is whether a national treatment commitment is autonomous from a market access commitment, or whether national treatment applies only once a market access commitment has been made.

As to the first, it must be accepted that national treatment commitments are mode specific. The scheduling of commitments by reference to modes of supply necessarily implies a fragmentation of the national treatment obligation in a way that was not anticipated in the text of the Agreement.[247] A Member may retain the right to discriminate between identical services supplied through different modes, by withholding its guarantee of national treatment in any particular mode. Both the structure of the schedules, and the scheduling conventions, contemplate that national treatment commitments must be considered on a modal, rather than sectoral basis. The *Scheduling Guidelines*[248] at paragraph 43[249] state:

> Regardless of what is inscribed in the market access column, a "no limitations" entry in the national treatment column (expressed as "NONE") would mean that national treatment is bound for the entire mode; it is not limited to what may be bound in a market access commitment with limitations. Thus, if a Member makes a commitment under Article XVI in a sector, where commercial presence is limited to partnerships, an entry "NONE" or any other entry in the national treatment column would refer to the whole mode of supply and not only to partnerships.

Whether the national treatment obligation is necessarily triggered by a market access commitment is more ambiguous. *Article XVII* requires national treatment "in the sectors inscribed in its schedule," rather than "in the sectors where market-access commitments are undertaken." Similarly, although the *Guidelines* state that a sector should not appear in the schedule if all modes of supply are "UNBOUND,"[250] they do not indicate whether "UNBOUND" refers to market access alone or also to national treatment commitments. Elsewhere, the *Guidelines* say that "depending on the extent to which a Member has limited market access and national treatment, for each commitment with respect to each

[246] Contrast this situation with the case of trade in goods: with regard to trade in goods, there is a relatively clear distinction between border measures and internal measures. In the GATT, apart from MFN, which applies equally to both types, border measures are subject primarily to GATT *Article II* (scheduling of tariffs) and GATT *Article XI* (elimination of quantitative restrictions), while internal measures are subject to the national treatment obligation under GATT *Article III*. At the time of the negotiation of the GATT, a debate arose as to whether national treatment should be limited solely to the items in the tariff schedules, in keeping with the alleged intention that GATT *Article III* was solely to protect the GATT *Article II* concessions. The majority view was that national treatment should extend to all imported products, whether or not they were the subject of a binding tariff concession, because the purpose of GATT *Article III* included the prevention of the use of internal taxes and regulations as a system of protection.

[247] Mattoo, *supra* note 205, at 121.

[248] *Guidelines for the Scheduling of Specific Commitments under the GATS*, S/L/92 (28 March 2001) ("*Scheduling Guidelines")*. The *Scheduling Guidelines* is the result of a revision of earlier *Guidelines* (MTN.GNS/W/164 and Explanatory Note MTN.GNS/W /164/Add.1) by the Committee on Specific Commitments (CSC).

[249] *Scheduling Guidelines*, *id*, ¶ 43.

[250] *Id*, ¶ 46.

mode of supply," four possible levels of commitment can be contemplated. Again, "each commitment" might equally refer to market access or to national treatment. *Article XIX:1*, entitled "Negotiation of Specific Commitments," on the other hand, indicates that negotiations for progressive liberalization are to be directed to the reduction or elimination of the adverse effects on trade in services of measures "as a means of providing effective market access."

In practical terms, while there may be no legal barrier to expressing a commitment to full national treatment in the absence of a market access commitment in any mode, there is little incentive for doing so. Schedules only occasionally inscribe sectors in which the entries show "UNBOUND" (market access) and "NONE" (national treatment), with the exception of "unbound except for horizontal commitments" (under both market access and national treatment) in one mode.[251] Mostly, a full national treatment commitment in all four modes arises where there is a market access commitment in regard to at least one mode. In the Australian real estate services example discussed in regard to market access, full national treatment was accompanied by a commitment to market access in regard to mode 3, commercial presence.

3. "Like Services and Service Suppliers"

The meaning and extent of the national treatment obligation depends on the definition of "like services and service suppliers" in the GATS. As pointed out in relation to most-favored nation treatment, the concept of likeness in relation to services is more difficult to define than the same notion in regard to goods. An initial comparison with the GATT shows that the national treatment obligation as expressed in GATS *Article XVII* (and GATT Article III:4) differs from that in GATT Article III:2[252] in that it refers only to "like services and service suppliers" and does not extend to "directly competitive or substitutable services."[253]

Physical characteristics, such as those used to determine likeness of goods, are not relevant for determining "likeness" in the GATS context. The *United Nations Provisional Central Product Classification* (or *UN CPC*)[254] of services, on which the *Services Sectoral Classification List* is based,[255] is not as well developed as the Harmonized System that is used for scheduling tariff concessions for goods, nor are Members bound to follow it absolutely. Further, the recommended services classification may distinguish between services products not on the basis of qualitative differences for consumption purposes but because they fall into different regulatory classes. Given, however, that the classification was developed and used for the negotiation of both market access and national treatment commitments, it could be argued that it represents mutually accepted product distinctions,

[251] As explained in Part IV.B.2. horizontal commitments are commitments made with respect to all sections, in contrast with the so-called "vertical," sector-specific commitments.

[252] *See also Ad Article III*, ¶ 2 to GATT Article III:2.

[253] It has been argued that the concept of "like" services in the GATS, if it is to equal in scope the concept of "like" products in GATT Article III:2, should be interpreted broadly, to include services that are "directly competitive or substitutable": Mattoo, *supra* note 205, at 127. This suggestion is, however, based on a reference to the second sentence of GATT Article III:2—which, as interpreted by *Ad Article* III, applies to "directly competitive or substitutable" products—a provision that is notably absent in the GATS.

[254] *United Nations Provisional Central Product Classification*, Statistical Papers Series M No. 77 (New York: United Nations, 1991). *("UN CPC").* The UN CPC has been updated on two occasions—CPC Ver. 1.0 (1997) and Ver. 1.1 (2002)—for a complete description of both versions, see: http://unstats.un.org/unsd/cr/registry/ (visited September 12, 2003).

[255] *See* Appendix A to this chapter *infra*, for an extensive discussion of classification of services and development of the *Services Sectoral Classification List* (or W/120), and *supra* note 110.

and that being allocated to different sub-sectors in the classification should be sufficient criteria for "unlikeness."

The answer to the reverse question: whether inclusion in the same narrowly defined sub-category of the classification can be considered to confer "likeness," is not as obvious. Given the high degree of aggregation of services under the system, the classification of services into even the finest of sub-categories will at best create a rebuttable presumption of likeness with one another.[256]

As is true of goods,[257] probably the most appropriate basis for comparing likeness in services is the "end use" of the product as appreciated by the consumer. End use also incorporates the commercially relevant concept of "directly competitive or substitutable," reflecting the way in which consumers treat services: whether they view them as substitutes for one another.

Whatever the criteria for determining an *a priori* concept of likeness, there is nothing to stop Members from imposing various regulatory distinctions, which, although they may be subject to challenge by other WTO Members, may be difficult to tackle in the GATS context. Aaditya Mattoo elaborates a good example of this in his article "*National Treatment in the GATS: Corner-Stone or Pandora's Box?*."[258] He describes a situation in which Member X, having made full market access and national treatment commitments in relation to transport services, imposes a regulation to the effect that drivers in X are required to train in its own schools and hold national drivers licenses. The restriction is not expressly discriminatory, as drivers from Member Y have access to the training facilities in X and the measure applies equally to X citizens, even if they have been trained abroad.

To determine that the measure is a *de facto* violation of *Article XVII*, on the grounds that it has a disproportionate impact on foreign drivers, requires a finding of likeness. The burden of determining likeness would fall on the complaining Member Y, who would simply argue that drivers from X and Y provide "like" services. X might assert that because drivers from Y have qualified under different training standards, their services are not "like" those of its national drivers. Since standards in any two countries are rarely going to be exactly the same, the question remains as to how much discrepancy is required to constitute "unlikeness". The situation could also put a WTO Panel in the awkward position of having to impose a decision on the local transport authorities of X. If it were to find that the services are "like", it would have to recommend that X give unconditional access to foreign drivers. Of course, if it were to find that they were "unlike," the national treatment rule would not apply, regardless of the extent of the difference in treatment applied by X.

As a third alternative, a Panel might recommend that X requires foreign drivers to take a competency test rather than compulsory local training as a less restrictive means of reaching the same objective. It is not, however, clear that GATS *Article XVII* can be read to contain a necessity test that would permit a Panel to assess the stringency of a measure, i.e. to ask whether the measure was necessary, or the least trade-restrictive means, to promote the objective, in this case of road safety. The general exception provision in *Article XIV* contains such a test, but it can only be invoked if inconsistency with *Article XVII* is demonstrated under paragraph (d) thereof, making it difficult for a panel to avoid the question of "likeness."

[256] Mattoo, *supra* note 205, at 128.

[257] With respect to goods, this approach was endorsed in *EC –Asbestos*, *supra* note 230, Appellate Body Report, ¶ 119.

[258] Mattoo, *supra* note 205, at 128.

C. Additional Commitments (Article XVIII)

GATS Article XVIII permits Members to make additional commitments, which are neither market access nor national treatment, in a particular sector. It facilitates the negotiation of commitments on "measures that reach beyond the purview of the GATS, relating, for example, to qualifications, standards or licensing matters."[259] While the conception of *Article XVIII* was linked to that of *Article VI*, which establishes a work program for the development of disciplines to ensure that qualifications, standards or licensing measures do not constitute unnecessary barriers to trade in services, the scope of *Article XVIII* is wider than that of Article *VI:4*, providing potential for negotiation of commitments on matters other than qualifications, standards or licensing.[260] While *Article XVIII* provided a legal framework for Members to address restrictive measures not falling within the scope of *Article XVI* or *XVII*, it was considered that a more long-term systemic solution would be desirable.[261]

As of July 2002, additional commitments had been undertaken by 72 Members in a number of services sectors, the majority of which were in telecommunications, maritime and financial services, with a few in professional and distribution services. In recording their additional commitments, Members have used different methods, sometimes simply describing the undertakings in individual text entries, or, more often, using a separate annex or note to the schedule, incorporated into the fourth column by reference.[262] In particular sectors, where mutually agreed model schedules were developed, a number of regulatory items were entered in the additional commitments column of the model.

In the draft telecommunications *Reference Paper*, for example, a "shopping list" of topics was included, most of which can be found in the *Reference Paper* in its current form.[263] Similarly, column four of all drafts of the "maritime model schedule" contained additional commitments regarding "access to/use of" port services and multimodal transport services. With the exception of the special case of the *Understanding on Commitments in Financial Services*,[264] some of the provisions of which, when incorporated in a schedule would constitute additional commitments, only a few WTO Members explicitly undertook additional commitments during the negotiations on financial services concluded in December 1997 by means of the Fifth Protocol to the GATS.[265]

The types of measures addressed in the additional commitments column also vary. In the telecommunications sector, for example, the most common inscriptions relate to competitive safeguards, provisions for independent regulators, interconnection, universal service obligations, allocation and use of scarce resources and licensing provisions. In other sectors, licensing conditions, requirements and/or procedures, services/product approval procedures, "access to and use of" infrastructural services, future undertakings

or elimination of measures (with or without dates), use of firm names and final-user price-setting mechanisms.[266] Less frequently, inscriptions in the fourth column of schedules provides for the future review of policies, best-endeavor clauses regarding licensing procedures, future undertakings conditional upon the passage of legislation, description of current policy, areas where foreign suppliers are or may be permitted, contractual arrangements between suppliers, and temporary movement of personnel of a firm.[267]

PART IV. PROGRESSIVE LIBERALIZATION

Part IV of the GATS, entitled "Progressive Liberalization," consists of *Articles XIX* (negotiation of specific commitments), *XX* (scheduling of commitments), and *XXI* (modification of schedules). Progressive liberalization is one of the key objectives of the GATS, "as a means of promoting the economic growth of all trading partners and the development of developing countries."[268]

It should be noted that the main obligation undertaken by Members in Part IV of the GATS is simply to enter into successive rounds of negotiations. It is not mandatory that specific commitments be made in regard to market access or national treatment. Where such commitments are made, however, certain obligations flow. *Article XX*, for example, requires that the commitments be set out in a national Schedule, which is annexed to, and forms an integral part of, the Agreement. Further, *Article XVI:2 and Article XVII:1*, both in Part III, oblige the Member having made the commitments to execute them by providing market access in accordance with the terms, conditions and limitations in its Schedule, and treating foreign services and services suppliers no less favorably than it would treat its own like services and service suppliers.

A. Negotiation of Specific Commitments (Article XIX)

GATS Article XIX requires WTO Members to enter into successive rounds of negotiations, commencing no later than five years from the effective date of the WTO Agreement, with a view to achieving a progressively higher level of liberalization of services markets. In accordance with this "built-in" agenda, services negotiations began in 2000 and were continued under the Doha Agenda, which was launched in November 2001.[269] In line with the timeframe for the rest of the negotiations undertaken in the Doha Round, the services negotiations were due to conclude by December 31, 2004, but were subsequently extended to the date of the next Ministerial Meeting in 2005.

B. Scheduling of Commitments (Article XX)

1. Overview

Article XX of the GATS requires each Member to set out in a national Schedule the specific commitments it undertakes. With respect to each section as to which commitments are made, the Schedule is to specify:

[266] *Additional Commitments under Article XVIII of the GATS*, *id*, ¶ 7.

[267] *Id*, ¶ 8. Examples of individual text entries can be found in Attachment 1 to *Additional Commitments under Article XVIII of the GATS*, *id*.

[268] *Preamble* to the GATS, second recital.

[269] *Ministerial Declaration*, adopted on November 14, 2001 at the Ministerial Conference, Fourth Session, Doha, November 9–14, 2001, WT/MIN(01)/DEC/1 (November 20, 2001) *("Doha Ministerial Declaration")*, ¶ 15, reproduced in the Appendix to this book.

(a) terms, limitations and conditions on market access;
(b) conditions and qualifications on national treatment;
(c) undertakings relating to additional commitments;
(d) where appropriate the time-frame for implementation of such commitments; and
(e) the date of entry into force of such commitments.

The Schedules are annexed to, and form an integral part of, the GATS.[270] By the end of the Uruguay Round, on April 15, 1994, the Members had agreed upon 95 schedules of services commitments (and 61 lists of MFN derogations). The Schedules are complex documents in which each Member identifies the service sectors to which it will apply the market access and national treatment obligations that of the GATS and any exceptions from those obligations that it wishes to maintain. In each case, the commitments and limitations are entered with respect to the four modes of supply by which "trade in services" is defined in GATS Article I. These are cross-border supply, consumption abroad, commercial presence and presence of natural persons.[271] The lists of MFN exemptions[272] are also integral to the GATS, and must be read in conjunction with the scheduled commitments.

Only by reference to a Member's Schedule, and (where relevant) its MFN exemption list, can one ascertain the services sectors and conditions to which the basic principles of the GATS will apply within the jurisdiction of that Member. A determination of the real level of market access represented by a Schedule requires an examination of the range of activities covered in each service sector and the limitations on market access and national treatment pertaining to the different modes of supply. It is also necessary to examine the list of MFN exemptions in order to assess the extent to which the Member is permitted to provide preferential treatment to, or discriminate against, one or more of its trading partners.

The WTO provides some assistance for understanding the scheduling process, and for obtaining and reading the Schedules of its Members. The Council for Trade in Services, through the Committee on Specific Commitments, has recently undertaken a major revision of the official guidelines on scheduling, resulting in the *Guidelines for the Scheduling of Specific Commitments under the GATS*, adopted March 23, 2001 ("*Scheduling Guidelines*").[273] Instead of binding rules in respect of scheduling, the revised *Scheduling Guidelines* take the form of an explanatory note. The intention was to improve the scheduling guidelines on the basis of practical experience since 1993, and to explain in concise terms how specific commitments should be set out in Members' individual Schedules. The adoption of a common format for scheduling as well as standardization of the terms used in services Schedules is intended to ensure that commitments made by Members are comparable and unambiguous. The *Scheduling Guidelines* also annex a list of documents relevant for scheduling purposes.[274]

The Trade in Services Division of the WTO also maintains a *Services Database*,[275] which contains downloadable Schedules of commitments and lists of GATS Article II (MFN) exemptions of those Members which were members of the WTO prior to

[270] GATS *Article XX:3*.
[271] GATS *Article I:2*.

December 31, 1999. The database does not include data on current negotiations or the schedules of WTO Members that have acceded since January 2000. Where further negotiations[276] resulted in schedules of commitments (GATS/SC/*/suppl.x) to supplement the original schedules of commitments (GATS/SC/*)[277], the Services Database provides one consolidated and up-to-date schedule for each country.

2. Horizontal Commitments

The national Schedules all conform to a standard format that is intended to facilitate comparative analysis.[278] In most Schedules, the commitments are divided into two sections. The first section contains horizontal commitments, the second section contains the secured vertical commitments made with regard to specific sections. Horizontal commitments stipulate limitations that apply to all of the sectors inscribed in that Member's Schedule, so it is important that any evaluation of sector-specific commitments take the horizontal entries into account. A Member might, for example, reserve the right to impose limitations on the supply of services in any sector in accordance with the terms of a pre-existing bilateral or regional investment treaty. Often horizontal commitments refer to limitations by mode of supply, such as commercial presence (mode 3) or movement of natural persons (mode 4); a common example of the latter is a limitation on access to executives and senior managers for a specified period of time.[279] Such limitations qualify the mode 3 and 4 entries made in every sector in which there is a commitment.

3. Sectoral Commitments

The second part of the Schedule contains the specific commitments that apply to trade in services in a particular sector or subsector based on negotiation. These sectoral commitments and any limitations on them are completely voluntary, but once a sector is scheduled, it is subject to the generally applicable obligations in the GATS, including any further norms that may be developed.[280] Some of the *general* obligations under the GATS, such as MFN and transparency, apply to the treatment actually provided by a Member, in any services sector, irrespective of its scheduled commitments. Others are applicable only in the context of specific commitments.[281]

(a) Hybrid Listing Approach. Part III of the GATS implicitly adopts an approach to the scheduling of services commitments that allows Members to gradually build up obligations through a process of "positive listings" of sectoral commitments. This "bottom up" approach is in contrast to the negative listing, or "top-down" approach adopted by the North American Free Trade Agreement ("NAFTA"), which operates on the premise that all service sectors are liberalized, unless they are circumscribed by specific restrictions.

[276] After the end of the Uruguay Round, negotiations took place in the WTO on the issue of movement of natural persons (1995) as well as sectorally, viz. basic telecommunications (1997) and financial services (1998). During these negotiations not all WTO members participated. Those Members that participated in the basic telecommunications and financial services negotiations made new commitments specifically in those sectors.

[277] * is a number which represents a specific country.

[278] See model schedule, attached as Annex I to the *Scheduling Guidelines*, *supra* note 248, and reproduced in text accompanying note 313, *infra* below.

[279] *See e.g., Australia—Schedule of Specific Commitments*, GATS/SC/6 (April 13, 1994) *("Australian Schedule")*.

[280] Arup, *supra* note 116, at 103.

[281] See for example *GATS Article XI*, which prohibits restrictions on international transfers and payments for current transactions relating to a Member's specific commitments.

Once a commitment has been made, however, the services sector is considered to be fully liberalized, unless limitations are itemized to the contrary in relation to individual modes of delivery; this combination of "positive" and "negative" listing requirements of the GATS may be referred to as a "hybrid" approach. The NAFTA approach may be less favorable, as it can lead countries to "carve out" broad reservations to keep their regulatory options open.[282] Still, there is potential for the same thing to happen under the GATS. A prudential carve-out has, for example, been included in the technical *Annex on Financial Services*, permitting national supervisory and regulatory authorities to take measures for prudential reasons.[283] The positive listing approach has the added disadvantage that a WTO Member may choose not to commit itself, by an inscription in its Schedule, to the degree of liberalization that it in fact provides in a particular services sector. It can therefore be difficult, or impossible, to get a clear picture of the regulatory barriers that exist in a particular service sector for a particular Member.

(b) Nature of Commitments. The Schedule of each Member, including its footnotes, headnotes and attachments, is a record of legally binding commitments.[284] The inscription of a service or sub-sector in a Schedule is a legal undertaking by a Member to provide market access and national treatment in relation to a service activity, on the terms and conditions specified in the Schedule. If a WTO Member does not wish to make a commitment in a particular mode or sector, it may enter "UNBOUND" in the specific commitments of its Schedule, indicating that, at least for the time being, it is maintaining its freedom to regulate the sector so as to restrict the entry of foreign suppliers.

By its commitment, a government therefore binds the specified level of market access and national treatment and undertakes not to impose any new measures that would restrict entry into the market or the operation of the service. This operates like a guarantee to foreign economic operators that the conditions of entry and operation in the market will not be changed to their disadvantage. Commitments can only be withdrawn or modified after the agreement of compensatory adjustments with affected countries and no withdrawals or modifications could be made until three years after entry into force of the Agreement.[285] Such modifications of commitments may not affect the application of most-favored-nation treatment. Commitments can however be added or improved at any time.

(c) Scheduling Sectoral Commitments.

(i) What Must be Scheduled The Schedule of sectoral commitments is a table comprising four columns.[286] The first column contains a description of the sector or subsector that is the subject of the commitment. In the second and third columns, the Member

[282] Others take the view that the NAFTA approach is preferable because it requires each country to list all of its restrictions. *See* Part II.A.3 of this chapter, *supra*, *Regional Approaches to the Regulation of Trade in Services: European Communities and NAFTA*, (b) *NAFTA*.

[283] See GATS *Annex on Financial Services* ("GATS *Financial Services Annex*"), ¶ 2 (Domestic Regulation) and *infra*, text accompanying note 630. *See also* Chapter 20 of this book.

[284] *Scheduling Guidelines*, *supra* note 248, ¶ 3.

[285] *See* GATS *Article XXI*, discussed below. However, under GATS *Article X:2* a Member could withdraw a commitment after one year from its entering into force provided that it notified the Council on Trade in Services and demonstrated that it could not wait until the end of the three-year period. An early report by the Secretariat on notifications in general, indicated that none had been made up to that point under GATS *Article X:2*; *see* Council for Trade in Services—*Notifications under the General Agreement on Trade in Services*—Note by the Secretariat, S/CSC/W/34 (July 14, 1997), 2.

[286] *See* the schematic version of a Schedule of vertical commitments, Annex 1 to the *Scheduling Guidelines*, *supra* note 248, included at the end of this section.

lists limitations on market access and limitations on national treatment, respectively. A sector-specific commitment applies to trade in services in a particular sector. If, in the context of such a commitment, a measure is maintained which is contrary to *Article XVI* (market access) or *Article XVII* (national treatment), then it must be entered as a limitation in the appropriate column. In each case this requires four entries, corresponding to the four modes of supply, for each sector or sub-sector inscribed. The entry should describe the measure concisely, indicating the elements that make it inconsistent with *Article XVI* or *Article XVII*, and may refer to the legal basis of the measure. In the fourth column, governments may enter any additional commitments that are not subject to scheduling under market access or national treatment.[287]

Also to be scheduled are the "time-frame for implementation of commitments,"[288] and the "date of entry into force of such commitments."[289] Attachments may be used, as long as it is made clear which part of the schedule they refer to.[290] If a commitment is not intended to cover the whole national territory, the entry should describe the geographical scope of the measures taken.[291] An example of this is Australia's national treatment limitations on mode 3 (commercial presence) delivery of legal services.[292] In New South Wales and Victoria at least one partner in a firm engaged in advising on foreign law matters must be a permanent resident; in Queensland at least one equity partner in a foreign law firm must be resident for a minimum period of 180 days per calendar year.

The following is a description of the information that must be inscribed in each column of the schedules. Terminology used in Schedules is standardized as much as possible although the descriptions of limitations entered in the market access and national treatment columns will vary according to the circumstances of the Member.

column 1: sector, subsector or services activity

The GATS articles on market access, national treatment and scheduling require, by implication, that commitments be undertaken on a sectoral basis. They each refer to "sectors where . . . commitments are undertaken"[293] or "in the sectors inscribed. . . ."[294] Subject to its negotiations with other participants, it is the Member that identifies the sectors, subsectors or activities that are listed in its Schedule, and it is to these alone that the commitments apply. A market access or national treatment commitment in a sector or sub-sectors inscribed in the Schedule does not imply that a service supplier in that sector is permitted to supply uncommitted services that are *inputs* to the committed service.[295]

The scope of the committed sectors varies greatly from, for example, "banking and other financial services" to "noise abatement services." Reflecting the recommended classification system,[296] the order in which the sectors are listed in most of the schedules corresponds to the twelve broad sectors listed in the *Services Sectoral Classification List (W/120)*, discussed in Appendix A to this chapter. In most cases, the sectoral entries are

also accompanied by numerical references to the *UN CPC*, which gives a detailed explanation of the services activities covered by each listed sector or subsector and on which the W/120 is based.[297] Where this is not possible, listings are to provide a sufficiently detailed definition to avoid any ambiguity as to the scope of the commitment. A clear description of the subject sector, subsector or activity is essential to the efficacy of the commitment. Given the inadequacies of W/120 framework experienced by Members in regard to many commercial sectors, a work program in relation to sectoral classification and definition is continuing under the auspices of the Committee on Specific Commitments. This work in regard to classification is addressed in some detail in the Appendix to this chapter.

column 2: market access[298]

For each sectoral market access commitment, with respect to each mode of supply, four cases can be foreseen: full commitment, commitment with limitations, no commitment and no commitment technically feasible. In all cases, any relevant limitations listed in the horizontal commitments continue to apply.[299] If a Member makes a *full commitment* it grants full market access in a given sector and mode of supply, and does not seek to limit the market access in any way through measures inconsistent with *Article XVI.* In this circumstance, the Member will enter "NONE" in the market access column. "NONE" in the market access column (sectoral section) must, however, be read as subject to the conditions set out in the horizontal section, unless it is expressly indicated, either in the horizontal or the relevant sectoral section, that no horizontal restrictions apply in the sector in question. Where *no commitment* is made, the Member remains free with respect to a given sector and mode of supply to introduce and maintain measures inconsistent with market access. In this situation the Member must record "UNBOUND" in the appropriate column. This entry is only relevant if the Member has made a commitment in that sector with respect to at least one mode of supply. If all modes of supply are unbound and there are no additional commitments undertaken, then the sector need not appear on the Schedule at all.

Where a particular mode of supply is *technically unfeasible*, such as the delivery of dentistry services by cross-border supply, the Member should enter "UNBOUND*." The asterisk should refer to a footnote, which states "unbound due to lack of technical feasibility." If the entry that was thought to be unfeasible becomes applicable in the future, it simply means "UNBOUND."[300]

By a sectoral *commitment with limitations* a Member may bind either an existing situation ("standstill") or a more liberal situation in which the commitment involves the removal of certain existing restrictions on market access ("rollback"), but while still maintaining limitations that are inconsistent with *Article XVI*, which must be described them in the market access column.[301] As discussed above, those measures that must be specified as a limitation on market access fall into six categories.[302] The list is an exhaustive one, comprising four types of quantitative restriction—limitations on the number of service suppliers, the total value of service transactions or assets (including

[297] *UN CPC, supra* note 254.
[299] *Scheduling Guidelines*, *supra* note 248, ¶ 42.
[300] *Id.*, ¶ 47.
[301] For example, a Member which had not permitted foreign banks to operate at all might make a commitment to opening its market only to a limited degree, e.g. as to the number of foreign banks allowed or the type of legal entity permitted (branch or subsidiary).
[302] GATS *Article XVI:2*.

the requirement of an economic needs test), the total number of service operations on the total quantity of service output, and the total number of employees—limitations on the type of legal entity through which a supply may be delivered, and limitations on foreign equity participation.

Market access commitments should describe each measure concisely, indicating the elements that make it inconsistent with *Article XVI.*[303] It is not sufficient to enter terms such as "freeze" or "standstill." In some cases, Members have chosen to indicate a limited commitment by describing what they are offering rather than the limitations they are maintaining. Such an approach may be used to indicate market access opportunities for the entry of certain categories of foreign natural persons who supply services, and possibly to reflect current entry provisions contained in their foreign investment laws.

The four quantitative restrictions may be entered in a number of ways: numerically, as in the case of numerical ceilings which should be expressed in defined quantities in either absolute numbers or percentages; through other criteria specified in the relevant sub-paragraph (a) through (d); or through the description of an economic needs test.

Although reference to the "requirement of an economic needs test" is made four times in *Article XVI*, "economic needs test" is not defined anywhere in the GATS. The purpose of an economic needs test is to facilitate restrictions upon market access according to the economic need of the limiting Member, which raises issues that have been investigated by the WTO Council for Trade in Services as well as the UNCTAD and OECD Secretariats.[304] According to the *Scheduling Guidelines*, economic needs test entries should indicate with some precision the main criteria on which the test is based.

Approval procedures, licensing and qualification requirements should not be entered as market access limitations if they do not contain any of the elements specified in *Article XVI*. The *Guidelines* are helpful in providing descriptions of typical market access limitations drawn from the schedules of specific commitments.[305]

column 3: national treatment[306]

The national treatment obligation under *Article XVII* of the GATS is to accord to the services and service suppliers of any other Member treatment no less favorable than is accorded to domestic services and service suppliers. A Member wishing to reserve the right to impose any limitations on national treatment, i.e. any measures that result in less favorable treatment of foreign services or service suppliers, must indicate these limitations in the third column of its Schedule. There is no obligation in the GATS that requires a Member to impose the national treatment limitations that it has reserved to itself in the Schedule.

Neither is there any obligation on a Member to 'take measures' outside of its territorial jurisdiction,[307] where they might apply, for example, to a service supplier located in another Member. This should not be read to imply that the national treatment obligation has no application to modes 1 and 2. While in principle a national treatment commitment applies to all modes of delivery of service, it may not be practicable for a Member to implement restrictions extraterritorially. While this prospect may inhibit the Member from entering a full commitment, given that modes 1 and 2 consumers ultimately reside

[303] *Scheduling Guidelines*, *supra* note 248, ¶¶ 9 and 44.
[304] *See* in particular, Council for Trade in Services, Special Session, *Economic Needs Tests*, Note by the WTO Secretariat, S/CSS/W/118 (November 30, 2001).

[307] *Scheduling Guidelines*, *supra* note 248, ¶ 15.

in the territory of the Member, and mode 1 services will be delivered there, it is possible to envisage certain national measures, such as restrictions on advertising, that Members might use to limit national treatment.

In regard to national treatment, like market access, any one of the four levels of commitment may be undertaken with respect to each sectoral commitment and mode of supply. "NONE" entered in the national treatment column means that a Member has made a *full commitment* to accord, in that sector and mode, conditions of competition no less favorable to services or service suppliers of other Members than those accorded to its own like services and service suppliers. It also means that the Member has made a binding commitment for the entire sector/mode, regardless of market access restrictions that may limit entry to only a portion of the service suppliers in that sector.[308] As in the case of market access, a full national treatment commitment must be read as subject to any relevant horizontal conditions.

Where *no commitment* is made, the Member remains free in a given sector and mode of supply to introduce and maintain measures inconsistent with the national treatment obligation. In this situation the Member must record "UNBOUND" in the national treatment column. This entry is *only* appropriate if the Member has made a commitment in a sector with respect to *at least one mode* of supply. If all modes of supply are unbound and there are no additional commitments undertaken, then the sector should not appear on the Schedule.

Where a particular mode of supply is *technically unfeasible*, the Member should enter "UNBOUND*." The asterisk should refer to a footnote, which states "unbound due to lack of technical feasibility." Notably, this entry cannot be made in the national treatment column for modes 1 (cross-border supply) and 2 (consumption abroad) when, for the same service, there is a market access commitment. Again, as in the case of market access, if the entry that was thought to be unfeasible becomes applicable in the future, it means "UNBOUND."

In relation to a *commitment with limitations* on national treatment, a few important factors should be kept in mind. First, measures that are in effect ("*de facto*") discriminatory constitute a limitation on national treatment that must be scheduled, even if the measure does not formally distinguish between services suppliers on the basis of national origin. This is because the national treatment obligation to provide "no less favourable treatment" does not require that Members provide "formally identical" treatment to domestic and foreign service suppliers; some formally different treatment results in effective equality of treatment, while some "identical" treatment results *de facto* in less favorable treatment to foreign services suppliers. An example of this is the scheduling of residency requirements in regard to professional services, as seen from the Australian Schedule of Specific Commitments. The fact that in some states at least one equity partner in accounting, auditing and book-keeping firms must be a permanent resident of Australia does not expressly discriminate in favour of Australian nationals, although it makes it much more likely that nationals will meet the criterion and obtain more favorable treatment than the foreign counterpart.[309]

Unlike *Article XVI* in regard to market access, *Article XVII* does not contain an exhaustive list of national treatment limitations that must be scheduled if such measures are to be maintained. This means that the necessity of scheduling a regulatory requirement, such as residency, must be assessed on a case-by-case basis to determine whether it is in

[308] *Id.*, ¶ 43.

[309] See *Australian Schedule*, *supra* note 279, at 9.

fact discriminatory. If, for example, all that is required is a mailing address in the country rather than a permanent residency, there may be no discriminatory effect and therefore no need to schedule. Similarly, approval procedures, licensing and qualification requirements should not be entered as national treatment limitations if they are to be applied equally to nationals and foreigners. Such non-discriminatory requirements would in any event be subject to separate disciplines on domestic regulation in accordance with *Article VI:5*.

Article XVII applies to *subsidies* in the same way that it applies to other measures, so that any subsidy that is discriminatory in nature would have to be scheduled as a limitation on national treatment. *Article XV* (Subsidies) requires only that Members enter into negotiations to counter the distortionary effects of subsidies (*See* commentary on GATS Part VI.C.3 below); it does not contain a definition of subsidy. Similarly, the *Scheduling Guidelines* indicate a consensus on the fact that restrictions on the purchase, lease or use of real estate connected with the supply of a service will be national treatment limitations that must be scheduled, if they alter the conditions of competition in favor of the service supplier of the Member, as compared to the like service suppliers of any other Member.

Where a Member wishes to maintain measures that are inconsistent with both *Article XVI* (market access) and *Article XVII* (national treatment), account must be taken of GATS Article XX:2. As noted above, that provision permits Members to inscribe such a limitation once, in the market access column, and confirms that "the inscription will be considered to provide a condition or qualification to Article XVII as well." The *Scheduling Guidelines* interpret this to mean that any discriminatory measure scheduled in the market access column is also to be regarded as scheduled under, and subject to the provisions of, *Article XVII* (national treatment). It also recommends that Members indicate that this is the case by stating in the market access column that the inscription "also limits national treatment."[310]

column 4: additional commitments

Members may negotiate commitments with respect to measures affecting trade in services that are not subject to scheduling under *Article XVI* or *Article XVII.* Such commitments are not mandatory. Entries would only be made in the Additional Commitments column if a specific commitment is being made in a given sector; it is not necessary to make a sub-entry for a mode of supply that remains unbound. Additional commitments are expressed in the form of positive undertakings, rather than the listing of limitations or restrictions,[311] and can include, but are not limited to, undertakings in relation to qualifications, technical standards and licensing requirements or procedures treatment of modes of supply.

The four modes of supply listed in the Schedules correspond to the scope of the GATS as set out in Article I:2. The modes are defined on the basis of the origin of the service supplier and consumer, and the degree and type of presence they have at the moment the service is delivered. For a more detailed description of the modes of supply of services, see commentary on GATS Part I. A.2 above.

The following table describes, in relation to the Member making a commitment, the four modes of supply, the location of the supplier and flow of services. Whatever the mode

[310] *Scheduling Guidelines*, *supra* note 248, ¶ 18.
[311] GATS *Article XVIII* and *GATS Article XX:2(c).*
[311] *Scheduling Guidelines*, *supra* note 248, ¶ 19.

of supply, obligations and commitments under the GATS relate directly to the treatment of services and service *suppliers*. They only relate to service *consumers* to the extent that services or service suppliers of other Members are affected. A Member may only be able to impose restrictive measures affecting its *own* consumers (especially under Mode 2), not those of other Members, on activities taking place outside its jurisdiction. Where a type of service requires, for practical purposes, the use of more than one mode of supply, the Member must make a commitment in each relevant mode of supply in order to ensure that coverage of the particular service transaction is complete.

Mode	Supplier Presence	Location of Service Delivery	Other Criteria
Cross-Border Supply	SUPPLIER NOT present in the territory of the Member	WITHIN the territory of the Member	Supply is FROM the territory of another Member
Consumption Abroad	SUPPLIER NOT present in the territory of the Member	OUTSIDE the territory of the Member, in the territory of another Member	Supply is TO a service consumer of the Member. • movement of consumer • property of consumer "moves" or is located abroad e.g. ship repairs • limitations re market access and/or NT should only relate to measures affecting the Member's own consumers.
Commercial Presence	SUPPLIER PRESENT in the territory of the Member	WITHIN the territory of the Member.	Supply through COMMERCIAL presence. Applies to expanded list of juridical persons: corporations, joint ventures, partnerships, representative offices and branches (see definitions, Article XXVIII).
Presence of Natural Persons	SUPPLIER PRESENT in the territory of the Member	WITHIN the territory of the Member.	Supplier present as a NATURAL person. Applies to natural persons who are themselves service suppliers, as well as natural persons who are employees of service suppliers.

(ii) What should not be scheduled The GATS does *not* require Members to schedule limitations such as customs duties or other administrative charges that may affect the cross-border movement of *goods* associated with the provision of a service.

Exceptions such as those falling under *Article XIV* (General Exceptions) are so-called "horizontal exceptions" and are "provisional" in their application. Horizontal exceptions, if found to be justified, can be set against all obligations and commitments under the GATS. They are provisional in the sense that certain conditions must be fulfilled in order

Schedule of Specific Commitments of Country X[313]

Sector or Sub-Sector	Limitations on Market Access	Limitations on National Treatment	Additional Commitments
	(1)	(1)	
	(2)	(2)	
	(3)	(3)	
	(4)	(4)	
	(1)	(1)	
	(2)	(2)	
	(3)	(3)	
	(4)	(4)	

Key: (1) Cross-border supply (2) Consumption abroad (3) Commercial presence (4) Presence of natural persons

Note: The schedule shall also indicate the date of entry into force of the commitments and where appropriate the time-frame for their implementation. For all future commitments the relevant date of entry into force should be inscribed.

to warrant their application.[314] Due to their special character, such exceptions should *not* be scheduled.

Prudential measures taken in accordance with section 2(a) of the *Financial Services*, *Annex*[315] for example, constitute an exception to the Agreement and should *not* be scheduled. Likewise, measures falling under *Article XII* (Restrictions to Safeguard the Balance of Payments) are also exceptions because they are a form of emergency safeguard measure and therefore should *not* be scheduled; they are governed by separate disciplines, including notification and consultation.

Since the Schedules are a record of legal commitments, nothing should appear in them that is not intended to be legally binding. Extraneous information, even though it may seem to be useful for purposes of transparency, should be avoided, as it could reduce the clarity and specificity of the commitments and might lead to conflict as to their proper interpretation.

C. Classification of Services

GATS Article XX requires that each Member set out its Part III commitments in Schedules that are an integral part of the GATS, and identifies what is to be specified therein,[316] but imposes no requirements with respect to the description of services or sectors to be inscribed in the Schedule. "Sector" of a service, as defined in GATS *Article XXVIII*, is, with reference to a specific commitment, one or more, or all, subsectors of that service, as specified in a Member's Schedule; otherwise, it is the whole sector, including all of its subsectors. The GATS provides no other guidance on the level of clarity or consistency

[313] Annex 1 to the *Scheduling Guidelines*, *supra* note 248.

[314] Additionally, in the actual application of the exception in practice the burden of proof rests upon the party, whether complainant or defendant, who asserts the affirmative of a particular claim or the defence thereof. If that party adduces evidence sufficient to raise a presumption that what is claimed is true, the burden then shifts to the other party, who will fail unless it adduces sufficient evidence to rebut the presumption (Report of the Appellate Body, *United States—Measures Affecting Imports of Woven Wool Shirts and Blouses from India*, WT/DS/33/AB/R (1997)). Given the procedural aspects of the general exception, this also implies that (1) the complainant will be required to make a *prima facie* case of violation of the relevant provisions of the WTO Agreement and (2) this must be done on a case by case basis and cannot be pre-scheduled.

[315] *See* GATS *Financial Services Annex*, *supra* note 283, ¶ 2(a), and Chapter 20 of this book.

[316] GATS *Art. XX*, ¶¶ 1 and 3.

or standardization of nomenclature required in order to establish legal certainty in the scheduling of commitments.

During the Uruguay Round no agreement was reached as to a common classification structure for adoption by all Members. Although Members were free to use any classification system they deemed appropriate, it was recommended that they apply the *Services Sectoral Classification List*[317] (W/120), compiled by the Secretariat on the basis of the *United Nations* Central Product Classification (CPC) system with some comment by participants. Most Members adopted either the W/120 or the CPC, with certain clarifications and Member-specific deviations. The United States, for example, did not rely on the CPC in scheduling its commitments.

The W/120 comprises twelve sectors and 155 sub-sectors. The sectors are as follows: business services, communication services, construction and related engineering services, distribution services, educational services, environmental services, financial services, health related and social services, tourism and travel related services, recreational, cultural and sporting services, transport services, other services not included elsewhere. The W/120 is reproduced in Appendix A to this chapter. Appendix A also contains a discussion of each of the main sectors and the work of the Committee on Specific Commitments.

D. Modification of Schedules (Article XXI)

In accordance with the provisions of *Article XXI*, a Member may modify or withdraw any commitment in its Schedule, at any time after three years from the date on which the commitment entered into force. The required procedure is that the modifying Member is to notify its intention to the Council for Trade in Services no later than three months before the intended date of implementation of the modification or withdrawal. Any other Member that may be affected by the notified proposal may require the modifying Member to enter negotiations with a view to reaching an agreement on necessary compensatory adjustment.

In such negotiations and agreement, the Members are to endeavor to maintain a general level of mutually advantageous commitments no less favorable to trade than that provided for in Schedules of specific commitments prior to such negotiations. These compensatory adjustments shall be made on a most-favored nation basis.

In the event that negotiations in relation to compensatory adjustment are unsuccessful, the affected Member may refer the matter to arbitration. If no affected Member requests arbitration, then the modifying Member is free to implement the proposed modification or withdrawal. In the event of arbitration, the modifying Member must comply with the findings of the arbitration before modifying or withdrawing its commitment. If it does not do so, any affected Member that participated in the arbitration may take retaliatory measures in the form of modification or withdrawal of substantially equivalent benefits in conformity with the arbitration findings. Notwithstanding *Article II* (MFN), such retaliatory measures are applicable solely in relation to the modifying Member.

PART V. INSTITUTIONAL ARRANGEMENTS

The institutional arrangements for trade in services are taken up in Part V of the GATS. For the most part they are typical provisions related to the performance of treaty obligations under the GATS as well as institutional issues, essential to the operation of the WTO in the

[317] *Services Sectoral Classification List* (or W/120), *supra* note 110. There is some *ad hoc* classification in certain sectoral negotiations, for example telecommunications.

matter of services. They can be divided into three main areas. First, provisions relating to consultation (*Article XXII*) and dispute settlement and enforcement (*Article XXIII*) These are discussed in Part V.A below. Second, *Article XXIV* establishes the institutional body responsible for overseeing the operation of the GATS, i.e. the Council for Trade in Services (Part V.B. below). Third, two provisions deal with cooperation in the field of trade in services—one related to technical cooperation for developing countries (*Article XXV*) and the other regulating inter-institutional cooperation between the WTO and other intergovernmental organizations in the field of services (*Article XXVI*) (Part V.C. below).

A. Dispute Settlement Procedures (Article XXII and XXIII)

1. Trade in Services—General Application

The rules and procedures of the WTO Understanding on Rules and Procedures Governing the Settlement of Disputes ("Dispute Settlement Understanding or DSU")[318] apply to all disputes brought pursuant to the consultation and dispute settlement provisions of the agreements listed in Appendix 1 to the DSU (the covered agreements), which include the General Agreement on Trade in Services (Annex 1B). The DSU rules and procedures also apply to consultations and disputes between Members under the WTO Agreement and under the DSU, taken in isolation or in combination with any other covered agreement.[319] However, Article I:2 of the DSU provides that the general rules are subject to any special or additional rules contained in the agreements, which include GATS *Articles XXII:3* and *XXIII:3*, as well as special rules under the GATS *Financial Services Annex*[320] and the GATS *Air Transport Annex*.[321] The special rules prevail in the event of a difference.

Where conflicts arise between special or additional rules in the respective covered agreements, and the matter cannot be resolved by agreement of the parties, the Chairman of the Dispute Settlement Body ("DSB") is to determine the rules and procedures to be followed within ten days after the request of either party Member.[322] In principle, the special and additional rules are to be used where possible and the rules and procedures set out in the DSU are to be used to the extent necessary to avoid conflict.[323]

Dispute settlement under the GATS is dealt with in Part V of the Agreement, in *Articles XXII and XXIII*.[324] These provisions refer to three stages in the dispute settlement process: consultations, adjudication and enforcement.

2. Consultations (Article XXII)

Paragraphs 1 and 2 of *GATS Article XXII* make provision for two distinct types of consultations under the Agreement. First, those carried out between individual Members (usually bilateral), of the sort contemplated under any of the other WTO agreements, with the opportunity to approach the Council for Trade in Services or the DSB for further assistance should bilateral discussions be unsuccessful. The basic provision in paragraph 1

[318] *Understanding on Rules and Procedures Governing the Settlement of Disputes*, Apr. 15, 1994, WTO Agreement, Annex 2, 33 INTERNATIONAL LEGAL MATERIALS 1125 (1986) (" *DSU*").
[319] DSU *Article 1:1*.

[321] GATS *Air Transport Annex*, *supra* note 72, ¶ 4.
[322] DSU *Article 1:2*.
[323] *Id.*
[324] GATS, *Article XXII* and GATS *Article XXIII.*

requires that each Member be receptive to consultations with any other Member in respect of representations made with regard to any matter that might affect the operation of the GATS. The terms of the DSU apply to these consultations.[325] Under the DSU, the complaining party may request a panel sixty days after the request for consultations, or earlier, if the consulting parties jointly consider that the consultations have failed to resolve the dispute.[326]

Secondly, if a satisfactory solution cannot be found through consultations under paragraph 1, the provision for multilateral consultations contained in paragraph 2 of *Article XXII* may be invoked. At that point, the Member may (but is not obliged) to request the Council for Trade in Services or the DSB to consult with any Member or Members.[327] Since the DSU does not provide for this further consultation procedure, the point at which such "multilateral" consultations may be deemed to have failed and a request for the establishment of a panel can be made, is unclear; not surprisingly, this provision has thus far not been used.[328]

(a) Fiscal "Carve-out" and Arbitration. Besides the provisions for bilateral and multilateral consultations, paragraph 3 of *Article XXII* contains an additional provision not found in any other WTO Agreement. This provision excludes the possibility of challenging a measure in the field of services on the ground that it violates national treatment, where the measure at issue falls within the scope of a double-taxation agreement. Thus, the GATS creates a fiscal "carve-out" for certain categories of services disputes where there is a nexus with a double taxation issue.

In case of disagreement between Members as to whether such a measure falls within the scope of a double taxation agreement, either the complainant or the defendant may bring the matter before the Council for Trade in Services and the matter will be referred to binding arbitration.[329] In the case of double taxation agreements, which existed at the time of entry into force of the WTO Agreement (January 1, 1995), the Council will only be seized of the matter upon consent of both parties to the agreement.[330]

3. Dispute Settlement and Enforcement (Article XXIII)

(a) Violation Complaints. GATS *Article XXIII*, like its counterpart in the goods régime, namely GATT Article XXIII:1,[331] provides for both "violation" and "non-violation" complaints. Violation complaints are covered by paragraph 1 of GATS *Article XXIII*, which gives any Member recourse to the DSU where that Member considers that another Member has failed to carry out its obligations or specific commitments under the GATS.[332] The omission of any reference to nullification or impairment here has been explained[333] by reference to the fact that in GATT dispute settlement practice it was presumed that nullification and impairment of benefits under the agreement resulted wherever there was

[325] GATS *Article XXII:1*.

[332] GATS *Article XXIII:1*.
[333] Zdouc, *supra* note 328, at 298.

a violation of GATT rules.[334] This presumption has been incorporated into the DSU rules such that an infringement of obligations under a covered agreement is considered *prima facie* to constitute nullification and impairment, subject to rebuttal by the respondent Member.[335]

(b) "Non-Violation" Complaints. The basis of the non-violation remedy in the GATS is the nullification or impairment of benefits that might reasonably have been expected to accrue from specific commitments undertaken by each Member. In contrast to the nullification or impairment language of the GATT,[336] which refers to "benefits accruing . . . directly or indirectly under this Agreement to a Member," paragraph 3 of GATS *Article XXIII* refers to the nullification or impairment of "any benefit (a Member) could reasonably have expected to accrue to it."[337] Although it is open to argument as to whether "benefits reasonably expected to accrue under specific commitments" should be interpreted to include both indirect and direct benefits, the failure of paragraph 3 of *Article XXIII* to mention benefits accruing "indirectly" should be considered to have meaning in itself. The omission could be explained either as a reflection of the non-violation dispute settlement practice in the GATT, or as a deliberate attempt to contain the scope of the non-violation remedy under the GATS.

In view of the fact that services commitments are not as narrowly defined as tariff concessions on imported goods, but instead relate to national treatment or market access obligations with respect to broadly defined services sectors or sub-sectors and modes of delivery, the scope of government measures that might distort the relationship between domestic and like foreign services or service suppliers is potentially vast. Seen in this light the "narrow" language of paragraph 3 appears to be a deliberate act of containment on the part of the GATS drafters.

To date no non-violation cases have been brought under the GATS. In view of prior GATT and some recent WTO dispute settlement jurisprudence on non-violation cases, it appears that three conditions would have to be met in order to establish a non-violation claim under the GATS. The first is the existence of a governmental measure; the second is the absence of any reasonable anticipation of nullification or impairment at the time of the negotiation of the relevant specific commitment; and third, proof that the competitive relationship between foreign and like domestic products has been "upset."

4. Specific Service Sectors

Because of the specific nature of GATS obligations and the relevant commitments taken by Members in their Schedules of Services Commitments under the Agreement, and of trade in services, a separate Ministerial *Decision on Certain Dispute Settlement Procedures for the General Agreement on Trade in Services* (*Decision on GATS Procedures*) was adopted at the end of the Uruguay Round.[338] The *Decision on GATS Dispute Settlement Procedures* contains certain additional rules and procedures for dispute settlement under the GATS, including for example the requirement that panelists have

[334] Report of the GATT Panel, *United States—Taxes on Petroleum and Certain Imported Substances ("Superfund")*, BISD 34th Supp. 136, 158 (1987), ¶ 5.1.9.
[335] DSU *Article 3:8*.
[336] GATT *Article XXIII:1*.
[337] GATS *Article XXIII:3*.
[338] See the second recital to the *Decision on Certain Dispute Settlement Procedures of the General Agreement on Trade in Services ("Decision on GATS Dispute Settlement Procedures")*.

specific-sector expertise. In the case of a GATS dispute, panels should be composed of "well-qualified governmental and/or non-governmental individuals who have experience in issues related to the General Agreement on Trade in Services and/or trade in services, including associated regulatory matters."[339] Additionally, in panels regarding sectoral matters, the *Decision of Certain Dispute Settlement Procedures for the General Agreement on Trade in Services* states that they shall have "the necessary expertise relevant to the specific services sectors which the dispute concerns."[340]

In specific services sectors, additional dispute settlement requirements may prevail, based on the relevant sectoral annex. For example, the *Financial Services Annex* calls for panels involving disputes on prudential issues and other financial matters to have "the necessary expertise relevant to the specific financial service under dispute."[341] Another approach to dealing with disputes involving specific sectoral issues is to exclude the scope of those services, wholly or partly, from the dispute settlement provisions as is the case with air transportation.

On the one hand, the *Annex on Air Transport Services*[342] confirms that a Member's obligations under bilateral and multilateral agreements relating to all transport services in effect at the date of the entry into force of the WTO Agreement are not diminished or affected by any obligations or commitments assumed under the GATS.[343] The carve-out of trade in air transport services, whether scheduled or unscheduled, and ancillary services,[344] expressly denies application of the GATS, including its dispute settlement procedures, to measures affecting traffic rights, and services directly related to the exercise of traffic rights[345] since these are normally expressly reserved under bilateral air services agreements.

On the other hand the *Annex on Air Transport Services* expressly affirms the application of the GATS to aircraft repair and maintenance services, the selling and marketing of air transport services and computer reservation system ("CRS") services.[346] However, even in these secondary services, the dispute settlement provisions of the GATS may be invoked only where obligations or specific commitments have been assumed by the concerned Members and where dispute settlement procedures in bilateral and other multilateral agreements or arrangements have been exhausted.[347] The *Annex on Air Transport Services* leaves open the possibility of further application of the GATS in this sector, subject to periodic review by the Council for Trade in Services[348] (See Part VI.D.3 of this chapter below).

[339] *Id*., ¶ 3. Cf. the text of DSU *Article 8.1*, which states "... persons who have served on or presented a case to a panel, served as a representative of a Member or of a contracting party to GATT 1947 or as a representative to the Council or Committee of any covered agreement or its predecessor agreement, or in the Secretariat, taught or published on international trade law or policy, or served as a senior trade policy official of a Member."

B. Council for Trade in Services (Article XXIV)

The Marrakesh Agreement Establishing the World Trade Organization (WTO Agreement) specifically establishes a Council for Trade in Services in Paragraph 5 of WTO Agreement Article IV, which "... shall oversee the functioning of the General Agreement on Trade in Services." Article IV:6 of the WTO Agreement provides that the Council for Trade in Services "... shall establish subsidiary bodies as required" and that they shall adopt "their respective rules of procedure." This is reinforced by GATS *Article XXIV*.

The first and second paragraphs of *Article XXIV* make it clear that, in line with the competences of the WTO at large, the competences of the Council for Trade in Services are also functional in character. Specifically, those functions include all that is necessary to facilitate the operation of the GATS and to further its objectives, i.e. primarily to provide a regulatory framework for trade in services and to achieve higher levels of liberalization of trade in services.

Article XXIV:1 recognizes that the Council for Trade in Services can exercise its discretion in establishing subsidiary bodies to which it may further delegate such powers as are necessary in order to discharge those functions. The Ministerial *Decision on Institutional Arrangements for the General Agreement on Trade in Services* (*Decision on GATS Institutional Arrangements*), adopted at the end of the Uruguay Round,[349] provides additional rules for such subsidiary bodies, pursuant to *Article XXIV.*

Since the entry into force of the WTO on January 1, 1995, the following subsidiary bodies have existed, or been established, under the auspices of the Council for Trade in Services:

- the Committee on Trade in Financial Services (or Financial Services Committee);[350]
- the Committee on Specific Commitments or "CSC";[351]
- the Working Party on Professional Services or "WPPS"[352] (in 1999 it was transformed into the Working Party on Domestic Regulation or "WPDR";[353]
- the Working Party on GATS Rules or "WPGR".[354]

[349] *Decision on Institutional Arrangement for the General Agreement on Trade in Services ("Decision on GATS Institutional Arrangements")*.

[350] *Id.*, ¶ 3. The mandate of the Financial Services Committee is set out in ¶ 2 of the *Decision on GATS Institutional Arrangements*, and is confined to the responsibilities listed therein, which fall to be dealt with under individual sectoral annexes. They include such responsibilities as keeping the GATS *Financial Services Annex*, *supra* note 283, under continuous review, formulating proposals/recommendations for consideration by the Council (including proposals for amendments to the aforementioned *Annex*), providing a forum for technical discussions and providing technical assistance to developing countries and cooperating with other subsidiary bodies under the auspices of the Council for Trade in Services and/or international organizations in the financial sector.

[351] The Committee on Specific Commitments, or CSC, was established by the Council for Trade in Services in 1995; see *Decision Establishing the Committee on Specific Commitments*, adopted by the Council for Trade in Services, S/C/W/9 (October 4, 1995).

[352] The Working Party on Professional Services, or "WPPS", was established pursuant to the Uruguay Round *Ministerial Decision on Professional Services*, and the *Decision on Professional Services*, adopted by the Council for Trade in Services, March 1, 1995, S/L/3 (April 4, 1995).

[353] The WPDR is the successor to the WPPS, and was established by the Council for Trade in Service, S/L/70 (April 26, 1999), *supra* note 200.

[354] The Working Party on GATS Rules, or "WPGR", was established in March 1995 by the Council for Trade in Services to carry out the negotiating mandates contained in the GATS on emergency safeguard measures, government procurement in services and subsidies.

With the launch of special negotiations on trade in services in January 2000,[355] as mandated in the built-in agenda under GATS *Article XIX:1*, the Council for Trade in Services is currently holding a Special Session back to back with regular sessions of the Council.[356] However, once the negotiations on further liberalization in trade in services have come to an end, the Special Session of the Council for Trade in Services will cease to exist (*See* Part VI.A. of this chapter, below). The Special Session is *not* a subsidiary body of the Council for Trade in Services but is simply a meeting that forms part of the exceptional work-load of the Council for the duration of the negotiations.

In accordance with *Article XXIV:2*, both the Council for Trade in Services and, unless the Council decides otherwise, any subsidiary bodies, or committees, which it establishes, are committees of the whole, i.e. open to all WTO Members. The Members elect the Chairman of the Council for Trade in Services and the practice in the WTO is to renew the chairperson annually, along with all other Councils and Committee chairs.[357]

The rules of procedure for meetings of the Council for Trade in Services are set out in the WTO/OMC Compendium, *Rules of Procedures for Meetings of WTO Bodies*.[358] For meetings of the Council for Trade in Services, the decision has been taken to adopt the same rules of procedure that are used for meetings of the Ministerial Conference and of the General Council,[359] with some additional rules on the circulation of the agenda, the election and functions of a Vice-Chairperson.[360] Where not otherwise stated the Council for Trade in Services has also decided to apply the relevant provisions contained in the *Guidelines for Appointment of Officers to WTO Bodies*.[361]

When it comes to decision-making the Council for Trade in Services decides by consensus, in conformity with the general rule on decision-making to be found in WTO Agreement Article IX[362] together with Rule 33 (Chapter VII—Decision-Making) of the General Council.[363] The *Rules of Procedure for the Council for Trade in Services* contain a modification to Rule 33, as follows: "(W) here a decision cannot be arrived at by consensus, the matter shall be referred to the General Council for decision." This so-called "kick-up" provision is common to all WTO bodies and allows for a higher body to take a decision, where it has not been possible for a delegated body to do so.

[355] The meeting of the Council for Trade in Services of February 26, 2000 witnessed the official launch of these Special Negotiations Session of the Services Council, S/CSS/M/1 (April 12, 2000), ¶¶ 4–35. Reports of meetings and all other pertaining to these Council Special Sessions are designated "CSS."

[356] Minutes of the Special Session are publicly available on the WTO website (upon derestriction), at http://www.wto.org/english/tratop_e/serv_e/s_negs_e.htm, series S/CSS/M/1–13 and, subsequently, series TN/S/M/1–6.

[357] See the WTO web-site for a list of current chairpersons as at February 11, 2004, General Council, Press/371, available at http://www.wto.org/english/news_e/pres03_e/pr371_e.htm (visited on August 26, 2004).

[358] *Rules of Procedure for Meetings of WTO Bodies*, Geneva, 1997 is available from the WTO Secretariat, Geneva.

[359] This is not without significance since Annexes 2 and 3 of the procedures for meetings of the Ministerial Conference and of the General Council contain "Guidelines for Observer Status for Governments in the WTO" and "Observer Status for International Intergovernmental Organizations in the WTO" respectively. Since no amending provisions are provided for the Council for Trade in Services (Section XXIV), these Annexes apply *mutatis mutandi* to those meetings.

[360] *Rules of Procedure for Meetings of WTO Bodies*, *supra* note 358, Services Council (Section XXIV).

[361] Footnote 1 to the Services Council (Section XXIV), *id*, refers to the *Guidelines for the Appointment of Officers to WTO Bodies*, WT/l/31, February 7, 1995.

[362] WTO Agreement *Article IX:1*.

[363] *Rules of Procedure for Meetings of WTO Bodies*, *supra* note 358, section II, p. 8, which states "(T)he General Council shall take decisions in accordance with the decision-making provisions of the WTO Agreement, in particular *Article IX* thereof entitled 'Decision-Making.' "

Exceptionally a footnote at the beginning of the *Rule of Procedure for Meetings of WTO Bodies* records the fact that, of the four subsidiary bodies under the auspices of the Council for Trade in Services, only the CSC has decided to apply the same Rules of Procedure of the Council for Trade in Services; the other bodies apply its rules of procedure on a *de facto* basis.

C. Technical Cooperation (Article XXV)

Article XXV imposes a specific obligation on the group of developed country Members (and other Members to the extent possible) towards developing country Members, on the basis of *Article IV:2* (Increasing Participation of Developing Countries). In the interests of transparency, developed country Members must establish and maintain so-called "contact points" to make it easier for developing country Members' services suppliers to have access to information about trade in services that relate to their respective markets. Such information should include details of "commercial and technical aspects of the supply of services," information about "registration, recognition and (the means of) obtaining . . . professional qualifications" and details concerning the availability of supporting "services technology."[364]

Article XXV also calls for the provision of technical co-operation to developing country Members by the WTO Secretariat at the multilateral level. The Council for Trade in Services decides upon the provision of technical co-operation in the matter of services ensuring that it is budgeted for annually and included in the overall allocation of the WTO's technical assistance budget.

D. Relationship with Other International Organizations (Article XXVI)

GATS *Article XXVI* foresees the possibility of inter-institutional co-operation and co-ordination in the field of services. Interestingly, it is the Council for Trade in Services rather than the General Council which is charged with undertaking such inter-institutional co-operation, as a result of which it enjoys an exclusive external relations power.

The WTO and other specialized agencies of the United Nations may also undertake inter-institutional co-operation, which could for example, include "consultation and co-operation" with the United Nations Conference on Trade and Development ("UNCTAD"),[365] as well as with the International Trade Centre ("ITC").[366] It could also include consultation and co-operation by the WTO with other intergovernmental organizations,

[364] GATS *Article IV:2*.

[365] The United Nations Conference on Trade and Development ("UNCTAD") was established pursuant to G.A. Res. 1785, 17 U.N. GAOR, Supp. 17, at 14, U.N. Doc A/5217 (1963) and UNCTAD Final Act, U.N. Doc. E/Conf. 46/141, vols. 6–8 (1964). It became an official organ of the UN General Assembly by G.A. Res. 1995, 19 U.N. GAOR, Supp. 15, at 1, U.N. Doc. A/5815 (1965).

[366] The International Trade Centre ("ITC") is the technical cooperation agency of the United Nations Conference on Trade and Development ("UNCTAD") and the WTO for operational, enterprise-orientated aspects of trade development in support of developing and transition economy countries, in particular their business sectors. It was created by the GATT in 1964 and since 1968 has been operated jointly by the GATT (now WTO) and the UN, acting under the auspices of UNCTAD. ITC is also the executing agency for the United Nations Development Programme ("UNDP") and in that capacity is responsible for implementing UNDP-financed projects in developing countries and transition economies related to trade promotion. Most recently joint collaboration in the field of services has led to the publication of a *GATS Consultation Kit*, primarily aimed at developing and transition economy countries. The Global Services Network provides links to a range of organisation, including government, business and international, all of which are working in the services sector, it can be reached on-line at www.GlobalServicesNetwork.com.

such as the Organization for Economic Co-operation and Development ("OECD").[367] Whatever inter-institutional co-operation is sought, the only requirement is that it concerns services. An example of such co-operation is the publication in 2002 of a joint study by the World Health Organization and the WTO Secretariat on *WTO Agreements and Public Health*.[368]

The Council for Trade in Services has given a broad interpretation to its external relations power in Article XXVI, since it has not confined itself to inter-institutional co-operation and coordination but has worked with other inter-governmental entities such as the Commonwealth Secretariat, in collaboration with the ITC,[369] and non-governmental entities such as the European Services Forum.[370]

PART VI. FINAL PROVISIONS

A. Denial of Benefits (Article XXVII)

The content of this provision is standard treaty language. At first sight, it might appear to be superfluous but is nonetheless necessary since it relates primarily to issues involving non-Members and/or territorial application. The three separate matters that are covered by the provision are dealt with in succession.

First, the wording in paragraph (a) makes it clear that a Member may, at its discretion, decide not to extend the rights and benefits accruing under the GATS where it concerns the supply of a service because it can be established that the service is being supplied 'from or in the territory of a non-Member'. Hereby, third States, not parties to the WTO Agreement and not having become WTO Members, can be denied the benefits of membership. Similarly, the benefits of the GATS can be denied in the case where the supply of a service is from or in the territory of 'a Member to which the denying Member does not apply the WTO Agreement'. This might for example be an overseas, or mandated territory, for which a Member retains administrative control but does not include the extension of treaty rights and obligations on the basis of a territorial treaty clause which was appended to the Final Act of the Uruguay Round (as an original Member) or a Protocol of Accession (in the case of an acceding Member).

Second, paragraph (b) of GATS *Article XXVII* relates to the supply of maritime services and contains additional language that is specific to that sector. Basically, a Member can deny the benefits of the GATS either where a vessel has been registered under the laws of a non-Member (or a Member to which the denying Member does not apply the WTO

[367] The OECD is an economic grouping of 24 mostly industrialized countries. It was established as a reconstituted organisation (as successor to the Organization for European Economic Co-operation or OEEC of 1948) by treaty of December 14, 1960, 888 UNTS 179.

[368] WTO Agreements and Public Health—A Joint Study by the WHO and the WTO Secretariat (2002), also available in PDF format, at http://www.wto.org/english/news_e/pres02_e/pr310_e.htm (visited June 11, 2003).

[369] See BUSINESS GUIDE TO THE WORLD TRADING SYSTEM, published by the International Trade Centre (UNCTAD/WTO) and the Commonwealth Secretariat, Part Three, International Rules Governing Trade in Services (1999).

[370] The European Services Forum, or ESF, is on-line at www.esf.be. Other non-governmental organisations, sometimes simply representatives of the services sector at large or based in a particular Member country, include the U.S. Coalition of Services Industries, on-line at www.uscsi.org, the Hong Kong Coalition of Services Industries, on-line at www.hkcsi.org.hk, the Japanese Services Network (hosted by the Japanese Federation of Economic Organisations (Keidanren), on-line at www.keidanren.or.jp, the Irish Coalition of Service Industries, on-line at www.icsi.ie and the specialist financial services sector or International Financial Services, London, on-line at www.bi.org.uk.

Agreement) or where it concerns a person operating and/or using a vessel 'in whole or in part' which belongs to a non-Member (or a Member to which the denying Member does not apply the WTO Agreement).

Finally, the third paragraph (c) of GATS *Article XXVII* contains almost identical language to paragraphs (a) and (b) but in this instance there can be a denial of benefits under the GATS, on the same grounds as in the preceding two paragraphs if a service supplier is a juridical person and where it can be established that it is not a service supplier of another Member (or it is a service supplier of a Member to which the denying Member does not apply the WTO Agreement).

B. Annexes (Article XXIX)

The Annexes to the GATS form an integral part of Annex IB. They cover a variety of different matters, relating to exemptions from or disciplines concerning basic GATS provisions to sectoral annexes and annexes that record the intention of Members to continue negotiating on certain sectoral issues. They include the following:

- Annex on Article II Exemptions;
- Annex on Movement of Natural Persons Supplying Services under the Agreement;
- Annex on Air Transport Services;
- Annex on Financial Services;
- Second Annex on Financial Services;
- Annex on Negotiations on Maritime Transport Services;
- Annex on Telecommunications; and
- Annex on Negotiations on Basic Telecommunications.

This book contains separate chapters relating to the Annexes on Financial Services and Telcommunications.[371]

V. Dispute Settlement Cases

The WTO dispute settlement mechanism has to date produced a limited body of analysis with regard to issues arising specifically under or pertaining to the General Agreement on Trade in Services. After a number of earlier cases involving GATS issues of a peripheral nature, the panel in *Mexico—Measures Affecting Telecommunications Services (Telmex)*,[372] was called upon to address matters arising primarily under the GATS—in particular the Telecoms Annex and the 'Telecoms Reference Paper'. The potential impact of the decision is reduced, however, by reason of its focus on issues specific to the telecommunications context, and because the parties were able to reach a mutual agreement on its implementation in order to avoid an appeal of the panel decision to the WTO Appellate Body.

In another recent case, *US—Measures Affecting the Cross-Border Supply of Gambling and Betting Services*,[373] the panel agreed to suspend proceedings, prior to the issuance of a decision communicated confidentially to the parties, to facilitate their further

[371] *See* Chapters 20 and 21.

[372] Report of the WTO Panel (not appealed), *Mexico—Measures Affecting Telecommunications Services*, WT/DS204/R, 2 April 2004 (*"Telmex"*).

[373] US—*Measures Affecting the Cross-Border Supply of Gambling and Betting Services*, WT/DS285 (*"US—Gambling and Betting"*).

negotiations. The complaint, by Antigua & Barbuda against the United States, is focused exclusively on cross-border delivery of gambling and betting services under the GATS, the primary issue being the construction of US commitments as set out in its Services Schedule. This goes to the heart of the uncertainty in the GATS system—one that, if the parties are unable to resolve the matter, will give the panel an opportunity to develop and clarify the rules on classification and scheduling. If it is determined that the United States has made a full commitment to liberalize gambling and betting services, then the GATS provisions on market access, national treatment and general exceptions will also come into play. At the time of writing, (August 2004), a resolution had not been notified by the parties.

Three prior cases: *Canada—Certain Measures Concerning Periodicals* (*Canada—Periodicals*),[374] *European Communities—Regime for the Importation, Sale and Distribution of Bananas*[375] and *Canada—Certain Measures Affecting the Automotive Industry*[376] have addressed the scope of application of the GATS and its relationship to the GATT. A fourth, *Japan—Measures Affecting Consumer Photographic Film and Paper (Japan—Photographic Film and Paper* or *Kodak-Fuji)* case,[377] while making no express reference to the GATS, addresses claims under GATT Article III and GATT Article X in regard to "measures" and "countermeasures" affecting the distribution, offering for sale and internal sale of a product—in this case imported consumer photographic film and paper—in a manner that allegedly impaired the benefit to the United States of Japan's tariff concessions on the product. The case is of interest from a GATS perspective insofar as it deals with the effect of Japanese government action on national and foreign distributors and wholesalers, as well as manufacturers, of the product.

A. Canada—Periodicals

In *Canada—Periodicals*, GATS issues arose out of a Canadian defence to a U.S. challenge concerning "split-run" periodicals and the advertising contained therein, even though no GATS claims were ever specifically raised by the United States against the measures at issue. Instead, the United States argued that the Canadian ban on imports of split-run periodicals and the excise tax imposed on the locally printed issues of those foreign magazines violated Articles XI and III of the GATT.

The case involved a dispute between the United States and Canada over measures taken by the Canadian Government to protect the Canadian magazine industry as a medium of Canadian ideas and interests and a tool for the promotion of Canadian culture. It had been a long-standing policy of the Canadian Government to protect its magazine industry by boosting its advertisement revenues and distribution capacity, by, for example, making advertisements directed at the Canadian market eligible for income tax deductions, and adopting schemes that facilitated distribution of Canadian magazines at

reduced postal rates. In 1965, imported "split run" editions of foreign magazines (special editions largely identical to the issue distributed in the country of origin, with the exception of advertisements that were directed primarily at the Canadian market) were identified by Canada as undermining these policies and accordingly banned. The ban was not, however, applicable to split-run editions printed locally in Canada.

In 1995, in response to an anticipated publication of *Sports Illustrated Canada*, a Canadian-published "split run" of the original U.S. *Sports Illustrated* and in order to address the possible evasion of the ban on imports of split-runs, the Canadian Government imposed a new excise tax aimed at the advertisements contained in all domestically-published split-run magazines. Under Part V.I of the 1995 *Act to Amend the Excise Tax Act and the Income Tax Act* (the *Excise Tax Act*[378]) a tax of eighty percent of the value of the advertisements inserted in the split-run edition was levied on each issue of all split-runs distributed in Canada. Additional measures included programmes to provide Canadian publishers with reduced postal rates that were lower than the "commercial international" rates applied to imported magazines. The United States objected to the Canadian measures as being trade-restrictive and protectionist and initiated a WTO dispute settlement process that led to an unfavorable ruling for Canada.

The facts gave rise to the issues of the potential applicability of the GATS, its relationship to the GATT 1994 and the distinction between goods and services. In defense of Part V.I of the *Excise Tax Act*, Canada claimed that Article III of GATT 1994 did not apply, because the measure, being imposed on advertising revenues, was a tax on advertising services, and came under the purview of the GATS, with respect to which the United States had raised no claims. Canada argued that as it had not annexed a positive GATS commitment to liberalize advertising services, it was under no obligation to afford national treatment in this sector. It argued that the United States should not be allowed to "obtain benefits under a covered agreement" (GATT 1994) that have been expressly precluded under another covered agreement (GATS).[379]

Assuming that Canada's exclusion of advertising services from its GATS commitments, by not inscribing advertising services in its Schedule, was a positive act, the panel assessed whether Canada was thereby exonerated from examination of alleged violations of its obligations and commitments under GATT 1994. Canada argued that both the GATT and GATS should be interpreted in such a way as to avoid overlap that could lead to conflicts in their application. The United States replied that there was nothing in the Uruguay Round Agreements that suggested that a single measure may not be covered by both agreements except where an irreconcilable conflict arises from an attempt to comply with both. It also argued that in the absence of such a conflict Canada could not abandon its GATT obligation solely on the ground that the product in question had a service component.

The panel concluded that obligations under GATT 1994 and the GATS can coexist and that it was not intended to create a hierarchical order between them. Its decision was based on the ordinary meaning of the texts of GATT 1994, GATS and Article II:2 of the WTO Agreement read together, and the absence of any conflicts provision in GATT or GATS equivalent to that of Article XVI:3 of the WTO Agreement[380] or the General Interpretative

[378] *See* an *Act to Amend the Excise Tax Act and the Income Tax Act*, S.C. 1995, c. 46 ("*Excise Tax Act"*).

[379] *Canada- Periodicals*, *supra* note 372, Report of the WTO Panel, ¶ 3.35.

[380] WTO Agreement *Article XVI:3* provides that "(I)n the event of a conflict between any provision of this Agreement and a provision of any Multilateral Trade Agreements, the provisions of this Agreement will prevail to the extent of this conflict."

Note to Annex 1A,[381] the latter of which only relates to agreements in the goods régime. Drawing on the case law of the Appellate Body with respect to the interpretation of treaties, the panel affirmed that a corollary of the general rule of interpretation, as set out in the Vienna Convention on the Law of Treaties,[382] is that it must give meaning and effect to all the terms of a treaty. In the words of the panel: "An interpreter is not free to adopt a reading that would result in reducing whole clauses or paragraphs of a treaty to redundancy or inutility."[383] The panel therefore found that both the GATS and the GATT could apply to the excise tax, and proceeded to address the claim of the United States under GATT Article III. The Appellate Body agreed with the panel, concluding that the entry into force of the GATS does not diminish the scope of application of the GATT 1994,[384] and found no necessity to rule on whether there could be a potential overlap between the GATT 1994 and the GATS.[385] As to Canada's characterization of the excise tax as a measure regulating advertising services, the panel pointed out that there was no comparable regulation on advertisements through other media and that the tax was imposed on the "periodical issue" rather than on the advertising.

On appeal, Canada had stepped back from its argument that the GATT could not possibly apply to the tax in question, with the result that the Appellate Body did not find it necessary to rule as to whether potentially conflict-producing overlaps might occur in the application of the GATT and the GATS. Canada did, however, appeal the decision that the tax was a measure affecting trade in goods. It argued that the panel had erred in law in applying the GATT to a measure affecting advertising services, which should properly be regulated by the GATS under which Canada had no national treatment commitment. Further, it alleged that the panel had misconceived the concept of indirect taxation in GATT Article III:2 and engaged in unwarranted generalization of the terms of GATT Article III:4, and had therefore erroneously concluded that the Excise Tax was a measure subject to Article III of the GATT 1994.

The Appellate Body affirmed the decision of the panel, finding that the measure was an excise tax on a product rather than on advertising services, and rejected Canada's claim that the excise tax, as a tax on services, could not "indirectly" affect imported products in accordance with Article III:2 GATT. In arriving at this conclusion, it considered several factors. First, it noted that the measure was an excise tax imposed on split-run editions of periodicals, and was entitled "tax on split-run periodicals" rather than "tax on advertising." The "Summary" of the Act[386] read "The *Excise Tax Act* is amended to impose an excise tax in respect of split-run editions of periodicals." Secondly, it found that the periodical was a good comprised of two components: editorial content and advertisement content, both of which could be viewed as having service attributes but

[381] The General Interpretative Note to Annex 1A of the WTO Agreement provides that "in the event of conflict between a provision of the General Agreement on Tariffs and Trade of 1994 and a provision of another agreement in Annex 1A to the Agreement Establishing the World Trade Organization . . . the provision of the other agreement shall prevail to the extent of the conflict.

[382] *Vienna Convention on the Law of Treaties*, done at Vienna, May 23, 1969, 1155 UNTS 331, 8 I.L.M., *Article 31(1*) states that a treaty must be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose.

[383] The panel made reference to *US—Gasoline*, *supra* note 230, Report of the Appellate Body, at 2; also cited in *Japan—Taxes on Alcoholic Beverages* ("*Japan—Alcoholic Beverages"*), WT/DS8/AB/R, WT/DS10/AB/R, WT/DS11/AB/R (1996), Report of the Appellate Body, at 12.

[385] *Id*., at 23.

[386] *An Act to Amend the Excise Tax Act and the Income Tax Act*, S.C. 1995, c. 46.

concluded that they combine to form a physical product—the periodical.[387] The Appellate Body also considered that the *Excise Tax Act* was a companion to the *Tariff Code 9958*, which prohibited imports of special edition periodicals and was, in the admission of Canada, a measure affecting trade in goods,[388] notwithstanding that the Code banned split-runs primarily because of their advertising content. As a companion to the Code, the *Excise Tax Act* had the same object and purpose as *Tariff Code 9958* and should, in the determination of the Appellate Body, be analysed in the same manner.

Finally, the Appellate Body reasoned that the excise tax was applied to periodicals on a "per issue" basis, that by its very "structure and design" it was a tax on a periodical,[389] and that it was not the advertiser but the publisher, distributor or wholesaler who was liable to pay the tax.[390] The Appellate Body accordingly proceeded to address the Article III GATT issue of differential tax treatment of imported versus domestic products, despite the absence of a demonstration of adverse trade effects.[391]

On the basis of the *Canada—Periodicals* case, the determination as to whether a product or service is the object of the measure in issue could turn on whether the services attributes of a product or its components are subordinate to the product as a whole.[392] Given that the application of GATS and the GATT is not mutually exclusive, together with increasingly complex production processes and limitless consumption patterns and end uses, such determinations will be inevitable.[393] Indices for future analyses include the structure and design of the measure and the location of the burden of liability for the substantive effects of the measure.[394] It may also be relevant to ask whether the goods and service components, from a conceptual point of view, are physically or commercially separable, the extent to which they are integrated at various levels of production (manufacture, sale or consumption) and the conclusions that may be derived from market patterns of purchase and consumption and what consumers view as the "end product."

B. EC—Bananas III

EC—Bananas III was the first to deal with substantive issues, including the definition of "service suppliers" and claims of violation of GATS Article II (MFN) and Article XVII (national treatment). The case involved the compatibility of the EC regime for the importation, sale and distribution of bananas, and in particular the EC's preferential treatment of ACP (African, Caribbean and Pacific) countries, with the WTO rules. In July 1993, the EC imposed restrictions on banana imports from all countries except for approximately seventy former European colonies and protectorates, located in the Caribbean and West Africa, now forming part of the ACP group of developing countries. The measures favored the mostly family-owned ACP operations that were experiencing great difficulty in competing with the giant multinationals in Central America. While the United States does not export significant quantities of bananas from its own territory, the U.S. Government was nevertheless persuaded to initiate the challenge by interested American

corporations such as Chiquita Brands International and Dole Foods Inc., which harvest bananas in Latin America and market them worldwide. At the heart of the case were the issues related to the EC import licensing system, which determined how economic rents generated by tariff-rate quotas were allocated between national importers and exporting countries.

The controversial measures at issue were set out in EC Regulation 404/93 and subsequent EC legislation, regulation and administrative measures which established the EC's banana import regime. The applicants: United States, Ecuador, Guatemala, Honduras and Mexico, argued that the regime was inconsistent with Articles I, II, III, X, XI and XIII of GATT 1994, Articles 1 and 3 of the Agreement on Import Licensing Procedures, the Agreement on Agriculture, Articles II and XVII of the GATS and Article 2 of the TRIMs Agreement. The position of the EC was essentially that the banana régime either did not fall within the scope of the invoked agreements or that any inconsistency with those agreements was covered by the Lomé waiver, which had been adopted by the GATT Contracting Parties in December 1994.[395]

The issues in *EC—Bananas III* also required the panel and Appellate Body to address the question of the relationship between the GATS and the GATT 1994 but from the opposite perspective to that required in *Canada—Periodicals* case. In *Canada—Periodicals* the issue was whether a measure directly or purportedly regulating services could actually or potentially affect imported goods adversely. In *EC—Bananas III* the issue was whether measures directly or purportedly regulating the importation of goods could actually or potentially adversely affect services or service suppliers of foreign origin.[396] In *Canada—Periodicals* Canada had argued that the measure related to *services* and that it had not made a specific commitment to liberalize in the relevant sector. In *EC—Bananas III* the EC, having made a full commitment in relation to wholesale trade services, argued that the measure related solely to *goods* and was therefore not subject to the GATS national treatment obligation. The GATS issues in *EC—Bananas III* include the scope of the material application of GATS, the definition of "service supplier" and substantive claims under GATS Articles II (MFN) and GATS XVII (national treatment).

1. Effective Date of GATS Obligations

The preliminary issue of the retroactivity of the GATS arose because some parts of impugned EC Regulation 404/93 were adopted and entered into force before the date of entry into force of the GATS (January 1, 1995).[397] The EC claimed that the application of GATS in this case would be contrary to Article 28 of the Vienna Convention on the Law of International Treaties,[398] which provides that international treaties are not applicable to situations that ceased to exist before their entry into force. Relying on 1992 data relating to the ownership and control of the companies, the panel characterized the provisions at issue as *continuing* measures, enacted before the entry into force of GATS but remaining in effect after that date. The scope of its ruling was accordingly limited to the effect of the measures after January 1995.

[395] The GATT waiver was required to allow the EC to take a general exception to its GATT obligations in order to continue to apply the Fourth ACP-Lomé Convention, and its system of preferential treatment for the ACP countries, which had been signed at Lomé on December 15, 1989; *see* text published in the Yellow Pages (1–186) of the Special Issue of *The Courier* No. 120 (March–April, 1990), OJ L 229/3 (1991), reprinted in 29 *I.L.M.* 783 (1990), as revised by the agreement signed in Mauritius on November 4, 1995, and published in the Yellow Pages (1–200) of *The Courier* No. 155 (January-February, 1996).

[396] Zdouc, *supra* note 328, 317.

[397] EC Regulation 404/93 was adopted on February 13, 1993 and was applicable from July 1, 1993.

[398] *Vienna Convention on the Law of Treaties*, *supra* note 384.

A further question arose as to the temporal relationship between the *de facto* discrimination arising from the EC licensing system and the GATS. At the panel stage it was determined that this discrimination existed in 1992, but whether it persisted after January 1995 remained unclear. Although the Appellate Body considered that the existence of *de facto* discrimination after January 1, 1995 was evident from the findings of the panel, the issue was technically outside the scope of jurisdiction of the Appellate Body and was not analyzed further.[399]

2. Application of the GATS

There were two issues to be addressed by the Appellate Body in the context of the application of the GATS to the EC import licensing procedures with regard to bananas. The first was whether the GATS applied to the EC import licensing procedures: i.e., whether they were "measures affecting trade in services." The second was whether the GATS overlaps with the GATT 1994, or whether the two agreements are mutually exclusive.

Having dealt with the question of non-discriminatory administration of quantitative restrictions under Article XIII GATT and having determined that the Lomé waiver justified preferential treatment provided by the EC only to the extent of the pre-1991 "best-ever" exports of the complainants, the panel held that allocation of advantages by the EC to any greater extent than the pre-1991 levels would contravene GATT Article XIII. Only then could the panel turn its attention to the import licensing procedures. It first determined that the EC banana licensing procedure fell within the scope of the provisions of GATT 1994, the Licensing Agreement and Article 2 of the TRIMs Agreement. In addition, and in spite of the EC argument to the contrary, the Appellate Body found that the import licensing regime also fell within the scope of the GATS.

The EC argued that the GATS did not apply to the banana licensing system in EC Regulation 404/93 because it did not comprise a measure "affecting trade in services" within the meaning of GATS Article I:1. It asserted that the rules dealt with bananas, albeit their importation, sale and distribution, and therefore the GATT rules alone applied. The complaining parties asserted that the GATS was sufficiently broad to encompass the EC regime because it comprised measures that affected the competitive relations between domestic and foreign services and service suppliers. This conclusion, they argued, was not affected by the fact that the same measures were also subject to scrutiny under the GATT 1994, as the two agreements are not mutually exclusive.

The Appellate Body gave a broad interpretation to the phrase "affecting trade in services" in the language of GATS Article I:1. It found that the use of the term "affecting" reflects the intent of the drafters to give a wide reach to the GATS. The Appellate Body referred to earlier panel decisions that determined that "affecting," in the context of Article III GATT is wider in scope than such terms as "regulating" or "governing."[400] It also noted that "services" includes any service in any sector, with the exception of services supplied in the exercise of governmental authority, and that "supply of a service" as defined in GATS Article XXVIII(b), includes the production, distribution, marketing, sale and delivery of that service. The Appellate Body found nothing in these provisions to suggest a limited scope of application for the GATS. It also agreed with the panel that

[399] DSU *Article 17.6* limits the appeal to issues of law covered in the panel report and legal interpretations developed by the panel.

[400] *EC—Bananas III*, *supra* note 375, Report of the Appellate Body, ¶ 220; Report of the Panel, ¶ 7.281; see also the earlier GATT panel decision, *Italian Agricultural Machinery* (adopted), *BISD* 7th Supp. 60, ¶ 12 (1958).

GATS Article XXVIII(c) does not narrow the meaning of the term "affecting" to "in respect of."[401] On these grounds, the Appellate Body found no legal basis for an *a priori* exclusion of measures within the EC banana import licensing regime from the scope of the GATS.

The second issue was whether the GATS and the GATT 1994 are mutually exclusive agreements. The Appellate Body found that the GATS and the GATT 1994 were not intended to cover the same subject matter and, given the respective scope of the application of the two agreements, they may or may not overlap, depending on the nature of the measures at issue.

The Appellate Body identified three categories of measures. First, certain measures could fall exclusively within the scope of the GATT 1994, when they affect trade in goods as goods. Second, measures that affect the supply of services as services would fall exclusively within the scope of the GATS. A third category of measures could be found to fall within the scope of both the GATT 1994 and the GATS. These, it said, involved a service relating to a particular good or a service supplied in conjunction with a particular good. In all such cases in this third category, the measure could be scrutinized under both GATT 1994 and GATS, although the specific aspects of the measure examined under each agreement could be different. Under the GATT 1994, the focus is on how the measure affects the goods involved. Under GATS, the focus is on how the measure affects the supply of the service or the service suppliers involved. Whether a certain measure affecting the supply of a service related to a particular good is scrutinized under the GATT 1994 or the GATS, or both, is a matter that can only be determined on a case-by-case basis, as in *Canada Periodicals*.[402]

3. Service Suppliers

The EC, on appeal to the Appellate Body, raised two issues concerning the definition of "wholesale services suppliers" and its application. Both arose in response to the panel's finding that "operators" within the meaning of the Regulations at issue are service suppliers, whether they import bananas directly for marketing or conduct other functions in the marketing process within an "integrated company."

The first question was whether the operators under the Regulations were "service suppliers" in the sense of the GATS, as their function was to buy and import bananas. The EC argued that when buying and importing, a wholesale trade services supplier is a buyer or importer and not covered by the GATS at all, because it is not providing any reselling services.[403] The EC also challenged the panel's decision that "integrated companies" are service suppliers, as they may provide some of their services in-house in the production or distribution chain.

On the first point, the Appellate Body agreed with the panel that the operators as defined in the relevant regulations were indeed suppliers of "wholesale trade services," relying largely on the definition of "distributive trade services" in the Headnote to Section 6 of the CPC.[404] It noted that the EC had made a full commitment to wholesale trade services (CPC 622) in its Schedule of Specific Commitments under the GATS and that, although the operators were engaged in some activities not strictly with the definition of "distributive trade services," there was no question that they were also engaged in

[401] *EC—Bananas III*, *supra* note 375, Report of the Panel, ¶ 7.280.
[402] *Id.*, Report of the Appellate Body, ¶ 221.
[403] *Id.*, ¶ 224.
[404] *UN CPC, supra* note 254, 189.

other activities involving the wholesale distribution of bananas that came within that definition.[405] While the principal services rendered by wholesalers and retailers was considered to be reselling merchandise, the CPC definition also referred to a variety of related, subordinated services that may accompany the principal service of reselling. The Appellate Body noted that these related services would include buying and importing, as it would be difficult for a wholesaler/retailer to engage in reselling without obtaining the goods by some means.[406] Further, the Appellate Body took the view that even if a vertically integrated company performs other functions related to the production, importation, distribution and processing of a product, to the extent that it is also engaged in providing "wholesale trade services" and is affected by a measure of a Member in its supply of those services, it is a "service supplier" for the purposes of the application of the GATS.[407]

4. Scope of Article II: De Facto Discrimination

Before addressing the substantive claims of discrimination under GATS Article II and GATS Article XVII, the Appellate Body dealt with a further question relating to scope of application. This was the question whether GATS Article II:1 applies only to *de jure*, or formal, discrimination, or whether it also applies to *de facto* discrimination. The EC had appealed the Panel's finding that the MFN obligation contained in GATS Article II:1 to extend "treatment no less favourable" should be interpreted to require the provision of no less favourable conditions *of competition*. The panel had attributed to GATS Article II:1 (MFN) the same ordinary meaning as that of GATS Article XVII:1 (national treatment) and found that both derived from the national treatment standard in Article III of GATT 1994. The panel concluded that as the drafters of GATS had chosen to depart from the MFN language of "any advantage, favour, privilege or immunity" in Article 1 of GATT 1994 and had adopted (in both Articles II and XVII of the GATS) the operative language of "treatment no less favourable," it should be interpreted in accordance with the consistent interpretation of past panels which had found "treatment no less favourable" to be concerned with conditions of competition between like domestic and imported products in internal markets. The panel also found that to interpret the standard of "no less favourable treatment" narrowly to include only formally identical treatment, would frustrate the objective of GATS Article II to prevent discrimination between like services and service suppliers of other Members.

Although coming to the same conclusion, that GATS Article II should apply to both *de facto* and *de jure* discrimination, the Appellate Body found the panel's reasoning to be less than fully satisfactory. It objected to the analysis of GATS Article II (MFN) in light of the national treatment standard and found that references to national treatment provisions in the GATS and previous panel practice in relation to Article III of the GATT were not necessarily relevant to the interpretation of GATS Article II. Instead, the Appellate Body referred to past GATT practice in which Articles I and II GATT had been applied to measures involving *de facto* discrimination.

The Appellate Body also found that the "treatment no less favourable" language contained in Articles II and XVII of the GATS, while it was not necessary to interpret those provisions to arrive at the same meaning in each, did not imply that it had been the intention of the drafters that Article II should have a *de jure* or formal standard. Unlike GATS Article XVII:1, which is qualified by paragraphs 2 and 3, Article II:1 of the GATS

[405] *EC—Bananas III*, *supra* note 375, Report of the Appellate Body, ¶ 225.
[406] *Id*, ¶ 226.
[407] *Id*, ¶ 227.

is unqualified. The normal interpretation of that latter provision does not exclude *de facto* discrimination. Finally, the Appellate Body agreed with the panel that if it did not include *de facto* discrimination it would not be difficult—in fact it would be easier in the case of trade in services than in the case of trade in goods—to devise discriminatory measures aimed at circumventing the basic purpose of the Article.[408]

5. EC Licensing Procedures

The complainants challenged the consistency of various elements of the import licensing system with Article II and Article XVII of the GATS, namely the allocation of licenses on the basis of "operator category" rules, "activity function" rules, and "hurricane" rules. In each case the Appellate Body agreed with the panel that the rules violated both Article II and Article XVII of the GATS.

(a) Operator Category Rules. Under the banana import licensing scheme, the EC had divided operators into two categories, A and B, on the basis of whether they had supplied, during a previous three-year period, third-country and non-traditional bananas, or EC and traditional ACP bananas. Most of the suppliers originating in complainant countries fell into category A while suppliers of EC origin came under category B. Within each of these categories, treatment of suppliers from the EC was identical to that given suppliers originating in the complainant countries. There was no formal discrimination on the basis of origin of the supply of service, but the categories were treated differently. Certain operator category rules did not apply to category B suppliers, i.e. suppliers of EC and ACP bananas, which applied to the category A suppliers. By supplying wholesale trade services to the traditional ACP and EC market segment, operators could move into category B and avoid the additional burden of certain operator category rules. They would also be eligible for allocation of thirty percent of the in-quota licenses for third country and non-traditional imports that the EC had earmarked for category B suppliers.

The panel found the operator category rules to be contrary to both Article II and Article XVII of the GATS. On appeal, the EC argued that the EC licensing system for bananas is not discriminatory under Articles I and XVII of the GATS, because the various aspects of the system, including the operator category rules, the activity function rules and the special hurricane license rules, "pursue entirely legitimate policies" and are not inherently discriminatory "in design or effect." The Appellate Body disagreed, finding no specific authority in Article II or XVII of the GATS for the proposition that the "aims and effects" of a measure are in any way relevant in determining whether that measure is inconsistent with those provisions. It referred to the fact that the "aims and effects" test had originated in connection with the Article III:1 GATT principle that internal taxes, charges or other regulations "should not be applied to imported or domestic products so as to afford protection to domestic production." The Appellate Body noted that there is no comparable provision in the GATS, and that the Article III:1 GATT "aims and effects" test had been rejected by it in *Japan—Alcoholic Beverages*.[409]

This question aside, the Appellate Body affirmed the decision of the panel that the allocation of thirty percent of the third country and non-traditional import licenses to category B suppliers, in order to market third-country bananas, created less favourable conditions for the operators belonging to Category A (mostly suppliers originating in complainant parties), and thus violated both the MFN and the national treatment principles of the GATS.

[408] *Id*, ¶ 233.
[409] *Japan—Taxes on Alcoholic Beverages*, *supra* note 385.

(b) Activity Function Rules. Secondly, the EC had applied activity function rules that defined three categories of economic functions: primary importers, secondary importers (customs clearers) and ripeners. Tariff quota licenses for imports of bananas originating in traditional or non-ACP countries were allocated in fixed percentages according to these activities: 57 percent of the quotas were designated for primary importers and the rest to secondary suppliers (15 percent) and ripeners (28 percent), most of which were EC companies. On the facts, the service suppliers of complainant origin had little if any access to the performance of ripening activities, most of which was handled in EC-owned or -controlled ripening facilities.

The EC maintained that the aim of the activity function rules was to protect the banana ripeners against the concentration of economic bargaining power in the hands of the primary importers as a result of the tariff quota. It argued that the policy objective was to correct the position of all ripeners in relation to all suppliers of bananas, without distinction as to nationality, and that the effect of the activity function rules depended on the commercial choices made by the operators. Operators that previously supplied wholesale trade services to bananas brought under the tariff quota could avoid or reduce the extent to which they were subject to the activity function rules by extending their services to the EC market segment. They could also resort to licence pooling within independent ripeners, or retain ownership of the bananas they imported and have them ripened under contract.

In the view of the EC there were many options open to primary importers, and the activity function rules did not have the effect of providing less favourable conditions of competition. Nevertheless, the Appellate Body again rejected the "aims and effects" test, noting the panel's factual conclusions that even the EC statistics suggested that 74 to 80 percent of ripeners were EC-controlled. Given these findings, the Appellate Body affirmed the legal conclusion of the panel that the allocation to ripeners of a certain proportion of the Category A and B licenses, thereby allowing the importation of third-country and non-traditional ACP bananas at in-quota tariff rates, created less favourable conditions of competition of like service suppliers of complainants' origin and was therefore inconsistent with the requirements of GATS Article XVII.

(c) Hurricane Licenses. The EC asserted that the purpose of the "hurricane licence rules" was to compensate those who suffer damage caused by tropical storms. Under those rules, however, it was only "operators who include or directly represent EC or ACP producers or producer organizations affected by a tropical storm" who were eligible for allocation of hurricane licenses. The panel concluded on the facts that the vast majority of operators who "include or directly represent EC or ACP producers" were service suppliers of EC or ACP origin. The Appellate Body accepted this factual finding and affirmed the decision of the panel that the hurricane licence system was also contrary to Article II and XVII of the GATS.[410]

C. Canada—Certain Measures Affecting the Automotive Industry

The *Canada—Automotive*[411] case involved complaints by Japan and the EC relating to Canadian measures affecting the automotive industry. The complainants challenged

[410] *EC—Bananas III*, *supra* note 375, Report of the Appellate Body, ¶ 248.
[411] *Canada—Automotive*, *supra* note 376.

Canadian legislation implementing an automotive products agreement (the so-called Auto Pact between the Canada and the United States, or Canada-United States Auto Pact), under which only a limited number of motor vehicle manufacturers were eligible to import vehicles into Canada duty-free and to distribute the motor vehicles in Canada at the wholesale and retail distribution levels. The legislation also made the duty-free treatment contingent on two criteria: a Canadian value-added ("CVA") content requirement that applied to both goods and services and a manufacturing and sales requirement. Japan and the EC alleged that these measures were in violation of several provisions of the GATT 1994, the TRIMs Agreement, Article 3 of the SCM Agreement and Articles II, V and XVII of the GATS.

The measure in issue was the *Motor Vehicles Tariff Order 1998 ("MVTO 1998")* which established duty-free treatment of certain automobiles and other motor vehicles pursuant to the Canada-United States Auto Pact of 1965. In conjunction with this there were *Special Remission Orders ("SROs")* which, in line with the terms of the Auto Pact, extended eligibility for the import duty exemption to additional manufacturers that had not met the conditions of the original MVTO 1965 and its successors. The import duty exemption was available to manufacturers of motor vehicles on imports "from any country entitled to the Most-Favoured-Nation Tariff," on condition that the manufacturer met the following three criteria:

a. the manufacturer was to have produced in Canada, during the designated "base year," motor vehicles of the class imported;
b. the ratio of the net sales value of the vehicles *produced in Canada* to the net sales value of all vehicles of that class *sold* for consumption *in Canada* was required to be, in the period of importation, "equal to or higher than" the ratio in the "base year," and the ratio was not in any case to be lower than 75:100 (the "ratio requirements"); and
c. the amount of Canadian value added in the manufacturer's local production of motor vehicles was required to be "equal to or greater than" the amount of Canadian value added in the local production of motor vehicles of that class during the "base year" (the "CVA requirements").[412]

Like *EC—Bananas III*, the *Canada Automotive* case raised a number of WTO issues in relation to both goods and services. At the panel level, the GATS issues were grouped around four main headings:

GATS Article I—measures affecting trade in services.

GATS Article II (MFN)—import duty exemption:

- whether the import duty exemption affected wholesale trade services;
- whether service suppliers were "like;"
- whether treatment no less favourable was accorded; and
- applicability of GATS Article V.

GATS Article XVII (national treatment)—import duty exemption:

- whether Canada had undertaken commitments on wholesale trade services of motor vehicles; and
- whether services were "like."

[412] *Id*., Report of the Appellate Body, ¶ 9 (citations omitted) (emphasis in original).

GATS Article XVII (national treatment)—the CVA Requirement:

- CVA requirements as affecting services related to the production of motor vehicles;
- whether services affected by the CVA requirements were covered by Canada's specific commitments in services;
- technical feasibility and inherent competitive disadvantage of modes 1 and 2 services;
- whether it was relevant that CVA requirements might be met on the basis of labour costs alone; and
- whether treatment no less favourable was accorded.

1. GATS Article I: Measures Affecting Trade in Services

The Appellate Body found that the panel should have asked, as a threshold question, whether the measure was within the scope of the GATS by examining whether the import duty exemption was a measure "affecting" trade in services within the meaning of GATS Article I, and that by failing to do so, the panel had erred in its interpretative approach.[413] The panel had referred to the *EC—Bananas III* case for the proposition that the term "affecting" in Article I of the GATS has a broad scope of application and accordingly found that no measures are *a priori* excluded from the scope of application of the GATS.[414]

The panel ultimately found that:

> "(t)he determination of whether a measure affects trade in services cannot be done in abstract terms in isolation from examining whether the effect of such a measure is consistent with the Member's obligations and commitments under the GATS. In this case, the determination of whether the MVTO 1998 and SROs are measures affecting trade in services within the meaning of Article I of the GATS should be done on the basis of the determination of whether these measures constitute less favourable treatment for the services and service suppliers of some Members as compared to those of others (GATS Article II) and/or GATS Article XVII)."[415]

The Appellate Body applied its reasoning in *United States—Import Prohibition of Certain Shrimp and Shrimp Products*, where it had held, in the context of GATT Article XX, that a panel may not ignore the "fundamental structure and logic" of a provision in deciding the proper sequence of steps in its analysis.[416] Based on this principle, it found that the fundamental structure and logic of GATS Article I:1, in relation to the rest of the Agreement, requires that determination of whether a measure is, in fact, covered by the GATS must be made *before* the consistency of that measure with any substantive obligation of the GATS can be assessed. It also found that the GATS Article II:1 reference to the fact that it applies to "any measure covered by this Agreement," confirms that a measure must be found to be covered by the GATS *before* any further examination of consistency with GATS Article II can logically be made.

The Appellate Body conducted its own threshold analysis of Article I of the GATS, referring to the pertinent parts of GATS Article I:1 and certain GATS Article XXVIII definitions. It found that at least two key legal issues must be examined to determine

[413] *Id*., ¶ 152.
[414] *Id*., Report of the WTO Panel, ¶ 10.231.
[415] *Id.*, ¶ 10.234.
[416] *US—Shrimp*, *supra* note 230, Report of the Appellate Body, ¶ 119. *See also US—Gasoline*, *supra* note 230, Report of the Appellate Body, at 22.

whether a measure is one "affecting trade in services." The first of these was whether there is "trade in services" in the sense of GATS Article I:2. Second, was whether the measure in issue "affects" such trade in services within the meaning of GATS Article I:1.

(a) Trade in Services. As to whether there was "trade in services," the Appellate Body looked at GATS Article I:2, where the definition of "trade in services" is the "supply of a service" in any one of four listed modes of supply. It then identified the supply of a service under the third mode, i.e. supply "by a service supplier" of one Member, through *commercial presence* in the territory of any other Member', as being at issue in the case. Next it looked at the definition of "commercial presence" in GATS Article XXVIII(d)[417] and, given the consensus of the parties, concluded that the category of services at issue was "wholesale trade services of motor vehicles supplied by service suppliers of certain Members through commercial presence in Canada."

(b) Affects Trade in Services. Having found "trade in services" it then considered whether the measure at issue "affects trade in services." Citing its own language in *EC—Bananas III*,[418] the Appellate Body affirmed the view that use of the term "affecting" in GATS Article I:1 reflects the intent of the drafters to give a broad reach to the GATS. It also affirmed the finding that, although the subject matter of the GATT 1994 and that of the GATS are different, particular measures "could be found to fall within the scope of both the GATT 1994 and the GATS," and that such measures include those "that involve a service relating to a particular good or a service supplied in conjunction with a particular good."[419] Furthermore, the Appellate Body reiterated that "whether a certain measure affecting the supply of a service related to a particular good is scrutinized under the GATT 1994 or the GATS, or both, is a matter that can only be determined on a case-by-case basis."[420] It concluded that:

> In cases where the same measure can be scrutinized under both the GATT 1994 and the GATS, however, the focus of the inquiry, and the specific aspects of the measure to be scrutinized, under each agreement, will be different because the subjects of the two agreements are different. Under the GATS, as we stated in European Communities—EC—Bananas III, "the focus is on how the measure affects the supply of the service or the service suppliers involved."[421]

The Appellate Body noted Canada's argument that the import duty exemption was not a measure "affecting trade in services" within the meaning of Article I of the GATS, because it was a tariff measure that affected the *goods* themselves and not the supply of distribution services. Canada maintained that the measure did not "affect" a service supplier in its *capacity as a service supplier* and in its *supply of a service*. It also relied on the *EC—Bananas III* decision to support its argument that the measure fell squarely within GATT 1994 and did *not* involve a service *relating to a particular good* or a service *supplied in conjunction with a particular good*.

Nevertheless, the panel had previously determined that the import duty exemption, granted only to manufacturer beneficiaries, bore upon conditions of competition in the supply of distribution services. Therefore, the import duty exemption fell into the third

[417] "(a)ny type of business or professional establishment, including through (i) the constitution, acquisition or maintenance of a juridical person . . . ."
[418] *EC—Bananas III*, *supra* note 375, Report of the Appellate Body, ¶ 220.
[419] *Id*, ¶ 221.
[420] *Id*; see also, *Canada-Periodicals*, *supra* note 374, Report of the Appellate Body, at 19.
[421] *Id*, ¶ 221.

category of measures identified by the Appellate Body in *EC—Bananas III*, as involving "a service relating to a particular good or a service supplied in conjunction with a particular good," which "could be scrutinized under both the GATT 1994 and the GATS."[422]

Referring to its analysis in *EC—Bananas III*, in determining that the activities of operators were indeed suppliers of "wholesale trade services," the Appellate Body pointed out that although the operators in that case were engaged in certain activities that were not strictly "distributive trade services," there was no question that they are also engaged in other activities involving the wholesale distribution of bananas within that definition.[423] It also noted the conclusions drawn in regard to vertically integrated corporate operators and said that "even if a company is vertically-integrated, and even if it performs other functions related to the production, importation, distribution and processing of a product, *to the extent that it is also engaged in providing 'wholesale trade services'* and is therefore *affected in that capacity* by a particular measure of a Member *in its supply of those 'wholesale trade services'*, that company *is a service supplier* within the scope of the GATS"[424] (emphasis added).

On that basis, the Appellate Body criticized the panel for failing to examine any evidence relating to the provision of wholesale trade services of motor vehicles within the Canadian market, its failure to make any factual findings as to the structure of the market for motor vehicles in Canada, or the companies that actually provide wholesale trade services of motor vehicles, and its consequent failure to examine whether or how the import duty exemption affects *wholesale trade service suppliers in their capacity as service suppliers*. The statement of the panel on the point had been as follows:

> Like the measures at issue in the EC—Bananas III case, the import duty exemption granted only to manufacturer beneficiaries bears upon conditions of competition in the supply of distribution services, regardless of whether it directly governs or indirectly affects the supply of such services.[425]

The Appellate Body found this to be an insufficient basis for a legal finding. A proper analysis as to whether the measure is one "affecting trade in services" under GATS Article I:1 would require the panel to show that the import duty exemption "affects" wholesale trade services of motor vehicles, *as services*, or wholesale trade service suppliers of motor vehicles, *in their capacity as service suppliers*. It found that the Panel had failed to analyse the evidence on the record relating to the provision of wholesale trade services of motor vehicles in the Canadian market. Moreover, it had also failed to articulate what it understood GATS Article I:1 to require by the use of the term "affecting." The panel, having interpreted GATS Article I:1, ought to have examined all the relevant facts, including *who* supplies wholesale trade services of motor vehicles through commercial presence in Canada, and *how* such services are supplied. The Appellate Body stated baldly: "(i)t is not enough to make assumptions." Finally, it said that "the Panel should have applied its interpretation of "affecting trade in services" to the facts it should have found."[426]

2. GATS Article II:1

In spite of finding that the panel had failed to examine whether the measure is one "affecting trade in services under GATS Article I, the Appellate Body

[422] *Canada—Automotive*, *supra* note 376, Report of the Panel, ¶ 10.239.
[423] *EC—Bananas III*, *supra* note 375, Report of the Appellate Body, ¶ 226.
[424] *Id.*, ¶ 227.
[425] *Canada—Automotive*, *supra* note 376, Panel Report, ¶ 10.239.
[426] *Id.*, Report of the Appellate Body, ¶ 165.

examined the analysis of the panel with respect to issues raised on appeal under GATS Article II:1.

Once again the Appellate Body, in laying the foundation as to the appropriate sequence of analysis, looked first at the text of GATS Article II:1 (MFN) and found that the wording of the provision suggested that analysis of the consistency of a measure with GATS Article II:1 should proceed in several steps. First, it reiterated that there must be a threshold determination under GATS Article I:1 finding that there is "trade in services" in one of four "modes of supply" and a measure which "affects" this trade. If the threshold determination is that the measure is covered by the GATS, then the next step is the appraisal of the consistency of the measure with the requirements of GATS Article II:1. This appraisal requires that treatment by one Member of "services and services suppliers" of any other Member should be compared with treatment of "like" services and service suppliers of "any other country." The process would normally require an interpretation of GATS Article II:1 and factual findings as to the treatment of services and service suppliers (in this case, the wholesale trade services and service suppliers of motor vehicles of different Members commercially present in Canada). Finally, the interpretation of GATS Article II must be applied to the facts as the panel finds them.

The Appellate Body found that the panel had taken none of these steps, but had based its conclusions on "pure speculation."[427] It said that the panel had confused the *application* of the import duty exemption to *manufacturers* with its *possible effect* on *wholesalers*.[428] It had also conducted a goods analysis of the measure, simply extrapolating its analysis of how the import duty exemption affects manufacturers to wholesale trade service suppliers of motor vehicles. Moreover, the panel had neither assessed the relevant facts, nor interpreted GATS Article II and applied the interpretation to the facts it found. On this basis the Appellate Body reversed the conclusion of the panel that import duty exemption, pursuant to the MVTO 1998 and the SROs, is inconsistent with Article II:1 of the GATS and its findings leading to that conclusion. In so doing, the Appellate Body expressly stated that it did not want to suggest that the import duty exemption does *not* affect wholesale trade services of motor vehicles in Canada.[429] Further, mindful of the importance of the GATS as a new multilateral trade agreement covered by the WTO Agreement and the complexity of the subject matter of trade in services, it decided that it was unable in the circumstances to provide any interpretation of GATS Article II.

3. GATS Article XVII: Import Duty Exemption and CVA Requirements

The parties did not challenge the decision of the panel with respect to GATS Article XVII on national treatment and the Appellate Body made no reference to this provision, or its analysis by the panel. It does, however, in its concluding paragraph, recommend that the DSB request Canada to bring the measure in question, "found in this Report and in the Panel Report as modified by this Report, to be inconsistent with Articles I and III of the GATT 1994, Article XVII of the GATS and Article 3.1 of the SCM Agreement, into conformity with its obligations in those agreements."

As to whether the import duty exemption contravened the national treatment obligation under GATS Article XVII, the panel found that Japan had failed to demonstrate that the import duty exemption, granted pursuant to the MVTO 1998 and the SROs constituted, "treatment less favourable" accorded to Japanese suppliers of wholesale trade services of

[427] *Id.*, Report of the Appellate Body, ¶ 174. *See also* ¶¶ 172 and 173.
[428] *Id.*, ¶ 181.
[429] *Id.*, ¶ 183.

motor vehicles than that accorded to like Canadian service suppliers within the meaning of Article XVII of the GATS.[430]

On the CVA requirements, the panel had found Canada, as a result of the application of the CVA requirements as one of the conditions determining eligibility for the import duty exemption on motor vehicles under the MVTO and SROs, to have acted inconsistently with Article XVII of the GATS by according treatment less favourable to services and service suppliers of other Members, supplied through modes 1 and 2, than it accorded to its own like services and services suppliers.[431]

The panel's reasoning on GATS Article XVII should, in light of the Appellate Body critique of its analysis and application of Articles I and II of the GATS, be viewed with caution. Although the conclusions of the panel still stand concerning application of GATS Article XVII (national treatment) to the CVA requirements, the Appellate Body's critique of the panel's approach to the Article I threshold determination applies equally to the CVA requirements as to the import duty exemption.

D. Japan—Photographic Film and Paper (Kodak-Fuji)

The *Kodak-Fuji*[432] dispute arose out of long-standing competition between the U.S. photographic film producer, Kodak, and its Japanese counterpart Fuji, and Kodak's battle for a share of the Japanese market. Originally Japan employed high tariffs and import licensing requirements to prevent the U.S. company from achieving a significant market presence, but eventually dismantled them, under pressure from the U.S. government and the OECD. After the formal restrictions were dismantled, the Japanese government then allegedly employed informal "*liberalization countermeasures*" to assist Fuji in blocking the expansion of Kodak in Japan. In particular, the government was said to have encouraged wholesale distributors to enter into exclusive supply contracts with Fuji that arguably enabled them and their affiliated distributors to dominate the Japanese market. According to the United States, the Japanese Ministry of International Trade and Industry: (1) encouraged the restructuring of the distribution agreements in consumer photographic materials so as to bring wholesalers and laboratories under the control of domestic manufacturers; (2) defended the Japanese industry against price-fixing charges by the Japanese Fair Trade Commission; and (3) tolerated systematic anti-competitive activities by the *domestic* industry, which the United States alleged to have the effect of restricting access of its industry into the Japanese market. Arguably it fostered a dependent and exclusionary relationship among Japan's major photographic materials manufacturers, the primary wholesalers, secondary wholesalers and retailers.

The United States launched a WTO proceeding claiming that a number of laws, regulations and requirements affecting the distribution, offering for sale, and internal sale of imported consumer photographic film and paper, nullified or impaired benefits accruing to the United States under the WTO agreements. It argued that the measures breached GATT Article III[433] by affording protection to the domestic photographic film industry, breached GATT Article X[434] by reason of lack of transparency, and, within the meaning of GATT Article XXIII,[435] nullified the benefit of tariff commitments made by the Japanese government during the last several negotiating rounds.

[430] *Id.*, Panel Report ¶ 11.1(i).
[431] *Id.*, ¶ 11.1(j).
[432] *Kodak-Fuji case*, *supra* note 377.
[433] National Treatment.
[434] Transparency.
[435] Non-violation nullification and impairment within the meaning of GATT Article XXIII.

Surprisingly, the United States did not base its claim on the GATS. It could have argued that the U.S. supply of distribution, wholesale trade and retailing services was affected by "measures" taken by the Japanese government and that the treatment afforded the U.S. suppliers was less favourable than that accorded to the like Japanese services and service suppliers. Japan had entered both market access and national treatment commitments in its GATS Schedule in regard to distribution services, including wholesale trade services and retailing services, with the exception of mode 4 (movement of natural persons), which remained unbound except for certain categories of persons as described in the Horizontal Commitments.

The Panel decided against the United States on every point. It found that none of the 21 measures challenged by the United States had nullified U.S. tariff benefits or denied national treatment to U.S. exports; that the measures should have been anticipated by the United States in its tariff negotiations; that many of the measures, which were in the form of administrative guidance, did not compel behaviour; and that the purpose and effect of the Japanese action was to modernize, rather than to protect, its economy. The United States did not appeal the decision. Unfortunately the case fails to shed light on the application of the GATS, particularly GATS Article XVII,[436] but illustrates the difficulties at the intersection of public and private conduct, and of trade law and competition law.

E. Mexico—Telecommunications Services

In the *Telmex* case, the panel found that Mexican laws and regulations governing the international supply of telecommunication services violated its international commitments. It concluded that charges for interconnection were unacceptably high, the rules on negotiation of international rates and allocation of revenues fostered anti-competitive behaviour, and foreign suppliers were prevented from accessing public networks and services on reasonable terms. The United States initiated the claim following unsuccessful attempts to negotiate a reduction of rates for completion of long-distance calls in Mexico that were three times more expensive than U.S. calls terminating in Canada. Although limited in scope, the decision is a good example of the impact that WTO disciplines can have on competitive conditions in the international market, with concrete benefits to consumers and businesses. The decision should lead to lower telephone costs for Americans and Mexicans with family and friends across the border, and eliminate unnecessary costs for businesses and telecoms providers. The panel found against Mexico on three main issues.

1. Interconnection with a Major Supplier at Cost-Oriented Rates

The panel ruled that the rates charged by Mexico for interconnecting U.S. suppliers with a major Mexican supplier, through its international gateways, were not 'cost-oriented' as required by the Telecoms Reference Paper, which was incorporated into Mexico's GATS schedule (¶ 7.216). The interconnection requirement only applied to services for which Mexico had permitted access by way of scheduled GATS commitments. In relation to cross-border supply (which the basic telecoms services in issue are), Mexico had given full access to U.S. operators who owned their own facilities in the US. This was subject to the express requirement that calls be routed through Mexican enterprises holding a government concession for the operation of a public telecoms network, for the purposes of terminating calls in Mexico.

[436] National Treatment.

The panel largely accepted U.S. methodologies demonstrating that Telmex rates for international interconnection were not cost-oriented. Data regarding the same network elements used to interconnect US suppliers showed that they cost on average 75 percent less when used for domestic interconnection (¶¶ 7.189–203); a further methodology demonstrated that wholesale rates for termination of calls between various countries with competitive long-distance operators were much lower than the rates charged by Telmex (¶¶ 7.208–210).

2. Prevention of Anti-Competitive Practices

The panel found that not only had Mexico failed to take appropriate measures to prevent anti-competitive practices in the industry, but through its International Long Distance Rules it actually required Mexican telecoms suppliers to participate in them (¶¶ 7.260–261). Under the 'uniform settlement provisions', the dominant carrier, which is invariably Telmex, was required to negotiate the uniform interconnection rate for cross-border traffic to and from a given country, on behalf of all Mexican carriers. This elimination of competition within Mexico for international interconnection resulted in rates significantly above cost and significantly above the rates charged in countries with competitive telecoms markets.

The 'proportionate return' system was also in violation for requiring Mexican operators to distribute incoming traffic among themselves (or compensate one another) on the basis of the proportion of outgoing calls handled by each. The panel found that the allocation of market share, together with permission for financial compensation arrangements, had the effects of a market sharing arrangement between suppliers (¶¶ 7.263–264). It said that measures that legally require anti-competitive behaviour could not be 'appropriate' for preventing it (¶¶7.265-266). In the absence of a claim by Mexico, it did not examine the broader issue as to whether Mexico's competition laws were themselves 'appropriate measures' in terms of Section 1 of the Reference Paper.

3. Access to and Use of Public Networks and Services on Reasonable Terms and Conditions

The panel held that Mexico had failed to give U.S. service providers 'access to and use of public networks and services on reasonable terms and conditions', contrary to the GATS Telecoms Annex (¶¶ 7.328–335). Interconnection rates were 'unreasonable' on the ground that they far exceeded 'cost-oriented' rates. Mexican law also prevented U.S. commercial entities from establishing themselves in Mexico, contrary to a full market access commitment by Mexico in relation to mode 3 (commercial presence). Even if they were allowed in, Mexican law prevented them from leasing public networks or capacity in order to provide services by 'simple international resale' to other countries; they were, instead, required to use the facilities of a Mexican company with a government concession to operate public telecoms facilities.

In principle, the decision is helpful in furthering U.S. efforts to open up international telecommunications markets. Instead of having one interconnection rate negotiated by Telmex, US and other foreign carriers will be able to negotiate their own interconnection rates with Mexican telecoms firms, and increased competition should eventually result in reduced, reasonable and cost-oriented rates.

Restrictions on the scope of the Mexican commitments (the denial of interconnection to services supplied over leased networks or leased capacity), which limited the extent of the victory, have no real bearing on the importance of the case outside of the Mexican market. Although the amended Mexican rules on negotiation of settlement rates here

extend only to cross-border 'facilities-based' providers who own U.S. networks and route their calls through a Mexican entity, such limitations will not apply in every case.

Similarly, the mutual agreement of the parties—that Mexico will not implement the part of the panel decision requiring it to permit commercial agencies to conduct international simple resale of leased capacity—is a conclusion, peculiar to this case, that does not undermine the panel's interpretation of Mexico's commitment in relation to mode 3 delivery of services by commercial establishment.

Perhaps the most interesting aspect of the case, at least within the telecoms context, is the way in which the panel addresses the competition issues underlying the dispute. While the GATS itself does not make express provision for ensuring competition in the market, the Telecoms Reference Paper, which requires the prevention of anti-competitive practices, does require the panel to define the phrase, at least for the purpose of application to the measures in question. The panel refers to Mexico's national competition laws only tangentially, indicating that it is not required to address their effect in the absence of a claim by Mexico to do so. Nevertheless, the panel applied a broad interpretation of '*anti-competitive practices*', rejecting Mexico's claim that acts by a major telecommunications supplier cannot be considered anti-competitive simply because they are compelled by its national government. The panel accepted the U.S. argument that the nature of anti-competitive practices does not change as a result of the fact that they are required by law, pointing out that the pro-competitive obligations in the Reference Paper do not reserve any unilateral right of WTO members to maintain anti-competitive measures. While a critical assessment might suggest that this definition could raise issues relating to a broad spectrum of government-required conduct, it seems unlikely that it will result in any challenges that would not otherwise have been contemplated.

For telecoms services providers, the case is instructive in regard to specific definitions, such as the distinction between '*facilities-based*' and '*non-facilities based*' services, and for its application of the terms of the Reference Paper. It also addresses the meaning of two restrictions that Mexico inscribed in its Services Schedule: the cross-border routing restriction and the permit requirement related to establishment of commercial agencies. These restrictions, neither of which was found to be a market access 'limitation' in the true sense, may have parallels in disputes over other commitments. As an initial decision on trade in services, however, the panel report does not take us very far in the elaboration or clarification of specific GATS principles.

VI. The GATS Built-in Agenda: Completing the Framework

At the time the Uruguay Round was completed in 1994 the GATS was heralded as an important, if modest, attempt to create a framework for the liberalization of trade in services.[437] What is perhaps not so readily understood is that GATS is an "incomplete" Agreement. It contains not only a "built-in" requirement for WTO Members to enter into successive rounds of negotiations no later than five years after entry into force of the WTO Agreement and periodically thereafter,[438] but it also calls for completion of the GATS framework with specific disciplines on subsidies, emergency safeguards,

Footer, *The General Agreement on Trade in Services: Taking Stock and Moving Forward*, 29:1 LEGAL ISSUES OF ECONOMIC INTEGRATION 7 (2002).

[438] GATS *Article XIX:1*.

government procurement and domestic regulation. It also calls for negotiating more specific commitments on a sectoral basis, leading to the development of new Annexes,[439] and/or the review of existing ones.[440]

A. Special Negotiating Sessions

1. Overview

Pursuant to Article XIX:I of the GATS, special negotiations on trade in services were launched in January 2000[441] with the intention that these should consist of two phases. The "rule-making" phase would allow WTO Members to negotiate new rules for services on subsidies, safeguards and government procurement, while the "Request and Offer" phase would allow Members to negotiate further market access, commitments across-the-board (with no sector excluded *a priori*) in order to achieve progressively higher levels of liberalization of trade in services by reducing or eliminating restrictive measures. At its meeting of May 26, 2000, the Council for Trade in Services finally agreed on a work program for the first phase of the "negotiations" process[442] whereby Members would submit proposals for discussion at the Special Session of the Council for Trade in Services[443] by the end of December 2000.

Some WTO Members, such as the United States[444] and Hong Kong[445], put forward their own suggestions for a framework and scope and coverage of the negotiations. Additionally, two Members—the European Communities[446] and Australia[447]—called for negotiations to be conducted in so-called "clusters" of inter-related services in certain service sectors, as a means of assisting WTO Members in the traditional Request and Offer phase. It was thought that "clustering" would give weight to economic linkages by providing Members with a "checklist" outlining the economic inter-related sectors and/or subsectors, thereby contributing to the increased efficiency and coherence of services negotiations. In fact, the checklist approach appears to have won the day over clustering, both when dealing with classification in new sectors where economic interlinkages are very prominent and when negotiating on the progressive

[439] For example, a number of developing country Members have pushed for a new GATS *Annex on Tourism*, see *infra* note 550.

[440] Including the GATS *Annex on Article II Exemptions*, *supra* note 161, at 352; GATS *Annex on Movement of Natural Persons*, *supra* note 141; and the possibility of extending the scope of the GATS *Air Transport Annex*, *supra* note 71.

[441] Negotiations under GATS *Article XIX* were formally launched at the Special Session of the Council for Trade in Services of February 25, 2000, S/CSS/M/1 (April 12, 2000), ¶¶ 4–35.

[442] This work program, which some Members have termed a "road map", effectively establishes the main parameters for the overall negotiations, including the agreed modalities for the second phase of negotiations, for the treatment of autonomous liberalization, for means to facilitate the increasing participation of developing countries and proposals on issues arising from the work carried out in the Council and its subsidiary bodies.

[443] The Special Sessions of the Council for Trade in Services are held back-to-back with the regular meetings of the Council for Trade in Services for the duration of the negotiations, with the latter reporting on progress to the WTO General Council. The Special Sessions will cease once negotiations have ended.

liberalization of specific service sectors. (For further details see also Appendix A, section 3, below.)

It was not until after the end of this first phase, in March 2001, that the Council for Trade in Services, adopted the *Guidelines and Procedures for the Negotiation on Trade in Services (Guidelines and Procedures for Negotiations)*, pursuant to the Preamble to the Agreement and GATS Article IV, and as mandated in GATS Article XIX GATS. The negotiations are aimed at achieving progressively higher levels of liberalization of trade in services through the elimination of regulatory barriers, and *inter alia* increasing "the participation of developing countries in trade in services."[448]

In accordance with the *Guidelines and Procedures for Negotiation* no service sector or mode of supply is excluded *a priori* from the negotiations, which means that such negotiations are across the board and include equally sectors where extensive liberalization has already taken place (e.g. telecommunications) and sectors where no, or virtually no, specific commitments have been taken to date (e.g. health-related and social services). Additionally, MFN exemptions previously taken by Members are the subject of negotiations in accordance with Paragraph 6 of the *Annex on Article II Exemptions*.[449]

The current (Uruguay Round)[450] schedules are the starting point for the negotiation of specific commitments,[451] and liberalization may take place through bilateral, plurilateral and multilateral negotiations, with the "Request-Offer" approach, already used in services negotiations and familiar from tariff negotiations, being the principal means of negotiating.[452] However, credit is also to be given in negotiations where individual Members have already undertaken autonomous liberalization following previous negotiations, although the *Guidelines and Procedures for Negotiation* do not say how this is to be achieved.[453] The uncertainty over this issue has finally been resolved only in 2003 with the adoption of a decision on autonomous liberalization, which is discussed below. Equally daunting is the fact that the Council for Trade in Services has decided to continue its work on assessing trade in services in the Special Session, and to keep it on its agenda as an "ongoing activity of the Council," with negotiations being adjusted accordingly in the light of the results of the assessment.[454]

Finally, the *Guidelines and Procedures for Negotiations* specifically mandate Members to continue negotiations on various outstanding issues,[455] related to rule making. These include the negotiations on emergency safeguard measures ("ESMs") under GATS Article X,[456] initially supposed to have been concluded and entered into force by January 1, 1998,[457] and the completion of negotiations on GATS Article VI:4 (domestic

[457] This deadline has been extended several times already as follows: first extension: June 30, 1999 (*Decision on Negotiations on Emergency Safeguard Measures*, adopted by the Council for Trade in Services on November 26, 1997, S/L/43); second extension: December 15, 2000 (*Second Decision on Negotiations on Emergency Safeguard Measures*, adopted by the Council for Trade in Services on June 24, 1999, S/L/73); third

regulation)[458] and negotiations on GATS Article XIII (government procurement),[459] as well as on GATS Article XV (subsidies).[460]

2. Progressive Liberalization and Current Negotiations

Having commenced in 2000, outside of the Doha Round and on the basis of the negotiating mandate contained in the GATS built-in agenda of Article XIX, the negotiations on trade in services have been brought within the current Round, following the Doha Ministerial Meeting in November 2001, where Members noted the following:

> We recognize the work already undertaken in the negotiations, initiated in January 2000 under Article XIX of the General Agreement on Trade in Services, and the large number of proposals submitted by Members on a wide range of sectors and several horizontal issues, as well as on movement of natural persons. We reaffirm the Guidelines and Procedures for the Negotiations adopted by the Council for Trade in Services on March 28, 2001 as the basis for continuing the negotiations, with a view to achieving the objectives of the General Agreement on Trade in Services, as stipulated in the Preamble, Article IV and Article XIX of that Agreement. Participants shall submit initial requests for specific commitments by June 30, 2002 and initial offers by March 31, 2003.[461]

As already noted in Part IV.A.(2)(c), negotiations on trade in services are due to be completed by December 31, 2004, with the Ministerial Declaration calling upon WTO Members to submit initial requests for specific commitments by June 30, 2002 and initial offers by March 31, 2003.[462] It has been reported that at the bilateral (and confidential) request phase, almost all Members have received requests for further liberalization from some fifty-five Members, of which thirty-two are developing country Members.[463] The United States and the EC have requested market access commitments in almost all of the twelve services sectors (only the category of health and related social services appear not to have been mentioned).

Some requests have also addressed "horizontal issues," other than assessment of trade in services and autonomous liberalization, such as the removal of investment barriers (for example, economic needs tests or investment approval procedures) in Mode 3 (commercial presence), while several proposals mostly from developing country Members such as India call for increased access for temporary entry and stay of professional employees under Mode 4 (movement of natural persons). The Request-Offer stage of negotiations is to be followed by bilateral negotiations of market access and national treatment on an item-by-item basis, across all sectors. In accordance with the most recent decision of the

extension: March 15, 2002 (*Third Decision on Negotiations on Emergency Safeguard Measures*, adopted by the Council for Trade in Services on December 1, 2000, S/L/90); fourth extension: March 15, 2004 (*Fourth Decision on Negotiations on Emergency Safeguard Measures*, adopted by the Council for Trade in Services on March 15, 2002, S/L/102); fifth extension, no later than the date of entry into force of current service negotiations (*Fifth Session on Negotiations on Emergency Safeguard Measures*, adopted by the Council for Trade in Services on March 15, 2004, S/L/159.) *See further Negotiations on Emergency Safeguard Measures*, Report of the Chairperson of the Working Party on GATS Rules, S/WPGR/9 (March 14, 2003), 2, II. Background of the Negotiations and Main Activities.

General Council Concerning the Doha Work Programme, revised offers should be tabled by May 2005.[464]

3. Outstanding Issues

The remainder of this Part reviews some of the outstanding issues related to the current round of services negotiations, including horizontal issues such as assessment of trade in services and autonomous liberalization. This is followed by an analysis of those built-in agenda items that form part of the "rules-making" phase of the negotiations, such as domestic regulation, emergency safeguards, government procurement and subsidies as well as the status of review of certain sectoral and/or functional annexes and outstanding implementation issues.

(a) Assessment of Trade in Services. GATS Article XIX:3 requires the Council for Trade in Services to carry out an assessment of trade in services in overall terms and on a sectoral basis, with reference to the objectives of the Agreement, including those set out in GATS Article IV:1 (relating to the participation of developing countries). At the regular Council Meeting of February 25, 2000, it was decided to make this a standing item on the agenda of the Special Session, as part of an on-going process,[465] and this was confirmed in the *Guidelines and Procedures for Negotiations*.[466]

The assessment process has been complicated by the demands for further work on the statistical basis for services, especially sectoral services statistics from non balance-of-payment sources with reference to transition economy and developing country Members, as noted previously in Part IV. B.1 above, there is still a dearth of statistical data on services trade, which has made it difficult for a quantitative assessment of trade in services to be carried out. Some Members also believe that the objective of this assessment process should be to determine if and to what extent developing countries have benefited from "developed countries" liberalization of their services markets, in line with the objectives of Article IV of the GATS.[467]

Some Members, particularly from developing countries, have expressed concern that negotiations on further liberalization of services commitments could only take place once the "rules-making" phase has been sufficiently developed in order to create some certainty and clarity for Members on key disciplines, in particular emergency safeguard measures, when negotiating and scheduling specific and horizontal services commitments. Unfortunately, specialist working groups on domestic regulation and GATS disciplines, which were set up as subsidiary bodies by the Council for Trade in Services,[468] have made slow progress in this respect while the negotiating process for further liberalization has continued on track.

(b) Autonomous Liberalization. A further element that has a direct bearing on the course of services negotiations is the issue of autonomous liberalization. Basically, Article XIX:3

[468] GATS *Article XXIV:2*, second full sentence.

GATS[469] requires that the guidelines and procedures for the negotiations also "establish modalities for the treatment of liberalization undertaken autonomously by Members since previous negotiations. . . ."[470] However, there has been persistent doubt as to how to give credit and recognition for autonomous liberalization measures.[471]

Autonomous liberalization first became an issue during the Uruguay Round and was discussed quite extensively in the negotiating group on market access.[472] It was recognized that developing countries, which had autonomously liberalized tariffs or non-tariff measures since June 1, 1986, should be given appropriate recognition by other individual participants in the context of achieving the Uruguay Round trade liberalization objectives. Two issues arose and have remained at the heart of the ongoing debate as applied to negotiations for the liberalization of trade in services.

First, how can recognition be given for measures that Members have taken autonomously if there is no agreement as to what recognition is being given for? Second, should recognition be given to autonomous measures taken by Members outside the GATT/WTO context, particularly in the case of developing countries that have undertaken such liberalization in the context of policy reforms advocated by the IMF and other international financial institutions, such as the World Bank, under a structural adjustment program or under poverty reduction strategies policies?[473] The latter issue in particular affects developing country Members, many of which have not yet formalized these policy reforms through market access and national treatment commitments in the context of GATS.[474] This leads to the peculiar result that for many developing country Members their markets may be effectively open but their market access commitments under GATS remain limited; the resulting gap between the two puts them in a weaker bargaining position when negotiating further market openings.

Discussions between Members have continued for over three years in the Special Session of the Council for Trade in Services as to what criteria should be used in determining the grant of autonomous liberalization, for example the application of an economic needs test,[475] and the modalities to be employed. The latter include functional modalities *inter alia* as to whether credit could be given without necessarily binding the autonomous liberalization measures (and indeed whether binding an autonomous liberalization measures would have any impact on the measure granted), the question as to how to measure the value of the autonomous liberalization measure taken, the nature of the credit given and how disputes arising from the application of autonomous liberalization would be

[469] GATS *Article XIX:3*.

[470] *See also* the *Guidelines and Procedures for Negotiations*, *supra* note 451, ¶ 13.

[471] *See Report of the Meeting of the Council for Trade in Services, Special Session*, held on December 1, 2000 on the *Treatment of Autonomous Liberalization*: Note by the Secretariat, S/CSS/M/6 (January 22, 2001).

[472] A paper was distributed in December 1991 by the Chairman of the Negotiating Group on Market Access, MTN.GNG/MA/W/13, December 19, 1991. GATT contracting parties could not agree whether autonomous liberalization meant tariff bindings undertaken autonomously, or the application of tariffs below bound rates.

[473] Elisabeth Tuerk and Robert Speed, *Credit for Autonomous Liberalization: Benefits and Pitfalls for Developing Countries* (CIEL, January 22, 2003), unpublished paper, available from CIEL, Geneva, or at http://www.ciel.org.

[474] As a WTO representative, present at the aforementioned meeting on autonomous liberalization put it: "Can autonomous liberalization, for the purposes of GATS *Article XIX:3*, constitute trade liberalization undertaken and bound in an autonomous manner, i.e. outside the context of a negotiation, or trade liberalization undertaken autonomously but not bound?," *Report of the Meeting of the Council for Trade in Services, Special Session*, S/CSS/M/6 (January 22, 2001), *supra* note 473, ¶ 4.

[475] An example of this is the *Communication from MERCOSUR —Economic Needs Test*, Council for Trade in Services, Special Session, S/CSS/W/139 (March 20, 2002).

resolved.[476] Of key concern was whether both developed and developing country Members should be equally eligible for credit, with a group of mostly Latin American and Asian developing countries having rejected a proposal to this effect in 2001.[477]

Eventually in March 2003, after the initial Request and Offer stage had come to an end but before negotiations on trade in services had been completed, the Council for Trade in Services adopted a decision on *Modalities for the Treatment of Autonomous Liberalization (Autonomous Liberalization Modalities*).[478] Essentially an autonomous liberalization measure is any measure that is:

(a) subject to scheduling under Part III of GATS, and/or leading to the termination of an MFN exemption,
(b) compatible with the MFN principle,
(c) undertaken by the liberalizing measure unilaterally, since previous negotiations, in accordance with Article XIX of GATS, and
(d) applicable to any or all service sectors.[479]

A footnote to sub-section (c) makes it clear that measures undertaken as part of an economic reform program, including those undertaken under the auspices of the IMF or World Bank, should be considered as autonomous liberalization measures for the purpose of the *Autonomous Liberalization Modalities* provided they meet the criteria set out therein.

The actual criteria for autonomous liberalization are not defined as such in the decision on *Autonomous Liberalization Modalities* but instead are offered as "illustrative criteria."[480] They include some nine possible criteria including "sectoral coverage," the "liberalising nature of the measure concerned," "date of entry into force and duration of the measure," sector share in total trade of the trading partner, share of the latter in the total trade in the sector that has been autonomously liberalized by the liberalizing Member, "importance and impact of the autonomous liberalization measures on the liberalizing member's economy," "market potential in the liberalizing Member for the trading partner," expansion opportunities of foreign participation in the sector after introduction of the measures, and "whether the measure in question has already been scheduled and, if not, whether the liberalizing Member would be willing to do so." The latter issue was one of the major sticking points for developing country Members but was seen as vital in order to bring about the legal certainty and predictability that a bound measure has following the successful conclusion of negotiations.[481]

It was also agreed that Members could use any qualitative or quantitative approach in arriving at an assessment of the value of the autonomous liberalization measure.[482] The *Autonomous Liberalization Modalities* also explicitly states that Members should take into account the level and development of individual Members "both overall and in individual sectors" when applying both approaches and criteria.[483] Furthermore, the

Autonomous Liberalization Modalities is explicit when it says that the modalities "shall be used *inter alia* as a means of promoting the economic growth and development of developing countries and their increasing participation in trade in services."[484] Moreover, credit for autonomous liberalization shall be recognized and granted with Members taking "fully into account the flexibility provided for individual country members" and their individual level of development.[485]

B. Domestic Regulation

The *Guidelines and Procedures for Negotiations* established for services recognize that the work by the Working Party on Domestic Regulation ("WPDR") on regulatory disciplines is a significant part of the current overall WTO negotiations, stating "Members shall aim to complete negotiations under Articles VI:4 . . . prior to the conclusion of negotiations on specific commitments."[486] One of the initial stages of the current services negotiations was the circulation of negotiating proposals, over 140 of which were submitted, in nearly equal numbers by developed and developing country WTO Members. The proposals, publicly available on the WTO website,[487] are essentially expressions of negotiating interest, containing typically a brief description of the sector concerned, comments on the trade importance, including for developing countries, a general description of the main trade barriers encountered and, often, general suggestions for trade liberalization.

It is important to observe that nearly every negotiating proposal contains a reference to the significance of domestic regulatory issues for the sector concerned, with most urging that progress be made on the development of regulatory disciplines by the WPDR. With respect to transparency, Canada and the United States submitted specific proposals.[488] The Canadian proposal emphasizes the need to improve the transparency and predictability of the regulatory conditions under which international business is conducted, especially with regard to small- and medium-sized enterprises, while the U.S. proposal calls upon Members to consider a wide application of measures for transparency in domestic regulation, including prior comment processes.

Since the Request phase of WTO services negotiations is typically conducted bilaterally between Members, it does not involve notifications to the WTO Secretariat. Nonetheless, Member governments have been encouraged to report on the progress of bilateral negotiations, including the domestic regulation aspects, in the Special Session meetings of the Council for Trade in Services. Notably, a number of developing countries have stated that issues regarding domestic regulation might be better treated in the WPDR, i.e. a multilateral approach, rather than in the context of bilateral negotiations.[489]

[484] *Id.*, Part IV, ¶ 13.

[485] *Id.*, ¶ 14.

[486] *Guidelines and Procedures for Negotiations*, *supra* note 453, ¶ 7. *See* Appendix B of this chapter for progress to date in the development of regulatory disciplines.

[487] *See* http://www.wto.org/english/tratop_e/serv_e/s_propnewnegs_e.htm. A compilation of the regulatory issues raised in the negotiating proposals was submitted as an Informal Paper to the WPDR, Job (02)/50 (May 31, 2002). (Unpublished, informal paper, not in the public domain.)

[488] The proposals are *Communication from Canada*, Council for Trade in Services, Special Session, S/CSS/W/47 (March 14, 2001) and *Communication from the United States*, Council for Trade in Services, Special Session, S/CSS/W/102 (July 13, 2001), respectively.

[489] Council for Trade in Services, *Report of the Meeting Held on October 28, and November 1, 2002*—Note by the Secretariat, TN/S/M/4 (February 11, 2003), 27–28 and 33–34. *See also* Minutes *Additional Commitments* of the Meeting of the Working Party on Domestic Regulation, S/WPDR/M/18 (December 3, 2002), 5–6.

1. Legal Form of Regulatory Disciplines

Another important issue, closely related to the question of multilateral *versus* bilateral approaches, is whether work on regulatory issues in services should involve the development of disciplines under GATS Article VI:4, the scheduling of Additional Commitments in accordance with GATS Article XVIII, or a combination of the two.[490] While sharing a number of common elements, the two options have significantly different implications.

First, one of the most important distinctions between the two options is that the regulatory disciplines developed under GATS Article VI:4 are "rules about regulations," rather than the regulations themselves. If a Member inscribes an aspect of a regulation in the Additional Commitments column of its GATS Schedule (as may be requested in the context of bilateral negotiations), that aspect of the regulatory structure underlying the sector (or sectors) concerned becomes bound and cannot easily be modified or withdrawn.[491]

While adding an Annex on Domestic Regulation to the GATS is perhaps the most likely way of implementing any horizontal disciplines that may be created, another option is for individual Members to add a common Reference Paper to the Additional Commitments column of their GATS Schedule.[492] In either case the regulatory disciplines contained in the Annex or the Reference Paper would be binding upon the Members concerned while their domestic regulatory structures would remain unrestricted. The two options are not identical in their effect, however, as an annex would have universal coverage among WTO Members, and a Reference Paper would be binding only upon those individual Members that chose to add it to their GATS Schedules.

In terms of addressing specific regulatory concerns (as opposed to more general issues), persuading another Member to make a commitment under GATS Article XVIII may well be the easiest and most direct way of achieving the desired result. For example, if exports of services have been hampered by long delays in obtaining necessary authorizations, the Member concerned might be persuaded to add a promise under the Additional Commitments column of their Schedule to process such authorizations within a fixed time-period. Any commitment made would, of course, be available to all WTO Members on a MFN basis. The alternative is long and complicated negotiations in order to create horizontal (or even sectoral) disciplines that, in the end, may not achieve the desired specific result.

Obviously, however, the risk in the bilateral approach is that larger systemic issues, such as recognition procedures, may not be adequately addressed. For smaller WTO Members, there is also the risk that a bilateral approach might not provide sufficient negotiating leverage, compared to the albeit more complex and time-consuming multilateral approach.

2. Sectoral vs. Horizontal Disciplines

Finally, one of the most interesting questions regarding regulatory issues in the current (and future) services negotiations is whether the disciplines created are more likely to be horizontal or sectoral. Perhaps one of the more likely scenarios is the creation of a

[490] *See Additional Commitments under Article XVIII of the GATS*, *supra* note 260.

[491] Improvements to a GATS Schedule merely involve a notification procedure, while changes that reduce the level of liberalization require the payment of compensation under GATS *Article* XXI, unless covered under the GATS exception provisions.

[492] This latter option may also be the one Members decide upon with respect to implementing any regulatory disciplines created at the sectoral level, as was done previously with the *Reference Paper on Basic Telecommunications*, *supra* note 263.

core set of horizontal disciplines possibly along the lines of Japan's draft Annex (see Appendix B to this chapter), together with a number of sector-specific disciplines.

Members would almost surely decide to make any horizontal disciplines that are created applicable only where specific commitments have been made. These core disciplines would most likely cover such fundamental aspects as transparency and necessity, together with a limited number of other broadly applicable disciplines. An issue of fundamental importance for developing countries is the extent to which recognition problems and other Mode 4-related issues covered by domestic regulation can be addressed in a core set of horizontal disciplines. Otherwise, the alternative would be a primarily bilateral approach, as discussed above.

In the context of the current services negotiations, at least some sectoral disciplines on regulation are likely to be proposed and undoubtedly adopted. One of the important roles of the WPDR will be to ensure smooth coordination between any horizontal and sectoral disciplines that are created in order to minimize administrative difficulties and to prevent potential conflicts. Another possible role could be to analyse proposed sectoral disciplines to determine their horizontal applicability.

C. Emergency Safeguards, Government Procurement and Subsidies

Another aspect of the ongoing negotiations is the "rules-making" phase, which stems from the "built-in agenda" contained in various GATS provisions, and calls upon WTO Members to develop GATS disciplines on emergency safeguards,[493] government procurement,[494] and subsidies.[495] The idea was that Members should aim to complete the current work being undertaken on those disciplines in the Working Party on GATS Rules ("WPGR"), prior to the conclusion of the special negotiating sessions on services. However, matters have not progressed as fast or as smoothly as in the WPDR, especially in relation to ESMs.[496]

1. Emergency Safeguard Measures ("ESMs") (Article X)

GATS *Article X* simply says that there shall be "multilateral negotiations on the question of emergency safeguard measures based on the principle of non-discrimination."[497] Although there is no definition of an "emergency safeguard measure" or ESM anywhere in GATS, it is generally understood that an ESM is a temporary measure that can be taken if the implementation of a specific commitment has the unforeseen consequences of service imports occurring in such increased quantities that domestic suppliers of like services find themselves threatened with serious injury.

Multilateral negotiations on ESMs were due to have been completed by January 1, 1998[498] but the Council for Trade in Services has extended the negotiating mandate on no less than five separate occasions to a new deadline that is intended to ensure that the

[493] GATS *Article X:1*.

[494] GATS *Article XIII:2*.

[495] GATS *Article XV:1*.

[496] *See* the most recent report in this respect, *Negotiations on Emergency Safeguards*, Report by the Chairperson of the Working Party on GATS Rules, S/WPGR/9 (March 14, 2003) *in extenso* and the four decisions taken by the Council for Trade in Services to extend the deadline for the negotiations on ESMs, *supra* note 457. *See also*, Yong-Shik Lee, *Emergency Safeguard Measures under Article X in GATS*, 33(4) JOURNAL OF WORLD TRADE 47–59 (1999).

[497] GATS *Article X:1*.

[498] This is in accordance with the language of GATS *Article X:1*, which states that the results of the negotiations "shall enter into effect on a date no later than three years from the date of entry into force of the WTO Agreement."

results of negotiations on ESMS come into force no later than the date of entry into force of the results of ongoing services negotiations.[499] The reason for this is the widespread disagreement among WTO Members with respect to the desirability and feasibility of applying ESMs to trade in services. There are serious conceptual issues underlying the application of ESMs in the services sector and in 1997 the Chair of the WPGR, in an informal note, posed four questions:

(i) On whose behalf would emergency safeguard action be taken?
(ii) In what circumstances would emergency safeguard action be taken and what would be the purpose of such action?
(iii) What approach should be adopted in respect of injury/adverse effects, and the relevant causal link between injury/adverse effects and commitments under the GATS? and
(iv) What measures would be taken under the emergency safeguard mechanism? Are some measures deemed more suitable than others?[500]

At one point, the issue became so divisive that the Chair of the WPGR only managed to proceed on the basis of an illustrative list of themes. These included *inter alia* the following elements: (a) definition of "domestic industry;" (b) the issue of "acquired rights;" (c) the modal application of a safeguard mechanism; (d) the concept of "like service;" (e) the identification of indicators and criteria for determining injury and causality; (e) the possible forms of a safeguard measure; (f) the questions of compensation and special and differential treatment; and (g) relevant procedural matters.[501]

At the end of October 2000, Thailand, on behalf of the ASEAN Members, produced a "non-paper" containing an informal draft agreement on emergency safeguard measures for trade in services (known as the 'Asian Concept Paper', or 'ACP')[502] modeled on the Agreement on Safeguards, which is applied to trade in goods.[503] Broadly speaking the ACP favored the development of an ESM discipline as necessary in order to further market access negotiations in services. Even so, there was little substantive agreement among the Members as to how the concepts like "domestic industry," "serious injury or threat thereof," "causality" and "emergency" *versus* "unforeseen developments," all of which are common to the goods régime, would be applied in the field of services. A further difficulty in drawing up disciplines on ESMs in the services sector is that, due to the lack of statistical data on services, there is no reference base for calculating the amount of injury suffered, based on objective and quantifiable criteria, which is a necessary precondition to sanctioning compensatory adjustment in any ESM régime.

[499] Communication from the Chairperson of the Working Party on GATS Rules to the Council for Trade in Services, S/C/W/236 (March 15, 2004), with attached *draft Fifth Decision on Negotiations on Emergency Safeguard Measures* and, fifth extension until a date not later than the date of entry into force of the results of the current round of services negotiations, adopted by the Council for Trade in Services on March 15, 2004, SL/L/159, *supra* note 459.

[501] *Negotiations on Safeguards under Article X of the GATS*, Note from the Chairperson, Working Party on GATS Rules Job. No. 1979 (March 29, 2000) and Job. No. 1979/Rev.1 (October 6, 2000).

[502] *Communication from ASEAN—Concept Paper: Elements of a Possible Agreed Draft of Rules on Emergency Safeguard Measures for Trade in Services (GATS Article X)*, Working Party on GATS Rules, S/WPGR/W/30 (March 14, 2000).

[503] The paper was introduced at an informal meeting of the WPGR on November 1–2, 2000 and discussed later that month; *see Report of the Meeting of November 30, 2000*, Note by the Secretariat, Working Party on GATS Rules, S/WPGR/M/30 (December 22, 2000), ¶¶ 4–18. *See* for a comparison the WTO Agreement on Safeguards. *See* Chapter 18 of this book.

Most developed country Members and several Latin American developing country Members are skeptical about introducing ESMs. Japan and Mexico cannot see a clear case for such measures while the EC and the United States have continued to question the very feasibility and desirability of doing so. For example, the United States believes that a safeguard applied to Mode 3 (commercial presence), would be counter-productive because it could lead to forced disinvestment and foreign direct investment.[504] India is fearful that ESMs might be used against them particularly in the delivery of services through the Mode 4 (supply of services by natural persons),[505] where it has a particular comparative advantage in certain services sectors, e.g. computer and related services. There is further division among the Members as to whether any ESM rules that might be developed should be applied horizontally, i.e. across all sectors, or only on a sector-specific and mode-specific basis.

Following the presentation by a number of WTO Members of both formal and informal written contributions relating to the mandate under GATS Article X, in 2001 the Chair prepared a Synopsis, under his own responsibility, that attempted to present the Members' main proposals in a synthetic way.[506] Since then Australia has tabled one possible option aimed at a compromise position on an ESM discipline and that is to have a consensus-based mechanism on ESMs.[507] Another option that has been put forward by the EC is to apply safeguard measures on a modal basis, i.e. on the basis of mode of supply—an idea that found particular favour among some WTO Members.[508] However, the EC has belatedly joined a chorus of other Members in calling for a swift and positive conclusion on the question of ESMs for services by (1) trying to identify concrete examples of emergency situations in the services area that are not already addressed by GATS provisions such as basic exceptions, other safeguards, e.g. for balance of payments purposes, or through the withdrawal in whole or in part of commitments, on the basis of GATS *Article XXI* and (2) demonstrating that an ESM for services would be feasible and desirable in order to deal with identified situations.[509] The current status is one of stalemate as reported by the Chair in March 2003 with the additional observation that the current mode and pace of discussion are unlikely to lead to the early finalization of negotiations it is unlikely to happen unless there is a commitment and the political will on the part of the Members to bring about closure on the issue.[510]

2. Government Procurement in Services (Article XIII)

Negotiations on government procurement under GATS *Article XIII*[511] have recently begun to progress beyond the definitional phase and consideration of the possible development of multilateral disciplines. Members were encouraged to put forward submissions

[511] GATS *Article XIII*.

for negotiations on government procurement as early as possible before March 31, 2003. Currently the focus is on the desirability and feasibility of developing disciplines for government procurement in services and related issues. There appears to be a consensus among Members to concentrate on developing horizontal disciplines prior to considering sectoral rules and to apply the principle of transparency in government procurement to the criteria used to assess tenders.[512]

It should be noted that there is some parallel work going on in the Working Group on Transparency in Government Procurement ("WGTP") and the Committee on Government Procurement that overlaps with some of the issues undertaken by the WPGR with respect to government procurement in services. In this respect, several Members, among them Australia, the United States, Norway, Chile and the Republic of Korea favor greater coordination with the WGTP in order to avoid duplication of work.[513] Additionally the Plurilateral Agreement on Government Procurement (a former Tokyo Round agreement that was renegotiated outside the Uruguay Round) contains specific provisions on procurement of services.[514]

3. Subsidies (Article XV)

Subsidies are another area where Members are encouraged under GATS *Article XV* to "enter into negotiations with a view to developing the necessary multilateral disciplines to avoid . . . [a] trade-distortive effect".[515] In the application of subsidies to services trade, WTO Members have been considering their possible scope, based on five items contained in the Chairperson's Checklist.[516] These are as follows: (1) definition of a subsidy (including relevance of the definition in the WTO Agreement on Subsidies and Countervailing Measures); (2) examination of any evidence of trade distorting subsidies in services (including production, distribution, consumption and export subsidies); (3) the extent to which existing WTO rules, in particular the GATS national treatment and MFN provisions and the related technical issues of mode specificity and concept of "like service already apply;" (4) (a) the wider role of subsidies, including the pursuit of public policy objectives and (b) the role of subsidies in relation to development, and the needs of developing country Members for flexibility, including special and differential treatment; and (5) whether there is a need for additional GATS disciplines to avoid trade-distortive effects, including the appropriateness of countervailing measures.

Additionally, in 2000 the European Communities produced an informal note on state aid in the field of services[517] that sets outs some of the specific issues for trade in services compared to trade in goods. For example, the determination of the production capacity of services producers is much more complex than is the case for goods. The concept of general economic interest services also has to be respected, especially for those services such as energy and communication, which are recognized as fulfilling a public goal.

[512] *Report of the Meeting of February 25, 2003 of the Working Party on GATS Rules*, Note by the Secretariat, S/WPGR/M/41 (March 12, 2003), section B, ¶¶ 31–32.

Meanwhile transport services, which are frequently subject to general provisions on state aid, may fall under special rules.[518]

Even so, there is still widespread disagreement among WTO Members concerning two issues. One is the generic definition in the services context, including reference to the definition contained in the SCM Agreement and the other is the meaning of the concept of trade-distortive or "actionable subsidies."[519]

D. Sectoral and Other Annexes

Alongside these aforementioned developments, WTO Members have also been considering the development of new sectoral annexes or the revision of existing ones. This brief survey begins with a review of the *Annex on Article II Exemptions*, followed by the *Annex on Movement of Natural Persons*, before considering various issues related to further work that is being conducted on the *Annex on Air Transport Services* and the drafting of a possible new sectoral annex on tourism.

1. Annex on Article II Exemptions

The *Annex on Article II* [MFN] *Exemptions* has been undergoing its first five year review, pursuant to Paragraph 3 of the Annex.[520] Currently, it is estimated that over four hundred measures have been granted exemptions from MFN obligations under the Annex and almost all of them have no definite date for termination, even though the Annex stipulates that, in principle, the duration of an MFN exemption should not exceed ten years.

The first part of the MFN Review process was concluded in the summer of 2000 during which extensive discussions took place. The nature of the review and arrangements for its conduct were addressed at its first session, held on May 29–30, 2000.[521] At this stage the Council for Trade in Services decided that the review should be primarily of an educative nature, designed to provide more information on Members' MFN exemptions and, in particular, in accordance with paragraph 4 of the Annex,[522] on whether the conditions that had created the need for the exemption continued to prevail. Members wishing to submit written questions would address them to the Members concerned three weeks prior to each session and to the Secretariat for circulation to the rest of the Membership. Responding Members would be free to answer either in writing or orally at the meeting. The discussions would be conducted in the formal mode, unless otherwise determined, and discussions would be reported by the Secretariat in the form of the usual minutes.

The Review is being conducted by the Council for Trade in Services along sectoral lines, working from the Secretariat's compilation of all MFN exemptions by services sector,[523] a document that neither replaces the final Exemption Lists nor creates any inference about the legal status of the exemptions to which it refers.[524] It was agreed

[523] Note by the Secretariat, Job No. 1551 and Addendum 1 thereto (Job. No. 1551/Add. 1).

[524] *Council Review of MFN Exemptions*, Report of the Meeting of the Council for Trade in Services held on May 29, 2000: Note by the Secretariat, S/C/M/44 (June 21, 2000).

that the Chairman should take each sector in turn, opening the floor for delegations that had received questions on the exemptions listed in that particular sector to respond. Once all responding Members had taken the floor, the Chairman invited delegations wishing to ask additional questions to seek or clarifications to take the floor. In case of questions addressed to delegations who were not represented in Geneva, or who could not attend the meeting, the Secretariat was asked to forward such questions to the delegations concerned.

During the first two meetings of May 29, 2000 and July 5, 2000,[525] the Council for Trade in Services addressed the MFN exemptions listed in the entire compilation prepared by the Secretariat. Thereafter, the question arose as to the status of the review process, i.e. whether it would remain open for consideration and discussion of further issues in regard to MFN exemptions, or whether the Council was formally ending the exercise without fixing a date for further review. It was concluded that continuation of the full review exercise was necessary and that items on the agenda of subsequent meetings would not be restricted to the date of the next review.

At the meetings of October 5, 2000[526] and December 1, 2000[527] there was considerable support for the proposal that further review of MFN exemptions should take place no later than June 2004. A few delegations favored tabling the issue until the stocktaking exercise had taken place at the meeting of March 2001, while two delegations argued that the stocktaking was not an appropriate time to address the matter because MFN Review was separate to the negotiations. Finally, at the May 14, 2001 regular meeting of the Council for Trade in Services, it was determined that a further review of MFN exemptions should take place no later than June 2004.[528] On June 5, 2002, the Council for Trade in Services adopted Procedures for the Certification of Terminations, Reductions and Rectifications of Article II (MFN) Exemptions.[529] As of August 2004, there had been no further MFN review in the Council.

It was obvious from the first part of the MFN Review process that a substantial amount of work and greater effort was required on the part of Members in order to streamline the wide number and variety of derogations from the most fundamental principle of the multilateral trading system. It was even suggested that the WTO should take a recent OECD paper on MFN exemptions under the GATS as a starting point[530] and conduct an in-depth analysis of the issues surrounding their possible withdrawal.

Additionally, many Members consider the "principle of reciprocity" to form the basis for securing equal access to, or treatment in, foreign markets but to do this in the field of services, in respect of specific sectors, goes against the general practice in multilateral trade negotiations where participants seek to balance or trade-off concessions across

sectors. A further problem with application of the *Annex on Article II Exemptions* is that for Members to seek to maintain MFN exemptions, when equal access or treatment to a particular market has not been granted, does not constitute the usual "exceptional circumstances" upon which exemptions from the fundamental principles of international trade law are normally permitted in the multilateral trading system. For example, Korea[531] has suggested instead that the *Annex on Article II Exemptions* be strictly applied, i.e. that the ten-year duration for MFN exemptions be imposed irrespective (or because) of the fact that many WTO Members have chosen to list MFN exemptions for an unspecified duration, and where they are not removed during upcoming negotiations, then it is up to individual Members to seek a waiver on the basis of Paragraph 2 of the *Annex* together with WTO Agreement Article IX:3.[532] Obviously, the second part of the MFN Review process dedicated to the removal of MFN exemptions, subject to negotiation (for their elimination) in subsequent trade-liberalizing rounds,[533] will be decisive.[534]

2. Annex on Movement of Natural Persons

Throughout the Uruguay Round negotiations developing countries maintained as one of their key negotiating objectives, the liberalization of labor mobility,[535] known in GATS-parlance as the "movement of natural persons supplying services." Many developed countries, however, were opposed to such labor mobility through a trade agreement on the grounds that cross-border movement of personnel would require major changes in their visa and immigration policies. In many cases the immigration laws of developed countries provide for entry of highly skilled personnel and professionals for a limited duration of time but not for the entry of unskilled or low-skilled workers.

By 1992, and the appearance of the Dunkel Draft, a draft *Annex on Movement of Labor* primarily reflected the concerns of developed GATT Contracting Parties, involving mostly the cross-border movement of managerial, technical and supervisory staff. While being encouraged to negotiate bilaterally on commitments with respect to the movement of labor, the developing countries noted that the gains arising from Mode 4 (presence of natural persons) accrued mostly to developed countries as they applied to managers and executives (including intra-corporate transferees, corporate trainees and service sellers and/or individual service providers and specialists on specific services assignments).

Since the concerns of developing countries failed to generate improved offers in other areas of labor mobility of interest to them (primarily unskilled labor), a decision was taken to allow for a revision of the Schedules of Specific Commitments in order to achieve more progress on Mode 4; for this purpose such negotiations were to continue up to July 28, 1995.[536] As a result of the extended period for negotiations on movement of natural persons and completion of national schedules, the nature and extent of commitments

[536] *Decision on Movement of Natural Persons*, adopted by the Council for Trade in Services on June 30, 1995, S/C/W/4 (July 4, 1995) and *Decision on Movement of Natural Persons Commitments*, adopted by the Council for Trade in Services on July 21, 1995, S/C/W/8 (July 21, 1995).

on liberalization can be summarized as falling into roughly four main categories: (1) commitments that limit the number of natural persons entering the territory of a Member in order to supply services; (2) bound commitments specifying the nature and extent of liberalization, e.g. entry and temporary stay of some categories of natural persons supplying services; (3) bound commitments specifying liberalization of entry and temporary stay of certain categories of natural persons as service providers but subject to economic needs tests or quantitative ceilings; and (4) some horizontal commitments in relation to national laws involving broad discretionary powers of immigration or labor ministries of some WTO Members.[537]

The WTO Secretariat has made an analysis of the current status of market access on Mode 4 and noted that commitments have been taken primarily with respect to executives, managers and specialists.[538] More recently some new proposals have been tabled with respect to the temporary movement of natural persons from the United States,[539] Canada,[540] Japan[541] and Colombia.[542] One idea that is gaining some currency, particularly among developed country Members, is to move ahead with a special GATS visa for entry and temporary stay of natural persons under Mode 4 although the actual scope and design of such a visa has not been extensively discussed.

3. Annex on Air Transport Services

The *Annex on Air Transport Services*,[543] one of the original annexes to the GATS, has been under review since 2000. The existence of a complex web of bilateral air services agreements, that many WTO Members wished to keep in place, has led to a unique sectoral exclusion. "Traffic rights" and "services directly related to the exercise of traffic rights" have been left outside the scope of the GATS; only aircraft repair and maintenance, the selling and marketing of air transport services and computer reservations systems, or CRS, are covered.[544]

There are interpretation problems with the *Annex on Air Transport Services*. On a practical level, some Members have taken commitments outside the three service subsectors specifically included under the Agreement. Moreover, the absence of a definition of what constitutes "services directly related to the exercise of air traffic rights" poses a question as to what the Annex really covers. The review is intended to clarify what Members understand by the present coverage of the Annex, bearing in mind that some commitments already go beyond the three specifically included services (aircraft repair and maintenance, the selling and marketing of air transport services and CRS). They must

[543] GATS *Annex on Air Transport Services*, *supra* note 72, ¶ 5 mandates a periodical review, at least every five years, of developments in the air transport sector and the operation of the Annex with a view to considering the possible further application of GATS in the air transport sector.

[544] *Id*., at ¶ 3; see *Air Transport Services, Background*, Note by the Secretariat, S/C/W/59, November 5, 1998.

also decide whether they wish to maintain the current exclusion of traffic rights and all services directly related to them.[545] The review is divided into two parts: examination of developments in the sector and operation of the Annex, as per the *Annex on Air Transport Services*.

4. Proposed Annex on Tourism

A new sectoral annex for the tourist sector has been under consideration in an informal working group. Tourism services[546] is a sector where many developing country Members have a comparative advantage and is also the service sector with the highest level of specific commitments to date. The Dominican Republic, supported by El Salvador and Honduras, first tabled the idea of an Annex on Tourism in 1999,[547] based on work undertaken in other international *fora* such as UNCTAD, the World Tourism Organization and World Travel and Tourism Council. Since then the proposal has also gained the backing of Bolivia, Ecuador, Nicaragua, Panama, Peru and Venezuela. Separately, the Dominican Republic, El Salvador, Honduras, Nicaragua and Panama have suggested a revised classification of tourism services, details of which can be found in Appendix A.

The original proposal for a draft Annex on Tourism has subsequently been revised with the latest draft dating from September 2001,[548] since when not much progress has been made. The main objective of the draft Annex on Tourism was to elaborate upon GATS provisions in order to ensure "equitable trading conditions for trade in tourism services, consistent with GATS *Article IV* and *Article XIX* and with the needs of sustainable development, including joint co-operation efforts and the prevention of anti-competitive practices in the tourism industries."[549]

Aside from its definitional clauses, the most striking feature of the draft Tourism Annex is the inclusion of provisions on anti-competitive practices (or so-called "competitive safeguards").[550] In the same way as a group of WTO Members participating in negotiations on telecommunications services in 1996 chose to agree a set of definitions and principles on the regulatory framework for basic telecommunications services, covering such matters as competition, interconnection guarantees, and transparency of licensing processes and the independence of regulatory authorities,[551] the draft Tourism Annex contains language to encourage Members to adopt competitive safeguards that are specific to the tourism sector. These should include measures to address discriminatory use of information networks, ancillary services to air transport, predatory pricing, abuse of dominant position through exclusivity clauses, refusal to deal, tied sales, quantitative restrictions, vertical integration and so forth.[552]

[545] *Report of the Second Session of the Review mandated under ¶ 5 of the Air Transport Annex held on December 4, 2000*, Note by the Secretariat, Council for Trade in Services, S/C/M/50, March 5, 2001, at ¶¶ 5 and 8.

E. Implementation Issues

Unlike the régime for trade in goods, there are few outstanding implementation issues in the field of services other than improving the means for facilitating the participation of developing countries in global services trade in accordance with GATS *Article IV* (*See* Part II.C. above). The *Guidelines and Procedures for Negotiations*[553] require the Council for Trade in Services to review the implementation of GATS *Article IV* and to "suggest ways and means of promoting the goals" of doing this. It is also recommended that in implementing GATS *Article IV* consideration be given to the needs of small service suppliers of developing countries.[554] An evaluation of the results attained in terms of the objectives of GATS *Article IV* is due to be undertaken "before the completion of negotiations."[555] Developing country Members have also urged the Council for Trade in Services to examine the actions taken by developed country Members to provide increased access for developing country service providers to technology, distribution channels and information networks and to evaluate the functioning of the contact points, which developed country Members are under a duty to establish, in accordance with paragraph 2 of GATS *Article IV*.[556]

VII. CONCLUSIONS AND FURTHER DEVELOPMENTS

The first nine years since the GATS entered into force have been momentous. In many respects, the Agreement is still very new and much needs to be done before the regime for trade in services can take its proper place alongside the older and more-established regime for trade in goods. To date, insufficient liberalization of services has occurred and there is a need for many more Members to take specific commitments across all sectors. In particular, Members have taken very few commitments in particular sectors such as health-related and social services or recreational, cultural and sporting services, as well as in such infrastructural sectors as transport services. This can be explained partly by the problems that exist with classification and scheduling across a range of service sectors combined with the relatively awkward way in which the Agreement is structured.

The Agreement also includes sectors that touch upon sensitive domestic policy issues and/or existing regulatory structures that have emerged over time and become embedded in domestic economies. Additionally, the "bottom-up" approach of listing sectoral commitments means that Members can gradually build up their commitments on services and can also choose not to commit themselves to the degree of liberalization that they otherwise already provide in their own domestic services sectors. Not surprisingly, it can be difficult, or even impossible, for a Member to get a clear picture of the regulatory barriers that exist in a particular service sector for a particular Member.

A further feature of the Agreement is that it is incomplete and remains a work in progress. Key disciplines relating to the development of rules on emergency safeguard measures (GATS *Article X*), subsidies (GATS *Article XV*) and government procurement (GATS *Article XIII*) have yet to be finalized, while there is still little practice among Members under some key provisions, for example on domestic regulation (GATS *Article VI:4*) or application of the principle of mutual recognition (GATS *Article VII*).

[555] *Id*.
[556] GATS *Article IV:2*.

Members carry the burden of having to implement the current Agreement, to negotiate further on disciplines under the built-in agenda items on rules, and to undertake further liberalization across all service sectors.[557] For many Members there is the additional burden of adapting to regulatory change in their own domestic economies and meeting the challenge of interfacing with GATS disciplines.

Finally, there have been few disputes under the Agreement and no substantial jurisprudential developments in the field of services with respect to key principles, such as non-discrimination or transparency. Much of the case law has dealt with issues that are either tangential to services (*EC—Bananas III*) or not at all, even though distribution services were involved in the dispute *(Japan—Photographic Film and Paper (Kodak-Fuji))*. An additional result is that there has been very little or no guidance on key interpretative issues under the Agreement until the recent *Telmex* decision, and even there mostly in relation to scheduling of services commitments. If a decision is issued in the *U.S. Gambling and Betting* case (which had been suspended at the time of writing), it could help provide a better understanding of the relationship between actual scheduling and the key GATS provisions on market access, national treatment and relevant exceptions. For example, the relationship between the twin domains of market access and national treatment under the Agreement has still to be determined and the situation is not helped by the fact that when scheduling it is often unclear as to the degree of intended discrimination in a market access commitment.

[557] On this latter aspect, it will be recalled that under the GATT, it took a number of years and several rounds of tariff negotiations, prior to the Tokyo Round (1972–1979) to arrive at substantial reductions on tariff levels for manufactures.

Special Distribution

SERVICES SECTORAL CLASSIFICATION LIST[558]

SECTORS AND SUB-SECTORS	CORRESPONDING CPC[559]
1. BUSINESS SERVICES	Section B
A. Professional Services	
a. Legal Services	861
b. Accounting, auditing and bookkeeping services	862
c. Taxation Services	863
d. Architectural services	8671
e. Engineering services	8672
f. Integrated engineering services	8673
g. Urban planning and landscape architectural services	8674
h. Medical and dental services	9312
i. Veterinary services	932
j. Services provided by midwives, nurses, physiotherapists and para-medical personnel	93191
k. Other	
B. Computer and Related Services	
a. Consultancy services related to the installation of computer hardware	841
b. Software implementation services	842
c. Data processing services	843
d. Data base services	844
e. Other	845+849
C. Research and Development Services	
a. R&D services on natural sciences	851
b. R&D services on social sciences and humanities	852
c. Interdisciplinary R&D services	853
D. Real Estate Services	
a. Involving own or leased property	821
b. On a fee or contract basis	822

[558] *Services Sectoral Classification List* (or W/120), *supra* note 110. The GATT Secretariat indicated in its informal note containing the draft classification list (May 24, 1991) that it would prepare a revised version based on comments from participants. The attached list incorporates, to the extent possible, such comments. It could, of course, be subject to further modification in the light of developments in the services negotiations and ongoing work elsewhere.

[559] "CPC" refers to the United Nations provisional Central Product Classification. The (*) indicates that the service specified is a component of a more aggregated CPC item specified elsewhere in this classification list. The (**) indicates that the service specified constitutes only a part of the total range of activities covered by the CPC concordance (e.g. voice-mail is only a component of CPC item 7523).

E. Rental/Leasing Services without Operators	
a. Relating to ships	83103
b. Relating to aircraft	83104
c. Relating to other transport equipment	83101+83102+83105
d. Relating to other machinery and equipment	83106-83109
e. Other	832
F. Other Business Services	
a. Advertising services	871
b. Market research and public opinion polling services	864
c. Management consulting service	865
d. Services related to man. Consulting	866
e. Technical testing and analysis services	8676
f. Services incidental to agriculture, hunting and forestry	881
g. Services incidental to fishing	882
h. Services incidental to mining	883+5115
i. Services incidental to manufacturing	884+885 (except for 88442)
j. Services incidental to energy distribution	887
k. Placement and supply services of Personnel	872
l. Investigation and security	873
m. Related scientific and technical consulting services	8675
n. Maintenance and repair of equipment (not including maritime vessels, aircraft or other transport equipment)	633+8861-8866
o. Building-cleaning services	874
p. Photographic services	875
q. Packaging services	876
r. Printing, publishing	88442
s. Convention services	87909*
t. Other	8790
2. COMMUNICATION SERVICES	
A. Postal services	7511
B. Courier services	7512
C. Telecommunication services	
a. Voice telephone services	7521
b. Packet-switched data transmission services	7523**
c. Circuit-switched data transmission services	7523**
d. Telex services	7523**
e. Telegraph services	7522
f. Facsimile services	7521**+7529**
g. Private leased circuit services	7522**+7523**
h. Electronic mail	7523**
i. Voice mail	7523**
j. On-line information and data base retrieval	7523**
k. electronic data interchange (EDI)	7523**
l. enhanced/value-added facsimile services, incl. store and forward, store and retrieve	7523**
m. code and protocol conversion	n.a.
n. on-line information and/or data processing (incl. transaction processing)	843**
o. other	

D. Audiovisual services	
a. Motion picture and video tape production and distribution services	9611
b. Motion picture projection service	9612
c. Radio and television services	9613
d. Radio and television transmission services	7524
e. Sound recording	n.a.
f. Other	
E. Other	
3. CONSTRUCTION AND RELATED ENGINEERING SERVICES	
A. General construction work for buildings	512
B. General construction work for civil engineering	513
C. Installation and assembly work	514+516
D. Building completion and finishing work	517
E. Other	511+515+518
4. DISTRIBUTION SERVICES	
A. Commission agents' services	621
B. Wholesale trade services	622
C. Retailing services	631+632 6111+6113+6121
D. Franchising	8929
E. Other	
5. EDUCATIONAL SERVICES	
A. Primary education services	921
B. Secondary education services	922
C. Higher education services	923
D. Adult education	924
E. Other education services	929
6. ENVIRONMENTAL SERVICES	
A. Sewage services	9401
B. Refuse disposal services	9402
C. Sanitation and similar services	9403
D. Other	
7. FINANCIAL SERVICES	
A. All insurance and insurance-related services	812**
a. Life, accident and health insurance services	8121
b. Non-life insurance services	8129
c. Reinsurance and retrocession	81299*
d. Services auxiliary to insurance (including broking and agency services)	8140
B. Banking and other financial services (excl. insurance)	
a. Acceptance of deposits and other repayable funds from the public	81115–81119
b. Lending of all types, incl., inter alia, consumer credit, mortgage credit, factoring and financing of commercial transaction	8113
c. Financial leasing	8112
d. All payment and money transmission services	81339**
e. Guarantees and commitments	81199**
f. Trading for own account or for account of customers, whether on an exchange, in an over-the-counter market or otherwise, the following:	

—money market instruments (cheques, bills, certificate of deposits, etc.)	81339**
—foreign exchange	81333
—derivative products incl., but not to, futures and options	81339**
—exchange rate and interest rate instruments, inclu. products such as swaps, forward rate agreements, etc.	81339**
—transferable securities	81321*
—other negotiable instruments and financial assets, incl. bullion	81339**
g. Participation in issues of all kinds of securities, incl. under-writing and placement as agent (whether publicly or privately) and provision of service related to such issues	8132
h. Money broking	81339**
i. Asset management, such as cash or portfolio management, all forms of collective investment management, pension fund management, custodial depository and trust services	8119+** 81323*
j. Settlement and clearing services for financial assets, incl. securities, derivative products, and other negotiable instruments	81339** or 81319**
k. Advisory and other auxiliary financial services on all the activities listed in Article 1B of MTN.TNC/W/50, incl. credit reference and analysis, investment and portfolio research and advice, advice on acquisitions and on corporate restructuring and strategy	8131 or 8133
l. Provision and transfer of financial, information and financial data processing and related software by providers of other financial services	8131
C. Other	
8. HEALTH RELATED AND SOCIAL SERVICES (other than those listed under 1.A.h-j.)	
A. Hospital services	9311
B. Other Human Health Services	9319 (other than 93191)
C. Social Services	933
D. Other	
9. TOURISM AND TRAVEL RELATED SERVICES	
A. Hotels and restaurants (incl. catering)	641–643
B. Travel agencies and tour operators services	7471
C. Tourist guides services	7472
D. Other	
10. RECREATIONAL, CULTURAL AND SPORTING SERVICES (other than audiovisual services)	
A. Entertainment services (including theatre, live bands and circus services)	9619
B. News agency services	962

C. Libraries, archives, museums and other cultural services	963
D. Sporting and other recreational services	964
E. Other	
11. TRANSPORT SERVICES	
A. Maritime Transport Services	
a. Passenger transportation	7211
b. Freight transportation	7212
c. Rental of vessels with crew	7213
d. Maintenance and repair of vessels	8868**
e. Pushing and towing services	7214
f. Supporting services for maritime transport	745**
B. Internal Waterways Transport	
a. Passenger transportation	7221
b. Freight transportation	7222
c. Rental of vessels with crew	7223
d. Maintenance and repair of vessels	8868**
e. Pushing and towing services	7224
f. Supporting services for internal waterway transport	745**
C. Air Transport Services	
a. Passenger transportation	731
b. Freight transportation	732
c. Rental of aircraft with crew	734
d. Maintenance and repair of aircraft	8868**
e. Supporting services for air transport	746
D. Space Transport	733
E. Rail Transport Services	
a. Passenger transportation	7111
b. Freight transportation	7112
c. Pushing and towing services	7113
d. Maintenance and repair of rail transport equipment	8868**
e. Supporting services for rail transport services	743
F. Road Transport Services	
a. Passenger transportation	7121+7122
b. Freight transportation 7123	
c. Rental of commercial vehicles with operator	7124
d. Maintenance and repair of road transport equipment	6112+8867
e. Supporting services for road transport services	744
G. Pipeline Transport	
a. Transportation of fuels	7131
b. Transportation of other goods	7139
H. Services auxiliary to all modes of transport	
a. Cargo-handling services	741
b. Storage and warehouse services	742
c. Freight transport agency services	748
d. Other	749
I. Other Transport Services	
12. OTHER SERVICES NOT INCLUDED ELSEWHERE	95+97+98+99

---

1. Overview

The difficulty with the W/120 list is that it provides an insufficient framework for country commitments of adequate specificity in all services sectors in all industries. In some instances, the classification entry is unclear because it is either too broad or too narrow for the scope of the service. In others instances, the W/120 provides no classification at all, either because the service did not exist at the time the classification list was drawn up, or because it has since evolved from a classified service into a "new" service.

W/120 does not, for example, provide a separate classification for energy services. Various sub-sectors throughout the W/120 are relevant to energy services, but they are either tangential to the core service sector, or are not well defined. Sectors, sectoral sub-headings and sub-sectors that are relevant to energy services businesses include a number of "other business services" under sector 1 Business Services: sub-heading F. Other Business Services; sub-sector h. Services incidental to mining (CPC 883 and 5115); sub-sector j. Services incidental to energy distribution (CPC 887); sub-sector m. Related scientific and technical and consulting services (CPC 8675). Also connected to energy services are certain sub-headings or sub-sectors under sector 11 Transport Services: sub-heading G. Pipeline Transport; sub-sector a. Transportation of fuels (i.e. "pipeline transport," CPC 7131) as well as under sector 1. Business Services: sub-heading A. Professional Services, sub-sector e. Engineering services (CPC 8672) and under sector 3 Construction and Related Engineering Services: sub-heading C. Installation and assembly work (CPC 514 and 516).

To take another example, there are classifications in sector 2. Communication Services under sub-heading A. Postal services (CPC 7511) and under sub-heading B. Courier services (CPC 7512) but not for "express delivery" services, which has developed only relatively recently and can be distinguished separately from each of the other two sub-headings. Members have tried several ways of amending the sectoral classification list to solve these problems: one is to disaggregate a sector into a more expansive list of sub-sectors, allowing Members to choose with more specificity sub-sectors to which they would make commitments. Another is to collapse two sectors, such as in the postal and courier example, into one single category which would henceforth be subdivided into a list of distinct services based on the types of items being handled.

An added difficulty is that since the Uruguay Round, services markets have developed exponentially, keeping pace with dramatic technological and commercial innovations. For many businesses, effective market access now requires access for a number of *interdependent* services as well as for those sectors that have not previously been defined. Many services are so closely interrelated commercially that restrictions on the supply of one can prevent or curtail the supply of others. This has been explored in relation to computer and related services, environmental services and energy services as well as telecommunications and audiovisual. Despite the close commercial links between a number of service sectors, the *Services Sectoral Classification List* constitutes a "vertical" structuring of services sectors on mutually exclusive lines. Few Members have undertaken specific commitments across most or all sectors that are closely related in commercial terms, with consequences for both predictability and security for the operations of services suppliers as well as the economic efficiency of the services supply chain overall. In relation to these problems, Members have explored the possibility of entering into defined "clusters" of commitments[560] or using a standard "checklist" of

[560] Julia Nielson, Carole Pellegrino, Rosemary Morris and Rachel Thompson, *Using "Cluster" Approaches to Specific Commitments for Interdependent Services*, in TRADE IN SERVICES: NEGOTIATING ISSUES AND APPROACHES 61 (OECD 2001), *and see* discussion below.

closely related services sub-sectors from which Members might pick and choose commitments. In light of ever-changing commercial realities, Members require a means of classification and definition that will provide not only commercial and legal certainty in regard to commitments but also sufficient flexibility for future evolution in each sector.

2. Guidelines for the Scheduling of Specific Commitments under GATS

Notwithstanding recognition of the problem, the approach to classification has been cautious and no major overhaul of the existing W/120 classification list has been attempted. As already noted, on March 28 2001, the Council for Trade in Services adopted new *Scheduling Guidelines*,[561] which state that the legal nature of a schedule and the need to evaluate commitments require the greatest possible clarity in the description of each sector and sub-sector scheduled. Accordingly, it recommends that Members continue to use the W/120 classification in which each sector and sub-sector is identified by reference to the corresponding CPC classification number and that further refinement of a sectoral classification, where necessary, be done on the basis of the CPC or other internationally recognized classification.[562] Further, the *Scheduling Guidelines* suggest that if a Member chooses to use its own classification system, it should provide concordance with the CPC in the manner illustrated in the *Scheduling Guidelines*. If this is not possible, it should give a sufficiently detailed definition to avoid ambiguity as to the scope of the commitment.[563]

3. Committee on Specific Commitments

Through its Committee on Specific Commitments ("CSC"), the Council for Trade in Services has proceeded to address classification issues and amend existing classifications on an *ad hoc* basis. The intended outcome of this exercise is, however, not entirely clear, as is apparent from the discussion that took place at the meeting of the CSC held on April 11 and 12, 2000:[564]

> *10. Regarding the substance of the work on classification the Chairman raised the issue of the overall aim of the exercise. He recalled that in the past meetings discussions had touched upon various possible outcomes for the work on classification including possible amendments to the existing sectoral classification (document MTN.GNS/W/120) and the development of "clusters" of sectors. He suggested that Members should begin asking themselves what they wanted to do with the existing sectoral classification and namely the "W/120." He pointed out that while it was the general view that this process should not result in an overhaul of the existing classification and that the structure of the "W/120" should be preserved, it was also evident, however, that adding new sectors or improving some existing sectoral entries would require an amendment of the existing classification list . . .*
>
> *20. The Chairman summing up the discussion said that according to most Members the work of the Committee should focus first on "core services" rather than on "clusters" and that the basis of this work should be the revision of the "W/120." He noted that many Members had stressed that any amendments to the "W/120" should only intervene where it was necessary and justified to ensure legal certainty and that some Members has raised the question of the role to assign to the CPC/Rev.1 in this process of revision. He said that while there was agreement on the mutually exclusive nature of the "W/120," the question of the mandatory or voluntary nature of the new classification was to be addressed at a later stage.*

[561] *Scheduling Guidelines*, *supra* note 248.
[562] *Id.*, ¶ 23; the example given is the GATS *Annex* on *Financial Services*.
[563] *Scheduling Guidelines*, *supra* note 248, ¶ 24.
[564] Committee on Specific Commitments, *Report of the Meeting held on April 11 and 12, 2000*, S/CSC/M/14, Note by the Secretariat (May 18, 2000).

The sectors in which the CSC has focused its efforts are, "without prejudice to the inclusion of any other sector whose classification Members may want to revise, and to the positions of Members as to the outcome of the exercise," in other words, environmental services, energy services, legal services, postal and courier services and construction services. Four of these five sectors are covered by an existing classification. "Energy services" is not itself defined under an existing classification, but comprises functions under several sub-sector classifications.

The work of the CSC in regard to classification raises certain questions. Is the technical work of the Committee too closely linked to political or diplomatic considerations related to future negotiations to serve the interests of commercial enterprise?[565] Does legal and commercial predictability require that the classification system be mandatory, and if so, that Members come to a consensus on this to avoid developing a scheme that can be sidestepped by Members' discretion to make or withhold commitments and to request specific commitments in "new" sectors?[566] Even if the amendment of the existing classification promises legal and commercial certainty can it be a lasting solution without the full commitment of each of the Members to adopt it? Are there creative solutions to the problem of classification, which do not require continual amendment of the definition of sectors in which existing commitments have been made?

4. Cluster and Checklist Approaches

Early in the work of the Committee on Specific Commitments, a number of Members expressed interest in a "cluster approach"[567] to the negotiation of specific commitments and presented several sector-specific proposals on the matter.[568] These proposals suggested that when Members seek to liberalize a particular sector they should, for the sake of commercial meaningfulness and legal clarity, choose to commit to a predefined "cluster" of narrowly defined sub-sectors, each related to the core services set out in the existing W/120 classification.

It was felt that the use of clusters might be appropriate in commercially interrelated sectors in which services companies are reliant on extended supply chain relationships. Where services are vital inputs to the supply of other services, access to interrelated services is an important factor in the efficiency and competitiveness of delivery of the

[565] Steve Orava, *The Commercial Reality (or Lack Thereof) in the Classification and Definition of Services in GATS Negotiations*, 1 INTERNATIONAL TRADE LAW REVIEW 5, 6 (2002): "... the linkage of the technical work on a scheduling framework with political and diplomatic issues seems misplaced and counterproductive."

[566] Heading 12 of the *Services Sectoral Classification List* (or W/120) is entitled "Services not Included Elsewhere."

[567] *See* discussion of the cluster approach in Nielson, Pellegrino, Morris and Thompson, *supra* note 562.

[568] The EC tabled a papers on clusters as a possible negotiating modality in the Council for Trade in Services, Special Session—*Communication from the European Communities (and their Member States) —The Cluster Approach*, Council for Trade in Services, Special Session, S/CSS/W/3 (May 22, 2000), followed by *Communication from Australia—Negotiating Proposal for Maritime Transport Services*, Council for Trade in Services, Special Session, S/CSS/W/111 (October 1, 2001) in relation to negotiations in the maritime sector. Other sector specific proposals include that of the EC in relation to classification of environmental services, *Communication from the European Communities (and their Member States)—Environmental Services*, Committee on Specific Commitments, S/CSC/W/25 (December 18, 2000) and Job No. 4348 (July 10, 2000) and a proposal tabled by the Dominican Republic, El Salvador and Honduras for a *Draft Annex on Tourism*, using a cluster approach, for details see *supra*, note 549. Electronic commerce is also often mentioned as a cross-cutting issue that relies on a definable cluster of key services inputs: Nielson, Pellegrino, Morris and Thompson, *supra* note 561, 62.

"other" services. The failure of a WTO Member to liberalize the sectors "related" or "connected" to, the "core service" could therefore have adverse consequences for the competitiveness of the foreign businesses trying to access and operate in its market. In this context, the definition of clusters was intended to cut across the "vertical" structure of the W/120, enabling businesses to obtain access to all input or support services relevant to their operations.

Strictly speaking, the cluster approach is not about classification, as it does not involve moving items from under their current listing in W/120; the rationale was that would permit appropriate recognition of the intersectoral links between sectors without requiring fundamental reorganisation of W/120, on which the existing WTO GATS Schedules are based. This is important for protecting the legal certainty of existing specific commitments and could result in greater overall liberalization of services trade.

In spite of its potential, the clustering approach had a few important drawbacks and had a mixed reception by the Members.[569] The main concern was that because a cluster grouping does not necessarily reflect existing regulatory regimes, it may increase the fragmentation of infrastructure services.[570] It might, for example, be difficult to implement commitments with regard to the construction of hotels, where hotel construction is not regulated separately from other types of construction. Neither is it necessarily desirable or appropriate, in terms of regulatory efficiency, to encourage the development of more specific regulatory regimes. Further, it is inevitable that the organisation of Members' regulatory frameworks and the extent of the regulation in any sector will vary. Moreover, in some cases the cluster approach could have the opposite effect of bringing together services that are classified separately but which correspond to a similar regulatory regime. Another argument against the cluster approach was that liberalization in groups of small sub-categories of broader infrastructure sectors could create barriers to trade by creating distortions in the domestic economy.

As a result, the most recent development is a shift in favour away from the cluster approach towards the use of a "checklist" of sub-sectors related to a core sector. The checklist is attractive because it is well placed to assist Members for the purpose of negotiations, while recognizing their entitlement to make selective commitments; in this way it may encourage consistency among Members without eliminating flexibility.[571]

5. The Twelve W/120 Services Sectors

The following is a brief description of each of the twelve services sectors as set out in the W/120 classification, the significance of the sector and highlights of the WTO work in relation to each sector, with particular emphasis on classification issues.[572]

[569] *See* Committee on Specific Commitments, *Report of the Meeting held on April 11 and 12, 2000*, S/CSC/M/14, Note by the Secretariat (May 18, 2000), *supra* note 370. At ¶ 20, the Chairman summing up the discussion said that according to most Members the work of the Committee should focus first on "core services rather than on 'clusters' and that the basis of this work should be the revision of the 'W/120' . . . ."

[570] Nielson, Pellegrino, Morris and Thompson, *supra* note 562.

[571] *See* for example, the EC in relation to tourism services, *Communication from the EC (and their Member States—Reaction to the Communication from Dominican Republic, El Salvador and Honduras on the Need for an Annex on Tourism*, Council for Trade in Services, Special Session, S/CSS/W/5 (September 28, 2000) ¶ 10.

[572] For a list of all negotiating proposals submitted up to April 2002, *see Statement of the Chairman of the Special Session of the Council for Trade in Services to the Trade Negotiations Committee of March 22, 2002*, TN/S/1, S/CSS/11 (April 11, 2002).

(a) Business Services. The sub-sectors covered by "business services" are: professional services, computer and related services, research and development services, real estate services, rental/leasing services without operators, and "other" business services. Each of these comprises a further set of between two and twenty sub-categories. Three general proposals have been made in regard to *Business Services* (other than professional services).[573] They highlight the need for transparency in domestic regulation, mutual recognition of qualifications-based business services and increased commitments in research and development services, real estate services, rental/leasing services and other business services. They also propose improved sectoral commitments, particularly the elimination of cross border supply limitations, limitations on commercial presence and restrictions on temporary movement of personnel.

Both professional services and computer and related services are growing rapidly and becoming knowledge-intensive sectors of the WTO member economies. *Professional Services* encompass a wide range of fields: legal services, accounting, auditing and bookkeeping services, taxation services, architectural services, engineering services, integrated engineering services, urban planning and landscape architectural services, medical and dental services, veterinary services and services provided by midwives, nurses, physiotherapists and para-medical personnel. The common characteristic of these services is that the practice of the respective profession is recognised by a competent national authority or regulatory body. The category of professional services has generated a number of proposals for negotiations (professional services,[574] accountancy,[575] architecture[576] and legal services).[577]

Legal Services is one of the five priority areas on which the CSC is currently focusing its work. The most recent Australian communication on classification proposes that the W/120 definition of legal services be expanded to reflect a number of sub-categories on the basis of a combination of an area of law and type of service, rather than by defining the service provider. It submits that, based on the Uruguay Round commitments and proposals tabled in the current negotiations, distinctions between home-country, host-country, third-country and international law are fundamental to achieving liberalization in legal services. The Australian proposal is as follows: home-country law (advisory

[573] *Communication from the EC and their Member States—GATS 2000: Business Services*, Council for Trade in Services, Special Session, S/CSS/W/34, (December 22, 2000); *Communication from Canada —Initial Negotiating Proposal on Business Services*, Council for Trade in Services, Special Session, S/CSS/W/55 (March 14, 2001); and *Communication from Australia Negotiating Proposal on Business Services*, S/CSS/W/135, Council for Trade in Services, Special Session, (March 7, 2002).

[574] *Communication from Colombia—Professional Services*, Council for Trade in Services, Special Session, S/CSS/W/98 (July 9, 2001), *Communication from Switzerland—GATS 2000: Professional Services*, Council for Trade in Services, Special Session, S/CSS/W/75 (April 4, 2001), *Communication from Canada—Initial Negotiating Proposal on Professional Services*, Council for Trade in Services, Special Session, Council for Trade in Services, Special Session, S/CSS/W/52 (March 13, 2001) and *Communication from the EC (and their Member States)—GATS 2000: Professional Services*, Council for Trade in Services, Special Session, S/CSS/W/33, (December 22, 2000).

[575] *Communication from Australia—Negotiating Proposal for Accountancy Services*, Council for Trade in Services, Special Session, S/CSS/W/62 (March 28, 2001) and *Communication from the United States—Accounting Services*, Council for Trade in Services, Special Session, S/CSS/W/20 (December 18, 2000).

[576] *Communication from Australia—Negotiating Proposal for Architectural Services*, Council for Trade in Services, Special Session, S/CSS/W/63 (March 28, 2001).

[577] *Communication from Australia—Negotiating Proposal for Legal Services*, Council for Trade in Services, Special Session, S/CSS/W/67, particularly supplement 2, S/CSC/W/32 (March 28, 2001, April 11, 2001, July 9, 2001, July 10, 2001 and March 11, 2002). *Communication from the United States—Legal Services*, Council for Trade in Services, Special Session, S/CSS/W28 (December 18, 2000).

services); home-country law (representation services); third-country law (advisory services); third-country law (representation services); host-country law (advisory services); host-country law (representation services); international law (advisory services); international law (representation services); international commercial arbitration services; other alternative dispute resolution services, preparation and certification of legal documents; and other legal advisory or consultancy services.[578]

At the CSC meeting of July 17, 2002[579] the EC representative expressed the view that the current classification was sufficiently flexible to achieve the goals of reflecting market reality and increasing the number and quality of commitments. The EC also felt that there was uncertainty as to whether the proposal by Australia was to amend the classification or to provide guidelines for scheduling terminology and that difficulties might arise if the terminology of "host-country" and "home-country" law, with which the EC has no problems were to be converted into a rigid classification.

The Minutes of the EC submission on this point read as follows:

> For example, if a Member were to take commitments only for "home country law," what would be the situation of a foreign lawyer that was qualified in host country law or of a foreign law firm employing lawyers qualified in the host country? Could they be prevented from providing legal advice in cases in which home and host country law were relevant at the same time? According to Australia's proposal, practice of "third country law" was subject to qualification in that third country. This might imply that "home country law" and "third country law" had the same meaning, and there would thus be no need for the latter category. Finally, further work on the definition of "international law" was necessary. Law could have an international content, but rely on domestic source and jurisdiction. Similarly, law could have an international source, combined with domestic jurisdiction. It was necessary to reflect further on those issues.[580]

Computer and related services is also of great interest, with six submissions having been made up to January 2003 by the EC,[581] Canada,[582] Taiwan,[583] MERCOSUR,[584] India[585] and Costa Rica.[586] The growing importance of the sector and the speed of technological development has prompted a proposal by the EC,[587] not to reclassify the CPC division 84 "computer and related services," but to develop an understanding as to its scope of coverage, particularly in relation to the "evolved" services. The suggestion was

that Members could inscribe "CPC 84"—Computer and related services in the "sector" column of the schedule, indicate there that they subscribe to the "Understanding on the Scope of Coverage of CPC 84," and annex the Understanding to the Schedule. In a subsequent meeting of the Committee for Specific Commitments,[588] Canada questioned whether the CPC description of computer and related services was so inadequate as to necessitate the annexing of a special Understanding to Members' schedules, and expressing a preference for clarifying the scope and application of CPC 84 through discussion in the CTS and CSC. It also contested the explicit inclusion of "packaged software" within the scope of CPC 84, while the EC representative affirmed that it was the view of his delegation that CPC 842 covered both packaged and customized software.

Chinese Taipei also introduced the concept of "value-chain" to the discussion regarding the scope of Computer and Related Services. Its suggestion was that the approach, which has been well accepted by the IT industries, would define the scope of the sector in four stages, namely, the pre-implementation stage, the implementation stage, the operations stage and the maintenance and support stage. Computer service providers would normally combine services from classifications in all four areas. In order to avoid overlap with other sectors, such as telecommunications or audiovisual services, Chinese Taipei recommends that issues under certain specified "convergence services" be dealt with in the other sectors. At the December 5, 2002 meeting of the Committee on Specific Commitments[589] Hong Kong, China sought clarification from the delegation of Chinese Taipei regarding the proposed exclusion, but the matter was postponed for discussion in Special Session.

(b) Communication Services. "Communication services" comprises postal, courier, telecommunications and "other" communication services. *Postal and courier services*, another of the five priority areas of the CSC, has received significant attention with respect to classification. Proposals have been submitted by the United States,[590] the EC,[591] Switzerland,[592] Bolivia and the MERCOSUR group of countries[593] and New Zealand.[594] The difficulty in this area is that the W/120 and the CPC classification systems were founded on the underlying assumption that postal services are carried out exclusively by national postal administrations[595] ("state monopolies,"[596] or "direct or indirect provision by the state itself, of services to society under a generalized monopoly regime")[597] while courier services, which generally consist of delivery of messages and

packages by personal messengers, are performed by private companies. This distinction is becoming increasingly blurred and somewhat obsolete as postal monopolies have been eroded in various ways and "courier" enterprises compete on equal terms in the postal market for services that are not now considered exclusive to public operators. In addition, the recently evolved "express delivery services" goes beyond courier services in providing expedited collection, transport and delivery of documents parcels and goods, while tracking the location of and maintaining control over the items throughout the supply of the service.

The United States has proposed that a separate definition for express delivery be added to the *Services Sectoral Classification List*.[598] The EC submits that the postal and courier sectors be collapsed into one category and divided into a series of subcategories based on the type of items being handled, including addressed written communications, addressed parcels and packages, press products, registered or insured mail, express delivery services, non-addressed items, document exchange and other services not specified elsewhere.[599] The Swiss proposal supports that of the EC, suggesting that the sector be referred to as the "handling of postal items, whether for domestic or foreign destinations."[600] The MERCOSUR group of countries and Bolivia have proposed a simple merger of the two sectoral classifications into one category entitled "Postal Services,[601] while New Zealand has endorsed the EC, Swiss and MERCOSUR proposals but points out that the area of consulting services relating to postal/courier is nowhere addressed."[602]

(c) Telecommunication Services. Like financial services, telecommunications is a key infrastructure sector needed for overall development and required for all economic and trade activities. A competitive telecommunications market reduces communications costs for industry and individual users while new investments in the sector stimulate the development of electronic commerce that spur growth in almost all services sectors.

During the Uruguay Round negotiations Members concluded the *Annex on Telecommunications*,[603] which elaborated upon the provision of the GATS with respect to measures affecting access to and use of public telecommunications transport networks and services.[604] They extended liberalization in the sector to include telecommunications infrastructure-based services, as a result of which market access commitments were made to permit suppliers to own and operate their own networks. The GATS *Annex on Telecommunications* did not, however, extend to cable or broadcast distribution of radio or television programmes.[605]

[603] GATS *Annex on Telecommunications*.

[604] Members also determined, in the *Annex on Negotiations on Basic Telecommunications*, the criteria upon which GATS *Article II* and the GATS *Annex on Article II Exemptions supra* note 161, would enter into force for basic telecommunications.

[605] See Simon Norton, *Liberalization in The International Telecommunications Market: the General Agreement on Trade in Services*, 4(6) COMMUNICATIONS LAW 223 (1999).

The definition of telecommunications under *Communication Services* in the W/120 provides for 14 sub-sectors (a. through n.) and an "other" category (o), based on the W/120 classification. These 14 sub-sectors have been divided historically into "basic telecommunications" (a. through g) and "value added services" (h. through n). With regard to value added services, suppliers add value to the customer's information by form or content enhancement, or by providing for the storage and retrieval of that information. This category includes electronic data interchange, e-mail and on-line database storage. Negotiations and commitments on value added services were undertaken mainly during the Uruguay Round, while commitments on basic telecommunications were made during further negotiations that ended in February 1997.

Pursuant to the Uruguay Round Ministerial Decision on Negotiations on Basic Telecommunications,[606] the Negotiating Group on Basic Telecommunications ("NGBT") commenced negotiations on basic telecommunications in May 1994. In February 1997, the Group issued a Chairman's note[607] in which basic telecommunications services were defined as comprising:

(a) local, long-distance and international services for public and non-public use.
(b) services provided on a facilities basis or by resale;
(c) services provided through any means of technology, such as cable, wireless and satellites; and
(d) private leased circuit services through which service suppliers can sell or lease any type of network capacity for the supply of services listed in any other basic telecom service subsector. This would include capacity via cable, satellite and wireless networks.

As a result of the negotiations on basic telecommunications, the *Fourth Protocol* to the GATS entered into force on January 1, 1998.[608] Classification within the sector has not always been carried out based on the W/120 model. In addition to the distinctions drawn by the model schedule adopted for basic telecommunications, some countries have also introduced technological distinctions (satellite/non-satellite, mobile/fixed) and some definitions rely on internal legislation not yet adopted or non-explicit internal definitions. As a result of these factors a number of variations in Member's commitments have arisen and have led to a lack of clarity about those commitments.[609]

In addition to market access commitments, negotiations in basic telecommunications addressed domestic regulation and the inevitable range of technical standards that would be applicable across domestic regimes. Seeking in particular to ensure the effective competition of new entrants, the NGBT negotiated, and circulated at its December 15, 1995 meeting, a "non-paper" referred to as the *Reference Paper* which set out pro-competitive disciplines on horizontal issues such as competitive safeguards, interconnection guarantees (including transparency and availability of an arbitration procedure), neutrality of universal service requirements, transparency on licensing procedures, establishment of independent regulators, and guidelines for the allocation of scarce resources. The *Reference Paper* was included in the schedules as additional commitments by over sixty countries, with some alterations.[610]

[610] *Id*. For a more detailed discussion of this sector, *see* Chapter 21 of this book.

(d) Construction and Related Engineering Services. *Construction Services* is the third of five categories for specific attention by the CSC. The sector comprises general construction work for buildings, general construction work for civil engineering, installation and assembly work, building completion and finishing work, and "other." The classification question raised by New Zealand[611] was whether there should be an "integrated" construction services item in the classification in order to clarify the classification of turn-key or multistage construction projects. During discussion of the proposal at the CSC meeting of May 9, 2001[612] Venezuela took a contrary view to the "integrated" item which it interpreted to mean essentially a "cluster" of a number of services within a single category. It stated that greater aggregation would not enable a country that wanted to make a specific commitment for one particular activity, or intermediary activity within the chain of construction services to do so without having to make a general commitment for all the services. At the same time it found the aggregated cluster approach unnecessary on the grounds that the comprehensive commitment would leave no space for an activity in the construction sector to be carried out by other players within each project.

Mexico, backed by Venezuela, suggested that the general approach to possible changes to the W/120 and the specific breakdown of categories proposed by New Zealand, could be adopted by Members, if they chose, in their formulation of specific commitments, even in the absence of one aggregated "cluster" category. India's concern was that some of the classification proposals might have come out of negotiating position rather than being derived from pure classification-oriented needs. It has requested the indulgence of the Members in permitting it to take additional time in order to assess the proposal more fully.

(e) Distribution Services. The distribution services sector accounts for a large share of economic activity. According to the W/120 classification it comprises commission agents' services, wholesale trade services, retailing services, franchising, and "other." No proposals to reclassify this sector have been put forward. *Distribution services* constitute a principal link between the producer and consumer. In addition, the sector's performance contributes directly to the competitiveness of other sectors, such as in manufacturing, resources including mining, agriculture and services industries. For example, manufacturers and resource companies seeking to extend their activities overseas may add value to their products and differentiate them by using improved logistics, delivery, after-sales service and through encapsulating other services. The more efficient distribution services are, the better the allocation of resources and the matching of supply with demand.

From a consumer perspective, these benefits can be considerable, taking the form of reduced risk, lower costs and prices, better quality and wider choice.[613] Although the sector is still considered to be largely domestic,[614] Members anticipate that globalization and new technologies will transform business processes and supply chains. New

[613] *Communication from Australia—Negotiating Proposal: Distribution Services*, Council for Trade in Services, Special Session, S/CSS/W/136 (March 7, 2002).

[614] *Id*., Australia is of the view that national wholesalers and retailers undertake little significant international trade; Colombia is of the opinion that development of the sector is largely national: see *Communication from Colombia—Distribution Services*, Council for Trade in Services, Special Session, S/CSS/W/120 (November 27, 2001).

developments have already resulted in distribution services being part of an integrated "value chain," rather than simply elements of a sequential distribution function linking producers and consumers. The most important new technology for distribution services is likely to be Internet-delivered e-commerce. Trade in distribution services takes place mainly through commercial presence but with advances in e-commerce, it is anticipated that mode 1 (cross-border supply) will become significant.

(f) Educational Services. The W/120 for education services comprises primary education services, secondary education services, higher education services, adult education services and "other" education services. Notwithstanding that the education sector is important to all Members, given the critical role of education in economic and social development, and trade in education services is of increasing international significance, the sector remains one of the least committed under the GATS.[615] This has been attributed in part to the fact that the delivery of education services has largely been reserved to governments. WTO Members therefore see a need to strike a balance between the pursuit of domestic education priorities and exploring ways in which trade in education services can be further liberalized. The United States however notes that in spite of the limited number of commitments in this area, nearly all Members allow the provision of higher education, adult education and training services by private sector service providers.

All four negotiating proposals address the need for increased liberalization to permit further benefit from international trade in education. Japan sees the promotion of a certain level of liberalization, as a means to ensuring improvement in the *quality* of education and research. The U.S. proposal is limited to education and training beyond the primary and secondary level, i.e. higher (tertiary) education, adult education and training services that would supplement, rather than displace, public education systems. Accordingly the United States has addressed the classification of the sector and suggested that the W/120 definition be expanded and clarified in order to facilitate commitments in relation to higher and adult education.

The U.S. proposal is for classification to clearly indicate that "training services" and "educational testing services" are part of the concept of education. Training services, it says, are very similar to education services, but training courses are generally less theoretical and more job-related than academic courses, often requiring hands-on operation of tools, equipment and certain devices. Training services are related to the W/120 subsectors of higher education, adult education, and other education services. Educational testing services are described as a "fundamental and essential part of the learning process, used to evaluate the student as well as the course material. These services include designing and administering tests, as well as evaluating test results." Educational testing services generally are related to all types of education.

(g) Environmental Services. *Environmental services* is another of the sectors identified by the CSC as an area of interest and extensive discussions have taken place on the issue of "core" versus "cluster" environmental services. The existing W/120 sectoral classification includes sewage services, refuse disposal services, sanitation and similar services,

[615] *Communication from New Zealand—Negotiating Proposal for Education Services*, Council for Trade in Services, Special Session, S/CSS/W/93 (June 26, 2001), *Communication from Australia—Negotiating Proposal for Education Services*, Council for Trade in Services, Special Session, S/CSS/W/110 (October 1, 2001), *Communication from Japan—Negotiating Proposal for Education Services*, Council for Trade in Services, Special Session, S/CSS/W/137 (March 15, 2002) and *Communication from the United States—Higher (Tertiary) Education, Adult Education and Training*, Council for Trade in Services, Special Session, S/CSS/W/23 (December 18, 2000).

and "other" environmental services. The United States asserts that "increasingly" WTO Members are recognizing and addressing the importance of pollution clean-up and environmental protection. As a result, there has been a general movement by governments toward preventing, reducing, or correcting environmental degradation. Simultaneously, various industries are recognizing the benefits of pollution prevention and clean technologies for efficiency purposes, liability avoidance and in the interests of good corporate citizenship. All of these factors have contributed to an increased demand for environmental services.[616]

This sector is also important due to the global nature of many environmental issues. Given the trans-boundary effects of those elements, which contribute to environmental degradation, there should be genuine interest in ensuring that reliable and competent environmental services are as widely available as possible.[617] The removal of barriers in the environmental services sector can assist in increasing the availability of these services, while lowering their cost.

The current WTO classification for environmental services is generally considered to be obsolete, given its focus on end-of-line pollution control and failure to encompass modern engineering and design processes for pollution prevention. It has been suggested, therefore, that the classification of environmental services be expanded to include not only clean-up activities but also the integration of environmental concerns into production processes and new areas of activity that have emerged. In addition to such a reclassification, the United States is especially supportive of the cluster approach in this sector. It favors an initiative to construct a framework that would highlight the importance of liberalising in core services and related services that have not historically been classified as being environmentally-related.

The EC proposal[618] provides such a framework for reclassification and a cluster of related sectors for commitment. The EC has suggested that sector 6 *Environmental Services*, in W/120, be amended as follows:[619]

A. Water for human use & wastewater management;
B. Solid/hazardous waste management;
C. Protection of ambient air and climate;
D. Remediation and cleanup of soil & water;
E. Noise & vibration abatement;
F. Protection of biodiversity and landscape; and
G. Other environmental & ancillary services.

The proposal also contains an environmental services "cluster" or "checklist"[620] as follows:

- business services with an environmental component;
- R&D with an environmental component;
- consulting, contracting & engineering with an environmental component;

[616] *Communication from the United States—Higher (Tertiary) Education, Adult Education and Training supra* note 616, ¶ 2.
[617] *Id.*, ¶ 3.
[618] *Communication from the EC (and their Member States)—GATS 2000: Environmental Services*, Council for Trade in Services, Special Session, S/CSS/W/38 (December 22, 2000).
[619] All sectors and sub-sectors of the "proposed classification" are described in the *Communication from the EC (and their Member States) - Classification Issues in the Environmental Sector* to the Committee on Specific Commitments, S/CSC/W/25 (September 28, 1999), *supra* note 569 (in particular on classification issues) as modified by Job 7612 (November 28, 2000).
[620] *Id.*

- construction with an environmental component;
- distribution with an environmental component;
- transport with an environmental component; and
- others with an environmental component.

Australia[621] has supported the proposed EC approach, as has Colombia[622] in scheduling commitments according to a revised classification that preserves the mutually exclusive nature of W/120 while addressing most of its recognized problems. Switzerland[623] has suggested something similar but has proposed a slightly different breakdown of categories:

A. Waste water management;
B. Waste management;
C. Protection of ambient air and climate;
D. Remediation and clean-up of soil and water;
E. Noise and vibration abatement;
F. Protection of biodiversity and landscape; and
G. Other environmental and ancillary services.

It suggests that to accommodate the gradual integration of environmental services with other service activities, Members must be able to make specific commitments in the following fields of activity, which have expanded significantly in recent years:

- professional services relating to the environment;
- research and development relating to the environment;
- consultancy, sub-contracting and engineering relating to the environment; and
- construction relating to the environment

Canada's position[624] is that Members should seek greater liberalization for both the core list of environmental services as they are currently defined, as well as in other related sectors, such as technical testing and analysis services, scientific and technical consulting services, engineering services and construction services. It views the discussion of "core" versus "cluster" primarily as a classification issue and suggests that in regard to negotiations, clusters be used as a "checklist."

Cuba[625] has cautioned that the negotiations should take account of a Member's right to regulate according to the most appropriate environmental policies and to establish requirements guaranteeing the objectivity of environmental assessments and the real benefit to the national environment. It is of the opinion that trade liberalization in this field will only be able to strengthen domestic service suppliers if differential treatment

[621] *Communication from Australia —Negotiating Proposal for Environmental Services*, Council for Trade in Services, Special Session, S/CSS/W/112 (October 1, 2001).
[622] *Communication from Colombia—Environmental Services*, Council for Trade in Services, Special Session, S/CSS/W/121 (November 27, 2001). Colombia has suggested that certain additions be made to the sectors: the implementation and auditing of environmental management systems, the evaluation and mitigation of environmental impact and advice in the design and implementation of clean technologies.
[623] *Communication from Switzerland —GATS 2000: Environmental Services*, Council for Trade in Services, Special Session, S/CSS/W/76 (May 4, 2001).

is applied and the sustainable development needs of the developing countries are taken into consideration from the outset of the negotiations.

(h) Financial Services. *Financial services* is a key sector for sound economic development, and infrastructure in this area is needed to support the development and functioning of other sectors in order to make the economy work properly. The presence of foreign operators can contribute to financially sound institutions that provide, among other things, much needed capital, new products, transfer of expertise and labour training. Local savings can be channeled through competitive domestic capital markets, thereby improving economy-wide resource allocation and reducing reliance on foreign borrowing. Insurance allows for the necessary spread of risks. Cheaper and better financial services help to improve the performance of domestic companies.[626] Such liberalization would not preclude Members from taking the appropriate temporary measures, as required and in accordance with the relevant provisions of the GATS, to control capital movements.

The Uruguay Round negotiations resulted in a separate GATS *Annex on Financial Services* (the *Annex*).[627] The *Annex* states that governments have the right to take prudential measures, such as those for the protection of investors, depositors and insurance policy holders, and to ensure the integrity and stability of the financial system, (a so-called "prudential carve-out").[628] It also excludes from the scope of GATS certain services, such as those of a central bank or monetary authority that are provided when a government exercises its authority over the financial system.

During the Uruguay Round, a large majority of Members based their commitments on two classification systems—the one provided for in the *Annex* and the other based on the W/120 *Services Sectoral Classification List*. The *Annex* provides the only GATS definition of financial services, as follows: "financial service is any service of a financial nature offered by a financial service supplier of a Member."[629] It also sets out an extensive but non-exhaustive list of financial services, which includes all insurance and insurance-related services, as well as all banking and other financial services. The W/120 *Services Sectoral Classification List* is very similar, using the same major headings, i.e. all insurance and insurance-related services, banking and "other" financial services (excluding insurance). Despite their similarities, however, there are enough differences between the two as to render the matter unclear when making a cross-country comparison as to what commitments in financial services have been made.

Like telecommunications, financial services is an area in which further negotiations were convened, after the Round officially ended in July 1995 in order to improve on the initial Uruguay Round commitments.[630] As with basic telecommunications, a Uruguay Round Ministerial Decision on Financial Services[631] opened the way for further negotiations in order for Members to "improve, modify or withdraw all or part of their commitments" without offering compensation and to finalize their Article II Exemptions

with respect to this sector. The negotiations, which ended in December 1997[632] resulted in the *Fifth Protocol to the GATS*,[633] which provides for the annexation of new financial services schedules to the Uruguay Round schedules.

The Committee on Financial Services, which was established by the Council for Trade in Services,[634] has been responsible for reviewing the status of acceptance of the *Fifth Protocol to the GATS*, in particular whether the Members who participated in the financial services negotiations in 1997 have ratified their commitments. In connection therewith, the Committee has also been looking at the classification of financial services and at developments in financial services trade generally.

Since May 2000, when comprehensive negotiations on trade in services commenced under the "roadmap"[635] adopted by the Council for Trade in Services only nine proposals have been received with respect to expanding, strengthening and clarifying commitments in the financial sector. It has been suggested that Members use the classification provided in the *Annex* wherever possible.[636] They are also encouraged to utilize the *Understanding on Commitments in Financial Services*[637] agreed upon at the end of the Uruguay Round, which contains a pre-determined set of commitments, not described as a "cluster," from which exceptions would remain possible, as a means of achieving more coherent sets of commitments.

(i) Health-Related and Social Services. The W/120 classification for this sector comprises four categories: hospital services, other human health services, social services, and "other." The sector includes, in addition to hospital services, services delivered under the direction of medical doctors chiefly to in-patients aimed at curing, reactivating and/or maintaining the health status; other human health services, ambulance services, residential health facilities services other than hospital services; social services with or without accommodation. The definition of health-related and social services does not include medical and dental services, veterinary services and the services provided by nurses, midwives and so forth, which have been grouped separately under professional services. There have been no negotiating proposals submitted in relation to this sector.

(j) Tourism and Travel-Related Services. Tourism is an important industry for both developed and developing countries in terms of revenue generation and its contribution to employment. The W/120 classification defines tourism services under four main

[632] See Chapter 20 of this book.

[633] The *Fifth Protocol to the GATS*, supra note 265, was adopted in December 1997. It entered into force on March 1, 1999.

[634] The Committee on Financial Services was established pursuant to the *Decision on Institutional Arrangements for the General Agreement on Trade in Services*, adopted by the Council for Trade in Services on March 1, 1995, S/L/1 (April 4, 1995), ¶ 3.

[635] At a meeting of the Council for Trade in Services held in May 2000 some Members referred to the work program for the first phase of the negotiations" as a 'road map.' It included modalities for the second phase of negotiations, for the treatment of autonomous liberalization, for means to facilitate the increasing participation of developing countries and proposals on issues arising from the work carried out in the Council and its subsidiary bodies. *See* Council for Trade in Services, Special Session, *Report of the Meeting held on May 26, 2000*, Secretariat Note, S/CSS/M/3 (June 26, 2000), ¶ 24. The decision on *Autonomous Liberalization Modalities*, *supra* note 478, has since been adopted in March 2003.

[636] *Communication from the European Communities (and their Member States)—GATS 2000: Financial Services*, Council for Trade in Services, Special Session, S/CSS/W/39 (December 22, 2000), ¶ 6.

[637] *Understanding on Commitments in Financial Services*.

headings, namely hotels and restaurants (including catering), travel agencies and tour operators" services, tourist guides services, and "other."

Although the tourism sector attracted more commitments by Members than any other sector at the end of the Uruguay Round, significant restrictions still remain. Included among the most common restrictions appearing in Members' schedules are economic needs tests, size limitations for establishments, restrictive licensing practices and fixed equity limits. The classification and liberalization of this sector has been the subject of detailed discussions and proposals by both developing and developed Members. The "cluster approach" to commitments has been a primary feature of these discussions, initiated by the Dominican Republic, El Salvador, Honduras, Nicaragua and Panama in their proposal of October 14, 1999 in relation to the need for an Annex on Tourism.[638]

The Appendix to the proposed Annex on Tourism contained a defined "tourism industries cluster" comprising extensive sectoral coverage of "characteristic sectors" and "related sectors" for tourism. This coverage reflected a World Tourism Organization definition given to the Tourism Satellite Account ("TSA"), which was agreed upon at an international conference held in Nice in June 1999. Subsequently, in March 2000, the United Nations Statistical Commission, on the basis of a more global consensus, determined that the definition of the tourism satellite account would be comprised only of tourism *characteristic* products, excluding the set of tourism *related* products from the prior definition. "Tourism *characteristic* products" include those services that would cease to exist in meaningful quantity or those for which the level of consumption would be significantly reduced in the absence of visitors and for which statistical information seems possible to obtain.[639]

In addition, the proposal received a number of comments from other Members, in particular the EC.[640] Despite asserting that the scope of coverage in the draft Annex on Tourism was too broad, and in some cases inappropriate,[641] the EC suggested considering "tourism-related" services alongside "core" tourism services in a "checklist," in order to highlight any inconsistencies of approach and to facilitate liberalization in related sectors. It proposed that "such a checklist could greatly contribute to increasing the efficiency and coherence of tourism services negotiations." Moreover, the EC was of the view that a checklist of "tourism-related" services sectors could serve as an aide-memoire during the negotiations of sectors that are related to tourism (the result of which should be scheduled in the relevant GATS sectors other than tourism). A possible shorter checklist, which calls for reflection on the matter, was annexed as a basis for further discussion.

[638] *Communication from the Dominican Republic, El Salvador and Honduras* to the WTO General Council and Council for Trade in Services in preparation for the 1999 Ministerial Conference, S/C/W/127 (October 14, 1999) and WT/GC/W/132 (October 14, 1999).

[639] *Communication from the Dominican Republic, El Salvador, Honduras, Nicaragua and Panama: the Cluster of Tourism Industries*, Council for Trade in Services, Special Session, S/CSS/W/19 (December 5, 2000).

[640] The European Communities and its Member States submitted a response to the initial proposal: *Communication from the EC (and their Member States—Reaction to the Communication from Dominican Republic, El Salvador and Honduras on the Need for an Annex on Tourism* . . . S/CSS/W/5, *supra* note 573, in which they supported full liberalization of the tourist sector.

[641] *Id.*, Part of the EC response reads as follows: "For example, the inclusion of "services" provided under governmental authority such as "passport and visa issuing services" does not appear appropriate in the context of GATS *Article I*. A part of air transport services is currently excluded from GATS pending the result of the mandated review. Discussion on this is therefore ongoing in another framework and duplication of work should be avoided."

The proposed Annex on Tourism was accordingly amended by further communication from the Dominican Republic, El Salvador, Honduras, Nicaragua and Panama on December 5, 2000.[642] The respective delegates presented another detailed list of "tourism *characteristic* products," organized using the CPC codes and attributing such "tourism *characteristic* services" to the *Services Sectoral Classification List* (W/120). The stated objective was a comprehensive treatment for tourism by reference to a set of "tourism *characteristic* products" as the cluster of tourism industries, without prejudice to the use of the cluster as the scope for new disciplines or for requesting additional specific commitments.

Other Members have contributed to the debate, including Canada, which has encouraged other Members to focus negotiations on the W/120 classification of tourism and travel-related services, and to accommodate the cross-cutting, multi-industry nature of tourism services. Canada has suggested that Members create and utilize their own tailored checklists to assist in the negotiation of tourism related sectors that are of particular interest to them.[643] The United States, on the other hand, has had very little to say about the cluster proposals, but has focused on ways to generate investment for tourist and business destinations around the world.[644]

(k) Recreational, Cultural and Sporting Services (other than audiovisual services). Recreational, cultural and sporting services under the *Services Sectoral Classification List* (W/120) is subdivided into entertainment services (including theatre, live bands and circus services), news agency services, libraries, archives, museums and other cultural services, sporting and other recreational services and "other."

Sporting services (CPC 964) has received particular attention. New Zealand has submitted a proposal[645] to expand upon the four existing subcategories of CPC 964, and has suggested that discussion by Members of commitments on sporting services, and a more effective classification of the subsector, should focus on the following outline of core activities in the sector:

96411: "sports event promotion services: existing definition;"
96412: "sports event organization services: existing definition;"
96413: "sports facility operation services: existing definition to be expanded to include maintenance of sports facilities; also expansion of definitions of sports facilities to encompass facilities other than stadia or arenas;"
96419: "other sporting services."

It is proposed that this should be replaced by the following:

- Referee and umpiring services;
  Sports performance services;
- Coaching and training services;
  Other instruction of groups or individuals in the practice of a sport or health, leisure and fitness activity, such as that provided by sports clubs, gymnasiums and

[642] *Draft Annex on Tourism*, *supra* note 550. (It replaces earlier drafts contained in S/C/W/127 (October 14, 1999) and the appendices to S/CSS/W/19 (December 5, 2000)).
[643] *Communication from Canada—Initial Negotiating Proposal on Tourism and Travel-Related Services—Revision*, Council for Trade in Services, Special Session, S/CSS/W/54/Rev.1 (May 4, 2001).
[644] *Communication from the United States —Tourism and Hotels*, Council for Trade in Services, Special Session, S/CSS/W/31 (December 18, 2000).
[645] *Communication from New Zealand—Negotiating Proposal on Sporting Services*, Council for Trade in Services, Special Session, S/CSS/W/94 (June 26, 2001).

other sports facilities, institutes of sport, high performance sports clinics, health and fitness clubs and specialist fitness practitioners such as personal trainers or yoga instructors;
Instruction in coaching and training of sports or health, leisure and fitness activities;
Instruction in referee and umpiring services;
Administration and management of sports teams, clubs, institutes, gymnasiums and other sports facilities;
Sports agents services;
Sports drug testing services; and
Other sporting services not elsewhere classified.

New Zealand notes that its negotiating proposal on education raises the issue of the exclusion from the CPC provisional education classifications of "education services" primarily concerned with "recreational matters" and their relegation to subsector 9641 (sporting services) with no further elaboration. New Zealand believes that education services concerning the academic study and teaching of sport and recreational activities and related activities should be classified as education rather than sporting services. Such services are distinct from services related to the instruction of groups or individuals in the practice of sporting disciplines and health, leisure and fitness activities. The latter are sporting services, and should be included in an updated sporting services classification.[646] It also recommends that issues associated with the Mode 4 provision of sports performance services, i.e. the temporary movement of teams, individual athletes/players, coaches, trainers, referees, administrators and organizers, should be the subject of further discussion by Members.

(l) Transport Services. Transport services is a massive W/120 classification comprising maritime transport services, internal waterways transport, air transport services, space transport, rail transport services, road transport services, pipeline transport, services auxiliary to all modes of transport, and "other transport services."[647] *Maritime transport services* is the subject of a basic GATS Annex containing modalities for further negotiations in the sector, *Annex on Negotiations on Maritime Transport Services.*[648] The Secretariat has produced two comprehensive Background Notes[649] and several proposals for further regulation have been tabled. There is also a GATS *Annex on Air Transport Services*,[650] which is subject to review under the GATS, and for which three proposals to expand the scope of the *Annex* have been received to date. Finally, one proposal on services auxiliary to all modes of transport has been received from Switzerland.[651]

[646] *Id.*, ¶ 10.
[647] For general comments on the transport sector, including land transport, see the *Communication from the European Communities (and their Member States)—GATS 2000: Transport Services*, Council for Trade in Services, Special Session, S/CSS/W/41 (December 22, 2000).

(m) Maritime Transport Services. At the end of the Uruguay Round negotiators ran into difficulty when incorporating market access commitments into GATS by the key players in the maritime transport services sector. A multilateral negotiating process was set up under the Negotiations Group for Maritime Transport Services ("NGMTS") with a deadline for completion by June 30, 1996. In order to better facilitate negotiations in this sector, a model schedule was developed which, while not directly compatible with the W/120 classification, reflected what was found to be the best way to organise talks. The model schedule adopted a three-pillar approach, which included:

International Maritime Transport Services;
Maritime Auxiliary Services; and
Access to, and Use of Port Services.

The 3-pillar model schedule reflected Paragraph 4 of the 1996 *Decision on Maritime Transport Services* ("*Decision"*)[652] of the Council for Trade in Services, which affirmed that Article II of the GATS (MFN) and the Annex on Article II Exemptions would enter into force for the three pillar sub-sectors, at the same time as the conclusion of the negotiations. The *Decision* suspended negotiations on Maritime Transport Services, indicating that they were to resume with the commencement of further comprehensive negotiations on services, which didn't take place until 2000. The *Decision* contained a standstill clause, under which Members undertook not to apply "... any measures affecting the maritime transport services except in the response to measures applied by other countries, and with the view to maintaining or improving the freedom of provision of maritime transport services ...."[653]

In October of 2000, the EC, Hong Kong, China, Japan, Republic of Korea, Norway and Singapore, by means of a joint statement,[654] noted that new negotiations on trade in services had commenced under a "roadmap" adopted by the Council for Trade in Services in May 2000.[655] This roadmap called for the views of other Members on the resumption of negotiations with a view to liberalizing maritime transport services.

To date, few countries have scheduled substantial commitments on maritime transport services in their Schedules. MFN exemptions apply for many of those that have maintained specific commitments in the sector. International maritime transport services are nevertheless already quite liberal compared to land and air transport, and most other services, with few restrictions apart from those in mode 3 and 4, although national treatment remains an issue for some Members.

Negotiating proposals in this sector reflect a general support for the three-pillar model schedule[656] developed under the Uruguay Round *Decision*, with the possibility of including commitments in regard to a fourth pillar on multimodal transport. Australia has suggested that "multimodal transport" be defined as: "The carriage of goods by at least

two different modes of transport, by the multimodal transport operator on the basis of a single 'through' multimodal transport contract, from a point of loading in one country to a point of delivery in another country."[657]

The EC contemplates an "ability to carry out multimodal operations, using land transport services where an international sea leg is involved."[658] It noted that the "fourth pillar" was not formally introduced in the previous negotiations, but emerged as a tool to facilitate multi-modal requests and offers. Although it suggests that proposals should be considered for activities such as feeder services related to international cargo, or repositioning of equipment and movement of empty containers, it also indicated that the right to conduct these activities should be limited and developed in the negotiations.[659]

A more recent joint communication of 29 states to the Council for Trade in Services in Special Session,[660] affirmed the importance of maritime transport services for foreign investment, employment opportunities and promotion of growth in other related service sectors. Noting that by the "multiplier effect" maritime transport services, extends to ship repair and maintenance, ship classification, distribution, professional services, communications, banking and insurance, they called for active participation of all members in the on-going negotiations, in order to secure broad coverage of the sector, consistent with sustainable development, security and safety.

(n) Air Transport Services. The supply of air transport services is covered by more than three thousand bilateral agreements worldwide and regulated by the International Civil Aviation Organization ("ICAO") on the basis of the 1944 Chicago Convention.[661] The importance of the sector for trade cannot be overestimated. Even so, the air transport sector is an anomaly under the GATS, as it is the only services sector that is subject to specific sectoral exclusions. The *Annex on Air Transport Services* confirms that "any specific commitment or obligation assumed under this Agreement will not reduce or affect a Member's obligations under bilateral or multilateral agreements that are in effect on the date of entry into force of the WTO Agreement."[662] The GATS, including the dispute settlement provisions, is expressly denied application to measures affecting traffic rights, or services related to the exercise of traffic rights.[663] It does, however, apply to measures affecting aircraft repair and maintenance services, the selling and marketing of air transport services and computer reservation system ("CRS") services.[664] These were the only three categories to form the basis of most of the limited commitments made by Members during the Uruguay Round[665] and their scope is further

limited by the narrow definitions maintained in respect of each of them in the *Annex* itself.[666]

Given the requirement that developments in the air transport sector and the operation of the *Annex* be reviewed periodically, and at least every five years, with a view to considering the possible further application of the GATS in this sector,[667] proposals have been made to explore ways in which Members can increase, within the existing scope of the GATS, the number and quality of commitments for air transport services during the course of the services negotiations. New Zealand is of the view that in terms of further commitments, aside from the specific exclusions covering a limited area of services that can only be supplied by the holders of traffic rights, all other air transport services and general aviation and supporting services must be considered to fall within the scope of the GATS.[668] In particular, it says that improvements could occur not only in the three areas explicitly referred to in the *Annex*, but also in such areas as auxiliary services (including cargo handling and storage and warehouse services), airport management services, air traffic control services, general aviation services, domestic air services and other supporting services for air transport.[669]

More than one Member has recognized that there is some sensitivity in this sector about the impact of improved commitments on the regulatory frameworks contained in the existing bilateral and multilateral air services agreements. New Zealand believes that "the GATS framework provides a flexible mechanism capable of accommodating the regulatory challenges across the full range of services sectors." Similarly, Colombia has expressed the view that liberalization, particularly for some ancillary services, is desirable if it can be accomplished without detriment to the regulatory and safety measures developed by the ICAO and competent national authorities. It has pointed out that these measures fall under GATS Article VI (Domestic Regulation).[670]

Most recently, Costa Rica has proposed that more substantial commitments be made, specifically in respect of aircraft maintenance repair and maintenance services, as defined in Paragraph 6(a) of the *Annex* as "such activities, when undertaken on an aircraft or a part thereof while it is withdrawn from service and do not include so-called line maintenance," or what the industry refers to as "maintenance, repair and overhaul.[671]

(o) Other Services Not Included Elsewhere. The presence of a category entitled "other" services leaves a creative option open for Members that wish to schedule commitments in relation to sectors not otherwise defined in the W/120. Energy services is one area in which the "other" classification might be utilized. In addition to legal, environmental, postal/courier and construction services, energy services has been of special and continuing interest to the CSC during its recent work.

[666] GATS *Air Transport Annex*, *supra* note 71, ¶ 6. This same paragraph also contains a definition of "traffic rights" which does not necessarily reflect the industry definition.

Energy Services is one of the most important industrial sectors of any economy and fundamental to the development of developing countries. Competitive provision of energy services helps ensure that energy consumers have access to efficiently produced, market-priced, reliable energy. The availability of a variety of energy sources at competitive prices, with access to cross-border supplies, contributes to a nation's ability to compete in the international market.

As noted above, there is currently no separate, comprehensive sectoral classification for energy services in W/120. A number of specifically energy-related subsectors are included in the W/120, but are spread throughout the classification system as follows: services incidental to energy distribution, and services incidental to mining (both subsets of "other business services") and pipeline transportation of fuel (in "transport services"). A number of other activities directly involved in the energy services chain are covered by other GATS sectoral classifications, including architectural and engineering services, construction work for civil engineering, wholesale and retail trade services with respect to fuels and energy equipment, transportation services and several specific financial services.

The absence of any comprehensive classification for energy services has been attributed to the fact that at the time of the Uruguay Round much of the energy industry was characterized by state-owned enterprises operating as vertically-integrated companies with monopoly positions and most services functions were performed in-house. Negotiators focused on sectors in which discrete services were readily identifiable and business interest in liberalization was strong. The energy market has changed drastically since then, through privatization and deregulation as well as technological advances and customer services. These changes and new activities in the energy sector have "unbundled" energy services and opened up opportunities for brokers and traders to buy and sell power or fuel on the open market for resale to an energy end-user.

New moves are now being made toward clarification of the scope of energy services, in parallel with the sectoral negotiations. With the exception of Canada,[672] the Members' proposals reflect positively on the need for a new and comprehensive classification[673] and several classification schemes have been proposed.[674] The United States proposes that the Energy Sector be divided into five main categories of activities related to the following:

1. development and redevelopment of the energy resource
   evaluation and exploration
   drilling
   completion and development

[672] In the more narrowly defined oil and gas sector, Canada's view is that all services can be found in the W/120: *Communication from Canada—Initial Negotiating Proposal on Oil and Gas Services*, Council for Trade in Services, Special Session, S/CSS/W/58 (March 14, 2001), ¶ 10.

[673] *See* the following proposals: *Communication from Japan—Negotiation Proposal on Energy Services—Supplement*, Council for Trade in Services, Special Session, S/CSS/W/42/suppl.3 (October 4, 2001), ¶ 1; *Communication from Cuba—Negotiating Proposal on Energy Services*, Council for Trade in Services, Special Session, S/CSS/W/144 (March 22, 2002), ¶ 10; *Communication from Venezuela—Negotiating Proposal on Energy Services*, Council for Trade in Services, Special Session, S/CSS/W/69 (March 29, 2001), ¶ 25; *Communication from the United States—Classification of Energy Services* to the Committee on Specific Commitment's, S/CSC/W/27 (May 18, 2000), ¶ 13; and *Communication from the EC (and their Member States)—GATS 2000: Energy Services*, Council for Trade in Services, Special Session, S/CSS/W/60 (March 23, 2001), ¶¶ 3 and 6.

[674] The United States and the EC have drafted comparably comprehensive schemes, while Venezuela has tabled a less detailed framework.

leasing or rental
offshore support
research and development

2. construction and operation of an energy facility
   design and construction of facilities necessary to produce and transform energy
   development activities for energy facilities
   installation, operation, management and maintenance of energy facilities and equipment on a fee or contract basis
   production-related activities
   decommissioning, waste management, environmental, recycling and disposal activities
   research and development
3. energy networks
   design and construction of energy networks
   operation activities of energy networks, including transportation, transmission and distribution
   maintenance and repair
   installation and upgrading
   research and development
4. wholesale markets in energy
   energy-related storage
   wholesale customer activities
   trading brokering and sales
   commodity and risk management
   energy efficiency activities
   advisory activities
   supply of energy activities
   activities related to the wholesaling and marketing of energy equipment
5. the retail supply of energy
   retail customer activities
   trading, brokering and sales activities
   commodity and risk management
   retail customer efficiency activities
   advisory activities
   activities related to the retail sale and marketing of energy equipment.[675]

It also proposes that the comprehensive description of energy services be structured to respect the existing scheduled commitments by reference to an "*Energy Sector Index*."[676] In the form of a table, the *Index*, when completed, would indicate where each of the commercial activities could be located in relation to the W/120 classification, i.e. whether the activity is clearly included in the W/120, likely to be included but requires clarification, is not included in W/120 but should be included in a new classification for Energy Services, or may possibly not come within the scope of the GATS at all. The intention is that the *Index* would help avoid overlaps between existing W/120 energy-related classifications and new energy services classifications. It would also cover the full

[675] For further detailed breakdown of these main headings, *see Communication from the United States—Classification of Energy Services*, **S**/CSC/W/27, *supra* note 674, Attachment A.
[676] *Id.*, Attachment B.

chain of energy service and serve as the basis of a model schedule of the energy services sector.

In addition, the United States proposes that the comprehensive classification could serve as a basis for developing a *Reference Paper on Energy Services*, similar to the *Reference Paper*[677] that was developed during negotiations in the telecommunications sector. It would address regulations and technical requirements creating significant impediments to market entry and competition within a market that is highly regulated and undergoing deregulation, and also subject to large incumbent suppliers.[678] Discussions, both within the CSC, and informally among delegates, have progressed during 2001 and 2002.[679]

[677] *See* in regard to telecoms, the *Reference Paper on Basic Telecommunications*, *supra* note 263.

APPENDIX B

IMPLEMENTING THE DOMESTIC REGULATION MANDATE

Due to the potentially very wide-ranging effects of GATS Article VI:4, as well as to the fact that the GATS was a new and untested agreement, Members have proceeded very slowly and cautiously in their efforts to implement the mandate to develop any necessary disciplines on domestic regulation. Indeed, the development of rules for the removal of unnecessary domestic regulatory barriers presents Members with a huge challenge, not least because they are also forced to deal with the attitudes and practices of their own national regulatory authorities towards regulatory reform. It is against this background that the developments which have occurred in implementing the domestic regulation mandate in Paragraph 4 of GATS Article IV must be viewed. We turn first to consider some of the early work in this field.

1. Working Party on Professional Services[681]

Recognizing that government regulation is especially pervasive in professional services, the first step taken by Members in implementing the mandate of GATS Article VI:4 was the Ministerial *Decision on Professional Services*[682] and the establishment of the Working Party on Professional Services ("WPPS").[683] After several years of discussions, the WPPS succeeded in creating the voluntary *Guidelines for Mutual Recognition Agreements or Arrangements in the Accountancy Sector* ("MRA Guidelines"), circulated in May 1997,[684] followed by the mandatory *Disciplines on Domestic Regulation in the Accountancy Sector* ("Accountancy Disciplines"), in December 1998.[685] It is important to note that both the *MRA Guidelines* and the *Accountancy Disciplines* are very general in scope and almost certainly could be applied, at least in part, across a wide range of other services. For this reason, both are deserving of extensive further attention.

2. MRA Guidelines

According to the introduction to the *MRA Guidelines*, "The most common way to achieve recognition has been through bilateral agreements."[686] The *MRA Guidelines* further state that "There are differences in education and examination standards, experience requirements, regulatory influence and various other matters, all of which make

[681] The discussion in this and the following sections, up to the section on the Working Party on Domestic Regulation, is based on Dale B. Honeck, *Developing Regulatory Disciplines in Professional Services: the Role of the World Trade Organization* in GLOBALIZATION OF SERVICES: SOME IMPLICATIONS FOR THEORY AND PRACTICE 52–72 (Yair Aharoni and Lilach Nachum eds., 2000).

[682] *Decision on Professional Services*, S/L/3 (April 4, 1995). The WTO negotiations on telecommunications, and to some degree those on financial services, also considered certain regulatory aspects related to GATS *Article VI:4*, as noted in the paper prepared by the WTO Secretariat, *International Regulatory Initiatives in Services*, S/C/W/97 (March 1, 1999), 2–4, ¶¶ 4–15.

[683] An overview of WPPS activities can be found in the reports to the WTO Council for Trade in Service, series S/WPPS/1–4, while detailed descriptions can be found in the Minutes of the meetings, series S/WPPS/M/1–25.

[684] *Guidelines for Mutual Recognition Agreements or Arrangements in the Accountancy Sector ("MRA Guidelines")*, S/L/38 (May 28, 1997).

[686] *MRA Guidelines*, *supra* note 684, second full para.

implementing recognition on a multilateral basis extremely difficult."[687] As required by Members, the *MRA Guidelines* are entirely voluntary in terms of application.

The core elements of the *MRA Guidelines*, in addition to a reminder of the notification requirements under GATS *Article VII*, are recommendations on the form and coverage of MRAs. The *MRA Guidelines* state that MRAs should clearly identify: the participants; purpose of the agreement; scope of the agreement; details of the mutual recognition provisions, including eligibility requirements for recognition as well as specification of the conditions under which any additional supplementary requirements may be applied; mechanisms for implementation; further licensing or related requirements; and terms for revision of the agreement.

3. Accountancy Disciplines

The WTO's Council for Trade in Services adopted the *Accountancy Disciplines* after agreement had been reached within the WPPS. The *Accountancy Disciplines* are very concise, comprising only twenty-six paragraphs in four pages (six pages with the appendix). They are divided into eight sections, i.e. I Objectives, II General Provisions, III Transparency (five measures), IV Licensing Requirements (six measures), V Licensing Procedures (five measures), VI Qualification Requirements (three measures), VII Qualification Procedures (three measures), and VIII Technical Standards (two measures).

The main achievements of the *Accountancy Disciplines*, relative to the current GATS Article VI:4 provisions are found in Paragraphs 1, 2, 5 and 6. Paragraph 1 (i.e. section I Objectives), for example, confirms that GATS Article VI disciplines are separate and distinct from measures under GATS Article XVI and GATS Article XVII. Paragraph 2, (section II General Provisions) is the most important element of the disciplines, as it mandates a "necessity test" for all applicable regulatory measures, i.e. the requirement that regulatory measures "shall not be more trade-restrictive than necessary to fulfil a specified legitimate objective."[688] Examples of such legitimate objectives mentioned in the disciplines are the protection of consumers (including all users of accounting services and the public generally), the quality of the service, professional competence and the integrity of the profession.[689]

In Paragraph 5 (under Section III, Transparency) of the *Accountancy Disciplines*, Members are required to explain upon request, the specific objectives intended by their accountancy regulations.[690] In Paragraph 6 (also under section III Transparency), Members are asked to provide an opportunity for trading partners to comment upon proposed accountancy regulations, and to give consideration to such comments.[691] Other important provisions of the *Accountancy Disciplines* include the requirement in section IV (Licensing Requirements) that WTO Members consider less trade restrictive alternatives to residency requirements,[692] the requirement in section V (Licensing Procedures) for reasonable documentation requirements[693] and the requirement in section VI (Qualification Requirements) that account be taken of qualifications earned abroad on the basis of equivalency.[694]

[694] *Id.*, Section VI, ¶ 19.

The December 1998 *Decision* of the Council for Trade in Services adopting the *Accountancy Disciplines*[695] is composed of three elements. The first element is a statement to the effect that the Council has adopted the disciplines and that they are applicable to Members that have scheduled specific commitments on accountancy.[696]

The second element is the statement that Members will continue their work on domestic regulation, aiming to develop general disciplines for professional services while retaining the possibility to develop additional sectoral disciplines.[697] Before the end of the current round of services negotiations, which commenced in January 2000 (and were originally due for completion by January 1, 2005, but were subsequently extended) all the disciplines developed by the WPPS are to be integrated into the GATS and will then become legally binding. Consequently, the *Accountancy Disciplines* did not take immediate legal effect upon their adoption back in 1998. The third, and final, element is a "standstill provision," effective immediately, under which all WTO Members, including those without GATS commitments in the accountancy sector, have agreed, consistent with their existing legislation, not to take new measures which would be in violation of the *Accountancy Disciplines*.[698]

4. Working Party on Domestic Regulation

In April 1999, WTO Members initiated a major expansion of their efforts to develop regulatory disciplines under GATS Article VI:4, following adoption of the *Decision on Domestic Regulation* by the Council for Trade in Services.[699] That same *Decision* replaced the WPPS with a new Working Party on Domestic Regulation ("WPDR"), mandated to develop generally applicable disciplines, as well as disciplines for individual sectors or groups of sectors, including professional services, as appropriate.

The initial stage of work of the WPDR focused on the discussion of general concepts related to the creation of regulatory disciplines, especially the creation of horizontal disciplines potentially applicable to all the services sectors covered by the GATS.[700] As suggested by one of the background documents prepared by the WTO Secretariat,[701] the discussion centered upon four major topics, i.e. necessity, transparency, equivalency and international standards. To assist the discussions, the WPDR decided to create a *Checklist of Issues*,[702] as well as a *Summary of Discussions on the Checklist of Issues for WPDR* ("*Summary of Discussions*").[703]

[695] Council for Trade in Services, *Decision on Disciplines Relating to the Accountancy Sector* S/L/63 (December 15, 1998) *("Decision on Accountancy Disciplines")*.

[696] *Id.*, ¶ 1.

[697] *Id.*, ¶ 2.

[698] *Id.*, ¶ 3.

[699] Council for Trade in Services, *Decision on Domestic Regulation*, S/L/70 (April 26, 1999).

[700] An overview of WPDR activities can be found in the annual reports to the WTO Council for Trade in Services, series S/WPDR/1–4, while detailed descriptions can be found in the Minutes of the meetings, series S/WPDR/M/1–20.

[701] *Article VI:4 Disciplines: Background Note*, *supra* note 202, ¶ 16, states, "On the basis of the text of Article VI:4, of the accountancy disciplines and of other WTO Agreements on regulation in goods (TBT and SPS), it is possible to identify the following policy areas, where domestic regulation disciplines in services could be developed: necessity, transparency, equivalence and international standards."

[702] *Checklist of Issues*, the revised version of which was circulated as an Informal Paper to the WPDR, Job No 5067/Rev.1 (June 19, 2001). (Unpublished, informal paper, not in the public domain.) *("Checklist of Issues")*

[703] *Summary of Discussions on the Checklist of Issues for the WPDR*, includes both formal discussions (as recorded in the WPDR Minutes) and informal discussions, on a non-attributed basis. It was first attached to the minutes of the WPDR meetings, from S/WPDR/M/8 to M/13 (the latter dated November 21, 2001).

(a) General Issues. Among the most important of the general issues discussed by the WPDR is the coverage of GATS Article VI:4 vis-a-vis GATS Article XVI and GATS Article XVII.[704] As already noted, nearly all WTO Members believe that Paragraph 4 of GATS Article VI refers only to non-discriminatory measures that are not already covered under the GATS provisions regarding market access and national treatment. Nonetheless, the determination of where a specific measure should be categorized can be difficult, and sometimes must be done on a case-by-case basis. An observation made by the Secretariat was that licensing systems could be composed of both kinds of measures and that a distinction needed to be made in regard to categorization between the overall licensing system and its various components.[705]

(b) Necessity. The necessity test in section II, Paragraph 2, of the *Accountancy Disciplines* is one of the most important of all the provisions contained therein.[706] It has also been one of the most difficult and controversial issues for the WPDR to address. The concept of a legitimate objective was intensively discussed in the early stages of the WPDR work, but Members eventually decided it was not necessary to create an exhaustive listing of legitimate objectives, instead noting that the WTO Appellate Body had never questioned the legitimate objectives set by governments.[707] Another important aspect for discussion has been criteria for the necessity test, including the definition of such terms as "not more trade restrictive than necessary."[708]

(c) Transparency. This issue has received the greatest level of support in the WPDR, both from developed and developing country Members but remains somewhat controversial. While the benefits of transparency are widely acknowledged, concerns have been expressed over the administrative burden of any additional GATS transparency requirements, especially those related to allowing prior comments on proposed regulations. Related aspects that have been discussed include the adequacy of existing GATS notification requirements, as well as the objectives and orientation of further transparency requirements (i.e. toward suppliers, consumers, or governments).[709]

(d) Equivalence/International Standards. Until the second half of 2002, the issues of equivalence and international standards received only minimal attention in the WPDR. In regard to the latter, some of this is undoubtedly due to the relatively small number of international services standards created to date, and the hesitation of governments

It was subsequently circulated separately as an Informal Paper to the WPDR, the latest version of which is JOB(02)/3/Rev.7 (September 23, 2003). (Unpublished, informal paper, not in the public domain.)

[704] The report of the WPPS to the Council for Trade in Services on the development of the *Decision on Accountancy Disciplines* included an informal note by the Chairman entitled *Discussion of Matters Relating to Articles XVI and XVII of the GATS in connection with the Disciplines on Domestic Regulation in the Accountancy Sector.* The note states: "It was observed that the new disciplines developed under Article VI:4 must not overlap with other provisions already existing in the GATS, including Articles XVI and XVII, as this would create legal uncertainty." Minutes of the Meeting of the WPDR, S/WPPS/4 (December 10, 1998), at 9–10, ¶ 2.

to create rules regarding something which largely does not yet exist. In addition, some WTO Members have expressed concern over the lack of involvement of many developing countries in the creation of international standards, typically due to a shortage of resources or technical expertise.[710]

The issue of equivalence, which is probably more accurately termed as the lack of recognition of qualifications, has received increasing attention, especially from developing country Members. In connection with the current services negotiations, India circulated a negotiation proposal in which recognition issues are a prominent feature.[711] This has been followed by comments from a growing number of Members in the WPDR, to the point where the issue occupies several pages of the *Summary of Discussion*.[712]

(e) Professional Services. The December 1998 *Decision* of the Council for Trade in Services, which adopted the *Accountancy Disciplines*, states that "the Working Party shall aim to develop general disciplines for professional services, while retaining the possibility to develop or revise sectoral disciplines."[713] At the time, Members discussed sending the *Accountancy Disciplines* and *MRA Guidelines* to other professions for discussion and consideration. Progress, however, was slow, as Members instead focused their attention on issues related to the development of horizontal disciplines for services as a whole.

To help advance the work on professional services, in 1999 the delegation of Hong, Kong, China submitted two informal papers.[714] Following discussions of the papers, the WPDR decided at its meeting in July 1999 that Members would consult on a voluntary basis with their domestic professional associations, concerning the potential applicability of the accountancy disciplines to their professions.[715] In the first of their two papers, Hong Kong, China suggested three questions for Member government to ask their domestic professional services associations regarding the potential applicability of elements of the *Accountancy Disciplines* to other professions. The questions were as follows:

(a) Are there any elements of the disciplines, which you feel need to be strengthened? If so, please set them out and why?
(b) Are there any points or areas which you consider are missing from the disciplines and which you feel should be included? If so, please indicate clearly what these are and why they should be included; and
(c) Are there any elements of the disciplines which you consider are not appropriate for your profession? If so, please set out which and why you consider they are inappropriate. Please also suggest what changes would make them appropriate.

[714] Informal Papers to the WPDR (*Communication from Hong Kong, China—Horizontal Work in Professional Services*, Job. No. 2784 (May 12, 1999) and Job No. 3547 (June 21, 1999). (Unpublished, informal papers, not in the public domain.)
[715] *Minutes of the Meeting of the WPDR*, S/WPDR/M/2 (September 2, 1999), 2, ¶¶ 8–9.

The WTO Secretariat subsequently compiled a synthesis of Members' responses, as notified to the WTO, circulated as an informal paper, under the heading: *Synthesis of Results to Date of the Domestic Consultations in Professional Services*. (*Synthesis of Results*). As of August 2004, responses had been received regarding seventeen professions, from fourteen WTO Members (counting the EU as one response), the vast majority of which indicated that the *Accountancy Disciplines* could be applied to other professional services, with perhaps some modifications to accommodate sectoral specificities.[716]

At the October 2002 meeting of the WPDR,[717] Members authorized the WTO Secretariat to begin consultations with a number of international professional services associations, which they had selected earlier, regarding the suitability of the *Accountancy Disciplines* for other professions. The Secretariat has reported on the progress on the consultations at subsequent WPDR meetings.[718]

(f) Regulatory Examples. The second phase of WPDR activities has been an attempt to move away from the discussion of abstract concepts to the analysis of concrete examples of the types of measures to which regulatory disciplines could be applied. This important shift in focus is recorded in the Minutes of the WPDR meeting of March 12, 2002, as follows:

> The Chairperson . . . observed that there would appear to be a general desire for the Working Party to adopt a more focused approach to its work, and that an important part of this would involve engaging more substantively in a review of the actual regulatory issues that related to Article VI:4.[719]

Members had earlier agreed to have the WTO Secretariat list examples of the kinds of measures that would be addressed by disciplines under GATS Article VI:4, based on contributions by Members and a review of the Working Party on Professional Services accountancy materials by the Secretariat. The Secretariat was instructed to list specific measures not already found in the *Accountancy Disciplines*, that were also not GATS Article XVI or GATS Article XVII measures. The WTO Secretariat then prepared an informal paper, *Examples of Measures to be Addressed by Disciplines under GATS Article VI:4* ("*Examples Paper*").[720]

In examining the measures listed in *Examples Paper*, Members agreed to ask the following four questions when looking at each measure individually, i.e.:

[716] The most recent version is circulated as an Informal Paper to the WPDR, JOB(02)/204/Rev.1 (February, 21 2003). (Unpublished, informal paper, not in the public domain.) Formal responses have been received from Canada, S/WPDR/W/13 (March 16, 2001) and W/22 (February 10, 2003); China W/20 (December 3, 2002); Chinese Taipei, W/21 (January 24, 2003); the European Communities, W/5 (May 19, 2000); Hong Kong, China, W/3 (April 28, 2000); Japan, W/6 (May 19, 2000); Korea, W/10 (October 2, 2000); Mexico, W/12 (March 9, 2001); Poland, W/7 (May 23, 2000); Switzerland, W/16 (September 4, 2001); and Thailand, W/18 (September 28, 2001).

[717] *Minutes of the Meeting of the Working Party on Domestic Regulation*, WPDR/M/18 (December 3, 2002), 7, 47.

[718] *Minutes of the Meeting of the WPDR*, February 24, 2003, S/WPDR/M/20 (March 31, 2003), 3, ¶ 18, and *Minutes of the Meeting of the WPDR*, May 15, 2003, S/WPDR/M/21/Rev.1 (June 25, 2003), 14, ¶ 81. The listing of international professional services associations selected by WTO Members for the Secretariat to consult is contained in the Informal Paper to the WPDR, *International Organizations in Professional Services*, JOB(01)/98 (June 2001). (Unpublished, informal paper, not in the public domain).

[719] *Minutes of the Meeting of the WPDR*, March 12, 2002, S/WPDR/M/15 (April 10, 2002), 1, ¶ 6.

[720] The latest version is an Informal Paper to the WPDR, JOB(02)/20/Rev. 7 (September 22, 2003). (Unpublished, informal paper, not in the public domain.)

(a) Is the measure already covered by Articles XVI and/or XVII?
(b) If not, is it addressed by any other provisions of the Agreement (e.g. Articles II, III, VIII, IX)?
(c) If not, does it fall clearly within the scope of Article VI, in particular VI:4 (licensing requirements, qualification requirements, technical standards, licensing procedures and qualification procedures)?; and
(d) If so, is the measure adequately addressed by the relevant provisions of the *Accountancy Disciplines*, or are modifications required?[721]

The later versions of the *Examples Paper* themselves contain a summary of the WPDR discussions on regulatory examples which, as of the fifth revision, had grown to seven pages. Among the types of examples most frequently discussed have been residency requirements, sub-federal measures and procedures for the recognition of qualifications.

(g) Draft Disciplines. At the WPDR meeting in February 2003, the delegation of Japan introduced an informal paper for discussion, entitled *Basic Outline of a Draft Annex on Domestic Regulation*.[722] The delegation stated that, following an extensive discussion of regulatory examples, it would be useful to start discussing disciplines on the basis of concrete provisions. Members could begin discussing possible disciplines on a text basis, and Japan hoped their paper would be useful to help stimulate further thinking in that regard.

Japan also stated that their draft Annex is based largely on the *Accountancy Disciplines* but that some elements were new, such as a paragraph regarding measures taken after granting a license or qualification, as well as a section on administrative guidance.[723] More importantly, however, Paragraph 2 of the *Accountancy Disciplines* has been modified to replace the reference to "legitimate objectives" with "national policy objectives," a politically more acceptable term found in the Preamble to the GATS.[724]

In July 2003, the EC circulated a *Proposal for Disciplines on Licensing Procedures*.[725] As indicated by the title, this formal paper concerns proposed disciplines only for licensing procedures. When introducing the paper at the formal meeting of the WPDR, the EC noted that licensing procedures are relevant to all services sectors where licences are required, and could be a particular burden in sectors dominated by small and medium-sized enterprises or individual service suppliers. The EC approach is not to address the substance of regulations, or the substantive requirements to be fulfilled to obtain a licence, but to focus on the procedures. Their approach is limited, but the EC also stated

[721] *Minutes of the WPDR meeting of February 24, 2003*, S/WPDR/M/19 (January 29, 2003), 2, ¶ 11.
[722] *Informal Paper to the WPDR*, *Basic Outline of a Draft Annex on Domestic Regulation* (*Communication from Japan*), JOB(03)/45 (March 3, 2003). (Unpublished, informal paper, not in the public domain.) Japan's introduction of the paper, and its initial responses to the comments received, can be found in the Minutes of the Meeting of the WPDR, February 24, 2003, S/WPDR/M/20, *supra* note 335, at 2–3, ¶¶ 7–10.
[723] *Id.*, ¶ 9. In a paragraph by paragraph comparison, Japan's draft Annex appears to have excluded ¶¶ 10–12 of the *Accountancy Disciplines*, *supra* note 695, regarding licensing requirements, ¶ 14 regarding licensing procedures, ¶¶ 19 and 21 regarding qualification requirements and ¶ 26 on technical standards. Perhaps the most significant of these omissions is the fact that the Japanese draft Annex makes no reference to ¶ 19 of the *Accountancy Disciplines*, requiring that competent authorities take account of qualifications acquired in the territory of another Member.
[724] In regard to use of the term "national policy objectives," see *Article VI:4 Disciplines: Background Note*, *supra* note 202, at 1, ¶ 2.
[725] *Communication from the European Community and its Member States, Proposal for Disciplines on Licensing Procedures*, S/WPDR/W/25 (July 10, 2003).

that they did not intend to exclude any other issues under the mandate of Article VI:4.[726] In addition to provisions from the *Accountancy Disciplines*, the paper relies upon measures from other WTO agreements, most notably the *Agreement on Import Licensing Procedures* and the *Reference Paper for Telecommunication Services*. Members have commented extensively on the EC paper at WPDR meetings.[727]

[726] *Minutes of the Meeting of the WPDR*, July 1, 2003, S/WPDR/M/22 (September 22, 2003).
[727] *See, e.g., Minutes of the Meeting of the WPDR*, November 27, 2003, S/WPDR/M/23 (November 27, 2003).

* Sydney J. Key is on the staff of the Federal Reserve Board's Division of International Finance in Washington, D.C. The views expressed by the author in this chapter should not be interpreted as representing the views of the Board of Governors of the Federal Reserve System or anyone else on its staff. This chapter is adapted from two of the author's previous works: FINANCIAL SERVICES IN THE URUGUAY ROUND AND THE WTO (Occasional Paper 54, Group of Thirty, 1997); and THE DOHA ROUND AND FINANCIAL SERVICES NEGOTIATIONS (AEI Press, 2003) <www.aei.org/book456>.

I. Introduction

For the financial services sector, the World Trade Organization ("WTO") provides, for the first time, a high-level multilateral forum in which the primary goal is to reduce or eliminate trade barriers in order to promote competitive markets and thereby support economic growth and development. The new prominence of this goal at the multilateral level complements the intensive work on strengthening domestic financial systems that is taking place in a variety of other international fora, ranging from the International Monetary Fund ("IMF") to specialized bodies such as the Basel Committee on Banking Supervision.[1] This work includes promoting cooperation and coordination among financial supervisors and setting voluntary—but widely accepted—international minimum standards and codes of good practices.[2] It also includes IMF and World Bank "surveillance" of domestic financial systems, which, *inter alia*, involves monitoring and helping to build institutional capacity for implementation of the international standards and codes.[3]

Trade in financial services—in combination with reforms to strengthen domestic financial structures—can play an important role in helping countries build more competitive and efficient and therefore more stable domestic financial systems. A sound financial system is, of course, imperative for economic growth and development; it also increases an economy's resiliency to "external shocks" such as movements in exchange rates or a major increase in global interest rates. Financial services trade can improve the quality, availability, and pricing of financial services and enhance the efficiency of capital markets. Especially when a foreign financial firm establishes a commercial presence in the host country, such trade can also stimulate innovation through the dissemination of new technologies, know-how, and skills. Financial services trade can also promote the use of international good practices, for example, with regard to accounting, risk management, and disclosure of financial information.[4]

[1] The Basel Committee on Banking Supervision ("Basel Committee") , which was established in 1975 in the aftermath of the failure of Bankhaus Herstatt in what was then West Germany, includes central banks and non-central bank authorities responsible for banking supervision from the Group of 10 ("G-10") countries plus Luxembourg and Spain; its secretariat is provided by the Bank for International Settlements. The G-10 actually comprises eleven countries: Belgium, Canada, France, Germany, Italy, Japan, the Netherlands, Sweden, Switzerland, the United Kingdom and the United States. Besides the IMF, the G-10, and the Basel Committee, other international fora involved in efforts to strengthen domestic financial systems include the Group of Seven (G-7), the Group of Twenty (G-20), the Financial Stability Forum, the International Organization of Securities Commissions and the International Association of Insurance Supervisors. *See* IMF, *A Brief Guide to Committees, Groups, and Clubs: A Factsheet* <www.imf.org/external/np/exr/facts/groups.htm> (accessed Apr. 2003). For additional information on the Basel Committee, *see* <www.bis.org/bcbs/index/htm> (accessed Apr. 2003).

[2] International minimum standards and codes of good practices have been established in three broad areas that are of critical importance for sound financial systems: (1) transparency of macroeconomic policy and data; (2) institutional and market infrastructure, which includes insolvency, corporate governance, accounting, auditing, market integrity and functioning, and payment and settlement systems; and (3) prudential regulation and supervision, which covers both financial firms and regulatory and supervisory systems. *See* Financial Stability Forum, *Compendium of Standards* <www.fsforum.org/compendium/about.html> (accessed Apr. 2003).

[3] *See* Sydney J. Key, The Doha Round and Financial Services Negotiations (AEI Press, 2003), for a brief overview of international efforts to strengthen domestic financial systems. *See also* Financial Stability Forum, *Compendium of Standards*, *supra* note 1; *Ongoing and Recent Work Relevant to Sound Financial Systems, Semiannual Status Report* (Apr. 2003) <www.fsforum.org/publications/Ongoin0304.pdf>; and IMF, *Standards and Codes* <www.imf.org/external/standards/index.htm> (accessed Apr. 2003).

[4] *See* Masamichi Kono, Patrick Low, Mukela Luanga, Aaditya Mattoo, Maika Oshikawa, and Ludger Schuknecht, Opening Markets in Financial Services and the Role of the GATS (WTO 1997); Wendy Dobson and Pierre Jacquet, Financial Services Liberalization in the WTO (1997); Stijn Claessens, Asli

The inclusion of financial services in a multilateral trade agreement such as the General Agreement on Trade in Services ("GATS") was a major milestone.[5] Because of the special characteristics and sensitivity of the financial sector—in particular, the role of banks in monetary and payment systems and the phenomenon of systemic risk—finance officials in the United States and other countries were concerned about allowing financial sector issues to fall within the domain of trade officials and the multilateral trading system.[6] Financial regulators made it clear that the inclusion of financial services in a multilateral trade agreement such as the GATS would be unacceptable without a specific carve-out from the obligations of the agreement for prudential measures. The regulators emphasized that such a carve-out was necessary to ensure that the agreement would not interfere with their ability to carry out their responsibilities for prudential regulation and supervision. Financial regulators also insisted that any dispute settlement panel dealing with financial services must have the appropriate expertise regarding the specific financial service at issue. Ultimately, provisions addressing both of these issues were included in the GATS Annex on Financial Services.

In the GATS, financial and other services are governed by the so-called framework agreement, which establishes overall rules and disciplines for trade in services and also includes various annexes; the Annex on Financial Services deals with rules specific to the financial services sector. Besides the framework agreement, the other major component of the GATS consists of schedules of specific commitments and lists of MFN exemptions; the Fifth Protocol to the GATS incorporates the results of the 1997 financial services negotiations into these schedules and lists. Although the expression "agreement on financial services" is widely used to refer to the results of the 1997 negotiations or, more broadly, to the GATS as it applies to financial services, from a legal point of view a separate multilateral agreement for financial services does not exist.

For financial services, however, there is a unique additional element, namely, the Understanding on Commitments in Financial Services, which was used by most of the OECD countries in scheduling commitments to supplement the provisions of the GATS framework agreement.[7] In legal terms, the Understanding is incorporated by reference

Dermirgüç-Kunt, and Harry Huizinga, *How Does Foreign Entry Affect the Domestic Banking Market?*, World Bank Policy Research Working Paper 1918 (1998); Stijn Claessens and Tom Glaessner, *Internationalization of Financial Services in East Asia*, paper presented at Conference on Investment Liberalization and Financial Reform in the Asia-Pacific Region, Sydney, Australia (Aug. 1997); Ross Levine, *Foreign Banks, Financial Development, and Economic Growth*, in HARMONIZATION VERSUS COMPETITION: INTERNATIONAL FINANCIAL MARKETS (Claude E. Barfield ed. 1996); World Trade Organization, *Financial Services: Communication from the United States*, S/CSS/W/27 (Dec.18, 2000).

[5] "Financial services" in the GATS include "all insurance and insurance-related services, and all banking and other financial services (excluding insurance)." GATS*, Annex on Financial Services,* ¶ 5(a). *See infra* Part III.B.4 and Appendix B.

[6] With the regard to the Uruguay Round negotiating process for financial services, arrangements were therefore worked out in a number of countries between trade and finance officials so that, although trade officials retained overall responsibility, finance officials played a major role as negotiators. For example, for the United States, although the Office of the United States Trade Representative had overall responsibility for the Uruguay Round negotiations and handled the insurance negotiations, the Department of the Treasury handled the negotiations for banking and other financial services excluding insurance. For the European Union ("EU") (see *infra* note 12 regarding use of the terms "European Union" and "European Community"), although the directorate general responsible for trade policy had overall responsibility for the Uruguay Round negotiations, the directorate general responsible for financial services (DG-Internal Market), handled the financial services negotiations.

[7] "OECD countries" refers to countries that are members of the Organisation for Economic Co-operation and Development ("OECD"). As of May 1, 2003, the OECD had thirty members: Australia, Austria, Belgium, Canada, the Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy,

into the GATS through the schedules of commitments of the countries that use it. The Understanding is, in effect, a model schedule, albeit a particularly complicated one (see Appendix A to this chapter).

This chapter provides a history and analysis of financial services in the GATS. The following part discusses the Uruguay Round financial services negotiations, including the "free-rider" issue that prolonged the negotiations well beyond the official end of the round. Part III examines financial services in the GATS framework agreement, including the provisions dealing with liberalization of capital movements—which are of particular importance for financial services—as well as the prudential carve-out and other special provisions for financial services contained in the Annex on Financial Services.[8] Part IV examines financial services in the GATS schedules of commitments and lists of MFN exemptions, especially the December 1997 agreement on financial services commitments and MFN exemptions. Part V highlights issues for the Doha round and beyond,[9] and the final part presents the conclusions.

II. Uruguay Round Negotiations

In the mid-1980s, the U.S. government, partly in response to an initiative by the U.S. financial services industry, was the primary advocate for including financial and other services on the agenda for the Uruguay Round negotiations. The U.S. financial services industry hoped that a multilateral negotiation with simultaneous bargaining across a wide range of goods and services sectors would provide opportunities for tradeoffs that would lead to significant market opening for financial services by a number of emerging market economies. A hypothetical example used by the U.S. industry was that emerging market economies might be willing to make binding commitments to lift restrictions on the provision of services by foreign financial firms in return, implicitly or explicitly, for concessions by the major industrial countries in other sectors such as textiles. Such trade-offs, however, did not occur.[10]

Indeed, the Uruguay Round financial services negotiations—like those for other major service sectors such as basic telecommunications, maritime transport, and audiovisual services—proved to be very difficult. As the round drew to a close in December 1993, the hoped-for commitments to market opening had still not materialized. Although obtaining strong commitments to national treatment and market access for foreign direct investment in the financial sector had been a major focus of the negotiations, significant host-country limitations remained. One of the most important of these involved the refusal of some emerging market economies to allow foreign financial firms to hold majority-ownership positions in domestic firms or, where majority-ownership was allowed, to lift restrictions limiting the foreign ownership positions to less than 100 percent.[11]

Japan, Korea, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Poland, Portugal, the Slovak Republic, Spain, Sweden, Switzerland, Turkey, the United Kingdom, and the United States.

[8] The GATS provisions dealing with capital movements are contained in contained in Article XI (Payments and Transfers) and a footnote to Article XVI (Market Access). *See infra* Part III.A.

[9] In this chapter "Doha round" refers to the multilateral trade negotiations that are part of the "Doha Development Agenda."

[10] *See* Sydney J. Key, FINANCIAL SERVICES IN THE URUGUAY ROUND AND THE WTO (Occasional Paper 54, Group of Thirty, 1997), for a discussion of why cross-sectoral trade-offs involving financial services did not occur.

[11] In some cases, however, the issue involved a country's refusal to "bind" in the GATS liberalizing measures already in effect. *See infra* Part IV.A.1(a).

A. The "Free-Rider" Issue

In the Uruguay Round financial services negotiations, the United States and the European Union ("EU") shared the goal of obtaining strong commitments to market opening in financial services from emerging market economies; however, their approaches to achieving this goal differed markedly.[12] The EU's priority was to put in place a multilateral agreement that included binding commitments for financial services, even if some of the initial commitments were weak. By contrast, the United States gave priority to obtaining strong initial commitments and was unwilling to allow emerging market economies to become so-called free riders.[13]

The free-rider issue arises because the GATS—like the GATT—is based on the most-favored-nation ("MFN") principle, which precludes discrimination among foreign countries.[14] As a result, although a country may refuse to make strong commitments to market opening, its service suppliers have the opportunity to benefit from the openness provided by other WTO members with commitments to substantially full national treatment and market access. Such a country is referred to as a "free rider."

In the Uruguay Round negotiations, the U.S. government took the position that, unless improvements were made in the commitments that were being offered by a number of emerging market economies, it would make only a limited commitment for financial services in the GATS and take a broad MFN exemption.[15] Specifically, the United States said that for banking and other financial services excluding insurance, it would guarantee market access and national treatment only for existing operations of foreign financial firms. It would then take a broad MFN exemption that would leave open the possibility of discriminating among other WTO members with regard to new entry or operations. Therefore, without violating its GATS obligations, the United States would have been able to prohibit future entry into the U.S. market for firms whose home countries were not sufficiently

[12] For simplicity and in accordance with generally accepted nontechnical usage, "European Union" or "EU" is used in this chapter except when it is necessary to refer to the European Community ("EC") or the European Communities as specific legal entities. The EU was created by the Treaty on European Union ("TEU"), often referred to as the Maastricht Treaty, which entered into force on November 1, 1993. The EC, which was formerly the European Economic Community ("EEC"), and the European Atomic Energy Community ("Euratom") constitute the supranational "first pillar"of the EU. The EU's "second pillar" (common foreign and security policy) and "third pillar" (police and judicial cooperation in criminal matters) are both intergovernmental. From a legal point of view, the European Communities (not the EU itself) and their member states are members of the WTO. The reason is that the area of trade is governed by the two Community treaties (the EC Treaty and the Euratom Treaty), which the Maastricht Treaty amended but did not replace. (Prior to July 24, 2002, the European Coal and Steel Community ("ECSC"), which expired fifty years after its entry into force, was the third Community under the EU's "first pillar.")

[13] *See* Jeffrey Shafer and Jeffrey Lang, *In Defence of a Modest Outcome,* Fin. Times, Jul. 25, 1995; for an EU perspective, *see* Leon Brittan, *Why Apathy Must not Prevail*, Fin. Times, June 19, 1995.

[14] Under the MFN obligation of the GATS, a WTO member must accord to services and services suppliers of any other member treatment "no less favorable" than the treatment it provides to "like" services and service suppliers of the most favored foreign nation. GATS, Art. II:1. The reach of the MFN obligation is very broad because it applies to all measures affecting trade in services that are covered by the GATS, not just those for which a member has made specific commitments to liberalization. The GATS does, however, allow certain departures from the MFN obligation. First, subject to certain conditions, the GATS allows one-time exemptions from the MFN obligation to be taken upon entry into force of a country's initial schedule of commitments under the GATS (*see* GATS, Art. II and *Annex on Article II Exemptions*, and *infra* Part IV.C). Second, the GATS allows a WTO member to enter into an economic integration agreement without extending the benefits of the agreement to all WTO members, although it establishes stringent criteria for an agreement to qualify for this exception (*see* GATS, Art. V). Third, the MFN obligation does not apply to recognition of standards or licensing or certification requirements, or, in the case of financial services, recognition of prudential measures (*see* GATS, Art. VII and *Annex on Financial Services*, ¶ 3, and *infra* Part III.B.2).

[15] *See* U.S. Department of the Treasury, NATIONAL TREATMENT STUDY 1994 at 95–98 (1994).

open to U.S. financial firms; for firms already established in the U.S. market, the United States would have been able to prohibit expansion into new activities or new locations.

In December 1993, in the final hours of the Uruguay Round negotiations, the United States and the European Union reached an agreement that resulted in the extension of the financial services negotiations until June 30, 1995, six months beyond the entry into force of the Agreement Establishing the World Trade Organization ("WTO Agreement").[16] Although the United States took a broad MFN exemption for banking and other financial services excluding insurance at the close of the Uruguay Round, the compromise provided that the exemption would be suspended pending the results of the extended negotiations.[17] Financial services thus became one of several sectors for which negotiations were extended at the close of the Uruguay Round—the others being basic telecommunications, maritime transport, and movement of natural persons.

B. The Interim Agreement on Financial Services

In the first set of post-Uruguay Round financial services negotiations, which took place during the first half of 1995, a number of WTO members improved their financial services commitments and/or narrowed or withdrew MFN exemptions for financial services.[18] Just before the June 30 deadline, however, the United States announced that the market opening being offered by some WTO members was still inadequate. The United States therefore made binding commitments only for existing operations of foreign financial firms and took a broad MFN exemption with regard to new entry and operations for all financial services.[19] To avoid losing what had been accomplished up to that point, the EU then took the lead in trying to preserve the commitments that had already been offered in the 1995 negotiations by other WTO members. The result was the so-called interim agreement on financial services, under which other countries agreed to maintain their existing offers on an MFN basis through the end of 1997 despite the minimal commitments and broad MFN exemption that had been taken by the United States.[20]

[16] *See* GATS, *Second Annex on Financial Services*. *See also* Uruguay Round Trade Negotiations Committee, *Ministerial Decision on Financial Services* (Dec. 15, 1993).

[17] Specifically, the compromise provided that MFN exemptions that were "conditional upon the level of commitments undertaken by other participants or upon exemptions by other participants" would not be applied. *Ministerial Decision on Financial Services*, *supra* note 16, ¶ 1.

[18] *See* Roger Kampf, *A Step in the Right Direction: The Interim Deal on Financial Services in the GATS*, 1 INT'L TRADE L. & REG. 157, 159 (1995), and U.S. Department of the Treasury, NATIONAL TREATMENT STUDY 1998 at 113 (1998).

[19] In contrast, the MFN exemption taken by the United States at the end of the Uruguay Round negotiations in December 1993 covered only banking and other financial services excluding insurance (*see supra* Part II.A). Even though the initial schedules of commitments of countries participating in the Uruguay Round negotiations had entered into force on January 1, 1995, special rules for MFN exemptions adopted for the extended financial services negotiations permitted WTO members to submit revised schedules of commitments and lists of MFN exemptions during a three-month period that ended on July 28, 1995. *See* GATS, *Second Annex on Financial Services; Ministerial Decision on Financial Services, supra* note 16; and WTO Council for Trade in Services, *Decision on the Application of the Second Annex on Financial Services*, S/L/6 (Jul. 4, 1995).

[20] The results of the interim agreement on financial services are reflected in the *Second Protocol to the General Agreement on Trade in Services* S/L/11 (Jul. 24, 1995); *WTO Ministerial Decision adopting the Second Protocol to the General Agreement on Trade in Services,* S/L/13 (Jul. 24, 1995); WTO Council for Trade in Services, *Decision on Commitments in Financial Services,* S/L/8 (Jul. 24, 1995) and *Second Decision on Financial Services,* S/L/9 (Jul. 24, 1995). *See* Kampf, *supra* note 18, and Kenneth Freiberg, *Introductory Note—World Trade Organization: Second Protocol to the General Agreement on Trade in Services (GATS) and Related Decisions*, 35 INTERNATIONAL LEGAL MATERIALS 199 (1996).

C. The 1997 Agreement

Financial services negotiations resumed once again in Geneva in April 1997, with an agreed deadline of mid-December. The goal was to achieve a permanent agreement that included strengthened commitments from emerging market economies and a concomitant MFN-based commitment from the United States.[21] In July 1997, the United States submitted an MFN-based offer with strong commitments; the offer was, however, specifically conditioned on the strength of the commitments to be offered by other countries.

That month also marked the onset of the Asian financial crisis of 1997–1998, which slowed the pace of—but did not derail—the negotiations in the WTO. Indeed, the Asian crisis appears to have created even greater pressure on all parties to reach an acceptable compromise. A widespread concern was that failure to reach agreement could have a further adverse impact on market confidence. Moreover, making binding commitments in the GATS to allow foreign direct investment in the financial sector offered an additional opportunity for Asian governments to try to reassure markets that they were committed to longer-term policy reform.

In any event, a number of countries made improvements to their previous offers, and an MFN-based agreement on schedules of commitments for financial services was finally reached in December 1997.[22] Two "cliffhanger" issues held up an agreement until the last minute. One involved the insistence of the United States and other countries that Japan should "bind" in the GATS the liberalizing measures it had previously agreed to in bilateral financial services agreements with the United States.[23] In accordance with its MFN obligation in the GATS, Japan was already applying those measures to all WTO members. Nevertheless, its trading partners insisted that Japan incorporate the measures into its GATS schedule of commitments so that they would become formal multilateral commitments directly and fully subject to WTO dispute settlement. In the end, Japan agreed to do so.

The other "cliffhanger" issue involved Malaysia's adoption in 1996 of a new statute requiring foreign insurers to incorporate locally (as opposed to operating through branches) and generally limiting their ownership interests in domestic insurance firms to thirty percent. In addition, instead of "grandfathering" existing operations,[24] the statute required foreign insurance already in the market to divest existing ownership positions in excess of 49 percent of the shares of a domestic firm.[25] In the GATS negotiations, Malaysia finally

[21] Special rules for MFN exemptions were also adopted for the 1997 negotiations. Under the terms of the July 1995 Interim Agreement on Financial Services, WTO members were permitted to submit revised schedules of commitments and lists of MFN exemptions during a sixty-day period beginning November 1, 1997. *See Second Decision on Financial Services*, *supra* note 20.

[22] For a summary of improvements in the financial services offers, *see* World Trade Organization, *Non-attributable Summary of the Main Improvements in the New Financial Services Commitments*, Feb. 26, 1998 <www.wto.org/english/news_e/news98_e/finsum.htm>.

[23] *See Japan—United States Measures Regarding Financial Services* (Feb.13, 1995), 34 I.L.M.617; *Japan—United States Measures Regarding Insurance* (Oct., 11, 1994), 34 I.L.M. 661; *Japan—United States Supplementary Measures Regarding Insurance* (Dec. 24, 1996) <www.mac.doc.gov/japan/source/menu/insurance/supjpn.html>.

[24] *See infra* Part IV.A.1(a) regarding "grandfathering" (also referred to as guaranteeing the retention of "acquired rights").

[25] Foreign insurance firms that were operating in Malaysia through the branch form of organization were required to convert the branches to locally incorporated entities and then reduce their ownership interests to 49 percent. The finance minister was given discretionary authority to waive the local incorporation requirements and limitations on foreign ownership positions on the basis of the national interest.

agreed to raise this limit to 51 percent.[26] However, in response to Malaysia's continued refusal to provide grandfathering for existing operation of foreign insurance firms, the United States took a limited MFN exemption for insurance specifically targeted at any WTO member that pursues forced divestiture policies.[27]

III. GATS Framework Agreement

This part examines two elements of the GATS framework agreement: first, provisions dealing with liberalization of capital movements—contained in GATS Article XII (Payments and Transfers) and a footnote to Article XVI (Market Access)—which apply to all services sectors but are of particular importance for financial services; and second, special provisions that are specific to the financial services sector—including the prudential carve-out—that are contained in the GATS Annex on Financial Services.

A. Liberalization of Capital Movements

Liberalization of capital movements is distinct from—but closely related to—liberalization of trade in financial services.[28] Establishment of a commercial presence in a host country by a foreign service supplier involves both trade in services under the GATS and international capital transactions. For example, a GATS commitment to liberalize services trade by allowing foreign financial firms to establish wholly owned subsidiaries is essentially a commitment to allow foreign direct investment that involves the acquisition of one hundred percent of the shares of existing or *de novo* host-country firms.[29] In theory it is possible that, once established, a subsidiary of a foreign financial firm could conduct its ongoing activities without engaging in additional international capital transactions; however, its activities would need to be limited to transactions with host-country residents involving domestic financial assets.[30] Both establishment and

[26] However, firms in which foreign insurers held a majority ownership interest were subject to additional restrictions, including a prohibition on branching. Subsequently, the deadline for foreign insurance firms to comply with the 51 percent requirement was extended for five years. As of May 1, 2003, at least one foreign insurance firm was still permitted to operate through the branch form of organization.

[27] Although the U.S. MFN exemption provided a strong political statement opposing forced divestiture, the scope for applying the exemption appears to be limited. One reason is that the United States made strong commitments to market access and national treatment for insurance, and MFN exemptions may not be used to provide treatment that is less favorable than that provided by a country's "bound" commitments in the GATS (*see infra*, Part IV.C). Moreover, as a practical matter, Malaysian insurance companies appear unlikely to be in a position to enter the U.S. market in the foreseeable future.

[28] Capital movements comprise international capital transactions—that is, the creation, transfer of ownership, or liquidation of capital assets, including financial assets—and the payments and transfers associated with such transactions. Capital assets comprise intangible assets (which, in addition to financial assets, include intellectual property) and real estate. A capital transaction is considered "international" if it takes place between a resident and a nonresident. A broader definition of "international" includes transactions between residents of the same country that involve a foreign capital asset. *See* INTERNATIONAL MONETARY FUND, BALANCE-OF-PAYMENTS MANUAL (5th ed., 1993).

[29] Besides the creation or transfer of ownership of financial assets, international capital transactions associated with the establishment of a commercial presence by a foreign firm could also involve the purchase of real estate. *See* Key, *supra* note 3, ch. 2, regarding the definition of foreign direct investment and its coverage in the GATS.

[30] Under standard balance-of-payments accounting, however, even if the earnings of the subsidiary were reinvested, they would be regarded as additional foreign direct investment by the parent in the subsidiary. *See* International Monetary Fund, *supra* note 28, and U.S. Department of Commerce, THE BALANCE OF PAYMENTS OF THE UNITED STATES: CONCEPTS, DATA SOURCE, AND ESTIMATING PROCEDURES (1990).

operation of branches of foreign financial firms, which are not separately incorporated in the host country, almost always involve international capital transactions.[31]

For cross-border financial services, international capital transactions are typically either integral to, or closely associated with, the provision of the service. For example, international capital transactions are an integral part of accepting deposits from or making loans to nonresidents. In addition, international capital transactions are usually, although not necessarily, associated with financial services such as securities trading or asset management on behalf of a customer residing in another country.[32] By contrast, certain cross-border financial services, such as investment advisory services and financial information services, can be provided without an associated international capital transaction. The usefulness of investment advice might be limited, however, if the customer were prohibited from investing in foreign assets.

In general, it is difficult to realize fully the benefits of liberalization of trade in financial services without freedom of capital movements.[33] Financial services trade absolutely requires, however, the liberalization of only those capital movements that are necessary for the trade transaction to occur. GATS Article XI (Payments and Transfers) prohibits WTO members from imposing restrictions on capital transactions or associated payments and transfers that would be inconsistent with their specific commitments to liberalization of trade in services.[34] A footnote to Article XVI (Market Access) provides greater detail—namely, a country that has made a specific commitment to market access must allow (a) capital movements that are "essential" for the provision of a service in mode 1 (cross-border supply); and (b) inward capital movements that are "related" to a service supplied through establishment of a commercial presence.[35]

The bottom line is that if a country makes a commitment to liberalize trade with respect to a particular financial service in the GATS, it is also making a commitment to liberalize most capital movements associated with the trade liberalization commitment. The country is not, however, making an across-the-board commitment to freedom of capital movements. The GATS provisions dealing with capital movements, like GATS specific commitments to liberalize trade in services, are subject to a balance-of-payments safeguard.[36] Both the capital movements and balance-of-payments safeguard

[31] For example, both establishment and operation of branches of foreign banks almost always involve international capital transactions between the bank's head office and the branch. These transactions include both foreign direct investment and portfolio investment (*see* Key, *supra* note 3, ch. 3, for additional detail). For branches conducting a wholesale business—that is, conducting business with "sophisticated" customers such as such as corporations and institutions, other financial services firms, and wealthy individuals—ongoing activities would typically also involve international capital transactions with unaffiliated parties.

[32] The capital transaction in these examples—that is, the transfer of ownership of the underlying instrument—would be international if the new owner were a resident of a different country than the previous owner; the broader definition would include transactions where the owners were residents of the same county but the instrument had been originally issued in another country. *See supra* note 28.

[33] *See infra* Part V regarding capital controls.

[34] Exceptions are provided for restrictions imposed under Article XII (Restrictions to Safeguard the Balance of Payments) or at the request of the IMF. *See* GATS, Art. XI: 2. Article XI also requires WTO members not to impose restrictions on payments and transfers associated with current transactions. *See* GATS, Art. XI: 1.

[35] GATS, Art. XVI, n. 8. "Essential" effectively limits the first requirement to the financial services sector. By contrast, "related" would apply the second requirement to all services sectors; outward capital movements were not covered because of concern on the part of some members about "capital flight."

[36] The GATS balance-of-payments safeguard allows a WTO member to impose temporary restrictions that suspend its commitments in the event of "serious balance-of-payments and external financial difficulties or threat thereof." Besides being temporary, such restrictions must adhere to the MFN principle; be consistent with the IMF Articles of Agreement; not exceed those necessary to deal with the circumstances; and avoid

provisions of the GATS refer to and are consistent with the IMF's responsibilities in these areas.[37]

B. GATS Annex on Financial Services

The GATS Annex on Financial Services, as already mentioned, contains two provisions that financial regulators had insisted on—namely, the prudential carve-out and a requirement for specific expertise in dispute settlement. It also includes provisions dealing with recognition of prudential measures and the coverage and definition of financial services.[38]

1. The Prudential Carve-Out

The prudential carve-out for domestic regulation of financial services allows a country to take prudential measures "for the protection of investors, depositors, policy holders or persons to whom a fiduciary duty is owed" or "to ensure the integrity and stability of the financial system" regardless of any other provisions of the GATS. [39] Thus prudential measures could, in principle, be inconsistent with a country's national treatment or market access commitments or its MFN obligation. To guard against abuse of the prudential carve-out, the GATS provides that prudential measures may not be used "as a means of avoiding" a country's obligations or commitments under the agreement.[40]

unnecessary damage to the commercial, economic, and financial interests of other WTO members. Members invoking the balance-of-payments safeguard are required to consult with the WTO Committee on Balance-of-Payments Restrictions. *See* GATS, Art. XII (Restrictions to Safeguard the Balance of Payments).

[37] The IMF Articles of Agreement do not include liberalization of capital movements as an objective; moreover, if necessary, they allow the imposition of capital controls. Even under the existing articles, however, the Fund is heavily involved with capital movements as part of its responsibility for oversight of the international monetary system, in its routine surveillance of economic policies of its members (so-called Article IV surveillance), and in its stabilization programs, which, subject to conditions, provide financing for balance-of-payments purposes. As the Asian financial crisis of 1997–98 was developing, active consideration was being given to amending the IMF Articles of Agreement to extend its formal jurisdiction with respect to capital movements. The crisis made these discussions more difficult, and work on amending the articles was discontinued. *See* Stanley Fischer, Richard N. Cooper, Rudiger Dornbusch, Peter M. Garber, Carlos Massad, Jacques J. Polak, Dani Rodrik, and Savak S. Tarapore, *Should the IMF Pursue Capital-Account Convertibility?* (Princeton Essays Int'l Fin. 207, 1998); Francois Gianviti, *The International Monetary Fund and the Liberalization of Capital Movements*, in CURRENT DEV. MONETARY & FIN. L. (International Monetary Fund, 1999); Sean L. Hagan, *The Design of the International Monetary Fund's Jurisdiction over Capital Movements*, in CURRENT DEV. MONETARY AND FIN. L. (International Monetary Fund, 1999); William E. Holder, *Fund Jurisdiction over Capital Movements,* 5 ILSA J. INT'L & COMP. L. 407 (1999); Ross B. Leckow, *The Role of the International Monetary Fund in the Liberalization of Capital Movements*, 17 WIS. INT'L. L. J. 515 (2000).

[38] The provisions in the Annex on Financial Services and the Understanding on Commitments in Financial Services (*see infra* Appendix A) emerged from a text developed by an informal group of finance officials from Canada, the EU, Japan, Sweden, Switzerland, and the United States. The group had initially gathered to discuss how financial services should be handled in the GATS and was known as the "Fu Lung group" after the restaurant where its first meeting was held in September 1989. In 1990, the group was broadened to include selected Asian, Eastern European, and Latin American countries. Finance officials from the United States had initially envisaged the Fu Lung text as a financial services agreement that would be separate from the GATS framework agreement. However, the idea of a separate agreement for financial services was unacceptable to trade officials, both in the United States and other countries. It was also opposed by finance officials in some countries and by the U.S. financial services industry. *See* Key, *supra* note 10, at 18–19.

[39] GATS, *Annex on Financial Services,* ¶ 2.

[40] *Id.*

The prudential carve-out differs from other exceptions for domestic policy contained in the GATS in one very significant respect.[41] In contrast to health and safety, for example, where only "necessary" measures are excepted, *all* prudential measures are excepted.[42] As a result, a prudential measure may not be challenged on the ground that it is not "necessary" or "least trade restrictive." Moreover, the prudential carve-out overrides the requirements for domestic regulations in GATS Article VI (Domestic Regulation).

The absence of a necessity test does not, however, resolve the issue of whether a measure is prudential or is being used to avoid the obligations of the agreement. An allegedly prudential measure that violates a country's obligations or commitments under the GATS might be challenged on the grounds that its purpose is really trade restrictive rather than prudential and therefore it does not fall within the scope of the prudential carve-out. This question is subject to WTO dispute settlement procedures and potentially to a determination by a dispute settlement panel.

Financial regulators do not seem particularly concerned about this possibility. Three factors appear to account for this lack of concern. First, prudential issues are dealt with intensively in other international fora, so there is some basis for assuming that certain types of rules will always be considered prudential. Moreover, a WTO member that was concerned about whether a particular measure would be generally accepted as prudential had the option of listing that measure as a limitation when making initial commitments for national treatment and market access, thereby avoiding the need to rely on the prudential carve-out. Second, and extremely important, only governments, not private parties, may bring claims to dispute settlement in the WTO. Absent a truly egregious action, governments may prefer to respect each other's ability to determine which rules may be prudential. Third, if a prudential or other financial services issue did reach a WTO dispute settlement panel, the panel would be required to have the appropriate expertise.[43]

Some of the difficulties in dealing with barriers that may fall within the prudential carve-out are illustrated by the treatment of direct branches of foreign banks. The list of barriers to market access in GATS Article XVI (Market Access) includes restrictions on the type of legal entity through which services may be supplied. This is consistent with the consensus that an overall prohibition on branch entry is not a legitimate prudential measure.[44] However, even though a branch is an integral part of a foreign bank and not separately capitalized, some countries that permit branch entry impose branch capital-equivalency requirements. These can take the form of "dotation" or endowment capital requirements or asset pledge requirements.[45] Because such measures are widely regarded as prudential, most countries that impose these requirements have not listed them as limitations on market access or national treatment in their schedules of commitments.

[41] These exceptions are set forth in GATS, Art. XIV (General Exceptions). A separate exception for national security allows a member to take any action that the member considers necessary for the protection of its essential security interests. *See* GATS, Art. XIV bis (Security Exceptions).

[42] Some measures that fall within the scope of the prudential carve-out may also fall within the general domestic policy exceptions in GATS Article XIV (General Exceptions). For example, Article XIV provides an exception for adoption or enforcement of measures necessary to secure compliance with nondiscriminatory laws and regulations relating to the prevention of deceptive and fraudulent practices.

[43] *See infra* Part III.B.3.

[44] In the banking sector, when wholesale financial services are provided through the establishment of a commercial presence, direct branches of the foreign bank—if permitted by host-country regulation are usually a more efficient form of organization than subsidiaries.

[45] *See* Key, *supra* note 3, ch. 4, notes 33 and 34, for additional detail.

Some host countries, however, take an additional step that effectively negates the economic benefits associated with the branch form of organization—namely calculating lending and other operating limits based on branch capital-equivalency requirements. Such measures restrict branch operations by tying, say, the size of individual loans to the amount of capital attributable to the branch. Since domestic banks operate on the basis of their consolidated worldwide capital, national treatment would require allowing branches to operate on the basis of the foreign bank's consolidated worldwide capital. A U.S. government study concluded that, although restrictions might need to be applied to address specific prudential concerns in problem cases, general application of such restrictions would have the effect of denying a foreign bank the economic benefits of the branch form of organization.[46]

Some WTO members that impose lending and other operating limits based on branch capital-equivalency requirements—Korea and Turkey, for example—listed the measures as limitations in their schedules of commitments, which could be interpreted as an acknowledgement that the measures may not be generally accepted as prudential. By contrast, members that impose the measures but did not list them as limitations in their schedules—Chile, for example—clearly believe the measures are within the scope of the prudential carve-out. The EU simply noted that branches (as opposed to subsidiaries) of third-country financial firms are, in general, not subject to harmonized EU prudential measures and that each member state may therefore impose its own measures for prudential purposes.[47]

A measure that imposes lending and other operating limits based on branch capital-equivalency requirements on all host-country branches of foreign banks arguably does not meet a "necessity" or "least trade restrictive" test. Prudential measures, however, are not subject to such tests. The measure could nonetheless be challenged, at least in theory, under the antiabuse provision of the prudential carve-out on the grounds that it was being used to avoid a country's commitment to allow entry through the branch form of organization. In practice, however, as discussed above, it seems unlikely that national authorities would use the WTO dispute settlement mechanism, as opposed to a more informal forum, to challenge such a measure.

2. Recognition of Prudential Measures

The Annex on Financial Services permits a departure from the MFN obligation for unilateral or mutual recognition of prudential measures.[48] This provision allows a country to recognize prudential measures of selected other countries, either unilaterally or through a negotiated arrangement or agreement, without being subject to a challenge by an excluded WTO member that it is being denied MFN treatment. A country must, however, be willing to accord similar recognition to measures of other WTO members that meet the same standards. In effect, the recognition provision in the Annex elaborates on the application to the financial services sector of GATS Article VII (Recognition), which allows a country to recognize standards or licensing or certification requirements of selected countries without being subject to the MFN obligation of the GATS. However, in contrast to Article VII, the recognition provision in the Annex on Financial Services does not contain a requirement for prior notification to the Council on Trade in Services.

[46] *See* U.S. Dept. of the Treasury and Board of Governors of the Federal Reserve System, SUBSIDIARY REQUIREMENT STUDY (1992).

[47] This statement appears in a footnote to the so-called headnotes of the EU financial services schedule.

[48] GATS, *Annex on Financial Services*, ¶ 3.

Host-country recognition of the adequacy of home-country prudential measures could be used to provide relief from host-country regulatory requirements that are inconsistent with national treatment or market access. An example of such an arrangement is Germany's recognition of the adequacy of U.S. supervision to provide relief from the lending and other operational limits based on dotation capital requirements that Germany imposes on branches of non-EEA (European Economic Area) banks.[49] Recognition could also be used to deal with barriers created by differences in nondiscriminatory prudential measures. For example, host-country recognition of specific elements of home-country regulation and supervision could be used to determine whether an applicant has met a mandatory—but nondiscriminatory—host-country licensing or registration requirement or to provide a procedural "fast lane" for determining compliance with a host-country requirement.[50]

In general, a recognition arrangement needs to be predicated on some degree of harmonization of the rules of the home and host countries. Such harmonization may have already occurred *de facto* or could be achieved through negotiations. Acceptance of home-country rules and supervision, together with legislated harmonization of essential rules, is the basis of the EU single-market program for the financial sector.[51] Outside the EU, however, few recognition arrangements exist for financial services.[52]

[49] *See infra* note 51 regarding the European Economic Area and *supra* Part III.B.1 regarding dotation capital requirements. Under authority granted by the German Banking Act, Germany's finance ministry has "recognized" U.S. regulation and supervision, together with assurances of enhanced supervisory cooperation, as sufficient to exempt branches of U.S. banks from lending and other operational limits based on dotation capital requirements and impose instead limits based on the consolidated worldwide capital of the U.S. bank. *See* exchange of letters between the Board of Governors of the Federal Reserve System and the Comptroller of the Currency (Richard Spillenkothen, Director, Division of Banking Supervision and Regulation, and Susan F. Krause, Senior Deputy Comptroller for Bank Supervision) and the Bundesaufsichtsamt fħr das Kreditwesen (Jochen Sanio, Departmental President) (Feb. 17, 1994); and Federal Ministry of Finance [Germany], First Regulation on the exemption of enterprises domiciled outside the European Community from provisions of the German Banking Act (Apr. 21, 1994).

[50] For example, determination of a foreign bank's capital adequacy as part of a host-country licensing process could be speeded up by recognition of the home country's implementation of the risk-based capital standards developed by the Basel Committee (*see supra* note 1). Such recognition could allow the use of capital ratios calculated for home-country supervisory purposes, thereby avoiding the process of recalculating the ratios under host-country rules. The ratios would, however, still need to meet host-country capital standards, which might be higher than those of the home country.

[51] Under the EU approach of "mutual recognition" and "home-country control," a financial firm incorporated in any member state may provide services across borders or through the establishment of branches throughout the EU on the basis of a "single license" issued by the home country, subject to the harmonization of essential rules required by EU legislation. This approach extends to the entire European Economic Area ("EEA"), which, as of May 1, 2003, included, in addition to the EU member states, three members of the European Free Trade Association ("EFTA")—namely, Norway, Iceland, and Liechtenstein; as required by the EEA Agreement, these countries have adopted the *acquis communautaire* and agreed to conform to future EU legislation. (Switzerland, the fourth member of the EFTA, is not a party to the EEA Agreement.) The EEA Agreement entered into force on January 1, 1994. *See Agreement on the European Economic Area* (May 2, 1992). *See* Key, *supra* note 3, ch. 5, regarding the EU approach of mutual recognition and home-country control; s*ee also infra* Part V.B.

[52] In the insurance sector, two mutual recognition agreements to which Switzerland is a party are based on harmonization to EU standards. The 1989 insurance agreement between Switzerland and the European Community (which covers non-life insurance provided through branches) is based on Switzerland's conforming its prudential regulations, primarily with regard to solvency requirements, to the standards set forth in EU directives. *See Agreement between the European Economic Community and the Swiss Confederation Concerning Direct Insurance Other Than Life Assurance* (Oct. 10, 1989). The 1996 Switzerland-Liechtenstein insurance agreement, which, in effect, treats Switzerland as if it were a member of the EEA (*see supra* note 51), but only vis-à-vis Liechtenstein and only in the insurance sector, was facilitated by the previous Swiss harmonization

Recognition could be facilitated by a country's adherence to international minimum standards and codes of good practices for prudential regulation and supervision, but such adherence would not necessarily provide sufficient harmonization for recognition. For example, the host country may impose higher or additional standards on both domestic and foreign firms, or the home country may generally adhere to international minimum standards but introduce certain differences in its application of those standards. In addition, the host country might not be willing to recognize the home country's ongoing supervision as sufficiently effective. Indeed, one reason that recognition arrangements are relatively rare in the financial sector is the importance and difficulty of evaluating home-country supervisory practices.

Although the GATS is permissive regarding recognition arrangements for prudential measures, the WTO is not the appropriate forum for their negotiation. The German recognition arrangement with the United States, for example, involved negotiations between supervisory authorities and took the form of an exchange of letters and a subsequent regulation issued by the German finance ministry.[53] This is consistent with the approach used for supervisory cooperation and information-sharing agreements, which typically take the form of a memorandum of understanding, a statement of cooperation, or an exchange of letters among supervisors.

3. Specific Expertise in Dispute Settlement

The Annex on Financial Services requires that, in the event a financial services issue reaches a dispute settlement panel, the panel must have the expertise necessary to deal with "the *specific financial service* under dispute" [emphasis added].[54] This provision establishes a stricter criterion for expertise than that contained in the general provision applicable to GATS panels, which requires "the necessary expertise relevant to the *specific services sectors* which the dispute concerns" [emphasis added].[55]

4. Definition and Coverage of Financial Services

The Annex on Financial Services defines a financial service as "any service of a financial nature offered by a financial service supplier of a [WTO] Member," including "all insurance and insurance-related services, and all banking and other financial services (excluding insurance)."[56] The Annex provides a non-exclusive list of activities included in this definition that is a slightly modified version of the WTO Services Sectoral Classification List that was used during the Uruguay Round negotiations (known as the "W120 list").[57] A firm or individual "wishing to supply or supplying financial services" falls within the GATS definition of a financial service supplier and can benefit from the GATS

of prudential rules to EU standards and by the fact that Liechtenstein, to become a member of the EEA, had been required to adopt the *acquis communautaire* and agree to conform to future EU legislation. *See Accord sur l'assurance directe entre la Confédération suisse et la Principauté de Liechtenstein* (Dec. 19, 1996).

[53] *See supra* note 49. Finance ministry officials also participated in the negotiations.

[54] GATS, *Annex on Financial Services*, ¶ 4. As of May 1, 2003, there had been no dispute settlement proceeding and no request for consultation on a financial services issue.

[55] Uruguay Round Trade Negotiations Committee, *Ministerial Decision on Certain Dispute Settlement Procedures for the General Agreement on Trade in Services*, ¶ 4.

Whichard, *Measurement and Classification of Services Sector Activity: Data Needs for GATS 2000*, in Robert M. Stern, ed. SERVICES IN THE INTERNATIONAL ECONOMY (2001), and World Trade Organization, *Financial Services: Background Note by the Secretariat* (1998).

regime for financial services.[58] The Annex on Financial Services also clarifies that the exclusion from GATS coverage for services supplied in the exercise of governmental authority applies to activities of central banks or monetary authorities in pursuit of monetary or exchange rate policies.[59]

IV. Specific Commitments and MFN Exemptions

The results of the 1997 financial services negotiations—that is, schedules of commitments and lists of MFN exemptions—were incorporated into the GATS by the Fifth Protocol to the GATS, which entered into force on March 1, 1999.[60] Seventy-one WTO members made improved—or, in a few cases, first-time—financial services commitments, although the strength and scope of these commitments vary considerably.[61] Most of the WTO members participating in the 1997 agreement "bound" the levels of liberalization for establishment of a commercial presence that existed as the negotiations entered their final phase in late 1997. For a number of emerging market economies and other developing countries, such liberalization represented a substantial improvement over the liberalization that existed a few years earlier. Moreover, capturing existing levels of liberalization in binding commitments subject to WTO dispute settlement is important in its own right. In contrast to the commitments for establishment of a commercial presence, the 1997 commitments for cross-border services in mode 1 (cross-border supply) were, even for OECD countries, relatively limited and did not always reflect existing liberalization.

[58] GATS, *Annex on Financial Services*, ¶ 5.

[59] GATS, *Annex on Financial Services*, ¶ 1.

[60] The Fifth Protocol to the GATS provides for the annexation of the financial services commitments agreed upon in December 1997 to the Uruguay Round services schedules of commitments and for any revised lists of MFN exemptions to replace the previous list of MFN exemptions for financial services (s*ee supra* note 21 regarding special rules governing MFN exemptions in the 1997 negotiations). For WTO members that participated in the 1997 negotiations but accepted the Fifth Protocol after March 1, 1999, commitments entered into force upon acceptance. The protocol initially remained open for acceptance until July 15, 1999; it was reopened for acceptance by Costa Rica and Nicaragua in late 1999; by Ghana, Kenya, and Nigeria in 2000, and by Bolivia in 2002. As of May 1, 2003, commitments made by six of the countries participating in the 1997 negotiations—Brazil, the Dominican Republic, Jamaica, the Philippines, Poland, and Uruguay—had not entered into force because they had not yet accepted the Fifth Protocol. *See* World Trade Organization, *Fifth Protocol to the General Agreement on Trade in Services,* S/L/45 (Dec. 3, 1997); Committee on Trade in Financial Services, *Decision Adopting the Fifth Protocol to the General Agreement on Trade in Services,* S/L/44 (Dec. 3, 1997); *Communication from Members which have accepted the Fifth Protocol to the General Agreement on Trade in Services*, S/L/67 (Feb. 15, 1999); and Council on Trade in Services, *Decision on Acceptance of the Fifth Protocol to the General Agreement on Trade in Services,* S/L/68 (Feb. 15, 1999). *See also* World Trade Organization, Council on Trade in Services*, Decision on the Acceptance of the Fifth Protocol* , S/L/76 (Oct. 21, 1999), *Second Decision on the Acceptance of the Fifth Protocol,* S/L/87 (June 8, 2000), *Third Decision on the Acceptance of the Fifth Protocol* , S/L/89 (Dec. 17, 2000), *Fourth Decision on the Acceptance of the Fifth Protocol,* S/L/108 (Nov. 11, 2002); and World Trade Organization, *Status of Acceptances of the Fifth Protocol to the General Agreement on Trade in Services* <www.wto.org/english/tratop_e/serv_e/finance_e/finance_status_5prot_e.htm> (accessed April 2003).

[61] The European Communities and each member state were counted separately in these statistics (as sixteen WTO members). Strictly speaking, only seventy members made *improved* or first time commitments. The exception was Ecuador, which acceded to the WTO in 1996 and used the special rules governing the extended financial services negotiations to weaken its schedule by imposing a temporary freeze on new licenses for both domestic and foreign banks. (Bulgaria, which also acceded in 1996, further strengthened its schedule in 1997.) *See* BRITISH INVISIBLES, OPENING MARKETS FOR FINANCIAL SERVICES: THE BI GUIDE TO THE FINANCIAL SERVICES AGREEMENT IN THE WORLD TRADE ORGANIZATION (1998), Roger Kampf, *Financial Services in the WTO: Third Time Lucky*, 4 INT'L TRADE L. & REG. 111 (1998), Aaditya Mattoo, *Financial Services and the WTO: Liberalization Commitments of Developing and Transition Economies*, 23 THE WORLD ECONOMY 351, (2000) regarding commitments made by individual countries. *See* U.S. Department of the Treasury, *supra* note 18, and World Trade Organization, *supra* note 22, regarding improvements made in the 1997 schedules.

Including financial services commitments made by additional WTO members that were not parties to the 1997 agreement, 117 members of the WTO—80 percent of its membership of 146—had made commitments in financial services as of May 1, 2003.[62] This figure includes sixteen countries that became members of the WTO under standard accession procedures since its establishment in 1995 and did not participate in the 1997 negotiations.[63] These acceding countries have, in general, made strong financial services commitments, including new liberalization, for foreign direct investment, and, in many cases, cross-border services in both modes 1 and 2. This figure also includes twenty-nine other WTO members—mainly small developing countries—that did not participate in the 1997 negotiations and maintained their pre-existing financial services schedules, which, in general, include only minimal commitments.[64] One additional member made a first-time commitment in financial services in 1998.[65]

This part highlights some of the important aspects of the financial services commitments to national treatment and market access for each mode of supply,[66] discusses the

[62] The European Communities and each member state were counted separately in these statistics. The total number of members with financial services commitments includes the six countries that had not accepted the Fifth Protocol as of May 1, 2003 (*see supra* note 60), because these countries had previous commitments in force. *See* BRITISH INVISIBLES, *supra* note 61, Kampf, *supra* note 61, and Mattoo, *supra* note 61, regarding commitments made by individual countries.

[63] As of May 1, 2003, eighteen members had acceded to the WTO through full accession negotiations under Article XII of the Marrakesh Agreement Establishing the World Trade Organization (as opposed to special GATT/WTO transitional arrangements): Bulgaria and Ecuador (1996), both of which participated in the 1997 negotiations and are therefore included with the Fifth Protocol countries; Mongolia and Panama (1997); Kyrgyz Republic (1998); Estonia and Latvia (1999); Albania, Croatia, Georgia, Jordan, and Oman (2000); Lithuania, Moldova, and China (2001); Chinese Taipei (2002); and Armenia and Macedonia (2003).

[64] A notable exception is Argentina, which made generally strong commitments in 1993 and did not modify its schedule in 1997. Most of the countries in this group have commitments that have remained unchanged either since December 1993 (the end of the Uruguay Round negotiations) or July 1995 (the "interim agreement" on financial services). This group also includes several smaller developing countries with minimal financial services commitments that acceded to the WTO in 1995 and 1996 under special GATT/WTO transitional arrangements. In the GATS, even if a country's schedule of commitments includes a particular sector such as financial services, the commitments may nonetheless be very limited—for example, commitments could cover only a few narrowly defined subsectors or activities and, within a listed subsector or activity, exclude one or more modes of supply or list other limitations on national treatment and market access.

[65] Côte d'Ivoire made a first-time commitment in financial services in 1998.

[66] In the GATS, national treatment and market access are "specific commitments" as opposed to general obligations. As a result, national treatment and market access do not apply across-the-board to all services sectors; instead, they apply *only* to sectors, subsectors, or activities that a WTO member specifically lists in its schedule of commitments. If a member is making only a partial commitment to national treatment or market access *within* a listed sector, subsector, or activity, any limitations must be listed in its schedule. The use of specific commitments for national treatment and market access instead of obligations applicable to all services sectors is in some respects a structural weakness of the GATS. (*See* Patrick Low and Aaditya Mattoo, *Is There a Better Way? Alternative Approaches to Liberalization under the GATS,* in GATS 2000: NEW DIRECTIONS IN SERVICES TRADE LIBERALIZATION (Pierre Sauvé and Robert M. Stern, eds., 2000), Bernard Hoekman, *Assessing the General Agreement on Trade in Services*, in THE URUGUAY ROUND AND THE DEVELOPING COUNTRIES (Will Martin and L. Alan Winters, eds., 1996), and Bernard Hoekman and Pierre Sauvé, *Liberalizing Trade in Service*, Discussion Paper 343, World Bank (1994).) Under a more ambitious approach, such as that used in the NAFTA's services and investment provisions, national treatment and market access would apply in each sector unless an exception was specifically listed in a country's schedule of commitments or one of the public policy exceptions, such as the national security exception, applied. This approach is referred to as a "top down" or "negative list" approach to scheduling commitments. In its most stringent form, a negative list would mean that only nonconforming measures could be listed as exceptions to national treatment or market access; "negative list" is widely used, however, to refer to an approach that would also allow a country to take exceptions for particular sectors, subsectors, or activities (*see* Low and Mattoo, *supra*). The GATS approach to scheduling commitments is referred to as a "hybrid list"

use of the "additional commitments" column of the GATS schedules to go beyond market access and national treatment, and provides an overview of the one-time MFN exemptions that have been taken in financial services. Appendix A to this chapter examines the Understanding on Commitments in Financial Services, which, as noted in Part I above, was used by most of the OECD countries in scheduling commitments to supplement the provisions of the GATS framework agreement.[67]

A. National Treatment and Market Access

1. Establishment of a Commercial Presence (Mode 3)

Ideally, WTO members would make broad commitments covering all types of financial services for the establishment and expansion of a commercial presence in whatever legal form the investor chooses. Indeed, most OECD counties used the Understanding on Commitments in Financial Services to make such commitments. A number of additional WTO members, including most acceding countries, made similar commitments. Other members, however, have significant gaps in their financial services commitments for establishment of a commercial presence. Some of these gaps—such as the binding of foreign ownership positions at less than levels currently permitted—represent "binding gaps," which are created by failure to bind in the GATS liberalizing measures already in effect or scheduled to go into effect.[68] However, many of the gaps in the GATS financial services commitments for establishment of a commercial presence represent barriers that WTO members continue to impose. Commitments also vary by type of financial service. For example, a number of countries, particularly emerging market economies and other developing countries, have made stronger and broader commitments for banking services than for securities-related services or for insurance. Furthermore, many countries did not make commitments for asset management or financial information services.

(a) Binding Existing Liberalization. In the 1997 agreement, some emerging market economies scheduled commitments that were more restrictive than measures already in force. For example, suppose that a country that allowed foreign financial firms to have majority-ownership interests in domestic financial firms guaranteed a level of foreign ownership of only 49 percent in the GATS. It has therefore left open the possibility of restricting foreign ownership interests to 49 percent in the future without violating its obligations under the GATS. Unless the country had made a commitment, as some WTO members did for financial services, to "grandfather" existing operations and activities, the new limitation could also be applied to foreign firms already in the market—that is, they could be required to divest any ownership interest in excess of 49 percent. Although grandfathering (also referred to as guaranteeing the retention of "acquired rights") is an important principle that is often used as a basis for national policies dealing with foreign direct investment in the financial sector, it can create inequities between firms already in the market and new entrants. It is therefore not a substitute for a ban on new measures

because it involves a so-called "positive list" of sectors, subsectors, and activities for which commitments are undertaken and, within each listed sector, subsector, or activity, a negative list of limitations on national treatment or market access. (*See* Key, *supra* note 10, at 14–16 for a comparison of negative lists and GATS hybrid lists.) *See infra* Appendix A regarding the use of a negative list approach in the Understanding on Commitments in Financial Services for mode 3 (establishment of a commercial presence) and, for banking and other financial services excluding insurance, mode 2 (consumption abroad).

[67] *See supra* note 7 for a list of countries that are members of the OECD.

[68] *See* Key, *supra* note 3, ch. 4.

that are inconsistent with market access and national treatment (often referred to as a "standstill").[69]

Since the 1997 agreement, further market opening for financial services has taken place in a number of emerging market economies, either through unilateral action or as part of the conditionality in IMF stabilization programs. Without concomitant changes in GATS commitments, new binding gaps are created.[70] Unlike the financial services chapter of the NAFTA, the GATS does not contain a "ratchet" that would automatically lock in or bind new liberalizing measures that reduce or eliminate barriers to national treatment or market access.[71] Moreover, countries that have adopted liberalizing measures are concerned about receiving "credit" for such measures in the Doha round.[72] This concern highlights a major "disconnect" between trade negotiations and economic theory—namely, trade negotiations involve exchanging so-called concessions of liberalization that, in economic terms, are in a country's best interest in the first place.[73]

(b) Remaining Barriers. Despite significant improvements during the course of the Uruguay Round, some WTO members still impose major barriers to establishment of a commercial presence by foreign financial firms. Restrictions on foreign ownership positions in a number of emerging market economies and other developing countries prevent foreign financial firms from holding majority-ownership positions in host-country firms, or, where majority ownership is allowed, limit the ownership position to less than 100 percent. Another major barrier involves restricting the type of legal entity through which financial services may be provided by prohibiting entry through the branch form of organization—that is, through direct branches of a foreign financial firm.

Other important discriminatory barriers relate to the operation of foreign financial firms once they have established a commercial presence in the host country. For banking services, these barriers include limitations on the number of branches that a subsidiary of a foreign bank may open, the number of ATM machines it may install, and the types of banking services it may offer to domestic residents. Discriminatory barriers to host-country operations faced by firms engaging in securities activities often include restrictions on their participation in underwriting and distributing securities and their

[69] In the GATS, countries scheduling commitments in accordance with the Understanding on Commitments in Financial Services committed to a "standstill" under which they may take exceptions to their commitments to market access and national treatment only for existing nonconforming measures. *See infra* Appendix A.

[70] *See* Key, *supra* note 3, ch. 4. As a technical matter, binding existing liberalization in the GATS could involve removing specific limitations listed in a country's schedule of commitments, binding a mode of supply for which a country had previously entered "unbound," or listing subsectors or activities that a country had omitted from its schedule.

[71] Specifically, the ratchet in the NAFTA financial services chapter automatically locks in or binds new liberalization with regard to any measure for which a country has taken an exception to an obligation under that chapter. Suppose, for example, a country has taken an exception for an existing nonconforming measure and subsequently amends that measure to provide market access or national treatment. The ratchet locks in the liberalizing amendment, that is, a country is prohibited from reverting to the original nonconforming measure. *See North American Free Trade Agreement*, Art. 1409: 1(c).

[72] Negotiating guidelines on services adopted in March 2001 by the Council for Trade in Services? Special Session state that "[b]ased on multilaterally agreed criteria, account shall be taken and credit shall be given in the negotiations for autonomous liberalization undertaken by Members since previous negotiations." WTO Council for Trade in Services—Special Session, *Guidelines and Procedures for the Negotiations on Trade in Services*, S/L/93 (March 28, 2001), ¶ 13. *See also* WTO Council for Trade in Services—Special Session, *Modalities for the Treatment of Autonomous Liberalization*, TN/S/6 (March 1, 2003).

[73] *See supra* Part I regarding benefits of trade in financial services for a host country. *See also infra* Part V regarding liberalization of capital movements.

ability to trade securities in secondary markets.[74] Foreign financial firms may also face discriminatory barriers arising from limitations on the temporary entry of home-country personnel for employment by their subsidiaries or branches.[75]

2. Cross-Border Services (Modes 1 and 2)

In this chapter, the term "cross-border services" is used broadly without attempting to assign a geographic location to the customer—that is without attempting to determine whether a transaction "takes place" in the country of the service provider or in the country of the customer. For example, a cross-border financial services transaction could be carried out in a number of different ways: (a) a representative of, say, a foreign bank might visit the country of the customer to arrange a loan; (b) the customer might travel abroad to visit the office of the foreign bank; or (c) the transaction might take place via telephone, fax, or increasingly, the internet, which in this context, is simply another technological means of delivering the service.[76]

The GATS, however, distinguishes between services provided to nonresidents "from" the country of the service supplier (mode 1 or cross-border supply) and services provided "in" the country of the service supplier (mode 2 or consumption abroad). Usually, but as currently defined by the GATS, not necessarily—mode 2 involved physical movement of the consumer, such as the movement that occurs in tourism.[77] For financial services, however, the line dividing these two modes of supply is not always clear, especially in the case of transactions carried out through telephone, fax, or the internet.

Indeed, assigning a geographic site to the provision of financial services across borders is difficult and often arbitrary and will become more so as the importance of electronic finance increases. From a regulatory perspective, a major issue is whether, and to what extent, the rules of the host country—that is, the country of the customer—are applied to the cross-border transaction.[78] Besides regulatory jurisdiction, another important

[74] The issuance of securities by a corporation is itself *not* a "financial service;" however, the financial services covered by the GATS include many services that are related to the issuance of securities, such as underwriting and distribution.

[75] *See infra* Part IV.A.3.

[76] As a legal matter, in terms of scheduling commitments in the GATS, providing services via the Internet need not be treated differently than providing services via telephone or fax. Some commentators have emphasized the importance of explicitly confirming this principle of "technological neutrality" in the GATS to ensure that members would not make policy distinctions among services based on the technological means of delivery. *See* Aaditya Mattoo and Ludger Schuknecht, *Trade Policies for Electronic Commerce*, Policy Research Working Paper 2380, World Bank (2002).

[77] The issue of clarifying the distinction between mode 1 and mode 2 in the GATS may be raised during the Doha round services negotiations. One approach would be to define mode 2 to require the physical presence of the consumer in the country of the service supplier; another approach (which appears to have little, if any, support among WTO members) would be to combine the two modes. *See id*.

[78] *See generally* Sydney J. Key and Hal S. Scott , International Trade in Banking Services: A Conceptual Framework (Occasional Paper 35, Group of Thirty, 1991). *See also* Financial Services Authority [UK], *The FSA's Approach to the Regulation of E-Commerce,* Discussion Paper 6 (2001). Suppose, for example, that employees of a foreign bank visit the host country to arrange cross-border loans. Even when the host country does not have a regulatory framework in place for cross-border banking services, host-country bank regulators sometimes look at factors such as the frequency and duration of visits and the permanence of the host-country infrastructure for the visiting employees to determine whether, for regulatory purposes, the cross-border activity rises to the level of a host-country office. (In this example, the question would be whether the activity rises to the level of a representative office. In economic terms, a foreign bank's representative office—which is normally not legally permitted to sign loan or deposit contracts—is basically a marketing mechanism used to facilitate the cross-border provision of financial services. In the GATS, however, the definition of "commercial presence" includes representative offices.) Or, suppose that a foreign

jurisdictional issue arises in the event of a dispute; here the question is which country's courts have jurisdiction to try the case and which country's laws apply.[79]

The GATS commitments for cross-border financial services differ substantially between banking and other financial services excluding insurance on the one hand, and insurance and insurance-related services, on the other, as well as among countries. For cross-border banking and other financial services excluding insurance, commitments also differ substantially between mode 1 (cross-border supply) and mode 2 (consumption abroad).

(a) Banking and other Financial Services Excluding Insurance. Most OECD countries used the Understanding on Commitments in Financial Services to make commitments in mode 2 (consumption abroad) for all banking and other financial services (excluding insurance) listed in the Annex on Financial Services.[80] However, for mode 1 (cross-border supply), they used the Understanding to make commitments that were relatively limited and did not always reflect existing liberalization. Specifically, most OECD countries made commitments in mode 1 for only two categories (excluding insurance): (a) financial information and data processing services; and (b) advisory services.[81] Many acceding countries have made substantial commitments in both mode 1 and mode 2. Most developing countries, however, made no commitments or extremely limited commitments for cross-border banking and other financial services excluding insurance.

broker-dealer solicits host-country customers to purchase securities. Securities regulators often use solicitation—in addition to the actual conduct of business with domestic residents—as a criterion for determining whether the foreign firm is subject to host-country broker-dealer registration requirements. In response to the increasing use of the Internet by the securities industry, a number of regulators also examine factors such as whether a web site is being used to target host-country customers. *See* International Organization of Securities Commissions, Technical Committee, Internet Task Force, *Report on Securities Activities on the Internet* (1998) and *Report on Securities Activities on the Internet II* (2001); U.S. Securities and Exchange Commission, *Regulation of Exchanges*, Concept Release, Release 34-38672, International Series Release IS-1125 (Jul. 16, 1997) and *Statement of the Commission regarding Use of Internet Web Sites to Offer Securities, Solicit Securities Transactions, or Advertise Investment Services Offshore*, Interpretation, International Series Release IS-1125 (Mar. 23, 1998); Financial Services Authority [UK], *Treatment of Material on Overseas Internet Wold Wide Web Sites Accessible in the UK but Not Intended for Investors in the UK*, Guidance 2/92 (1998), and *The FSA's Approach to the Regulation of E-Commerce, supra*; Michael E. Mann and Eva Marie Carney, *Jurisdiction in Cyberspace: International Implications of Electronic Markets*, in John F. Olson and Carmen J. Lawrence, eds. SECURITIES IN THE ELECTRONIC AGE: A PRACTICAL GUIDE TO THE LAW AND REGULATION (2002).

[79] See Financial Services Authority [UK], *The FSA's Approach to the Regulation of E-Commerce, supra* note 78.

[80] *See infra* Appendix A regarding the Understanding on Commitments in Financial Services. In view of the difficulties in distinguishing between the two modes, however, some of the members who made mode 2 commitments for a broad range of financial services also included statements in the so-called headnotes to their financial services schedules emphasizing that these commitments did not require them to allow solicitation by foreign service suppliers. *See* World Trade Organization, *Technical Issues Concerning Financial Services Schedules*, Note by the Secretariat, S/FIN/W/9 (1996).

[81] One OECD country—Switzerland—went further and made comprehensive financial services commitments for banking and other financial services (excluding insurance) in mode 1 as well as mode 2. A few OECD countries, however, severely limited even their commitments for financial information and data processing services and/or advisory services, or made no commitments at all in mode 1. The Annex on Financial Services refers to "advisory, intermediation and other auxiliary financial services" undertaken in connection with any financial service listed in the Annex; examples listed included credit reference and analysis, investment and portfolio research and advice, and advice on acquisitions and corporate restructuring and strategy. GATS, *Annex on Financial Services*, ¶ 5. With respect to mode 1, however, the Understanding covers advisory and other auxiliary financial services but excludes intermediation services. *See Understanding on Commitments in Financial Services*, ¶ B.3 (c).

For a number of the OECD countries, the lack of broad cross-border commitments in mode 1 (cross-border supply) for banking and other financial services excluding insurance represents a binding gap. In other words, these countries have been unwilling to bind additional categories of services even when their existing rules are consistent with market access and national treatment under the GATS. Some OECD countries, however, restrict or prohibit the cross-border provision of financial services, particularly securities services—for example, by requiring establishment of a commercial presence to provide securities services to retail customers. In some cases, host countries may regard these barriers as prudential.

For some emerging market economies and other developing countries the lack of broad cross-border commitments for banking and other financial services excluding insurance also represents a binding gap. Many developing countries, however, continue to impose barriers that significantly restrict or prohibit the provision of cross-border financial services to their residents. From the perspective of developing countries, cross-border services may not appear to offer the same benefits as establishment of a commercial presence, particularly with regard to the transfer of technology, know-how, and skills. A further complication is that capital flows are either an integral part of, or typically associated with, most types of cross-border financial services.[82] In addition to their concern about the overall volatility of international capital flows, some developing countries may also be concerned about "capital flight" on the part of individual residents.[83] Restrictions on residents opening bank accounts abroad, for example, constitute both capital controls and barriers to trade in financial services.

(b) Insurance and Insurance-Related Services. With the exception of the reinsurance business, the provision of insurance services has traditionally been much less internationalized than banking and other non-insurance financial services. At present, the cross-border provision of insurance services consists almost entirely of reinsurance and commercial insurance, primarily marine, aviation, and transport insurance (referred to as "MAT insurance").[84] In the GATS, most of the OECD countries used the Understanding to make commitments in both mode 1 (cross-border supply) and mode 2 (consumption abroad) only for MAT insurance; reinsurance and "retrocession," that is, reinsurance by reinsurers; and services auxiliary to insurance, such as actuarial, risk assessment and claim settlement services.[85] Many acceding countries made similar commitments. Most developing countries made no commitments or extremely limited commitments for cross-border insurance services.

3. Temporary Presence of Natural Persons (Mode 4)

This mode of supply includes both the temporary presence of nonlocal staff of a host-country branch or subsidiary of a foreign financial firm and agents of the firm visiting the

[82] *See supra* Part III.A

[83] The GATS requirement that a member allow capital movements that are an essential part of the cross-border supply of a service (*see supra* note 35) mentions only mode 1 (cross-border supply) and not mode 2 (consumption abroad). As a practical matter, however, countries would presumably not have scheduled commitments in either mode 1 or mode 2 unless they were prepared to liberalize any capital transaction that is either an integral part of or closely associated with the provision of the service.

[84] *See* HAROLD D. SKIPPER, JR., INSURANCE IN THE GENERAL AGREEMENT ON TRADE IN SERVICES. (2001).

[85] *See Understanding on Commitments in Financial Services*, ¶¶ B.3 (a)–(b); Skipper, *supra* note 84; and *infra* Appendix A.

host country to facilitate the provision of cross-border serivces. Although the presence of natural persons is listed as a mode of supply in the GATS and members can negotiate sector-specific commitments, countries usually make commitments for the temporary presence of natural persons as "horizontal commitments" that apply to all services sectors. For the financial services sector, however, most OECD countries used the Understanding on Commitments in Financial Services to make commitments allowing the temporary entry of senior managerial personnel and certain types of specialists in association with the establishment of a commercial presence.[86]

B. Additional Commitments

Barriers to international trade in financial and other services can also be created by non-quantitative and nondiscriminatory structural barriers. Such barriers are associated with national measures that do not discriminate between domestic and foreign services and service suppliers.[87] These barriers could arise because a national measure is primarily anticompetitive or fosters anticompetitive behavior by private parties. In some cases, the barrier could be associated with the inadequacy or absence of domestic regulation—for example, the lack of an adequate domestic legal framework for insolvency.[88] Nondiscriminatory structural barriers could also arise because of differences in national rules, including prudential rules, that make it difficult to conduct operations on a global basis. A country's administrative procedures—in particular, a lack of regulatory transparency and procedural "fairness"—could also create nondiscriminatory structural barriers.[89]

Some nondiscriminatory structural barriers are addressed in the GATS framework agreement;[90] others have been dealt with in schedules of commitments for individual sectors, where the most far-reaching example is in basic telecommunications.[91] In the

[86] *See infra* Appendix A regarding the Understanding on Commitments in Financial Services.

[87] GATS Article XVI (Market Access) covers various quantitative limitations imposed by host-country that may not, on their face, be overtly discriminatory—for example, limiting the number of service suppliers in a particular market by restricting the number of new licenses that may be issued or by relying on an economic needs test, which involves an assessment of "needs" in the market by host-country authorities. Such barriers are, however, similar to the more overly discriminatory barriers covered by GATS Article XVII (National Treatment) because they block foreign entry based on criteria that are beyond the control of the affected foreign service supplier to meet. *See infra* note 121.

[88] Nondiscriminatory structural barriers to trade in financial services are not limited to financial sector regulation. Barriers in other areas that are particularly important for the effective functioning of the financial services sector, such as lack of adequate frameworks for corporate governance or insolvency, are part of the international work on strengthening domestic financial systems (*see supra* Part I).

[89] *See infra* Part V.B.

[90] GATS Article III (Transparency) imposes a general transparency obligation on WTO members to publish all measures "of general application" that are relevant to trade in services. GATS Article VI (Domestic Regulation) addresses, in fairly general terms, barriers created by domestic regulations. It requires countries to apply such regulations in a "reasonable, objective and impartial manner" to avoid undermining commitments to market access and national treatment. Moreover, countries must have appropriate legal procedures to review administrative decisions affecting trade in services. Article VI also mandates further work to develop disciplines to ensure that licensing requirements or technical standards do not constitute unnecessary barriers to trade in services. Pending the completion of this work, countries must refrain from adopting licensing rules or technical standards that are so burdensome, restrictive of trade, or lacking in transparency that they undermine the benefits that could reasonably be expected from their commitments to national treatment and market access.

[91] In the basic telecommunications sector, a substantial majority of the countries that have made commitments to national treatment and market access in that sector have incorporated into their schedules—using the additional commitments column—a reference paper setting forth "procompetitive" regulatory principles. Designed for a sector where dominant suppliers often control essential host-country facilities, these principles

financial services sector, most OECD countries used the Understanding on Commitments in Financial Services to make a general "best efforts" commitment to remove or eliminate any significant adverse effects of such barriers.[92] In addition, the United States and the European Union used the "additional commitments" column of their schedules to make "best efforts" commitments to remove specified nondiscriminatory barriers.[93] Japan, under great pressure from its trading partners, went further and made binding commitments regarding removal of certain nondiscriminatory structural barriers—including restrictions on asset-management services and lack of regulatory transparency and limitations on lines of business in insurance—that were covered in its bilateral financial services agreements with the United States.[94]

C. MFN Exemptions

An MFN exemption allows a country to apply more favorable treatment than that guaranteed by its GATS commitments on a non-MFN basis, but it does not permit less favorable treatment. As a result, an MFN exemption, combined with the absence of commitments to substantially full national treatment and market access, provides leeway for a country to pursue a unilateral reciprocity policy. Such policies constitute a significant departure from the fundamental principle of nondiscrimination among countries on which the GATS and other multilateral trade agreements are based.[95] The GATS nonetheless allows one-time MFN exemptions to be taken upon entry into force of a country's initial schedule of commitments under the GATS. In principle such MFN exemptions should not exceed a period of ten years; they must be reviewed after five years and, in any event, are subject to negotiation in subsequent trade-liberalizing rounds.[96]

In financial services, about twenty-five WTO members have taken one-time MFN exemptions under GATS Article II.[97] Many of these exemptions are relatively narrow,

seek to ensure that a country's national treatment and market access commitments will not be undermined. Countries committing to the principles undertake, among other things, to maintain measures to ensure network interconnection on nondiscriminatory terms and to prevent certain anticompetitive practices. *See* Bernard M. Hoekman, *Competition Policy and the Global Trading System,* 20 THE WORLD ECONOMY 383 (1997) and Bernard M. Hoekman, Patrick Low, and Petros C. Mavroidis, *Regulation, Competition Policy and Market Access Negotiations*: *Lessons from the Telecommunications Sector* in COMPETITION POLICY FOR AN INTEGRATED GLOBAL ECONOMY (Einar Hope, ed., 1996).

[92] *See infra* Appendix A.

[93] For example, the U.S. administration committed to try to work with the Congress to remove Glass-Steagall Act restrictions, a goal that was subsequently accomplished, while the European Union pledged that its member states would try to process applications for licenses for banking and insurance subsidiaries within specified periods of time.

[94] *See supra* Part II.C and *infra* Part V.B. For asset management services, Japan's additional commitments included eliminating restrictions that prohibited a single entity from managing both pension and mutual funds and that imposed extremely strict asset-allocation rules—for example, requiring most assets to be invested in bonds and other fixed-income instruments as opposed to equities. *See Japan—United States Measures Regarding Financial Services, supra* note 23, and *Japan—United States Measures Regarding Insurance*, *supra* note 23. In addition, one insurance commitment was actually aimed at maintaining for a certain period of time a restriction on new entrants into a niche market, the so-called third sector of accident, medical and nursing care insurance. The purpose was to protect the interests of foreign firms in this market until they could enter and compete with domestic firms in other market segments. *See Japan—United States Supplementary Measures Regarding Insurance*, *supra* note 23.

[95] *See supra* note 14 and accompanying text.

[96] *See* GATS, Art. II and *Annex on Article II Exemptions*. *See also supra* notes 19 and 21.

[97] Some WTO members—including some of those that submitted MFN exemptions specifically targeted at financial services—took MFN exemptions for measures applicable to all services sectors that would also be relevant to the financial services sector, including, for example, measures dealing with the temporary presence of natural persons, regulatory frameworks for investment, or real estate ownership.

that is, they apply only to a specific activity or to treatment accorded particular countries. The United States, for example, has taken an MFN exemption for granting primary dealer status to foreign financial firms operating in the U.S. government securities market. Some members, including a number of developing countries, have taken MFN exemptions for measures applicable to neighboring countries because of special relationships that do not qualify as economic integration agreements.[98]

Of the members with MFN exemptions in financial services, about half have taken broad exemptions covering establishment of subsidiaries and/or branches of foreign financial firms—that is, they enable the country to condition establishment on whether the firm's home country has opened its market to host-country financial firms. These broad MFN exemptions—and concomitant absence of commitments or only minimal commitments to market access and national treatment—have been taken either to accommodate reciprocity policies currently in force or to preserve the option of applying such policies in the future. In the latter case, the MFN exemption is analogous to a "binding gap."

V. The Doha Round and Beyond

The inclusion of financial services in the GATS and the negotiation of the 1997 agreement on financial services commitments constitute an important step in the larger process of achieving "international contestability of markets" for financial services and strengthening domestic financial systems. "International contestability of markets" refers to the creation of markets that are competitive and efficient on a global basis—a goal that can be achieved by removing all types of barriers to foreign participation in host-country markets.[99] International contestability is, in effect, based on three pillars of liberalization: (1) national treatment and market access; (2) the removal of nondiscriminatory structural barriers, that is, domestic structural reform; and (3) freedom of capital movements.[100]

Third-pillar liberalization, that is, liberalization of capital movements, is dealt with by the GATS only insofar as it affects members' specific commitments to liberalize trade in services.[101] In general, liberalization of capital movements is a matter of concern for the IMF.[102] Although the free movement of capital plays a critical role in allowing efficient allocation of resources on a global basis, the Asian financial crisis of 1997–98 revived a long-standing debate over the appropriateness and effectiveness of capital controls, particularly on short-term flows.[103] Nevertheless, all parties to the debate agree

[98] An example of this type of MFN exemption taken by an OECD country, in this case for cross-border services in mode 1, involves Switzerland's requirement that Swiss franc-denominated issues be lead-managed by a bank or securities dealer with a commercial presence in Switzerland. Switzerland listed this requirement as a limitation on market access in its schedule of commitments. Because of its monetary union with Liechtenstein, however, Switzerland has taken an MFN exemption to allow persons established in Liechtenstein to lead-manage such issues without establishing a commercial presence in Switzerland.

that capital controls can never be a substitute for sound macroeconomic policies and fundamental reforms of domestic financial and legal structures. Indeed, the Asian crisis itself emphasized that weaknesses in domestic financial systems can create significant vulnerabilities as capital movements are liberalized. At present, conventional wisdom holds that, although imposition of new capital controls should, in general, be avoided, the imposition of limited, temporary capital controls to deal with massive temporary inflows or outflows of short-term debt might be useful in some cases.[104] Moreover, it is now widely recognized that removal of existing controls must be carried out with great care. Of particular importance are the pace and appropriate "sequencing" of liberalization of different types of capital flows and of liberalization of capital movements vis-à-vis structural reforms to strengthen domestic financial systems.[105]

A. National Treatment and Market Access

To date, the financial services negotiations in the GATS have dealt primarily with first-pillar liberalization, aimed at ensuring national treatment and market access.[106] Despite significant improvements during the course of the Uruguay and post-Uruguay round negotiations, however, significant gaps remain in the GATS commitments to national treatment and market access for financial services. These include both binding gaps—that is, gaps created by the failure to bind in the GATS liberalizing measures already in effect or scheduled to go into effect—and gaps resulting from barriers that WTO members continue to impose on foreign financial services and service suppliers. It is therefore important for financial services negotiations in the Doha round to focus on (a) capturing as formal GATS commitments existing or ongoing liberalization that has not yet been bound; and (b) removing remaining barriers to national treatment and market access, and binding the resulting liberalization.[107] As already noted, for establishment of a commercial presence, important barriers that need to be addressed include restrictions on foreign ownership positions in host-country financial firms and restrictions on entry through the branch form of organization.[108]

[105] *See* Shogo Ishii and Karl Habermeier with Jorge Iván Canales-Kriljenko, Bernard Laurens, John Leimone, and Judit Vadasz, *Capital Account Liberalization and Financial Sector Stability*, Occasional Paper 211, International Monetary Fund (2002), and Eichengreen and Mussa with Giovanni Dell'Ariccia et al., *supra* note 103.

[106] Japan's additional commitments were an exception (*see supra* Part IV.B and *infra* Part V.B.2).

[107] The bound liberalization could involve "phased commitments," that is, commitments that are guaranteed to be implemented by a specified future date that marks the end of a transition period. A government could guarantee that it will lift a restriction by a certain date if it is able to do so by regulation, if it already has any necessary legislative mandate, or if it will be given the authority to do so as part of the approval process for the results of the Doha round negotiations or an accession agreement. Phased commitments were not used to any significant extent in the 1997 financial services agreement. China, however, in its WTO accession agreement, made a series of phased commitments to market-opening for financial services. *See* Key, *supra* note 10, ch. IV, regarding phased commitments.

[108] *See supra* Part IV.A.1(b).

For cross-border services, it may be necessary to use an incremental approach that combines strengthening GATS commitments and achieving greater liberalization in practice.[109] Such an approach could focus on broadening the group of countries with mode 1 and mode 2 commitments that are at least as strong as those made by most OECD countries; exploring whether there are any specific categories of financial services, beyond those now covered by the Understanding on Commitments in Financial Services, that OECD countries might be willing to bind in mode 1 (cross-border supply);[110] and persuading emerging market and other developing countries that do not currently offer substantially full market access and national treatment for a broad range of cross-border activities in mode 1 to liberalize their rules.[111]

Another area for negotiation that is closely related to national treatment and market access commitments involves the narrowing or withdrawal of the broad exemptions that some WTO members have taken from the most-favored-nation (MFN) obligation of the GATS. [112]

B. Nondiscriminatory Structural Barriers

A difficult issue for the Doha round and subsequent financial services negotiations is how far GATS financial services commitments should extend into the realm of second-pillar liberalization, namely, nonquantitative and nondiscriminatory structural barriers. Removing second-pillar barriers goes far beyond achieving national treatment and market access. Those principles ensure that foreign services and service suppliers can enter a host-country market *as currently structured* and enjoy equality of competitive opportunities vis-à-vis their domestic counterparts. By contrast, second-pillar liberalization represents an effort to create maximum potential competitive opportunities in a host-country market. Achieving this could require major domestic structural reform. This would necessarily involve some degree of convergence of national regulatory systems, either de facto or through negotiated harmonization.

The European Union's single-market program represents the most far-reaching effort to date to remove nondiscriminatory structural barriers among a group of nations.[113] That program has, however, been undertaken within the unique supranational legislative, judicial, and administrative structure of the European Community, to which member states have transferred a significant degree of sovereignty.[114] In addition, within that supranational framework, the legislated harmonization of essential rules covers a broad range of areas. Even within the European Union, however, important second-pillar barriers to trade in financial services among the member states are still in place.

[109] *See* Key, *supra* note 3, ch. 4, for a more detailed discussion.

[110] In view of concerns about ensuring consumer protection for retail financial services provided in cyberspace, such an effort could focus on services that are likely to present fewer risks for host-country retail consumers and also on the possibility of distinguishing between wholesale and retail customers.

[111] Binding such liberalization in the GATS would be a goal for future negotiations, since it would not be productive to pressure these countries to make commitments for activities that OECD countries are unwilling to bind.

[112] *See supra* Part IV.C.

[113] The EU single-market program is, in effect, an effort to achieve "EU contestability of markets" by dealing with all three pillars of liberalization: national treatment and market access; removal of nondiscriminatory structural barriers; and freedom of capital movements. Moreover, the EU single-market legislation includes most of the areas covered by the international work on strengthening domestic financial systems. See *supra* Part III.B.2 and Key, *supra* note 3, ch. 5, regarding the intra-EU approach of mutual recognition and home-country control.

[114] *See supra* note 12 regarding the distinction between the European Community and the European Union.

In considering whether, or to what extent, it is realistic or appropriate to negotiate and bind in the GATS financial services liberalization that goes beyond national treatment and market access, it seems reasonable to proceed selectively. In this regard, two areas seem particularly important: (a) developing stronger GATS disciplines on regulatory transparency; and (b) removing barriers that cannot be justified on prudential grounds and serve primarily to deny "effective market access" to foreign financial services and service suppliers, and then binding the resulting liberalization.

1. Regulatory Transparency

Regulatory transparency is qualitatively different from other types of second-pillar liberalization because it involves rules about developing and applying rules, that is, procedural as opposed to substantive barriers. Procedural reform can, however, engender substantive change. Increased transparency in developing and applying regulations, together with procedural fairness in applying regulations, can lead to higher quality regulations. Such regulations are likely to be clearer; more effective and less burdensome in achieving their goals; and applied more reasonably, objectively, and predictably. Regulatory transparency and procedural fairness help to achieve these goals because they promote accountability—that is, they create an environment in which regulatory authorities must explain and accept responsibility for their actions with regard to the development and application of rules.

Stronger GATS disciplines on regulatory transparency could be designed specifically for financial services or could be applied more generally to all services sectors.[115] GATS rules on transparency in developing[116] and applying regulations[117]—together with the

[115] In 2001, both the United States and Canada submitted proposals on regulatory transparency for the GATS negotiations in the Doha round. See World Trade Organization, *Transparency in Domestic Regulation,* Communication from the United States, S/CSS/W/102 (July 13, 2001), and *Initial Negotiating Proposal on Regulatory Transparency and Predictability*, Communication from Canada. S/CSS/W/47. (Mar. 14, 2003). The United States had previously submitted, as an attachment to its initial sectoral proposal for financial services, "some initial views" on transparency and other principles for regulation of financial services. *See* World Trade Organization, *Financial Services,* Communication from the United States, S/CSS/W/27 (Dec. 18, 2000).

[116] Transparency in *developing* financial services regulations includes establishing a meaningful procedure for interested parties to comment on a proposed regulation prior to its adoption in final form. (*See* Rachel Thompson and Keiya Iida, *Strengthening Regulatory Transparency: Insights for the GATS from the Regulatory Reform Country Reviews*, in TRADE IN SERVICES: NEGOTIATING ISSUES AND APPROACHES (Julia Nelson and Pierre Sauvé, eds., 2001.) Specific approaches will vary among countries—and over time within countries—depending on the legal system, the institutional arrangements for financial regulation and supervision, and the size and stage of development of financial markets. In the United States, for example, the Administrative Procedure Act generally requires "notice and comment" rulemaking, whereby regulatory authorities must give public notice of proposed rules, provide a reasonable amount of time for interested parties to submit comments, give consideration to comments received, and publish final regulations with an explanation that addresses major concerns raised in the comments and gives the basis for the agency's decision.*See* 5 U.S.C. §553 (2000). *See* Key, *supra* note 3, ch. 5, for a more extensive discussion of regulatory transparency and procedural fairness.

[117] With regard to transparency in *applying* regulations, Article III of the GATS (Transparency) already requires countries to publish all measures "of general application" relating to trade in services (*see supra* note 90). Other important elements of transparency in applying regulations include establishing and making publicly available objective criteria for obtaining authorization to provide a service; providing information on the amount of time normally required to act upon an application; responding to an applicant's request for information on the status of the application; and, except when special circumstances make it impracticable to do so, providing reasonable advance notice before requiring compliance with new regulations. GATS Article VI (Domestic Regulation) already includes a requirement for providing information about the status of an application but only for services for which a specific commitment to national treatment and market access has been made (*see* GATS, Art VI: 5).

closely related principle of procedural "fairness" in applying regulations[118]—would not only help eliminate barriers created by opaque and unfair regulatory procedures but also help ensure that a country does not use its regulatory process to undermine its commitments to national treatment and market access. Moreover, GATS rules on transparency in financial services regulation could both complement and build upon the work on transparency that is part of the ongoing international effort to strengthen domestic financial systems.[119]

2. "Effective Market Access"

A second issue involves anticompetitive domestic regulatory measures that cannot be justified on prudential grounds and serve primarily to keep foreign financial firms from competing in host-country markets by making entry impractical or too costly—thereby denying them "effective market access."[120] Such measures are distinct from the barriers to market access covered by GATS Article XVI (Market Access). The latter constitute quantitative barriers based on criteria such as numerical quotas and economic needs tests that are beyond the control of the affected foreign service supplier to meet. [121] By contrast, measures denying effective market access would, as a legal matter, allow a foreign firm the possibility of complying with the rules—that is, the firm would be permitted to enter the market and operate under the same rules that apply to domestic firms. Even if the rules provided de facto national treatment, however, their practical impact on foreign firms would be to create a major barrier to entry. [122]

Identifying barriers to effective market access in financial services that could usefully be negotiated in the GATS requires a country's trading partners to determine (a) whether, in practice, its measures keep foreign firms from competing in a host-country market or market segment and (b) whether a "critical mass" of regulators believes that the measures

[118] Although increased transparency per se should contribute to both substantive and procedural fairness in financial services regulation, principles specifically designed to enhance *procedural fairness in applying regulations* are usually linked with proposals for greater regulatory transparency. GATS Article VI (Domestic Regulation) already addresses some basic elements of procedural fairness in applying regulations (*see supra* note 90). Several of these, however, cover only those services for which specific commitments to national treatment or market access have been made—for example, requirements that regulations must be applied in a "reasonable, objective and impartial manner," and that regulatory authorities must act on applications in a timely fashion (GATS, Art. VI: 1,3). A provision of Article VI that applies more generally requires a country to maintain a mechanism for appeal of an adverse regulatory ruling affecting trade in services (*see* GATS, Art. VI: 2).

[119] Most of the work on transparency that is part of the ongoing international effort to strengthen domestic financial systems focuses on establishing international minimum standards and codes of good practices with regard to types of transparency other than regulatory transparency—namely, transparency on the part of governments with regard to macroeconomic policy and data; and on the part of the private sector with regard to disclosure of financial information, risk exposures, and risk management practices. *See* Key, *supra* note 3, ch. 5.

[120] "Effective market access" is an undefined term that has been used in many different ways in the context of international trade in financial services. For example, it has been used broadly to encompass all second-pillar barriers and also, much more narrowly, to refer to de facto national treatment *See* Sydney J. Key , *Is National Treatment Still Viable? US Policy in Theory and Practice*, 5 Journal of International Banking Law 365 (1990).

[121] *See* World Trade Organization, Council for Trade in Services, *Economic Needs Tests,* Note by the Secretariat, S/CSS/W/118 (Nov. 30, 2001), for a comprehensive discussion of the distinction between quantitative measures, particularly economic needs tests, listed in GATS Article XVI (Market Access) and domestic regulatory measures.

[122] *See* Robert G. Pozen, *WTO Objectives of Asset Manage*rs, (presentation at conference on "Further Liberalization of Global Financial Services Markets?" Institute of International Economics, Washington, D.C. (June 2002).

are inappropriate for prudential purposes. Even if the prevalent regulatory view is that the measures cannot be justified on prudential grounds, however, host-country regulators must be persuaded to accept it.[123] Some guidance on the areas that are appropriately subject to prudential regulation and the types of measures that are generally accepted as prudential is provided by the international work on minimum standards and codes of good practices. That work does not, however, directly address the appropriateness of specific national measures.

The additional commitments made by Japan in the 1997 agreement on financial services commitments provide a model for the types of measures that could be negotiated in the Doha round.[124] For example, with regard to asset management services, a number of countries still maintain restrictions that create major barriers to entry by foreign firms. Such restrictions include prohibiting pension and mutual funds from investing in foreign securities or limiting such investments to a small portion of their assets, and subjecting the funds to extremely strict asset-allocation requirements, such as requiring a certain percentage of assets to be invested in domestic government bonds.[125] For both pension and mutual funds, however, the prevalent regulatory view appears to be that prudential portfolio regulation should be based on broader principles that allow fund assets to be managed in an effective and efficient manner and, at the same time, ensure adequate protection of investors and policyholders.[126]

C. Prudential Measures

Barriers to trade in financial services can also be created by legitimate prudential rules, that is, measures to promote the integrity and stability of the financial system or to protect consumers of financial services. The prudential carve-out ensures that a WTO member may take such measures even if they are inconsistent with its obligations and commitments in the GATS. The international work on minimum standards and codes of good practices for prudential regulation and supervision provides general guidance on the areas in which prudential regulation is appropriate and on the types of rules that are widely accepted as legitimate prudential measures. Against this background, pressure from a country's trading partners—and, for particularly egregious measures, use of the WTO dispute settlement mechanism—will need to be relied upon to prevent abuse of the prudential carve-out.

Although prudential measures sometimes impose additional requirements on foreign firms, they may also create barriers simply because they differ among countries—that

[123] In the GATS, additional commitments are scheduled as so-called positive lists of liberalizing measures that reduce or remove existing barriers. A country would, of course, be unwilling to make a commitment to liberalize with respect to a measure that it regards as prudential. A country might need to rely on the prudential carve-out, however, if circumstances were to change such that it decided to reintroduce for prudential reasons a measure that was inconsistent with its additional commitments. See Key, *supra* note 3, ch. 5, for further discussion of the "effective market access" approach.

[124] *See supra* Part IV.B.

[125] *See* Investment Company Institute, *Asset Management*, presentation at financial services seminar, World Trade Organization, Council for Trade in Services (Oct. 11, 2001).

[126] Under such principles, mutual funds must maintain portfolios that comply with their stated investment objectives, disclose portfolio holdings periodically, maintain sufficient portfolio liquidity to meet redemptions, and keep fund assets safeguarded. Pension funds must act solely in the interests of the pension plan and its participants, make investments in accordance with principles of diversification and prudence, and safeguard plan assets. *See, for example,* International Organization of Securities Commissions, Technical Committee, *Report on Investment Management—Principles for the Regulation of Collective Investment Schemes and Explanatory Memorandum* (1994), regarding collective investment schemes.

is, financial firms operating on a global basis may often find it burdensome to comply with a multitude of different national rules. Two approaches can be used to deal with barriers created by legitimate prudential measures. One would have home-country regulatory authorities convince host-country authorities that their prudential concerns can be addressed with less sweeping requirements. These efforts could take place bilaterally or in various international fora, including the financial services negotiations under the auspices of the WTO, where finance ministries play a major role.[127]

A second approach would have home- and host-country authorities negotiate a recognition arrangement. Such arrangements can be used to deal with nondiscriminatory structural barriers that arise from differences in prudential rules among countries, as well as to provide relief from prudential rules that are inconsistent with national treatment and market access.[128] Although the GATS Annex on Financial Services facilitates unilateral or mutual recognition of prudential measures by permitting a departure from the MFN obligation of the GATS for such arrangements, their negotiation is beyond its purview.[129]

VI. Conclusion

Financial services liberalization under the GATS is one part of the larger process of achieving international contestability of markets and strengthening domestic financial systems, including prudential regulation and supervision. As the GATS explicitly recognizes, liberalization of trade in financial and other services is an ongoing process. In the financial services sector, this process is being driven not only by market forces and new technologies but also by the growing recognition among policymakers, particularly in emerging market economies, that market opening can both benefit host-country consumers of financial services and contribute to the resiliency of domestic financial systems. The development of international minimum standards and codes of good practices for sound financial systems and their implementation by individual countries provide a strong foundation for moving ahead with further liberalization of trade in financial services. Financial services negotiations in the Doha round and beyond can play an important role helping to accelerate the process of liberalization as well as solidifying its results in the form of binding commitments subject to the WTO dispute settlement mechanism.

APPENDIX A

UNDERSTANDING ON COMMITMENTS IN FINANCIAL SERVICES

The Understanding on Commitments in Financial Services ("Understanding") provides an alternative approach to scheduling commitments that was used by most of the OECD countries to supplement the requirements of the GATS framework agreement. In effect, the Understanding is a model schedule, albeit a particularly complicated one. In legal terms, the Understanding is incorporated by reference into the GATS through the schedules of commitments of the countries that use it. Commitments scheduled under the Understanding are extended to all members of the WTO regardless of whether the members scheduled commitments under the framework or the Understanding.

For establishment of a commercial presence (mode 3), the Understanding supplements the list of measures inconsistent with market access contained in GATS Article XVI (Market Access) by setting forth a broad commitment to the right of establishment or expansion of a commercial presence. WTO members using the Understanding undertake to provide national treatment and market access for *all* financial services in this mode—under the GATS framework agreement as supplemented by the Understanding[130]—except for nonconforming measures listed in their schedules or measures that fall within the scope of the prudential carve-out or the other public policy exceptions in the GATS. This is a so-called "negative list" or "top down" approach to scheduling commitments, in contrast to the "hybrid-list" approach used for national treatment and market access in the GATS.[131] The Understanding also contains a "standstill" provision that allows a member to take exceptions only for *existing* nonconforming measures.[132]

For banking and other financial services excluding insurance, the Understanding sets forth a comprehensive commitment for cross-border services provided through mode 2 (consumption abroad)—that is, a negative list approach is used for all banking and other financial services excluding insurance. However, for banking and other financial services excluding insurance provided through mode 1 and for insurance services in both modes 1 and 2, the Understanding is designed to facilitate more limited commitments.[133] With regard to the temporary presence of natural persons (mode 4), the Understanding sets

[130] The Understanding relies on the definition of national treatment in the framework agreement, but clarifies its application in the financial services sector with regard to both payment and clearing systems and self-regulatory bodies. Specifically, it clarifies that access by host-country offices of foreign financial firms to payment and clearing systems operated by public entities must be granted on a national treatment basis; it also makes clear that when membership in a private self-regulatory body is required by a host country in order for foreign financial firms to compete on an equal basis with domestic firms, the host country must ensure that the self-regulatory body offers national treatment. *See Understanding on Commitments in Financial Services*, ¶¶ C1.–C2.

[131] The GATS approach to scheduling commitments is referred to as a "hybrid list" because it involves a so-called "positive list" of sectors, subsectors, and activities for which commitments are undertaken and, within each listed sector, subsector, or activity, a "negative list" of limitations on national treatment or market access. (*See supra* note 66 and Key, *supra* note 10, at 14–16 for a comparison of "negative lists" and GATS "hybrid lists.")

[132] *See Understanding*, ¶ A.

[133] *See supra* Part IV.A.1.

forth commitments to allow the entry of managerial and certain technical personnel in association with establishment of a commercial presence.[134]

The Understanding contains various other provisions that supplement the framework agreement. These include: a "best efforts" undertaking to remove or limit any significant adverse effect of nonquantitative and nondiscriminatory structural barriers,[135] a requirement that existing monopoly rights be listed in schedules of commitments and a "best efforts" commitment to reduce or eliminate such rights;[136] an obligation to provide both MFN and national treatment for government procurement of financial services;[137] a requirement to allow a host-country office of a foreign financial firm to offer new financial services;[138] and a commitment not to prevent transfers and processing of information that are necessary in the ordinary course of business.[139]

[134] *See Understanding*, ¶ B.9 and *supra* Part IV.A.3.

[135] *See Understanding*, ¶ B.10. With regard to nondiscriminatory measures, the Understanding also contains a best efforts commitment not to limit or restrict existing opportunities. *See* Understanding, ¶ B.11. However, the Understanding also states that neither of these undertakings should result in "unfair" reverse discrimination against domestic service suppliers. *Understanding*, ¶¶ B.10–11.

[136] *See Understanding*, ¶ B.1.

[137] *See Understanding*, ¶ B.2.

[138] *See Understanding,* ¶ B.7. (A "new financial service" is defined as a service already being supplied in another country but not in the host country. *See Understanding*, ¶ D.3.) The purpose of this provision, which was strongly supported by the U.S. financial services industry, is to allow innovative products introduced by financial institutions in their home countries—and approved by the relevant home-country authorities—also to be introduced by their offices in other countries. However, the scope of the provision appears to be relatively narrow. A host country could, for example, invoke its prudential rules to refuse to allow a particular service or a particular type of entity to provide that service. In addition, a note regarding new financial services in the EU schedule of commitments contains a very broad reaffirmation of the need for consistency with host-country regulatory frameworks, a statement that appears to reflect a general understanding among negotiators.

[139] The provision makes clear, however, that it does not restrict the right of countries to protect personal data and privacy provided that right is not used to circumvent the GATS. *See Understanding,* ¶ B.8.

APPENDIX B

DEFINITION OF "FINANCIAL SERVICES" IN GATS ANNEX ON FINANCIAL SERVICES[140]

For the purposes of this Annex:

(a) A financial service is any service of a financial nature offered by a financial service supplier of a Member. Financial services include all insurance and insurance-related services, and all banking and other financial services (excluding insurance). Financial services include the following activities:

Insurance and insurance-related services

(i) Direct insurance (including co-insurance):
  (A) life
  (B) non-life
(ii) Reinsurance and retrocession;
(iii) Insurance intermediation, such as brokerage and agency;
(iv) Services auxiliary to insurance, such as consultancy, actuarial, risk assessment and claim settlement services.

Banking and other financial services (excluding insurance)

(v) Acceptance of deposits and other repayable funds from the public;
(vi) Lending of all types, including consumer credit, mortgage credit, factoring and financing of commercial transaction;
(vii) Financial leasing;
(viii) All payment and money transmission services, including credit, charge and debit cards, travellers cheques and bankers drafts;
(ix) Guarantees and commitments;
(x) Trading for own account or for account of customers, whether on an exchange, in an over-the-counter market or otherwise, the following:
  (A) money market instruments (including cheques, bills, certificates of deposits);
  (B) foreign exchange;
  (C) derivative products including, but not limited to, futures and options;
  (D) exchange rate and interest rate instruments, including products such as swaps, forward rate agreements;
  (E) transferable securities;
  (F) other negotiable instruments and financial assets, including bullion.
(xi) Participation in issues of all kinds of securities, including underwriting and placement as agent (whether publicly or privately) and provision of services related to such issues;
(xii) Money broking;

[140] GATS, *Annex on Financial Services*, ¶ 5.

(xiii) Asset management, such as cash or portfolio management, all forms of collective investment management, pension fund management, custodial, depository and trust services;

(xiv) Settlement and clearing services for financial assets, including securities, derivative products, and other negotiable instruments;

(xv) Provision and transfer of financial information, and financial data processing and related software by suppliers of other financial services;

(xvi) Advisory, intermediation and other auxiliary financial services on all the activities listed in subparagraphs (v) through (xv), including credit reference and analysis, investment and portfolio research and advice, advice on acquisitions and on corporate restructuring and strategy.

(b) A financial service supplier means any natural or juridical person of a Member wishing to supply or supplying financial services but the term "financial service supplier" does not include a public entity.

(c) "Public entity" means:

(i) a government, a central bank or a monetary authority, of a Member, or an entity owned or controlled by a Member, that is principally engaged in carrying out governmental functions or activities for governmental purposes, not including an entity principally engaged in supplying financial services on commercial terms; or

(ii) a private entity, performing functions normally performed by a central bank or monetary authority, when exercising those functions.

Appendix A. Example of a Schedule of Specific Commitments on Telecommunications Services (Country X) 1036
Appendix B. Reference Paper 1038

I. Introduction : The Inclusion of Telecommunications Services in the WTO

In 1986, at the start of the Uruguay Round, there were few precedents and little discussion of liberalization in telecommunications. By way of illustration,[1] the United States was in the aftermath of the AT&T break-up, and the EC had not taken any internal liberalization measures yet, and national telecommunications operators ("TOs") were still firmly entrenched throughout the EU (with the exception of the UK). The European Commission did not publish its first policy paper on the telecommunications sector until 1987, with proposals for a partial liberalization.[2] There is reason to ask then why telecommunications was included in the trade policy framework.

First, the WTO provided a *suitable forum* for negotiations. In 1986, a number of developed countries felt that the traditional forum for international telecommunications negotiations, the International Telecommunications Union ("ITU"), was not an appropriate place in which to discuss liberalization initiatives. The vested interests in the ITU, *i.e.*, governments, most of which control the national TO, were used to discussing technical issues, such as radio frequency allocation, in a spirit of cooperation. Some felt that the introduction of competition, and the advent of many private suppliers of telecommunications services, did not fit into this tradition.[3]

Developed countries also perceived that developing countries had too much influence in the ITU.[4] In view of the ITU's role in discussions on the North-South dialogue and the "New International Economic Order" in the 1970s, developed countries did not expect that deregulation and liberalization could become a high priority for the ITU.

Second, it was felt by developed countries that the *negotiating techniques* of the GATT were appropriate for the objectives they pursued**:** the global framework would give them more opportunity to achieve results, since cross-sectoral deals might be struck.[5]

Having unsuccessfully resisted the inclusion of services in the Uruguay Round, the developing countries did manage to put services on a separate track in an attempt to prevent cross-linkages between traditional GATT issues and services.[6] In fact, there were not many trade-offs amongst different service sectors. These circumstances undoubtedly led to more protracted negotiations on telecommunications. As explained below, no agreement on basic telecommunications could be reached by 1994 for signature as part of the WTO Agreement. This issue was accordingly entrusted to an *ad hoc* negotiating group. While an agreement was ultimately signed, no benefits could therefore be derived from including telecommunications in a global trade round.

[4] *See* TEGGE, supra note 3, at 54–59.

[5] Dissatisfaction with traditional UN fora for international negotiations was not limited to the telecommunications sector. For similar reasons, the developed countries also insisted that intellectual property be included in the Uruguay Round. They were unhappy about the agenda pursued by developing countries in the World Intellectual Property Organisation (WIPO), and thought they could achieve more by linking different issues to trade. *See* Marco C.E.J. Bronckers, *The Impact of TRIPS: Intellectual Property Protection in Developing Countries*, 31 CMLREV 1245, 1246–1251 (1994). *See also* Chapter 22 of this book.

[6] *See* BERNARD M. HOEKMAN AND MICHEL M. KOSTECKI, THE POLITICAL ECONOMY OF THE WORLD TRADING SYSTEM 249 (2d ed., 2001).

Third, the original GATT appeared to provide a *tested framework* for negotiations on the liberalization of telecommunications services. The GATT framework for goods contained some fundamental liberalization principles (MFN, national treatment, tariff bindings, etc.). These tested principles might provide a road map to the telecommunications negotiators and could reinforce the commitments ultimately agreed.

Fourth, the proponents of including telecommunications in the Uruguay Round were attracted by the dispute settlement procedures available in the GATT. While these procedures could be criticized, they were at least used and thus helped to further trade liberalization. In contrast, the dispute settlement provisions of the ITU have not been used once since 1947.[7]

II. A Brief Overview of the WTO Telecommunications Negotiations

The WTO telecommunications negotiations lasted from 1986 to 1997.[8] In the first few years, discussions centered on the outlines of a general agreement on services.

A. From 1986 to the Conclusion of the GATS in 1994

Sectoral discussions on telecommunications began in 1989. Since the United States was the most advanced country in terms of telecommunications liberalization at the time, it will come as no surprise that their perspective and their agenda initially dominated the talks. For instance, as will be discussed further below, at the insistence of the United States a distinction between basic and value-added services was introduced to structure the discussions.[9] Negotiations on value-added or enhanced services went relatively easily.

However, difficulties arose with respect to basic telecommunications services. On the one hand, many U.S. operators were eager to be able to enter foreign markets and invest abroad, since they felt comparatively more advanced than their foreign competitors.[10] On the other hand, the United States was reluctant to open its market, the largest in the world, as long as other markets were dominated by legal monopolists which could thwart the efforts of U.S. firms abroad and also potentially engage in anti-competitive practices affecting the U.S. market (at least the market for international communications). The United States argued that it was not going to open its market as long as its telephone operators (AT&T, etc.) were not granted reciprocal access to markets of similar size to the United States. This became known as the issue of *critical mass*: without a sufficiently large number of market access commitments from its trading partners, the United States was unwilling to make a move.[11]

[7] *See* TEGGE, *supra* note 3 at 148–9.

[8] *See* generally BEN PETRAZINNI, GLOBAL TELECOMS TALKS: A TRILLION DOLLAR DEAL (1996) and on the history and outcome of the negotiations, Jonathan D. Aronson, *Telecom Agreement Tops Expectations*, in UNFINISHED BUSINESS: TELECOMMUNICATIONS AFTER THE URUGUAY ROUND 15 (Gary C. Hufbauer and Erika Wada eds. 1997).

[9] *See infra* notes 17–24 and the accompanying text for a discussion of the relevance of this distinction.

[10] This eagerness subsided somewhat as a result of the major changes brought to the U.S. market by the Telecommunications Act of 1996, Pub. L. No. 104-104, 110 Stat. 56, which modified in depth the Communications Act of 1934, 47 U.S.C. § 151 and ff. Since the second half of the 1990s, U.S. operators have refocused part of their energies on the domestic market again.

[11] *See* Holmes *et al*., *supra* note 3, at 764.

In the end, the Uruguay Round produced a framework agreement on trade in services.[12] WTO Members gave specific market access commitments in a variety of sectors.[13] With respect to telecommunications services, a number of countries made commitments, but they were mostly limited to so-called value-added services only (see Part III A1 below). No agreement was reached on basic telecommunications. A Decision on Negotiations on Basic Telecommunications was taken at the end of the Uruguay Round, whereby a Negotiating Group on Basic Telecommunications was created ("NGBT") with a mandate to conclude an agreement by April 30, 1996. WTO Members agreed to a standstill during the upcoming round of telecommunications negotiations; they would not seek to improve their negotiating position or leverage by the introduction of new measures.[14] An Annex on Negotiations on Basic Telecommunications was also attached to the GATS in order to extend the time limit for filing exemptions to Article II of the GATS (most-favored nation treatment) in the telecommunications sector until the end of the telecommunications negotiations.

B. The 1996 Breakdown

Negotiators were fairly relaxed about this seemingly generous extension of the deadline. They realized that rapid technological developments were helping to undermine national restrictions. By simply waiting, they felt they were still making progress towards liberalization.

Nevertheless, telecommunications negotiations broke down in the spring of 1996, when the United States bowed out. The United States explained its refusal to conclude an agreement by claiming that a critical mass of market access commitments, notably from developing countries, had not been reached.[15]

Members of the NGBT agreed however to extend the deadline in order to try to salvage the negotiations. The effect of both the Decision on Negotiations on Basic Telecommunications and the Annex on Negotiations on Basic Telecommunications were extended in substance to February 15, 1997 by the Decision on Commitments in Basic Telecommunications of April 30, 1996.[16] The NGBT was turned into the Group on Basic Telecommunications ("GBT"). In contrast to the NGBT, where some countries were participants and others observers, the GBT was open to all WTO Members as participants.

C. The 1997 End Game

Between April 1996 and the new deadline of February 15, 1997, a lot of effort was spent on improving existing offers and obtaining new offers. The United States and the EU

[12] For a general discussion of the GATS, *see* Chapter 19 of this book. For a practical introduction, available in English, French and Spanish, *see* European Commission, GUIDE TO THE GATS (1995).

[13] The commitments of high-income countries covered about half of their service sectors; those of developing countries as a group (including Eastern European countries in transition) only eleven percent. *See* Bernard M. Hoekman, *Tentative First Steps: An Assessment of the Uruguay Round Agreement on Services*, in THE URUGUAY ROUND AND THE DEVELOPING COUNTRIES (Will Martin and L. Alan Winters eds. 1996).

[14] *Decision on Negotiations on Basic Telecommunications,* ¶ 7.

[15] According to U.S. calculations, over forty percent of world telecom revenues and over 34 percent of global international traffic were not covered by acceptable offers. The United States was particularly disappointed about the offers from ASEAN countries and India, about continuing foreign ownership restrictions in some EU countries and Canada, and the lack of improvement in Latin-American offers. *See* Statement of Ambassador Charlene Barshefsky on Basic Telecom Negotiations (USTR, April 30, 1996).

[16] *Decision on Commitments in Basic Telecommunications*, WTO/S/L/19 (April 30, 1996).

were particularly looking for concessions in the Asia-Pacific region. As a result of this pressure, but also because of their own perception that deregulation would be in their own interest, several countries in the region presented revised or new liberalisation offers. In November 1996, the United States and the EU also improved their offers, as further enticement to the others.

At the end, 32 of the 34 offers that had been tabled in April 1996 were revised, and 21 new offers were submitted, bringing the total number of schedules of commitments to 55, accounting for 69 countries (the fifteen countries of the EU being included in a single schedule). On February 15, 1997, an agreement was reached between the participants on these commitments. The 55 schedules were attached to a brief document which became the Fourth Protocol to the GATS. The Fourth Protocol entered into force on February 5, 1998.

III. The Commitments Relating to Telecommunications Services in the WTO

The results of the telecommunications negotiations must be seen against the background of the GATS, as described in other Chapters, in particular the scheduling techniques peculiar to the GATS ("horizontal" and "vertical" commitments, modes of supply, listing of restrictions in schedules, etc.).

A. The Specific Commitments Concerning Telecommunications Under the GATS

This section reviews the commitments already contained in the GATS at the time the WTO Agreement was signed (1994), followed by the commitments of the Fourth Protocol of February 15, 1997. First, however, it is important to explain the distinction that has been drawn between "basic" and "value-added" telecommunications.

1. The Distinction Between Basic and Value-Added Telecommunications

As a preliminary matter, a distinction between "basic" and "value-added" telecommunications has unfortunately been introduced in the GATS framework. "Basic" and "value-added/enhanced" telecommunications are essentially U.S. regulatory categories introduced for the purposes of delineating FCC jurisdiction in the course of the *Computer* inquiries.[17] In the United States, basic services are defined as "the . . . offering of transmission capacity for the movement of information",[18] while enhanced services are "any offering over the telecommunications network which is more than a basic transmission service".[19] The FCC exerts jurisdiction under Title II of the Communications Act over the former but not the latter. The distinction is thus a technical one, whereby basic services are those where the service provider offers little more than a clear communications path to the customer. It does not reflect any inherent difference between the two groups of services.[20] The distinction is rather a way to draw a line between what the FCC perceived as a competitive sector and one that still required regulation.

[17] These inquiries aimed at ascertaining the scope of FCC jurisdiction as regards then emerging telecommunications services which also relied on data processing (*e.g.*, electronic mail). *See Second Computer Inquiry*, Docket 20828, Final Decision, FCC 80–189, 77 FCC 2d 384 (April 7, 1980) and subsequent modifications, *Third Computer Inquiry*, CC Docket 85–229, Report and Order, FCC 86–252, 104 FCC 2d 958 (May 15, 1986) and subsequent modifications.

[18] *Second Computer Inquiry*, *supra* note 17, at ¶ 93.

[19] *Second Computer Inquiry*, *supra* note 17, at ¶ 97.

[20] The difficulties related to the application of the basic/enhanced services distinction led the FCC to examine alternative means of delineating its jurisdiction in the *Third Computer Inquiry*, *supra* note 17.

The distinction between basic and value-added services is not present to the same extent in all telecommunications regulatory frameworks. In the EC, this distinction is no longer made.[21]

In the original outline for services schedules, telecommunications services were divided into fifteen sub-headings. These are still reflected in the schedules, as can be seen in the model schedule in the Annex. Later, the distinction between basic and value-added services was made by separating the sub-headings into two groups for the purposes of negotiation, the latter being treated in the original GATS, the former being left for further negotiations within the NGBT (and later the GBT).[22] The Decision on Negotiations on Basic Telecommunications defines "basic telecommunications" as "telecommunications transport networks and services", a definition which comes closer to the U.S. approach.[23] NGBT and GBT participants were, however, unable to agree on a more precise definition of basic services, and in fact did not incorporate a definition of basic services in their respective schedules. Whilst the United States uses the sub-headings as an exhaustive list of what is covered under "telecommunications services", the EC and its Member States see these sub-categories as illustrations of a broader definition, which is included at the beginning of its commitments.

Now that commitments have been made for both basic and value-added telecommunications, a full set of commitments is present and there is no need to distinguish further between the two services if no substantive consequences are attached to the distinction. Nevertheless, the basic/value-added distinction appears in the Reference Paper agreed by the GBT. This distinction stems from the idiosyncrasies of U.S. telecommunications regulation, may cause complications, and may have outlived its usefulness given that no substantive consequences are attached to the distinction. It could be eliminated from the GATS framework.[24]

2. Commitments Contained in the GATS at the Time of Signature of the WTO Agreement (1994)

The GATS, as concluded in 1994, already contained a number of commitments relating to telecommunications.

(a) GATS Schedules. Fifty-six of the original GATS schedules included specific commitments on telecommunications on behalf of 67 WTO Members, among which were the United States as well as the EU and its Member States (twelve at the time submitting a single schedule). Forty-four of these schedules (accounting for 55 Members) were limited to value-added or enhanced telecommunications services,[25]

[21] The historical evolution of the regulatory categories in the run-up to liberalization in the EC is described in PIERRE LAROUCHE, COMPETITION LAW AND REGULATION IN EUROPEAN TELECOMMUNICATIONS 1–30 (2000).

[22] The sub-heading "Other" (2.C.o)) was used by some countries in their original GATS schedule, by others in their schedule to the Fourth Protocol, in order to cover services which they felt were not adequately addressed by other sub-headings. For instance, many countries have included "Mobile Services" under "Other" in their schedule to the Fourth Protocol, although mobile services are theoretically covered by commitments made under the other sub-headings under 2.C. Chairman's Note for Scheduling Basic Telecom Services Commitments, S/GBT/W/2/Rev.1 (January 16, 1997), at ¶ 3.

[23] *Decision on Negotiations on Basic Telecommunications Services*, ¶ 1.

[24] The United States appears to be insisting on the distinction between basic and value-added services in its proposals for the next round of negotiations: Communication from the United States—*Market Access in Telecommunications and Complementary Services*, S/CSS/W/30 (December 18, 2000).

[25] *i.e.*, sub-headings 2.C.h to 2.C.n, as shown in the model schedule in Annex A to this chapter.

including the schedules of the most important countries in the international telecommunications market. The major countries in the international telecommunications market did not make any notable limitations to their commitments on value-added services.

(b) The Annex on Telecommunications. An Annex on Telecommunications ("AT"), attached to the GATS, concerns "access to and use of public telecommunications transport networks and services".[26] The AT is based on the recognition that telecommunications are an essential tool for other economic activities, such as banking.[27] It therefore set forth certain principles to make sure that concessions on other services would not be frustrated by a lack of progress on telecommunications negotiations. In other words, the AT can be seen as a general insurance policy for suppliers of other services that they would have access to the requisite telecommunications networks and services in WTO countries.

The AT does not contain or lead to any market access or national treatment obligation. It is not to be interpreted to require WTO Members to allow the provision of telecommunications services beyond the commitments they have already made in their respective schedules.[28] The AT is only applied once a WTO Member has offered specific commitments in a given service sector.[29] It is therefore comparable to the general GATS obligations which apply in addition to the specific commitments made in schedules.[30]

The central provision of the AT binds each Member to "ensure that any service supplier of any other Member is accorded access and use of public telecommunications transport networks and services on reasonable and non-discriminatory terms and conditions".[31] This obligation is further specified as follows:

- Access to and use of leased lines is guaranteed, with the right to attach equipment to the network, to connect leased lines to the public network or the leased lines of a third party, and to choose the protocol to be used in the supply of a given service[32]
- Public networks and services must be available for the transport of information[33]
- Restrictions on access and use must be necessary to ensure public availability of the network or service, network or service integrity or the enforcement of the commitments made in the GATS schedule.[34]

[26] AT, ¶ 2.(a). *See* on the AT in general Lee Tuthill, *Users' Rights?: The Multilateral Rules on Access to Telecommunications*, 20 TELECOMMUNICATIONS POLICY 88 (1996).

[27] AT, ¶ 1.

[28] AT, ¶ 2.(c). This was confirmed in the Report of the WTO Panel, *Mexico—Measures Affecting Telecommunications Services*, WT/DS204/R (2004), ¶ 7.291, 7.293 (hereinafter cited as *Telmex* Report).

[29] AT, ¶ 5(a), applies only to "the supply of a service included in [a Member's] Schedule."

[30] Tuthill, *supra* note 26, at 94.

[31] AT, ¶ 5.(a). The structure of ¶ 5 is complex, but it is construed quite ably in the *Telmex* Report, ¶ 7.299–7.309. ¶ 5(a) itself was interpreted at length in ¶ 7.310–7.343. The panel finds that the termination rates for international traffic into Mexico were not "reasonable" within the meaning of ¶ 5(a), even though "reasonable" may imply some departure from cost-orientation (¶ 7.344, with the panel contrasting "reasonable" under the AT with "cost-orientation" for interconnection rates under the RP).

[32] AT, ¶ 5.(b). In the *Telmex* Report, Mexico was found to have breached its obligations under that provision as well: ¶ 7.347–7.389.

[33] AT, ¶ 5.(c).

[34] AT, ¶ 5.(e). Examples of possible restrictions are listed at ¶ 5(f).

The AT imposes some obligations regarding the transparency of tariffs and other terms and conditions relating to public telecommunications transport networks and services.[35] It is also of interest to note that developing countries can claim an exception to the AT in order to strengthen their domestic telecommunications infrastructure or their participation in international negotiations on telecommunications.[36]

To ascertain whether a service supplier from "WTO Member B" can rely on the AT in "WTO Member A", regard must be had to the GATS schedule of Member A. The AT is attached as a "bonus" to the specific commitment in a given sector. For an insurance provider from Member B, therefore, the mere fact that Member A has given a commitment in the insurance sector entitles that provider to the benefits of the AT, irrespective of the commitments of Member A in the telecommunications sector.

For instance, when Member A enters into specific commitments in the insurance sector while not making any specific commitments on telecommunications services, the AT generally gives insurers from Member B the right to access and use whatever public telecommunications transport networks and services are offered in Member A. In the rare case where the TO of Member A chooses not to offer leased lines, the insurer from Member B would not obtain much (more or less only the right to access and use the public telecommunications network). In most countries, however, leased lines will be offered by the TO. The insurer from Member B could then rely on the AT to obtain leased lines on non-discriminatory terms and to connect them to the public network in Member A.

In most cases, the AT will enable foreign suppliers of services for which a WTO Member has undertaken specific commitments to use their own telecommunications equipment, in combination with those leased lines, in order to self-provide their telecommunications needs. Indeed, WTO Members are bound to allow the basic operations required to put together a private telecommunications network[37] and to permit cross-border information movements for "intra-corporate communications" purposes.[38] The definition of "intra-corporate communications" is fairly narrow[39] expressly excluding any services offered to unrelated companies or customers.

There are some gaps in the coverage of the AT, which made it unsuitable as a regulatory basis for the liberalization of "basic" telecommunications.[40] The Reference Paper used in the NGBT and GBT contains heavier commitments as regards "major suppliers", notably on interconnection (points of interconnection, timeliness, cost-oriented rates, unbundling); at the same time, the AT's scope is not limited to "major suppliers" and its obligations are also couched in more general terms ("access to and use of" networks and services).[40a]

[35] AT, ¶ 4.
[36] AT, ¶ 5.(g).
[37] AT, par. 5.(b).
[38] AT, par. 5.(c).
[39] Especially when compared to the "closed user group" notion used in the EC to delineate private and public voice telephony ahead of full liberalization: *see* the definition of "voice telephony" in Directive 90/388 of June 28, 1990 [1990] OJ L 192/10, as amended. This definition and the correlated notion of "closed user group" are explained in detail in European Commission, Communication on the status and implementation of Directive 90/388 on competition in the markets for telecommunications services [1995] OJ C 275/2 at 4–8. The definition of "intra-corporate communications" at paragraph 3.(d) of the AT in fact closely corresponds to the concept of "corporate networks" once defended by Germany as a correct implementation of Directive 90/388 and found by the Commission in this Communication at 7–8, 16 to be too narrow and unduly limitative of the scope of liberalized services.
[40] *See* the testimony of Jeffrey M. Lang, the head of the U.S. delegation to the NGBT and GBT, before the U.S. Congress (May 9, 1996).
[40a] *Telmex* Report, ¶ 7.331–7.332.

3. Commitments in the Fourth Protocol

The NGBT and GBT negotiations were aimed at specific commitments in the field of basic telecommunications. The Annex depicts a "model schedule" after the entry into force of the Fourth Protocol.

(a) Market Access and National Treatment Commitments.[41] Fifty-five schedules of specific commitments were attached to the Fourth Protocol, accounting for 69 countries, with the EC and its Member States presenting a single schedule. From these 55 schedules:[42]

— Forty-seven schedules (for 61 countries) contained commitments to liberalize at least partially the provision of voice telephony. Two countries only committed to liberalize voice services to closed user groups. International voice services were liberalized in 42 schedules (56 countries), national long-distance services in 37 schedules (41 countries), and local services in 41 schedules (55 countries). A large number of commitments (for 25 countries), were phased in after the entry into force of the Fourth Protocol: for instance Spain (December 1998), Ireland, Portugal, Argentina and Singapore (2000), and Greece (2003);
— Forty-nine schedules (63 countries) included commitments on data transmission services, 41 schedules (55 countries) on leased lines, 46 schedules (60 countries) on cellular/mobile telephony services, 45 schedules (59 countries) on other types of mobile services (mobile data, paging), 37 schedules (51 countries) on mobile satellite services or transport capacity and 36 schedules (50 countries) on fixed satellite services or transport capacity.

OECD Members, with the exception of Switzerland and Turkey, liberalized all of the services mentioned above.

One of the key objectives of the United States in this round of discussions was to obtain commitments from WTO Members on foreign investment in local telecommunications services providers. Of the 55 schedules annexed to the Fourth Protocol, 42 (covering 56 countries) contained a commitment to permit foreign ownership or control of all telecommunications services and facilities. According to the U.S. Trade Representative, these 56 countries account for 97 percent of the total basic telecommunications services revenue of WTO Members.[43]

Nonetheless, certain significant WTO Members retained a foreign investment limit, notably India, South Africa, Turkey and many of the "Asian tigers" (Indonesia, Malaysia, the Philippines and Thailand). Others left foreign investment limits on certain services, including important players such as Brazil, Canada, France, Israel, Mexico and Portugal. Moreover, certain countries retained limits on foreign participation in the local incumbent TO, including Australia, Japan and New Zealand.

A number of issues arose with respect to the scheduling of commitments. First, there was discussion on whether to differentiate according to whether competition would take place only at the services level (or resale) or also at the infrastructure level

[41] *See also* the analysis made by William J. Drake and Eli Noam, *Assessing the WTO Agreement on Basic Telecommunications*, in UNFINISHED BUSINESS: TELECOMMUNICATIONS AFTER THE URUGUAY ROUND 27, at 41–4 (Gary C. Hufbauer and Erika Wada eds. 1997). A few representative individual schedules are analysed by Isabelle Gavannon, *International Telecommunications Trade: A Progressive Liberalization* INT'L BUS. L.J. 711 (1997).

[42] The numbers given below are taken from an unofficial compilation prepared by the WTO Secretariat.

[43] *Annex to the Statement of Ambassador Charlene Barshefsky on Basic Telecom Negotiations* (February 15, 1997), available at <http://www.ustr.gov>.

("facilities-based competition"). The key issue is whether, and if so how much, control should be retained over the construction of infrastructure. Many countries—especially developed ones—have a well-established telecommunications infrastructure. Since it is not necessary to construct a parallel infrastructure everywhere, competition could have been limited to resale only (although creating resale opportunities always require extensive regulation). On the other hand, certain countries—mostly developing ones—wanted to promote the expansion of their telecommunications infrastructure and were only inclined to allow facilities-based competition. Ultimately, it was agreed in the GBT that market access commitments would extend both to facilities-based and resale competition.[43a]

Second, many countries participating in the telecommunications negotiations conditioned their market access offers on the availability of frequencies. This could be seen as a factual statement reflecting the scarcity of a natural resource, or a broad reservation that allowed national or political preferences and thereby undermined market access commitments. To avoid any misunderstanding, it was indicated that frequency availability ought not be mentioned in the market access commitments, since it is covered by the general GATS framework for domestic regulation.[44]

Finally, the privatization of State-owned enterprises is a matter that falls outside the purview of the GATS.[45] Accordingly, neither the GATS nor the Fourth Protocol contained any provision on the privatization of State-owned TOs. Hence, even if many States made commitments to open their markets to foreign investment, a local TO may remain beyond the reach of a foreign investor as long as the State does not decide to privatize it. A State remains free not to privatize a State-owned local TO fully, so in practice foreign participation in the local TO can be limited.

Since the conclusion of the Fourth Protocol and up to the date of writing, five signatories (Guatemala, Morocco, Pakistan, Switzerland and Venezuela) have improved their commitments. Six WTO Members (Barbados, Cyprus, Egypt, Kenya, Suriname and Uganda) made commitments on basic telecommunications for the first time. Furthermore, fifteen new WTO members (Albania, Armenia, China, Croatia, Estonia, Georgia, Jordan, the Kyrgyz Republic, Latvia, Lithuania, Macedonia Moldova, Nepal, Oman and Taiwan) have made commitments on basic telecommunications in the course of their initial schedule of specific commitments.

(b) Additional Commitments on Regulatory Principles: The Reference Paper. The most remarkable feature of the Fourth Protocol is undoubtedly that almost all participating countries (but for Ecuador and Tunisia) agreed to enter into additional commitments concerning regulatory principles to be applied in the telecommunications sector. These principles are derived from a brief Reference Paper ("RP"),[46] which was prepared by a group of countries in the run-up to the April 1996 deadline. Some countries (Bolivia, India, Malaysia, Morocco, Pakistan, the Philippines, Turkey and Venezuela) did not

[43a] As noted in the *Telmex* Report, ¶ 7.55–7.68, a member must expressly indicate in its schedule if its commitments are limited to facilities-based or non-facilities based (resale) supply only.

[44] Art. VI GATS. *See Chairman's Note on Market Access Limitations on Spectrum Availability*, S/GBT/W/3 (February 3, 1997).

[45] Rachel Frid, *The Telecommunications Pact Under the GATS—Another Step Towards the Rule of Law,* 24(2) LEGAL ISSUES OF ECONOMIC INTEGRATION 67, 80 (1997).

[46] The Reference Paper was circulated by the WTO together with the results of the GBT. Like many other documents discussed here, it can be found at http://www.wto.org. It is reproduced in Appendix B to this chapter.

adopt the whole of the Reference Paper, while others (Bangladesh, Brazil, Mauritius and Thailand) have agreed to follow it at a later point in time.

The purpose of the RP is twofold: to provide the requisite safeguards in domestic law for market access and foreign investment commitments to be truly effective, and to anchor these safeguards in the WTO system and hence make failure to implement them challengeable under the WTO Dispute Settlement Understanding.

As noted in the introduction, until recently the telecommunications sector in most countries operated under a legal monopoly regime whereby one or a few operators held the exclusive right to provide telecommunications services. Whenever liberalization occurs, the former monopoly operator is by definition almost always the dominant player on the market. It is in many ways advantaged, if only because its network is already in place and it has a strong customer base. Usually, it also wields more political clout than any entrant, although this often means that it will be burdened with certain obligations that it would not otherwise have incurred based on free market principles (whether they are called universal service obligations or otherwise). The RP contains a core of principles designed to ensure that the advantages of the former monopoly operator are not used to the detriment of new entrants on the telecommunications markets.

The RP has quite recently been interpreted for the first time in the *Telmex* Report, issued in April 2004. The US alleged that Mexican international telecommunications policy infringed WTO law in three respects:

(i) Mexico failed to ensure that the tariffs of Telmex, the incumbent operator, for terminating international communications in Mexico were cost-oriented, thereby breaching its commitment under the RP to ensure "cost-oriented rates" for interconnection;[46a]
(ii) Mexico forced Telmex to negotiate such termination tariffs for all other operators and imposed a "proportionate return" system on incoming traffic, thereby failing to prevent anti-competitive practices, in contravention of the RP;[46b] and
(iii) Mexico failed to ensure access and use of its public networks and services on reasonable and non-discriminatory terms and conditions, contrary to the AT.[46c]

The analysis below will refer to salient findings in this report.

(i) Legal nature The RP could be characterized as a policy document, a common framework during the negotiations leading up to the 1997 agreement guiding the parties' individual commitments. As such, parties were free to deviate from the RP, to select particular issues from it and to rephrase certain obligations in their individual Schedules.[47] While most WTO Members participating in the Telecommunications Agreement ultimately agreed to follow the RP, a number of them did make slight or more important modifications when formulating their additional commitments.[48] Accordingly, the starting point of a legal analysis of a WTO Member's additional commitments is the language

[46a] RP, ¶ 2.2.b).
[46b] RP, ¶ 1. "Proportionate return" is discussed in greater detail *infra*, notes 217–218 and accompanying text.

[47] *See* Lee Tuthill, *The GATS and New Rules for Regulators,* 21 TELECOMMUNICATIONS POLICY 783, 786 (1997).
[48] For a fascinating overview of how a number of Asian countries, some without any developed system of competition law, have implemented the Reference Paper in varying ways, *see* Ted Ringrose, *The Impact on Asian Telecommunications Markets*, in TRADE AND TELECOMS 103, 106–108 (Mark Clough ed. 2001).

each country has used when incorporating the RP in its own GATS Schedule. For ease of reference, and given that many WTO Member States did incorporate the RP more or less verbatim in their schedules of commitments, the following analysis discusses the RP rather than individual country schedules.

(ii) Scope As indicated in the heading "Scope", the RP applies to basic telecommunications services. This is probably a consequence of the mandate of the NGBT and GBT. As already noted, the distinction between basic and enhanced or value-added services does not serve much purpose in the GATS context. On its face, the RP could apply just as well to all telecommunications services, however characterized. It makes almost no practical difference that the *obligations arising* under the RP are only imposed on suppliers of basic services, since the markets for value-added or enhanced services are usually competitive. On the other hand, there is no reason why providers of all types of telecommunications services should not benefit from the *rights* that will be granted to suppliers when WTO Members implement the RP.

The RP is divided into six headings. The first two (competitive safeguards and interconnection) apply to the regulation of "major suppliers", while the last four (universal service, licensing, independence of the regulator and allocation of resources) deal with general regulatory issues.

(iii) The regulation of "major suppliers" The first two headings of the RP concern "major suppliers" of telecommunications services within a given country. The RP defines a "major supplier" as one: (1) with a power "materially [to] affect the terms of participation (having regard to price and supply)"; (2) flowing from one of two alternative situations, namely control over essential facilities *or* the position on the market; and (3) in the relevant market for basic telecommunications services. Each of these elements is examined in turn.

(1) The precise nature of the power to affect the terms of participation in the market is not clear. On its face, it would appear to mean quite a radical influence on the market, namely the power to exclude or control the participation of market actors. The RP is therefore concerned with suppliers that have a particularly strong position on the market. This may or may not correspond with the definition of dominance or monopoly power in the domestic competition laws of individual signatories of the RP.[49]

(2) In order for a supplier to qualify as a major supplier, the power mentioned above must come from control over essential facilities *or* a position on the market. The introduction of "essential facilities" as an alternative criterion is noteworthy. Elsewhere, the so-called "doctrine of essential facilities" has generally been presented as a special case of a dominant or monopoly position, an approach that is not without its share of problems.[50] In this respect, the RP

[49] The ECJ, for instance, in its judgment of 9 November 1983, Case 322/81, *Michelin* v. *Commission* [1983] ECR 3461 defined a dominant position as the possibility "to prevent effective competition from being maintained and behave to an appreciable extent independently of its competitors and customers and consumers." In the *Telmex* Report, ¶ 7.153–7.155, the issue is left open, since in view of the fact that Telmex was legally required to negotiate the terms of termination of international calls into Mexico on behalf of all terminating carriers in Mexico, it "patently" had the ability to materially affect the terms of participation in the market.

[50] For a discussion of the doctrine in the main jurisdictions where it has been used, *see* Sally Van Siclen, *Background Note* in OECD, THE ESSENTIAL FACILITIES CONCEPT, COMPETITION POLICY ROUNDTABLES NO. 5,

acknowledges that control over facilities must be seen as a problem analytically separate from that of large market positions (since they can be evidenced by a high share of a relevant market).

The RP defines essential facilities as the parts of a public telecommunications transport network or service (a) that are exclusively or predominantly provided by one or a few suppliers, *and* (b) for which there is no economically or technically feasible substitute. Condition (a) is worded somewhat loosely in that a facility could be deemed essential even if it were provided on a competitive basis by a few suppliers. Condition (b) seems to echo the widespread view that an especially high level of non-substitutability must be shown to establish that a facility is essential.[51] Nevertheless, it is open to question whether the "essential facilities doctrine" as formulated in the RP, has the same meaning as in competition law.[52] Indeed, while under a normal competition law approach the burden of proving "essentiality" is quite high, the RP is part of the GATS commitments, which are meant to enable market access. It could be that a lower threshold (*i.e.*, a facility economically and technically necessary for a newcomer from another country to access the market) would suffice to conclude that a firm controls an essential facility for the purposes of the RP.

(3) The use of "relevant market" must be taken as a reference to competition law where this concept is well known.[53a] The wording of the RP does not require that the major supplier itself be active on the relevant market; it can very well exert the power in question from an upstream, downstream or neighboring market.[53] It may seem in theory that a major supplier would have no incentive to use such a disciplinary power were it not itself active on the relevant market or intent on being so, and that accordingly there should be no competition or regulatory concern if the major supplier is not active on the relevant market. In practice, given the difficulties that have surrounded market definition in the telecommunications sector, at least in Europe,[54] it is more convenient not to burden the inquiry further by requiring that the major supplier also be present on the relevant market.

While the definition of a "major supplier" in the RP is framed in relatively indeterminate terms, the WTO panel in the *Telmex* case had no trouble finding that the incumbent telecoms company Telmex was a "major supplier".[54a]

OCDE/GD(96)113, at 7–10. *See also* John Temple Lang, *Defining Legitimate Competition: Companies' Duties to Supply Competitors and Access to Essential Facilities*, 18 FORDHAM INT'L L.J. 437 (1994) and LAROUCHE, *supra* note 21, at 165–217.

[51] *See* Van Siclen, supra note 50, at 12. For the EC, *see* ECJ, 26 November 1998, Case C-7/97, *Oscar Bronner GmbH & Co KG* v. *Mediaprint Zeitungs- und Zeitschriftenverlag GmbH & Co KG* [1998] ECR I-7791.

[52] *See* Marco C.E.J. Bronckers, *The WTO Reference Paper on Telecommunications: A Model for WTO Competition Law?*, in NEW DIRECTIONS IN INTERNATIONAL ECONOMIC LAW 371, 385–386 (Bronckers and Quick eds. 2000).

[53a] Indeed this is how the RP is construed in the *Telmex* Report, ¶ 7.152. The panel defined the relevant market as "termination of telecommunications services—voice, switched data and fax—in Mexico".

[53] Giving rise to the same type of situation as was considered by the ECJ, November 14, 1996, Case C-333/94, *Tetra Pak* v. *Commission*, [1996] ECR I-5951.

[54] *See* Pierre Larouche, *Relevant Market Definition in Network Industries*, 1 JOURNAL OF NETWORK INDUSTRIES 407 (2000).

[54a] *Telmex* Report, ¶ 7.146–7.159. Later on, the panel also found that Telmex and all the other Mexican gateway operators *together* constituted a "major supplier": ¶ 7.228.

(iv) Competitive safeguards As a general principle, the RP contains a commitment to enact appropriate measures to prevent anti-competitive practices by major suppliers.[55] In the specific case of service providers holding a monopoly or exclusive/special rights, the obligations of the RP complement those of the GATS.[56] To the extent that anti-competitive practices are not defined but for the specific examples given in the RP, it would appear that WTO Members could meet their commitment to enact appropriate measures either through the application of general competition law, or in the absence thereof, through a specific regulatory provision for the telecommunications sector whereby a set of defined practices is forbidden.[56a]

The RP lists three examples of anti-competitive practices: (1) cross-subsidization, (2) use of information obtained from competitors, and (3) withholding technical and commercial information.[57]

(1) Cross-subsidization is not defined, but for the qualification "anti-competitive". Generally, cross-subsidization consists in the use of profits derived from one area of operations in order to finance another (presumably loss-making) area. It is a common business practice. It can become anti-competitive when the operations in the profit-making area are conducted pursuant to exclusive or special rights or when the major supplier in question holds a dominant position in the profit-making area. As experience in the EU shows, it can be quite difficult to translate a complaint about unfair or "cross-subsidized" prices into violations of general competition law.[58] If cross-subsidization is to be prevented, an appropriate regulatory framework must be developed. In order to be able to monitor whether any cross-subsidization occurs, one of the first regulatory elements required is that the major supplier in question implement an appropriate accounting system, with regular reporting and disclosure requirements.[59] Given the size and service portfolios of large telecommunications companies, it is otherwise almost impossible to prove that cross-subsidization

[55a] RP, par. 1.1.

[56a] GATS, Article VIII.

[56a] Note that the panel in the *Telmex* Report left open whether a country's competition laws could qualify as "appropriate measures" within the meaning of the RP. The panel did not consider it necessary to examine this issue, as Mexico had not claimed that its general competition laws were applicable to Telmex' disputed conduct: see ¶ 7.266. Yet the panel did have occasion to highlight an instance where a country's competition laws might not be considered an "appropriate measure". This would be the case where a country's competition laws would tolerate the "anticompetitive practices of a "major supplier" on the grounds that the contested behaviour of this supplier was mandated by governmental regulation. See, *infra* notes 60e–60g and accompanying text on Mexico's appeal to the "sovereign compulsion defense".

[59] *See* the requirements imposed in Directive 97/33 (ONP-Interconnection) of June 30, 1997 [1997] OJ L 199/32, Art. 7(5) and Annex V (now replaced by Directive 2002/19 (Access Directive) of 7 March 2002 [2002] OJ L 108/7, Art. 13(3) and (4)). In a further step, in case of persistent problems, accounting or even structural (legal) separation might be required, as was done in the EC, under certain circumstances, for firms holding both telecommunications and cable TV networks in Directive 1999/64 of June 23, 1999 [1999] OJ L 175/39, amending Directive 90/388, *supra* note 39 (now Directive 2002/77 of September 16, 2002 [2002] OJ L 249/21, Art. 8). *See also* Frid, *supra* note 45, at 84–5.

has occurred. Furthermore, some cost-allocation key must be found, a very thorny issue as mentioned below in relation to interconnection. The RP is silent on these regulatory issues, which leads one to doubt the effectiveness of the general commitment to prevent cross-subsidization.

(2) TOs typically operate at many levels in the telecommunications sector. They will, for instance, both supply leased lines to data communications providers in order to enable them to complete their network, and at the same time offer data communications in competition with those providers. In such a case, in the course of supplying leased lines to its competitor, a TO is likely to obtain information from the competitor which is often precise enough to identify the customers of the competitor or to guess the intentions of a competitor. If that information is relayed to the retail division of the TO, it can be used for anti-competitive purposes (although the RP does not specify what "anti-competitive purposes" means).[60] Here as well, structural measures, such as the legal separation of business divisions operating in different markets may be necessary, although the RP does not mention this point.

(3) Since the RP defines anti-competitive practices in absolute terms (by giving examples) and not in terms of non-discrimination, it would appear from the text of the RP that a major supplier could be forced to disclose technical and commercial information to third parties that want to provide a certain service, even if neither the major supplier nor any other party is already providing that service. Such far-reaching consequences, if they were intended, can only be explained by the high degree of market power of the "major suppliers" within the meaning of the RP.

While appreciating the many questions raised by the competitive safeguards included in the RP, one should not underestimate the capacity of WTO panels and the Appellate Body to provide answers. For instance, in the *Telmex* Report, the WTO panel found that the three practices listed in the RP are merely examples, and that term "anti-competitive practices" also includes other practices, in particular horizontal practices related to price-fixing and market-sharing agreements.[60a] The panel reached this conclusion in the light of the ordinary meaning of the term anti-competitive practices as found in dictionaries, the use of this term in the competition legislation of WTO Members, related provisions of international instruments concerning competition policy, as well as the object and purpose of the RP.[60b]

[60] The risks for competition associated with the movement of confidential information amongst divisions and subsidiaries was a major concern of the U.S. Department of Justice in *U.S.v. MCI*, Civil Action 94.1317, Consent Decree filed on June 15, 1994, and *U.S.v. Sprint Corporation*, Civil Action 95.1304, Consent Decree filed on July 13, 1995. In these two cases, stringent requirements were imposed in this respect.

[60a] *Telmex* Report, ¶ 7.232.

[60b] See *Telmex* Report, ¶ 7.230, 7.235–7.237. Here as well, much as it did for the definition of "major supplier", the panel turns to competition law to construe the terms of the RP that appear to originate from it. In the absence of any WTO or other international agreement on competition law, the panel looks into domestic laws (especially those of the US and the EU) and non-binding international instruments (such as those of the OECD). Yet the reference to the Havana Charter (predecessor to the GATT and the WTO) at ¶ 7.236 appears politically somewhat insensitive. After all, the Havana Charter was never ratified, following US opposition in the early 1950s. The Charter's competition law chapter reportedly went too far for American business. Now the Charter is used to lend support to a US complaint about anticompetitive practices in another country. See *infra* note 97 and accompanying text.

We believe that the panel conclusions are persuasive. Price-fixing and market-sharing arrangements are considered hard-core violations of competition laws around the world; leaving them outside of the scope of "anti-competitive practices" would have curtailed the RP's impact considerably.[60c] It would have transformed the RP's examples of anti-competitive practices into three isolated instances.

The panel found that the two elements of Mexican telecommunications policy at issue did constitute anti-competitive practices. The requirement that Telmex negotiate termination rates for international traffic on behalf of all its competitors on that market amounted to price-fixing, while the "proportionate return" policy amounted to market-sharing.[60d]

The panel then endorsed the US complaint that Mexico maintained measures that *require* Mexican telecommunications operators to participate in these anti-competitive practices. In so doing, the panel adroitly countered a clever Mexican appeal to the so-called "sovereign compulsion defense" in many competition laws. Pursuant to this defense, a firm can defend itself by showing that its allegedly anti-competitive conduct was in fact mandated by legislation.[60e] Mexico argued that since its laws required Telmex and its competitors to engage in otherwise anti-competitive practices, these practices fell outside the scope of the RP. [60f] The panel answered that the GATS obligations, including the RP, were designed to limit the regulatory powers of the WTO Members. A WTO Member cannot hide behind its domestic law in order to erode unilaterally its international commitment to prevent major suppliers from continuing anticompetitive practices.[60g]

However sensible and convincing, the panel's reasoning is geared to fit an unusual set of facts. One might recall at the outset that the RP provisions at stake are concerned with "major suppliers"; in competition law terms, their scope extends to "dominance" issues. The anti-competitive practices in question (price-fixing and market-sharing), however, pertain more to the "cartel" or "collusion" side of competition law. As regards dominance, the pricing of a dominant firm should become an issue only if it is excessive or predatory; similarly, any measures designed to enforce a certain market share should be problematic only if exclusionary. Yet the panel did not find that the high level of Telmex's termination rates as such constituted an anti-competitive practice from a dominant firm (or "major supplier").[60h] Elsewhere in the report, the panel faulted the high rates on the basis of a regulatory concept specific to the RP, holding that these rates were not

[60c] In criticizing the panel report, Marsden makes much of the fact that the RP's drafters did not mention cartels in the RP as an anti-competitive practice. From this omission, and the WTO membership's general reluctance to include binding competition law commitments in the WTO, he deduces that the panel should have left cartels outside the scope of the RP: see Marsden, *WTO Decides its First Competition Case, With Disappointing Results*, 16 Competition Law Insight 3, 8 (No. 16, May 2004). We find Marsden's *a contrario* reasoning unconvincing. In addition, the text of Mexico's RP indicates that the three examples listed of anticompetitive practices are not exhaustive.

[60d] See *Telmex* Report, ¶ 7.257–7.264.

[60e] *Id*., ¶ 7.244.

[60f] Interestingly enough, the EC supported this Mexican argument: *ibid*., ¶ 7.241.

[60g] *Id*., ¶ 7.244.

[60h] The panel did find, without much explanation, that Telmex and its competitors together formed a "major supplier": ibid. ¶ 7.228. However, there is no indication in the report of a "collective dominant position" or anything similar, based on a study of the characteristics of the market. See for instance, CFI, 6 June 2002, Case T-342/99, *Airtours* v. *Commission* [2002] ECR II-2585 for an illustration of the intricacies involved in showing that a number of firms collectively hold a dominant position.

"cost-oriented".[60i] But in finding that Telmex had engaged in "anti-competitive practices", the panel focused on the collusive or cartel-like nature of Telmex behaviour, i.e. price-fixing and market-sharing, which was required by Mexican legislation. The panel recognized that the Mexican measures are "exceptional"[60j] and cannot justify a "sovereign compulsion defence". Indeed the panel's findings do not reveal much about how a future WTO panel might deal with rather more typical "dominance" issues involving "major suppliers". Furthermore, whether State regulation making a certain tariff compulsory—as opposed to explicitly ordering one firm to fix prices for the whole market—would also fall foul of the RP is still debatable.

(v) Interconnection The provisions on interconnection constitute another key part of the RP. In large part, they also seek to prevent anti-competitive behavior by a major supplier, and they are accordingly closely linked to the provisions discussed above. Interconnection is defined as the "linking with suppliers providing public telecommunications transport networks or services in order to allow the users of one supplier to communicate with users of another supplier and to access services provided by another supplier".[61]

This definition closely resembles the standard U.S. and EC definitions. In the United States, interconnection is defined as the "physical linking of two networks for the mutual exchange of traffic",[62] while in the EC, it is the "physical and logical linking of public communications networks used by the same or a different undertaking in order to allow the users of one undertaking to communicate with users of the same of another undertaking, or to access services provided by another undertaking".[63] In contrast to customer access, interconnection is granted between telecommunication service providers. It occurs not at network termination points, but rather at more central points of the network,[64] and it offers a quite different and more extensive range of possibilities (such as calls between users of both networks).

In the *Telmex* Report, the panel elaborated at some length on the meaning of interconnection in the RP, as Mexico had argued that this term did not cover the cross-border supply of telecommunications services. The panel rejected this argument and found that international interconnection was included in the substantive scope of the RP.[64a]

The RP enumerates the parameters of the obligation to ensure interconnection, namely:[65]

- Interconnection must be made at any technically feasible point.
- The terms, conditions and rates must be "non-discriminatory", and the quality of interconnection, "no less favorable" than that provided to subsidiaries, affiliates or third parties.[66]

[60i] See *infra*, note 70a–70b and accompanying text.

[63] Directive 2002/19, *supra* note 59, Article 2(b). The *Telmex* panel relied on the EC definition to construe the RP: *Telmex* Report, ¶ 7.111
[64] For instance directly to a local switch.
[64a] *Telmex* Report, ¶ 7.96–7.143.
[65] RP, ¶ 2.2.
[66] *See* MARK NAFTEL AND LAWRENCE J. SPIVAK, THE TELECOMS TRADE WAR 111 (2000). It is interesting to note (*See also* Miriam Gonzalez Durantes, *The European Perspective*, in TRADE AND TELECOMS 51, 66

- Interconnection must be provided in a timely fashion.
- The rates must be cost-oriented (and not necessarily cost-based). Both at the national and international level, cost-orientation has proven to be a most difficult issue. While as a principle it looks very reasonable on paper, its application is rife with practical difficulties.[67] Since telecommunications firms are typically multi-service firms with a high level of common costs, cost allocation plays a central role.[68] There is a wide choice of theoretically acceptable formulae, including fully-distributed costs ("FDC"), long-run incremental costs (historic or forward-looking, the famous "FL-LRIC" standard) or stand-alone costs ("SAC"). In the case of interconnection between fixed networks, FL-LRIC has tended to prevail in national laws,[69] but even so at a practical level its implementation is rarely ever uncontroversial. The RP does not indicate anything beyond the general cost-orientation principle.[70] In *Telmex*, the panel found, on the basis of a survey of ITU Recommendations and domestic laws and regulations, that "cost-oriented" under the RP should be assessed on a long-run incremental cost (LRIC) basis, allowing for a reasonable rate of return.[70a] Since Mexico did not provide any cost data on Telmex itself, the panel relied on the four different methods put forward by the United States to show that Telmex could not be charging cost-oriented rates, and found that Mexico was in breach of its commitments under the RP.[70b]
- The terms, conditions and rates must be transparent and reasonable, having regard to economic feasibility;
- There must be "sufficient" unbundling, so that there is no need to "pay for network components or facilities" that are not required. Similar provisions are found in the U.S. Telecommunications Act of 1996[71] and EC Directive 2002/19.[72] Such

(Mark Clough ed. 2001)) that the EC introduced a footnote to the Reference Paper in its commitments on this point, stating that "different terms, conditions and rates may be set in the Community for operators in different market segments, on the basis of non-discriminatory and transparent national licensing provisions, where such differences can be objectively justified because these services are not considered 'like services"'. Another footnote just before goes in the same direction. These reservations echo the substance of Directive 97/33, *supra* note 59, Art. 7(3) (now superseded by Directive 2002/19, without any equivalent provision). For an analysis of the practical consequences of this apparently uncontroversial statement, *See* LAROUCHE, *supra* note 21, at 76–85.

[67] *See* the overview of costing issues in telecommunications in LAROUCHE, supra note 66, at 239–46.

[68] Unless one decides to ignore or avoid common cost allocation difficulties and allow pricing at marginal cost or according to the Efficient Component Pricing Rule ("ECPR"). *Id*.

[69] *Id*. at 244. In other contexts, *e.g*., cross-subsidization within a firm, other standards, such as FDC, might appear more appropriate, potentially leading to contradictions: for instance, interconnection could be priced according to FDC internally in order to avoid cross-subsidization, but at FL-LRIC towards third parties in order to encourage entry on the market. In that case, there is a contradiction if the party giving interconnection is otherwise under a non-discrimination obligation as between its own subsidiary and third-party competitors of that subsidiary.

[70] *See* James Ibbetson, *World Trade Organization and Basic Telecommunications Services*, in TRADE AND TELECOMS 31, 48 (Mark Clough ed. 2001).

[70a] *Telmex* Report, ¶ 7.166–7.185. Whereas elsewhere the panel referred to domestic competition laws to construe terms with a clear competition law lineage, here the panel turned to the ITU, as well as domestic telecommunications regulation, for the interpretation of terms which pertain more to the regulatory than the competition law arena.

[70b] Ibid., ¶ 7.186–7.216. These involved comparisons with: domestic Mexican rates for comparable services,"grey market" prices between the US and Mexico, rates on other international routes and rates used between Mexican operators under the "proportionate return" system.

[71] *Telecommunications Act of 1996*, *supra* note 10, 47 U.S.C. §251(c)(3).

[72] Directive 2002/19, *supra*,note 59, at Art. 9(2), formerly in Directive 97/33, *supra* note 63, at Art. 7(4).

provisions are difficult to apply unless the regulatory authority intervenes to provide a classification of network components in order to make the obligation more concrete.[73] The RP does not contain any provisions on this subject. A related question is whether the provisions of the RP imply an obligation to unbundle the local loop.[74] If the experience of the EC can be taken as a guide, access to an unbundled local loop does not truly qualify as interconnection (given that the local loop does not as such constitute a network, but rather a single component thereof). A more specific legal instrument is needed to cover such a case.[75]

- Interconnection must also be provided upon request at points other than those provided to the majority of users, subject to charges for additional facilities.

Unless otherwise noted above, the parameters contained in the RP broadly follow the regulatory framework in place in the United States and the EC, although the RP does not contain much detail.

The RP contains provisions on transparency.[76] Even though the RP imposes a general duty of non-discrimination and the public availability of interconnection agreements or standard offers,[77] some negotiation would still be needed for newcomers to obtain interconnection agreements (with prolonged discussions as to what terms and conditions are non-discriminatory). The RP does not go as far as the U.S. Telecommunications Act of 1996, which forces local exchange carriers to offer to other telecommunications carriers the same terms and conditions as those offered under existing interconnection agreements.[78] The RP also requires the creation of dispute settlement mechanisms in case of disagreement with a major supplier on the terms, conditions and rates for interconnection.[79]

(vi) Universal service The RP does not provide any definition or parameters for universal service, expressly leaving this question to each WTO Member. Parties to the Fourth Protocol do, however, agree that their rules on universal service will be transparent, non-discriminatory, competitively neutral and not unduly burdensome.

The application of universal service schemes has also given rise to some friction at the international level. In the EC, Member States must include a specific set of services in the universal service obligations that they impose on one or more service providers.[80]

[73] In the United States, this was done by the FCC in the Local Competition Order, *supra* note 62, at ¶ 97–409. However, in *AT&T Corp*. v. *Iowa Utilities Board* 525 U.S. 366 (1999), the Supreme Court found that the FCC was mistaken on that issue and had put the incumbents under too heavy an unbundling obligation. Later on, in a Third Report and Order in the Local Competition proceeding, FCC 99–238 (November 5, 1999), the FCC went back on its first order. Subsequently, the courts quashed that order again (*United States Telecom Ass'n* v. FCC, 290 F.3d 415 (D.C. Cir. 2002). A third attempt by the FCC (Report and Order and Order on Remand and Further Notice of Proposed Rulemaking, 18 FCC Rcd 16978 (2003)) was also quashed (*United States Telecom Ass'n* v. *FCC*, 359 F.3d 554 (D.C. Cir. 2004)) and the matter is now pending before the FCC once more.

[80] Directive 2002/22 of March 7, 2002 [2002] OJ L 108/51, Art. 3–7, replacing Directive 98/10 of February 26, 1998 [1998] OJ L 101/24, Art. 5–8. These are access to the PSTN, directory services, public payphones and specific measures for disabled users.

Member States may then set up a cost recovery mechanism for the extra costs associated with universal service, in the form of an industry fund.[81] These costs are to be recovered from the other providers of public networks and services in the country in question (therefore excluding international operators merely delivering traffic for termination).[82] The U.S. approach to universal service, in contrast, provides for a larger class of services that can be funded via a universal service mechanism. Moreover, that mechanism consists of a supplementary charge on access to local networks.[83] This charge is due irrespective of where the other end of the call is, *i.e.*, international operators must also pay it when they access local networks to terminate international calls. In other words, foreign telecommunications operators (and their customers) are contributing to universal service in the United States. The EC has voiced its dissatisfaction with this aspect of U.S. telecommunications law.[84]

(vii) Licensing The RP contains commitments on the public availability of licensing criteria, time periods required to decide on a license application and terms and conditions of individual licenses.[85] Reasons are to be given when licenses are denied. The provisions in the RP concerning licensing are limited, and some major issues are not addressed:

- The RP does not attempt to define the situations in which a license can be required, nor does it outline the terms and conditions that should or should not be found in a license. Licensing can become a substantial barrier to cross-border trade, since a service provider can be subject to fairly different (and sometimes incompatible) licensing conditions from one country to the other, even if each country applies an even-handed licensing process. Moreover, when the scope of activities for which a license is required is defined broadly and the time period for issue of a license is relatively long, new market entrants are penalized by having to wait while the incumbent catches up. The RP does not address these issues. The GATS general proportionality rule could, however, perhaps be used to keep disproportionate licensing requirements in check.[86] Conceivably, the provisions of the AT dealing with permissible conditions on access and use, though not dealing with licensing conditions, could be used to supplement the proportionality principle in this respect.[87]
- There is no provision for the mutual recognition of licenses in the RP. The GATS merely encourages the mutual recognition of licenses, while it does contain a non-discrimination obligation.[88] In the telecommunications sector in particular, it is very important to be able to operate globally, *i.e.*, at both the international

[88] GATS, Art. VII.

and domestic levels. A regional operator wanting to serve the Mercosur area, for instance, would likely have to obtain licenses from each and every country. It is however understandable that the RP does not touch upon this issue, since even within the EU, agreement on the mutual recognition of telecommunications licenses has proven elusive. At the same time, the EC has now put in place a mutual recognition regime for electronic commerce services, which shows that mistrust amongst countries in this area is not insurmountable.[89]

- The RP only contains an obligation to provide reasons when a license is denied, but not in cases when a license is granted with conditions that the applicant may not desire.

(viii) Independence of the regulatory authority Pursuant to the RP, signatories to the Fourth Protocol are bound to guarantee the separation of the regulatory authority from any supplier of basic telecommunications services, as well as the regulatory authority's impartiality.[90] There is however no provision in the RP analogous to the requirement in EC law that, when the TO is state-owned or state-controlled, the regulatory authority should also be structurally separated from the government department that exercises ownership and control functions over the TO.[91] Indeed, when the local TO is State-owned but autonomous, two sometimes distinct sets of interests may conflict with the regulatory authority: the interests of the TO itself as a business, and the interests of the government as the owner of the TO. Even if the regulatory authority is independent from the TO as a business, it can still conflict with the interests of the government as owner, for instance when privatization is taking place.

The RP is silent on some important issues as well, such as the circumstances in which recourse to an independent authority must exist (except in the case of interconnection disputes), or the standing requirements for foreign entities before the independent authority.

(ix) Allocation and use of scarce resources The RP includes commitments to allocate and use frequencies, numbers, rights of way and other scarce resources in an objective, timely, transparent and non-discriminatory manner, with a reservation for national security interests applicable to the secrecy of certain frequency allocations.

(x) Overall assessment Some observers believe that the most important achievement of the Fourth Protocol lies in the RP.[92] While we believe that the immediate impact of the RP should not be overstated, this document does provide a breakthrough at the international level. The RP reflects recognition that monopolized sectors cannot be liberalized with the stroke of a pen. Additional commitments are needed, in terms of both regulatory supervision as well as competition law principles. It is admirable that the negotiators of the RP recognized this point. One also has to appreciate how difficult it was for the negotiators to achieve something meaningful in this regard, as they were forced to explore areas that had long been politically fenced off.

[89] Directive 2000/31 of 8 June 2000 on Electronic Commerce [2000] OJ L 178/1.

[92] *See* Drake and Noam, *supra* note 41, at 44–5, as well as NAFTEL AND SPIVAK, *supra* note 66, at 106–7.

As already noted, some of the RP's commitments concern licensing and other rules addressed to WTO governments, concerning for instance the way they allocate scarce resources like frequencies and telephone numbers. Since they are addressed to governments, these are commitments one would expect in a typical WTO Agreement. The RP also contains rules that effectively impose obligations on certain private entities, notably to open some of their production facilities (their public networks) to competitors from abroad. Reference is made to the so-called interconnection obligations. Moreover, WTO governments are supposed to take "appropriate measures" to prevent powerful suppliers of telecommunications services from engaging in "anti-competitive practices." The RP also gives examples of such practices.

It is highly unusual to find rules in the WTO that seek to govern private activities.[93] Indeed, the rules of the RP stand in marked contrast to the few provisions scattered throughout the WTO agreements where competition law is mentioned. Some of these provisions give WTO governments the authority to intervene if they believe that private entities are engaged in competition law violations.[94] Other provisions, notably in the GATS agreement, envisage that Members will consult each other about anti-competitive practices. However, none of these provisions forces governments to intervene or take action against private anti-competitive behavior.[95] The governments have discretion to do so. In contrast, the Reference Paper does envisage obligations for governments to prevent anti-competitive practices, which would in turn impose obligations for private parties (*i.e.*, the major suppliers of telecommunications services) as well. This is a significant innovation in the WTO package of agreements.

Indeed, the competition law principles found in the RP are the first competition laws ever introduced in the WTO.[96] This is the undoing of an old taboo. In the early 1950s, competition law was one of the factors that sank the genuine predecessor of the WTO, the International Trade Organization ("ITO"). It was the intention of the negotiators that the ITO would succeed the GATT and become the third international economic organization beside the IMF and the World Bank in the post-war UN-system. However, the Havana Charter was never even presented to the U.S. Congress for ratification because of the strong opposition there. The chapter on competition law in the ITO-Treaty was one of the major stumbling blocks, since—however modest—this chapter went too far for American business.[97] History repeats itself—in recent years the United States resisted

[93] Rare examples would be the Agreement on Government Procurement, and the Agreement on Pre-shipment Inspection, which cover both government and privately owned entities. *See* Chapter 23 of this book.

[94] *See* TRIPS, Art. 8, 31(c) and 40(2). These provisions are discussed in DANIEL GERVAIS, THE TRIPS AGREEMENT: DRAFTING HISTORY AND ANALYSIS (2d ed., 2003). *See also* Chapter 22 of this book.

[95] GATS, Art. IX. Pursuant to Art. VIII of the GATS, WTO Members must guard against abuses by monopoly service providers, yet the scope of this obligation would seem to be limited. It ties the prohibited behaviour of the private entity to the GATS prohibitions addressed to governments. This provision, therefore, prevents a government from shirking its GATS obligations through a transfer of responsibility for essentially governmental action to a private entity, which it controls by means of a governmental monopoly.

[96] Of interest as well is the fact that WTO Members have agreed to review before January 1, 2000 whether the limited WTO agreement relating to investment ought to be complemented by provisions on competition policy, as part of a general review of this Agreement: *SeeAgreement on Trade-Related Investment Measures,* Art. 9. This review was not completed by the agreed deadline, nor were there any relevant developments to report by the fall of 2002.

[97] *See* Bernard M. Hoekman and Petros C. Mavroidis*, Competition, Competition Policy and the GATT,* 17 WORLD ECONOMY 121, 137–139 (1994).

European proposals to negotiate a general agreement on competition law in the WTO. In November 2001, at the Ministerial Meeting in Doha, a decision was taken in principle to start negotiations on some form of competition law agreement in the WTO after the next ministerial meeting in Cancun.[98] However, the Cancun Ministerial Meeting ended in failure. The EU agreed to drop competition law from the relaunched negotiations in the summer of 2004. Nevertheless, at some point the Reference Paper, and its interpretations in WTO dispute settlement, may help to break the ice by opening this controversial subject to multilateral negotiations.

Meanwhile, there is a need for much clarification. Many of the RP's principles are formulated vaguely and/or are incomplete. There is no definition of basic terms such as "anti-competitive cross-subsidization", "anti-competitive results" and "non-discrimination". Nor is there a benchmark against which these terms are to be interpreted: is the goal to increase market access for foreign suppliers, or to improve effective conditions of competition in the host country? This can make quite a difference. WTO panels already have had occasion to distinguish between competition and trade law approaches.[99] It is also notable that the RP, while stipulating that an independent agency is supposed to hear private complaints about interconnection, remains silent on whether this agency should also be competent to hear private complaints about anticompetitive practices of the "major suppliers" of telecommunications services. While government-to-government complaints always remain a possibility in this area of WTO law, experience shows that private enforcement of competition law principles is indispensable to their effectiveness.[100]

Key regulatory concepts have also not been well developed in the RP.[101] In general, the RP avoids the "heavier" regulatory issues that are no less essential to ensure a level playing field: transformation of TOs into private law companies (including privatization), accounting standards for TOs, the definition of the network and service components to be unbundled, universal service, services for which individual licenses may be required or not, terms and conditions attached to licenses or the recognition of foreign licenses.

The fact that the commitments in the Reference Paper are open-ended and allow many different interpretations has been hailed as the "real value" of the RP,[102] on the theory that no WTO Member could claim that only one interpretation is the valid one. Ultimately, it would be up to WTO panels and the Appellate Body to decide the specific interpretations of those commitments.[103] We could not disagree more. If the commitments undertaken on the basis of the Reference Paper are supposed to be legally binding, then they must be intelligible to all interested parties, their interpretation must be predictable, and their

[98] *See* ¶¶ 23–25 of the Doha Ministerial Declaration, available at www.wto.org., and reproduced in the Appendix into this book.

[99] Thus, panels have defined markets more broadly in trade than in competition law. In their view, trade law addresses the "potentiality to compete", whereas competition law is designed to protect "the actual mechanisms of competition". Report of the WTO Panel, *Korea—Taxes on Alcoholic Beverages*, WT/DS75/R, WT/DS84/R (1998), at ¶ 10.81 (confirmed on appeal). *See also* Report of the WTO Panel, *Chile—Taxes on Alcoholic Beverages*, WT/DS/87/R, WT/DS/110/R (1999), at ¶ 7.87 (confirmed, and modified on other grounds, on appeal).

[100] These points have been developed in Bronckers, *supra* note 52.

[101] *See also* M. Fredebeul-Klein and A. Freytag, *Telecommunications and WTO Discipline*, 21 TELECOMMUNICATIONS POLICY 477, at 480–3, 489–60 (1997).

[102] *See* Gonzalez Durantes, *supra* note 66, at 71–75 who presents this as the "European perspective" on the Fourth Protocol.

[103] *Id*. at 72.

enforcement should not be seen either to "add to or diminish" the rights and obligations of WTO Members.[104] In the words of the *Telmex* panel:[105]

> WTO negotiators sometimes praise the political wisdom of resorting to "constructive ambiguity" as a diplomatic means of enabling consensus on WTO rules. [105a] The limited legal task of dispute settlement findings is very different. It is to decide on the legal claims, in a particular dispute, based on the "ordinary meaning" of the WTO provisions concerned in their context and in light of the "object and purpose" of the agreement.

In other words, the primary responsibility to clarify and improve the RP rests with the WTO membership, at the negotiating table. The same is true for the elaboration of competition law principles. If the WTO membership fails to assume this responsibility, dispute settlement on the basis of the RP remains a second-best solution to make the necessary progress.[105b] The overall admirable work of the panel in the *Telmex* Report has given a boost to the credibility of the RP. This report has also underlined the useful role that competition law principles can play in opening markets that were hitherto closed.

(c) Residual Importance of the Annex on Telecommunications after the Fourth Protocol. As a result of the successful conclusion of the GBT negotiations (especially the agreement on the RP), the AT has lost much of its significance. Yet the more salient obligations under the RP are in some respects more limited than those of the AT, as noted in the *Telmex* Report,[105c] where the panel made concurrent findings under both the AT and the RP. The AT therefore remains relevant:

- When a given WTO Member has not made any commitments under the Fourth Protocol;
- When a given WTO Member has made commitments under the Fourth Protocol but has not or not fully committed to the principles contained in the RP. In this case, the AT could provide some protection to suppliers of basic telecommunications services;
- When a WTO Member has made commitments under the Fourth Protocol, including the RP in full, for issues falling outside of the scope of the RP, because no "major supplier" is involved or because the problems do not concern "interconnection" but another form of "access to and use of" public networks and services;
- When a WTO Member has given commitments in a service sector other than telecommunications, for foreign service suppliers in that sector in their dealings with the incumbent TO; and
- When a WTO Member has given commitments on value-added telecommunications services, for suppliers of these services, since as mentioned above, the RP only applies to basic telecommunications services.

[105a] Cf. former WTO Director-General Mike Moore, "*A World without Walls—Freedom, Development, Free Trade and Governance*", Cambridge, Cambridge University Press, 2003, P. 111 [footnote in original].

[105b] Obviously, it remains the prerogative of the WTO membership to exclude certain questions from being solved through WTO dispute settlement. For an example see TRIPS, Art. 6 (regarding the question of parallel imports).

[105c] See *Telmex* Report, ¶ 7.331–7.332.

B. The General GATS Obligations that Apply to the Telecommunications Sector

With the Fourth Protocol, the GATS now contains a complete set of specific commitments on telecommunications. In addition, as mentioned above, certain general obligations of the GATS come into play only when specific commitments are made for a given sector, relating essentially to domestic regulation.[106] The application of these general obligations to the telecommunications sector, in light of specific commitments, is reviewed below.[107] For the sake of convenience, the MFN obligation,[108] which can apply independently of any specific commitment, is also reviewed.

1. The Most-Favored-Nation ("MFN") Obligation

In general, the MFN obligation applies to every measure concerning trade in services,[109] and it would accordingly apply to measures concerning telecommunications services as well.[110] Essentially, it binds WTO Members to treat services and service suppliers from other WTO Members no less favorably than like services and service suppliers from any other country. However, the GATS Annex on Negotiations on Basic Telecommunications provided that the MFN obligation would only enter into force for basic telecommunications after the market access negotiations were completed or appeared to remain unsuccessful.[111] With the Fourth Protocol, the MFN obligation now applies to basic telecommunications as well.

WTO Members are allowed to apply measures in derogation of the MFN obligation, provided that they were identified during the negotiations and listed in an annex to the GATS. These derogations are then subject to periodical review and must in principle be terminated at the latest ten years after the entry into force of the WTO Agreement, *i.e.*, on January 1, 2005.[112] The Annex on Negotiations on Basic Telecommunications has similarly extended the deadline for so-called "Article II Exemptions" on basic telecommunications until the conclusion of the negotiations. Indeed, Article II Exemptions were also negotiated within the NGBT and GBT at the same time as specific commitments. Nine countries submitted Article II Exemptions (mentioned below when relevant).

The effects of the MFN obligation were felt mostly in countries where telecommunications are operated by the State or by a legal monopoly. It must indeed be emphasized that the MFN obligation, like virtually all WTO obligations,[113] rests only on States and their agencies. For instance, to the extent a government still negotiates accounting rates to settle international telephone calls, a sending country would be entitled to claim the most favorable rate a terminating country has offered to any other country—regardless of whether that other country is a WTO Member. Accordingly, five countries (Bangladesh, India, Pakistan, Sri Lanka and Turkey) submitted MFN exemptions for differential accounting rates concluded in separate bilateral agreements with other countries.[114]

[106] GATS, Art. VI. The obligations relating to freedom of payments and transfers (Art. XI and XII GATS) are of less immediate relevance and will not be discussed here.

[107] *See also* Drake and Noam, *supra* note 41, at 45–6.

[108] GATS, Art. II. On transparency, *See* Frid, *supra* note 45, at 83–4.

[109] *See* GATS, Art. II:1.

[110] Although the precise significance of MFN for telecommunications is not yet well established: Holmes *et al*., *supra* note 3, at 762. *See also* Tuthill , *supra* note 47, at 788–9.

[111] *See Annex on Negotiations on Basic Telecommunications*, ¶ 1.

[112] *See* GATS, Art. II:2, in conjunction with Annex on Article II Exemptions, ¶¶ 3 and 6. *See* HOEKMAN AND KOSTECKI, *supra* note 6, at 252.

[113] *See supra* notes 93–5 and accompanying text.

[114] *See* the discussion *infra* notes 213–25 and accompanying text.

To the extent private or privatized TOs handle international relations (including the negotiation of accounting rates), they are not directly bound to observe the MFN obligation. Two exceptions may exist. First, since most TOs will qualify as major suppliers for the purposes of the RP, the commitments on anti-competitive practices may well apply to differential treatment in international relations (*e.g.*, discriminatory accounting rates). Domestic law restrictions on discrimination then become relevant, to the extent they do not already apply independently of the RP commitments.[115] Second, if a TO enjoys legal monopoly rights or exclusive or special rights, a government may be forced to intervene under the GATS if the TO acts in a manner inconsistent with MFN by charging discriminatory prices on the basis of nationality (*e.g.*, differing accounting rates despite comparable distances or traffic volumes).[116]

Once a complete set of specific commitments relating to telecommunications is in place, the general MFN obligation of the GATS also creates a so-called *free rider* problem. Indeed, even if only 69 of the 130 WTO Members made specific commitments on telecommunications at the time of the Fourth Protocol, the benefit of these commitments must be extended to all WTO Members pursuant to the MFN obligation. Even among the 69 countries that participated in the NGBT and GBT, the commitments are by no means symmetrical. If Canada, for example, limited foreign ownership of facilities-based service providers to 46.7 percent (direct and indirect), a country such as the Netherlands, which fully removed all restrictions must allow Canadian investors to buy a majority in a facilities-based telecommunications provider. These free rider effects explain why a critical mass of acceptable offers was considered to be so important. If the free rider effect was thought by a Member to be too substantial, an Article II Exemption could still be used, but only on a temporary basis. The United States, for one, "retaliated" against the perceived shortcoming of the Canadian commitment mentioned above by filing an Article II Exemption on foreign ownership of U.S.-based companies active in certain satellite services.[117]

2. Domestic Regulation

While the GATS recognizes the right of WTO Members to regulate,[118] it also imposes certain obligations relating to domestic regulation.[119] For instance, for telecommunications services these obligations apply to licensing schemes,[120] universal service obligations, frequency allocation,[121] numbering, and access/interconnection regulations.

The GATS obligations regarding domestic regulation distinguish between "committed services" (i.e. services for which specific commitments have been made) and other services. All measures affecting services generally must be published.[122] Moreover, for

[115] *See e.g.,* Art. 82(c) EC, prohibiting a dominant supplier from charging discriminatory prices to its customers, which cause competitive harm.

[116] Pursuant to GATS, Art. VIII.

[117] Direct-to-home ("DTH"), direct broadcasting ("DBS") and digital audio services. A potentially more damaging consequence of this Article II Exemption could be that the commercial subsidiaries of international satellite organizations ("ISOs") are prevented from offering DTH and DBS in the United States. Even though the United States explicitly undertook not to apply this Article II Exemption against operators from the EU, the EC and its Member States protested. *See* the press release of the Council meeting of February 14, 1997, PRES/97/39.

[118] *See* the fourth recital of the GATS' preamble.

[119] GATS, Art. VI. *See also* Tuthill, supra note 47, at 789–92, and Chapter 19 of this book.

[120] Provided that the total number of suppliers is not limited, in which case the licensing requirement is subject to Art. XVI GATS and must be listed as a limitation on market access in the schedule of specific commitments.

[121] *See supra* note 44 and the accompanying text.

[122] GATS, Art. III.I.

committed services, any new law or regulation, or amendment of existing rules, which significantly affects the trade of services in that sector must be notified to the WTO, though prior consultation is not required.[123] Furthermore, in commited sectors, the WTO Member concerned must administer all regulations of general application in a reasonable, objective and impartial manner.[124]

Furthermore, WTO Members are also bound to institute objective and impartial review procedures with respect to administrative decisions affecting trade in services.[125] A service supplier who files an application to operate in a WTO Member in a "committed sector" is entitled to a decision within a "reasonable period of time". At "any time" when so requested the WTO Member shall "without undue delay" inform the applicant of the status of his application.[126] These general obligations correspond to or complete the specific commitments found in the RP.[127]

Moreover, in the absence of anything on this point in the RP, the general obligations of the GATS are the only provisions applicable to the substance of the terms and conditions of telecommunications licenses, although some guidance can already be derived from the provisions of the AT dealing with conditions on access and use, where a core of permissible restrictions and requirements is outlined.[128] In essence, licensing requirements should not restrict trade unnecessarily. Whenever a WTO Member has given commitments on telecommunications services, its licensing requirements are subject to a form of proportionality test (objective and transparent criteria, not more burdensome than necessary to ensure quality of service, not in themselves a restriction on supply). No WTO Member can undermine these commitments through the imposition of unnecessarily cumbersome licensing requirements, at least when such requirements would be new or unexpected.[129]

The WTO Council for Trade in Services is supposed to elaborate disciplines to concretize these principles—whether they are subject to commitments or not.[130] A reading of the GATS that would, for example, expressly tolerate the capricious, subjective and biased regulation of "uncommitted" telecommunications services would seem out of place.[131]

Nevertheless, the negotiation of principles of good administration regarding services regulation is proving to be difficult. It is generally recognized that the present disciplines of Art. VI need to be clarified and sensibly strengthened.[132] A key question has become how to determine in the WTO whether services regulations, such as telecommunications licensing requirements, are "necessary" or "proportionate".[133] In reaching

[123] GATS, Art. III.3. Note that, as with notification obligations generally in the WTO, there is no immediate sanction foreseen in the event notification has been omitted. This is to be contrasted, for instance, with the rigorous case law of the European Court of Justice pursuant to which Member States having failed to notify technical regulations to the Commission, pursuant to Directive 94/34 of June 22, 1998 [1998] OJ L 204/37, are barred from enforcing those rules against individuals. *See* ECJ, 30 April 1996, Case C-194/94, *CIA Security International* v. *Securitel* [1996] ECR I-2201.

[130] *See* GATS, Art. VI.4.

[131] *See contra* GATS, Art. VI.1.

[132] *See e.g.,* Geza Feketekuty, *Regulatory Reform and Trade Liberalization in Services*, in GATS 2000: NEW DIRECTIONS IN SERVICES TRADE LIBERALIZATION 225, 237–238 (Pierre Sauvé and Robert M. Stern eds. 2000).

[133] *See* GATS, Art. VI.4, opening paragraph and subclause (b). The EU and its Member States recently presented their views on this issue to the WTO Membership, with reference to their own experiences and

this determination the basic tension between market integration and national regulatory autonomy has to be resolved. This difficulty is not particular to the services sector. In the goods areas as well, assessing the proportionality of non-discriminatory domestic regulation has been one of the most intractable questions for the WTO membership.[134]

3. Government Procurement

The scope of GATS is limited in an important respect. The general MFN principle, as well as specific commitments relating to market access and national treatment, do not apply to government procurement of services. Negotiations on this subject started in 1995, though no timetable was set for their completion.[135] It is currently envisaged by the Members that the negotiations on government procurement will be completed at the same time as the overall negotiations on services liberalization which restarted in 2000.[136]

For foreign suppliers of telecommunications services this gap can have considerable impact. Governments are probably the largest single customer for telecom services in any country. The political expediency to purchase locally is supplemented by an economic interest, as long as governments retain an important stake or share in the local TO.

C. Remedies and Dispute Settlement

The substantive GATS provisions applicable to telecommunications have been examined above. It must now be assessed whether these provisions can be effectively enforced. The following section is concerned with applicable remedies and dispute settlement. Two cases are distinguished for the purposes of remedies, namely injury to telecommunications service providers in their home market as a result of practices from foreign suppliers, and difficulties on a foreign market.

1. Remedies for Injury to the Domestic Market

The GATS does not contain a set of self-help remedies, unlike the GATT, where Members can take unilateral action against dumped or subsidized imports from other Members, or even impose safeguard measures against imports that cause serious injury.[137] Even though WTO Members recognized that subsidies may distort competition in services as well,[138] the GATS contains no disciplines regarding government subsidies.[139] If a Member finds that subsidies granted by another country create distortions on its market, the GATS does not envisage countervailing action. A Member with sufficiently serious grievances about foreign subsidies on services is only entitled to "sympathetic consideration" if it

case law. *See European Communities—Domestic Regulation: Necessity and Transparency*, S/WPDR/W/14 (May 1, 2001).

[134] *See generally*, Axel Desmedt, *Proportionality in WTO Law*, 4 J. INT'L ECON. L. 441 (2001).

[135] *See* GATS, Art. XIII. On the issues to be addressed in these negotiations see Patrick Low, Aaditya Mattoo and Arvind Subramanian, *Government Procurement in Services*, in LAW AND POLICY IN PUBLIC PURCHASING—THE WTO AGREEMENT ON GOVERNMENT PROCUREMENT 225 (Bernard M. Hoekman and Petros C. Mavroidis, eds. 1997).

[136] According to the "built-in agenda" of GATS, Art. XIX.1, a new round of negotiations on services started in the year 2000: *See* the Guidelines and Procedures for the Negotiations on Trade in Services, S/L/93 (March 29, 2001). These "built-in" negotiations have gained additional momentum following the Doha Ministerial Meeting in November 2001, which launched a new global round of trade negotiations in the WTO.

[137] *See* GATT, Art. VI and the WTO Anti-dumping and Subsidies Agreements, as well as GATT Art. XIX and the WTO Safeguard Agreement. *See* Chapters 11 and 18 of this book.

[138] *See* GATS, Art. XV.1.

[139] To the extent a Member has not scheduled limitations on national treatment regarding subsidies, it may be forced to give subsidies to local and foreign telecommunications suppliers indiscriminately.

requests consultations with the subsidizing country.[140] WTO Members have undertaken to address these issues in further negotiations,[141] and currently aim to complete these prior to the conclusion of the new overall negotiations on services liberalization, started in the year 2000.[142]

The GATS envisages no remedy either against injury caused by private anti-competitive behavior of foreign suppliers. The GATS, in other words, does not contain an anti-dumping remedy. This is remarkable, as the GATS itself offers no alternative. The GATS principles on restrictive business practices[143] or the RP do not really help here, as they are principally concerned with helping foreign suppliers to gain market access in the face of a powerful incumbent.

In some sense, it may be laudable that the GATS drafters did not simply copy the anti-dumping regime for trade in goods, given that this remedy is open to fundamental criticism. Beyond protecting against abuses by powerful exporters enjoying protection in their home market, anti-dumping measures have also been used to strike at competitive practices that are perfectly legitimate under national competition law and should create no concern internationally either.[144]

Perhaps the GATS drafters were not overly concerned about the lack of remedies against anti-competitive practices, as most of the specific commitments on market access aim to allow foreign service suppliers to establish a commercial presence in the host country.[145] Such a commercial presence may have been thought sufficient for the host country to exercise jurisdiction and curb any anti-competitive practices from the foreign supplier pursuant to domestic competition law. This assumption may not readily hold for telecommunications, and in particular international telecommunications, however. International telecommunications are often traded across borders, without a commercial presence of the supplier in the country where the service is consumed.[146] Furthermore, a local affiliate in the host country may not reflect the full competitive potential of the foreign supplier and therefore escape competition law disciplines imposed on major suppliers.[147] Accordingly, countries such as the United States have resisted the opening of their markets as long as no effective remedies against unfair competition from abroad were in place.

Such resistance may well have been compounded by the absence of an effective safeguard mechanism. Trade agreements traditionally incorporate an escape clause, a "fail-safe" mechanism, in order to provide assurance to countries which open their markets that they could unilaterally suspend trade concessions if these would cause unexpected problems for their domestic industry. An escape clause allows restrictions on imports, even if trade is considered fair; what matters is the injury suffered by the domestic industry.[148]

[140] GATS, Art. XV.1.

[141] *See* GATS, Art. XV.2.

[142] *See supra* note 136.

[143] *See* GATS, Art. VIII and IX.

[144] *See* Marco C.E.J. Bronckers, *Rehabilitating Antidumping and other Trade Remedies through Cost-Benefit Analyses*, 30 JOURNAL OF WORLD TRADE 5–37 (1996). *See also* Chapter 11 of this book.

[145] This is the third mode of international service delivery recognized in GATS, Art. I.2.

[146] This is the first mode of international service delivery recognized in GATS, Art. I.2.

[147] In EC competition law terms, for instance, the European subsidiary of a foreign supplier might escape the pricing disciplines which a dominant supplier must observe by virtue of Art. 82 EC.

[148] Paradoxically, by allowing a country to suspend its concessions when it finds itself in difficult circumstances, even if the foreign competition is fair, an escape clause is seen as an encouragement to trade liberalization.

Expressed differently, an escape clause can operate as an alternative or a complement to the remedies against anti-competitive practices or unfair trade (such as anti-dumping or countervailing duties). The GATT contains an escape clause, which after much difficulty was elaborated in a separate WTO agreement in the course of the Uruguay Round.[149]

The GATS, however, does not incorporate a safeguard mechanism yet. The agreement only provides that negotiations on such a mechanism were to be concluded before January 1, 1998,[150] but this deadline has been extended indefinitely.[151] In the meantime, the GATS allows WTO Members to permanently withdraw or modify concessions in accordance with a more cumbersome process.[152] The safeguard concept does not fit easily into the context of services.[153] Suppose, for instance, that a local TO runs into serious difficulties as a result of the surge in competition following the abolition of its monopoly over voice telephony. It would not seem feasible to simply "suspend" the concession, and reinstate the monopoly for some period.[154] A better alternative might be to impose a temporary surcharge on the sales of foreign telecom suppliers, to ease momentarily the competitive pressures on the local TO.

Perhaps the GATS negotiating parties felt that they were better protected against unexpected developments than in the goods sector, as GATS offers market access piecemeal through specific commitments. This is different from the original GATT approach, where quantitative restrictions had to be abolished as a matter of principle, tariffs reduced and national treatment immediately given. Whether sudden leaps in competitive advantage will happen in services remains to be seen. In the telecommunications sector at least, this seems a safe bet in view of continuing and rapid technological developments.

However, while for the time being the GATS does not explicitly envisage self-help remedies, it does not prohibit them altogether. The GATS acknowledges that WTO Members have latitude in developing their own public policies. Thus, the GATS would seem to allow a Member to impose licensing conditions in order to protect fair and undistorted competition in its own market.[155] Yet in order to be GATS-consistent, there would have to be evidence of anticompetitive behavior in the host country (or an unjustifiable failure of the foreign supplier to cooperate with a competition-related investigation by the host country) before a telecom license could be withdrawn. Expressed differently, telecom licenses cannot be denied *ex ante*, based on the presumption that a powerful foreign supplier *might* engage in anticompetitive behavior.[156]

[149] *See* GATT, Art. XIX and the WTO Safeguards Agreement. *See* Chapter 1.8 of this book.

[150] *See* GATS, Art. X.1.

[151] *See Fifth Decision on Negotiations on Emergency Safeguard Measures*, S/L/159 (March 17, 2004).

[152] *See* GATS, Art. X.2. Although not explicitly stated, the reference to Art. XXI suggests that a WTO Member wishing to avail itself of this provision may have to pay compensation to other disaffected WTO Members. This constraint is not in line with current thinking on the effective operation of an escape clause. *See WTO Safeguards Agreement*, Art. 8(3).

[153] *See* Gilles Gauthier, Erin O'Brien and Susan Spencer, *Déjà Vu, or New Beginning for Safeguards and Subsidies Rules in Services Trade*, in GATS 2000: NEW DIRECTIONS IN SERVICES TRADE LIBERALIZATION 165, 166–176 (Pierre Sauvé and Robert M. Stern eds. 2001). *See* Chapter 19 of this book.

[154] This could amount to expropriation of, or at least far-reaching interference with an established business of foreign service providers. Note that similar, conceptual concerns were deemed insurmountable in the context of intellectual property, and have been put forward to explain the absence of an escape clause in the TRIPS agreement. *See* Bronckers, *supra* note 5, at 1260.

[155] *See* GATS, Art. VI.

[156] *See* Gonzalez Durantez, *supra* note 66, at 64–65.

2. Remedies for Difficulties on Foreign Markets

Various reasons may explain why a given telecommunications service provider (the "entrant") has difficulties in accessing a foreign market (the "host country"). It may be that the entrant has been correctly treated by the authorities of the host country, for example as far as licensing is concerned, but is facing anti-competitive practices from a major supplier in that host country. By way of example, the entrant may be deterred from offering services in the host country if the prices charged by the local TO are perceived to be artificially low. In that case, a faithful implementation of the principles of the RP should provide the entrant with a remedy before an independent regulatory authority, with the additional possibility of recourse against the decision of that authority, pursuant to the GATS.[157]

It may be however that the RP and the GATS have not been implemented in the host country, or that the entrant is hampered by the host country itself breaching one of the GATS commitments applicable in the telecommunications sector as described above, be it market access, foreign investment, MFN, transparency, etc. The entrant may then have difficulties obtaining redress, which reflect the problems private parties have with the enforcement of the WTO agreements in general.

First, there is no direct right of access to the WTO dispute settlement mechanism for private parties. Second, it is open to question whether the WTO agreement can be invoked by a new entrant before a national court in the host country. This depends on whether the host country is "dualist" or "monist", and in "monist" systems whether courts are willing to grant direct or indirect effect to WTO agreements.[158] The country of origin of the new entrant could of course initiate government-to-government litigation in the WTO, yet such litigation is normally an act of sovereign discretion. However, some WTO Members have introduced in their domestic law mechanisms whereby private parties can petition them to act before the WTO.[159] Pursuant to these mechanisms a telecom supplier from country A might formally request its government to initiate WTO dispute settlement action against country B which has frustrated this telecom company's access to country's B market (*e.g.*, by not curbing the anti-competitive practices of its domestic incumbent).

3. The WTO Dispute Settlement System

The WTO Agreement brought about a considerable improvement in dispute settlement procedures over the former GATT.[160] In sum, the WTO has created a unique system, which has compulsory jurisdiction to resolve disputes between Member countries rather quickly and effectively. Yet despite the innovative nature and wide-ranging scope of the Fourth Protocol, combined with the general obligations of the GATS, there have been relatively few disputes between WTO Members concerning telecommunications. Some of them are discussed below.

The only telecommunications dispute that has led to a WTO panel ruling, in April 2004, is the *Telmex* case, involving a complaint by the United States against Mexico.

[157] GATS, Art. VI.2.

[158] For a European Community law perspective, *see* Naboth van den Broek, *Legal Persuasion, Political Realism and Legitimacy: The European Court's Recent Treatment of the Effect of WTO Agreements in the EC Legal Order*, 4 J. INT'L ECON. L. 411 (2001).

[159] *See e.g.*, in the EC, Regulation 3286/94 of December 22, 1994 [1994] OJ L 349/71, discussed in Marco C.E.J. Bronckers and Natalie McNelis, *The EU Trade Barriers Regulation Comes of Age*, 35 J. WORLD TRADE 427–482 (No.4, 2001). *See also* Chapter 33 of this book.

[160] *See* Chapters 25 *et seq* of this book for a more detailed treatment of dispute settlement.

This case is commented on at some length in this Chapter and elsewhere in this book.[161]

Japan found itself in the crossfire of the United States and the EC, among others as regards persistently high interconnection fees with the incumbent NTT.[162] The case has not progressed to the dispute settlement stage.

A dispute between the United States and the EU/Germany was avoided in 1999.[163] In the course of setting out the details of the interconnection regime, the German regulator tried to find a way to distinguish between "true" telecommunications operators and "mere resellers" (who would get a less favorable interconnection rate to the incumbent). At some point, the envisaged solution would have placed international operators (whose network in Germany is often limited to a point of presence for the delivery of traffic to the incumbent) in the same basket as resellers. However, the solution finally retained was satisfactory to U.S. interests.

Finally, the United States has put in place a special monitoring process for telecommunications, whereby every year a number of countries are reviewed for compliance with their GATS commitments.[164] The review generally notes a number of points for each country, but it appears that most of these points are subsequently settled.

IV. Implementation of WTO Commitments

This section deals with how the two major trading blocks—the EU and the United States—implemented their WTO commitments in the telecommunications sector. It would be equally interesting to conduct such a study of the other WTO Members that have entered into commitments in the telecommunications sector,[165] but it would make this contribution much too large. In any event, the extensive experience of the EU and the United States with respect to regulation and competition law should be indicative of the difficulties arising in other WTO Members.

A. The EU, its Member States and their WTO Commitments

Before looking at how the EU and its Member States implemented their WTO commitments, it should be underlined that developments in the EU had a substantial influence on the content of the Fourth Protocol and indeed on the very fact that it was concluded. First of all, the Protocol was to enter into force on January 1, 1998,[166] which is also the date on which the full liberalization of the EU telecommunications sector was set to take

[161] *See* in this Chapter, pp. 998, 999, 1001–1009, 1015, 1032–1033, 1036; *see* also in Chapter 19 of this book.

[165] *See e.g.,* Ringrose, *supra* note 48. The situation in the APEC countries is also surveyed in Shin Cho and Myeongho Lee, *Competition and Deregulation: An APEC Perspective* and Erika Wada and Tomohiko Asano, *Telecommunications Services in the Asia Pacific Countries*, both in UNFINISHED BUSINESS: TELECOMMUNICATIONS AFTER THE URUGUAY ROUND 155 and 181 respectively (Gary C. Hufbauer and Erika Wada, eds. 1997). *See also* Toshiaki Tarigawa, *The Impact of the WTO Telecommunications Agreement on U.S. and Japanese Telecommunications Regulations* 32 J. WORLD TRADE 33 (1998).
[166] It eventually entered into force on February 5, 1998.

place under EC law.[167] This is no coincidence. As mentioned earlier, the United States always insisted on a "critical mass" of offers, and only when the offers coming from the EC and its Member States became satisfactory to the United States did it become possible to attain such a critical mass. Political agreement within the EC on the full liberalization of the telecommunications sector was only finalized at the very end of 1994,[168] when work was being pursued under the NGBT. The EC offers in the NGBT then began to reflect that agreement. Since full liberalization in the EU was one of the most significant commitments made, it made sense to align the date of entry into force of the Fourth Protocol with the internal deadline for liberalization in the EU.[169]

As for market access and national treatment, the EC schedule contains very few permanent limitations of any significance. Leaving aside limitations scheduled by Portugal and Greece,[170] the most significant limitation on the EC schedule is the twenty percent limit on direct non-EC ownership of public telecommunications providers operating radio-based infrastructure in France.[171] This limit is widely seen as an answer to a similar limitation found in the U.S. schedule.

It has been said that the Reference Paper was based in large part on the regulatory framework that was being discussed at the EC level in 1996–1997.[172] Accordingly, the substance of the Reference Paper was already present in that regulatory framework, and there was no need to modify or complement it to bring it into line with the Reference Paper.[173]

For the EC and its Member States, the key operation required to implement the specific WTO commitments on telecommunications consisted of extending the benefits of internal measures to providers from non-EC WTO Members. In line with the respective constitutional orders of the EC and its Member States, this was done through various

[167] *See* Directive 90/388, *supra* note 39, Art. 2(2), as amended by Directive 96/19 of March 13, 1996 [1996] OJ L 74/13.

[168] *See* LAROUCHE, *supra* note 21, at 19–23. The date of January 1, 1998 already appeared much earlier, in a Council Resolution of July 22, 1993 [1993] OJ C 213/1, as the date for completing the liberalization of all telecommunications services (with the liberalization of voice telephony). Agreement on the date of January 1, 1998 for the opening up of infrastructure, however, was only reached 18 months later, as evidenced by Council Resolution of December 22, 1994 [1994] OJ C 379/4.

[169] Within the EC, the deadline for full liberalization had been extended for some Member States (Spain, Greece, Ireland, Portugal and Luxembourg), pursuant to Directive 96/2 of January 16, 1996 [1996] OJ L 20/59, Art. 4 and Directive 96/19, *supra* note 167, Art. 1(2), replacing Directive 90/388, *supra* note 39, Art. 2. *See* Decision 97/114 of November 27, 1996 (Ireland) [1997] OJ L 41/8, Decision 97/310 of February 12, 1997 (Portugal) [1997] OJ L 133/19, Decision 97/568 of May 14, 1997 (Luxembourg) [1997] OJ L 234/7, Decision 97/603 of June 10, 1997 (Spain) [1997] OJ L 243/48 and Decision 97/607 of June 18, 1997 (Greece) [1997] OJ L 245/6. To the extent applicable, the extensions granted in those decisions were reflected in the EC schedule to the Fourth Protocol. They now have all lapsed.

[170] Portugal scheduled a requirement that cross-border supply of basic services be limited to companies established in Portugal, and that the direct or indirect participation of non-EC entities in firm supplying basic services be limited to 25 percent. Greece limited market access to corporations engaged exclusively in the provision of telecommunications services.

[171] As currently found in the French Code des postes et télécommunications, Art. 33–1.III. Art. 33–1.III. sets out the twenty percent limit for both direct and indirect ownership, however it is subject to international agreements, so that the limitation on indirect ownership is rendered inoperative towards firms from WTO Members through the commitments made in the Fourth Protocol.

[172] *See* NAFTEL AND SPIVAK, *supra* note 66, who also note, however, that U.S. negotiators thought that the U.S. Telecommunications Act of 1996, *supra* note 10, provided the "gold standard" for the WTO.

[173] For an explanation of how the EC regulatory framework in place for 1998 implements the commitments made in the WTO, see EC, Implementation of Telecommunication Legislation in the European Community, S/C/W/110/Add.5 (June 21, 1999), available at http://www.wto.org. *See also* Gonzalez Durantez, *supra* note 66, at 51–70.

legislative enactments ratifying the Fourth Protocol,[174] so that for all intents and purposes firms from other WTO Members were put on the same footing as EC firms. Accordingly, the implementation of the Fourth Protocol by the EC and its Member States did not give rise to any significant problems.

In this context, mention should be made of the tensions that arose between the EC and its main trading partners, first and foremost the United States, concerning Directive 95/46 of October 24, 1995 on the protection of individuals with regard to the processing of personal data and on the free movement of such data.[175] This Directive requires the Member States to put in place a regulatory framework to ensure the protection of personal data.[176] In order to avoid circumvention through "data havens" outside the EC, Article 25 of the "Data Protection Directive" obliges Member States to ensure that transfers of personal data to a non-EC country only takes place if that country offers an "adequate level of protection" for such data, as found by Commission decision.[177] To assure adequate protection, the situation in the country in question is examined, and if needed negotiations can be held to conclude an agreement with the EC on data protection. Conversely, if the Commission finds that a given non-EC country does not offer an adequate level of protection for personal data, Member States are required to block data transfers to that country. As could be expected, non-EC countries protested at what they saw as an attempt to "export" EC data protection norms. The United States, in particular, disagreed with the EC both on substance—the Data Protection Directive being too protective on a number of points, in their view—and on the regulatory vehicle—the United States preferring to leave data protection to self-regulatory mechanisms instead of legislation. Nevertheless, the United States and the EC entered into discussions on the issue. As the deadline for implementation of the Data Protection Directive (October 24, 1998), loomed without any agreement, the United States indicated that they might take the matter to the WTO as a breach of the EC's commitments regarding market access and national treatment, among others in the telecommunications sector. The EC, on the other hand, thought that the Data Protection Directive fell under the ambit of Article XIV(c)(ii) GATS.[178] The matter was ultimately resolved, without prejudice, by the creation of a "safe harbor" system in the United States, which the EC found satisfied its requirements.[179]

More significant difficulties may be in store for the EC and its Member States as they renew their internal telecommunications regulations. Many of the Directives of

[174] *See e.g.*, for the EC itself, Decision 97/838 of November 28, 1997 [1997] OJ L 347/45; for France, Act 97-1098 of November 28, 1997, JO, November 29, 1997, 17284; for Germany, the Act of November 20, 1997, BGBl.II.1990.

[175] Directive 95/46 of October 24, 1995 [1995] OJ L 281/31.

[176] In short, the Data Protection Directive regulates the processing of personal data according to the purpose of such processing (Art. 7–9). It gives persons the right to be informed of the collection and processing of personal data (Art. 10–11), the right to access and correct such data (Art. 12) and under certain circumstances the right to object to data collection and processing (Art. 14–15). Furthermore, Member States must provide for remedies to vindicate those rights, including liability (Art. 22–24).

[177] In addition to the United States, discussed here, the Commission concluded that there was an adequate level of protection in Switzerland (Decision 2000/518 of July 26, 2000 [2000] OJ L 215/1), Hungary (Decision 2000/519 of July 26, 2000 [2000] OJ L 215/4) and Canada (Decision 2002/2 of December 20, 2001 [2002] OJ L 2/13).

[178] *See* the First Annual Report of the EC Working Party on the Protection of Individuals with regard to the Processing of Personal Data, available at <http://europa.eu.int/comm/internal_market/en/dataprot/index.htm> at 17 (covering 1996), and the Second Annual Report (covering 1997), available on the same site, at 30.

[179] *See* Decision 2000/520 of July 26, 2000 [2000] OJ L 215/7.

the 1998 liberalization package[180] provided that the Commission had to undertake a review of the EC regulatory framework before the end of 1999.[181] This review led to EC legislation concerning what is now called "electronic communications".[182] While the regulatory package adopted in 1996–1998 did not specifically refer to the GATS and the Fourth Protocol, the new regulatory framework contains explicit references to the EC's obligations.[183] As discussed below, this does not necessarily mean that the EC's regulatory framework is entirely in line with the requirements set forth in the GATS and the Fourth Protocol. Furthermore, the inclusion of telecommunications, together with a significant part of broadcasting and other activities, under the overall concept of "electronic communications" might create difficulties for the EC in the upcoming rounds of negotiations. This issue is discussed below in relation to convergence.

The new EC regulatory framework rests on a number of assumptions[184] that are not necessarily consistent with the thrust of the Reference Paper. The new framework is very much oriented towards competition law in at least two major respects. First, it is widely assumed that in the long-run sector-specific regulation will shrink to leave economic regulation mostly to competition law.[185] Second, it is generally agreed that while sector-specific regulation remains in force, its substance should be aligned with that of competition law, by relying on competition law concepts and doctrines in the formulation of regulations.[186] Such an approach might prove incompatible with the EC's WTO commitments since the regulatory principles contained in the Reference Paper are not and cannot be aligned with an international competition law framework that presently does not exist.

To take a concrete example, there is no guarantee that the new definition of Significant Market Power ("SMP"), *i.e.*, "a position equivalent to dominance, that is to say a position of economic strength affording [a firm] the power to behave to an appreciable extent independently of competitors",[187] will cover the same firms as the definition of "major supplier" in the Reference Paper.[188] It could be that a firm that would be considered as a "major supplier" within the meaning of the Reference Paper would not be found to have SMP under that new EC definition, thereby escaping obligations (especially as regards

[180] Directive 90/387, supra note 91, Art. 8; Directive 97/33, *supra* note 59, Art. 22(2); Directive 98/10, *supra* note 80, Art. 31; Directive 97/13 of April 10, 1997 [1997] OJ L 117/15, Art. 23.

[181] Towards a new framework for electronic communications infrastructure and associated services—The 1999 Communications Review, COM(1999)539 (November 10, 1999).

[182] The main elements are Directive 2002/19, *supra* note 59; Directive 2002/20 of March 7, 2002 ("Authorization Directive") [2002] OJ L 108/21; Directive 2002/21, *supra* note 91; Directive 2002/22, *supra* note 80; Directive 2002/58, *supra* note 175 and Directive 2002/77 of September 16, 2002 [2002] OJ L 249/21.

[183] *See* Directive 2002/21, *id*., Rec. 29, Directive 2002/19 , *id.*, Rec. 13 and Art. 8(3) and Directive 2002/22, *id.*, Rec. 3.

[184] For more information concerning the new framework, *see* Pierre Larouche, *A Closer Look at Some Assumptions Underlying EC Regulation of Electronic Communications* 3 JOURNAL OF NETWORK INDUSTRIES 129 (2002), and CEPS, EUROPEAN COMMUNICATIONS AT THE CROSSROADS, REPORT OF A CEPS WORKING PARTY (Martin Cave and Pierre Larouche, rapporteurs, 2001).

[185] That proposition has been widely aired in the course of the legislative process: *See* the 1999 Communications Review, *supra* note 181, at 49 and the EP Resolution of June 13, 2000 [2001] OJ C 67/53. It has been taken over in a weakened form in the final texts: *see e.g., Framework Directive*, *supra* note 183, Rec. 27 and *Access Directive*, *supra* note 183, Rec. 12. For a similar argument at the international level, *See* Petros C. Mavroidis and Damien Neven, *The WTO Agreement on Telecommunications: It's Never Too Late*, in THE LIBERALIZATION OF STATE MONOPOLIES IN THE EUROPEAN UNION AND BEYOND 307 (Damien Geradin, ed. 2000), with a reply by Pierre Larouche at 319.

[186] *See e.g., Framework Directive*, *supra* note 183, Rec. 25 and *Access Directive, supra* note 183, Rec. 12.

[187] *Framework Directive,* Art. 13(2).

[188] As discussed *supra* notes 49–54 and accompanying text. *See contra* Ibbetson, *supra* note 70, at 46.

interconnection) that the parties to the Fourth Protocol have undertaken to impose on their "major suppliers".[189] In view of that possibility, the Access Directive makes room for SMP-type obligations to be imposed on firms without SMP in order to "comply with international commitments".[190] Similarly, while the RP prescribes cost-orientation for the interconnection tariffs of major suppliers, the new EC framework leaves more discretion to the national regulatory authorities as to the remedies to be applied.[191] Beyond that, it remains to be seen whether the new EC regulatory framework will remain as easily "exportable" on the international scene as the previous framework, in the absence of a consensus on the development of an international competition law instrument.

B. The United States and its WTO Commitments

Much like the EC and its Member States, the United States went through a major internal telecommunications law reform in parallel with the negotiations of the Fourth Protocol.[192] Nevertheless, the U.S. telecommunications sector was by and large already liberalized, as reflected in the U.S. schedule of specific commitments, which contains no significant limitations other than a twenty percent limit on direct foreign ownership of telecommunications carriers.

The implementation of WTO commitments in telecommunications has proved far more eventful in the United States than in the EC, for a number of reasons.[193] First of all, it was difficult for U.S. authorities to abandon the wide-ranging reciprocity principle that governed U.S. telecommunications policy before the Fourth Protocol. Second, U.S. policy on accounting rates provoked considerable friction with other WTO Members.

1. Abandoning Reciprocity

Of all the parties in the NGBT and the GBT, the United States probably had the most developed international telecommunications policy. It had liberalized its domestic market for long-distance and international telecommunications early on, with the breakup of AT&T in 1984. The United States was ostensibly worried that, in an environment where international communications were still essentially conducted on a bilateral, correspondent basis, U.S. operators competing to handle the origination or termination of international calls in the United States would be vulnerable to foreign operators—generally monopolists—handling the other end of those calls.

The main problems relate to (i) *cross-subsidization*, whereby a foreign operator would use supra-competitive profits in its home market to undercut the prices of U.S. carriers in the United States or in other markets, and (ii) *bypass*, whereby a U.S. subsidiary or affiliate

[189] That risk may be limited, however, given that the degree of market power which appears to be envisioned under the definition of "major supplier" in the Reference Paper is at least as strong as dominance as it is understood under EC law. Then again, given that the policy direction underlying the RP (market access or market foreclosure?) has not been articulated by the RP's negotiators, this remains a point of speculation.

[190] *Access Directive*, *supra* note 183, Art. 8(3).

[191] See Art. 2.2(b) RP. Firstly, Directive 2002/19, *supra* note 59, does not provide for the automatic imposition of pricing obligations on SMP operators as regards interconnection. Secondly, even if the national authority would impose a pricing obligation in such a case, it does not need to be cost-orientation: Directive 2002/19, Art. 13.

[192] It resulted in the enactment of the Telecommunications Act of 1996, *supra* note 10.

[193] On the U.S. implementation of its WTO telecommunications commitments, *See also* Kelly Cameron, *The WTO Basic Telecommunications Agreement—Effect on the U.S. Market,* in TRADE AND TELECOMS 77 (Mark Clough ed. 2001).

of a foreign monopoly or dominant operator would carry international traffic from that foreign country to the United States outside of the correspondent regime and thereby further distort the imbalance in settlement payments. In addition, the discrimination problem, discussed below in the context of accounting rates also arose from asymmetric liberalization.

As concerns *bypass* and *cross-subsidization*, the FCC introduced a new policy at the end of 1995.[194] Pursuant to the U.S. Communications Act, FCC approval must in practice be obtained for foreign operators to enter the U.S. market.[195] According to the relevant provisions of the Act, when examining requests the FCC is to have regard to "public convenience and necessity" or the "public interest". The FCC interpreted its legislative mandate so as to make its approval subject to the so-called "Equivalent Competitive Opportunities" ("ECO") test, whereby it must be shown that the country of origin of the foreign operator offers to U.S.-based operators equivalent competitive opportunities. Based on this provision, the FCC assessed whether the foreign market has been sufficiently liberalized, although it was willing to discount a perceived lack of liberalization in foreign markets against the pro-competitive effects on the U.S. market from allowing the entry of the foreign supplier.[196]

The U.S. policy was heavily discussed within the NGBT and GBT. It was argued by participants that it could not be maintained within the framework of GATS, since it breached the MFN obligation by differentiating between countries based on their perceived level of liberalization. Indeed the whole thrust of the Fourth Protocol, especially the additional commitments to the principles contained in the RP, was to address U.S. concerns by ensuring that all signatories create "effective competitive opportunities" and take it upon themselves to prevent anti-competitive behavior by their own operators, so that all markets could be opened at once without reservation, in conformity with the MFN principle. Accordingly, it was argued that the prior approval requirements of the Communications Act (and certainly the ECO test) should be abandoned as concerns WTO Members.

Although the U.S. Administration appeared to agree with the above reasoning, it indicated that it would not introduce legislation to implement the Fourth Protocol, but instead leave it to the FCC to amend its rules. That put the FCC between a rock and a hard place: on the one hand, it has a statutory mandate to look after the public interest, which it cannot readily abdicate; on the other hand, it was being asked to implement an international agreement pursuant to which the MFN principle must be respected, and barriers to market access and national treatment must be removed.

The FCC sought to live up to the U.S. commitments with its 1997 Foreign Participation Order.[197] In short, the FCC abandoned the ECO test for firms coming from other WTO Members, and replaced it with the following framework:

[194] *Market Entry and Regulation of Foreign-affiliated Entities,* IB Docket 95–22, Report and Order, FCC 95–475 (November 28, 1995). The U.S. policy prior to the Fourth Protocol is discussed critically in NAFTEL AND SPIVAK, *supra* note 66, at 123–46.

[195] This is the combined effect of 47 U.S.C. §§ 214 (authorization required for any carrier to operate infrastructure) and 310(b)(4) (authorization required for a foreign entity to own more than 25 percent of a U.S. carrier holding a radio license). In addition, under the Submarine Cable Landing License Act, 47 U.S.C §§ 34–39, a license must also be obtained to land and operate a submarine cable in the United States.

[196] *See Sprint Corporation*, ISP 95–002, Declaratory Ruling and Order, FCC 95–498 (December 15, 1995).

[197] *Rules and Policies on Foreign Participation in the U.S. Telecommunications Market*, IB Docket No. 97–142, Report and Order, FCC 97-398 (November 26, 1997). *See* for a critical appraisal NAFTEL AND SPIVAK, *supra* note 66, at 156–64.

- Firms from other WTO Members may openly enter the U.S. market (*i.e.*, the FCC will presume that entry is in the public interest).[198] However, the FCC reserved the right to "attach additional conditions" to authorizations if it finds that existing safeguards might not be sufficient to prevent "anti-competitive harm" and even, "in the exceptional case in which an application poses a very high risk to competition, [the right] to deny an application."[199] Furthermore, national security, law enforcement, foreign policy and trade policy concerns will continue to be considered by the FCC in its decisions, although it is expected that they will rarely be brought to bear.[200]
- At the same time, the FCC revised but ultimately kept in place a number of "competitive safeguards" designed to prevent the exercise of "foreign market power" on U.S. markets.[201] For instance, U.S. carriers are prevented from accepting any "special concessions"[202] from foreign carriers who have been found to be dominant on their end of the market with respect to international telecommunications services with the United States.[203] Furthermore, U.S. carriers that are "affiliated" with (*i.e.*, more than 25 percent owned by) dominant foreign carriers are to be treated as dominant on the route to the country of that foreign carrier.[204] They are thus subject to specific prior disclosure, structural separation and reporting obligations.[205]

A similar approach has been put forward by the FCC for satellite communications.[206]

These new rules were criticized by many trading partners, including the EU.[207] In short, they are considered to violate the MFN principle, which is central to the GATS. As far as market access is concerned, the treatment of foreign firms may differ depending on the perceived level of competition in their respective home countries**.** It could even be said that the "competitive safeguards", which do not restrict entry as such, are difficult to reconcile with the MFN principle. Even though the "competitive safeguards" apply to firms operating in the United States, they indirectly affect foreign carriers (which see their freedom to deal with U.S.-based carriers impinged) in a manner that varies depending on their respective home countries. Furthermore, despite FCC statements to the contrary,[208] the thrust of the Reference Paper—in line with the MFN principle—is that each Member is meant to police its domestic market, so that the other Members can open their own markets "safely".

The relative fragility of the U.S. implementation of its WTO telecommunications commitments was made plain when Deutsche Telekom ("DT"), the German incumbent,

sought FCC approval for its purchase of U.S. mobile operators VoiceStream and Powertel.[209] Before the FCC, a number of parties intervened to ask the FCC to deny DT the necessary authorizations to carry out the transaction, on the ground that (i) state ownership of DT and/or (ii) DT's dominant position on many German markets created a risk of harm to competition in the United States, within the meaning set out in the *Foreign Participation Order* outlined above. The FCC firmly rejected these claims, finding among other points that state ownership of DT might put it at a competitive disadvantage,[210] and that DT could not rely on its dominant position in Germany to engage in predatory pricing in the United States, given the competitiveness of U.S. markets.[211] Despite this encouraging result from the WTO perspective, the procedure was lengthy (seven months) and costly (given the number of interested parties), and overlapped in part with the merger control activities of the Department of Justice.

In parallel with the FCC examination, some U.S. lawmakers (led by Senator Hollings), tried to place a bill on the agenda of Congress that would have prevented the FCC from granting the authorizations requested by DT. This was motivated by a concern that competition in the United States would be distorted by the entry of firms in which a foreign government has a significant stake.[212] This bill provoked a fierce reaction from within the U.S. administration and also from the EU, which threatened to bring the matter before the WTO if the bill in question was passed.[213] Ultimately, the bill was abandoned.

2. Accounting Rates

There is a long-standing U.S. complaint about the functioning of international communications accounting rates. For a better understanding of the problem, it is necessary to explain briefly the traditional way in which international communications were operated, namely the "correspondent system" set out in ITU Regulations. Under that system, the TO of the originating country cooperates with the TO of the terminating country to complete telephone calls or other services. The TO of the originating country alone collects a fee from the caller ("collection rate"). As between the two TOs, an "accounting rate" is agreed. For each minute of international traffic, the TO of the originating country owes a fraction of the accounting rate (usually half, called the "settlement rate") to the TO of the terminating country, in order to compensate the latter for the completion of the international call. The correspondent system works in both directions, so that a given pair of TOs will periodically offset the amounts due to one another. As a consequence, the TO from the country that originated the most traffic will make a payment to the TO of the other country. The correspondent system was developed earlier in the 20th century, at a time when almost all countries were served by monopoly TOs, often State-owned.

[209] *See* FCC, *VoiceStream/Powertel/DT*, IB Docket 00–187, Memorandum Opinion and Order, FCC 01–142 (April 27, 2001).

[210] *Id*. at ¶¶ 62–5.

[211] *Id*. at ¶¶ 89–92. The opposing parties even went as far as to suggest that the fact that both DT and VoiceStream used the GSM standard (and planned to use the same 3G standard, namely WCDMA) would give them an unfair competitive advantage.

[212] In the words of Senator Hollings, "you cannot compete with government": *See* T. Foley, *Congress Accused of Telecoms Protectionism,* COMMUNICATIONS WEEK INTERNATIONAL (August 14, 2000).

[213] *See* the European Commission's yearly REPORT ON U.S. BARRIERS TO TRADE AND INVESTMENT, available at <http://europa.eu.int/comm/trade/bilateral/usa/usa.htm> at 60 (2000) and at 50 (2001).

On its face, the correspondent system could work effectively when some or all countries have liberalized telecommunications services.[214] However, a central weakness of the traditional system is that accounting rates are not required to, and in practice do not bear any relationship to either customer prices (collection rate) or underlying costs. As technological evolution reduced operating costs, the gap increased. This resulted in two undesirable consequences for traffic between countries that have liberalized the provision of international services and countries that have not done so. First, in a liberalized country, competition among local service providers often brings down prices for international telecommunications, usually markedly below the prices in a non-liberalized country for the same call in the other direction. As a consequence, callers from a non-liberalized country will often try to originate their calls in the liberalized country to benefit from the lower collection rate.[215] The balance of traffic between the liberalized and the non-liberalized country is then upset—more traffic originates in the liberalized country, and as a consequence the operators in the liberalized country must make large settlement payments to the TO of the non-liberalized country.[216] Second, operators from the liberalized country are prevented from reducing prices as much as they could because settlement rates are above costs. A large part of the settlement payments made to a TO from a non-liberalized country can arguably be viewed as a subsidy.

The United States was dissatisfied with the artificially high level of accounting rates in comparison to underlying costs, which they claimed led to payment outflows of up to five billion U.S. dollars, three-quarters of which were allegedly a subsidy to foreign TOs. The FCC, in particular, has led a campaign against the correspondent system as a whole (including above-cost accounting rates), which it perceives as a barrier to competition. More specifically, the FCC fears discrimination by the foreign operators towards the competing U.S. carriers, be it through preferential treatment of one carrier in the allocation of return traffic from the foreign operator to the United States, or through whipsawing (pitting competing U.S. carriers against one another in order to obtain discriminatory accounting rate concessions).

In order to alleviate those concerns, the FCC introduced an International Settlements Policy ("ISP") whereby competing U.S. carriers must be treated without discrimination and must receive a proportion of return traffic to the United States equal to their proportion of outgoing traffic (so-called "proportionate return").[217] The ISP can be counterproductive when applied to traffic between the United States and another liberalized country, since competition in both countries provides a safeguard against discrimination and the ISP prevents the emergence of innovative alternative arrangements for international

[214] *See I Want My Pound of Flesh* . . . , PUBLIC NETWORK EUROPE 33 (September 1996) and *At this Rate, You're Going Nowhere* . . . PUBLIC NETWORK EUROPE 31 (October 1996).

[215] Services such as call-back or country direct help callers to "reverse" the direction of their calls.

[216] In *International Settlement Rates*, IB Docket 96–261, NPRM, FCC 96–484 (December 19, 1996), the FCC mentions as an example the balance of traffic between the United States and Hong Kong, which in the 18 months to October 1996 went from 1:1 to 7:1 in favour of traffic originating from the United States, as the use of call-back services became more widespread.

[217] *Policy Statement on International Accounting Rate Reform,* FCC 96–37 (January 31, 1996), at ¶ 8. *See also* the long-standing FCC proceeding on the *Regulation of International Accounting Rates*, CC Docket 90–337: *Phase I Report and Order*, FCC 91–157, 6 FCCR 3552 (May 9, 1991), *Phase II First Report and Order*, FCC 91–401, 7 FCCR 559 (December 12, 1991), *Phase II Second Report and Order,* FCC 92–496, 7 FCCR 8040 (November 5, 1992), *Phase II Third Report and Order*, FCC 96–160 (April 9, 1996), *Phase II Fourth Report and Order*, FCC 96–459 (November 26, 1996).

traffic between the two countries.[217a] The FCC has accordingly decided to relax the application of the ISP in appropriate cases for traffic to and from countries that satisfy the ECO test.[218]

Developing countries challenged the ISP, arguing that the high accounting rates, and the ensuing capital flows from developed to developing countries, are necessary to foster the development of the telecommunications infrastructure in developing countries. Furthermore, in a context where telecommunications are increasingly used for much more than simple voice telephony, an argument can be made that the accounting rate system amounts to a form of universal service financing mechanism at the international level, given that connecting developing countries also create value and benefits in developed countries (through network effects). From this perspective, it would make sense not to require developing countries alone to bear the cost of improving their telecommunications infrastructure and to transfer funds to them for that purpose. Yet the accounting rate system lacks a number of safeguards that are essential for a good universal service financing system, especially as regards reporting.

The United States tried to place the issue of accounting rates on the table of both the NGBT and GBT, without much success.[219] It appears that the United States already envisaged tying the award of licenses to foreign providers to the level of accounting rates between the United States and the foreign country in question. This would not have been compatible with the principle of MFN treatment, and it seems that other participants in the NGBT and GBT were uneasy with this U.S. approach. Ultimately, it was agreed in the Fourth Protocol that the issue of accounting rates would not be raised in WTO disputes until the beginning of the new round of services negotiations in 2000.[220] That understanding was interpreted narrowly in *Telmex*.[221]

The United States had already changed its course by December 1996. In connection with a downward revision of its benchmarks for accounting rates, the FCC proposed in its *International Settlement Rates* proceedings to impose, as a licensing condition on foreign carriers seeking to enter the U.S. market, a requirement that accounting rates move towards the benchmark rate. If this does not occur, the FCC envisaged various enforcement measures, including ordering U.S. carriers to settle at the benchmark rate with the foreign carrier in question.[222]

That decision was challenged before U.S. courts by around one hundred governments, regulators and telecommunications firms, principally on the ground that the FCC had exceeded its jurisdiction by seeking to regulate the activities of foreign firms indirectly by pressuring U.S. firms to disregard agreed accounting rates. The U.S. Court of Appeals for the D.C. Circuit dismissed the suit.[223]

Since then, the ITU has undertaken to reform the accounting rate system, and has come up with innovative proposals, including recognition that accounting rates should

[217a] While it may have appeared ironic to see the United States in *Telmex* attack the very type of "proportionate return" policy which it earlier pioneered, there was indeed no obvious purpose to be served by Mexico maintaining such a policy, given that both the United States and Mexico had liberalized the international telecommunications traffic between them.

be cost-oriented, the creation of its own benchmarks (somewhat higher than the FCC's) and an acknowledgement that international telecommunications can be handled through means other than the traditional correspondent system.[224] The status of the accounting rate system under the WTO remains uncertain, since on the one hand, the system itself—to the extent it can be presented as a State measure—would seem to be at odds with the MFN principle,[225] and on the other hand, the FCC settlement rate policy is also questionable, if not on WTO grounds (MFN principle), then on other grounds related to international law (comity and jurisdiction). In any event, as between developed countries at least, the accounting rate system is being replaced by other arrangements more suitable to a competitive environment, such as self-correspondence (when a firm is present at both ends of the international communication), interconnection (with termination and origination charges) or peering/routing arrangements (in the Internet sector).[226] Indeed the *Telmex Report* deals with the international traffic between Mexico and the United States first and foremost as an interconnection issue, not much different from domestic interconnection. The accounting rate system is seen as but one method to arrange international traffic.[226a] The difficulties caused by the accounting rate system are now likely to take much more of a North-South dimension.

V. The WTO Telecommunications Commitments in a Broader Context

The WTO commitments on telecommunications, culminating with the Fourth Protocol, are in many ways groundbreaking. So far, this contribution has examined the specific provisions of the Fourth Protocol, and looked at them in the light of domestic telecommunications regulation. The following paragraphs look at broader issues.

A. Institutional Setting: The WTO and the ITU

The launch of telecommunications negotiations in the course of the Uruguay Round amounted to a rebuke of the ITU by developed countries. The question was whether the WTO would take over the leading role in international telecommunications policy from the ITU,[227] since the WTO's structure and operation appeared inherently better suited to a liberalized, competitive and global telecommunications environment. Indeed, the ITU reflected the old world order of telecommunications, with government representatives speaking for each Member's telecommunications sector, on all issues ranging from operations to regulation. Like the "correspondent system" (with accounting rates), that grew out of its discussions, the ITU seemed somewhat outdated and was rapidly losing significance.

[224] *See* the latest version of ITU-T Recommendation D.140 on accounting rate principles for the international telephone service (October 2000) and Accounting Rate Reform undertaken by ITU-T Study Group 3 (2000), available at http://www.itu.int. The FCC and ITU approaches are compared by Kenneth B. Stanley, *Toward International Settlement Rate Reform: FCC Benchmarks Versus ITU Rates* 24 TELECOMMUNICATIONS POLICY 843 (2000). In the *Telmex* Report, these reforms were acknowledged and used as evidence by the panel: ¶ 7.170–7.175.

[225] Within the realm of State measures (leaving aside purely private arrangements), a uniform termination charge applicable to all foreign carriers that deliver traffic for termination in a given country would be optimal as regards MFN.

[226] *See* Pekka Tarjanne (former ITU Secretary-General), *Preparing for the Next Revolution in Telecommunications: Implementing the WTO Agreement* 23 TELECOMMUNICATIONS POLICY 51 at 54–5, 58–60 (1999), and Peter A. Stern and Tim Kelly, *Liberalization and Reform of International Telecommunication Settlement Arrangements*, available at http://www.itu.int for a thorough review of reform options for, as well as alternatives to, the accounting rate system.

[226a] *Telmex* Report, ¶ 7.96–7.117.

[227] *See* Drake and Noam, *supra* note 41, at 50–1.

To its credit, the ITU has sought to respond to the challenge by adapting to the new environment.[228] For instance, it recognized that private actors (who can become industry Members of the ITU and participate in its activities) played the leading role in operations and that governments should concentrate more on regulatory issues.[229] It tried to produce meaningful reform of the accounting rate system, but the pace of reform may not be quick enough and the whole system might disappear, at least for communications between developed countries. The ITU took measures to speed up its standardization process to respond to market realities,[230] and it has become a credible actor for standardization in areas such as ASDL, Voice over IP and 3G. It has also taken up the task of helping to set up and train regulators in developing countries, and to transfer regulatory expertise from developed countries to developing countries.[231]

At the same time, the above analysis of the Fourth Protocol should make it clear that if the WTO wants to pursue its work in the telecommunications area, it must go deeper into regulatory issues. In particular, as markets become more competitive, with a greater number of actors, matters such as frequency allocation, interoperability, compatibility and standardization will become increasingly significant.[232] On these matters, the WTO has little experience, while the ITU has expertise and is keen to maintain its pre-eminent role.

Accordingly, the WTO and the ITU have concluded a co-operation agreement to formalize their relationship and ensure the co-ordination of their respective activities.[233] It is likely that the two organizations will become partners in the management of international telecommunications regulation, with the WTO perhaps focusing on general issues of economic regulation, as well as enforcement, and the ITU taking care of more technical issues, including frequency allocation and standardization.

B. Beyond Telecommunications: Convergence with Media, Electronic Commerce

Given the convergence with neighboring sectors and the rise of electronic commerce, the telecommunications sector is becoming a part of a broader whole. This will affect the negotiations of future WTO commitments.

The first contributions from the EC and the United States to the services negotiations that commenced in the year 2000 already show some differences in approach. The EC would essentially like to improve the commitments made so far by ensuring that every Member removes scheduled restrictions, commits to the entire Reference Paper and eliminates MFN exemptions.[234] The United States would like to go further

[228] *See* Pekka Tarjanne (at the time ITU Secretary-General), *Trade in Telecommunications Services: The WTO Agreement and the Role of the ITU*, available at http://www.itu.int and Tarjanne, *supra* note 226, at 60–2.

and, beyond the improvement of commitments, would promote privatization and enhance telecommunications commitments by opening up (or opening further) a number of related areas.[235]

Significant debate is also likely to arise in the WTO framework concerning convergence, *i.e.*, acknowledging that telecommunications are now becoming part of a larger sector together with media and information technology.[236] In the Uruguay Round, the EC was very reluctant to enter into any commitment concerning the audiovisual sector. The EC was concerned that liberalizing the telecommunications sector might undermine its cultural reservations in the audiovisual sector. That issue was solved by the EC making an explicit reservation in its schedule of commitments that telecommunications does not extend to broadcasting, namely "the uninterrupted chain of transmission required for the distribution of TV and radio program signals to the general public".[237] Furthermore, the EC expressly noted in its schedule that its commitments do not cover "content provision which require[s] telecommunications services for its transport".[238] This reservation was apparently accepted by other signatories to the Fourth Protocol, although it leaves certain services, for instance, the distribution of audio or video files via the Internet, in a grey zone. Now that the EC has decided to introduce a single internal regulatory framework for telecommunications and broadcasting networks and services, it will be increasingly difficult to defend treating telecommunications and broadcasting separately at the international level.

Against that background, the United States has already indicated that it would like to include the audiovisual sector in the next round of negotiations.[239] The controversy over content regulation in the audiovisual sector is therefore likely to flare up again. This time around, it seems difficult to envisage an agreement to disagree. Convergence will force a re-thinking of the rationale underpinning content regulation (is it the content itself or rather its means of distribution?), with the answer likely to depend on the aim of content regulation (*e.g.*, diversity, protection of minors or consumer protection).

In addition to a repeat of the "audiovisual" controversy, foreseeable difficulties in dealing with convergence at the WTO level include:

- *Scheduling:* The current structure of GATS schedules embodies pre-convergence thinking. Already, there is no consensus on the definition of telecommunications services. In addition, telecommunications services are listed separately from audiovisual services, and no room is made for hybrid services that might fall between these two categories (for instance, video-on-demand or music download services). Even if modifications to the structure of the schedules represent major negotiating processes, they might be necessary in order to take convergence fully into account.
- *Treatment of regulatory constraints:* The same scheduling difficulties that beset the NBGT and GBT will surface once more. For instance, how is a must-carry

[238] *Id.*

[239] *See* Communication from the United States—*Audiovisual and Related Services*, S/CSS/W/21 (December 18, 2000).

rule—whereby network operators are bound to transmit certain content, *e.g.*, a public broadcasting channel—to be considered? Is it a restriction on market access or national treatment that must be listed in a schedule, is it part of a regulatory framework conducive to entry (like the Reference Paper), or is it none of these, and thus left to be dealt with under the rules concerning domestic regulation?[240]

- *Technological neutrality:* The mantra of "good regulation" in the convergence era can mean many things. It could imply a preference for competition law over sector-specific regulation, because competition law would be framed in technologically neutral terms.[241] It could also mean that decisions on standardization or frequency allocation would become relevant from the point of view of trade law, should they imply a preference for one technology over others.

Finally, the WTO has also taken up discussions on electronic commerce.[242] So far, there has been a lot of soul-searching over whether electronic commerce should be considered under the GATT or the GATS framework. Once that preliminary issue is settled, there will be a renewed impulse to move forward in the telecommunications negotiations in order to remove impediments to electronic commerce.

VI. Milestone or Stepping Stone? A Concluding Assessment

From a telecommunications perspective, the Fourth Protocol marked the beginning of a new era, though its immediate impact should not be overestimated. For a number of significant players, like the EU and the United States, the Protocol essentially consolidated at the international level the liberalization movement to which they were already committed nationally. Other, notably developing, countries claimed long transitional periods or significant exceptions for their liberalization commitments. Furthermore, while the RP represents a useful recognition that the liberalization of monopoly sectors has to be accompanied by additional regulatory and competition law commitments, much unfinished business remains.

In sum, the agreement reached in 1997 can be said to constitute a beginning, and a useful one at that. It will nevertheless take a sustained effort to further develop a suitable legal framework that will deliver the full benefits of the ongoing telecommunications revolution. Furthermore, new issues like convergence and electronic commerce will also force the current arrangements to be reconsidered and improved.

The obligations outlined in the Reference Paper will have to be strengthened as well, although the *Telmex* Report of April 2004 demonstrates that these obligations can already bite. Preferably, the RP obligations should also become part of a WTO agreement, rather than remain a patchwork of individual commitments, so as to ensure a modicum of uniformity, and predictability in their interpretation and enforcement. Even if the WTO membership were to negotiate a comprehensive competition law agreement, this would not eliminate the need for an agreed Reference Paper.

In part this is because general competition law is unlikely any time soon to replace the regulatory principles necessary to open up and further ensure effective competition in

[240] GATS, Art. VI.

[241] However, it must be possible to formulate sector-specific regulation in functional/economic terms without reference to a particular technology.

[242] *See* the *Work Program on Electronic Commerce* adopted by the General Council, WT/L/274 (September 30, 1998). *See also* Chapter 56 of this book.

heretofore heavily regulated industries like telecommunications.[243] Accordingly, while a WTO competition law agreement may adopt and reinforce parts of the Reference Paper, a need for sector-specific regulation in the telecommunications industry is likely to remain. In this respect the Reference Paper can serve as a checklist. It demonstrates to the WTO membership the additional commitments that are necessary to effectively liberalize other regulated service industries such as the post, energy and air transport.

APPENDIX A

EXAMPLE OF A SCHEDULE OF SPECIFIC COMMITMENTS ON TELECOMMUNICATIONS SERVICES (COUNTRY X)

In the original schedule to the GATS

Modes of Supply: 1) Cross-border supply 2) Consumption abroad 3) Commercial presence 4) Presence of natural persons

Sector or sub-sector	Limitations on market access	Limitations on national treatment	Additional commitments
Horizontal commitments (*i.e.*, across all sectors)		(3) Unbound for subsidies.	
	(4) Unbound except for intra-corporate transferees of senior managers	(4) Unbound except for categories listed in the market access column	
Sectoral commitments:			
2. COMMUNICATIONS SERVICES			
C. *Telecommunications Services*	1) None 2) None 3) None 4) Unbound, except as indicated in the horizontal section	1) None 2) None 3) None 4) Unbound, except as indicated in the horizontal section	
h) Electronic mail i) Voice mail j) On-line information and database retrieval k) Electronic Data Interchange ("EDI") l) Enhanced/Value-added facsimile services m) Code and protocol conversion n) On-line information and/or data processing			

In the schedule to the Fourth Protocol to the GATS

Modes of Supply: 1) Cross-border supply 2) Consumption abroad 3) Commercial presence 4) Presence of natural persons

Sector or sub-sector	Limitations on market access	Limitations on national treatment	Additional commitments
2. COMMUNICATIONS SERVICES C. *Telecommunications services* a) Voice telephony b) Packet-switched data transmission services c) Circuit-switched data transmission services d) Telex services e) Telegraph services f) Facsimile services g) Private leased circuit services o) Other	1) None, except for voice telephony services, to be liberalized as of 1.1.2000. 2) None. 3) None, except for: Voice telephony services, to be liberalized as of 1.1.2000; Foreign direct or indirect investment in facilities-based telecommunications service suppliers is permitted up to 33 percent of voting shares only. 4) Unbound except as indicated in the horizontal section.	1) None. 2) None. 3) None. 4) Unbound except as indicated in the horizontal section.	Country X undertakes the obligations contained in the reference paper attached hereto.

APPENDIX B

REFERENCE PAPER

Scope

The following are definitions and principles on the regulatory framework for the basic telecommunications services.

Definitions

Users mean service consumers and service suppliers.

Essential facilities mean facilities of a public telecommunications transport network or service that

(a) are exclusively or predominantly provided by a single or limited number of suppliers; and
(b) cannot feasibly be economically or technically substituted in order to provide a service.

A major supplier is a supplier which has the ability to materially affect the terms of participation (having regard to price and supply) in the relevant market for basic telecommunications services as a result of:

(a) control over essential facilities; or
(b) use of its position in the market.

1. Competitive Safeguards

1.1. Prevention of anti-competitive practices in telecommunications

Appropriate measures shall be maintained for the purpose of preventing suppliers who, alone or together, are a major supplier from engaging in or continuing anti-competitive practices.

1.2. Safeguards

The anti-competitive practices referred to above shall include in particular:

(a) engaging in anti-competitive cross-subsidization;
(b) using information obtained from competitors with anti-competitive results; and
(c) not making available to other services suppliers on a timely basis technical information about essential facilities and commercially relevant information which are necessary for them to provide services.

2. Interconnection

2.1 This section applies to linking with suppliers providing public telecommunications transport networks or services in order to allow the users of one supplier to communicate

with users of another supplier and to access services provided by another supplier, where specific commitments are undertaken.

2.2. Interconnection to be Ensured

Interconnection with a major supplier will be ensured at any technically feasible point in the network. Such interconnection is provided.

(a) under non-discriminatory terms, conditions (including technical standards and specifications) and rates and of a quality no less favorable than that provided for its own like services or for like services of non-affiliated service suppliers or for its subsidiaries or other affiliates;
(b) in a timely fashion, on terms, conditions (including technical standards and specifications) and cost-oriented rates that are transparent, reasonable, having regard to economic feasibility, and sufficiently unbundled so that the supplier need not pay for network components or facilities that it does not require for the service to be provided; and
(c) upon request, at points in addition to the network termination points offered to the majority of users, subject to charges that reflect the cost of construction of necessary additional facilities.

2.3. Public Availability of the Procedures for Interconnection Negotiations

The procedures applicable for interconnection to a major supplier will be made publicly available.

2.4. Transparency of Interconnection Arrangements

It is ensured that a major supplier will make publicly available either its interconnection agreements or a reference interconnection offer.

2.5. Interconnection: Dispute Settlement

A service supplier requesting interconnection with a major supplier will have recourse, either:

(a) at any time or
(b) after a reasonable period of time which has been made publicly known to an independent domestic body, which may be a regulatory body as referred to in paragraph 5 below, to resolve disputes regarding appropriate terms, conditions and rates for interconnection within a reasonable period of time, to the extent that these have not been established previously.

3. Universal Service

Any Member has the right to define the kind of universal service obligation it wishes to maintain. Such obligations will not be regarded as anti-competitive *per se*, provided they are administered in a transparent, non-discriminatory and competitively neutral manner and are not more burdensome than necessary for the kind of universal service defined by the Member.

4. Public Availability of Licensing Criteria

Where a license is required, the following will be made publicly available:

(a) all the licensing criteria and the period of time normally required to reach a decision concerning an application for a license and
(b) the terms and conditions of individual licenses.

The reasons for the denial of a license will be made known to the applicant upon request.

5. Independent Regulators

The regulatory body is separate from, and not accountable to, any supplier of basic telecommunications services. The decisions of and the procedures used by regulators shall be impartial with respect to all market participants.

6. Allocation and Use of Scarce Resources

Any procedures for the allocation and use of scarce resources, including frequencies, numbers and rights of way, will be carried out in an objective, timely, transparent and non-discriminatory manner. The current state of allocated frequency bands will be made publicly available, but detailed identification of frequencies allocated for specific government uses is not required.

CHAPTER 22

THE AGREEMENT ON TRADE-RELATED ASPECTS OF INTELLECTUAL PROPERTY RIGHTS

Thomas Cottier*

2. Amendments 1114
3. Reservations 1115
IV. Conclusions and Further Developments 1115

I. Introduction

The World Trade Organization ("WTO") Agreement on Trade-Related Aspects of Intellectual Property Rights ("TRIPs")[1] builds upon a long tradition of intellectual property rights protection ("IP" protection) in the national and international laws of Western market economies. Well before the advent of the TRIPs Agreement, a wide range of international IP treaties existed.[2] Deficiencies in the international IP system, particularly concerning the level of protection, implementation and enforcement, resulted in the decision of the GATT CONTRACTING PARTIES to vest regulatory leadership in the WTO with respect to trade-related aspects of intellectual property protection. What initially was conceived as a minor agreement, mainly relating to border enforcement against counterfeiting and piracy, emerged in the Uruguay Round as the third pillar of the multilateral trading system. It added a new dimension to traditional precepts of international trade regulation as they were known under the General Agreement on Tariffs and Trade ("GATT 1947"). A new generation of WTO rules emerged.

The TRIPs Agreement contains five distinctive features. *First*, the Agreement positively prescribes regulatory standards which Members must provide (positive integration). *Second*, the concept of progressive liberalization to be achieved in multilateral rounds of trade negotiations does not apply in this field. Flexibility is limited to transitional periods and sometimes broadly textured obligations which, however, remain subject to treaty interpretation by panels and the Appellate Body. Unlike the General Agreement on Tariffs and Trade and its side instruments ("GATT 1994") and the General Agreement on Trade in Services ("GATS"), but comparable to Human Rights treaties, the TRIPs Agreement *ab initio* sets relatively high standards of protection and requirements. This is true both for substantive rights as well as for procedural rights and obligations which emerged in an effort to combine civil and common law traditions. *Third*, the Agreement reflects the highly abstract nature of intellectual property rights ("IPRs"). Intellectual property exists not only with respect to particular traded products in commerce, but is inherent to creative ideas and information, or expression thereof, embodied in all such products. *Fourth*, the Agreement, for the first time in WTO law, explicitly addresses private rights of economic operators, whereas the GATT and other agreements only address traders' rights indirectly as they formally give rights only to States—a distinction which remains to be analyzed. *Fifth*, the Agreement fully incorporates substantive rules enshrined in other international agreements. The formal and constitutive integration into the TRIPs Agreement of major preexisting international agreements on intellectual property rights is unique in the law of international organizations. Substantively, it goes beyond traditional references to other treaties (such as the Vienna Convention on the Law of Treaties) and interlocks the WTO on the one hand and WIPO, and thus the UN system, on the other hand. It binds the international intellectual property ("IP") system to the WTO with respect to both substance and registration.

[2] For a comprehensive survey and sources *see* Thomas Cottier and Christophe Germann, *Bedeutung und Wirkung der Staatsverträge im Immaterialgüterrecht*, in SCHWEIZERISCHES IMMATERIALGÜTER- UND WETTBEWERBSRECHT I/2 GRUNDLAGEN 35–122 (R.von Büren and Lucas David eds., 2002).

The TRIPs Agreement significantly reinforces the international intellectual property system. It has become its core and center for the setting and enforcement of substantive and procedural standards. For the first time, intellectual property rights are subject to effective international litigation (other than commercial arbitration), with the possibility of cross-retaliation with respect to goods and services through the WTO dispute settlement system.

Changes in domestic law brought about by the TRIPs Agreement and its five features vary in degree. For industrialized and a number of advanced developing countries, the TRIPs Agreement largely reflects accepted domestic standards. For some, it added new forms of protection, such as the protection of geographical indications or the protection of undisclosed information as a defined intellectual property right. For others, adjustments were necessary mainly in the field of rules relating to civil and administrative enforcement. Yet it is fair to say that the TRIPs Agreement did not compel most industrialized countries to make politically difficult adjustments. The Agreement assures implementation and provides important refinements, but did not require most of them to make profound changes in their intellectual property legislation.

The situation is significantly different for a majority of developing countries and transitional economies who had not been exposed prior to the TRIPs Agreement to bilateral agreements, in particular with the United States, seeking higher levels of IP protection. Levels of protection were supposed to be raised within a few years, but implementation of the new standards has often caused political problems. The IP system, in particular patent protection, is costly and capacity needs to be built. In many countries, society is not familiar with Roman Law concepts of property, and communitarian use of resources has a long tradition. With the advent of the TRIPs Agreement, many saw their innovative capacity, and their capacity to imitate and build upon foreign technology reduced. Crucially, the economic costs and benefits of the TRIPs Agreement remain highly controversial, mainly in relation to extended patent protection (see Chapter 54 of this book). Evidence has remained anecdotal and economic research on the impact of the Agreement is still in its infancy.

Contemporary economic research on IPRs was only stimulated by the adoption of the Agreement. The first results indicate that developing countries, prior to the TRIPs Agreement, tended to reduce the levels of protection established under colonial rule in order to benefit from reproductive potential and talent (counterfeiting and piracy from the point of view of technology exporters). They would autonomously raise their standards only in accordance with the need for protection as their own creative industries emerged. The TRIPs Agreement cut short this process. For many countries, it is perceived as retarding development since reproductive potential is reduced, both domestically and internationally. On the other hand, evidence supports the view that that WTO disciplines are beneficial in the long term as they improve the rule of law, good governance, the framework for technology transfer and domestic and foreign direct investment.[3]

A majority of the WTO membership thus conceives the Agreement to be predominantly, if not exclusively, for the benefit of industrialized countries. Indeed, high-technology industries—ultimately defining economic leadership—all depend on

[3] For the leading analysis, *see* KEITH E. MASKUS, INTELLECTUAL PROPERTY RIGHTS IN THE GLOBAL ECONOMY (2000); *see also* JAYASHREE WATAL, INTELLECTUAL PROPERTY IN THE WTO AND DEVELOPING COUNTRIES (2000), COMMISSION ON INTELLECTUAL PROPERTY RIGHTS, INTEGRATING INTELLECTUAL PROPERTY RIGHTS AND DEVELOPMENT POLICY (2002): www.iprcommission.org (visited November 25, 2003).

intellectual property rights, as well as other essential framework conditions, such as the rule of law, sound currency, sound financial institutions and democratic governance. To these industries, the Agreement is of vital importance as it regulates essential conditions of competition between them in third country markets, including those of developing countries. But the TRIPs Agreement is currently seen as increasing the gaps between industrial and developing countries, rather than closing them. Academic analysis of intellectual property by leading economists and lawyers has been critical of the current balance of private property rights and assets in the public domain.[4] For the time being, hopes for enhanced transfer of technology and foreign direct investment in developing countries due to increased IP protection have not yet materialized and there is no evidence of significantly increased levels of transfer of technology and foreign direct investment since the adoption of the TRIPs Agreement in 1995.

Given the sharp and increasing differences in perception and the policy changes required on the part of many Members of the WTO, it is not surprising that the world is sharply divided on the issue of legitimacy and acceptance of the Agreement. Many representing developing country governments, non-governmental organizations and academia believe that introducing TRIPs into the WTO was conceptually wrong and goes against the grain of trade liberalization, enhanced market access and competition generally furthered by WTO law and policy.

These objections and problems as well as the benefits of the TRIPs Agreement will be addressed throughout this chapter. At this introductory stage, attention simply needs to be drawn to the fact that more than in any other WTO Agreement, the ideological, legal and economic debate and overall state of affairs continues to be characterized by a persisting North-South divide, different perceptions of the role of private property and individual rights and, finally, the rule of law in governance. Attention is drawn to these tensions in order to emphasize that the revolutionary changes introduced by the TRIPs Agreement mean that acceptance of the Agreement in many parts of the world will be a long-term process. While standards were set at a relatively high level at the outset, the realities of implementation in developing countries will perhaps in reality be closer to the concept of *progressive* regulation and implementation as it is conceptually known in the fields of goods and, in particular, in services. This tradition, and the fact that international pressure on implementation only takes place where strong economic interests exist, may render the Agreement more acceptable in coming years. Greater acceptance should come with changing attitudes, capacity building, but above all, the realization of real benefits. New interests will emerge as countries develop their creative industries. The TRIPs Agreement has significantly increased awareness of IP issues, including developing country efforts to seek additional benefits from IP protection in support of agricultural exports, in particular in the field of geographical indications and possibly the eventual protection of traditional knowledge.

All this takes time. We should not forget that progressive liberalization of goods has taken decades, and not years. The same will be true of GATS, where the process is only in its infancy. It will also be true for the implementation and the further development of the milestone TRIPs Agreement. It is too early to assess the legitimacy of the Agreement from the point of view of developing countries. Time will tell as they develop viable market economies.

[4] *See generally* the collection of conference papers, INTERNATIONAL PUBLIC GOODS AND TRANSFER OF TECHNOLOGY UNDER A GLOBALIZED INTELLECTUAL PROPERTY REGIME (Keith Maskus and Jerome H. Reichman eds., forthcoming).

II. The Foundations and Origins of the Agreement

A. The Functions of Intellectual Property

Market-based economic activities depend on the allocation of property rights, both real and intellectual. Contracts and transactions with respect to goods and services presuppose respect, protection and enforcement of such rights. Investment, creativity and commercial innovation by individuals and corporations largely depend on the protection of intellectual property rights. Legally, IP rights grant exclusive rights to right holders, normally for a limited period of time, in order to control the marketing of protected products and to prevent third parties from unfairly profiting from efforts by others in bringing about innovation or creating goodwill. They enable the right holder to prevent free-riding on what it has achieved. Economically, intellectual property rights are formalizations of investment protection, encouraging innovation and product improvements by assuring a period of exclusive returns or strong protection of goodwill achieved on the market.

Together with rules on anti-trust, unfair competition, subsidies and government procurement, intellectual property forms an essential ingredient of competition policy broadly defined. All IPR rights are important ingredients of legal security and justice and define, along with other legal factors, conditions of competition. This is true both domestically and for international transactions. International transactions depend on legal security and fair conditions of competition abroad, and thus depend on international disciplines and monitoring of IPRs. This has been true for a long time, but in the age of globalization and enhanced interdependence, it is today more important than ever before. It suffices to recall a number of key areas of the economy and their dependence on IPR protection. Developments in chemical, genetic and mechanical engineering have been stimulated by the allocation of patent rights. Developments in information technology, which now define one of the frontiers of global economic leadership and are a major source of growth in industrialized economies, have been stimulated and protected by copyright law. The ability to trade in goods and services depends on the reputation of a particular product or service provider—trademarks and geographical indications play an important role in the protection of reputation and allow consumer to make appropriate decisions in the market place.

Property rights are not absolute. As a whole, they must contribute to foster public goods, and individual rights need to be balanced with access to what is or should be in the public domain and thus at the disposition of society at large.[5] All legal systems need

[5] It would seem that intellectual property operates within the triangle of public goods, public domain and appropriation. "Public goods" are understood to be values and assets that are characterized by non-rivalry in consumption and non-excludability, such as prosperity, welfare, biodiversity, national defense, clean air. They cannot or should not be appropriated. Public goods exist in nature (such as air, water) or can be produced by men and norms, such as a legal system, human rights, justice and legal security. Public goods are generally perceived to be protected and created by public policy, but private rights—being part of the legal system—also contribute to the creation of public goods at large, to the extent that they have welfare creating effects. Public goods therefore are often values created on the basis of public law, but also private law as a whole. For example, property rights, contracts, and torts as legal concepts are equally important contributions to the public goods of equity and legal security. "Public domain" stands for the proposition that values and assets are or should be available to the public at large, to the exclusion of private property entitlements and exclusive rights. From the perspective of public goods, public domain is a tool, as much as exclusive legal rights, and both need to be balanced with a view to optimizing public goods. These relations are not clearly defined, and the literature tends to relate public goods to public policy, limiting or even excluding private rights, *cf.* Peter Drahos, *The Regulation of Public Goods*, IN INTERNATIONAL PUBLIC GOODS AND TRANSFER OF TECHNOLOGY UNDER A GLOBALIZED INTELLECTUAL PROPERTY REGIME, *supra* note 4.

to find a proper balance between the allocation of private property and what is in the public domain in order to bring about optimal welfare effects. Lawyers and economists are engaged in this debate which is fuelled by ever-changing societal, economic and technological norms.[6] Arguments about IP rights relate to both efficiency and equity. They address the scope and duration of IP rights, the problem of inherent exceptions (fair use), exhaustion and parallel trade, and new forms of property rights. These issues will be discussed in this chapter. Many of the domestic controversies on intellectual property in different countries relate to the proper balance, rather than to the very idea of the existence of a proper system of property rights. For example, witness the current search for a balance in protecting new technologies, in particular information technology (data protection) and genetic engineering and modern biotechnology (patenting life forms). For well-established blue chip technologies, the matter was settled over time in a process of trial and error. The same will occur in legislation and adjudication over time with respect to the new fields of technology.

We see a parallel, but more intense, debate on the international level with respect to the proper balance between property rights and what should be in the public domain in developing and transitional economies. Again, it is less a matter of principle, and more a matter of defining and shaping the proper relationship between the scope of property rights and what should be in the public domain, than phasing in intellectual property laws based on economic and social needs. The main challenge here is to find appropriate standards that are equally suitable for economies at different stages of development. The first generation rules of the TRIPs Agreement are not the final word on this point, and the international community needs to build upon experience.

B. Intellectual Property as an International System

Intellectual property protection essentially depends on national law and legal systems. International transactions do not take place on the basis of international law, but upon rules and principles of domestic law assigned to such transactions by law or agreement.[7] The international legal system still depends on the principle of territoriality and nation states. This is also true for intellectual property. Yet, perhaps more than in any other field, commercial transactions involving IPRs depend on the proper interface of national laws and the regulations of different countries and markets. Compare this with real property transactions, which are barely regulated under international law except for investment protection.[8] Unlike real property, intellectual property protection depends on a certain level of transnational uniformity in order to achieve appropriate interfaces and comparable protection in different jurisdictions. It depends on mechanisms that facilitate registration of rights in pertinent markets around the world. The need for an interface between national systems accounts for the fact that intellectual property protection today

LILLICH ED., 1983); ROSALYN HIGGINS, THE TAKING OF PROPERTY BY THE STATE: RECENT DEVELOPMENTS IN INTERNATIONAL LAW, 176(III) RECUEIL DES COURS 259 (1982); GEORGE H. ALDRICH, THE JURISPRUDENCE OF THE IRAN-UNITED STATES CLAIMS TRIBUNAL (1997).

is promoted through an international system. For example, the principle of priority in relation to patents and trademarks, which allows registration in one country without losing potential eligibility for protection in other countries, is a prime and early example of such an interface. These interfaces were at the heart of efforts in international law, mainly by treaty-making since the late Nineteenth Century.

The battles fought over the new field of intellectual property rights during the industrial revolution reinforced attempts to bring about level playing fields among nations in the late Nineteenth Century. The 1883 Paris Convention on Industrial Property and the 1886 Berne Convention for the Protection of Literary and Artistic Works resulted from this process. The many agreements and unions, in particular those that fall within the purview of the specialized UN World Intellectual Property Organization ("WIPO") provide ample evidence of this tradition of stabilizing and promoting internationally the protection of intellectual property. Apart from work on substantive standards of protection in different fields, these agreements mainly focus on international registration of national titles in the field of patents, trademarks and industrial designs.[9] WIPO today is one of the few

Intellectual property protection was the first sphere of international economic law to be harmonized multilaterally, long before multilateral disciplines were developed in the field of international trade regulation. Linking the protection of IPRs to the tradition of GATT, which only emerged after World War II but developed an increasingly effective dispute settlement system, adds a new quality and changes the traditions of harmonization under the Paris and Berne Conventions. With the advent of the TRIPs Agreement in WTO law, intellectual property protection spearheads the development of a global law of integration. It heralds a new era, and the many problems it raises are partly due to its pioneering role in global law. Perhaps more than in any field of international law, domestic IP rules and standards are primarily shaped and defined at the international level. In many respects national IP legislation implements what has been internationally agreed. Problems related to the legitimacy and democratic accountability of the multilateral trading system, now including IPRs, need to be discussed in this context.

C. Efforts at Improvement of Intellectual Property Protection and the Trade Link Prior to the TRIPs Agreement

Despite efforts beginning in the late Nineteenth Century to harmonize intellectual property protection, the emerging international system of IP protection remained highly fragmented and incomplete. Indeed, due to significantly different perceptions of the role of intellectual property in the process of economic development, as well as diverging traditions among industrialized countries, substantive global standards with respect to intellectual property have remained of a largely open and permissive nature. Throughout the 1970s and 1980s attempts to introduce more specific norms largely failed due to these differences. The unsuccessful effort to revise the Paris Convention in this period of time is a case in point. Moreover, WIPO lacks an effective, swift and simple system of dispute settlement, even for procedural matters relating to the registration of rights. It does not comprise standards on effective enforcement of intellectual property rights. No case has ever been brought before the International Court of Justice relating to intellectual property protection. The thrust of world-wide cooperation therefore has mainly focused on achieving national treatment for foreign nationals and, with the exception of international copyright law, on the important field of acquisition and administration of rights, i.e., by simplifying international registration of national trademarks, designs and patents.

Efforts made within other international organizations were also unsuccessful. The OECD, the World Bank and the United Nations produced a considerable record of work

Parliament and of the Council of May 22, 2001 on the harmonisation of certain aspects of copyright and related rights in the information society; Directive 96/9/EC of the European Parliament and of the Council of March 11, 1996 on the legal protection of databases; Council Directive 93/98/EEC of October 29, 1993 harmonizing the term of protection of copyright and certain related rights; Council Directive 93/83/EEC of September 27, 1993 on the coordination of certain rules concerning copyright and rights related to copyright applicable to satellite broadcasting and cable retransmission; Council Directive 92/100/EEC of November 19, 1992 on rental right and lending right and on certain rights related to copyright in the field of intellectual property; Council Directive 91/250/EEC of May 14, 1991 on the legal protection of computer programs; Council Directive 87/54/EEC of December 16, 1986 on the legal protection of topographies of semiconductor products. With respect to further forms of intellectual and industrial property protection in the EU, *see* http://europa.eu.int/comm/internal_market/en/intprop/index_all.htm (status as of June 1, 2003), (visited November 25, 2003).

and recommendations with respect to the relationship between intellectual property rights and the transfer of technology or competition.[16] Yet they failed to reach the level of binding obligations. The negotiations on the Law of the Sea Convention in the 1970s ("UNCLOS III") provide a classic example of extensive, but failed, IP-related negotiations on technology transfer, particularly in the field of deep seabed mining.[17] UNCTAD has dealt extensively with the issue of IPR protection from the point of view of developing countries and for a long time argued in favor of restraint, if not resistance to strengthening international rules on intellectual property.[18] Efforts within the movement towards a New International Economic Order focused on improving transfer of technology on a concessionary basis, yet without reinforcing IPRs.[19]

Difficulties in achieving progress in the traditional international fora led to increased links between IPRs and trade policies. These linkages began in the context of regional integration. The European Court of Justice was required to define the relationship between competition rules, free movement of goods and nationally defined intellectual property rights. A substantial body of trade-related case law emerged and eventually led to a considerable amount of secondary legislation addressing the relationship of exclusive rights, market segmentation and the goals of free movement of goods and competition, up to the point of creating the EC-wide systems of protection, described above.[20] Other regional fora, in particular Nafta, Mercosur and the Andean Pact, followed suit. They took ideas from the TRIPs drafts to harmonize fields of IP protection such as the protection of undisclosed data.[21]

At the national level, linkages between IPRs and trade were first established unilaterally by Section 301–06 of the 1974 U.S. Trade Act, which was reinforced in 1988 with controversial provisions and procedures allowing for retaliation against the import of goods and services from countries having, according to the United States,

unfair and distorting IP regimes, whether or not in conflict with current international obligations.[22] The IPR-trade linkage in domestic U.S. law, as well as U.S. bilateral and regional efforts, such as the Caribbean Basin Initiative, undoubtedly inspired GATT Contracting Parties, through a U.S. initiative to incorporate IPRs into the 1986 Punta del Este Declaration which began the Uruguay Round.

The Punta del Este mandate was able to build upon previous, but failed efforts, after the Tokyo Round to bring about disciplines against counterfeiting and piracy. It went beyond these leftovers and was strongly contested by developing countries. But fears of the use of unilaterally defined IPR trade policies by the United States largely accounted for the reluctant acceptance of international negotiations with a view to enhancing the predictability and accountability of major trading partners with respect to their export-driven foreign intellectual property policies.

D. From Tariffs to Intellectual Property

It is important to describe at the outset the inherent linkages between trade regulation and intellectual property protection and to understand the sequencing and the reasons therefor. The lack of appropriate protection of IPRs results in trade restrictions. This should be addressed in the proper context of what I call third generation trade barriers.

Trade policy in the early post-World War II era focused on the gradual reduction of tariffs and the elimination of preferential systems. Tariffs, the first generation of barriers, were high, stemming from the protectionist policies of the great depression of the 1930s.[23] In addition, preferential tariffs existed within the colonial systems. After the failure to establish the International Trade Organization, based upon the Havana Charter, the 1947 General Agreement on Tariffs and Trade ("GATT")[24] provided, in essence, a framework for a gradual and, as it turned out, successful process of tariff reductions. In seven rounds of multilateral negotiations, tariffs on manufactured goods, which averaged forty percent in 1947, were reduced by the conclusion of the Tokyo Round in 1979 to an average of 4.7 percent in the main industrialized nations. Further cuts were achieved in the Uruguay Round, the eighth round of multilateral trade negotiations, and the Round resulted in the decision of developing countries to bind many tariffs. Importantly, all quantitative restrictions were tariffied under the new Agreement on Agriculture. The average tariff reduction achieved by the 117 participants during the Uruguay Round negotiations amounted to forty percent.[25]

Breen, *Agriculture*, in THE GATT URUGUAY ROUND, A NEGOTIATING HISTORY (1986-1992), VOLUME I: COMMENTARY, 131–247 (Terence P. Stewart ed., 1993); Harmon Thomas, *Agriculture in the Uruguay Round: Interests and Issues*, in URUGUAY ROUND PAPERS ON SELECTED ISSUES 221-260 (UNCTAD 1989).

The provisions of the GATT were designed to accompany tariff reductions and to prevent circumvention of tariff bindings by other means, in particular quantitative import restrictions, subsidies or discriminatory taxes on imports. Indeed, the gradual reduction (and even the elimination of tariffs within customs unions and free trade arrangements) increasingly shifted the emphasis in the negotiations to non-tariff measures, which began to replace tariffs as the main instrument of governmental trade policy in order to protect domestic industries and products. Quantitative restrictions, export subsidies, anti-dumping measures, technical norms and standards, balance of payment measures, labeling requirements, import licensing, rules on government procurement, "voluntary" import obligations or export restrictions ("grey area" measures such as voluntary export restraints or "VERs", and orderly marketing arrangements or "OMAs") and other imaginative tools became widely-used instruments for economic and political ends, both in developing and industrialized countries. They form a second generation of barriers. Such non-tariff measures became, in addition to the classical process of tariff reductions, the main subject of trade negotiations in the Tokyo Round. The Tokyo Round agreements on non-tariff measures were further developed in the Uruguay Round, and new ones, in particular on safeguards (including a prohibition of grey area measures) and textiles were added.

As a result of the substantial tariff reductions and increasing legal disciplines in the field of non-tariff measures, a third generation of non-tariff barriers emerged during the 1980s. These barriers encompassed a number of issues, ranging from domestic farm support, to the restrictive regulation of service industries and investments, and finally, the protection of intellectual property. What do these subjects share in common? They stem from different fields of law, public and private, but the common trait is that they all are foremost part of *domestic* legal systems. They are not directly geared to border measures and classical international trade relations, but they have been affecting such relations more and more in terms of limiting market access while other barriers were gradually dismantled or at least legally disciplined. The great political difficulty in reaching final agreement on important issues in the Uruguay Round, such as the reduction of agricultural support, but also the failure to achieve substantial streamlining of conditions for investment, or to bring about significant liberalization of trade in services beyond binding existing levels of market access (a first and important step to establish a framework for liberalization), all stemmed from this development—turning more and more to areas of domestic law, beyond simple regulation of imports and exports.

The main difficulties to be settled in the area of intellectual property had similar roots. The patentability of pharmaceuticals, foodstuffs or living matter, i.e., how far exceptions to patentability should be allowed to go, or, in copyright, how the relationships of authors, producers, performers and users should be arranged, are primarily matters of domestic law and policy. At the same time, they are perhaps the most prominent examples of how far international negotiations and regulations have penetrated socially, ethically or culturally sensitive contemporary issues concerning the domestic political process.

International trade law has come a long way. It has left the area of mere transboundary action. More than ever before, international trade regulation now seeks to assure fair competition in a globalizing market economy. Foreign and domestic economic affairs can no longer be separated; and the increasing importance and attention paid to foreign policy in general is a natural effect of such developments. Today, efforts under the Doha Development Agenda aim, inter alia, at developing disciplines on anti-trust rules, on

investment and enhanced transparency in government procurement.[26] These new areas continue the move towards the development of global rules on domestic conditions of competition beyond border measures, which essentially began in the Uruguay Round with the intellectual property and services negotiations.

The Uruguay Round mandate to negotiate on intellectual property resulted in what amounts to the most comprehensive instrument ever adopted in the field. Many consider it to be one of the main, if not the main, achievement of the Round. Others in hindesight, for reasons already discussed, identify a fundamental and fatal error in placing IPRs under the umbrella of the WTO; it is argued that trade rules in favor of freer trade and market access are fundamentally at odds with the allocation of exclusive rights and monopolies under the very same instrument. Many economists fear that the balance tipped too much towards exclusive or monopoly rights, profoundly at odds with freer trade. For them, as mentioned before, the negotiating history suggests that many countries were forced into a strange agreement under the single undertaking approach of the Uruguay Round in return for other benefits expected, but without an inherent linkage to trade liberalization. The TRIPs Agreement is thus seen by some as an alien and misplaced body of law in the WTO.

Two counter-arguments should be made and stressed. First, the negative point of view ignores the fact that intellectual property is not the only field encompassing what was described above as a new generation of trade regulation. Other areas are in principle, equally structured and follow the patterns of positive or prescriptive integration. Rules relating to safeguards, dumping, subsidies, and agriculture are equally harmonizing, albeit setting maximum, and not minimum standards. To the extent that Members make use of such policy instruments, they are obliged to respect a set of well-defined disciplines aimed at excluding excessive recourse and use. Second, the contradiction between trade liberalization and exclusive rights is a formal one. In substance, there is no difference in principle between exclusive rights and freer trade. Intellectual property rights are an inherent part of the international trading system. The evolution of intellectual property disciplines in the European Communities both under free movement of goods and competition rules, despite the rule that property rights per se remain within the competence of the Member States, proves the point on an international level. Every rule-based trading system depends on intellectual property protection, to the extent that it presupposes property rights over traded goods and services. Whether or not the effects are beneficial or detrimental to national and global welfare depends on the balance achieved. Lack of, or insufficient protection amounts to *de facto* restrictions on market access, as exported products will be replaced by both generic and copied products that free-ride on research and development, investment in creative activities and in quality control and product differentiation undertaken elsewhere. On the other hand, lack of appropriate limitations on rights may unduly hamper the flow of goods and services. The real issue is one of balancing different policy goals. This is the core of the matter, upon which fruitful discussions between proponents and critics of intellectual property protection should focus. The proper debate is one of degrees and levels of protection, rather than protection *per se* or the existence of the TRIPs Agreement in the WTO.

[26] *Ministerial Declaration*, adopted on November 14, 2001 at the Ministerial Conference, Fourth Session, Doha, November 9–14, 2001, WT/MIN(01)/DEC/1, November 20, 2001, ¶¶ 20–26, reproduced in the Appendix to this book. The so-called Singapore issues also contain a future mandate on trade facilitation; *see* THE SINGAPORE ISSUES AND THE WORLD TRADING SYSTEM: THE ROAD TO CANCUN (Swiss State Secretariat of Economic Affairs and S. Evenett eds., 2003).

E. Uruguay Round Negotiations

The complexity and comprehensiveness of the TRIPs Agreement cannot be fully understood without recalling the negotiating process through which it was concluded. It may be described as one of the most successful operations in building coalitions, partnerships and, above all, creating a mutual learning process.[27]

At the end of the Tokyo Round, the United States and the European Community launched negotiations on a draft Anti-Counterfeit Code. That effort ceased when intellectual property was included in the 1986 negotiating mandate for the Uruguay Round, which as a political compromise was limited to its "trade-related aspects".[28] The initiative was eventually supported by U.S. estimates that its industries suffered losses of some 24 billion dollars in 1986 as a result of inadequate protection of intellectual property and related investments.[29] At that time, no estimates were available for other countries, in particular for European industries. In the beginning, the European Community was reluctant to commit itself on the issue, but in the course of the negotiations, it gradually became one of the major *demandeurs*.

The seven-year negotiations went through three phases.[30] A long process of fact-finding, which also worked as a tool for mutual education, led to comprehensive proposals by various contracting parties. In the second phase, intensive negotiations took place after the Montreal mid-term review (December 1989) and the April 1990 Ministerial Decision. The work was successfully concluded in December 1991, when the draft TRIPs Agreement was included in the "Dunkel text".[31] During the last phase, efforts were aimed at preserving the results achieved and avoiding jeopardizing the results by counterproductive new IP proposals, as well as avoiding a deadlock in the negotiations on other IP issues, relating to agriculture or audiovisual services. Unlike the first two phases, the last phase was marked by conflicting interests between the United States and the EC on copyright issues (cultural aspects, levies on blank tapes, and national treatment of collecting societies).

The results were made possible by various factors, many of which are interesting for the purposes of a general assessment of the importance of intellectual property. To a great extent the results exceeded the initial expectations.

The educational process in the first phase led to a change in the attitude of a majority of developing countries toward the traditional UNCTAD approach of regarding higher protection of intellectual property as detrimental to the development of those countries. Negotiations were frank, and conducted by well-informed delegations. Complaints that many developing countries could not fully grasp the scope of obligations entailed by an

[27] On this subject, *see* Julie Chasen Ross and Jessica A. Wasserman, *Trade-Related Aspects of Intellectual Property*, in THE GATT URUGUAY ROUND. [31] *See* Amy S. Dwyer, *supra* note, 27 at 471–495; GERVAIS, *supra* note 27, at 3–25.

IP agreement are not well founded, perhaps with the exception of complaints from some African States that were not prepared or able to make the necessary resources available during the negotiations. But there was a strong group of countries, including Brazil and India, which resolutely defended their interests, as well as those of small and often absent delegations. The efforts of these countries were reflected in key provisions, such as those relating to the recognition of social and developmental goals, compulsory licensing, and restrictive business practices.

The developing countries eventually recognized the importance of intellectual property protection as a prerequisite, albeit not the only one, for foreign direct investment and transfer of technology. In that respect, the decisive position in favor of IPRs maintained by the newly industrialized Asian economies, the political and economic transformation of Central and Eastern European countries, as well as the growing competition between those countries in order to make their markets more attractive, undoubtedly played an important role, within the context of a globalizing world economy, in reaching an agreement. Developing countries subsequently discovered the virtue of the multilateral system as a bulwark against unilateral pressure, in particular that of the United States (through the Super 301 procedure of the Trade Act). They also saw the TRIPs Agreement as a means to reinforce their position with respect to trade in goods: the potential of reprisals through the withdrawal of concessions in the field of intellectual property enhanced their negotiating power on market access to Europe and the United States. Last, there was a clear linkage, albeit not openly and formally stated as such, between the TRIPs negotiations and those in the fields of agriculture and textiles. No breakthrough on TRIPs would have been possible without middle and long-term prospects of better market access conditions for developing countries in those two areas.

F. The Impact of the TRIPs Agreement

Unlike the agreement concluded in the field of agriculture, the TRIPs Agreement only required minor changes in the national legislation of the European Community and EFTA countries, and in North America. Within the EC, it has resulted in the further harmonization of laws, in particular in the field of procedures—despite the fact that the EC does not have internal jurisdiction in the field. Except for border measures, it is therefore essentially a mixed agreement in Community law, entailing the shared jurisdiction of the EC and the Member States.[32]

Major structural changes were, and still are, to be undertaken in developing countries, the newly industrialized countries, and Eastern European countries, subject to transition periods. Unlike measures which produce immediate results (e.g., tariff reductions), most effects of the TRIPs Agreement will only become apparent on a medium- and long-term basis for reasons already discussed. While national treatment and the most-favored-nation rule had to be accorded immediately, the other requirements were to be implemented by developed countries one year after the entry into force of the Agreement, i.e., on January 1, 1996, according to Article 65, or upon accession to the WTO in accordance with the respective protocol of accession. Developing countries benefit from further transitional periods, discussed in Part III(H) below.

In many countries, deficiencies in intellectual property protection result not only from inadequate substantive standards, but also from the lack of effective enforcement of

[32] *See Opinion 1/94 on the Competence of the Community to conclude International Agreements concerning Services and the Protection of Intellectual Property*, ECR I-5267 (1994) ¶¶ 54 *et seq.,* and 99 *et seq.*

intellectual property rights (due to corruption or lack of resources). In the final analysis, in many countries it is also a question of diverging cultural traditions, in other words, of general perceptions of law, property, and what is in the public domain, that need to change in light of the commitments made under the Agreement. At the 2001 Ministerial Meeting in Doha, implementation of the TRIPs Agreement was one of the main concerns of developing countries.[33] The wide gap that currently exists between the requirements of the WTO Agreements and current practices in many developing countries induced Members to pledge substantial efforts in capacity building, implicitly including capacity building related to IPRs.

It is clear that the implementation of the TRIPs Agreement amounts to a major challenge in many parts of the world. Implementation is not merely a matter of adjusting laws and regulations (monitored by the TRIPs Council as one of its main activities in the first five years). More profoundly, it is a matter of changing attitudes towards concepts of private and intellectual property, still largely absent in the social fabric of society in many countries. There are no easy and rapid solutions and this is bound to be a long-term process.

III. Description and Legal Analysis of the Trips Agreement

A. Scope and Subject-Matter of the Agreement

1. Survey of Protected Rights

The TRIPs Agreement is contained in Annex 1C of the WTO Agreement. The TRIPs Agreement lays down the essential elements of the level of protection that countries must accord to intellectual achievements. TRIPs Article 1:2 defines the nature and scope of obligations and the pertinent notion of "intellectual property" under the Agreement. Part II of the Agreement covers all pertinent fields and forms of intellectual property: copyright (including computer programs and data bases), trademarks and service marks, geographical indications, industrial designs, patents for invention, topographies of integrated circuits, and trade secrets (undisclosed information). Additional obligations stem from the incorporation of pre-existing agreements (as defined in Article I footnote 2 of the Agreement): Article 2 of the TRIPs Agreement obliges Members to comply with the substantive provisions of the widely adopted Stockholm Act of 1967 of the 1883 Paris Convention which covers aspects of patents, trademarks, trade names and protection against unfair competition. Article 9 incorporates the substantive provisions of the 1971 Paris Act of the Berne Convention covering copyright, and Article 35 incorporates the Washington Treaty on the Protection of Integrated Circuits, which has never come into force. These provisions form an integral part of the Agreement's obligations with respect to intellectual property.[34] The 1961 Rome Convention, addressing the rights of performers, producers and broadcasters (neighboring rights) is referred to in various Articles, but is not formally incorporated into the Agreement. The relationship of these various agreements is discussed in Part III(B)(3) of this chapter.

In addition, the Member States undertake in Part III to provide prescribed procedures and remedies at the national level in order for intellectual property rights to be effectively enforced, and in Part IV in relation to registration and maintenance of rights. The

substantive and procedural standards are described in more detail in Parts III(D) and III(E) and (F) of this chapter.

Article 1:3 addresses the right holders under the TRIPs Agreement. These are deemed to include all nationals of other Members. For the purpose of enforcement, right holders also include "federations and associations having legal standing to assert such rights" in accordance with their purpose.[35] As a practical matter, the rights also extend to the nationals of a Member since rights and obligations are generally implemented in a non-discriminatory manner. Whether or not the Agreement can be invoked domestically, however, remains a matter to be defined by national law.

The rights and obligations relating to the specific forms of intellectual property are not defined uniformly, but vary from form to form. In general terms, they are defined as negative rights as they entitle a right holder to prevent others not having the owner's consent from acts such as making, using, offering for sale, selling and importing protected products. More specific activities covered will be discussed below in Part III(D).

2. Subject Matter and Inter-temporal Application

The subject matter of the Agreement is defined by the scope of protected rights and the objects of intellectual property, more specifically information, i.e. expression of ideas, creative forms, inventions, reputation, goodwill and products (goods and services) containing these factual elements. Intellectual property rights appropriate this information that would otherwise be in the public domain, and the relationship between the two needs (the scope of protected rights and the object of the intellectual property protection) to be defined in inter-temporal terms. With the advent of the TRIPs Agreement, the relationship of the new rights and existing subject matter under protection, no longer under protection and not yet under protection needs to be defined. The principles of intertemporal law are set out in Article 70 of the Agreement.

In accordance with general principles of law, the Agreement does not apply retroactively to acts that took place prior to the entry into force of the TRIPs Agreement. Article 70:1 therefore excludes from coverage *completed* creative or infringing activities such as inventing, acting and performing, registration of works on phonograms, but also counterfeiting or piracy which took place prior to the entry into force of the agreement. Ongoing acts, however, which become infringing under the Agreement, are subject to Article 70:4. The treaty allows Members to provide for a limitation on the remedies available for such acts, including past acts which entailed important (and ongoing) investment. At any rate, Members are obliged to provide for financial compensation in such cases.

It is important to distinguish acts from subject matter which was created through such acts and continues to exist, such as inventions, existing phonograms, trademarks, etc. Subject matter capable of protection through intellectual property rights falls under the Agreement to the extent that the subject matter existed at the day of entry into force for a Member. Under Article 70:2, the Agreement applies to subject matter which has been protected at the day of entry into force, or *subsequently meets the criteria for protection* under the Agreement. Existing subject matter, created by acts prior to the entry into force, therefore qualifies for protection under the Agreement. Of course, subject matter coming into existence after the entry into force, is fully covered. Pursuant to Article 70:7, subject matter for which an application for registration is pending when the TRIPs Agreement entered into force, is entitled to protection under the standards of the Agreement.

[35] Article 42 note 11.

Difficult areas of overlap exist with respect to pre-existing subject matter which qualifies for protection under the new rules. As a general rule, there is, according to Article 70:3, no obligation to restore protection of subject-matter which, at the day of entry into force, had been in the public domain. Subject matter which did not, or no longer, enjoys protection under pre-existing rules, will not be protected pursuant to the categories of extended protection under the Agreement. There are, however, qualifications of this principle in the fields of copyright and patents which will be discussed when these particular rights are addressed.[36]

B. The Nature and Interpretation of TRIPs Rights and Obligations

1. Private Rights and the Potentials of Direct Effect

As stated at the outset of this chapter, the TRIPs Agreement introduced a new dimension of rights and obligations into the multilateral trading system.[37] While intellectual property protection was referred to as a legitimate basis for exceptions in GATT Article XX(d), and thus used to justify trade restrictions on infringing imports, the TRIPs Agreement establishes standards for private rights and obligations, thus pertaining to right holders rather than States. The preamble explicitly recognizes that intellectual property rights are private rights. Members are obliged to implement these standards and thus grant protection to individual right holders, the very subject of the Agreement.

Such explicit recourse to private rights and right holders marks a particular feature of the Agreement. Yet, the practical difference between private and public law—the latter being the traditional basis of trade regulation—should not be overstated. The nature of private rights does not change the primary nature of obligations of Members under international law which require implementation through domestic law.

First, Article 1:1 of the TRIPs Agreement obliges Members to give effect to the provisions of the Agreement. As to methods of implementation, they remain free to define the appropriate method in accordance with their own legal system. The Agreement therefore does not prescribe the status of the norms of the TRIPs Agreement in domestic law. Members are free to limit the impact of these rules to the process of domestic legislation in the dualist tradition of international law which clearly separates the spheres of national and international law. Countries operating under monist doctrines, which integrate international law into domestic law, may grant more extensive, immediate effect to the norms of the Agreement. Yet, the nature and definition of private rights in the TRIPs Agreement has not altered the freedom of Members to chose their own methods of implementation.

Second, dispute settlement remains reserved to Members. Private operators cannot invoke the obligations of Members under WTO law before the WTO under the Understanding on Rules and Procedures Governing the Settlement of Disputes ("DSU") by arguing that in the field of IPRs these rights are also private rights.

The impact of defining private rights and directly addressing right holders is more important in domestic law and legal protection. The protection of intellectual property

[36] *See* Parts III(A)2; III(D)(1)(c), III(D)(5)(c) and III(E)(1) of this chapter.

[37] *See, e.g.,* ABBOTT, COTTIER, GURRY, *supra* note 7 at 1, 326; ALESCH STAEHELIN, DAS TRIPS-ABKOMMEN: IMMATERIALGÜTERRECHT IM LICHT DER GLOBALISIERTEN HANDELSPOLITIK 45 (1999); D. Wager, *Compliance with TRIPs: The Emerging World View*, 29 VANDERBILT JOURNAL OF TRANSNATIONAL LAW 391 (1996); WIPO, IMPLICATIONS OF THE TRIPS AGREEMENT ON TREATIES ADMINISTERED BY WIPO (1996).

rights has been a core function of domestic courts, and clearly belongs in the judicial province. Domestic courts are called upon to work with the provisions of the TRIPs Agreement in the process of implementing, completing and applying domestic intellectual property law. In this context, we need to distinguish the doctrine or principle of "consistent interpretation" and the doctrine of "direct effect".

The principle of consistent interpretation is of paramount importance, has been generally accepted, and is also suitable for application in dualist countries. According to this principle, courts of Members are obliged to interpret national law to the extent possible in a manner that is compatible with international law and thus the TRIPs Agreement.[38] The high level of detailed prescription contained in the TRIPs Agreement is a prominent feature. It allows the Agreement to provide guidance in interpreting domestic law which, in many countries, provides much less detail. The TRIPs Agreement is therefore an important reference to fill lacunae and render broad domestic provisions more specific in accordance with international legal obligations.

In addition, many provisions of the TRIPs Agreement, given their origin in the tradition of national law, are suitable to be applied with direct effect in domestic law. While consistent interpretation operates within the bounds of domestic law and assists in its interpretation, the doctrine of direct effect goes much further, addressing inconsistencies between domestic and international law obligations. Direct effect requires a monist tradition of international law. Granting direct effect implies that international law prevails over domestic law. In the United States—despite its monist tradition—direct effect is generally excluded by Congress in trade-related implementing legislation for reasons of separation of powers and the preservation of Congressional prerogatives.[39] The European Union, in particular the European Court of Justice, has so far generally excluded direct effect for trade policy reasons associated with the lack of reciprocal judicial protection by major trading partners.[40] Importantly, the Court did not exclude direct effect by EU Member States in areas of exclusive or mixed competence, to which intellectual property rights and civil and administrative enforcement belongs. Similarly, countries like Switzerland have not ruled out the general direct effect of the WTO Agreements and remain open to apply the doctrine, in particular in the field of intellectual property.[41]

The doctrine of direct effect is controversial and its application to WTO law has mainly been influenced by difficult cases outside the realm of the TRIPs Agreement. The modern theory of direct effect avoids generalizations with respect to its general applicability in WTO law. It seeks to analyze the nature and justiciability of the particular norm in question, taking into account the proper role and suitability of courts to make appropriate determinations in the case at hand. In other words, the doctrine of direct effect should apply to areas that belong to the traditional provinces of the courts in the light of separation of powers and checks and balances applied under the respective constitutional system.[42]

Thus, direct effect depends on whether the subject matter concerned falls within the province of a court, or whether a decision should instead be left to political, legislative bodies. While trade policy generally speaking is characterized by strong prerogatives of the executive and legislative branches, accompanied by judicial restraint, no such tradition exists in the field of intellectual property protection.[43] Importantly, applying direct effect in the field of intellectual property does not prejudice the question of direct effect for other areas of trade regulation. It offers the potential for nuanced and differentiated approaches to direct effect.

2. Minimum and Maximum Standards

A second quality of TRIPs norms is that they are conceived as minimum standards, and not formal norms of international harmonization that set limits to domestic protection of intellectual property. The prevailing view is that the TRIPs Agreement merely sets out minimal substantive standards and does not amount to harmonization. It thus allows Members to introduce stronger protection than the minimums set forth in the Agreement.

Article 1:1 of the Agreement expressly allows Member States to adopt "more extensive protection", provided such protection does not contravene the provisions of the Agreement. Article 71:2 reiterates the basic concept, providing for facilitated adoption of enhanced standards contained in subsequent IPR agreements adopted by all Members. Article X:6 of the WTO Agreement allows for adoption "by the ministerial conference without further formal acceptance process" of such amendments to the TRIPs Agreement.

In terms of substantive standards relating to the different forms of intellectual property, it is difficult to see explicit barriers to enhanced protection in the provisions of the Agreement. The situation is different with respect to the provisions on enforcement, which partly limit Members from taking certain procedural steps. Experience had shown that border controls may be abused to impede international trade, and the rules partly reflect this experience. The preamble of the TRIPs Agreement recognizes this point requires an appropriate balance in the field of enforcement rules:

> Desiring to reduce distortions and impediments to international trade, and taking into account the need to promote effective and adequate protection of intellectual property rights, and to ensure that measures and procedures to enforce intellectual property rights do not themselves become barriers to legitimate trade;

The question arises as to whether such limitations should also exist with regard to substantive standards, as trade barriers may equally stem from excessive standards. Assume that a Member adopts patent protection for fifty, instead of twenty years. This is unlikely for a number of policy reasons relating to competition, but is not excluded by the wording of Article 1:1 of the Agreement. Would the trade-impeding and pricing effects of such an extensive monopoly, if exercised to its full extent, amount to an abuse of rights and thus be contrary to a general principle of law? Or, could it give rise to a non-violation complaint under GATT or GATS as such a rule—compatible with the TRIPs Agreement—could excessively impair *de facto* market access and nullify and impair market access rights? At this stage, the agreement does not provide an answer to such issues. It may be argued that patents, whatever their duration, stimulate competition and a fifty-year period would not be exploited frequently as technology develops fast, is rapidly outdated, and patents will

99–123 (Armin von Bogdandy; Petros C. Mavroidis and Yves Mény eds., 2002). *See also* THOMAS COTTIER, ALBERTO ACHERMANN, DANIEL WUEGER, AND VALENTIN ZELLWEGER, DER STAATSVERTRAG IM SCHWEIZERISCHEN VERFASSUNGSRECHT 9, 95–253 (2001).

[43] *See* Thomas Cottier and Matthias Oesch, *supra* note 39.

therefore not be maintained. Similar questions may be asked in respect of an extensive duration of copyrights and neighboring rights as applied to software, the internet, phonograms and films, respectively. More importantly in practical terms, there is clear risk of excessive protection of contents of databases in domestic law[44] and of geographical indications.[45] Finally, it will be seen that the Agreement allows for extensive restrictions on parallel trade which may be questioned from a trade policy perspective.[46]

The problem of merely setting minimum standards in the TRIPs Agreement illustrates that in the long run the nature and scope of rights cannot be defined without reference to other disciplines of WTO law, in particular future competition policy and rules. This is a complex issue. Protection of intellectual property rights is recognized as a necessary condition of competition, allowing companies to find their identity and place on the market and motivating them to undertake investment in technological developments. At the same time, intellectual property protection is not a sufficient condition of competition. Consisting of exclusive rights, there is always the risk it will become a barrier to trade, leading to market segmentation and higher prices. A proper balance must be maintained.

Today, this balance is partly maintained in the Agreement by defining appropriate, non-excessive levels of protection. Partly, it is kept within the Agreement by allowing Members to consider other policy goals and introduce restrictions. Partly, it is kept by reference to competition policy against restrictive business practices which Members are allowed to apply fully under Article 40 of the Agreement. The Agreement however fails to effectively address excessive protection in domestic law. Future coordination in the WTO between the TRIPs Agreement and international standards on competition law and policy[47] may reveal that the TRIPs Agreement should not only prescribe minimum, but also maximum standards that Members must not exceed in order to maintain a proper balance between IPR protection, competition and market access rights. Such coordination would reveal the true harmonizing nature of TRIPs as a body of global law.

The problem posed by minimum versus maximum standards also arises from the practice of Members to ask for additional commitments from newly acceding countries which go beyond the level of protection required by the TRIPs Agreement. For example, the Protocol of Accession of the People's Republic of China sets forth additional substantive and procedural obligations.[48] While additional procedural requirements can be justified

[44] While efforts to bring about extensive protection for databases failed in the United States and in WIPO, the EC introduced a higher standard of protection based on traditional copyright (Articles 5–7 of Directive 96/9/EC of the European Parliament and of the Council of the EU of March 11, 1996 on the Legal Protection of Databases, O.J. L 077, March 27, 1996) as well as new sui generis approaches (Articles 7–11, Id) that are aimed at stimulating investment in databases; see Pamela Samuelson, *The Digital Agenda at WIPO*, 37 Virginia Journal of International Law 369 (1997), reprinted in Abbott, Cottier, Gurry, *supra* note 7 at 908; Matthias U. Studer, *The Quest for Legal Protection of Databases in the Digital Age*, Vol. 4 (5) Journal of World Intellectual Property 670, 690 (2001).

[45] *See infra* Part III(D)(3).

[46] *See infra* Part III(C)(3).

[47] Whether or not such disciplines will emerge is difficult to assess. *See generally, Julian L. Clarke and Simon J. Evenett, A Multilateral Framework for Competition Policy*? in The Singapore Issues and the World Trading System: The Road to Cancun 77–168 (Swiss State Secretariat of Economic Affairs and S. Evenett eds., 2003). The author of this chapter has argued from an IPR perspective that particular emphasis should be given to mutual assistance in law enforcement and the regulation of export cartels, *see* Thomas Cottier and Ingo Meitinger, The TRIPs Agreement without a Competition Agreement?, Nota di Lavoro (Working Paper) 56.00, Fondazione Eni Enrico Mattei Venice (1999): www.feem.it/NR/rdonlyres/364E97CC-2C8D-42E2-BE36-D87542C3A67C/299/6599.pdf visited November 25, 2003).

to provide necessary assurances for enforcement in the light of existing problems and deficiencies of the legal system of the new Member,[49] additional substantive standards are problematic both from the point of view of equality of WTO Members and the equal conditions of competition that were set (unlike for GATT 1947) for all original Members of the WTO. Levels of commitments may and do vary in specific Member schedules under GATT and GATS, but should all remain within the legal framework of the WTO Agreements.

3. Incorporation by Reference of other Agreements

TRIPs Articles 2 and 9:1 settle the interrelationship between the norms of the TRIPs Agreement and the Berne and Paris Conventions, and require non-members of these Conventions to comply with their provisions.

The technique of full incorporation of the substantive provisions of these Agreements is a novel feature in international treaty law. It goes beyond preexisting treaty references as these agreements are positively incorporated and thus establish genuine rights and obligations that assist in the interpretation of the TRIPs Agreement and its exceptions. It establishes a Member's right to WTO dispute settlement over matters involving these conventions, including over disputes involving a WTO Member that is not a party to one or more of these agreements. Moreover, the TRIPs Agreement establishes jurisdiction to prescribe and enforce matters within the province of WIPO.

The "incorporation" of certain IP conventions into the WTO Agreement should be distinguished from other references to international agreements in the WTO Agreement. WTO law sometimes refers to other agreements that are not formally part of WTO law. These related agreements may be taken into account as a preliminary issue (e.g., in interpreting GATT Article XXIV relating to regional trade arrangements), or in interpreting provisions (e.g., GATT Article XX). Such relationships may also emerge in the field of intellectual property. Panels and the Appellate Body may be called upon to examine the relevance of existing agreements pursuant to Article 31 of the Vienna Convention on the Law of Treaties (in particular paragraph 3:c), such as the Patent Corporation Treaty, or agreements dealing with the international registration of rights. Other instruments, such as legal opinions submitted by WIPO, may be taken into account as factual evidence.[50]

Problems arose as to the relationship of the incorporated agreements with the TRIPs Agreement. In *United States—Omnibus Appropriation Act* the parties disputed whether trade names, protected under Article 8 of the Paris Convention, but not referred to in the TRIPs Agreement, enjoy protection under WTO law. While the Panel found against protection on the grounds that trade names are not specifically mentioned in the TRIPs Agreement, the Appellate Body rightly rejected such a formal view and affirmed incorporation and full protection of such names under the TRIPs Agreement.[51] This clarification, however, does not dispose of all potential problems. There may be tensions between rights and obligations of the TRIPs Agreement and an incorporated agreement. Formally, they are of equal standing, and the later-in-time rule of Article 30:3, or *the lex specialis* rule of Article 59:1 of the Vienna Convention on the Law of Treaties cannot formally apply. For example, Articles 5:2 and 5:4 of the Paris Convention allow, under certain

[49] Thomas Cottier, *Emerging Doctrines of Good Governance: The Impact of the WTO and China's Accession*, in CHINA IN THE WORLD TRADING SYSTEM, DEFINING THE PRINCIPLES OF ENGAGEMENT 119 (Frederick M. Abbott ed., 1998).

[50] *See United States—Omnibus Appropriation Act, supra* note 34, at 106.

[51] *See United States—Omnibus Appropriation Act, supra* note 34, at 333–339.

conditions, for mandatory working of patents. This is excluded under Article 27 of the TRIPs Agreement which generally requires non-discriminatory treatment of patents, i.e. "whether products are imported or locally produced". The potential tension will need to be resolved by interpreting these norms as a single undertaking, taking into account the underlying prohibition of abuse of rights in Article 5:2 of the Paris Convention and Article 31 of the TRIPs Agreement on compulsory licensing.

4. Interpretation of the TRIPs Agreement

(a) Textual Interpretation and Good Faith. The TRIPs Agreement does not contain particular provisions relating to its interpretation. The rules enshrined in Articles 31 and 32 of the Vienna Convention on the Law of Treaties apply in accordance with the standard practice of panels and the Appellate Body, based on the reference to "customary rules of interpretation of public international law" in Article 3:2 of the Dispute Settlement Understanding.[52] The process of interpretation is characterized by strong reliance on the wording and textual meaning (including standard dictionary definitions) in order to define the intent of the parties. The object and purpose of a rule is—unlike in EC and domestic law—less prominent, although it does appear in the form of a contextual analysis. Recourse to the third element in Article 31 of the Vienna Convention—protection of good faith[53]—however is not yet well developed in WTO law. While a Panel has used the "doctrine of legitimate expectations of Members regarding conditions of competition,[54] this approach was rejected by the Appellate Body in the field of IPRs, which found that the Panel had misapplied Article 31 of the Vienna Convention. According to the Appellate Body, the Panel had misunderstood the concept of legitimate expectations in the context of the customary rule of interpretation of public international law. It stated that the legitimate expectations of the parties to a treaty are reflected in the language of the treaty itself. The duty of a treaty interpreter is to examine the words of the treaty to determine the intentions of the parties, in accordance with the principles set forth in Article 31 of the Vienna Convention.[55]

It can be argued that the Appellate Body has failed to recognize that Article 31 of the Vienna Convention requires interpretation to be conducted in the light of good faith, thus taking into account what Members and right holders could legitimately expect from compliance with a particular obligation. The Appellate Body ruled that this would amount to the application of subjective standards. Protection of good faith, however, always makes recourse to what a reasonable person would and could believe under the circumstances. It makes recourse, in other words, to an objective assessment of what the claimant could reasonably expect in the process of applying and implementing an obligation. This must be distinguished from non-violation complaints, and the respective

[52] See Chapters 25 *et seq.* of this book.

[53] "A treaty is to be interpreted in good faith. Apart from the necessity for this as a matter of general principle, it follows from Article 26 of the [Vienna] Convention which imposes upon parties to a treaty the obligation to perform in good faith", I OPPENHEIM'S INTERNATIONAL LAW 1272 (9th ed., Robert Jennings and Arthur Watts eds., 1996) A footnote adds that "[t]his strongly implies an element of reasonableness". *Id.*

Davey, *Has the WTO Dispute Settlement System Exceeded its Authority? A Consideration of Deference shown by the System to Member Government Decisions and its Use of Issue-Avoidance Techniques*, 4 JOURNAL OF INTERNATIONAL ECONOMIC LAW 79 (2001); P. Cattaneo, *The Interpretation of the TRIPs Agreement: Considerations for the WTO Panels and Appellate Body*, 3 JOURNAL OF WORLD INTELLECTUAL PROPERTY 626 (2000).

doctrine of protecting legitimate interests. Interpretation purely based on wording often falls short of identifying the true meaning of a provision.[56] While the scope of expansive interpretation is limited in international law and cannot be applied in the same manner as by a well-established domestic or regional court, the Vienna Convention nevertheless allows and even requires legitimate expectations to be reasonably taken into account in interpreting a rule.

(b) Questions of Law and Fact. The interpretation of TRIPs rules often entails the review of relevant national or regional intellectual property rules. The task regularly amounts to the examination of whether a certain rule is consistent with the standards set out in the TRIPs Agreement. Review and interpretation of domestic or regional law is a question of fact.[57] Panels and the Appellate Body do not have jurisdiction to interpret and apply national or regional laws, properly speaking. How should they treat them? How much deference should be granted? Panels and the Appellate Body examine the matter by asking whether the defendant is in a position to demonstrate as a matter of evidence that its interpretation is supported in national law. Defendants, of course, always argue that the rule is compatible, and examination therefore cannot rest here. Panels and the Appellate Body cannot simply rely on the interpretation provided by the defendant. It must be corroborated by precedents or scholarly writings. No benefit of the doubt is given to defendants in interpreting their own law. The test to be met is evidence as to the existence of a sound legal basis. As the Appellate Body held in the *India—Patents* case, municipal law may serve as evidence of facts and may provide evidence of state practice. In addition, under public international law, municipal law may also constitute evidence of compliance or non-compliance with international obligations. The Appellate Body quoted the Permanent Court of International Justice in *Certain German Interests in Polish Upper Silesia*:[58]

> It might be asked whether a difficulty does not arise from the fact that the Court would have to deal with the Polish law of July 14th, 1920. This, however, does not appear to be the case. From the standpoint of International Law and of the Court which is its organ, municipal laws are merely facts which express the will and constitute the activities of States, in the same manner as do legal decisions and administrative measures. The Court is certainly not called upon to interpret the Polish law as such; but there is nothing to prevent the Court's giving judgment on the question whether or not, in applying that law, Poland is acting in conformity with its obligations towards Germany under the Geneva Convention.[59]

In *India—Patents*, the Appellate Body confirmed that the Panel proceeded in accordance with the above decision as it was not interpreting Indian law "as such", but was examining Indian law solely for the purpose of determining whether India had met its obligations under the TRIPs Agreement.[60] In *Canada—Patent Protection of Pharmaceutical Products*, the Panel noted that the "context" within the meaning of Article 31:2

[56] For further discussion, *see* Thomas Cottier and Krista Nadkavukaren Schefer, *Non-violation Complaints in WTO/GATT Dispute Settlement: Past, Present and Future*, in INTERNATIONAL TRADE LAW AND THE GATT/WTO DISPUTE SETTLEMENT 145 (Ernst Ulrich Petersmann ed., 1997).

of the Vienna Convention includes the provisions of the international instruments on intellectual property protection incorporated into the TRIPs Agreement, as well as any agreement between the parties relating to these agreements. Furthermore, with respect to the negotiating history pursuant to Article 32 of the Vienna Convention, the Panel considered that it may go beyond the negotiating history of the TRIPs Agreement itself and also inquire into the negotiating history of other international IP instruments. In *Canada—Patent Protection of Pharmaceutical Products*, the Panel referred to the negotiating history of the Berne Convention.[61] In *Canada—Term of Patent Protection*, the Panel confirmed that the term "subsequent practice" according to Article 31:3(b) of the Vienna Convention means, according to the Appellate Body Report in *Japan—Taxes on Alcoholic Beverages*, a "'concordant, common and consistent sequence of acts or pronouncements which is sufficient to establish a discernable pattern implying the agreement of the parties regarding its interpretation."[62] The United States submitted evidence demonstrating that six developed country Members, other than Canada, had amended their laws to comply with the patent term obligation under TRIPs Article 33. In its interim report, the Panel considered this evidence insufficient to rise to the level of a "subsequent practice".[63]

5. The Relationship of the TRIPs Agreement to GATT and GATS

The TRIPs Agreement forms part of WTO law and thus cannot be read in isolation from other pertinent WTO Agreements. The Appellate Body has adopted a policy of "effective interpretation" with respect to the relationship between GATT and GATS,[64] but also in the relationship between the GATT and its related specialized Agreements under Annex 1A of the WTO Agreement.[65] This policy reflects an effort to bring about maximum application and implementation of the rules.

It is well established that both GATT and GATS may apply to the same measure.[66] There is a marked reluctance by panels and the Appellate Body to accept a conflict rule that would give priority to specific provisions of one instrument over the other in accordance with Article XVI:3 of the WTO Agreement, the General Interpretative Note to Annex 1A, the Vienna Convention on the Law of Treaties, or customary rules of

lex specialis which, by definition gives priority to the provisions of one instrument over another, based on the specificity with which one instrument addresses the particular issue in question in relation to a more general provision in another instrument. This policy also applies to the TRIPs Agreement, the more so because explicit conflict rules relating to the relationship of GATT 1994, GATS and the TRIPs Agreement do not exist. It is therefore conceivable that provision of the TRIPs Agreement, as well as those of GATT and GATS, or any of the specialized agreements, will apply to a particular case. While no case law exists as of today on this point, it is safe to say that the TRIPs Agreement can apply in combination with the GATT 1994 and its related agreements under Annex 1A, and the GATS. Potential areas of overlap can be found where the exercise of intellectual property rights affects the importation, exportation and the marketing of products, in particular restrictions of parallel trade of genuine products. The point is discussed in Part III(C)(3) below.

C. General Provisions and Basic Principles (Part I)

1. National Treatment

Article 3 of the TRIPs Agreement requires Member States "to accord to the nationals of other Member States treatment no less favorable than that it accords to its own nationals with regard to the protection of Intellectual Property". The obligation extends to all parts of the Agreement, including the availability, acquisition, scope, maintenance and enforcement of IPRs as well as those matters affecting the use of intellectual property rights specifically addressed in the Agreement. Importantly, it extends national treatment to copyright law, still absent under the Berne Convention. The wording of the provision deviates from Article 2 of the Paris Convention which requires equal treatment ("the same protection"), although for practical purposes, differences between the two provisions are limited.[67] While treatment no less favorable, in theory and practice, allows for reverse discrimination (*discrimination à rebours*) in favor of non-nationals, intellectual property laws normally provide, as abstract rules, for equal protection of all right holders alike and neither privilege nor disadvantage nationals, although exceptions to this finding exist.[68] Moreover, Article 3 of the Paris Convention provides for equal protection also of resident nationals of non-members, thus extending protection beyond the TRIPs Agreement. Finally, national treatment obligations under Article III of the GATT also apply in regard to procedures affecting the importation of products protected by intellectual property rights. A GATT Panel held that a dual system of legal protection that makes it more difficult to defend cases alleging infringement by imported products than infringement by domestic products, violates Article III GATT.[69]

However, a number of IPRs in the field of copyright remain subject to the requirement of reciprocity. Here, national treatment of rights is only granted if applied mutually by

[67] *See* GEORG BODENHAUSEN AND CHRISTIAAN HENDRIK, GUIDE TO THE APPLICATION OF THE PARIS CONVENTION FOR THE PROTECTION OF INDUSTRIAL PROPERTY AS REVISED IN STOCKHOLM IN 1967 (1968).

[68] For example, the United States requires its own nationals to register their copyrights before bringing suit, but not foreign nationals (*cf.* 17 U.S.C. §411(a), *Murray Hill Publications, Inc. v. ABC Communications, Inc.,* 264 F.3d 622, 630 (6th Cir. 2001)), and requires nationals to use their trademarks in commerce in the United States before registration is possible, but imposes no use requirement on foreign nationals (*c.f.* 15 U.S.C. §1051) (communication by Alice Zalik).

[69] *See* Report of the GATT Panel, *United States—Sec 337 of the Tariff Act of* 1930, BISD 36S/345 (1989) (adopted). For renewed consultations on the matter, *see* DS 186/1-3, requested by the EC, Japan and Canada in 2000.

both Parties. Such exceptions are referred to in TRIPs Article 3:1 and corresponding rules are contained in Articles 6:1 and 20 of the Berne Convention and Article 13:d and 16:1 of the Rome Convention. They essentially relate to the predominantly European system of collecting societies by which authors and performers obtain remuneration on the basis of membership and overall income from royalties, rather than on the basis of individual contracts. The extension of national treatment to collecting societies was a major goal of the United States since much of the revenue of these societies is generated from works of U.S. authors and artists, but do not reach these persons if they are not members of the societies. The United States did not prevail on this point, partly due to its lack of corresponding societies and a system based on individual contracts, and partly due to European resistance to sharing income which was used in Nordic countries to support general cultural activities.

Article 3:2 of the TRIPs Agreement qualifies those exceptions referred to in Article 3:1 that relate to judicial and administrative procedures, including the designation of an address for service or the appointment of an agent for foreign right holders (which does not exist for domiciled persons), thus facilitating intercourse with the authorities. Exceptions are only permitted where necessary to secure compliance with laws and regulations that are not inconsistent with the Agreement, and they must not be applied in a way that constitutes a disguised restriction on trade. The wording of these exceptions is very narrow. Obligations to appoint an agent for service are common in all fields of registered IPRs, such as trademarks or patents, and it is difficult to see why they should be limited to the exceptions set out in paragraph 1 of the provision. The text does not reflect the purpose of the provision and should be read in its overall context to encompass all rights that are subject to registration.

2. Most-Favored-Nation Treatment

Unlike all other intellectual property conventions, Article 4 of the Agreement includes an obligation of most-favored nation treatment. This obligation reflects the influence of GATT Article I and obliges all Parties to extend privileges accorded to one Member immediately and unconditionally to all other WTO Members. Importantly, the provision is not limited to TRIPs obligations, but extends to all protection granted to intellectual property, with the exception of rights of performers, producers of phonograms and broadcasting organizations not provided under the TRIPs Agreement.[70] The MFN provision strengthens, in particular, the position of smaller countries vis-à-vis the large trading powers in third markets. As a result of the TRIPs Agreement and its MFN clause, unilateral practices, or a bilateral agreement concluded between two Members, granting and providing greater protection ("TRIPs-plus"), or the improvement of registration procedures, needs to be extended to all Members so as to avoid any incompatibility with TRIPs obligations.

Article 4 provides for a number of enumerated exceptions to MFN, which relate to privileged, non-IPR specific judicial assistance or law enforcement. Again, the provision refers to relevant privileges contained in the Berne Convention and the Rome Convention providing for reciprocity and which, logically, not only excludes national treatment, but also MFN. Finally, privileges existing prior to the entry into force of the TRIPs Agreement in all areas of intellectual property (e.g., trademark law) are grandfathered to the extent that respective agreements were formally notified to the TRIPs Council and, in addition, do not amount to "arbitrary and unjustifiable discrimination" against

[70] TRIPs Agreement, Article 4(c).

nationals of other Members. The interpretation of this proviso will be influenced by the jurisprudence relating to the chapeau of GATT Article XX which uses similar language. Special arrangements and practices therefore will only be lawful if they are based upon relevant factual differences between Members.[71]

The TRIPs Agreement does not contain an exception corresponding to Article XXIV of the GATT and Article V of the GATS allowing for privileges in the context of free trade agreements, customs unions and regional economic integration. Negotiators agreed that preferential treatment in terms of intellectual property protection was not advisable nor necessary. Article 1 of the Agreement defines "nationals" to encompass persons domiciled or having a real and effective industrial or commercial establishment in a customs territory, a term that encompasses customs unions.[72] The EC (and other customs unions) are thus dealt with as a single unit for the purpose of the Agreement. Importantly, this does not apply to FTAs such as NAFTA. The point is of particular importance in relation to exhaustion of rights and parallel trade and its application in the context of regional integration.

3. Exhaustion of Rights and the Regulation of Parallel Trade

(a) The Doctrine of Exhaustion of Rights. Intellectual property rights are of an "ubiquitous" nature. They exist independently of the specific material good in which they might be incorporated. Intellectual property rights conceptually follow the product downstream, and potentially control the use of the product. Logically, they could expand endlessly over time, interfering in downstream markets indefinitely. It therefore is necessary to put an end, at some point, to the effect of intellectual property rights on individual products on the market. This concept is called "exhaustion of rights" or *épuisement*. This doctrine is a necessary ingredient in balancing the significance of exclusive rights against the needs of the markets. In a national context, IP rights with respect to specific products are exhausted as soon as the product is put on the market and sold by the right holder or with its consent, e.g., by way of a license agreement. At this point, the right holder can no longer influence a further transfer of the product on the market by legal means. His or her rights have been "exhausted". Exhaustion only relates to one specific aspect of intellectual property rights: that is, the right of sale after first sale or, to be more precise, the right to control the resale of the protected product after first sale by means of intellectual property rights. It does not affect the existence and exercise of rights in respect to all action taken without the consent of the right holder, for example counterfeiting, piracy, the use of a patented invention or the confusing use of a trademark. Exhaustion does not affect, in other words, the core and essence of an intellectual property right.

Three types of exhaustion exist: national, international and regional exhaustion.[73] They are of practical importance mainly in relation to the regulation of parallel trade,

[71] *See* Report of the Appellate Body, *United States—Import Restrictions of Certain Shrimps and Shrimp Products*, WT/DS58/AB/R (1998), ¶¶ 111–114.

[72] Footnote 1 of the Agreement states:

> When "nationals" are referred to in this Agreement, they shall be deemed, in the case of a separate customs territory Member of the WTO, to mean persons, natural or legal, who are domiciled or who have a real and effective industrial or commercial establishment in that customs territory.

[73] *See generally* CHRISTOPHER HEATH, ERSCHÖPFUNG UND PARALLELEINFUHR, in: RECHTSFRAGEN DES INTERNATIONALEN SCHUTZES DES GEISTIGEN EIGENTUMS 27 (D. Ehlers, H.M. Wolffgang and H. Pünders eds., 2002). For further references *see infra* notes 74, 75; Marco M. Slotbooom, *The Exhaustion of Intellectual Property Rights: Different Approaches in EC and WTO Law*, 6 JOURNAL OF WORLD INTELLECTUAL PROPERTY 421 (2003).

i.e., the importation and marketing of genuine products outside contractual channels of distribution—perhaps the most prominent trade-related subject of intellectual property rights protection.

National exhaustion means that the sale of a protected product in one country has no impact on intellectual property rights in another country. The sale on the national market itself leads to the exhaustion of the rights to control the resale of the product in that market only. The doctrine of national exhaustion allows for market segmentation as the exercise of intellectual property rights remains completely independent in different countries and parallel imports therefore can be prevented or challenged.

International exhaustion means that it makes no difference whether a protected product was first sold on the national market or abroad. Regardless of where the first sale took place, the right holder cannot prevent parallel imports by asserting its intellectual property rights. Thus, whoever has acquired a product in a foreign country and which was put on the market with the consent of the right holder, can import it to another country that provides for international exhaustion. The official importer cannot prevent such a parallel trade flow. This typically increases competition within the country of destination of the good, and is likely to lower consumer prices.[74]

Regional exhaustion falls between national and international exhaustion. It does not apply globally, but only exists based on treaty law. Its territorial scope is limited to the respective signatory states, among which international exhaustion applies, while sales to third countries are typically subject to the doctrine of national exhaustion. In effect, it extends national to international exhaustion for two or more countries, fully allowing for parallel trade while limiting its effects to these countries.

The TRIPs Agreement addresses issues relating to parallel trade on two levels. The first one, of course, relates to the problem of exhaustion of rights. The second one relates to the notion and scope of individual intellectual property rights, in particular trademarks and patents.

(b) Scope of Article 6. The issue of exhaustion of rights is addressed in Article 6 of the Agreement which essentially constitutes an "agreement to disagree"[75] In the final stages of the Uruguay Round, the GATT Contracting Parties were unable to address in great detail the complex issue of exhaustion of rights and to agree on a common standard. The scope and content of Article 6 appears to be simple and void of much substance. It provides: "For the purposes of dispute settlement under this Agreement, subject to the provisions of Articles 3 and 4, nothing in this Agreement shall be used to address the issue of exhaustion of intellectual property rights". Nevertheless, Article 6 is not devoid of normative content and poses a number of puzzling problems.

First, exhaustion rules are subject to the provisions of non-discrimination, i.e., national treatment and most-favored-nation treatment. While Members remain free to adopt whichever doctrine of exhaustion they wish (national, regional or international), this has to be done on a consistent basis. The practical relevance of national treatment is limited in this context. For example, Members would be precluded from providing rules less favorable to foreign right holders than for nationals on the enforcement of contracts

[74] *See* Frederick M. Abbott, *First Report (Final) to the Committee on International Trade Law of the International Law Association on the Subject of Parallel Importation*, 1(4) JOURNAL OF INTERNATIONAL ECONOMIC LAW 607 (1998).

establishing marketing territories. The implications of MFN treatment are more important as Members are basically not allowed to treat other WTO Members differently in terms of exhaustion of rights of products originating from these countries. To what extent does MFN treatment affect and restrict the use of regional exhaustion?

First, as noted above, customs territories and thus customs unions are deemed to be a single territorial entity for the purposes of the TRIPs Agreement. The use of regional exhaustion within such an entity therefore does not amount to a violation of MFN. Second—and this is of importance to Free Trade Agreements—differential treatment of parallel trade based upon exhaustion or other rules is dealt with primarily as a matter of trade in goods and thus falls under the GATT, as will be discussed below.[76] The country of exportation, rather than the nationality of the right holder, is decisive in determining the exhaustion of rights in relation to the product at stake. For example, a product exported from Switzerland to the EC will be subject to the doctrine of exhaustion applied by the EC to third countries (or on the basis of specific bilateral treaty provisions) even if the right holder is a national of a Member State of the European Union. MFN treatment as to the nationality of the right holder therefore does not exclude differential and preferential treatment of parallel imports based upon categories other than IPRs, in particular provisions relating to free movement of goods in trade agreements.

Finally, provisions other than national treatment and MFN are arguably exempted from invocation, in the context of Article 6, for purposes of WTO dispute settlement between Members. However, Article 6 does not preclude recourse to such other provisions of the Agreement in domestic dispute settlement for the purpose of construing national or regional law relating to exhaustion and parallel trade in accordance with WTO rules.[77]

In conclusion, Article 6 of the TRIPs Agreement, while seemingly clear, does not exhaust the issue of parallel trade in WTO law. Moreover, additional provisions are relevant for the topic.

(c) Related Trademark Provisions. It is important to note that parallel trade is not exclusively defined in Article 6 of the TRIPs Agreement by the doctrine of exhaustion and its different forms—national, regional and international. The issue of parallel trade may also be resolved independently of exhaustion, i.e., *before* the question of exhaustion is reached.

This is so in the case of trademarks. As a minimum standard, TRIPs Article 16:1 grants rights only to the extent that the use of "identical or similar signs for goods or services which are identical or similar to those in respect of which the trademark is registered where such use would result in a likelihood of confusion." The provision primarily applies to counterfeit goods, but is also relevant in the case of parallel trade for the following reason. Article 16:1 creates a presumption of such likelihood of confusion in the case of identical marks used on identical goods or services. The presumption can be rebutted by demonstrating the absence of confusion. This is crucial in parallel trade. The importer of parallel-traded goods originating from different production lines in different countries, but controlled by the same firm and right holder, will generally be able to show that such likeliness of confusion does not exist. Whether or not imported

[76] See *infra* Part III(C)(3)(e).

[77] *Cf. also* Karen D. Lee and Silke von Lewinski, *The Settlement of International Disputes in the Field of Intellectual Property*, in FROM GATT TO TRIPS 317 (Beier and Schricker eds., 1996).

products can be prevented from being put on the market depends on the test of consumer deception and confusion. To the extent that products are identical and of equal quality,[78] the concept of trademark protection in the TRIPs Agreement does not allow the ban of parallel imports. Conceptually, the question of exhaustion does not even arise, and the qualifications of TRIPs Article 6 (and the footnote to TRIPs Article 28:1) are irrelevant with respect to assessing parallel trade in the field of trademarks. As a result, the minimum standard is equivalent to a regime of international exhaustion.[79] It is interesting to note that the Swiss Supreme Court essentially relied upon this test of consumer deception in approaching parallel trade and based its decision, inter alia, on Article 16 of the TRIPs Agreement.[80]

The impact of Article 16, however, is not mandatory and applies in jurisdictions only where national or regional law does not grant protection beyond the minimum standard required by Article 1:1 of the Agreement.[81] Members are free to adopt levels of protection that go beyond the test of consumer deception and to exclude external parallel trade as a matter of principle. This is the case in EC law which applies the doctrine of regional exhaustion independently from consumer deception and thus generally allows the prevention of parallel imports from third countries (and thus protection from competition) also in the field of trademarks.[82]

From the point of view of properly balancing market access, competition and exclusive rights, the rules contained in Article 16 should, in this author's view and considered from a WTO law perspective, be made mandatory and a ceiling to protection. This is an example demonstrating why the TRIPs Agreement should impose both minimum and maximum standards. Discussions held at the International Law Association and recommendations adopted based on a revised version of a report by Professor Frederick Abbott, suggest that there is an emerging consensus in academia as to the application of international exhaustion to the field of trademarks.[83]

(d) Related Patent Provisions. In the field of patents, Article 28:1 of the TRIPs Agreement defines the rights of patent holders as follows (emphasis added):

> (a) where the subject matter of a patent is a product, to prevent third parties *not having the owner's consent* from the acts of: making, using, offering for sale, selling or *importing* for these purposes that product.
> (b) where the subject matter of a patent is a process, to prevent third parties *not having the owner's consent* from the act of using the process and from the acts of: offering for sale, selling, or *importing* for these purposes at least the product obtained directly by that process.

[78] The question arises as to what extent differences between countries with respect to conditions of sale, service plans or warranties can lead to substantial product differentiation and, accordingly, to consumer deception. However, as differences in pricing—the essence of parallel trade—do not create deception, conditions of sale and marketing attached to a particular product should not amount to consumer deception if properly communicated to the customer.
